CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED

Regulatory Disclosures Statement (unaudited)

Introduction

The Information contained in this document is for China Construction Bank (Asia) Corporation Limited (“the Bank”) and its subsidiaries (“the Group”), and is prepared in accordance with the Banking (Disclosure) Rules (“BDR”) and disclosure templates issued by the Hong Kong Monetary Authority (“HKMA”).

These banking disclosures are governed by the Group’s disclosure policy, which has been approved by the Board. The disclosure policy sets out the governance, control and assurance requirements for publication of the document. While the regulatory disclosures statement is not required to be externally audited, the document has been subject to independent review in accordance with the Group’s policies on disclosure and its financial reporting and governance processes.

The numbers in this document are expressed in thousands of Hong Kong Dollars, unless otherwise stated.

Basis of preparation

Except where indicated otherwise, the financial information contained in this Regulatory Disclosures Statement has prepared on a combined basis. The basis of consolidation for regulatory purposes is different from that for accounting purposes. Information regarding subsidiaries that are not included in the consolidation for regulatory purposes is set out in the “Basis of consolidation” section in this document.

The capital adequacy ratios (“CAR”) were compiled in accordance with the Banking (Capital) Rules (“BCR”) issued by the Hong Kong Monetary Authority (“HKMA”). In calculating the risk weighted assets, the Group adopted the Standardised (Credit Risk) Approach and the Standardised (Market Risk) Approach for credit risk and market risk respectively. For operational risk, the capital requirement is calculated using the Basic Indicator Approach.

Basis of consolidation

The basis of consolidation for regulatory purposes is different from that for accounting purposes. Subsidiaries included in the consolidation for regulatory purposes are specified in a notice from the HKMA in accordance with Section 3C(1) of the BCR.

The CAR as at 31 December 2020 were computed on a consolidated basis, including the Bank and its subsidiaries, CCB Properties (Hong Kong) Holdings Limited and all of its subsidiaries (“CCBP Group”) and CCB (Asia) Insurance Broker Limited.

The main difference between the consolidation basis for accounting and regulatory purposes is that the former includes the Bank and all its subsidiaries and a joint venture whereas the latter excludes CCB Securities Limited (“CCBS”), CCB Nominees Limited (“CCBN”) and CCB (Asia) Trustee Company Limited (“CCBT”) which conduct non-banking related business. In accordance with the thresholds as determined in Part 3 of the BCR, the Bank’s shareholdings in CCBS, CCBN and CCBT were included in the total risk weighted assets of the Group.

The following entities are within the Group’s accounting scope of consolidation but are excluded from its regulatory scope of consolidation as at 31 December 2020.

In HK\$ thousands

Name of company	Principal activities	Total assets	Total equity
CCB Securities Limited	Securities brokerage business	1,333,020	629,995
CCB Nominees Limited	Custodian and nominee services	39,952	39,804
CCB (Asia) Trustee Company Limited	Trustee and custodian business	83,687	75,954

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED

Regulatory Disclosures Statement (unaudited)

OVA: Overview of risk management

China Construction Bank (Asia) Corporation Limited (“the Bank”) and its subsidiaries (together referred to as “the Group”) have effective risk governance and management framework in place to comply with the requirements set out by the HKMA and other regulators. This framework is built around a structure that enables the Board and senior management to discharge their risk management-related responsibilities with appropriate delegation and controls. These risk management-related responsibilities are discharged by means of properly defined risk appetite in accordance with the Group’s business strategies and objectives, formulated risk policies that govern the execution of those strategies, and established procedures and limits for the approval, control, monitoring, and remedy of risks.

The Board has primary responsibility for risk governance of the Group. For effective management, the Board has delegated authority to several Board-level committees to carry out risk management tasks. The Board-level committees include Audit Committee, Nomination and Remuneration Committee, Executive Committee, Risk Committee, Compliance Sub-Committee, and Strategy and Corporate Governance Committee. The Risk Committee, which is chaired by an independent non-executive director with a background in accounting, banking or other relevant financial industry or expertise in risk management, is responsible for examining the Group’s key risk management policies according to the overall strategy of the Group, and supervising and evaluating implementation and effect of these policies. It also reviews and recommends the risk appetite framework and statement to the Board of Directors.

Senior management has established several functional committees including Asset and Liability Committee, Fintech Committee, Safe Production Committee, Product Innovation and Approval Committee, Credit Committee, Risk Management Committee, and Internal Control, Compliance and Operations Committee. The functional committees and senior management are delegated with authority by the Board to oversee the Group’s corporate governance in their respective specific risk areas.

The Group adopts HKMA’s Eight Types of Inherent Risk approach in managing risk, with principal risks include credit risk, market risk, interest rate risk, liquidity risk, operational risk, reputation risk, legal risk and strategic risk.

The Group has maintained effective risk management tools to ensure our business and operations are conducted under a sound and well-controlled environment. Such tools refer to relevant policies, procedures, and limits to identify, measure, monitor and control the various types of risk. The functional committees approve policies and procedures formulated by various working committees and functional management to identify, analyze, manage and control the risks through the use of reliable and up-to-date management and information systems. The Group has adopted a “Three Lines of Defense” risk management concept to ensure that roles within the organization are clearly defined in regard to risk management. The internal auditors perform risk-based audits to ensure the soundness of the governance and compliance with the relevant policies and procedures. The internal control of the Group is supervised and evaluated by Board-level Audit Committee through the assessment report from internal auditor and external auditor.

The Group is committed to fostering strong risk culture embedded with risk ownership, accountability and awareness of all staff. The risk policies and procedures are accessible by all staff through the Group’s internal electronic platform. On the other hand, all staff is required to adhere to risk policies, procedures and limits, and to avoid excessive risk-taking. This is monitored by regular information reporting on different risk areas to the functional committees, Board-level Committees and the Board.

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED

Regulatory Disclosures Statement (unaudited)

OVA: Overview of Risk Management (Continued)

The Group maintains risk management systems to measure and monitor exposures, identify areas of high risk, and ensure that the magnitude of risk is within the tolerance level. In particular, the credit, market and operational risk management systems are also used for assessing the capital adequacy. Their features are as follows:

(a) Credit risk measurement system

The Group has established policies, procedures, and rating systems to identify, measure, monitor, control, and report on credit risk. In this connection, guidelines for management of credit risk have been laid down in the Group's respective credit policies and procedures. These policies and procedures stipulate delegated lending authorities, credit underwriting criteria, credit control and monitoring process, internal rating structure, credit recovery procedures and provisioning practices. They are reviewed and enhanced on an ongoing basis to cater for market changes, statutory requirements, and best practices in risk management processes.

The Group's credit risk management for the major types of credit risk is further elaborated in the latter section about credit risk.

(b) Market risk measurement system

The Group's market risk framework comprises market risk management policies and control procedures with appropriate delegation of market risk limits.

Market risk is the risk of loss arising from adverse changes in market rates and prices such as foreign exchange rates and interest rates and prices of debt securities. Market risk arises from the trading business. A trading book consists of positions in financial instruments held either with trading intent or in order to hedge other elements of the trading book.

The trading activities are primarily related to foreign exchange transactions. The market risk exposure is managed through the establishment of various trading limits. Trading book position is monitored by both end-of-day and intraday reports. Any excess will be promptly investigated and communicated with Treasury and then reported to RMC. In addition to the overall limits, documented trading policies and procedures define acceptable boundaries within which traders can execute transactions in their assigned markets. The limits, policies and procedures, and risk measurement methodology are updated and reviewed at least annually and seek for RMC's approval to make sure the controls are sound and valid.

