AUTORITÉ DES MARCHÉS FINANCIERS
AMF

This Universal Registration Document was filed on March 21, 2025 with the AMF, in its capacity as the competent authority in respect of Regulation (EU) No. 2017/1129, without prior approval pursuant to Article 9 of said regulation. The Universal Registration Document may only be used for the purposes of a public offering or admission of securities to trading on a regulated market if it is accompanied by a memorandum pertaining to the securities and, where applicable, an executive summary and all amendments made to the Universal Registration Document. The complete package of documents is approved by the AMF in accordance with Regulation (EU) No. 2017/1129.

Copies of this Universal Registration Document may be obtained free of charge from BPCE, 7, Promenade Germaine Sablon 75013 Paris.

The English version of this report is a free translation from the original which was prepared in French. All possible care has been taken to ensure that the translation is an accurate presentation of the original. However, in matters of interpretation, views or opinions expressed in the original language version of the document in French take precedence over the translation. Only the French version of the Universal Registration Document has been submitted to the AMF. It is therefore the only version that is binding in law.

MESSAGE FROM THE CHAIRMAN OF THE MANAGEMENT BOARD

Photo credit: Alexis REAU

Nicolas **Namias**

Chairman of the Management Board of BPCE

"With VISION 2030, our ambition is to enable our customers, cooperative shareholders and employees to approach their future with confidence.

In 2024, Groupe BPCE opened a new chapter in its history by mapping out its major strategic priorities and those of its business lines for 2030. Faced with the acceleration and mutual reinforcement of the environmental, technological, demographic and geopolitical transitions, our ambition is to enable our customers, cooperative shareholders and employees to approach their future with confidence.

The VISION 2030 project, prepared with all the executives of the Banques Populaires, the Caisses d'Epargne and our business lines, by broadly involving our teams, from retail banking to global business lines, is resolutely focused on growth and diversification of our activities in three major areas in France, Europe and worldwide.

With VISION 2030, we will combine the power of dreams with the strength of execution.

This growth momentum is thus already at work. In recent months, our Group has accomplished key projects for its development, such as the creation of BPCE Equipment Solutions, from the acquisition of Société Générale Equipment Finance, which makes BPCE the European leader in capital goods leasing, or the creation, in partnership with BNP Paribas, of ESTREEM, the No. 1 payment processor in France, with the aim of placing it in the top 3 in Europe. In all our business lines, we have also initiated the impact revolution to make it accessible to all thanks to the strength of our local solutions.

In addition, at the start of 2025, we announced the creation of a technological platform shared by the Banques Populaires and the Caisses d'Epargne, which will optimize the service offered to our 35 million customers and enrich the daily lives of our employees, thus supporting the development of local banking in France.

This momentum is also reflected in the annual results of our business lines. The year 2024 marks the return to financial performance in all our business lines. The Banques Populaires and the Caisses d'Epargne benefited from the rebound in their net interest margin, supported by an intensive commercial activity. The business lines serving the networks, such as insurance, consumer loans, leasing or payments, showed the same dynamism. Lastly, the global business lines of Natixis CIB and Natixis IM had an outstanding year. The Group's strength was reflected in the increase in our rating, placing us in the best standards.

I would like to highlight how this momentum is fueled by the daily commitment of our 100,000 employees. This year, they demonstrated their tremendous mobilization, particularly during the Paris 2024 Olympic and Paralympic Games, which will remain a highlight for our Group. On this occasion, the ties with our customers and cooperative shareholders were further strengthened, and we will continue to cultivate them by supporting them every day and in the major transitions, whilst contributing to the sustainable development of the regions in which we operate, faithful to our cooperative nature.

GROUPE BPCE AT A GLANCE

A cooperative full-service banking and insurance group serving its customers, cooperative shareholders, regions and the economy

9.8 MILLION
COOPERATIVE SHAREHOLDERS

35 MILLION
CUSTOMERS

Groupe BPCE is the No. 2 banking group[1] in France and finances over 21%[2] of the French economy. All our customers, be they individuals, professionals, associations, corporate customers of all sizes or institutional customers, have constantly evolving expectations, with increasing demands in terms of availability, feedback, advice and service.

Our business lines, in France and internationally, offer solutions tailored to meet these needs, in retail banking, insurance, financial solutions & expertise, payments, asset & wealth management, and corporate & investment banking.

In the regions and internationally, our brands support our customers in all their projects, through all distribution channels, by offering them a complete range of financial services and offers.

Thanks to its unlisted cooperative nature, which enables it to invest to meet the challenges of tomorrow, Groupe BPCE is committed to long-term action and provides local and concrete responses to economic and societal transformations. Its cooperative model is a performance factor, in line with society's expectations.

Strategic plan and objective for 2026

VISION 2030

Enabling our customers, cooperative shareholders and employees to approach the future with confidence

Groupe BPCE is opening a new chapter in its history with the launch of its VISION 2030 strategic project. Outlining the main strategic priorities of the Group and its business lines between now and 2030, this project is resolutely focused on the growth and diversification of its activities. VISION 2030 has commercial, financial and non-financial objectives for 2026 that already capitalize on several ambitious projects announced during the year 2024.

True to its cooperative nature, Groupe BPCE has mobilized the 14 Banques Populaires, the 15 Caisses d'Epargne and BPCE's business lines, in order to **build a growth project to serve its customers in a society** marked by **four major transitions**: environmental, demographic, technological and geopolitical. The acceleration and mutual reinforcement of these transitions can create uncertainties. Faced with this situation, Groupe BPCE is mobilizing its local and regional presence, its business lines and expertise, to enable its customers, cooperative shareholders and employees to **assert their power to act and to trust in the future**.

VISION 2030, which is a milestone for Groupe BPCE and all of its companies, is organized around three main pillars.

FORGING OUR GROWTH FOR THE LONG TERM	GIVING OUR CUSTOMERS TRUST IN THEIR FUTURE	EXPRESSING OUR COOPERATIVE VALUES IN ALL TERRITORIES

In 2030, a Group…

Leader Leadership positions in France, Europe and worldwide, underpinning diversified growth	**That enables** Two priorities for a world in transition: housing and territories competitiveness	**Proud and strong from its many faces** Everywhere, our brands, regional banking houses and expertise are combined to great effect
Open Partnerships that boost our growth model	**That protects** Insurance for all key milestones and life phases	**With a positive impact** A positive global impact thanks to the power of local solutions accessible to all
High-performer Cooperative performance to chart our growth over the long term	**That simplifies** Simplified relationship models thanks to the best of human and digital solutions, enhanced by AI	**With lifelong influence for its millions of ambassadors** Cooperative shareholders and employees, proud of their Group and committed to its values in their everyday lives

VISION 2030

All on the road to 2030

Groupe BPCE, a Group with a positive impact committed to making impact accessible to all

A GROUP WITH A POSITIVE IMPACT

The cooperative nature of the Banques Populaires and the Caisses d'Epargne combined with their strong local presence have made Groupe BPCE a financial player with a positive societal impact since its inception, particularly committed to the decarbonization of the economy in recent years. Groupe BPCE's global business lines - Natixis Corporate & Investment Banking and Natixis Investment Managers - are positioning themselves as key global players in a world in transition.

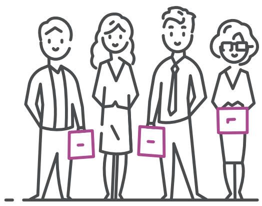
MAKING IMPACT ACCESSIBLE TO ALL

By 2030, the impact revolution will depend on our ability to ensure that the greatest possible number of people benefit from it; this is the essence of 'impact for all'.

LOCAL SOLUTIONS, GLOBAL IMPACT

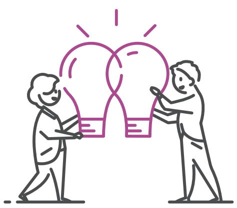
Our local roots allow us to focus our actions on the local level, inspired by the idea that this is where it is possible to begin building a desirable and sustainable world. Both in France and abroad, our companies contribute to a more sustainable economic and social development within the local region or part of the world in which they are located.

THE STRENGTH OF LOCAL SOLUTIONS ACCESSIBLE TO ALL:



All customers whether they are individuals, corporates or local authorities, by supporting and making their transition possible.

All territories and all the society, because the Group's cooperative nature ensures its ability to bring together local players and undertake regional initiatives.



All employees and boards of directors, by mobilizing 100% of Groupe BPCE's employees, companies and governance bodies around ESG issues.

Strengthening our overall positive environmental impact

In response to the climate emergency, our approach sets out to ensure the rapid implementation and rollout of measures designed to mitigate and adapt to the already tangible environmental and socio-economic impacts of climate change.

Making the impact accessible to all means raising awareness and providing extensive support to our customers in the environmental transition by providing them with expertise, advisory services, and comprehensive solutions.

- Strengthen the financing of the energy renovation of individual homes and condominiums; and raise our customers' awareness of how to calculate their carbon footprint to help them move towards low-carbon mobility or green savings.
- Support the transition of business models from SMEs to the largest international companies with a dedicated local dialog and a contribution of sector expertise to integrate ESG issues according to their size and economic sector.
- Offer sustainable savings and investment solutions through a range of responsible investments.
- Support changes in the energy mix and assist with reducing the use of carbon energies.
- Steer the decarbonization trajectories of the highest carbon-emitting sectors.
- Limit the climate impact of our financing, investment and insurance activities, and gradually align our portfolios on a "Net Zero" trajectory.
- Work to reduce the pressure on nature and gradually integrate the protection of biodiversity into our activities.

Strengthen our overall positive societal impact

Stemming from century-old brands in close contact to territories and the needs of both customers and society, our companies have played a societal role since their origins:

- In addition to being the No. 1 bank for SMEs, we are also a leading financier of the Social and Solidarity Economy.
- A key player in solidarity finance and social entrepreneurship.
- Leading banking group complementary to Initiative France honor loans and leading issuer of loans guaranteed by France Active for VSEs.
- A long-standing banker for social housing
- Support for the most vulnerable populations with adapted products and services, and economic empowerment of everyone through action and acculturation programs.

In the regions, the Banques Populaires and the Caisses d'Epargne are **key players in the dynamic development of our territories** by financing the construction or renovation of infrastructure and facilities necessary for education, health or mobility. They are the leading private financier of local authorities and the hospital sector. On a global scale, Natixis Investment Managers and Natixis Corporate & Investment Banking are developing their Asset & Wealth Management and Corporate & Investment Banking business lines in over 40 countries, in line with international commitments in terms of investment and financing activities.

No. 1 corporate sponsors in France, the Banques Populaires and the Caisses d'Epargne invest almost €34 million in the regions every year to support local projects. Groupe BPCE, with all its brands, was a Premium Partner of the Paris 2024 Olympic & Paralympic Games and we want to fully participate to the Legacy of Paris 2024.

Innovative in Sustainable Finance, the Group has set a target of issuing more than five green, social or health financing instruments per year, using all the debt instruments at its disposal.

Impact inside, a profound transformation of Groupe BPCE

In order to support the transitions of all our customers in accordance with the best available standards and with in-depth expertise and taking into account new market methodologies, we have launched an internal transformation plan for all Group companies at every level.

This pragmatic, shared and managed impact approach enables Groupe BPCE to operate as a banker, insurer and investor in the service of all its customers, bringing economic, societal and environmental performance to the heart of the territories and regions of the world where it is present.

1 PRESENTATION OF GROUPE BPCE

1.1 Group history

Groupe BPCE was established in 2009 through the merger of the Banque Populaire and Caisse d'Epargne groups. This marked the combination of two leading cooperative banks, created in 1878 and 1818 respectively, sharing common values rooted in solidarity, a local presence, democratic governance and a long-term vision.

The first step took place in 2006, with the creation of Natixis from the merger of Ixis and Natexis Banques Populaires.

In 2021, Natixis shares were delisted and the Group simplified its organization. It thereby strengthens its universal cooperative banking model.

True to its roots and history, Groupe BPCE supports the major changes of today, whether they be societal, environmental, or digital.

BANQUE POPULAIRE

1878 **FIRST BANQUE POPULAIRE FOUNDED**
The Banques Populaires were founded by and for entrepreneurs, to make it easier to finance their projects.

1917 The Banques Populaires quickly become **major players in their region's economy**, working for craftsmen, small retailers, and SMEs.

1962 The Banques Populaires **open their services to individual customers.**

1998 The acquisition of Natexis gives the Groupe Banque Populaire a **listed vehicle**.

CAISSE D'EPARGNE

1818 **FIRST CAISSE D'EPARGNE FOUNDED**
to promote, collect, and manage people's savings.

1835 The Caisses d'Epargne become "private institutions in the public interest".

1895 The Caisses d'Epargne conduct **operations of general interest.**

1983 The Caisses d'Epargne become **not-for-profit credit institutions**.

1999 The Caisses d'Epargne become **cooperative banks**.

2004 By purchasing CDC Ixis, the Groupe Caisse d'Epargne **branches out into investment banking.**

2006

THE BANQUE POPULAIRE AND CAISSE D'EPARGNE GROUPS UNITE THEIR STRENGTHS BY CREATING A JOINT SUBSIDIARY, NATIXIS

2009

CREATION OF GROUPE BPCE
No. 2 BANKING GROUP IN FRANCE
THROUGH THE MERGER OF THE BANQUE POPULAIRE AND CAISSE D'EPARGNE GROUPS

2010

First strategic plan of the "Ensemble" group, a construction plan: concentration of resources on the Group's core business lines; refocusing of Natixis; simplification of the Group's structure; synergies developed between networks, insurance and specialized financial services; enhanced solvency and liquidity.

2014

"Growing differently", a plan for the development of the Group: growth in market share in retail banking; major positions in asset management and savings; international development of Natixis; creation of an integrated insurance platform; launch of the Group's digitization; continued strengthening of solvency and liquidity.

2017

"TEC 2020", a Group transformation plan: finalization of regional bank mergers; grouping of business lines and resources to serve the networks; refocusing and disposal of assets (CFF, international retail, etc.); creation of a major player in interest rate and insurance management; the Group's commitment and responsiveness in supporting the economy during the health crisis; construction of shared digital platforms.

2019

- Purchase of **a 50.1% stake in Oney Bank alongside Auchan Holding**.
- Integration of Crédit Foncier's activities and expertise and integration of Natixis' Specialized Financial Services business lines within BPCE.
- Continued mergers of the Banques Populaires and Caisses d'Epargne.
- **Groupe BPCE becomes the first Premium Partner of the Paris 2024 Olympic and Paralympic Games.**
- **Signing of the Principles for Responsible Banking**: the Group undertakes to strategically align its activities with the United Nations Sustainable Development Goals and the Paris Climate Agreement.

2020

Creation of Ostrum Asset Management, a major player in rate and insurance management in Europe.

2021

- Launch of the **"BPCE 2024"** strategic plan**, an ambitious development plan in line with the transformation of society,** to become a leader in banking, insurance and asset management for all.
- **Delisting of Natixis.**
- Creation of the **Global Financial Services** division including the Asset & Wealth Management and Corporate & Investment Banking businesses.
- Sale by BPCE to La Banque Postale of its 16.1% stake in CNP Assurances.

2022

- **Nicolas Namias becomes Chairman of the Management Board of BPCE following Laurent Mignon.**
- Integration of the Insurance and Payments activities into BPCE.
- Acquisition by Natixis IM of La Banque Postale's stakes in Ostrum AM and AEW Europe.
- Sale of Bimpli, a subsidiary of Groupe BPCE and a leading player in employee benefits and services in France, to Swile — of which Groupe BPCE has become the largest shareholder — in order to create a world leader.
- BPCE Towers become the Group's common home.

2024

- **Groupe BPCE launches its VISION 2030 strategic project**, resolutely focused on the growth and diversification of its activities, and with commercial, financial and non-financial objectives for 2026.
- **Éric Fougère is elected Chairman of the Supervisory Board of BPCE**. He is also Chairman of the Steering and Supervisory Board of Caisse d'Epargne Bourgogne Franche-Comté
- **Groupe BPCE announces the signature of a memorandum of understanding with Société Générale** with a view to acquiring the activities of Société Générale Equipment Finance (SGEF).
- **BPCE and BNP Paribas forge a strategic partnership** to create the No. 1 payment processor in France, in the top 3 in Europe.
- As the first Premium Partner of the event, **Groupe BPCE is making a decisive contribution to the success of the Paris 2024 Olympic and Paralympic Games.**

1.2 Understanding the Group's organization

The Banques Populaires and the Caisses d'Epargne are owned by 9.8 million cooperative shareholders. This highly stable shareholding structure is imbued with a strong cooperative spirit.

The 14 Banques Populaires and the 15 Caisses d'Epargne hold an equal 100% stake in BPCE, which is responsible for defining the Group's policy and strategic orientations, and coordinating the commercial policies of each network.

The Banques Populaires and Caisses d'Epargne are banks in their own right. They collect deposits and savings, distribute loans and define their priorities locally.

The Fédération Nationale des Banques Populaires (FNBP) and the Fédération Nationale des Caisses d'Epargne (FNCE), the bodies that provide deliberation, communication and representation for the two networks and their cooperative shareholders, play an essential role in defining, coordinating and promoting the banks' cooperative spirit and social responsibility initiatives, in accordance with Groupe BPCE's commercial and financial objectives. Persons representative of their regional economies sit on the Board of Directors of the Banques Populaires and on the Steering and Supervisory Board of the Caisses d'Epargne. Their resources are first and foremost allocated to meet the needs of local areas and regional customers.

Group architecture

1
TWO BPCE COOPERATIVE SHAREHOLDER NETWORK

Under the cooperative banking model, the cooperative shareholders are the focal point of the Group's governance.

The Banques Populaires and Caisses d'Epargne are credit institutions wholly-owned by their cooperative shareholders (*via* LSCs – Local Savings Companies – for the Caisses d'Epargne).

Cooperative shareholding customers – both individuals and legal entities – **play an active part in the life, ambitions and development of their bank.**

Being a cooperative shareholder means owning a cooperative share (a percentage of the share capital not quoted on the stock exchange), representing a portion of the share capital in a Banque Populaire or an LSC for a Caisse d'Epargne, and playing a role in the bank's operation by taking part in General Meetings and voting to approve the financial statements and resolutions, validating management decisions and electing directors.

Each institution is governed by a Board of Directors and a Chief Executive Officer for the Banques Populaires, or a Steering and Supervisory Board (COS) and a Management Board for the Caisses d'Epargne.

SEE CHAPTER 4
"REPORT ON CORPORATE GOVERNANCE"

2
BPCE, A COLLECTIVE SERVING THE GROUP'S AMBITIONS

BPCE brings together the central institution of Groupe BPCE, the retail and global business lines, as well as the resource pools. To support the Group's performance, development and strategic ambitions, BPCE ensures the coordination, consistency and synergies between its various brands and companies.

– **The central institution, BPCE SA, is responsible for defining the policy and strategic orientations of the Group and each of the two networks.**

The main duties of the central institution, as defined by the French act of June 18, 2009, are to:

- coordinate trade policies;
- represent the Group and its networks, and negotiate national/international agreements on their behalf;
- represent the Group and its networks as an employer;
- take all necessary measures to ensure the Group's liquidity and solvency, risk management and internal control.

All banks affiliated with the central institution are covered by a guarantee and solidarity mechanism.

– **Beyond the central institution, BPCE brings together the following business lines, to serve the Group's development:**

- Insurance
- Digital & Payments
- Financial Solutions & Expertise
- BPCE Technologies & Opérations
- Corporate & Investment Banking
- Asset & Wealth Management

BPCE also includes Banque Palatine, Natixis Algérie and Crédit Foncier.

Thus, Groupe BPCE is made up of the two major cooperative networks, Banque Populaire and Caisse d'Epargne, as well as BPCE, that brings together the central institution, the retail and global business lines, and the resource groups.

REFER TO CHAPTER 1
"PRESENTATION OF GROUPE BPCE"

1.3 Highlights

January

In partnership with the European Investment Bank, Banque Populaire offers a budget of €150 million to facilitate the installation of health professionals and thus strengthen access to patient care.

BPCE Lease and the European Investment Bank sign a €300 million financial partnership dedicated to the environmental transition of SMEs and mid-sized companies in France and Europe.

February

Caisse d'Epargne creates an offering for micro-entrepreneurs enabling them to open their professional account online in a few minutes, access dedicated services and benefit from the expertise of an advisor.

March

Groupe BPCE becomes the first banking group in France to offer "Tap to Pay", a new generation payment solution for the two main operating systems on the market.

BPCE Assurances announces a new initiative to facilitate access to insurance for customers of the Banque Populaire and Caisse d'Epargne networks who have overcome breast cancer.

Caisse d'Epargne launches a private debt fund of €535 million to finance the development of French mid-sized companies in the regions. This fund is managed by the private debt platform of AEW, the real estate asset management company of Natixis Investment Managers.

April

Groupe BPCE announces the signature of a memorandum of understanding with Société Générale with a view to acquiring the activities of Société Générale Equipment Finance (SGEF). The transaction is expected to be completed for first-quarter 2025.

Natixis CIB announces the extension of Natixis Partners' minority participation in Clipperton, a boutique specializing in mergers & acquisitions advisory services in the tech sector.

May

Banque Populaire mobilizes to promote access to healthcare in all regions and offers the Zero Medical Desert Loan to its new professional healthcare customers.

Banque Populaire and Caisse d'Epargne announce the launch of a new exclusive remote monitoring offer with Verisure, French leader in remote monitoring.

With the planned acquisition of HSBC Epargne Entreprise, Natixis Interépargne strengthens its leadership in the employee savings and retirement market in France.

June

Groupe BPCE opens a new chapter in its history with the launch of its VISION 2030 strategic project.

Banque Populaire, Caisse d'Epargne and Oney forge a partnership with Leroy Merlin to offer their customers a turnkey experience with a comprehensive, integrated solution.

Natixis CIB announces the strategic investments of Natixis Partners in two M&A boutiques: Tandem Capital Advisors (Belgium) and Emendo Capital (the Netherlands).

BNP Paribas and BPCE forge a strategic partnership to create the No. 1 payment processor in France, in the top 3 in Europe.

July

The Standard & Poor's agency improves Groupe BPCE's long-term rating, which now stands at A+ with a stable outlook. This rating places the Group at the best European standard.

Caisse d'Epargne Hauts de France announces the signing of a memorandum of understanding with Dajia Insurance Group to acquire 100% of the share capital of Bank Nagelmackers, the oldest bank in Belgium.

Groupe BPCE publishes its new decarbonization commitments for five industrial sectors (aluminum, aviation, commercial real estate, residential real estate, and agriculture) and announces an extension of the scope of its objectives in three sectors already covered (automotive, steel, and cement).

July-September

Groupe BPCE is the first Premium Partner of the Paris 2024 Olympic and Paralympic Games. This partnership was signed in 2019.

September

With the launch of the CATVair and CATVert term accounts, the Banques Populaires and the Caisses d'Epargne offer their customers the opportunity to become players in the energy transition in their regions through their savings.

BPCE acquires iPaidThat in order to have an all-in-one digital financial management solution for the professional and VSE-SME customers of the Banques Populaires and the Caisses d'Epargne.

October

Banque Populaire and Caisse d'Epargne innovate to facilitate home ownership for individual first-time buyers under the age of 36, by allowing them to borrow more to purchase their main residence and to defer the capital repayment over time up to a limit of 10% to 20% of the total amount financed.

To deal with the cybersecurity challenges faced by their customers in terms of protecting their data and their activities, the Banques Populaires and the Caisses d'Epargne offer a comprehensive, customized system to support their professional and corporate customers.

The European Investment Bank, the European Investment Fund and Groupe BPCE strengthen their partnership to support the financing of innovation and the energy transition of SMEs and mid-sized companies in France, with a total budget of more than €1 billion.

BPCE launches its first "Social Bond" with share coupon with the assistance of Natixis CIB. This social bond, issued for the benefit of the Institut Robert-Debré du Cerveau de l'Enfant supported by the Fondation de l'Assistance Publique - Hôpitaux de Paris, was placed entirely with leading French institutional investors.

November

Banque Populaire reaffirms its commitment to innovative companies through three key initiatives: the signature of a partnership with the Start Industrie association, an organization representing French industrial start-ups and scale-ups, and two new financing agreements with the European Investment Bank and the European Investment Fund.

December

Caisse d'Epargne offers a simplified implementation process for the 130,000 business leaders affected by the regulatory obligation to share value, which has been imposed on companies with 11 to 49 employees since January 1, 2025. This offer benefits from the expertise of Natixis Interépargne.

GROUPE BPCE CONTRIBUTES TO THE SUCCESS OF PARIS 2024

Committed since January 1, 2019 alongside the COJOP (Paris Olympics organizing committee), Groupe BPCE and its companies were the first Premium Partner of Paris 2024.This global event will remain a real popular achievement, as 89% of French people consider it to be a success[1].

The Group actively contributed to this success, with an exceptional level of commitment, both from a human, financial and logistical point of view.

Banques Populaires

The 14 Banques Populaires are shareholders in BPCE on an equal footing with the Caisses d'Epargne, and are fully-fledged banks owned by their cooperative shareholders. They form a first-rate banking network made up of 12 regional Banques Populaires and two national affinity banks: CASDEN Banque Populaire, the benchmark bank for the French public sector, and Crédit Coopératif, the bank for the social and solidarity economy.

The Banques Populaires are actively involved in local communities and remain true to their entrepreneurial roots, providing their individual, professional, association, corporate and institutional customers with a full range of financing, savings, insurance, payment and specialized financial services (such as private management, leasing, factoring and social engineering).

The Banques Populaires are wholly-owned by their cooperative shareholders. The strength and durability of their cooperative model is based on balanced governance. Members are cooperative shareholders, co-owners of their bank's capital, through the purchase of shares. They elect the directors, who are committed local personalities, at the General Meeting, reinforcing the local character of Banque Populaire institutions.

Measured and recognized commitments

Each year, the Banques Populaires measure the cooperative and responsible actions they carry out in their regions, mainly in three areas: local proximity, entrepreneurial culture, and cooperative and sustainable commitment. These actions are listed in the cooperative and societal footprint, a tool based on ISO 26000 (the international standard for CSR) which references all the voluntary, non-regulatory and non-commercial actions carried out by the 14 Banques Populaires. As an indication, in 2023, more than 6,400 actions were carried out for an amount of nearly €200 million.

IN 2024

- The Banques Populaires innovated by launching the first packaged responsible incentive contract for their corporate customers.
- The Banques Populaires reaffirmed their role as key partners of farmers, in particular by implementing support measures to help them overcome their cash flow difficulties.
- The Banques Populaires strengthened their positioning with healthcare professionals, notably with the launch of several dedicated solutions.
- The Banques Populaires rolled out their new strategy for young people around three initiatives: the launch of the young entrepreneurs package, the introduction of free international operations, and the launch of the Nathan tutoring offer for the children of their customers.
- Premium Partners of Paris 2024 and Official Sponsors of the *Relais de la Flamme* (Torch Relay) of Paris 2024, the Banques Populaires were strongly committed to the success of the Games (Refer to section 1.3 Highlights / Groupe BPCE contributes to the success of Paris 2024).

INDIVIDUAL CUSTOMERS

In terms of activity, the year 2024 was marked by a slowdown in the real estate market which had an impact on the momentum of winning new customers: the Banques Populaires recorded a 10.3% decrease in the number of new customers in the retail market.

In Consumer Loans, the pace of development remained brisk, with growth of 1% in production, in line with previous years.

The number of principal active banking customers continues to grow, with stock growth of 1.5%, to 4.65 million principal active banking customers.

In non-life insurance (IARD) and personal protection insurance, the Banques Populaires recorded a decrease of 4% in total gross sales, with a stable sales volume on motor vehicles and a decrease of 4% on the sales of multi-risk home insurance policies, in line with the reduction in the home loan activity. Regarding personal protection, overall sales were stable with significant contrasts in performance between the various solutions: MAV (multi-risk personal accidents) recorded an increase of +15% in the gross sales volume; on the other hand, performance was down on family insurance (-3%) and precautionary insurance (-12%). The range was enhanced with a remote monitoring solution, in partnership with Verisure.

In terms of highlights, Banque Populaire launched several structuring actions.

The new youth strategy was rolled out around three initiatives: the launch of the young entrepreneurs package, combining the opening of a personal bank account and a professional account at a competitive price, a dedicated advisor, and extra-banking services including a training platform specific to entrepreneurship, developed in partnership with the Conservatoire National des Arts et Métiers (CNAM); the introduction of free international transactions (concerning international withdrawals and payments by card, with no ceiling limit, for all their customers aged 18 to 28 with a banking package); lastly, the launch of the Nathan tutoring offer for the children of Banque Populaire customers (with free access to the myMaxicours tutoring platform throughout the school year).

The digital bank savings pathways were strengthened with the selfcare deployment of several products (*Livret de Développement Durable* (LDD) passbook savings accounts, home purchase savings schemes and *Livret Jeunes* youth passbook savings accounts, *Livret dépôt solidaire* deposit passbook savings accounts and CASDEN Banque Populaire passbook accounts). This change meets a real expectation, as illustrated by the number of *Livret A* passbook savings accounts opened in selfcare in 2024 (34,000).

Lastly, Banque Populaire innovated in the field of payment wallet solutions with the launch of solutions in partnership with SwatchPay!, Garmin Pay and Google pay.

- **€15.3bn in new loans, -15.9%**
- **€152.3bn in loan outstandings, -1.7%**
- **€201.7bn in savings deposits, +3.0%**
- **309,091 new non-life insurance policies (IARD)**

PRIVATE MANAGEMENT

In 2024, the Banques Populaires' activity was sustained in private banking, with an increase in total customer outstandings of +3.2%.

The percentage of on-balance sheet savings increased by 177 points over a rolling 12-month period, thanks to the strategy of supporting non-equipped customers and the conduct of digital marketing actions. At the same time, the Banques Populaires strengthened their green offering with the launch of the CAT VAIR, which meets the needs of their customers looking for responsible, sustainable and environmental investments. Business was also buoyant in life insurance thanks, in particular, to loan issues and protected structured fund solutions; gross inflows from life insurance amounted to €4.03 billion. In individual retirement savings (PERI), a solution favored by French people, the Banques Populaires recorded 35,000 new contracts, an increase of +40% in the number of contracts.

Lastly, concerning financial savings, 2024 was marked by the launch of funds dedicated to sport (€153 million were invested) and solutions to address transition issues (€221 million were invested in Article 9 funds across all individuals and legal entities markets).

Overall, customer satisfaction increased with an NPS of +38. The quality of all these solutions was recognized at the 39th edition of the *"Corbeilles"* of the monthly *Mieux Vivre votre Argent* magazine: Banque Populaire was awarded 3rd place in the long-term five year *"Corbeille"* category.

- **579,145 customers, +2.7%**
- **€113bn under management, +3.70%**

PROFESSIONAL CUSTOMERS

In an uncertain economic environment, the Banques Populaires reaffirmed their commitment to their customers, craftspeople, retailers, self-employed professionals and farmers, at each stage of their projects: creation/installation, development, disposal/ transmission. This commitment was reflected in the good resilience in the acquisition of new customers, albeit with a contraction of -4.9%.

In the emblematic franchise market, Banque Populaire remains the leader in the franchisor segment (with 60% of the Banques Populaires customer franchise networks) and in the franchise segment (with 25% penetration rate).

Despite a difficult economic situation in certain sectors of activity (construction/masonry, agriculture, clothing, etc.), credit flows held up well, at €162.8 billion, a very slight decrease of -0.2% on the previous year. The intensity of the relationship with professional customers also increased, with an increase in the number of active equipped customers of +2.7% year-on-year and an increase in the number of customers with dual active relationships by +3.7 %.

In terms of financing, equipment loans to professionals recorded a further decline but which was less significant than in 2023. This decrease is the result of a slowdown in demand for financing, in a context of economic and political uncertainty. Conversely, the number of equipment leasing financings increased by +2.1%, confirming the Banques Populaires' commitment to support professionals in their development projects.

In insurance, the number of contracts sold rose by +7%, a trend driven by professional motor insurance (+10%) and personal protection (+6%).

In employee savings, a +30% increase in outstandings was recorded, reflecting customers' growing need to prepare for retirement.

Lastly, the number of premium cards rose by +2.1%, boosted by the partnership with Visa in connection with the Paris 2024 Olympic and Paralympic Games.

This dynamic activity was accompanied by a historically high level of customer satisfaction, with an NPS of +23.

In 2024, Banque Populaire strengthened its presence with two key customer bases.

In the context of the crisis in the agricultural sector, it reaffirmed its role as a key partner of farmers, by implementing support measures to deal with the cash flow difficulties encountered by the profession.

It also launched three new flagship solutions for healthcare professionals:

- The NEXT SANTE affinity platform, which offers advice and practical information to all healthcare professionals, regardless of their specialty, and gives access to a dedicated Banque Populaire expert;
- Financing of €150 million, in partnership with the European Investment Bank, to facilitate the installation of new practitioners, in particular in high-tension areas in order to offer better access to local care in the regions;
- Finally, the "Zero Medical Desert Loan", a 0% financing up to €20,000, to encourage doctors to set up in medical deserts.

The year was also marked by the strengthening of the Banques Populaires' positioning as preferred partners of accountants thanks to the launch of new dedicated offers, such as the electronic invoicing offer of the subsidiary iPaidThat, acquired by Groupe BPCE in 2024.

- **1.2 million professional customers**
- **558,632 tradesmen**
- **185,517 liberal professionals**
- **76,319 farmers**
- **€74.7bn in loan outstandings, -1.0%**

CORPORATE CUSTOMERS

In 2024, Banque Populaire continued its drive to win over corporate customers (more than 9,500 new customers), with a particularly marked increase in the mid-sized companies segment (almost +10%), in line with its strategic mid-sized companies program. This momentum can also be seen in the intensity of relationships with positive growth in active and active equipped customers, and a customer stock that recorded growth of more than 3.5%. This change is reflected in a significant increase in credit flows entrusted by corporate customers and the symbolic crossing of the €500 billion mark over a rolling year. On the credit side, investment loans are up by 2% in 2024 and short-term loans are holding up positively. In line with the Climate priority of Groupe BPCE's VISION 2030 strategic project, the Banques Populaires continued to support the ESG transition of their customers in 2024. Following the deployment of the "BP impact" loan throughout the country in 2023, subscriptions accelerated with a 3.5-fold increase in the number of contracts and a +46% increase in production by amount. Same focus on green financing with an increase in production of +2%. A collaboration with the Impact France movement was also launched to promote the impact score among business leaders. To meet companies' transition challenges, the Banques Populaires offered tools to support the digital transition, in particular for new payment methods and digital monitoring, thanks to the full digital management of international transactions, transfers with GPI Tracker, or their trade activities with Trade Tracker. Protection against cyber risks is not neglected around three lines of security: anti-fraudulent email software and training for employees, in partnership with Mailinblack; cyber security insurance offers; and tools against banking fraud with SuiteEntreprise.com. Lastly, Banque Populaire broke new ground by launching the first packaged responsible incentive contract. It makes it possible to involve all employees in the company's results and to increase the incentive bonus thanks to the achievement of CSR criteria. In addition, in 2024, the number of customers supported by employee savings plans was up by +32%.

- **164,259 corporate customers, +3.7%**
- **268,691 non-profits and institutions, +2.0%**
- **No. 1 bank for corporates, 44% are customers**
- **€44.0bn of medium- and long-term loan outstandings**

COMMUNICATION

One year after its launch, Banque Populaire's communication territory continued to focus on a buoyant discourse on successes. Thank to a constant presence via radio, Internet, social networks, billboards ..., the brand gained ground in terms of spontaneous notoriety, particularly with its historical targets: professionals (+4 points) and companies (+5 points). The year will, of course, remain marked by the Paris 2024 Olympic and Paralympic Games, for which Groupe BPCE was the first Premium Partner. The global success of the event reflected on Banque Populaire, which was the Official Sponsor of the *Relais de la Flamme* (Torch Relay). The brand generated 1,000 medoa mentions and 259 million contacts through the media. It also reached 8.5 million spectators along the roadsides and at celebration sites.

CASDEN BANQUE POPULAIRE

CASDEN Banque Populaire, a cooperative bank serving specifically members of the French civil service, continued its development. In 2024, it won over 79,798 new cooperative shareholders, of which 66% came from the civil service excluding National Education. Among these new CASDEN cooperative shareholders, 52,380 are also Banque Populaire customers. Today, it brings together nearly 2,359,980 Cooperative shareholders. In 2024, CASDEN maintained its level of new home loans, in a tense market with the distribution of nearly 12,000 home loans. In order to facilitate the first-time home ownership of young civil servants, the Starden Immobilier loan, previously reserved for cooperative shareholders under the age of 30, is now available up to the age of 35, in order to finance a principal residence at a fixed rate. The Real Estate Starden Loan is cumulative with the PTZ (interest-free loan) and the "PTZ + X" (additional loan to the PTZ, granted up to €25,000, up to double the limit of the PTZ). As part of its premium partnership with the 2024 Paris Olympic and Paralympic Games, CASDEN launched the CASDEN Sport loan to encourage its members to take part in sports by enabling them to finance their sports equipment. CASDEN Banque Populaire is committed to supporting its Cooperative shareholders in terms of the ecological transition. With the Cozynergy offer, CASDEN offers them a turnkey service to carry out their energy renovation work. It was the leading Banque Populaire bank on leads for the Cozynergy offer in 2024. And, out of more than 1,500 cooperative shareholders who have completed their projects, 85% are satisfied with its support and 90% believe that the solutions proposed have enabled them to better control the cost of their work. Parnasse Garanties, a surety insurance subsidiary held by CASDEN Banque Populaire at 80% and by MGEN at 20%, now insures the new guarantees of the MGEN mutualists and the entire portfolio of MGEN stock has been transferred to it. More than 57,000 guarantees were taken over by Parnasse Garanties, representing more than €2 billion. The diffusion of the "History, sport and citizenship" exhibition, created with the ACHAC research group continued in schools and public sector establishments. Placed under the high patronage of Emmanuel Macron, this educational program on the history of the Olympic and Paralympic Games is part of the Heritage of Paris 2024 component. Nearly 9,000 events were organized around the exhibition, already having attracted 8.5 million visitors. Finally, the third edition of the *Défi des Pas*, a sporting and solidarity-based challenge organized by CASDEN and Banque Populaire, raised €30,000 for the Fondation des Hôpitaux.

- **More than 2.3 million cooperative shareholders**.
- **More than 10,000 activists: 248 CASDEN delegates and 10,080 correspondents**

CRÉDIT COOPÉRATIF

As a reference bank for the social and solidarity economy, real economy companies and committed individual customers, Crédit Coopératif is committed alongside its customer-cooperative shareholders to build a fairer, more inclusive, more local economy that is respectful of the environment.

In 2024, Crédit Coopératif recorded an increase in its customers, particularly individual customers (+4.2%). This momentum is reflected in a significant increase in the number of cooperative shareholders, both legal entities (+4.9%) and individual customers (+11.6%).

In the retail market, the launch of the Family plan was one of the highlights of the year. This traced bank account includes an *Agir* solidarity bank card and the possibility for each family member to personalize their commitment and choose the association they wish to support *via* a micro-donation system. This solution offers a single and advantageous monthly contribution for the entire family, while preserving everyone's financial autonomy.

Other solutions have been launched, such as the Millevie retirement savings plan, which provides additional income for retirement while opting for savings with a positive social and environmental impact.

In line with the challenge of offering the same service face-to-face or remotely, online banking continued to expand its services with the online subscription of non-life insurance policies (IARD) and the PER (retirement savings plan), and online payments without providing a bank card number.

At the same time, after Toulouse and Lyon, a third branch dedicated to Individual customers was created in Grenoble. Lastly, customer satisfaction is up sharply with an NPS of 35.

In the legal entity market, two offers were launched in collaboration with recognized partners: Iremia santé (a specialist in the management of third-party payment and administrative conduct of healthcare professionals, which supports customers in managing third-party payments (*tiers payant*) and reducing payment terms), as well as Mailinblack (cybersecurity experts who offer solutions to combat IT attacks) for the security and peace of mind of its customers on a daily basis.

The "Tap to Pay" solution was also offered to customers with a compatible Android smartphone or tablet. Thus, Crédit Coopératif offers a payment solution adapted to all types of customers, from one-off needs to expert solutions.

Lastly, Crédit Coopératif supported its legal entity customers in their ecological transition by deploying strategic ESG interviews on a massive scale.

The satisfaction of legal entity customers is up sharply with an NPS of 10.

- **138,516 cooperative shareholders**
- **423,048 customers**
- **Over €7.1 million in donations, raised from solidarity-based products, distributed to 59 associations**
- **€2.7bn in new amortizable loans paid (+47%)**

Caisses d'Epargne

The 15 Caisses d'Epargne are equal shareholders of BPCE with the Banques Populaires, and are fully-fledged regional cooperative banks. Committed to local community life, they offer their individual, professional, association, corporate, institutional and local authority customers a comprehensive range of financing, savings, private management, insurance, payment and specialized financial services (such as leasing and factoring). They make decisions and act locally, in a short circuit, and reinvest their customers' savings where they live to finance useful projects close to home (schools, hospitals, associations, etc.).

As cooperative banks, the Caisse d'Epargne belong solely to their 4.4 million cooperative shareholders, who participate in the decisions of their bank, voting on resolutions at the General Meeting and electing their representatives, the 2,500 Directors, from among their peers. Cooperative shareholders and directors are brought together in the local savings companies (LSC), which hold part of the capital of a Caisse d'Epargne and constitute a local tier, reinforcing the regional anchoring, proximity and expression of the cooperative shareholders.

At the service of local economic, social and environmental development

The Caisses d'Epargne are the only banks to provide long-term support to all players in a given region: individual customers, businesses, professionals, social housing and social and solidarity economy players, institutions, local authorities and associations. As such, they have the capacity to create the synergies required for local development.

In 2023, the 15 Caisses d'Epargne launched their Utility Contract to strengthen their commitment to the regions, for the benefit of those who live there.

This contract comprises 16 commitments broken down into concrete actions to be:

- **100% useful to economic development**: as banks serving all their customers and their territory, but also as local businesses and major employers in the region;
- **100% useful to the environmental transition**: by building solutions to enable everyone to become a player in this transition, and by financing projects that will help accelerate it in local areas;
- **100% useful to social progress:** as cooperative banks, having always been committed to the principles of solidarity and the fight against exclusion.

IN 2024

- The Caisses d'Epargne strengthened their customers' insurance equipment thanks to the development of a global strategy on protection, property insurance, personal risk insurance and remote monitoring.
- The Caisses d'Epargne have launched many innovative payment solutions in partnership with Garmin Pay, SwatchPay and Google Pay, as well as the peer-to-peer solution, WERO.
- The Caisses d'Epargne were one of the lead arrangers of the first French gigafactory project, "Verkor", established in Dunkerque.
- The Caisses d'Epargne confirmed their commitment to the sports sector through the distribution of the EIB budget for the renovation of sports facilities and participation in the "swimming pool plan".
- The Caisses d'Epargne, Premium partners of Paris 2024 and Official Sponsors of the *Relais de la Flamme* (Torch Relay) of Paris 2024, were strongly committed to the success of the Games (Refer to section 1.3 Highlights / Groupe BPCE contributes to the success of Paris 2024).

INDIVIDUAL CUSTOMERS

Supporting young people and families has been a common thread in the strategy of the Individual customers market, with a strong challenge to win new customers and provide access to banking services.

The household mortgage market share was 14.02%, up +19 basis points year-on-year. The Caisses d'Epargne have rolled out several innovative solutions to support their first-time home buyer customers, particularly young people under the age of 35.

Supporting households in the energy renovation of their homes remained a priority in 2024 with the launch of an impact real estate loan offer and a large-scale *Renov' énergie* campaign on the financing of works.

In terms of inflows, activity was particularly dynamic in life insurance with gross inflows of €13.7 billion, generating an overall surplus of €4.3 billion. This activity was boosted by the marketing of three Natixis CIB loans and the deployment of a support approach for customers to prepare for their retirement.

The Caisses d'Epargne have also strengthened their customers' insurance equipment thanks to the development of a global strategy for protection, property insurance, personal risk insurance and remote monitoring - thanks to a partnership with VERISURE.

In the field of payments, the Caisses d'Epargne have launched numerous innovative solutions in partnership with Garmin Pay, SwatchPay and Google Pay, not to mention the peer-to-peer payment solution, WERO.

In the end, the Caisses d'Epargne maintained their strong growth in customer satisfaction in the retail market with an NPS of 23, *i.e.* +7 points compared to 2023. The favorable trend in satisfaction also concerns young customers, with a 4-point increase in NPS over 18-24 year olds.

- **€207.7bn in loan outstandings, +0.8%**
- **€408.1bn in savings deposits, +3.4%**
- **€13.7bn collected in life insurance, +1.1%**
- **6.5 million non-life insurance contracts marketed, +2.1%**

PRIVATE MANAGEMENT

The Caisses d'Epargne continued their acquisition momentum with 160,000 new Premium customers and growth of €6 billion in outstandings. In total, 3.4 million customers entrust the Caisses d'Epargne with a total amount of €312 billion in savings. The momentum around life insurance and Individual Retirement Savings Plans was particularly noteworthy, with an inflow of €10.5 billion and surpluses exceeding €3 billion. At the same time, banking services increased, with 70% of principal banked customers, as well as equipment in loans, insurance and protection. The satisfaction of high net-worth customers is constantly increasing, with a net promoter score (NPS) of +29.

- **3.4 million Premium customers**
- **€312bn in assets under management, +3.31%**

PROTECTED PERSONS

The Caisses d'Epargne remain the leading bank for protected persons, persons under guardianship, trusteeship and dependent adults living at home in France. Across France, 200 specialized advisors are on-hand to assist family representatives and legal guardians.

The year was marked by the generalization of the new version of Webprotexion, an online banking service for family or professional representatives of people under legal protection.

- **350,737 customers**
- **€12bn in outstandings**

PROFESSIONAL CUSTOMERS

Despite a tense economic context, more than 44,000 new Professional customers were gained, representing growth in the customer base of 2.1% year-on-year. Thanks to numerous actions implemented in synergy with the Premium market, the stock of customers with dual Premium relationships increased by 6.4% to reach more than 87,000 customers. In 2024, the Caisses d'Epargne strengthened their positioning as privileged partners of healthcare system players, including healthcare professionals, through several actions:

- The launch of the "EIB Health Pros Budget" subsidized-rate financing offer made available by the European Investment Bank and dedicated to business creation or recovery projects;
- The provision of SantExpert, an online space dedicated to healthcare professionals;
- The development of key partnerships with renewed support for the ISNI (InterSyndicale Nationale des Internes) for the second year running in order to provide long-term support to medical interns and future healthcare professionals. Two new partnerships were forged: one with CERP Rhin Rhône Méditerranée (merged with CERP Rouen in July 2024) to support the installation of young community pharmacists and the other with Médecins Solidaires, to support the development of the association that fights against medical deserts in rural areas.

Among the other highlights of the year, the Caisses d'Epargne launched new non-banking offers: remote monitoring with Verisure and meal and gift vouchers with Swile.

Lastly, the digitalization of customer journeys continued with the development of two new self-care subscription pathways on the Retirement Savings Plan and Tap to Pay offers.

- **447,241 customers, +2.2%**
- **€4.3bn in loan outstandings**
- **8,560 employee savings contracts signed**
- **16,716 Pro non-life insurance policies (IARD) taken out**
- **34,522,109 personal protection insurance contracts subscribed**

CORPORATE CUSTOMERS

With more than 38,800 customers (VSEs, SMEs and mid-sized companies), the Caisses d'Epargne continued their commitment to business development in 2024. As a reference partner for the regions, they have fully played their role with all economic players to promote their growth and that of the regions, not only by meeting their financial needs but also by supporting them in their transition challenges.

The Caisses d'Epargne confirmed the acceleration of their support for the decarbonization of the economy through the deployment of a strategic ESG dialog with business leaders, the increase in their production of green financing and the increase in power of the marketing of Impact Loans dedicated to SMEs and mid-sized companies. In concrete terms, they encourage companies to integrate more non-financial criteria into their activities. This system has been audited by Moody's ESG Solutions, one of the world leaders in ESG (Environment, Social and Governance) analyses.

This year, the Caisses d'Epargne anticipated significant regulatory and societal changes to provide their corporate customers with genuine support.

The law on value sharing requires companies with 11 to 49 employees to set up a legal value-sharing scheme, as of January 1, 2025.

E-invoicing becomes mandatory for all companies subject to VAT in France, between July 1, 2024 and January 1, 2026, requiring the choice of a platform for the exchange of invoices.

Finally, cybersecurity has become a priority because it is no longer a question of knowing "if" a company is at risk of malicious cyber acts, but "when" it will occur.

In response to all these challenges, Caisse d'Epargne has structured its offers and strengthened its awareness-raising process around these crucial themes.

In the agricultural sector, the member cooperatives of the UFG (Union Finances Grains) were supported by the implementation of the NeuCP (Negotiable European Commercial Paper) program. This issue of short-term negotiable securities represented a credit line of around €132 million for the Caisse d'Epargne network.

The Caisses d'Epargne also confirmed their position as Industry bankers. Their average penetration rate is 20%, including industries both inside and outside of energy.

Through its Néo Business program, the Caisses d'Epargne continued to support the development of innovative companies throughout France and in all business sectors. They now support 2,000 start-ups/scale-ups in their growth with dedicated solutions.

- **38,807 customers (+3.4%)**
- **3,352 new relationships (-8.6%)**
- **€34.1bn in MLT loan outstandings (+1.7%)**
- **€3.3bn in MLT commitments (excluding CBM & CBI)**
- **€19.4bn in term deposit outstandings (+12.9%)**

FINANCIAL ENGINEERING

The Caisses d'Epargne's financial engineering activity is growing. It reached €128 million in net fees and commissions generated in 2024, up 25% year-on-year. Over the duration of the 2020-2024 strategic plan, the amount of net fees and commissions generated was multiplied by four. This level of performance validates our choice of organization of the activity around financial engineering teams located locally, as close as possible to the operations and regions, supported where necessary by the action of Groupe BPCE's subsidiaries and specialized structures.

In terms of private equity activities, the activity of the Regional Investment Companies combined with the support of national vehicles generated a capital gain of approximately €20 million.

In addition, in 2024, a new debt fund, backed by a syndication desk, was launched. Fully subscribed by the Caisses d'Epargne for an amount of €535 million, it meets the financing needs of mid-sized companies. By creating this original system, the Caisses d'Epargne are opening up a new asset class to institutional investors, those of regional mid-sized companies, and enabling these mid-sized companies to diversify their sources of financing at the best price while benefiting from the support of their long-term operations.

Lastly, the Caisses d'Epargne supported emblematic projects in 2024. Drawing on the resources and expertise of the renewable energy and energy transition debt fund launched in 2022, they were among the lead arrangers of the Dieppe le Tréport and Yeu Noirmoutier offshore wind farms, as well as the first French gigafactory project, "Verkor", located in Dunkerque.

INSTITUTIONS

The Institutional market is facing many transitions that require very heavy investments. As such, I4CE (the French Institute of the Economy for the Climate) calculates the additional need for energy, transport and decarbonization for local authorities at €11 billion per year. As for social housing, 1.2 million housing units must undergo an energy-efficient renovation before the end of 2025.

In this context, the Caisses d'Epargne confirmed their presence with their customers to serve the regions. They remain the leading private banks for local authorities, with €26 billion in outstandings and almost €2.7 billion in new financing loans. They are also the leading private bankers for social housing, with Habitat en Région, and for the semi-public sector, with over €2.1 billion in new MLT loans and €11.2 billion in MLT loan outstandings. At the end of December 2024, inflows totaled €9.4 billion (including demand deposit accounts).

In the Professional Real Estate market, the decline in new construction activity continued. Short-term financing for real estate professionals, developers and property dealers was down -10.5%. Long-term financing remained stable at +3.4%.

In 2024, the Caisses d'Epargne confirmed their commitment to the sports sector through the distribution of the EIB budget for the renovation of sports facilities and participation in the "swimming pool plan" alongside Union Sport et Cycle.

In addition to the ESG questionnaires and the distribution of green or impact loans, the Caisses d'Epargne's commitment to the ecological transition was further strengthened through their participation in the Métamorph-OSE program. This Groupe BPCE program operationally implements Groupe BPCE's Impact strategy on BtoB customers. It is based on a new commercial approach, tools and specific training. It mobilizes elected officials, companies, associations and citizens to accelerate the process of solidarity and ecological transition in the regions.

Lastly, 2024 was marked by the equity merger with Finances & Territoires, a consulting firm specializing in public financing. This decision will enable the Caisses d'Epargne to establish a long-term approach to bank financing and maximum mobilization of support mechanisms for Institutional investors.

SOCIAL ECONOMY

Caisses d'Epargne is a leading financier of the SSE sector, with loan outstandings of €6.5 billion in 2024, and supports more than 20,600 customers, including associations and other SSE companies. In the field, 130 account managers, dedicated to this not for profit clientele, master all the legal, tax and governance specifics and business models unique to these associations, foundations and impact companies. Over 1,000 new relationships were entered into in 2024. This development is based on a long-standing partnership with the entire SSE ecosystem and social innovation support networks (ESS France, France Active, Impact France movement, La Ruche, etc.), as well as main industry federations (Nexem, FEHAP, FNOGEC, etc.). In 2024, a new national partnership was signed with Le Kiif, an alliance of ten incubators, located in nine French regions, which support the spin-off or development of socially innovative projects in rural areas

- **23.2% credit market share (*source: Apri*)**
- **€696m in new medium- and long-term loans**

COMMUNICATION

Official sponsor of the Olympic Torch Relay and Premium partner of Paris 2024, Caisse d'Epargne deployed an ambitious communication system for the benefit of the brand's reputation and image: 4,500 press coverage mentions (TV, PQN, PQR), 8.5 million people present on the Relay route, the first advertising announcer of an opening ceremony followed by 24.4 million French viewers, more than 600 TV trailers broadcast during the Games. Caisse d'Epargne also launched several communication campaigns on essential topics for its customers, in particular, the energy transition (with a new TV film) and savings. At the same time, the brand strengthened its digital presence and launched a TikTok account for young people (5.5 million videos viewed).

In 2024, Caisse d'Epargne received 12 professional awards recognizing the performance of its communication systems (*Grands Prix Stratégie*, Top Com, *Grands Prix du Sport Business*, etc.).

Banque Palatine

Banque Palatine, a 100% subsidiary of Groupe BPCE, is mainly dedicated to mid-sized companies, executives and private banking. For more than 240 years, Banque Palatine has been working alongside entrepreneurs on both a professional and personal level. It provides them with a range of banking products (current accounts, real estate and personal loans, financial investments, financing solutions to meet environmental challenges) and insurance products. Its network consists of 36 offices in France.

Banque Palatine offers value-added expertise dedicated to supporting its customers' growth and performance: wealth, legal and tax engineering, investment advice, global approach to managers' assets, corporate finance, specialized approach to real estate, trade finance, customer desk, etc.

In the regulated real estate market, where the Bank is the market leader, and in the audiovisual market, where it is a key player, it deploys a dedicated national organization.

Its signature "The art of being a banker" illustrates Banque Palatine's determination to develop a model of close relationships based on excellent support for its 13,500 corporate and 46,000 private customers.

Banque Palatine is notably a patron of the French Sports Foundation. Through this sponsorship, Banque Palatine finances the training, socio-professional integration and retraining of four top athletes.

2024 KEY FIGURES

ALMOST **13,500** CORPORATE CUSTOMERS

OVER **46,000** PRIVATE CUSTOMERS

1,063 EMPLOYEES

€18.4BN SAVINGS DEPOSITS

€12.1BN LOAN OUTSTANDINGS

In 2024, the drive to win over companies with revenues exceeding €15 million continued, with 248 new customers active in this segment. Banque Palatine recorded strong momentum in attracting private customers, executives and senior executives with 1,056 new relationships. Inflows in financial savings, equipment of customers with savings products, and the performance of wealth audits also showed a very good trend. On the other hand, the distribution of home loans is behind schedule by 25%.

Structured financing transactions recorded a sustained performance, generating income from fees and commissions of €12.9 million. At the same time, new corporate loans reached €2.2 billion, of which €0.6 billion in structured financing.

In terms of payments, Banque Palatine now offers transfer initiation, which allows companies and property managers to offer a new simple and secure means of payment for their collections and simplify their bank reconciliations.

In terms of innovation, Banque Palatine, with Groupe BPCE, conducted two pilots on generative AI technologies: one on reading and extracting the minutes of General Meetings in real estate, the other on the preparation of interviews between advisors and prospects or customers.

In 2024, Banque Palatine unveiled its purpose, the foundation of its new strategic plan "PALATINE 2030", focused on three pillars: customers, risks and people and obtained the CSR Committed label from AFNOR.

BPCE Assurances

BPCE Assurances is Groupe BPCE's Insurance division. A fully-fledged insurer, it designs, distributes and manages a comprehensive range of personal and non-life insurance products for customers of Groupe BPCE's banking networks:

- personal insurance: life insurance, retirement savings, borrower insurance and individual and professional personal protection insurance;
- non-life insurance: motor insurance, multi-risk home insurance, supplementary health insurance, personal accident insurance (GAV), multimedia equipment insurance, legal protection, parabanking insurance, professional car and multi-risk insurance, etc.

BPCE Assurances' insurance subsidiaries (BPCE Assurances IARD, BPCE IARD, BPCE Vie, BPCE Life) do not distribute their products. The Group's banking networks distribute their insurance[1] products.

Personal insurance business was dynamic during 2024, with gross inflows reaching €15.1 billion in savings, marking an increase of 17% compared to the previous year.

The year was marked by the launch, within the Crédit Coopératif network, of the Millevie retirement savings plan, which makes it possible to build up additional income for retirement while opting for savings with a positive social and environmental impact.

In borrower insurance (ADE), the number of termination requests by borrowers stabilized after the entry into force of the Lemoine law. In addition, in a context of stagnation in new home loans, the production of borrower insurance contracts remained limited in the first half of the year before rising again in the second half, at the same time as the fall in interest rates. In 2024, the ADE offer has evolved twice. First of all, the addition of a new "Family assistance" cover makes it possible, when an insured family is faced with the illness, disability or serious accident of one of their children, to alleviate the household's economic situation by taking on part of the loan repayments. Then, people who have overcome breast cancer and are in the remission phase can now take out a borrower insurance policy for a real estate or professional project, without additional premiums and exclusion, even partial, and without waiting for the legal period of five years set by the law.

Non-life insurance (IARD) business recorded a good level of customer growth, both in the individual customers (+2%) and professional customers (+6%) markets. More specifically, with regard to the Caisses d'Epargne network, 35% of customers are now equipped with non-life insurance (IARD)/personal protection solutions, six months ahead of the target set in the BPCE 2024 strategic plan.

Several highlights marked the year 2024:

- Firstly, the deployment of non-life insurance (IARD) products in the networks of Société de Banque et d'Expansion (a joint subsidiary of BRED Banque Populaire and Banque Populaire Val de France), Crédit Coopératif and BRED Banque Populaire, including in French overseas territories.
- Then, the launch of a pilot to test a new distribution model for the health product in six customer relationship centers.
- Lastly, the launch of the Sightcall video assistance solution, rolled out in the MRH and AUTO scope, which enables managers to assist their policyholders during the reporting and management of a claim. The policyholder can show the damage in real time and be guided remotely, thus simplifying the interactions and the identification of the claim. This solution enabled BPCE Assurances IARD to win the *Argus d'Or* 2024 claims management award.

Finally, it should be noted that the exceptional rainfall, which affected many regions of France, strongly impacted the activity of BPCE Assurances' centers of expertise.

(1) With the exception of BPCE Life, a subsidiary of BPCE Assurances, which deals directly with certain customers outside the Banque Populaire and Caisse d'Epargne networks.

The Digital & Payments division

The Digital & Payments division brings together all of Groupe BPCE's business lines and expertise in the fields of innovation, digital, data and artificial intelligence, payments, and trade finance with Oney.

Oney, a subsidiary of Groupe BPCE (50.1%) and ELO (formerly Auchan Holding) (49.9%), is a French bank with a European dimension, specializing in payments, consumer financing, insurance and the fight against fraud. Founded in 1983 and a player in new modes of consumption, it supports the daily lives of more than 7 million customers and the development of more than 37,000 merchants and e-merchants by designing solutions for payments, financing, insurance and the fight against fraud. The mobilization of the expertise of its 1,900 employees worldwide allows Oney to offer seamless and secure in-store and online shopping experiences. Oney is currently the leader in payment in three or four installments by bank card in France and, *via* its subsidiary Oneytrust, in fraud detection and digital identification. Oney is present in 10 countries in Europe.

BPCE Payment Services, with its recognized expertise in the field of electronic payment processing and payment flows, supports Groupe BPCE's banks and subsidiaries as well as external customers consisting of financial institutions and payment service providers. The subsidiary now manages more than 33 million payment cards, 11 billion transactions per year, and more than 500,000 merchant contracts for their needs in payment terminals and associated services. Its pioneering culture in terms of innovation has enabled the Group's institutions to position themselves as pioneers in a number of payment market standards, such as Apple Pay, instant transfers and more recently, Tap to Pay.

Payplug, an omnichannel payment solution, specializing in credit card payments and payment acceptance and acquisition offers, this fintech from the BPCE Digital & Payments division is aimed at retailers and e-retailers of all sizes for which the European market and its various local payment methods is a priority issue.

Xpollens, a Groupe BPCE Banking as a Service Platform, enables companies to offer payment services with accounts and cards, as well as the automation of payment flows in the business line interfaces of companies.

In addition, the division has three departments:

- **The Digital customer department,** composed of digital experts who design remote banking for the Group's institutions, and ensure its continuous improvement by developing the best applications thanks to AI and Data.
- **The AI & Data department** designs and deploys services and tools that exploit the potential of data, for the benefit of the competitiveness of each of the Group's business lines. By placing artificial intelligence at the service of performance and simplicity, they enrich the customer experience, optimize processes for advisors, and facilitate the daily lives of all Group employees.
- **The Innovation department** whose mission is to build new sources of revenue, incubate internal and external strategic projects and participate in the capital of technology companies. Its work focuses on open finance, blockchain, new payment methods and the energy transition.

IN 2024

2024 was marked by several structuring transactions.

BPCE and BNP Paribas announced their project to create a European player in payment processing, to equip themselves with the best technology in terms of payment processing for cardholders and merchants. This processor aims to handle all card payments in Europe from BNP Paribas and Groupe BPCE, accounting for 17 billion transactions, and could also be opened to other banks. It would thus be the No. 1 processor in France, and both Groups share the ambition to make it one of the Top 3 processors in Europe.

In 2024, the European Payments Initiative (EPI) announced the launch of Wero, the European instant account-to-account payment solution. With Wero, Groupe BPCE now offers all Banque Populaire and Caisse d'Epargne customers a new instant account-to-account payment solution that meets new expectations. As a pioneer in this area, Groupe BPCE successfully completed the first cross-border instant payment transactions in December 2023.

Groupe BPCE and Oney have partnered with Leroy Merlin to support the customers of the Banques Populaires and the Caisses d'Epargne in their energy renovation projects, from financing to completion of the works. Customers benefit from a turnkey program, with a global and integrated solution, and a complete range of financial solutions including the Eco-Loan at Zero Interest Rate.

The Group's Digital Banking system has increased the number of new functionalities offered to customers of the Banque Populaire and Caisse d'Epargne networks, with the top 10 current customer transactions already available in self-care. And also through a winning mobile strategy that has led to a significant increase in active mobile customers. The applications show a growing use by individual customers, professionals and companies and they retain very high scores (4.7/5 on the App Store, for example).

Lastly, in July 2024, Groupe BPCE acquired iPaidThat, a specialist and leading player in invoicing and business activity management. The integration of iPaidThat into the Digital & Payments division accelerates the development of these solutions and significantly enriches the digital experience offered to the Group's professional and corporate customers.

On the innovation front, the Digital & Payments division confirmed its dynamism through several initiatives:

- First, the launch of the "Tap to Pay" offer for customers of the Banques Populaires and Caisses d'Epargne equipped with Android smartphones. This service, which allows users to accept contactless payments *via* their smartphone or tablet, can be used on the main payment schemes. Groupe BPCE thus became the first banking group in France to offer this new generation payment solution on the two main operating systems on the market.

- Then, access to the SwatchPAY! Contactless payment solution. Banque Populaire and Caisse d'Epargne customers were the first in France to be able to make their purchases safely with a simple movement of the wrist, thanks to their watch equipped with contactless payment technology.
- Groupe BPCE has become a partner of Garmin, the world's leading supplier of navigation products and one of the first manufacturers of sports connected watches to integrate contactless payment.
- Lastly, in accordance with the "VISION 2030" strategic plan, the "AI for all" program was rolled out with the launch of the generative AI tool MAiA which, at the end of December 2024, had 26,000 user employees in the Group and which aims for a target of 50% of employees adopters by 2026.

In collaboration with COJOP and Visa, BPCE's Digital & Payments division, with its fintech Payplug, handled the processing of all **3 million transactions** (from more than 170 countries), with a quality of service that can be summed up in one figure: **the acceptance rate reached 98%**, well above the standard of 92% in France. At the same time, Visa (the official supplier of the International Olympic Committee) entrusted BPCE's Digital & Payments division with the management of payments within the Paris 2024 forums during the 29 days of competition.

The Financial Solutions & Expertise division

The Financial Solutions & Expertise (FSE) division brings together BPCE's expertise in financing, insurance, custodial and advisory services for the Group's corporate customers.

The entities that make up FSE are:

FOR THE FINANCING BUSINESS LINES

BPCE Financement develops offers and complete solutions for the management of revolving loans and personal loans for Groupe BPCE's networks.

BPCE Lease offers a complete range of rental solutions: equipment and real estate leasing, trust, long-term vehicle leasing, leasing with purchase option, boating or automotive leasing, IT operational leasing, and renewable energy financing.

BPCE Factor develops factoring solutions for companies of all sizes, at any stage of their growth process (creation, development, external growth, international development, etc.)

SOCFIM is a leading player in the real estate financing market, covering the whole of France and all asset classes: new and existing housing, managed housing (students and seniors), offices, retail and logistics warehouses.

FOR THE INSURANCE BUSINESS LINES

Compagnie Européenne de Garanties et Cautions (CEGC) offers a wide range of financial guarantees in all of the Group's markets: individuals, professionals and companies, real estate, social economy and social housing.

It should be noted that CEGC joined the Insurance division as of January 1, 2025. This new organization is part of our strategic project VISION 2030, one of the objectives of which is to become the fourth largest insurer in France.

FOR THE CUSTODIAL AND ADVISORY BUSINESS LINES

BPCE Solutions immobilières is a major player in real estate consulting in France. It comprises three business line divisions: Expertise & Consulting, Residential, Investment & Rental.

EuroTitres develops a comprehensive range of services for the custody of securities accounts and the management of transactions carried out by individual customers: stock market, mutual funds, securities transactions, portfolio statements, tax forms, etc.

Pramex International specializes in advising French start-ups, SMEs and mid-sized companies on international expansion, either through internal growth (creating and overseeing foreign subsidiaries) or external growth (international acquisitions).

IN 2024

BPCE Financement With total outstandings of €37.1 billion in 2024, BPCE Financement strengthened its position as the leading player in consumer loans in France with a market share of 18.07% in the third quarter of 2024, excluding LOA (lease with purchase option), down -5.1% (*source: ASF at the end of November 2024*). The year was marked by the overhaul of the revolving credit underwriting process across all institutions, with high levels of satisfaction from advisors. Significant investments in Artificial Intelligence were made, particularly in the orchestration of customer contacts, enabling a significant increase in the contribution of digital marketing to total financing. In addition, an allocated credit chain has been developed for the financing of energy renovation through an initial partnership with Cozynergy.

BPCE Lease After record production in 2023, BPCE Lease again recorded a significant increase in production of +5%. Several areas even outperformed, such as equipment leasing (+10%), renewable energy financing (+17%) and long-term leasing (+22%). Several highlights marked the year:

- The takeover of the new production of Banque Populaire Rives de Paris under a commissioning scheme.
- Acquisition of a majority stake in SIMPEL, a specialist in the management of rental flows and B2B and B2C subscriptions.
- The launch of the Société Générale Equipment Finance (SGEF) portfolio and booking takeover project.

Lastly, a few large-scale projects were financed in 2024, such as the Hilton hotel in Sevilla, the logistics warehouse in Moussy-le-Neuf (Seine et Marne), 34 electrical equipment for Spanish airports, or the electrolyzer gigafactory in Belfort (Territoire de Belfort).

BPCE Factor In 2024, BPCE Factor handled 11 million invoices, supporting the changing working capital requirements of companies, both in their day-to-day business and as they grow. With a 25% market share in France, BPCE Factor is the leader in the factoring market in terms of number of contracts. Its factoring revenues amounted to €61 billion. The year was marked by the continuation of a major program to develop the customer experience, initiated in 2023: creation of an onboarding unit for new customers, deployment of a modernized telephone system, expanded contact hours and enhanced customer relationship intensity through new contact channels. These items resulted in a two-point increase in customer NPS over one year. Finally, for the ninth consecutive year, Bureau Veritas Certification confirmed BPCE Factor's service certification and label, recognizing the high level of quality perceived by customers, with 92% overall satisfaction.

SOCFIM In a real estate market severely affected by the inflationary context of high interest rates and, more generally, administrative constraints, SOCFIM maintained a satisfactory level of activity with more than €3 billion in new loans to real estate professionals. It thus retained its position as the main financier of property developers and increased its penetration of the long-term investor segment. The structural and financial difficulties encountered by real estate professionals, the wait-and-see attitude of the markets and the general decline in values had an impact on the increase in the portfolio's risks, partially offset by a reinforcement of dedicated teams, the quality of the customer base and close monitoring. The year was marked by the ramp-up of urban regeneration real estate projects, which now represent more than a quarter of new projects, and of course the timely delivery of the Athletes' Village, which welcomed participants to the Paris 2024 Olympic and Paralympic Games before starting the Heritage phase of the project.

Compagnie Européenne de Garanties et Cautions (CEGC) guaranteed 146,502 real estate loans for individual customers produced by Groupe BPCE networks, for a total of €20.8 billion, down 34% on 2023, in line with market trends[1].In the construction sectors, CEGC covered the delivery "at the agreed price and deadline" of 7,629 single-family houses and issued financial guarantees for the completion of 599 real estate development projects. Lastly, in the building, construction, business and industry sectors, 115,763 market guarantees were issued, mainly *via* the www.cautiondemarche.com solution which posted a net promoter score of +53[2]. CEGC benefits from the trust of its reinsurers, which renewed 100% of their reinsurance contracts in 2024. With nearly €2.5 billion, CEGC is one of the world's leading buyers of home loan reinsurance for individual customers. The quality of CEGC's credit rating was confirmed by the rating agencies Moody's and DBRS, which renewed their good assessment levels with respective ratings of A1 and A High. Finally, CEGC carried out its first EcoVadis assessment in 2024 and obtained the bronze medal with a score of 64/100. A score that reflects the quality of its policies and actions in the four areas assessed: environment, social and human rights, ethics and responsible purchasing.

BPCE Solutions immobilières continued its sustained activity with the Group's companies in 2024, mainly in the residential sector. However, the crisis in the real estate market penalized a more marked development. Nearly 850 units were sold to individual customers (600 in 2023), and SCPI inflows totaled €48 million. The Expertise division recorded revenues of €12.8 million in 2024, and continued its development with large institutional investors.

EuroTitres is one of the leaders in the outsourcing of retail custody of financial instruments in France. Retail activity on the stock market and UCIs remained resilient overall in 2024 with 1,890,000 stock market orders processed compared to 2,009,000 last year. The Internet and mobile transactional site was the main channel used by customers, with a constantly improving NPS and a good level of positioning in the benchmark of online stock market sites carried out periodically by the firm Ailancy. In 2024, on collective investments, volumes decreased by 4% with 2,635,000 subscriptions/redemptions. As last year, the stock of ordinary securities accounts and PEA held as well as the number of value lines in the portfolio were stable. The year was marked by two major events:

- firstly, the contribution to the successful placement of BPCE/Natixis loans on the one hand and of structured products on the other;
- then EuroTitres new commercial and technical initiatives for the networks, in support of the relaunch of Securities Financial Savings.

Pramex International In a still uncertain economic and geopolitical context, the number of contract signatures saw slower growth. The year was marked by the launch of Pramex International's strategic plan focused on two main areas: quality at all levels and the France firm with the aim of expanding the clientele target by welcoming foreign companies wishing to set up in France. In addition, the deployment of the Senta management interface was finalized. This tool will make it possible to manage the production and delivery of services more efficiently and securely. Finally, very attentive to the quality of its service, Pramex conducted a new satisfaction survey on all its subsidiaries. The rate of 88% reflects the high level of overall satisfaction of its customers.

1.4.2 Global business lines

Groupe BPCE's global business lines, namely Corporate & Investment Banking and Asset & Wealth Management, support corporates, investors, financial institutions, financial sponsors, as well as customers of the Banque Populaire and Caisse d'Epargne networks in the realization of their projects around the world. They offer them innovative and sustainable financing and investment solutions that contribute to the implementation of their environmental, technological and societal transitions.

CORPORATE & INVESTMENT BANKING

Natixis Corporate & Investment Banking (CIB) supports its corporate customers, financial institutions, institutional investors, financial sponsors, public sector entities and the Groupe BPCE networks. It advises them and designs innovative, tailor-made solutions to support their strategy, drawing on the full range of its expertise in advisory services, investments, financing, commercial banking and capital markets, as well as its global presence in nearly 30 countries across three geographic areas: North & South America, Asia-Pacific and EMEA.

Natixis CIB is organized around five main business lines (Global Markets, Investment Banking, Real Assets, Global Trade, M&A):

The Global Markets business line offers a wide range of hedging, financing and investment solutions on the fixed-income, credit, foreign exchange, commodities and equity markets, combined with recognized economic research.

The Investment Banking teams support their customers in their strategic decisions: acquisitions, asset sales or purchases and, more generally, any growth project. Offering high value-added solutions, Investment Banking encompasses strategic and acquisition financing, financing on the primary bond and equity markets, and financial engineering for listed holdings.

The Real Assets business line combines the origination and structuring of structured finance in the sectors of aviation, infrastructure & natural resources and real estate & hospitality. Real Assets is recognized as one of the market's major players in these sectors.

The Global Trade business line includes the international trade financing activities, structured financing solutions for export transactions and cash management for its corporate customers, commodity traders and for customers of the Banques Populaire and Caisse d'Epargne networks. This business line, at the heart of the Group's strategy, aims to support and finance the commercial development of its customers in a sustainable manner.

Finally, the teams specialized in mergers and acquisitions (M&A) support large- and medium-sized commercial and industrial companies, institutional investors and investment funds in the preparation and implementation of divestments, mergers, fundraising, restructuring or capital protection. This expertise is based on a network of nine boutiques in nine countries: Natixis Partners, Solomon Partners, Fenchurch, Natixis Partners Iberia, Natixis Partners Belgium, Emendo Capital, Vermilion, Azure Capital and Clipperton.

Natixis CIB's core business lines are supported by a number of cross-functional teams, including the Advisory & Coverage division dedicated to customer support, which brings together bankers, sector experts and teams in charge of supporting customers' environmental and technological transitions. To ensure a close relationship with customers, this division has a strong regional presence in France, and draws on all the bank's teams of experts abroad.

The portfolio distribution and management teams support all financing activities and are central to the successful deployment of the bank's Originate-to-Distribute model.

Lastly, in addition to its five main business lines, Natixis CIB is positioned, *via* its subsidiary Coficiné, as a leader in specialized financing for the media, entertainment and cultural industries.

HIGHLIGHTS IN 2024

Natixis CIB achieved an excellent commercial performance in 2024 and posted a record level of revenue, driven by all of its activities. Combined with cost control, this very good performance reinforces the achievement of the objectives set as part of the BPCE 2024 strategic plan.

- Natixis CIB continued to grow its Global Markets activities in all its regions, with a significant development of its flow activities. Natixis CIB was recognized as Flow Market Maker and Commodity Derivatives House of the Year[1]. In 2024, Natixis CIB saw a significant increase in the number of new customers.
- Natixis CIB has carried out numerous financing of real assets and is ranked third in project financing (third in Telecom financing and third in Revolving Financing). This momentum was particularly strong in Europe and Latin America. In 2024, 10 projects were recognized as "projects of the year" at the PFI Awards; for example, the bank played a major role in the financing of Teeside, the first commercial gas-fired power plant equipped with a CO_2 capture, storage and recovery (CCUS) system in the United Kingdom. Activity was buoyant in terms of aviation financing in all regions. In the real estate market, Natixis CIB strengthened its leading position in France and Europe, in a context of a moderate recovery in investment.
- The Global Trade teams continued their development in France and internationally: in addition to remarkable cash collection, tailor-made solutions incorporating environmental criteria were developed. The Corporate activity experienced significant expansion in Western Europe, with successes in Supply Chain Finance. At the same time, the Commodity Trade activity strengthened its support for the energy transition of its customers while diversifying its operations in the metals, agriculture and electricity sectors.
- The Investment Banking business lines recorded a record performance driven by strong origination momentum in a more buoyant market. Natixis confirmed its leading position in the financial issuers market, with the DCM franchise ranking first in FIG[2] and the ECM franchise in first place in terms of share buybacks in SBF 120 companies, for the tenth consecutive year.
- The M&A activity maintained a good level of growth. Natixis CIB expanded its network of M&A boutiques with strategic stakes in Emendo Capital and Tandem Capital Advisors (now Natixis Partners Belgium), strengthening its position in Europe and in particular in the Benelux. In 2024, Natixis CIB also renewed its partnership with Clipperton, which enables it to best support its customers in their development projects in the fields of Tech and digital.
- Natixis CIB continued to strengthen its role as an advisor and key partner in supporting its customers' transitions by developing its offering of sustainable finance products and services and, in particular, expertise in emerging technologies essential to the transition (batteries, metals, new energies, etc.) and by supporting all its customers who present a credible, robust and ambitious transition plan, including those from the most high-emission sectors. In 2024, Natixis CIB:
  - Improved the colorization of its financing portfolio thanks to an increase of eleven points in green financing compared to 2020;
  - Significantly reduced its exposure to the Oil & Gas sector while increasing the share of low-carbon energy;
  - Continued the growth of its "green" revenues, which grew faster than the bank's total revenues;
  - Received numerous awards, testifying to the recognition of the market and its customers as a leading player in sustainable finance.
- Overall, the three platforms - Americas, EMEA and APAC - recorded solid commercial performances and stood out for the quality of their expertise. In Asia, in particular, Natixis CIB strengthened its presence in Korea, where the bank signed a strategic partnership with the Asian bank Woori, increasing Natixis CIB's presence in the rapidly expanding global private debt market. Lastly, Natixis CIB launched strategic initiatives in Japan and India

ASSET & WEALTH MANAGEMENT

Asset & Wealth Management develops solutions to meet the deposits and savings, investment, risk management and advisory needs of the various private banking and institutional customers of Groupe BPCE.

Asset Management

Natixis Investment Managers (IM) is one of the world's leading asset managers and Europe's third largest player in this industry, with €1,317 billion in assets under management at the end of December 2024. Natixis IM supports investors on every continent in building their portfolios, offering them a wide range of diversified, responsible solutions.

With its decentralized and entrepreneurial multi-affiliate model, Natixis IM brings together the expertise of more than 15 specialized asset management companies and offers its investor customers a range of over 200 strategies to help them achieve their investment objectives, whatever the market conditions.

Managed from its headquarters in Boston and Paris, the company develops its offer around four key areas of expertise:

- fundamental active management,
- management under liability constraints,
- real assets,
- and quantitative management.

It deploys its offer through an integrated distribution network established in over 20 countries, in addition to the sales teams of the Banques Populaires and Caisses d'Epargne.

(1) IFR Awards
(2) Bondradar

HIGHLIGHTS IN 2024

Thanks to the commitment of all its teams, **Natixis IM** recorded strong commercial momentum, reaching record net inflows over the year (€40 billion), particularly in bond and life insurance products.

68% of funds rated by Morningstar over three years were in the first and second quartiles at the end of December 2024, compared with 64% a year earlier.

Natixis IM continued to streamline its organization and actively manage its investments: in a context of technological revolution and accelerated transformation of the asset management industry, it created Natixis Investment Managers Operating Services, a new entity bringing together the operations, technology, data and innovation teams of Ostrum AM, Natixis IM International and Natixis IM, to strengthen synergies and better serve its customers; in January 2025, it also sold its 100% stake in the asset management company MV Credit to Clearlake Capital, a private equity firm based in the United States.

Alongside its affiliates, Natixis IM continued its efforts to develop responsible and impact investing: ESG assets represent a growing share of total assets under management: 40% at the end of 2024, *i.e.* +3 points compared to the end of 2022. They also continued to make their voices heard through individual and collective engagement, active voting policies and participation in key marketplace initiatives to advance responsible investment.

Natixis IM also launched initiatives to revitalize financial savings in France and better meet the expectations of the networks, in particular by preparing the launch in January 2025 of VEGA Investment Solutions, the financial savings expert dedicated to Groupe BPCE customers.

Lastly, Natixis IM also continued its international development, notably achieving an important milestone in Korea by obtaining a Private Asset Management Company license.

Wealth management

Established in France and Luxembourg, Natixis Wealth Management designs and implements tailor-made wealth management and financial solutions to structure and manage the assets of business leaders, senior executives, large private investors and holders of a family capital. It supports them in their initiatives to undertake, invest and transmit, and mobilizes a wide range of expertise that covers all their needs, whatever the size or maturity of their projects: corporate advisory, origination, vanilla and complex financing, investment, portfolio engineering, asset management and diversification solutions, particularly in private equity.

The entire value proposition is tailored to the degree of personalization desired by the customers and is distributed *via* two channels: BtoC and BtoB. To expand its range of products and services in listed and unlisted asset management, Natixis Wealth Management draws on the complementary expertise of its three subsidiaries:

- VEGA Investment Managers, in collective asset management, delegated management and open-architecture fund selection;
- Massena Partners, dedicated to advising private family groups and family offices, mainly in private equity;
- Teora by Natixis Wealth Management, specialized in high-end, open-architecture life insurance brokerage.

HIGHLIGHTS IN 2024

- In 2024, in an environment marked by inflation and political instability in France and abroad, the Bank and its subsidiaries continued their development: at the end of December, Natixis Wealth Management managed more than €33.1 billion in assets. The Bank also continued its transformation program thanks in particular to the completion of several projects in its IT master plan to serve a modernized customer and employee experience. The innovative approach developed by Natixis Wealth Management - also supported by a recognized brand image and CSR approach - obtained First Prize in the Private Banking category at the *Rencontre Occur* 2024 for the third time in four years. To continue to grow and gain market share in wealth management, Natixis Wealth Management unveiled a new roadmap: RISE. This new strategic project is fully in line with Groupe BPCE's other global business lines as well as the Banque Populaire and Caisse d'Epargne networks.
- Natixis Wealth Management rolled out its strategic roadmap and pursued its transformation program, notably concerning its repositioning in Luxembourg, its new brand identity and the upgrading of its IT infrastructure.

Employee and pensions savings

Natixis Interépargne, a leader in employee and pensions savings, is invested in the future of over 100,000 corporate customers and in the service of 3.7 million savers(1). A leader in customer relations, responsible and solidarity-based investment, and innovation, it supports companies of all sizes in setting up, managing and promoting their employee savings, retirement savings and employee shareholding. It offers them a unique, high-performance management offering to help them achieve their savings objectives. Natixis Interépargne draws on the wealth and diversity of expertise of more than 15 management companies affiliated to Natixis Investment Managers. With more than €40 billion in assets under management1), it is the leader in solidarity-based employee savings(2). Sustainable funds, in accordance with SFDR regulations, represent 88%(2) of its assets diversified into employee savings and retirement.

(1) Natixis Interépargne at December 31, 2024
(2) Natixis Interépargne at June 30, 2024

HIGHLIGHTS IN 2024

In 2024, Natixis Interépargne strengthened its leadership in the employee savings and retirement savings market in France, with the acquisition of HSBC Epargne Entreprise, ninth French player. This transaction was accompanied by a marketing agreement for employee savings and pension plans and services between HSBC Global Asset Management (France) and Natixis Interépargne, bringing the number of Natixis Interépargne distribution partners of choice to 12.

With the Banques Populaires and the Caisses d'Epargne, Natixis Interépargne launched the first responsible incentive offer in the market, enabling all employees to be involved in the company's results and increasing the incentive bonus by meeting CSR criteria[1].

On behalf of Groupe BPCE, it successfully carried out the employee share ownership operation for more than 40 Group institutions and entities, with a participation rate of 46%.

It obtained the first place in the *Corbeilles* 2024[1] in the five-year long-term *Corbeille* category of the best employee savings plan. Natixis Interépargne has been regularly recognized over the past 10 years and has the most award-winning and best-performing employee savings management system on the market[2].

Lastly, the commercial momentum continued with significant successes with major corporate customers. Gross inflows are up by 15% in 2024 compared to the previous year. All distribution networks posted strong growth, with growth of 19% in new contract sales over the year[2].

1.5 Agenda

May 6, 2025	After market close – Publication of first-quarter 2025 results
May 22, 2025	BPCE General Meeting
August 5, 2025	After market close – Publication of second-quarter and first-half 2025 results
November 5, 2025	After market close – Publication of third-quarter results for 2025

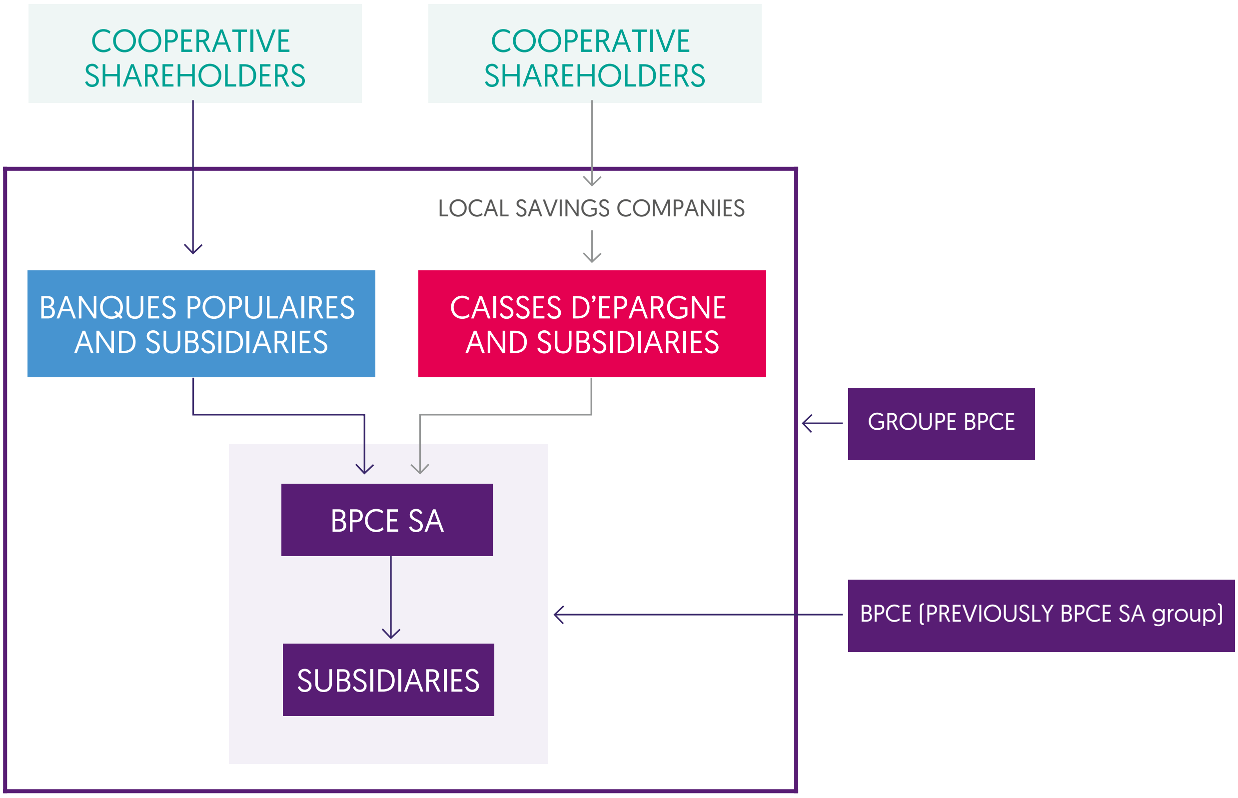
2 SUSTAINABILITY REPORT

Groupe BPCE and BPCE scopes of consolidation

The scope of consolidation of both groups, organized around the central institution, is presented in the diagram below.

In addition to BPCE, Groupe BPCE includes the Banques Populaires, the Caisses d'Epargne and their respective subsidiaries.

BPCE includes BPCE SA and its subsidiaries. The main difference in terms of consolidation perimeter stems from the contributions of the parent companies, which do not contribute to BPCE's net income.



2.1 Groupe BPCE sustainability report

PART 1 - GENERAL INFORMATION

1.1 Basis for preparation

1.1.1 BP-1 — General basis for preparation of the sustainability statements

Groupe BPCE has prepared its sustainability report in accordance with European Sustainability Reporting Standards (ESRS). These standards provide a comprehensive framework for the disclosure of non-financial information on environmental, social and governance issues.

The Group's sustainability report is based on a double materiality assessment, which takes into account both the impact of Groupe BPCE on the environment and society, and the influence of changes in the environment and society on the company's performance. This approach takes into account the expectations of stakeholders, in particular employees, investors, customers, cooperative shareholders and the communities in which the Group operates. It results in a list of impacts caused by Groupe BPCE's activity, and of risks and opportunities (IRO) related to environmental and societal changes.

To prepare this report, Groupe BPCE has collected data on a consolidated basis and across its value chain. This sustainability report is audited as required by the regulations with a limited level of assurance.

Scope of the sustainability report

The scope of consolidation used for this sustainability report is identical to that of Groupe BPCE's consolidated financial statements. All entities included in the IFRS (International Financial Reporting Standards) consolidation scope of Groupe BPCE are also included in this sustainability report.

The institutions included in Groupe BPCE's consolidation, permanently affiliated with BPCE in accordance with Article 10 of Regulation (EU) 575/2013 (CRR) and exempted from the individual and consolidated disclosure obligation in terms of sustainability are the following:

Banques Populaires	Caisses d'Epargne
Banque Populaire Alsace Lorraine Champagne	Caisse d'Epargne Aquitaine Poitou-Charentes
Banque Populaire Aquitaine Centre Atlantique	Caisse d'Epargne d'Auvergne et du Limousin
Banque Populaire Auvergne Rhône Alpes	Caisse d'Epargne de Bourgogne Franche-Comté
Banque Populaire Bourgogne Franche-Comté	Caisse d'Epargne Bretagne Pays de Loire
Banque Populaire Grand Ouest	Caisse d'Epargne Côte d'Azur
Banque Populaire Méditerranée	Caisse d'Epargne Grand Est Europe
Banque Populaire du Nord	Caisse d'Epargne Hauts de France
Banque Populaire Occitane	Caisse d'Epargne Ile-de-France
Banque Populaire Rives de Paris	Caisse d'Epargne Languedoc-Roussillon
Banque Populaire du Sud	Caisse d'Epargne Loire-Centre
Banque Populaire Val de France	Caisse d'Epargne Loire Drôme Ardèche
CASDEN Banque Populaire	Caisse d'Epargne de Midi-Pyrénées
Crédit Coopératif	Caisse d'Epargne Normandie
	Caisse d'Epargne Provence Alpes Corse
	Caisse d'Epargne Rhône Alpes

Exclusions from the reporting scope by family of indicators are indicated in the description of each indicator.

Option to omit specific disclosures

Groupe BPCE has not made use of the option that allows it to omit certain disclosures relating to intellectual property, know-how or the results of innovations. This option is provided for in Section 7.7 of ESRS 1: Classified and sensitive information, and information on intellectual property, know-how or results of innovation.

1.1.2 BP-2 — Disclosures in relation to specific circumstances

1.1.2.1 TIME HORIZONS

In most cases, the material impacts, risks and opportunities have been assessed in the short, medium and long term. To obtain forward-looking information on Groupe BPCE's material impacts, risks and opportunities in its sustainability reports, the Group has adopted the general principles as defined in Section 6.4 of the ESRS 1 section, namely:

- 1 year as short term (annual financial statement presentation period);
- between 1 year and 5 years as medium term;
- more than 5 years as long term.

