Part IV: Counterparty credit risk	
CCRA: Qualitative disclosures related to counterparty credit risk (including those arising from clearing through CCPs)	34
CCR1: Analysis of counterparty default risk exposures (other than those to CCPs) by approaches.	35
CCR2: CVA capital charge	35
CCR3: Counterparty default risk exposures (other than those to CCPs) by asset classes and by risk weights – STC approach	36
CCR5: Composition of collateral for counterparty default risk exposures (including those for contracts or transactions cleared through CCPs)	37
CCR8: Exposures to CCPs	37
Part V: Market risk	
MRA: Qualitative disclosures related to market risk	38-40
MR1: Market risk under STM approach	41
Part VI: Interest rate risk in banking book	
IRRBBA: Interest rate risk in banking book – risk management objectives and policies	42-43
IRRB1: Quantitative information on interest rate risk in banking book	43
Part VII: Remuneration	
REMA: Remuneration policy	44-46
REM1: Remuneration awarded during financial year.	46
REM2: Special payments.	46
REM3: Deferred remuneration.	47

Regulatory Disclosure Statement (continued)

The information contained in this regulatory disclosure statement is for China CITIC Bank International Limited (“the Bank”) and its subsidiaries (together “the Group”), and is prepared in accordance with the Banking (Disclosure) Rules and the disclosure templates issued by the Hong Kong Monetary Authority (“HKMA”). It should be read in conjunction with the Group’s 2022 Annual Report. These regulatory disclosures are governed by the Group’s disclosure policy, which set out the governance, control and assurance requirements for publication of the document. Certain comparative figures have been restated in conformity with the latest books and records of the Group and returns submitted by the Bank to the HKMA.

PART I: OVERVIEW OF RISK MANAGEMENT, KEY PRUDENTIAL RATIOS AND RISK-WEIGHTED ASSET (RWA)

OVA: Overview of risk management

The Group has the fundamental goal of executing our strategy while managing our risks in a comprehensive and integrated manner. The Risk Appetite Statement and Risk Appetite Framework are key components within the risk management framework which describes the types and levels of risk that we are prepared to accept in the pursuit of our goals. The Group has a robust infrastructure to facilitate identifying, quantifying, monitoring and mitigating all risk types in our business activities. A comprehensive overview of our risk management framework including the management and mitigation of key risks facing the Group is set out in the *Financial Risk Management Section of the Annual Report 2022*.

The Board has the primary responsibility for the effective management of risks. The Board approves the Risk Appetite Statement and ensures that it is consistent with our strategic, business, capital and financial plans, as well as the risk-taking capacity and remuneration system. The Board has established the Credit & Risk Management Committee (“CRMC”) to oversee and manage the Bank’s risk related matters, including but not limited to the risk strategy, risk appetite/tolerance, profile, policies (including key risk procedures), fair value practices, capital adequacy, risk culture, systems, and various risk-related initiatives and projects. The CRMC carries out its oversight function on the Group’s risk management through various committees at the management level, including the Credit Committee, Market Risk Committee, Non-Performing Loans Committee, Investment Review Committee, Asset and Liability Committee, Operational Risk Management Committee, New Product Committee, Compliance and AML Committee and Management Committee. Further information on the risk governance structure is set out in the Corporate Governance and Other Information Section of the Annual Report 2022.

The Group adopts a Three Lines of Defence model in risk management. As the first line of defence, business units and related support units which take risks have primary responsibility to own and manage the risks associated with day-to-day business and operational activities. For reporting of quantifiable risks that are measured against approved limits, limits initiated by business units shall be subject to independent monitoring and control by various independent risk management and compliance functions as the second line of defence. Furthermore, the second line of defence establishes relevant risk governance and framework to ensure the level of risks are properly managed. As the third line of defence, the Internal Audit Group shall conduct regular audits on the risk areas to ascertain the effectiveness of the system in risk measurement, reporting and monitoring.

The Group’s Bank Culture Reform (“BCR”) Taskforce convened to review and drive continuously the various bank-wide and group/entity-level BCR initiatives which included refining the bank-wide Bank Culture Indicators (“BCI”) dashboard; producing group/entity-level BCI dashboards; launching various BCR promotion to shape desirable behaviour; senior management training as part of leadership development programme; bank-wide and group/entity-level Risk Appetite Statement alongside with summary sheets of Code of Conduct and General Compliance Policy and Guideline; and incorporating BCR as a standing agenda item in Board level Committee meetings.

Our risk measurement and reporting systems are dedicated to deliver comprehensive and management information in support of business strategy and solutions to evolving regulatory reporting requirements. The Group maintains adequate tools/techniques and management information systems to identify, measure, monitor and mitigate all relevant quantifiable and material risks and to provide our management with timely and accurate reports on the financial condition, operating performance and risk exposure of the Group. Risk management tools/techniques include but not limited to quantitative models, portfolio and limit management tools, early alert tools, stress testing, etc. to ensure that the risks are evaluated and quantified in a multi-dimensional and scientific manner. The Group continually seeks to enhance our risk management practices and methodologies in alignment with international best practices. A number of key initiatives and projects to enhance risk database, data governance, system and infrastructure, and work towards meeting the Basel Committee, climate risk management, operational resilience, and other applicable regulatory requirements are in progress.

Regulatory Disclosure Statement (continued)

PART I: OVERVIEW OF RISK MANAGEMENT, KEY PRUDENTIAL RATIOS AND RISK-WEIGHTED ASSET (RWA) (CONTINUED)

OVA: Overview of risk management (continued)

The Group operates a robust and comprehensive stress testing programme that supports our risk management and capital planning. Stress testing also assesses our capital strength and enhances our resilience to adverse events. It also gives an insight into the potential impact of the Group risk taking positions and how it could be mitigated. Apart from regulatory driven stress tests, the Group also conducts internal stress tests. Our stress testing is supported by dedicated teams and infrastructure. The Board delegated committees oversees the stress testing programme, and the stress test results are regularly reported to the management level committees for approval and course of action, where appropriate. The Group uses a range of stress testing techniques to achieve a comprehensive coverage across our business activities. A comprehensive overview on stress testing over different risk classes is set out in the *Financial Risk Management Section of the Annual Report 2022*.

19	Of which SEC-SA	-	-	-	
19a	Of which SEC-FBA	-	-	-	
20	Market risk	15,966,100	17,699,925	1,277,288	
21	Of which STM approach	15,966,100	17,699,925	1,277,288	
22	Of which IMM approach	-	-	-	
23	Capital charge for switch between exposures in trading book and banking book (not applicable before the revised market risk framework takes effect)*	Not applicable	Not applicable	Not applicable	
24	Operational risk	15,001,688	14,757,300	1,200,135	
24a	Sovereign concentration risk	-	-	-	
25	Amounts below the thresholds for deduction (subject to 250% RW)	1,421,193	1,281,670	113,695	
26	Capital floor adjustment	-	-	-	
26a	Deduction to RWA	239,315	211,401	19,145	
26b	Of which portion of regulatory reserve for general banking risks and collective provisions which is not included in Tier 2 Capital	78,117	27,502	6,249	
26c	Of which portion of cumulative fair value gains arising from the revaluation of land and buildings which is not included in Tier 2 Capital	161,198	183,899	12,896	
27	Total	314,124,876	324,633,017	25,129,990	

Remark:

Items marked with an asterisk (*) will be applicable only after their respective policy frameworks take effect. Until then, "Not applicable" is reported in the rows.