(c) Operational risk measurement system

The Group implements a centralized risk management framework and formulates operational risk management policy to provide a bank-wide definition of operational risks and set out the requirements on the identification, assessment, reporting, monitoring and mitigation of operational risk.

The Group implements the "Three Lines of Defense" in its operational risk management framework. Operational Risk under Risk Management Division, Legal and Compliance Division together with certain units involved in management of internal process, people and system are the second line of defense responsible for the design and implementation of the operational risk management policies, mechanism, tools and methodologies in their responsible areas.

Stress testing is an integral part of the Group's risk management. The Group regularly performs stress-tests on the principal risks, where appropriate, covering the Group's major portfolios such as lending and investments. Various stress testing methodologies and techniques including, scenario analyses and reverse stress testing are adopted to assess the potential impact of stressed business conditions on the Group's financial positions, in particular, capital adequacy and liquidity. Whenever necessary, a prompt management response will be executed to mitigate potential impact.

Regulatory Disclosures Statement (unaudited)

OV1: Overview of RWA

The following table provides an overview of the capital requirements in terms of detailed breakdown of RWAs for credit risk, market risk and operational risk. Minimum capital requirement means the amount of capital required to be held for that risk based on its risk-weighted amount multiplied by 8%.

In HK\$ thousands		(a)	(b)	(c)
		RWA		Minimum capital requirements
		As at 31 December 2020	As at 30 September 2020	As at 31 December 2020
1	Credit risk for non-securitization exposures	326,396,670	346,078,247	26,111,734
2	Of which STC approach	326,396,670	346,078,247	26,111,734
2a	Of which BSC approach	-	-	-
3	Of which foundation IRB approach	-	-	-
4	Of which supervisory slotting criteria approach	-	-	-
5	Of which advanced IRB approach	-	-	-
6	Counterparty default risk and default fund contributions	771,974	716,348	61,758
7	Of which SA-CCR	N/A	N/A	N/A

LIA: Explanations of differences between accounting and regulatory exposure amounts

The following table provides qualitative explanations on the differences observed between accounting carrying values (as defined in template LI1) and amounts considered for regulatory capital purposes (as defined in template LI2) under each risk framework.

(a)	Material differences between the amounts in columns (a) and (b) in template LI1
	The basis of consolidation for regulatory purposes is different from the basis of consolidation for accounting purposes. Subsidiaries included in consolidation for regulatory purposes are specified in a notice from the HKMA in accordance with Section 3C of the Banking (Capital) Rules.
(b)	The main drivers for the differences between accounting values and amounts considered for regulatory purposes shown in template LI2
	<p>The differences are mainly attributable to the following factors:</p> <ul style="list-style-type: none"> - Off-balance sheet credit exposures for regulatory purposes are derived by multiplying the principal amount of the exposures, after deducting any specific provisions applicable to the exposures, by the CCF; - The carrying values reported in the financial statement are after deduction of collective and specific provisions while the exposure amounts for regulatory purposes are net of specific provision only; - The exposure amounts for regulatory purposes are after the adjustment for the capital effect of recognized credit risk mitigation on the principal amounts; - Counterparty credit risk exposures for regulatory purposes consist of both the current exposures and the potential future exposures which are derived by applying the credit conversion factor (CCF) to the notional principal of the transactions or contracts.
(c)	Systems and controls applied to valuation estimates
	<p>(i) Financial assets and liabilities measured at fair value</p> <p>Fair value estimates are generally subjective in nature, and are made as of a specific point in time based on the characteristics of the financial instruments and relevant market information. The Group measures fair value using the following hierarchy method:</p> <p>Level 1: fair values measured using quoted market prices (unadjusted) in active markets for identical financial instruments.</p> <p>Level 2: fair values measured using valuation techniques based on observable inputs, either directly (i.e. as prices) or indirectly (i.e. derived from prices). This category includes quoted prices in active markets for similar financial instruments, or quoted prices for identical or similar instruments in markets that are considered less than active, or other valuation techniques where all significant inputs are directly or indirectly observable from market data.</p> <p>Level 3: fair values measured using significant unobservable inputs. This category includes inputs to valuation techniques not based on observable data and the unobservable inputs have a significant effect on the instrument's valuation. This category includes instruments that are valued based on quoted prices for similar instruments where significant unobservable adjustments or assumptions are required to reflect differences between the instruments.</p> <p>Where available, the most suitable measure for fair value is the quoted market prices in an active market. In the absence of active markets for most of the unlisted securities and over-the-counter derivatives, direct market prices of these financial instruments may not be available. The fair values of such instruments are therefore calculated based on established valuation techniques (i.e. Market Comparable Approach) by using observable and comparable market parameters or market prices provided by counterparties. Independent price verification or reasonableness check is performed if</p>

Regulatory Disclosures Statement (unaudited)

LIA: Explanations of differences between accounting and regulatory exposure amounts (Continued)

(c)	<p>Systems and controls applied to valuation estimates (Continued)</p> <p>(i) Financial assets and liabilities measured at fair value (Continued)</p> <p>Fair values are determined by reference to externally quoted prices.</p> <p>Options and equity swaps traded over the counter are valued using broker quotes price. The fair value of foreign exchange contracts are valued by observable foreign exchange rates and forward points at the reporting date. Other derivative financial instruments, including interest rate swaps and currency swaps, are valued through estimated future cash flows and discounting with appropriate yield curves.</p> <p>For structured deposits, this class of instruments includes certain deposits received from customers that are embedded with derivatives. The valuation of the underlying deposits is derived by using net present value of expected cash flow taking the Group's own credit risk into account. The valuation method of the embedded derivative is the same as other derivatives mentioned as above.</p> <p>(ii) Financial assets and liabilities not measured at fair value</p> <p>Financial assets and liabilities that are not presented at their fair value on the consolidated statement of financial position mainly represent cash and balances with banks and central banks, placements with banks, advances to banks, advances to customers and trade bills, and other assets measured at amortised cost. These financial assets are measured at amortised cost less ECL. Financial liabilities not presented at their fair value on the consolidated statement of financial position mainly represent deposits and balances of banks, deposits from customers and other debt securities issued. These financial liabilities are measured at amortised cost.</p> <p>i) Cash and balances with banks and central banks, Placements with banks, Advances to banks and Financial assets held under resale agreements</p> <p>These balances are mainly priced at market interest rates and mature within one year. Accordingly, the carrying values approximate the fair values. The differences between fair values and carrying amounts of these financial assets not presented on the Group's consolidated statement of financial position.</p> <p>ii) Advances to customers and trade bills</p> <p>Majority of the advances to customers and trade bills are on floating rate terms, bear interest at prevailing market interest rate. Accordingly, their carrying values approximate the fair values.</p> <p>iii) Other financial assets and other debt securities issued which are measured at amortised cost</p> <p>The fair value of securities measured at amortised cost is determined using the same approach as those securities measured at fair value. Further details are described in Note 28 and Note 43 of the consolidated financial statements of China Construction Bank (Asia) Corporation Limited.</p>

PV1: Prudent valuation adjustments

The following table provides a detailed breakdown of the constituent elements of valuation adjustment.