When the time horizons deviate from these general guidelines, this information is communicated at the same time as the relevant information concerning the specific material subject. During the preparation of this sustainability report, forward-looking estimates and assumptions were made. The results observed may differ from these estimates and assumptions.

1.1.2.2 VALUE CHAIN ESTIMATION

The indicators must cover the entire consolidated scope. However, for the calculation of greenhouse gas emissions under ESRS E1-6 (greenhouse gas emissions), the indicator is calculated over an extended scope. Scope 3, category 15 emissions relate to the value chain, in particular financed emissions.

For the calculation of Scope 3 category 15 emissions on the banking book, greenhouse gas data come from several sources:

purchase of supplier data (Carbone4, Trucost, CDP);

- data collected from the Group's customers (DPE); and
- public databases (*Centre Scientifique et Technique du Bâtiment*).

When data is not available, the Group uses sectoral intensity estimates: either through extrapolation or using a proxy defined through PCAF.

1.1.2.3 SOURCES OF ESTIMATION AND OUTCOME UNCERTAINTY

This report, known as the Groupe BPCE sustainability report, was prepared in accordance with the legal and regulatory requirements resulting from the transposition of the European Directive on the disclosure of information on companies' sustainability (Corporate Sustainability Reporting Directive or "CSRD Directive"). This first year of application is characterized by uncertainties about the interpretation of the texts, which are generalist and cover all sectors of activity but do not specify a specific framework for banking and financial business models. There is also the absence of established practices or comparative information and certain data, in particular within the "value chain".

In this context, Groupe BPCE has endeavored to apply the normative requirements set by the ESRS, as applicable at the date of the sustainability statement, based on the information available within the timeframe for its preparation, by doing its best to reflect its role as a universal bank-insurer, as well as its various business models.

For the double materiality analysis and, in particular, that relating to its value chain, Groupe BPCE encountered limitations relating to the maturity of its valuation methodologies and the availability of data. As presented in Section 1.5.1.1 on the Environment (E), we considered that only the issue of mitigation and adaptation related to climate change is material within the meaning of the standard. The limitations relating to the market information and methodologies available at this stage did not make it possible to characterize the Nature ESRS's materiality within the standard's meaning, which led the Group to assess these environmental issues as non-material. This assessment was carried out based on the definitions of the standard, and the methodologies available to assess and carry out the rating exercises. This assessment can be explained, in particular, by the absence of a consensus on robust methodologies developed on the topics in question and of relevant and appropriate data which would make it possible to establish a link between the impact or risks for Groupe BPCE regarding these topics through its value chain. In view of Groupe BPCE's continuous improvement approach to these environmental issues, the work and ongoing changes in international methodologies, the standards that are being put in place, the best market practices that are emerging and information and data from its customers, which should gradually become available, this double materiality analysis may change in the coming years. The dual materiality analysis, the results of which are presented in this report, aims to qualify the impacts, risks and opportunities as described in the CSRD standard: this analysis only meets the needs of sustainability reporting and not the analysis of factors risks presented in the chapter on risk management.

For the **data points presented** in this report, the BPCE Group used methodological options that it deemed relevant and made estimates for many data points, particularly concerning the various activities of its value chain. The data, analysis, and studies carried out do not guarantee that expectations and targets will be achieved: they are based on objectives, commitments, estimates, assumptions, standards, and methodologies under development and currently available data, which continue to evolve and develop. Some of the information contained in this document has been obtained from public sources or from sources that appear to be reliable or from market references: the BPCE Group has not independently verified them. In addition, Groupe BPCE notes that the information expected in terms of sustainability is based on so-called "agnostic" European standards (ESRS), which are generalist and do not reflect the specificities of the financial sector. As a result, certain data items deemed irrelevant or not applicable, given Groupe BPCE's business models and value chain, have not been produced. The same applies to certain data points relating to the Taxonomy Regulation.

Regarding the **climate change mitigation and adaptation transition plan**, in its transition plan, Groupe BPCE distinguishes between actions relating to its own operations and the targets and actions that it has set itself in order to contribute to the decarbonization of the economy by supporting its customers. The actions described present, in particular, the achievements and roadmap for the actions that seem to impact the downstream value chain. The Group's transition plan describes past, current and future efforts to align its financing, investment and insurance portfolios with scientifically established trajectories aimed at achieving global carbon neutrality by supporting its customers with their environmental transition. This report does not quantify the effects of decarbonization levers or future estimates of total financed emissions. Indeed, the actions undertaken by the Group cannot replace those of individual customers, companies or States that it supports with the transition, and the transition of the economy to a low-carbon economy depends on many parameters external to Groupe BPCE.

As regards the assessment of **greenhouse gas emissions**, as a service company, the Group emits a limited level of CO_2e in terms of its own operations, including by integrating the upstream value chain (purchases, including those related to IT and technological investments, mobility including business trips, etc.) and the travel of its customers to its branches or business centers. Most of Groupe BPCE's GHG emissions come from financed emissions and are subject to a normative calculation for category 15 of the emissions of the downstream "investment" value chain, otherwise known as "financed emissions", aimed at attributing to the financial institution a portion of the CO_2 emissions of its financed customers or securities in which it invests. This calculation takes into account the scopes 1-2-3 of customers, which therefore also include the emissions of their value chain, and leads to a maximum calculation. It is estimated that the financed emissions can be, on average, three times the same greenhouse gas emissions for portfolios of exposure to companies in the same value chain. For this sustainability statement, the Group considered the mandatory categories of financial assets provided for in the Greenhouse Gas (GHG) protocol for calculating financed emissions. The scopes, methodologies used and the main assumptions and data sources are detailed in the paragraph relating to (E1-6) "Gross Scopes 1, 2, 3 and Total GHG emissions".

With regard to Taxonomy, the assumptions used and limitations are detailed in Chapter 2.1 Indicators of the European taxonomy on sustainable activities.

Groupe BPCE believes that the expectations reflected in these forward-looking statements are reasonable; however, they are subject to numerous risks and uncertainties, are difficult to predict, generally outside of the control of Groupe BPCE, sometimes unknown, and may lead to results or cause events to unfold significantly differently from those expressed, implied, or anticipated by the aforementioned information and forward-looking statements.

1.1.2.4 CHANGES IN PREPARATION OR PRESENTATION OF SUSTAINABILITY INFORMATION

As for all French companies, the sustainability report for the 2024 fiscal year is the first such report produced by the Group. Consequently, no change in the definition or calculation of metrics, including those used to set targets and monitor progress towards their achievement, is to be reported.

1.1.2.5 REPORTING OF ERRORS IN PRIOR PERIODS

As indicated above, since this exercice is the first, comparative data with previous periods are not presented. The reporting of errors in previous periods does not extend to the reference periods preceding this first year of application of the sustainability standards by the company. Furthermore, no significant error related to the previous Green Asset Ratio (GAR) period was identified.

1.1.2.6 DISCLOSURES STEMMING FROM OTHER LEGISLATION OR GENERALLY ACCEPTED SUSTAINABILITY REPORTING PRONOUNCEMENTS

With regard to risk management, Groupe BPCE has defined sustainability risk as a risk factor. The chapter on environmental, social and governance risks under Pillar III ESG describes how the Group defines and manages these risks. This chapter also contains an overview of the impact of climate and environmental risks on other types of risks. Further details on the methodologies and management used for traditional types of risks, such as credit risk, market risk, operational risk and liquidity risk, are provided in Chapter 7 - Risk factors and management.

In addition, the elements relating to the eligibility and alignment of the Group's portfolio as defined in Regulation (EU) 2020/852 and supplemented by Delegated Regulations (EU) 2021/2178, 2021/2139 and 2023/2486 are included in Section 2.1. Indicators of the European Taxonomy on sustainable activities.

1.1.2.7 INCORPORATION BY REFERENCE

In order to avoid duplication, ESRS 1 allows the incorporation of parts prepared in other documents, such as the management report or the Universal Registration Document, by means of a simple mention, provided that this information has equivalent characteristics, particularly in terms of reliability. This generally concerns the parts relating to the description of the company's activities and strategy, its governance, remuneration policies, risk factors and the Duty of Care. The ESRS believe that it is imperative to ensure and explain the consistency between the sustainability report and the financial statements, by paying particular attention to significant amounts, assumptions and projections. The amounts considered as material from the financial statements must be accompanied by a reference, although the presentation of a reconciliation in the form of a comparative table between the amounts of the sustainability report and those of the financial statements remains optional.

At Groupe BPCE level, the following information is incorporated by reference:

Name of the disclosure requirement	Data point	Registration document	Section of the Registration Document
Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies	ESRS GOV-2, Para. 26 (a) & (b)	Universal Registration Document	Chapter 4 - Report on corporate governance - 4.3 Composition of the management and supervisory bodies and 4.4 Role and operating rules of governing bodies
Disclosures in relation to specific circumstances	ESRS BP-2 Para. 15	Universal Registration Document	Chapter 7 - Factors and risk management - 7.16. Environmental, social and governance risks
The role of the administrative, management and supervisory bodies	ESRS 2 GOV-1 Para. 19 & 21	Universal Registration Document	Chapter 4 - Report on corporate governance - 4.3 Composition of the management and supervisory bodies
Risk management and internal controls over sustainability reporting	ESRS 2 GOV-5 Para. 36 (a)	Universal Registration Document	Chapter 7 - Factors and risk management - 7.16. Environmental, social and governance risks

1.2 Cooperative dimension

Groupe BPCE is a cooperative full-service bank and insurance Group serving its customers, cooperative shareholders, territories and the economy. Its cooperative model is inseparable from the history of its two historical networks, Banque Populaire and Caisse d'Epargne. These roots, which forge its identity, also condition its performance, both financial and non-financial.

Since its origin, Groupe BPCE has been rooted in a humanist aspiration: making people a core priority, giving everyone the means to save money and finance their projects, and playing a pioneering role in regional development. This DNA, supported by century-old brands, has been embodied at every stage of its history:

- 1818: creation of the first Caisse d'Epargne et de Prévoyance to promote, collect, and manage the general public's savings;
- 1878: creation of the first Banque Populaire, founded by and for entrepreneurs to help finance their projects;
- 1919: creation of Crédit National, from which Natixis originated, to finance the reconstruction of the French economy;
- 2009: creation of Groupe BPCE through the combination of the Banque Populaire and Caisse d'Epargne groups, sharing common values of solidarity and proximity.

Thanks to its unlisted cooperative nature, which enables it to invest to meet the challenges of tomorrow, the Group's action is part of the long term and provides local and concrete responses to the transformations of the economy and society. Its sustainable model is based on a positive financial trajectory and economic footprint contributing to both an environmental and societal impact. After fifteen years of transformation and simplification, Groupe BPCE is today a unique and solid group, 100% cooperative and bringing together 9.8 million cooperative shareholders.

Cooperative shareholding, one of the pillars of the cooperative model

By holding the company's capital through cooperative shares, customers become cooperative shareholders and actively participate in the life, ambitions and sustainable development of their bank, with the aim of implementing a fairer and more inclusive company that is more democratic and guided by the public interest.

- **The 9.8 million cooperative shareholders of the Banque Populaire and Caisse d'Epargne networks** hold 100% of the capital of the Banques Populaires and the Caisses d'Epargne (through the intermediary of the local savings companies [LSC] for the Caisses d'Epargne). Their representatives sit on the Boards of Directors of the Banques Populaires and on the Steering and Supervisory Boards of the Caisses d'Epargne.
- The **14 Banques Populaires and the 15 Caisses d'Epargne**, all with firm roots in their regions, hold 100% of the capital of BPCE, the Group's central institution.

A regional cooperative model

A fundamental characteristic of its identity, the local presence of the Banques Populaires and the Caisses d'Epargne enables the Group to be attentive to everyone and understand the expectations of society. The Group transforms this proximity into a capacity for innovation to serve regional growth. By acting alongside local players (local authorities, associations, business networks, educational and university communities, etc.), Groupe BPCE brings this proximity to life:

- by making use of a short circuit of money. Local savings and results finance projects on this same scale, purchases are mainly made from local suppliers, and the Group creates jobs as close as possible to the regions;
- by promoting local ecosystems and dialog with its stakeholders such as chambers of commerce and industry, professional associations, social and solidarity-based economy players, NGOs and associations. Aware that solutions to social and environmental challenges require acting together, it stands alongside those who come together to take action.

Cooperative performance to ensure long-term growth: VISION 2030

Strong and proud of its many faces, Groupe BPCE has built itself around solid and complementary brands: Banque Populaire, Caisse d'Epargne, Natixis CIB, Natixis IM, Oney, Banque Palatine, with full-service regional institutions with differentiating expertise. The societal project that guides their activities defines the way in which the Group conducts its business. Coupled with its regional cooperative model, these brands contribute to the Group's strengths, resources and stability.

With its VISION 2030 strategic project, the Group reaffirms the societal ambition of its activities by placing the cooperative dimension at the heart of its growth. It is now managed on the basis of a "cooperative performance"; both financial and non-financial, with an environmental and societal impact, and is part of a long-term perspective reconciling robustness, subsidiarity and impact.

Robustness

By being unlisted the Group is protected from any speculation, reserves are indivisible and the value created is distributed fairly among stakeholders. A portion of the surpluses is reinvested in the future of the Group's companies to develop them and pass them on to future generations, and a portion is paid to the cooperative shareholders as well as used for the local development of the regions.

This model results in regular and low-volatility profitability, a moderate risk appetite and high solvency. The Group thus distinguished itself in Europe, where it maintained some of the highest solvency requirements.

Subsidiarity

Groupe BPCE's decentralization and regional presence are real assets for supporting transitions and lasting transformation of society; they are the guarantors of rapid decision-making, as close as possible to the regions.

Impact

With its VISION 2030 strategic project, the Group aims to "make impact accessible to all": this is the meaning of 'impact for all.' Its generalization is based on three main principles:

- the impact for all clients: individual clients for their energy renovation projects, corporate clients for their transition plans, local authorities in support of their policies;
- impact for all territories and the society: by enabling local players to join forces, with the help of the Group's cooperative shareholders and developing regional initiatives;
- impact for all employees and boards of directors: by deploying an Impact Inside operation and by mobilizing 100% of Groupe BPCE's employees, companies and governing bodies around ESG issues.

Groupe BPCE is convinced that it is a model in line with society's expectations, whose changes it has always supported.

The philanthropic engagement and solidarity and sponsorship actions of the Banques Populaires and the Caisses d'Epargne

Banque Populaire network

Since 1992, the Fondation Nationale Banque Populaire, an instrument of sponsorship for the 14 Banques Populaires and their cooperative shareholders, has promoted individual initiative and supported, over the life of their projects, talented, creative people with an entrepreneurial spirit and a taste for innovation in three areas: classical music, disability and arts and crafts.

In 2024, the Fédération nationale des Banques Populaires endowment fund continued its support for ADIE, a national and regional association that finances and supports micro-entrepreneurs. Supplemented by the action of each of the Banques Populaires in the regions, Banque Populaire (excluding CASDEN) is once again in 2023 the first financial partner of ADIE with €47.7 million, which financed 10,000 microloans and contributed to the creation or maintenance of 12,200 self-employed and salaried jobs, in addition to skills sponsorship, honor loans, and other training support or Créadie Awards.

In addition to sponsorship, they are involved in actions in favor of civil society. They are highly involved in supporting business creation, integration (through microloans in particular) and solidarity, and actively support education and research. In addition, Crédit Coopératif and its foundation are mainly focused on supporting and promoting the social and solidarity-based economy. CASDEN Banque Populaire naturally favors education and research.

The impact of the sponsorship of the 14 Banques Populaires is one of the components measured each year *via* the Banque Populaire Cooperative and Societal Footprint (ECS). Based on ISO 26000 (the leading international standard for CSR), this footprint identifies and values in euros the CSR and cooperative actions implemented within each bank for the benefit of society, employees and customers, cooperative shareholders and suppliers. These actions go beyond regulations, excluding commercial, and traditional banking activity. In 2023, the cooperative and societal footprint (ECS) shows that the Banques Populaires network - composed of 12 regional Banques Populaires, CASDEN Banque Populaire and Crédit Coopératif - carried out 6,434 actions for the benefit of society and the regions, for a total amount of €194.6 million. There has been a sharp increase in the number and amount of ECS actions supported.

Caisse d'Epargne network

Created by philanthropists, the Caisses d'Epargne have been working to promote social cohesion and the fight against exclusion since their inception. They are among the leading corporate sponsors in France.

The Fédération nationale des Caisses d'Epargne has adopted CSR and Cooperative Guidelines that provide a shared framework for the actions of the Caisses d'Epargne around four ambitions: be a key player in the transformation of the regions and the local economy (local footprint), pursue the continuous improvement of ESG policies and their integration into all business lines for more impact (overall performance), encourage employees and cooperative shareholders to become cooper'actors (active cooperation) and anticipate societal needs to build solutions that contribute to progress (societal innovation).

The purpose of the endowment fund of the Caisse d'Epargne network constituted by the FNCE, is to encourage and support actions of general interest aimed at combating exclusion and poverty, particularly in banking and financial situations, and to support solidarity actions and assistance programs. It also supports the Finances et Pédagogie association, which deploys educational programs on money issues throughout the country. It also supports other large structures such as the Fondation Belem, which is recognized as a public utility, whose purpose is to promote France's maritime past and to preserve France's last large ship of the 19th century, which has been classified as a historic monument since 1984. Lastly, it has a €200,000 fund that responds quickly to natural disasters.

The 15 Caisses d'Epargne have their own sponsorship strategy in their regions. In 2024, sponsorship represented a total of €20.8 million and 1,290 local projects were supported, mainly in the field of youth, solidarity and sport.

Groupe BPCE, a Premium Partner of the Paris 2024 Olympic and Paralympic Games, is building a social and environmental legacy that makes sport accessible to all

Groupe BPCE, with all its companies - Banque Populaire, Caisse d'Epargne, Natixis, CASDEN, Crédit Coopératif, ONEY and Banque Palatine - was the leading Premium Partner of the Paris 2024 Olympic and Paralympic Games. In addition to sharing the values of one of the biggest sporting events in the world, it was an opportunity for the Group to continue to respond in a tangible way to the current challenges of society and to participate in building a social and environmental legacy which makes sport accessible to all:

- making sport a tool for regional planning;
- supporting the local economic fabric and employment;
- taking action to promote the inclusion of people with disabilities.

1.3 Strategy

1.3.1 SBM-1 - Strategy, business model and value chain

1.3.1.1 SUSTAINABILITY-RELATED STRATEGY

In 2024, Groupe BPCE rolled out its strategic project VISION 2030, a growth project at the service of its customers and their support in the face of the challenges of the environmental, demographic, technological and geopolitical changes.

The priority given to climate in its latest strategic project has been renewed and integrated into the Impact strategy, with an extra-financial trajectory that includes fifteen key impact indicators. This prioritizes the expansion of impact solutions to all clients of the group, accelerating across all ESG dimensions

Thus, sustainability, both environmental and societal, is at the heart of the Group's strategy.

1.3.1.1.1 Sustainability-related strategy

A Group with "positive impact"[1]

VISION 2030, Groupe BPCE's new strategic project outlines the major priorities it has set for itself in order to build a growth project to serve its customers, in a society marked by four major transitions: environmental, demographic, technological and geopolitical.

Faced with this situation, Groupe BPCE is mobilizing its local and regional presence, its business lines and expertise, to enable its customers, cooperative shareholders and employees to assert their power to act and to trust in the future.

The cooperative nature of the Banques Populaires and the Caisses d'Epargne, combined with the banks' strong local presence, have made Groupe BPCE a financial player which has notably committed to the decarbonization of the economy in recent years. Groupe BPCE's global business lines - Natixis Corporate & Investment Banking (Natixis CIB) and Natixis Investment Managers (Natixis IM) - are positioned as key global players in transitions.

Environmental impact

Faced with the climate emergency, Groupe BPCE's approach sets out to ensure the rapid implementation and rollout of measures designed to mitigate and adapt to the already tangible environmental and socio-economic impacts. Making "the impact accessible to all"[2] means raising awareness and providing support to all its clients in the environmental transition by providing them with expertise, advisory services, and comprehensive solutions.

Building on the scenarios defined by science, the BPCE Group and its businesses position themselves as facilitators of transition efforts, with a clear and ambitious goal: to finance a carbon-neutral economy by 2050 by taking action today.

The Group's approach is based on its cooperative business model: a presence in local communities and a commitment to society geared to financing the economy.

- **Impact solutions**

For individual clients: providing support for energy renovations and home adaptations addressing aging and reduced autonomy by offering financing solutions and by mobilizing Groupe BPCE's role as a housing operator, trusted third party along with its network of partnerships:

  – by offering an "Advice and Sustainable Solutions" tool in partnership with ADEME, making it easy for clients to calculate their carbon footprint but also to benefit from advice and assistance for energy renovation work, for decarbonized mobility or green investments;

(1) Terminology for the strategic project VISION 2030: https://www.groupebpce.com/en/the-group/strategic-plan/
(2) VISION 2030 strategic project terminology: https://www.groupebpce.com/le-groupe/plan-strategique/

– by providing support at every stage of energy renovation projects for individual homes and condominiums: energy assessment, search for grants, guarantee of successful completion of work, with financing pathways tailored to each situation;
– by increasing the volume of financing for the energy renovation of buildings.

For BtoB customers: supporting the transition of the business models of its clients, from SMEs to the largest international companies. The Group engages with its clients through dedicated dialogue and sector-specific expertise to integrate ESG issues according to the size of the companies and their economic sectors, particularly in energy infrastructure, transportation, waste management and treatment, etc. Sustainable solutions also exist for investor clients with a range of responsible investments and placements: sustainable development passbook accounts, funds with a sustainable investment target, theme-labeled funds, etc..

- **Support for the evolution of the energy mix:** faced with the climate emergency, the priority is to accelerate the advent of a sustainable energy system:
  - by positioning itself among the world leaders in debt project financing in the renewable energy sector;
  - by increasing its financing dedicated to the production and storage of green electricity;
  - by providing advice about capital raising processes to its clients commanding leading positions in the infrastructure and equipment sector related to energy transition as well as innovative and high-growth companies in the same sector;
  - by advising its customers on energy transformation projects in their financing or capital raising processes;
  - by supporting the reindustrialization of regions and energy sovereignty;
  - by setting up teams of experts dedicated to low-carbon energies (solar, wind, electrolysis, etc.) and critical metals.
- **Alignment of its financing and insurance portfolios** with trajectories compatible with the objectives of the Paris Agreement:
  - by developing carbon emission measurement systems;
  - by developing its system for identifying and managing physical and transitional climate risks affecting both its clients and its own activities, on the basis of a continuous improvement approach;
  - by gradually withdrawing from the most-carbon emitting activities, in particular through adapted ESG policies.

In this context, the Group has joined the Net Zero Banking Alliance initiative of the United Nations Environment Program (UNEP FI), and has a decarbonization ambition for the most carbon-emitting sectors.

- **Active and innovative issuer in sustainable finance**: in its VISION 2030 strategic project the Group has set itself the target of issuing more than five green, social or health funding instruments per year, using all the debt instruments at its disposal.

Societal impact

The Group is a leading financier in the Social and Solidarity Economy sector, local authorities and a major player in social housing, social entrepreneurship and microcredit.

- A player in the territories and regions of the world where it operates: Groupe BPCE plays a major role in local ecosystems promoting territorial cohesion, supporting numerous initiatives in favor of social inclusion and the reduction of inequalities:
  – the Banques Populaires and the Caisses d'Epargne are key players in the dynamic development of our territories, notably by financing the construction or renovation of infrastructure and facilities necessary for education, health, and mobility. They are the leading providers of private funding for local authorities and the hospital sector;
  – on a global scale, Natixis Investment Managers and Natixis Corporate & Investment Banking are developing their Asset & Wealth Management and Corporate & Investment banking business lines in over 40 countries, in line with international commitments in terms of investment and financing activities.
- Committed to supporting local and national initiatives:
  – the impact of the sponsorship activities of the 14 Banques Populaires is measured annually through their Cooperative & Societal Footprint metric. This footprint identifies and values in euros the CSR and cooperative actions implemented within each bank;
  – the 15 Caisses d'Epargne have rolled out their Utility Contract in all regions of France: 100% cooperative, 100% regional and 100% useful for the economic, social and environmental development of the territories.

Transforming Groupe BPCE

In order to support the transitions of its clients in accordance with the best available standards, Groupe BPCE has launched an internal transformation plan entitled 'Impact Inside'. In order to expand its impact solutions to its clients and speed up its progress in all the different aspects of ESG, Groupe BPCE has undertaken a transformation of all its companies at every level. It mobilizes its governance and employees, which it trains in ESG issues, and also acts on its own activities by reducing its carbon footprint.

1.3.1.1.2 Sustainability-related targets

Among the strategic priorities of VISION 2030, Groupe BPCE is renewing its commitment to supporting environmental and societal transitions. It is committed to making "impact accessible to all"[1] and to reinforcing its "global positive based on the strength of local solutions accessible to all."[2].

The Group's strategy is accompanied by quantified objectives to implement and steer the Group's concrete actions by 2026. All of these objectives (depending on the major service groups, customer categories, geographic areas and relations with interested parties) are set out in the table below.

(1) Terminology for the strategic project VISION 2030 - Environmental impact, Groupe BPCE: https://www.groupebpce.com/en/csr/actor-in-the-environmental-transition/.
(2) Terminology for the strategic project VISION 2030 - A Group with positive impact, Groupe BPCE: https://www.groupebpce.com/en/csr/our-csr-approach/.

A GROUP MOBILIZED TO DECARBONATE THE ECONOMY

	Reduction of the carbon footprint (own footprint 2023-2026)	(6%)[8]

(1) The scope for reporting this indicator is made up of the Banque Populaire and Caisse d'Epargne networks. This indicator sums the financing of energy renovation work for individual customers (natural persons). The calculation base for this indicator is made up of production data relating to energy renovation, ECO PTZ MPR and ECO PTZ.

(2) The scope for reporting this indicator is made up of the Banque Populaire and Caisse d'Epargne networks. This indicator is the cumulative number of unique visitors who have consulted the "Sustainable Advisory and Solutions" section of the Banque Populaire and Caisse d'Epargne networks mobile app since 2023. The basis for calculating this indicator is made up of the almost real-time reporting of digital navigation data traced by the tool Adobe Analytics.

(3) This indicator calculates, for Groupe BPCE, the percentage of corporate outstandings covered by an ESG dialog. The basis for calculating this indicator is made up of outstandings at risk covered by an ESG dialog for third-party corporate assets in the commercial sense.

(4) This indicator sums the financing of the public sector, social housing and the social and solidarity economy. It is established for the Caisses d'Epargne on the basis of the Panorama BDR CE + HeR for social housing financing. *Source FSE for the Banques Populaires*.

(5) It is established for the Caisses d'Epargne on the basis of the Panorama BDR CE + HeR for social housing financing. *Source FSE for the Banques Populaires*.

(6) The scope for reporting this indicator is made up of the Banque Populaire and Caisse d'Epargne networks. This indicator lists the annual number of professional projects financed by microloans. The calculation basis for this indicator is made up of the number of pro take-off loans carried out in the Caisses and the amount of microloans made by the CE and BPs sent by external organizations (France Active, CREA-SOL and ADIE).

(7) New system currently being rolled out.

(8) 15% reduction achieved over the 2019-2024 period.

1.3.1.2 BUSINESS MODEL

Our DNA

A FULL-SERVICE REGIONAL COOPERATIVE BANK MODEL

1.3.1.2.1 Description of the main groups of products and/or services offered

As a universal, cooperative and regional bank, Groupe BPCE is a major player in Retail Banking and Insurance in France, in specialized businesses lines in Europe, and in Corporate & Investment Banking and Asset Management internationally.

Groupe BPCE's business models and business lines are structured around two divisions: Retail Banking and the related business lines, mainly in France, and the global business lines of Groupe BPCE:

Retail Banking and Related Business Lines

- **Retail Banking:** Groupe BPCE is present in the Retail Banking field in France *via* its two cooperative networks, Banque Populaire and Caisse d'Epargne, along with Banque Palatine:
  - the Banques Populaires and Caisses d'Epargne provide their customers with a complete range of solutions in terms of account access, financing, savings, private management, insurance, payment and specialized financial services (such as leasing or factoring);
  - Banque Palatine provides its customers with a range of banking products (current accounts, real estate and personal loans, financial investments, financing solutions to meet environmental challenges).

> The Retail Banking business line represents 54% of the Group's NBI, *i.e.* €12.5 billion.

- **Insurance:** BPCE Assurances is Groupe BPCE's Insurance division. A fully-fledged insurer, it designs, distributes and manages a comprehensive range of personal and non-life insurance products for customers of Groupe BPCE's banking networks:
  - personal insurance: life insurance, retirement savings, creditor insurance and individual and professional personal protection insurance;
  - non-life insurance: motor insurance, multi-risk home insurance, supplementary health insurance, personal accident insurance (GAV), multimedia equipment insurance, legal protection, parabanking insurance, professional car and multi-risk insurance, etc.

> The Insurance business line represents 3% of the Group's NBI, *i.e.* €0.7 billion.

- **Digital & Payments:** the Digital & Payments division brings together all of Groupe BPCE's business lines and expertise in the fields of innovation, digital, data and artificial intelligence, payments, and trade finance with Oney.

> The Digital & Payments business line represents 4% of the Group's NBI, *i.e.* €0.9 billion.

- **Financial Solutions & Expertise:** the Financial Solutions & Expertise division brings together the expertise in the financing business lines - these develop revolving credit and personal loan offers for the Group's banks, offer a complete range of rental solutions (in particular equipment and real estate leasing, long-term leasing, and leasing with option to buy) and develop factoring solutions - as well as in the business lines of insurance, custodial and advisory services.

> The Financial Solutions & Expertise business line represents 5% of the Group's NBI, *i.e.* €1.3 billion.

Global business lines

- **Corporate & Investment Banking:** Natixis Corporate & Investment Banking (CIB) provides advice and designs solutions for its corporate customers, financial institutions, institutional investors, financial sponsors and public sector entities, drawing on all of its expertise in advisory, investment and financing, commercial banking and capital markets. It is organized around five main business lines: Global Markets, Investment Banking, Real Assets, Global Trade, M&A.

> The Corporate & Investment Banking business line represents 19% of the Group's NBI, *i.e.* €4.4 billion.

- **Asset & Wealth Management:** Asset & Wealth Management develops solutions to meet the deposits and savings, investment, risk management and advisory needs of the various private banking and institutional customers of Groupe BPCE:
  - Asset Management: Natixis Investment Managers (Natixis IM) supports investors on all continents in building their portfolios by offering them a wide range of diversified and responsible solutions. Natixis IM offers a range of more than 200 strategies to enable its investor customers to achieve their investment objectives, and develops its offer around four key areas of expertise: fundamental active management, liability-driven management, real assets, and quantitative management;
  - Wealth Management: Natixis Wealth Management designs tailor-made wealth management and financial solutions to structure and manage the assets of business leaders, senior executives, large private investors and holders of family capital. Natixis Wealth Management supports its clients in their initiatives to undertake, invest and transmit by mobilizing a wide range of expertise: corporate advisory, origination, vanilla and complex financing, investment, wealth engineering, asset management and diversification solutions, in particular private equity;
  - Employee and retirement savings: Natixis Interépargne supports companies of all sizes in setting up and managing their employee savings and retirement savings (PEE, PERCO, Collective PER, Mandatory PER) as well as employee shareholding.

> The Asset & Wealth Management business line represents 15% of the Group's NBI, *i.e.* €3.5 billion.

1.3.1.2.2 Description of major markets and/or customer groups

Groupe BPCE, a universal banking group, serves 35 million customers worldwide. The offers are aimed at a wide range of customers, including the main target customer groups:

- **individual customers:** Groupe BPCE is the second-largest bank for individuals[1] in France;
- **professional customers:** Groupe BPCE is the second-largest bank for professional customer and self-employed customers[2]. The professional market includes craftspeople, small retailers and liberal professions
- **corporate customers**: the Group supports companies of all sizes - SMEs, SMIs, medium-sized companies and large companies. Groupe BPCE, thanks in particular to its Banque Populaire network, is the No. 1 bank for SMEs[3];
- **local authorities:** Groupe BPCE, in particular through the Caisse d'Epargne network, is the main private financier of local authorities[4], the hospital sector[5], and more generally the French public sector;
- **social housing** operators: Groupe BPCE is a long-standing partner and leading private banker in social housing[6];
- **Social and Solidarity Economy (SSE)**: Groupe BPCE, thanks to the action of its Banque Populaire and Caisse d'Epargne networks, is a major player in the private financing of the Social and Solidarity Economy. They support the various SSE structures, regardless of their size and status: cooperatives, mutuals, associations and foundations, employer structures in the historical sectors of SSE activity.

In addition, as part of its VISION 2030 strategic project, the Group is defining a new growth model to develop simultaneously in three major geographical circles France, Europe and the world. This ambition concerns:

- in France: insurance and individual customers, professional customers and corporate customers;
- in Europe: financial services;
- in the world: the Group's global business lines, Corporate & Investment Banking and Asset Management.

1.3.1.2.3 Description of the number of employees by geographical area

Groupe BPCE has over 100,000 employees, nearly 90% of whom are based in France.

1.3.1.2.4 Description of products and services prohibited in certain markets

ESG sector policies govern Groupe BPCE's activities in sectors deemed sensitive from an environmental, social and governance (ESG) point of view.

Concerning Groupe BPCE's banking activities

- **Thermal coal**: in October 2015, Natixis Corporate & Investment Banking (CIB) committed to no longer finance coal-fired power plants and thermal coal mines worldwide. This policy has gradually been strengthened. In 2021, Groupe BPCE extended its policy to all of its banking activities and committed to a strategy aimed at gradually reducing its banking activities' exposure to thermal coal to zero by 2030 (for European Union and OECD countries) and 2040 (for the rest of the world).
- **Oil and gas industry**: published for the first time in 2017, this ESG policy, initially applicable to Natixis CIB's activities, was extended in 2023 to all of Groupe BPCE's banking activities and was strengthened with new criteria.

Concerning Natixis CIB's banking activities

- **Defense industry**: Natixis CIB excludes the financing, investment and provision of services to companies involved in the production, storage and trade of anti-personnel mines and cluster munitions.
- **Tobacco industry**: Natixis CIB has undertaken to cease all dedicated financing related to tobacco activities, as well as all non-dedicated financing in favor of a company whose business is 25% or more tobacco-based.

The European asset management companies affiliated with Natixis Investment Managers also apply sector and/or exclusion policies:

European asset management companies have developed responsible investment policies that explain their overall ESG approach, provide detailed guidance on the integration of environmental factors, and explain their sectoral and/or exclusion policies. All European asset management companies ban controversial weapons from their investments, and have exclusion policies in the coal, non-conventional oil and gas, and tobacco sectors. Some affiliated asset management companies have developed more restrictive exclusion policies, based on recognized frameworks for fossil fuels. The majority of asset management companies offering investment products in non-listed assets completely exclude fossil fuels in favor of transition and renewable energies.

(1) Market share: 21.9% in household deposits/savings and 26.3% in home loans (Banque de France Q3 2024).
(2) 37% (rank 2) penetration rate among professional customers and self-employed customers (Pépites CSA 2023-2024 survey).
(3) 2023 Kantar SME SMI survey.
(4) *Observatoire de la dette Finance Active des Collectivités Locales* (published in 2024).
(5) *Observatoire Finance Active Établissements de Santé* (published in 2024).
(6) Repères 136 USH of August 2024 (*Les HLM en chiffres*).

BPCE Assurances has implemented the following sector policies as part of its investments:

- **Tobacco sector**: total exclusion of producers and exclusion of distributors whose tobacco-related turnover exceeds 5% of their total business.
- **Controversial weapons**: total exclusion.
- **Thermal coal**: for new investments, exclusion of producers whose turnover from thermal coal is higher than 10%, the annual coal production exceeds 10 million metric tons, or the electricity capacity generated from coal is greater than 5 GW. Distributors developing new thermal coal generation capacities of more than 300 MW are also excluded. For existing investments, divestment planned for 2030 at the latest for companies in OECD countries and for 2040 for companies in non-OECD countries.
- **Oil & Gas**: for new investments, companies developing new upstream fossil fuel (conventional or non-conventional) exploration or production projects, as well as those whose production of unconventional hydrocarbons or those with a high environmental impact exceeds 10% of their total activity are excluded. For existing investments, divestment no later than 2030 for companies that do not meet these criteria.
- **International guidelines**: for new investments, companies that violate the United Nations Global Compact (UNGC) and the OECD guidelines are excluded. For existing investments, priority divestment of companies that violate international principles.
- **Pesticides**: companies whose turnover from the production or marketing of pesticides exceeds 5% and which do not have a biodiversity strategy whose targets are aligned with target 7 of the Kunming-Montreal agreements for new investments are excluded. For existing investments, divestment set no later than 2030 for companies that do not meet the defined criteria.

1.3.1.3 LABELS AND COMMITMENTS

Public commitments that meet demanding international standards

Groupe BPCE has made several long-standing commitments to scale up its actions and accelerate the positive transformations to which it is contributing.

Global Compact

Since 2003, the Group has been a participating member of the Global Compact (United Nations Global Compact), which defines ten principles relating to respect for human rights, labor standards, environmental protection and the fight against corruption.

Principles for Responsible Investment (PRI)

Since 2008, through Natixis, the Group has adhered to the PRI, which supports institutional investors in incorporating environmental, social and corporate governance considerations into the investment decision-making process.

Equator Principles

Since 2010, through Natixis, the Group has been a signatory of the Equator Principles. They aim to take into account social and environmental risks in the context of project financing.

Principles for responsible banking, UNEP Finance Initiative

Groupe BPCE and Natixis have signed the Principles for Responsible Banking and are committed to strategically aligning their activities with the United Nations Sustainable Development Goals (SDGs) and the Paris Climate Agreement.

Net Zero Banking Alliance

In July 2021, Groupe BPCE joined the Net Zero Banking Alliance (NZBA), a financial initiative of the United Nations Environment Program (UNEP FI) covering more than 40% of the assets financed by banks worldwide. This alliance between banking institutions is a decisive step in the mobilization of the financial sector.

In accordance with its commitment to align the trajectory of its portfolios with the objective of carbon neutrality by 2050, Groupe BPCE has published its ambitions for the eleven sectors with the highest carbon emissions (power generation, oil and gas, automotive, steel, cement, aluminum, aviation, commercial real estate, residential real estate and agriculture).

Net Zero Asset Owner Alliance

Since 2022, BPCE Assurances has been a member of the Net Zero Asset Owner Alliance (NZAOA), an international group of investors committed to transitioning their investment portfolios with the aim of contributing to carbon neutrality by 2050.

act4nature

By joining act4nature international in 2024, Groupe BPCE is strengthening its commitment to the environment by renewing the partnership supported by Natixis since 2018.

By joining act4nature international, a coalition that mobilizes companies, public authorities, scientists and environmental associations in favor of the protection, enhancement and restoration of biodiversity, the Group has set itself 24 proactive objectives as part of its banking, insurance and investing activities.

1.3.1.4 VALUE CHAIN

As a financial institution, Groupe BPCE receives funds in the form of customer deposits or purchases of financial instruments by investors and grants loans to its customers (banking transformation function).

The downstream value chain includes customers who benefit from Groupe BPCE's products or services, particularly loans.

The upstream value chain includes suppliers of products or services.

Own operations concern resources (*e.g.* employees, IT, premises, etc.).

1.3.2 SBM-2 - Interests and views of stakeholders

Taking into account stakeholder expectations is an essential exercise to better identify and assess the Group's sustainability impacts. Groupe BPCE's stakeholder consultation process is based on a large number of systems that aims to involve its stakeholders in its process of identifying and assessing impacts, risks and opportunities, as well as levers for improving both environmental and societal topics. These systems are detailed in the table below.

The Group's cooperative model places dialog with stakeholders at the heart of its actions. The local presence of the Banques Populaires and the Caisses d'Epargne enables the Group to be attentive to everyone and understand society's expectations, by promoting local ecosystems and dialog with its stakeholders such as chambers of commerce, professional associations, players in the social and solidarity economy (SSE), entrepreneurial ecosystems, educational structures, associations, foundations, mutuals that the Group has historically supported, given its role as a major financier of the social and solidarity economy.

By holding the company's capital through cooperative shares, customers become cooperative shareholders and actively participate in the life, strategic and sustainable development of their bank. The members of the Board represent the cooperative shareholders, the regions and civil society within the governance of their bank.

Everywhere in the territories in France and in the regions of the world where the Group operates, stakeholder expectations are identified and taken into account through regular relations with the executives of the Group's companies, the Fédération Nationale des Banques Populaires, the Fédération Nationale des Caisses d'Epargne, the employee representative bodies, investors roadshows, meetings with rating agencies and NGOs (non-governmental organizations). Lastly, discussions with regulators, and image or forward-looking surveys are all sources of identification of changes in stakeholder expectations.

Summary of stakeholder dialog

Stakeholders	Dialog methods	Purpose
Cooperative shareholders (Banques Populaires and Caisses d'Epargne)	• Participation in General Meetings • Election of representatives • Dedicated meetings and newsletters • Cooperative shareholders club • Coordination by the Fédération Nationale des Caisses d'Epargne and the Fédération Nationale des Banques Populaires	• Promotion of the cooperative model • Participation in the life of the bank • Access to inside information on the bank's life and its impact on the region • Measurement of satisfaction
Board members (Banques Populaires and Caisses d'Epargne)	• Participation in the Boards of Directors (Banques Populaires) or Steering and Supervisory Boards (Caisses d'Epargne) • Participation in specialized committees • Focus groups • Training programs and seminars • Dedicated directors website	• Representation of the cooperative shareholders' interests in governance • Participation in the definition of strategic orientations • Monitoring function, in particular risk management and reliability of internal control
Employees	• Social survey (internal survey measuring the social climate in the Group's companies) and business line satisfaction survey • Annual interviews • Training • Internal communication • Non-profit networks (women, intergenerational, LGBT+) • Employee whistleblowing rights • Consultation of employee representatives and representative trade unions	• Improving quality of life at work, health and safety at work • Employee loyalty and commitment (career and talent management, skills and expertise development) • Participation of employee representatives in major strategic and transformation issues and negotiation of agreements
Clients	• Interviews • Strategic dialog to integrate ESG issues • Customer events • NPS satisfaction surveys[1] • Institutional and commercial partnerships • Voting policies (available on the websites of the asset management subsidiaries)	• Definition of offers and customer support • ESG dialog: customer acculturation on ESG issues, support for transformation initiatives, risk assessment for better prevention and management by the customer and for incorporation of ESG criteria in the granting of loans • Improving customer satisfaction • Development of a committed shareholder base to encourage companies to transform their strategy and reduce their ESG risks • Monitoring of the respect for compliance and ethics rules in commercial policies, procedures and sales • Complaint management • Mediation
Suppliers and sub-contractors	• Responsible purchasing policy • Commitment to government initiatives (*e.g.* "I choose French Tech") • Regular meetings with strategic suppliers • "Supplier voices" survey • Preparation of certifications • Listening system and satisfaction surveys • Supplier whistleblowing rights and establishment of an independent mediator • Audit	• Responsible Supplier Relations Charter, involving suppliers in the implementation of Duty of Care measures • Compliance with ESG clauses included in contracts • Identification of progress plans to better understand supplier expectations • Improve the level of satisfaction and the relationship • Consultations and calls for tenders • Measurement of satisfaction

(1) Net promoter score

Stakeholders	Dialog methods	Purpose
Institutions, federations, regulators	• Regular meetings (public authorities, regulators, chambers of commerce and industry, etc.) • Contribution to marketplace work (in particular within the FBF - Fédération Bancaire Française), participation in sectoral working groups • Responses to public consultations • Transmission of information and documents • Board seats (EPL, LS, ESS, etc.)	• Constructively contributing to public debate and participating in collective, fair and informed decision-making • Taking into account sector specificities • Regulatory compliance
Rating agencies, investors and independent third parties	• Regular dialog, participation in meetings (technical meetings, roadshows, conferences, etc.) • Transfer of information and documents for ratings/audits • Publication of official documents: Universal Registration Document, quarterly earnings, press releases, investor website	• Improving transparency • Diversification of the Group's refinancing, in particular by promoting the issuance of Green / social / sustainable bonds • Improving financial and non-financial ratings • Meeting the expectations and questions of investors and rating agencies • Reports publication (CDP, act4nature international, PRB, etc.)
NGOs and non-profits	• Calls for projects • Sponsorship • Employee volunteering, skills sponsorship • Regular dialog • Contributions to market questionnaires • Seats on the boards of foundations or associations	• Positive impacts through numerous cultural and solidarity initiatives in various fields: business creation, integration, solidarity, young people, sport, environmental protection, etc. • Improving transparency • Contribution of cross-expertise: banking / financial and better understanding of local players
Academic and research sector	• Relations and partnerships with business schools and universities • Partnership with research chairs • Participation in forums and events • Discussions and consultations with scientific experts	• Welcome and recruitment of work-study students and interns • Improving the employer brand • Contribution to the Group's research, working groups and strategies

Certain stakeholders were consulted as part of the double materiality assessment (see 1.5.1.1 IRO-1).

1.4 Governance

1.4.1 GOV-1 - The role of the administrative, management and supervisory bodies

1.4.1.1 COMPOSITION AND DIVERSITY OF GROUPE BPCE'S MANAGEMENT AND SUPERVISORY BODIES

Supervisory Board and Management Board

The Supervisory Board of Groupe BPCE has 19 members[(1)]: 7 representatives of the Banques Populaires, 7 representatives of the Caisses d'Epargne, 3 independent members[(2)] and 2 employee representatives. The Supervisory Board includes 6 non-voting directors acting in an advisory capacity.

As of 31st December 2024, with eight women on its Supervisory Board out of a total of seventeen members, Groupe BPCE had a proportion of women of:

- 47.05%[(3)] (in accordance with Article L. 225-79 of the French Commercial Code, members representing employees are not taken into account in this calculation);
- 42.11%, in accordance with ESRS 2 (European Sustainability Reporting Standards 2) of the CSRD (Corporate Sustainability Reporting Directive).

The Management Board of Groupe BPCE is composed of four members[(4)], including a Chairman. The diversity rate is 50%[(5)].

The modalities and details of the composition of the Supervisory Board and Management Board (as well as the Executive Management Committee) are provided in Chapter 4.

Thus, the members of the Supervisory Board and the Management Board are appointed in accordance with the appointment and succession policy (adopted by the Supervisory Board at its meeting of February 7, 2024), which specifies the diversity policy applicable to them.

The Appointments Committee - responsible for formulating proposals concerning the choice of Board members, non-voting directors and external independent members (in compliance with legal and statutory rules and in accordance with the Supervisory Board's internal rules) - thus verifies the suitability of candidates to join the Board in view of their good repute, skills and independence while pursuing an objective of diversity within the Board, *i.e.* a situation where the characteristics of the members of the Board differ to a degree ensuring a variety of views within the Board. The Group's cooperative nature contributes to this diversity.

The committee strives to observe the following diversity criteria:

- training,
- balanced geographical representation,
- representation of the different types of market.

When assessing a candidate for the Supervisory Board, the Appointments Committee strives to maintain or achieve a balance and have a skill set appropriate for the Group's activities and strategic project, as well as the technical responsibilities assigned to the various Supervisory Board committees.

Sustainability expertise and skills of the Supervisory Board

Skills are assessed collectively within the Supervisory Board, which favors their complementarity.

The Supervisory Board is mainly composed of representatives from the Banques Populaires and the Caisses d'Epargne, and in particular of the directors and Chairmen of the Boards from both networks. The board chairmen are first and foremost cooperative shareholders of their bank and have in-depth knowledge of the cooperative model, the region and regional specificities.

The skills of the members are reported in the collective skills matrix of the Supervisory Board in Chapter 4[(6)]. This matrix notably mentions all the regulatory skills expected by the supervisor (including banking skills such as: banking and financial markets, accounting and auditing, interpretation of a credit institution's financial information, risk management, etc.). In addition, these elements are supplemented by the information appearing in the terms of office sheet of each member[(7)], which describes his or her experience in detail.

In view of the Supervisory Board's collective skills matrix, the Supervisory Board's average skill level, particularly with regard to ESG skills, is as follows:

- **Knowledge and experience of climate and environmental risks: 3.55 / 5**

This expertise covers the understanding of climate and environmental risk and its challenges for a banking group, the general regulatory context as regards the environment, the specific expectations on the banking sector, and the measurement of this risk and its main indicators. It also covers knowledge of the action plans implemented by the Group.

(1) The Supervisory Board of BPCE exercises permanent control over the management carried out by the Management Board and must include, according to the Group's articles of association, between 10 and 19 members (non-executive company directors) as well as 6 non-voting directors chosen in accordance with the procedures provided for in the diversity policy adopted on February 7, 2024.
(2) *i.e.* a proportion of 15.79% of independent members on BPCE's Supervisory Board. The proportion of independent members on the board committees is specified in Chapter 4.
(3) The Supervisory Board aims for a minimum of 40% representation of the under-represented gender, a ratio calculated by the ratio of the number of women members of the Supervisory Board to the total number of Supervisory Board members, it being specified that the members representing the employees are not included in the calculation.
(4) The Management Board has the broadest powers and must include between two and five members according to Groupe BPCE's articles of association (executive company directors).
(5) The Management Board of BPCE, which is not subject to any regulatory or statutory obligations, calculates this ratio by dividing the number of women members of the Management Board with the total number of members of the Management Board.
(6) The matrix presents the average of the collective skills of all of the members. It is based on skill levels (between 1 and 5) as declared by the members. During the assessments, the Appointments Committee checks the consistency of the declared skill levels with the CVs and training completed.
(7) See 4.3.5 "Directorships and offices held by corporate officers".

- **Social and solidarity economy: 4.47/5**

This expertise covers the understanding of the various areas of intervention of the social and solidarity economy (fair trade, responsible consumption, short supply chains, solidarity-based finance, integration through economic activity, confiscation of criminal assets for the use of social utility, social currencies and non-monetary exchange systems, etc.) and its specific challenges, knowledge of social innovations, the role of the various players, and interactions with public authorities.

- **Cooperative banking experience: 4.47 / 5**

This expertise covers the specificities of the Banque Populaire and Caisse d'Epargne networks, banks and cooperative companies, which are owned by their cooperative shareholders. As cooperative banking institutions, the operations and missions of the Banques Populaires and the Caisses d'Epargne are governed by law (as is BPCE as the central institution of these institutions): participatory governance, regional proximity, legal duties to implement the principles of solidarity and fight against exclusion, promotion and collection of savings, development of provident insurance, contribution to the protection of popular savings, financing of social housing, improvement of local and regional economic development, and fight against banking and financial exclusion of all players in economic, social and environmental life. Knowledge of these specificities, the very essence of the Group's model, is the basis of this "cooperative banking experience".

- **Regional specificities: 4.21 / 5**

This competence involves understanding and taking into account the economic and social strengths and weaknesses of the territories.

- **Economic and regional environment: 4.34 / 5**

This expertise covers knowledge of the strategies for the development, revitalization and optimization of a region as well as understanding of the role of the various players and partners and the legal and financial constraints.

Training program

In order to strengthen the skills available to the Supervisory Board, training provided by internal and/or external providers is offered to Board members, particularly on sustainability issues. The training program takes into account the diversity of experiences and the needs of the Board members, as well as the proposals made as part of the Board's annual assessment.

Details of the training program offered to Supervisory Board members are provided in Chapter 4.

The training offered in 2024 in terms of sustainability, both as part of the regulatory initial training and continuing training, were as follows:

- climate and environmental risks: training delivered by internal and external providers with the aim of understanding climate risk, the general regulatory context regarding the environment, and the specific expectations on the banking sector;
- the challenges of the energy transition and the management of climate and environmental risks: internal training with the aims of improving knowledge about the integration of ESG criteria in risk monitoring, presenting the main regulatory requirements related to climate and environmental risks, and describing the action plans implemented by the Group to respond to them;
- CSRD and transition plan: training delivered by internal and external providers, with the aim of ensuring a good understanding of the CSRD regulatory requirements and the challenges related to this new regulation for Groupe BPCE;
- the climate solutions fresco: external training with the aim of achieving good understanding of the impacts and challenges related to climate risks on the various sectors of the economy;
- Retail Banking operating model: internal training aimed at seeing how the Group is accelerating its transformation of the support functions and how future technologies can trigger new dynamics in Retail Banking operating models;
- governance of cooperative 'banks', overview of the governance and organization of cooperative banks in France and Europe: training delivered by internal and external providers with the aim of presenting an overview of the governance and organization of cooperative banks in France and Europe.

1.4.2 GOV-2 - Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies

1.4.2.1 SUSTAINABILITY TOPICS ADDRESSED BY THE ADMINISTRATIVE, MANAGEMENT AND SUPERVISORY BODIES

Organization of governance relating to Groupe BPCE's sustainability issues

The Supervisory Board supervises and puts the Group's ESG strategy into perspective. The Executive Management Committee of Groupe BPCE validates the ESG strategy, ensures its implementation and oversees the Group's risk management (the composition and diversity of the management and supervisory bodies, the roles and responsibilities of the bodies are detailed in Chapter 4 of the Universal Registration Document - Report on corporate governance).

Banques Populaires and Caisses d'Epargne place ESG at the heart of their business model, and ESG issues have historically been an integral part of the governance of each institution.

At the level of the Supervisory Board and its committees

The Supervisory Board meets as often as the company's interests and legal and regulatory provisions require. The frequency is at least once per quarter. Several specialized committees have been set up by the Supervisory Board and carry out their activities under its responsibility. Their duties are defined in the Supervisory Board's internal rules. The Chairman of each of these committees reports on the committee's work to the Supervisory Board.

In addition to the subjects regularly addressed during Board meetings, such as the quarterly reports of the Management Board, related-party agreements, executive approvals, current events and other matters for information, sustainability subjects are also examined mainly in the context of committee minutes.

Board	Chairman	Frequency in 2024	Duties	Main ESG topics addressed in 2024
Audit and Investment Committee	Kadidja Sinz - Independent member of the Supervisory Board	9 sessions per year	The Audit and Investment Committee: Monitors the process of preparing the sustainability information and the process implemented to determine the information to be published in accordance with the sustainability reporting standards. Monitors the effectiveness of the internal control and risk management systems, and where applicable the internal audit, regarding the procedures relating to the preparation and processing of accounting and financial information used for sustainability reporting. Monitors the performance of the statutory audit by the Statutory Auditors and certification of sustainability information and ensures compliance with the independence conditions required of the parties involved in the audit and certification of sustainability information. Reports regularly to the collegiate body in charge of administration or to the supervisory body on the performance of its duties. It also reports on the results of the certification of the financial statements and the sustainability information, as well as on the way in which these missions have contributed to the integrity of the financial and sustainability information. It reports on the role it has played in this process.	Monitoring of the construction and progress of the CSRD sustainability report: • result of the sustainability auditor's call for tenders; • methods for implementing the CSRD regulation (structuring and construction of the project). Presentation of CSRD issues for Groupe BPCE (joint meeting with the Risk Committee). Presentation of the double materiality assessment approach followed, results of the exercise and guidelines adopted by Groupe BPCE for the rating, overall view of the Group's materiality positions. Presentation by the sustainability auditor of his strategy and approach to verification of the sustainability report.
Cooperative and CSR Committee	The Chairmen of Fédération Nationale des Banques Populaires and Fédération Nationale des Caisses d'Epargne alternately	4 sessions per year	The Cooperative and CSR Committee: Develops proposals and recommendations aimed at promoting and translating the cooperative and social values of long-term engagement, as well as professional and interpersonal ethics, within the activities of the Group and networks, thereby strengthening the cooperative and CSR dimension of the Group and each of the networks. Develops proposals on strategy and institutional communication related to ESG issues. Reviews the sustainability report, as well as any other document or report relating to current or future legal obligations (taxonomy, etc.). Monitors the communication plan and the indicators used to measure the actions of the Group's strategic plan around the actions falling within the scope of the Cooperative and CSR Committee. More generally, makes any proposal it deems useful regarding CSR actions that could be carried out.	VISION 2030 strategic project: positions on Impact, monitoring of the ESG program, in particular assessment of the 2021-2024 ESG program, preparation and implementation of the 2024-2026 Impact program, Net Zero trajectories, biodiversity approach. News and key indicators of Groupe BPCE's Impact Program, monitoring of indicators. Management of Net Zero trajectories (NZBA). Sustainability reports: 2023 NFPS with focus on the carbon audit, new CSRD regulations. CSRD: double materiality assessment (approach followed, results of the exercise and guidelines adopted by Groupe BPCE for the rating, global view of the Group's materiality positions). Presentation by the sustainability auditor of his strategy and approach to verification of the sustainability report. Conduct and Ethics Reporting. News from the national federations of the Banques Populaires and the Caisses d'Epargne. "Protection of the local natural assets" initiative.

Board	Chairman	Frequency in 2024	Duties	Main ESG topics addressed in 2024
Risk Committee	Independent member of the Supervisory Board of BPCE	10 sessions per year	The Risk Committee: Assesses the effectiveness of the internal control and risk management systems. Supports risk management. Assesses and reviews the implementation of the operational strategy for managing BPCE's and the Group's climate and environmental risks and issues proposals, opinions or recommendations in this area to the Supervisory Board. Examines the overall exposure of the Group's activities to current and future climate and environmental risks (based on the work of the ESG Risk Committee)	Climate risks: presentation of the annual work program and monitoring. ESG risks: regulatory news, presentation of the action plan and monitoring. Validation and monitoring of the implementation of the ESG risk action plan. Business Environment Scan and assessment of the materiality of the risks. Climate risk appetite management. Monitoring of regulatory news and interactions with supervisors. Cybersecurity. Half-yearly reports of the compliance functions. Annual report on the combat against money laundering and financing of terrorism.

At the Executive Management level

Board	Chairman	Frequency	Duties	Main ESG topics addressed in 2024
ESG Risk Committee	Chief Risk Officer	6 sessions per year	The ESG risk committee notably: Performs the consolidated monitoring of the ESG risks to which Groupe BPCE is exposed and ensures the implementation of the organization and operational strategy in terms of ESG risk management. Validates the main methodological choices and scenarios used within the Group in the context of ESG risk management. Reviews and validates the assessment of the materiality of ESG risks and expresses its opinion on the Group's ESG risk appetite.	ESG risk management system. Materiality assessment of climate and environmental risks for Groupe BPCE. Climate scenarios and stress test approach. ESG risk dashboard. Monitoring of regulatory news and interactions with supervisors. Climate and environmental risk materiality identification and assessment. Review and monitoring of the ESG risk action plan. Organizational ESG risk charter. Monitoring of work to strengthen the system: geo-sectoral assessments of physical and transition risks, modeling of physical risks on residential real estate, climate scenarios and stress test system, implementation and monitoring of work to integrate ESG issues in the analysis of customer business models (including the credit process). Climate risk appetite management.
Executive Management Committee	Chairman of the Management Board	Weekly	The Executive Management Committee: Validates strategic priorities in terms of social and environmental responsibility. Supervises their implementation.	Progress of the 2021-2024 ESG Program. Impact strategy in VISION 2030. ESG operating model. 2023 NFPS and TCFD publications. Update on the work on the 2023 Duty of Care plan. "Protection of the local natural assets" initiative. Business Environment Scan and assessment of the materiality of the risks. Action plan to strengthen the ESG risk system. Monitoring of regulatory news and interactions with supervisors. Net Zero trajectories of the most emitting sectors. Impact 2024-2026 program.

Board	Chairman	Frequency	Duties	Main ESG topics addressed in 2024
Environmental Transition Strategy Committee	Chairman of the Management Board	4 sessions per year	The Strategic Environmental Transition Committee: Defines the Group's Impact strategy in terms of environmental transition and manages its implementation: action plans, indicators by business line, measurement of the Group's ambitions. Defines the Group's positions in terms of environmental transition. Manages the Group's non-financial communication plan on ESG issues and monitors its impact (non-financial ratings, etc.).	Net Zero trajectories of the most emitting sectors. ESG policies in sensitive sectors. CSRD project. Transition plan. Biodiversity approach.
Data & Technologies ESG Committee	Chief Technology & Operations Officer Chief Digital & Payments Officer	2 sessions per year	The ESG Data & Technologies Committee: Ensures the implementation of the system for distributing the ESG data required for the various uses in all of the Group's information systems.	ESG data as part of VISION 2030. Data governance.
Group Regulatory Committee	General Secretary	4 sessions per year	The Group's Regulatory Monitoring Committee: Monitors regulatory changes, from the genesis of texts to their daily implementation. Carries out a regulatory watch, with a cross-functional and global vision of current/recent regulatory changes. Decides and monitors the implementation.	CSRD. Pillar III ESG, Green Asset Ratio Article 28 of the Energy and Climate act. ECB guide to climate and environmental risks. Guidance on the granting and monitoring of loans. Duty of Care.

The double materiality assessment was presented to the Cooperative and CSR Committee in November 2024 and to the Audit and Investment Committee in December 2024. These two committees communicated their report at the Supervisory Board meeting held in December 2024.

The material impacts, risks and opportunities focus on climate change, value chain workers, affected communities, consumers and end-users and business conduct. The skills of the members of the management and supervisory bodies in connection with these IROs are available in Chapter 4[1].

These diverse topics are the responsibility of various specialized committees and the material matters are dealt with within the ordinary framework of the existing bodies. For example, the material matters related to the climate are dealt with by the Environmental Transition Strategy Committee (CTSE), which is notably tasked with defining the Group's Impact strategy as regards the environmental transition and overseeing its implementation, through action plans, business line indicators and measurement of ambitions. It is in this body that the decarbonization action plans and/or trajectories of the eleven highest-emitting sectors published by Groupe BPCE were validated, before being presented to the Executive Management Committee (CDG).

An "Impact Inside" approach managed by the Sustainability Office

The Sustainability Office which reports directly to the Chairman of the Management Board, proposes, validates and implements the Group's ESG strategy. It plays a cross-functional role within the Group, carrying out the following key missions:

- co-construct the VISION 2030 of the Group's Impact on the Environmental, Social and Governance (ESG) dimensions;
- develop and deploy ESG expertise and ensure the Group's representation and communication;
- conduct and interpret scientific and competitive monitoring and support regulatory monitoring, to ensure continuous improvement;
- manage the Impact 2026 program and carry out structuring projects within its scope in accordance with Group standards and regulatory expectations;
- ensure overall coordination and support each sector's "Impact Inside" operations while implementing the necessary synergies.

The "Impact Inside" approach is being rolled out:

- with the Executive Management Committee, which oversees projects related to the implementation of the Impact VISION 2030 for the Group, with a regular review of the portfolio of structuring projects;
- with the Strategic Environmental Transition Committee, which validates the main operational guidelines and monitors the deployment of environmental projects;
- *via* the institutions, with an Impact Committee, composed of CEOs of Banques Populaires and Chairmen of Caisses d'Epargne, which guides the Impact program and monitors the progress of projects, with the various functions of the divisions notably with the Impact/CSR function to ensure a global vision of the program, a co-construction dynamic and its implementation in the institution;
- with the Group's business lines through specific systems adapted to each business line (the global business lines of Groupe BPCE, Insurance, FSE and D&P), based on existing committees, notably including work between business line departments and a dedicated coordination to co-construct and implement the Group Impact program with the ESG managers.

[1] Matrix of the collective skills of the Supervisory Board and terms of office sheets of the members.

1.4.3 GOV-3 - Integration of sustainability-related performance in incentive schemes

Concerning the members of the Supervisory Board of BPCE SA

With the exception of the Chairman, who receives a fixed annual fee, the members of the Supervisory Board receive remuneration on the basis of their activities. The Chairman and Vice-Chairman of the Supervisory Board do not receive any additional remuneration for their participation in committees.

Each remuneration payment relates to the corporate officer's attendance at Board Meetings and is calculated according to the total compensation package set by by each company's General Meeting.

Concerning the members of the Management Board of BPCE SA

For the 2024 fiscal year, CSR and employee cooperative shareholding within BPCE are one of the five qualitative criteria influencing the variable pay of Management Board members. The variable portion of pay relating to the five qualitative criteria represents 40% of the total variable pay, with no specific weighting for each of the individual criteria. The achievement rate was assessed overall by taking into account the attention paid to the five criteria, taken as a whole, including CSR topics and employee cooperative shareholding within BPCE.

On February 6, 2025, on the proposal of the Remuneration Committee, BPCE's Supervisory Board decided to set the Management Board's variable pay targets for the 2025 fiscal year by incorporating a specific criterion related to the environment, climate and decarbonization trajectories with a weighting of 5%.

1.4.4 GOV-5 - Risk management and internal controls over sustainability reporting

MAIN FEATURES OF THE RISK MANAGEMENT AND INTERNAL CONTROL SYSTEM LINKED TO THE SUSTAINABILITY REPORTING PROCEDURE

1.4.4.1 PREPARATION AND PUBLICATION OF SUSTAINABILITY INFORMATION

Roles and responsibilities

Within the Group, the preparation and processing of sustainability information is mainly the responsibility of the Group Finance division which mobilizes its Architecture & Reporting (A&R) and Financial and Non-Financial Communication teams and the Sustainability Office.

FINANCE DIVISION

Architecture and Reporting

Reporting to the Finance division, the Architecture and Reporting (A&R) department is responsible for securing the key Information Systems Finance & Risks applications, ensuring the reliability of complex production processes (data transformed with the preparation of regulatory and management reports) and ensuring that these processes comply with BCBS 239 principles[1].

In 2024, the department created a unit dedicated to managing non-financial issues closely related to the management of the financial statements. The Responsible Finance Management (RFM) structure is in line with the new "Impact Inside" model.

The new RFM department played a key role in coordinating the work to draw up Groupe BPCE's sustainability report:

- coordination of project committee and governance internally, including interaction with other Group entities that prepare their own sustainability report;
- strengthened coordination of the data strategy and the processes for producing the regulatory indicators required by the ESRS, including the conduct of a test system involving all production entities;
- active monitoring of best practices in force in the market (methodologies for producing indicators, transition plan);
- acculturation of the Finance function of the Group's companies on the new CSRD challenges, in particular *via* the existing National Finance Committee (NFC) bodies;
- interaction with the College of Auditors.

Financial and non-financial communication

Teams are involved in the CSRD set-up and responsible for the production of the Universal Registration Document. They drive the narrative production process. The drafting of the narratives is entrusted to the production business lines, who are experts in the themes. The project teams perform the following functions:

- identify, integrate and raise awareness among the ESRS-themed narrative writers of the new CSRD challenges as well as the editorial requirements required by the standard;
- provide tools to the production business lines such as an editorial guide, methods for monitoring production and completeness, and instructions for proofreading and validation with the managers of the contributing divisions;
- manage the narrative collection process with the Sustainability Office and data collection in collaboration with the Architecture & Reporting department;
- ensure the production of the sustainability report within the milestones of the URD production schedule;
- organize the mechanisms necessary to collect investors' expectations.

This approach aims to ensure a good understanding of the spirit of the EFRAG standard and guide[2]. The drafting work is carried out according to a schedule and in the collaborative tool used to draft the URD.

(1) The Basel Committee on Banking Supervision.
(2) European Financial Reporting Advisory Group.

SUSTAINABILITY OFFICE

The Sustainability Office, which reports directly to the Chairman of the Management Board, proposes, validates and implements the Group's ESG strategy. It plays a cross-functional role within the Group and, as part of the CSRD project and is more specifically involved in the following projects:

- **CSRD acculturation**: the Sustainability Office has designed and runs acculturation sessions for employees, various business lines (Purchasing, Governance, Compliance, etc.) and the Group's management bodies, subsidiaries and institutions. The educational objective of these sessions is to put into perspective the challenges of the CSRD and the sustainability report, explain the regulatory requirements and new structuring concepts, present the organization of the project at Group level and the expected contributions;
- **double materiality assessment:** this analysis was carried out in two stages (for a detailed description, see ESRS 2 IRO-1):
  - the identification of impacts, risks and opportunities (IRO) relevant to Groupe BPCE's activity was coordinated by the Finance division (A&R) and the Sustainability Office, with the operational support of the Retail Banking & Insurance business lines, the global business lines of Groupe BPCE, as well as the ESG Risk, Operational Risk, Achats & Services, Human Resources, Compliance, Technology and Operations, and Public Affairs departments at group level. The double materiality assessment was carried out in two phases, A and B, by the Finance department and the Sustainability Office respectively. Phase A lead to identify the topics and subtopics of the ESRS relevant to Groupe BPCE, through workshops with internal business line experts, and then to carry out an initial identification of the IROs. Phase B lead to draw up the final list of relevant IROs for Groupe BPCE, as well as to rate them,
  - assessment of the materiality of the IROs: the Sustainability Office is responsible for establishing, on behalf of the Group, the IRO rating methodology and it coordinates and supervises the rating of IROs, in conjunction with the internal stakeholders mentioned above; the business lines and functional departments are responsible for rating the IROs falling within their scope;
- **communication strategy and editorial content**: the Sustainability Office ensures that the editorial content of the sustainability report is relevant and consistent with the Group's strategy on sustainability issues, for which it is responsible;
- **transition plan**: the Sustainability Office is responsible for drafting the transition plan;
- **coordination of the Banques Populaires and Caisses d'Epargne**: the Sustainability Office supports the institutions and defines a framework, guidelines and certain content for the preparation of their Impact reports (non-regulatory report produced by certain institutions).

Methods for producing and publishing sustainability reports

In accordance with the requirements defined by the Corporate Sustainability Reporting Directive (CSRD), the central institution prepares the sustainability report.

It also ensures the proper application by the entities subject to this requirement of the rules defined by the Group and verifies compliance with these requirements. Within the Group, the entities subject to the requirement to publish a sustainability report are Natixis, BPCE Assurances, BRED Banque Populaire and Banque Palatine.

To ensure the reliability of the production process, the central institution uses:

- a project structure dedicated to the publication of sustainability reports and distributed to all Group entities;
- a process for consolidating all the information to be published in the sustainability report, including controls to ensure the consistency of the information published and the analyses;
- a complete body of documentation;
- a harmonized permanent control system, the organization of which is described in the following Section (GOV-5 1.4.4.2).

1.4.4.2 GENERAL ORGANIZATION OF PERMANENT CONTROL

General system

The internal control system defined by the Group contributes to the control of risks of all kinds and is governed by an umbrella charter – the Group Internal Control Charter – which stipulates that this system is designed, in particular, to ensure "*[…] the reliability of financial and non-financial information reported both inside and outside the Group.*"

The Group has defined and implemented a permanent control system to ensure the quality of this information, in accordance with the requirements defined by the Ministerial Order of November 3, 2014 on internal control, or any other regulatory obligations relating to the quality of reports, and in particular for the publication of information on sustainability.

For the sustainability report, the internal control system must ensure compliance with the requirements defined by:

- the Corporate Sustainability Reporting Directive (CSRD);
- the Group, in the framework for the preparation and publication of reports and management indicators, which aims to harmonize the reporting practices within the Group.

To ensure strict independence in the implementation of controls, the permanent control system is based annually on two levels of controls with:

- a first level exercised by all those involved in the production and reporting process. The following functions produced the information used for the sustainability report: Finance, Risk, Human Resources, Impact/CSR, Purchasing, Corporate Secretary's Office and Governance;
- a second level is handled by independent units within the Risk, Compliance or Permanent Control functions. For the CSRD reporting, this work is coordinated by the Group Financial Control (Group Corporate Secretary's Office) in conjunction with the other level two control players (risk).

Level one controls

The level one controls consist of self-checking and control procedures implemented by each unit or entity responsible for producing sustainability information.

They aim in particular to ensure compliance with the rules defined by the CSRD and by the Group in the framework for the preparation and publication of reports and management indicators.

The level one controls are carried out throughout the report production process. The definition and implementation of these controls is the responsibility of each function or entity in charge of production, throughout the chain of contributors to the CSRD sustainability report. The production processes have been documented internally.

The results of the controls are formalized by the units or entities responsible for producing the information relating to sustainability and they specify, where applicable, any anomalies identified and their remediation plans to resolve them over the long term.

With regard to the indicators, the level one controls relate in particular to:

- reconciliation with the financial statements, if applicable;
- analysis of changes;
- the quality of the data collected from external suppliers, where applicable;
- drafting of a documentary corpus describing the planned production process and first-level controls.

The level one controls are carried out either in the technical production chains or by the business lines, with particular attention paid to processes involving office automation and manual interventions.

In addition, and in accordance with the requirements of the CSRD regulations (MDR-M[1]), the methods and main assumptions underlying the indicators, as well as the associated limitations, have been documented internally and reproduced in the CSRD report to provide the reader with all the background information necessary to understand the published indicators. As this is the first year of application of the system related to the assessment of double materiality, the internal control process is under construction and will be strengthened in the coming years.

Level two controls: independent review of the sustainability report

GENERAL SYSTEM

To ensure that the main reports published within the Group comply with all the requirements defined by the Group or by regulations, the Group has defined a method for assessing reports called the *independent review of reports* based on the implementation of strict criteria and carried out by independent functions.

This review, organized to ensure that the regulatory requirements are met, mainly aims to obtain an opinion or reasonable assurance that the reports are produced and published in a satisfactory internal control environment and that they include reliable and clear data that is useful and auditable.

Coordinated by the Group's Corporate Secretary's Office (Group Financial Control), this system is mainly carried out in **four major phases**:

1) a **risk assessment phase** aiming to identify the indicators to be checked, to plan the controls and to include the system in an annual control plan N+1 (under PRISCOP[2]) validated by the Internal Control Coordination Committee. The risk assessment is carried out on all the indicators provided for in the publication of the sustainability report, based on the double materiality assessment, to identify gross risks, and on the internal procedures to assess the risk management system related to these indicators. The results of the assessment are based on three levels of risk (low, moderate and high) in order to select those that require a targeted review;

2) an **implementation phase of the level two controls** carried out, according to the scoring method, *via* a grid of rated controls, in accordance with the rules set out in the permanent control framework document on a scale ranging from 1 (requirement not met) to 4 (requirement fully met):

Rating scale for the quality of the report

1	from 1 to 1.9	Requirement not met
2	from 2 to 2.9	Requirement very partially met
3	from 3 to 3.9	Requirement correctly met but to be improved
4	> = to 3.9	Requirement fully met

These controls are based on six areas of analysis, weighted from 1 to 3 and relating to:

- the quality of the **documentation**;
- the robustness of **the organization** relating to the production and publication of the report;
- the quality of the **audit** trail of the data and/or indicators included in the reporting;
- the effectiveness of the system of level one **controls**;
- the **accuracy** of the data and/or indicators published and their consistency with the information provided in other publications;
- the **clarity** of the information.

Weighting of each criterion

DOCUMENTATION	1
ORGANIZATION	1
CLARITY	2
AUDITABILITY	2
CONTROL	2
ACCURACY	3

(1) Minimum Disclosure Requirement - Metrics.
(2) Group permanent control tool.

3) a **control review phase**: the results of the controls are formalized and presented in a summary note, which presents the work carried out and the conclusions, specifying in particular the anomalies identified and, where applicable, the recommendations made (or action plans or corrective measures). The results are included, by criterion, in the Group's permanent control tool (PRISCOP) and the conclusions are shared with the audited units, the external auditors (Statutory Auditors in particular) and with the supervisory body or its specialized bodies (the Audit and Investment Committee on the one hand, and the Cooperative and CSR Committee on the other hand);

4) a **phase of monitoring corrective actions (recommendations issued) and/or areas for improvement identified**: this monitoring is carried out in conjunction with the business lines and after the publication of the Group's sustainability report in order to strengthen the system for subsequent publications. Their implementation will also be monitored for the actions reported under PRISCOP by the Group entities subject to the publication of this report.

MAIN FEATURES OF THE ENVIRONMENTAL, SOCIAL AND GOVERNANCE RISK MANAGEMENT SYSTEM

The environmental, social and governance risk management system is described in detail in Chapter 7, section 16 of the Universal Registration Document.

Definition of ESG risks

ENVIRONMENTAL RISKS

The environmental risks fall into two main risk categories:

- physical risks arising from the impacts of extreme or chronic climate or environmental events (biodiversity, pollution, water, natural resources) related to the activities of Groupe BPCE or its counterparties;
- transition risks, arising from the impacts of the transition to a low-carbon economy, or to one with a lower environmental impact, regarding Groupe BPCE or its counterparties, including regulatory changes, technological developments, and the behavior of stakeholders (including consumers).

SOCIAL RISKS

Social risks arise from the impacts of social factors on Groupe BPCE's counterparties, including issues related to the rights, well-being and interests of individuals and stakeholders (the company's workforce, workers in the value chain, communities concerned, consumers and end-users).

GOVERNANCE RISKS

Governance risks arise from the impacts of governance factors on Groupe BPCE's counterparties, including in particular issues related to ethics and corporate culture (governance structure, business integrity and transparency, etc.), supplier relationship management, influence activities and business practices.

ESG risk management framework deployment program

The ESG Risk department coordinates the implementation of the ESG risk management system at Groupe BPCE level through a dedicated program. This program, initiated in 2021, was reviewed and strengthened during 2024 in line with Groupe BPCE's climate and environmental commitments within the framework of the VISION 2030 strategic project and the regulatory requirements. It defines a multi-year action plan aligned with the action plan that implements the 2024-2026 strategic project. It is directly linked to the strategy and actions implemented by the Impact program. This program is monitored quarterly by the ESG Risk Committee, Groupe BPCE's Supervisory Board and the European supervisor.

This program is structured around the following four topics:

- **ESG risk governance**: committee procedures, roles and responsibilities, remuneration;
- **strengthening risk knowledge**: monitoring systems, sector analyses and assessments, risk reference framework, risk analysis methodologies and processes, data;
- **operational integration of work:** in coordination with the other functions of the Risk division, consideration of ESG risk factors in their respective management systems and decision-making processes;
- **consolidated risk management mechanisms**: dashboards, contributions to RAF / ICAAP / ILAAP, training and acculturation plan for directors, managers and employees, contribution to non-financial communication.

The execution of this program mobilizes the main internal stakeholders in terms of ESG risks, in particular the Sustainability Office, the teams and functions of the other departments of the Risk division, the Finance division and the Compliance department, as well as Groupe BPCE business lines, in particular the departments in charge of developing sustainable finance activities.

Integration of ESG risks into the risk management framework

Based on specific ESG risk assessment methodologies, Groupe BPCE is gradually integrating ESG risk factors into its operational decisions through the existing systems in the bank's main risk functions.

The process of identifying and assessing climate risks and the associated action plans are described in Chapter E1 - Climate change (in Sections 2.2.2.1 and 2.2.3.4 respectively).

Reputational and/or litigation and liability risks have been identified as material in the chapters Climate change, Workers in the value chain, Affected communities and Consumers and end-users, and are covered by the following sections:

REPUTATIONAL RISK

The growing awareness and sensitivity of citizens and economic players to environmental, social and governance issues is leading to increased exposure to reputational risks related to these topics.

Faced with these risks, Groupe BPCE relies on a reputational risk management system overseen by Groupe BPCE Risk division and structured around the Group Reputation Risk Committee, which is tasked with reviewing the most sensitive issues at Groupe BPCE level.

This system is based on the measures implemented in the decision-making processes in order to assess reputational risks and implement mitigation measures if necessary. This concerns in particular:

- the responsible purchasing policy, which requires knowledge and assessment of suppliers' ESG risks, and the implementation of a carbon clause in supplier contracts since 2024;
- the new products/new activities (NPNA) system concerning the characteristics and communication related to Groupe BPCE's products and activities, which includes a systematic opinion from the ESG Risk department and the Impact department;
- the application of sector CSR policies as part of the new relationship, credit and investment processes.

Given the particular sensitivity of its activities to reputational risks, a dedicated system is deployed by Natixis. This system is based in particular on an assessment of the reputational risk arising from Natixis CIB's customers, from inception and throughout the business relationship, including the management of controversies. It is carried out in the normal course of business and, to the extent possible, using the various existing governance mechanisms and committees. A reporting process also makes it possible to report all the files likely to generate a significant risk of damage to the reputation of Natixis and/or Groupe BPCE, composed of members of the entity's Executive Management.

In addition, a system for monitoring the Group's ESG reputation has been set up, conducting monthly monitoring of the main controversies related to ESG issues that have involved Groupe BPCE and their impact on its overall reputation score. This monitoring is presented quarterly to the ESG Risk Committee.

Groupe BPCE plans to continue to enhance these systems in the course of 2025, in particular by defining a framework for monitoring voluntary commitments and strengthening its reputational risk management system.

LITIGATION RISKS

The environmental, social and governance issues are likely to lead to litigation risks for Groupe BPCE. These can be based on legal foundations specific to the ESG issues (Duty of Care, international treaties or European legislation on the climate and the environment), on broader principles applied in this context (competition law, consumer law, criminal law), or unilateral commitments made by Groupe BPCE.

Groupe BPCE has identified and integrated into its operational risk mapping three main litigation and liability risk situations specifically related to ESG issues:

- communication using the ecological/sustainable argument in a misleading manner (greenwashing);
- non-compliance with the voluntary commitments made by Groupe BPCE or voluntary commitments deemed insufficient;
- controversial activities of Groupe BPCE or its entities, customers and/or suppliers.

As for the reputational risks, the risk management relating to these three situations is based on a set of measures integrated into the Group's main decision-making processes.

In addition, Groupe BPCE's Legal department also defines and disseminates best practices in terms of communication on climate and environmental issues and supports Groupe BPCE's business lines and functions in their implementation regarding internal and external communication.

1.4.5 GOV-4 - Statement on due diligence

The table below maps the information concerning the due diligence procedure included in Groupe BPCE's sustainability report.

Core elements of due diligence	Sections in the statement relating to sustainability
a) Embedding due diligence in governance, strategy and business model.	1.3.1.1 / 1.3.1.2 / 1.4.2
b) Engaging with affected stakeholders in all key steps of the reasonable due diligence.	1.3.2
c) Identifying and assessing adverse impacts.	1.5.1 / 2.2.2.1
d) Taking actions to address those adverse impacts.	2.2.3.1 / 2.2.3.4 / 3.2.3.3 / 3.2.3.4 / 3.4.3.3 / 3.4.3.4
e) Tracking the effectiveness of these efforts and communicating.	2.2.3.10 / 2.2.4.1 / 3.2.4.1 / 3.4.4.1

1.5 Impacts, risks and opportunities management

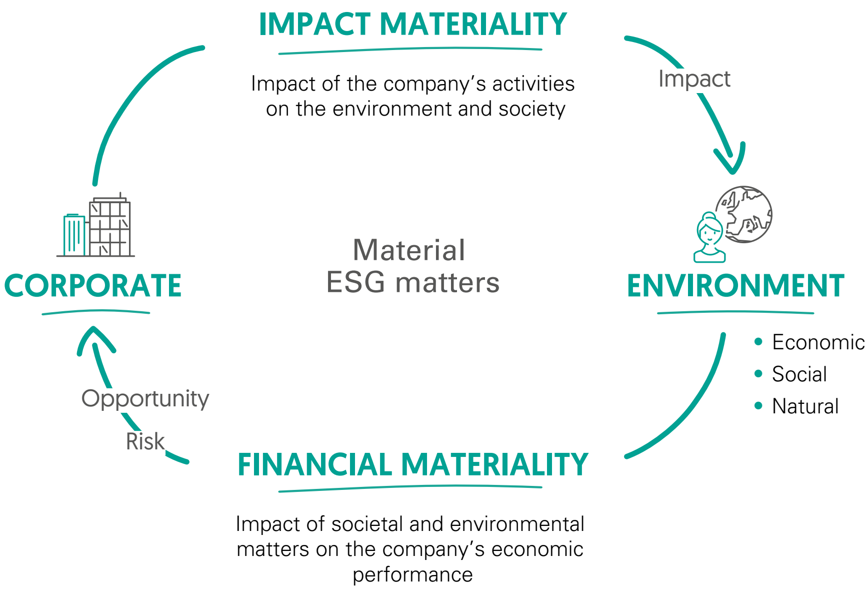
1.5.1 Disclosures on the materiality assessment process

1.5.1.1 IRO-1 - DESCRIPTION OF THE IDENTIFICATION AND ASSESSMENT OF MATERIAL IMPACTS, RISKS AND OPPORTUNITIES PROCESS

1.5.1.1.1 Double materiality definition

The double materiality exercise is the starting point for the preparation of the sustainability report.

Double materiality has two dimensions: i) materiality from an impact point of view and ii) materiality from a financial point of view.



The concept of double materiality aims at taking into account both:

- **impact materiality**: assesses the impact of the company's activities on people or the environment in the value chain and through business relationships.
- **financial materiality**: assesses the financial impact of the risks and/or opportunities. This is about the impact of the external environment on Groupe BPCE, which has or may have an impact on the company's financial situation, the cost of capital, the financial performance, etc.

The impacts, risks and opportunities which are identified as material represent the material matters on which the content of the sustainability report is based.

1.5.1.1.2 Methodology for identifying and rating impacts, risks and opportunities

From an operational standpoint, the double materiality exercise was carried out in two stages:

- identification of impacts, risks and opportunities relevant to Groupe BPCE's business and its entire value chain;
- assessment of the materiality of these impacts, risks and opportunities.

Methodology for identifying impacts, risks and opportunities (IRO)

The IRO identification was carried out by topic and sub-topic according to the ESRS 1 requirements (AR 16):

- **topics and sub-topics:** the topics and sub-topics identification was carried out by mobilizing **internal sources**, such as the ESG matters identified in Groupe BPCE's 2022 and 2023 NFPS reports, the reasonable due diligence process put in place by the Group as part of the Duty of Care plan and the existing risks mapping, supplemented by **external sources**, such as the analysis of a business sectors benchmark, with a focus on the most relevant matters for banking players. Following this identification of an initial list of topics and sub-topics, additional work was carried out to align with CSRD requirements. This alignment was carried out in two stages through workshops involving in-house business experts to (i) **validate the list** of topics and sub-topics **according to these experts**, and (ii) **reconcile** ESG issues with **ESRS themes** for the E, S and G components (AR 16 of ESRS 1). This work was carried out with the business lines in charge of the ESRS topics and sub-topics, drawing on the expertise of the employees of these teams;
- **Impacts, Risks and Opportunities (IRO)**: work to identify the IRO within each theme was carried out in order to cover both **impact materiality** and **financial materiality**. Several internal and external sources were used to identify IROs;
- the **relevance of each IRO** was verified with the business lines concerned to ensure that the listed IRO effectively reflected a Risk, Opportunity or Impact for Groupe BPCE, to qualify the Impacts as positive or negative for the same sub-topic and to avoid duplication between similar IRO.

For each IRO identified, a rating was prequalified. This prequalification consisted of:

- a. positioning each IRO in Groupe BPCE's value chain, *i.e.* **upstream** of its **own activities**, or **downstream**;
- b. defining the **potential** or **actual nature of the negative and positive impacts**.

Process for identifying and assessing impacts, risks and opportunities related to E2-Pollution, E3-Water and marine resources, E4-Biodiversity, E5-Resource use and circular economy.

The process of identifying the impacts of environmental matters, excluding climate change, at Groupe BPCE level was carried out across the entire value chain. Impacts have been identified on own operations as well as financing and asset management operations.

The rating of these impacts was conducted according to experts. As far as financing and asset management activities are concerned, the rating was carried out by experts based in particular on a business sectors analysis of Groupe BPCE's exposures by the Group ESG Risk division as part of the scale assessment. This rating was strengthened by the mobilization of the Group's stakeholders' views.

The process of identifying and assessing environmental risks, excluding climate, is part of the same system as assessing the materiality of climate and environmental risks set up by Groupe BPCE.

With regard to opportunities, the identification and assessment process was carried out by experts taking into account economic changes related to environmental issues, excluding climate change, and Groupe BPCE's outlook to adapt its banking, insurer and investor business models.

Consideration of the value chain in the identification of the Group's IROs

The activities of Groupe BPCE and its entire upstream and downstream value chain were taken into account in the double materiality assessment. In light of Groupe BPCE's business sector specific nature, the following guidelines have been adopted:

- a. map its activities and the stakeholders in the value chain to identify which stakeholders are in risky areas;
- b. carry out an analysis by major stakeholders families: customers, suppliers, subcontractors, etc...;
- c. enlarge this analysis beyond first-level and direct business relationships: the business lines took into consideration, in addition to the major families of direct stakeholders in the value chain, the entire environment surrounding them, in particular through sectors analysis.

Organization in terms of identifying impacts, risks and opportunities

The identification of IROs was coordinated by and under the joint responsibility of Groupe BPCE's Finance department, Financial Communication department and Impact department. The Retail Banking, Insurance, Architecture and Reporting, Risks, Purchasing, and Human Resources teams helped formalize and assess these IROs.

Process for rating impacts, risks and opportunities

Following this first stage, among all the IROs identified as relevant, the impacts, risks and opportunities rating led to designate those that are material from an impact point of view or from a financial point of view, which are presented in this sustainability report.

Methodology for rating impacts, risks and opportunities

Description of the rating criteria

The ESRS impose criteria for assessing the materiality of IROs. These criteria may be different depending on whether one is related to an impact (negative or positive), a risk or an opportunity.

a) The **negative impacts** are rated according to two dimensions:

- i. **likelihood** this involves assessing the probability that Groupe BPCE will have a negative impact on the subject identified;
- ii. **severity** composed of:

1. **Scale:** the severity of the negative impact on people or the environment,

2. **Scope:** the scope of the negative impacts. In the case of an environmental impact, the extent may refer to the extent of the damage caused to the environment or a geographic area. In the case of impacts on the population, the extent may refer to the number of people affected by the impact,

3. **Irremediable character:** assessing whether, and to what extent, the negative impacts can be remediated.

Note : In the event of a potential negative impact on human rights, the severity of the impact takes precedence over its likelihood.

b) The **positive impacts** are rated according to three dimensions:

- i. **likelihood:** this involves assessing the probability that Groupe BPCE will have a positive impact on the subject identified;
- ii. **scale:** the beneficial effect of the impact on people or the environment;
- iii. **scope:** the extent of the impact (*e.g.* geographical or demographic).

c) The **risks** and **opportunities** are rated according to two dimensions:

- i. **likelihood of occurrence**: probability of the risk or opportunity occurring;
- ii. **scale of the financial impact:** measurement of the potential financial effects.

All IROs have been rated in gross terms, meaning without taking into account the action plans implemented by the group to prevent, mitigate, or remedy them.

Rating scales

Rating scales are not prescribed by the ESRS. They have been defined by and for Groupe BPCE. Each rating criterion was assessed on a scale from 1 to 4.

IRO	Criteria	1	2	3	4
		Rating and associated score / 4			
NEGATIVE IMPACT	**Scale** Significance of the severity of the negative impact on people or the environment	No or very little impact	Significant	High	Very strong
	Scope Extent of impact	Limited	Moderate	Wide	Global / Total
	Irremediable character Whether and to what extent the negative impacts can be remediated	Very easy to correct	Relatively easy to correct	Very difficult to correct in long-term	Non-remediable
	Likelihood (potential impact)	Rare / Unlikely	Possible	Probable	Nearly certain
POSITIVE IMPACT	**Scale** Significance of the beneficial effect on people or the environment	No or very little impact	Significant	High	Very strong
	Scope Extent of positive impacts	Limited	Moderate	Wide	Global / Total
	Likelihood (potential impact)	Rare / Unlikely	Possible	Probable	Nearly certain
RISKS AND OPPORTUNITIES	**Scale** Potential financial effects	No or very little impact	Significant	High	High
	Likelihood of occurrence	Rare / Unlikely	Possible	Probable	Nearly certain

Score and final rating of impacts, risks and opportunities

Each impact, risk and opportunity was rated, based on the criteria and scales described above.

Determination of the materiality threshold

Materiality threshold refers to the score or rating based on which impacts, risks and opportunities are material.

Groupe BPCE's materiality threshold is defined by the CSRD Project Steering Committee.

Materiality threshold

As part of the harmonization of the rating scales defined for the criteria, a rating scale has also been defined for the rating level of impacts, risks and opportunities.

This scale consists of four levels:

1	2	3	4
Low	Moderate	High	Very high

An impact, risk or opportunity is material when the rating level is greater than or equal to 3, corresponding to a high or very high level.

Final score (/16)	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Final rating (/4)	0.3	0.5	0.8	1	1.3	1.5	1.8	2	2.3	2.5	2.8	3	3.3	3.5	3.8	4
Rating level	Low				Moderate				High				Very high			
	1				2				3				4			

Materiality threshold

Organization in terms of rating impacts, risks and opportunities

Role of the Sustainability Office

The Sustainability Office established the methodology for rating impacts, risks and opportunities on behalf of the Group. It also coordinated and supervised the IRO rating work on behalf of the Group.