The Bank has adopted the "standardised approach" for calculating the risk-weighted amount for credit risk and market risk and the "basic indicator approach" for calculating operational risk.

Total RWA decreased mainly due to a decrease in credit RWAs for non-securitization exposures, which was driven mainly by a decrease in loans and advances to customers.

LI2: Main sources of differences between regulatory exposure amounts and carrying values in financial statements

		(a)	(b)	(c)	(d)	(e)
		Total	Items subject to:			
			credit risk framework	securitization framework	counterparty credit risk framework	market risk framework
At 31 December 2022		HK\$' 000	HK\$' 000	HK\$' 000	HK\$' 000	HK\$' 000
1	Asset carrying value amount under scope of regulatory consolidation (as per template LI1)	451,306,907	426,587,539	–	26,678,346	24,719,368
2	Liabilities carrying value amount under regulatory scope of consolidation (as per template LI1)	23,604,909	–	–	26,703,894	23,604,909
3	Total net amount under regulatory scope of consolidation	427,701,998	426,587,539	–	(25,548)	1,114,459
4	Off-balance sheet amounts	135,862,047	10,190,415	–	–	–
5	Differences in valuations	–	–	–	–	–
6	Differences due to consideration of provisions	–	1,149,349	–	–	–
7	Differences due to potential exposures for counterparty credit risk	–	–	–	5,491,349	–
	Exposure amounts considered for regulatory purposes	563,564,045	437,927,303	–	5,465,801	1,114,459

LIA: Explanations of differences between accounting and regulatory exposure amounts

(1) Template LI1

The differences between column (a) and column (b) of Template LI1 are primarily due to the consolidation basis for accounting includes the Bank and all its subsidiaries whereas the consolidation basis for regulatory purposes includes the Bank and only some of the Group's subsidiaries but mainly excluded nominee services companies and investment holding company.

(2) Template LI2

The main drivers for the differences between accounting values and amounts considered for regulatory purposes are the application of credit conversion factor (“CCF”) on off-balance sheet amounts and consideration of potential future exposures (“PFE”) for counterparty risk.

Regulatory Disclosure Statement (continued)

PART II: LINKAGES BETWEEN FINANCIAL STATEMENTS AND REGULATORY EXPOSURES (CONTINUED)

PV1: Prudent valuation adjustments

		(a)	(b)	(c)	(d)	(e)	(f)	(g)	(h)
								Of which:	Of which:
At 31 December 2022 (HK\$' 000)		Equity	Interest rates	FX	Credit	Commodities	Total	In the trading book	In the banking book
1	Close-out uncertainty, of which:	-	38,641	-	-	-	38,641	-	38,641
2	<i>Mid-market value</i>	-	-	-	-	-	-	-	-
3	<i>Close-out costs</i>	-	38,641	-	-	-	38,641	-	38,641
4	<i>Concentration</i>	-	-	-	-	-	-	-	-
5	Early termination	-	-	-	-	-	-	-	-
6	Model risk	-	-	-	-	-	-	-	-
7	Operational risks	-	-	-	-	-	-	-	-
8	Investing and funding costs	-	-	-	-	-	-	-	-
9	Unearned credit spreads	-	-	-	-	-	-	-	-
10	Future administrative costs	-	-	-	-	-	-	-	-
11	Other adjustments	-	-	-	-	-	-	-	-
12	Total adjustments	-	38,641	-	-	-	38,641	-	38,641

Prudent valuation adjustments (“PVA”) are made for financial instruments accounted for at fair value for the purpose of determining capital requirements, regardless of whether they are booked in the trading book or banking book and whether they are marked-to-market or marked-to-model. The Group applies prudence and makes appropriate adjustments in the financial reporting to address valuation uncertainties arising from the following factors: mid-market value, unearned credit spreads, and other factors where appropriate.

Regulatory Disclosure Statement (continued)

PART IIA: COMPOSITION OF REGULATORY CAPITAL (CONTINUED)

CC1: Composition of regulatory capital (continued)

Row No.	Description	Hong Kong basis	Basel III basis
		HK\$' 000	HK\$' 000
9	Other intangible assets (net of associated deferred tax liability)	453,944	453,944
	<p><u>Explanation</u> As set out in paragraph 87 of the Basel III text issued by the Basel Committee (December 2010), mortgage servicing rights (“MSRs”) may be given limited recognition in CET1 capital (and hence be excluded from deduction from CET1 capital up to the specified threshold). In Hong Kong, an AI is required to follow the accounting treatment of including MSRs as part of intangible assets reported in the AI’s financial statements and to deduct MSRs in full from CET1 capital. Therefore, the amount to be deducted as reported in row 9 may be greater than that required under Basel III. The amount reported under the column “Basel III basis” in this box represents the amount reported in row 9 (i.e. the amount reported under the “Hong Kong basis”) adjusted by reducing the amount of MSRs to be deducted to the extent not in excess of the 10% threshold set for MSRs and the aggregate 15% threshold set for MSRs, DTAs arising from temporary differences and significant investments in CET1 capital instruments issued by financial sector entities (excluding those that are loans, facilities or other credit exposures to connected companies) under Basel III.</p>		
10	Deferred tax assets (net of associated deferred tax liabilities)	417,649	417,649
	<p><u>Explanation</u> As set out in paragraphs 69 and 87 of the Basel III text issued by the Basel Committee (December 2010), DTAs of the bank to be realized are to be deducted, whereas DTAs which relate to temporary differences may be given limited recognition in CET1 capital (and hence be excluded from deduction from CET1 capital up to the specified threshold). In Hong Kong, an AI is required to deduct all DTAs in full, irrespective of their origin, from CET1 capital. Therefore, the amount to be deducted as reported in row 10 may be greater than that required under Basel III. The amount reported under the column “Basel III basis” in this box represents the amount reported in row 10 (i.e. the amount reported under the “Hong Kong basis”) adjusted by reducing the amount of DTAs to be deducted which relate to temporary differences to the extent not in excess of the 10% threshold set for DTAs arising from temporary differences and the aggregate 15% threshold set for MSRs, DTAs arising from temporary differences and significant investments in CET1 capital instruments issued by financial sector entities (excluding those that are loans, facilities or other credit exposures to connected companies) under Basel III.</p>		
18	Insignificant LAC investments in CET1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	–	–
	<p><u>Explanation</u> For the purpose of determining the total amount of insignificant LAC investments in CET1 capital instruments issued by financial sector entities, an AI is required to aggregate any amount of loans, facilities or other credit exposures provided by it to any of its connected companies, where the connected company is a financial sector entity, as if such loans, facilities or other credit exposures were direct holdings, indirect holdings or synthetic holdings of the AI in the capital instruments of the financial sector entity, except where the AI demonstrates to the satisfaction of the MA that any such loan was made, any such facility was granted, or any such other credit exposure was incurred, in the ordinary course of the AI’s business. Therefore, the amount to be deducted as reported in row 18 may be greater than that required under Basel III. The amount reported under the column “Basel III basis” in this box represents the amount reported in row 18 (i.e. the amount reported under the “Hong Kong basis”) adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI’s connected companies which were subject to deduction under the Hong Kong approach.</p>		