In HK\$ thousands		As at 31 December 2020							
		(a)	(b)	(c)	(d)	(e)	(f)	(g)	(h)
		Equity	Interest rates	FX	Credit	Commodities	Total	Of which: In the trading book	Of which: In the banking book
1	Close-out uncertainty, of which:	-	-	-	-	-	-	-	-
2	<i>Mid-market value</i>	-	-	-	-	-	-	-	-
3	<i>Close-out costs</i>	-	-	-	-	-	-	-	-
4	<i>Concentration</i>	-	-	-	-	-	-	-	-
5	Early termination	-	-	-	-	-	-	-	-
6	Model risk	-	-	-	-	-	-	-	-
7	Operational risks	-	-	-	-	-	-	-	-
8	Investing and funding costs						-	-	-
9	Unearned credit spreads						-	-	-
10	Future administrative costs	-	-	-	-	-	-	-	-
11	Other adjustments	-	-	-	-	-	-	-	-
12	Total adjustments	-	-	-	-	-	-	-	-

Valuation adjustments are made for assets measured at fair value, including non-derivative and derivative instruments. In the evaluation process of the valuation adjustment, the Bank would assess the market data input and model risk. Other elements are not taken into consideration as the impact is considered to be insignificant. There is no valuation adjustment as at 31 December 2020.

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED
Regulatory Disclosures Statement (unaudited)

CC1: Composition of regulatory capital (Continued)

Notes to the Template

In HK\$ thousands

	Description	Hong Kong basis	Basel III basis
9	Other intangible assets (net of associated deferred tax liabilities)	-	-
	<p><u>Explanation</u> As set out in paragraph 87 of the Basel III text issued by the Basel Committee (December 2010), mortgage servicing rights ("MSRs") may be given limited recognition in CET1 capital (and hence be excluded from deduction from CET1 capital up to the specified threshold). In Hong Kong, an AI is required to follow the accounting treatment of including MSRs as part of intangible assets reported in the AI's financial statements and to deduct MSRs in full from CET1 capital. Therefore, the amount to be deducted as reported in row 9 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 9 (i.e. the amount reported under the "Hong Kong basis") adjusted by reducing the amount of MSRs to be deducted to the extent not in excess of the 10% threshold set for MSRs and the aggregate 15% threshold set for MSRs, DTAs arising from temporary differences and significant investments in CET1 capital instruments issued by financial sector entities (excluding those that are loans, facilities or other credit exposures to connected companies) under Basel III.</p>		
10	Deferred tax assets (net of associated deferred tax liabilities)	424,473	-
	<p><u>Explanation</u> As set out in paragraphs 69 and 87 of the Basel III text issued by the Basel Committee (December 2010), DTAs of the bank to be realized are to be deducted, whereas DTAs which relate to temporary differences may be given limited recognition in CET1 capital (and hence be excluded from deduction from CET1 capital up to the specified threshold). In Hong Kong, an AI is required to deduct all DTAs in full, irrespective of their origin, from CET1 capital. Therefore, the amount to be deducted as reported in row 10 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 10 (i.e. the amount reported under the "Hong Kong basis") adjusted by reducing the amount of DTAs to be deducted which relate to temporary differences to the extent not in excess of the 10% threshold set for DTAs arising from temporary differences and the aggregate 15% threshold set for MSRs, DTAs arising from temporary differences and significant investments in CET1 capital instruments issued by financial sector entities (excluding those that are loans, facilities or other credit exposures to connected companies) under Basel III.</p>		
18	Insignificant LAC investments in CET1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	-	-
	<p><u>Explanation</u> For the purpose of determining the total amount of insignificant LAC investments in CET1 capital instruments issued by financial sector entities, an AI is required to aggregate any amount of loans, facilities or other credit exposures provided by it to any of its connected companies, where the connected company is a financial sector entity, as if such loans, facilities or other credit exposures were direct holdings, indirect holdings or synthetic holdings of the AI in the capital instruments of the financial sector entity, except where the AI demonstrates to the satisfaction of the MA that any such loan was made, any such facility was granted, or any such other credit exposure was incurred, in the ordinary course of the AI's business. Therefore, the amount to be deducted as reported in row 18 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 18 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.</p>		

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED
Regulatory Disclosures Statement (unaudited)

CC1: Composition of regulatory capital (Continued)

Notes to the Template (Continued)

In HK\$ thousands

	Description	Hong Kong basis	Basel III basis
19	Significant LAC investments in CET1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	-	-
	<p><u>Explanation</u> For the purpose of determining the total amount of significant LAC investments in CET1 capital instruments issued by financial sector entities, an AI is required to aggregate any amount of loans, facilities or other credit exposures provided by it to any of its connected companies, where the connected company is a financial sector entity, as if such loans, facilities or other credit exposures were direct holdings, indirect holdings or synthetic holdings of the AI in the capital instruments of the financial sector entity, except where the AI demonstrates to the satisfaction of the MA that any such loan was made, any such facility was granted, or any such other credit exposure was incurred, in the ordinary course of the AI's business. Therefore, the amount to be deducted as reported in row 19 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 19 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.</p>		
39	Insignificant LAC investments in AT1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	-	-
	<p><u>Explanation</u> The effect of treating loans, facilities or other credit exposures to connected companies which are financial sector entities as CET1 capital instruments for the purpose of considering deductions to be made in calculating the capital base (see note re row 18 to the template above) will mean the headroom within the threshold available for the exemption from capital deduction of other insignificant LAC investments in AT1 capital instruments may be smaller. Therefore, the amount to be deducted as reported in row 39 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 39 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.</p>		
54	Insignificant LAC investments in Tier 2 capital instruments issued by, and non-capital LAC liabilities of, financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold and, where applicable, 5% threshold)	-	-
	<p><u>Explanation</u> The effect of treating loans, facilities or other credit exposures to connected companies which are financial sector entities as CET1 capital instruments for the purpose of considering deductions to be made in calculating the capital base (see note re row 18 to the template above) will mean the headroom within the threshold available for the exemption from capital deduction of other insignificant LAC investments in Tier 2 capital instruments and noncapital LAC liabilities may be smaller. Therefore, the amount to be deducted as reported in row 54 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 54 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.</p>		
<p>Remarks: The amount of the 10% threshold and 5% threshold mentioned above is calculated based on the amount of CET1 capital determined in accordance with the deduction methods set out in BCR Schedule 4F. The 15% threshold is referring to paragraph 88 of the Basel III text issued by the Basel Committee (December 2010) and has no effect to the Hong Kong regime.</p>

CCyB1: Geographical distribution of credit exposures used in countercyclical capital buffer

The CCyB is calculated as the weighted average of the applicable CCyB ratios in effect in the jurisdictions in which banks have private sector credit exposures. The Group's CCyB ratio as at 31 December 2020 was 0.834% as the majority of its private sector credit exposures are attributed to Hong Kong which applicable JCCyB has been updated to 1.0% effective from 16 March 2020.

The table below provides an overview of the geographical distribution of private sector credit exposures relevant for the calculation of the Group's CCyB ratio:

In HK\$ thousands		As at 31 December 2020			
		(a)	(c)	(d)	(e)
	Geographical breakdown by Jurisdiction (J)	Applicable JCCyB ratio in effect (%)	RWA used in computation of CCyB ratio	AI-specific CCyB ratio (%)	CCyB amount
1	Hong Kong SAR	1.000%	234,963,063		
4	Sum of above		234,963,063		
5	Total (including those exposures in jurisdictions with zero JCCyB ratio)		281,593,750	0.834%	3,064,304

Notes:

1. The geographical allocation of private sector credit exposure is determined with reference to the principle set out in the HKMA Return of International Banking Statistics, on the "Ultimate Risk" basis.
2. Effective from 16 March 2020, the applicable JCCyB ratio in effect in Hong Kong decreased from 2.00% to 1.00%.
3. The private sector credit exposures decreased comparing with 30 June 2020, mainly driven by the loan decrease.