Operating procedure for rating IROs

Groupe BPCE's Sustainability Office proposed the methodological approach for rating IROs as part of the CSRD Project.

Workshops were held with the institutions (Banques Populaires and Caisses d'Epargne) as well as with the global business lines and BPCE Assurances to discuss structuring options for the rating of IROs and to co-construct a common approach.

A Group operating procedure was prepared and shared with the representatives of the institutions (Banques Populaires, Caisses d'Epargne, BPCE) as well as with the subsidiaries.

Role of the functional departments

Several functional departments were called upon as part of the rating of the IROs. These notably include:

- the Purchasing department;
- the Compliance department;
- the Sustainability Office ;
- the Human Resources department;
- the ESG Risk department;
- the Operational Risk department;
- the Technology and Operations department.

Rating of Environmental Impacts *via* financing and investments

The rating of the environmental impacts in connection with financing and investments was carried out, according to experts, by the Sustainability Office, Retail Banking, BPCE Assurances and Natixis based on a business sectors analysis of Groupe BPCE's exposures carried out by the Group Risk department as part of the assessment of the scale. This analysis focuses on the impact of 26 business sectors on various environmental matters (mitigation and adaptation to climate change, pollution, biodiversity, water and marine resources and the circular economy). A three-level scale is applied to each business sector depending on the criticality of its impact on each environmental matter:

- "strong" impact;
- "moderate" impact;
- "low" impact.

This information is used to score the "Scale" criterion of the negative impacts identified by Groupe BPCE:

1) No or very little impact when exposure to "strong impact" sectors is between 0% and 15%;
2) Significant: when exposure to "strong impact" sectors is between 15% and 50%;
3) High: when exposure to "strong impact" sectors is between 50% and 75%;
4) Very high: when the exposure to "strong impact" sectors exceeds 75%.

This rating was subject to additional reviews by experts in order to streamline the quantitative analysis and to cover all of the Group's exposures, taking into account:

a) the scope of the environmental impacts of other sectors beyond the 26 business sectors analyzed by the ESG Risk department;
b) additional exposures to those obtained by the ESG Risk Department (exposures to individual retail, the public sector and exposures to financial institutions).

The other criteria, scope, irremediable character and likelihood were assessed on an expert basis taking into account the rating scales defined for all impacts.

Rating of environmental risks *via* financing and investments

The rating of environmental risks was carried out by the ESG Risk department on the basis of the materiality assessment of climate and environmental risks conducted annually by Groupe BPCE since 2021. The latter aims to qualify the materiality of climate and environmental, physical or transition, short-, medium- and long-term risks in relation to the "traditional" risks to which Groupe BPCE is exposed (according to the risk taxonomy defined within Groupe BPCE's Risk Appetite Framework, *e.g.* credit risk, market risk, operational risk, etc.). This rating of environmental risks was based on an analysis of the impact of 26 business sectors regarding various environmental matters (mitigation and adaptation to climate change, pollution, biodiversity, water and marine resources and the circular economy).

This annual process is based on scientific knowledge (scenarios, assessment tools) and knowledge bases (*e.g.* Business Environment Scan), internal measures and indicators available at the date of completion of the exercise, as well as the expertise of all internal parties involved in the risk management system (LOD1 or LOD2). The assessments are carried out on the gross risk. This annual review is part of the continuous improvement of the underlying processes and methods.

As part of the assessment of the financial materiality of the CSRD risks, the assessment of the materiality of climate and environmental risks was cross-referenced with the materiality assessment of each of the "traditional" risks. This assessment is carried out annually as part of the work on the Risk Appetite Framework in order to obtain an assessment of the intrinsic materiality for each IRO on the same criteria as the other IROs (likelihood of occurrence / scale of impact), to ensure consistency between the different exercises. An expert's overall consistency check was carried out to validate the materiality levels obtained.

To date, Groupe BPCE's rating of environmental risks (biodiversity, water, pollution and circular economy) has been applied uniformly to all these environmental topics. The work undertaken by Groupe BPCE to strengthen the climate and environmental risk management system will gradually refine this analysis.

Process for validating the ratings of impacts, risks and opportunities

The validation of the IRO was carried out through workshops bringing together:

- representatives of the business lines concerned by each topic, subtopic and each Purchasing, Human Resources, Operational Risks IRO, etc.;
- sponsors of the institutions (4 Banques Populaires, 4 Caisses d'Epargne);
- the ESG Risk department;
- the CSR representatives of the global business lines, BPCE Assurances, Banque Palatine, BRED Banque Populaire, Crédit Coopératif, FSE and Digital & Payments;
- the Group Sustainability Office.

Stakeholder consultation process

Although the consultation of stakeholders is not mandatory as part of the double materiality exercise, Groupe BPCE has deemed it important to specifically consult some of its stakeholders within the limits of this first exercise in addition to the existing permanent listening systems (see 1.3.2 - SBM-2). The *ad hoc* systems deployed concern customers, suppliers and cooperative shareholders and more than 300 members of the Group's company boards.

1.5.1.1.3 Review process

In accordance with the CSRD transposed into French law, the sustainability report is prepared annually. As a result, and as specified by EFRAG in its guidance on double materiality, Groupe BPCE must determine the list of material IROs every year. If Groupe BPCE concludes, on the basis of audit evidence, that the results of the double materiality exercise for the previous year are still relevant at the reporting date, it may use the conclusions obtained previously for the preparation of the sustainability report.

Each year, Groupe BPCE will verify the elements that may trigger a revision of the list of material IRO, for example, a major merger and acquisition transaction leading to a new activity, an entry into a new sector or a significant change in operations, a global event (pandemic, natural disaster, etc.), a change in scientific evidence that could affect the severity criteria.

List of material IROs

Environment

CLIMATE CHANGE (ESRS E1)

Subtopic	Sub-subtopic	Type of IRO	Own activity / Value chain	Time horizon	IRO definition
Climate change mitigation and adaptation	Climate change mitigation - own footprint	Negative impact	Own operations	Long term	Negative impact on the climate due to greenhouse gas emissions from the Group's own operations (IT, fixed assets, etc.).
	Climate change mitigation and adaptation - financing and investments	Negative impact	Downstream value chain	Invariable	Negative impact on the climate mainly due to the Group's financing and investments in so-called carbon-intensive sectors.
		Opportunity	Downstream value chain	Long term	Proposals for savings products invested in companies to support their transition, as well as financing solutions to support the Group's customers in their own transition and mitigate the effects of climate change.
		Risk	Downstream value chain	Long term	Risk of impairment of assets related to investments and financing exposed to physical climate risks (high-risk areas).
		Risk	Downstream value chain	Long term	Risk of financial loss related to financing/investments of counterparties exposed to climate transition risks.
		Risk	Downstream value chain	Medium term	Reputational risk related to the financing of and/or investment in companies with an activity that is carbon-intensive and/or incompatible with the net-zero alignment trajectories.

Social

OWN WORKFORCE (ESRS S1)

Subtopic	Sub-subtopic	Type of IRO	Own activity / Value chain	Time horizon	IRO description
Attractiveness, employee loyalty and engagement	Listening to employees and strengthening their commitment	Risk	Own operations	Invariable	Risk of deviation from employees' expectations due to the absence and/or inadequacy of listening systems and action plans to strengthen their commitment.
	Integration of new hires and strengthening employee loyalty	Positive impact	Own operations	Invariable	Positive impact of the employee experience contributing to a welcoming environment for the Group's employees (pre-boarding, onboarding, induction program and individualized training course).
	Recruitment strategy and employer brand	Opportunity	Own operations	Medium term	Opportunity for the Group to strengthen its employer brand and its attractiveness on the job market with a digital (communication and prospecting on social networks, use of job boards, recruitment events in the regions, co-optation, etc.) and inclusive (work-study, hiring of non-banking profiles, etc.) recruitment strategy.
Working conditions	Social dialog (freedom of association and collective bargaining)	Positive impact	Own operations	Invariable	Positive impact on employee commitment and performance *via* sustained and constructive dialog with employee representatives at Group, division and company level (regular meetings with the staff-representative bodies and conclusion of collective agreements).
	Privacy	Risk	Own operations	Invariable	Financial risk in the event of non-security of employee personal data or breach of privacy: • financial sanctions; • damages for the loss suffered.
	Quality of life at work and risk prevention and safety at work	Risk	Own operations	Invariable	Financial losses related to employee turnover, absenteeism and employee disengagement resulting from: • recruitment and training costs for new employees, absences (replacement and financing of all or part of the absences or medical expenses); • lost revenue related to the decline in productivity, sales performance and customer satisfaction; • loss of talent.
		Risk	Own operations	Invariable	Financial risks for the Group in the event of: • occurrence of a workplace accident (incivility, assault, outside or on the premises) and/or commuting accident; • financial losses and operational risks related to the deterioration of the health of employees and/or the deterioration of the quality of life at work (increase in professional risks, turnover, absenteeism, loss of productivity and induced costs, etc.); • non-compliance with the single occupational risk assessment document regulation.
		Positive impact	Own operations	Invariable	Positive impact on the quality of life at work of employees (working hours, teleworking, layout of premises, work-life balance, QLW collective agreement, etc.).
	Decent pay and social protection	Positive impact	Own operations	Invariable	Positive impact for employees thanks to clear remuneration, well understood by employees, fair remuneration exceeding legal minimums, guaranteeing adequate working conditions (basic salaries, bonuses, employee savings, benefits in kind, etc.) and solid social protection (provident insurance, health insurance, pension plan, etc.).
	Employee health and job retention	Positive impact	Own operations	Invariable	Positive impact on employee working conditions for a safe working environment adapted to the well-being of employees.

Subtopic	Sub-subtopic	Type of IRO	Own activity / Value chain	Time horizon	IRO description
Equal treatment and opportunities	Skills development	Positive impact	Own operations	Invariable	Positive impact on the employees' skills development.
		Positive impact	Own operations	Invariable	Positive impact on the development of employability, employee mobility within the Group and proactive career management.
		Opportunity	Own operations	Invariable	Opportunity for the Group to promote the development of internal skills and capitalize on expertise and knowledge in order to strengthen employee commitment (increase in the retention rate, reduction of operational risk, etc.).
	Diversity & inclusion (disability, discrimination & harassment)	Positive impact	Own operations	Invariable	Positive impact in terms of diversity, inclusion, professional equality and support for people with disabilities.

WORKERS IN THE VALUE CHAIN (ESRS S2)

Subtopic	Sub-subtopic	Type of IRO	Own activity / Value chain	Time horizon	IRO description
Working conditions and other work-related rights	Working conditions and other work-related rights of subcontractors, service providers and suppliers	Negative impact	Upstream value chain	Invariable	Potential negative impacts in terms of human rights or working conditions (health, safety, etc.) of employees of subcontractors and service providers in the absence of proactive policies, particularly in geographic areas that are not signatories to international labor conventions.
		Risk	Upstream value chain	Invariable	Risk concerning the Group's image and reputation linked to deteriorated working conditions and non-respect of the human rights of workers in its value chain.
	Working conditions and other work-related rights of workers in financed/invested companies	Risk	Downstream value chain	Invariable	Risk of image damage due to insufficient due diligence on the social aspects of the companies that the Group finances or in which it invests.
		Negative impact	Downstream value chain	Invariable	Potential negative impact via the Group's activity of financing/investing in companies where working conditions are deteriorated.

AFFECTED COMMUNITIES (ESRS S3)

Subtopic	Sub-subtopic	Type of IRO	Own activity / Value chain	Time horizon	IRO description
Communities' economic, social and cultural rights	Financing the economy and regional players	Positive impact	Downstream value chain	Invariable	Positive impact on society by financing and investing in projects which accessibility is governed by social or cultural rights of communities (education, health, sport, etc.).
		Positive impact	Downstream value chain	Invariable	Positive impact on local economic development and regional attractiveness by creating jobs, supporting local businesses, local collectivities and social housing operators, and by promoting economic growth, including improving the living conditions of stakeholders impacted by the Group's local presence policies.
		Risk	Downstream value chain	Invariable	Risk of image and reputation damage related to the financing/investment of projects that have a negative impact on communities or when they are not aligned with the real needs of society.
		Risk	Downstream value chain	Invariable	Legal risk related to the financing/investment of projects having a negative impact on communities, as part of the Duty of Care.

CONSUMERS AND END-USERS (ESRS S4)

Subtopic	Sub-subtopic	Type of IRO	Own activity / Value chain	Time horizon	IRO description
Impacts related to consumer and end-user information	Access to information	Positive impact	Downstream value chain	Invariable	Positive impact on customers *via* a transparent offer to facilitate understanding of products and services by all customers and informed decision-making, as part of responsible marketing.
	Personal data protection and cybersecurity	Risk	Downstream value chain	Invariable	Risk of sanctions due to regulatory non-compliance related to: • non-compliance with customer data protection regulations (in particular: GDPR on data practices - consent, cookies, etc.); • sanction related to the non-disclosure of cybersecurity attacks having taken place.
		Risk	Downstream value chain	Invariable	Potential or proven financial losses, including related reputational risk, related to the loss of customers in the event of: • insufficient measures to prevent and combat cybercrime; • leaks, theft or inappropriate use of personal data.
		Negative impact	Downstream value chain	Invariable	Potential negative impact on human rights in case of practices related to the misuse of customers' personal data.
		Opportunity	Downstream value chain	Long term	Development of new innovative products and services, respecting responsible marketing policies, opening new markets and customer segments and partnerships with tech start-ups, stimulating innovation and creativity and increasing customer interest in products and services as part of responsible marketing.
		Positive impact	Downstream value chain	Invariable	Positive impact with access to the Group's offers and services adapted to the financial needs of each customer as well as global geographical coverage and thanks to adapted digital solutions.
		Negative impact	Downstream value chain	Invariable	Potential negative impact on customers in the event of abusive sales, unethical practices (including forced sales).

Subtopic	Sub-subtopic	Type of IRO	Own activity / Value chain	Time horizon	IRO description
		Positive impact	Downstream value chain	Invariable	Offer accessible products and services to all customers and economic players (companies, professionals, local authorities, operators of the social and solidarity economy), including those in financially vulnerable situations, thanks to accessibility and inclusion offers.
		Risk	Downstream value chain	Invariable	Risk of image and reputation damage related to the inaccessibility or lack of readability of offers, contributing to the loss of customers.
	Non-discrimination	Positive impact	Downstream value chain	Invariable	Contribution to the reduction of social inequalities by promoting access for customers with disabilities to financing and insurance offers.
		Negative impact	Downstream value chain	Invariable	Potential negative impact: undermining the equality and inclusion of people if Groupe BPCE's practices are discriminatory as regards the choice of customers (age, gender, nationality, etc.) or the access to financing or essential services provided to customers (account opening, insurance, etc.).
		Risk	Downstream value chain	Invariable	Risk of image and reputation damage related to discriminatory practices, contributing to the loss of customers.

Governance

BUSINESS CONDUCT (ESRS G1)

Subtopic	Sub-subtopic	Type of IRO	Own activity / Value chain	Time horizon	IRO description
Ethics and corporate culture	Fight against corruption and bribery	Risk	Own operations	Invariable	Financial losses due to acts of corruption or unethical behavior within the Group.
		Risk	Own operations	Invariable	Reputational risk and sanctions due to non-compliance with anti-corruption and anti-bribery laws and regulations.
	Fight against money laundering and terrorism financing	Risk	Own operations	Invariable	Risk of regulatory sanctions in the event of non-compliance with anti-money laundering and terrorist financing laws and regulations as well as reputational risk.
	Protection of whistleblowers	Risk	Own operations	Invariable	Reputational risk, deterioration of stakeholder confidence and sanctions in the event of ethically questionable practices as well as in the event of non-compliance with laws and regulations on the protection of whistleblowers.
	Compliance with sanctions measures (national, European or international), embargoes and asset freezes	Risk	Downstream value chain	Invariable	Risk of regulatory sanctions in the event of non-compliance with sanctions measures (national, European or international), embargoes and asset freezes.
Management of relationships with suppliers including payment practices	Management of relationships with suppliers including payment practices	Risk	Upstream value chain	Invariable	Reputational risk in the event of the Group being called into question for negative ESG impacts (unethical practices or practices that derogate from human rights) caused by its suppliers and service providers.
		Positive impact	Upstream value chain	Invariable	Positive impact on suppliers by encouraging them to adopt virtuous practices (rigorous selection of suppliers), by improving the quality of the relationships with suppliers and payment terms management.

1.5.2 SBM-3 - Material impacts, risks and opportunities and their interaction with strategy and business model

The material impacts, risks and opportunities (IRO) resulting from the double materiality assessment are listed in Section 1.5.1.1 (IRO-1). This description makes it possible to identify where in its business model, its own activities or its value chain these material IRO are concentrated.

The business model, value chain and integration of sustainability matters into Groupe BPCE's strategy are detailed in Section 1.3.1.2 (SBM-1).

The interactions between these material impacts, risks and opportunities, the Group's business model and its strategy embodied by the VISION 2030 strategic project, as well as the way in which positive or negative material impacts affect the company (customers, regional players or employees) or the environment are presented within each topical ESRS.

In the absence of established practices for financial institutions, are not published in respect of the 2024 fiscal year the financial effects relating to:

- material risks and opportunities of the company on its financial position, financial performance and cash flows;
- material risks and opportunities for which there is a risk of a significant adjustment to the carrying amount of assets and liabilities included in the financial statements during the next annual period.

With respect to climate risks, Groupe BPCE analyzes the resilience of its business model across its three activities (financing, insurance, asset management) through climate stress tests as part of the self-assessment process of its capital (ICAAP) and liquidity (ILAAP) adequacy with regard to the risks it may face. This analysis is presented in Chapter E1 - Climate change (Section 2.2.3.2.1).

1.5.3 IRO-2 - Disclosure Requirements in ESRS covered by the undertaking's sustainability report

Disclosure Requirements in ESRS covered by the undertaking's sustainability report.

PART 2 - ENVIRONMENTAL INFORMATION

2.1 Indicators of the European taxonomy on sustainable activities

Regulatory framework

To encourage sustainable investment, EU Regulation 2020/852 of June 18, 2020 (Taxonomy Regulation) established a common EU classification system to identify economic activities considered environmentally sustainable.

The Taxonomy Regulation (Article 8) includes, for companies subject to the CSRD (Corporate Sustainability Reporting Directive published on December 16, 2022), a reporting obligation, outlined in the sustainability report, regarding how and to what extent the company's activities are associated with economic activities that can be considered environmentally sustainable.

An activity is considered as "eligible" for the Taxonomy if it is included in the European Commission's evolving list. These are activities likely to make a substantial contribution to at least one of the following six environmental objectives:

- climate change mitigation;
- climate change adaptation;
- sustainable use and protection of water and marine resources;
- the transition to a circular economy;
- pollution prevention and control;
- the protection and restoration of biodiversity and ecosystems.

To be effectively considered environmentally sustainable, an eligible activity must be "aligned" with the Taxonomy, *i.e.* it must meet the following three cumulative conditions:

- **demonstrate its substantial contribution** to one of the six environmental objectives in accordance with the technical review criteria defined in the delegated acts;
- **demonstrate that it does not cause significant harm** to any of the other environmental objectives (Do No Significant Harm or DNSH) in accordance with the technical review criteria defined in the delegated acts;
- be exercised in **compliance with minimum social guarantees** provided for in the regulation (*i.e.* in compliance with social rights guaranteed by international law).

The technical criteria for documenting the environmental sustainability of an activity are set out in delegated acts:

- the Climate Delegated Regulation of June 4, 2021 (2021/2139), including technical review criteria for economic activities that make a substantial contribution to the first two environmental objectives: climate change adaptation and mitigation of its effects. It applies from January 1, 2022.

This was amended for the first time on March 9, 2022, by Delegated Regulation 2022/1214, which included, under strict conditions, specific activities linked to nuclear energy and gas on the list of economic activities covered by the Union's taxonomy. It applies from January 1, 2023.

A second amendment was published on June 27, 2023 (Delegated Regulation 2023/2485) completing the technical examination criteria for certain activities that were initially not listed as eligible (in particular, manufacture of essential equipment for low-carbon transport or electrical equipment). It comes into force from January 1, 2024;

- the Environment Delegated Regulation of June 27, 2023 (2023/2486) sets the criteria for the technical examination of economic activities considered to make a substantial contribution to one or more of the four other environmental objectives (other than climate): sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, protection and restoration of biodiversity and ecosystems. It comes into force from January 1, 2024.

The content of sustainability metrics (Key Performance Indicators or KPIs) and the information to be published by non-financial and financial corporations (asset managers, credit institutions, investment firms and insurance and reinsurance companies) subject to these transparency obligations, are specified, for each of these economic actors, in the Delegated Regulation Article 8 of July 6, 2021 (2021/2178). The format of publishable tables is governed by Environment Delegated Regulation 2023/2486.

Additional information is required for companies engaged in, financing or exposed to specific activities related to nuclear energy and fossil gas (Delegated Regulation 2022/1214).

In addition, European Commission communications published in the Official Journal on October 20, 2023 aim to interpret certain provisions relating to the implementation of Article 8 of the Taxonomy Regulation (C/2023/305) and the delegated act relating to the climate component of the taxonomy (C/2023/267).

On December 21, 2023, the Commission published a communication on the interpretation and implementation of Article 8 of the Taxonomy, which clarifies the information to be provided. It was published in the Official Journal of the European Union on November 8, 2024 under the reference C/2024/6691. On November 29, 2024, the Commission published a new draft communication. Given its late publication and the implementation work involved, this text is currently being analyzed, and some of its provisions will be applied in the coming period.

The Taxonomy Regulation provides for a gradual implementation of information transparency requirements according to economic players. As a company in the financial sector, Groupe BPCE is notably subject to disclosure requirements that are deferred by one year compared to non-financial corporations. This principle allows financial corporations to use the eligibility and alignment data provided by the counterparties themselves subject to these disclosure requirements (counterparties subject to the CSRD) in order to weight their investments, financing and other exposures.

Groupe BPCE publishes disclosures applicable to financial companies – credit institutions. Groupe BPCE publishes the tables required by the regulation in the tabular formats presented in Annex VI of Delegated Regulation 2023/2486.

Taking the taxonomy into account in the Group's activities (requirement of Annex XI of Delegated Regulation 2021/2178)

The taxonomy criteria are used to identify a portion of the financial assets allocated to green bonds issued by Groupe BPCE. Groupe BPCE also takes into account the European Taxonomy in the design of some of its "green" offers and services and in its project financing (renewable energy financing).

KPIs of material non-banking subsidiaries

The Group's material non-banking activities are insurance activities, of which BPCE Assurances is the main entity. The KPI relating to asset management activities is also published *via* the GAR AuM in the section *"Off-balance sheet indicators: financial guarantees given and assets under management"* below.

BPCE Assurances' ratios are detailed below:

BPCE Assurances' non-life underwriting ratio:

Non-life insurance has been defined as eligible for Objective No. 2 "Climate change adaptation". The underwriting ratio, expressed as a percentage, indicates the share of premiums that meet the technical criteria relating to climate change adaptation, in the total premiums.

	"Underwriting" KPI
Eligibility ratio	7.103%
Alignment ratio	2.8%

BPCE Assurances' investment ratios:

The investment eligibility and alignment ratios calculations are carried out by weighting the investments according to the share of eligible economic activities and aligned with the taxonomy, based on two financial indicators of the invested companies: turnover and capital expenditure (CAPEX).

For BPCE Assurances' euro and similar funds (excluding unit-linked funds), the proportion of eligible investments aligned with the taxonomy is presented in the table below:

	"Investments" KPI *(turnover based)*	"Investments" KPI *(CapEx based)*
Eligibility ratio	6.08%	7.54%
Alignment ratio	2.20%	3.70%

Assumptions used and existing limitations in the preparation and collection of information

The various KPIs required by the regulations were published as follows:

Information on the main KPI (Green Asset Ratio) has been published.

The financial conglomerate KPI has not been published. BPCE considers that it is not subject to this indicator, which is not defined by the Delegated Regulation.

The main exempt entities are the Banques Populaires and the Caisses d'Epargne. As the activity profiles of the BPs and CEs are homogeneous with those of the Group, the summary of the GARS of the BPs and CEs is not disclosed.

The KPIs of non-financial subsidiaries have not been published because they are not material.

The flow information on the KPIs of off-balance sheet exposures has not been published due to the absence of a dedicated table in Annex 6 of the Delegated Regulation.

The main assumptions used to determine the alignment of eligible assets under the Green Asset Ratio (GAR) are as follows:

For real estate loans to households, the alignment is based on:

1) analysis of the energy performance of assets through the EPD or compliance with thermal regulations for new assets (RT2012 and RE2020) in order to measure the substantial contribution;
2) an analysis of the physical risks, including only the "flooding" risk in order to verify that the criteria of the DNSH adaptation are respected: any loan relating to an asset exposed to a significant physical risk is thus considered as not aligned with the taxonomy.
3) minimum social guarantees are deemed to be met for all assets built in France and Europe, taking into account the laws and regulations in force in these countries.

The alignment of the following eligible assets was not analyzed: loans for the renovation or financing of motor vehicles with individual customers as well as financing allocated with CSRD counterparties. These assets are therefore *de facto* considered as not taxonomy-aligned.

Given their non-material impact on the GAR ratio, the eligibility and alignment of the equity-accounted value of the insurance subsidiaries were not taken into account.

Given the non-material nature of the exposures relating to gas and nuclear energy (0.06% of the balance sheet), only the information on the Main KPI (Green Asset Ratio) was disclosed. Information on other KPIs (flows, off-balance sheet exposures) has not been disclosed.

For the breakdown of GAR exposures by sector of activity (NACE code), the Group has not published the table in CapEx view insofar as the GAR turnover and CapEx are very similar.

MANDATORY GAR

Main indicator – GAR (Green Asset Ratio)

Groupe BPCE's GAR at December 31, 2024 includes taxonomy alignment data. It is presented in the tabular format required by regulations. This requires presentation once on the basis of the "Turnover" KPI (key performance indicator) and once on the basis of the "CapEx" KPI (capital expenditure) of counterparties subject to the CSRD.

Groupe BPCE's GAR, established at December 31, 2024, lists for the first time information on the alignment of financial corporations with the two climate-related environmental objectives (Mitigation and Adaptation). Data on assets aligned with the Climate Change Adaptation objective are published as soon as they are available on Bloomberg.

Information on eligibility for the four non-climate objectives (sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, protection and restoration of biodiversity and ecosystems) is based on data published by non-financial corps, which publish this information for the first time on December 31, 2023. As a result, at December 31, 2024, Groupe BPCE provides this information and the columns in the regulatory tables relating to this information are presented.

The tables presenting information relating to the comparative period are presented for the first time (templates 0, 1, 3 and 5). Also, the GAR flows, whose calculation methods were specified in the European Commission communication of December 21, 2023, was published for the first time on December 31, 2024.

The GAR flows KPI shows the portion of assets aligned over the portion of assets covered by the GAR only for new outstanding loans and advances and debt securities recognized on the balance sheet since the beginning of the period (in our case, January 1, 2024). The outstandings are recorded at gross carrying amount (before impairment, provisions and amortization) and without deduction of repayments or sales of assets during the period. Given their non-material nature, the GAR flows KPI is not calculated on equity instruments (*e.g.* equities). The Flows KPI for financial guarantees and assets under management are not published either for operational reasons. The other calculation principles remain identical to those applied for the calculation of outstandings.

The main indicator applicable to credit institutions is the Green Asset Ratio (GAR). Expressed as a percentage, it indicates the proportion of assets that finance or are invested in economic activities aligned with the taxonomy in relation to the total assets covered.

Scope of financial assets subject to eligibility and alignment analysis

On the basis of the prudential perimeter established in accordance with FINREP regulations (investments in insurance companies controlled by Groupe BPCE are consolidated using the equity method), assets are presented at their gross carrying amount, *i.e.* before depreciation, provisions and amortization.

The eligibility and alignment analysis applies to a scope of assets determined following a series of exclusions specified by the regulations:

Assets subject to eligibility analysis and taxonomy alignment analysis (A)	Assets not subject to taxonomy eligibility and alignment analysis but included in the denominator (B)	Assets excluded from the denominator and numerator (C)
Exposures to: • Non-financial corporations subject to the CSRD • Financial corporations subject to the CSRD • Retail customers – home loans, renovation loans and motor vehicle loans granted from January 1, 2022 • Local governments • Collateral obtained by taking possession	Assets excluded from the numerator for the GAR calculation (but included in the denominator): • Hedging derivatives • Exposures to non-financial and financial corporations not subject to the CSRD • On demand interbank loans • Cash and cash equivalents • Other assets (goodwill, property, plant and equipment, etc.)	• Exposures to central governments, central banks and supranational organizations • Financial assets held for trading including derivatives in this portfolio

GAR NUMERATOR = (A)
38.88%
of total assets

GAR DENOMINATOR = A + B
66.18%
of total assets

TOTAL FINREP ASSETS = A + B + C
100%

The above exposures subject to eligibility and alignment analysis thus include balance sheet assets in the following accounting categories:

- financial assets at amortized cost, financial assets at fair value through other comprehensive income, financial assets designated as measured at fair value through profit or loss and non-trading financial assets measured at fair value through profit or loss;
- investments in subsidiaries, joint ventures and associates (controlled insurance companies are accounted for using the equity method for the presentation of the regulatory perimeter);
- fixed assets, with regard to collateral obtained by taking possession.

Methodology used

In accordance with the principles of the regulations, the eligibility and alignment of the outstanding amounts of assets subject to eligibility and alignment analysis are determined:

- for financial and non-financial counterparties subject to the CSRD regulations, as identified from the database provided by Bloomberg:
  - for unallocated financing, by applying the alignment and taxonomy eligibility rates (Turnover KPI and CapEx KPI) available in Bloomberg to the gross amount outstanding. These data correspond to the indicators published by these counterparties in the previous year (determined in accordance with the criteria of the Climate and Environment Delegated Regulations). BPCE only uses Bloomberg data corresponding to the counterparty's exact data. Conversely, BPCE does not use Bloomberg estimates. Lastly, in the absence of available data distinguishing eligibility and alignment rates by environmental objective, the choice was made to allocate them to the climate change mitigation objective,
  - for financing allocated, the taxonomy criteria defined by the European Commission should be analyzed on the basis of the information provided by the counterparties. For the 2024 fiscal year, Groupe BPCE did not conduct these *ad hoc* analyses.

Eligibility and alignment were only measured using data available in Bloomberg. These data are not always exhaustive, in particular for data relating to the alignment of financial companies. The Group's alignment ratio is penalized by this lack of data.

- for retail customers (or households):
  - the exposures subject to analysis are: loans guaranteed by residential real estate (including secured loans); renovation loans and loans for motor vehicles granted from January 1, 2022.
  - the alignment of loans guaranteed by residential real estate (or secured) is determined in the light of criteria laid down by regulations and interpretations accepted by the marketplace. The substantial contribution to the first taxonomy objective of climate change mitigation is documented with regard to the following criteria:
    - financed properties with a primary energy consumption of less than 135kWh/m^2 per year (corresponding to properties with an Energy Performance Diagnostic - EPD - rated A, B or, in some cases, C). Groupe BPCE has adopted a methodological approach in which the collection of EPD data for loans secured by real estate is based on the EPDs collected from customers, supplemented by the EPDs supplied by the CSTB (*Centre Scientifique et Technique du Bâtiment*) and collected in the ADEME database for single-family homes for which the Group is certain of the address of the property financed. For collective housing, in the absence of customer EPDs issued after 2021, Groupe BPCE uses EPDs calculated by the CSTB, in accordance with the 2021 reform, based on the characteristics of the buildings concerned and the rating of its various lots,
    - in the absence of an EPD, and for financing property to be built, Groupe BPCE determines primary energy consumption using the applicable construction standards (RT 2012 regulations applicable to constructions between January 1, 2013 and December 31, 2020) and RE 2020 regulations applicable to constructions from January 1, 2022). In the absence of information on the date on which the building permit for the property financed was filed, Groupe BPCE identifies it from the date on which the financing was granted, applying a margin of two years. For the 2021 construction year, in the absence of information, no exposure has been considered as aligned.

  The analysis of alignment with the taxonomy's criteria must then be supplemented by technical criteria demonstrating that the activity does not cause significant harm to the taxonomy's other objectives (DNSH criterion):
    - for retail customer real estate loans, this analysis is based on the analysis of physical risk. The acute physical "flood" risk was assessed as the most material in terms of Groupe BPCE's portfolio. Properties with the highest level of flood risk are thus excluded when determining the alignment of property loans. In the "Nomenclature of Territorial Units of Statistics", the risk of flooding related to housing has been qualified as high in accordance with the European Central Bank's classification of acute flood risks. For example, if a financed property has been identified as being at high risk of flooding, the corresponding outstanding amount will not be considered as aligned, even though it complies with the energy performance criteria described above;

The alignment analysis must also verify **compliance with minimum social guarantees.** For real estate loans to households, this criterion was not verified for each of the loans.

Groupe BPCE considers that compliance with the minimum social guarantees is implicitly verified for real estate loans when the assets financed are located in France or in the European Economic Area (EEA). This position is based on a legal framework in which European directives and national laws guarantee fundamental social rights, particularly in terms of working conditions and social protection. In France, the French Labor Code establishes clear standards that provide protection to workers and households.

The alignment analysis for renovation loans was not carried out in the absence of data available to document compliance with the taxonomy criteria.

In the absence of available data (CO_2 emissions/km), the analysis of alignment of motor vehicle loans has not been performed;

- for local governments:
  - housing financing is considered eligible. As this is not a real estate development activity, the alignment analysis must be carried out, where it is possible to establish a link between the financing and the property financed, in the same way as indicated above for retail real estate financing. However, due to operational constraints, the alignment could not be measured this year,
  - for other financing, in the absence of available analysis data, no outstandings were considered eligible or aligned;
- collateral obtained by taking possession has not been analyzed in terms of its non-material value.

Insurance activities are included through the equity-accounted investments in subsidiaries, presented on the "equity instruments" line. The eligibility and alignment of insurance activities is determined by applying to non-life insurance entities the underwriting ratio (share of gross written premiums received corresponding to insurance or reinsurance activities aligned with the taxonomy) and to life or combined insurance activities the investment ratio (share of investments devoted to financing economic activities aligned with the taxonomy). Given their non-material impact on the GAR ratio, the eligibility and alignment of the equity-accounted value of the insurance subsidiaries were not taken into account as of December 31, 2024.

Summary of the MANDATORY GAR

	12/31/2024			12/31/2023			
	Amount in millions of euros	*% of total assets*	*% of total GAR assets (denominator)*	*Amount in millions of euros*	*% of total assets*	*% of total GAR assets (denominator)*	**Change since 12/31/2023**

Off-balance sheet indicators: financial guarantees given and assets under management

Guidelines

From December 31, 2023, in accordance with Section 1.2.2. of Annex V of the Delegated Regulation 2021/2178, credit institutions must publish additional indicators on exposures not recognized as assets on the balance sheet relating to:

- financial guarantees granted;
- assets under management.

Methodology used

The method used to calculate KPIs for financial guarantees and KPIs for assets under management consists in applying to exposures the eligibility and alignment rates of counterparties subject to the CSRD.

Summary of off-balance sheet KPIs

Detail of GAR on off-balance sheet exposures - Turnover

Detail of off-balance sheet - Turnover	12/31/2024					12/31/2023					Change in aligned exposures (since 12/31/2023)
	in millions of euros			*As a % of total assets*		*in millions of euros*			*As a % of total assets*		
	Exposures	**of which eligible**	**of which aligned**	**of which eligible**	**of which aligned**	**Exposures**	**of which eligible**	**of which aligned**	**of which eligible**	**of which aligned**	
Financial guarantees	56,205	8,447	2,752	15.03%	4.90%	52,097	790	260	1.52%	0.50%	4.40%
Assets under management	1,132,162	94,004	9,934	8.30%	0.88%	1,185,642	88,139	7,755	7.43%	0.65%	0.22%

Detail of GAR on off-balance sheet exposures - CapEx

Detail of off-balance sheet - CapEx	12/31/2024					12/31/2023					Change in aligned exposures (since 12/31/2023)
	in millions of euros			*As a % of total assets*		*in millions of euros*			As a % of total assets

Assets under management	1,132,162	26,043	8,038	2.30%	0.71%	1,185,642	18,258	7,002	1.54%	0.59%	0.12%

Activities related to nuclear energy and fossil gas

Guidelines

Additional information is required for companies engaged in, financing or exposed to specific activities related to nuclear energy and fossil gas (Delegated Regulation 2022/1214). The tabular format is required by regulations. This requires the publication of these tables for each applicable KPI.

At December 31, 2024, Groupe BPCE presents this information for the main KPI – the GAR established in stock, once on the counterparties' Turnover-based KPI and once on counterparties' CapEx-based KPI. Five tables must be communicated.

However, this information is not presented for the GAR in a flow view, as well as for the off-balance sheet KPIs: financial guarantees given and assets under management.

Methodology used

The publication of template 1 is mandatory. This template is used to identify the specific activities in the gas and nuclear sectors covered by delegated act 2022/1214 of the Taxonomy Regulation.

Templates 2 to 5 are presented by weighting the exposure to the counterparties concerned by the data communicated by them in their reference document for the previous year, collected from the Bloomberg database.

All the tables required by the Taxonomy Regulation in accordance with the template tables applicable to credit institutions in Annex VI of the Regulation are presented in Part 5 "Tables to be published in accordance with Article 8 of the Taxonomy Regulation" in this sustainability report.

2.2 E1 - Climate change

2.2.1 Governance

2.2.1.1 [GOV-3] INTEGRATION OF SUSTAINABILITY-RELATED PERFORMANCE IN INCENTIVE SCHEMES

This disclosure requirement is addressed in Section GOV-3 - 1.4.3.

2.2.2 Impact, risk and opportunity management

2.2.2.1 DISCLOSURE REQUIREMENT RELATED TO ESRS-2 IRO-1 - DESCRIPTION OF PROCESSES TO IDENTIFY AND ASSESS MATERIAL CLIMATE-RELATED IMPACTS, RISKS AND OPPORTUNITIES

PROCESS TO IDENTIFY AND ASSESS CLIMATE CHANGE IMPACTS

Groupe BPCE's climate change impacts were assessed throughout the value chain. The impacts of these activities on climate change are classified as material in the context of Groupe BPCE's sustainability report, both regarding its own operations (own footprint) and also, through the customer value chain, *via* financing operations, asset management, investment and insurance. This first year of application is characterized by uncertainties about the interpretation of the texts, which are generalist to cover all sectors of activity but do not specify a specific framework for banking and financial business models, due to the absence of established practices or comparative information as well as the absence of certain data, particularly within the "value chain".

The rating of impacts on climate change, in connection with financing and asset management activities, was carried out by experts based in particular on a sectoral analysis of Groupe BPCE's exposures carried out by the Group ESG Risk department as part of the scale assessment. This rating was supplemented by the mobilization of the views of the Group's stakeholders.

Groupe BPCE is committed to maintaining an ongoing dialog with its stakeholders based on several mechanisms that enable them to be involved in the process of identifying and assessing impacts, risks and opportunities, and identifying levers for improving its positive impact on environmental issues, in particular climate.

The expectations of stakeholders are taken into account by the teams of each Group company and regularly shared between the managers and teams of the Banques Populaires and the Caisses d'Epargne, Natixis, and more generally every Group entity, in particular through the coordination of dedicated functions (customer satisfaction, HR, purchasing, etc.), governance, the Fédération Nationale des Banques Populaires and the Fédération Nationale des Caisses d'Epargne, the employee representative bodies, investor roadshows, meetings with rating agencies, and the foundations and mutual companies that the Group has historically supported.

In particular, as part of Groupe BPCE's commitment and the ongoing dialog between the Banques Populaires and the Caisses d'Epargne and the players in the regions where they are located, the expectations of the local non-profit sector, entrepreneurial ecosystems and educational structures are identified.

Moreover, discussions with regulators, and image or forward-looking surveys are all sources of identification of changes in stakeholder expectations. Identifying customer expectations is also based on regular satisfaction surveys, conducted both immediately after a contact and after some time has passed. These surveys cover the environmental dimensions, in particular climate issues. They measure the perception of the support provided for the transitions.

Lastly, with regard to customer expectations, Groupe BPCE supports the transition of the business models of companies, ranging from SMEs to large international companies, by developing a non-financial analysis through the establishment of a dedicated dialog on environmental issues. For Natixis CIB's business lines, as well as throughout the Banque Populaire and Caisse d'Epargne networks, customer support is based on dialog around the ESG issues of each customer, depending on their size and business sector. This ESG dialog is also a tool for assessing their exposure to risks, informing them, and proposing solutions to better prevent and manage the risks. It contributes to the analysis of ESG criteria at the counterparty level as part of the integration of ESG criteria into the corporate loan granting process. This counterparty analysis complements an analysis of the financed asset and the business sector to inform the lending decision with non-financial factors. Since the beginning of 2023, more than ten thousand legal entity customers have been met by the Group's account managers to take stock of their thinking, their management of the challenges and their projects on the environmental, societal and governance dimensions.

The other criteria - scope, irremediable character and likelihood - are assessed by multidisciplinary experts, involving various teams from Groupe BPCE who have taken into account the rating scales defined for the fiscal year, as well as the use of stakeholder opinions.

PROCESS FOR IDENTIFYING AND ASSESSING CLIMATE RISKS

The process of identifying and assessing climate risks is part of Groupe BPCE's system for assessing the materiality of climate and environmental risks and described below.

The process implemented by Groupe BPCE to identify and assess the materiality of climate and environmental risks aims to structure its understanding of the risks to which it is exposed in the short, medium and long term and to identify priority areas for strengthening the risk management system.

This process is coordinated by the ESG Risk department, under the supervision of Groupe BPCE's ESG Risk Committee and Supervisory Board. It is reviewed annually to update the underlying scientific knowledge and methodologies.

This process consists of four main steps:

- creation of the risk framework;
- documentation of the risk transmission channels;
- assessment of the materiality of climate risks in relation to the other risk categories;
- input into cross-functional risk management exercises (risk appetite system, ICAAP, ILAAP).

Identification of risks

Group risk framework

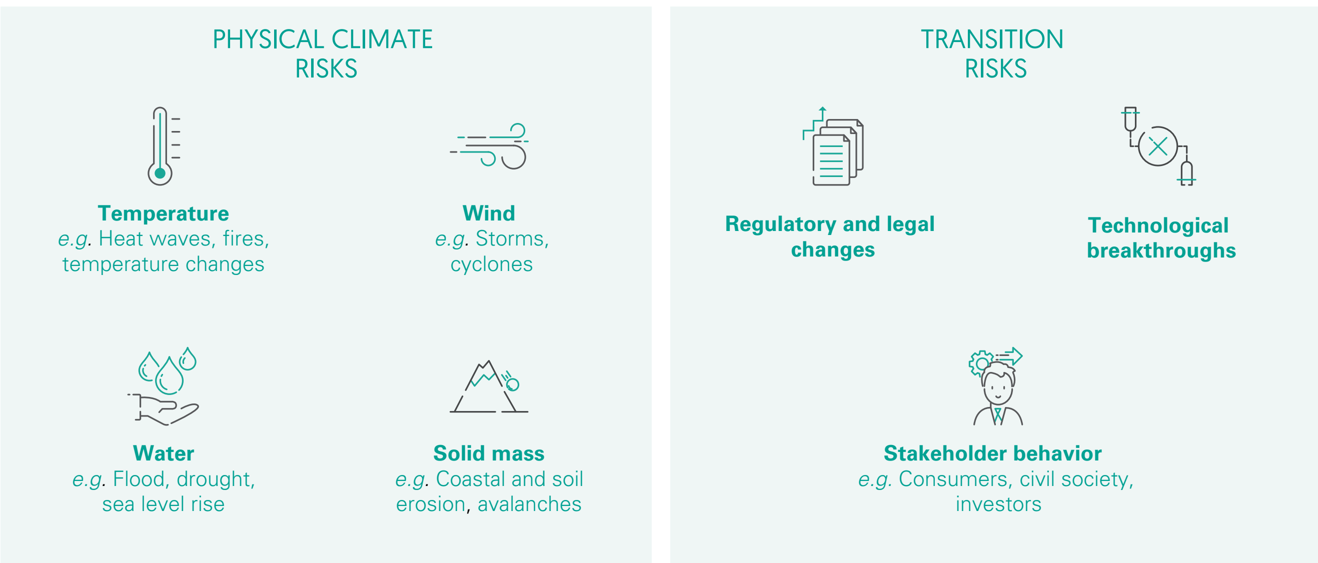
Groupe BPCE has established a framework for climate and environmental risks to define the hazards covered by the climate and environmental risks. This framework is based on current scientific knowledge and reference regulatory texts (*e.g.* European taxonomy) and aims to provide the most comprehensive possible representation of the hazards. It must be updated annually.

With regard to physical risks, the framework distinguishes between physical risk hazards related to the climate, biodiversity and ecosystems, pollution, water and marine resources, the use of resources and the circular economy. The climate-related hazards are divided into acute or chronic hazards related to temperature, wind, water, solid mass and environmental hazards. The hazards related to environmental risks are divided between the disruption of regulation services (protection against climate hazards, support for production services, mitigation of direct impacts) and the disruption of supply services (in terms of quality or quantity).

With regard to transition risks, the framework distinguishes between risks related to regulatory changes, technological developments, and changes in stakeholder expectations and behavior.

The climate risks included in the risk framework currently defined by the Group are presented below:

CLIMATE RISKS



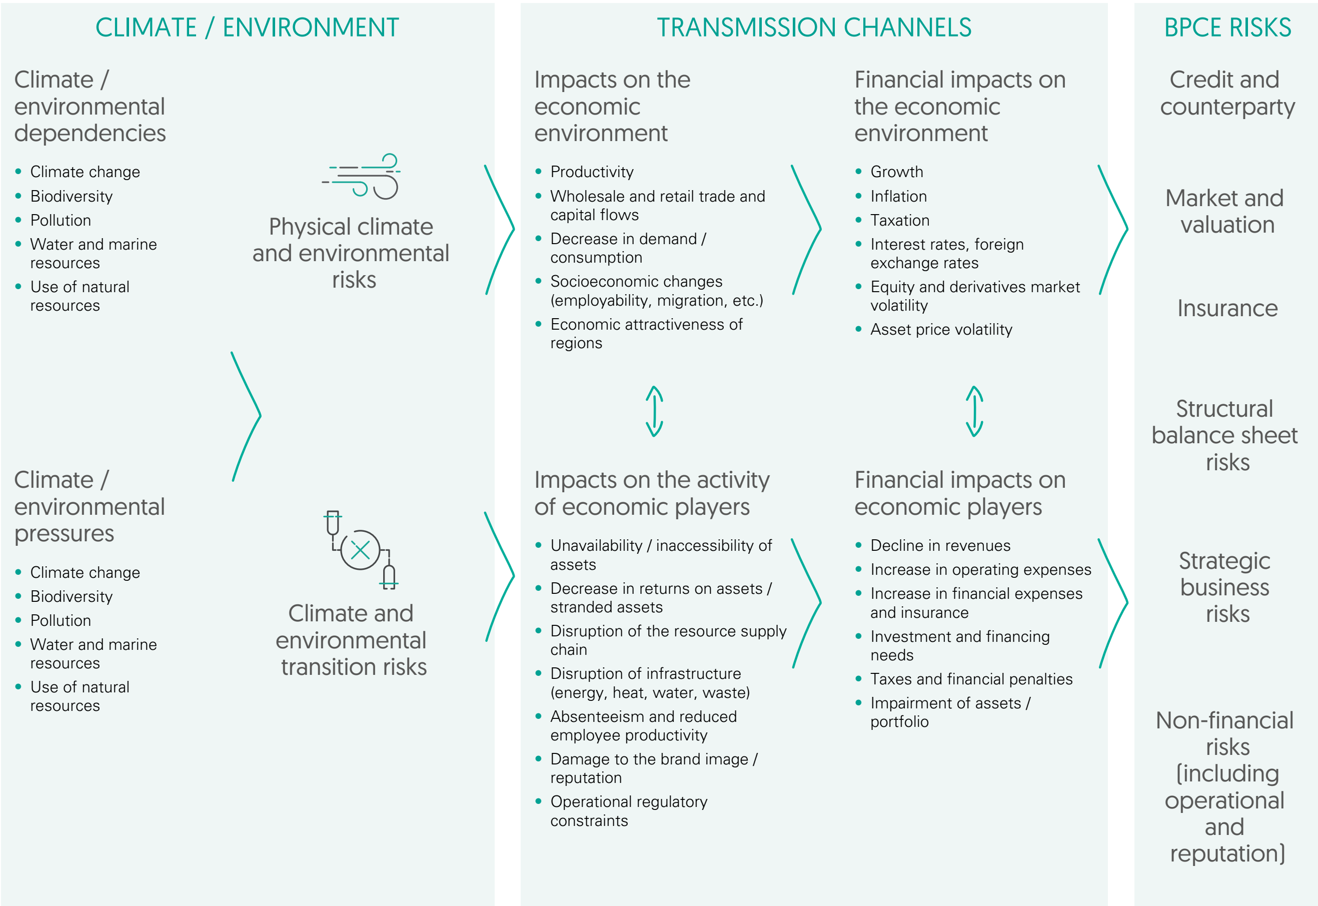
Risk transmission channels

Climate and environmental risks are risk factors underlying the other risk categories to which Groupe BPCE is exposed, namely credit and counterparty risks, market and valuation risks, insurance risks, structural balance sheet risks, strategic and business risks and non-financial risks (operational risks, reputation risks, non-compliance risks, insurance risks, etc.), as identified in Groupe BPCE's risk taxonomy.

In 2024, Groupe BPCE conducted work to systematically identify and describe the transmission channels linking climate and environmental risk factors to the main risk categories of Groupe BPCE's risk taxonomy. For this work, Groupe BPCE relied on its internal experts as well as on the impact maps developped by leading institutions such as NGFS and SBTN or the OCARA methodology.

These transmission channels involve the impacts of climate hazards on activities and business models, which are reflected in financial variables at the macroeconomic or microeconomic level and ultimately modify Groupe BPCE's risk exposure. These risks may materialize directly, in connection with Groupe BPCE's own activities, or indirectly through the counterparties to which Groupe BPCE is exposed as part of its financing or investment activities. They are summarized in the diagram.

This work will be subject to an annual review in order to integrate changes in the knowledge on climate and environmental risks and to extend the scope of the risks covered to social and governance risks.



Materiality assessment

Based on the transmission channels identified, Groupe BPCE assesses the materiality of the climate and environmental risks in relation to the main risk categories to which it is exposed. This assessment distinguishes between physical risks and transition risks for the climate risks on the one hand, and the environmental risks on the other. It is carried out according to three time horizons: short term (one to three years, financial planning horizon), medium term (strategic planning horizon, five to seven years) and long term (~2050).

This assessment is based on quantitative or qualitative indicators, making it possible to assess the risk exposures from a sectoral and geographical point of view, when these are available, as well as on expert assessments. The internal experts involved in these assessments include the ESG Risk department, the other functions of the Risk division, as well as representatives from the other departments (impact, compliance, legal) and the business lines concerned.

In 2024, the assessment of the climate risks was carried out by almost all of Groupe BPCE's physical entities and aggregated at Groupe BPCE level. It was supplemented by an initial assessment of the environmental risks carried out solely at Groupe BPCE level. A convergence of the climate and environmental risk assessment processes and the extension to social and governance risks will be carried out as part of the annual update of the assessments.

As part of the assessment of the financial risk materiality, the materiality assessment of climate and environmental risks was cross-referenced with the materiality assessment of each of the "traditional" risks carried out annually as part of the work on the Risk Appetite Framework in order to obtain an assessment of the intrinsic materiality for each risk on the same criteria applied to other risks (likelihood of occurrence/scale of financial impact), making it possible to ensure consistency between the assessments. A comprehensive consistency check was carried out to validate the materiality levels obtained.

Climate risk measurement tools and methodologies

Groupe BPCE has adopted specific methodologies to systematically and consistently address the climate, social and governance risks associated with its exposure portfolios. These methodologies are based on internal and external expertise, and reflect the state of scientific knowledge, technologies and the current regulatory environment, as well as market practices. They are regularly reviewed, supplemented and enriched with the aim of gradually improving the accuracy of the assessment of climate risks and taking into account changes in the context.

Assessment of governance, social and environmental risks

Groupe BPCE has developed an internal methodology for assessing climate issues and risks, based on sector scores documenting the main issues and risks related to the sector, according to criteria aligned with the definitions of the European taxonomy (six environmental risk criteria: physical climate risks, climate transition risks, biodiversity, water, pollution and circular economy).

These criteria are then rated by in-house experts, according to the principles of double materiality. The scores for the climate criteria are also aggregated in order to provide a summary score enabling the sectors to be compared. The proposed scores were validated by the Non-Financial Risk Committee.

This analysis methodology was deployed in the 26 economic sectors used to manage Groupe BPCE's financing portfolio. It is shared with all Groupe BPCE entities.

Physical environmental risk assessment

GEO-SECTORAL ASSESSMENTS

In order to strengthen the sensitivity and robustness of its assessments of the physical risk associated with the outstanding financing for professional and corporate customers, in 2024 Groupe BPCE developed a methodology for analyzing the vulnerability of the outstandings to physical risks.

This internal methodology makes it possible to take into account the intrinsic vulnerability of a sector to physical risk hazards and the exposure of a given geographical area to physical risk hazards. It is currently broken down into a fine-grained sectoral grid (NACE2) and a national or regional geographic grid for countries in which Groupe BPCE has a particular concentration of outstandings (France, United States). Six physical climate risk hazards are currently covered, which are among the most representative for Groupe BPCE, and can be simulated under different scenarios and time horizons.

This methodology will be deployed in the internal risk management tools in the course of 2025.

HOME LOAN PORTFOLIO

Given its significant exposure to home loans to individual customers, Groupe BPCE has adopted a tool to simulate the physical risks of the financed assets. This tool takes into account the exact coordinates of the asset to assess its risk exposure and certain characteristics to estimate its vulnerability to determine the estimated damages under different scenarios and time horizons. To date, this tool covers the territory of mainland France and Corsica and makes it possible to assess the exposure to the two main physical risks for this portfolio (drought - RGA and floods).

This methodology will be deployed in the internal risk management tools in the course of 2025.

Assessment of transition environmental risks

SECTOR ASSESSMENTS

In order to strengthen the sensitivity and robustness of its assessments of the transition risk associated with the outstanding financing for professional and corporate customers, in 2024 Groupe BPCE developed a methodology for granular analysis of the sensitivity of the sectors to this risk.

This internal methodology makes it possible to assign a sectoral score reflecting the transition risk associated with a given NAF code, taking into account the carbon emissions and the main environmental impacts of the companies in the sector. It has been developed in line with the Green Weighting Factor methodology (described below) that applies at the level of the company or project financed. Given the predominant share of French companies in the exposure portfolio, this methodology is focused on parameters corresponding to the French economy.

This methodology will be deployed in the internal risk management tools in the course of 2025.

HOME LOAN PORTFOLIO

To assess the transition risk on its home loan portfolio, Groupe BPCE relies on the Energy Performance Diagnostic (EPD) of the real estate assets financed. The EPD of the financed asset is collected systematically and makes it possible to capture both a risk on the repayment capacity of the loan in the event of an increase in energy expenditure or expenses related to the financing of work to improve energy performance, but also the risk of loss of value of the asset due to a deteriorated EPD, making it potentially unfit for use in the rental context given the regulations in force.

GREEN WEIGHTING FACTOR

Groupe BPCE notably uses the Green Weighting Factor (GWF) methodology, developed by Natixis CIB, to assess the transition risk related to its counterparties and financed projects.

Using a seven-color rating scale ranging from dark brown to dark green, the GWF assesses the impact of transactions on climate change, while taking into account the risk of the most material non-climate-related environmental externalities (water, waste, biodiversity, pollution). The GWF covers all bank financing. This assessment is carried out on a granular basis for each of the financing exposures on the balance sheet for all banking products (loans, guarantees, caution letters, documentary credits) regardless of their maturity, in all geographies and for all sectors of activity except the financial sector and administration. The GWF's methodology is also adapted to corporate and dedicated financing.

The GWF methodology offers a vision of the challenges of transition. The GWF covers:

- the issues of induced decarbonization (CO_2 Scopes 1, 2 and 3);
- the contribution to the transition made by certain customers or active projects, with the notion of avoided emissions;
- the exposure to the most material non-climate environmental risks;
- a forward-looking view of the customers' performance, making it possible to assess their transition potential;
- extract a set of new indicators useful for the management of the decarbonization strategy, notably for Natixis CIB and for regulatory reporting;
- the integration of the non-financial reporting needs of investor customers.

The operational management of Natixis CIB's climate trajectory is based in particular on data from the Green Weighting Factor (GWF). This management tool is used periodically and at several levels:

- for credit decisions at the transactional level;
- for the strategic dialog with customers;
- for strategic planning: definition of annual color targets for each business line and sub-business line;
- for commercial planning: definition of systems for assessing the individual performance of the financing origination teams;
- for capital allocation and active portfolio management;
- for risk appetite management.

With the aim of continuously improving this analysis tool, Natixis CIB carried out a major overhaul of the GWF methodology for dedicated financing, which will be rolled out using a new tool. This overhaul makes it possible to increase the coverage of the scope of financing analyzed and to improve the relevance of the assessments of each transaction (on the basis of feedback obtained from users since 2020).

The GWF is currently deployed on Natixis CIB's financing portfolio, for which the scores assigned are updated annually as part of the review of credit files. Studies are underway to assess the relevance of rolling out the GWF to other Groupe BPCE portfolios in the future.

PROCESS FOR IDENTIFYING AND ASSESSING OPPORTUNITIES

Groupe BPCE takes into account economic developments related to climate change in order to adapt its business models as a banker, insurer and investor. The challenges of mitigating and adapting to climate change generate development opportunities by supporting the economic players concerned and deploying transformation levers for its business lines.

The Group's VISION 2030 strategic project is based on the consideration of four transitions, all generating opportunities: environmental - with a clear priority given to the decarbonization of the economy - demographic, technological and geopolitical. In this context, issues related to climate change are fully integrated, taking into account their interactions with the other transitions. The Group offers an approach that takes into account global limits and societal needs, offering concrete solutions to all to support the transitions towards a more sustainable and inclusive world. Combating climate change and bringing about a more low-carbon society are major challenges for which the Group has long been mobilized, in order to limit the impact related to climate change of its financing, asset management and insurance activities. In this context, the Group is becoming a player in these transitions by developing its activities and revenues while providing a real lever for the transformation of its business lines. The Group translates this opportunity into its strategic plan with ambitions to achieve them.

In order to identify, assess and implement opportunities to support the environmental transition of its customers:

- Groupe BPCE has business line teams within the Group's various entities whose mission is to study market opportunities, develop business plans and launch useful offers. The New Products and Partnerships Validation Committee approves the marketing of these products after having assessed their appropriateness;
- an ESG dialog is conducted with the local banking customers of the Banque Populaire and Caisse d'Epargne networks in order to propose comprehensive offers that bring together specialized partners to support the customers' transformation initiatives, particularly in the area of energy renovation;
- in particular, within Natixis CIB, the Green & Sustainable Hub (GSH), composed of around forty experts, contributes to the implementation of the commercial strategy in terms of green and sustainable finance. The GSH works with all of Natixis CIB's business lines to develop sustainable "cross-asset" financing and investment solutions to serve customers' transition objectives. The GSH is continually expanding its offering of sustainable finance solutions and services as well as its range of advisory and support services. Since 2023, the GSH has supported Banque Populaire and Caisse d'Epargne networks, with the creation of a "GSH network" team to meet the sustainable financing needs of large SMEs. This team is made up of five dedicated experts and bankers "incubated" full-time for six months from the Banques Populaires and the Caisses d'Epargne, who develop their own expertise and participate in the creation of a wider network of sustainable financing experts within the Group.

2.2.3 Strategy

2.2.3.1 (E1 - 1) TRANSITION PLAN FOR CLIMATE CHANGE MITIGATION

With the previous strategic project including an ambition in terms of combating climate change, Groupe BPCE initiated the adaptation of its activities in order to contribute to the decarbonization of the economy. In 2024, with the definition and launch of the VISION 2030 strategic project, Groupe BPCE is committed to long-term action.

With the aim of making impact accessible to all, the Group has defined specific areas of action:

- support for all customers in their environmental transition;
- alignment of its financing, investment and insurance portfolios with trajectories compatible with the objectives of the Paris Agreement;
- decarbonization trajectories offered by European asset management companies to their investor customers;
- extension of the sustainable refinancing strategy in order to have the resources necessary to achieve its objectives;
- accelerated reduction of its own footprint.

The Group is accelerating the transformation of its activities with the aim of extending its impact solutions to all its customers on climate issues and more broadly on sustainability issues. Groupe BPCE has undertaken a transformation of all its companies, at all levels, by launching an internal transformation plan, named "Impact Inside", to support its customers' environmental and societal transitions. The transition plan to mitigate climate change is part of this global approach.

The "Impact Inside" transformation plan is reflected in the mobilization of the full strength of the Group's regional and international economic footprint to support all players in the economy in their transitions and thus strengthen their positive impact on society and on the environment. For the largest customers, particularly at the international level, the Group is strengthening its positioning at the heart of the transitions thanks to enhanced know-how and development of the strategic dialog led by the ESG consulting activities.

The Group's cooperative model, which places customers at the heart of governance, makes it possible to take into account their expectations and needs and the aspirations of society by ensuring a fair transition for each of its customers. Its decentralized model and its regional presence are real assets for supporting transitions and contributing to a fair and sustainable transformation of society.

Implementation of Groupe BPCE's transition plan in its contribution to climate change mitigation

IMPACT ACCESSIBLE TO ALL

- Support for all customers in their environmental transition
- Alignment of its financing, investment and insurance portfolios with trajectories compatible with the objectives of the Paris Agreement
- Decarbonization trajectories offered by European asset management companies to their investor customers
- Extension of the sustainable refinancing strategy in order to have the resources necessary to achieve VISION 2030's targets
- Accelerated reduction of its own footprint

ADAPTATION OF THE BUSINESS STRATEGY

Supporting individual customers

- In renovation
- In soft mobility
- In post-claim remediation
- *Via* dedicated savings products

Supporting legal entity customers in the evolution of business models

- Based on the analysis of transition plans (ambition, past and present performance, levers and actions, operational management)
- With a range of products and solutions adapted to corporate customers
- With a range of products adapted to investor customers
- Through the strengthening of expertise in the financing of the energy transition, the financing of renewable energies, M&A and intermediary services on the capital markets

Portfolio decarbonization management

LEVERAGE

- Support for individual customers with a complete range of home energy renovation solutions to preserve the value of the real estate portfolio
- Support for individual and corporate customers in low-carbon mobility
- ESG dialog enabling consulting, in close proximity to companies, with the analysis of business models according to their size and economic sector
- Support for changes in the energy mix and support for the reduction of the use of carbon-based energies
- Management of decarbonization trajectories of the highest carbon-emitting sectors
- Continued approach to reducing the own footprint of real estate, mobility, digital and purchasing

TARGETS AND ACTION PLANS

Quantitative, science-based decarbonization targets for...

- **Financing** of carbon-intensive sectors in financing portfolios
- **Investment** portfolios of the insurance activities
- The **portfolios and mandates** of the asset management activity

... supplemented by dedicated action plans that capitalize on the Group's local roots and its understanding of regional challenges:

- Annual financing envelope of €1 billion dedicated to energy efficiency renovation for individual customers
- Financing envelope of €5 billion by 2026, dedicated to decarbonization and the transition of companies
- Increase in renewable energy financing by 15% by 2026
- ESG dialogs with companies
- Constant development of sectoral expertise (energy infrastructure, transport, etc.)
- Development of a selective range of transition funds and services by offering products with a transition theme, or with decarbonization ambitions
- Own footprint activities

2.2.3.1.1 Compatibility of the company's targets with limiting climate change [E-1-1-16 (a)]

The definition of the decarbonization action plans and targets is strengthened by Groupe BPCE's local model, its expertise at the level of Natixis CIB and its regional roots. Thus, for the highest carbon-emitting sectors, the Group has defined action plans and/or decarbonization trajectories adapted to the economic sectors of its financing portfolios, as well as for the asset management and insurance activities. The Group sets its targets based on science[1] and the most ambitious objective of the Paris Agreement to limit global warming to +1.5°C by 2100 compared to pre-industrial levels.

In order to build this trajectory on its financing activities, in 2021 Groupe BPCE joined the Net Zero Banking Alliance (NZBA), an international initiative by the banking industry coordinated by the financial initiative of the United Nations Environment Program (UNEP FI). Similarly, BPCE Assurances joined the Net Zero Asset Owner Alliance (NZAOA) in 2022 and certain Natixis IM affiliated asset management companies have joined market initiatives such as the Net Zero Asset Managers initiative (NZAMi) to strengthen their portfolio transition and alignment approach.

By co-constructing and sharing guidelines adapted to financial institutions, the Net Zero alliances allow each financial institution, depending on the composition of its loan or investment portfolio in the context of asset management, to adapt its strategy according to the business sector in which it operates. The objective is for the trajectory of each loan or investment portfolio to be aligned with the decarbonization trajectory based on science and specific to the business sector in question, thus making it possible to contribute to global carbon neutrality by 2050.

FINANCING ACTIVITIES

Groupe BPCE has deemed it more relevant and operationally more judicious to set targets for reducing the greenhouse gas emissions from financing transactions (Scope 3 category 15) by business sector and not set one target for all financing transactions. In fact, within its financing portfolio, Groupe BPCE has identified the sectors that emit the most greenhouse gas emissions. These sectors have been assigned absolute carbon emission or intensity targets and/or are the subject of action plans. Based on the methodological framework developed at the international level within the Net Zero Banking Alliance, the Group has prioritized the following sectors: coal, oil and gas, electricity production, automotive transport, air transport, residential real estate, commercial real estate, steel, cement, aluminum, agriculture. The targets are expressed in absolute value for fossil fuel-related sectors, and in physical intensity for the GHG emissions of other sectors.

For financing activities, "financed emissions" consist in attributing a portion of the borrowers' GHG emissions to the credit exposures. In the fossil fuel sector, the target - expressed in absolute value - aims to steer a reduction in the credit exposures over the long term, as well as a reduction in the financed emissions. The intensity targets are based on GHG emissions at the level of each physical unit produced by the corporate customer (*e.g.* metric tons of cement, metric tons of iron, kWh, km traveled, etc.). An intensity target aims to manage the decarbonization of the most carbon-intensive financed activities and to support the Group's customers in their efforts to improve energy efficiency and transition to less carbon-intensive energies.

To define its targets by sector, Groupe BPCE generally uses as a reference scenario the Net Zero Emissions by 2050 scenario (NZE 2050 scenario) published by the International Energy Agency in 2021. This scenario plots sector trajectories compatible with limiting global warming to +1.5°C, in accordance with the most ambitious objectives of the Paris Agreement. When this scenario is not sufficiently precise and granular to be reconciled with the composition of certain sector portfolios, the Group may have to use alternative scenarios by ensuring the quality of the organizations that produce them and their compatibility with the +1.5°C target without or with limited overshoot of the global carbon budget.

The science-based decarbonization targets are used to identify the decarbonization levers relevant to each sector and to engage customers in a discussion on their transition. The Group relies on its regional presence and cooperative model to offer its customers financing adapted to their transition needs and compatible with the targets that the Group has set for itself.

The scientific scenarios are most often expressed in terms of emission intensity. They are also used by the vast majority of the customers that Groupe BPCE finances in these sectors. This shared use of the scientific reference base optimizes the dialogue between the bank and its customer.

In addition, the Group's own footprint is measured and governed by an emission reduction target.

INSURANCE ACTIVITIES

BPCE Assurances has developed a proactive policy in terms of responsible investment. Since 2018, BPCE Assurances has set itself the goal of aligning its investment policy with a trajectory compatible with the objectives of the Paris Agreement. BPCE Assurances has stepped up this ambition by joining the NZAOA alliance in 2022. The members of this alliance commit to evolve their investment portfolios to zero net greenhouse gas emissions by 2050, in line with a maximum temperature increase of +1.5°C above pre-industrial temperatures, taking into account the best scientific knowledge. Thus, BPCE Assurances aims for an investment portfolio temperature of +1.5°C by 2030, with a first waypoint of +2.0°C at the end of 2024.

In doing so, BPCE Assurances has changed its investment policies and the proportion of assets that contribute significantly to global warming is constantly decreasing in its investment portfolio. This action will be continued in the coming years with the aim of working towards the objective set.

(1) See Section 2.2.4.1 "Targets for aligning portfolios with the objectives of the Paris Agreement".

ASSET MANAGEMENT ACTIVITIES

As the business model comprises different asset management companies, Natixis IM has not yet formalized a transition plan encompassing the objectives and ambitions in a consolidated manner. However, some European asset management companies are demonstrating an ambition in terms of climate transition with specific objectives adapted to their own challenges and those of their customers. Thus, the various ambitions of asset management companies in terms of transition can be reflected in decarbonization objectives or alignment with the objectives of the Paris Agreement, either at the level of funds and mandates, or at the level of the management company's portfolio.

The European asset management companies have defined decarbonization objectives or alignment with the objectives of the Paris Agreement for their portfolios, which are as follows:

- Asset management companies committed to contributing to global carbon neutrality as part of an international alliance: two asset management companies (DNCA Finance and Mirova) are committed to a Net Zero approach as part of the NZAM initiative at the end of December 2024.
- Asset management companies aiming for decarbonization or portfolio management aligned with the objectives of the Paris Agreement without joining a specific external framework: five asset management companies (Ostrum AM, Vega IM, Dorval AM, AEW and Vauban IP) manage their assets to align with the objectives of the Paris Agreement or have targets to reduce their footprint.

Other Natixis IM European asset management companies have defined approaches specific to their type of asset.

OWN FOOTPRINT

As an extension of an approach to reducing its own footprint, already underway for several years, Groupe BPCE has determined a GHG emission reduction trajectory marked by milestones in 2026 and 2030. A detailed strategy and a pragmatic action plan have been defined. Actions after 2030 will be progressively identified to continue the efforts to reduce its footprint by 2050. The decarbonization trajectory for the own footprint, established proactively and adapted as far as possible to operational implementation constraints, has not been compared to a scientific scenario aimed at limiting global warming to 1.5°C. The strategic KPI validated and backed by the VISION 2030 strategic project concerns the reduction of 6% of Groupe BPCE’s own footprint by 2026 (on a 2023 basis). This KPI is part of a target of -20% by 2030 (on a 2023 basis), covering Scopes 1, 2 and 3 (excluding category 15).

2.2.3.1.2 Description of decarbonization levers and key actions [E1-1-16 (b)]

Groupe BPCE is mobilized to make impact accessible to all economic players in the society and in all its areas of expertise, while accelerating its own transformation. Each business line incorporates all aspects of sustainability into its business model and uses the decarbonization levers and key actions within its scope to support its customers. In this context, the Group has identified the following levers:

- the energy renovation of the residential real estate sector, with solutions to preserve the value of the real estate portfolio of its individual customers and permanently reduce the greenhouse gas emissions;
- the transition to low-carbon mobility, with solutions to support its customers on this major mitigation and adaptation issue;
- deliver local advisory for the transition of its corporate customers’ business models through dialog devoted to this subject and by providing expertise to incorporate ESG issues into the analysis of business models according to their size and business sector;
- support for changes in the energy mix and support for the reduction of the use of carbon-based energies;
- managing the decarbonization trajectories of the sectors with the highest carbon emissions, both for financing activities and investment activities in the insurance sector and for asset management activities;
- reducing the carbon emissions from its own footprint.

Groupe BPCE mobilizes these levers to position itself alongside all its customers and offer them key actions *via* local and adapted solutions, in all regions, nationally and internationally. The Group pragmatically:

- supports individual customers with a complete range of home energy renovation solutions;
- supports individual and corporate customers in soft mobility;
- proposes “ESG dialogs” to its BtoB customers to support the transformation of business models by integrating climate change issues and the implementation of transition plans which contribute to achieving the objectives of the Paris Agreement;
- adapts its support to the various economic sectors thanks to cutting-edge sectoral expertise, particularly in energy and transport infrastructure;
- offers customers:
  - a range of responsible savings and investments: sustainable development savings accounts, funds with a sustainable investment objective,
  - an array of sustainable financing products such as green loans, social loans or integrating quantitative sustainability objectives (sustainability-linked) into their financial structures,
  - sustainable investment solutions;
- capitalizes on its local roots and in-depth understanding of the specificities of the regions and their challenges.

In terms of investments, BPCE Assurances uses a selective investment policy as a lever. This is reflected in a key action, which is to devote at least 16% of its investment flows to green assets each year. A significant portion of the investments (51% of flows in 2023 and 42% in 2024) is made in assets such as green bonds, Article 9 funds according to the SFDR, and divestments aligned with the European taxonomy. These investments aim to align the asset portfolio with a temperature trajectory compatible with the objectives of the Paris Agreement, with a first waypoint of +2.0°C at the end of 2024. As a result, the proportion of assets that contribute significantly to global warming is steadily decreasing in BPCE Assurances’ investment portfolio. This effort will be continued in the coming years with the aim of moving towards an alignment with a scientific scenario of +1.5°C by 2030. BPCE Assurances had set itself the goal of no longer holding securities rated “Negative” by Mirova by the end of 2024 (target achieved), as the majority of the underlying issuers are related to the fossil fuel sector.

In terms of asset management on behalf of third parties and in order to support customers in their transition to a low-carbon economy, several Natixis IM asset management companies have developed products, funds and mandates dedicated to sustainable investment with decarbonization objectives. In addition to these dedicated investments, all Natixis IM European asset management companies include sustainability criteria in their investment decision-making process, using different methodologies adapted to the size, diversity of activities and asset classes. On the subject of climate change mitigation and adaptation, several commitment levers are common to several asset management companies[1] including, for example:

- encourage transparency through the publication of the company's environmental performance and its exposure to climate risks;
- encourage the implementation of a climate strategy and reduction targets in line with the objectives of the Paris Agreement;
- encourage better management of climate risks;
- encourage commitment to an energy transition.

For most of Groupe BPCE's activities, the implementation of these decarbonization levers is monitored as part of the strategic plan by means of indicators corresponding to objectives to be achieved in 2026. These include:

- supporting the evolution of the energy mix in the territories and regions of the world where the Group operates by contributing to the reduction in the use of carbon-based energies through a 15% increase in new financing for renewable energy projects;
- management of the action plan to decarbonize the financing of the sectors that emit the most greenhouse gases *via* the implementation of absolute or intensity targets for 2030: oil and gas, electricity production, automotive, air transport, steel, cement, aluminum and commercial real estate.

More general indicators reflect the objectives relating to the support and awareness-raising actions deployed for its customers:

- ESG dialogs covering 100% of the active corporate customers (this dedicated exchange has been rolled out since the beginning of 2023 to already more than 10,000 corporate customers);
- a number of unique visits to the digital module[2] "Sustainable Advisory and Solutions": 5.2 million Banque Populaire and Caisse d'Epargne customers at the end of 2024.

2.2.3.1.3 Description and quantification of the company's investments and financing to support the implementation of the transition plan [E1-1-16 (c)]

This data point is not relevant to Groupe BPCE's financing, insurance and asset management activities. In addition, the following data point relating to the description of the way in which the transition plan is integrated into the commercial strategy, describes in detail the products implemented to support its customers in order to support the implementation of the transition plan.

With regard to its own footprint, significant investments have been made in a limited scope related to BPCE SA as part of the Real Estate Master Plan implemented between the beginning of 2020 and the end of 2023. This program has a positive and significant impact in terms of reducing the own footprint. It required investments of €450 million notably including flexible and homogeneous workspaces, an increased range of services and services appreciated by users and the support of technology for employees or for smart management of the real estate portfolio.

In concrete terms, this program has had a major effect in terms of reducing greenhouse gas emissions and energy consumption: the estimated annual reduction of the carbon footprint is around 11,000 metric tons of CO_2eq and the reduction in energy consumption is around 36%.

2.2.3.1.4 Qualitative assessment of the locked-in potential GHG emissions [E1-1-16 (d)]

This data point is not relevant for Groupe BPCE. There are no plans to publish qualitative information on the locked-in potential GHG emissions. In the context of a banking activities, the locked-in emissions are not significant given the nature of the assets being operated.

2.2.3.1.5 Explanation of any objectives or plans that the company has set to align its economic activities [E1-1-16 (e)]

This data point is not relevant to Groupe BPCE's activities.

2.2.3.1.6 Publication of investment amounts related to fossil fuel activities (E1-1-16 (f))

This data point is not relevant to Groupe BPCE's activities. In addition, the objectives for reducing greenhouse gas emissions, the monitoring of these objectives as well as the action plans put in place by the Group for the financing activities are detailed in this report.

2.2.3.1.7 Exclusion or not of the "Paris Agreement" benchmarks (E1-1-16 (g))

Groupe BPCE is not excluded from the "Paris Agreement" benchmarks. In addition, this data point is not applicable to financial institutions according to the Implementation Guidance [draft] Transition Plan for Climate Change Mitigation source EFRAG approved by the TEG on January 23, 2025.

(1) DNCA Finance, Dorval AM, Ecofi, Mirova, Thematics AM, Ossiam, Ostrum AM, Vega IM.

(2) The scope for reporting this indicator includes the Banque Populaire and Caisse d'Epargne networks. This indicator calculates the cumulative number of unique visitors who have consulted the "Sustainable Advisory and Solutions" section of the Banque Populaire and Caisse d'Epargne networks mobile app since 2023. The basis for calculating this indicator is made up of the almost actual data reported by the Caisse d'Epargne and Banque Populaire scopes of digital navigation traced by the tool Adobe Analytics.

2.2.3.1.8 Description of how the transition plan is integrated into the business strategy and financial planning

INTEGRATION OF THE TRANSITION PLAN INTO THE COMMERCIAL STRATEGY OF THE ACTIVITIES

Faced with the climate emergency, the Group's ambition is to rapidly implement and deploy measures to mitigate and adapt to the already tangible environmental and socioeconomic impacts of climate change. The "Impact Inside" approach enables the business lines to integrate levers and actions that contribute to the transition plan into their commercial strategy. It is broken down by main customer segments, based on the Group's decentralized cooperative model.

The transition plan integrated into the commercial strategy is based on a certain number of commercial levers which make it possible, by customer segment, to develop the following actions:

Supporting individual customers

In energy renovation

Groupe BPCE is a major player in the housing market: in terms of residential real estate, it finances one in four housing units in France. Supporting the reduction of greenhouse gas emissions from individual customers is closely linked to improving the energy performance of homes, an essential lever for improving quality of life and preserving the value of the portfolio.

In 2023, the residential real estate sector generated 36.4 MtCO2eq (*source: Secten 2024 report*), *i.e.* 9.7% of total greenhouse gas emissions in France.

To make the Impact accessible to all, a massive customer awareness campaign was organized. To promote energy efficiency renovation, Groupe BPCE offers financing solutions and mobilizes its role as an operator, trusted third party, as well as its partnerships:

- by offering its customers the use of the "Sustainable Advisory and Solutions" application on the digital applications available to customers. It enables customers to calculate their own carbon footprint, benefit from advice and support for their energy renovation and transition to low-carbon mobility, and select green savings solutions. As mentioned above, the application has recorded 5,2 million unique visitors since its launch;
- by supporting its customers with real estate projects, for individual housing and condominiums. Several services and pathways are offered:
  - energy assessment,
  - search for subsidies,
  - works performance guarantee,
  - financing adapted to each situation (dedicated eco PTZ loan, Impact loan, prefinancing of subsidies, dedicated collective loan), partnerships established or being tested with renovation specialists (Cozynergy, IzibyEDF and Leroy Merlin, etc.);
- by increasing the annual amount of financing for the energy renovation of buildings for individual customers. The action plan implemented by all of the Group's establishments will increase the annual amount of financing for energy renovation work to €1 billion per year by 2026.

In addition, as part of the multi-risk home insurance offering, in order to promote the climate transition in the housing sector by reducing greenhouse gas emissions from individual customers, BPCE Assurances provides insurance for sustainable construction and for renewable energy production equipment.

In soft mobility

In 2023, the light vehicle (passenger and utility) sector generated 87 $MtCO_2eq$, representing 23.3% of the total greenhouse gas emissions in France (*source: Secten 2024 report*).

The transition to low-carbon mobility is one of the major challenges of the energy transition.

Groupe BPCE has adapted its commercial strategy and offers to support its individual customers when adapting to this new context:

- a "Clean vehicle" loan was developed to identify and meet the financing needs of "clean" vehicles, *i.e.*, according to the regulations, electric and plug-in hybrid vehicles emitting less than 50g of CO_2 per km;
- a consumer loan offering called "Green Loan" for the purchase of an electric vehicle is offered by BPCE Financement;
- Banque Populaire and Caisse d'Epargne car insurance offers, dedicated to "clean" vehicles (hybrid, electric, LPG) with a specific rate advantage for electric vehicles (up to -10%) and to short-distance drivers (up to -10% if they drive less than 8,000 kilometers) have been launched;
- insurance offers have been rolled out to support the acquisition of "soft mobility" means (scooters, electric bikes, gyropods, etc.) as part of the multi-risk home insurance contract;
- lastly, the "Sustainable Advisory and Solutions" application offers comprehensive support: understanding regulatory changes, identifying Low Emission Zones, calculating the vehicle's Crit'Air sticker, estimating the carbon impact of travel using the ADEME simulator, identifying grants and subsidies to encourage the adoption of lower-emission mobility, finding a clean vehicle for purchase or lease, financing and insuring these vehicles.

Post-claim remediation

When managing claims, BPCE Assurances is developing an eco-responsible approach.

In the event of a car accident, this means priority implementation of repairs using re-used parts rather than new materials, thus allowing, thanks to the extension of the product life cycle, a reduction in greenhouse gas emissions. To this end, BPCE Assurances has been coordinating and involving its networks of service providers (garages and experts) for several years on the basis of detailed management indicators.

For home claims, work is being carried out to implement "low-carbon" repair processes in order to promote the use of materials from the circular economy and products made from bio-sourced raw materials.

Via dedicated savings products

By offering savings products whose resources will be 100% allocated to financing local loans for the ecological transition, the two networks Banque Populaire and Caisse d'Epargne are enabling all their individual customers to play an effective role in this common objective. The system for earmarking "Green" bank savings products makes it possible to justify the allocation of funds collected to the CODEVair, CSL Vert, CATVair and CATVert products, as well as the 10% of funds collected on the *Livret de Développement Durable (LDD)* passbook savings accounts to financing universes contributing to the energy and environmental transition: energy renovation, low-carbon mobility, business transition, renewable energies, property construction to the latest energy performance standards.

Supporting the needs of legal entity customers in the evolution of business models

Groupe BPCE supports the transition of the business models of companies, ranging from SMEs to large international companies, by measuring the greenhouse gas emissions footprint of its financing and by developing a non-financial analysis through the establishment of ongoing dialog with its customers on environmental issues.

In other words, and in more detail, this involves:

- establishing a link between credit and greenhouse gas emissions, by assessing the possible climate impacts of the financing activities. To this end, tools and methods used as part of the Net Zero Banking Alliance (NZBA) guidelines and relating to the analysis of climate performance *via* the colorization of sectors and counterparties (Green Weighting Factor) have been deployed;
- engaging in ongoing dialog with customers on these issues in order to support them on environmental transition issues and integrate the risks and opportunities related to this transition into the analysis, according to their size and business sector. This action is based on "ESG dialogs", the use of non-financial reports and data, as well as the acquisition of data, facilitated by the gradual application of the CSRD.

The transition plan provides for support for corporate and investor customers by adapting the commercial strategy of the Group's various business lines in four areas: analysis of customer transition plans, adaptation of the product offering for corporate customers, adaptation of the product offering for investor customers, and the transition to low-carbon solutions.

A commercial strategy that builds on the analysis of transition plans

The reduction of Groupe BPCE's financed emissions is essentially based on that of its customers. The commercial strategy is enhanced by the development of detailed analysis tools for the trajectories and transition plans of the Group's customers. To date, this analysis focuses on the trajectories implemented and published by the largest customers. For all customers, specific tools are gradually being rolled out, taking into account their size and business sector.

The actions of the Group's customers are assessed as part of regular discussions to identify risks related to climate change and support opportunities in terms of financing and investment solutions. Particular attention is paid to the action plans implemented, and their achievements, to reduce the intensity and absolute emissions of greenhouse gases in relation to the specific scientific decarbonization curve of the sector in question.

Transition Potential Assessment Tool for companies and issuers

For its Corporate & Investment Banking activities, in 2024, Natixis CIB launched the development of a Transition Plan Assessment (TPA) tool to assess the transition potential of its corporate customers. This tool will notably make it possible to analyze the transition plans published by customers, in respect of regulations or proactive commitments, as well as the governance and means actually implemented to achieve their transition objectives. The tool places particular emphasis on forward-looking factors that are not yet reflected in the GWF assessment. The assessment of customer transition plans is based on four areas: ambition, past and present performance, the levers and actions implemented, and operational management. The result of each assessment will be evidenced by a transition rating that will be used in the loan granting process, as is currently the GWF (color) rating.

With regard to asset management on behalf of third parties, several Natixis IM asset management companies assess transition potential among other sustainability criteria integrated into their investment decision-making process. This requires the review of the business model adaptation strategy through the assessment of transition plans for each issuer. Certain European asset management companies[1] already have or are in the process of implementing an internal methodology for analyzing the transition plans of portfolio companies.

A commercial strategy based on a range of products adapted to the transition context for corporate customers

FOR RETAIL BANKING

To support its customers in the environmental transition, and in particular the climate transition, an organization to better embody the Green Business and lead a community of local Green Business advisors and experts has been set up within each institution of the Banque Populaire and Caisse d'Epargne networks. This organization makes it possible to concentrate expertise and thus better serve customer companies by offering them products adapted to the various domains of the transition: energy renovation, sustainable mobility, business transition and renewable energies.

(1) DNCA, Thematics AM, Mirova and Ostrum.

As part of supporting corporate customers in their transition and decarbonization approach, the Group will mobilize €5 billion in financing by 2026. The support takes the form of various actions: deployment of the ESG strategic dialog, acceleration of green financing production and ramping up of the marketing of the Impact loan dedicated to SMEs, ISEs and players in the social and solidarity economy. It also relies on the deployment of global solutions bringing together partners including [Naldéo] for energy optimization work, SAMI for the carbon assessment and the development of a decarbonization plan, Économies d'énergies to facilitate the search for subsidies and Opera for the subscription and management of energy contracts.

Organized around financing, consulting and custody at the service of the Group's networks, the Financial Solutions & Expertise division supports its customers in the realization of their projects contributing to the mitigation of global warming. This support is provided *via* a range of adapted products distributed by the networks.

In terms of mobility, several solutions enable corporate customers to reduce the environmental impact of their vehicle fleet by promoting green alternatives. The latter can be financed through equipment leases or long-term leases (including car policy advice, eco-driving services, connected fleet management and car-sharing). In terms of energy renovation, companies are supported in the search for energy performance of their buildings and professional equipment as part of a partnership with Altérea, an energy and building engineer, and a complete range of rental solutions for movable property and real estate assets (BPCE Lease).

In addition, BPCE Solutions Immobilières offers tertiary expertise dedicated to offices based on a building's environmental performance assessment grid.

To ensure quality support for customers, the skills of the sales teams are being strengthened (training of the business lines in sustainability issues, activities). The latter maintain a regular dialog with their customers on specific sectoral issues, in particular through the organization of awareness-raising webinars and networking with partners.

Lease Impact Program

In a context of economic and regulatory paradigm shifts and rising energy costs, leasing represents significant development potential in the service of the environmental transition. The Lease Impact program is part of this framework, covering three areas of need:

- the production of energy for self-consumption and/or sale for the electricity grid;
- energy efficiency with the aim of reducing consumption and enhancing the value of the real estate portfolio;
- green mobility to reduce the environmental impact of the vehicle fleet by promoting green alternatives.

To meet these challenges and support the growing share of these three areas, this program relies on multiple financing solutions, adapted to customer needs (equipment leasing, real estate leasing, long-term leasing, IT operational leasing, project financing).

FOR NATIXIS CIB

Natixis CIB supports its customers with financing, advisory and investment solutions in the various stages of their ecological and energy transition. It acts both as an advisor and as a preferred financial partner for:

- the withdrawal or divestment of activities that emit the most greenhouse gases;
- diversification of their activities to increase the share of those that are sustainable and/or that contribute to the transition (avoided emissions);
- intrinsic decarbonization of industrial supply and production processes;
- carbon sequestration (nature-based solutions or technological storage solutions) after prioritizing the application of the previous decarbonization levers;
- governance and consideration of transition issues in their management.

SUPPORT CUSTOMER TRANSITION

SYSTEMATIC ASSESSMENT OF THE CUSTOMER TRANSITION PLAN

4 key pillars

1) Strategy and vision
2) Ambition
3) Action and preparation
4) Governance and reporting

A classification of clients in key sectors:

- Energy management & storage
- New energies: hydrogen, bioenergies, carbon removal, e-fuels and SAFs (sustainable aviation fuel)
- Nuclear, SMR (small modular nuclear reactors)
- Critical metals
- Strategic stockpiling strategies
- Physical and market hedging capabilities
- Key transition commodity financing
- Carbon accounting (Scopes 1, 2, 3 and 4)
- Climate scenario modelling

A commercial strategy based on a range of products adapted to the transition context for investor customers

In order to support investor customers in their objectives of contributing to the transition to a low-carbon economy, Natixis IM's management companies have developed products (funds and mandates), with decarbonization objectives or aligned with the objectives of the Paris Agreement. In addition, some of the products managed by Natixis IM's asset management companies invest in solutions that make a positive contribution to climate mitigation or adaptation, both on the listed markets, through green bonds for example, and on the private markets.

Various European asset management companies of Natixis IM have also developed analytical tools to support clients in the diagnosis of their portfolio and the calculation of climate or transition-related metrics.

A commercial strategy based on a transition towards low-carbon solutions

With regard to Natixis CIB, the commercial strategy implemented is taking the form of a gradual reallocation of portfolios. The Green Weighting Factor shows the gradual transition of the financing portfolio initiated since 2018. Financing exposures on the highest-emitting counterparties are reduced in favor of exposures to the lowest-emitting counterparties in each sector. This strategy is also reflected in a significant and continuous increase in the exposures related to the financing of renewable and carbon-free energies in the balance sheet compared to the weight of the financing granted to assets or counterparties in the fossil fuel sector.

As a result, Natixis CIB has sharply reduced its exposure to fossil fuels since 2017 by (i) reducing its exposure to the sub-sectors that have the greatest impact on the environment (oil and gas production/exploration, exclusively oil projects, exclusion from the financing of shale gas), (ii) reallocating part of the exposures to gas assets considered as an important driver of the transition and to short-term energy security and (iii) streamlining its energy trading financing portfolio (Commodity Trade Finance Energy) by financing fewer petroleum products and more gas and agricultural raw materials and/or transition metals. This strategy is based on a robust organization and dedicated, cross-functional teams of experts from all business lines, in particular the Green & Sustainable Hub (GSH) and the Energy Transition & Natural Resources (ETNR) team.

ETNR, symbol of the transition of Corporate & Investment Banking towards a low-carbon economy

The creation of the Energy Transition & Natural Resources activity in 2020 symbolizes the transformation of Natixis CIB's activities in favor of low-carbon energy production. This activity supports the development of companies in new sectors that are essential to the energy transition, such as hydrogen, bioenergies, sustainable fuels for aviation and carbon capture technologies. In these fast-growing but still developing segments, Energy Transition & Natural Resources, alongside Natixis CIB's business line teams (advisory, M&A, financing, capital markets, hedging) and Retail Banking, through their support to medium-sized companies, supports its customers in their development by helping them to raise capital on the markets and finance projects to promote decarbonization. In addition, the team has deployed dedicated strategies for batteries and critical metals, essential for renewable energy production and storage, and for carbon-free transport. By way of illustration, Natixis CIB supports the development of the midstream value chain and manufacturers in the sector in Europe by financing gigafactories, the production of green hydrogen and low-carbon energy reserve infrastructures.

FINANCING OF RENEWABLE ENERGIES

Groupe BPCE finances low-carbon energy production assets through the financing of renewable energy projects of all sizes thanks to the involvement of its various entities. Groupe BPCE's renewable energy asset outstandings amounted to €16.2 billion in 2024. The portfolio is focused on solar (44%) and wind (37%).