Regulatory Disclosure Statement (continued)

PART IIA: COMPOSITION OF REGULATORY CAPITAL (CONTINUED)

CC1: Composition of regulatory capital (continued)

Row No.	Description	Hong Kong basis	Basel III basis
		HK\$' 000	HK\$' 000
19	Significant LAC investments in CET1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	–	–
	<p><u>Explanation</u> For the purpose of determining the total amount of significant LAC investments in CET1 capital instruments issued by financial sector entities, an AI is required to aggregate any amount of loans, facilities or other credit exposures provided by it to any of its connected companies, where the connected company is a financial sector entity, as if such loans, facilities or other credit exposures were direct holdings, indirect holdings or synthetic holdings of the AI in the capital instruments of the financial sector entity, except where the AI demonstrates to the satisfaction of the MA that any such loan was made, any such facility was granted, or any such other credit exposure was incurred, in the ordinary course of the AI's business. Therefore, the amount to be deducted as reported in row 19 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 19 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.</p>		
39	Insignificant LAC investments in AT1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	–	–
	<p><u>Explanation</u> The effect of treating loans, facilities or other credit exposures to connected companies which are financial sector entities as CET1 capital instruments for the purpose of considering deductions to be made in calculating the capital base (see note re row 18 to the template above) will mean the headroom within the threshold available for the exemption from capital deduction of other insignificant LAC investments in AT1 capital instruments may be smaller. Therefore, the amount to be deducted as reported in row 39 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 39 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.</p>		
54	Insignificant LAC investments in Tier 2 capital instruments issued by, and non-capital LAC liabilities of, financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold and, where applicable, 5% threshold)	–	–
	<p><u>Explanation</u> The effect of treating loans, facilities or other credit exposures to connected companies which are financial sector entities as CET1 capital instruments for the purpose of considering deductions to be made in calculating the capital base (see note re row 18 to the template above) will mean the headroom within the threshold available for the exemption from capital deduction of other insignificant LAC investments in Tier 2 capital instruments and non-capital LAC liabilities may be smaller. Therefore, the amount to be deducted as reported in row 54 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 54 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.</p>		
<p>Remarks:</p> <p>The amount of the 10% threshold and 5% threshold mentioned above is calculated based on the amount of CET1 capital determined in accordance with the deduction methods set out in BCR Schedule 4F. The 15% threshold is referring to paragraph 88 of the Basel III text issued by the Basel Committee (December 2010) and has no effect to the Hong Kong regime.</p>

PART IIB: MACROPRUDENTIAL SUPERVISORY MEASURES

CCyB1: Geographical distribution of credit exposures used in countercyclical capital buffer

		At 31 December 2022			
		a	b	c	d
Geographical breakdown by Jurisdiction (J)		Applicable JCCyB ratio in effect	RWA used in computation of CCyB ratio	AI-specific CCyB ratio	CCyB amount
			HK\$' 000		HK\$' 000
1	Hong Kong SAR	1.0000%	167,434,437		
2	Luxembourg	0.5000%	191,808		
3	Norway	2.0000%	837		
4	Sweden	1.0000%	1,077		
5	United Kingdom	1.0000%	1,272,169		
Sum (Remark 1)			168,900,328		
Total (Remark 2)			248,642,982	0.6790%	2,132,908

Remark:

- (1) This represents the sum of RWAs for the private sector credit exposures in jurisdictions with a non-zero countercyclical buffer rate.
- (2) The total RWAs used in the computation of the CCyB ratio in column (b) represents the total RWAs for the private sector credit exposures in all jurisdictions to which the banks is exposed, including jurisdictions with no countercyclical buffer rate or with a countercyclical buffer rate set at zero. The CCyB amount in column (d) represents the Group's total RWAs multiplied by the Group specific CCyB ratio in column (c).
- (3) In accordance with the announcements made by the HKMA, the CCyB ratio for Hong Kong was 2.5% of risk-weighted amounts effective from 1 January 2019, reduced to 2.0% effective from 14 October 2019 and was further reduced to 1.0% effective from 16 March 2020.

PART IIC: LEVERAGE RATIO

LR1: Summary comparison of accounting assets against leverage ratio exposure measure

Item		Value under the LR framework At 31 December 2022
		HK\$' 000
1	Total consolidated assets as per published financial statements	451,650,934
2	Adjustment for investments in banking, financial, insurance or commercial entities that are consolidated for accounting purposes but outside the scope of regulatory consolidation	523,814
2a	Adjustment for securitised exposures that meet the operational requirements for the recognition of risk transference	-
3	Adjustment for fiduciary assets recognised on the balance sheet pursuant to the applicable accounting standard but excluded from the LR exposure measure	-
3a	Adjustments for eligible cash pooling transactions	-
4	Adjustments for derivative contracts	(14,046,240)
5	Adjustment for SFTs (i.e. repos and similar secured lending)	943,448
6	Adjustment for off-balance sheet ("OBS") items (i.e. conversion to credit equivalent amounts of OBS exposures)	21,109,404
6a	Adjustments for prudent valuation adjustments and specific and collective provisions that are allowed to be excluded from exposure measure	(165,201)
7	Other adjustments	(5,972,411)
8	Leverage ratio exposure measure	454,043,748

Leverage ratio			
22	Leverage ratio	11.2%	11.5%

Regulatory Disclosure Statement (continued)

PART IID: LIQUIDITY

LIQA: Liquidity risk management

Liquidity risk is the risk that the Group may not be able to fund an increase in assets or meet obligations as they fall due without incurring unacceptable losses. Such funding liquidity risk arises from the maturity mismatch of the assets and liabilities that the Group manages. Market liquidity risk is a risk that occurs when additional costs are involved in disposing of a position in the market under abnormal or stressed market conditions. Under these conditions, the bid-ask spreads for the position are much wider than usual or there could even be an extreme lack of buyers. As a result, the Bank will incur extra costs to dispose of the position.