Leverage ratio			
22	Leverage ratio	15.08%	14.24%

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED

Regulatory Disclosures Statement (unaudited)

LIQA: Liquidity risk management

Liquidity risk is the risk that the Group may not be able to fund the increase in assets or meet obligations as they fall due without incurring unacceptable losses. This may be caused by market disruption or liquidity squeeze whereby the Group may only unwind specific exposures at significantly discounted values.

The purpose of liquidity management is to ensure sufficient cash flows to meet all financial commitments and to capitalise on opportunities for business expansion. This includes the Group's ability to meet deposit withdrawals either on demand or at contractual maturity, to repay borrowings as they mature, to comply with the statutory liquidity ratio, and to make new loans and investments as opportunities arise.

To achieve this purpose, the Bank adopts a prudent risk appetite in setting liquidity risk tolerance. Risk appetite is set in the form of liquidity risk limits and metric framework.

The Bank has established a set of liquidity risk management policies which set out the liquidity risk management framework of the Bank according to the requirements of HKMA's Supervisory Policy Manuals "Regulatory Framework for Supervision of Liquidity Risk (LM1)" and 'sound Systems and Controls for Liquidity Risk Management (LM2)".

Liquidity risk management framework

The Board of Directors is ultimately responsible for having an effective liquidity risk management framework in place. Risk Committee ("RC") is one of the committees set up under the Board. The duties of RC are to approve a risk management framework that is sound and in line with the Group's business objectives and risk profile, to approve key liquidity risk management policies and to ensure that the liquidity management framework and policies are duly implemented and maintained by the Group.

Risk Management Committee ("RMC") is set up under the Risk Committee and the Executive Committee to oversee the Group's overall asset quality as well as resolve all important risk-related or governance issues including those on liquidity risk. The RMC is responsible for providing guidance and overseeing the Group's liquidity risk management strategy and development; review or approve liquidity risk management policies and review the Bank's liquidity risk position.

Asset and Liability Committee ("ALCO") is a functional committee set up under the Executive Committee to oversee the liquidity risk management in light of the business strategy.

Regular meetings of various committees are held to review the compliance status of liquidity measurements and the needs for change in strategy and policy. Daily liquidity management is performed by the Treasury. Risk Management Division is responsible for the daily monitoring of the liquidity limits and measurements, and submits regular reports of the liquidity profile to ALCO and RMC. Internal Audit periodically performs independent reviews to ensure effectiveness of the Group's liquidity risk management framework and implementation of the established policies.

Funding Strategies

The objective of the Bank's funding strategy is to strive for a balance between business growth opportunities and funding stability. The Bank seeks to maintain diversified and stable funding sources with an appropriate mix of liabilities including customer deposits, interbank borrowings, issuance of negotiable certificates of deposit and debt instruments.

The annual budgeted statement of financial position of the Bank, which contains a plan for the composition of various sources of liabilities, is approved by the Board of Directors in each calendar year. Various considerations such as the target business growth, market sentiment, target financial ratios and regulatory requirements would be taken into account in the process of budgeting.

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED

Regulatory Disclosures Statement (unaudited)

LIQA: Liquidity risk management (Continued)

To manage currency mismatch and avoid over-reliance on the currency swap market, the Bank sets limits on swapped fund ratios of major currency positions which are subject to daily monitoring. The swapped fund ratios limit the extent of one currency's assets being funded by other currencies through the swap market. The extent of diversification in tenors of funding is governed by liquidity metrics such as net stable funding ratio ("NSFR") and medium-funding ratio. A medium-term funding ratio highlights the extent to which medium-term assets are being financed by the roll-over of short-term liabilities. To mitigate the risk of contagion from other CCB group entities when they are under liquidity stress, the Bank sets intragroup liquidity limits.

The funding support provided by China Construction Bank Head Office is one of the key sources of liquidity backstop during times of liquidity stress.

Liquidity cushion

The Bank's liquidity cushion consists of cash, balances at central banks, high quality and other marketable securities issued or guaranteed by sovereigns, central banks, and mainland policy banks. Liquidity cushion being held by the Bank consists of High Quality Liquid Assets for purposes of determining the Bank's liquidity coverage ratio ("LCR") and other marketable debt securities.

The extent of the Bank's maturity mismatch and the sufficiency of liquidity cushion are governed by various liquidity metrics and measurement tools such as maturity mismatch limits and liquidity stress test.

The marketability of the Bank's liquidity cushion is periodically reviewed in keeping with market conditions. The size of the liquidity cushion being maintained must be sufficient to meet intraday payments and settlement obligations on a timely basis under both normal and stressed conditions.

Stress scenario analysis

Liquidity Stress Testing is regularly conducted to project the Bank's cash flows under stress scenarios for evaluation of the sufficiency of the liquidity cushion. The stress scenarios cover institution-specific crisis scenario, general market crisis scenario and combined crisis scenario. The cash flows under each stress scenario are determined by applying a set of prescribed stress assumptions to the Bank's cash flow projection. Customer behavioural patterns of some products including customer deposits are applied in the stress test. The stress test results are regularly reported to the RMC and ALCO. The definition of liquidity cushion being held by the Bank is consistent with the definition of High Quality Liquid Assets and other marketable debt securities for purposes of determining the Bank's Liquidity Coverage Ratio. The liquidity cushion should be able to cover projected cash outflows under various prescribed stress scenarios.

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED

Regulatory Disclosures Statement (unaudited)

LIQA: Liquidity risk management (Continued)

Contingency Funding Plan (CFP)

The Bank has a CFP that sets out the Bank's strategies for identifying the occurrence of a liquidity event and the operational procedures for addressing such emergency situation if it really takes place. The CFP contains a set of early warning indicators that helps to identify any emerging liquidity risks at an early stage. The CFP also includes detailed action steps and properly assigned responsibilities within the liquidity risk management framework. The list of potential funding sources, with due consideration of their reliability, priority and the expected available time during liquidity crisis, is included.

The extent of liquidity shortfalls estimated from stress testing under various scenarios beyond the level of liquidity cushion is a factor in determining severity levels and strategies to be adopted under the CFP. The Bank developed Business Continuity Plan ("BCP") to handle bank-wide disaster and major crisis including bank run situations. The CFP constitutes an integral part of the BCP as bank run event may lead to liquidity drain.

The Bank has not entered into any agreement or arrangement under which the Bank has to fulfil contingent funding obligations.

Liquidity measurements

Maturity analysis

The maturity analysis lists out the assets and liabilities by their remaining maturities into different time buckets. The gap amount for each time bucket represents the liquidity exposure after netting the assets and liabilities maturing in the same bucket. The Bank maintains daily gap limits for each time bucket to manage liquidity risk. For some liabilities without prescribed maturity date such as demand deposits from customers, the liabilities are listed in the bucket of "Repayable on Demand", resulting in a larger negative gap in this time bucket. The Bank considers this is an inherent risk to a consumer and commercial bank that offers demand deposit products to customers. By experience demand deposits have stable outstanding and the negative gap does not materialise into an immediate outflow of liquidity. However, to mitigate the liquidity risk, inter-bank and other borrowing facilities, as well as contingency funding plan are in place to cover withdrawals at unexpected levels of demand. Apart from customer deposits, the Bank has other sources to fund the earning assets, such as inter-bank borrowings, certificates of deposit issued, funding support from the parent bank and CCBA's share capital.

LIQ1: Liquidity coverage ratio - for category 1 institution

The average LCR for each quarter is based on the arithmetic mean of its LCR as at the end of each working day for each quarter for the Bank as required by the HKMA for its regulatory purposes. LCR measures the extent of liquid assets covering total net cash outflow due within 30 days arising from on-balance sheet and off-balance sheet exposures including contingent funding obligations.

The average LCR of the Bank was maintained at a healthy level in 2020.