The VISION 2030 strategic project provides for an increase in new renewable energy financing of around 15% over a three-year period by 2026.

The complementarity between the Group's entities makes it possible to support companies of different sizes and projects at both regional and national levels.

Natixis CIB positions itself as a leader in international renewable energy financing, with an arranged amount of €3.05 billion in 2024 (having enabled the development of 7,000 MW of installed capacity), an increase of +19% compared to 2020. The annual fixed amount for the financing of renewable energy projects has doubled since 2020 and Natixis CIB is positioned as the third largest arranger in the world[1]. In 2024, renewable energy accounted for 91% of new infrastructure financing by the Corporate & Investment Banking division in the power generation sector.

At the national level, for large-scale transactions, the combination of the expertise and resources of Natixis CIB, BPCE Energeco, local Caisses d'Epargne and the Caisse d'Epargne Energy Transition Debt Fund are key to arranging this type of financing.

For intermediate-sized projects at the regional level, Groupe BPCE also relies on the Banques Populaires, the Caisses d'Epargne, Crédit Coopératif, Banque Palatine and the expertise of BPCE Energeco, a subsidiary of BPCE Lease, within BPCE's Financial Solutions & Expertise division. Dedicated to the financing of renewable energies since 2003, this entity supports the Group's various institutions in the financing of renewable energy projects in their region.

Renewable energy exposures[2]

Year	2024	2023	2022
Total Group RE exposure (in billions of euros)	16.2	14.3[3]	12.2

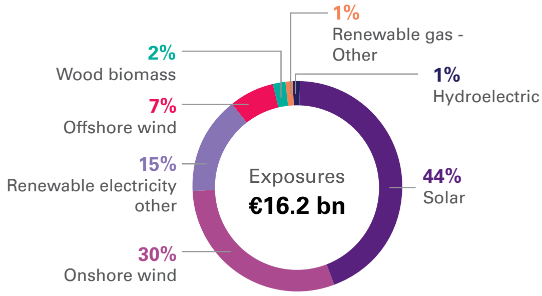
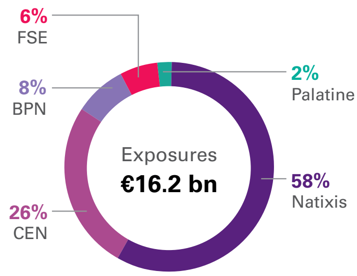
(2) Scope of the metric: Banque Populaire and Caisse d'Epargne networks, Natixis CIB, Banque Palatine, BPCE Energeco (subsidiary of BPCE Lease, FSE division). Metric calculated on the basis of on-balance sheet and off-balance sheet renewable energy financing outstandings.
(3) Data recalculated following quality improvement work carried out in 2024.

Exposure of renewable energies by sub-sector



Renewable energy exposure by Groupe BPCE entity



FINANCIAL PLANNING OF THE TRANSITION PLAN

The implementation of the transition plan is supported by financial planning.

With regard to supporting individual customers in their energy renovation work, the action plan implemented by all of the Group's establishments will make it possible to increase the annual amount of financing for energy renovation work to reach €1 billion per year by 2026.

To support corporate customers in their transition and decarbonization approach, the Group will mobilize €5 billion in financing by 2026

With regard to the Group's decarbonization trajectories, financial planning was based on the following two elements:

- a methodology for calculating trajectories that establishes a link between the evolution of the outstanding financing in the value chain in question and the greenhouse gas emissions of the counterparties in the sector concerned;
- a change in the nature and amounts of the outstanding financing by sector, depending on their distribution between the assets or counterparties that promote the achievement of the objectives set for 2030 and those that deviate from them.

By way of illustration, in the fossil fuel sector (oil and gas) the trajectory is based on a reduction of the outstanding financing, whereas in the electricity production sector the trajectory is based on a planned increase of the financing for renewable energy projects. This increase is managed thanks to the implementation of a new production growth indicator (+15% by 2026).

In addition, the increase in new financing production relating to assets or counterparties that have begun their transition makes it possible to promote the structuring of bond issues dedicated to the theme of sustainable development. The refinancing program provides liquidity, necessary for the financing resources provided for in the context of financial planning.

This financial planning is periodically reviewed by steering committees by business line or by theme. The achievements of the business lines according to the levers and actions identified are then analyzed. The effectiveness of these actions in relation to the ambition is subject to a gap analysis. The results of this analysis are presented to the Environmental Transition Strategy Committee, which will decide on any actions to be implemented so that the transition plan complies with the forecast made as part of the implementation of the above-mentioned commercial strategy.

Concerning more specifically the sector decarbonization trajectories, a summary of the progress made (as set out below in the context of the disclosure requirement - Section 2.2.3.1.9) is presented to the Environmental Transition Strategy Committee.

2.2.3.1.9 APPROVAL OF THE TRANSITION PLAN BY THE ADMINISTRATIVE, MANAGEMENT AND SUPERVISORY BODIES OF THE COMPANY [E1-1-16 (i)]

In accordance with the governance system described in Section 1.2.2.1, and as part of the overall process for approval of the CSRD by the administrative, management and supervisory bodies of Groupe BPCE, Groupe BPCE's transition plan was approved on March 11, 2025 by the Management Board, then by the Supervisory Board, which took note of it.

Thus, the following guidelines were presented. They are part of the transition plan:

- support for all customers in their environmental transition;
- alignment of its financing, investment and insurance portfolios with trajectories compatible with the objectives of the Paris Agreement;
- decarbonization trajectories proposed by European asset management companies to their investor customers;
- extension of the sustainable refinancing strategy in order to have the resources necessary to achieve its objectives;
- accelerated reduction of its own footprint;

Firstly, the proposed decarbonization trajectories (own footprint and financed emissions) and the methodologies used for their development are presented to the Environmental Transition Strategy committee. Chaired by the Chairman of Groupe BPCE's Management Board, this body brings together the members of the Executive Management Committee of BPCE, whose business lines will be responsible for implementing the action plans relating to the proposed trajectories, members of the Executive Committee and Group experts.

Moreover, and in the context of its cooperative model, the Impact Committee supports the work of defining and implementing the Impact strategy by liaising with the managers of Groupe BPCE's institutions. The Impact Committee manages the entire Impact dimension of the strategic plan, including the elements of the Group's transition plan. It makes it possible to focus Groupe BPCE's Impact program on all its dimensions and to share with the executive managers of Groupe BPCE's retail banking activity an overall vision of the projects and deliverables for all business lines. It thus ensures the best chance of success for the operational integration of the program to reduce the greenhouse gases, and the success of the commercial action plans at the level of the institutions, which are part of Groupe BPCE's transition plan.

2.2.3.1.10 DESCRIPTION OF THE PROGRESS MADE BY THE COMPANY IN IMPLEMENTING THE TRANSITION PLAN [E1-1-16 (j)]

OWN FOOTPRINT

Groupe BPCE has set itself the target of reducing the GHG emissions related to its own footprint by 15% over the 2019-2024 period. This involves going from 640 ktCO_2e emitted in 2019 to 544 ktCO_2e emitted in 2024, calculated using the BEGES V5 method. This objective was achieved in 2024.

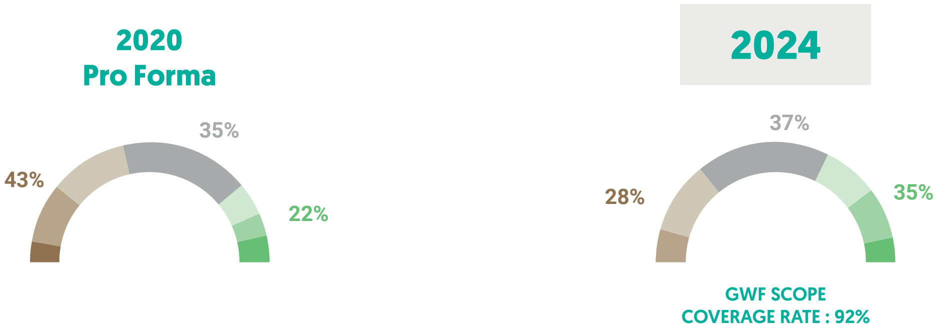
FINANCED EMISSIONS

For more than 20 years, as part of its full-service bank model, the Group has laid the foundations for its transition planning both locally and internationally. As a long-standing player in transition support, the Group places societal ambitions and regional development at the heart of the purpose of its Retail Banking brands.

Groupe BPCE is committed to financing the energy transition and decarbonizing the most emitting sectors.

Over the 2020-2024 period, the active management of Natixis CIB's exposures shows tangible results with a significant change in the breakdown of exposures of the Green Weighting Factor.

CHANGE IN NATIXIS CIB'S COLOR MIX BETWEEN 2020 AND 2024 (BASE 100)



The progress made thanks to the actions undertaken by Natixis CIB is based on the development of dedicated skills and expertise, as well as on continuous operational management in line with its strategic ambition thanks to key resources and tools: GWF, TPA, sustainable finance product offering and transition consulting. All the transition momentum drivers are thus activated and managed: customer mix/sector mix, pace of customer transition, sustainable finance product/service offering, active management of the financing portfolio.

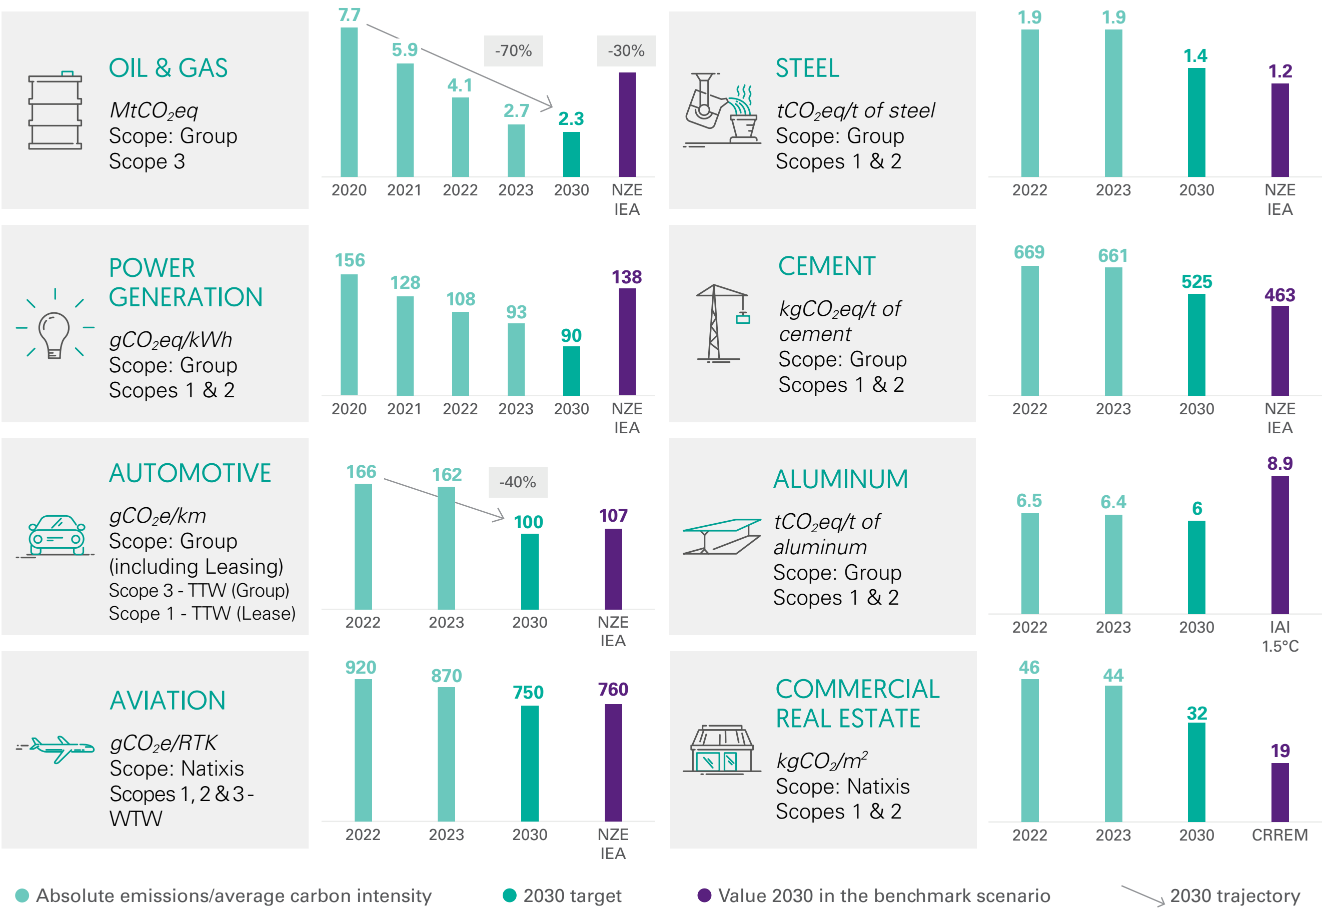
Natixis CIB's action plan is defined and measured using the proprietary Green Weighting Factor (GWF) tool, which makes it possible to implement the following operational levers:

- refinancing of existing customers rated "medium green/dark green";
- financing of customers in transition (and whose GWF rating may improve as a result);
- high selectivity for new "brown" rated financing;
- drastic reduction in financing for customers with very limited transition potential.

With regard to the progress made in the context of sector trajectories, the periodic publication of the decarbonization trajectories of the highest-emitting sectors makes it possible to note the effectiveness of the action plans and the gradual adaptation of its business model. Groupe BPCE manages the decarbonization trajectories of the economic sectors that emit the most greenhouse gases, with targets expressed in terms of emission intensities or absolute values. From one year to the next, the actual CO_2eq emissions calculated in intensity or in absolute emissions make it possible to ensure the adequacy of the trajectories of the portfolios in relation to the targets and to initiate, if necessary, corrective actions. These actions can be of different kinds and include, among other things, an intensification of the dialog with customers in the sectors concerned or strengthening of the range of products and services aimed at supporting our customers' transition.

It should be noted that due to limitations concerning the availability of customer data, changes in methods, regulatory changes that may be divergent internationally, the management of sector trajectories must be interpreted with caution. In order to improve the quality of this management, at the end of 2024 Groupe BPCE launched an action plan to further industrialize the production of sector trajectory management metrics.

Summary of sectoral trajectories and objectives



- *Note: "Value 2030 in the benchmark scenario": for the cement, steel and aluminum sectors, the value of the benchmark scenario includes a Scope 1 trajectory specific to the sector and for Scope 2, an extrapolation based on the trajectory of the electricity generation sector. For the commercial real estate sector, the value of the benchmark scenario takes into account the breakdown of the portfolio by geographical area and type of asset. For oil and gas, the level of 5.4 $MtCO_2e$ corresponds to the application of the -30% GHG rate of the scenario to the Group's 2020 reference base.*

Oil and gas sector

Groupe BPCE reduced its financed carbon emissions by nearly 65% between 2020 and 2023, from 7.7 $MtCO_2eq$ to 2.4 $MtCO_2eq$ on the financing recognized in the balance sheet. Also including off-balance sheet financing, this corresponds to a reduction of 13.7 $MtCO_2eq$ to 6 $MtCO_2eq$, i.*e.* a decrease of nearly 56%.

The sharp reduction in these exposures enable Groupe BPCE to rapidly advance its trajectory in this sector by 2030. While the carbon footprint and these exposures related to fossil fuels m over time depending on market conditions, regular and precise management, favored by the Green Weighting Factor, aims to strengthen these trends and decreases over the long term.

Natixis CIB continued a selective approach in the sector, focusing its commercial efforts and exposures on players with the greatest transition potential, gradually reducing its exposure to oil and favoring positioning in the gas sector, within the limits of the sector policy in force.

Power generation

At December 31, 2023, the carbon intensity of the electricity production financing portfolio amounted to 93 gCO_2eq/kWh, a decrease compared to 2022 (108 gCO_2eq/kWh).

The portfolio's energy mix has little exposure to fossil fuels, coal, oil and gas compared to the global energy mix for electricity production due to strategic choices in terms of financing the energy sector, but also due to the Group's geographical footprint.

The exposure to thermal coal is negligible (around €350 million), and Groupe BPCE is on track to gradually reduce its credit exposure to thermal coal to zero by 2030 for the European Union and the OECD and by 2040 for the rest of the world.

At the same time, on December 31, 2024, Groupe BPCE finances more than €16 billion in exposure to projects and companies whose main activity is in the renewable energy sector and is positioned as a leading global player[1] in terms of financing renewable energies. This closely managed positioning has gradually made it possible to make exposures to projects and companies producing electricity from a low-carbon source, which is predominant in the electricity production sector.

(1) IJGlobal 2024 - #3 RENEWABLES Project Finance MLA - in value. Natixis' Corporate & Investment Banking is a leader in the financing of renewable energy projects internationally. The annual amount arranged for the financing of renewable energy projects has doubled since 2020, and Natixis CIB is now the third largest arranger in the world. In 2024, renewable energies accounted for 91% of Natixis Corporate & Investment Banking's new financing in the power generation sector.

Automotive sector

In 2023, the average carbon intensity of the automotive portfolio was 162 gCO_2eq/km. This concerns the financing of Groupe BPCE's automotive manufacturers and the financing of BPCE Lease's leasing activity.

It should be noted that the 2022 reference value presented in the Group's previous communications, of 167 $kgCO_2eq/km$, changes only marginally to 166 $kgCO_2eq/km$ when including the scope of BPCE Lease's leasing activities (equipment leasing contracts, leases with purchase offer, and long-term leases).

The change between 2022 and 2023 is downward. It is explained exclusively by the improvement in the carbon intensity of the leasing activities based on the evolution of the offer on light vehicles and the impact of regulations on the vehicle fleet.

In fact, as part of the French law on mobility, companies and local authorities with a fleet of large light vehicles are required to integrate an increasing share of low-emission vehicles (CO_2 rate ≤50 g/km) every year when all or part of their fleets are renewed. The consequence of this practice is to direct the choice of fleet managers towards electric or rechargeable hybrid models. In addition, there is a motor tax on vehicles for professional use held by companies, which is increasingly penalizing for internal combustion engines.

For the financed car manufacturers, the carbon intensities of vehicles put on the road between 2022 and 2023 are stable overall.

Steel

In 2023, the scope of the target, initially limited to Natixis CIB, was extended to Groupe BPCE as a whole. The reference value for 2022 is maintained at 1.9 tCO_2eq/t of steel on a pro forma basis due to the concentration of outstandings on customers in this sector within Natixis CIB.

At December 31, 2023, the carbon intensity of Groupe BPCE's steel producer portfolio remained stable compared to 2022 (1.9 tCO_2eq/t steel).

In line with the technological transition levers, the implementation of which is expected only at the end of the decade in the reference scenario.

Cement

In 2023, the scope of the target, initially Natixis CIB, was extended to Groupe BPCE. The reference value for 2022, previously 622 $kgCO_2eq/t$ cement, is adjusted to 669 $kgCO_2eq/t$ cement also taking into account the improvement in the quality of the data.

At December 31, 2023, the carbon intensity of Groupe BPCE's financing portfolio for cement producers was 661 $kgCO_2eq/t$ of cement.

The intensities declined very slightly between 2022 and 2023 in line with the technological transition levers whose implementation is expected only at the end of the decade in the reference scenario.

Aluminum

At December 31, 2023, the carbon intensity of Groupe BPCE's financing portfolio for aluminum smelters was 6.4 tCO_2eq/t aluminum. The average intensity is already lower than the global Net Zero 2030 target of the 1.5°C IAI scenario (9 tCO_2eq/t aluminum), given the geographical location of the portfolio (mainly the Middle East).

Compared to a reference value set in 2022 at 6.5 tCO_2eq/t of aluminum, the intensities declined very slightly between 2022 and 2023 based on the available information.

Commercial real estate

The average carbon intensity of the commercial real estate financing portfolio (real estate professionals) decreased between 2022 and 2023, from 46 gCO_2/m^2/year to 44 gCO_2/m^2/year.

It should be noted that the scope of GHG emissions used for this intensity measurement concerns the use of buildings, *i.e.* mainly their energy consumption. The emissions associated with refrigerants used in buildings are not included (data not available). The measurement used is consistent with the method used to calculate market practices.

Aviation

The average carbon intensity of the aviation financing portfolio decreased from 920 gCO_2eq/RTK in 2022 to 870 gCO_2eq/RTK at December 31, 2023.

The business line supports the sector's decarbonization levers which depend in particular on improving the operational efficiency of its customers (fleet renewal, optimization of the load factor, improvement of air traffic management) and is exploring initial financing projects for sustainable aviation fuel. The positive change in the carbon intensity of the aviation portfolio is mainly due to the growing share of new generation aircraft in the sector's overall financing portfolio.

It should be noted that the carbon metric used covers a scope known as Well to Wake which includes emissions from fuel production, transportation and combustion. In addition, in accordance with market practices and given the absence of scientific consensus on the consideration of an effect, contrails are not included in the emission calculation.

Residential real estate

The reference value of this sector was established for the 2024 fiscal year according to the exposures at December 31, 2023. Due to the dependence on regulatory and governmental actions (uncertainty about the application of renovation policies and construction plans), Groupe BPCE has not set a specific carbon target for 2030. Nevertheless, action plans have been defined and implemented within the institutions.

The average carbon intensity of the home loan portfolio was around 25 $kgCO_2eq/m^2$ at the end of 2023.

Limitations on GHG measurements and associated targets

The data collected, methods and measurements carried out have not been subject to external verification. The data used regarding the customers are derived primarily from data providers or publications of companies funded by Groupe BPCE. Differences may exist in the measurements of greenhouse gases from data providers (for example, in terms of geography and scope) as well as inaccuracies or incompleteness of the activities covered by our customers in their publications. Estimates will evolve as the quality of available data improves.

Furthermore, the objectives targeted by Groupe BPCE are conditioned by the commitments of its customers and their ability to meet them over time. These objectives also depend on current government policies and the development of low-carbon technologies, which are critical for long-term horizons.

These measurements and targets are based on methodologies known to date and which may change in the future.

INSURANCE ACTIVITIES

The actions carried out by BPCE Assurances in 2024 made it possible to achieve a significant share of green assets in inventory, standing at 16%, driven by the **significant weighting (42%) of green assets in 2024 investments**, which is well above its minimum commitment of 15%. These investments support sectors that are critical to environmental transition and limiting climate change, such as renewable energies, building renovation, and sustainable mobility.

Since June 2024, BPCE Assurances' investment portfolio is on track to reach the +2.0°C alignment target. The significant share of green investments allocated in 2023 and 2024 has substantially contributed to the achievement of this objective.

2.2.3.2 DISCLOSURE REQUIREMENT RELATED TO ESRS 2 SBM-3 - MATERIAL IMPACTS, RISKS AND OPPORTUNITIES AND THEIR INTERACTION WITH STRATEGY AND BUSINESS MODEL

Reminder of the material risks and opportunities identified by Groupe BPCE in relation to climate change

RISKS

Sub-theme	Sub-sub-theme	Type of IRO	Activity/Value chain	IRO definition
Climate change mitigation and adaptation	Climate change mitigation and adaptation - financing and investments	Risk	Downstream value chain	Risk of impairment of assets related to investments and financing exposed to physical climate risks (high-risk areas)
		Risk	Downstream value chain	Risk of financial loss related to financing / investments of counterparties exposed to climate transition risks
		Risk	Downstream value chain	Reputational risk related to financing and/or investments in companies with a carbon-intensive activity and/or incompatible with the net-zero alignment trajectories

2.2.3.2.1 RESILIENCE OF THE STRATEGY AND THE BUSINESS MODEL

RESILIENCE ANALYSIS AT GROUPE BPCE LEVEL

With respect to climate risks, Groupe BPCE analyzes the resilience of its business model across its three activities (financing, insurances, assets management) through climate stress tests as part of the self-assessment process of its capital (ICAAP) and liquidity (ILAAP) with regard to the risks it may face. This analysis takes place each year between October and February, on the basis of assumptions defined upstream in the cycle (between June and November). Over the last three years, the analysis has been enriched in terms of coverage of the scope (increase in the number and severity of physical hazards, increase in transition risk factors, taking into account of a reputational component) that will be the subject of continuous improvement over the coming years. From the point of view of profitability and solvency, the assessments carried out as part of the ICAAP 2023 and ICAAP 2024 processes showed low financial impacts. It should be noted that these stress tests do not cover all of the risks identified as part of the double materiality assessment.

Under ICAAP 2025, Groupe BPCE is continuing to improve its system by integrating three factors:

- a physical flood risk based on the ECB scenario proposed in 2022 extended to the whole of France and the Eurozone, applied to commercial and residential real estate, with more or less significant shocks (up to -30%) depending on the area;
- a transition risk based on the NGFS Net Zero 2050 scenario, which assumes a rapid transition to a low-carbon economy, significantly impacting the functioning of the economy (significant slowdown in growth over several years, with differentiated impacts depending on the sector, moderate increase of inflation and unemployment, sharp decline in equity indices, significant increase in sovereign rates) over the coming years;
- the occurrence of a reputational risk on the Group leading to a customer liquidity leak and a disaffection of certain investors was included, modifying the Group's financing structure and its refinancing cost at the margin.

From a liquidity point of view, the Group's resilience on its banking component (financing) for climate risks was assessed on an *ad hoc* basis regarding physical risks under the 2024 ILAAP. Thus, the impact of a major Seine flood on the financial standing of Groupe BPCE's customers and the behavior of investors was assessed. The impacts of this stress scenario were assessed as moderate with regard to Groupe BPCE's ability to cope with it.

The climate risks thus assessed do not call into question the resilience of Groupe BPCE's business model over the time horizon of its strategic plan.

In addition to the contribution of the insurance activities within Groupe BPCE as a whole, a dedicated analysis is also carried out on the impact of climate risks on this scope.

SPECIFIC NATURE OF THE BPCE ASSURANCES SYSTEM

The financial risks arising from the exposure of the investment portfolio are assessed using several approaches. Among the work carried out, in 2023 BPCE Assurances took part in the climate stress tests set up by ACPR and which are based on two long-term trajectories: Network for Greening the Financial System on the one hand, and a short-term scenario combining physical risks and transition risks on the other. In parallel with this exercise, various types of work were carried out:

- analysis of the 40 largest exposures in the portfolio (approximately 10% of the outstandings). The objective was to measure the exposure of the companies concerned to physical risks (drought, flooding, etc.);
- analysis of the resilience of the various sectors represented in the bond portfolio held directly to various climate risks (drought, flooding, etc.), in line with the trajectories defined by the IPCC;
- analysis of the physical risk exposure of dedicated real estate vehicles and directly owned buildings;
- lastly, the measurement of the alignment of the portfolio's temperature with a scenario compatible with the objectives of the Paris Agreement makes it possible to understand the exposure of the asset portfolio to transition risk.

As part of the ORSA (Own Risk and Solvency Assessment), climate stress tests are also carried out to measure the sensitivity of the solvency ratios to the occurrence of major weather events.

2.2.3.3 (E1-2) POLICIES RELATED TO CLIMATE CHANGE MITIGATION AND ADAPTATION

2.2.3.3.1 Policies related to climate change mitigation and adaptation

ESG SECTOR POLICIES

General framework

The ESG sector policies govern Groupe BPCE's activities in sectors deemed sensitive from an environmental, social and governance (ESG) point of view. The definition of these policies is coordinated by the Sustainability Office within Groupe BPCE, taking into account the expectations of civil society, regulatory requirements and ESG best practices. They are regularly updated to reflect the new challenges of the sectors concerned and are validated by Groupe BPCE's Executive Management.

The Risk division is responsible for the operational integration of these policies into Groupe BPCE's processes. At the end of 2024, Groupe BPCE published sector ESG policies for the thermal coal industry as well as for the oil and gas industry, available on Groupe BPCE's website. Work is underway to strengthen the framework of sector ESG policies applicable to Groupe BPCE.

Scope of application of the ESG sector policies

The ESG sector policies apply to Groupe BPCE's activities worldwide. They concern the banking and financial activities of the Banque Populaire and Caisse d'Epargne networks, BPCE SA and Natixis SA, as well as their direct subsidiaries over which they exercise exclusive control.

The policies apply to credit activities, capital markets activities (in debt and capital), guarantees and advisory services (including merger & acquisition activities), as well as to investments in respect of liquidity reserves.

However, they do not apply to the management of portfolio assets on behalf of third parties and collective management. For these activities, BPCE Assurances and certain asset management companies that are subsidiaries of Natixis Investment Managers have their own ESG sector policies, which are published on their respective websites.

ESG sector policy - Thermal coal industry

In 2021, Groupe BPCE committed to reducing its financial exposure to thermal coal to zero by 2030 for the European Union and OECD countries, and by 2040 for the rest of the world. This commitment supports the objectives of reducing the carbon footprint financed for the electricity production sector.

The ESG sector policy applicable to the thermal coal industry covers the extraction, storage, transport, trading and processing activities of thermal coal, as well as the production and distribution of electricity produced from thermal coal.

This policy includes exclusion and assessment criteria for companies and projects in this sector. For example, Groupe BPCE does not finance a company that develops new coal capacities, or for which 25% or more of its revenues are linked to power generation from coal. Exceptions may be granted only for transactions aimed at supporting the low-carbon transition.

Similarly, Groupe BPCE does not finance coal-related projects, such as coal-fired power plants or thermal coal mines.

The policy also includes assessment criteria to assess the environmental and social performance of companies, covering in particular pollution issues, working conditions and the adoption of ESG best practices.

For more details, please consult the public document available at the following address: https://www.groupebpce.com/en/csr/ratings-international-standards/.

ESG sector policy - Oil and gas industry

Groupe BPCE has committed to reducing its financed carbon emissions related to the end-use of oil and gas extraction and production between 2020 and 2030, in accordance with the International Energy Agency's Net Zero Emissions by 2050 scenario.

The ESG sector policy applicable to the oil and gas industry covers the following activities in the industry value chain: exploration and production, transportation (pipelines), processing (refineries, liquefaction terminals, etc.), storage and other related activities. The policy covers both conventional and unconventional oil and gas resources.

This policy also includes exclusion criteria for companies and projects in this sector. For example, Groupe BPCE does not participate in any non-earmarked financing (*i.e.* when the funds are used for general corporate purposes) for a company whose business is 25% or more exploration - production of shale oil and gas, oil from tar sands or extra-heavy oil.

In addition, Groupe BPCE does not finance oil and gas facilities whose environmental and social risks and impacts are deemed too high, such as new shale oil and gas fields, projects dedicated solely to the commissioning of a new oil field, as well as projects located in the Arctic region.

For companies and projects, the policy details assessment criteria to assess their environmental and social performance, covering in particular pollution issues, working conditions and the adoption of ESG best practices.

For more details, please consult the public document available at the following address: https://www.groupebpce.com/en/csr/ratings-international-standards/.

2.2.3.4 (E1-3) ACTIONS AND RESOURCES IN RELATION TO CLIMATE CHANGE POLICIES

2.2.3.4.1 Actions and resources in relation to climate change policies

Groupe BPCE has implemented actions to: i) reduce the Group's negative impacts on the climate, both on its own operations and on financing, investment and insurance activities, and ii) strengthen the climate risk management system.

MANAGEMENT OF NEGATIVE IMPACTS

Groupe BPCE has defined the following actions in response to the management of the negative impacts identified on climate change:

Business lines action plans

Financing activities (financed emissions)

Actions on the financed emissions are implemented by business sector:

OIL AND GAS

To achieve the 2030 reduction target, Natixis CIB has chosen to support energy sector customers who are transitioning or having a clearly defined transition pathway, relying in particular on its Green Weighting Factor assessment tool. In this context, and during the transition period, gas is still considered an essential vector for the energy transition. Thus, for operations related to gas assets, the Group adopts a case-by-case approach, aimed at ensuring that the projects financed comply with the highest standards in the industry, particularly in terms of the environment. The relevance of these projects to local energy needs and sovereignty issues is also taken into account.

► Progress to date:

The commercial actions begun in 2020 continue across the entire portfolio. Relationships with counterparties not engaged in an energy transition approach are not developed.

The Group supports the development of technological initiatives replacing fossil fuels to improve production process efficiency, such as methane capture to reduce emission intensities; and storage technologies, particularly for hydrogen. Since 2020, the outstanding financing of the oil and gas portfolio has been gradually reduced, in particular on the exposures towards the most emissive counterparties. This reduction in outstandings primarily concerns independent crude oil producers. Independent customers who demonstrate a concrete energy transition strategy (part of production more focused on gas than on oil, carbon capture solutions, etc.) are supported by the Group. This approach is also being developed with national companies and large international companies (Majors) by analyzing the projects in which they invest, in order to understand their current and future impacts on the environment, biodiversity and local populations.

POWER GENERATION

The determination of the target set for this sector is based on the pursuit of a strategy structured around the following areas:

- growth, diversification of corporate financing for players with the most low-carbon energy mix and/or whose trajectory and transition plan are engaging, credible and convincing;
- the concentration of structured financing on renewable energies, taking into account a growth rate in the sector in line with that forecast by the supra-national scenarios (RePower EU, IEA, IRA, etc.).

► Progress to date:

In 2023, the Group ranked first in France and fifth worldwide for the arrangement and financing of renewable energy projects (*Source: Infralogic*). The number of corporate customers in the sector (developers, independent producers, utilities in transition) is growing, particularly in new regions.

This ambition is part of a value chain approach in the electricity production sector, its storage and the flexibility of distribution networks. It takes into account the investment needs in the critical metals sector needed for renewable energies and storage, carbon capture technologies (see CCUS), the strengthening of electricity grids and business models related to flexibility (interconnections, load shedding, storage, etc.), and also downstream on the electrification of uses (transport, industrial).

AUTOMOTIVE

For the scope selected, *i.e.* the entire Group for the financing of automotive manufacturers and BPCE Lease for leasing activities, Groupe BPCE has implemented the following action plans to achieve its target for 2030:

- Automobile manufacturers

The Group aims to maintain, or even strengthen, support for customers in the implementation of their transition plan and the electrification of their range of vehicles. The Group could, if necessary, reduce its exposure to customers with insufficient climate ambitions with regard to the provisions of the Paris Agreement, and finance customers that are new pure players or strongly committed to the electrification and decarbonization of their range.

- Leasing activity

BPCE Lease, in partnership with the European Investment Bank, offers professional, SME and mid-sized corporate customers of the Banques Populaires, the Caisses d'Epargne, Crédit Coopératif and Banque Palatine to support them in the financing of low-carbon mobility projects. This financing relates to new furniture leasing contracts and long-term leases, granted at advantageous financial terms. They promote the acquisition of light vehicles for professional use with low emissions (≤50 gCO_2/km) as well as the installation of charging stations.

This strategy for the automotive sector is part of a value chain approach, taking into account the commitment of manufacturers in terms of innovation, in particular to electrify their vehicles, as well as battery production capacities.

STEEL

For this sector, the commercial approach is based on reinforced sectoral and technological monitoring, as well as on a strategic dialog with targeted customers on the decarbonization challenges of the sector. The strategic orientation of this sector is resolutely focused on the financing of low-carbon steel production projects (in particular the use of hydrogen in blast furnaces, electric arc furnaces, iron reduction processes), aimed at transforming and decarbonizing the sector's value chain.

In order to reach the level of emission intensity set for 2030, the action plan could result in a reduction in the exposure to the highest emitting customers (in the absence of credible transition plans); by earmarked or dedicated financing for Green steel projects; and through strengthened collaboration with the companies whose transition plans are the most aligned with Groupe BPCE's 2030 target.

CEMENT

Groupe BPCE has little exposure to the cement sector. However, the Group places decarbonization issues, which are eminently material for this industry, at the heart of the strategic, regular and expert dialog that it conducts with its cement producers concerning their decarbonization trajectory and related technologies. However, to date it has been difficult to mobilize financial levers due to, on the one hand, the limited number of low-carbon cement production projects and, on the other hand, the often direct financing of these projects by the customers' capital, limiting the bank's financing possibilities and the traceability of the investments made.

ALUMINUM

The action plan for this sector is to selectively develop the aluminum production activity by focusing mainly on low-carbon projects and on companies with a clear and credible decarbonization trajectory. As a result, any new customer or project is subject to strict emission intensity requirements. The business line is continuing its discussions with customers in the aluminum sector to help them identify their decarbonization levers, in particular to study the possibility of using low-carbon energy through Power Purchase Agreements (PPA), and the financing of new processing methods under development.

COMMERCIAL REAL ESTATE

Natixis CIB's decarbonization strategy for commercial real estate is based on the following areas:

- support its customers in their transition plan at corporate level;
- manage the mix of its portfolio by type of asset and geography with regard to real estate portfolio decarbonization expectations, in particular governed by local regulations, and the expected changes in the carbon intensity of electricity mixes and the electrification of uses;
- increase the share of new/recent construction and transformative energy renovations in its portfolio.

► Progress to date:

The improvement in the level of data quality undertaken with the collection of EPDs (among other carbon and environmental performance data) on Natixis CIB's outstandings made it possible to obtain a more accurate assessment of the carbon intensities of buildings. This collection exercise is now fully integrated into the operational and decision-making tools and processes for granting credit.

AVIATION

The decarbonization objectives of the aviation financing activity are based on a commercial and capital allocation strategy based on two main areas:

- support the decarbonization levers of customers by taking into account the improvement of their operational efficiency (fleet renewal, optimization of the load factor, improvement of air traffic management);
- focus the financing mix on:
  - actors with robust decarbonization plans aligned with the Group's ambitions (these plans are more substantiated for airlines than for aircraft leasing companies),
  - the most efficient aircraft models from a carbon intensity point of view for asset financing.

It should be noted that the assumptions used in the Group's projections on the share of Sustainable Aviation Fuel (5% SAF in the fuel mix in 2030) are more conservative than those of the IEA and MPP scenarios, considered too ambitious. Nevertheless, Natixis CIB is exploring its first SAF financing projects and is co-leading an initiative on the feasibility of producing e-SAF in Europe.

RESIDENTIAL REAL ESTATE

Groupe BPCE is implementing an action plan to reduce the greenhouse gas emissions related to its financing by:

- advising and raising awareness among its customers through the expertise of its advisors and use of the "Sustainable Advisory and Solutions" module available in the mobile banking application. This module enables customers to measure their carbon footprint and benefit from advice on how to optimize their energy consumption. Since its launch in 2023, it has recorded 5.2 million unique visitors;
- supporting energy renovation projects for individual homes and condominiums: energy assessments, search for subsidies, guaranteeing the successful completion of work and its coordination, with tailored pathways and financing (eco PTZ loan, pre-financing of subsidies, dedicated collective loans, partnerships with Cozynergy, with Papernest, etc.).

By way of illustration, Groupe BPCE is developing a partnership with the Leroy Merlin Group in order to offer its customers a turnkey solution with a complete and integrated solution. Customers will be able to benefit from a comprehensive range of financial solutions, including the interest-free eco-loan (*Eco-Prêt à Taux Zéro*). This agreement is part of a two-pronged ambition to address energy retrofitting needs and help French households manage their budget using simple solutions tailored to their needs.

The action plan implemented by all of the Group's institutions will increase the amount of financing for energy renovation work to €1 billion per year by 2026.

AGRICULTURE

Groupe BPCE has defined an action plan reconciling climate change issues and the sustainability of agriculture and viticulture by integrating them, along with other players in the value chain, into its approach (agro-supply, processing, distribution...) into its approach.

This action plan encourages initiatives for food security in the French territories while preserving farmers' and winegrowers' incomes. Three levers are mobilized:

- adapt financing and products to new challenges;
- activate regional and sectoral synergies;
- train bank advisors to support farmers' projects in a sustainable manner.

CHANGES IN METRICS ON THE SECTOR TRAJECTORIES OF FINANCING ACTIVITIES

In accordance with the disclosure requirements relating to actions and resources (E1-3), the table below shows the changes in emissions. Considering that Groupe BPCE measures its alignment for its financing activities through sector trajectories and in order to remain consistent with this approach (even if the calculation of the portfolio's carbon footprint is carried out), the calculation of the expected reduction of the carbon footprint and that of the reduction achieved are replaced by the calculation of the reduction achieved using the NZBA metric. The theoretical calculation scope is the one on which the targets are defined. The methodology elements (MDR-M) are published in Section 2.2.4.1 (targets).

Portfolio decarbonization metrics

Entity	Unit	Sectors	12/31/2022	12/31/2023
Group	gCO_2eq/kWh	Power generation	108	93
Group	$MtCO_2eq$	Oil and gas extraction and production	4.1	2.4
Group	gCO_2eq/km	Automotive*	166	162
Group	$kgCO_2/t$ cement	Cement production	669	661
Group	tCO_2/t steel	Steel production	1.9	1.9
Group	tCO_2/t aluminum	Aluminum production	6.5	6.4
Natixis CIB	gCO_2eq/RTK	Air transport	920	870
Natixis CIB	$kgCO_2eq/m^2/year$	Commercial real estate	46	44

* Consolidated figure: Car manufacturer + Lease

INSURANCE ACTIVITIES

To achieve its 2030 target, BPCE Assurances has adopted a selective investment policy by allocating, every year, at least 15% of its investment flows to green assets (green bonds, SFDR Article 9 funds, investments aligned with the European taxonomy, etc.). By 2024 at the latest, they will represent 10% of the outstandings in the portfolio.

These investments aim to align the asset portfolio with a temperature trajectory compatible with the objectives of the Paris Agreement. A first waypoint of +2.0°C, set for the end of 2024, was reached. As a result, the proportion of assets that make a significant contribution to global warming and are liable to decline in value in the future is constantly decreasing in BPCE Assurances' portfolio. This effort will be continued in the coming years with the aim of moving towards an alignment with +1.5°C by 2030.

ASSET MANAGEMENT ACTIVITIES

Faced with the challenges of the climate transition, its risks and opportunities for investors, most of Natixis IM's European asset management companies include climate change in their commitment process. In this respect, the commitment themes may include:

- encouraging transparency through the publication of the company's environmental performance and its exposure to climate risks. Implementing a climate strategy and greenhouse gas emission reduction targets in line with the objectives of the Paris Agreement;
- improving climate risk management and encouraging commitment to the energy transition.

In addition, Natixis IM's European asset management companies specializing in the management of unlisted assets are actively engaging with their portfolio companies.

Own activities

In order to limit the negative impact on the climate due to the GHG emissions of the Group's own operations, it acts in the following areas:

RESPONSIBLE PURCHASING

In 2024, BPCE Achats & Services provided training on Responsible Purchasing, based on the ISO 20400 standard, for buyers joining the function.

In order to facilitate the inclusion of CSR criteria in the specifications, the AFNOR's CSR risk mapping with CSR criteria adapted to the purchasing categories was also made available to the Purchasing function. Moreover, an action plan has been developed to increase the use of inclusive suppliers. In addition, BPCE Achats & Services has the RFAR label and is continuing to implement a simplified labeling methodology for the Group's companies. For 2025, BPCE Achats & Services has set itself the target of continuing the Group RFAR certification project with increased support for candidate companies.

Lastly, the Group is working towards acquiring CSR scorings, complementing the CSR assessment questionnaires of its suppliers. This will be a major step forward in terms of supplier data reporting and standardization.

MOBILITY

In the last quarter of 2024, a working group dedicated to the electrification of the car fleet was initiated. This involves working on three specific projects: the HR strategy and employee change support, the vehicle catalog, and the charging business model. Contributors and sponsors of the institutions are involved in each of these three projects. The main objective is to carry out a diagnostic of uses, in order to adapt the vehicles as accurately as possible, and their charging method. The results of this study may enable every Group company to adapt its HR policy and its vehicle fleet.

RESPONSIBLE DIGITAL

Several actions are underway to implement a more responsible digital ecosystem by relying on more efficient application development techniques, extending the lifespan of equipment, improving the energy efficiency of data centers and raising the awareness of all Group employees about eco-responsible actions. The referencing of the carbon footprint of equipment has also been implemented.

In 2023, 94% of the equipment had a carbon footprint referenced in the equipment inventory database. By controlling the growth of IT assets (removal of servers, transfer to cloud solutions…), Groupe BPCE generates carbon savings estimated at 2,235 tCO_2eq per year.

RESIDENTIAL MORTAGES

The reduction of the carbon footprint of the premises is achieved through energy renovation work, the generalization of home automation in offices and branches as well as the reduction of occupied space. As specified above, a major program to optimize surface areas was completed in 2023. This program has had a major effect in terms of reducing greenhouse gas emissions and energy consumption: the estimated reduction of the carbon footprint is around 11,000 metric tons of CO_2eq per year and the reduction in energy consumption is around 36%.

Groupe BPCE's energy supply strategy is at the heart of the Responsible Company Program. It aims to ensure a stable supply of energy, predictability of prices and a greening of supply by taking into account a growing share of renewable energies within an essentially decarbonized supply mix, specific to France.

Through its implementation, the current electricity supply mix comprises 14% renewable energy. The ambition is to gradually increase the share of renewable electricity to a total of 56% of the Group's electricity supply by 2030.

E1-3 Reduction of GHG emissions as a result of climate change mitigation actions

Actions and resources in relation to climate change policies	2024
Achieved reduction of Scope 1 and 2 tCO_2 emissions	(2,318)
Expected reduction of Scope 1 and 2 tCO_2 emissions	(1,365)
Achieved reduction of absolute Scope 3 tCO_2 emissions (categories 1 to 14 as defined by the GHG Protocol)	+7,042
Expected reduction of Scope 3 tCO_2 emissions (categories 1 to 14 as defined by the GHG Protocol)	(9,599)

MDR-M E1-3

Definition:

Calculation of GHG emissions generated by Groupe BPCE's own activities ("office life"). As part of the production of indicators related to the "own footprint" universe, Groupe BPCE includes the following scopes:

Scope 1: direct company emissions;

Scope 2: indirect emissions related to electricity production;

Scope 3: categories 1 to 14, in accordance with the GHG Protocol classification. It should be noted that category 15 of Scope 3 is not included in the scope of the own footprint, as it is treated separately in the "financed emissions" universe.

Calculation method:

The emissions are calculated for each of the above scopes and each of the items that make up these scopes according to the breakdown defined by the GHG protocol.

The emission factors used for the calculations are reviewed annually. They are mainly taken from the Footprint database administered by ADEME, a reference database in France, cited by Article L. 229-25 of the French Environment code (BEGES decree). This database is managed by a governance committee bringing together various public and private players (ministries, technical bodies, associations, MEDEF, etc.). Groupe BPCE has chosen to use emission factors calculated specifically for certain indicators, in particular the four emission factors used for the "Intellectual IT services", "Consulting", "Strategy consulting" and "Software & digital services" purchasing categories. These four specific emission factors were calculated on the basis of the carbon footprints of significant players in these sectors of activity, compared to their turnover and over several successive years.

The indicators collected from entities in the consolidated scope for the calculation of the Group's carbon footprint are 54% physical indicators and 46% monetary indicators, in metric tons of CO_2eq.

To reduce the uncertainties related to the collection of indicators, automated information circuits were deployed in 2024. The program to automate the collection of indicators will continue in the coming months.

Checks on any variation of +/-15% of the indicators between year N and year N-1 are systematic in the tool for collecting and calculating GHG emissions. This blocking control requires that contributors produce proof of these changes.

In 2024, Groupe BPCE improved the accuracy and granularity of the measurement of GHG emissions related to its purchases by deploying a new methodology. This new methodology is based on a segmentation of purchases into 16 categories, compared to only two previously, thus allowing the application of emission factors better suited to each of them. In addition, work has been undertaken with certain suppliers to improve the reliability of the assessment of the GHG emissions associated with the goods and services they provide. This work will eventually enable to replace monetary data with physical data, guaranteeing a more rigorous measurement, in line with best practices.

The application of the new methodology results in a significant increase in emissions for this item. It makes it possible to highlight the categories with the highest emissions, identify relevant reduction levers, and monitor their implementation in close consultation with suppliers.

In order to justify and explain the impact of this change, two calculations were carried out for Groupe BPCE's own footprint in 2024. An initial calculation was carried out using the old methodology in order to monitor the achievement of the objectives set for the 2019-2024 period. A second calculation is carried out using the new methodology, in order to follow the 2023-2026 reduction trajectory.

Scope covered:

Every year, the scope for calculating Groupe BPCE's consolidated own footprint is extended to new entities, particularly international entities. In 2024, the measurement was carried out on a scope of 60 entities whose employees on permanent contracts represented 88% of the Group's permanent staff (French CDI contracts). For each scope extension to a new entity, the emissions for the reference year (2019) and the emissions for subsequent years, up to the year of integration of the new entity, are recalculated. A "pro forma" is also calculated when indicators are corrected by the entities.

Operational implementation of action plans

In order to support its own transformation and the transition pathways of all its customers in accordance with the best available standards, Groupe BPCE has launched an internal transformation plan called "Impact Inside": an internal transformation for all Group companies at all levels.

Groupe BPCE is deploying a new pragmatic, shared and managed approach,allowing it to pursue its banking, insurance, and investment activities for the benefit of all its clients, bringing economic, societal, and environmental performance to the heart of local and regional France and in the parts of the world where the Group does business.

This "Vision 2030 focused on Impact" has been co-constructed with all Groupe BPCE companies and all its business lines. It takes the form of the Impact 2026 Program, which consists of concrete commitments in terms of offerings, financing policies, reduction of its own footprint, consideration of ESG issues in its risk management and financial processes but also within the framework of its renewed responsible employer policy. The Impact program allows each business line to fully integrate ESG issues.

Groupe BPCE's Sustainability Office is responsible for the Impact VISION 2030 on the E, S and G dimensions. It develops and deploys this expertise, and works to share and disseminate the best practices identified in all Group companies, with a view to continuous improvement. Lastly, it ensures overall coordination and supports each sector to ensure "Impact Inside" operations, while setting up the necessary synergies.

Thus, all of BPCE's business lines and all of its companies are implementing an Impact approach according to their business models and their scope in order to support the Group's transformation towards a more sustainable model that guarantees its cooperative, financial and non-financial performance.

MANAGING IMPACT

To implement its Impact VISION 2030, Groupe BPCE has set up a dedicated management program with the aim of increasing the positive impact of its social and environmental footprint. This management should enable:

- to extend and manage its sector decarbonization trajectories, and therefore its transition plan, to all activities and sectors with data expressing a measurement of greenhouse gas emissions;
- to support its customers by integrating their non-financial performance and the ESG issues they face in its analyses.

The Group's priority is to decarbonize the economy by supporting its customers, regardless of their size and business sector, and providing the necessary expertise to fully integrate ESG issues into the analysis of their business model.

By way of illustration, three areas of work have been prioritized for Retail Banking's corporate customers:

- i) make the link between credit and greenhouse gas emissions by mobilizing dedicated tools, methods and practices;
- ii) improve its knowledge of customers, in order to verify their integration of ESG issues, in particular climate issues, into their business model;
- iii) engage in dialogue with the latter to support them in their environmental transition.

These three areas provide a front to back vision including the risk and engagement teams. This harmonized and synchronized approach enables to integrate all ESG dimensions, as well as issues related to climate change, in the customer's annual review during the credit granting process, while securing the qualification of the transactions related to the environmental transition.

2.2.3.4.2 Climate risk management

ESG risk management framework deployment program

This program is detailed in Section 1.2.5.2 of this sustainability report.

In summary, the ESG Risk department is coordinating the gradual strengthening of the ESG risk management system at Groupe BPCE level through a dedicated action plan, in line with the Impact Inside program and the climate and environmental commitments of Groupe BPCE as part of the VISION 2030 strategic project. The execution of this action plan is monitored by the ESG Risk Committee and the Risk Committee of the Groupe BPCE Supervisory Board.

Financing activities

Credit risk

ESG risks are taken into account in the context of credit decisions from two complementary angles, according to the issues specific to each transaction:

- the assessment of the ESG risks to which the counterparty or project is exposed and their impact on the credit risk profile of the counterparty or project;
- the assessment of the reputational risk related to the ESG issues associated with the counterparty or project's activities, in particular with regard to alignment with the voluntary commitments made by Groupe BPCE and its Impact strategy.

CREDIT POLICIES

Groupe BPCE's credit policies include documentation of sectoral ESG issues and points of attention to guide the analysis of financing applications on these aspects when they are relevant for the sector. These elements are compiled from the ESG sector knowledge base (see above) and reviewed and enhanced in coordination with Groupe BPCE entities and institutions as part of the regular updating of credit policies.

When relevant, Groupe BPCE's credit policies refer to Groupe BPCE's voluntary commitments (in particular, ESG policies in the coal and oil/gas sectors), requiring the exclusion criteria set in the context of credit decisions to be taken into account.

At Natixis CIB, restrictive criteria relating to ESG issues have been incorporated into certain sectoral credit policies relating to sectors that are particularly sensitive to these issues in the context of Natixis CIB's activities. Natixis CIB's credit sector policies also reflect the ESG policies specific to this scope, which also covers sensitive sectors from the point of view of social and governance issues such as defense and tobacco.

ESG sector policies are described in detail in Section 2.2.3.3.1 of this chapter.

ESG DIALOG WITH CORPORATE CUSTOMERS OF THE NETWORKS

Since 2023, Groupe BPCE has included the ESG dimension in its strategic dialog with the Corporate customers of its Retail Banking networks. An "ESG dialog" tool was built internally and rolled out to sales teams to address the main challenges and commitments of Corporate customers on environmental, social and governance issues. This tool enhances customer knowledge from the perspective of ESG issues and risks and identifies additional elements to the financial analysis that can be taken into account in assessing the credit file.

An overhaul of the "ESG dialog" tool was launched during 2024 to enrich the underlying questionnaire, provide additional sectoral information on the most sensitive sectors, and clarify the implications regarding the counterparty risk profile in the context of credit analyses. This work is due to be rolled out in Retail Banking networks in 2025.

ESG RISK RATING OF COUNTERPARTIES/TRANSACTIONS

As part of Natixis CIB's credit granting process, Corporate counterparties are systematically assigned a Green Weighting Factor score (see above) (Green Weighting Factor - General Purpose), and at the transaction level in the case of dedicated financing (Green Weighting Factor - Dedicated Purpose), and are subject to a control by the teams in charge of credit risk. This score is included in the loan origination file and is used to inform discussions regarding the transition risk associated with the counterparty or project.

Several subsidiaries of the FSE division (SOCFIM, BPCE Lease – Crédit Bail Immobilier) and CEGC also use the dedicated Green Weighting Factor score to finance real estate transactions as part of their lending process. BPCE Factor, BPCE Lease, and CEGC also include the counterparties' non-financial ratings in the credit file when available.

In addition, work has been undertaken to develop an internal ESG risk rating methodology for SME/ISEs and large Corporates, incorporating the specificities of each customer. This methodology, which is independent of the credit rating, will make it possible to systematically and consistently assess the level of ESG risk associated with a counterparty. The roll-out of this rating is planned from 2025.

EQUATOR PRINCIPLES

As part of the Equator Principles, Natixis CIB applies a market methodology that aims to assess the environmental and social risks of projects financed and the management of these risks by customers, regardless of their business sector. Since October 2020, Natixis CIB has applied the amended version of the Principles (EP Amendment IV), which includes more exhaustive criteria regarding respect for human rights (including the rights of indigenous communities) and requires the analysis of physical and transition climate risks.

The borrower is therefore required to: assess the physical risks associated with climate change for most projects, carry out an assessment of the climate transition risks and an analysis of less greenhouse gas intensive alternatives for projects with CO_2 equivalent emissions of at least 100,000 tons per year in total. Depending on the risks identified and the nature of the associated impacts, mitigation measures are requested of the customer. They are covered by specific clauses in the financial documentation ("covenants").

ESG CONTROVERSY ANALYSIS

As part of the due diligence carried out when entering into a relationship with its Large Corporate customers and in monitoring its portfolio clients, Natixis CIB takes into account the potential controversies that its clients may encounter, in particular concerning ESG issues. In the event of significant risks, Groupe BPCE analyzes and manages the associated risks. In certain cases, Groupe BPCE may decide of its own accord not to enter into a relationship or not to renew its commitments with the customer.

Groupe BPCE has begun work to extend this approach to all Groupe BPCE entities in a manner adapted to their operating context and their customer portfolio.

Financial risks

INVESTMENT RISKS RELATED TO THE LIQUIDITY RESERVE

Groupe BPCE incorporates ESG criteria into the management of the liquidity reserve in order to manage both the ESG risks associated with investments and the associated reputational risk.

These ESG criteria are defined according to two axes: a target is set on the proportion of "sustainable" securities (Green, Social or Sustainable) and an exclusion on issuers of securities with a downgraded non-financial rating.

In addition, the criteria defined in the ESG policies also apply to securities held in the liquidity reserve.

RISKS RELATED TO PROPRIETARY INVESTMENTS

Groupe BPCE's proprietary investments mainly concern the private equity and real estate (non-operating) investment portfolios. In 2024, Groupe BPCE used two ESG questionnaires to systematically collect information related to ESG characteristics in the creation of new investment files. The questionnaire aims to assess the ESG performance of asset management companies regarding delegated management investments, mainly in relation to the associated reputational risk. For properties managed on its own behalf, the questionnaire aims to collect elements of physical risk and transition risk associated with the invested asset.

This approach aims, at this stage, to promote the sector's acculturation to ESG issues and possibly provide information for discussion as part of the investment decision. It is planned to continue this work and enhance the system in the future.

Operational risks

Litigation risks are dealt with in Section GOV 5 - 1.4.4.2.

System specific to the insurance and asset management activities

Insurance activities

Due to the nature of its activities and its management horizons, BPCE Assurances naturally attaches importance to the integration of sustainability risks, particularly climate risks, in its risk management system.

In line with the regulations in force, BPCE Assurances incorporates climate risks at each stage of the risk management process, from their identification to their assessment and then their mitigation.

Climate risks are integrated into a risk mapping specific to insurance, distinguishing between physical and transition risks, on the one hand, and between short-, medium- and long-term risk horizons, on the other. The quantification of risks is an essential component of the approach followed by BPCE Assurances, which is gradually incorporating the concept of double materiality.

LIFE INSURANCE BUSINESS

Risk identification and assessment

Various types of work were carried out to assess the financial risks induced by the exposure of the investment portfolio:

- analysis of the 40 largest exposures in the portfolio (approximately 10% of the outstandings). The objective was to measure the exposure of the companies concerned to physical risks (drought, flooding, etc.);
- analysis of the resilience of the various sectors represented in the bond portfolio held directly to various climate risks (drought, flooding, etc.), in line with the trajectories defined by the IPCC;
- analysis of the physical risk exposure of dedicated real estate vehicles and directly owned buildings.

Lastly, the measurement of the alignment of the portfolio's temperature with a scenario compatible with the objectives of the Paris Agreement makes it possible to understand the exposure of the asset portfolio to transition risk.

Risk mitigation

For several years now, BPCE Assurances has defined objectives and implemented measures to limit its exposure to climate risks and its impact on climate change.

In terms of investments, this is reflected in the combination of several elements:

- implementation of sector policies: among the sector policies in force, several are directly related to the management of climate risks and concern companies related to fossil fuels;
- investments in view of the objectives of the Paris Agreement: in order to limit both its impact on the climate and its exposure to transition risk, BPCE Assurances has set itself ambitious objectives in terms of ESG criteria for its investments;
- any company rated "negative" in terms of sustainability, according to Mirova's ESG analysis, is to be excluded from purchasing. BPCE Assurances has also developed an approach to categorize issuers according to ESG criteria and climate target criteria, which will replace the approach of issuers rated "negative" according to Mirova from January 1, 2025.

NON-LIFE INSURANCE

Non-life insurance is particularly exposed to climate risks through the significant and regular increase in claims related to natural hazards.

With regard to non-life insurance products, climate risk management is an integral part of the underwriting, provisioning and reinsurance policies of the guarantees offered to customers.

The property & casualty insurance portfolio for individuals customers and professionals, through its guarantees for home, car and professional multi-risk, carries the risk of claims related to weather events.

Analysis of the contract portfolio is carried out on a regular basis to identify and measure risks, in particular those related to climate events, to qualify their geographical distribution and to adapt the underwriting policy.

To reduce the impact of climate-related claims on the balance sheet, BPCE Assurances transfers a portion of its risks, including climate-related risks, to global reinsurers through various reinsurance treaties.

Work is underway on the scope of banking institutions, property and casualty insurance and loan guarantees (CEGC) to integrate prospective climate change scenarios into the risk modeling.

For several years, BPCE Assurances has identified the challenges and action levers to improve the positive impact of its activities on the climate and the environment. This is reflected in its insurance offers, in the implementation of the management processes for automotive and home claims and in terms of risk prevention for policyholders.

To limit the consequences of climate events, work has been initiated to encourage policyholders to implement adaptation and prevention measures. This is reflected by:

- integration of prevention into business mail, the institutional website and the social media strategy;
- text messages in advance of climate events to alert policyholders, enable them to take shelter and protect their property.

When filing claims, BPCE Assurances accelerates customer handling by strengthening the teams dedicated to claims reporting and management and quickly mobilizes the networks of experts.

Asset Management

In the current context of growing concern about climate issues, all[1] Natixis IM's European asset management companies have set up a system to identify, assess and monitor risks related to climate change. However, due to the nature of its multi-boutique model, each asset management company within Natixis IM has a different level of maturity in terms of taking these risks into account and applies a system with different methods and measures, adapted to its specificities, expertise and investment strategies. At this stage, the tools and methodologies for integrating climate risks are constantly evolving.

All of Natixis IM's European companies investing in listed assets take into account physical and transition risks to assess climate risks. This consideration is strengthened through the use of one or more reference climate scenarios[2]. Some[3] asset management companies have developed proprietary tools in this area or use climate value at risk[4].

2.2.4 Metrics and targets

2.2.4.1 (E1-4) TARGETS RELATED TO CLIMATE CHANGE MITIGATION AND ADAPTATION

OWN FOOTPRINT

As part of the previous strategic plan, an ambitious target to be achieved by December 31, 2024 was set. Between 2019 and 2024, this consisted in reducing 15% of the Group's GHG emissions by prioritizing four priority action levers:

- Real estate: energy renovation work, generalization of home automation in offices and branches, reduction of occupied space;
- Purchasing: integration of CSR criteria in all purchasing stages, assessment of the CSR performance of suppliers during consultations;
- Mobility: reduction in employee travel, particularly remote working, transformation of the vehicle fleet;
- Digital: development of more energy-efficient applications, extension of equipment life time, improvement of the energy efficiency of data centers, training in eco-responsible practices.

The strategic KPI validated and backed by the VISION 2030 strategic project concerns the reduction of 6% of the Group's own footprint by 2026 (on a 2023 basis). This KPI is part of a target of -20% by 2030 (on a 2023 basis).

MDR-T Own footprint

Carbon emissions reduction trajectory

Groupe BPCE has set itself the target of reducing the GHG emissions related to its own footprint by 15% over the 2019-2024 period. The goal is to reduce the emissions from 640 ktCO_2eq in 2019 to 544 ktCO_2eq in 2024. The calculation of GHG emissions achieved and target is carried out according to the BEGES V5 method. To continue this reduction effort after 2024, this target was set at 6% between 2023 and 2026. It was calculated taking into account the annual reduction step for the previous year. The scope of the entities included in the Group's own footprint reduction target is gradually being extended to include subsidiaries and international entities.

The GHG emission reduction trajectory between the base year 2023 and 2030 is as follows:

- ***-6% between 2023 and 2026.***

The Group proposes to smooth the reduction target annually to build annual targets:

  - Year 2024: -2%
  - Year 2025: -2%
  - Year 2026: -2%

- ***-20% between 2023 and 2030.***

The reduction intensity for 2026/2030 is therefore estimated at -14% (2030 target - 2026 target). The Group proposes to smooth the reduction target annually to build annual targets:

  - Year 2027: -3.5%
  - Year 2028: -3.5%
  - Year 2029: -3.5%
  - Year 2030: -3.5%

These reduction targets were defined using a method similar to that applied by the SBTi, broken down between Scope 1-2 and Scope 3.

The initiatives launched to refine the Scope 3 emissions will also allow to focus on sub-categories with high impact and high decarbonization potential in a pragmatic and iterative approach.

Different scenarios have been devised on the basis of the 2023 carbon assessment published in 2024 and the more or less accentuated activation of decarbonization levers such as the increase in soft mobility when commuting between home and work, the reduction of the surface areas in branches and head office, intensity of remote working.

As Scope 3 weighed more than 90% in 2023, efforts on this Scope are essential and must be brought under control.

Scope 1, 2 and 3 reduction targets are calculated according to the global annual targets and the weighting of the scopes on the total own footprint.

(1) AEW, DNCA Investments, Dorval AM, Flexstone, Mirova, MV Credit, Naxicap, NIMI Solutions, Ossiam (for funds applying ESG criteria only), Ostrum AM, Seventure, Thematics AM, Vauban, Vega IM and Ecofi.
(2) DNCA Investments, Dorval AM, Ostrum AM, Ossiam (for funds applying ESG criteria only) and Mirova.
(3) Mirova, Dorval AM and DNCA Investments.
(4) DNCA Investments and Ossiam (for funds applying ESG criteria only).

Scopes	Weighting 2023
Scopes 1 and 2	8%
Scope 3	92%

Group objectives:

2023	2024	2025	2026	2027	2028	2029	2030
Ref. year	(2%)	(2%)	(2%)	(3.5%)	(3.5%)	(3.5%)	(3.5%)
			(6%)				(14%)
							(20%)

Calculation by scope:

2023	2024	2025	2026	2027	2028	2029	2030
Scopes 1 and 2	(3.5%)	(3.5%)	(3.5%)	(5.0%)	(5.0%)	(5.0%)	(5.0%)
Scope 3	(1.9%)	(1.9%)	(1.9%)	(3.4%)	(3.4%)	(3.4%)	(3.4%)
Overall	(2%)	(2%)	(2%)	(3.5%)	(3.5%)	(3.5%)	(3.5%)

Note: It is important to understand that the reduction target is built on a cumulative basis in this calculation, since we always compare with the reference year 2023 and not with the year N-1.

Example: if we choose an annual reduction of 3.5% over three years for Scope 1:

- Scope 1 emission reduction target in 2024 = 3.5%
- Scope 1 emission reduction target in 2025 = 2 * 3.5% = 7%
- Scope 1 emission reduction target in 2026 = 3 * 3.5% = 10.5%

The Group's annual targets compared to the reference year are therefore as follows:

2023	2024	2025	2026	2027	2028	2029	2030
Scopes 1 and 2	(3.5%)	(7.0%)	(10.5%)	(15.5%)	(20.5%)	(25.5%)	(30.5%)
Scope 3	(1.9%)	(3.8%)	(5.7%)	(9.1%)	(12.5%)	(15.9%)	(19.3%)
Overall	(2%)	(4%)	(6%)	(9.6%)	(13.2%)	(16.7%)	(20%)

Between 2024 and 2026, the breakdown is -3.5% on Scopes 1 and 2 and -1.9% on Scope 3, which amounts to a total annual average weighting of -2% (using the respective weights of 8% and 92%). Between 2019 and 2026, the total reduction is estimated at -22%, which corresponds to the theoretical SBTi objective to achieve carbon neutrality by 2050.

For 2027 to 2030, the breakdown is -5% on Scopes 1 and 2 and -3.4% on Scope 3, which amounts to a total annual average weighting of -3.5% (using the respective weights of 8% and 92%). Between 2026 and 2030, the total annual reduction of 3.4% corresponds to the theoretical SBTi objective to achieve carbon neutrality by 2050.

Groupe BPCE has set targets for reducing the GHG emissions of the most emitting business sectors of its financing operations. It has also set reduction targets for its own operations. This enables it to reduce the identified material negative impacts on the climate.

These targets are based on the implementation of the decarbonization levers described above in the section "Actions and Resources." The quantitative contribution is observed retrospectively in the "Progress" section.

FINANCED EMISSIONS: DECARBONIZATION TRAJECTORY TARGETS BY SECTOR

As specified in the E1-1 disclosure requirement, Groupe BPCE has defined decarbonization targets for the most carbon-intensive business sectors in its financing portfolio. Given the volume of emissions from these sectors, they require priority action to reduce emissions either in absolute terms or in intensity. The targets were determined in absolute value for the fossil fuel sector (coal, oil and gas) and in intensity for the other sectors. These sectoral trajectories demonstrate their contribution to achieving the objectives of the Paris Agreement and in particular the objective of limiting global warming to no more than 1.5°C compared to the pre-industrial era.

The reference year used to determine the trajectory is the one corresponding to the most recent year for which data were available.

Setting targets for reducing GHG emissions in absolute terms consists of setting a target date for the volumes of financing for its customers (corporate customers, individual customers, etc.) taking into account the expected volume of the emissions associated with this financing (based on a modeling of the emission trajectories of customers / financed assets), but also the value of the customer company. Groupe BPCE considers that, for Scope 3 category 15 emissions in the customer value chain, calculated for banks according to the PCAF approach for measuring the financed emissions, it is not relevant to set a target in absolute value.

Projecting financing volumes is a complex exercise, which depends on multiple assumptions related to the macroeconomic, microeconomic and climatic environment. Groupe BPCE has included in its VISION 2030 strategic project the ambition to make impact accessible to all, including sectors in transition, which are increasingly seeking financing.

In this context, Groupe BPCE refers to the transitional provisions provided for in Paragraph 133 (a) of ESRS 1, as well as to the response given in December 2024 by EFRAG to follow up on the request for interpretation of Point 34 a). This response allows, when only intensity value targets are available, a financial institution to limit the information on the value chain targets to the information available internally during the first three years of reporting.

Targets for aligning the banking book with the objectives of the Paris Agreement - Groupe BPCE

	Exposures	Methodology					Baseline			Update		Trajectory	
	12/31/2023	Entities	Scopes covered	Metric units	Calculation method	Scenario	Reference year	Absolute emissions	Carbon intensity	Year	Footprint	Year of publication	2030 target

MDR-T targets and MDR-M decarbonization metrics

Limits related to GHG measurements and associated targets

The data collected, methods and measurements carried out have not been subject to external verification.

The data used regarding the customers are derived primarily from data providers or publications of companies funded by Groupe BPCE. Differences may exist in the measurements of greenhouse gases from data providers (for example, in terms of geography and scope) as well as inaccuracies or incompleteness of the activities covered by the clients in their publications. Estimates will evolve as the quality of available data improves. To date and for information purposes, the quality levels of the carbon data measured at December 31, 2023 are estimated, according to the PCAF score[1], at 3.6 for oil and gas extraction and production, 2.6 for electricity production, 3.7 for residential and commercial real estate, 2.4 for the automotive sector, 2 for aviation and 3 for heavy industry (steel, cement and aluminum).

In order to have carbon data on the financed companies, consistent with the credit exposures on these same companies, for this fiscal year, Groupe BPCE has chosen to publish a financed footprint concerning the exposure at the end of 2023 and CO_2e emissions of companies for 2023, some of which were calculated only in Q3-2024.

Furthermore, the objectives targeted by Groupe BPCE are conditioned by the commitments of its customers and their ability to meet them over time. These objectives also depend on current government policies and the development of low-carbon technologies, which are critical for long-term horizons.

For the residential real estate sector, due to the dependence on regulatory and governmental actions (uncertainty about the application of renovation policies and construction plans), Groupe BPCE has not set a specific carbon target for 2030.

For the agricultural sector, in the absence of precise non-financial data from clients as well as economic and social obstacles, Groupe BPCE has not published specific targets for 2030.

These measurements and targets are based on methodologies known to date and which may change in the future.

Thermal coal

BPCE aims to gradually reduce its exposure to thermal coal to zero by 2030 for the activities of its companies in the European Union and OECD countries and by 2040 for their activities in the rest of the world.

Oil and gas

Groupe BPCE's objective is to reduce, between 2020 and 2030, the absolute carbon emissions related to the end use of oil and gas by at least 70%, for the scope of financing for oil and gas extraction and production recognized in the balance sheet. When including the credit exposures recognized off-balance sheet (compared to 30% in the IEA NZE 2050 scenario published in 2021), this reduction is equivalent to -50%. The 2020 reference value, calculated on the basis of the assets in the balance sheet, is estimated at 7.7 $MtCO_2$eq.

The carbon emissions measurements and targets cover customers' oil and gas extraction and production activities, which account for most of the emissions in this sector, all regions combined.

The financed carbon footprint is estimated using the PCAF method. This is dependent on corporate values, whose market fluctuations are essentially independent of customers' climate strategies.

Power generation

Groupe BPCE's target is to have an average carbon intensity related to the financing of electricity production of less than 90 gCO_2eq/kWh by 2030 (compared to a target of 138 gCO_2eq/kWh in the NZE 2050 scenario of the IEA published in 2021).

Notes on methodology

- It should be noted that the geographical breakdown of Groupe BPCE's portfolio is not directly comparable to the global scope of the IEA scenario. The IEA's NZE 2050 scenario is adapted to a global portfolio (target of less than 138 gCO_2eq/kWh by 2030). Groupe BPCE's portfolio is not exposed to all geographical areas of the world. It is mainly focused on France, Europe / Middle East and the Americas.
- The carbon intensity measurements and targets cover electricity production activities.
- The calculation method used is the PACTA (average of customer intensities weighted by portfolio exposures).

Automotive

Groupe BPCE's carbon intensity reduction target for the automotive sector is 100 gCO_2eq/km, *i.e.* -40% compared to 2022.

BPCE Lease's leasing activities (furniture leasing contracts, leases with purchase offer, and long-term leases) were added in 2024 in order to broaden the coverage of the sector. The 2022 reference value, initially 167 kgCO2eq/km, is 166 $kgCO_2$eq/km pro forma.

The carbon measurements and targets cover the activities of car manufacturers and the leasing activities (furniture leasing contracts, leases with purchase offer, and long-term leases). The manufacturers' financials are excluded from the coverage. The scope of the carbon emissions corresponds to the emissions of light motor vehicles.

The IEA NZE 2050 scenario is a scenario for the global rolling stock. It does not fully correspond to the covered portfolios: the emissions are linked to the annual sales of car manufacturers' vehicles, so they are not, or only slightly, comparable to an IEA Net Zero target adapted to a (global) fleet - flows *vs.* stock. The ambition of the targets was calibrated on an internal calculation aiming to derive from the trajectory of the IEA car fleet (stock) an assumption of a reference point for manufacturers' vehicle sales (flow).

The financed carbon footprint is estimated using the PCAF method. This is correlated with corporate values whose market fluctuations are independent of the bank's climate strategy.

Steel

The scope of the target, initially Natixis CIB, was extended to Groupe BPCE. The reference value for 2022 is maintained at 1.9 tCO_2eq/t of steel due to the concentration of outstandings within Natixis CIB

Groupe BPCE's steel sector objective is to reach a threshold of 1.4 tCO_2eq/t of steel by 2030. It should be noted that the IEA revised the Scope 1 Net Zero target upwards in its last report published in 2023. A possible revision of this reduction target will depend on the progress of new steel production decarbonization technologies and public policies to support their deployment.

(1) As specified by the PCAF standard, the various carbon data sources used are associated with a quality level ranging from one to five depending on whether they are based on data audited and communicated by the company (corresponding to the best score: 1), or based on industry proxies/estimates (corresponding to the lowest score: 5).

The carbon measurements and targets cover steel producers, which account for most of the emissions in this sector. The production process includes the following steps: preparation of raw materials, steelmaking (including steel casting). The rolling and coating stages as well as the upstream (*e.g.* mining) and downstream stages (*e.g.* finishing) are excluded.

The financed carbon footprint is estimated using the PCAF method. This is correlated with corporate values whose market fluctuations are independent of the bank's climate strategy.

Cement

The scope of the target, initially Natixis CIB, was extended to Groupe BPCE. The 2022 reference value, initially determined at 622 kgCO_2eq/t cement, is now 669 kgCO_2eq/t cement.

The cement sector's main decarbonization levers (*e.g.* CCUS) will not be fully operational before 2030. The reduction target set is ambitious, but is therefore higher than the 2030 target of the IEA NZE 2050 scenario published in 2021. It should be noted that the IEA revised the Scope 1 Net Zero target upwards in its last report published in 2023. The objective for the cement sector is to obtain an average carbon intensity of financing for cement producers of less than 525 kgCO_2eq/t of cement by 2030. A more ambitious review of this reduction target will depend on the progress (development of sectors, economic equation, adoption by the major players in the sector) of new decarbonization technologies for cement production and public policies to support their deployment.

The carbon measurements and targets cover cement and clinker producers, which account for most of the emissions in this sector.

The financed carbon footprint is estimated using the PCAF method. This is correlated with corporate values whose market fluctuations are independent of the bank's climate strategy.

Aluminum

Groupe BPCE aims to achieve a financed carbon intensity of 6 tCO_2eq/t of aluminum by 2030. The 2022 reference value is 6.5 tCO_2eq/t of aluminum. The scenario used is the International Aluminum Institute (IAI) 1.5°C scenario which is based on the IEA NZE 2050 scenario.

The carbon measurements and targets only cover the smelting activities of aluminum smelters.

The financed carbon footprint is estimated using the PCAF method. This is correlated with corporate values whose market fluctuations are independent of the bank's climate strategy.

Commercial real estate

Groupe BPCE, through Natixis CIB, targets an average carbon intensity related to the financing of real estate professionals of less than 32 kgCO_2/m^2/year by 2030 (compared to the 19 kgCO_2/m^2/year of the CRREM Net Zero scenario), *i.e.* a 30% decrease in carbon intensity compared to the 2022 reference value (46 kgCO_2/m^2/year).

The carbon intensity measurements and targets cover dedicated financing of real estate assets and financing of commercial real estate companies (including Property Development and Foncières) worldwide. This mainly involves financing for real estate professionals.

The Carbon Risk Real Estate Monitor (CRREM) scenarios were used as a scientific reference. They are compatible with the Net Zero 2050 scenario of the International Energy Agency. They specify the Real Estate carbon budget by country and by type of asset. This allocation is made by taking as a starting point the average carbon intensity of the portfolio in each country and each type of asset, to converge towards the same final carbon intensity by type of asset by 2050.

Target setting for Groupe BPCE takes into account the current and projected breakdown of the outstanding loans in the portfolio.

Aviation

Groupe BPCE, through Natixis CIB, targets an average carbon intensity related to aviation financing of less than 750 gCO_2eq/RTK by 2030 (*i.e.* lower than the intensity level of 760 gCO_2eq/RTK of the IEA NZE 2050 scenario). The reference value in 2022 is 920 gCO_2eq/RTK

The carbon intensity measurements and targets cover airlines, aircraft leasing companies and aircraft asset financing.

The IEA NZE 2050 scenario (or that of Mission Possible Partnership) is adapted to a global portfolio.

Residential real estate

Groupe BPCE has not set a target and is managing changes in the emission intensity of this sector. Setting a target for reducing absolute greenhouse gas emissions would have the effect of restricting the flow of financing to energy-efficient housing and of penalizing individual customers.

Groupe BPCE, as the main player in the financing of residential housing in France, has decided to focus its actions on reducing the emission intensity of the homes it has helped to finance. The greenhouse gas emissions related to its financing are estimated on average at 25 kgCO_2eq/m^2 at the end of 2022. Levers and actions have been put in place to meet customer needs. They aim to facilitate access to ownership of low-energy homes, help finance the renovation of so-called energy-intensive homes, and preserve the value of customers' assets. These actions will contribute to significantly lowering the average intensity of the residential real estate loan portfolio by 2030.

Given the significant need for the transition to more energy-efficient homes and the financial challenge faced by private owners, there is a strong dependence on public policies to achieve this carbon neutrality target. It is essential to take into account a private and public contribution when calculating a trajectory. While the share of the trajectory linked to private financing solutions put in place by Groupe BPCE is clearly identifiable, the public share, which is based on structural and sectoral actions, in particular to promote the marketing of new homes and the renovation of so-called energy-intensive housing needs to be adapted to the current economic context. Thus, the assumptions used to build the National Low Carbon Strategy need to be reassessed. Groupe BPCE contributed to the formulation of proposals for additional actions within the French Banking Federation (*Fédération bancaire française*) that could be implemented.

The quality of the data is correlated with the EPD coverage of all outstandings. If to date, the stock is not fully covered by the EPDs provided by the advisors. Groupe BPCE is working to systematize the recovery of the EPDs implemented since 2022.

EMISSION REDUCTION TARGETS FOR THE INVESTMENT PORTFOLIOS OF THE INSURANCE ACTIVITIES

Following its membership of the NZAOA in 2022, in 2023 BPCE Assurances committed to two initial decarbonization targets for its asset portfolio:

- 30% reduction in the carbon footprint (Scopes 1 and 2) of the corporate bond portfolio and financial assets held directly between December 31, 2020 and December 31, 2024;
- 50% reduction in the carbon footprint (Scopes 1 and 2) of the portfolio of listed equities held through the dedicated fund *Réaumur Actions* between December 31, 2020 and December 31, 2029;
- Moreover, as part of its new strategic plan, BPCE Assurances has set the objective of continuing to reduce its carbon footprint (Scope 1 & 2), aiming for a reduction target of at least 50% by 12/31/2029 for its entire portfolio of directly held equities and corporate and financial bonds, with an interim target of at least 40% by the end of 2026.
- In addition, as part of its new strategic plan, BPCE Assurances has set itself the target of continuing to reduce its carbon footprint (Scope 1 & 2) by aiming for a -50% reduction by December 31, 2029, for its entire equity portfolio and corporate and financial bonds held directly, with a waypoint point of -40% at the end of 2026.

EMISSIONS REDUCTION TARGETS FOR ASSET MANAGEMENT ACTIVITIES

Natixis IM's European asset management companies have set targets for decarbonizing or aligning their portfolios with the objectives of the Paris Agreement, which are as follows:

- **Asset management companies committed to achieving global carbon neutrality as part of an international alliance:** two asset management companies (DNCA Finance and Mirova) are committed to a Net Zero approach as part of the NZAM initiative at the end of December 2024.
  - Since its creation in 2014, Mirova has set itself the objective of using the lever of investment to serve environmental issues. Its portfolio is aligned with the objectives of the Paris Agreement through a demanding investment strategy for total assets of **€31.9 billion** in assets at the end of December 2024.
  - DNCA Finance has been analyzing the climate trajectory of its investments since 2020 and has made a commitment to contribute to making its investments compatible with the objectives of the Paris Agreement in December 2022. The scope covered by this commitment represents **€23.3 billion** in assets under management for DNCA Finance at the end of December 2024.
- **Asset management companies aiming for decarbonization or portfolio management aligned with the objectives of the Paris Agreement without joining a specific external framework**: five asset management companies (Ostrum AM, Vega IM, Dorval AM, AEW and Vauban IP) manage their assets to align with the objectives of the Paris Agreement or have targets to reduce their footprint.
  - **Ostrum AM** had a total of **€132 billion** in assets under management with a decarbonization target at the end of 2024.
  - **Vega IM** aims to reduce the greenhouse gas emissions of its investments by 45% by 2030 (excluding *Conseillée Premium* management), compared to 2021, concerning **€12.6 billion** of its outstandings at the end of 2024.
  - **Dorval AM** has a target, by 2050, of having at least 80% **(*i.e.* almost €0.9 billion)** of open-ended fund assets aligned with a trajectory of +2°C.
  - **AEW** has set itself a target of reducing the greenhouse gas emissions of its investments on **€11.4 billion** of its portfolio of at least 40% by 2030 compared to a reference year by building that cannot go beyond 2010.
  - **Vauban Investment Partners (IP),** since 2022, has formally committed to aligning its investment strategy with the goal of global carbon neutrality by 2050. This commitment covers the entire portfolio, which is aligned at the end of 2024 with a trajectory of +2°C, for a total of approximately **€9.5 billion** in assets.

Other Natixis IM European asset management companies have defined approaches specific to their type of asset.

For example, since 2023, Naxicap has included a specific sustainability clause in the shareholders' agreements signed with the companies in which its funds invest. This clause makes it possible to define targets for reducing the carbon footprint of its investments.

2.2.4.2 (E1-6) GROSS SCOPES 1, 2, 3 AND TOTAL GHG EMISSIONS

Scope 1, 2 and 3 emissions for Groupe BPCE[1]

	Historical data			Milestones and target years				
	Reference year	Comparative data (N-1)	N	% N/ N-1	2026	2030	(2050)	Annual target in %/ Reference year
Scope 1 GHG emissions								
Gross Scope 1 GHG emissions - Emissions [tCO_2eq]	12/31/2024	23,154	21,330	(8%)	(10.5%)	(30.5%)	(3.5%)	(3.5%)
Percentage of Scope 1 GHG emissions resulting from regulated emission trading schemes (in %)	12/31/2024	-	-					
Scope 2 GHG emissions								
Gross Scope 2 GHG emissions (location-based) [tCO_2eq]	12/31/2024	18,152	17,658	(3%)	(10.5%)	(30.5%)	(3.5%)	(3.5%)
Gross Scope 2 GHG emissions (market-based) [tCO_2eq]	12/31/2024	5,158	4,922	(5%)	(10.5%)	(30.5%)	(3.5%)	(3.5%)
Significant Scope 3 GHG emissions								
Total gross indirect Scope 3 GHG emissions [tCO_2eq]	12/31/2024	498,165	505,207	1%	(5.7%)	(19.3%)	(1.9%)	(1.9%)
1 Goods and services purchased								
1 Goods and services purchased	12/31/2024	191,377	194,600	2%				
[Optional subcategory: Cloud Computing & Data Center Services]	12/31/2024	-	-					
2 Capital goods	12/31/2024	108,569	106,424	(2%)				
3 Activities in the fuel and energy sectors (not included in Scopes 1 and 2)	12/31/2024	13,512	13,169	(3%)				
4 Upstream transport and distribution	12/31/2024	-	-					
5 Waste generated during operations	12/31/2024	4,515	4,931	9%				
6 Business travel	12/31/2024	20,498	22,170	8%				
7 Employee commuting	12/31/2024	72,947	74,859	3%				
8 Upstream leased assets	12/31/2024	-	-					
9 Forwarding	12/31/2024	86,746	89,054	3%				
10 Processing of products sold	12/31/2024	-	-					
11 Use of products sold	12/31/2024	-	-					
12 End-of-life treatment of products sold	12/31/2024	-	-					
13 Downstream leased assets	12/31/2024	-	-					
14 Franchises	12/31/2024	-	-					
Total Own footprint emissions								
Own footprint GHG emissions (location-based) (tCO_2eq)	12/31/2024	539,471	544,195	1%	(6%)	(20%)	(2%)	(2%)
Own footprint GHG emissions (market-based) (tCO_2eq)	12/31/2024	526,477	531,459	1%				
Portfolio emissions								
15 Investments (Banking)	12/31/2024	113,826,510	119,095,437	5%				
15 Investments (Insurance)	12/31/2024	16,070,706	16,584,592	3%				
Total GHG emissions								
Total GHG emissions (location-based) (tCO_2eq)	12/31/2024	130,436,687	136,224,224	4%				
Total GHG emissions (market-based) (tCO_2eq)	12/31/2024	130,423,692	136,211,488	4%			The data presented are based on the previous calculation methodology for CO2e emissions due to the purchased goods and services category.	The data presented are based on the previous calculation methodology for CO2e emissions due to the purchased goods and services category.

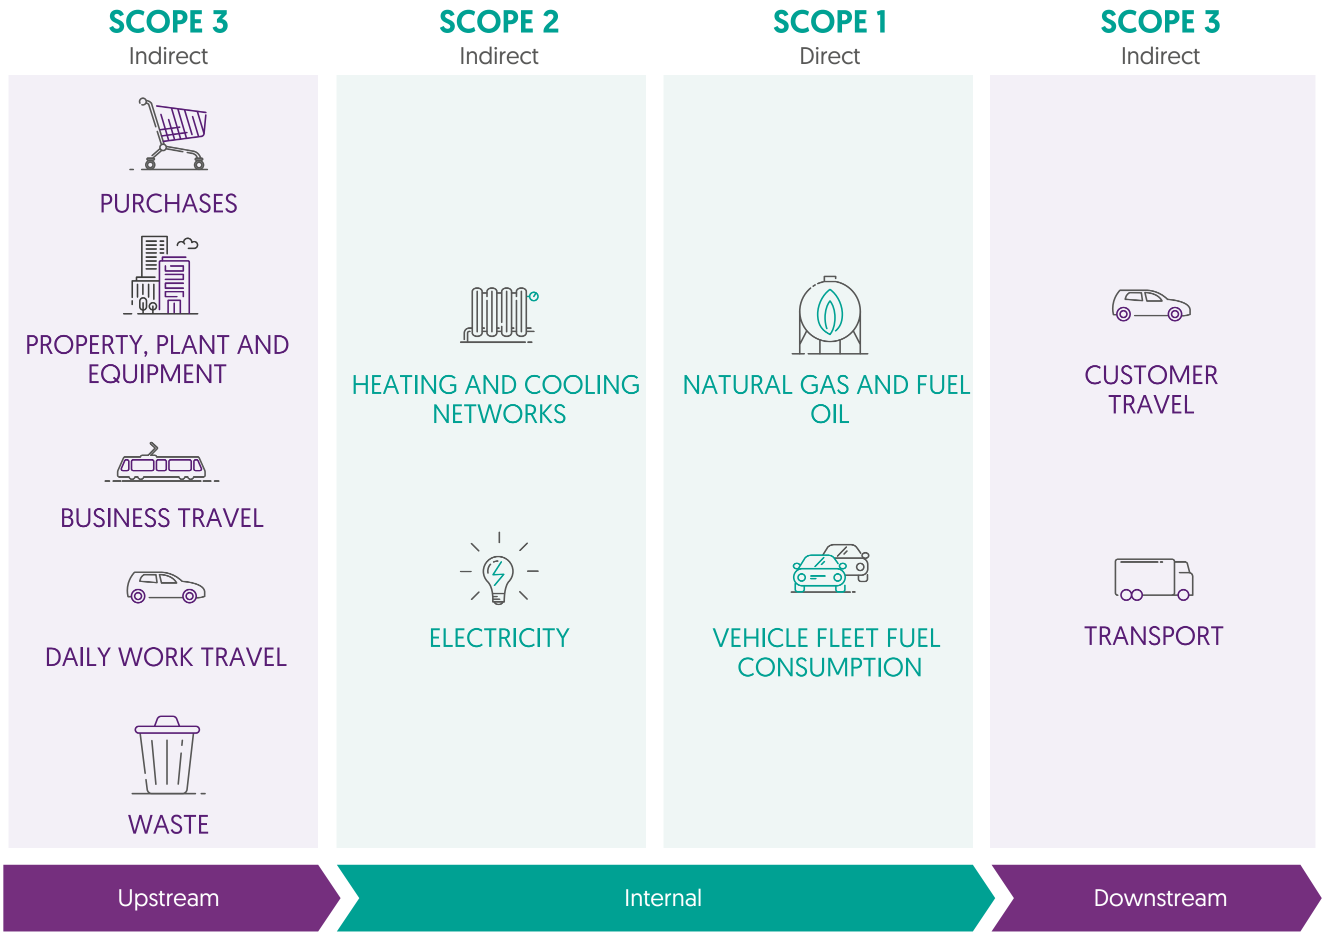
The above table is intended to represent all of Groupe BPCE's activities within the accounting scope of consolidation, with the limitations described in the MDR-M below.

The Group considers that the format of this table does not make it possible to present the milestones it has set for itself in its transition plan because this format details many categories of insignificant emissions taken one by one, and also does not detail the most important emission items relating to financing and investments, which require sectoral transparency. For this reason, some "milestones and target years" columns are left blank in favor of a detailed presentation of these milestones and target years in Section 2.2.4.1.

The portfolio emissions presented above for the Banking exposures on one hand and Insurance on the other, aggregate scope 1, 2, and 3 emissions of the financed companies. For 2024, the financed scope 1+2 emissions total 40.5 MtCO2e for the Banking category and 1.9 MtCO2e for the Insurance category.

(1) The data presented are calculated based on the previous methodology for calculating CO2e emissions related to purchased goods and services.