The liquidity risk management framework is as follows:

- The management of the Group’s liquidity risk is governed by the Liquidity Management Policy, concurred by the Asset and Liability Committee (“ALCO”) and the CRMC, and approved by the Board of Directors.
- The CRMC is delegated by the Board of Directors to oversee the Group’s liquidity risk management. Its main responsibilities are to review and approve policies, set strategies, and define risk appetite and tolerance limits.
- The ALCO is established by the Chief Executive Officer and ratified by the CRMC as the governing body responsible for formulating and implementing policies, strategies, guidelines and limit structures. It also identifies, measures and monitors the Group’s liquidity risk profile to ensure current and future funding requirements are met. In addition, the ALCO monitors a set of risk indicators for liquidity risk. Daily liquidity stress testing, which includes market general, bank-specific and combined (market general and bank-specific) stress scenarios, is conducted by the Risk Management Group, and the stress results are regularly reviewed by the ALCO to assess the current risk tolerance level and the level of the liquidity cushion. A Contingency Funding Plan is established which sets out the strategies for addressing liquidity stress situations. The plan contains a set of policies, procedures and action plans, with clearly established lines of responsibility, as well as invocation and escalation procedures. This plan is reviewed and approved by the ALCO on a regular basis.
- Daily liquidity management is managed by the Central Treasury Unit to monitor funding requirements. This unit is supported by other functional departments including the Financial Management Group and Risk Management Group, which monitor the liquidity risk and provide regular reports to the management, committees and local regulatory bodies. Limits for net cash flow per different time bucket under stress scenarios have been set to ensure that adequate funding and liquid assets are available to meet liquidity needs. Moreover, limits, triggers or alerts are set for other liquidity risk indicators such as the statutory liquidity ratios, the loan-to-deposit ratio, the currency mismatch ratio and the maturity mismatch ratio. Both quantitative and qualitative measures are employed to identify and measure market liquidity risk. Limits and alert levels related to market and funding liquidity risk are monitored and reported by the Financial Management Group or Risk Management Group to the ALCO to review and approve on a regular basis. The Audit Department performs periodic reviews to ensure liquidity risk management functions are carried out effectively.

Liquidity management is conducted at the Group and the Bank levels, and at individual overseas branches and subsidiaries. Financial subsidiaries and overseas branches are responsible for implementing their own liquidity management policies under the framework established by the ALCO and local regulatory requirements, taking into account their different liquidity risk characteristics. The liquidity situation of overseas branches and subsidiaries falls under the overall supervision of the ALCO. Policy and respective counterparty limits are set for overseas branches and subsidiaries in respect of the funding support extended from the head office, with details shown in the below. The Group expects all business units to contribute to the success of managing liquidity under normal and contingency situations by maintaining a rapport with depositors, customers, interbank counterparties, related companies and the HKMA.

Regulatory Disclosure Statement (continued)

PART IID: LIQUIDITY (CONTINUED)

LIQA: Liquidity risk management (continued)

	Intragroup Money Market Funding Limit for the year ended 31 December 2022
	<i>HK\$ million</i>
<i>Subsidiaries</i>	
CITIC Bank International (China) Limited	2,500
HKCB Finance Limited	6,100
<i>Overseas Branches</i>	
Singapore	17,156
New York	54,586
Los Angeles	7,798
Macau	5,459

The objective of liquidity management is to meet obligations payable under normal and emergency circumstances, to fund asset growth and to comply with the statutory liquidity requirements. To achieve this, the following liquidity management processes are in place:

- Projecting cash flows in normal and various stress scenarios, using the net mismatch gap between assets and liabilities to estimate the prospective net funding requirement;
- Factoring potential drawdown on irrevocable committed facilities into our normal and stress scenarios to cater for contingent liquidity risk;
- Monitoring the statutory liquidity ratios, the loan-to-deposit ratio, the currency mismatch ratio and the maturity mismatch ratio against internal and/or regulatory requirements;
- Ensuring a sound and diversified range of funding sources, through monitoring the structure and the stability of the deposit portfolio;
- Projecting the statutory liquidity ratios regularly for the short to medium term to permit early detection of liquidity issues and to ensure the ratios are within statutory requirements and internal triggers;
- Projecting a high-level funding requirement and funding structure during the annual budget process to ensure sufficient funding and an appropriate funding mix;
- Conducting liquidity risk assessment before launching a new product;
- Maintaining High Quality Liquid Assets (“HQLA”) comprising cash and investment grade securities as a cushion against unexpected funding needs. The amount of HQLA that the Group maintains is determined with reference to the statutory requirement and the results of the liquidity stress tests;
- Maintaining access to the interbank money market;
- Maintaining a funding programme to tap debt funding on a regular basis;
- Monitoring the Group’s collateral requirement. Periodically assess and review the additional collateral required under derivative contracts and credit downgrade events. Based on the positions at 31 December 2022, in the event of a 2-notch downgrade, the impact on the Group’s additional collateral requirement is minimal; and
- Maintaining a Contingency Funding Plan, which integrates with the results of the scenarios and assumptions used in the stress test, including setting early warning indicators (including internal and market indicators), and describing actions to be taken in the event of a stress crisis, so as to minimise adverse long-term implications for business.

Regulatory Disclosure Statement (continued)

PART IID: LIQUIDITY (CONTINUED)

LIQA: Liquidity risk management (continued)

The Group funds its operations through a diversified funding source, primarily from the retail and corporate customer deposits. At the same time, it also participates in the wholesale funding market through the issuance of certificates of deposit (“CDs”), with the size no more than HKD25 billion, to secure another source of term funding and to enable diversification of funding sources. Deposit tenor mix and debt maturities are regularly monitored to ensure there is an appropriate funding maturity mix.

Under the Banking (Liquidity) Rules, the Group being a Category 1 institution is required to maintain a Liquidity Coverage Ratio (“LCR”) and Net Stable Funding Ratio (“NSFR”) above the statutory minimum requirements, which also serve as the Group’s assessment tools on the future cash flows and liquidity positions. Please refer to the LIQ1 and LIQ2 of the Regulatory Disclosures for details.

The following maturity profile is based on the remaining period at the end of the reporting period date to the contractual maturity date:

	31 December 2022			
	Repayable within one year	Repayable within one to five years	Repayable over five years	Undated
	<i>HK\$' 000</i>	<i>HK\$' 000</i>	<i>HK\$' 000</i>	<i>HK\$' 000</i>
Total on-balance sheet assets	281,701,519	118,328,569	36,460,813	15,160,033
Total on-balance sheet liabilities	375,024,627	16,854,223	2,977,910	2,100,023
Net liquidity gap	(93,323,108)	101,474,346	33,482,903	13,060,010

The net liquidity gap of off-balance sheet items is mainly within one year.

Regulatory Disclosure Statement (continued)

PART III: CREDIT RISK FOR NON-SECURITIZATION EXPOSURES

CRA: General information about credit risk

Risk management plays a critical role in balancing the risks and rewards of the Group's strategic goals, growth and activities. The Group's risks are managed under the oversight of the Board and its delegated Risk Management Committee, the Credit & Risk Management Committee ("CRMC"), with the fundamental objective of ensuring the Group's overall risk appetite, tolerance and risk management strategy is commensurate with the Group's strategy and direction, and therefore achieving value creation while preserving the Group's financial strength for sustainable development.

Credit risk is controlled and managed by the Risk Management Group ("RMG") under the oversight of the Credit Committee, and is reported to the CRMC at the board level on a quarterly basis. These committees provide appropriate oversight of the Group's risk management practices by defining the Group's policies and risk appetite, and providing the RMG with the means to implement measures to mitigate credit risk arising from the Group's adopted strategy.

The Group has established a comprehensive risk governance framework and risk management function comprising various risk owners and departments (including business units) that work collectively to identify, quantify, monitor and mitigate the various risks faced by the Bank. RMG is responsible for overseeing the Group's risk-taking activities and undertaking risk assessments independently from the business line. The Compliance & Control Group is responsible for monitoring compliance with laws, corporate governance rules, regulations and the Group's policies. The Internal Audit Group is responsible for providing assurance on the effectiveness of the Group's risk management framework including the risk governance arrangements.