The Bank's High Quality Liquidity Assets ("HQLA") consists of cash, balances at central banks and high quality marketable securities issued or guaranteed by sovereigns, central banks, mainland policy banks and non-financial corporate debt securities. The Bank's primary sources of funds were retail and corporate customer deposits. The funding base was also supplemented by wholesale funding such as issuance of certificates of deposit, term debts and short-term interbank money market borrowing.

The Bank's customer deposits are mainly denominated in HKD. To meet customers' loan demand, the Bank swaps surplus HKD funding into USD and other foreign currencies. This results in some currency mismatch in the LCR.

The currency mismatch between the HQLA and the net cash outflow in the calculation of LCR is controlled and monitored via individual currency LCR limits. The HQLA mix is further governed by concentration caps and limits in accordance with statutory requirements and internal policy requirements for risk management purposes.

The Bank closely monitors all its exchange traded and over-the-counter derivative exposures arising from customer transactions and their corresponding hedging activities. Collateral may be required to be posted to counterparties depending on the marked-to-market position of the derivative contracts. Nonetheless, such exposures are not material and hence the impact of the relevant cash outflows was minimal to the LCR levels.

The Bank manages its liquidity independently of other members of the CCB Group and has not granted any liquidity facility to any group member. However, CCB Head Office provides strong liquidity support to the Bank which forms an important part of the Bank's funding sources.

The composition of the Bank's HQLA was:

	Weighted amount (average value) at quarter ended	
	December 31, 2020	September 30, 2020
Level 1 assets	70,808,135	50,044,715
Level 2A assets	3,175,130	2,372,491
Level 2B assets	2,629,757	4,750,425
Total weighted amount of HQLA	76,613,022	57,167,631

The NSFR of the Bank was maintained at a healthy level in 2020. Net stable funding ratio means the ratio of the amount of the Bank's available stable funding ("ASF") to the amount of the Bank's required stable funding ("RSF").

ASF is the sum of weighted amounts of the Bank's capital and on-balance sheet liabilities. The Bank's liabilities include customer deposits, certificates of deposit and medium term debts issued and interbank money market borrowing.

RSF is the sum of weighted amounts of the Bank's on-balance sheet assets and off-balance sheet obligations. The Bank's assets include loans to customers, interbank money market lending and debt securities held. The Bank's off-balance sheet obligations mainly involve potential drawdown of undrawn committed facilities.

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED

Regulatory Disclosures Statement (unaudited)

CRA: General information about credit risk

Credit risk is the risk of loss arising from a borrower's or counterparty's inability to meet its obligations. Credit risk exists in the Group's loans, leases, credit cards, trade finance and treasury transactions. There is also credit risk in off-balance sheet financial arrangements such as loan commitments, trade-related contingencies and transaction-related contingencies.

The Group has appointed the intermediate holding company, China Construction Bank Corporation, as its credit adviser. Risk Management Division is responsible for providing centralized management and control of different types of risks including credit risk. Whereas credit approval matters are handled by the Credit Division, both divisions are independent of the business units, and supervised by the Deputy Chief Executive overseeing Risk Management. In addition, functional committees, namely Risk Management Committee and Credit Committee are set up under the Executive Committee and the Risk Committee to provide guidance in the respective risk areas. The Risk Management Committee is a central forum for overseeing the Group's overall asset quality as well as resolving all the important risk or governance issues on credit risk. It is co-chaired by the Deputy Chief Executive overseeing Risk Management or the Head of Risk Management, and the other Regular Members are the Head of Finance, the Head of Legal & Compliance and Deputy Head of Risk Management supervising Operational Risk. The Credit Committee is responsible for loan quality maintenance, authority delegation, credit related policymaking and maintenance, credit approval and credit risk management issues. It is chaired by the Deputy Chief Executive overseeing Risk Management, and the other Members are the Head of Risk Management, the Head of Credit, Senior Approvers of Credit and the Deputy Head of Risk Management.

Overall, credit risks of the Group are managed through the following processes:

- Ensuring the Group's risk profile is in line with the risk appetite and strategies set by the Bank.
- Establishing credit policies and procedures of the Group and issuing lending and monitoring guidelines to credit officers and business units. Credit policies and procedures are constantly revisited and updated whenever warranted to accommodate portfolio development, market changes and regulatory requirements.
- Making appropriate lending authority delegation via the Credit Committee according to the risk, size and nature of the transactions.
- Maintaining the internal risk rating system for measurement of credit risk exposures. The Group adopts a two dimensional risk rating methodology for the corporate portfolio, for which risk ratings are assigned to the obligor and facility separately. This system provides granularity in the rating scale and hence more refined risk differentiation for better risk and reward analysis and enhanced risk quantification. For a certain part of the consumer portfolio, in-house scoring models are also adopted to measure the credit risk involved.
- Monitoring and controlling large exposures, connected lending, product and industry concentration based on established policies and internal risk limits to ensure prudent credit decisions are made and that the Group complies with statutory requirements and supervisory guidelines.
- Monitoring criticized loans and managing recoveries of problem assets. Collection and problem asset management are separately handled by specialized teams with the relevant experience and expert knowledge.
- Assessing collective and individual loan impairment losses and allowances regularly to ensure the adequacy of impairment allowances.
- Managing and monitoring the Group's loan quality.

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED

Regulatory Disclosures Statement (unaudited)

CRA: General information about credit risk (Continued)

- Supervising the stress-testing programme to provide a forward-looking assessment of the Group's risk exposures under stressed conditions, and enable the Group to project tail risks on a bank-wide basis, to quantify such potential losses and the impact on the Bank in terms of profitability, liquidity and capital adequacy.
- Coordinating and driving credit related initiatives throughout the Group to ensure compliance with regulatory requirements.

(a) Credit risk for advances

In addition to underwriting standards, the Group manages credit risks through an effective and prudent credit approval process. In making credit recommendations and decisions, only officers with appropriate banking experience and product knowledge are delegated credit approval authorities. There is a post-approval review process where applicable to ensure quality of the credit decisions made, to identify negative trends which need attention or actions, and to ensure adherence to existing policies and procedures.

In the approval process, the credit officers assess the purpose and structure of the loan, the ability of a particular borrower or counterparty to service the proposed facilities, as well as the nature of the underlying collateral where applicable. Credit approval guidelines are issued from time to time to enhance the credit acceptance process as appropriate.

The Group categorizes its loans and leases into either consumer or corporate and commercial credits and monitors their risks separately as discussed below:

Consumer credits are grouped by products and their risk attributes for purposes of evaluating credit risk, and on-going monitoring of asset quality. Standard credit underwriting criteria are established and exceptional approvals for deviations from such criteria are required and monitored.

Corporate and commercial credits are evaluated for customers' default risk, taking into consideration the related credit enhancements. To support the credit assessment, internal risk ratings will be assigned to customers. These risk ratings are monitored regularly and updated upon any changes in the borrower's or counterparty's financial position, repayment ability and the related credit enhancements.

(b) Credit risk for treasury transactions

The credit risk of the Group's investment in debt securities and treasury hedging transactions is managed by the use of both internal and external credit ratings and credit limits set on individual counterparties. Internal and external credit ratings, and news on each counterparty are closely tracked and monitored.

(c) Credit-related commitments

The risks involved in credit-related commitments and contingencies are essentially the same as the credit risk involved in extending loan facilities to customers. These transactions are therefore subject to the same credit approval, portfolio maintenance and collateral requirements as for customers applying for loans.