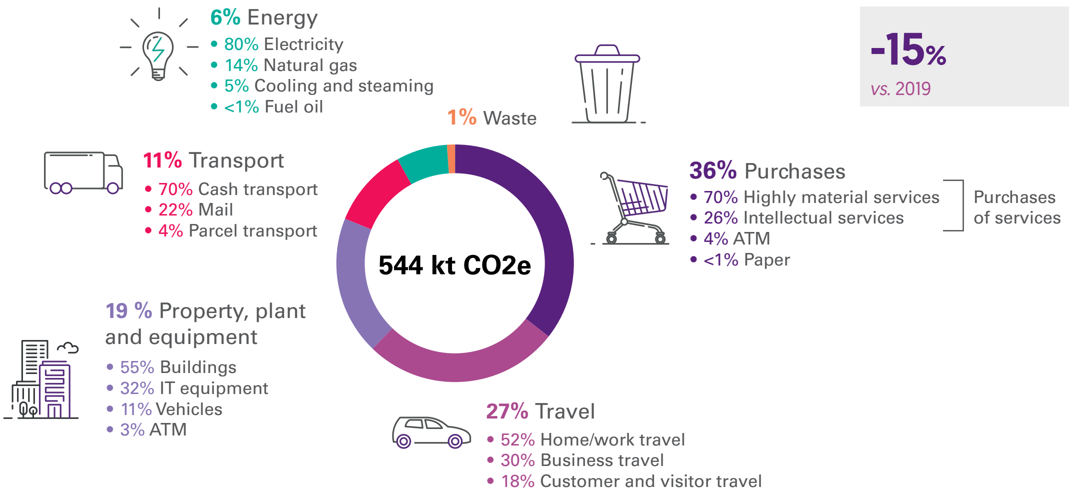
Scope of the calculated greenhouse gas (GHG) emissions



FOCUS ON THE OWN FOOTPRINT

Scope

GHG emissions related to the own footprint include all Scope 1, 2 and several Scope 3 categories.



Calculation methodology

Two amounts are presented at the end of table AR48, which cover the specific scope of the own footprint:

- total own footprint emissions (with Scope 2 emissions calculated using the location-based method);
- total own footprint emissions (with Scope 2 emissions calculated using the market-based method).

The emissions are calculated for each of the items presented in Table AR48 according to the breakdown of the GHG Protocol items into the three emission scopes.

In this table, the data regarding the footprint has been calculated using the previous methodology for calculating CO2e emissions related to purchased goods and services, which has been applied since 2019 to facilitate monitoring the trajectory of the strategic plan for 2019-2024.

The methodology applied to property, plant and equipment is based on the principles of French regulations concerning the preparation of a greenhouse gas report (BEGES V5), which meets the regulatory requirements set out in Article L. 229-25 of the French Environment Code. This methodology is also consistent with ISO 14064-1:2018. More specifically, the calculation of emissions associated with fixed assets is based on the collection of data from the inventories of the various fleets (IT equipment, real estate, vehicles, etc.) and on the application of amortization coefficients making it possible to distribute the emissions over the useful life of the assets concerned.

Work will be carried out in the coming months to enable Groupe BPCE to also calculate its carbon footprint according to the methodological principles of the GHG Protocol, *i.e.* by accounting for all emissions associated with the manufacture of capitalized assets during the year of acquisition.

As specified in the paragraph "Actions and resources" (E1-3), Groupe BPCE has refined the measurement of its purchases in 2024, by detailing the measurement on 16 categories of purchases instead of two previously and by allocating more precise emission factors to each category. This greater degree of precision shows a significant increase in emissions for this item. As a result, two calculations were carried out in 2024: a calculation of the carbon footprint using the old methodology, in order to measure the achievement of the objectives set over the 2019-2024 period, and a second calculation with the new methodology, in order to follow the 2023-2026 reduction trajectory. According to this new methodology, in 2024, the CO2 emissions related to purchased goods and services amount to 226 ktCO2e, bringing the Group's own footprint based on location to 576 ktCO2e, and 563 ktCO2e based on market.

See details of changes in the measurement of purchases in E1-3 - 2.2.3.4.1.

Limitation of scope

The scope of calculation of the own footprint covers 60 entities whose permanent contracts (CDI) represent 88% of the Group's employees with permanent contracts. This scope is gradually extended each year.

In response to the E1-6 disclosure requirement (AR 43), the Group publishes the following mandatory information:

Gross Scopes 1, 2, 3 and Total GHG emissions	2024
Biogenic CO_2 emissions resulting from the combustion or biodegradation of biomass separately from Scope 1 GHG emissions, but includes emissions of other types of GHG (in particular CH_4 and N_2O)	-
Breakdown of information by indicating separately the Scope 1 emissions from: – the consolidated accounting group (parent company and subsidiaries); and – companies benefiting from investments, such as associates, joint ventures, or unconsolidated subsidiaries that are not fully consolidated in the financial statements of the accounting group, as well as contractual agreements that are joint agreements not structured through an entity (*i.e.* jointly controlled operations and assets) over which the company exercises operational control.	-
Breakdown of information by indicating separately the Scope 2 emissions from: – the consolidated accounting group (parent company and subsidiaries); and – companies benefiting from investments, such as associates, joint ventures, or unconsolidated subsidiaries that are not fully consolidated in the financial statements of the accounting group, as well as contractual agreements that are joint agreements not structured through an entity (*i.e.* jointly controlled operations and assets) over which the company exercises operational control.	-

MDR-M - EMISSIONS FINANCED BY GROUPE BPCE - BANKING ACTIVITIES

Scope

The scope of greenhouse gases related to financing activities (Scope 3 category 15 Investments [Banking]) corresponds to the scope of corporate financing and dedicated financing (Natixis) of the banking book and also includes home loan financing. Home loan financing corresponds to home loans granted to individual customers and to self-employed customers.

Calculation methodology

The calculation of the carbon measures financed follows the Partnership for Carbon Accounting Financials (PCAF) methodology in accordance with the recommendations of the GHG Protocol for corporate credit financing (in its guide *"The Global GHG Accounting and Reporting Standard Part A: Financed Emissions"* published in 2022). These measures are based on methodologies known to date and which may change in the future.

The calculation is carried out on the Scope 1, Scope 2 and Scope 3 emissions of financed customers, aligned with the regulatory requirements and scope materiality issues. The sources of carbon data used for corporate financing are mainly based on data suppliers (Carbone 4, CDP, Trucost, MSCI): when the data is not available at the company level, their group's carbon data is used. In the absence of information, sectoral proxies are used:

- For companies or dedicated financing belonging to sectors with good supplier data coverage, the sectoral carbon data are extrapolated.

- For companies related to other sectors, the sectoral proxies provided by PCAF are applied (by NACE code and geographical area). As the coverage by the PCAF proxy is significant (applied to more than [75]% of outstandings) related in particular to exposures to small- and medium-sized companies, the estimated nature of the measures should be highlighted for this segment.

- The carbon measurements used for home loan financing correspond to the carbon emissions related to the use of the building. The data sources are based on Energy Performance Diagnostics (EPDs) when these are available. Otherwise, proxies are used, relying in particular on data from the French Scientific and Technical Center for Building (*Centre Scientifique et Technique du Bâtiment - CSTB*).

It should be noted that the carbon data used may be one year behind the closing date of the outstandings. The data collected, methods and measurements carried out have not been subject to external verification.

To date and for information purposes, the quality levels of the carbon data used to measure financed emissions at December 31, 2023 and December 31, 2024 are estimated at around four according to the PCAF score. As specified by the PCAF standard, the various carbon data sources used are associated with a quality level ranging from one to five depending on whether they are based on data audited and communicated by the company (corresponding to the best score: 1), or based on industry proxies/estimates (corresponding to the lowest score: 5).

MDR-M - EMISSIONS FINANCED BY GROUPE BPCE - INSURANCE ACTIVITIES

Scope

The scope of greenhouse gases related to insurance activities (Scope 3 category 15 Investments [Insurance]) includes the activities of BPCE Assurances and PREPAR-VIE.

Calculation methodology

The methodology used to calculate greenhouse gas emissions is aligned with that of the Principal Adverse Impacts indicator (PAI) 1.1 defined by the SFDR regulation. Thus, the gross GHG emissions attributed to investments take into account the Scope 1, 2 and 3 emissions of the companies comprising the portfolios of assets held. The attribution coefficient for a given company corresponds to the value of the investment divided by the total value of this company (Enterprise Value Including Cash [EVIC]).

BPCE Assurances relies on Carbone 4 Finance for the collection of GHG emissions as well as the EVICs of companies in which it invests. In the absence of available information, sectoral proxies are used.

PREPAR-VIE relies on ISS, using the Sequantis STM tool for all its calculations. The coverage rate of the ISS data used to measure the Scope 1 + 2 + 3 CO_2 emissions of directly managed bonds is 72%. To date, the calculation does not use proxies.

To be consistent with the scope of emissions financed by the banking activity, emissions relating to insurance activities relate exclusively to corporate investments.

In addition, asset management companies are subject to SFDR reporting obligations and/or Article 29 of the Energy Climate Act and disclose information on the financed emissions that they incur through the investments.

As an illustration, Natixis IM has consolidated the GHG emissions calculated according to the PCAF standard for European portfolios of listed assets (excluding sovereigns)[1] and relying on a single data source (MSCI). These emissions amounted to €81 million tCO_2e at December 31, 2024.

(1) This carbon footprint is consolidated by summing the GHG emissions "attributed" to each position in the portfolio, on companies. The emission allocated corresponds to the carbon emissions (Scope 1, 2 & 3) of the company multiplied by the actual outstanding amount of listed shares or corporate bonds held in the portfolio divided by the value of the company including cash (EVIC).

PART 3 - Social information

3.1 S1 - Own workforce

3.1.1 SBM-2 - Interests and views of stakeholders

The Group has an ongoing dialog with its stakeholders. This process makes it possible to identify levers for improvement to maximize the positive impact of its activities, on both environmental and societal level, and to adapt its strategy and business model accordingly. Through its business lines, Groupe BPCE interacts with various stakeholders. The methods of dialog, adapted to the points of view and rights of the stakeholders, are presented accordingly.

- **Career management and support**

The Human Resources division is committed to providing individualized support for employees' career paths. This involves close collaboration between managers and employees, in particular through annual interviews that shoud allow identification of employee's skills development needs and career development aspirations.

- **Skills development to retain and engage employees**

The Human Resources department skills development as an essential lever for retaining and engaging employees. The Human Resources Mangers, as well as the Training and Career management teams, are attentive to the needs of employees and suggest training courses tailored to their business line needs. These internal and external training courses are designed to meet the company's strategic challenges while promoting the personal and professional development of employees.

- **Recruitment and employer brand**

To strengthen the employer brand and attract the best talents, the Human Resources department relies on HR Development Managers, employee ambassadors and managers who contribute to promoting a positive image of the company by highlighting its values, its culture and development opportunities. This includes the dissemination of communications on social networks and participation in recruitment events.

- **Communities of HR officers**

The Human Resources department coordinates communities of HR officers around issues of diversity, gender equality, disability and well-being at work. Diversity and gender equality officers, disability officers, quality of life at work (QLWC) officers and harassment officers share and implement initiatives in line with group or branch policies and agreements in their field, in order to promote an inclusive and respectful work environment.

- **Non-profit and influence networks to promote an inclusive policy**

The Human Resources department relies on and showcases Employees Resource Groups (non-profit and influence networks) to promote the Group's inclusive policy. Employees Resource Groups such as "Les Elles de BPCE", "WIIN", "All Equals" and "GenConnect" are promoted in their implementation of tangible actions to encourage intergenerational exchanges, diversity and equal opportunities.

- **Dialog with employee representatives to guarantee quality of life at work, health and safety**

Dialog with employees is a fundamental element of the HR policy to guarantee quality of life at work. The Human Resources department works in collaboration with, HR representatives, employee representatives and labor relations managers to establish an open and constructive communication framework. This includes the implementation of information and consultation mechanisms on employee working conditions and health & safety. Its objective is to create a healthy and safe working environment, where each employee feels listened to and valued.

3.1.2 SBM-3 - Material impacts, risks and opportunities and their interaction with strategy and business model

Among the three themes related to the own workforce "Attractiveness, employee loyalty and commitment", "Working conditions" and "Equal treatment and opportunities" ten issues have been identified as material.

- **Attractiveness, employee loyalty and commitment**

With regard to "Attractiveness, employee loyalty and commitment", two material issues in terms of opportunity or positive impact have been identified:

  - a phygital and inclusive recruitment strategy is an opportunity for the Group to strengthen its employer image;
  - the various support systems, integration of new employees and talent retention have positive impacts on the Group's employees.

Conversely, an insufficient system for listening to employees, which does not capture their needs and level of satisfaction, is considered as a risk for the Group, insofar as this could have a harmful effect on employee commitment.

- **Working conditions**

In terms of "Working conditions":

– the theme of quality of life at work, risk prevention and health and safety at work is crucial because of its direct impact on employees, directly affecting their well-being. This theme is also material in the event of inadequate measures, in terms of employee retention, absenteeism, or disengagement of teams leading to an increase in recruitment, training or replacement costs. Insufficient commitment to risk prevention and occupational health and safety could also generate operational risks and have financial consequences for the Group;
– sustained and constructive dialog with employee representatives at the level of the Group and its various entities is a guarantee for the improvement of employees' working conditions;
– a transparent remuneration policy understood by employees, decent remuneration beyond the legal minimums and protective social security coverage enable a significant improvement in employee well-being;
– the protection of personal data and the privacy of employees' personal life was assessed as a material risk which in the event of non-compliance, could have financial consequences, such as financial penalties in the context of damages suffered.

- **Equal treatment and opportunities**

With regard to the theme of "Equal treatment and opportunities", the Group considers positive material impacts or opportunities through the various initiatives implemented: adapted skills development systems, policies supporting career paths and development of employability, policies promoting gender balance, professional equality, diversity, inclusion, support for people with disabilities or through measures to fight discrimination of any kind.

Groupe BPCE's commitments to its employees are expressed as follows:

– in its Human Rights Charter, through its committed and responsible human resources policy, which respects the rights and dignity of its employees and social partners[1];
– in its Code of Conduct and Ethical Standards[2], which notably promotes exemplarity, high standards and benevolence (Principle 5) and respect for employees and their personal development (Principle 6).

The management of material impacts, risks and opportunities are described in the following paragraphs.

3.1.3 Impact, risk and opportunity management

3.1.3.1 (S1-1) POLICIES RELATED TO OWN WORKFORCE

3.1.3.1.1 Human rights

Groupe BPCE is committed to respecting and promoting human rights, which is one of the cornerstones of its corporate social responsibility.

Groupe BPCE is a signatory of the United Nations Global Compact and endorses its "Ten Principles", of which two relate to Human Rights:

- promote and respect the protection of international human rights law in its areas of activity and sphere of influence. This responsibility relates to the internationally recognized human rights set out in the International Bill of Human Rights and the principles set out in the ILO's[3] Declaration on Fundamental Principles and Rights at Work;
- make sure they are not complicit in human rights violations.

The Group's convictions and commitments have been set out in the form of "Principles" in the Groupe BPCE Code of Conduct and Ethical Standards. "Promoting respect for human rights in all our activities" is thus anchored in the Group's values framework.

Groupe BPCE is also committed to applying the guiding principles on business and human rights set out in the United Nations' "Protect, Respect and Remedy" framework.

Groupe BPCE recognizes the fundamental role of States and governments in defining legal frameworks for the protection and full exercise of human rights. The Group thus complies with the legal and regulatory provisions of the regions in which its activities are carried out. Groupe BPCE is also convinced of its role in preventing serious violations of human rights, both in the context of its internal operations and for the risks directly related to its purchases and its products and services.

Through its committed and responsible human resources policy, Groupe BPCE respects the rights and dignity of its employees and social partners. In particular, the Group:

- strives to create an inclusive and respectful environment, without distinction or discrimination, which promotes the well-being of its employees and offers remuneration that values employee commitment;
- ensures the implementation of an adequate prevention and protection system to guarantee health and safety at work and undertakes to protect the privacy of its employees and the confidentiality of their data in accordance with the applicable regulations;
- respects the rights of its employees to freedom of association and collective bargaining.

The Group's employees must, in the context of their professional activity, apply and respect Human Rights, this rule is contained in the Code of Conduct and Ethical Standards that applies to all employees.

(2) Code-of-conduct-ethics-FR-2.pdf (groupebpce.com).
(3) International Labor Organization.

3.1.3.1.2 Dialog with employee representatives & working conditions

GROUP SOCIAL POLICY

Groupe BPCE's social dialog complies with local regulations and takes the form of organized dialog with employee representatives in France. Internationally, there are no laws or regulations on employee bodies in the countries where the Group is most represented.

Groupe BPCE's employment policy is based on an ongoing dialog led by the legal bodies and endeavors to respect the fundamental rights and freedoms of employees. Social dialog is based on regular exchanges with employee representatives and representative trade unions, which are key players in the proper functioning of the Group's various companies. Dialog with employee representatives thus contributes to the Group's economic and social performance.

Groupe BPCE's social dialog and negotiations with social partners are structured around three levels: the Group, the branches, and the companies.

At Group level, regular discussions with the representative trade unions take place in three main bodies:

- the Group committee, a body for information, discussion and dialog on subjects such as the general market, the economic and financial situation, and the Group's social policy;
- the Strategy Committee, a body for sharing the Group's strategic plan and overall vision;
- the negotiation body with the three representative trade unions at Group level.

In this context, dialog with employee representatives is reflected in group agreements applicable to the various entities, such as:

- the 2022 Workforce and Career Management agreement on Employment and Skills Forecasting (which addresses the themes of intergenerational balance, end-of-career arrangements, skills development, professional and geographical mobility and mobility leave);
- the 2022 agreement on the career paths for appointed employees (which deals with support for employee representatives when taking office, during their term of office and at the end of their terms of office).

At the level of the Banque Populaire and Caisse d'Epargne branches, social dialog takes the form of regular exchanges with trade unions within the framework of the Banque Populaire Joint Commission (CPBP) and *Commission Paritaire Nationale* (CPN), leading to the conclusion several collective agreements, such as : in 2024 the Banque Populaire and Caisse d'Epargne collective agreements on the prevention of incivility and professional equality between women and men. An NAO agreement was also signed in each of the two branches. In addition, social dialog in the Banque Populaire and Caisse d'Epargne branches is mobilized in the field of human resources development and business lines through the *Commissions partitaires nationale pour l'emploi* (National Employment Committees (CPNE)) and the *Observatoires prospectifs des métiers, qualifications et compétences* (Prospective observatories of business lines, qualifications and skills (OPMQC)).

Lastly, each Group company leads its own social dialog, thus guaranteeing an approach adapted to each entity's specificities while respecting the fundamental rights of employees.

This three-tiered organization ensures fluid communication and a strong commitment to collective bargaining.

The Group is committed to maintaining an open, transparent and constructive dialog that contributes to the implementation of its strategy and the performance of its activities. This dialog with employee representatives promotes the support of social partners and employees in the deployment of the Group's social policies.

In this context, the Group is very keen to involve employee representatives as early as possible on the major strategic issues and transformations to be carried out within its organization. These discussions prior to the deployment of projects facilitate understanding both in terms of the Group's challenges and development prospects, thus avoiding possible situations of blockage or potential infringement that could not only harm the Group's operations but also lead to a decrease in employee commitment.

REMUNERATION & PERSONAL DATA PROTECTION

Remuneration policy

The Group's remuneration policy is structured to promote long-term employee commitment and strengthen the company's attractiveness. It reflects the individual and collective performance of the business lines and employees, while ensuring that it is not a vector of conflicts of interest between employees and promoting behavior in accordance with Groupe BPCE's culture and the rules of good conduct.

The remuneration policy also aims to offer competitive remuneration levels in its reference markets. The Group regularly compares its practices with those of other similar players in France and internationally, to ensure that its remuneration policy remains competitive and appropriate for each of its business lines and entities.

The remuneration policy also incorporates the fundamental objectives of professional equality and non-discrimination. In this respect, the Group ensures, in particular, the equal treatment of women and men in terms of remuneration (details of the action plan in the Section 3.1.3.4.3 *Discrimination and equal opportunities*). The Group also pays particular attention to the remuneration of its junior and senior employees.

Finally, the Social and Environmental Responsibility (CSR) dimension is integrated into the remuneration policy at several levels, for example:

- by taking into account the Group's CSR strategy in determining the variable pay of the Executive Management Committee of BPCE (see 1.4.3 - GOV 3 for more details),
- for certain subsidiaries:
  - the inclusion of CSR indicators in profit-sharing agreements,
  - the systematic choice of SRI-certified funds[1] or those incorporating ESG criteria for the free management of employee savings plans (PES) and collective retirement savings plan (PERCO),
  - the profit-sharing agreement, which provides the inclusion of CSR indicators to calculate the special profit-sharing reserve (sustainable and impact assets under management for asset management activities and the amount of green income for corporate banking and investment activities).

(1) Socially Responsible Investment.

The remuneration of Group employees is structured around the following three components:

- fixed pay that reflects the skills, responsibilities and expertise expected in the performance of a position, as well as the role and weight of the function in the organization. It is determined according to the specificities of each business line within its local market. It includes the basic wage, which compensates for the skills and responsibilities corresponding to the position held, and, where applicable, additional fixed pay related to geographical mobility and/or the specific nature of certain functions and responsibilities, allocated in accordance with regulations;
- individual variable pay, awarded annually according to the results of the activity and/or the achievement of predetermined individual objectives, including the contribution to risk management taking into account market practices (business line/geography). It may be paid in full in cash in the year of the grant. For certain employees (depending on their regulatory status, their profession and/or their level of variable pay), the payment may also be partly deferred, indexed to a financial instrument and subject to conditions, in a logic of loyalty and alignment of employees' interests within the long-term interests of Groupe BPCE;
- collective variable pay associated with employee savings schemes, particularly in France (profit-sharing and incentive schemes), as well as other local savings and/or social protection schemes offered in each jurisdiction.

Each employee benefits from all or some of these various components, depending on their job, their responsibilities, their skills and their performance.

The objectives and main principles of the Group's remuneration policy apply to all its employees in France and internationally. This policy is applied in all business lines, functional departments and Group entities according to their specificities and market practices, and in compliance with local laws and regulations that apply to them. The foreign subsidiaries, which are subject to specific regulations, have their own remuneration policy, which is in line with that of the Group.

The Supervisory Board for BPCE or the Board of Directors for Natixis - is the body for approving the remuneration policy and its implementation, guaranteeing independent decision-making through its composition and prerogatives.

More specifically, the decision-making process is structured around several successive levels of validation:

- business lines, functional departments and entities;
- Executive Management in coordination with the Human Resources division;
- Board of Directors after consulting the Remuneration Committee, itself composed of directors, half of whom are independent

The Compliance and Risk divisions, as control functions, are involved in the implementation of the remuneration policy, in particular to ensure that risk management and behavior in terms of conduct and compliance are properly taken into account when determining the amounts of individual variable pay.

The remuneration policy is in strict compliance with the legal obligations that apply to the company at the national, international, European and/or local level in terms of labor law and social and tax legislation.

In France and in the countries where the legislation provides for it, the social partners are involved in determining the remuneration policy. Each year in France, mandatory annual negotiations (NAO) are held with representatives of representative trade unions on the main components of remuneration. Employee savings schemes (including profit-sharing and profit-sharing), as well as social protection schemes (healthcare costs, personal risk insurance) are also governed by collective agreements negotiated with social partners. Lastly, the theme of equal pay is included in the agreements signed on gender equality.

Internal communication

Policies and practices in terms of remuneration and social benefits are disseminated and applied internally in the form of procedures, guides, notices and guidelines to the various stakeholders involved in their definition and implementation, particularly within the Human Resources, Risk and Compliance divisions. Managers involved in the annual review of their employees' remuneration are also supported within the same exercise.

At the end of the annual remuneration review, the components of remuneration specific to each employee (individual fixed and variable pay) and their evolution are communicated by their manager.

An Individual Social Report is sent to employees each year to explain the components of annual remuneration. It presents both quantitative and qualitative elements related to:

- direct remuneration and its composition;
- employee savings schemes;
- social protection (protection, health, retirement, etc.);
- the various benefits.

External communication

In addition, as part of its compliance with its regulatory obligations, the Group is required to publish an annual report on its remuneration policies and practices on its website, with a focus on employees identified as having a material impact on the company's risk profile under the CRD regulation[1].

The Group also complies with transparency requirements with regard to supervisory bodies in France, at the European level and in the various countries where it operates, such as the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector, the European Central Bank (ECB) and the *Autorité des Marchés Financiers* (AMF), the French financial markets authority.

Employee data protection

Groupe BPCE has defined a Group data protection policy that reflects the organization of the Group's Privacy function.

In line with this general policy, the Group has drawn up an information notice on personal data for employees, relating to the processing of their personal data. It meets the obligation of transparency due to the holders of personal data in the context of the use of their data.

This Group information notice has been applied to each entity within the scope of supervision of Groupe BPCE as its central institution.

(1) Capital Requirements Directive.

This policy also sets the requirements for employee training on GDPR compliance[1].

This applies to all Group employees, insofar as they are located in a country subject to GDPR regulations. It should be noted that the SECs, as independent legal entities, are not subject to this policy, as they are outside the scope of BPCE's supervision as a central institution.

The draft policy is prepared by the Group DPO (data protection officer), belonging to the Group Security division, and submitted to the GDPR umbrella committee, named the Executive Privacy Committee, four members of BPCE's Executive Management Committee are present or represented, for approval by Groupe BPCE's Standards and Methods Committee.

The policy is an extension of the European regulation (GDPR) and its implementation in French law. It also incorporates the guidelines of the EDPB and the French regulatory authority, the CNIL.

The policy transparently defines the rights of employees and the procedures for exercising them. Employees therefore have access to information on the processing of their personal data through the Data Protection Policy and the Data Protection Notice.

The policy and its operational implementation (the Personal Data Information Notice) are accessible on the intranet page containing the standards applicable within the Group:

- the employee intranet space - NORMA;
- the Data Protection area - the Kiosk;
- the intranet space opened in each Group entity for the benefit of employees - intranet portal.

QUALITY OF LIFE AT WORK

Quality of Life and Working Conditions (QLWC) is a major area for Groupe BPCE that concerns each company and each employee individually. The QLWC policy aims to strengthen collective commitment and effectiveness and have a positive impact on the development and health of employees to serve the overall performance of the Group and its companies. The QLWC includes a set of issues such as: the work environment, work-life balance, support for transformations, career support, recognition and the right of expression, etc.

The QLWC approach is co-constructed with the coordination of a group-level function and the deployment of actions within the entities by local representatives. These actions, resulting in concrete measures to improve the working conditions of employees, directly contribute to the well-being and satisfaction of employees as well as to the reduction of psychosocial risks (workload, stress, burn-out, etc.).

Since 2009, several QLW agreements have been signed within the Group:

- agreements on stress measurement and prevention;
- agreements on working conditions;
- agreements to expand the possible fields of intervention by articulating all QLWC topics to facilitate the implementation at the local level of each company;
- agreements including new provisions on occupational health, workload regulation and support for managers.

For the Group, QLWC adapted by each company, is a catalyst for sustainable performance, making it possible to reconcile efficiency and employee well-being. Four aspects are taken into account:

- attention to **well-being** at work: "**Care**": systems for well-being and work-life balance (*Right to disconnect, Concierge services/ Well-being areas, Parenthood, Health Plan/Fight against sedentary lifestyle, etc.);*
- the **quality of relationships** and **leadership**: trust-based management that empowers teams and helps them grow (*Leadership model - Leadership Development Programs - Simplicity of Organizations);*
- **working environment**: a framework that facilitates efficiency and collaboration (*Support for hybrid work, Workspaces, Collaborative tools, integration of the human dimension in the management of **transformations**);*
- **transformation**: a constantly evolving company, which ensures that employees are committed to change (*Change management methodology, Increased attention to psychosocial risks).*

All of these actions, supported by constant dialog with employee representatives, make it possible to limit the high risk of financial losses related to turnover, absenteeism and employee disengagement, risk arising from:

- the loss of talent, recruitment costs, the training of new employees, and the replacement and financing of all or part of the absences;
- lost revenue related to the decline in productivity, performance and internal or external customer satisfaction.

RISK PREVENTION AND SAFETY AT WORK

Groupe BPCE deploys its Personal and Property Security policy on the basis of branch agreements and the legal provisions in force (Banque Populaire and Caisse d'Epargne). It issues safety and occupational risk prevention rules.

The documents apply to all employee activities as well as outsourced services and concerns all Groupe BPCE companies subject to French regulations (4121-1 to 8 of the French Labor Code).

The safety and incivility branch agreements or the legal provisions in force, shared with employee representatives, organize prevention and safety and adapt the systems, equipment and human resources in order to achieve the overall safety objectives.

French regulations are thus made operational and applied to banking activities, which also comply with the regulations of the host countries for international subsidiaries with local legislation.

Through the prevention of occupational risks, major risks and the safety of banking activities, companies aim for:

- a positive impact on the feeling of safety and the improvement of working conditions;
- the reduction of the financial impact on the amount of the social security contributions, in addition to the reduction in the number of days lost in the event of a workplace accident.

(1) The General Data Protection Regulation.

Management committees and safety reviews are within each company. They ensure that the process is adapted and updated on a regular basis. The steps are shared with the staff involved in the implementation.

Management, with the help of community tools, provides a global, consistent and structured vision for the entire group. Procedures for preparing and responding to emergencies or major situations are also implemented by companies. A monitoring and management unit can be activated at Group level.

Permanent control plans guarantee risk control and compliance of measures.

3.1.3.1.3 Promoting equal opportunities and combating discrimination

The Diversity, Equity & Inclusion policies deployed within Groupe BPCE reflect the conviction of its executives that there is no performance without collective intelligence and therefore without diversity. To make room for all singularities and therefore all diversities, means:

- being faithful to the Group's values, because collective intelligence and cooperation are at the foundation of the creation of Groupe BPCE;
- meeting the expectations of customers, regulators and civil society more broadly.

Proactive HR policies have been in place for several years in order to build an even more respectful and inclusive working environment, which capitalizes on the diversity of its employees and allows everyone to be heard, valued and have an impact. Our HR policies offer the same opportunities to talents from all backgrounds, regardless of age, background, gender, orientation or gender identity or disability.

Supported by the managers, this Diversity, Equity & Inclusion policy is an opportunity and a positive impact on several levels:

- in terms of innovation and transformation thanks to the comparison and cross-examination of the diversity of its employees, customers, cooperative shareholders and service providers;
- performance, thanks to a better understanding of the needs of all customers in all markets;
- commitment and employer brand, in response to the expectations of candidates, employees and civil society, who are increasingly attentive to these issues.

Driven at Group level, the Diversity, Equity & Inclusion policy is then rolled out at the level of each company, taking into account local specificities and adapting to the regulations of the host countries for international structures.

DIVERSITY AND GENDER EQUALITY

For several years now, the Group’s policy on diversity and gender equality has been structured around three areas: the representation of women in all the business lines at all levels of responsibility, equal pay and the fight against sexism and sexual harassment.

Since 2009 in France, with the signing of “Workforce and Career Management” (GEPP) agreements, the Group has defined a common base of actions in favor of gender equality. The majority of the Group’s companies have then supplemented these GEPP agreements with signing additional specific agreements on the subject of professional equality.

All of these agreements make it possible to define the means implemented in terms of recruitment, equal pay, professional promotion, parenthood, the fight against sexual harassment, sexist acts and other violence.

They are the subject of annual monitoring meetings with employee representatives, which present the actions deployed and monitor the progress of diversity and gender equality indicators.

Beyond the signing of these agreements, all executives are mobilized in favor of diversity and gender equality. In 2021, they publicly reaffirmed their commitment by signing a “diversity charter” ratified by all Group executives. To strengthen these actions and offer an increasingly respectful working environment for women and men by applying zero tolerance to sexism, Groupe BPCE is also a member of the collective initiative **#StOpE** composed of around a hundred companies, associations and schools, which is committed to the long-term fight against so-called “ordinary sexism in the workplace”.

The composition of the own workers is a concrete illustration of the Group’s commitment and results:

- the workforce is composed of 55.5% women and 44.5% men (figures available in 3.1.5.2 S1-6 Breakdown of own workers by gender);
- the representation of women within senior executives is 37.4% (MDR-M available in Section 3.1.5.5 S1-9 Diversity metrics).

Lastly, the Group ensures that women and men have identical access to training.

DISABILITY

Groupe BPCE has long been involved in the inclusion of people with disabilities and the retention in employment of employees faced with fragile health or personal accidents. Since 2006, the Group’s companies have implemented a proactive inclusion policy aimed at promoting the integration and retention in employment of people with disabilities.

This policy is based on clear commitments, enshrined in Groupe BPCE agreements, branch or company agreements, approved by the French State in accordance with the legal provisions set out in the framework of the French Obligation to Employ Disabled Employees (OETH)[1].

Through these agreements, the Disability policy covers the following main areas:

- **job retention**: thanks to the implementation of actions to detect disabling situations as early as possible, the Group’s companies can adapt working conditions and tools to the disability, in order to keep the employees concerned in their jobs. They also ensure that employees with disabilities can benefit from the same development prospects as other employees, in line with their ambitions, their skills and the opportunities offered, without the disability being an obstacle;
- **recruitment and integration**: there is a major gap in integration into the labor market between people with disabilities and the rest of the population. Thus, the Group’s Disability policy aims to promote: the professionalization of people with disabilities, sourcing and support for the integration of candidates with disabilities;

(1) Article L. 5212-13 of the French Labor Code.

- **changing outlook for better inclusion**: the Group's companies are committed to promoting disability awareness and inclusion, notably through the Mission Handicap Nationale and by the community of diversity & inclusion and disability officers;
- **support for the Sheltered and Adapted Work Sector**: Groupe BPCE's companies have a proactive purchasing policy and are committed to using the services of structures (*Entreprises Adaptées*, ESAT and Independent Workers with Disabilities) in the Sheltered and Adapted Work Sector (STPA) to support the external employment of people with disabilities who cannot work in the ordinary environment.

In France, in each Groupe BPCE company, a disability officer supports people with disabilities throughout their career in the company.

Within the Group, the Mission Handicap Nationale ensures the commitment of all companies and the continued momentum of sharing and pooling means and resources in each scope in order to maximize its impact.

Thanks to the implementation of this policy, the employment rate of people with disabilities within the Group reached 6.37%[1] in 2023, above the legal obligation of 6%.

6.37%

(2) Amount excluding tax of supplies, works or services, less the cost of raw materials, products, materials and selling expenses.

FIGHT AGAINST DISCRIMINATION & HARASSMENT

In order to offer a respectful and safe working environment, in which each and every employee can express their skills and potential, the Diversity, Equity & Inclusion policies are supported by robust HR systems to combat discrimination and harassment. They make it possible to reduce the underlying risks: the risk of deterioration in working conditions, the reputational risk and the associated financial risks.

Several types of systems are available to the Group's employees:

- guides and communication campaigns that raise employee awareness against all forms of discrimination, such as sexism and racism;
- training to understand what inclusion consists of and how, in addition to the policies put in place, all employees are involved in inclusion;
- specific training to enable employees to recognize and fight against the different types of discrimination and harassment (see Chapter 4 Actions);
- with regard to the fight against sexual harassment and sexist behavior, a network of harassment officers trained and led by Group HR teams and company HR divisions.

3.1.3.1.4 Attractiveness, employee loyalty and commitment

ATTRACTIVENESS

The Group Human Resources department is responsible for the main guidelines applied by each entity for the implementation of the attractiveness policy. The latter is co-constructed with the various stakeholders, divisions concerned, employees and candidates, all involved at different times. The Group's policy is disseminated through all internal HR (HR divisions, recruitment managers, career managers, etc.) and external (social networks, trade shows, etc.) channels.

Groupe BPCE stands out for its social DNA that is fueled by cooperative values, strong local roots and a desire to act as a responsible employer. The Group's strategy, consisting of recognized and powerful brands, is based on four key dimensions that guide its approach to recruitment, retention and commitment.

- ***Skills***: a group that gives all its employees the means to succeed and thrive at every moment of their professional life

The Group Human Resources department, with the HR officers in each entity, mobilizes the recruitment system to detect and attract talent, by focusing in particular on the apprenticeship of young people. Its loyalty policy takes the form of individualized support for employees in their professional development and proactive career management, thus promoting their employability. Groupe BPCE's HR policy aims to grow each employee by giving them the time and resources to continuously train to maintain and develop their skills, or to reinvent themselves within the Group by implementing their professional development or retraining projects. (see 3.1.3.1 S1-1 Skills development section).

(1) **Scope**: Groupe BPCE for French companies only // **Calculation**: Beneficiary of the obligation to employ workers with disabilities (BOETH) workforce employed by the company for the obligation to employ workers with disabilities (OETH) for the year/workforce subject to the OETH (D. 5212-1 of the French Labor Code). Figure communicated to URSSAF each year.

- ***Equality and inclusion***: a respectful group that offers a protective working environment

Groupe BPCE considers diversity to be an asset: it trusts everyone, regardless of their career path, by tangibly realizing the promise of equal opportunities, universal accessibility, diversity, inclusion and professional equality. Initiatives in favor of gender equality, the employment of people with disabilities and pay equity, as well as awareness-raising and educational support programs illustrate this commitment to creating an environment in which every employee feels respected. Groupe BPCE's HR policy strives to offer a real comfort of work, making it possible for each employee to give their best, through a culture of listening and dialog that takes into account all voices.

- ***Well-being at work***: a group attentive to the needs of its employees

Groupe BPCE implements a work environment that meets the highest standards of well-being and health and safety at work, in terms of quality of life and work organization, work-life balance, health and personal risk insurance. It implements listening and support systems, promotes initiatives such as occupational health programs and spaces for dialog with employee representatives to improve the experience for everyone.

- ***Sense and pride in belonging***: towards a positive and powerful impact

As a cooperative full-service banking group, Groupe BPCE wants each employee to feel proud of being part of a collective adventure and unifying moments with a strong positive impact on societal challenges, such as major transitions, sustainable finance, social innovation or the Olympic and Paralympic Games. It implements a tangible and pragmatic HR policy to support its employees towards responsibility, autonomy and initiative, by spreading an entrepreneurial culture in each business line, at each level and in each Group entity. It encourages employees to get involved outside the company and recognizes the place of this commitment in their lives, whether in terms of sports, civic or educational commitments, or with their families.

RECRUITMENT AND EMPLOYER BRAND

The strength of a decentralized, multi-brand group

The Group's companies attract, recruit and develop talent in line with the components of the markets and companies in which they operate, both in France and internationally, while capitalizing on centralized resources. The values of cooperation, trust and commitment are conveyed through the Group's website and disseminated through various internal and external communication channels.

Recruitment processes are adapted to local organizations to enable candidates to join a company that will provide them with the right level of professional support, with the possibility of moving on within the Group. Each company has the opportunity to adapt its human resources management methods to its market and its needs.

Attractiveness of Groupe BPCE brands

Groupe BPCE has been able to develop a consistent communication strategy between its brands based on three pillars:

- placing the employee at the center by including employee testimonials in its publications;
- conducting communication campaigns to promote the business lines and support recruitment operations;
- promoting all its commitments in terms of inclusion (gender equality, disability, diversity) with dedicated communication plans (pride month, European Week for the Employment of People with Disabilities (SEEPH), diversity week, etc.).

The Group has strengthened its presence and visibility on two social networks:

- LinkedIn to promote the Group's culture and professional commitments by embodying its DNA through its employees as much as possible;
- Instagram to develop proximity and conversation with the audience, in particular through stories.

In 2024, the Group obtained the following results on LinkedIn[1]:

- number of subscribers: +21% between January - August 2023 and 2024:
  - over the period January - August 2024, 223,206 subscribers were registered on the platform,
  - for the period January - August 2023, the figure was 176,332 subscribers;
- number of appearances of a publication:
  - more than 4 million in the first half of 2024 compared to 1 million in the first half of 2023;
- number of visits to the Group's page:
  - 256,968 visits in the first half of 2024 compared to 55,535 visits in the first half of 2023.

Groupe BPCE and its entities are featured on several job boards and specialized media. The objective is to significantly develop the reputation and image of the various brands through increased communication on the culture, business lines and employment opportunities within the Group. The challenges are as follows:

- increase the visibility of messages to generate media impact and recruit qualified candidates;
- develop a multi-channel and mixed content strategy to address targeted messages on the platforms mentioned above.

Strong markers around Sport, Health and Collective engagement

The Group's policy of attractiveness is based on its strong societal engagement:

- in 2023: launch of the Sport, Health & Collective engagement program, which includes measures to promote sports and physical activity within companies, actions aimed at having a positive impact on health (soft mobility, nutrition, etc.) and commitments to associations;
- in 2024: the development of sports practices by as many people as possible, notably through the partnership with Paris 2024, the sponsorship of the *Relais de la Flamme* (torch relay), and the organization of recruitment operations: 56 recruitment operations (*source Indeed*) from May to July 2024 in all French regions.

(1) The figures are taken from the LinkedIn tracking platform.

Strengthening the employer brand and Groupe BPCE's commitments to young people

Groupe BPCE is resolutely committed to strengthening its employer brand among young talent. Aware of the importance of this new generation for the future of the company, the Group has a dedicated strategy aimed at attracting, developing and recruiting young professionals. At the end of 2024, the Group had 5,172 work-study students[1] (metric monitored at Group level) within its companies.

Diversify recruitment: OPIE and retraining of athletes

Several Group companies have set up the Operational Preparation for Individual Employment (OPIE) system offered by *France Travail*, which makes it possible to train and recruit job seekers.

The Group also invests in the field of sports to open up its recruitment to diversity and profiles with atypical career paths. A partnership developed with the *Association Française des Banques* (French Banking Association - AFB) enables the group to recruit young people, some of whom are far from the job market, as work-study trainees for customer service positions.

In 2024, a partnership was also signed with a specialized service provider to hire high-level sportspeople undergoing career changes. Groupe BPCE accompanies the athletes supported during Paris 2024 who wish to join the corporate world after the competition.

Supporting employees as soon as they join the company

Significant benefits for the Group's employees thanks to measures such as:

- integration and support for new employees: the Group's companies have undertaken to offer a reinforced onboarding program over three years, within a common framework by a GEPP (Workforce and Career Management) agreement renegotiated every three years. The current agreement signed on July 12, 2022 covers the 2022-2025 period;
- talent retention (systems for promoting success in positions, internal promotion culture, empowerment, corporate and Group talent pools and building individual career paths) (see 3.1.3.4.4 Skills Development).

Enhanced support and monitoring for a positive newcomer experience

Each Groupe BPCE company undertakes to implement an onboarding process and carries out tangible actions that anticipate and support the arrival of all new employees. This approach is structured around several major stages:

A pre-boarding program to prepare for the arrival of the new employee, maintain a link and distribute information about their future environment (group history, HR policies, etc.) in several smooth and fun formats.

- on arrival, an onboarding process organized around welcome sessions, meetings with the team and key stakeholders, the stages of which are structured;
- reinforced monitoring during the first months, with regular interviews with the manager and the HR manager;
- "mentoring" is encouraged so that the new employee can be accompanied by an employee on an informal basis.

Some Group companies are equipped with dedicated platforms to facilitate the support of employees in pre- and on-boarding. These tools offer an innovative, game-based employee experience and facilitate the onboarding of new employees.

Offer rewarding professional development through internal mobility and support for employee projects and career paths

Groupe BPCE has made internal mobility one of its priorities, in order to strengthen the sense of belonging and commitment and retain talent. Mechanisms are made available to employees to boost internal mobility:

- a Job Exchange for each company and a Group job exchange, rolled out in all Group companies to facilitate access to available opportunities for all employees of the Group's companies;
- a Group platform that summarizes career paths by mapping the bridges between jobs and associated skills, is accessible on the intranet of all Group companies to enable employees to understand the many business lines and employment channels of the Group's companies and project themselves into possible developments and paths;
- a Group platform dedicated to supporting employees in their mobility projects, Mobiliway deployed in all Group companies and accessible to all employees *via* their job exchange;
- innovative platforms for self-declaration of skills in certain Group companies, which enable employees to view and receive job offers that best match their skills and aspirations.

Training employees

Groupe BPCE implements an active training policy, promoting continuous learning through its "BPCE Campus" (see 3.1.3.4.4. Skills development)

Supporting high-potential employees

Since 2022, the Group has deployed a long-term system that has led to the identification and support of high-potential employees at Group level. Two pools have been created: potential senior executives and core business lines to fill management positions with experts. Employees have a shared development plan and are regularly monitored by an assigned individual manager. They benefit from personal development support actions.

(1) **Definition** of the scope of work-study students in the metrics calculated: the total number of work-study students was calculated on the basis of the scope of entities subject to the CSRD // **Calculation methodology** of the total number of work-study students based on: counting the own workers on a contractual basis in number of work-study contracts / workforce present at the end of the reference period / closing date: December 31 of the reference year. // The metrics are produced on the basis of the France and international **scope**. The metrics are produced in France and internationally.

SKILLS DEVELOPMENT

Skills at the heart of the HR policies

Groupe BPCE is committed to the long-term employability of its employees by offering them the possibility of broadening their experiences through rewarding career opportunities and the continuous development of new skills. In a constantly changing environment, Groupe BPCE is also committed to developing its high-potentials and its leaders to ensure succession in the company's key positions and manage the achievement of its commitments, particularly in terms of diversity and inclusion.

Groupe BPCE's skills development policy is part of an evolving context of its business lines and strong competition. Groupe BPCE is convinced that the development of technical and relational skills is an essential driver for individual and collective success and is determined to put skills at the heart of HR policies.

In France, this policy is expressed through the signing of an agreement for all Group entities on Workforce and Career Management agreement (GEPP) in July 2022 which defines a common set of policies and practices for all Group entities. This agreement is supervised by the Group HR department.

It is consistent with the branch and company agreements signed within the Group in the areas of professional training, gender equality and quality of life at work, in accordance with current legislation on professional training in France.

The main objectives of the skills development policy are therefore broken down into four major areas:

- promoting the integration of young people into the business lines;
- encouraging professional mobility & supporting business line transformation;
- raising awareness on CSR;
- developing a positive AI culture.

3.1.3.2 [S1-2] PROCESSES FOR ENGAGING WITH OWN WORKFORCE AND WORKERS' REPRESENTATIVES ABOUT IMPACTS

3.1.3.2.1 Dialog with employee representatives and working conditions

DYNAMIC DIALOG WITH EMPLOYEE REPRESENTATIVES

Dialog with employee representatives is based on a series of interactions both within the Group's Human Resources/Labor Relations function, with the Employee Representatives as well as with employees *via* the Human Resources departments in particular.

With regard to the Human Resources/Labor Relations function, the Group HR department coordinates its policy on dialog with employee representatives through - and in agreement - with the entire community of directors, Human Resources Directors and Labor Relations in order to allow harmonization of practices, global monitoring of issues affecting the entire working community and shared expertise. This activity takes the form of regular *ad-hoc* exchanges, working groups dedicated to specific topics as needed, as well as two seminars per year.

With regard to interactions with Employee Representatives, as discussed in Section S1-1 - 3.1.3.1 on policies related to the own workforce, regular meetings are organized within each entity concerned, with the joint committees of the branches or with the social and economic committees (CSE) as well as with the specialized committees within them (health, safety and working conditions committee, etc.). In addition, Employee Representatives are the local contacts for employees within the Group's companies to raise their concerns and questions and obtain answers.

Collective agreements are negotiated with union representatives. When agreements are signed, all employees concerned are informed of the measures negotiated applicable to them.

REMUNERATION & DATA PROTECTION

REMUNERATION

Payroll is subject to a regular individual review *via* annual interviews conducted by management under the supervision of the HR Department. In addition, employees can contact their line managers or the HR department at any time to discuss the subject of pay. At the collective level, pay is subject to mandatory annual negotiations with the social partners (details available in Section 3.1.3.1 *S1-1 Remuneration policy*).

Data protection

The DPO (data protection officer) of the employee's parent entity is competent for the exercise of rights or requests for information on the processing of personal data. For this purpose, a generic mailbox makes it possible to collect requests made by employees.

The responses are sent directly by the DPO to the requester, using the same communication channel as the referral. In accordance with the GDPR, feedback made following a right of access are in a clear and accessible format.

QUALITY OF LIFE AT WORK

In terms of Quality of Life at Work, Groupe BPCE's Human Resources department has set up a dedicated organization with a national contact who drives, develops and implements QLW actions alongside companies. This shared approach specific to the cooperative organization has gradually made it possible to develop a harmonized QLW policy (clarification available in Section 3.1.3.1 *S1-1 Quality of life at work*).

The quality of life and working conditions is a collective and concerted momentum of action by employees, managers, executives, occupational health and social assistance players, and social partners.

Employee listening systems are regularly deployed within the Group's various entities, with a view to dialog and continuous improvement (*see paragraph "Listening systems" in Section 3.1.3.2.3 "Attractiveness"*).

At the local level, the creation of a QLW officer, who is the coordinator and bearer of the local policy, makes it possible to define and carry out actions as close as possible to the ground according to the specific context of the companies.

At the national level, the QLW players' function benefits from specific activities through discussions, co-construction, experience sharing and studies. Web conferences and meetings are regularly organized. The QLW officers have a QLW website, which is a memory of the function's work, and a social network platform specific to their community. A professionalization system that can be adapted to the needs and constraints of participants is available to new officers. It enables them to acquire the skills necessary to implement appropriate systems and thus avoid negative impacts of an insufficient quality of life at work.

RISK PREVENTION AND SAFETY AT WORK

The Group Security department is the reference documentation for the Safety and Security of People and Property, and oversees its implementation and updating. In addition, it is the responsibility of each company to implement the rules and recommendations set out in the reference documentation within their respective contexts in accordance with the validation processes and the responsibilities of the institutions representing the company's employees.

Agreements are shared at the national level with employee representatives at the level of the *Association Française de Banque* (AFB), Caisse d'Epargne and Banque Populaire branches. They are distributed to member companies with the aim of informing their departments responsible for implementing the agreement (real estate, sales, security departments, etc.), the employee representatives and the employees concerned.

Dedicated information and follow-up moments are shared with employees and their representatives at several levels:

- a national joint committee takes stock of the past year by reviewing:
  - statistical balance sheets of accidents,
  - analyzing work situations according to business line transformations,
  - security devices and equipment inventory taking into account technological developments,
  - study of safety rules and procedures;
- Within companies, a health, safety and working conditions committee (CSSCT) meets quarterly. It is made up of Management and employee representatives who interact quarterly on prevention and safety issues. Annually, an accident report and an action plan is presented to the Social and Economic Committee (SEC). The latter is regularly consulted to issue an opinion on the various projects or when calling on an expert.

In parallel, companies also adopt the Group's Personal and Property Security Policy. They define the procedures for operational application within them (organization, management, bodies, etc.) by regularly interacting and informing employees and their representatives.

3.1.3.2.2 Promoting equal opportunities and combating discrimination

The Group's HR teams are the entry point for the Diversity, Equity & Inclusion policy with all stakeholders, employees and their representatives.

As indicated above, the agreements monitoring committees (Professional Equality, Disability, GEPP) draw up the quantitative and qualitative assessment of the actions deployed and are part of a constructive dialog with employee representatives.

In terms of interaction, Groupe BPCE relies on a number of key HR players. They cover several distinct scopes and are spread across all companies in France:

- the diversity & gender equality officers: their role consists in promoting, leading and coordinating the implementation of the Diversity & Gender Equality policy within the company. They deploy training systems, manage key indicators and relay the tools and highlights made available to employees;
- the HR harassment officers: in accordance with the law in force, their role is to guide, inform and support employees in the fight against sexual harassment and sexist behavior;
- the SEC officers are appointed within each SEC to fight against sexual harassment and sexist behavior. They are trained *via* the Group system made available to them or *via* another training program of their choice;
- the disability officers: in each company of Groupe BPCE, a disability officer supports people with disabilities throughout their career in the company (recruitment, integration, training, job retention, support in the process of recognizing their disability, etc.) in conjunction with Human Resources managers, managers, occupational health services and disability missions.

These groups of officers are key contacts for employees, who can call on them as needed.

To carry out their duties, the officers are trained and coordinated through regular meetings and exchanges of best practices.

Another key relay for employees is the associative networks as a space for discussion and action plan proposals for ever greater inclusion of all types of diversity. Groupe BPCE currently has:

- female or mixed-use networks which exist in almost all of the Group's companies and bring together a large group of committed employees;
- Groupe BPCE's *Les Elles* network of women in banking contributes through its actions to gender diversity in positions of responsibility, as a career facilitator that defends and promotes diversity, and offers advice on how to dare to pursue a career as a woman. (lesellesdebpce.fr);
- the WINN network (We in Natixis Network), is an association open to all employees, which aims to promote diversity in management in France and internationally through conferences, mentoring and networking events;
- the All Equals network, created in 2020, which aims to promote equality and inclusion of LGBT+ people. All Equals is open to all Group employees, regardless of their workplace, sexual orientation or gender identity;

Lastly, to promote and disseminate all of the Group's Diversity, Equity & Inclusion commitments, dedicated online spaces are accessible to all employees in France and abroad. They can find all the key resources there (charters, agreements, key figures, news, etc.).

3.1.3.2.3 Attractiveness, employee loyalty and commitment

ATTRACTIVENESS

The HR functions of the Group's entities are regularly coordinated around the themes of Recruitment & employer brand, integration & loyalty, listening systems, enabling employees and their representatives to be informed of all projects and news.

In France, a Group GEPP agreement (signed on July 12, 2022 and covering the period from 2022 to 2025) gives rise to an Annual Monitoring Committee bringing together staff representatives as well as corporate HR managers and the Group's HR department. This agreement lays down key principles on the integration and retention of employees over three years, on the development of skills and career development.

Groupe BPCE's HR department offers a range of attractive programs for the Group's candidates and employees.

DIAPASON barometer

The Group diapason barometer, developed with IPSOS, has become a key tool for interaction with employees and for measuring the transformation of the Group and our companies. It is a measure of trust and commitment. Rolled out to all Group employees, the purpose of this engagement survey[1] is to collect employees' opinions on their professional situation and their perception of the company at local and Group level.

In 2023, the results of the Diapason barometer at Group level:

- 60,698 respondents;
- 77% participation rate;
- 72% engagement rate;
- 76% of employees confident in the future of their company[2].

Specific listening systems

Depending on their challenges and the context, different systems are made available to the Group's entities to carry out *ad hoc* surveys. They are based on tools referenced at Group level:

- *Key employee moments*: this system makes it possible to question employees during the main events of their professional career, generating the implementation of specific action plans;
- *Your Pulse program:* deployed since 2020, this program aims to regularly take the pulse of the teams *via* short surveys and thus be as close as possible to employee expectations;
- *other mechanism*: in all the Group's systems, the integration of several open questions makes it possible to listen to employees' concerns and to encourage more spontaneous proposals in order to identify the acceleration drivers for necessary transformations.

These systems are made available to the Group's entities, which mobilize them as needed. They make it possible to prevent potential risks or identify improvements. They ensure that the processes concerned are adapted and regularly updated.

The Group is very keen and committed to maintaining a constructive and permanent dialog by involving employee representatives, along with all or some of the employees, depending on the themes addressed during the listening sessions in order to avoid any decline in employees' engagement.

Developing interactions between Groupe BPCE companies

The HR Managers of the companies regularly discuss all topics related to recruitment at thematic meetings. The practices and tools used by companies are compared in order to optimize them.

Centralized management of the main recruitment tools (application management software, recruitment processes, interviews, tests) are referenced and integrated for a majority of solutions.

Lastly, the service providers also solicited and used to complete this offer are subject to agreements and partnerships widely communicated within the companies and they give rise to benchmarks, best practices and experience sharing that boost Groupe BPCE's recruitment management.

Group employee ambassadors

Groupe BPCE employees are regularly asked to have their say on social media: promoting their business lines, sharing behind-the-scenes information on their business lines, promoting a commitment. Employees are also encouraged to post a review on recruitment platforms such as Glassdoor and Indeed.

The Group's employees can also be stakeholders in the recruitment activity, by:

- participating in actions to promote the Group's business lines to target schools;
- co-opting candidates for job offers within the Group.

Allowing employees to be ambassadors or co-opters is also a strong commitment driver.

SKILLS DEVELOPMENT

In France and abroad, interactions between managers and their employees are at the heart of the skills development policy. These discussions make it possible to maintain the motivation of each employee, to identify their support and/or training needs, and to involve them in the construction and management of their career path.

Support for employee development

Employees can share their training needs throughout the year and also during their annual development interviews. Staff reviews organized between managers and Human Resources Managers make it possible to prepare for employee promotion and support their professional development.

In France, on the basis of these various exchanges, the Group designs skills development plans that are shared and monitored with employee representatives in dedicated bodies of the Social and Economic Committee.

(1) Annual survey or every two years.
(2) **Scope**: All Group companies //**Methodology**: questionnaire submitted to all employees on permanent (CDI) and active contracts on the roll-out dates.

A learning experience to encourage employees to train

The Group's entities offer their employees a portal for accessing training in response for the need for greater visibility on training opportunities.

Employees can thus find the main offers by theme (communication, project management, impact, etc.) and, for some of them, direct access to skills diagnostics that allow them to create personalized courses or content platforms.

3.1.3.3 [S1-3] PROCESSES TO REMEDIATE NEGATIVE IMPACTS AND CHANNELS FOR OWN WORKFORCE TO RAISE CONCERNS

3.1.3.3.1 Dialog with employee representatives and working conditions

There are different channels for raising employee concerns. In particular, they can contact their manager and their Human Resources Manager. Complaints can also be made *via* employee representatives or trade unions. Employee representatives can be contacted at any time to collect employee concerns.

The labor inspectorate may also be solicited directly by employees.

In addition, dialog with employee representatives at the level of the Group, the Banques Populaires & Caisses d'Epargne branches and BPCE allows for rapid meetings when the social partners solicit management on a particular and extraordinary topic, outside of the monthly meetings of employee representative bodies. The regularity of these meetings as well as the social highlights at Group level, such as the Group Works Council (at least two per year) and the Strategy Committee (also at least two per year), make it possible to report all complaints and demands made by the working community through the trade unions.

Each employee can ask their line manager and/or the HR department to express a concern about their own pay. A dedicated chat platform has been implemented to facilitate and accelerate the processing of individual questions. In addition, the social partners relay complaints and demands in terms of remuneration to company, branch and group bodies.

Generic addresses (delegate-protection-donnees@, etc.) are available in each Group company, and enable the DPO to be contacted in the event of a personal data breach. A response is provided within the legal deadlines, where applicable.

The Human Resources department of each company define their remedy procedures, manage and support the collective and individual situations identified (whistleblowing process available in the Section 4.1.1.3.3 *G1-1 Whistleblowing procedure*).

Group companies offer employees specialized psychological support to prevent psychosocial risks. Employees have free access to a telephone listening platform in complete confidentiality. Listed service providers also intervene occasionally at the request of companies to support crisis situations.

RISK PREVENTION AND SAFETY AT WORK

The processing and identification of employee exposure and accidents in Groupe BPCE companies are organized according to severity or organizational scope criteria.

All employees who are victims of an accident related to a professional activity or while commuting, inform their employer of the occurrence of a workplace accident by any means (email, telephone, SMS, etc.). This procedure is carried out on the day of the accident or within 24 hours at the latest.

The components of an accident or occupational illness are listed on the basis of the victim's declarations and declared to the corresponding Primary Health Insurance Fund according to national procedures.

Cases of serious accidents are analyzed and investigated by the Health, safety and security departments, and the results are shared in extraordinary meetings with employee representatives.

Faced with the constant increase in crime figures across the country, as a preventive measure, in 2023, Groupe BPCE's HR department decided to strengthen measures to report incivilities. The system includes a reporting tool to identify incidents, a management and processing workflow, an innovative training program based on virtual reality, awareness-raising guides adapted to managers and employees, and support measures for victims (psychological assistance, legal assistance, etc.).

The Group tool centralizes notifications of near-misses, work-related accidents and occupational illnesses.

Finally, procedures for preparing and responding to emergency or major situations are implemented by companies through business continuity. A monitoring and management unit can be activated at Group level.

Infrastructure improvement and business transformation projects are regularly subject to specific assessments proposing measures to improve working conditions, risk prevention and protection.

In addition, safety visits (safety and security of people and property) and actions in the workplace (health at work) are regularly scheduled. The whole contributes to the regular updating of the Single Occupational Risk Assessment Document (DUERP).

A Health, Safety and Security passport is available to all employees, particularly new employees, with a specific focus on the risks associated with their activity (fire, evacuation, coping with incivility, fraud).

Prevention, management and safety training programs cover all known risks and are adapted to safety experts, managers and employees. An annual assessment measures the skills acquired and available.

Actions to prevent occupational risks are undertaken in the Group's companies. They are reinforced by national management.

Permanent control plans ensure risk management and the compliance of measures.

Best practices are collected by the central institution. They formalize the effective measures deployed in companies. They are regularly shared at safety reports (changes in the temperature of heat waves, extreme cold, road risks, international missions, remote working, etc.). Managers, HR departments, Security Managers and business line managers are collectively involved in deploying prevention and protection measures from start to finish.

3.1.3.3.2 Discrimination and equal opportunities

In 2024, the Group rolled out a "Whistleblower" system to all employees (*See 4.1.1.3.3 G1-1 Whistleblowing procedure*) in which it is now possible to report information related to crime, offense, threat or prejudice to the general interest. In particular:

- a breach of the Groupe BPCE Code of Conduct and Ethical Standards;
- a violation, or an attempted violation, of the law or regulations in force;
- any action that has a negative impact on the environment;
- any behavior that is inappropriate in the workplace or that could harm everyone's safety.

Employees who are victims or witnesses of discrimination or harassment can contact the aforementioned officers. Their contact details are available on the company intranet. Some companies have also set up dedicated pages to remind people of the best practices to adopt and facilitate access to the whistleblowing system.

Several contacts are in position to answer employees' questions on diversity, inclusion and disability in complete confidentiality in order to inform them and support them in their approach depending on the situation and the subject.

Disability officers are available to take into account disability compensation needs. They receive, inform and provide guidance in complete confidentiality on issues relating to each individual disability situation and its impact on professional life.

The occupational physician is the essential contact person who can help to take stock of the impact of a health problem on professional activity and to formulate a request for adaptation of the position. He/she is bound by medical confidentiality.

The Social Worker manages all legal and internal procedures to support employees in administrative procedures, including in their private lives, and ensures a listening, information and guidance role.

The Human Resources Manager is also a privileged contact at all times of professional life.

Employee representatives of each company can be solicited as part of the diversity, inclusion and disability policy. They contribute to the protection of the physical and mental health and safety of employees within the company.

So that employees can benefit from a listening, information or advice space, the Group also provides all its employees with dedicated and anonymous listening centers.

3.1.3.3.3 Attractiveness, employee loyalty and commitment

ATTRACTIVENESS

Listening systems and continuous process improvement plans

The Diapason survey and additional listening systems are opportunities for employees to express their irritants and dissatisfaction. Groupe BPCE endeavors to report on results by entity, involving HR representatives. This makes it possible to identify operational action plans to be put in place to better support employees and initiate a continuous improvement process.

Monitoring jobs and working methods

In order to anticipate the impacts on working conditions, monitoring and tangible actions are implemented at Group level:

- a job observatory which provides a monitoring and alert system for quantitative and qualitative changes in the Group's jobs, and enables to fine-tune training, mobility and retraining programs.
- the implementation and support of new ways of working: work organization, hybrid work, management methods, etc.

An open and transparent application process

All candidates may request directly *via* the recruitment site to delete their applications and associated data in compliance with the laws and regulations in force.

In addition, to allow candidates more proactivity and simplified interaction, Groupe BPCE has also set up - with its partner who manages the application management software - a link system sent directly by email when the application is submitted to manage and even withdraw their applications and associated data.

Finally, all data is automatically archived and destroyed at the end of the legal period, and all data exchanged as part of the monitoring and reporting necessary for the proper functioning of these tools are coded to make anonymous all statistical processing necessary for the performance and evaluation of the effectiveness of the systems used.

Moderation

Groupe BPCE may be subject to unfounded complaints relating to "greenwashing" (excessive advertising in terms of eco-responsibility), "pinkwashing" (abusive advertising in terms of inclusion), opinions and/or comments on the social networks and rating platforms from candidates or employees, which could tarnish its employer reputation.

In response, Groupe BPCE has set up a moderation guide[1] which is managed by the Communication department with the help of a social media agency that supports it.

(1) https://groupebpce.sharepoint.com/sites/tous_acteurs_sur_les_reseaux_sociaux/

SKILLS DEVELOPMENT

The risk for Groupe BPCE companies could be that they may not identify the right skills for future needs. To update and take into account future skills needs, the Group has a certain number of tools and systems.

Business line observatories

Among these resources, the studies carried out annually by the Business Line Qualification Observatories (OPMQ) exist in each branch. Through these studies, the observatories offer an enlightened vision of current or future changes and the impacts of these changes on organizations, employment and skills.

The Group thus relies on those of the Banque Populaire, Caisse d'Epargne, *Association Française des Banques* (AFB) and Insurance branches with, in particular,

- specific studies on the Banque Populaire and Caisse d'Epargne scope (example in 2023 "*What levers to attract and retain employees in the banking sector, in a changing environment?*");
- inter-branch studies between the banking and mutualist departments (example: on the challenges of generative AI in the banking sector, ongoing in 2024).

In addition, studies are also carried out by OPCO ATLAS. They are accessible, as well as those carried out by the branches of the scopes, from the Prospective Atlas platform set up in 2024.

At Group level:

- a job development trend booklet, updated each year, including sensitive job sheets (identified according to the findings of observatory studies, particular context, recruitment difficulties, etc.) is accessible to all employees (example in 2023: professional customer advisor, branch manager and remote banking advisor);
- dynamic personalized mobility platforms bring together information on the Group's business lines, training courses and mobility bridges;
- ongoing updating of skills and employment standards in line with the business lines and on a regular basis.

Continuous updating of business line frameworks

The Group HR division regularly updates the business line and skills frameworks in line with changes in the business lines and under construction with the business line divisions of the Group and its entities. As indicated in the Group GEPP agreement of 2022, these operational and dynamic business benchmarks must enable managers, employees and the HR division to build individual policies and trajectories for the development of skills and performance on a daily basis and over the long term. These business line frameworks provide useful material for discussion when assessing the employee's work, particularly during the assessment interview and/or a skills assessment.

3.1.3.4 (S1-4) ACTIONS ON MATERIAL IMPACTS ON OWN WORKFORCE, APPROACHES TO MANAGING MATERIAL RISKS AND PURSUING MATERIAL SIGNIFICANT OPPORTUNITIES RELATED TO OWN WORKFORCE, AND EFFECTIVENESS OF THOSE ACTIONS AND APPROACHES

3.1.3.4.1 Human rights

In France and internationally, HR divisions implement measures to guarantee benchmark standards for HR policies. In 2023, a map was drawn up as part of the Duty of Care to identify more specifically the risks relating to working conditions, discrimination and personal safety in the various Natixis sites. These assessments are based on recognized external databases, such as ILO (International Labour Organization) statistics or the ITUC (International Trade Union Confederation) Global Rate Index. On the basis of these analyses, the sites with more than 50 employees that present a risk in terms of human rights, health and safety are as follows: China, United Arab Emirates, Hong Kong, India and Algeria. In all countries, including these five countries, the working conditions of employees comply with local regulations or improve them:

- child labor and forced labor are strictly prohibited; Group entities are required to check the age of all new employees when they are hired;
- working hours comply with local standards or are more favorable, sometimes with the possibility of remote working and additional days off;
- remuneration surveys are regularly carried out to verify their competitiveness in their reference market;
- maternity leave complies with or improves local regulations;

3.1.3.4.2 Dialog with employee representatives and working conditions

RISK PREVENTION AND SAFETY AT WORK

Groupe BPCE has implemented a strategy to identify any material impact on the work situation, such as significant fluctuations in the number of employees, problems with work or commuting accidents, the identification of serious accidents, specific risks, or material changes in the organizational structure.

The "Prevention of occupational risks" rule (N2) is a set of principles formulated in the form of commitments in which Groupe BPCE defines the organization's long-term orientation for the support and continuous improvement of its performance in preventing occupational risks. It gives a general direction and provides a framework enabling the organization to define its objectives and carry out actions in order to obtain the expected results of the prevention management system and, more specifically, the accident ratio.

These commitments are then reflected in the processes established by the companies to guarantee a reliable, credible and robust system.

Community tools support companies in mastering techniques and harmonize practices between companies.

The tools offer modules around the following prevention objectives:

- assessment of physical and psychosocial risks;
- action plan;
- accident reporting;
- monitoring of near-misses;
- indicator for managing accidents and absenteeism.

Whenever necessary, they adapt to the regulations of the host countries for international subsidiaries with local legislation.

Some actions undertaken by the Group since 2023:

- an occupational risk prevention rule applicable to all Groupe BPCE companies reinforces the personal and property safety policy and specifies the applicable rules and best practices for preventing the risk of accidents. Without an end limit and revised regularly, the rule specifies the legal provisions and the Group's recommendations in terms of organization, planning, performance of operational activities, evaluation and continuous improvement;
- a three-year Security branch agreement, the objectives of which are to maintain the vigilance of companies and reaffirm their desire to ensure the safety of employees in the face of assaults, on the one hand, and on the other hand, for emerging health and climate risks, related to new working methods or high-risk gatherings, is signed between the Management and employee representatives of the Banque Populaire branch. The scope covers all Banque Populaire companies. The agreement specifies the prevention and safety policy, the means of protection and prevention implemented as well as the planned crisis management systems;
- two branch agreements for the Banque Populaire and Caisse d'Epargne companies are negotiated with employee representative bodies on the phenomenon of incivility and assaults committed by customers, in the workplace, in situations of mobility, or through communication tools, whether digital or not. The agreements are signed for an indefinite period. A review of incivilities and assaults is organized annually for the branch and a review scheduled every three years.

Their action plans include strong measures to fight incivility in companies, in particular:

- a campaign to raise employee awareness of the risk of incivility;
- a training program to deal with incivilities including new hires, team members and dedicated training for managers. The program includes virtual reality immersions;
- the creation of a specific, innovative system available on the employee's computer workstation. It is intended to support employees in situations of isolation and lack of motivation;
- a manager's guide to dealing with incivilities in the form of a toolbox to respond to emergency situations;
- a tool for reporting and processing incivilities.

QUALITY OF LIFE AT WORK

The Group's QLW system pays particular attention to individual and collective situations. The measurement of the impact of the actions is the responsibility of each company. Indeed, the quality of life and working conditions is an approach that is materialized and experienced on the ground in the working environment. However, the Group promotes and monitors actions:

- **the Prev&Care system**: a partnership was signed in 2023 with a Care Management company. This partnership offers Group companies a personalized response to the support needs of their employees who are caregivers, including information and training, and the implementation of care solutions for the person being cared for. This system is currently operating in 18 companies. In addition, some companies offer specific measures, for example, additional remote working days for caregiver employees. The global approach to inclusion and support for caregiver employees was recognized by the award in 2021 of the First Prize Company and Caregiver Employees.

The system is set to continue and be extended to the Group's various institutions. An annual review is scheduled for April 2025 and aims to take stock of the use of Prev&Care and the new services offered by Prev&Care.

- **Support for transformations**: in a context of accelerated change in the banking sector characterized by new work organizations, Groupe BPCE also pays close attention to the management of transformations, hence the implementation of dedicated initiatives and teams to support change such as:
  - Human Impact Measurement;
  - Establishment of the Change function.

These initiatives include giving employees a voice to identify the major consequences of a transformation shared by the work team, identify corrective measures and strengthen support measures. Internal training courses enable employees to be trained in the implementation of these approaches.

The Human Impact Measurement will continue in 2025 depending on the transformation projects chosen by the companies to benefit from this system.

- **Sport & Health**

The Group's various companies deploy awareness and prevention actions in the areas of physical health, mental health and serious or chronic diseases.

The partnership with Paris 2024 was an opportunity to reinforce the Group's efforts and commitments in the fight against sedentary lifestyles, and to contribute to the well-being of its employees.

A Sport, Health & Collective Engagement program, launched in 2023, focused on five areas:

- **Sport & Business**: promotion of physical activity in companies, with more than a hundred programs identified and contracts in progress with sports platforms;
- **Sport & Inclusion**: promotion of diversity and inclusive recruitment, in particular for the retraining of athletes;
- **Sport & CSR**: initiatives promoting a positive impact on health and associative commitment;
- **Sport & Attractiveness**: promotion of the partnership with Paris 2024 to improve the employer image;
- **Sport & Pride in belonging**: employee loyalty initiatives during and after the 2024 Olympic and Paralympic Games.

The Group continues its commitment to the dynamics of the Olympic Games, through initiatives aimed at improving employee's well-being and promoting Groupe BPCE as a Sports Bank.

3.1.3.4.3 Discrimination and equal opportunities

In accordance with the policy on professional equality, the action plans undertaken by Groupe BPCE are broken down into three themes:

- actions in terms of professional equality;
- disability actions;
- actions to combat discrimination and harassment.

All action plans are included in company agreements for a period of three years. They are monitored annually and reviewed at maturity.

ACTIONS ON PROFESSIONAL EQUALITY

In terms of professional equality, several corrective actions are applied to prevent the risk of discrimination and promote equality.

In terms of remuneration: these are monitored annually, in particular as part of the production of gender equality indices and mandatory annual negotiations with employee representatives. In this respect, pay gaps are closely monitored. Dedicated budgets are thus reserved to reduce the discrepancies observed and not justified by the nature and/or positioning of the job.

In terms of recruitment: job offers are formulated in a neutral and objective manner. In addition, the Group strives to promote gender diversity in the business lines and to guarantee, as much as possible, a mixed final recruitment phase for management functions and certain business lines.

Other initiatives focus on highlighting the testimonials of employees in jobs where they are less represented in order to fight stereotypes.

In terms of parenthood:

The Group ensures that maternity leave does not hinder the professional development and remuneration of women.

Thus, in France, women returning from maternity leave benefit from the average increase granted to employees in accordance with the legal provisions applicable in France. In application of this principle, it is agreed that after one year of seniority, any employee on paternity leave covered by social security benefits from remuneration equal to 100% of the difference between the amount paid by social security and the amount of their gross pay.

Awareness-raising actions: highlights throughout the year, such as gender diversity week, parenthood week and the fight against sexism day, raise employee awareness of these themes and promote behavioral change.

In 2024, 15 companies in the Group were involved in obtaining the Professional Equality label[1]. This label, created in 2004 by the State, in association with social partners and experts, is a true methodological guide, which certifies respect for equal rights between male and female employees.

In addition, some of the Group's companies have carried out their Diversity footprint: a digital footprint that measures the level of maturity on five dimensions: gender equality, disability, cultural and social origins, ages and sexual orientation/gender identity.

ACTIONS RELATED TO DISABILITY

In terms of actions related to disability, several corrective measures are applied to prevent risks in terms of job retention, recruitment, integration and change of perspective.

Job retention action plan defined in the 2023-2025 disability agreements:

- information for employees experiencing health difficulties about the specific support measures from which they could benefit by having their disability recognized;
- support for employees wishing to apply for recognition of the status as a disabled worker (RQTH);
- multidisciplinary management of individual situations and search for solutions;
- assistance in financing disability compensation needs in a professional and personal field;
- organization of training (internal or external) according to the constraints related to the person's disability.

Action plan for the recruitment and integration of people with disabilities defined in the 2023-2025 disability agreements:

- welcome and training of people with disabilities *via* internships or work-study contracts;
- participation in sourcing actions dedicated to disabled candidates (virtual forum, trade fair, specialized firm, etc.);
- external communication to attract new employees with disabilities;
- adaptation of the recruitment process according to the individual compensation needs of candidates;
- awareness-raising/training of HR teams, recruiters and managers on the principles of non-discrimination applied to disability.

Action plan: change of perspective defined in the 2023-2025 disability agreements:

In 2024, the Group focused on actions to improve awareness of visible and non-visible disabilities and improve the inclusion of employees with disabilities.

Support Action plan for the Sheltered and Adapted Work Sector defined in the 2023-2025 disability agreements:

- implementation of an annual action plan by each company purchasing function;
- raising awareness among local buyers and specifiers;
- national partnership with the Gésat Network.

Each of the provisions of the action plans are rolled out and implemented within each Group company according to their own policy and commitments on this subject.

(1) https://www.groupebpce.com/rse/employeur-inclusif/

ACTIONS TO FIGHT DISCRIMINATION AND HARASSMENT

Systems to raise awareness and to train employees with several levels of granularity according to the themes and challenges:

- non-discrimination training for recruiters;
- e-learning programs have been widely rolled out to employees, enabling them to:
  - distinguish non-discrimination, diversity and inclusion,
  - understand the challenges of inclusion,
  - identify the impact of stereotypes on daily working life,
  - identify and know how to react to micro-attacks,
  - adopt inclusive practices and behaviors.

In addition, the Group has made available a guide "all mobilized against sexism", a self-assessment as well as a dedicated e-learning program to prevent sexism and sexist behavior.

Commitments were also made to several dedicated populations:

Soutien aux jeunes (Support for young people) from priority urban areas

- welcoming many young interns from third and second grade from the priority urban areas across the whole group in order to introduce them to the Group's business lines;
- partnership for three years with the *Capital Filles* association to help young girls in their career paths. For the association, Groupe BPCE represents the largest number of female sponsors who once again support young people from rural areas or priority urban areas;
- support for the "Nos Quartiers ont des Talents" (NQT) (our neighborhoods have talent) program with mentors who help young people in their job search: help with CV writing, advice for interviews, mentoring, etc.;
- welcome of work-study students from priority urban areas in 2024 within Groupe BPCE.

Inclusion des personnes LGBT+ (inclusion of LGBT+ people)

- signature of the *Autre Cercle* commitment charter, encouraging companies to promote and LGBT+ diversity respect in their workforce;
- organization of several conferences and round tables in the Group's various companies to address the consideration of LGBT+ diversity in society and in business;
- distribution of a guide to clarify certain definitions or misconceptions and share some best practices;
- a quiz/Sensi'Diag of around ten questions enabling employees to assess themselves in just a few minutes and test their knowledge and awareness on LGBT+ inclusion.

L'intergénérationnel, source de richesse pour tous (intergenerational, a source of wealth for all)

- signature of the 50 years plus charter, managed by a collective of companies under the aegis of the Bayard Group[1];
- deployment of a policy structured around company agreements which notably covers the recruitment of young people under the age of 30 years and the retention of employees over the age of 50, in accordance with French law. In this context, measures have been deployed to enable young people to integrate the Group's business lines, as well as older people to evolve under the same conditions as other employees, to change jobs and to be supported in a pragmatic manner in retirement.

3.1.3.4.4 Attractiveness, employee loyalty and commitment

SKILLS DEVELOPMENT

All of the skills development action plans described below fall within rolling time horizons. Indeed, action plans are to continue over the coming years with no scheduled end date.

The total amount committed in terms of training is[2]:

- €275 million for 2022;
- €301 million for 2023.

100,369 employees benefited from training in 2023.

Integrating young people into the Group's business lines with the Apprenticeship Training Center (CFA) of the BPCE Campus

- In order to support the Group's proactive and ambitious skills development policy, the BPCE Campus CFA was created in 2020 to support, train and retain students by offering them adapted courses. The BPCE Campus CFA, in partnership with the *École Supérieure de la Banque* (ESB), offers two Bac+3 graduate level certifications: the Professional Banking Degree (LPB) and the Bachelor in Banking Insurance (BBA), which prepare students for the profession of Individual Customer Advisor.

In 2024, the Campus CFA welcomed more than 300 work-study students (*i.e.* four cohorts in the Professional Banking Degree and 17 in the Bachelor in Banking Insurance) in more than 10 locations in mainland France (Paris, Marseille, Lyon, Toulon, Bordeaux, Toulouse, Montpellier, Nantes, Lille, Tours, Rouen, Caen, Strasbourg, etc.). Nearly 8 out of 10 work-study students passed their exam[3].

In June 2024, the Campus CFA passed an external audit to renew its Qualiopi certification, enabling it to maintain it for the next three years. This audit revealed any non-conformities and identified twelve strong points, notably:

- strengthening of the supervision of young people;
- support for the success of work-study students.

(1) https://www.clublandoy.com/la-charte-50/

(2) Figures taken from the Group's social report in 2023. The scope studied below represents more than 96% of Groupe BPCE's total workforce in France. It includes the Banques Populaires, the Caisses d'Epargne branch, Banque de Savoie, BCP Banque, Banque Palatine, Natixis SA, Natixis Interépargne, UES Natixis Investment Managers International, Natixis Wealth Management, AEW CILOGER, Fédération Nationale des Banques Populaires, as well as BPCE companies (1). It concerns 100,369 employees.

(3) For the Bachelor in Banking Insurance, one month after taking the exam, the exam certifier (in this case ES Banque) sends the results file. For the Professional Banking Degree, the certifier (in this case the partner universities) sends the results to its educational partner (ES Banque), which issues them to the Group during the quarter.

Professional mobility & job transformation

Groupe BPCE encourages the mobility of its employees and develops tools to facilitate their professional development:

- digital platforms and job exchanges to discover jobs and identify opportunities;
- workshops or individualized support to build professional projects and prepare for interviews;
- continuous training programs to develop employees' skills and thus strengthen their employability.

Support for professional mobility through targeted pathways

Groupe BPCE supports the preparation of future professional mobility through several key pathways available:

- the Career Boost program enables employees to build their mobility project, consolidate their future applications and develop their personal marketing;
- the "Up by BPCE" program enables the development of high-potential young talents who are likely to advance across the Group's major business lines;
- high-potential development paths are also offered within each major business line.

At Group level, dedicated pathways are offered to high-potential female employees to accelerate their development with, in 2024:

- the "Declic" program enables high-potential female employees to accelerate their careers by developing a clear and ambitious career plan;
- the "Inspiring Women Program" with an international dimension and the "Women Sponsorship Program" to enable women with strong potential to develop their careers and their visibility.

Support for professional mobility with training programs or certifying training courses

For sales advisors, mobility and development are often achieved by developing their skills in new markets. To support this mobility, the BPCE Campus and companies offer substantial certification or diploma courses.

The "Step Up Academy" system makes it possible to design and roll out retraining programs for the professions of the future, in cooperation with internal professionals, as well as schools with expertise in the training market.

Within the Group, employees working in a functional profession are also supported by training courses leading to certification. For example:

- the internal control and risk management certificate for financial institutions with Paris Dauphine;
- the certificate in banking and prudential accounting with ESCP Europe.

Support for future jobs

Aware of the challenges related to job transformation to which the Group is exposed, several specific systems and pathways have been put in place:

For each of the Group's major business lines, a dedicated program prepares employees for the skills of tomorrow and encourages them to maintain their skills, develop and progress in their jobs, for example:

- the **'Progress within the network'** program enabled each Banque Populaire and Caisse d'Epargne to set up personalized development paths for its Sales Advisors so that they can **be comfortable in their jobs and at the level expected by their customers**. On the basis of a skills and performance framework, the advisor can identify areas for improvement with their manager and, after a skills assessment, build their personalized career path with them;
- as part of the strategic **'Adding Value to Banking Services'** program, a new Job Skills framework was delivered in 2023 for these jobs, as well as a training catalog classified by skills and incorporating new job expertise and a strengthening of training offers concerning change management, in particular to support the Group's companies that want to support employees moving from a back office customer support job to a support more in contact with customers (Middle office).

Impact awareness

Climate School

At the end of 2022, the Climate School was launched Group-wide to raise employee awareness and develop skills and commitment to the success of the sustainable transition. It offers an online training experience, composed of more than 150 microlearning modules, 100% customizable with mini quizzes with two learning paths:

- "understanding" the environment to better act collectively. This is the objective of the Climate School, the new educational program dedicated to the climate and the ecological transition in 2023;
- "act" in 2024 looking back at the Group's initiatives.

Launch of the BPCE Impact Campus

As part of the VISION 2030 strategic project, Groupe BPCE companies claim positive feedback, thanks to the strength of local solutions and are committed to making impact accessible to all. By transforming itself, the Group will be able to support the transitions of all its customers, in each of its regions.

With a view to continuous improvement, Groupe BPCE therefore set up an Impact Campus at the end of 2024. It aims to structure the training of all its employees with a tailor-made course consisting of a common core of general knowledge for all and operational modules specific to each business line and each level of expertise.

Within the BPCE Campus, the Impact Campus is a training program available as of 2025 and dedicated to ESG issues for the 100,000 Groupe BPCE employees. The objective is to raise awareness and acculturate all employees to ESG issues as part of the "VISION 2030" strategic project, and also to initiate the transformation of each business line through targeted training programs. It makes it possible to implement the Group's Impact program, which sets the operational priorities for 2024-2026.

Strengthening the tech & digital campus and developing a positive AI culture

Training programs

The objective of the Tech & Digital Campus is to support skills development by offering career paths, with specializations by business line and typology of players (employees, experts, managers and personae of the transformation program) so that each employee has the appropriate level of knowledge for the Group's AI transformation.

In 2024, the Campus continued its development through its training offer built around the nine strategic skills for the Group: user experience, agility at scale, Product Owner skills, quality of service, responsible digital services, data, technology and innovation, IS security, devOps.

Within the BPCE Tech & Digital Campus and under the aegis of the Data & AI division, the Data & IA Academy offers training that serves the Group's Data & AI transformation.

Group employees are offered training on:

- "The responsible use of data and AI", the objective of which is to enable them to understand the opportunities and responsibilities of the advanced use of data and AI;
- "Generative AI for employees" helps to acculturate them and raise awareness of best practices in the use of generative AIs. This training is a prerequisite for the use of the Group's generative AI tool (Maia);
- "The discovery of the essentials of prompt writing" in order to make employees autonomous and efficient in drafting prompts;
- "Mastery of the advanced techniques of the art of the prompt" enabling them to go further in the theory and practice of the use of prompts through use cases.

Managers have access to a training offer enabling them to familiarize themselves with generative AI, understand the business impacts and acquire the in-depth skills necessary to operate it on a daily basis and support novice users of their entities.

The Group's senior executives receive training to provide them with the keys to building the strategic vision, including a good understanding of how AI works, an understanding of the transformation prospects and knowledge of the work launched by the Group.

A secure chat to help employees familiarize themselves with AI

From the beginning of 2024, Groupe BPCE employees have access to a generative AI tool (Maia) enabling them to meet various needs: translation of text, generation of a summary, writing of a text, preparation of the agenda of a meeting, inspiration for a brainstorming, etc.

Acculturation programs

To enable employees to take ownership of Data and AI technologies, managers and tools, acculturation actions and systems are deployed facilitated by a network of Data Managers in each Group establishment.

ATTRACTIVENESS

Launch of Great Place To Work

As part of the VISION 2030 strategic project, Groupe BPCE wants to embody a human model and a culture that is a source of commitment, trust and performance. One of the flagship projects is the deployment of Great Place To Work in the Group's entities that may wish to do so according to their own strategy. It is a survey to measure the internal perception of the business model based on the assessment of five managerial pillars: credibility, respect, fairness, pride and conviviality. It is recognized in France and internationally and aims to gradually improve managerial quality and the commitment index.

In 2024, out of the Group's four companies[1] who carried out the survey, 3 obtained the Great Place to Work label.

Increased digital accessibility of the Group's HR tools

In order to improve the employee experience and meet the requirements of the European directive, Groupe BPCE has embarked on a major program to improve digital accessibility across all its sites, tools and media. This work makes it possible to take into account all disabilities when using digital products. The recruitment website, the job market and internal time management tools are among the priority HR tools in 2025-2026.

A benchmark employer

As part of the new VISION 2030 strategic plan, the Group wants to stand out on the market through an employer signature that can be adapted by each Group entity.

In connection with the employer brand, to highlight the Group's actions and attract the best candidates, work is being carried out to redesign the Groupe BPCE's career website by 2026. For this purpose, benchmarks and design thinking workshops are underway.

3.1.4 Targets

3.1.4.1 (S1-5) TARGETS RELATED TO MANAGING MATERIAL NEGATIVE IMPACTS, ADVANCING POSITIVE IMPACTS, AND MANAGING MATERIAL RISKS AND OPPORTUNITIES

3.1.4.1.1 Human rights

In each of the Group's locations, the objective is to monitor and enforce the application of the Group's Human Rights Charter while being part of a process of continuous improvement.

3.1.4.1.2 Dialog with employee representatives and working conditions

SOCIAL DIALOGUE

Social dialog, as managed within the Group, enables it to comply with all of the legal obligations, whether in terms of negotiations or information for employee representatives.

The coordination of relations with employee representatives based on the negotiation and signature of collective agreements as well as the deployment of social policies aims to meet both the aspirations of employees and the challenges facing the Group's companies. This social dialog supports the Group's economic and social performance.

(1) BPCE Assurance, Banque Populaire du Sud, BPCE Vie.

PERSONAL DATA PROTECTION

In terms of training, each employee must have had GDPR training within the last three years.

With regard to the exercise of rights within the meaning of the GDPR, the Group's entities endeavor to respond within the required timeframe, *i.e.* 30 days, except in the event of a complex request where this response period is extended to 90 days.

Compliance with these deadlines is subject to permanent control, the results of which are presented to privacy committees or permanent controls.

RISK PREVENTION AND SAFETY AT WORK

To reduce the number of material negative incidents by implementing preventive measures and risk management protocols, Groupe BPCE has developed a risk management strategy that takes into account occupational risks and natural risks and, where applicable, industrial risks. This approach aims to anticipate and mitigate the effects on employees.

A safety policy is rolled out in all companies, taking into account the results of an adapted risk assessment (DUERP) and action plans, Annual plan for prevention and improvement of working conditions (PAPRIPACT) revised annually.

They make it possible to ensure regular monitoring of prevention as closely as possible to the challenges of the regions.

The Group social report includes a section dedicated to accidents. The indicators of the consolidated companies make it possible to monitor its evolution and identify significant discrepancies without seeking to determine other target objectives.

The work and action plan initiated in 2023 should continue to be rolled out in companies during 2025.

These are structured around three main areas:

- Facilitate the declaration of incivilities, develop new protection tools
- Provide "incivility" training for employees and managers
- Strengthen the hot and cold analysis of each incivility and use the filing of a complaint as a lever to fight against incivility

QUALITY OF LIFE AT WORK

The QLW policy is structured to be as close as possible to employees. Thus, each company sets its own targets with regard to its concerns, its territory and its organization. For this reason, the Group has not set measurable results-based targets at Group level.

3.1.4.1.3 Discrimination and equal opportunities

DIVERSITY & INCLUSION - GENDER EQUALITY

Groupe BPCE wishes to continue its commitments to gender equality through the following targets :

- strengthen support for women in accessing positions of responsibility *via* dedicated paths at Group or local level or by promoting mentoring or awareness-raising actions to combat self-censorship;
- achieve 50% of women with the rank of manager/leader within Groupe BPCE by 2026[1]
  - at September 30, 2024, the rate was 47.6%,
  - at December 31, 2023, the rate was 47%.

DIVERSITY & INCLUSION - DISABILITY

In 2022, Groupe BPCE renewed its commitment to the employment of people with disabilities through the signing of four agreements approved for the period 2023-2025.

These agreements set targets at December 31, 2025 for each of the scopes (Banque Populaire, Caisse d'Epargne, Natixis):

Banque Populaire branch:

Overall logic: targets set in the approved BP branch agreements in line with French legislation, which imposes a minimum of 6%.

- **Target**: achieve an employment rate of 6% by the end of 2025.
  - Reference value: 5.94% at the end of 2023.
- **Target**: recruit a minimum of 200 people recognized as BOETH over 3 years (recruitments taken into account: permanent contracts, fixed-term contracts of more than 6 months or work-study contracts - professionalization or apprenticeship), including a minimum share of 30% of permanent contracts (*i.e.* a minimum of 60).
  - Reference value: 90 people recognized as BOETH recruited in 2023.
- **Target**: welcome at least 45 work-study students with disabilities over the term of the agreement.
  - Reference value: 22 work-study students recruited in 2023.
- **Target**: maintain and promote actions that promote purchases entrusted to the structures of the Protected and Adapted Work Sector (STPA) as part of a commitment led by CSR and the Solidarity Purchasing division.

(1) **Calculation methodology**: Number of women managers/leaders/Total number of managers/leaders (workforce vision for Natixis, employment contract for BPCE excluding Natixis) // **BP & CE scope:** Sales network: Agency Director or higher management than Branch Director/Head office: classification H or higher in the collective agreement // **BPCE scope**: Managers.

Caisse d'Epargne branch:

Overall logic: targets set in approved CE branch agreements in line with French legislation, which imposes a minimum of 6%.

- Maintain an employment rate of over 6% at the end of 2025.
  - Reference value: 7.29% at the end of 2023.
- Recruit a minimum of 180 people recognized as BOETH over 3 years (recruitments taken into account: permanent contracts, fixed-term contracts of more than 6 months or work-study contracts - professionalization or apprenticeship), including a minimum share of 30% of permanent contracts (*i.e.* a minimum of 60).
- Recruitment of people recognized as BOETH: 65 people.
- Welcome at least 30 work-study students with disabilities over the term of the agreement.
  - Reference value: 12 work-study students with disabilities in 2023.
- Maintain and promote actions that promote purchases entrusted to the structures of the Protected and Adapted work sector (STPA) as part of a commitment led by the CSR and the Solidarity Purchasing division.