The Group has developed risk management policies and procedures to identify, monitor and mitigate risks, to set appropriate risk limits and to monitor all relevant risk exposures by means of reliable and up-to-date management information systems. The risk management framework and risk appetite statement are approved by the Board and continually monitored and reviewed by the Board delegated committee and various management level committees, including Credit Committee, Non-Performing Loans Committee, Investment Review Committee, New Product Committee and Management Committee.

To match the standards set by the Basel Committee on Banking Supervision, the HKMA has imposed increasingly stringent requirements on the banking industry. With a view to strengthening the risk infrastructure and coping with a tighter regulatory environment, the Group implemented a number of risk management enhancement initiatives throughout the year. Various risk management enhancement projects and initiatives including the implementation of Basel III Reform Package are underway to keep pace with the evolving regulatory landscape and increasingly stringent regulatory requirements. Furthermore, the Group has been actively fortifying the resilience against climate-related risks and promoting the risk culture of green and sustainable banking.

The Group maintains robust management information and reporting systems to identify, measure, monitor and mitigate all relevant quantifiable and material risks and to provide our management with timely and accurate reports on our risk exposure, including provisions, total exposures and RWAs, as well as early alert accounts.

		(a)
		Amount
At 31 December 2022		HK\$' 000
1	Defaulted loans and debt securities at end of the previous reporting period	1,702,471
2	Loans and debt securities that have defaulted since the last reporting period	5,384,653
3	Returned to non-defaulted status	(10,048)
4	Amounts written off	(1,390,215)
5	Other changes (Note)	(2,289,697)
6	Defaulted loans and debt securities at end of the current reporting period	3,397,164

Note: Other changes mainly due to repayments from loan customers, disposal of the defaulted loans and settlement of debt securities.

CRB: Additional disclosure related to credit quality of exposures

Loans and advances past due up to 90 days and not otherwise classified as impaired are separately classified as “past due but not impaired”. “Past due but not impaired” gross financial instruments are those loans where, although customers have failed to make payments in accordance with the contractual terms of their facilities, they do not exhibit any objective evidence of impairment. Impaired loans and advances are loans which exhibit objective evidence of impairment, and the borrower is either unlikely to pay their credit obligations in full without recourse to security, or is more than 90 days past due on any material credit obligation. Objective evidence for impairment is described in the Significant Accounting Policies Note 2 of the Annual Report 2022. The accounting definition of past due and the regulatory definition of default are generally aligned.

The Hong Kong Financial Reporting Standard 9 (“HKFRS 9”) requires the consideration of changes in economic factors in ECL calculation, which would be determined on a probability-weighted basis. The Group has an effective credit risk rating process in place which captures the varying level, nature and drivers of credit risk of all in-scope assets in order to reasonably ensure that the corresponding ECL are appropriately measured. ECL must be updated on a timely basis to reflect changes in credit risk quality for all in-scope assets. The models used in the ECL computation process are reviewed regularly.

Loans and receivables with renegotiated terms are loans that have been restructured due to (i) deterioration in the borrower’s financial position or the borrower’s inability to meet the original repayment schedule; and (ii) for which the revised repayment terms, either of interest or of repayment period, are “non-commercial” to the Group. Renegotiated loans and receivables are subject to ongoing monitoring to determine whether they remain impaired or past due.

Regulatory Disclosure Statement (continued)

PART III: CREDIT RISK FOR NON-SECURITIZATION EXPOSURES (CONTINUED)

CRC: Qualitative disclosures related to credit risk mitigation

The Group focuses on assessing the repayment ability of individual customers or counterparties rather than just solely relying on securities. Mitigation of credit risk is a key aspect of effective risk management process that takes many forms. The Group has guidelines on the acceptability of specific classes of collateral or credit risk enhancements accompanied by the determination of valuation parameters. Such parameters are expected to be reviewed regularly. Security structures and covenants (financial and non-financial) are subject to regular review to ensure they comply with the stipulated conditions.

The Group enters into enforceable master netting arrangements with counterparties. If an event of default occurs, all outstanding transactions with the counterparty are terminated and all amounts outstanding are settled on a net basis. Except for the event of default, all outstanding transactions with the counterparty are settled on a gross basis and generally do not result in offsetting the assets and liabilities in the statement of financial position. The Group discloses information to evaluate the effect or potential effect of netting arrangements, including the rights of set-off associated with the Group's recognised financial assets and recognised financial liabilities, on the Group's financial position.

The Group establishes policies and procedures to govern the credit risk mitigations including acceptability and management of collateral, valuation practices, valuer's competency and documentations. Collateral should be revalued on a regular basis, though the frequency may vary with the type of collateral involved, the nature and the internal credit rating of the underlying credit.

The most common form of mitigating credit risk is to take collateral. The principal collateral received to secure loans and advances includes mortgages, cash collateral, equities listed on a main index/recognised exchanges, accounts receivable assignments, standby letters of credit and listed debt securities acceptable to the Group. The main types of provider of guarantees are banks, sovereigns and other financial institutions and corporates. The creditworthiness of guarantee providers is thoroughly assessed and ideally independent of the financial position of the borrower.

CR3: Overview of recognised credit risk mitigation

		(a)	(b1)	(b)	(d)	(f)
		Exposures unsecured: carrying amount	Exposures to be secured	Exposures secured by recognized collateral	Exposures secured by recognized guarantees	Exposures secured by recognized credit derivative contracts

4	Of which defaulted	908,329	2,663,770	2,569,390	94,379	-

CRD: Qualitative disclosures on use of ECAI ratings under STC approach

The standardized approach requires banks to use risk assessments prepared by external credit assessment institutions ("ECAIs"), including Standard & Poor's, Moody's and Fitch's, to determine the risk weights applied to exposures. There has been no change on the ECAIs over the current reporting period.

ECAI risk assessments are used within the Group as part of the determination of risk rating for the following exposure classes:

- a) Sovereigns
- b) Public Sector Entities
- c) Banks
- d) Corporates
- e) Securities Firms

The Group adopts standardized approach for credit risk. The risk weights are assigned to exposures according to Banking (Capital) Rule. When calculating risk-weighted amount, risk systems look up the available ECAI ratings to derive relevant risk weights.

Regulatory Disclosure Statement (continued)

PART IV: COUNTERPARTY CREDIT RISK

CCRA: Qualitative disclosures related to counterparty credit risk (including those arising from clearing through CCPs)

Counterparty Credit Risk (“CCR”) has two components, namely pre-settlement risk and settlement risk. Pre-settlement risk which comprises counterparty default risk and credit valuation adjustment (CVA) risk, is the risk of loss due to default, or deterioration of the credit quality, of the counterparty to a transaction before the final settlement of the transaction. Settlement risk is the risk of loss during the settlement process due to a counterparty’s failure to perform its obligation after the Bank has performed its obligation in a transaction at the settlement date. For counterparty default risk, an economic loss would only occur if the transaction with the counterparty has a positive economic value at the time of default, which vary in value by reference to a market factor, such as an interest rate, exchange rate or asset price. Counterparty credit risk relates to derivative contracts (including over-the-counter (“OTC”) derivatives and exchange-traded derivatives), securities financing transactions (“SFTs”), and long settlement transactions in either the trading or the non-trading book.