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED
Regulatory Disclosures Statement (unaudited)

CRA: General information about credit risk (Continued)

(d) Collateral and other credit enhancements

The Group obtains collateral in respect of loans advanced to mitigate the credit risk of the transactions and has established policies and guidelines on the eligibility and valuation of collateral and other credit enhancements. However, the approval of credits will be based on the assessment of debt servicing ability rather than solely dependent on collateral or other credit enhancements. The main collateral types and credit enhancements include charges over properties, standby letters of credit issued by banks, securities, deposits, account receivables, vehicles and guarantees.

(e) Risk concentration

The Group sets various risk limits to control exposure to countries, individual counterparties, industries, intra-group exposures and loan portfolios to avoid excessive risk concentration.

The Group has adopted a “Three Lines of Defense” risk management concept to ensure that roles within the organization are clearly defined in regard to credit risk management. The internal auditors conduct periodic reviews and independent audits of the Group’s credit portfolio and credit risk management process. The purpose is to ensure due compliance with established credit policies and procedures, and to evaluate the effectiveness of the credit management process and control mechanism. The results of these reviews and audits are regularly reported to the Board level Audit Committee for effective oversight and monitoring.

CR1: Credit quality of exposures

The table below provides an overview of the credit quality of on- and off-balance sheet exposures as at 31 December 2020:

	In HK\$ thousands	(a)	(b)	(c)	(d)	(e)	(f)	(g)
		Gross carrying amounts of		Allowances / impairments	Of which ECL accounting provisions for credit losses on STC approach exposures		Of which ECL accounting provisions for credit losses on IRB approach exposures	Net values (a+b-c)
		Defaulted exposures	Non-defaulted exposures		Allocated in regulatory category of specific provisions	Allocated in regulatory category of collective provisions		
1	Loans	3,284,633	383,732,954	(2,951,082)	1,171,579	1,779,503	-	384,066,505
2	Debt securities	-	79,566,260	(12,795)	-	12,795	-	79,553,465
3	Off-balance sheet exposures	-	51,029,686	(319,440)	-	319,440	-	50,710,246
4	Total	3,284,633	514,328,900	(3,283,317)	1,171,579	2,111,738	-	514,330,216

CR2: Changes in defaulted loans and debt securities

The table below provides information on the changes in defaulted loans and debt securities, including any changes in the amount of defaulted exposures, movements between non-defaulted and defaulted exposures, and reductions in the defaulted exposures due to write-offs as at 31 December 2020 and 30 June 2020 respectively:

In HK\$ thousands		(a)
		Amount
1	Defaulted loans and debt securities at end of the previous reporting period (30 June 2020)	2,851,783
2	Loans and debt securities that have defaulted since the last reporting period	2,981,654
3	Returned to non-defaulted status	(3,537)
4	Amounts written off	(22,155)
5	Other changes*	(2,523,112)
6	Defaulted loans and debt securities at end of the current reporting period (31 December 2020)	3,284,633

* Other changes include loan repayment

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED

Regulatory Disclosures Statement (unaudited)

CRB: Additional disclosure related to credit quality of exposures

The Group has laid down guidelines for determining the impairment loss allowances.

At each of the reporting period end, the carrying amount of the Group's assets are reviewed to determine whether there is objective evidence of impairment. If internal and external sources of information indicate such evidence exists, the carrying amount is reduced to the estimated recoverable amount and an impairment loss is recognized in the income statement.

The approach and treatment of impairment allowance of different types of assets are elaborated in note 8 (a) (x) "Expected credit loss measurement" of the consolidated financial statements of China Construction Bank (Asia) Corporation Limited.

Loans and receivables with renegotiated terms are loans that have been restructured due to deterioration in the borrower's financial position and where the Group has made concessions that it would not otherwise consider.

Renegotiated loans and receivables are subject to ongoing monitoring to determine whether they remain impaired or past due. The original loan that is renegotiated is derecognized and a new financial asset is recognized at fair value if the original loan agreement is cancelled and a new agreement made on substantially different terms.

Credit risk exposures by geographical areas:

Geographical areas (In HK\$ thousands)	As at 31 December 2020

CRC: Qualitative disclosures related to credit risk mitigation

The Group obtains collateral in respect of loans advanced to mitigate the credit risk of the transactions and has established policies and guidelines on the eligibility and valuation of collateral and other credit enhancements. However, the approval of credits will be based on the assessment of debt servicing ability rather than solely dependent on collateral or other credit enhancements.

For regulatory capital adequacy and management, the Group has established policies in managing and recognizing credit risk mitigation, one of which is the taking of collateral and other credit enhancements. The principal types of collateral taken by the Group are also those of the recognized credit risk mitigation as prescribed in the Banking (Capital) Rules.

For regulatory capital calculation, the Group adheres to the criteria as stipulated in the Banking (Capital) Rules when assessing the eligibility of the credit risk mitigation.

Recognized collateral includes both financial and physical collateral. Financial collateral include cash deposit, shares and debt securities and mutual fund, whilst physical collateral include commercial real estate and residential real estate. The exposure amount after mitigation is determined by applying the standard supervisory haircut stipulated in the Banking (Capital) Rules as an adjustment discount to the current collateral value.

Recognized guarantor is any sovereign entities, public sector entities, banks, regulated securities firms and corporates with a lower risk weight than that of the borrower.

The credit and market risk concentrations within the credit risk mitigation (recognised collateral and guarantees for capital calculation) used by the Group are under a low level.

On-balance sheet and off-balance sheet recognized netting is not adopted by the Group.

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED
Regulatory Disclosures Statement (unaudited)

CR3: Overview of recognized credit risk mitigation

The following table presents the extent of credit risk exposures covered by different types of recognized CRM as at 31 December 2020:

		As at 31 December 2020				
		(a)	(b1)	(b)	(d)	(f)
In HK\$ thousands		Exposures unsecured: carrying amount	Exposures to be secured	Exposures secured by recognized collateral	Exposures secured by recognized guarantees	Exposures secured by recognized credit derivative contracts
1	Loans	350,732,208	33,334,297	3,870,776	29,463,521	-
2	Debt securities	78,832,623	720,842	-	720,842	-
3	Total	429,564,831	34,055,139	3,870,776	30,184,363	-
4	Of which defaulted	2,022,146	90,908	81,561	9,347	-

Compared with 30 June 2020, the defaulted exposures secured by recognized guarantees decreased by 99% mainly due to decrease in defaulted exposures guaranteed by bank.

CRD: Qualitative disclosures on use of ECAI ratings under STC approach

The Group uses the following external credit assessment institutions (“ECAIs”) to calculate its capital adequacy requirements under the Standardised (Credit Risk) Approach prescribed in the Banking (Capital) Rules:

- Moody’s Investors Service
- Standard & Poor’s Ratings Services

Where exposures have been rated by the above-mentioned ECAIs, they are categorised under the following classes of exposures:

- Sovereign exposures
- Public sector entity exposures
- Bank exposures
- Securities firm exposures and
- Corporate exposures.

The process used to map ECAIs issue specific ratings in the Group’s banking book is consistent with those prescribed in the Banking (Capital) Rules.

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED

Regulatory Disclosures Statement (unaudited)

CCRA: Qualitative disclosures related to counterparty credit risk (including those arising from clearing through CCPs)

Counterparty Credit Risk Management

The Group has adopted the Current Exposure Method for regulatory capital calculation of its counterparty credit risk ("CCR") arising from securities financing transactions and derivative contracts booked in the banking book and trading book.

The Group has in place a set of policies and a comprehensive framework to effectively manage such counterparty credit risk.

Under this management framework, the Group establishes credit limit through formal credit approval procedures to control the pre-settlement and settlement credit risk arising from derivative transactions. In this connection, distinct credit limits for counterparty credit exposure for individual counterparties and each group of related counterparties are determined based on the credit standing of the counterparties, collateral value, contract nature, actual needs, etc.