Natixis:

- Achieve an employment rate of 5% by the end of 2025.
  - Reference value: 4.59% at the end of 2023.
- Targets set Natixis approved agreement.
- Recruitment targets per year and per contract by 2025: 10 permanent hires, 8 fixed-term contracts, 10 work-study students, 8 internship hires.
  - 2023 reference value: 16 hires: 6 permanent contracts/9 work-study students/1 intern/1 fixed-term contract.

3.1.4.1.4 Attractiveness, employee loyalty and commitment

SKILLS DEVELOPMENT

By 2025, each Group company in France will have an onboarding program for new employees and a personalized training portal that will provide individualized training paths focused on its priorities with individual skill levels known and monitored by the manager/HR team.

By 2030, the ambition is to enable a rapid and massive adaptation of skills to meet the requirements of customer relationship excellence, facilitated by Artificial Intelligence (AI).

This challenge involves the transformation of national and local practices to, together, enable more targeted and agile skills development:

- decentralized: the Group's companies rely on the BPCE Campus to pool the design of the training programs deployed within the campuses of each institution;
- no intermediaries: the best educational partners in the market design the most effective learning solutions within the BPCE Campus directly with the expert business lines (simulation exercises, etc.);
- optimized: the content created within the Campus or purchased by each institution is managed and promoted as an educational asset *via* a platform;
- more internalized: the organization of in-house training is promoted by the development of training for certified designers within the BPCE Campus.

Integration of young people into the Group's business lines with the BPCE Campus CFA

Objective: ensure the development of the skills of young people who join the CFA (Training Center for Apprentices) of the BPCE Campus in order to constitute a qualitative pool:

- in 2025, the target is to maintain the success rate of the diploma of work-study students from the Campus CFA at more than 80% for both diplomas;
- in 2024, the success rates for both diplomas are as follows:
  - Bachelor in Banking Insurance: 80% stable compared to 2023,
  - Professional Banking Degree: 86% up 6%;
- in 2023, the success rates for both diplomas are as follows:
  - Bachelor in Banking Insurance: 80%,
  - Professional Banking Degree: 80%;
- the target is determined on the basis of the results of previous years (2022/2023) where the % was less than 80% and the benchmark for the sector on the same diplomas from other schools;
- in 2025, the second target is to maintain the integration rate of work-study students in the Campus CFA in Groupe BPCE at more than 30%;
- 2024 figures are not available. In 2023, the integration rate of work-study students is as follows:
  - Bachelor in Banking Insurance: 24%,
  - Professional Banking Degree: 23%;
- the target is determined in accordance with the terms described in the Group's GEPP agreement signed in July 2022.

Professional mobility & job transformation

Objective: monitor advisors' adherence to personalized development pathways and thus ensure the development of their skills in line with commercial priorities:

- by the end of 2025, at least 60% of employees who access the skills assessment will have completed at least one assessment and started at least one personalized development path;
- BP & CE commercial networks - In 2024 - 40% of employees concerned by the system carried out at least one diagnostic among the 10 entities deployed;
- target set with the commercial networks, companies and in line with a logic of deployment over time and a system that starts in 2024.

Supporting the future of business lines: Developing strategic skills for tech, digital, data and AI

Objective: ensure that the development of strategic tech and digital skills progresses since the Tech and Digital Campus brings them to the Group level:

- in 2025, the target is to enable at least 3,300 employees to be trained in the Tech and Digital Campus programs on strategic skills in face-to-face or virtual classrooms;
- in 2023, 2,500 employees received face-to-face or virtual classroom training;
- the target was set in line with the training objectives of the VISION 2030 strategic project. It is based on the training already carried out in 2023 and management's estimate.

Supporting the future of business lines: impact awareness

Objective: ensure that all employees are trained in impact in their profession, in order to undergo in-depth transformation and provide the best advice and expertise to customers:

- the objective is to have 100% of employees and Board members trained in ESG issues by the end of 2026. This is an objective clearly stated in the HR strategic project: VISION 2030;
- Reference value: no harmonized and fixed KPI;
- Methodology for setting the target: KPI set for the BPCE collective: 100% of employees trained in the common core "impact fundamentals" being developed. For the business lines and other Group companies: co-construction underway with Impact and HR.

ATTRACTIVENESS

Strengthen employee engagement:

- the last Groupe BPCE Diapason engagement survey conducted with Ipsos measured an employee engagement rate at 72% in 2023. To measure the employee engagement rate, the Group is now committed to Great Place to Work. The methodologies used to measure the rate are very different between the two providers. The Group's target is therefore to reach an engagement rate of 65%[1] for the majority of its entities by 2026.

Strengthen digital accessibility for employees

In terms of digital accessibility, a number of priority tools are considered as inaccessible today. For example:

  - e-learning training courses, some of which are mandatory & regulatory;
  - the HR leave declaration tool;
- by 2026, the Group's objective is to make the non-exhaustive examples of tools above accessible to all employees[2].

Strengthen the employer brand

- By 2026, the Group will have rolled out its employer signature on each of its brands. The employer signature is an essential component of the employer brand. It makes it possible to express the values held by the Group and the attention paid to employees. The aim is to enable candidates to identify with the values promoted by the Group.

3.1.5 Metrics

3.1.5.1 GENERAL INTRODUCTION - SCOPE OF APPLICATION

Scope of publication of S1 indicators for the 2024 CSRD:

Some of the Group's entities do not upload their data in the Group HR information system tools, in particular for international entities, which also comply with national legislation imposing heterogeneous requirements in social matters (*e.g.* minimum wage).

In this context, the Group has chosen a baseline scenario for the entities on which the indicators will be calculated for the CSRD 2024 publication (based on data collected *via* the Group's Information System and *ad hoc* manual data).

Entities included in the scope of publication of the S1 indicators - for the CSRD 2024:

The 14 institutions of the Banque Populaire network, the 15 institutions of the Caisse d'Epargne network and their subsidiaries in France included in the HRIS[3], all BPCE subsidiaries (specialized financing, asset management, life and non-life insurance, payments, wealth management and retail banking) and BPCE SA.

And inclusion of other entities:

- Natixis consolidated scope: for the 2024 publication, the Natixis scope of coverage was studied indicator by indicator with the use of proxies for some. Data are collected for at least 78% and up to 100% of the own workers in 2025 on the mandatory indicators expected from 2025. Natixis aims to have the indicators calculated for 100% of the own workers by 2026 (refer to 3.1.5.14 - Annex - Natixis scope for more details);
- BRED international entities;
- Banque Palatine;
- Crédit Foncier de France;
- BPCE Life Luxembourg. **Attention point**: this entity will be excluded from the following indicators due to the unavailability of data in the HR information system: S1-12, S1-14, S1-15 and S1-16. We will thus have a coverage rate of 100% (for the Insurance division) for the other indicators and 90% (for the Insurance division) for the aforementioned indicators.

Specificities relating to the Oney scope: Some Oney subsidiaries do not have a payroll tool and are not integrated into the Group's HRIS, which makes data collection more complex. Thus, the scope used for the disclosure of the S1 metrics for the 2025 CSRD for Oney is as follows:

- Oney Bank France: 100% of indicators covered;
- Oney international subsidiaries: covered only for some of the S1-6 indicators.

Entities excluded from the scope:

- International and overseas subsidiaries of BP & CE (except BRED), and international subsidiaries of BPCE Lease;
- Banque BCP;
- Fintech Digital & Payments (PayPlug Entreprise);
- Pramex International.

Populations concerned:

Population exclusions (fixed-term contracts/work-study/VIE) according to the metrics were made for reasons of data availability and/or the relevance and reliability of the calculations.

(1) Great Place to Work methodology.
(2) Accessibility measurement carried out *via* audit by external firms specializing in digital accessibility.
(3) Human Resources Information System.

3.1.5.2 (S1-6) CHARACTERISTICS OF THE UNDERTAKING'S EMPLOYEES

A. General introduction: definition and transversal methods for S1-6 indicators

Preliminary reminder: S1-6 only concerns employees (therefore non-employees are excluded from the scope of the indicators of S1-6).

Scope

- for the Group scope excluding Natixis, see 3.1.5.1 General introduction - scope of application;
- for the Natixis scope, see 3.1.5.14.2 (S1-6) Characteristics of the undertaking's employees – Natixis.

Concerning the non-covered scopes, the following actions will be deployed:

- carry out studies to assess the feasibility of collecting unavailable data manually from the IS;
- define the methods for collecting data not currently available.

Definition

The total number of employees was calculated on the basis of the scope of entities subject to the CSRD and the following definition of employee status:

- permanent internal employees (CDI);
- temporary internal employees (fixed-term contracts - CDD);
- work-study employees;
- VIE.

Note:

Interns were not included in the scope, insofar as in France, interns are not considered as company employees.

Calculation

Methodology for calculating the total number of employees based on:

- a counting of the number of own workers in number of contracts;
- the number of employees present at the end of the reference period;
- a closing date at December 31 of the reference year.

B. Breakdown of own workers:

Completion of the table based on three fields:

- the "Men" and "Women" fields: based on the information available in the information system;
- the "Not stated" field is the field used in the event of data not available in the information system;
- the "Other" field is currently not available in the employee gender self-declaration process, as French legislation does not prescribe the place of such a system.

Breakdown of own workers by gender

	12/31/2024
Gender	**Number of employees**
Male	46,046
Female	57,372
Other	
Not declared	
TOTAL SALARIED EMPLOYEES	**103,418**

C. Own workers by country

Scope

Countries in which Groupe BPCE has at least 50 employees representing at least 10% of its total number of employees.

The calculation basis for own workers is that applied to the scope of publication of the CSRD.

Presentation of the number of employees in countries where the company has at least 50 employees representing at least 10% of its total number of employees

	12/31/2024
Country	**Number of employees**
France	92,361

D. Employees by type of contract

Definition

The total number of employees was calculated on the basis of the scope of entities subject to the CSRD and the following definition of employee status:

- permanent internal employees (CDI);
- temporary internal employees (fixed-term contracts - CDD);
- work-study employees;
- VIE (for France).

Note:

Groupe BPCE has no employees on non-guaranteed hours, as this type of contract is not included in the Group's business model (see definition in the introduction).

Calculation

- for the breakdown by gender: *see section B. Breakdown of own workers;*
- the breakdown by contract is detailed in the section *A. General introduction: definition and transversal methods for the metrics;*
- publication of the full-time/part-time split on a voluntary basis;
- is considered as full-time, any employee with a contractual FTE of 100%. All others are considered part-time.

Note: work-study students are considered as being part-time employees as they have a specific working time format dedicated to them.

Presentation of information on employees by type of contract, broken down by gender

	12/31/2024				
	Women	**Men**	**Other(*)**	**Not communicated**	**Total**
Number of employees	57,372	46,046			103,418
Number of permanent employees	54,052	42,964			97,016
Number of temporary employees	3,320	3,082			6,402
Number of non-guaranteed hours employees					
Number of full-time employees	46,544	41,264			87,808
Number of part-time employees	9,994	3,488			13,482

* Gender as specified by the employees themselves.

E. Employees by type of contract, by region

Definition

Definition of the term "Region": the Group understands the definition of region in the sense of geographical area. The Group distinguishes between four types of regions: **France/Americas/APAC/EMEA (excluding France).**

Calculation

- for the breakdown by gender: *see section B. Breakdown of own workers;*
- the breakdown by contract is detailed in the section *General introduction: definition and transversal methods for the metrics.*

Presentation of information on employees by type of contract, broken down by region

	12/31/2024				
	FRANCE	EMEA(*)	AMER	APAC	TOTAL
Number of employees	92,265	5,432	2,748	2,973	103,418
Number of permanent employees	86,227	5,235	2,700	2,854	97,016
Number of temporary employees	6,038	197	48	119	6,402
Number of non-guaranteed hours employees					
Number of full-time employees	78,574	5,090	1,321	2,823	87,808
Number of part-time employees	13,211	184	33	54	13,482

* excluding France

F. Total number of employees who left the Group during the reference period

Definition

The metric presented only concerns permanent contracts.

Calculation

- The following reasons for departure were used in the calculation of the indicator: contractual terminations, resignations, deaths in the course of employment, dismissals and retirements.
- departures related to internal mobility have not been included in the calculation of the indicator.

8,168

TOTAL NUMBER OF EMPLOYEES THAT LEFT THE GROUP DURING THE YEAR

G. Employee turnover during the reference period:

Two indicators are published: the departure rate and the turnover rate.

Definition

The calculation is based on permanent employees present at the end of 2023.

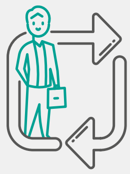
Note: fixed-term contracts, work-study employees and VIE employees have been excluded from the calculation of the turnover rate, as their presence in the Group is by definition temporary.

Calculation

$$\textbf{departure rate: } \frac{\text{Number of permanent contract departures over the reference period}}{\text{permanent workforce at 12/31 of the reference year Y-1}}$$

$$\textbf{turnover rate: } \frac{\text{(number of permanent contract hires over the reference period + number of permanent contract departures during the reference period) / 2}}{\text{permanent workforce at 12/31 of the reference year Y-1}}$$

Percentage of permanent staff turnover



9.21%

PERMANENT STAFF TURNOVER RATE

Departure rate of permanent staff

8.74%

DEPARTURE RATE OF PERMANENT STAFF

H. Reconciliation between the own workers mentioned in Section "3.1.4.2 (S1-6) Characteristics of the undertaking's employees" and the most representative workforce in the financial statements.

The Group Human Resources division relies on a notion of number of contracts and not FTE[1], it is therefore not relevant to reconcile the FTEs with the financial statements for the 2024 reference year, as the latter are not comparable.

3.1.5.3 (S1-7) CHARACTERISTICS OF NON-EMPLOYEES IN THE UNDERTAKING'S OWN WORKFORCE

In accordance with the transitional application measure provided for by the regulations, this indicator is not published for the 2024 reference year.

The action plan for future publications is as follows:

- define the concept of "non-salaried employee" and identify the populations concerned based on the standard;
- list the companies for which the data can be collected *via* the tools (Group employee reference framework);
- the Group will collect the number of non-salaried employees manually and in declarative form, for companies that will not be included in the Group employee reference framework (RPG) tool[2].

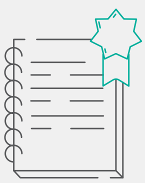
3.1.5.4 (S1-8) COLLECTIVE BARGAINING COVERAGE AND DIALOG WITH EMPLOYEE REPRESENTATIVES

A. General introduction

- in the France scope, regulations require that all employees meeting the definition criteria in Section "S1-6 - Characteristics of the undertaking's employees" be covered by a collective agreement and by a social dialog/employee representation;
- for the Group scope excluding Natixis, see 3.1.5.1 General introduction;
- for the Natixis scope, see 3.1.5.14.3 (S1-8) Collective bargaining coverage and social dialogue – Natixis;
- employees: the employees covered by a collective agreement are the fixed-term contracts (CDD), permanent contracts (CDI), work-study students;
- the Group indicates in which countries of the European Economic Area (EEA) it employs a significant number of employees (*i.e.* at least 50 employees representing at least 10% of the total number of employees).

B. Percentage of all employees covered by collective bargaining agreements

Collective convention, company agreements or any other form of agreement negotiated between an employer, a group of employers or one or more employers' organizations, on the one hand, and one or more trade unions or, in their absence, employee representatives elected in accordance with national laws and regulations, on the other hand, shall be considered as "collective agreements".



100%

RATE OF ALL EMPLOYEES COVERED BY COLLECTIVE BARGAINING AGREEMENTS

(1) Full-time equivalent.
(2) Group employee reference framework.

The percentage of employees covered by collective agreements is calculated using the following formulas:

$$100 \text{ X } \frac{\text{Number of employees covered by collective bargaining agreements}}{\text{total number of employees}}$$

C. Social dialog coverage rate & workplace representation

To calculate the information required, the Group indicates in which countries of the EEA it employs a significant number of employees (*i.e.* a workforce of at least 50 employees representing at least 10% of the total number of employees) and indicates the percentage by country of employees and by establishment, with employee representation. The notion of "establishment" includes any place of operations where the company carries out an economic activity on a non-temporary basis with human resources and property.

$$100 \text{ X } \frac{\text{Number of employees working in establishments in which employees are represented by representatives}}{\text{number of employees}}$$

D. Percentage of employees covered by a collective agreement (outside the EU)

Definition

The employees covered by a collective agreement are fixed-term contracts (CDD), permanent contracts (CDI), work-study students.

Model declaration on the coverage of collective bargaining and social dialog

	12/31/2024		
	Collective bargaining coverage		Social dialogue
Coverage rate	Employees - EEA (for countries > 50 employees representing > 10% of total employees)	Employees - non-EEA (estimate for regions with > 50 employees representing > 10% of total employees)	Workplace representation (EEA only) (for countries with > 50 employees representing > 10% of total employees)
0-19%			
20-39%			
40-59%			
60-79%			
80-100%	France		France

3.1.5.5 (S1-9) DIVERSITY METRICS

Scope:

- for the Group scope excluding Natixis, see 3.1.5.1 General introduction;
- for the Natixis scope, see 3.1.5.14.4 (S1-9) Diversity metrics.

Definition:

SENIOR MANAGEMENT METRIC:

Senior management means employees:

- who are entrusted with responsibilities for which the importance implies a great deal of independence in the organization of their schedule;
- who are empowered to make decisions on a largely autonomous basis;
- who receive pay within the highest levels of pay systems applied in their company or establishment.

BREAKDOWN OF EMPLOYEES BY AGE GROUP METRIC:

Fixed-term contracts (CDD), permanent contracts (CDI), work-study and VIE are taken into account for the calculation of the metrics.

Calculation:

BREAKDOWN BY GENDER AT SENIOR MANAGEMENT LEVEL IN NUMBER AND PERCENTAGE

$$\textbf{\% of women in senior management: } \frac{\text{number of women in senior management}}{\text{number of employees in senior management}}$$

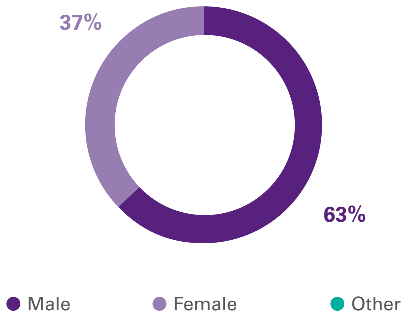
% of men in senior management: $\frac{\text{number of men in senior management}}{\text{number of employees in senior management}}$

BREAKDOWN OF EMPLOYEES BY AGE GROUP

$$\frac{\text{Number of employees by age group}}{\text{Total number of employees (within the meaning of metric S1-6)}}$$

- Breakdown by age group:
  - under 30
  - between 30 and 50 years
  - 50 years and over

Breakdown by gender at senior management level



Breakdown of employees by age group and percentage - Own workers

	12/31/2024	
Age groups	**Number of employees (own workers)**	**%**
< 30 years	18,839	18.22
>= 30 and < 50 years	54,191	52.40
>= 50 years	30,356	29.35
Not reported	32	0.03
TOTAL SALARIED EMPLOYEES	**103,418**	**100**

3.1.5.6 (S1-10) ADEQUATE WAGES

Scope:

- for the Group scope excluding Natixis, see 3.1.5.1. General introduction
- for the Natixis scope, see 3.1.5.14.5 (S1-10) Adequate wages - Natixis

All Group employees receive an adequate wage in accordance with the applicable benchmarks. The adequate wage refers to the minimum social wages set by legislation or collective bargaining or applicable benchmarks.

3.1.5.7 (S1-11) SOCIAL PROTECTION

In terms of social protection (health and personal risk coverage)

In France, all employees have social protection covering the five major life events: illness; unemployment, workplace accidents and disabilities, parental leave and retirement.

Internationally, according to the legal systems and local practices of the countries in which the Group operates, all employees benefit from health and/or personal protection insurance.

In the various countries in which it operates, the social protection and benefit schemes available to employees take into account not only applicable laws and regulations, but also market practices. Through the systems in place, the Group ensures that employees or their beneficiaries, for example, benefit from coverage in the event of a health situation that could lead to a loss of income, such as illness, maternity or accidents at work, or in the event of death.

In addition to the legal and contractual arrangements, depending on the regulations and practices of the countries in which Groupe BPCE operates, employees may benefit from additional social security in personal risk and/or health coverage.

In France, Groupe BPCE, in accordance with the French Social Security Code, offers all its employees comprehensive supplementary social protection through collective health insurance and personal risk, disability and death insurance plans. The social protection policy is managed directly by the Human Resources department.

Employees of the Caisse d'Epargne branch are covered in personal risk and health insurance by plans negotiated with the social partners at the level of the Caisse d'Epargne branch. Employees of the Banque Populaire branch are covered by a personal risk plan negotiated at the level of the Banque Populaire branch, while their health plan is negotiated at the level of each Banque Populaire.

With regard to employee benefits, the Group strives to implement an appropriate management system that complies with regulations, intended to limit risks as much as possible, in particular URSSAF.

In terms of pensions

Groupe BPCE employees may benefit from supplementary pension plans, the characteristics of which are set in accordance with local legislation and the HR practices and policies defined locally.

These plans supplement the mandatory and statutory plans to which the entities contribute for employees. They can be of two different types (defined benefit plans or defined contribution plans).

For example, employees of the CE and BP branches benefit from supplementary defined-contribution pension plans paid for mainly by the employer, these plans being negotiated at the level of each of the branches with the social partners. All social protection schemes are made available to employees according to the terms defined locally (employment contract, HR intranet, etc.).

3.1.5.8 (S1-12) PERSONS WITH DISABILITIES

Scope:

- for the Group scope excluding Natixis, see 3.1.5.1 General introduction;
- for the Natixis scope, refer to 3.1.5.14.6 (S1-12) Persons with disabilities – Natixis.

Definition:

- Number of employees with disabilities as of December 31 of the reference year.
- In order to maintain consistency between this metric and the other metrics published under the CSRD, the "own workers" data is to be considered as registered workforce (number of contracts) and not in FTE. The types of contract to be taken into account are those of S1-6 (permanent [CDI], fixed-term [CDD], work-study students, VIE).

Calculation:

- Calculation formula: $\dfrac{\text{Workforce with disabilities at 12/31 of the reference year}}{\text{Total workforce (at 12/31 of the reference year)}}$

Percentage of employees with disabilities in 2024 within the meaning of the CSRD in France and International scope: 5.40%.

3.1.5.9 (S1-13) TRAINING AND SKILLS DEVELOPMENT METRIC

Performance assessment

Scope:

- for the Group scope excluding Natixis, see 3.1.5.1 General introduction;
- for the Natixis scope, see 3.1.5.14.7 (S1-13) Training and skills development metrics – Natixis.

Definition:

All performance, career development and professional appraisal interviews must be taken into account.

Calculation:

- Population: permanent contracts
- Calculation formula: $\dfrac{\text{number of employees who participated in regular performance and career development reviews}}{\text{the total number of employees present at 12/31 of the reference year}}$

Breakdown by gender of employees who participated in regular performance and career development reviews

	12/31/2024	
Gender	**Number of assessments**	**%**
Male	36,194	87.52
Female	45,414	86.23
Other		
Not declared		
TOTAL SALARIED EMPLOYEES	**81,608**	**86.8**

* Gender as specified by the employees themselves.

Training hours completed in 2024

Scope:

- for the Group scope excluding Natixis, see 3.1.5.1 General introduction;
- for the Natixis scope, see 3.1.5.14.7 (S1-13) Training and skills development metrics - Natixis.

Definition:

The calculation is made on the basis of training hours completed during the reference year, including training not completed.

Calculation

- Population: fixed-term contracts (CDD), permanent contracts (CDI), work-study students and VIE.
- Calculation formula: $\frac{\text{number of training hours completed in the reference year}}{\text{total number of employees as of December 31 of the reference year}}$

Number of training hours by type of contract and by gender

	12/31/2024				
	Women	**Men**	**Other(*)**	**Not communicated**	**Total**
Average number of training hours	36	36			**36**
Permanent employees	35	35			**35**
Temporary employees	49	49			**49**
Non-guaranteed hours employees					

*Gender as specified by the employees themselves.

3.1.5.10 (S1-14) HEALTH AND SAFETY METRICS

A. Health and Safety Management System

Scope:

For the **France scope:** the regulations require that all employees, according to the criteria defined in S1-6, are covered by a health and safety management system. For the **international scope**: data will be collected in accordance with local obligations and/or practices.

- for the Group scope excluding Natixis, see 3.1.5.1 General introduction;
- for the Natixis scope, see 3.1.5.14.8 (S1-14) Health and safety metrics - Natixis.

Calculation:

- population: permanent contracts (CDI), fixed-term contracts (CDD), work-study students, VIE;
- Calculation formula: $\frac{\text{number of employees covered by the health and safety management system}}{\text{total number of employees}}$
- percentage of own workers covered by the health and safety management system based on legal requirements and/or recognized standards or guidelines.

99.90%

EMPLOYEE HEALTH AND SAFETY MANAGEMENT SYSTEM COVERAGE RATE

B. Work-related accident frequency rate

Scope:

- for the Group scope excluding Natixis, see 3.1.5.1 General introduction;
- for the Natixis scope, see 3.1.5.14.8 (S1-14) Health and safety metrics - Natixis.

Definition:

The indicator used relates to the frequency rate of workplace accidents:

- the notion of "days lost" is interpreted as "days of absence" linked to work stoppage due to workplace/commuting accidents;
- the Group measures and collects data related to workplace and commuting accidents recognized by the social security;
- however, for occupational illnesses, the Group is not in a position to collect similar data.

Calculation:

- Population: permanent, fixed-term contracts
- the calculation of the indicator excludes:
  - data on occupational illnesses (not available for Groupe BPCE),
  - absences and accidents of non-salaried workers (in accordance with the publication deadline granted by the standard);
- the indicator used for the workplace accident rate is the frequency rate of workplace accidents involving permanent (CDI) and fixed-term (CDD) contracts. The formula for calculating the frequency rate, according to INSEE, is as follows: RIDER 38

$$\frac{\text{number of workplace accidents with days lost}}{\text{hours worked X 1,000,000}}$$

$$\frac{\text{the number of days of absence due to workplace accidents}}{\text{journey is to be considered in number of calendar days}}$$

Occupational health and safety

	12/31/2024
Number of fatalities due to work-related accidents or illnesses	5
Number of work-related accidents over the period	1,166
Work-related accident rate (in %)	7.14
Number of days lost due to work-related accidents	41,510

C. Regarding the health and safety indicators that we will not report, we are planning the following action plan:

Limitation on published information:

The quantitative information required by the CSRD standard is not published in Groupe BPCE's CSRD sustainability report, given the unavailability of data.

Action plan:

- determine a common definition of the term "occupational illness";
- list the companies for which the data can be collected *via* the information systems;
- list the scopes on which the data can be collected manually (if unavailable in the tools);
- define data collection methods.

3.1.5.11 (S1-15) WORK-LIFE BALANCE METRICS

- for the Group scope excluding Natixis, see 3.1.5.1 General introduction;
- for Natixis, see 3.1.5.14.9 (S1-15) Work-life balance – Natixis.

Definition

- The concept of family leave takes into account the following arrangements:
  - maternity leave;
  - paternity leave;
  - parental leave;
  - caregiver leave provided for by legislation or collective agreements.
- Population: permanent contracts (CDI)/fixed-term contracts (CDD)/work-study students/VIE.

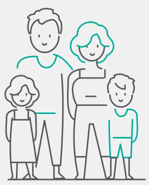
Calculation

"% of employees entitled to family leave"

- Calculation formula: $\frac{\text{Number of employees eligible for family leave}}{\text{Total number of employees}}$

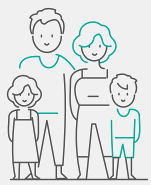
"% of employees concerned who took such leave, with a breakdown by gender"

- Calculation formula: $\frac{\text{Number of employees who took family leave}}{\text{The number of eligible employees}}$



100%

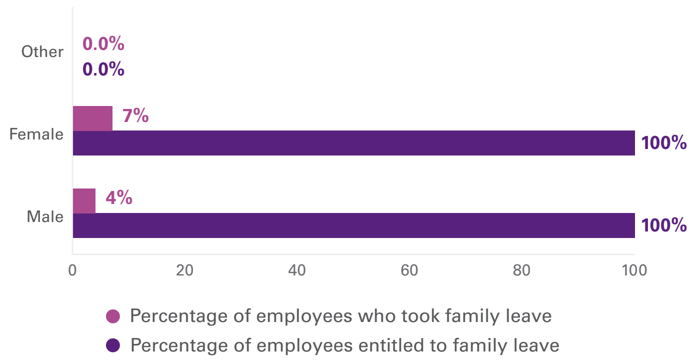
OVERALL RATE OF EMPLOYEES ENTITLED TO FAMILY LEAVE



5.77%

OVERALL RATE OF EMPLOYEES WHO TOOK FAMILY LEAVE

Breakdown by gender of the percentage of employees entitled to and having taken family leave



3.1.5.12 (S1-16) REMUNERATION METRICS (PAY GAP AND TOTAL REMUNERATION)

Gender pay gap metric

Scope:

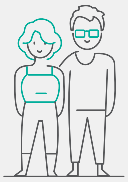
- for the Group scope excluding Natixis, see 3.1.5.1 General introduction;
- for the Natixis scope, see 3.1.5.14.10 (S1-16) Remuneration metrics (pay gap and total remuneration) – Natixis.

Definition:

- The consolidated population includes own workers on permanent contracts (CDI) who are present and paid at full rate throughout the reference year excluding:
  - corporate representatives;
  - employees on fixed-term contracts (CDD);
  - temporary workers;
  - work-study employees;
  - expatriate French employees;
  - people without an employment contract and employees on long-term illness (ALD).
- fixed wage and variable pay **are taken into account.**
- **Elements taken into account in the fixed wage**: theoretical full-time annual fixed wage + Fixed annual duty allowance, if applicable, for the reference year.
- **Elements taken into account in the variable pay**:
  - BPCE excluding Natixis: value-sharing bonus paid in the reference year + performance bonus or any individual bonus + variable pay paid in the reference year.
  - Natixis: variable pay awarded in respect of the previous year (including deferred portions) + exceptional bonus awarded, where applicable.

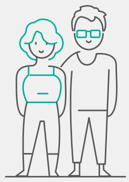
Calculation:
$$\frac{\text{Average gross hourly pay of male employees - average level of gross hourly pay of female employees}}{\text{Average gross hourly pay of male employees}} \text{ X 100}$$

As the way in which the data is presented is different for Natixis, two distinct metrics are presented



17.0%

GENDER PAY GAP WITHIN THE GROUP SCOPE EXCLUDING NATIXIS



34.1%

GENDER PAY GAP BETWEEN MEN AND WOMEN FOR THE NATIXIS SCOPE

Annual total remuneration ratio metric

Scope:

- for the Group scope excluding Natixis, see 3.1.5.1 General introduction;
- for the Natixis scope, see 3.1.5.14.10 (S1-16) Remuneration metrics (pay gap and total remuneration - Natixis).

Definition:

- The consolidated population includes own workers on permanent contracts (CDI) who are present and paid at full rate throughout the reference year excluding:
  - corporate representatives;
  - employees on fixed-term contracts (CDD);
  - temporary workers;
  - work-study employees;
  - expatriate French employees;
  - people without an employment contract and employees on long-term illness (ALD).
- Fixed wage and variable pay **are taken into account.**

- **Elements taken into account in the fixed wage**: theoretical full-time annual fixed wage + fixed annual duty allowance, if applicable, for the reference year.
- **Elements taken into account in the variable pay**:
  - BPCE excluding Natixis: value-sharing bonus paid in the reference year + performance bonus or any individual bonus + variable pay paid in the reference year;
  - Natixis: variable pay awarded in respect of the previous year (including deferred portions) + exceptional bonus awarded, where applicable.

Calculation:

- **Annual total remuneration ratio metric:** $\frac{\text{Total annual remuneration for the highest-paid person in the company}}{\text{Median level of total annual remuneration (excluding highest-paid individual)}}$
  - if the maximum annual total remuneration is the same for several employees, then they are excluded from the denominator in the calculation presented above (median level of annual total remuneration (excluding the highest-paid individual).

The ratio of the total annual remuneration between the highest-paid employee and the median of other employees was 124.9 in 2024.

The ratio of total annual remuneration is established based on the scope of the BPCE Group, on the basis of gross remuneration, without neutralizing the differences in living standards between the countries in which the Group operates. Indeed, salary practices also reflect the economic conditions specific to each country, as well as market practices specific to the various business lines present in the Groupe BPCE. Therefore total annual remuneration ratio, therefore, incorporates very diverse local realities in terms of labor markets and living standards.

3.1.5.13 (S1-17) INCIDENTS, COMPLAINTS AND SEVERE HUMAN RIGHTS IMPACTS

Limitation on published information:

Given the multitude of channels for reporting alerts, the Group will not be able to provide an exhaustive response to this metric and proposes to include it in the next fiscal year through the action plan mentioned below.

Action plan to publish metrics in future publications:

- bring together the relevant contacts (compliance, diversity & harassment officer, labor & legal relations);
- agree on a common definition of the expected terms in the metrics: incidents of discrimination, harassment, complaints, violation of social and human rights matters, severe employee human rights issues and incidents;
- identify the channels for alert reporting such as Group whistleblowing tools, dedicated local email address, harassment or diversity contact, emergency number, listening unit.

3.1.5.14 ANNEX - NATIXIS SCOPE

3.1.5.14.1 General Introduction to metrics S1-6 to S1-17

The following scopes are cited throughout the methods defining each metric:

- **Managed scope**: companies forming part of Natixis and its subsidiaries, at least 50% owned directly or indirectly, and for which individual data is available in the global Human Resources Information Systems (HRIS).
- **Other entities of the AWM division**: companies owned directly or indirectly at least 50% worldwide and for which individual data is not available in the Global HR Information Systems. Two of these companies (DNCA Finance France, Natixis US Advisors) were subject to manual collection for this first disclosure. We will refer to them as “AWM entities with manual collection” in the rest of this disclosure.
- **CIB M&A stores**: companies owned directly or indirectly at least 50% worldwide and for which individual data is not available in Global HR Information Systems (Peter J. Solomon/Azure Capital Limited/Vermilion Partners Limited/Fenchurch Advisory Partners/Natixis Partners Espana/Natixis Partners).
- **Scope of financial investments**: Natixis Algérie

3.1.5.14.2 (S1-6) Characteristics of the undertaking's employees - Natixis

- **Breakdown of own workers by gender**
  - **Scope of coverage:**
    - France & International managed scope
    - Other entities of the AWM France & International division
    - Scope of financial investments
  - **Use of proxies:**

Proxies were calculated based on the own workers of entities in the "Other Natixis entities" scope, which is collected at the end of the year.

A proxy is calculated to obtain the percentage distribution of men and women: at the end of the year, the entities communicate information on their own workers (permanent, fixed-term, young jobs), when available. A proportion of male/female is calculated based on this file with regards to the M/F breakdown of own workers for year Y-1.

- **Own workers by country**
  - **Scope of coverage**
    - France & International managed scope
    - Other entities of the AWM France & International division
- **Employees by type of contract, by gender**
  - **Scope of coverage**
    - France & International managed scope
    - Other entities of the AWM France & International division
    - Scope of financial investments
  - **Use of proxies:**

A proxy is calculated to obtain the breakdown of men and women as a percentage: at the end of the year, the entities communicate information on their own workers (permanent, fixed-term, youth employment), when available. A proportion of Men/Women is calculated based on this file with regards to the M/F breakdown of their own workers for year N-1.

- **Employees by type of contract, by region**
  - **Scope of coverage:**
    - France & International managed scope
    - Other entities of the AWM France & International division
    - Scope of financial investments
- **Total number of employees who left the Group during the reference period and employee turnover during the reference period**
  - **Scope of coverage:**
    - France & International managed scope
    - AWM entities with manual collection
    - Scope of financial investments

3.1.5.14.3 (S1-8) Collective bargaining coverage and social dialogue - Natixis

- **Scope of coverage**
  - France managed scope
  - International managed scope: entities with the largest own workforce
  - AWM entities with manual collection
  - Scope of financial investments

3.1.5.14.4 (S1-9) Diversity metrics - Natixis

- **Senior management**
  - **Scope of coverage:**
    - France managed scope
- **Breakdown of employees by age group:**
  - **Scope of coverage:**
    - France & International managed scope
    - Other entities of the AWM France & International division
    - Scope of financial investments

- **Use of proxies:**

A proxy is calculated to obtain the percentage breakdown of men and women: at the end of the year, the entities communicate their own workers (permanent, fixed-term, young jobs) where the information is available. A proportion of male/female is calculated on the basis of this file with regard to the M/F breakdown of the own workers for year Y-1.

3.1.5.14.5 (S1-10) Adequate wages - Natixis

- **Scope of coverage**:
- France & International managed scope;
- AWM entities with manual collection.

3.1.5.14.6 (S1-12) Persons with disabilities - Natixis

- **Scope of coverage:**
- France managed scope (in first year of disclosure).

Note: from the second year of disclosure, the metric will be published at the level of the World scope.

3.1.5.14.7 (S1-13) Training and skills development metrics - Natixis

- **Performance assessment**
- **Scope of coverage:**
- France & International managed scope
- Scope of financial investments
- **Training hours completed in 2024**
- **Scope of coverage:**
- France managed scope

3.1.5.14.8 (S1-14) Health and safety metrics - Natixis

- **Health and Safety Management System**
- **Scope of coverage:**
- France managed scope
- International managed scope: entities with the largest number of own workers
- AWM entities with manual collection
- Scope of financial investments
- **Work-related accident frequency rate**
- **Scope of coverage:**
- France managed scope
- International managed scope: entities with the largest number of own workers
- AWM entities with manual collection
- Scope of financial investments

3.1.5.14.9 (S1-15) Work-life balance metrics - Natixis

- **Scope of coverage:**
- France managed scope

3.1.5.14.10 (S1-16) Pay metrics (pay gap and total remuneration) - Natixis

- **Scope of coverage:**
- France & International managed scope
- AWM entities with manual collection
- Scope of financial investments

3.2 S2 - Workers in the value chain

3.2.1 SBM 2 - Interests and views of stakeholders

Groupe BPCE is in ongoing dialog with its stakeholders. Groupe BPCE's stakeholder consultation process is based on systems that involve its stakeholders in its process of identifying and assessing impacts, risks, opportunities and levers for improvement, both on environmental and societal topics. The summary of the dialog by stakeholder category is presented in Section 1.3.2 - SBM-2 Interests and views of stakeholders.

3.2.2 SBM 3 - Material incidents, risks and opportunities and their interaction with the strategy and business model

Groupe BPCE expects its suppliers and subcontractors to commit to applying the United Nations Guiding Principles on Business and Human Rights, in particular the prohibition of the use of forced labor, the elimination of child labor, the absence of discrimination, respect for health and safety and compliance with all laws, regulations and directives applicable in the countries where they operate, in terms of working hours and rest time. These commitments are set out in a Responsible Purchasing charter included in the tender documents.

This topic is a material matter for the Group, both in terms of the potential negative impacts that could affect the employees of suppliers and subcontractors, and in terms of reputational risk for the Group. Groupe BPCE ensures that its purchases and supplies are managed in such a way as to limit the risk of severe human rights violations.

Downstream in the value chain, the matters concern employees of financed companies or companies in which the Group invests (through its asset management activities).

For the global business lines, Natixis CIB's Corporate & Investment Banking activities are based on the financing of companies across a wide range of sectors and geographical areas downstream of its value chain. As a result, these activities may influence the working conditions of workers in the companies financed. To identify and minimize these impacts, Natixis CIB incorporates ESG criteria into the analysis of its financing, both for projects and corporate financing.

Natixis CIB's ESG analysis and CSR policies, based on international standards relating to human rights and working conditions, aim to identify and prevent the risks of violations of workers' rights, in particular child labor, forced labor and the use of violence. Particular attention is paid to workers in financed companies operating in sectors and geographical areas considered to be high risk. These impacts, whether systemic or occasional, can lead to a reputational risk for Natixis, regardless of the type of workers concerned, because this risk is global and can affect the entire organization. This could affect its business model by eroding the confidence of investors, customers and other stakeholders. The reputation risk management system is formalized in a dedicated policy applicable to the entire scope of Natixis.

To address human rights and working conditions matters, Natixis CIB has set up an ESG controversy monitoring system. This system, incorporating environmental, social and governance dimensions, enables to identify, analyze and manage the associated risks, particularly those related to working conditions within financed companies and projects. ESG processes, combining ESG analysis and controversy analysis, are fully integrated into the framework of credit decisions and influence financing decisions.

In the specific context of Natixis IM's asset management activities and its European management companies, this topic concerns workers in the value chain of the companies invested in. The double materiality assessment focused in particular on their working conditions, equal treatment and opportunities as well as other labor rights such as forced labor based on the sectoral exposures of assets under management. The integration of these matters into the activities of asset management companies is done through the investment process, the proposal of financial products and commitment activities. Each Natixis IM management company is responsible for its investment process and is ultimately responsible for integrating environmental, social and governance factors in compliance with its fiduciary duty.

As Natixis IM's activity is based on a multi-boutique model encompassing a variety of asset management companies with diversified convictions, management styles and approaches to sustainability, different levers are used by these asset management companies to take into account challenges for value chain workers:

- Some Natixis IM[(1)] European direct management companies[(2)] have integrated considerations related to value chain workers into their investment policies. With this in mind, the rating methodologies or analysis processes carried out on the companies involved enable to take this topic into account. These considerations may also lead to controversy monitoring procedures and exclusion policies for companies considered to be the worst offenders;
- Some Natixis IM European management companies[(3)] have developed thematic products specifically addressing the social challenges of value chain workers.
- In order to improve the practices of companies invested in, in connection with value chain workers, Natixis IM management companies participate in market initiatives and implement a dialog with their issuers as part of their shareholder engagement policies.

(1) Mirova, DNCA Finance, Dorval AM, Ossiam (for funds applying ESG criteria only), Ostrum AM, Thematics AM, Flexstone, MV Credit, Vauban IP, Ecofi, Seventure, Naxicap, AEW and Vega IM.
(2) Excluding Natixis IM International Solutions.
(3) Mirova, Ostrum AM and Thematics AM.

3.2.3 Incident, risk and opportunity management

3.2.3.1 (S2-1) POLICIES RELATED TO VALUE CHAIN WORKERS

3.2.3.1.1 Upstream of the value chain

The Group's commitments to value chain workers are broken down at the purchasing level. BPCE Achats & Services deploys a Responsible Purchasing policy for suppliers and subcontractors with whom the Group has commercial relationships. It is available on Groupe BPCE's website[1]. This policy incorporates the Group's major CSR guidelines. (see G1 - 4.1.1.3.1). The Responsible purchasing policy sets out the Group's major procurement guidelines. It therefore applies to all institutions that can, at their levels, implement their own policy. This Responsible Purchasing Policy, distributed in 2021, was approved by the Board of Directors of BPCE Achats & Services, which represents the Group's companies (update scheduled for 2025).

The Responsible Procurement Policy incorporates the commitments of the United Nations Global Compact and adheres to its "Ten Principles", two of which relate to Human Rights[2]:

- promote and respect the protection of international human rights law. This responsibility relates to the internationally recognized human rights set out in the International Bill of Human Rights and the principles set out in the International Labour Organization's Declaration on Fundamental Principles and Rights at Work;
- make sure they are not complicit in human rights violations.

Groupe BPCE is also committed to applying the guiding principles on business and human rights set out in the United Nations' "Protect, Respect and Remedy" framework. The Group's convictions and commitments have been set out in the form of "Principles" in Groupe BPCE's Code of Conduct and Ethical Standards. "Promoting respect for human rights in all our activities" is thus anchored in the Group's values framework.

These principles are included in the Responsible Procurement Charter[3] of the Banking Sector, a joint initiative of BPCE Achats & Services and the main French players in the banking and insurance sector. This charter is one of the reference documents in the tender documents sent to suppliers. The aim is to involve suppliers in the application of diligence measures in this area. In the "human rights and labor law" section, this includes vigilance with regard to suppliers' commitments and in particular:

- the prohibition of the use of forced or compulsory labor and the ill-treatment of their employees. This includes the prohibition of all practices of modern slavery and human trafficking;
- elimination of child labor;
- the absence of discrimination: no distinction, exclusion or preference may be based on color, sex, age, language, religion, sexual orientation or identity, national or social origin, opinion, or disability.

BPCE Achats & Services has set up a risk management system to comply with the Duty of Care with the aim of identifying, preventing and remedying negative impacts related to human rights and environmental issues.

As part of an AFNOR and Banking Sector-supported initiative, BPCE Achats & Services and three other banking groups have drawn up a CSR risk mapping based on a common nomenclature comprising over a hundred purchasing categories (142 in 2024).

Presented to the Purchasing and CSR departments from 2018 and associated with the Duty of Care plan, this mapping enables to identify, rank and prioritize, by purchasing category, the CSR risks to be monitored as part of supplier relations. It also incorporates the risk associated with the country in which the majority of the added value on each product and service is generated. This mapping is updated in real time.

BPCE Achats & Services has implemented a prevention and control system taking into account banking sector regulations (EBA), the specific nature of purchasing and all other regulations concerning it (Duty of Care, anti-corruption, labor law, etc.).

BPCE Achats & Services is in constant contact with the team in charge of monitoring BPCE SA's regulatory changes and the team in charge of relations with European regulators.

As an extension to the charter and backed by the responsible procurement standard ISO 20400, the Responsible Supplier Relations and Procurement (RFAR) certification is awarded by the company mediator (under the auspices of the French Ministry for the Economy) and the CNA (French association of purchasing managers). It aims to single out French companies that have established lasting, balanced relations with their suppliers.

BPCE Achats & Services and 12 Groupe BPCE companies have received the RFAR certification and have historically been committed to the continuous improvement process in Procurement induced by the label.

This Certification recognizes the Group's responsible procurement strategy led by BPCE Achats & Services and the deployment of CSR at the heart of the purchasing function and in relations with suppliers.

The development of the use of inclusive suppliers is also an action principle implemented by BPCE Achats & Services to integrate corporate social responsibility into its purchasing practices.

3.2.3.1.2 Downstream of the value chain

Natixis CIB

Natixis CIB takes into account potential ESG controversies associated with counterparties and financed projects that could impact the risk profile of the counterparty/project.

SECTOR POLICIES

When developing its sectoral policies, Natixis makes sure to consult its key stakeholders, in particular representatives of civil society and sector experts. This approach enables to gather diversified perspectives and to ensure that the defined criteria effectively respond to the societal and environmental issues identified. Public sector policies (oil and gas, coal, defense, tobacco) are shared on the Natixis website.

The implementation of ESG policies is carried out by a committee at Groupe BPCE level, chaired by a member of the Executive Management Committee, which aims to define and monitor strategic guidelines related to ESG risks.

The following ESG policies include criteria aimed at ensuring adequate working conditions within the financed companies: mining and metals sector (internal policy), oil and gas sector (public policy), palm oil sector (internal policy).

EQUATOR PRINCIPLES

As part of the Equator Principles, Natixis CIB applies a rigorous methodology that aims to assess the environmental and social (E&S) risks of projects financed and the management of these risks by customers, regardless of their business sector. Since October 2020, Natixis CIB has applied the amended version of the Principles (EP IV Amendment), which incorporates more exhaustive criteria, in particular the application of IFC performance standards concerning the impact on local communities (IFC PS2 "Workforce and working conditions"), IFC PS4 "Community Health, Safety and Security", and IFC PS5 "Land Acquisition and Involuntary Resettlement". Each transaction submitted for review is classified into three categories according to the IFC classification:

- A = significant and adverse E&S impact;
- B = limited and adverse E&S impact;
- C = minimal E&S impact or no adverse impact.

This categorization affects the internal credit approval process. For category A and B projects, the ESG risk management team performs its own analysis and supports the business line in preparing and monitoring the environmental and social assessment carried out by an independent third-party consultant (key elements of the Equator Principles).

An E&S note summarizing the key elements of the project assessment must be presented for any new transaction pending credit approval. This is prepared by the business line and, for category A and B projects, enhanced by the ESG risk management team, which validates or modifies the project category and sets out its position and recommendations on the project. This note is an integral part of the loan application; therefore, the various members of the credit approval body review this document before making any decision. For category A projects, the procedure provides for a referral to a higher-ranking credit approval body. Transactions are subject to E&S monitoring throughout the term of the loan. When deemed appropriate, the ESG risk management team may notify and inform Natixis' management of any aspect related to the E&S risks of transactions through the Reputational Risk Committee, Global Culture & Conduct Committee.

Natixis IM

In conjunction with value chain workers, Natixis IM's European asset management companies are implementing various policies that integrate these issues into investment and commitment activities.

RESPONSIBLE INVESTMENT POLICIES

The responsible investment or ESG policies of Natixis IM's European direct management companies[1] include the dimension of value chain workers in their investment approach.

This integration can be carried out through due diligence processes, research or by taking into account minimum standards.

These policies may thus describe the consideration of diversity in the companies considered, safety at work or respect for human rights and these criteria ultimately influence the non-financial rating of the companies. After having been combined with a set of other criteria, these criteria thus enable to take into account the impacts, risks and opportunities related to value chain workers. By way of illustration in listed asset management, as indicated in Ostrum AM's ESG policy, the GREaT rating method[2] applied to issuers/companies, takes into account human rights: quality of working conditions, supplier relationship management, etc.

MINIMUM STANDARDS

All European direct listed asset management companies[3] have defined minimum standards on the social issues to which their investments are subject, based on regulatory exclusions related to international standards:

- the United Nations Global Compact;
- United Nations Guiding Principles on Business and Human Rights; and/or
- the OECD Principles of Responsible Business Conduct.

Private asset companies have also adopted these international standards[4] or have adopted specific approaches[5] to their investment universes by including, for example, clauses in the contracts of real estate managers.

CONTROVERSY MONITORING POLICY

Natixis IM has defined a global ESG risk policy that requires the implementation of a controversy monitoring for Natixis IM and its asset management companies. This policy requires having a structure and a system to assess, quantify, manage, mitigate and communicate about severe forms of controversy as part of its reputational risk management system.

(1) Mirova, DNCA Finance, Dorval AM, Ossiam (for funds applying ESG criteria only), Ostrum AM, Thematics AM, Flexstone, MV Credit, Vauban IP, Ecofi, Seventure, Naxicap, AEW and Vega IM.
(2) Responsible management, sustainable management of resources, energy transition, regional development.
(3) Ostrum, Ecofi, DNCA Finance, Dorval AM, Mirova, Thematics AM, Vega IM. Ossiam, a quantitative and index-based management company, includes exclusion criteria in ESG funds.
(4) Flexstone, MV Credit and Vauban.
(5) For Naxicap, these principles are integrated into the ESG analysis processes rather than exclusions due to the type of companies involved. Seventure includes in these standards in the Due Diligence and in its annual ESG data collection questionnaire. AEW has included contractual provisions for some of its products with its property managers.

In particular, each asset management company must therefore have a system for taking into account controversies (either formalized *via* a dedicated policy or integrated into existing policies and procedures) that defines the governance and operational principles.

This monitoring of controversies makes it possible to identify, among other things, any social violations including breaches related to value chain workers.

SHAREHOLDER ENGAGEMENT POLICIES

The engagement and voting policies of Natixis IM management companies may include principles relating to the social rights of value chain workers.

In terms of engagement, the interests of value chain workers are included in the dialog between asset management companies and issuers. Indeed, these interests are taken into account by several Natixis IM European management companies(1) as a topic of attention.

If the engagement processes result in responses deemed unsatisfactory by the asset management companies, a reporting procedure is provided for and takes the form of several actions specific to each engagement policy.

At any point in the reporting process, if the company's progress and/or practices are deemed insufficient to maintain eligibility, divestment may be considered.

VOTING POLICIES

In terms of voting, several Natixis IM European asset management companies(2) take into account the interests of value chain workers when analyzing shareholder resolutions and voting.

In general, these voting policies support shareholder resolutions on social issues that improve long-term value for all stakeholders, including employees of the companies involved, and/or encourage greater transparency. on the respect of their rights or the fair distribution of the value created.

- In this respect, Mirova's voting policy encourages companies to take into account the remuneration of employees in a fluctuating economy marked in particular by inflation and/or by pressures related to the cost of living. Mirova encourages companies to explain how they have approached the distribution of value. As part of the application of these principles, Mirova votes in favor of resolutions guaranteeing that the components of executive remuneration highlight, among other things, a fair distribution of value between the various stakeholders.
- In addition, in its voting policy, Ossiam also requires large listed companies to disclose information on their exposure and management of the main risks related to corporate social responsibility. This may include, but are not limited to, issues related to health and safety, human rights, modern slavery and labor standards. When companies do not publish this information or when Ossiam observes poor performance or poor management practices in terms of corporate social responsibility, the management company may vote against or abstain on the resolution to adopt the annual report and financial statements.

3.2.3.2 (S2-2) PROCESSES FOR ENGAGING WITH VALUE CHAIN WORKERS ABOUT IMPACTS

3.2.3.2.1 Upstream of the value chain

Process for engaging on preventing and identifying potential impacts with value chain workers.

The Responsible Supplier Relations and Procurement (RFAR) certification demonstrates the Group's attention to the quality of its supplier relationships. The aim of this Certification is to improve procurement practices by raising awareness among economic players of the importance of the quality of relations with the various suppliers.

BPCE Achats & Services has implemented a continuous progress plan for responsible purchasing This plan is audited annually by an approved independent body.

Relationship monitoring system

BPCE Achats & Services has set up regular meetings with the Group's strategic suppliers (defined in particular according to the volume of purchases, the criticality of the services delivered for the continuity of banking activities and/or essential to the Group's development). Major suppliers are met once a year. Strategic suppliers are met once every 18 months on average. The business lines are responsible for monitoring contracts with suppliers and meet with them in this context.

These meetings allow for a privileged exchange with suppliers on all aspects of the service. The Purchasing Director of BPCE Achats & Services is responsible for the proper application of the system.

In addition, BPCE Achats & Services has set up a system for "listening to the voice of suppliers" for the entire Group. This system, used by nine Group companies in 2024, has enabled to identify areas for optimization and implement progress plans to better understand the expectations and degree of satisfaction of suppliers in order to improve the relationship.

3.2.3.2.2 Downstream of the value chain

Natixis CIB

For the financing of projects falling within the framework of the Equator Principles, Natixis CIB implements a prior consultation of the workers of the projects financed by an independent consultant for all category A project financing and the majority of category B transactions. This includes an on-site visit and interviews, mainly to validate the conclusions of the initial analysis and identify any additional action required to correct and mitigate potential impacts. An action plan is then drawn up and included in the project's financial documentation, thus guaranteeing that the borrower is required to comply with the planned actions throughout the duration of the loan. This procedure aims to remedy the negative impacts and allows the workers of the financed projects to express their concerns through the consultations carried out by the independent consultant.

(1) Mirova, DNCA Finance, Dorval AM, Ossiam (for funds applying ESG criteria only), Ostrum AM, Thematics AM, Flexstone, MV Credit, Vauban IP, Ecofi, Seventure, Naxicap, AEW and Vega IM.

(2) Ecofi, Mirova, Ossiam (for funds applying ESG criteria only), Ostrum AM, Thematics AM and Vega IM.

Natixis IM

In the context of asset management, Natixis IM management companies do not have the opportunity to interact directly with the employees of the companies invested in. However, asset management companies use data and research and analysis methodologies that address the issue of value chain workers. The response to this information point was made in this sense in the absence of guidelines for the asset management sector.

Natixis IM's European asset management companies use internal research services as well as analysis and due diligence processes to identify risks and opportunities related to the social issues of value chain workers. This consideration concerns both European asset management companies investing in listed assets[1] and those investing in private assets[2].

- For example, for Ostrum AM, the investment process excludes investments by issuers for which proven severe controversies run counter to the principles defended by commonly established international standards (United Nations Global Compact, OECD Guidelines for multinational companies), thus seriously undermining: human rights and labor rights. For this, Ostrum AM has defined an analysis methodology based on various criteria: the proven nature of the facts; the seriousness of the events and their impact on stakeholders; the systemic nature of the breaches observed and the absence of remediation or their ineffectiveness;
- For Thematics AM, the non-financial investment approach includes a behavioral analysis. As part of this analysis, Thematics AM identifies "non-compliant" companies, *i.e.* those that cause or contribute to serious, systemic and/or systematic violations of international standards concerning human and labor rights.

For private assets, Natixis IM's European asset management companies take social indicators into account in their due diligence and ESG risk integration process. For example, in its analysis of litigation and reputational risks, AEW includes risk, whose occurrence is ongoing, and which are related to challenges in the event of risk to the health or comfort of stakeholders and participants, on construction sites and in the operating phase of the assets.

3.2.3.3 (S2-3) PROCESSES TO REMEDIATE NEGATIVE IMPACTS AND CHANNELS FOR VALUE CHAIN WORKERS TO RAISE CONCERNS

Whistleblowing mechanism open to Groupe BPCE's third parties

Groupe BPCE companies have a platform to collect reporting of facts relating to serious breaches of the Code of Conduct, laws, safety, environmental impact, or any inappropriate behavior in the workplace. This whistleblowing system is open to all employees and third parties of the Company, who can express themselves *via* a tool accessible by URL link, regardless of the country of operation (Europe, United States, etc.) and regardless of the business line (Retail Banking, Corporate & Investment Banking, etc.). For more details on the whistleblowing system, see Section G1-1 - 4.1.1.3.3.

3.2.3.3.1 Upstream of the value chain

Risk management system and Duty of Care

The level of risk for each purchasing category is assessed along three axes covering the following issues:

- **fair practices and ethics**: fraud and corruption, personal data protection, property rights and patents;
- **human rights and social conditions**: child labor, forced labor and modern slavery, discrimination, health and safety, working conditions and freedom of association;
- **environment**: climate change and greenhouse gases, loss of biodiversity, depletion of natural resources, pollution, waste and end-of-life management.

Each purchasing category is assessed on a scale of four CSR risk levels: low, limited, high, very high. To assess the level of risk, the AFNOR expert takes into account the likelihood and potential severity of the risk for each factor.

Based on the risk assessment work, specific mitigation measures were developed:

- in 2024, BPCE Achats & Services adopted an additional module to CSR risk mapping. This AFNOR module can integrate specific criteria into specifications in order to mitigate risks according to the purchasing category;
- for high and very high-risk purchasing categories, a specific system has been set up: suppliers must answer a questionnaire specific to each category and communicate the actions taken to mitigate risks and prevent serious harm.

This action plan, evaluated by BPCE Achats & Services, generates a rating that is integrated into the supplier's overall score. Depending on the results, a progress plan may be drawn up (when relevant) with the selected suppliers and must be reviewed as part of the monitoring of the supplier relationship;

- for other purchasing categories, CSR requirements are gradually being implemented in the consultations;
- professionalization of the Purchasing function, through the gradual dissemination of best practices and the roll-out of training programs: in particular, all purchasers have been trained in the CSR issues and risks identification tool covering all 142 purchasing categories.

A collective CSR audit process has been initiated with a few major local banking institutions. This approach aims to verify the compliance of the CSR commitments made by suppliers.

(1) DNCA Finance, Mirova, Ostrum AM, Thematics AM, Ecofi, Ossiam (for funds applying ESG criteria only) and Dorval AM.
(2) Flexstone, Naxicap, AEW, Seventure, Vauban IP and MV Credit.

Integration of specific contractual clauses

BPCE Achats & Services communicates on its commitments in terms of responsible purchasing and its expectations of suppliers, on the Group's institutional website and *via* the Banking Sector's Responsible Procurement Charter[1] in the consultation files.

BPCE Achats & Services systematically includes clauses in its contracts to ensure that its subcontractors comply with all regulations relating to fundamental rights and freedoms, health and safety of people, social and labor regulations or environmental regulations, whether they are of conventional origin (company agreements, branch agreements, collective agreements), national, European or international. The supplier must justify this at the customer's request.

Groupe BPCE also includes clauses in its contracts allowing employees to rely on a whistleblowing system and to be explicitly informed by their employer of the existence of this system.

Several existing channels are highlighted to allow the reporting of negative impacts; whether or not they are related to value chain workers:

- employees can use the whistleblowing system set up within Groupe BPCE (whistleblowing system described in section G1-1 - 4.1.1.3.3);
- an independent "Supplier Mediator" at BPCE Achats & Services has been appointed to help manage disputes;
- audits may be carried out by BPCE Achats & Services to ensure that the elements declared by the supplier in the CSR questionnaire are compliant (methods for sending the questionnaire described in section G1-2 - 4.1.1.4).

3.2.3.3.2 Downstream of the value chain

Natixis CIB

ESG risk management is part of the procedure that aims to define the principles governing the credit risk decision process within Natixis CIB (*Credit Decision Process*). This procedure details the Bank's various commitments monitored in the context of granting a loan, such as:

- CSR policies in sensitive sectors, whether internal or public (coal, oil and gas, defense, tobacco, mining, nuclear, palm oil);
- the application of the Equator Principles for dedicated financing;
- commitments made proactively as part of the Act4Nature initiative;
- clients with a significant ESG or reputation risk.

Natixis IM

In the context of asset management, Natixis IM's management companies have no direct relationship with the employees of the companies invested in. It is these same companies invested in that may be subject to a whistleblowing mechanism by their own employees. In the absence of guidelines for asset management, the interpretation of requirements in this area concerns the monitoring of controversies, Principle Adverse Impacts (PAIs)[2] and engagement with companies.

Each Natixis IM management company must have a system to address controversies (formalized through a dedicated policy or integrated into existing policies and procedures).

For the monitoring of controversies, Natixis IM management companies rely on data produced by external data providers, collected from third parties and/or on information communicated directly from the company invested in (for private assets).

External data providers are mainly ISS, MSCI, RepRisk and Sustainalytic. For the latter, social controversies are determined in part on the basis of cases of forced labor, violations of human rights and problems related to health and safety at work. Similarly, controversies as defined by MSCI also include elements related to workers' rights, child labor, potential health and safety issues at work and cases of discrimination.

European asset management companies also report quantitative indicators as part of their PAI reporting in order to monitor potential negative impacts on value chain workers.

In addition to PAI indicators for which publication is mandatory, certain of Natixis IM's European asset management companies publish additional PAI indicators in relation to value chain workers. Thus, Ostrum AM, Dorval AM and Vega IM also take into account which investment countries have breaches of social standards (PAI 16) in the context of sovereign and supranational issuers.

Finally, the engagement actions implemented, where applicable, by Natixis IM's management companies can help influence practices and remedy the negative impacts related to potential controversies or violations involving value chain workers.

(1) groupebpce.com/app/uploads/2024/01/Charte-Achats-Responsables.pdf.
(2) PAIs (Principal Adverse Impact) are key indicators used to measure the most significant adverse impacts of investments on the environment, society and governance (ESG).

3.2.3.4 (S2-4) TAKING ACTION ON MATERIAL IMPACTS ON VALUE CHAIN WORKERS, AND APPROACHES TO MANAGING MATERIAL RISKS AND PURSUING MATERIAL OPPORTUNITIES RELATED TO VALUE CHAIN WORKERS, AND EFFECTIVENESS OF THOSE ACTIONS

3.2.3.4.1 Upstream of the value chain

The actions implemented for Groupe BPCE as a whole to limit negative impacts and seize opportunities are as follows:

Duty of Care

- the principles and actions related to the Duty of Care have been implemented in policies (responsible purchasing), actions and procedures since 2017. The procedure is constantly being adapted to cover high and very high-risk categories of purchases: January 2025;
- implementation of obligations related to the Duty of Care (BPCE Achats & Services scope: General Purchasing Procedure): January 2025;
- to date, no serious impact has been identified as part of the collaboration with the Group's suppliers;

BPCE Achats & Services has set up dedicated tools for the Purchasing Function:

- availability since 2021 of CSR questionnaires covering all purchasing categories in order to measure the CSR performance of suppliers;
- since 2022, an AFNOR CSR risk mapping platform has been deployed for Groupe BPCE's entire purchasing function. An internal control system verifies the compliance of the purchasing process deployed by BPCE Achats & Services on behalf of its internal specifiers;
- in 2024, implementation of a "listening to the voice of suppliers" system for Group companies;
- in 2025, BPCE Achats & Services intends to monitor the integration of CSR criteria into specifications.

The effectiveness of this system is currently measured using several annual indicators:

- the consultation rate including the integration of supplier CSR performance assessments;
- the compliance rate of purchasing files measured during internal controls.

Development of spending with Inclusion Market suppliers

- implementation in 2023 of inclusive service providers referencing;
- organization of events on the topics of inclusion and disability every year (March 2023 and October 2024);
- implementation in 2024 of a training module "Developing more inclusive purchasing with greater solidarity" for buyers and their business lines;
- provision for the Purchasing Function of a documentary space (SharePoint) dedicated to the Inclusion Market, which has been regularly enhanced since 2023 (access to contracts, sourcing platforms, training, indicators, etc.);
- in 2025, the implementation of an internal catalogue of inclusive suppliers is planned and enable to source and optimize regional synergies.

The effectiveness of these actions will be measured by:

- the number of people trained during training/events per year;
- the amount of annual expenses with the inclusion market.

3.2.3.4.2 Downstream of the value chain

Natixis CIB

In 2024, there was no significant change in the ESG risk control system within Natixis CIB. However, as part of the ESG Inside program, several projects have been launched to improve this system as part of a continuous improvement approach. These initiatives will be rolled out throughout 2025.

In addition, it should be noted that the number of transactions analyzed, where the ESG risk is considered major, increased between 2023 and 2024, from 614 in 2023 to 800 in 2024.

Regarding the financing of projects covered by the Equator Principles, the measures described can also be used for possible remediation. These measures especially allow to establish communication and consultation channels through which the workers concerned can express their concerns. The involvement of the independent on-site consultant - and the development of a potential action plan, included in the financial documentation - strengthens ability of stakeholders to identify and correct potential impacts.

INTERNAL CONTROL SYSTEM

In order to verify the effectiveness of these actions, Natixis CIB has an internal control system that incorporates all risks, including environmental and social risks regarding value chain workers. It is based on three lines of defense:

- first line of defense: represented by sales, origination and distribution teams;
- second line of defense: embodied by the Risk and Compliance departments of Natixis. Risk acts as a second line of defense at transaction, counterparty, portfolio and corporate levels across all activities;
- third line of defense: Natixis CIB's Internal Audit department is in charge of periodic controls, and has integrated ESG-specific risks into its scope of activity; it carries out thematic controls on Natixis CIB activities.

Natixis IM

The actions explained below only concern the positive contributions generated by the products and the improvement of the issuer's practices thanks to the engagement actions related to value chain workers.

PRODUCTS

Some of Natixis IM's management companies offer products aimed specifically at creating a positive contribution or promoting good social practices related to the theme of value chain workers.

For example, for Mirova, the "*Insertion Emplois Dynamique*" fund (dynamic employment integration fund) adopts an original thematic approach based on long-term trends and job creation to identify investment opportunities across the value chain and in all business sectors. As such, part of the fund's assets are invested in unlisted securities of solidarity-based companies that promote the creation or consolidation of jobs in France.

For Thematics AM, the AI & robotics strategy contributes to the optimization of the use of resources, sustainable manufacturing and the health and safety of workers, in connection with, among other things, SDG 8 (access to employment). As such, the positive contribution is generated through the automation of logistics and industrial robots as part of factory automation, thus freeing workers from hazardous, dirty, difficult, repetitive and tedious tasks.

SHAREHOLDER ENGAGEMENT

Engagement strategies can be proactive and therefore respond to the themes defined as priorities in the engagement policy, or implemented in response to a social controversy such as the violation of standards related to value chain workers (reactive). These controversies can be identified as part of the controversy monitoring processes of Natixis IM management companies, or *via* the analysis carried out by the service providers conducting the engagement.

- As part of its proactive engagement, Mirova reports actions in favor of diversity in its engagement report. For example, Mirova encourages companies in which it invests to adhere to the principles of UN Women Empowerment[1].
- In addition, Ostrum AM reports that the main topics of dialog with issuers in 2023 concerned, on social issues: the development of human capital, strengthening relations with issuers' stakeholders, maintaining the balance of powers and compensation.
- As part of the reactive engagements carried out by Natixis IM's asset management companies, Ossiam explains that, *via* their collaborative engagement service provider, companies in significant violation of treaties and international rights are those identified as a priority to implement an engagement dialog.

In terms of voting, shareholders' resolutions at General Meetings are reviewed according to the principles defined in the voting policies and explained in section S2-1 - 3.2.3.1.2 of this document.

- Thematics AM generally votes for proposals requiring a company to disclose its diversity policies or initiatives, or proposals requesting the disclosure of full diversity data on a company's workforce.
- In addition, Ecofi's voting report shows that the asset management company regularly supports resolutions that invite companies to disclose information on respect for human rights within their value chain.

Proactive participation in market initiatives

Some Natixis IM European management companies[2] have proactively joined market initiatives in order to collaborate with other investors to improve issuer practices, several of these initiatives are targeting issues related to value chain workers.

For European asset management companies active in listed investments:

- DNCA Finance and Mirova are signatories of the "Advance" PRI initiative. Since its launch in December 2022, this initiative has enabled the 115 investor members to establish an active dialog with 38 companies to encourage them to promote human rights in their activities;
- Ostrum AM and Mirova are founding members of the 30% Club France Investor Group initiative. Created in 2020, this club aims to promote better gender diversity within the management teams of SBF 120 companies, thus contributing to the sub-theme Equal treatment and equal opportunities for all. A first objective is to achieve at least 30% representation of women by 2025. The investor group currently has 16 members representing more than €6,000 billion in assets under management;

With regard to the Natixis IM European management companies specializing in private asset management, participation in the following market initiatives can be mentioned:

- the majority of private asset management companies[3] have signed the Parité France Invest charter[4], which aims to increase efforts to promote parity at all levels in the organization of asset management companies and in portfolio companies. Concerning the companies invested in, the commitment is to reach at least 30% of women on Executive Committees by 2030;
- Mirova, Naxicap and Vauban IP are also signatories of the France Invest Value-Sharing Commitment Charter[5]. The signatories have defined the objective for companies invested in:
  - to increase, in the short term, the coverage rate of their employees by at least one annual value-sharing scheme (value-sharing bonuses, profit-sharing or incentive scheme);
  - to promote, over the long term, the sharing of shareholder value creation through employee shareholding and the distribution of capital gains in all situations where these two mechanisms are relevant.

3.2.4 Metrics and targets

3.2.4.1 (S2-5) TARGETS RELATED TO MANAGING MATERIAL NEGATIVE IMPACTS, ADVANCING POSITIVE IMPACTS, AND MANAGING MATERIAL RISKS AND OPPORTUNITIES

3.2.4.1.1 Upstream of the value chain

Duty of Care target

For several years, the Group has been raising awareness and equips the purchasing process to ensure compliance with the Duty of Vigilance Law.

Until 2024, no target had been defined.

As part of the launch of the new VISION 2030 strategic project, the target at BPCE Achats & Services is to be able to assess 100% of suppliers in high and very high CSR risk categories when entering into a relationship in order to prevent risks in these categories by the end of 2026. Already deployed, the system will concern 25 categories identified as the most at risk. This change will be made possible by the implementation of a specific Responsible purchasing procedure at the beginning of 2025.

Development of spending with Inclusion Market suppliers target

Within Groupe BPCE, the amount of spending on inclusive suppliers has stabilized in recent years. It amounted to €14.8 million in 2024[1]. This expenditure is made with structures, in particular the integration by economic activity (SIAE) and the disability structures (protected and adapted work sector - STPA - and Independent Workers with Disabilities - TIH).

It is planned to increase this amount by the end of 2026 through:

- raising the awareness of the purchasing sector and business lines through specific events and training;
- the provision of dedicated sourcing and referencing tools.

3.2.4.1.2 Downstream of the value chain

Natixis CIB

Natixis CIB has not defined performance indicators for the employees of the companies financed. Natixis CIB nevertheless aims to cover all clients and projects for which ESG issues, and in particular those relating to value chain workers, are identified as part of the analysis of potential controversies (carried out at the start of the relationship with a new client and in the monitoring of portfolio clients), the implementation of sectoral ESG policies and the Equator Principles.

No performance indicators have been identified for the employees of the companies financed, instead resources indicators implemented are considered.

The ESG Risk team produces detailed analyses of Natixis CIB customers for whom ESG risk is considered a major concern (see S2-4 for the number of transaction analyzed in 2024).

Natixis IM

At this stage, Natixis IM has no performance indicators and is deploying a continuous improvement approach to resources and processes.

(1) This figure is the result of cross-referencing of data between the inclusion market supplier database (public inclusion market website) and the Group's purchasing expenditure database.

3.3 S3 - Affected communities

Groupe BPCE consists of brands with strong identities that meet all customer needs; fully-fledged regional houses with decentralized governance that enables local decision-making ; and differentiating expertise that makes it possible to address new markets, develop synergies, and pool certain functions.

With its many faces, Groupe BPCE is supported by high-performance banking houses promoted by their customers:

- Banque Populaire, a bank that is locally committed to the growth and the success of all its customers, is the:
  - Affinity and trustworthy bank for young people who wishto undertake professional and public sector roles;
  - Bank for corporates: co-pilot for day-to-day activities, a main banker supporting transitions and an advisory banker for diversifying and preserving wealth;
  - Partner bank for healthcare and blue economy players, expert in the industries of the future.
- Caisse d'Epargne, a bank open to all and useful to everyone, is the:
  - Bank for families and the prime partner for the regions, energizing and unifying public and private stakeholder communities;
  - Pioneer bank for transitions, assisting with the major challenge of housing and changes affecting society and all economic actors – Social & Solidarity Economy actors, corporates and professionals;
  - Partner bank of confidence, a leader in deposits & savings providing expertise, security and protection every day.

Rooted in the heart of the regions and closely connected to the local inhabitants and ecosystems, the Banques Populaires and the Caisses d'Epargne help enhance the economic, social, and cultural dynamics of these areas, thereby contributing to the well-being of communities. In its VISION 2030 strategic project, Groupe BPCE is focusing its actions on specific sectors and communities:

- **(A)** companies of all sizes, from VSEs to SMEs and mid-sized companies, as well as professionals, craftspeople, small retailers and liberal professions, by providing them with key expertise, strategy and transformation advisory and a structured and global approach to savings. By investing regional savings in the local economic fabric and financing regional projects, the Banques Populaires and the Caisses d'Epargne also indirectly help support the development of local employment opportunities;
- **(B)** the various structures of the social and solidarity economy (SSE), which respond to major societal challenges (healthcare, dependency, aging, fight against poverty, collaborative economy, etc.);
- **(C)** public sector players, including local authorities. As the main private financier of the French public sector[1], the Group supports the transformation of regions, for the benefit of those who live there;
- **(D)** social housing operators and their beneficiaries, as long-standing partners and leading private bankers in social housing[2];
- **(E and F)** key regional infrastructures, by financing players in the health sector (clinics, hospitals, etc.) or the sports economy (companies, associations), thus improving the living conditions of their beneficiaries.

As part of its financing activities, Natixis CIB identifies potentially affected communities as those that live or work near its customers' companies, sites and projects, that could be impacted by their activities.

In the specific context of Natixis IM's asset management activities, this topic concerns the impact of the companies invested in on the affected communities, in relation to economic, social and cultural rights, civil rights and freedoms as well as the specific rights of indigenous communities based on sector exposures of assets under management.

(1) *Observatoire de la dette Finance Active des Collectivités Locales* at the end of 2023 (published in 2024).
(2) Milestones 136 USH "*HLM in figures*" (August 2024).

3.3.1 SBM-2: Interests and views of stakeholders

Groupe BPCE is in ongoing dialog with its stakeholders. Groupe BPCE's stakeholder consultation process is based on systems that involve its stakeholders in its process of identifying and assessing impacts, risks, opportunities and levers for improvement, both on environmental and societal topics. The summary of the dialog by stakeholder category is presented in Section 1.3.2 - SBM-2 Interests and views of stakeholders.

3.3.2 SBM-3 - Material incidents, risks and opportunities and their interaction with the strategy and business model

Within the framework of double materiality assessment, the financing of the economy and territorial actors has been identified as material for the Groupe BPCE.

The Banques Populaires and the Caisses d'Epargne have a positive impact by fostering local economic development through job creation and support for companies, professionals, local authorities, and public sector players. They also assist stakeholders and beneficiaries of the social and solidarity economy, as well as social housing operators, ultimately enhancing the living conditions of the communities they serve.

By supporting transitions, particularly environmental and social transitions, the Banque Populaire and Caisse d'Epargne networks are helping to support the various players and contribute to the territories competitiveness. Conversely, financing/investment in projects that have a negative impact on communities or in projects that are not aligned with the actual needs of society could damage the Group's reputation or increase the Group's legal risk. Reputational and litigation risk management systems are described in the ESRS 2 chapter.

At the downstream level of Natixis' value chain, financing activities can have positive impacts on communities through the financing of projects that meet societal needs and improve access to facilities related to social and cultural rights.

The process of granting financing by Natixis CIB incorporates ESG criteria, particularly concerning the communities affected, which allows for the identification, analysis, and management of any associated risks. Natixis CIB implements a reputation risk management system that includes controversy analyses. These analyses are fully integrated into credit decisions.

For Natixis IM and its European asset management companies, the integration of community matters (in connection with economic, social and cultural rights, civil rights and freedoms as well as the specific rights of indigenous communities) in the activities of asset management companies, is done through the investment process, the proposal of financial products and engagement activities. Each Natixis IM asset management company is responsible for its investment process and is ultimately responsible for integrating environmental, social and governance factors in compliance with their fiduciary duty. Diversified approaches are observed within Natixis IM's European asset management companies:

- all of[1] Natixis IM's[2] European direct asset management companies have incorporated considerations related to the affected communities into their investment policies. This is reflected in the rating methodologies or due diligence processes carried out on the invested companies;
- some of Natixis IM's European asset management companies[3] have developed products with the objective of specifically taking into account the impact of the companies invested in and/or implementing actions that have a positive impact on communities;
- as part of their shareholder engagement policies, Natixis IM's asset management companies participate in market initiatives[4] and engage in dialogs with the companies they invest in, with the aim of improving their practices related to communities. They also adhere to several international principles aimed at promoting respect for community rights.

Groupe BPCE's general approach to human rights is presented in the Group's Human Rights charter[5].

(1) Within Natixis IM, direct management includes all asset management companies except the management of Natixis IM's International Solution's funds of funds.
(2) Mirova, DNCA Finance, Dorval AM, Ossiam (for funds applying ESG criteria only), Ostrum AM, Thematics AM, Flexstone, MV Credit, Vauban IP, Ecofi, Seventure, Naxicap, AEW and Vega IM.
(3) Dorval AM, AEW, Mirova, Ostrum AM and Thematics AM.
(4) For example, DNCA Finance and Mirova are members of the PRI Advance initiative, Dorval AM and Ostrum AM took part in a collective declaration by UNI Global Union.
(5) Extract 241007-charte-droits-humains-groupe-dles.pdf.

3.3.3 Incident, risk and opportunity management

3.3.3.1 FINANCING THE ECONOMY AND REGIONAL PLAYERS IN FRANCE

3.3.3.1.1 (S3-1) Policies related to affected communities

There are no policies applicable to the entire Group on this topic at this stage. They will be specified for the 2025 fiscal year, as part of the strategic project VISION 2030 by Groupe BPCE. Nevertheless, in 2024, Groupe BPCE is rolling out action plans for the aforementioned communities, which are specified in the dedicated section (see S3-4 - 3.3.3.1.4).

3.3.3.1.2 (S3-2) Processes for engaging with affected communities about impacts

The Banques Populaires and Caisses d'Epargne interact with local players on an ongoing basis as part of their day-to-day activities:

(A) With companies, in particular SMEs and mid-sized companies as well as professionals, craftspeople, retailers and liberal professions: to collect the expectations of local ecosystems, the Banques Populaires and the Caisses d'Epargne interact with the Chambers of Commerce and Industry (CCI), the Chambers of Trades and Crafts, and the regional delegations of organizations employer organizations (such as MEDEF, CPME, U2P, etc.), entrepreneurial networks and regional orders;

(B) With the various structures of the Social and Solidarity Economy: the Banques Populaires, in particular Crédit Coopératif, and the Caisses d'Epargne support SSE players, coordinate partnerships and maintain ongoing dialog with representative networks and their members, support networks and all SSE players, associations, foundations, mutuals and cooperatives, particularly at the local level within the Regional Chambers of the Social and Solidarity Economy (RCSSE). These exchanges allow monitoring of issues, needs, and current events, leading to the integration of these elements into national and local strategies and allowing the co-construction of events, round tables, or joint disclosures.

The Banque Populaire and Caisse d'Epargne networks also work alongside the heads of networks and general or SSE representative bodies.

(C) With public sector players, including local authorities: the Banques Populaires, in particular Crédit Coopératif and CASDEN, and the Caisses d'Epargne, which historically support all public players, are in direct contact with the ecosystems of their regions and players in the public sphere. The Caisses d'Epargne are in constant contact with various public bodies (local and regional authorities, SEM, etc.) and forge partnerships at both national and local levels (associations of local authorities and elected representatives, EPL, etc.).

(E and F) With key regional infrastructures: the Banques Populaires and the Caisses d'Epargne support committed players with many partners in the health sector and institutions in the sports economy, such as GIE France Sport Expertise, Territoire d'Évènements Sportifs and Union Sport & Cycle. They represent the banking sector in the Sport sector.

3.3.3.1.3 (S3-3) Procedures to address negative impacts and channels for affected communities to raise concerns

Whistleblowing mechanism open to Groupe BPCE's third parties

Groupe BPCE companies have a platform to collect reports relating to serious breaches of the Code of Conduct, laws, safety, environmental impact, or any inappropriate behavior in the workplace. This whistleblowing system is open to all employees and third parties of the company, who can express themselves *via* a tool accessible by URL link, regardless of the country of operation (Europe, United States, etc.) and regardless of the business line (Retail Banking, Corporate & Investment Banking, etc.). For more details on the whistleblowing system, see G1.1 - 4.1.1.3.3.

Groupe BPCE is not aware of any cases of non-compliance with the guiding principles of the United Nations or the ILO Declaration on Fundamental Principles and Rights at Work regarding its customers.

In addition, no alert was raised *via* Whispli, Groupe BPCE's whistleblowing channel.

Channels for affected communities to raise concerns

The Group's cooperative model places dialog with stakeholders at the heart of its actions. This ongoing dialog with its customers and partners enables it to identify, understand and meet the specific needs of the players in the regions it supports, with the permanent aim of amplifying its social impact at the local level. Among the channels mobilized to collect the expectations of the affected communities, the Group includes:

- meetings with its stakeholders (see SBM-2 - 1.3.2 and S3-2 - 3.3.3.1.2);
- regular satisfaction monitoring, immediately after customer interactions and following events, to identify customer expectations;
- meetings with its customers: ESG dialogs, intended in particular to deepen the knowledge and maturity of ESG issues in the business models of corporate customers, are privileged channels for reporting needs, and any risks and impacts encountered by the latter. These strategic dialogs, covering environmental and social aspects, also make it possible to refine their needs in terms of support;
- BPCE L'Observatoire studies, which capture social and economic trends on topics related to savings and investment, real estate, companies, the sports economy, purchasing behavior and life changes.

3.3.3.1.4 (S3-4) Taking action on material impacts on affected communities, and approaches to managing material risks and pursuing material opportunities related to affected communities, and effectiveness of those actions

The action plans identified are managed as part of the strategic programs and projects supporting the achievement of VISION 2030 and Groupe BPCE's 2026 ambitions.

These programs and projects, under the direct responsibility of a member of the Executive Management Committee or the Executive Committee, are subject to quarterly oversight by the Strategic Executive Management Committee.

For each program and project, this management is carried out by means of a "control sheet" which describes the objectives, achievements, risks, key indicators, schedule, budget as well as any points of attention and associated remedial actions.

A) COMPANIES, FROM VSES TO SMES AND MID-SIZED COMPANIES, AS WELL AS PROFESSIONALS, CRAFTSPEOPLE, SMALL RETAILERS AND LIBERAL PROFESSIONS

Ensuring the economic momentum of the regions is a priority for the Banques Populaires and the Caisses d'Epargne. Essential partners of companies, they allow local savings and results to serve the region, support a local economy and finance regional projects that take into account the specific economic, environmental and social needs of the regions, as well as their development, and that of their inhabitants.

Banque Populaire network

The Banques Populaires, the leading corporate banks, are a key player in the financing of the local economy. Created by and for entrepreneurs, they have a special relationship with companies, in particular SME and mid-sized companies:

- the Banque Populaire network is the leading corporate bank for the fourteenth year (*source: KANTAR 2023 PME PMI survey*). The Banques Populaires operate locally in all territories and are the reference banking partners of nearly one in two companies in France. Of these, two out of three companies have been customers for more than 10 years (*KANTAR 2023 PME PMI survey*). Today, they have nearly 160,000 corporate customers who are supported by specialized employees in all territories;
- positioned as the long-term banking partner for all companies, Banque Populaire supports its customers in addressing key issues related to ecological and societal transitions, supporting local activity and employment, and provides guidance in managing their liabilities and financial assets through solutions tailored to the specific needs of their region.

To support all transitions, both environmental and social, innovative products were launched such as the most accessible Impact loan on the market and the first packaged incentive contract for SMEs. The Banques Populaires want to encourage the greatest number of its executive customers to integrate an ESG policy into their strategy. To support them, regardless of the size of their company, the Banques Populaires rely on a team of corporate account managers trained in sustainable development issues. With the implementation of a system dedicated to strategic dialog focused on five areas, including ESG, the Banques Populaires are developing measures to support companies in their growth and transition challenges. In addition, by deploying budgets of European subsidized resources with the help of the EIB, the Banques Populaires enable companies to finance green projects.

The Banques Populaires thus contribute to the development of regional economies, by supporting the growth of VSE/SME, the development of medium-sized companies, and the sale of business transfers. Reindustrialization, transition and decarbonization of companies are also subjects of expertise, crucial to ensure the long-term local economic dynamism.

Caisse d'Epargne network

The Caisses d'Epargne support the development of the plurality of players that make up the local economy in each region.

With more than 38,800 VSE, SME and mid-sized customers, the Caisses d'Epargne are committed to working alongside economic players and meeting their investment needs, in particular to support their environmental transitions. Specialized business managers (SMEs, ISEs, Large Corporates) and business centers located in all regions, enable the Caisses d'Epargne to contribute to the region's multiple economic and social challenges.

- by supporting the managers of SMEs, mid-sized companies and start-ups in the development of their business: they offer financing solutions for the operating cycle, innovation, transmission or external growth of companies. Each institution can rely on a Financial Engineering department;
- they affirm their commitment to proximity and responsibility through financing solutions tailored to the challenges faced by their clients, particularly in terms of ecological, energy, and social transitions. Caisse d'Epargne has been the first bank in the Group to offer the implementation of the Impact Loan to enhance its clients' efforts regarding environmental and social trajectories;
- by intensifying their relationship with executives through balance sheet optimization operations, Private Equity, sales, transfers or by meeting their support needs on various subjects (retirement, ESG policy and social engineering). They conduct an ESG dialog with Corporate customers to support their transformation approach on environmental, social and governance issues by helping them integrate these dimensions into their strategy.

Lastly, as a reference bank for its customers' savings reinvested in local projects, Caisse d'Epargne communicates to its customers the use of their savings, thus fulfilling its clients promise of sustainable savings.

(B) The various structures of the social and solidarity economy (SSE)

The Social and Solidarity Economy has a positive social and environmental impact on the French and regional economy by responding to strong societal challenges: health, care, dependency, aging, the fight against poverty, the collaborative economy, well-being and sport. Groupe BPCE, a key player in solidarity finance and social entrepreneurship, plays an important role in SSE structures.

Banque Populaire network

The Banques Populaires support players in the Social and Solidarity Economy, regardless of their size and status: associations, cooperatives, foundations, mutual companies and ESUS (Social utility solidarity companies). The regional network of the Banques Populaires and the national presence of Crédit Coopératif provide SSE players with solutions that contribute to the development of projects with a direct impact in the regions.

To this end, the Banques Populaires support regional operations and accompany SSE structures in the major transition challenges they face, strengthening the consistency of the local regional cooperative model. They have thus accentuated the distribution of services covering:

- the need for virtuous financing, in particular with the Impact loan;
- the consideration of issues related to human resources with several social engineering systems helping, for example, to maintain a workforce that has struggled in recent years;
- the growing problems of fraud with the deployment of tools to meet the challenges of secure digitalization, dematerialized secure donations or cyber security;
- the sustainability and optimization of their cash flow by focusing, with a particular emphasis on financial support that meets SRI criteria.

Caisse d'Epargne network

As a leading banking partner of companies with a social and/or environmental impact in the Social and Solidarity Economy, the Caisses d'Epargne include associations, foundations, mutuals and cooperatives among its customers falling under the status of the SSE, supported by dedicated account managers - experts in the specificities of these players - who operate locally in all regions.

By giving them access to all the banking products and solutions used by so-called "traditional" companies and by providing value-added advice, the Caisses d'Epargne offer a complete range of needs (strategic dialog, financing for the ecological transition, employee motivation and loyalty tools, Impact loan, etc.) The Caisses d'Epargne, whose DNA is geared towards social innovation with the commitment to being useful to development and transition issues, guarantee consistent support within each territory and create synergies that are sustainable over time:

- by supporting managing associations in the medico-social sector: these organizations, which serve as significant sources of employment for regions, are a fundamental link in the solidarity network for all vulnerable individuals (such as the sick, elderly, disabled, and children);
- by getting involved with private education;
- by supporting innovative social enterprises to promote the social and environmental impact of the economy (*e.g.* development of bio-waste collection services, recycling of electrical and electronic waste) or by supporting social inclusion through work.

C) Public sector players, including local authorities

BANQUE POPULAIRE RETAIL BANKING NETWORK

The Banques Populaires, in particular Crédit Coopératif, support public players. They implement their initiatives with a focus on dedicated services for regional development, benefiting the communities that reside there. As such, the Banques Populaires and Crédit Coopératif offer short-term and medium- to long-term financing solutions specifically tailored for local authorities.

CAISSE D'EPARGNE RETAIL BANKING NETWORK

The Caisses d'Epargne, the main private financier in the French public sector[1], offer local authorities a full range of financing solutions and services to support them in the transformation of their regions.

The Caisses d'Epargne support local authorities, in particular through the following actions:

- support for public/private structural entities (Local Public Enterprises - EPL), increasingly acknowledged within the regions for the implementation of structuring projects and the deployment of emblematic partnerships such as the *Fédération des EPL* (Local Public Enterprises) and *Territoires & Industrie*;
- assistance in finding subsidies;
- the marketing of European Investment Bank (EIB) subsidized budgets focused on: Water and Sanitation III, energy efficiency and sustainable mobility, Renovation and the extension of existing sports infrastructures;
- dedicated financing proposals to enhance their environmental or social commitment (ex. Impact loans).

D) Social housing operators and their beneficiaries

As the leading private banking partner of social housing[2], and very frequently holding operators' share capital and sitting on their Boards of Directors, the Caisse d'Epargne network continues its long-standing involvement in the public interest.

France's third-largest social housing player, Groupe Habitat en Région, a subsidiary of Groupe BPCE, manages 244,000 homes for 490,000 people and boasts 3,200 employees. Groupe Habitat en Région cultivates a decentralized business model, enabling it to cover a large part of mainland France in all its diversity. Committed to a mission of social utility, Habitat en région provides housing for the most disadvantaged individuals who do not have access to the private market. It acknowledges the social and environmental challenges faced by regions, their residents, and stakeholders, and contributes to urban planning and territorial development

To better accompany social housing players for their needs, in 2024, the Caisses d'Epargne supported:

- the implementation of the Intermediate Residential Loan;
- the creation of property structures for the development of intermediate housing;
- the promotion of the "Green" approach through emblematic partnerships, such as Delphis (innovation hub dedicated to social housing) and the organization of the second edition of the Sobriety trophies with the *Fédération des ESH (Entreprises Sociales pour l'Habitat).*

(1) *Observatoire de la dette Finance Active des Collectivités Locales* at the end of 2023 (published in 2024).
(2) Milestones 136 USH "*HLM in figures*" (published in August 2024).