Counterparty credit risk for treasury transactions is managed in the same way as the Group manages its lending risk. Policies are established and implemented to effectively assess and control credit limits and tenors made available to the counterparty. Limits are based on the credit quality of the counterparty and aligned with the Group’s risk appetite.

Counterparty credit exposures are mitigated to the extent possible by various means including requiring and accepting collateral or cash margining or other forms of mitigation including but not limited to guarantee from third parties and/or incorporation of measures such as set-off rights, option to terminate and material change triggers or financial covenants. Payment netting and closeout netting, where proper documentation is in place will also mitigate counterparty credit risk. Industry standard documentation (for example, International Swaps and Derivatives Association master agreements for derivatives and Global Master Repurchase Agreements for SFTs) is executed for clients prior to trading. The Bank establishes a guideline for Credit Support Annex (“CSA”) requirement criteria, collateral threshold amounts, minimum transfer amounts, minimum haircuts and collateral eligibility criteria, and call frequency. Where netting is not enforceable, exposures are shown gross, and where netting and collateral enforceability criteria are not fulfilled, exposure is assumed to be uncollateralized.

Wrong-way risk represents the risk of loss that arises when the risk factors driving the exposure to a counterparty are positively correlated with the probability of default of that counterparty, i.e. the size of the exposure increases at the same time as the risk of the counterparty being unable to meet that obligation increases. The Group also manages its exposure to wrong-way risk under a risk management framework incorporating transactional approvals, controls, excesses, limits and regular monitoring, where appropriate.

A credit rating downgrade threshold clause in a CSA is designed for the Group to trigger an action if the credit rating of the affected party falls below a prescribed level, which may include the requirement to pay or increase collateral, the reduction of threshold amount, the termination of transactions or the assignment of transactions. Upon the new Variation Margin requirement, most of the CSA entered with banks had been updated with zero threshold.

Regulatory Disclosure Statement (continued)

PART V: MARKET RISK

MRA: Qualitative disclosures related to market risk

Overview of Market Risk

Market risk is the risk of loss caused by an adverse change in valuation associated with holding either long or short market positions. The risk arises as a result of market making, underwriting, principal position taking and asset/liability management in interest rate, foreign exchange, equity, credit and commodity markets and their associated derivatives instruments. The Group manages its market risk exposures mainly through its trading and treasury business. The trading business is to facilitate customer activities, but as a result, takes on principal positions. The treasury business performs asset/liability management function including liquidity risk management, with securities positions intended for liquidity management and investment purposes under non-trading portfolio (debt securities measured at fair value through other comprehensive income).

The objective of market risk management is to consistently measure and monitor market risk on a timely and unbiased basis in order to better manage the portfolios and, by doing so, optimise financial performance. The business is responsible for managing market risks to meet corporate performance objectives within the market risk limit parameters. The Risk Management Group (“RMG”) is responsible to independently monitor and report all market risks.

Market Risk Management and Governance Structure

The Board of the Group allocates capital or risk appetite through the limit process. The Board delegates Credit & Risk Management Committee (“CRMC”) to establish limits for the different businesses. CRMC further delegates market risk limit establishment to the Market Risk Committee (“MRC”) and then to RMG. RMG is responsible for designing and drafting the market risk limits and framework and reviewing and updating the limits on a regular basis. The market risk limits are to be approved by MRC and endorsed by CRMC. In addition, the Board also establishes a set of risk indicators under the risk appetite statement (“RAS”) in measuring different types of risks including market risk.

RMG is an independent function reporting to the Chief Risk Officer (“CRO”). RMG uses both quantitative and qualitative measures in analysing market risk. The analysis includes, but not limited to, Value-at-Risk (“VaR”), stress testing, risk sensitivities, market events, product liquidity and volatility, underlying quality, hedging strategy, performance including profit and loss, accuracy of valuations and balance sheet and capital consumptions. The results are regularly reported to senior management and CRO and to MRC and CRMC.

Regulatory Disclosure Statement (continued)

PART V: MARKET RISK (CONTINUED)

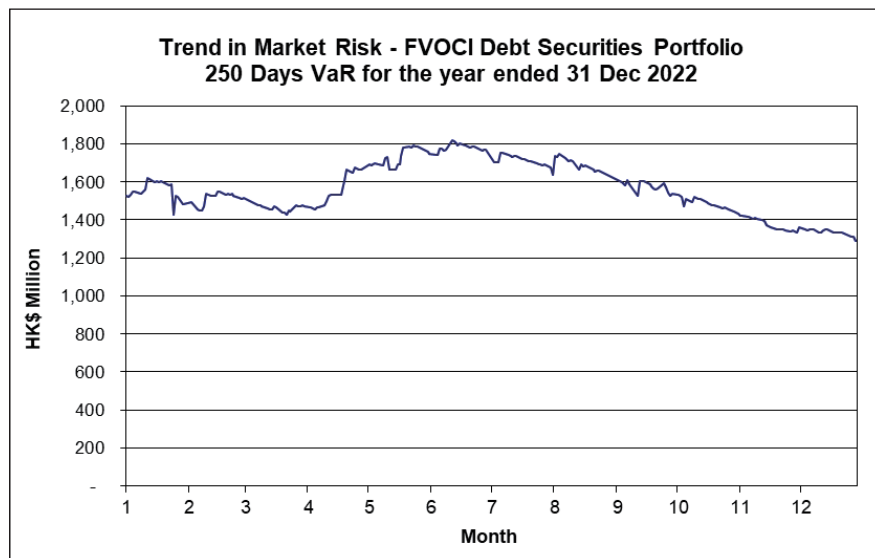

MRA: Qualitative disclosures related to market risk (continued)

Value at Risk (“VaR”)

VaR is a technique in estimating the potential losses that could occur on market risk-taking positions due to market rates and prices movement under normal market conditions over a specified time horizon. The model is designed to capture different types of risk including interest rate risk, foreign exchange risk, credit spread risk, equity risk, commodity risk and volatility risk.