From a risk management perspective, the Group monitors the risk exposure due to fluctuations in the market by using the current exposure and the potential exposure value of the transactions.

All credit facilities granted to a counterparty, including general credit facilities as well as pre-settlement limit for derivative and FX products will be subject to review on an annual basis, in order to assess the latest information together with credit standing of the counterparties, and decide whether any adjustment of the credit package is required.

Transactions with associated specific wrong-way risks are discouraged, e.g. granting a credit line to a counterparty against the pledge of the counterparty's own shares (e.g. for conducting OTC derivative transactions) creates specific wrong-way risk to the Bank, as the risk of "secured" portion of the exposure is positively correlated with the probability of default of the counterparty. Exception should be justified and approved by Deputy Head of Credit Division or above.

Credit ratings downgrade

A credit rating downgrade clause in International Swaps and Derivatives Association ("ISDA") Master Agreement or a credit rating downgrade threshold clause in a Credit Support Annexes ("CSA") is designed to trigger an action if the credit rating of the affected party falls below a specified level. These actions may include the requirement to pay or increase collateral, the termination of transactions by the non-affected party or the assignment of transactions by the affected party.

If the Bank is given a credit rating downgrade, the impact on collateral posted is minimal as currently there are no such clauses in the collateral agreements entered by the Bank.

MRA: Qualitative disclosures related to market risk

Market risk management by the Group

Market risk is the risk of loss arising from adverse changes in market rates and prices such as foreign exchange rates and interest rates and prices of debt securities. Market risk arises from the trading business. A trading book consists of positions in financial instruments held either with trading intent or in order to hedge other elements of the trading book.

Risk Management Committee (“RMC”) is responsible for overseeing the market risk. The market risk framework comprises market risk management policies and control procedures with appropriate delegation of market risk limits.

The trading activities are primarily related to foreign exchange transactions. The market risk exposure is managed through the establishment of various trading limits. Trading book position is monitored by both end-of-day and intraday reports. Any excess will be promptly investigated and communicated with Treasury and then reported to RMC. In addition to the overall limits, documented trading policies and procedures define acceptable boundaries within which traders can execute transactions in their assigned markets. The limits, policies and procedures, and risk measurement methodology are updated and reviewed at least annually and seek for RMC’s approval to make sure the controls are sound and valid.

MR1: Market risk under Standardized (market risk) approach (STM approach)

The table below provides the components of the market risk capital requirements calculated using the STM approach as at 31 December 2020:

In HK\$ thousands		(a)
		RWA
	Outright product exposures

Regulatory Disclosures Statement (unaudited)

IRRBBA: Interest rate risk in banking book

Risk Management objectives and policies

Interest rate risk in the banking book (IRRBB) is the potential adverse impact of changes in interest rates on earnings and capital. The major types of interest rate risk of the Group include gap risk, basis risk and option risk.

IRRBB risk management aims to minimise potential significant loss as a result of changes in interest rate and to maintain IRRBB within risk appetite. A set of IRRBB management policies which set out the overall IRRBB management and mitigation strategies has been established.

Interest rate risk indicators and limits are in place to measure, monitor and control interest rate risk. The indicators, limits and monitoring tools include, but are not limited to, re-pricing gap limits, Net Interest Income (NII), Economic Value of Equity (EVE) and stress testing. These are regularly reviewed by Risk Management Division. Different levels of limit are established and approved by Risk Management Committee (RMC) and Risk Committee (RC), as deemed appropriate. The indicators are consistently presented to the ALCO for its decision-making purposes. ALCO formulate strategies over the asset and liability structure based on the risk appetite approved by the Board to ensure the business is operated within the acceptable risk tolerance. IRRBB management process is also subject to independent reviews by the Internal Audit.

Interest rate risks are analysed in terms of interest rate re-pricing gap that measure for each future period the re-pricing characteristic mismatches between assets and liabilities. The interest rate re-pricing gaps are subject to limits across time horizons which are monitored on a daily basis.

The risk is also measured and controlled through limits of both earning and economic value sensitivities on a monthly basis. From the earning perspective, Net Interest Income (NII) measures potential changes in NII due to an adverse interest rate movement over a one-year period. From the economic value perspective, Economic Value of Equity (EVE) measures the change in the present value of expected cashflows from interest rate shock scenarios. Commercial margin and other spread components are included in the computation and discounted at risk-free rates. The EVE and NII sensitivity shown in the quantitative disclosures are based on scenarios and assumptions prescribed in the Hong Kong Monetary Authority's Supervisory Policy Manual IR-1, and the total exposures are aggregated across currencies as prescribed by the HKMA's standardized framework.

In the NII and EVE calculations, behavioral prepayment models are applied to retail loans for estimating loan prepayment rates according to historical analysis. The behavioral models are reviewed and validated regularly or more frequently in response to significant change in market conditions. On the other hand, retail term deposits are slotted according to their contractual re-pricing dates as significant penalty are charged for early redemption. The non-maturity deposits (NMD) are slotted to the next business day for conservative purpose.

IRRBB stress testing has been developed to estimate the sensitivities of NII and EVE under stressed conditions. The stress scenarios including historical scenarios and hypothetical scenarios which make reference to the latest changes of market condition.

Exposures to interest rate risk are hedged using derivatives. Further details on hedge accounting are discussed in note 30 of the consolidated financial statements of China Construction Bank (Asia) Corporation Limited.

As of 31 December 2020, there is no behavioral model for non maturity deposits (NMDs) and these products are assumed to be repriced and matured in the next business day. (The average and longest maturity is one day)

Off-balance sheet exposures other than derivative transactions

The following is a summary of the contractual amounts of each significant class of contingent liabilities and commitments to extend credit:

In HK\$ thousands	As at 31 December 2020	As at 31 December 2019
Direct credit substitutes	371,050	361,765
Transaction-related contingencies	5,097,298	3,985,512
Trade-related contingencies	1,856,681	1,762,424
Other commitments:		
which are unconditionally cancellable or automatically cancellable due to the deterioration in the credit worthiness of the borrower	55,023,274	52,942,232
with an original maturity up to one year	2,306,442	3,245,985
with an original maturity over one year	41,398,215	30,399,463
Total	106,052,960	92,697,381
Total RWAs for credit risk of its off-balance sheet exposures	21,923,148	16,958,439

Contingent liabilities and commitments are credit-related instruments which include letters of credits, guarantees and commitments to extend credit. The risk involved is essentially the same as the credit risk involved in extending loan facilities to customers. These transactions are, therefore, subject to the same credit application, portfolio maintenance and collateral requirements as for customers applying for the loans. The contractual amounts represent the amounts at risk should the contract be fully drawn upon and the client defaults. As the facilities may expire without being drawn upon, the contractual amounts do not represent expected future cash flows.

Regulatory Disclosures Statement (unaudited)

International claims

International claims are exposures recorded on the statement of financial position based on the location of the counterparties after taking into account the transfer of risk. For a claim guaranteed by a party situated in a country different from the counterparty, risk will be transferred to the country of the guarantor. For a claim on the branch of a bank, the risk will be transferred to the country where its head office is situated. Claims on individual countries or areas, after risk transfer, amounting to 10% or more of the aggregate international claims are shown as follows:

Regulatory Disclosures Statement (unaudited)

REMA: Remuneration Policy

Disclosure on remuneration for CG-5 Guideline on a Sound Remuneration System issued by the HKMA

The Board has delegated power to the Nomination and Remuneration Committee to oversee the design and operation of the Bank's remuneration system.