E) Key regional infrastructures, the financing of healthcare players

Within the framework of its strategic project, Groupe BPCE is pursuing its ambition to become the go-to partner in the healthcare sector. Number one private financier in the hospital sector[1], it is also a partner of healthcare players (students, professionals and companies) and the innovative ecosystem (e-health, biotech, medtech, etc.). It works with the regions and their inhabitants by mobilizing to promote access to healthcare in all regions, by contributing to developing the fabric of companies that innovate in the health sector and by supporting healthcare professionals.

It thus plays a leading role in supporting students, healthcare professionals and those in the dependency sector (hospital public service, liberal professions, future healthcare professionals) in their practice, establishment, and transformation. To support them over the long term:

- since January 31, 2024, a new affinity area, developed in the Banques Populaires and Caisses d'Epargne sales portal, enables healthcare professionals to access useful tools and advice, consult offers and get in touch with the sales networks' healthcare experts;
- in order to support medical and nursing students, the Banques Populaires and CASDEN Banque Populaire, a cooperative bank for the public service, signed a partnership with the National Federation of Nursing Students (FNESI), and Caisse d'Epargne renewed its partnership with the InterSyndicale Nationale des Internes (ISNI) for the third consecutive year. The Caisses d'Epargne offer the Pass Future Installation, which ensures continuity of support between student life and the transition into self-employment for young graduates;
- to facilitate the financing of the installation or the development of healthcare professionals, particularly in the least endowed areas and in medical deserts:
  - since February 2024, the Banques Populaires and Caisses d'Epargne have offered an EIB Santé loan, financing backed by the European Investment Bank's resources, enabling a preferential rate to be proposed,
  - the Banques Populaires and the Caisses d'Epargne signed a partnership agreement with Médecins Solidaires. They support this collective of general practitioners who open health centers in under-resourced rural areas,
  - the Banques Populaires have rolled out the Medical Desert Zero-Interest Loan, a zero-percent loan of up to €20,000, to encourage the establishment of new practitioners and assist in the development of their activities or the completion of construction work;
- the Caisse d'Epargne network is also continuing its commitment to all players in the Silver economy by renewing its partnership with *France Silver économie* for the eighth consecutive year.

Groupe BPCE supports healthcare companies, the pharmaceutical industry and healthcare innovation markets (biotech, medtech, e-health) in their installation and growth. It improves access to healthcare by reinforcing the development of Health Tech start-ups (Biotech, Medtech and e-health players) and drawing on support and financing schemes for innovative companies (NextInnov for the Banque Populaire network and Néo Business for the Caisse d'Epargne network). The Banque Populaire network joined forces with France Biotech - the association of health innovation entrepreneurs - as an exclusive private banking partner, to encourage the development and sustainability of the fabric of companies, start-ups and SMEs, which innovate daily in France.

With regard to health infrastructure, Groupe BPCE supports public hospitals, private hospitals, nursing homes, multi-professional medical centers and social housing. As a recognized financier of healthcare infrastructures, Groupe BPCE supports their transformation through, for example, the financing of public hospitals, increasing concentration of healthcare infrastructure, and strengthening the Group's presence in a majority of operations concerning private hospitals and clinics or nursing homes, etc.

F) Key regional infrastructures, the sports economy

As a leading banking player in sports, Groupe BPCE has been involved with local authorities, professionals and sports companies, and have supported the sports movement through federations and clubs (sailing, surfing, basketball, handball, rugby) thus promoting professional and amateur sports. The Banques Populaires and Caisses d'Epargne, which are heavily involved in each of their regions, build on the Sport and Health program to consolidate their positioning as Sports Bank and Health Bank.

With the *Entreprendre 2024* program, Groupe BPCE, the leading premium partner, mobilized to ensure that the Paris 2024 Olympic and Paralympic Games benefit companies, in particular VSE-SMEs and Social and Solidarity-based Economy (SSE) structures. By allowing them to take part in calls for tenders launched in the sectors of activity related to the construction of infrastructure and the organization of the event. Out of a total of 3,500 companies awarded contracts (over €100,000), 1,460 are customers of Banques Populaires and Caisses d'Epargne. In addition, 40% of these companies are located outside the Greater Paris region. Building on the momentum of the 2024 Paris Games, Groupe BPCE's companies continue to commit to sport, for a long-term legacy that is tangible for customers, cooperative shareholders, employees and all territories.

To serve the sports economy and local residents, a first fund dedicated to sports start-ups has been developed: Sport & Performance Capital was created and is managed by Seventure Partners (an affiliate of Natixis Investment Managers), with the support of the Caisses d'Epargne and supplemented by numerous external investors. The fund selects innovative companies in the field of sports and well-being, supports them, finances them and assists them in their development until 2029. Its portfolio is currently composed of 12 companies distributed geographically (Annecy, Brest, Bordeaux, Paris, Douai, etc.) and should be supplemented by four to six new investments by mid-2025. Seventure plans to launch a successor fund by mid-2025.

The Group's sporting ambitions are part of the VISION 2030 strategic project. In addition to national actions, regional institutions will also be required to implement actions and continue to support athletes in their regions. The next ambitions are to:

- actively contribute to the structuring of the sports economy, by supporting companies in the sector and financing sports infrastructure;
- contribute to sustainable and inclusive sport, in particular through support for inclusion (see the Caisses d'Epargne's Utility Pact);
- continue and develop support for athletes by accompanying them in their training, career and retraining. For the Olympic and Paralympic Games, more than 250 athletes and para-athletes from all over France were supported by Groupe BPCE companies;
- mobilize employees around the values of sport and fight against sedentary lifestyle.

(1) *Observatoire Finance Active Établissements de Santé* (published in 2024).

G] Green or social bond issues for communities

In 2015, BPCE SA entered the sustainable bond market by issuing a first green bond related to Renewable Energy in addition to the Paris Agreement. Since then, Groupe BPCE has regularly issued bonds and has continued to extend the scope of sustainable bond issues to categories of eligible green and social projects, thus establishing itself as one of the main issuers of green and social bonds among financial institutions worldwide. As part of the execution of its VISION 2030 strategic plan, the Group has further intensified its issuance program by committing to at least five green or social issues per year to fully contribute to the development of more sustainable finance.

In 2024, Groupe BPCE carried out five social/green public bond issues for €3,650 million (compared with four in 2023 for €2,250 million):

- €500 million 12NC7 Tier-2 LED social Local Economic Development;
- Green Building covered bonds issued by BPCE SFH for €1,500 million over 10 years;
- Senior Preferred of €400 million over 10 years in the form of a shared coupon bond for the Institut Robert-Debré du Cerveau de l'Enfant supported by the Fondation de l'Assistance Publique - Hôpitaux de Paris (a first for a financial institution in France);
- €750 million of our RMBS BPCE Home Loans FCT 2024 Green Use of Proceeds;
- lastly, Compagnie de Financement Foncier launched its first social issue for €500 million. This transaction is intended to refinance Social Housing and Public Health assets.

Thus, by acting alongside them and supporting their transformations, the Banques Populaires and the Caisses d'Epargne have a positive impact on the regions and their communities. They contribute to improving communities' living conditions and well-being and provide answers to the regions' economic, environmental, and societal challenges.

3.3.3.2 FINANCING THE ECONOMY AND REGIONAL PLAYERS - GLOBAL BUSINESS LINES

3.3.3.2.1 [S3-1] Policies related to affected communities

Natixis CIB

Social impact financing for local communities

Natixis CIB supports its customers in the "social" certification of their financing (bonds or loans) according to the Social Bonds Principles of the ICMA (International Capital Market Association) and the Social Loan Principles of the LMA (Loan Market Association).

Five principles govern this certified financing:

- **Use of funds:** The proceeds of social financing must be exclusively applied to the financing of eligible social projects that provide clear social benefits.
- **Project assessment and selection process**: Issuers must clearly communicate the social objectives of the projects and the selection process to ensure that they meet the eligibility criteria.
- **Fund management:** Net income from obligations must be monitored and managed appropriately, with periodic adjustments to match allocations to eligible social projects.
- **Reporting:** Issuers must provide up-to-date information on the use of funds, including descriptions of the financed projects and their expected impact, on an annual basis.
- **External reviews:** Issuers are encouraged to establish a social obligation framework and obtain external reviews to ensure transparency and compliance with the principles.

Sector policies

It should be noted that certain criteria specific to sectoral policies, related to the impact on local communities, are included in the following policies:

- defense sector (public policy);
- tobacco sector (public policy);
- mining and metals sector (internal policy);
- oil and gas sector (public policy).

Natixis IM

Natixis IM's European asset management companies implement policies that integrate the issues, in conjunction with the affected communities, as part of their investment and engagement activities.

Investment policies

The responsible investment policies of certain of Natixis IM's European asset management companies[1] integrate the community dimension into their investment approach. This integration is done through due diligence processes, research processes or the consideration of minimum standards.

The criteria included in the investment analysis influence the company's extra-financial rating, thus making it possible to take into account the impacts, risks and opportunities related to communities. For example:

- For example, DNCA Investments states that one of the fundamental principles of its responsible investor philosophy is to assess the risk of corporate responsibility. As part of this assessment, the liability risk analysis includes interactions with all stakeholders, including local communities;

Minimum standards

All European direct listed asset management companies[2] have defined minimum standards on the social issues to which their investments are subject, based on regulatory exclusions related to international standards:

- the United Nations Global Compact;
- United Nations Guiding Principles on Business and Human Rights; and/or
- the OECD Principles of Responsible Business Conduct.

Private asset companies have also adopted these international standards.[3] or have adopted specific approaches[4] to their investment universes by including, for example, clauses in real estate managers' contracts.

(1) DNCA Investments, Ossiam (for funds applying ESG criteria only), Mirova, Ostrum AM, Ecofi, Dorval AM, Vega IM, Thematics AM, Naxicap, AEW, Vauban IP, Flexstone, MV Credit and Seventure.
(2) Ostrum AM, Ecofi, DNCA Finance, Dorval AM, Mirova, Thematics AM, Vega IM. Ossiam, a quantitative and index-based management company, includes exclusion criteria in ESG funds.
(3) Flexstone, MV Credit and Vauban IP.
(4) For Naxicap, these principles are integrated into the ESG analysis processes rather than exclusions due to the type of companies involved. Seventure includes these standards in the Due Diligence and in its annual ESG data collection questionnaire. AEW has included contractual provisions for some of its products with its property managers.

Engagement policies

In addition to exclusions, one of the significant levers for positively influencing corporate governance is shareholder engagement, *via* dialog with issuers and the exercise of voting rights.

Among these engagement policies, several[1] take into account the issues relating to the affected communities and make this one of their areas of engagement with issuers. For example, one of Ostrum AM's priority engagement themes stipulates that maintaining good relations with the various stakeholders (suppliers, employees in supply chains, local communities) is essential to ensuring business continuity and reducing exposure to reputational risk. This engagement theme is then divided into two areas, one of which relates to maintaining good relations with local communities.

Controversy monitoring policies

Natixis IM has defined a global ESG risk policy that requires the implementation of controversy monitoring for Natixis IM and its asset management companies. This policy requires having a structure and a system to assess, quantify, manage, mitigate and communicate about severe forms of controversy as part of its reputational risk management system.

In particular, each asset management company has a mechanism for taking into account controversies (either formalized *via* a dedicated policy or integrated into existing policies and procedures) which defines the governance and operational principles.

3.3.3.2.2 (S3-2) Processes for engaging with affected communities about impacts

Natixis CIB

Social impact financing for local communities

For this type of financing with social impact, Natixis CIB is only indirectly in contact with the communities concerned. As such, customers wishing to label their financing in the "social" format must ensure compliance with the principles defined in the market standards.

Thus, the beneficiary of social financing must have implemented a process to identify the mitigation systems for known material risks of negative social and/or environmental impacts of the project(s) concerned. These mitigation measures may include a clear and relevant analysis of the trade-offs and follow-up when the issuer assesses the potentially significant risks.

Equator Principles

Refer to paragraph S2-2 - 3.2.3.1.2, as the interactions described therein also include the local communities, notably thanks to the on-site visits and interviews carried out by the independent consultant with members of communities close to the funded sites/projects.

Natixis IM

In the context of asset management, Natixis IM management companies do not have the opportunity to interact directly with the communities of the companies invested in. In the absence of guidelines for the asset management sector, the response to this information point was made by considering the due diligence and research processes in line with the issues on the communities of the companies invested in.

Natixis IM's European asset management companies use their proprietary research as well as due diligence processes to understand the risks, opportunities and impacts generated by the companies invested in on the affected communities. This consideration applies to both European direct asset management companies[2] that invest in listed assets[3] as well as those that invest in private assets[4].

For private assets, Natixis IM's European asset management companies take into account social indicators related to communities in their due diligence process.

3.3.3.2.3 (S3-3) Procedures to address negative impacts and channels for affected communities to raise concerns

Natixis CIB

The management of ESG risks (see Section S2-3 - 3.2.3.3.2) also benefits the affected communities. Indeed, this management is designed in a comprehensive manner and encompasses the potential impacts on all stakeholders, including local communities, thereby enabling remediation of any negative impacts on them.

Natixis IM

In the context of asset management, Natixis IM's management companies do not have a direct relationship with the companies invested in. It is these same companies invested in that may be subject to an alert mechanism from the affected communities. In the absence of guidelines for the asset management sector, the interpretation of requirements in this area concerns the monitoring of controversies, PAIs and engagement with companies.

As part of the analysis carried out at the time of the investment, Natixis IM's management companies use data produced by external data providers, collected from third parties and/or on information communicated directly to the company invested in both to identify and monitor the controversy (see Section S2-1 - 3.2.3.1.2).

In order to identify these controversies, European asset management companies use data produced by external data providers, such as those from ISS, MSCI, World Check, EthiFinance, RepRisk or Sustainalytics, etc. For the latter, controversies are determined in part on the basis of cases of conflicts with local and indigenous communities and land and water rights.

Similarly, the MSCI ESG rating, used by several European asset management companies[5], in addition to their internal method, assigns each company a score on each key issue selected. .

(1) DNCA Finance, Mirova, Ostrum AM, AEW and Vega IM.
(2) Exclusion of Natixis IM International Solutions.
(3) DNCA Finance, Mirova, Ostrum AM, Thematics AM, Ecofi, Ossiam (for funds applying ESG criteria only), Dorval AM and Vega IM.
(4) Flexstone, Naxicap, AEW, Seventure, Vauban IP and MV Credit.
(5) Ostrum AM, Natixis IM International Solutions, Dorval AM and DNCA Finance.

MSCI also includes an identification of controversies that takes into account elements that have an impact on communities.

Other Natixis IM European asset management companies[1] also monitor the ESG rating of the data provider ISS, which is based on nearly 700 indicators, some of which are related to communities: human rights, dialog with stakeholders, relations with governments and influence on public policies and also social impacts of the product portfolio.

In addition, European asset management companies also report quantitative indicators as part of their Principal Adverse Impacts (PAI) reporting in order to monitor potential impacts on communities[3].

Finally, the engagement actions put in place, where applicable, by NIM's asset management companies, can influence practices and remedy the adverse impacts in connection with potential controversies or infringements related to communities, as described in S2-4 - 3.2.3.4.2 of this document.

3.3.3.2.4 (S3-4) Taking action on material impacts on affected communities, and approaches to managing material risks and pursuing material opportunities related to affected communities, and effectiveness of those actions

Natixis CIB

Social impact financing for local communities

Through several of its activities, Natixis CIB is a player in the financing of the economy and regional players, in particular:

- Support as an arranger and/or ESG coordinator of many key issuers in the region, through:
  - their local presence (sustainable emissions from the Île-de-France region, green emissions from the City of Paris, green and social emissions from the Wallonia region, etc.),
  - their work on essential infrastructures (such as green emissions from players such as Société des Grands Projets, SNCF, IDF Mobilité, RATP, Tisseo Mobilités, etc.),
  - their essential role as a social and economic shock absorber in the event of socioeconomic crises (through, for example, social issues by CADES or UNEDIC, including a strong focus on demonstrating compliance with their social promise in terms of monitoring beneficiaries, social justice or redistributive effects),
  - their essential role in financing transitions in regions or regional sectors such as CDC or BPI on the one hand, but also Groupe BPCE with its "Local Economic Development" bond issues dedicated to SMEs and associations in the most disadvantaged areas, or its "Sport & Santé" program aimed in particular at supporting sports infrastructures or associations as well as the green and social programs of Sfil/Caffil dedicated to the financing of sustainable investments by local authorities in France and for export,
  - their commitment to ensuring access to decent housing for all, in particular for the most vulnerable populations, through the essential issue of social housing financing (for example through the sustainable bonds of Action Logement Services or social bonds of Compagnie de Financement Foncier),
  - their mission of providing economic assistance and support to the development of local communities such as AFD, IBRD or BOAD, for which meeting societal needs and providing access to essential social services are at the heart of their financing,
  - their sovereign mission of regional development, in particular for access to essential services such as education, electricity, health, and food (for example, the sustainable loans of Senegal make it possible to raise funds for infrastructure projects and services that improve the quality of life of the populations, thus contributing to the achievement of the country's sustainable development goals which aim to reduce poverty and improve the living conditions of Senegalese citizens),
- Strong positioning in the health sector (public and private hospital infrastructures and services) and the elderly (EPHAD, and home care services), in France and Europe, with a strong focus on social (quality of care and accessibility to healthcare) and environmental issues (building and operations) for both bank and bond financing products (for example: Icade Santé, Ramsay, Bastide, Colisée, Elsan, Vivalto, Sanofi);
- Natixis CIB Green & Sustainable Hub also supported the IDFC and its members in defining the concept of alignment with the Sustainable Development Goals (SDGs) through a dedicated study and tailor-made consulting sessions. The study presents the notion of alignment with the SDGs from the point of view of public development banks. It provides relevant definitions, assessment methods and tools to measure and manage their contribution to the SDGs at both local and consolidated level;
- Lastly, the Green Hub Networks (dedicated to mid-sized and public-sector customers of regional Banques Populaires and Caisses d'Epargne) supports the transitions of players in the region through the implementation of so-called impact financing (integrating CSR performance indicators into the margin mechanism) and a strategic dialog on CSR to support these customers in establishing and developing their sustainability trajectory.

Natixis IM

The actions described below relate exclusively to the positive contributions generated thanks to the products specifically related to the affected communities and the improvement of the practices of the companies involved thanks to the engagement actions.

Income

In addition to being able to benefit from the flexibility to be able to detect, analyze and measure social risks in the value chain, Natixis IM management companies also have the possibility of offering products aimed specifically at creating a positive impact or promoting good social practices. As such, several products offered by Natixis IM's European asset management companies specifically take into account the issue of impacts on communities.

(1) DNCA Finance, Dorval AM, Ecofi, Mirova and Ossiam (for funds applying ESG criteria only).

- The AEW UK Impact Focus Fund became the first fund approved by the Financial Conduct Authority under the Sustainability Disclosure Requirements as an "Impact Focus" fund in 2024. This provides a tailor-made real estate solution that meets local needs in the United Kingdom. Investments are made in collaboration with local authorities and aim to increase the provision of sustainable real estate assets with social use value for communities. These investments include residential housing, care facilities, daycare, community and leisure facilities.
- Mirova has a natural capital investment platform that enables the large-scale deployment of impact solutions based on natural capital. Through a direct investment approach, which targets a wide range of activities, it includes innovative and high-growth projects as well as more mature companies, whose environmental and social impact can be considerable, in particular thanks to the development of "Nature-based solutions". These solutions aim to produce a net positive impact on climate, biodiversity, ecosystems and communities, while creating value for investors.
- In 2023, Dorval AM decided to allocate 10% of the management fees of the Dorval European Climate Initiative fund to the NGO Blue Venture *via* the EPIC Foundation. The Dorval European Climate Initiative fund invests in European companies mainly in the Eurozone whose products and/or services provide solutions to climate issues. Concerning the allocation of management fees, Blue Ventures is an NGO operating in Asia and Africa that supports coastal communities in the reconstruction of fisheries and the restoration of ocean life.

Shareholder engagement

Engagement strategies can be proactive and therefore respond to the themes defined as priorities in the engagement policy, or implemented in response to a social controversy such as the violation of standards related to communities. These controversies can be identified as part of the controversy monitoring processes of Natixis IM's asset management companies, or *via* the analysis carried out by the service providers conducting the engagement.

- For example, one of Mirova's commitment priorities is to promote social opportunities. Among the actions expected from issuers, the following can be mentioned:
  - implementing strategies for access to basic necessities, ensuring the development of local infrastructure and services in underserved regions (banking, medical, infrastructure, energy, etc.),
  - ensuring the development of products and services that address social challenges such as medical needs, antimicrobial resistance, healthy food, inequalities, etc.;
- DNCA Finance encourages the issue of respect for local communities to be taken into account in a transparent manner. DNCA Finance is convinced that companies must listen to local communities, and DNCA Finance wants each company to be able to integrate this dialog into its strategic decisions.

Proactive participation in market initiatives

Certain Natixis IM European management companies[1] have joined market initiatives to collaborate with other investors to improve business practices. Several of these initiatives target issues related to affected communities.

- The asset management companies, DNCA Finance and Mirova, are members of the PRI Advance initiative. This initiative was launched in December 2022 to take into account, among other things, respect for employee and community relations, health and safety, and forced labor. This initiative considers that this type of recognition also makes it possible to protect the long-term returns of asset management companies.
- On the subject of health, Mirova and Ecofi are members of the "Access to Medicine Initiative". It aims to improve access to medications and healthcare in low- and middle-income countries. Founded in 2001, this initiative focuses on how pharmaceutical companies, as well as other healthcare stakeholders, can contribute to solving the challenges of access to essential medicines, particularly for vulnerable populations.

(1) Dorval AM, Ecofi, Ostrum AM, DNCA Finance and Mirova.

3.3.4 Metrics and targets

3.3.4.1 FINANCING THE ECONOMY AND REGIONAL PLAYERS IN FRANCE

Corporate customers, from VSEs to SMEs and mid-sized companies

As part of the VISION 2030 strategic project, Groupe BPCE has identified regional competitiveness as one of its priorities. The latter is reflected in support for SMEs and mid-sized companies, development of sustainable infrastructures and support for strategic sectors.

The Banque Populaire and Caisse d'Epargne networks aim to be number one in the professional and corporate market by 2030. The 2026 objectives for both networks are a 15% increase in active professional customers and a 21% increase in active companies.

The various structures of the social and solidarity economy (SSE), local authorities, social housing operators and their beneficiaries

As part of the VISION 2030 strategic project, the ambition by 2026 is to increase the financing of the SSE, social housing and public sector players by 8%.

More specifically, with regard to local authorities and social housing, faced with the major challenges facing these sectors (environmental transition, financing, etc.), Caisse d'Epargne has defined three major ambitions for 2030:

- strengthen the public-private connection to establish itself as the key partner for the regions;
- become the trusted partner that provides advice, expertise and innovation to local players in response to their changing needs;
- fulfill their role as a pioneering bank in social and environmental transitions to contribute to better housing and collective well-being.

With regard to the financing of the social economy, social housing and the public sector, annual production totaled €8.5 billion in 2024, an increase of 3.7% compared to 2023[1].

Key infrastructures in the regions, financing of healthcare players

In 2025:

- The Banques Populaires intend to continue to develop among all players in the Health sector, whatever their time in life or their mode of practice (health students, civil servants, employees, freelancers or innovative entrepreneurs) for their private or professional projects.
- The Caisses d'Epargne professional market intends to consolidate its positioning in the Health sector in line with the Corporate/Professional and Individual customers markets, and to continue its development among healthcare professionals and future healthcare professionals throughout their various life stages, for their professional and private projects.
- The Caisses d'Epargne will continue their affinity approach with all health institutions and companies (hospitals, health and medico-social establishments, innovative health companies). The Caisse d'Epargne network's objective is to maintain its position as the leading financier of public health institutions, to regain its status as the first Financer of Medico Social players, and to be the preferred bank for healthcare professionals in their private and professional projects, while supporting the transformation of their modes of practice.

Key infrastructures in the regions, sports economy

Groupe BPCE has set targets for:

- in B-to-B: sports infrastructures, and in particular their renovation (EIB budget, swimming pool plan);as well as sports professionals and companies, including SporTech;
- in B-to-C: support for high-level athletes, sports amateurs, associations and sports clubs.

Following the Paris 2024 Games, a new roadmap is being prepared. Metrics are being built in conjunction with stakeholders.

3.3.4.2 FINANCING THE ECONOMY AND REGIONAL PLAYERS - GLOBAL BUSINESS LINES

Natixis CIB

Social impact financing for local communities

As defined by market standards, a reporting process is established for financing labeled as "social". The beneficiary of the labeled funding is responsible for providing qualitative and/or quantitative impact indicators to measure the impacts on the communities.

Issuers must keep up-to-date and easily accessible information on the use of the financing obtained. An annual report should include a list of the projects to which the social financing revenues have been allocated, as well as a brief description of the projects, the amounts allocated, and their expected impact.

NATIXIS IM

At this stage, Natixis IM does not have any performance metrics and is deploying a continuous improvement approach to resources and processes.

(1) This metric sums up financing of the social and solidarity economy, social housing and the public sector: It is established for the Caisses d'Epargne on the basis of the Panorama BDR CE + HeR for social housing financing. Source SCF for the Banques Populaires.

3.4 S4 - Consumers and end-users

Groupe BPCE, a bank, insurer and asset manager, conducts its business activities close to the needs of its customers, including the most vulnerable. Its relational and regional banking model enables it to support all its customers, individuals, professionals, retailers and craftspeople, public sector players and companies, regardless of their size. In France, Groupe BPCE offers an essential local service to its 35 million customers and the French economy. Internationally, Natixis CIB and Natixis IM are developing recognized expertise and positioning themselves as privileged partners of their customers, thanks to a range of adapted products and advice.

3.4.1 SBM-2: Interests and views of stakeholders

Groupe BPCE is in ongoing dialog with its stakeholders. Groupe BPCE's stakeholder consultation process is based on systems that involve its stakeholders in its process of identifying and assessing impacts, risks, opportunities and levers for improvement, both on environmental and societal topics. The summary of the dialog by stakeholder category is presented in Section 1.3.2 - SBM-2 Interests and views of stakeholders.

3.4.2 SBM-3 - Material impacts, risks and opportunities and their interaction with strategy and business model

Among the two themes related to consumers and end-users, "Information-related impacts for consumers and/or end-users" and "Financial inclusion and accessibility of the offer", four issues were identified as material: access to information, personal data protection and cybersecurity, access to products and services, responsible marketing practices, and non-discrimination.

The Group's convictions and commitments are expressed in its Code of Conduct and Ethical Standards[1], which sets out the interests of the customer and cooperative shareholders and the Group's commitment to be a useful player over the long term.

With regard to "Impacts related to consumer and end user information", two material matters in terms of positive impact or negative risks and impacts were identified:

Employees are responsible for passing on offers to customers in a transparent and correct manner, as part of a relationship of trust. They must:

- **Protect the interests of customers and cooperative shareholders (Principle 3)**: in particular, by constantly prioritizing the customer's interests and ensuring that the customer fully understands the nature and details of the solution recommended to them, but also by protecting the customer's private data;
- **Communicate in complete transparency (Principle 4):** the Group's customers must be certain that the services and products recommend to them are the solutions best suited to their needs and long-term interests. To achieve this, all Group entities undertake to communicate with their customers in a transparent and honest manner.

In terms of access to information, all the measures put in place have a positive impact for customers:

- as part of the distribution of products and services to individual customers, the protection system includes a set of rules relating to the validation of the products marketed as well as the commercial processes (regardless of the channel used);
- Natixis' strategy focuses on improving the transparency of its offerings, which enables a good understanding of products and their environmental, societal and governance (ESG) impact. This increased transparency represents a positive impact for Natixis on its clients, enabling them to make informed decisions.

The protection of personal data and cybersecurity are a major matter in terms of risks or negative impact: the Group is exposed to strict regulations such as the General Data Protection Regulation (GDPR). Strong privacy and cybersecurity measures are crucial to protecting customer data and complying with applicable regulations; the Group pays particular attention to the responsible use of data. Risks of sanctions or financial losses may arise in the event of non-compliance with regulations or insufficient measures to prevent or combat cybercrime, which may lead to leaks, theft or inappropriate use of customers' personal data. These risks and potential impacts, resulting from non-compliance with legislative and regulatory provisions, can be qualified as systemic.

The development of new innovative products and services to meet customer expectations opens up opportunities for the Group, in particular in terms of new markets, customer segments, partnerships, stimulating creativity and innovation and likely to strengthen customers' interest for these new products and services. The Group's territorial network, its international geographical locations and the deployment of adapted digital solutions have a positive impact for customers, in terms of proximity and accessibility.

With regard to the topic "Financial inclusion and accessibility of the offer", two material matters were identified: access to products and services and responsible marketing practices, non-discrimination.

(1) Code of ethics-EN-2.pdf. [groupebpce.com]

The Group considers that it is its social responsibility to:

- **Guarantee an impartial treatment for all our customers (Principle 2)**: it offers a system for listening to and welcoming customers in situations of vulnerability, in particular due to financial difficulties, which allows the Group to tailor its services to their specific needs and to ensure that, in all cases, it continues to listen carefully to their individual needs and provides customized solutions.;
- **Contribute to the development of a socially responsible market economy (Principle 9)**: it undertakes to finance all types of players active in the local and regional economy offering them tailor-made solutions ranging from microloans to major project financing;
- **Be a banking group that is socially inclusive and open to all (Principle 10):** it takes preventive action with individual customers to avoid over-indebtedness proceedings, and is careful to contact them, listen to them and offer simple solutions (account management, Fragile Customer Offer, loan restructuring solutions, etc.) and to put them in contact, if necessary, with dedicated correspondents. Through its managers and customer advisors, it undertakes to bear a particular responsibility to give as much support as possible to customers facing difficulties. The Group makes every effort to accommodate all customers, adapting and personalizing its services and relationships. This is why it is the leading banker for protected persons.

In terms of financial inclusion, specific systems are deployed to cover the various needs and issues of customers: support for financially vulnerable customers, populations in need of economic and social inclusion, protected persons, adaptation of insurance offers.

On the subject of non-discrimination, the implementation of dedicated financing or insurance policies and tools adapted to customers with disabilities generate a positive impact on the customers concerned.

Conversely, a lack of transparency in offers, abusive sales practices or discriminatory practices undermining the equality and inclusion of certain groups of customers, in particular those already identified as financially vulnerable or disabled, may have a negative impact on these customers and constitute an image risk for the Group. These potential adverse impacts would concern isolated incidents and are not considered to be widespread or systemic.

In the specific context of asset management activities, this topic concerns consumers and end-users of the companies invested in and does not refer to the investors of the financial products offered by the asset management companies themselves.

For Natixis IM and its European asset management companies, the integration of these issues into the activities of asset management companies is done through the investment process, the proposal of financial products and engagement activities. Each Natixis IM management company is responsible for its investment process and is ultimately responsible for integrating environmental, social and governance factors in compliance with their fiduciary duty. Diversified approaches are thus observed within Natixis IM’s European asset management companies.

The Group has not identified any material risks or opportunities that could result from its dependence on consumers and end-users.

In its VISION 2030 strategic project, Groupe BPCE intends to develop simplified relationship models, thanks to the best of people (clients choosing how they prefer to interact with their bank from 100% digital to 100% physical, transparent, simple and innovative offers) and digital (thanks to its banks' applications, the best rated on the market, thanks to 100% self-service pathways for all its clients and high-performance transactional spaces for professional and corporate customers), augmented by AI (to enrich the customer experience, make life easier for bank advisors and simplify the every day life for all clients and employees of customers and employees).

The management of material impacts, risks and opportunities is described in the following paragraphs, including developments specific to certain customers (customers in vulnerable economic situations, populations in need of economic and social inclusion, protected persons - *i.e.* adults benefiting from a legal or social protection measure decided by a guardianship judge, people with disabilities).

3.4.3 Incident, risk and opportunity management

3.4.3.1 (S4-1) POLICIES RELATED TO CONSUMERS AND END-USERS

3.4.3.1.1 Access to information and supervision of commercial practices

As part of the Group's policy on the transparency of offers, the systems listed below are applicable to the Caisses d'Epargne, the Banques Populaires and Natixis.

Various departments are committed to ensuring transparent offers that are adapted to customer needs. When intended for a consumer, product and service offers must comply with the provisions of Articles L. 121-1 to L. 121-24 of the French Consumer Code relating to prohibited commercial practices, with the exception of the refusal to sell. It is in this series of provisions that deceptive commercial practices (Articles L. 121-2 to L. 121-5) or aggressive practices are found (Articles L. 121-6 to L. 121-7). The policy is made available to Group companies through a practical guide produced by the Legal division.

When drafting commercial documents, regardless of their nature, writers are invited to be particularly vigilant concerning the adequacy between the marketing conditions, the method/process of providing information, and the targeted customers. The writer of promotional documentation must therefore pay close attention to the marketing channels considered and the appropriateness of the distribution strategy. All information, including advertising, must be correct, clear and not misleading. Clear information is that which is sufficient to enable customers to understand the main characteristics of the product they are about to subscribe to as well as the related benefits and risks.

Understanding the needs of the Group's customers in order to offer them the most appropriate products and services is at the heart of the principles of the Group's Code of Conduct. Employees strive to best serve the interests of customers by:

- taking the time to identify their needs, listening to them attentively;
- making an effort to identify the most appropriate solution, taking into account the customer's profile, their needs and their knowledge;
- treating all customers fairly, including when they have potentially conflicting interests.

The protection of customers' interests is a major concern for the Group and is reflected in the policies of each of the entities in France and internationally. In all circumstances, employees must serve customers with diligence, loyalty, honesty and professionalism, and offer products and services adapted to their skills and needs. In this context, and in order to maintain a high level of customer protection, the Group establishes and maintains a body of procedures and carries out controls on this topic. This is reflected in the implementation of various systems dedicated to customer information and knowledge, and by the implementation of governance for the products offered to them.

3.4.3.1.2 Personal Data Protection and cybersecurity

Personal Data Protection

The purpose of Groupe BPCE's data protection policy is to describe the standards related to the processing of personal data and applies to all entities. It thus lays down the principles of use and ethics for the use of personal data.

The policy describes in particular:

- the organization and governance of Groupe BPCE to ensure the protection of personal data, through roles, responsibilities and reporting relationships;
- the data protection principles and practices to be respected by the entire Privacy sector;
- the tools offered by Groupe BPCE available to players in the sector.

This policy applies to all transactions processing Personal Data by any of Groupe BPCE's entities. As a result, it concerns:

- all Group employees;
- all countries where the Group operates (taking into account local contexts where applicable);
- all Group entities.

Applicable to each Group entity, this policy must be presented to the executive or to an umbrella committee dealing with risks. With regard to the integration of a new entity, the application of the policy may be subject to the determination of a compliance plan, the implementation period of which is defined jointly between the central institution and the entity.

Groupe BPCE is subject to several local and European standards and legal texts, including:

- the European Data Protection Regulation (Regulation (EU) 2016/679) and its application in French law, the Data Protection act of January 6, 1978 as amended;
- the guidelines of the G29 - now the European Data Protection Committee - provide clarifications on the reading of the Regulation;
- the guidelines of the European Data Protection Board also including the ePrivacy directive.

In addition to the regulatory texts in force, data protection must comply with Groupe BPCE's standards affecting this activity. It is in line with the CSR commitment or the Code of Conduct.

Local Data Protection legislation may require more stringent criteria or impose less stringent rules than those contained in this Policy. Thus, any national policy that diverges from the Group policy must be submitted for prior approval to the DPO-G (Group Data Protection Officer).

The contracts with service providers processing Personal Data are concluded in accordance with the legislation on the Protection of Personal Data and the Group's standards and instructions. They thus guarantee the strict use of personal data solely for the purpose of performing their services.

Any sharing of data within or outside the Group is strictly limited to legal obligations such as those relating to the fight against money laundering and the financing of terrorism.

The policy is accessible to all entities *via* the Group Intranet and can also be distributed - in electronic or physical format - to Employees and Service providers as needed.

Cybersecurity

Information Systems (IS), resources essential to the Group's business, contain and process multiple sensitive data relating to customers commercial information, the Group's strategy, its financial results, its commercial development or its commitments, as well as personal information relating to customers, partners and employees.

Thus, IS must be protected from any known or emerging threat by taking into account the vulnerabilities inherent in the technologies on which they are based.

To achieve this objective, Groupe BPCE has adopted a Group Information Systems Security Policy (ISSP-G) to enable it to address IS Security issues in its best interests and image in line with best practices. This policy defines the guiding principles for IS protection and specifies the provisions to be followed by all Group entities.

The ISSP-G applies from its publication:

- to all Group Companies, in France and abroad;
- to all employees or persons authorized to access the resources comprising the Group's IS.

The ISSP-G covers the IS Retail, the IS of the BPCE central institution, the IS of Natixis, the private IS of the Banques Populaires and the Caisses d'Epargne and, more generally, the IS specific to the other Group companies.

The ISSP-G covers all the resources necessary for the automated processing of information: applications, data in all its forms, infrastructures and people. It aims to be independent of technologies in order to guarantee its applicability in different technical contexts.

Relationships with subsidiaries in which the Group is not the majority shareholder, users, partners, organizations and suppliers must be subject to contracts or agreements, as soon as they access the Group's IS, whether their own IS are linked to it or they store or process data from the Group's IS. These contracts or agreements must express the Group's security needs, based if possible on the wording of the ISSP-G rules.

It is supervised by the Group Security Department as well as by the Group Corporate Secretary's Office.

The challenges of the ISSP-G are as follows:

- preserve the value of assets and secure business line processes;
- comply with legal and regulatory obligations;
- contribute to measuring and managing non-financial risks;
- look for possible optimizations;
- meet the IS Security requirements extended to third parties;
- contribute to protecting and enhancing the Group's image.

They are part of Groupe BPCE's desire to control and manage the risks associated with Information Systems, to preserve and increase its performance, to strengthen the trust of its customers and partners and to ensure the compliance of its actions with national and international laws and regulations.

Groupe BPCE undertakes to comply with the directives of European and international regulators. The chronology of regulations shows a shift towards stricter regulations, particularly in terms of data protection, transparency and control of technological risks.

In summary, here are the major changes observed:

- since 2014, the review and assessment process of the European Banking Authority (EBA) has covered ICT risks. The ECB-ACPR joint supervision team (JST) requests one or two visits concerning IT risks;
- in 2017, the EBA issued guidelines on the assessment of ICT risks as part of the SREP (Supervisory Review and Evaluation process);
- since June 30, 2020, the guidelines on the management of risks related to information and communication technologies (ICT) published by the EBA in 2019 are applicable;
- the future DORA regulation (Digital Operational Resilience act) should take over the EBA guidelines and include them in positive law;
- the Federal Reserve Bank (FRB) requires an IT risk management framework;
- in Asia, regulators have also been monitoring IT risks since 2003 (HKMA) and have recently strengthened their requirements (MAS).

3.4.3.1.3 Financial inclusion and accessibility of the offer

Protecting vulnerable customers

In terms of supporting vulnerable customers, Groupe BPCE wants to give as many people as possible, and in particular people in difficulty, access to banking services. To manage the risk of exclusion, it has put in place in France systems that enable low-income customers to access financing and customers in vulnerable economic situations to manage their bank accounts with greater peace of mind.

This commitment makes all the more sense in view of the current economic context. After a period of high inflation that is gradually returning to normal, unemployment, although at a historically low level, is once again increasing slightly. More than 4.3 million customers are identified as vulnerable by banks in France, an increase of 4% between 2023 and 2022. At the same time, there has been a faster increase in the number of beneficiaries of the specific Fragile Customer Offer (OCF): +24% compared to 2022 and +168% over the last five years[1]. At the end of 2023, the specific offer now benefits more than one million beneficiaries. Groupe BPCE is vigilant in this context and is continuing its efforts to provide the best possible support to its vulnerable customers.

To carry out its action, Groupe BPCE relies on the regulations in force, *i.e.*:

- the banking act of July 26, 2013 on the separation and regulation of banking activities imposes several measures to protect individual customers and support banking inclusion;
- Decree No. 2014-738 of June 30, 2014, relating to the specific offer to limit costs in the event of an incident (published in the Official Journal on July 1, 2014 and entered into force on October 1, 2014) specifies the conditions of application of this legal obligation;

(1) Annual report of the Observatoire de l'inclusion bancaire 2023 (published in 2024): https://www.banque-france.fr/system/files/2024-06/OIB-2023 Rapport-annuel.pdf

- Decree No. 2020-889 of July 20, 2020 (published in the Official Journal on July 22, 2020 and entered into force on November 1, 2020) modifies the conditions for assessing the financial vulnerability of their cardholder account-holding customers in order to identify these people more quickly and manage the duration of the financial fragility.

To complete this body of regulations, the French Banking Federation published commitments in September and December 2018. These commitments were introduced in a charter published by the French Association of Credit Institutions, Financing Companies and Investment Firms, entitled Charter for Banking Inclusion and the Prevention of Indebtedness (AFECEI). It applies to all credit institutions and aims to promote banking inclusion and prevent indebtedness.

When credit institutions, payment institutions, electronic money institutions and asset management companies offer a payment account management service accompanied by means of payment (transfer, direct debit, payment card, etc.), they commit in this charter to:

- implement measures to improve access to banking services for individuals not acting for business purposes and to facilitate their use;
- develop mechanisms to detect and deal with customers' difficulties early in order to better prevent indebtedness.

Thus, Groupe BPCE banks identify vulnerable customers on the basis of regulatory criteria:

- the incidents or irregularities in the operation of the account;
- if, for three consecutive months, there are at least fifteen payment incidents and the maximum amount of the average credit balance of the individual customer's account over the period is equivalent to three times the monthly net minimum wage (SMIC);
- if at least five irregularities or payment incidents are recorded over a month and the maximum amount of the customer's average credit balance over the period is equivalent to the monthly net minimum wage;
- registration in the Central Check Register (FCC), a database managed by the Banque de France: customers registered in the FCC who have been deprived of checkbooks because they have issued bounced checks or had their bank card withdrawn for three consecutive months;
- indebtedness, with a case declared admissible by a commission of the Banque de France, with effect for the entire duration of the repayment plan (Article L. 722 of the French Consumer Code), or a case that is being processed.

The issue of financial fragility within the meaning of the AFECEI Charter also applies to institutions that do not have deposit accounts. For Groupe BPCE, these are its subsidiaries BPCE Financement, BPCE Lease, ONEY Banque, Crédit Foncier, CASDEN and Capitole Finance.

Groupe BPCE also acts to prevent indebtedness. In accordance with the AFECEI Charter, all deposit accounts are subject to predictive score intended to detect in advance (six months before the occurrence of the risk) any deterioration in their financial position. This score is based on a modeling technique based on socio-demographic variables, equipment, flows, outstandings and banking incidents. It is subject to regular checks to monitor its performance.

Since 2021, Groupe BPCE has extended its method of identifying the risk of over-indebtedness to the individual customers and individual entrepreneurs of both networks. The aim is no longer to restrict itself to credit holders alone, but to target a wider audience in order to be more effective in terms of prevention.

This offer, dedicated to vulnerable customers, is supported by a governance managed by BPCE SA at the Retail banking and Insurance (RB&I) level. It is led by the Vulnerable Customers and Regulated Pricing Committee, which meets bimonthly in the presence of the Legal and Compliance divisions, as well as the IT development and services division.

In accordance with the Banking Inclusion Charter (AFECEI Charter) and faced with the financial difficulties encountered by certain customers, the acculturation of financial advisers to banking inclusion issues is crucial.

To coordinate its employees and its branches in the regions, Groupe BPCE and its institutions have set up a specific training program with a module dedicated to the prevention of indebtedness and customers in vulnerable situations, as well as a second dedicated to the right to an account. This training must be taken every five years by individual advisors in the branches and on the telephone platforms. In 2024, training for employees was dedicated to the AFECEI and the right to an account.

Groupe BPCE recently updated its training on indebtedness prevention and for customers in vulnerable situations, and made an online version of this module available to its Banque Populaire and Caisse d'Epargne institutions (e-learning) in order to facilitate its deployment. This module will make it possible to better identify the challenges of banking inclusion, and to best support the customers targeted by the prevention of indebtedness or financial vulnerability.

Microcredit for financial inclusion

Microcredit covers specific categories of loans dedicated to groups in need of economic and social inclusion and who are excluded from traditional loans because of low income or a life hazard. The microloan makes it possible to finance a project of access to employment or mobility, to create a business, or to cover expenses related to housing, health and other unforeseen events. The implementation of microcredit is backed by a public guarantee and support from a general interest organization.

In 2023, according to the Banque de France's Banking Inclusion Observatory, microloans represented nearly €2 billion in outstandings and more than 100,000 microloans for new personal and professional projects financed and supported[1].

Groupe BPCE supports microloans in France through its local banks:

- in line with their entrepreneurial positioning, the Banques Populaires are focusing their actions on professional microcredit, in particular through their support for ADIE (Association for the Right to Economic Initiative).

  ADIE defends the idea that everyone, even without capital or a diploma, can become an entrepreneur or have access to a job if they obtain a microloan and personalized professional support based on trust, solidarity and responsibility. ADIE acts by:
  - financing all types of professional activity with microloans up to €12 thousand (€15 thousand in French overseas territories);
  - providing free personalized monitoring for each project thanks to the support of specialists; and

(1) Annual report of the Observatoire de l'inclusion bancaire 2023 (published in 2024): https://www.banque-france.fr/system/files/2024-06/OIB-2023 Rapport-annuel.pdf

- by fighting against obstacles and stereotypes, so that anyone who wants to can become an entrepreneur;
- the Caisses d'Epargne, with the *Parcours Confiance* associations and the *Créa-Sol* microfinance institute, offer different personal microloans, enabling people excluded from the banking system to be supported in their projects and in managing their budgets.

The practice of microloans is strictly regulated. According to Article R. 518-61 of the French Monetary and Financial Code, microloans range between €300 and €8,000 for a period of between 6 and 84 months. No personal guarantee is required from the borrower. However, they must have a professional integration project and not have access to traditional bank credit. The microloans are 50% guaranteed by BPI France.

In terms of governance, for the Banques Populaires, the relationship with ADIE on microloans is governed by the endowment fund at the sponsorship level. The FNBP participates in funders' clubs, partner meetings and boards of directors.

For the Caisses d'Epargne, governance is at the level of the Fédération Nationale des Caisses d'Epargne *via* its internal bodies. The indicators and guidelines are set and studied by a working group composed of three Chairmen of the Management Boards and three Chairmen of the Steering and Supervisory Committees (SOC). They are then approved by the Bureau (composed of six Chairmen) and then by the Board of Directors with all managers (executive and non-executive). Indicators are monitored annually in the reporting. Each Caisse d'Epargne then monitors the indicators and guidelines of their Board of Directors of their *Parcours Confiance* associations in conjunction with the Lead Financial Inclusion Directors.

The orientations of the offer are defined according in particular to market trends and studies carried out by the microloan operators (Banque de France, BPI France and non-profit organizations). Partners are consulted during the construction of a new offer in order to validate the need such as the Caremakers offer for leases with a purchase option.

In addition, the financial inclusion function is coordinated at two levels:

- the financial inclusion managers and advisors meet annually at a face-to-face seminar to monitor activity;
- meetings to present new offers or monitor partnerships are held by videoconference.

For the Banque Populaire network in particular, the link between the bank and ADIE is carried out at several levels: the first is at the regional level, between the 12 regional offices of ADIE and the 12 regional Banques Populaires. The second takes root at the national level, between the FNBP and ADIE - the national headquarters - at different strategic and/or more operational levels. Sharing and cohesion meetings are also organized at the level of the Fédération Nationale des Banques Populaires banks and *via* the internal social network.

Securing the banking offer of protected persons

In France, 800,000 adults have received legal or social protection under a ruling by a guardianship judge. These measures, graded according to the degree of autonomy of the person, involve the banks through the management of the accounts and assets of these customers, in conjunction with their legal representative.

The Caisse d'Epargne network is the leader in this customer segment; it is the leading bank for protected persons under guardianship, trusteeship and family housing in France.

Crédit Coopératif is the Group's second-largest operator in this area.

The protected persons market is regulated by the act on planning and reform for the justice system of March 23, 2019, which made it possible to strengthen the autonomy of protected adults. A "norma", an internal document, lists all the regulatory obligations relating to this market.

In terms of governance, a Protected Persons and Vulnerable Customers Market Manager for Retail banking and Insurance is responsible for coordination (with monthly meetings and plenary meetings once or twice a year) within Groupe BPCE. Then, for each Caisse, the Protected Persons market is organized around a market manager. Depending on the Caisses d'Epargne, the Protected Persons market is allocated to Retail Banking or Regional Development Banking. The Development division issues recommendations to the Caisses to determine objectives and guidelines. The Caisses then decide on the orientations and objectives for the Protected Persons market.

In addition, think tanks are organized between the Caisses, BPCE and IT and professionals in order to adapt offers and services to market realities. This dynamism is illustrated in terms of market activity and presence, with:

- national: a presence at the meetings of the regional offices of the National Federation of Individual Judicial Officers, notably with a stand;
- regional: participation in events organized by sponsor associations and partners.

In November 2024, Groupe BPCE enhanced its offer with a new online banking tool - WEBPROTEXION, for professional guardians or curators. The changes are the result of feedback from both protection professionals and adult customers under protection measures.

An inclusive insurance offer

BPCE Assurances is committed to providing all populations with insurance coverage to deal with risks that could cause damage to property or people.

Based on the principle of risk pooling, BPCE Assurances offers a wide range of products and rates to suit all types of needs and customers: particularly in the face of weather events, with home and automotive insurance offers covering the entire country without exclusions.

In terms of personal insurance, offers are eligible for the target of protected persons and the borrower's insurance contract is inclusive by definition. BPCE Assurances has chosen to focus its savings and protection offers on improving accessibility and inclusivity, including offering products that are accessible from modest amounts, as well as the integration of specific options for people with disabilities, and the assessment of the financial situations of vulnerable customers before subscription.

BPCE Assurances places particular emphasis on offering tailored assistance services and tailoring guarantees, in order to guarantee comprehensive and relevant coverage for all.

Non-discrimination

For Groupe BPCE, fair treatment of its customers is a fundamental principle. It acts in this sense in favor of non-discrimination in its relations with customers and natural persons. Professional ethics are an integral part of the main principles of the Code of Conduct and Ethical Standards set by BPCE, then rolled out by each Group entity according to its specific characteristics. Compliance with the rules of good conduct by employees enables each entity to carry out its activities honestly, loyally and professionally, and to serve the best interests of its customers. The Group has thus drawn up a Code of Conduct and Ethical Standards to ensure customer interests, employer responsibility and social responsibility (for information on the structure, approach and management of the Code of Conduct, see section G1 - 4.1.1.2 and section G1 - 4.1.1.3).

The convictions and commitments in the Code of Conduct and Ethical Standards make it possible to describe the Group's vision with regard to the customer's interests and its desire to be a useful player. Among the twelve principles it lists, the Group considers that it is its social responsibility to:

- Guarantee an impartial treatment for all our customers (Principle 2): It offers a system for listening to and welcoming customers in situations of vulnerability, in particular due to financial difficulties, which allows the Group to tailor its services to their specific needs and to ensure that, in all cases, it continues to listen carefully to their individual needs and provides customized solutions.;
- Protect the interests of customers and cooperative shareholders (Principle 3); in particular, by constantly prioritizing the customer's interests and ensuring that the customer fully understands the nature and details of the solutions recommended to them.;
- Be a banking group that is socially inclusive and opens to all (Principle 10): the Group makes every effort to accommodate customers with disabilities, adapting and personalizing its services and relationships.

The Groupe BPCE Code of Conduct and Ethical Standards, approved by the Executive Management Committee and the Supervisory Board, is implemented operationally in the codes of conduct and charters of the Group's entities.

Digital accessibility: ensuring inclusion for all

Digital accessibility is essential to meeting the objective of universality of digital services, since it aims to ensure that the information and functionalities of a digital service or content are accessible to everyone, regardless of the person's disability or their way of accessing information.

This means that everyone can:

- perceive and understand the information and functionalities of a digital service;
- navigate and interact with;
- and thus contribute on the web.

Digital accessibility thus determines the possibility for any service or digital content to be a vector of inclusion and autonomy for all. In this respect, it is part of the same approach as inclusion for full access to digital technology for each individual.

Groupe BPCE presents its commitments in this area *via* its multi-year accessibility plan for 2025-2027. The latter focuses on digital accessibility in the digital strategy of Groupe BPCE entities as well as in their policy to promote the integration of people with disabilities. Its launch reflects the Group's desire to include the inclusion of people with disabilities or those experiencing digital difficulties as one of its long-term strategic priorities.

This multi-year plan is common to all Groupe BPCE entities. However, each of them remains individually responsible for making its own digital services accessible, in line with the Group's ambitions and commitments.

Groupe BPCE's accessibility governance is based on an Accessibility function created to:

- ensure regulatory compliance;
- define the Group's ambitions and priority actions to be carried out, monitor and manage the application of accessibility standards by all Group entities;
- improve the user experience of the Group's customers and employees;
- enable operational efficiency.

The Accessibility function is structured to ensure optimal coordination and effective implementation of digital accessibility initiatives. It is composed of:

- the Group accessibility officer, supporting the Group's entities, promoting awareness-raising and training, and ensuring the monitoring and management of accessibility;
- a core team, made up of representatives of various key functions within the Group, acting as intermediaries for the various entities and internal and external regulators, steering the implementation of the Group's ambitions, centralizing best practices;
- local accessibility officers, each as an entry point for their entity guaranteeing compliance and continuous improvement of digital accessibility. It ensures compliance with accessibility standards, manages accessibility (relay between the core team and its entity, etc.) and raises awareness among the various audiences; and
- the IT relays of the various entities concerned.

In addition, a control system will be rolled out in the Group's entities to manage compliance with regulations and the accessibility of digital services. The system will be based on a set of KPIs produced by the local accessibility officers (first-level control), and supervised by the core team (second-level control).

Digital accessibility is part of a broader regulatory framework. It is a fundamental right, recognized by:

- the United Nations in the Convention on the Rights of Persons with Disabilities in particular;
- the application of the act of February 11, 2005 on equal rights and opportunities, participation and citizenship of people with disabilities. It is more specifically Article 47 of this act that makes accessibility a requirement for all online communication services of public bodies, as well as for certain private bodies;
- to complete this regulatory framework and define the resulting technical requirements, a dedicated framework has been drafted: the RGAA (General Accessibility Improvement Framework);
- it should be noted that in accordance with the latest changes in European regulations, French accessibility obligations have also been extended to certain categories of products and services.

It is in this context that Groupe BPCE entities must operate to ensure that their digital content and services are accessible to all their customers and employees, as well as to the general public.

This approach, built with the support of two firms specializing in accessibility, involved collaboration with various partners within the Group, such as the Legal division, the Communication division, BPCE-IS, etc. At the same time, the implementation of the Group's approach, particularly in the context of Retail Banking and Insurance (RB&I), which is also a member of the core team, involves dialog with specialist associations in these matters, in order to test the effectiveness of these policies.

The multi-year accessibility plan for 2025-2027 is a public document, accessible on all of the Group's institutional websites and mobile and web applications. A Coordination Committee meeting attended by a business line and IT correspondent from each Group entity and department (around 70 people), meets on a monthly basis. Specific workshops are also set up to co-construct ambitions, methods and tools with all Group entities.

3.4.3.2 (S4-2) PROCESSES FOR ENGAGING WITH CONSUMERS AND END-USERS ABOUT IMPACTS

3.4.3.2.1 Customer satisfaction measurement

Banque Populaire and Caisse d'Epargne networks

Groupe BPCE has structured an ambitious plan to accelerate performance in terms of "customer satisfaction", for each institution, and focused on actions with a strong leverage effect. This mobilization has created a favorable environment for the commercial development of all Groupe BPCE institutions.

With its robust listening tools for customers, Groupe BPCE effectively assesses the feedback from each of its customers in all its markets:

- customer satisfaction is calculated in real time, resulting in faster deployment of improvement actions, whether regarding the mobile experience or the relationship with the branch and the advisor;
- these systems make it possible to interview 100% of customers once a year and each time they have contact with their advisor;
- in total, over 12 million Groupe BPCE customers are surveyed on a full-year basis across all markets.

In addition to listening to customers, very concrete actions have been taken to ensure that each institution benefits from the Group's best practices for improving the customer experience. This is how best practices were disseminated concerning improving telephone accessibility, responsiveness to customer requests, etc.; the resulting action plans have increased the NPS of all Group institutions, in all markets since 2018.

In terms of customer satisfaction, the BPCE 2021-2024 strategic plan focused on the branch, the cornerstone of the relationship with our customers: 100% of branches and business centers have a positive NPS in 2024.

Over the 2021-2024 period, the net promoter score (NPS), a reference indicator for measuring satisfaction, increased steadily in all markets. At the end of 2024, the percentage of branches and business centers with a positive NPS was 95% for the Caisse d'Epargne network, 95% for the Banque Populaire network and 94% for the Groupe Crédit Coopératif.

This performance reflects the mobilization of all institutions on the fundamentals of customer satisfaction: strengthening of service quality, strong responsiveness to requests, continuity of the relationship and proactivity.

Customer Satisfaction: % of branches with positive NPS[1]

	% at the end of 2024	% at the end of 2023	% at the end of 2022
Banque Populaire network	95%	90%	82%
Groupe Crédit Coopératif	94%	94%	91%
Caisse d'Epargne network	95%	86%	74%

Natixis CIB

Natixis CIB builds a sustainable business model with its customers thanks to its proximity, the quality of its strategic dialog and the combination of its expertise. This privileged relationship with its customers is the preferred channel for knowing their point of view. In addition to customer relations, the systems described above help to identify customer expectations and, if necessary, remedy any negative impacts. As part of the continuous improvement of its systems, Natixis takes into account the recommendations of the regulators and participates in various market initiatives through the professional associations of which it is a member.

Natixis CIB measures customer satisfaction through the analysis of customer complaints received. A customer complaint indicates dissatisfaction with a service offered by the bank. Regular analysis makes it possible to identify sensitive complaints or customers who frequently make them, in order to put in place comprehensive action plans to prevent similar situations from occurring with other customers. These action plans are closely monitored to ensure their implementation and results within the allotted timeframe.

Performance measurement indicators are also presented at a quarterly regulatory committee meeting on Natixis CIB's customer complaints.

NATIXIS IM

All Natixis IM European direct management companies use their proprietary search service as well as due diligence processes to understand the risks, opportunities and impacts generated by the companies invested in on consumers and end-users.

In terms of analysis methodology, the theme of consumers and end-users is taken into account by all European direct management companies investing in both listed assets and private assets.

These considerations are also taken into account in the case of asset management companies investing in private assets. By way of illustration, Naxicap when carrying out the ESG due diligence on investment targets, incorporates the criteria: quality of service and customer satisfaction. The due diligence provides an in-depth analysis of each sustainability theme, including their level of importance to the company, their strategic importance to the sector, a summary of the company's performance and relevant key performance indicators (KPIs).

In addition to proprietary methodologies, asset management companies monitor the ratings of external data suppliers. Several of Natixis IM's asset management companies[2] use the ESG rating of the data provider MSCI. This rating assigns each company a score on each key issue selected, ranging from 0 to 10. For the social pillar, the scores assess the company's exposure to risks or opportunities as well as its ability to manage this exposure. These are calculated using the key issues exposure score and the management score for these key issues. Key

(1) The scope for reporting this indicator is made up of the Banque Populaire and Caisse d'Epargne networks. This indicator measures a customer's intention to recommend their bank. The calculation of this indicator is carried out after analyzing the feedback from the surveys sent by RB&I *via* its partners to all customers. This analysis of the overall NPS, networks, markets and institutions is followed by the production of an overall report.

(2) Ostrum AM, Natixis IM International Solutions, Dorval AM and DNCA Finance.

issues related to the consideration of the impacts of products on consumers include:

- chemical safety;
- financial protection of consumers;
- data security and confidentiality;
- product safety and quality.

Other Natixis IM asset management companies[1] use the ESG rating of the data provider ISS. Based on a set of approximately 700 indicators, several of them cover topics relating to customer responsibility issues and products specific to the company's business model and are therefore linked to the consideration of consumers' interest. For example:

- product safety;
- data confidentiality and information security;
- responsible marketing.

BPCE Assurances

BPCE Assurances has set itself ambitious targets for its centers of expertise in a context of growth in its activities.

Two types of measurement indicators are closely monitored: satisfaction rates expressed by customers and the NPS (net promoter score), which assesses the intention to recommend.

In line with the customer listening system set up at Groupe BPCE level, BPCE Assurances interviews its policyholders after they have received telephone contact with one of the company's centers of expertise, or when the customer browses on the Digital Space.

For telephone contact, this survey is systematically carried out after an incoming call with a questionnaire sent to policyholders by text message. The customer answers the survey and then validates their answers, which are anonymous. These surveys take place at each interaction, with a 30-day non-solicitation period.

3.4.3.2.2 Personal Data Protection

As soon as the GDPR was implemented, Groupe BPCE drafted an information notice intended for retail banking customers (mainly Banques Populaires and Caisses d'Epargne), which aims to describe the main processing operations carried out in compliance with the rules set by the GDPR. Indeed, the regulations state that any processing must be based on proper and justified cause with a legal basis. In banking activities, this processing is in most cases the result of either a legal obligation or a contract. This notice was produced by Natixis, it is intended for its customers and natural persons related to its customers.

This notice also specifies the various rights that any natural person can exercise and the points of contact in institutions, in order to be able to activate them.

Although this notice was not mandatory, it fulfills a duty of transparency towards customers and prospects and demonstrates the Group's ambition in terms of personal data protection.

This notice is widely distributed and accessible to any person (customer or prospect) on the websites and App.

3.4.3.2.3 Cybersecurity

Groupe BPCE, as the Group's central institution, ensures that the measures taken by all Group companies are sufficient to ensure compliance with commitments to customers, employees, partners, regulators, and cooperative shareholders. To do this, the Group has set up an organization to:

- lead the development and evolution of the ISSP-G and monitor its deployment according to the management system described below;
- ensure the security of the Group's IS;
- ensure the security of the federal IS and the central institution.

To this end, BPCE appoints a Group IS Security Manager (RSSI-G), as well as an alternate.

The RSSI-G reports hierarchically to the Group Head of Security, who reports to the Group Secretary General (SGG) and functionally to the Chief Technology & Operations Officer (T&O).

Within the ISSP-G, each Group company adopts the ISS framework and the reference system of ISS rules and instructions, without adaptation. This framework is adapted according to the company's organization, the Internal Control Coordination Committee (3CI), the Risk Committee, the supervisory body or the executive management.

With regard to IS Security, each Group IT Operator ("Operator") formalizes and specifies in a document:

- the commitments of each party concerning the expected level of security for the main business applications, the deployment, administration and use of security systems, as well as the exercise of ISS Level 2 permanent controls;
- the alert procedure between the Operator and its customers in the event of an incident;
- indicators enabling its customers to have permanent visibility on the level of security achieved with regard to the requirements defined by the business line managers.

Concretely, this translates into the implementation of security measures to protect its end-users:

- enhanced authentication: use of two-factor authentication (2FA) devices to secure access to online accounts;
- data encryption: sensitive data, such as personal and banking information, is encrypted to prevent unauthorized access;
- transaction monitoring: implementation of fraud detection systems that monitor transactions in real time to identify any suspicious activity;
- application security: development of mobile and web applications with robust security protocols to protect users against cyber threats;
- training and awareness: training programs for users on best practices in online security, including the recognition of phishing attempts;
- assistance and support: the provision of assistance services to assist users in the event of a security issue, such as identity theft or fraud;
- regular updates: application of regular updates to correct vulnerabilities in systems and applications;

(1) DNCA Finance, Dorval AM, Ecofi, Mirova and Ossiam (for funds applying ESG criteria only).

- access controls: limitation of access to data and systems according to roles, in order to minimize the risk of unauthorized access.

These measures aim to guarantee the security of end-user information and transactions, thus reinforcing confidence in the services provided by the Group to its customers.

BPCE also implements preventive actions to raise awareness among consumers and end users of the threats to which they may be exposed. "Security" pages are published on the institutional websites of the Group's institutions.

Customers also receive communications by email to inform them about the various possible attacks and how to guard against them. This system is supplemented by online banking. Recommendations for use are available through alerts on potential fraud at each connection.

Through Group security, Groupe BPCE organizes conferences where the objective is to raise awareness of cybersecurity among its professional clients. Finally, it proposes an offer entitled *cybersecur+*, aimed at protecting the activity of companies, improving their security and anticipating attacks. *Cybersecur+* is intended for VSEs, SMEs, mid-sized companies, public sector entities and associations.

3.4.3.3 (S4-3) PROCESSES TO REMEDIATE NEGATIVE IMPACTS AND CHANNELS FOR CONSUMERS AND END-USERS TO RAISE CONCERNS

Whistleblowing mechanism open to Groupe BPCE's third parties

Groupe BPCE companies have a platform to collect reports relating to serious breaches of the Code of Conduct, laws, safety, environmental impact, or any inappropriate behavior in the workplace. This whistleblowing system is open to all employees and third parties of the company, who can express themselves via a tool accessible by URL link, regardless of the country of operation (Europe, United States, etc.) and regardless of the business line (retail banking, Corporate & Investment Banking, etc.).

For more details on the whistleblowing system, see G1-1 – 4.1.1.3.3.

Groupe BPCE is not aware of any cases of non-compliance with the guiding principles of the United Nations or the ILO Declaration on Fundamental Principles and Rights at Work regarding its customers.

In addition, no alert was raised *via* Whispli, Groupe BPCE's whistleblowing channel.

3.4.3.3.1 Complaint management

The collection of customer feedback in real time makes it possible to detect any dissatisfaction and to deal with them as quickly as possible in the complaints management process. The listening system deployed in all institutions as well as the complaints management system feed into discussions on areas for continuous improvement in the range of banking products and services offered by the Group. All Groupe BPCE entities have a department that handles customer complaints.

Banque Populaire and Caisse d'Epargne networks

Analysis and use of information about complaints

Group entities analyze complaints in order to detect possible failures, shortcomings and bad practices. This analysis allows them to establish corrective measures to be implemented with the relevant divisions. The search for the root causes of complaints is a continuous improvement process that also draws on comments made by customers in satisfaction surveys and on monitoring social networks and customer reviews.

The complaints handling process

Complaints are handled as follows:

- the branch or business center in charge of the local commercial relationship, is the customer's main contact;
- the customer relations department of the bank or subsidiary may be called upon, even if the answer or solution provided by the customer's main contact is not suitable;
- the mediator, an independent figure, may be solicited when no solution has been found with the bank, or in the absence of a response from the bank. The mediator has their own website, where the client can submit a request for mediation *via* an online form.

The procedure for discussing or transferring complaints between the Customer Relations departments of Group's banks, and those of the subsidiaries, is organized to ensure that each complaint is addressed as quickly as possible.

Informing customers about the complaints handling process

Customers are informed of the complaints handling process and how to contact the bank:

- on the websites of the Group's institutions: https://www.banquepopulaire.fr/votre-banque/reclamation-et-mediation/ and https://www.caisse-epargne.fr/votre-banque/reclamation-et-mediation;
- in fee guides;
- in the general terms and conditions.

Monitoring of the complaints handling process

This management concerns in particular the grounds for complaint, the products and services concerned by these complaints and the processing times. Key indicators are regularly submitted to Groupe BPCE bank directors, Internal Control departments and all sales structures.

Among the reasons for complaints, indicators are monitored which may reveal discrepancies between the service expected by the customer and the service provided, such as information and advice for 2.16% of complaints handled in 2024 and unauthorized transactions for 1.7%, down compared to 2023.

In 2024, 63% of complaints were handled within 10 working days. The average processing time was 15.8 days.

Complaints: Average processing time for complaints, % processed within 10 days[1]

	2024	2023	2022
Average processing time	**15.8 days**	**15.5 days**	**14.6 days**
% within 10 days	63%	61%	59%

Natixis CIB

A framework for managing customer complaints has been defined within Natixis CIB, the main objective of which is to ensure that all customer complaints are properly identified and captured. These complaints must be grouped within internal tools allowing a simplified search for complaints.

A systematic acknowledgment of receipt must be sent to the customer to confirm the handling of the claim (unless a response is sent within 10 days for France). In this acknowledgment of receipt, the customer is informed of the various steps to come, as well as the regulatory deadlines that apply. The information provided by the mediator, to whom the customer can contact in the event of persistent dissatisfaction, is also provided.

Natixis IM

In the context of asset management, Natixis IM's management companies do not have a direct relationship with the companies invested in. It is these same companies that may be subject to a whistleblowing mechanism or complaints from consumers and end-users. In the absence of guidelines for the asset management sector, the interpretation of requirements in this area concerns the monitoring of controversies, PAIs and engagement with companies.

As part of the analysis carried out at the time of the investment, Natixis IM's European asset management companies rely on data produced by external data providers, collected from third parties and/or on information communicated directly by the company invested in both to identify and monitor the controversy.

As part of the monitoring of ESG risks, each Natixis IM management company must have a mechanism for taking into account controversies, either formalized via a dedicated policy or integrated into existing policies and procedures (see S2-1 – 3.2.3.1.2).

In order to identify these controversies, European asset management companies may use data produced by external data providers, such as those from ISS, MSCI, World Check, EthiFinance, RepRisk or Sustainalytics.

3.4.3.3.2 Personal Data Protection

The Group continues to spread the data protection culture by strictly managing commercial prospecting. Thus, consent collection for commercial prospecting purposes has grown considerably:

- by bringing the Cookie policy into compliance in April 2021 with the new guidelines published by the CNIL in October 2020. Thus Internet users have access to comprehensive information through a Policy made available on the websites and App. Internet users are also asked to give or refuse their consent for the processing of their data according to the purposes pursued;
- by implementing the consent of customers for commercial solicitations based on payment data and on the use of information from the energy performance diagnosis and certain data from the tax notice;
- through the development of a consent center that brings together all the authorizations given by customers on cookies, commercial prospecting and specific processing requiring prior agreement.

3.4.3.3.3 Cybersecurity

In order to be able to listen to incidents affecting end-users, Groupe BPCE has made various communication channels available to them to report their incidents and express their concerns:

- the following public link points to the document describing the mission of the CERT and containing all the information necessary for the declaration of incidents concerning end-users[2]. This document describes how to interact with the CERT to report an incident online;
- a customer service *via* phone, email or online chat allows users to ask questions and report issues;
- users can visit branches to discuss their concerns with an advisor;
- the Group uses social media platforms to interact with customers and collect their feedback.

After a complaint or incident is reported, BPCE conducts an in-depth analysis of the incidents to identify the root causes and implement corrective actions.

In addition, performance indicators are used to assess the effectiveness of remedial measures and make continuous improvements.

In the event of persistent dissatisfaction, customers may turn to a banking mediator, who intervenes to resolve disputes.

Regular surveys collect customer opinions on services and identify areas for improvement.

These procedures and channels are essential to ensure that consumer concerns are taken into account and addressed effectively, thus helping to improve customer satisfaction and trust in BPCE's services.

BPCE also implements preventive actions to raise awareness among consumers and end-users of the threats to which they may be exposed. "Security" pages are published on the institutional websites of the Group's institutions:

- Security of your accounts and transactions | Banque Populaire;
- https://www.caisse-epargne.fr/votre-banque/securite/;
- Security: protect yourself against the risk of fraud | BRED;
- Security - CASDEN Banque Populaire.

(1) The scope for reporting these indicators is made up of the Banque Populaire and Caisse d'Epargne networks. The calculation of these indicators is carried out after the collection of data from the institutions' claims management tools on a quarterly basis, and the specific reporting from certain institutions (CERA, CEHDF, BRED, CASDEN and BPSud).

(2) https://www.groupebpce.com/app/uploads/2024/04/20190418-rfc2350-fr-v2-1.pdf.

3.4.3.4 [S4-4] TAKING ACTION ON MATERIAL IMPACTS ON CONSUMERS AND END-USERS, AND APPROACHES TO MANAGING MATERIAL RISKS AND PURSUING MATERIAL OPPORTUNITIES RELATED TO CONSUMERS AND END-USERS, AND EFFECTIVENESS OF THOSE ACTIONS

3.4.3.4.1 Personal Data Protection and cybersecurity

Personal Data Protection

Work on the Privacy Center continued in 2024 to initiate consents to commercial prospecting on the basis of certain information from the tax notice and the Energy Performance Assessment. The information notice will also be updated to include the new processing. Lastly, governance work will continue on cookies on the one hand, and on Artificial Intelligence, on the other hand, given developments and recent recommendations in this area.

Cybersecurity

BPCE implements several measures to manage incidents and operational risks related to regulatory non-compliance, particularly in terms of personal data protection and communication of cybersecurity attacks. These measures concern both BPCE employees and end-users.

In terms of personal data protection risk management, the main actions are as follows:

- regulatory compliance:
  - BPCE ensures compliance with applicable regulations, such as the General Data Protection Regulation (GDPR), by implementing appropriate policies and procedures;
- Data Protection Officer (DPO):
  - appointment of a DPO to oversee data processing activities, ensure compliance and serve as a point of contact for regulatory authorities and customers;
- training and awareness-raising:
  - organization of regular training for staff on data protection, to raise employee awareness of best practices and legal obligations;
- audit and internal control:
  - conducting internal audits to assess compliance with regulations and identify weaknesses in data management;
- data breach management:
  - establishment of procedures to detect, report and remedy data breaches, including notification of competent authorities and the persons concerned where necessary.

In terms of communication of cybersecurity attacks, procedures are in place to quickly inform customers and regulatory authorities in the event of a significant attack, in accordance with legal obligations. In addition, a partnership has been established with cybersecurity experts and financial institutions to share information on cybersecurity threats and best practices.

3.4.3.4.2 Financial inclusion and accessibility of the offer

Protecting vulnerable customers

The Fragile Customer Offer (OCF) is managed at Retail Banking (BDD). Its aim is to enable customers identified as fragile customers (2.9%[1] in 2024) to access an appropriate range of banking services (day-to-day banking, financing, insurance, etc.). This offer fully coincides with the Group's values of inclusion. All actions concerning the vulnerable customer market are carried out with the conviction that drives Groupe BPCE, both to comply with regulatory requirements and to give life to its image as a cooperative group.

A specific offer dedicated to vulnerable customers

The Banques Populaires and the Caisses d'Epargne propose a specific offer for vulnerable customers, billed at a maximum rate of €1/month and guaranteeing access to banking services essential to managing the account - the Fragile Customer Offer (OCF). 23.8% of those detected as vulnerable are equipped with it. This offer includes (non-exhaustive list):

- a systematically authorized payment card (CPAS);
- the specific cap on intervention fees and commissions at €4 per transaction and €20 per month (Article R. 312-4-2 of the French Monetary and Financial Code);
- capping of fees for payment incidents and irregularities in the operation of the account at €16.50/month;
- a subscription to products providing alerts on the status of the account by text message regarding the level of the account balance.

The concerned institutions provide details of the specific offer for vulnerable customers on their websites.

On their website, the Caisses d'Epargne also offer a space for customers experiencing financial difficulties, where they can find out about the full range of dedicated support available to them: https://www.caisse-epargne.fr/clientele-fragile/.

Three main sections are included:

- dedicated solutions: banking offers (OCF, microloans) and non-banking offers in partnership with Orange and Renault (vehicle leasing) https://www.caisse-epargne.fr/clientele-fragile/services-mieux-gerer-comptes-ocf/;
- advice: to support customers in managing their accounts and their day-to-day finances (tips on the Caisse d'Epargne app, practical sheets, links to Budget Advice Points, etc.) https://www.caisse-epargne.fr/clientele-fragile/conseils-reprendre-budget-en-main/;
- partners: with *Finance & Pédagogie*, *Parcours Confiance*, *Créa-Sol*, https://www.caisse-epargne.fr/clientele-fragile/partenaires-engages/.

(1) The scope for reporting these indicators is made up of the Banque Populaire and Caisse d'Epargne networks. The basis for calculating these indicators is made up of data collected on behalf of the OIB (*Observatoire de l'Inclusion Bancaire* - Banking Inclusion Observatory) relating to vulnerable customers and collected on an annual basis.

In addition, a customer relations program has been set up for all customers with banking inclusion (vulnerable customers, those at risk of indebtedness and those with rights to the account) to provide them with advice, best practices and information on budget management *via* an e-newsletter "*Les Clés de votre Budget*" ("The Keys to Your Budget"), and digital banners in their connected areas.

"Fragile" customers who do not wish to subscribe to the OCF nonetheless benefit from a cap on fees for payment incidents and account irregularities, set at €25/month in accordance with the commitments of the French Banking Federation.

For the subsidiaries BPCE Financement, BPCE Lease, ONEY Banque, Crédit Foncier, CASDEN and Capitole Finance, the institutions have set up internal tools to detect customers in difficulty, accompanied by a process to facilitate the settlement of situations. In addition, they carried out awareness-raising campaigns for their advisors *via* dedicated training sessions.

In terms of support for its customers in potential risk of indebtedness or in a situation of proven financial vulnerability, the treatment of this customer is an essential topic of customer protection.

Groupe BPCE institutions were the first to use a tool to predict the risk of indebtedness or financial vulnerability (initiated in 2015).

In the procedure deployed within the Group, if a customer is identified as at risk of indebtedness, they receive a letter inviting them to make an appointment with their advisor to take stock of their situation and possibly readjust their banking products and services. Advisors can also direct customers towards non-banking solutions such as:

- Budget Advice Points;
- the Communal Social Action Centers;
- local associations;
- as well as the High Speed Budget Application tool, which allows customers to better manage their budget, and also to identify financial aid.

Reinforcing reception and listening to customers in difficulty

Groupe BPCE also continues its commitment to strengthening the reception and listening to customers in difficulty. The creation of entities (specialized branch, dedicated service within a customer relations center, telephone platform, etc.) dedicated to the reception, handling and monitoring of difficult banking situations is a good practice recommended at Group level. These entities provide more personalized support for customers on the road to a brighter future.

Developing financial education for all audiences

WITHIN THE BANQUE POPULAIRE NETWORK

The Banques Populaires also carry out educational actions to raise awareness of banking; over €5 million were invested in connection with inclusion and banking education.

Several Banques Populaires are taking part in the "I invite a banker into my classroom" initiative, which raises students' awareness of budget management.

WITHIN THE CAISSE D'EPARGNE NETWORK

In terms of financial education, since 1957, the Caisses d'Epargne had the intuition that it was necessary to go further in supporting the French people on money matters, and thus created the *Finances & Pédagogie* association. It organizes educational programs on money matters across the country.

In response to changes in society, the association is supported by a network of 6,000 public, private and non-profit partners, with a strong ability to adapt its content to different needs. The target audience is made up of young people and actors from schools and universities, people in a situation of economic and financial difficulty, and social action and association professionals (volunteers or employees). More broadly, the association's face-to-face and distance learning courses are aimed at the whole population, to help them to manage their everyday budgets and support life projects or crucial moments in financial management such as retraining or the transition to retirement. The association provides answers to the changing relationship to money linked to new societal lifestyles (digital, caregivers, sustainable consumption…). Trainers located in fifteen branches throughout the country carry out awareness-raising and training actions, both face-to-face and remotely. The association is certified: Qualiopi and ESUS ("Entreprise solidaire d'utilité sociale" - Solidarity company of social utility).

The quantitative and qualitative impacts of Finance and Education interventions contribute overall to the reduction of risks related to banking exclusion.

Microcredit for financial inclusion

WITHIN THE BANQUE POPULAIRE NETWORK

For more than 25 years, the Banques Populaires and ADIE have shared the same ambition: to open the doors of credit to those who, without resources or diplomas, embark on a determined and daring venture into entrepreneurship.

This partnership, which is embodied throughout the country, comes to life in each of the banks by involving employees, managers and even retirees, many of whom become ADIE volunteers.

Each year, ADIE's mission with the Banques Populaires enables more than 26,000 men and women to bounce back or get started in life, and also to contribute to the economic momentum in all territories, including the most fragile such as rural municipalities, overseas territories or priority urban areas.

With nearly €42 million in refinancing lines made available to the association in 2024, representing 21% of ADIE's microloan activity, the Banques Populaires network is a strategic partner of ADIE and thus contributes to maintaining 7,000 independent and salaried jobs in the regions.

The Banques Populaires network is also a committed sponsor alongside young entrepreneurs accompanied by ADIE by supporting the entire range of support services for those under the age of 30 years (*Je Deviens Entrepreneur* training program, honor loan funds dedicated to young people and the *Créadie Jeune Banque Populaire* award).

Lastly, the Banques Populaires are a long-standing partner of France Active with which they disburse microloans based on the France Active guarantee. They also grant additional loans to Initiative France's Honor Loan Funds.

For the Banques Populaires, in 2024, credit lines were disbursed to finance 8,666 ADIE professional and mobility microloans, thus helping to maintain 7,000 independent and salaried jobs in the regions.

WITHIN THE CAISSE D'EPARGNE NETWORK

The financial inclusion of the Caisses d'Epargne is a long-term commitment that is part of a comprehensive and coherent strategy. By aligning their actions with the Group's ambitions, they are working for a more inclusive and sustainable society, where everyone has the opportunity to access the financial services needed to carry out their projects. A major player in personal microloans in France, the Caisses d'Epargne confirm their commitment and wish to join forces by supporting the microfinance institute, *Parcours Confiance*.

The Caisses d'Epargne thus offer various personal microloans with the *Parcours Confiance* associations and the *Créa-Sol* microfinance institute. The *Parcours Confiance* microloan is intended to finance people who encounter financial difficulties in the realization of their project. The *Parcours Confiance* network mobilizes advisors able to intervene in all departments of mainland France. They support people looking for work or facing a life-threatening accident, and whose resources do not allow them to access traditional bank loans.

In addition, as part of their 2022-2024 CSR & Cooperative Guidelines, the Caisses d'Epargne aim to develop an offer of inclusive products and services for their vulnerable customers. As an illustration, new vehicles were financed thanks to the Caremakers offer, launched in 2017 by Renault, the Action Tank Entreprise & Poverty initiative, the Fédération Nationale des Caisses d'Epargne and ADIE It allows people in difficulty to access a new vehicle thanks to a lease-to-buy option financed by a microloan. Pioneers in transitions, the Caisses d'Epargne continue to innovate by financing the first new electric vehicles through direct purchase. As part of the lease offer with a purchase option (LOA) in partnership with Groupe Renault, Pôle Emploi, FASTT and the "Entreprises et pauvreté" Action Tank, the Caisses d'Epargne are aiming for 4,000 vehicles delivered in 2025.

For the Caisses d'Epargne, in 2024, 1,923 professional microloans were granted, thanks to the advisors dedicated to this activity and the social partners mobilized throughout the country.

Overall, within the Banque Populaire and Caisse d'Epargne networks, there are 10,589 local projects[1] that were supported in 2024.

Securing the banking offer of protected persons

As part of VISION 2030 strategic project, the Caisses d'Epargne wish to become the Bank for families. In this sense, the focus is on family measures, emphasizing listening, advice and expertise. The Caisse d'Epargne network aims to maintain its leading position in the Protected Persons market, both in terms of professional and family measures. In this context, support is provided to the network to welcome and manage family measures.

On an ongoing basis, the Caisses d'Epargne offer solutions that meet the specific needs of protected persons. To promote their autonomy, they can have access to payment cards equipped with contactless technology, as well as account consultation *via* an adapted remote bank. The customer's legal representative, whether a professional or a family member, also has a range of services to help manage their accounts.

Crédit Coopératif maintains a relationship of trust with legal guardians and guardians' associations. It has extended its solutions by establishing a clear distinction between the services offered to guardians' associations and those available to the protected adults. A specific customer onboarding charter has been drafted for protected persons.

The Caisses d'Epargne have a market penetration rate of 40%. They have experts spread across all regional banks and dedicated to this clientele.

Crédit Coopératif manages the situation of one in ten protected persons in France, with offers and management tools adapted to their situation.

An inclusive insurance offer

BPCE Assurances, through its two Non-life (IARD) and Life insurance business lines, strives to offer insurance and savings solutions adapted to all profiles and budgets, including preferential rates for young people, cover for people with reduced mobility, and a borrower insurance policy accessible without exclusion for at-risk professions.

BPCE Assurances IARD offers a range of Non-life (IARD) and Health products for which the structure offers several formulas and options to adapt coverage to all profiles and budgets (particularly vulnerable populations). A few examples:

- preferential rates are offered for young people, as well as benefits for young people with small budgets;
- a range with guarantees for PRM (people with reduced mobility) included directly in the contracts, without additional cost (for example, extension of civil liability in multi-risk home insurance, damage to wheelchairs including electric ones);
- in Health insurance, the range of products includes a "responsible" supplementary health insurance that meets the requirements of the regulations: no medical selection at the time of subscription and the contributions are not set and do not change according to the health status of the person covered;
- for Life Accident coverage, in the event of disability following a covered accident, the policyholder receives assistance services on "Coping with disability" with a personal and professional situation report specific to the person's disability.

BPCE Vie savings products cover the largest number of customers, particularly with highly accessible consumer policies. Some BPCE Vie policies (life insurance, non-funded insurance and funeral protection policies) are eligible for the target group of protected persons and may be taken out, depending on the protection measure (safeguard, guardianship, trusteeship, etc.), either directly by the protected adult or by their legal representative. A disability savings option (regulatory) is offered on Life Insurance policies at the time of subscription, offering specific and favorable tax treatment.

BPCE Assurances facilitates access to insurance for people who have overcome breast cancer. They will now be able to take out a Group borrower insurance policy for a real estate or professional project without additional premiums or exclusion, even partial, and without waiting for the legal period of five years set by the right to be forgotten.

(1) The scope for reporting this indicator is made up of the Banque Populaire and Caisse d'Epargne networks. This indicator lists the annual number of professional projects financed by microloans. The calculation basis for this indicator is made up of the number of pro take-off loans carried out in the local banks and the amount of microloans made by the CE and BPs sent by external organizations (France Active, CREA-SOL and ADIE).

Digital accessibility: ensuring inclusion for all

Accessibility concerns digital services for the general public, employees and customers (individuals and professionals) of Groupe BPCE. These are more particularly people with long-term or permanent sensory, motor or cognitive impairments, in addition to those with a temporary disability. With a view to digital inclusion, Groupe BPCE wanted to extend its actions in this area to people in a digital divide, while taking into account the aging of the population.

Before the publication of the 2025-2027 multi-year plan, Groupe BPCE decided to synchronize and harmonize the approach by setting up a dedicated governance structure, called the Accessibility function, and launching a program to strengthen digital accessibility. Since its creation, the Accessibility function has endeavored to disseminate digital accessibility issues and best practices to the various Group entities and to BPCE-SA's business line and IT departments.

In order to define the ambitions for the 2024-2025 horizon and lay the foundations of the program, it began with a diagnostic phase with the launch of work on:

- regulations and control systems:
  - development of the associated control system,
  - definition of management indicators relating to digital accessibility with a view to their implementation,
  - adoption and distribution of a Group standard to frame the accessibility of Groupe BPCE's digital services;
- target ambitions, organization and budget:
  - survey and analysis of the Group's existing digital services,
  - definition of target business line ambitions by 2030,
  - costing of the resources required for the remediation necessary to achieve the 2025 ambitions;
- tools, methods and change management:
  - provision of an accessibility statement template, the current multi-year plan and an annual action plan template,
  - definition of target IT project methodologies, accompanied by a toolkit for the production of accessible digital content and services "by design",
  - discussions on the conduct and industrialization of RGAA (General Framework for Improvement of Accessibility) compliance audits,
  - introduction of accessibility requirements in the Group's purchasing policy,
  - assessment of the maturity level of the digital accessibility of Groupe BPCE's major publishers with a view to implementing remediation plans,
  - provision of a training offer dedicated to business lines on digital accessibility within Groupe BPCE,
  - development of the change management plan for the Accessibility program.

Improvement of the accessibility of digital services

As part of the Accessibility program, Groupe BPCE has set a twofold objective in its ambitions for 2025:

- in the priority scope, remedy the problems of accessibility of digital services to ensure at least partial accessibility (*i.e.* a compliance rate with the RGAA of more than 50%). To that end, the entities will have to conduct audits of compliance with the RGAA and plan the remediation necessary to achieve this objective *via* their own annual action plans, taking into account any user complaints;
- for new digital services, the evolution of project methodologies to take into account digital accessibility from their design in order to ensure an optimal level during their production;

To this end, the Group's entities will have target processes, accompanied by a toolbox to assist them through the diagnostic, design, development and deployment stages of a digital project.

The Accessibility Function is studying the opportunity to include user tests with disabled people for digital services in the priority or extended scope. To reap the full benefits, they will only be considered when the teams have a sufficient level of accessibility and maturity.

Skills base

RECRUITMENT

Groupe BPCE wants to integrate technical skills related to digital accessibility in the profiles of eligible positions, as well as in the recruitment process of the corresponding profiles (in particular *via* dedicated criteria).

AWARENESS, TRAINING AND CHANGE MANAGEMENT

In 2025, Groupe BPCE will provide its entities with an internal training offer to disseminate the skills necessary for the accessibility of digital products and services. This will include, among other things:

- accessibility awareness sessions for all employees;
- technical training for a more specialized audience (developers, UI/UX designers, content creators, etc.).

In addition, the Accessibility function will develop various measures to raise the challenges of disability and inclusion among the Group's employees.

Alongside the skills development platform for employees, a change management plan is being drawn up to ensure the long-term accessibility of the entities' digital content and services.

DIAGNOSTICS AND AUDITS

The procedures for performing diagnostics and audits on compliance with the RGAA have not yet been defined. These will be detailed in this section during a subsequent review of this multi-year plan.

In the meantime, the Group's entities will conduct the diagnostics and audits according to the methods that seem most appropriate to their situation and level of maturity.

The Group's multi-year plan and these actions cover the French level.

3.4.4 Metrics and targets

3.4.4.1 (S4-5) TARGETS RELATED TO MANAGING MATERIAL NEGATIVE IMPACTS, ADVANCING POSITIVE IMPACTS, AND MANAGING MATERIAL RISKS AND OPPORTUNITIES

3.4.4.1.1 Cybersecurity

Groupe BPCE has drawn up a strategic plan that will be rolled out over the next few years, with the following ambitions and objectives:

- consolidate foundations to ensure trust, resilience and compliance;
- change practices to be more efficient;
- adapt to new threats, technological developments, particularly in terms of AI and quantum technology, and societal changes.

Groupe BPCE takes a holistic approach to manage material negative impacts, promote positive impacts, and manage material risks and opportunities.

In terms of managing material negative impacts, the processes in place are as follows:

- incident management plan:
  - implementation of incident management plans to quickly and effectively address major issues, such as data breaches, fraud and service outages;
- risk assessment and mitigation:
  - identification and assessment of risks, monitoring of the development of mitigation plans to minimize negative impacts,
  - the ISSP-G includes an instruction for mapping business line and IT risks from the Group's ISS:
    - its scope applies to Groupe BPCE as a whole,
    - the resulting risk mapping is updated regularly;
- communication and transparency:
  - proactive communication with stakeholders, including customers and regulators, in the event of a major incident, to maintain trust and transparency.

In terms of promoting positive impacts, the initiatives are as follows:

- innovation and product development:
  - development of innovative products and services that meet customers' needs and enhance their user experience;
- social and environmental responsibility initiatives:
  - implementation of programs that aim to have a positive impact on society and the environment, such as green finance initiatives and community development projects;
- customer satisfaction and loyalty:
  - implementation of loyalty and customer satisfaction programs to improve long-term engagement and satisfaction;
- strategic partnerships:
  - collaboration with external partners to co-develop solutions that add value to customers and society.

Lastly, with regard to the management of material risks and opportunities, the following principles are applied by BPCE:

- proactive risk management:
  - use of advanced technologies and robust methodologies to proactively identify, assess and manage risks;
- investment in technology:
  - investment in cutting-edge technologies to improve safety, operational efficiency and customer experience;
- continuous training and skills development:
  - regular training of employees on new regulations, best practices and technological innovations to ensure effective management of risks and opportunities;
- governance and oversight:
  - strong governance structures in place to oversee the management of risks and opportunities, with dedicated committees and rigorous reporting processes;
- open innovation and co-creation:
  - encouragement of open innovation and co-creation with customers and partners to identify and exploit new market opportunities.

To effectively manage these risks, BPCE conducts regular audits to assess the compliance and effectiveness of risk and opportunity management processes. It collects and analyzes feedback from customers and employees to identify areas for improvement and adjust the strategies accordingly.

3.4.4.1.2 Financial inclusion and accessibility of the offer

Microcredit for financial inclusion

As part of the VISION 2030 strategic project, Groupe BPCE aims to support 11,000 local social entrepreneurship projects per year. This KPI includes professional microloans.