The VaR model used by the Group is based on the historical simulation technique. The technique predicts the value at risk by simulating or constructing position returns over time arise from the historical changes in rates and prices in the interest rate, foreign exchange, equity, credit and commodity markets. The calculation that the Group has adopted for VaR is based on Historical method that includes the following:

- Period of observations of market data – based on 2 years of historical data
- Confidence level – set at 99%
- Time horizons – 1-day & 10-day for trading book portfolio; 250-day for FVOCI portfolio debt securities and related positions

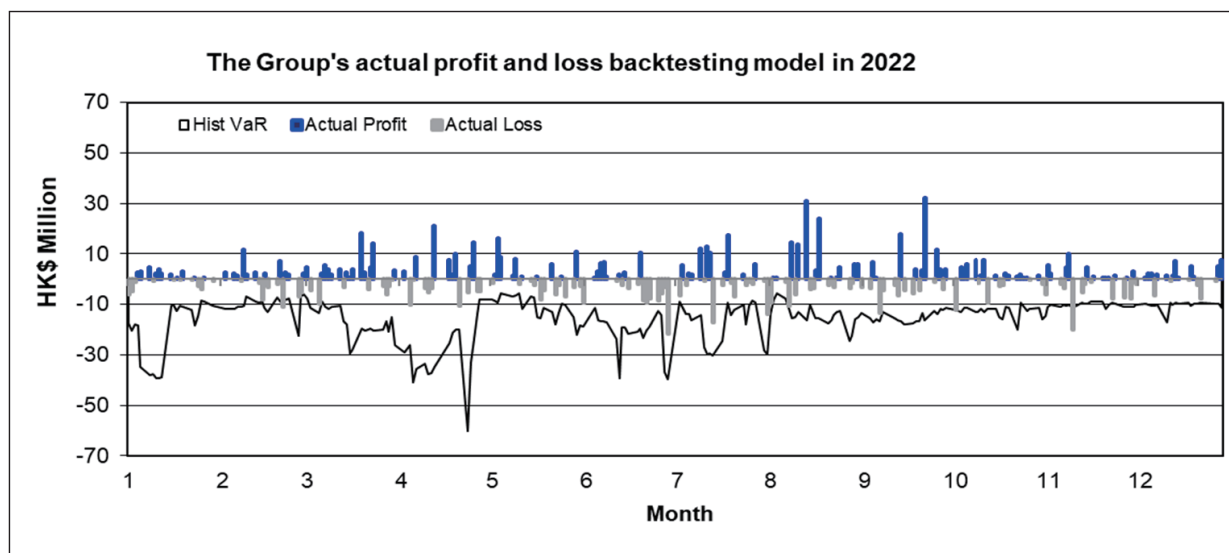

Regulatory Disclosure Statement (continued)

PART V: MARKET RISK (CONTINUED)

MRA: Qualitative disclosures related to market risk (continued)

Back Testing

The Group back-tests the accuracy of its VaR model by comparing the actual and hypothetical daily profit and loss, adjusted for items including fees and commissions, against the corresponding VaR figures. For the period from 1 January 2022 to 31 December 2022, there were 3 exceptions in the back-testing results, which corresponds to the green zone specified by the HKMA and the international Basel principles.

Stress Testing

Stress testing is implemented as a compliment of the VaR model in order to capture remote, but plausible events. The Group uses both sensitivity-based and historical-based scenarios for market risk stress testing. The results are reported to senior management, MRC and CRMC.

Other Risk Metrics

In addition, risk sensitivities and other risk metrics are used in measuring market risk of different asset classes and products. The types of risk sensitivities include, but not limited to, foreign exchange (“FX Open”), interest rate (“PV01”), credit fixed income (“CS01”), option volatility (“vega”) and etc. The types of risk metrics such as aging for staled securities positions, tenor to control risk with respect to time and rating on the issuer of securities are also adopted.

Fair Value

The Group adopts fair value practice including independent price verification (“IPV”), model validation, valuation uncertainty (“VU”) and valuation adjustments (“VA”) in addressing uncertainties arising from different sources. They include market price uncertainty, bid-offer or position close out uncertainty, model risk, concentration risk, liquidity risk, unearned credit spreads and liquidity.

PART VI: INTEREST RATE RISK IN BANKING BOOK

IRRBB: Interest rate risk in banking book – risk management objectives and policies

Interest rate risk in the banking book (“IRRBB”) is the risk to the Group’s financial condition caused by adverse movements in interest rates that affect the Group’s non-trading book activities. The impact of IRRBB could be measured both from earning or net interest income (“NII”) perspective and from economic value (“EVE”) perspective. The activities include those arise from assets, liabilities and off-balance sheet items. Excessive levels of IRRBB can pose a significant threat to earnings and capital base.

The objective of interest rate risk management at the Group’s is to consistently measure and monitor interest rate risk on a timely and unbiased manner in order to better manage risk taking and by doing so, optimize the Group’s financial performance. It is essential that the Group’s develops and establishes an effective governance structure and a system to ensure the soundness and appropriateness of interest rate risk management.

The Bank identifies, assesses and manages interest rate risk at several levels. The Board has delegated its authority in overseeing the Bank’s IRRBB to the Credit & Risk Management Committee (“CRMC”), which then delegates the authority to the Asset and Liability Committee (“ALCO”) for the control and management of IRRBB including assessment of strategies and risk profile and establishment of governance, methodologies, limits & exceptions and documentations. ALCO further delegates the day-to-day management of IRRBB to the Central Treasury Unit (“CTU”) of Treasury Management Group (“TMG”) and the Market and Credit Risk Methodologies (“MCRM”) of the Risk Management Group (“RMG”). Internal Audit Group (“IAG”) is to conduct regular audits to evaluate the effectiveness of internal controls over IRRBB.

The Group applies various types of metrics including BP01, stress testing and other sensitivity, where applicable. The limit authority is at the Board level, which is then delegated to ALCO.

In managing IRRBB, both on and off-balance sheet products are used including, but not limited to, interest rate swaps and fx swaps. Hedging is entered either against individual transactions or on a portfolio basis and related hedge accounting treatment is applied under Hong Kong Financial Reporting Standard.

In measuring IRRBB, the standardized framework introduced by HKMA’s Supervisory Policy Manual module IR-1 “Interest Rate Risk in the Banking Book” (“HKMA SPM IR-1”) has been adopted by the Group. Customer behavior on products such as types of deposits and loans due to change in interest rates is also considered. The cash flows of selective instruments are adjusted accordingly to reflect the behavior of clients when calculating some of the IRRBB metrics. The method is in line with those described in the HKMA SPM IR-1:

- the commercial margins and other credit spread components are included in the cash flows used in the computation and discount rate used;
- the average repricing maturity of non-maturity deposits is determined in accordance with customer behavior derived from the Group’s historical customer data;
- the prepayment risk on loans and early withdrawal risk on deposits are based on whether significant penalty is applied on a product or not;
- the impact on EVE and NII is based on the methodology per HKMA SPM IR-1; and
- the aggregation across currencies is also based on the methodology per HKMA SPM IR-1.

The Group’s average and longest behavioral maturity of non-maturity deposits (“NMDs”) are 1 year and 5 years respectively.

Regulatory Disclosure Statement (continued)

PART VI: INTEREST RATE RISK IN BANKING BOOK (CONTINUED)

IRRBBA: Interest rate risk in banking book – risk management objectives and policies (continued)

A robust risk management system plays a crucial role in the effectiveness and the efficiency of the risk management process. MCRM uses a vendor and an in-house developed system in capturing, reporting and monitoring IRRBB daily, monthly and quarterly. The system:

- evaluates IRRBB arising from the full range of assets, liabilities and off-balance sheet positions;
- employs validated and accepted financial models in measuring significant IRRBB;
- captures accurate and timely data; and
- is relatively automated to reduce administrative errors.