The Nomination and Remuneration Committee consists of not less than three members, majority of whom should be independent non-executive Directors.

The major responsibilities of the Committee include but not limited to:

- Making recommendations of remuneration packages of the Senior Management ^{Note¹} and the Key Personnel ^{Note²},
- Making recommendations to the Board on the Bank's remuneration structure, annual salary adjustment, annual performance bonus and long term incentive, if applicable, and
- Conducting regular review of the Bank's remuneration system and its operation.

The Committee takes into account of the Bank's risk tolerance, risk management framework and long term financial soundness in determining the Bank's remuneration policy. The policy advocates pay-for-performance philosophy and internal equity to encourage achievement of results and desirable behaviors in support of the Bank's long term goals and strategies. The policy applies to all employees employed by the Bank.

Remuneration Structure

The remuneration packages of employees focus on "total cash remuneration" comprising of fixed salary and variable remuneration. Following the total reward principle and prevailing market practices, payments of remuneration are required to follow the policy guidelines to maintain an appropriate balance that the fixed portion is sufficient to attract and retain employees with relevant skills and the variable portion will not effectively become "non-discretionary" or induce excessive risk taking. The proportion of variable remuneration shall vary according to roles and responsibilities, and is usually higher for employees who are higher in seniority.

Fixed remuneration refers to base salary, fixed allowances. Variable remuneration, comprising mainly annual bonus, short term, incentives and/or long term incentives (if applicable), is awarded based on overall performance of the Bank, the relevant business units and the employee, taking into account the full range of current and potential short-term and longer-term risks connected with the activities of employees which may affect the performance of the Bank. Variable remuneration is awarded in form of cash currently.

Performance Management and Allocation of Variable Remuneration

Performance of the Bank will be evaluated against pre-defined and assessable financial and non-financial targets, including but not limited to the Bank's performance on risk management perspectives. Based on the Bank level targets, each individual Division will set up its performance indicators covering financial, non-financial, risk management, compliance and corporate value targets. Major types of risks such as credit risks, market risks, liquidity and operational risks are taken into consideration during the evaluation process.

Note 1 Senior Management refers to employees at Deputy Chief Executive and above. The Bank had 5 employees classified as Senior Management as at the year ended 31 December 2020.

Note 2 Key Personnel refers to individual employees whose duties or activities in the course of their employment involve the assumption of material risk or the taking on of material exposures on behalf of the Bank. The Bank had 5 employees classified as Key Personnel as at the year ended 31 December 2020.

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED

Regulatory Disclosures Statement (unaudited)

REMA: Remuneration Policy (Continued)

Performance Management and Allocation of Variable Remuneration (Continued)

Performance of individual employees will be assessed against a number of pre-defined and measurable performance goals in support of the Bank's targets. The goals are determined according to the job responsibilities, areas of contribution covering both financial and non-financial factors, and the full adherence to the code of conduct, internal control policy, compliance standard, risk management requirements and corporate values. The overall and balanced quality of an employee's performance is therefore measured and determined by not only financial achievement, but also non-financial indicators such as adherence to risk management policies, compliance with legal, regulatory, ethical standards (including Anti-Money Laundering etc.), results of internal audit reviews, adherence to corporate values, and customer satisfaction as an integral part of the performance management system. Employees who play a role in supervising employees within the Bank should be measured with additional non-financial factors, such as oversight responsibilities in relation to the management and mitigation of risks, and the risks of misconduct. "Zero compromise" is the standard that the Bank advocates as far as legal and compliance are concerned. Stringent compliance standard and risk management requirement have remained as a key and mandatory element in the performance management system during the year of 2020. For employees within risk control functions, they have to achieve their specific divisional and individual key performance indicators independent of the performance of the business areas which they oversee.

Bank-wide variable remuneration level will be determined with reference to the result of the Bank's overall performance evaluation at the end of the year. Failure to achieve financial and non-financial targets will result in reduction in variable remuneration pool at the Bank level. Award of variable remuneration of individual employee is linked to the performance of the Bank as a whole, the relevant Division and the employee concerned. Misconduct or adverse performance in non-financial factors, where appropriate, should override outstanding financial achievements and could have a significant negative impact on the overall performance rating. Employees who fail to achieve satisfactory performance results or are accountable for misconduct, will result in a reduction or elimination of variable remuneration. Employees who are beyond those directly responsible for misconduct would also be subject to adjustment to remuneration. The amount of remuneration to be adjusted should be proportionate to the non-compliance or misconduct outcome, by taking account all relevant factors and indicators of the severity of the impact as the outcome depicted in relevant performance management policy and procedural guidelines of the Bank.

In assessing the remuneration packages of Senior Management and Key Personnel of the Bank, the Nomination and Remuneration Committee has the delegated responsibility to review and recommend the total remuneration inclusive of the variable components in alignment with the performance management system described above.

Payout and Deferral of Variable Remuneration

The award of variable remuneration is subject to deferment in accordance with the remuneration policy as approved by the Nomination and Remuneration Committee and the Board of the Bank. In general, the proportion of variable remuneration subject to deferment will increase in line with seniority, scope of responsibilities and in proportion to the amount of bonus as compared to the fixed remuneration.

The award of deferred remuneration is subject to a minimum vesting period and pre-defined vesting conditions in accordance with the remuneration policy. The vesting period shall be up to three years and aligned to the nature and risks of business, activities undertaken by employees and the time horizon of the risks from the activities. Payout of deferral may be subject to forfeiture in case of significant performance deterioration at the Bank, business unit or individual level, as appropriate. Early payment of deferral amount is normally not allowed and the unvested payment will be forfeited if the employee tenders resignation from the Bank or is terminated by the Bank before the normal payout date. Any exception to the rules is subject to approval by the Board, Nomination and Remuneration Committee or Chief Executive Officer as defined in the remuneration policy.

Unvested deferred variable remuneration shall be subject to "Malus" and any paid and vested deferred variable remuneration shall be subject to "Clawback" if it is later established that any performance

CHINA CONSTRUCTION BANK (ASIA) CORPORATION LIMITED

Regulatory Disclosures Statement (unaudited)

REMA: Remuneration Policy (Continued)

measurement was based on data which is subsequently proven to have been manifestly misstated, or it is later established that there has been fraud or other malfeasance on the part of the employee or violation of the Bank's internal control policies/ procedures. Exception to malus/clawback shall be subject to approval by the Board, Nomination and Remuneration Committee or Chief Executive Officer as defined in the remuneration policy.

On-going Monitoring of the Remuneration System

A multi-level monitoring mechanism shall be in place to ensure the policy is well respected and followed appropriately.

The Board and the Nomination and Remuneration Committee shall provide oversight of the overall remuneration matters of the Bank to be ensure consistency with the culture, strategy, risk tolerance and control environment of the Bank. The audit function of the Bank or an external consultant appointed by the Bank shall conduct regular review (at least annually), independent of management, on the adequacy and effectiveness of the remuneration policy as well as compliance of the operations of the Bank's remuneration system. Results of the review together with any material weaknesses identified shall be submitted to the Nomination and Remuneration Committee. Involvement and inputs from risk management, compliance, finance and human resources shall be solicited as appropriate in the design and implementation of the remuneration policy and systems, with specific regard to risk considerations at various levels of the Bank.

In 2020, the assessment of the Bank's remuneration system against the principles as outlined in the Supervisory Policy Manual CG-5 "Guidelines on a Sound Remuneration System" which was issued by the Hong Kong Monetary Authority was conducted independent of management, and the result of the review was submitted to the Board of Directors and the Nomination and Remuneration Committee.