IRRBB1: Quantitative information on interest rate risk in banking book

(HK\$'million)		(a)	(b)	(c)	(d)
		ΔEVE		ΔNII	
Period		31 December 2022	31 December 2021	31 December 2022	31 December 2021
1	Parallel up	163	339	(1,555)	(1,431)
2	Parallel down	1,662	2,422	1,555	1,430
3	Steeper	415	318	N/A	N/A
4	Flattener	54	157	N/A	N/A
5	Short rate up	60	255	N/A	N/A
6	Short rate down	1,057	1,500	N/A	N/A
7	Maximum	1,662	2,422	1,555	1,430
	Period	31 December 2022		31 December 2021	
8	Tier 1 capital	50,964		46,415	

N/A – Not Applicable

Note:

(a) & (b): The change in economic value of equity (“ΔEVE”) based on the standardized framework described in the HKMA SPM IR-1 and the IRRBB return.

(c) & (d): The change in projected net interest income (“ΔNII”) over a forward-looking rolling 12-month period based on the methodology described in the HKMA SPM IR-1 and the IRRBB return.

Maximum: Refer to the maximum of economic value of equity (across interest rate shock scenarios 1 to 6 above) and net interest income (across interest rate shock scenarios 1 and 2 above). Positive values indicate losses under the alternative scenarios.

The parallel up scenario and the parallel down scenario would cause the most significant adverse impacts respectively on a decrease of 3.3% in Tier 1 Capital and a decrease of 22.5% in the net interest income at the consolidated level.

Regulatory Disclosure Statement (continued)

PART VII: REMUNERATION

REMA: Remuneration Policy

In support of the Bank's sustainable development and continued business growth, the Bank has put in place a Master Remuneration Policy and a structured reward system that enable the Bank to attract and retain talents in the highly competitive manpower market, promote effective risk management, and support the Bank's business objectives. The policy is applicable to the Bank, its overseas offices and its subsidiaries.

During 2022, in executing its roles and responsibilities in supervising the Bank's remuneration policies and structure, the major work performed by the Bank's Remuneration Committee included:

- engaged an external consulting firm, Willis Towers Watson, to review the remuneration policy and systems against regulatory requirements and sound remuneration governance framework;
- updated the Master Remuneration Policy to further strengthen the Bank's governance;
- reviewed and approved the proposed variable pay for 2021 and the pay review proposal for 2022;
- determined the remuneration packages of the senior management and key personnel of the Bank;
- discussed and reviewed the fees payable to the directors and made its recommendation to the Board; and
- reviewed the Remuneration Committee's effectiveness in discharging its roles and responsibilities, and its terms of reference.

(i) *Reward System*

The reward system is designed based on the Total Compensation Framework ("TCF"). Total Compensation comprises a fixed component (Guaranteed Cash), a variable component, and benefits.

The Bank's variable remuneration includes Performance Bonus which mainly takes the form of cash bonus, while Long-term Incentive is a form of phantom share scheme (Book Value Appreciation Rights Scheme).

Performance Bonus Scheme is intended to reward performance in the preceding year. In determination of the Performance Bonus pool of the Bank, the Remuneration Committee would consider both financial factors (including Operating Profit and other financial ratios against the market) and non-financial factors (including but not limited to compliance risk, liquidity risk and operational risk management). Unsatisfactory performance in non-financial factors will lead to reduction of Performance Bonus pool. Final bonus pool at the Bank's level will be endorsed by Chief Risk Officer, and be approved by the Remuneration Committee.

Allocations of Performance Bonus to individual employees are based on assessment on the achievement against key measures including financial, risk management, regulatory and compliance, growth, people and team, as well as staff competencies and behaviour. Such variable remuneration is subject to a deferral provision, under which if the variable remuneration of an employee exceeds the prescribed threshold, a portion of the variable remuneration will be deferred in order to align remuneration with the time horizon of risk and to allow their performance, including the associated risks, be validated over a period of time. The unvested deferred remuneration can be forfeited where it is later established that there has been fraud or other malfeasance on the part of the employee or violations by the employee of internal control policies.

The Long-term Incentive is aimed to motivate executives towards increasing shareholders' wealth while balancing long-term risk management. Under the Long-term Incentive Scheme, payment of incentive is determined by the appreciation in the Bank's net asset value (applicable for the grant in 2020 or before) or net profit after tax (applicable for the grant in 2021 or afterwards) over a 3-year period and is made at the end of the performance period. Payment is deferred until performance results create the economic value that triggers an award. It is designed to align employees' reward with long-term value creation.

Regulatory Disclosure Statement (continued)

PART VII: REMUNERATION (CONTINUED)

REMA: Remuneration Policy (continued)

(ii) *Methodologies and Approaches*

Methodologies and approaches applied to remuneration arrangement include but not limited to the followings:

- **Regular Review** with reference to the guidance issued by Financial Stability Board (FSB) will be conducted, to ensure the effectiveness of the remuneration and related performance measurement mechanisms in preventing and remediating potential misconduct risk.
- **Total Compensation Framework** to ensure optimal level of remuneration and to deliver balanced solution.
- **Market Benchmarking** to take into account market relativities, having regard to the need to attract, motivate and retain talents.
- **Job evaluation** to determine relative size of different position and therefore corresponding level of reward.
- **Performance Management System** linked with reward system to support performance-oriented culture.
- **Talent Identification and Classification Method** taking into account performance and potential for differentiation when granting variable rewards.
- **Promotion review mechanism** with consideration of competency requirements and performance to support the Bank's manpower plan.
- **Remuneration Committee** assists the Board in the design and operation of the remuneration system. The Committee held three meetings in 2022. Members of the Remuneration Committee are Non-executive Directors of the Bank. Except for Non-executive Directors assigned by the parent bank, the other Non-executive Directors are paid Directors' fee.
- **Engagement of external consulting firm** in verification of incentive scheme to ensure effectiveness (to be commissioned by the Chairman of the Board), when necessary.
- **Clawback and Malus Arrangement** shall be made under the following circumstances
 - (a) Vesting conditions are not fulfilled
 - (b) Performance measurement was based on data which is later proven to have manifestly mis-stated
 - (c) Fraud or other malfeasance on the part of the relevant grantees
 - (d) Violation by the grantees of internal control policies or legal requirement
- The **Disciplinary Actions Policy** to provide clear guidelines on the consequences of misconduct behavior on remuneration. It covers indicative scenarios that severity of misconduct would result in a reduction to variable remuneration proportionately.

(iii) *Senior Management and Key Personnel*

Senior Management ("SM") is defined as heads of major functional units and Key Personnel ("KP") is defined as those whose activities involve the assumption of material risk or the taking on of material exposures on behalf of the Bank.

REMA: Remuneration Policy (continued)

(iv) Staff within risk control function

Risk Control Function includes risk management, legal, compliance, audit, and financial management function.

The remuneration of risk control function staff is determined by their functional job responsibilities and achievements against key measures specific to the functional role they undertake, which are independent from the performance of the business they oversee. Remuneration of risk control function staff is carefully benchmarked with the market and internally to ensure that it is set at an appropriate level.

REM1: Remuneration awarded during financial year