Digital accessibility: ensuring inclusion for all

Groupe BPCE's strategic priorities described in its VISION 2030 strategic project include "improving the accessibility of digital products and services". The 2025-2027 multi-year accessibility plan and VISION 2030 promote an ethical approach to digital technology, in line with the Group's cooperative values.

In addition, all Groupe BPCE legal entities, including Banque Populaire and Caisse d'Epargne, are required to publish an accessibility statement for a legal maximum of three years. These are due to expire, and new audits are being carried out, managed by the Digital division. The results of these audits will enable to identify the technical changes in terms of accessibility that the Group may be able to implement.

An inclusive insurance offer

BPCE Assurances is mobilized in the development of inclusive digital products and services that meet the needs of various customer segments.

Non-discrimination practices enable BPCE Assurances to develop new products and services, thus opening up to new markets and customer segments. However, it is crucial to note that this inclusion must be managed, as abusive or forced sales could have negative effects on human rights. In addition, inaccessibility or a lack of legibility of offers could lead to risks of image and reputation, as well as a loss of customers.

Thus if BPCE Assurances failed to comply with these principles, the company would be exposed to negative social impacts, such as a lack of transparency with regard to customers, which could harm its reputation and the trust of its customers.

In view of these risks and potential impacts on consumers and end-users, BPCE Assurances has set itself the target of rolling out the online subscription process for savings policies (consumer life insurance and individual pensions, the deployment of which is scheduled for 2025). The objective is to adapt the functionalities of the offers for this new channel in order to simplify the contours of the online offers (offer essential/standard functionalities only, reduce complex options to explain, cap payments, etc.). This target is aligned with the objective of the internal governance and product monitoring policy. This involves providing educational elements in the paths, with the possibility of redirecting the customer to their advisor to benefit from human support at any time. This target concerns BPCE Assurances' activities upstream of its value chain. Progress will be measured from the year 2025.

PART 4 - Governance information

4.1 G1 - Governance

4.1.1 Impact, risk and opportunity management

4.1.1.1 GOV-1 - THE ROLE OF THE ADMINISTRATIVE, MANAGEMENT AND SUPERVISORY BODIES

See the GOV-1 section in the General Information chapter.

4.1.1.2 (IRO-1) DESCRIPTION OF THE PROCESSES TO IDENTIFY AND ASSESS MATERIAL IMPACTS, RISKS AND OPPORTUNITIES

In order to identify material impacts, risks and opportunities relating to business conduct, Groupe BPCE has relied on:

- the list of sub (sub) themes indicated in AR16 of ESRS 1, particularly in terms of corporate culture, whistleblower protection, supplier relationship management and corruption;
- the mapping of the Group's non-compliance risks, which takes into account both the Group's activities and its sector of activity, particularly in terms of regulations relating to money laundering, terrorist financing and measures of sanctions, embargoes and asset freezes.

4.1.1.3 (G1-1) CORPORATE CULTURE AND BUSINESS CONDUCT POLICIES

4.1.1.3.1 Code of Conduct

BPCE's Code of Conduct and Ethical Standards is based on a Group ambition to prepare a practical and clear document for employees, suppliers and partners in their relations with the Group. The code highlights the rules of conduct and best practices to be adopted while respecting the best behavioral standards of transparency and confidentiality, with the aim of forging long-term relationships of trust and acting with integrity as responsible bankers.

The Code of Conduct, updated in October 2023, is based on twelve principles of conduct in three parts:

- Interests of customers and cooperative shareholders: Foster a spirit of openness and a trusting relationship, Guarantee an impartial treatment for all our customers, Protect the interests of our customers and cooperative shareholders, Communicate in complete transparency;
- Employer and employee responsibility: Promote exemplary, principled and considerate behavior, Promote respect for employees and favor their professional growth, Act in a manner consistent with ethical business practices at all times, Ensure the continuity of Groupe BPCE;
- Social responsibility: Contribute to the development of a socially responsible market economy consistent with human dignity, Be a banking group that is socially inclusive and open to all, Take effective steps to protect the environment and facilitate the transition toward a low carbon economy, Promote Human Rights in the pursuit of all our activities.

Groupe BPCE's Code of Conduct, which is reflected in the codes of conduct and charters of the Group's entities, is a guarantee of a high-quality working environment and long-term reputation.

In 2022, all entities[1] of the Group that had been questioned declared that they had deployed the Group's Code of Conduct or their own ethics charter (see 2022 Risk Assessment and Compliance questionnaire).

Groupe BPCE's Code of Conduct and Ethical Standards was approved by the Executive Management Committee (10 members, including the Chairman of Groupe BPCE's Management Board) and the Supervisory Board in 2018 (composed of 19 members representing the Group's entities and employees as well as 3 independent members and 6 non-voting directors), after review by the Cooperative and CSR Committee (composed of 7 executives from the Group's entities).

The principles of ethical and professional conduct set out in this code are considered fundamental by BPCE's Supervisory Board, Management Board and Executive Management Committee, as well as by all Group executives.

Groupe BPCE's Code of Conduct[2] and Ethical Standards is available on the Groupe BPCE intranet and on the Groupe BPCE website. All employees, including the new hires, can access it, as well as can all persons outside the Group who consult the BPCE website.

In addition, a regulatory training course, in e-learning format, has been developed to ensure that the principles of the Code of Conduct and Ethical Standards are known throughout the Group. This training is mandatory for all Group employees and for all new hires. As of December 31, 2024, 98.95% of registered employees had completed the training[3].

Lastly, an annual reminder on the system relating to the Code of Conduct and Ethical Standards is conducted by the entity's Ethics Officer.

Groupe BPCE is also a signatory of the Human Rights Charter, details of which are available in Section *3.1.3.1 - S1 - Own workforce*.

(1) The entities questioned using the questionnaire are as follows: the 14 institutions of the Banque Populaire network, the 15 institutions of the Caisse d'Epargne network, all BPCE subsidiaries (specialized financing, asset management, life and non-life insurance, payments, wealth management and retail banking) and BPCE SA. (B)

(2) Code of ethics-EN-2.pdf.

(3) **Scope**: The 14 Banques Populaires, the 15 Caisses d'Epargne, BPCE excluding Natixis Algérie, Banque de Savoie, Prepar-Vie, GIE Nord-Ouest Recouvrement, and Mobiliz. // ***Source:*** *training infocenter via the Click & Learn tool - HR Data & Analysis services center - Group HR department.* // **Calculation**: number of employees trained / number of employees targeted.

4.1.1.3.2 Prevention of breaches of the Code of Conduct

Concerning violations of the Code of Conduct and Ethical Standards as well as the internal rules, local management identifies inappropriate behaviors and reports them to the entity's Human Resources for handling. In addition, during the annual employee performance appraisal interview, the manager formalizes any breaches of the Code of Conduct in a dedicated section. Sanctions may be imposed. They are presented half-yearly to the Cooperative and CSR Committee composed of members of the Banque Populaire and Caisse d'Epargne networks, and Groupe BPCE functions. This committee is responsible for making proposals and recommendations aimed at promoting both cooperative and societal values and long-term ethical professional relationships.

Breaches of the Code of Conduct can also be reported *via* the whistleblowing framework applicable in all Group entities. This is described in an internal "Whistleblowing framework" policy approved on May 5, 2023 by a dedicated committee chaired by the Group's control functions and composed of 12 management representatives from Groupe BPCE entities.

This policy, published on June 30, 2023, is applicable and rolled out in the procedure by all Group entities after consultation with the employee representative bodies. The policy applies to all legal entities of Groupe BPCE, in France and abroad, taking into account the regulatory specificities of the country in which they operate, regardless of the number of employees of the entity (including foreign branches or subsidiaries). They disseminate the policy by any means that ensures sufficient awareness among employees, in particular by means of notification, posting or publication, where applicable on their website or by electronic means, under conditions that make the policy permanently accessible to the persons concerned. For service providers and suppliers, a clause in their contract calls for dissemination of the policy.

The body of standards presents the type of alert that can be submitted, the process for submitting and handling alerts, the confidentiality of the information, the whistleblower's protected status and the penalties incurred in the event of non-compliance. The persons who can submit an alert are also specified:

- Groupe BPCE's employees, including internal or external, temporary or occasional employees (temporary staff, interns, service providers, etc.), including where their parent company has set up its own professional alert system;
- cooperative shareholders, partners and holders of voting rights at the entity's General Meeting;
- members of the administrative, management or supervisory body, external and occasional employees;
- co-contractors of the entity concerned, their subcontractors or, in the case of legal entities, members of the administrative, management or supervisory body of these co-contractors and subcontractors as well as members their staff;
- customers (excluding complaints processing).

Groupe BPCE employees and co-contractors have the opportunity to report any breaches *via* the internal whistleblowing system implemented in each Group entity (details are available in the following Section: 4.1.1.3.3 *Protection of whistleblowers*).

The whistleblowing must relate to conduct or situations likely to constitute a breach of the rules applicable to Groupe BPCE. It may also relate to a crime, an offense, a threat or harm to the general interest, a violation or an attempt to conceal a violation of an international commitment duly ratified or approved by France, or a unilateral act of an international organization made on the basis of such a commitment, or of a European Union or French law or regulation. The whistleblowing framework has been extended to allow the reporting of facts falling within the scope of the Duty of Care (identification of risks and prevention of serious violations of human rights and fundamental freedoms, health and safety of persons as well as the environment).

Groupe BPCE's "whistleblowing" framework is based on the following:

- act of December 9, 2016, known as the "Sapin 2" act, on the general provisions on whistleblowing;
- Directive (EU) 2019/1937 of the European Parliament of October 23, 2019 on the protection of persons who report breaches of EU law;
- act No. 2022-400 of March 21, 2022 aimed at strengthening the role of the defender of rights in terms of whistleblowing;
- act No. 2022-401 of March 21, 2022 aimed at improving the protection of whistleblowers;
- act No. 2017-399 of March 27, 2017 on the Duty of Care of parent companies and ordering companies;
- decree No. 2022-1284 of October 3, 2022 supplementing the act of March 21, 2022;
- decree No. 2022-1686 of December 28, 2022 on the matching contribution to the personal training account of a whistleblower employee.

In addition, Group entities with subsidiaries abroad must also meet similar requirements with regard to regulatory or internal texts (code of conduct). As a result, anonymity may be prohibited by law or regulation in a country. In such cases, the local measures will prevail over the policy.

In addition, a regulatory training course, in e-learning format, accompanies the deployment of the Whispli tool and specifies the rights, duties and protections of a whistleblower. It has been rolled out to Group employees since July 2023.

Group Compliance is responsible for managing the system and ensuring its proper application in all Group entities.

4.1.1.3.3 Protection of whistle-blowers

The internal "Whistleblower framework" policy describes the operational process for reporting and handling alerts in order to guarantee the integrity and confidentiality of the information collected but also to protect the persons eligible for the protection system against any retaliation or threats.

The policy was updated in 2023 to take into account the changes made by act No. 2022-401 of March 21, 2022 aimed at improving the protection of whistleblowers and its implementing decree of October 3, 2022.

The main changes to the framework concern the extension of the persons benefiting from the guarantees provided for by the law, the collection and handling of alerts falling within the scope of the law, the guarantee of the confidentiality of the identity of the whistleblower and the information submitted and, lastly, the prohibition of retaliatory measures and/or threats by the employer.

Whistleblowing channels

Whistleblowers can use the internal procedures in place in all Group entities to report breaches of the rules before they become serious risks. An alert may be submitted *via* any channel defined by the entity provided that the anonymity and confidentiality of the whistleblower be fully guaranteed (if the whistleblower so wishes).

The Group's Whispli tool

The main channel for transmitting alerts for all entities participating in this framework is the Group's Whispli platform accessible *via* the Group's website.

It is a tool chosen for all Group entities, regardless of the country in which they operate and regardless of the business line (Retail banking, Corporate & Investment Banking, Insurance, etc.). The screens to which the whistleblower has access have been translated into more than 15 languages in line with the countries in which Groupe BPCE operates. Whispli offers all guarantees in terms of data security, complies with the highest standards in terms of confidentiality and respect for anonymity (encrypted data, inability to retrieve the IP addresses of whistleblowers, etc.), as required by the regulatory requirements aiming to improve the protection of whistleblowers. The whistleblower may submit his or her alert and discuss it with the person managing it, with or without anonymity. The alert is sent directly to the department responsible for handling it thanks to the definition of routing rules specific to each institution as described in its procedure – these rules contribute to confidentiality. Example: a harassment-type alert will be sent to HR. The procedure indicates the function or department designated to collect and process each type of alert. The position or status of the designated function or department ensures that it has sufficient expertise, authority and resources to carry out its duties impartially.

Other channels for submitting an alert

An alert can also be submitted directly to a line manager or *via* a dedicated generic address. However, it is recommended that alerts be submitted through the Group tool or be sent directly to the Chief Compliance Officer so that the whistleblower protection system can be fully complied with (compliance with response and handling times, handling of alerts received orally, commitment in terms of confidentiality).

Protection of whistleblowers

Strict confidentiality of the information collected in an alert is guaranteed, in particular the identity of the person submitting the alert (if he or she so wishes), the persons targeted by the alert and any third party mentioned in it, throughout the handling of the alert.

The policy specifies the categories of persons who are subject to protection: the whistleblower, the facilitators, the persons linked with the whistleblower, and the legal entities controlled by a whistleblower and in which he or she works or with which he or she is connected in a professional context. Under no circumstances may they be subject to any disciplinary sanction or legal action, provided that they act without direct financial compensation and in good faith. They may not be subject to retaliation, threats or attempts to resort to such measures. The policy mentions the various forms of retaliation against which the whistleblower is protected (suspension, dismissal, terminal or equivalent measures; coercion, intimidation, harassment or ostracism; abusive referral to mental or medical treatment, etc.).

With regard to training, two mandatory regulatory formats support the whistleblower protection framework: the e-learning course on the Code of Conduct which refers to it and the e-learning course which supports the deployment of the tool and which specifies in particular the rights, duties and protections of whistleblowers. It has been rolled out to Group employees since July 2023.

4.1.1.3.4 Training on business conduct

In order to enable the sustainable development of its business relationship with customers and to secure the activity, Groupe BPCE requires its employees to participate in regular training. Groupe BPCE and its entities are mobilized to offer training to employees enabling them to acquire the skills necessary to carry out their activities.

The Group "Mandatory Regulatory Training" (Formation Réglementaire Obligatoire - FRO) policy presents the scope of application of the FRO framework, defines what FRO is, describes the bodies in charge of the eligibility of FRO or related decision-making, and specifies the reports produced and the expected controls. It was validated by the Control Function Standards Validation Committee on November 21, 2023. This committee, chaired by the Group's control functions, comprises 12 management representatives from Groupe BPCE entities. The Group's "Mandatory Regulatory Training" policy was published in January 2024 on the NORMA tool.

The Group "Mandatory Regulatory Training" *(*Formation Réglementaire Obligatoire - FRO) policy applies to all Groupe BPCE entities, taking into account specific regulatory requirements depending on the country in which it operates. The entities are responsible for ensuring that the content of the training is adapted to the specificities and activities of the company. It concerns all employees.

Mandatory Regulatory Training is identified, monitored and managed by the Group FRO Committee, whose first session was held in June 2024. In this committee, the following are represented: Group Human Resources, Group Compliance and, if necessary, the Group's business lines that have functional responsibility for one or more FRO. This body validates the entry or exit of a training course from the FRO mapping but also any changes to the characteristics related to FRO (*e.g.* the profile of the employees to be targeted).

Mandatory Regulatory Training *(*Formation Réglementaire Obligatoire - FRO) is set up to meet a regulatory obligation to which the Group's entities are subject (law, regulation, directive, etc.). Example: the "Whistleblower" training is based on all the laws, directives and decrees governing the subject of whistleblowers such as the Sapin 2 act of 2016 for France, the act of March 21, 2022 - Waserman act. A FRO can also be set up to respond to a recommendation from a regulator at the end of an audit mission within a Group entity.

Groupe BPCE's entities must apply all the FROs validated by the decision-making body at Groupe BPCE level, in accordance with their activities. A new control sheet on the proper implementation of the Group's "Mandatory Regulatory Training" (FRO) policy within the entities will be rolled out in 2025 and will be the subject of a report to the committee.

In terms of business conduct, three training courses are identified as mandatory regulatory training courses:

- Code of Conduct and Ethical Standards e-learning course;
- Whistleblower e-learning course;
- Essentials of professional ethics and the fight against corruption e-learning course.

Details of the implementation of these training courses within the Group:

BPCE name	Global business line name	RBP & RCE	BPCE excluding global business lines	Global business lines
Code of Conduct and Ethical Standards	Code of Conduct	yes	yes	yes
Whistleblower	Whistleblowing	yes	yes	yes
Essentials of professional ethics and the fight against corruption	Professional ethics and awareness	yes	yes	yes
	Fight against corruption			yes

Groupe BPCE's FROs are mapped according to the activity and scope of each division. This mapping details the target employees to be trained, the duration of the training, its frequency, the timeframe for carrying out the training and the type of contracts concerned.

By way of illustration, the mapping of the Banque Populaire and Caisse d'Epargne networks was defined as follows:

Code of Conduct and Ethical Standards e-learning course

Target	Duration	Training frequency	Time to complete training from entering the company or employment	Type of contract	Monitoring: Employees enrolled at a date or enrolled over a period	Standard target jobs (title)
All employees	20 min	Every 5 years	6 months	All permanent and fixed-term contracts, including work-study students	Employees enrolled to date	All employees

Whistleblower e-learning course

Target	Duration	Training frequency	Time to complete training from entering the company or employment	Type of contract	Monitoring: Employees enrolled at a date or enrolled over a period	Standard target jobs (title)
All employees	30 min	All Group employees in 2023 New hires in subsequent years	6 months	All except temporary holiday personnel	Employees enrolled to date	All employees

Essentials of professional ethics and the fight against corruption e-learning course

Target	Duration	Training frequency	Time to complete training from entering the company or employment	Type of contract	Monitoring: Employees enrolled at a date or enrolled over a period	Standard target jobs (title)
All employees	1 hour	Every 5 years	6 months	All permanent and fixed-term contracts, including work-study students	Employees enrolled to date	All employees

In addition, a "Conflicts of interest" e-learning training supplements the business conduct training system. This is a 30-minute training course for all Banques Populaires, Caisses d'Epargne and BPCE SA employees.

All training courses are directly accessible in the training tool chosen by the entity such as Click and Learn and HR One.

At the level of Groupe BPCE, the monitoring of the performance of the FROs is presented by Human Resources, at least once a year, to the Group Risk and Compliance Committee composed of the Executive Management Committee (10 members including the Chairman of Groupe BPCE's Management Board) and a representative of the Internal Audit function. At the level of each entity, the monitoring of the completion of the MRTs within the entity is presented to a local *ad hoc* committee at least once a year.

4.1.1.4 (G1-2) MANAGEMENT OF RELATIONSHIPS WITH SUPPLIERS

4.1.1.4.1 SYSTEM FOR MONITORING PAYMENT TERMS

For several years BPCE Achats & Services has had a system for monitoring payment terms with Group companies as well as a "White Paper on Payment Terms". This white paper is made available to the Group's institutions *via* an internal Sharepoint. This commitment is also set out in the Group's Responsible Purchasing Policy on page 9.

The purpose of this system is to:

- monitor the payment terms of the Group's companies on a quarterly basis;
- recall the regulatory context of the law on the modernization of the economy, with regulation of inter-company payment terms, the cap on payment terms set by Articles L. 441-10 *et seq.* of the French Commercial Code;
- monitor the 28-day target defined for the Group. Launched well before the Covid-19 crisis, the work carried out by Groupe BPCE on the improvement of supplier payment terms have since been intensified, giving rise to a collective dynamic among the Group's companies. Executive Management has reiterated the importance of the Group's commitment to its customers but also to its suppliers, calling for an acceleration of the procedure for payment of services rendered, targeting the Group target set at 28 days. Mandated by Executive Management, BPCE Achats & Services manages this indicator at the level of the Group. Since April 2020, regular monitoring of the payment terms of Group institutions is carried out through a survey that collects data such as:
- the average cumulative payment period since January 1;
- the share of invoices pending payment issued more than 60 days ago;
- the total amount of the outstanding invoices;

- in the first few months, the scope of the invoices and rules were refined. The working group defined common rules to enable a relevant analysis of all institutions; and
- share best practices in terms of payment terms.

This white paper and a dedicated dashboard are made available to all Group institutions.

The dashboard makes it possible to communicate quarterly to all executives, in particular during the quarterly Group Supplier Risk Committee.

In 2024, BPCE Achats & Services continued to conduct groupwide surveys to measure payment terms, the results of which are included in the Group's procurement reporting tools. The process was enhanced in 2024 to identify suppliers under in legal proceedings and thus reduce any potential reputational risk. Particular attention was paid to suppliers under legal proceedings. BPCE Achats & Services manages an indicator since end 2024 for ongoing legal actions related to late payments to ensure proactive and effective management.

The share of spending with SMEs represents 37% of the total spending with suppliers[1]. The aim of this monitoring of payment terms is to guarantee the proper payment of all suppliers, in particular SMEs.

4.1.1.4.2 Supplier relations

The Group is committed to promoting a sustainable and balanced relationship with suppliers.

This is one of the commitments made as part of its Responsible Purchasing Policy.

Through its cooperative model, Groupe BPCE's companies contribute to the dynamism and collaboration within their regions by relying on local suppliers. The share of these suppliers (VSEs / SMEs) within the Banques Populaires and Caisses d'Epargne is on average 75%[2].

The Group's institutions are very involved in local life and contribute to the development of suppliers who are often vulnerable.

Groupe BPCE is also involved in the government initiative "I choose French Tech", which brings together more than 300 signatory companies and 80 institutional players. This initiative aims to double the use of French start-ups by 2027.

The Group pays particular attention to the risk of its vulnerable suppliers becoming dependent on the Group.

In line with the responsible procurement charter and based on the sustainable procurement standard ISO 20400, the Responsible Supplier Relations and Procurement Label (*Label relations fournisseurs et achats responsables* - RFAR) is awarded by the French Business Mediation Committee (attached to the Ministry of the Economy and Finance) and the French National Procurement Council (*Conseil national des achats* - CNA). It aims to single out French companies that have established lasting, balanced relations with their suppliers.

Thirteen of Groupe BPCE's companies (Banque Populaire Alsace Lorraine Champagne, Banque Populaire Grand Ouest, Banque Populaire Méditerranée, Banque Populaire Rives de Paris, Banque Populaire du Sud, Caisse d'Epargne Aquitaine Poitou-Charentes, Caisse d'Epargne Bretagne Pays de Loire, Caisse d'Epargne Côte d'Azur, Caisse d'Epargne Grand Est Europe, Caisse d'Epargne Hauts de France, Caisse d'Epargne Ile-de-France, Caisse d'Epargne Rhône Alpes, BPCE Achats & Services) are historically committed to the continuous progress of Responsible Purchasing induced by the Label.

BPCE Achats & Services, awarded the label in 2024, will gradually extend this approach to all its companies through the implementation of a Groupe BPCE RFAR label.

BPCE Achats & Services has set up regular meetings with the Group's strategic suppliers (defined in particular according to the volume of purchases, the criticality of the services delivered for the continuity of banking activities and/or essential to the Group's development).

These meetings have led to significant progress in the management of purchasing with these key suppliers. The purpose of the meetings is to discuss the supplier's strategy (innovations, HR, external growth, changes to the products and services offered, etc.) and positioning, in order to adjust the Group's strategy accordingly. They are part of the management of the Group's challenges and risks and contribute to new opportunities between the Group's companies and suppliers, particularly in terms of CSR.

BPCE Achats & Services plans to conduct supplier feedback surveys in order to assess the level of supplier satisfaction with the relationship (see 3.2 - S2 "Workers in the value chain"). A successful pilot was carried out in 2024. The system will be perpetuated in 2025.

4.1.1.4.3 Social and environmental criteria to select suppliers

The Responsible Procurement policy, updated in 2021, is in line with the Group's CSR ambitions and commitments, in which the Purchasing function has an essential role to play. A driver of transformation and development, the Responsible Procurement approach is part of a global and sustainable performance objective, involving the Group's companies and their suppliers.

CSR is incorporated:

- in Groupe BPCE's Responsible Purchasing Policy;
- in the procurement process, which specifies how to implement responsible procurement;
- in procurement cases by including appropriate CSR criteria in the decision-making process, by indicating in the specifications the CSR performance of the products and services planned and by increasing the weight of the CSR evaluation of suppliers in decision-making. Since 2022, 100% of the purchasing categories have been covered by specific CSR assessment questionnaires. A method for taking into account the cost of ownership, which covers the costs of acquisition, use and end of life, is currently being deployed within the Procurement function;
- in contracts with contractual CSR clauses;
- in the tool for identifying the CSR issues and risks intrinsic to each of the purchasing categories, upstream of purchasing projects, for each of the 142 purchasing categories;
- in the professionalization of the Procurement function, with a regularly expanded training program (Responsible Procurement, training deployed with AFNOR on the ISO 20400 standard), plenary sessions bringing together all the Procurement and CSR functions to share information and best practices. The Group's ambition is to continue to deploy and systematize, in all the cases handled, the inclusion of CSR in a procurement decision-making by 2024, and the sharing of best practices and systematic monitoring of CSR criteria.

(1) **Methodology**: this rate is obtained by dividing the amount of expenses incurred with VSEs / SMEs by the total amount of Groupe BPCE's supplier expenses.
(2) **Methodology**: this rate is calculated by dividing the amount of expenses incurred by the Caisses d'Epargne and the Banques Populaires with VSEs / SMEs by the amount of total supplier expenses of these two networks over one year.

4.1.1.5 (G1-3) PREVENTION AND DETECTION OF CORRUPTION AND BRIBERY

4.1.1.5.1 Detect and prevent incidents of corruption and other breaches of probity

Groupe BPCE's rules and procedures help to prevent and detect behaviors likely to characterize acts of corruption or influence peddling:

- a corruption risk map is drawn up and regularly updated by the Group's entities, according to a methodology complying with the recommendations of the French Anti-Corruption Agency (*Agence française anticorruption* - AFA). It is based on discussions with the business lines that make it possible to identify and assess the risks of corruption, whether active or passive, direct or indirect (complicity, concealment), and to achieve a shared vision of the challenges of the fight against corruption. The results of the risk assessment, including any ensuing action plans, are presented for approval to the management bodies of each Group entity. A consolidation of the mappings is presented to the Group Risk and Compliance Committee, as well as to BPCE's supervisory body. The next update of the mapping by each entity will include a requirement to present it to its supervisory body;
- action plans are formalized to reduce the level of risk of certain scenarios, when it remains too high after taking into account the mitigation measures;
- the Group's "gifts, advantages and invitations" policy: it sets a maximum threshold for gifts received or given, above which prior authorization from management and a declaration to Compliance are required. As part of the sponsorship of the Paris 2024 Olympic and Paralympic Games, specific vigilance rules were adopted to secure the allocation of hospitality to customers and other third parties;
- the alerts submitted through the whistleblowing framework concerning acts of corruption are subject to an anonymous and annual Group reporting;
- suppliers from which the Group makes purchases of at least a total of €50,000 are assessed, taking into account a certain number of criteria (purchase category, geographical criterion, negative information about the supplier, etc.). This assessment leads, if necessary, to additional procedures aimed at assessing the ultimate risk, particularly with regard to the anti-corruption measures put in place by the supplier;
- relations with intermediaries (including business introducers) and customers are regulated: contracts and agreements include anti-corruption clauses; approval committees are stipulated; the consideration of the risk of corruption in the granting of credit to corporate customers and in relations with intermediaries is being formalized at Group level; the integrity of the Group's new partners is also assessed by the Group's "New Products and New Activities Committee";
- Groupe BPCE has an extensive body of standards and procedures providing a general framework for the strict separation of operational and control functions, including in particular a system of delegations for granting credit and relations with politically exposed persons, and a KYC framework. As part of the organization of internal control, permanent control plans contribute to the security of the system. The components of this system are explicitly targeted at the corruption risks identified in the risk map;
- Groupe BPCE has accounting standards and procedures that comply with professional standards. The Group's internal control system for accounting information is based on a structured audit process to check the conditions in which such information is assessed, recorded, stored and made available, in particular by verifying the existence of the audit trail. A Group control framework has been drawn up to help prevent and detect fraud, corruption and influence peddling, and its deployment in the entities is monitored by Group Financial Control;
- the anti-corruption rules of conduct, which can be consulted on the "Ethics and compliance" page of Groupe BPCE's website (Ethics and compliance: Groupe BPCE's actions and commitments), are intended to be adapted by each entity and appended to its internal regulations. Disciplinary sanctions, up to and including dismissal, are provided for in the event of failure to comply with these rules;
- the handling of allegations relating to acts of corruption is not subject to a specific Group procedure. However, guidelines have been defined for the handling of cases as part of the whistleblowing framework. The formalization of a Group procedure is included in the roadmap for 2025. It will include a requirement for reporting to the entities' management and supervisory bodies;
- in general, the policies and procedures formalized at Group level are co-drafted by Group Compliance and the representatives of the compliance/anti-corruption function in the entities and then validated in Group bodies. They are communicated to all the players concerned. In some cases, their implementation is ensured by the use of Group tools (mapping, controls, supplier assessment, whistleblowing framework). The frameworks that are intended to apply to all employees are the subject of specific internal communication (appendix to the internal regulations for the rules of conduct, intranet for the whistleblowing framework and the gift policy, individual monitoring for training).

Legal framework

The following rules and mechanisms make it possible to comply with the requirements introduced by Article 17 of act No. 2016-1691 of December 9, 2016 on transparency, the fight against corruption and the modernization of the economy (the "Sapin 2" act).

Training indicator

- All employees, including employees in exposed positions, in particular executive managers, are required to undergo training in professional ethics and the fight against corruption. With regard to the administrative and supervisory bodies, awareness-raising sessions on corruption are organized by the Fédération Nationale des Caisses d'Epargne (in 2024) and the Fédération Nationale des Banques Populaires (scheduled for H1-2025). BPCE's Supervisory Board is also scheduled to raise awareness of corruption in 2025. In this context, excluding Natixis, the percentage of at-risk functions within the workforce covered by training programs is 99.1%. The exposed personnel of a subsidiary of a bank affiliated with the central body, five people, will receive anti-corruption training in 2025.
- The *indicator is defined as follows for Group entities (excluding Natixis):*
  - *"at-risk functions" are defined, within the personnel (in accordance with the "Sapin 2" act), as the Material Risk Takers (MRT), which include executive managers; in the event that the executive managers do not meet the strict definition of MRT, they are nevertheless taken into account;*
  - *if an entity has deployed a "Mandatory Regulatory Training" (Formation Réglementaire Obligatoire - FRO) course on professional ethics and the fight against corruption to all its employees, the at-risk functions are considered as covered;*
  - *the percentage of at-risk functions covered by the training program, at Group level (excluding Natixis), is therefore the at-risk staff of entities that have deployed an anti-corruption FRO, compared to the at-risk staff of all entities;*
  - *this indicator is calculated on the scope of so-called "material entities", with the exception of entities without employees, i.e.:*
    - *BPCE SA, Crédit Foncier, Banque Palatine, Natixis Algérie, BPCE Payments, BPCE Payment Services, Payplug, subsidiaries of the Insurance entity;*
    - *BPCE Lease, and its subsidiaries Car Lease and Lease Immo;*
    - *BPCE Factor, Socfim, BPCE Financement, CEGC;*
    - *Oney Bank SA, Oney Servicios Financieros EFC SAU (Oney Spain);*
    - *the Caisses d'Epargne; their subsidiaries Capitole Finance (CEMP), Banque de Nouvelle Calédonie (CEIDF), Banque de Tahiti (CEIDF), BCP (CEIDF), Banque du Léman (CERA);*
    - *the regional Banques Populaires; Banque de Savoie (subsidiary BPAURA);*
    - *BRED and its subsidiaries BCI Mer Rouge, BIC BRED Suisse, Prepar, BRED Bank Fidji, BRED Bank Cambodge;*
    - *CASDEN; Crédit Coopératif and its subsidiary BTP Banque.*

Natixis has set up specific training courses on the anti-corruption framework for at-risk employees.

The percentage of at-risk functions covered by training programs is 100% for Natixis.

Positions for which employees are qualified as "Material Risk Takers" are considered to be at-risk functions covered by training programs.

The percentage of at-risk functions covered by training programs is the ratio between the at-risk functions covered by anti-corruption training and the total number of at-risk functions within Natixis.

The scope includes all entities consolidated by Natixis.

4.1.1.5.2 Combating money laundering and the financing of terrorism

The fight against money laundering and terrorism financing (AML-CFT) has a dual objective:

- preventing criminal activities by depriving them of funds, on the one hand;
- ensuring the soundness, integrity and stability of the economic and financial system, on the other hand.

As an AML-CFT obliged entity, Groupe BPCE is fully committed in the fight against illegal financial circuits, in addition to the action of public authorities: financial intelligence units, law enforcement agencies, and judicial authorities.

Groupe BPCE's ML-TF risk assessment and management system includes measures to prevent, mitigate and remediate financial transactions that may be linked to criminal activities. It is based on a **corporate culture** promoted across all hierarchical levels and all "lines of defense" (LOD), as well as an **appropriate internal organization and resources** (human resources, IT, data).

The AML-CFT framework applies to all Groupe BPCE entities (banks of the Banques Populaires and Caisses d'Epargne networks and their subsidiaries and branches, as well as BPCE SA, its subsidiaries and branches in France and abroad), which are subject to AML-CFT requirements.

Main components of the AML-CFT framework of Groupe BPCE and its affiliates

The Group AML-CFT system is based on five main components:

- **ML-TF risk assessment**. Each entity, subsidiary or branch of the Group, subject to the AML-CFT requirements, assesses its exposure to the risks described by the public authorities according to factors related to customers, activities and products, transactions and delivery channels, as well as geographical zones of activities. In addition, a risk profile is attributed for each customer based on a certain number of criteria which, in particular, set the "Know Your Customer" (KYC) review frequency and due diligence on the customer's transactions;
- **Know Your Customer (KYC).** In addition to identifying the customer and verifying the customer's identity, KYC includes, in particular, information on the nature of the customers' business, including, in the case of undertakings, whether they carry out activities, or of their employment or occupation, as well as reputation information available in trustworthy media, so that obliged entities are able to have an overall understanding of the customer's financial transactions (origin, destination and purpose of funds and transfers). Customer due diligence encompasses, in particular, the detection of politically exposed persons (PEP) and the identification of beneficial owners for legal entities;
- **Ongoing monitoring of transactions, throughout the business relationship.** Due diligence on transactions relies on the ML-TF risk profile and is based on human vigilance as well as on automated means of detecting unusual transactions, in strict compliance with the rules provided for by the General Data Protection Regulation (GDPR). Alerts are mainly handled by client advisors. Most sensitive alerts or those suspicious are forwarded to the local financial security department;
- **Alert processing resources, for which deadlines are monitored locally and at the level of the central institution.** Enhanced due diligence measures are undertaken to raise doubts over legality of amounts or atypical/unusual transactions, when one of the following three alternative conditions is fulfilled: (i) the transaction is of a particularly complex nature, (ii) the transaction is unusually large or (iii) the transaction does not have an apparent economic or lawful purpose. This analysis requires entities to carry out a certain number of verifications: global analysis of operations, request for documents, etc.;

- **Reporting of "suspicions" to the Financial Intelligence Unit (FIU; TRACFIN in France) of doubtful/suspicious amounts or transactions when there is a concern about their legality.** Entities are required to report to the French financial intelligence Unit, where they know, suspect or have reasonable grounds to suspect that funds or activities are the proceeds of an offense punishable by more than one year's imprisonment (organized crime, trafficking of various kinds, corruption, misuse of corporate assets, laundering of all crimes and offenses, tax, social security or customs fraud, etc.) or are related to terrorist financing. Conversely, in the event due diligence makes it possible to remove any doubt as to the regular nature of the amounts or transactions, the alert is "closed" and accompanied by an audit trail of the verifications performed. Reporting time periods are monitored as part of the risk appetite policy.

Other elements supplement this framework such as, in particular, a permanent and periodic control system, regular training and information for employees and managers of the Group and affiliates, regular monitoring of dedicated indicators by the governance bodies, and periodic reporting to national supervisors.

Applicable legal framework

All Groupe BPCE entities subject to AML-CFT requirements apply the legal and regulatory provisions in accordance with:

- the French Monetary and Financial Code, legislative and regulatory sections of Book V, Title VI, Chapter 1, as well as related non-codified regulations:
  - the case law of the French Prudential Supervisory Authority (*Autorité de contrôle prudentiel et de résolution* - ACPR) and national supervisors for entities located abroad;
  - the sectoral guidelines, recommendations and/or application principles of national and European supervisors.

The legal framework is implemented by the Group's obliged entities, whose compliance resources are designed, according to their specificities in terms of geographical locations, internal organization or information systems.

4.1.1.5.3 Compliance with national and international sanctions (embargoes and asset freezes)

Applicable legal framework

Compliance with national and international financial sanctions is a key element of Groupe BPCE's compliance system, which, as a French and European entity, strictly complies with French and European Union laws and regulations and with the Resolutions of United Nations Security Council (UNSC).

In addition, all entities within the scope of Groupe BPCE comply with the US financial sanctions regime due to Groupe BPCE's presence in the United States and the large volume of transactions in US dollars and due to other criteria such as the extraterritorial scope of certain US financial sanctions regulations, including for example secondary sanctions that extend US sanctions extraterritoriality to all transactions without any US nexus.

French, European, UN and US regulations therefore constitute a "common base" in terms of financial sanctions applicable to Groupe BPCE. The other regulations of the jurisdictions in which Groupe BPCE operates apply locally, and concurrently to the common base. The strictest provisions prevail.

Types of sanctions (asset freezes, embargoes, etc.) applied by Groupe BPCE

Groupe BPCE complies with all applicable forms of financial sanctions, which may target a country or territory, an organization, an individual, a legal entity, a vessel, an aircraft, certain goods or services, or certain activities. The sanctions may take the form of assets and / or economic resources freezing, global embargoes, restrictions or targeted embargoes on particular types of transactions (for example, long-term financing or transactions that are carried out by sanctioned individuals or legal entities) or on the export or import of certain goods, services or technologies (for example, military goods to or from sanctioned countries or territories).

Groupe BPCE fully complies with the regulations and does not accept any activity which the purpose or effect is to circumvent the prohibitions provided for therein.

4.1.2 Metrics and targets

4.1.2.1 (G1-4) CONFIRMED INCIDENTS OF CORRUPTION OR BRIBERY

Groupe BPCE does not tolerate corruption under any circumstances or in any form. The same applies to influence peddling. People working within Groupe BPCE are required to comply with the internal rules and procedures that help to prevent and detect behaviors likely to characterize acts of corruption or influence peddling in their companies. Any employee who engages in such behavior is subject to disciplinary sanctions, up to and including dismissal.

In the reference year 2024, there was one conviction for breaches of anti-corruption legislation and for acts of corruption. This relates to a conviction for the passive corruption of an employee of an establishment affiliated with the central institution. As the employee was dismissed, he was no longer part of the workforce at December 31, 2024.

The amount of the fines paid for violation of anti-corruption and anti-bribery laws is €0.

Background information on the published indicators (MDR-M requirement):

Excluding Natixis, these two indicators are calculated for the Group's so-called "material entities", with the exception of entities without employees, i.e. the same entities as those described in Section 4.1.1.5.1.

For each entity in the scope, the convictions taken into account are as follows:

- administrative sanctions against the company for breaches of anti-corruption legislation, imposed by the French Anti-Corruption Agency's Sanctions Commission or by a foreign supervisor competent to monitor the application of equivalent laws and regulations abroad;
- criminal convictions of the company for offenses of corruption, influence peddling, complicity in corruption, concealment of corruption, complicity in influence peddling, concealment of influence peddling, regardless of the jurisdiction; approved judicial agreements in the public interest (Conventions judiciaires d'intérêt public - CJIP) or other similar transactions are included;
- criminal convictions of an executive or employee for offenses of corruption, influence peddling, complicity in corruption, concealment of corruption, complicity in influence peddling, concealment of influence peddling committed as part of his or her duties in the company, regardless of the jurisdiction.

For each entity in the scope, the fines taken into account are those corresponding to the sanctions imposed on the company in 2024:

- administrative sanctions for breaches of anti-corruption legislation imposed by the French Anti-Corruption Agency's Sanctions Commission or by a foreign supervisor competent to monitor the application of equivalent laws and regulations abroad;
- criminal convictions of the company for offenses of corruption, influence peddling, complicity in corruption, concealment of corruption, complicity in influence peddling, concealment of influence peddling, regardless of the jurisdiction; approved judicial agreements in the public interest (Conventions judiciairies d'intérêt public - CJIP) or other similar transactions are included.

The data on convictions and fines concerning the scope of the entities consolidated by Natixis are taken from a report presented to a quarterly internal Natixis committee.

4.1.2.2 (G1-6) PAYMENT PRACTICES

The Group undertakes to comply with regulatory payment terms, in accordance with the legal definition, which stipulates a period of 60 days from the date of issue of the invoice. In 2024, 95.5% of payments (by amount) met this commitment. In addition, the Group has implemented a policy aimed at paying suppliers within 30 days (from the date of issue of the invoice); the average payment period complies with this requirement and amounts to 24.89 days. Lastly, there are no ongoing legal proceedings concerning late payments. The scope of intervention includes all extra-group invoices, including Natixis CIB's international entities.

Background information on the published indicators (MDR-M):

The average payment term for invoices paid in 2024 includes all invoices paid between January 1 and December 31, 2024, regardless of their date of issue. Expense claims are not taken into account in this analysis.

The payment term is calculated as the difference between the issue date (i.e. not from the date of receipt or recognition) and the settlement date.

Several indicators resulting from this analysis are monitored on a quarterly basis, among which the most significant are: the average payment term (expressed in days) and the total amount of invoices paid after 60 days.

The objective is to achieve the lowest possible values for these two indicators, and thus comply with the regulations in force.

LIMITATION ON PUBLISHED INFORMATION:

The indicator "description of the company's standard payment terms (in number of days) by major supplier category and the percentage of payments made within these terms", corresponding to the disclosure requirement of Section 33b of DR G1-6 of the CSRD standard, is not published. Indeed, the Group is not in a position to publish this indicator for the 2024 reference year, given the unavailability of data. An action plan will be put in place to meet the disclosure requirement.

PART 5 - INDICATORS OF THE EUROPEAN TAXONOMY ON SUSTAINABLE ACTIVITIES

Tables to be published in accordance with Article 8 of the Taxonomy Regulation

The information relating to GAR is presented below in accordance with the template tables applicable to credit institutions as set out in Annex VI of Delegated Regulation 2023/2486.

Template 0 - Summary of KPIs to be disclosed by credit institutions under Article 8 of the Taxonomy Regulation

		Total environmentally sustainable assets	KPI****	KPI*****	% coverage (over total assets)***	% of asset excluded from the GAR (Article 7 (2) and (3) and Section 1.1.2 of Annex V)	% of assets excluded from the denominator of the GAR (Article 7 and Section 1.2.4 of Annex V)
Main KPI	Green asset ratio (GAR) stock	**40,324**	4.09%	4.22%	66.18%	27.29%	33.82%

		Total environmentally sustainable activities	KPI	KPI	% coverage (over total assets)	% of asset excluded from the GAR (Article 7 (2) and (3) and Section 1.1.2 of Annex V)	% of assets excluded from the denominator of the GAR (Article 7 and Section 1.2.4 of Annex V)
Additional KPIs	GAR (flow)	**3,505**	2.70%	2.96%	89.03%	46.01%	10.97%
	Trading book*						
	Financial guarantees	**2,752**	4.90%	5.81%			
	Assets under management	**9,934**	0.88%	0.71%			
	Fees and commissions received**						

* For credit institutions not fulfilling the conditions of Article 94 (1) or Article 325a (1) of the CRR

** Fees and commissions on services other than loans and asset management

Institutions shall provide forward-looking information for these KPIs, in particular on the targets concerned, and relevant explanations of the method applied.

*** Percentage of assets covered by the KPI, compared to total banking assets

**** Based on the KPI of the counterparty's turnover

***** Based on the KPI of the counterparty's CapEx, except for general lending activities, for which the turnover KPI is used

1. This template shall include information for loans and advances, debt securities and equity instruments in the banking book, towards financial corporates, non-financial corporates (NFC), including SMEs, households (including residential real estate, house renovation loans and motor vehicle loans only) and local governments/municipalities (house financing).

2. The following accounting categories of financial assets should be considered: Financial assets at amortised cost, financial assets at fair value through other comprehensive income, investments in subsidiaries, joint ventures and associates, financial assets designated at fair value through profit or loss and non-trading financial assets mandatorily at fair value through profit or loss, and real estate collaterals obtained by credit institutions by taking possession in exchange in of cancellation of debts.

3. Banks with non-EU subsidiary should provide this information separately for exposures towards non-EU counterparties. For non-EU exposures, while there are additional challenges in terms of absence of common disclosure requirements and methodology, as the EU taxonomy and the NFRD apply only at EU level, given the relevance of these exposures for those credit institutions with non-EU subsidiaries, these institutions should disclose a separate GAR for non-EU exposures, on a best effort basis, in the form of estimates and ranges, using proxies, and explaining the assumptions, caveats and limitations.

4. For motor vehicle loans, institutions shall only include those exposures generated after the date of application of the disclosure.

2. The following accounting categories of financial assets should be considered: Financial assets at amortised cost, financial assets at fair value through other comprehensive income, investments in subsidiaries, joint ventures and associates, financial assets designated at fair value through profit or loss and non-trading financial assets mandatorily at fair value through profit or loss, and real estate collaterals obtained by credit institutions by taking possession in exchange in of cancellation of debts.

3. Banks with non-EU subsidiary should provide this information separately for exposures towards non-EU counterparties. For non-EU exposures, while there are additional challenges in terms of absence of common disclosure requirements and methodology, as the EU taxonomy and the NFRD apply only at EU level, given the relevance of these exposures for those credit institutions with non-EU subsidiaries, these institutions should disclose a separate GAR for non-EU exposures, on a best effort basis, in the form of estimates and ranges, using proxies, and explaining the assumptions, caveats and limitations

4. For motor vehicle loans, institutions shall only include those exposures generated after the date of application of the disclosure

1. This template shall include information for loans and advances, debt securities and equity instruments in the banking book, towards financial corporates, non-financial corporates (NFC), including SMEs, households (including residential real estate, house renovation loans and motor vehicle loans only) and local governments/municipalities (house financing).

2. The following accounting categories of financial assets should be considered: Financial assets at amortised cost, financial assets at fair value through other comprehensive income, investments in subsidiaries, joint ventures and associates, financial assets designated at fair value through profit or loss and non-trading financial assets mandatorily at fair value through profit or loss, and real estate collaterals obtained by credit institutions by taking possession in exchange in of cancellation of debts.

3. Banks with non-EU subsidiary should provide this information separately for exposures towards non-EU counterparties. For non-EU exposures, while there are additional challenges in terms of absence of common disclosure requirements and methodology, as the EU taxonomy and the NFRD apply only at EU level, given the relevance of these exposures for those credit institutions with non-EU subsidiaries, these institutions should disclose a separate GAR for non-EU exposures, on a best effort basis, in the form of estimates and ranges, using proxies, and explaining the assumptions, caveats and limitations

4. For motor vehicle loans, institutions shall only include those exposures generated after the date of application of the disclosure

1. In this template, credit institutions provide information on the exposures of the banking book to sectors covered by the taxonomy (level 4 of NACE sectors), using the relevant NACE codes for the counterparty's main activity.

2. The attachment of the counterparty to a NACE sector is based exclusively on the nature of the direct counterparty. The classification of exposures jointly concerning more than one debtor is based on the characteristics of the debtor that was the most relevant, or the most significant, for the authorization of the exposure by the institution. The breakdown by NACE code of the exposures incurred jointly depends on the characteristics of the most relevant or significant debtor. The information is published by the institutions by NACE code with the level of detail required in the template.

395	NACE code not identified												

1. In this template, credit institutions provide information on the exposures of the banking book to sectors covered by the taxonomy (level 4 of NACE sectors), using the relevant NACE codes for the counterparty's main activity.

2. The attachment of the counterparty to a NACE sector is based exclusively on the nature of the direct counterparty. The classification of exposures jointly concerning more than one debtor is based on the characteristics of the debtor that was the most relevant, or the most significant, for the authorization of the exposure by the institution. The breakdown by NACE code of the exposures incurred jointly depends on the characteristics of the most relevant or significant debtor. The information is published by the institutions by NACE code with the level of detail required in the template.

1. In this template, credit institutions provide information on the exposures of the banking book to sectors covered by the taxonomy (level 4 of NACE sectors), using the relevant NACE codes for the counterparty's main activity.

2. The attachment of the counterparty to a NACE sector is based exclusively on the nature of the direct counterparty. The classification of exposures jointly concerning more than one debtor is based on the characteristics of the debtor that was the most relevant, or the most significant, for the authorization of the exposure by the institution. The breakdown by NACE code of the exposures incurred jointly depends on the characteristics of the most relevant or significant debtor. The information is published by the institutions by NACE code with the level of detail required in the template.

1. The institution shall disclose in this template the GAR KPIs on stock of loans calculated based on the data disclosed in template 1, on covered assets, and by applying the formulas proposed in this template.

2. Information on the GAR (green asset ratio of "eligible" activities) shall be accompanied with information on the proportion of total assets covered by the GAR.

3. Credit institutions can, in addition to the information included in this template, show the proportion of assets funding taxonomy relevant sectors that are environmentally sustainable (Taxonomy-aligned). This information would enrich the information on the KPI on environmentally sustainable assets compared to total covered assets.

4. Credit institutions shall duplicate this template for the information based on income received and CapEx.

2.2 Statutory Auditors' report on the Groupe BPCE Sustainability report

Report on the certification of sustainability information and verification of the disclosure requirements under Article 8 of Regulation (EU) 2020/852 of Groupe BPCE

Year ended December 31, 2024

This is a translation into English of the statutory auditors' report on the certification of sustainability information and verification of the disclosure requirements under Article 8 of Regulation (EU) 2020/852 of the Company issued in French and it is provided solely for the convenience of English speaking users.

This report should be read in conjunction with, and construed in accordance with, French law and the H2A guidelines on "*Limited assurance engagement - Certification of sustainability reporting and verification of disclosure requirements set out in Article 8 of Regulation (EU) 2020/852*".

To the General Assembly

GROUPE BPCE

7, promenade Germaine Sablon

75013 PARIS

This report is issued in our capacity as statutory auditor of Groupe BPCE. It covers the sustainability information and the information required by Article 8 of Regulation (EU) 2020/852, relating to the year ended December 31, 2024 and included in the group management report and disclosed in section 2.1 "Groupe BPCE Sustainability report" in the chapter 2 of the universal registration document (below the "Groupe BPCE Sustainability report").

Pursuant to Article L. 233-28-4 of the French Commercial Code, Groupe BPCE is required to include the above mentioned information in a separate section of the group management report. This information has been prepared in the context of the first time application of the aforementioned articles, a context characterized by uncertainties regarding the interpretation of the laws and regulations, the use of significant estimates, the absence of established practices and frameworks in particular for the double-materiality assessment, and an evolving internal control system. It enables an understanding of the impact of the activity of the group on sustainability matters, as well as the way in which these matters influence the development of the business of the group, its performance and position. Sustainability matters include environmental, social and corporate governance matters.

Pursuant to Article L.821-54 paragraph II of the aforementioned Code our responsibility is to carry out the procedures necessary to issue a conclusion, expressing limited assurance, on:

- compliance with the sustainability reporting standards adopted pursuant to Article 29 b of Directive (EU) 2013/34 of the European Parliament and of the Council of 14 December 2022 (hereinafter ESRS for European Sustainability Reporting Standards) of the process implemented by Groupe BPCE to determine the information reported, and compliance with the requirement to consult the social and economic committee provided for in the sixth paragraph of Article L. 2312-17 of the French Labour Code;
- compliance of the sustainability information included in the Groupe BPCE Sustainability report with the requirements of Article L. 233-28-4 of the French Commercial Code, including ESRS; and
- compliance with the reporting requirements set out in Article 8 of Regulation (EU) 2020/852.

This engagement is carried out in compliance with the ethical rules, including independence, and quality control rules prescribed by the French Commercial Code.

It is also governed by the H2A guidelines on "*Limited assurance engagement - Certification of sustainability reporting and verification of disclosure requirements set out in Article 8 of Regulation (EU) 2020/852*".

In the three separate sections of the report that follow, we present, for each of the sections of our engagement, the nature of the procedures that we carried out, the conclusions that we drew from these procedures and, in support of these conclusions, the elements to which we paid particular attention and the procedures that we carried out with regard to these elements. We draw your attention to the fact that we do not express a conclusion on any of these elements taken individually and that the procedures described should be considered in the overall context of the formation of the conclusions issued in respect of each of the three sections of our engagement.

Finally, where deemed necessary to draw your attention to one or more disclosures of sustainability information provided by Groupe BPCE in the group management report, we have included an emphasis of matter paragraph hereafter.

Limits of our engagement

As the purpose of our engagement is to express limited assurance, the nature (choice of techniques), extent (scope) and timing of the procedures are less than those required to obtain reasonable assurance.

Furthermore, this engagement does not provide guarantee regarding the viability or the quality of the management of Groupe BPCE, in particular it does not provide an assessment, of the relevance of the choices made by Groupe BPCE in terms of action plans, targets, policies, scenario analyses and transition plans, which would go beyond compliance with the ESRS reporting requirements.

It does, however, allow us to express conclusions regarding the entity's process for determining the sustainability information to be reported, the sustainability information itself, and the information reported pursuant to Article 8 of Regulation (EU) 2020/852, as to the absence of identification or, on the contrary, the identification of errors, omissions or inconsistencies of such importance that they would be likely to influence the decisions that readers of the information subject to this engagement might make.

Any comparative information that would be included in the group management report are not covered by our engagement.

Compliance with the ESRS of the process implemented by Groupe BPCE to determine the information reported, and compliance with the requirement to consult the social and economic committee provided for in the sixth paragraph of Article L. 2312-17 of the French Labour Code

Nature of procedures carried out

Our procedures consisted in verifying that:

- the process defined and implemented by Groupe BPCE has enabled it, in accordance with the ESRS, to identify and assess its impacts, risks and opportunities related to sustainability matters, and to identify the material impacts, risks and opportunities, that lead to the publication of information disclosed in the Groupe BPCE Sustainability report, and
- the information provided on this process also complies with the ESRS.

We also checked the compliance with the requirement to consult the social and economic committee.

Conclusion of the procedures carried out

On the basis of the procedures we have carried out, we have not identified any material errors, omissions or inconsistencies regarding the compliance of the process implemented by Groupe BPCE with the ESRS.

Concerning the consultation of the social and economic committee provided for in the sixth paragraph of Article L. 2312-17 of the French Labour Code we inform you that as of the date of this report, this consultation has not yet been held.

Emphasis of matter

Without qualifying the conclusion expressed above, we draw your attention to the information provided in the note 1.1.2.3 "*Sources of estimation and outcome uncertainty*" which underlines the uncertainty and limitations related to the methodologies used to perform the double materiality analysis regarding the thematic standards E2, E3, E4 and E5 (pollution, water and marine resources, biodiversity and ecosystems, and resource use and circular economy) for the year 2024.

Elements that received particular attention

We set out below the elements that have been the subject of particular attention in relation to our assessment of compliance with the ESRS of the process implemented by Groupe BPCE to determine the information reported.

- Concerning the identification of stakeholders

Information on the identification of stakeholders is set out in the note 1.3.2 "SBM2 – Interests and views of stakeholders" of the Groupe BPCE Sustainability report.

We interviewed management and others within the entity as appropriate and inspected available documentation.

We also assessed the consistency of the primary stakeholders identified by Groupe BPCE in view of the nature of its activities and its geographical location, taking into account its business relationships, its cooperative dimension and value chain.

- Concerning the identification of impacts, risks and opportunities

Information on the identification of impacts, risks and opportunities is provided in the note 1.5.1.1 "IRO-1 – Description of the identification and assessment of material impacts" of the Groupe BPCE Sustainability report.

  – We obtained an understanding of the process implemented by the entity to identify actual or potential impacts – both negative and positive – risks and opportunities (IROs), in relation to the sustainability matters mentioned in paragraph AR 16 of ESRS 1, "Application requirements", and where applicable, those specific to Groupe BPCE, as presented in the above cited note.

In particular, we assessed the approach taken by the entity to determine its impacts and dependencies, which may be a source of risks or opportunities, including the dialogue undertaken, where appropriate, with stakeholders.

We obtained an understanding of the group's mapping of identified IROs, including a description of their distribution within the group's own operations and its value chain, as well as their time horizon (short, medium or long term), and assessed the consistency of this mapping with our knowledge of Groupe BPCE and, where applicable, with the risk analyses conducted by Groupe BPCE.

- Concerning the assessment of impact materiality and financial materiality

Information on the assessment of impact materiality and financial materiality is provided in the note 1.5.1.1 "IRO-1 – Description of the identification and assessment of material impacts" the Groupe BPCE Sustainability report.

Through interviews with management and inspection of available documentation, we obtained an understanding of the process implemented by the entity to assess impact materiality and financial materiality, and assessed its compliance with the criteria defined in ESRS 1.

In particular, we assessed the way in which the entity established and applied the materiality criteria defined in ESRS 1, including those relating to the setting of thresholds, in order to determine the following material information reported:

- metrics relating to material IROs identified in accordance with the relevant ESRS standards;
- entity-specific disclosures.

Compliance of the sustainability information included in the Groupe BPCE Sustainability report with the requirements of Article L.233-28-4 of the French Commercial Code, including the ESRS

Nature of procedures carried out

Our procedures consisted in verifying that, in accordance with legal and regulatory requirements, including the ESRS:

- the disclosures provided enable an understanding of the general basis for the preparation and governance of the sustainability information included in the Groupe BPCE Sustainability report, including the basis for determining the information relating to the value chain and the exemptions from disclosures used;
- the presentation of this information ensures its readability and understandability;
- the scope chosen by Groupe BPCE for providing this information is appropriate; and
- on the basis of a selection, based on our analysis of the risks of non-compliance of the information provided and the expectations of users, that this information does not contain any material errors, omissions or inconsistencies, i.e. that are likely to influence the judgement or decisions of users of this information.

Conclusion of the procedures carried out

Based on the procedures we have carried out, we have not identified material errors, omissions or inconsistencies regarding the compliance of the sustainability information included in the Groupe BPCE Sustainability report, with the requirements of Article L.233-28-4 of the French Commercial Code, including the ESRS.

Emphasis of matter

Without qualifying the conclusion expressed above, we draw your attention to the information provided in the notes 1.1.2.3 "Sources of estimation and outcome uncertainty", 2.2.3.1 "(E1-1) Transition plan for climate change mitigation" and 2.2.4.2 "(E1-6) Gross scopes 1,2, 3 and total GHG emissions", which disclose the scope selected for the transition plan and for the calculation of financed emissions related to the value chain (category 15 of scope 3 according to the *GHG Protocol*) , as well as the limitations related to data availability, the assumptions used, and the methodologies applied to determine the estimates related to decarbonization targets and the greenhouse gas emissions balance.

Elements that received particular attention

- Information provided in application of the standards relating to general requirements and general disclosure (ESRS 1 – Climate change)

We set out below the elements that have been the subject of particular attention in relation to our assessment of compliance with the ESRS of the following information disclosed in the notes 2.2.3.1 "Transition plan for climate change mitigation" and 2.2.4 "Metrics and targets".

With regard to the information published on the greenhouse gas emissions (ESRS E1-6), as mentioned in the note 2.2.4.2 "(E1-6) Gross scopes 1,2,3 and total GHG emissions" of the Groupe BPCE Sustainability report, our work consisted primarily of:

- obtaining an understanding of the process, methods, frames, data and estimates used by Groupe BPCE to prepare the information (including procedures and internal control);
- with regard to Scope 3 emissions (categories 1, 2 and 6) regarding Groupe BPCE own operations:
  - assessing the appropriateness of the emission factors used and the calculation of the related conversions, taking into account the uncertainty inherent in the state of scientific or economic knowledge and the quality of the external data;
  - reconciling physical data, on a sample basis, to the underlying data used to draw up the greenhouse gas emissions assessment and tracing to supporting documents
- with regard to financed emissions (scope 3, category 15 of *GHG Protocol*) :
  - Understanding the scope of covered assets as described and assess its justification in regard of the applicable framework;
  - Verifying that the base used for computing financed emissions corresponds to the scope of covered assets as described in the note 2.2.4.2 and reconciling it with the consolidated general balance
  - assessing the appropriateness of the method for determining estimates, including the sectoral proxies chosen;
  - verifying the accuracy of the calculations used to prepare this information on a sample basis.

With regard to the information published on the Transition plan for climate change mitigation and adaptation (ESRS E1-1), as defined in the note 2.2.3.1 "(E1-1) Transition plan for climate change mitigation" of the Groupe BPCE Sustainability report, our work consisted primarily of:

- assessing the information related to the scope chosen for the Transition Plan (transition plan for own activities and sector-specific transition plans covering the value chain), as well as the processes, methodologies, frameworks, data, and estimates adopted by the Group to prepare the published information;
- assessing the description of the structural assumptions and reference climate scenarios underlying this plan, it being understood that we are not required to express a conclusion on the appropriateness or the level of ambition of the transition plan's objectives ;
- assessing whether the transition plan reflects the commitments made by Groupe BPCE as stated in the minutes of its governance bodies' meetings and other group communications;;
- assessing whether the transition plan is in line with the strategic plan as approved by the governing bodies and the financial planning of Groupe BPCE;
- assessing the information related to the scope chosen for the analysis of transition risks (physical and transition risks), as well as the methodologies, scenarios, and assumptions adopted by the group, and their integration into risk mapping of the Group.

Compliance with the reporting requirements set out in Article 8 of Regulation (EU) 2020/852

Nature of procedures carried out

Our procedures consisted in verifying the process implemented by Groupe BPCE to determine the eligible and aligned nature of the activities of the entities included in the consolidation.

They also involved verifying the information reported pursuant to Article 8 of Regulation (EU) 2020/852, which involves checking:

- the compliance with the rules applicable to the presentation of this information to ensure that it is readable and understandable;
- on the basis of a selection, the absence of material errors, omissions or inconsistencies in the information provided, i.e. information likely to influence the judgement or decisions of users of this information.

Conclusion of the procedures carried out

Based on the procedures we have carried out, we have not identified any material errors, omissions or inconsistencies relating to compliance with the requirements of Article 8 of Regulation (EU) 2020/852.

Emphasis of matters

Without qualifying the conclusion expressed above, we draw your attention to:

- The information in the paragraph "Methodology used" in the note 2.1 "Indicators of the European taxonomy on sustainable activities" which discloses the main methodological assumptions used to assess the alignment of loans granted to individuals
- The information in the paragraph "Assumptions used and existing limitations in the preparation and collection of information" in the note 2.1 "Indicators of the European taxonomy on sustainable activities" which discloses the main existing limitations in the presentation of information, including those concerning the presentation of cash flow information regarding the KPI on off-balance-sheet exposures.

Elements that received particular attention

We concluded that there are no elements that received particular attention to report.

2.3 BPCE Sustainability report

Introductory remarks

The following sustainability report is the result of a regulatory obligation imposing a publication on a scope covering only BPCE, which is made up of the central institution of Groupe BPCE, the business lines serving the activities of the Banque Populaire and Caisse d'Epargne networks, Natixis SA, as well as resource pools.

The analysis of the double materiality for the two scopes is identical. The criteria for identifying impacts, risks and opportunities (IRO) and assessing their materiality are the same. The same applies to the definition of policies and action plans.

This is why this report makes references to Groupe BPCE's sustainability report for elements of strategy and editorial content.

This report presents certain quantitative metrics required by the standard, when they are applicable to the BPCE scope.

Where applicable, the reported quantitative metrics are calculated for the BPCE scope. This concerns a majority of the indicators required by the ESRS.

The indicators required by the ESRS that are not applicable to BPCE concern:

- greenhouse gas emission reduction targets: these are calculated solely for Groupe BPCE scope, as an integral part of the transition strategy covering the entire Group scope;
- indicators relating to the G1-3 and G1-4 topics, which are calculated for the scope of Groupe BPCE only.

These items are published in Groupe BPCE's report, which includes the BPCE scope.

PART 1 - GENERAL INFORMATION

1.1 Reporting basis

1.1.1 BP-1 - General basis for the preparation of the sustainability statements

See the corresponding section in Groupe BPCE's sustainability report.

1.1.2 BP-2 - Disclosures in relation to specific circumstances

1.1.2.1 TIME HORIZONS

See the corresponding section in Groupe BPCE's sustainability report.

1.1.2.2 VALUE CHAIN ESTIMATION

See the corresponding section in Groupe BPCE's sustainability report.

1.1.2.3 SOURCES OF ESTIMATION AND OUTCOME UNCERTAINTY

See the corresponding section in Groupe BPCE's sustainability report.

1.1.2.4 CHANGES IN PREPARATION OR PRESENTATION OF SUSTAINABILITY INFORMATION

See the corresponding section in Groupe BPCE's sustainability report.

1.1.2.5 REPORTING OF ERRORS IN PRIOR PERIODS

See the corresponding section in Groupe BPCE's sustainability report.

1.1.2.6 DISCLOSURES STEMMING FROM OTHER LEGISLATION OR GENERALLY ACCEPTED SUSTAINABILITY REPORTING PRONOUNCEMENTS

See the corresponding section in Groupe BPCE's sustainability report.

1.1.2.7 INCORPORATION BY REFERENCE

See the corresponding section in Groupe BPCE's sustainability report.

1.2 Strategy

1.2.1 SBM-1 - Strategy, business model and value chain

See the corresponding section in Groupe BPCE's sustainability report.

1.2.2 SBM-2 - Interests and views of stakeholders

See the corresponding section in Groupe BPCE's sustainability report.

1.3 Governance

1.3.1 GOV-1 - The role of the administrative, management and supervisory bodies

See the corresponding section in Groupe BPCE's sustainability report.

1.3.1.1 COMPOSITION AND DIVERSITY OF BPCE'S MANAGEMENT AND SUPERVISORY BODIES

See the corresponding section in Groupe BPCE's sustainability report.

1.3.2 GOV-2 - Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies

1.3.2.1 SUSTAINABILITY TOPICS ADDRESSED BY THE ADMINISTRATIVE, MANAGEMENT AND SUPERVISORY BODIES

See the corresponding section in Groupe BPCE's sustainability report.

1.3.3 GOV-3 - Integration of sustainability-related performance in incentive schemes

See the corresponding section in Groupe BPCE's sustainability report.

1.3.4 GOV-5 - Risk management and internal controls over sustainability reporting

See the corresponding section in Groupe BPCE's sustainability report.

1.3.5 GOV-4 - Statement on due diligence

See the corresponding section in Groupe BPCE's sustainability report.

1.4 Impact, risk and opportunity management

1.4.1 IRO-1 - Description of the processes to identify and assess material impacts, risks and opportunities

See the corresponding section in Groupe BPCE's sustainability report.

1.4.2 SBM-3 - Material impacts, risks and opportunities and their interaction with strategy and business model

See the corresponding section in Groupe BPCE's sustainability report.

1.4.3 IRO-2 - Disclosure Requirements in ESRS covered by the undertaking's sustainability statements

See the corresponding section in Groupe BPCE's sustainability report.

PART 2 - Environmental information

2.1 Indicators of the European taxonomy on sustainable activities

Regulatory framework

See the corresponding section in Groupe BPCE's sustainability report.

Mandatory GAR

See the corresponding section in Groupe BPCE's sustainability report.

Summary of GAR

GAR – Summary

At December 31, 2024

	12/31/2024		
	Amount in millions of euros	*% of total assets*	*% of total GAR assets (denominator)*
TOTAL ASSETS	**831,840**	**100.00%**	
Assets not covered for GAR calculation	347,898	41.82%	
TOTAL GAR ASSETS	**483,942**	**58.18%**	**100%**
Assets excluded from the numerator for GAR calculation (covered in the denominator)	390,492	46.94%	80.69%

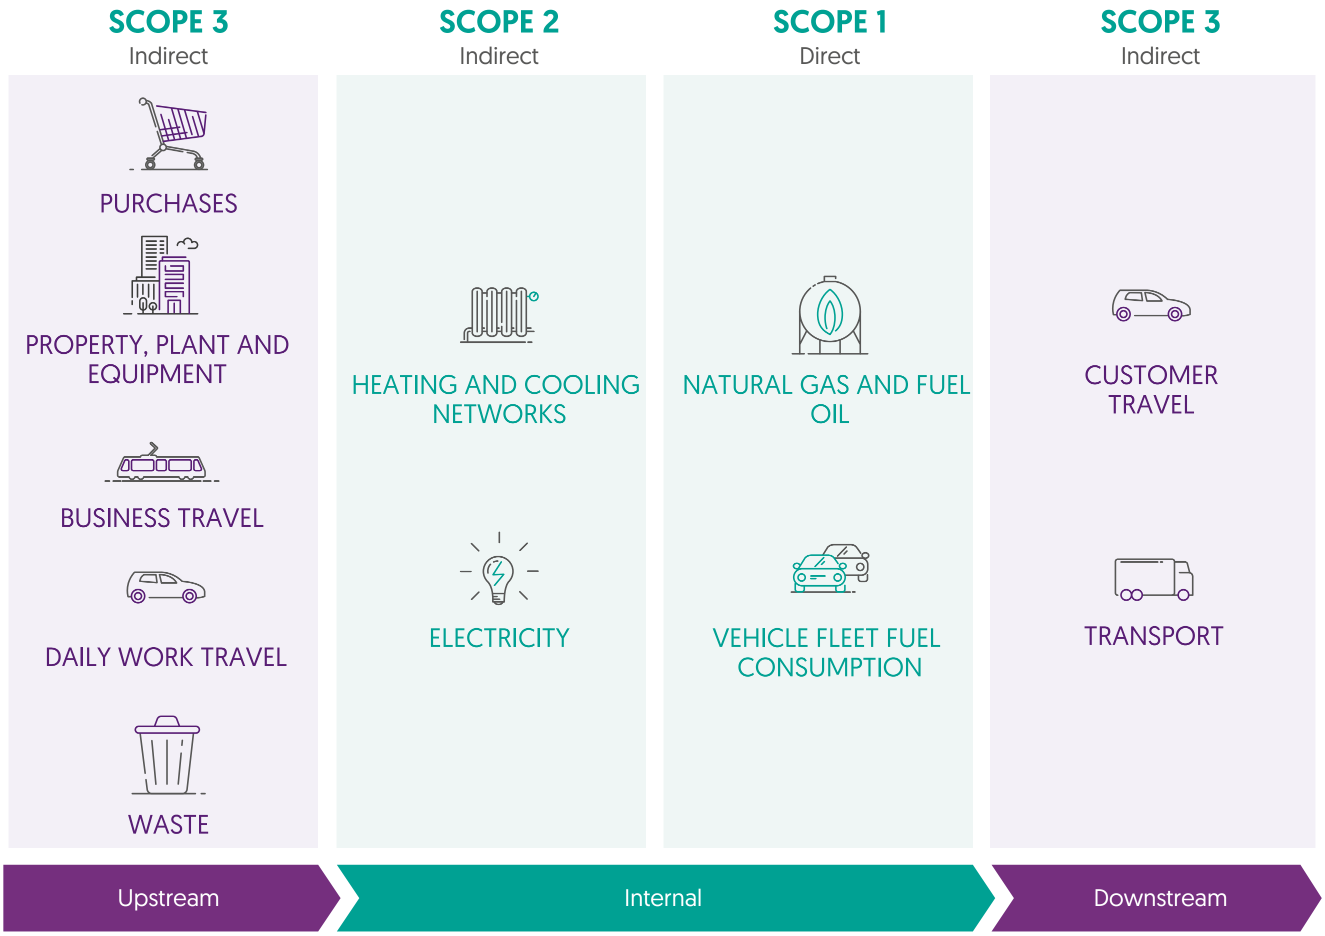
11 Use of products sold	12/31/2024	-	-					
12 End-of-life treatment of products sold	12/31/2024	-	-					
13 Downstream leased assets	12/31/2024	-	-					
14 Franchises	12/31/2024	-	-					
Total Own footprint emissions								
Own footprint GHG emissions (location-based) (tCO_2eq)	12/31/2024	169,756	172,428	1.57%				
Own footprint GHG emissions (market-based) (tCO_2eq)	12/31/2024	166,445	168,959	1.51%				
Portfolio emissions								
15 Investments (Banking)	12/31/2024	65,348,460	66,833,271	2.27 %				
15 Investments (Insurance)	12/31/2024	14,409,074	14,341,729	(0.47%)				
Total GHG emissions								
Total GHG emissions (location-based) (tCO2eq)	12/31/2024	79 927 290	81 347 428	2%				
Total GHG emissions (market-based) (tCO2eq)	12/31/2024	79 923 979	81 343 959	2%)				

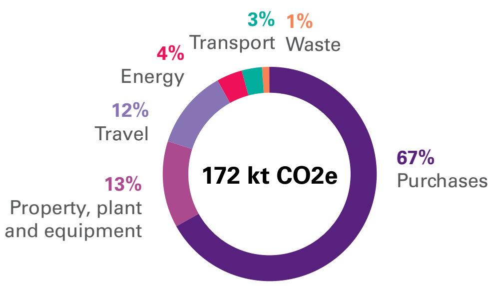
Scope of the calculated greenhouse gas (GHG) emissions



FOCUS ON THE OWN FOOTPRINT

Scope

GHG emissions related to the own footprint include all Scope 1, 2 and several Scope 3 categories.



Calculation methodology

Two amounts are presented at the end of table AR48, which cover the specific scope of the own footprint:

- total own footprint emissions (with Scope 2 emissions calculated using the location-based method);
- total own footprint emissions (with Scope 2 emissions calculated using the market-based method).

The emissions are calculated for each of the items presented in Table AR48 according to the breakdown of the GHG Protocol items into the 3 emission scopes.

The methodology applied to property, plant and equipment is based on the principles of French regulations concerning the preparation of a greenhouse gas report (BEGES V5), which meets the regulatory requirements set out in Article L. 229-25 of the French Environment Code. This methodology is also consistent with ISO 14064-1:2018. More specifically, the calculation of emissions associated with fixed assets is based on the collection of data from the inventories of the various fleets (IT equipment, real estate, vehicles, etc.) and on the application of amortization coefficients making it possible to distribute the emissions over the useful life of the assets concerned.

Work will be carried out in the coming months to enable Groupe BPCE to also calculate its carbon footprint according to the methodological principles of the GHG Protocol, *i.e.* by accounting for all emissions associated with the manufacture of capitalized assets during the year of acquisition.

As specified in the paragraph "Actions and resources" (E1-3), Groupe BPCE has refined the measurement of its purchases in 2024, by detailing the measurement on 16 categories of purchases instead of two previously and by allocating more precise emission factors to each category. This greater degree of precision shows a significant increase in emissions for this item. As a result, two calculations were carried out in 2024: a calculation of the carbon footprint using the old methodology, in order to measure the achievement of the objectives set over the 2019-2024 period, and a second calculation with the new methodology, in order to follow the 2023-2026 reduction trajectory (see details of changes in the measurement of purchases in E1-3).

Scope limitation

The scope of calculation of BPCE's own footprint covers 26 entities whose permanent contracts (CDI) represent 72% of the Group's employees with permanent contracts. This scope is gradually extended each year.

In response to the E1-6 disclosure requirement (AR 43), BPCE publishes the following mandatory information:

Gross Scopes 1, 2, 3 and Total GHG emissions	2024
Biogenic CO_2 emissions resulting from the combustion or biodegradation of biomass separately from Scope 1 GHG emissions, but includes emissions of other types of GHG (in particular CH_4 and N_2O).	0
Breakdown of information by indicating separately the Scope 1 emissions from: – the consolidated accounting group (parent company and subsidiaries); and – companies benefiting from investments, such as associates, joint ventures or unconsolidated subsidiaries that are not fully consolidated in the financial statements of the accounting group, as well as contractual agreements that are joint agreements non-structured through an entity (*i.e.* jointly controlled operations and assets) over which the company exercises operational control.	0
Breakdown of information by indicating separately the Scope 2 emissions from: – the consolidated accounting group (parent company and subsidiaries); and – companies benefiting from investments, such as associates, joint ventures or unconsolidated subsidiaries that are not fully consolidated in the financial statements of the accounting group, as well as contractual agreements that are joint agreements non-structured through an entity (*i.e.* jointly controlled operations and assets) over which the company exercises operational control.	0

MDR-M - EMISSIONS FINANCED BY BPCE - BANKING ACTIVITIES

Scope

The scope of greenhouse gases related to financing activities (Scope 3 category 15 Investments [Banking]) corresponds to the scope of corporate financing and dedicated financing of the banking book and also includes home loan financing. Home loan financing corresponds to home loans granted to individual customers and to self-employed customers.

Calculation methodology

The calculation of the carbon measures financed follows the Partnership for Carbon Accounting Financials (PCAF) methodology in accordance with the recommendations of the GHG Protocol for corporate credit financing (*in its guide "The Global GHG Accounting and Reporting Standard Part A: Financed Emissions" published in 2022*). These measures are based on methodologies known to date and which may change in the future.

The calculation is carried out on the Scope 1, Scope 2 and Scope 3 emissions of financed customers, aligned with the regulatory requirements and scope materiality issues. The sources of carbon data used for corporate financing are mainly based on data suppliers (Carbone 4, CDP, Trucost, MSCI): when the data is not available at the company level, their group's carbon data is used. In the absence of information, sectoral proxies are used:

- For companies or dedicated financing belonging to sectors with good supplier data coverage, the sectoral carbon data are extrapolated.

- For companies related to other sectors, the sectoral proxies provided by PCAF are applied (by NACE code and geographical area). As the coverage by the PCAF proxy is significant (applied to more than [75]% of outstandings) related in particular to exposures to small- and medium-sized companies, the estimated nature of the measures should be highlighted for this segment.

- The carbon measurements used for home loan financing correspond to the carbon emissions related to the use of the building. The data sources are based on Energy Performance Diagnostics (EPDs) when these are available. Otherwise, proxies are used, relying in particular on data from the French Scientific and Technical Center for Building (Centre Scientifique et Technique du Bâtiment - CSTB).

It should be noted that the carbon data used may be one year behind the closing date of the outstandings. The data collected, methods and measurements carried out have not been subject to external verification.

To date and for information purposes, the quality levels of the carbon data used to measure financed emissions at December 31, 2023 and December 31, 2024 are estimated at around four according to the PCAF score. As specified by the PCAF standard, the various carbon data sources used are associated with a quality level ranging from one to five depending on whether they are based on data audited and communicated by the company (corresponding to the best score: 1), or based on industry proxies/ estimates (corresponding to the lowest score: 5).

MDR-M - EMISSIONS FINANCED BY GROUPE BPCE - INSURANCE ACTIVITIES

Scope

The scope of greenhouse gases related to insurance activities (Scope 3 category 15 Investments [Insurance]) includes the activities of BPCE Assurances.

Calculation methodology

The methodology used to calculate greenhouse gas emissions is aligned with that of the Principal Adverse Impacts indicator (PAI) 1.1 defined by the SFDR regulation. Thus, the gross GHG emissions attributed to investments take into account the Scope 1, 2 and 3 emissions of the companies comprising the portfolios of assets held. The attribution coefficient for a given company corresponds to the value of the investment divided by the total value of this company (Enterprise Value Including Cash [EVIC]).

BPCE Assurances relies on Carbone 4 Finance for the collection of GHG emissions as well as the EVICs of companies in which it invests. In the absence of available information, sectoral proxies are used.

To be consistent with the scope of emissions financed by the banking activity, emissions relating to insurance activities relate exclusively to corporate investments.

In addition, asset management companies are subject to SFDR reporting obligations and/or Article 29 of the Energy Climate Act and disclose information on the financed emissions that they incur through the investments.

As an illustration, Natixis IM has consolidated the GHG emissions calculated according to the PCAF standard for European portfolios of listed assets (excluding sovereigns)[1] and relying on a single data source (MSCI). These emissions amounted to €81 million tCO2e at December 31, 2024.

PART 3 - Social information

3.1 S1 - Own workforce

3.1.1 SBM-2 - Interests and views of stakeholders

See the corresponding section in Groupe BPCE's sustainability report.

3.1.2 SBM-3 - Material impacts, risks and opportunities and their interaction with strategy and business model

See the corresponding section in Groupe BPCE's sustainability report.

3.1.3 Impact, risk and opportunity management

3.1.3.1 (S1-1) POLICIES RELATED TO OWN WORKFORCE

See the corresponding section in Groupe BPCE's sustainability report.

3.1.3.2 (S1-2) PROCESSES FOR ENGAGING WITH OWN WORKFORCE AND WORKERS' REPRESENTATIVES ABOUT IMPACTS

See the corresponding section in Groupe BPCE's sustainability report.

3.1.3.3 (S1-3) PROCESSES TO REMEDIATE NEGATIVE IMPACTS AND CHANNELS FOR OWN WORKFORCE TO RAISE CONCERNS

See the corresponding section in Groupe BPCE's sustainability report.

3.1.3.4 (S1-4) TAKING ACTION ON MATERIAL IMPACTS ON OWN WORKFORCE, AND APPROACHES TO MANAGING MATERIAL RISKS AND PURSUING MATERIAL OPPORTUNITIES RELATED TO OWN WORKFORCE, AND EFFECTIVENESS OF THOSE ACTIONS

See the corresponding section in Groupe BPCE's sustainability report.

3.1.4 Metrics and targets

3.1.4.1 (S1-5) TARGETS RELATED TO MANAGING MATERIAL NEGATIVE IMPACTS, ADVANCING POSITIVE IMPACTS, AND MANAGING MATERIAL RISKS AND OPPORTUNITIES

See the corresponding section in Groupe BPCE's sustainability report.

3.1.5 Metric units

3.1.5.1 GENERAL INTRODUCTION - SCOPE OF APPLICATION

Scope of publication of S1 indicators for the 2024 CSRD :

(1) This carbon footprint is consolidated by summing the GHG emissions "attributed" to each position in the portfolio, on companies. The emission allocated corresponds to the carbon emissions (Scope 1, 2 & 3) of the company multiplied by the actual outstanding amount of listed shares or corporate bonds held in the portfolio divided by the value of the company including cash (EVIC).

Some of the Group's entities do not upload their data in the Group HR HRIS, in particular for international entities, which also comply with national legislation imposing heterogeneous requirements in social matters (*e.g.* minimum wage).

In this context, the Group has chosen a baseline scenario for the entities on which the indicators will be calculated for the CSRD 2025 publication (based on data collected via the Group's Information System and *ad hoc* manual data).

Entities included in the scope of publication of the S1 indicators - for the CSRD 2024:

All BPCE subsidiaries (specialized financing, asset management, life and non-life insurance, payments, wealth management and wholesale banking), BPCE SA, and the Natixis consolidated scope are included in the S1 reporting scope.

And inclusion of other entities:

- Banque Palatine;
- Crédit Foncier de France;
- Oney;
- BPCE Life Luxembourg

Specificities related to BPCE Life Luxembourg scope : this entity will be excluded from the following indicators due to the unavailability of data in the HR information system: S1-12, S1-14, S1-15 and S1-16. A coverage rate of 100% (for the Insurance division) for the other indicators and 90% (for the Insurance division) for the aforementioned indicators.

Specificities related to the Oney scope : some Oney subsidiaries do not have a payroll tool and are not integrated into the Group's HRIS, which makes data collection more complex. Thus, the scope used for the disclosure of the S1 metrics for the 2025 CSRD for Oney is as follows:

- Oney Bank France: 100% of indicators covered;
- Oney international subsidiaries: covered only for some of the S1-6 indicators.

Specificities relating to the Natixis consolidated scope: for the 2024 publication, the Natixis scope of coverage was studied indicator by indicator with the use of proxies for some. Data are collected for at least 78% and up to 100% of the own workers in 2024 on the mandatory indicators expected from 2025. Natixis aims to cover 100% of the own workers by 2026. (For more details: see the Natixis CSRD publication - *3.1.3.2 Introductory remarks on metrics S1-6 to S1-17*).

Entities excluded from the scope:

- International subsidiaries of BPCE Lease;
- Fintech Digital & Payments (PayPlug Entreprise);
- Pramex International;

Population concerned :

Population exclusions (fixed-term contracts/work-study/VIE) according to the metrics were made for reasons of data availability and/or the relevance and reliability of the calculations.

3.1.5.2 (S1-6) CHARACTERISTICS OF THE UNDERTAKING'S EMPLOYEES

A. General introduction: definition and transversal methods for S1-6 indicators

Preliminary reminder: S1-6 only concerns employees (therefore non-employees are excluded from the scope of the S1-6 indicators).

Scope

- for BPCE scope excluding Natixis, see *3.1.5.1 General introduction*.
- for the Natixis scope, see 3.1.5.14.2 (S1-6) Characteristics of the undertaking's employees – Natixis

Concerning the non-covered scopes, the following actions will be deployed:

- carry out studies to assess the feasibility of collecting unavailable data manually from the IS;
- define the methods for collecting data not currently available.

Definition

The total number of employees was calculated on the basis of the scope of entities subject to the CSRD and the following definition of employee status :

- permanent internal employees (CDI);
- temporary internal employees (fixed-term contracts - CDD);
- work-study employees;
- VIE.

Note:

- interns were not included in the scope, insofar as in France, interns are not considered as company employees.

Calculation

- Methodology for calculating the total number of employees based on:
  - a counting of the number of own workers in number of contracts;
  - the number of employees present at the end of the reference period;
  - a closing date at December 31 of the reference year.

B. Breakdown of own workers:

Completion of the table based on three fields:

- the “male” and “female” fields: based on the information available in the information system;
- the “not declared” field is the field used in the event of data not available in the information system;
- the “other” field is currently not available in the employee gender self-declaration process, as French legislation does not prescribe the place of such a system.

Breakdown of own workers by gender

	12/31/2024
Gender	**Number of employees**
Male	18,010
Female	16,077
Other	
Not declared	
TOTAL SALARIED EMPLOYEES	**34,087**

C. Own workers by country

Scope

Countries in which BPCE has at least 50 employees representing at least 10% of its total number of employees.

The calculation basis for own workers is that applied to the scope of publication of the CSRD.

Presentation of the number of employees in countries where the company has at least 50 employees representing at least 10% of its total number of employees

	12/31/2024
Country	**Number of employees**
France	25,206

D. Employees by type of contract

Definition

- The total number of employees was calculated based on the scope of entities subject to the CSRD and the following definition of employee status:
  - permanent internal employees (CDI);
  - temporary internal employees (fixed-term contracts - CDD);
  - work-study employees;
  - VIE (for France).

Note:

- Note: BPCE has no employees on non-guaranteed hours, as this type of contract is not included in the Group’s business model. See definition in the introduction. (see. 3.1.5.1.general introduction.)

Calculation

- for the breakdown by gender: see Section *B. S1-6 - Breakdown of own workers.*
- the breakdown by contract is detailed in the Section *A. General introduction: definition and transversal methods for the metrics S1-6 - Breakdown of own workers;*
- publication of the full-time/part-time split on a voluntary basis.
- is considered as full-time, any employee with a contractual FTE of 100%. All others are considered part-time.

Note: work-study students are considered as being part-time employees as they have a specific working time format dedicated to them.

Presentation of information on employees by type of contract, broken down by gender

	12/31/2024				
	Women	Men	Other(*)	Not Communicated	Total
Number of employees	16,077	18,010			34,087
Number of permanent employees	15,027	16,949			31,976
Number of temporary employees	1,050	1,061			2,111
Number of non-guaranteed hours employees					
Number of full-time employees	12,888	15,603			28,491
Number of part-time employees	2,355	1,113			3,468

* Gender as specified by the employees themselves.

E. Employees by type of contract, by region

Definition

- Definition of the term "Region": BPCE understands the definition of region in the sense of geographical area. The Group distinguishes between four types of regions: **France/Americas/APAC/EMEA (excluding France).**

Calculation

- for the breakdown by gender: see Section *B. Breakdown of own workers;*
- the breakdown by contract is detailed in the Section *General introduction: definition and transversal methods for the metrics S1-6 - Breakdown of own workers*

Presentation of information on employees by type of contract, broken down by region

	12/31/2024				
	FRANCE	EMEA(*)	AMER	APAC	TOTAL
Number of employees	25,110	5,071	2,748	1,158	34,087
Number of permanent employees	23,276	4,877	2,700	1,123	31,976
Number of temporary employees	1,834	194	48	35	2,111
Number of non-guaranteed hours employees					
Number of full-time employees	21,362	4,747	1,321	1,061	28,491
Number of part-time employees	3,268	166	33	1	3,468

* excluding France.

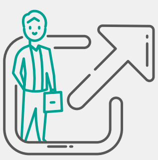
F. Total number of employees who left the Group during the reference period

Definition

- The indicator presented only concerns permanent (CDI) contracts.

Calculation

- the following reasons for departure were used in the calculation of the indicator: contractual terminations, resignations, deaths in the course of employment, dismissals and retirements;
- departures related to internal mobility have not been included in the calculation of the indicator.



2,043

TOTAL NUMBER OF EMPLOYEES THAT LEFT BPCE DURING THE YEAR

G. Employee turnover during the reference period:

Two indicators are published:

- departure rate;
- turnover rate.

Definition

The calculation is based on permanent employees present at the end of 2023.

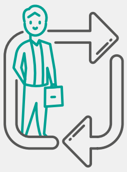
Note: Fixed-term contracts, work-study employees and VIE employees have been excluded from the calculation of the turnover rate, as their presence in the Group is by definition temporary.

Calculation

$$\textbf{departure rate: } \frac{\text{number of permanent contract departures over the reference period}}{\text{number of employees on permanent contracts at December 31 of reference year Y-1}}$$

$$\textbf{turnover rate: } \frac{\text{(number of permanent contract hires over the reference period + number of permanent contract departures during the reference period)/2)}}{\text{number of employees on permanent contracts at December 31 of reference year Y-1}}$$

Percentage of permanent staff turnover



8.72%

PERMANENT STAFF TURNOVER RATE

Departure rate of permanent staff

7.20%

DEPARTURE RATE OF PERMANENT STAFF

H. Reconciliation between the own workers mentioned in Section "3.1.4.2 (S1-6) Characteristics of the undertaking's employees" and the most representative workforce in the financial statements

The Group Human Resources division relies on a notion of number of contracts and not FTE[1], it is therefore not relevant to reconcile the FTEs with the financial statements for the 2024 reference year, as the latter are not comparable.

3.1.5.3 (S1-7) CHARACTERISTICS OF NON-EMPLOYEES IN THE UNDERTAKING'S OWN WORKFORCE

In accordance with the transitional application measure provided for by the regulations, this indicator is not published for the 2024 reference year.

The action plan for future publications is as follows:

- define the notion of "non-salaried employee" and identify the populations concerned based on the standard;
- list the companies for which the data can be collected *via* the tools (Group employee reference framework);
- BPCE will collect the number of non-salaried employees manually and in declarative form, before integration by the companies in the RPG tool[2].

3.1.5.4 (S1-8) COLLECTIVE BARGAINING COVERAGE AND SOCIAL DIALOGUE

A. General introduction

- In the France scope, regulations require that all employees meeting the definition criteria in Section *S1-6 - Characteristics of the undertaking's employees* be covered by a collective agreement and by a social dialog/employee representation ;
- for the Group scope excluding Natixis, see *3.1.5.1 General introduction*.
- for the Natixis scope, see 3.1.5.14.3 (S1-8) Collective bargaining coverage and social dialogue – Natixis;
- employees: the employees covered by a collective agreement are the fixed-term contracts (CDD), permanent contracts (CDI), work-study students.

The Group indicates in which countries of the European Economic Area (EEA) it employs a significant number of employees (*i.e.* at least 50 employees representing at least 10% of the total number of employees).

(1) Full-time equivalent.
(2) Group employee reference framework.

B. Percentage of all employees covered by collective bargaining agreements

Collective conventions, company agreements or any other form of agreement negotiated between an employer, a group of employers or one or more employers' organizations, on the one hand, and one or more trade unions or, in their absence, employee representatives elected in accordance with national laws and regulations, on the other hand, shall be considered as "collective bargaining agreements".

100%

RATE OF ALL EMPLOYEES COVERED BY COLLECTIVE BARGAINING AGREEMENTS

- The percentage of employees covered by collective agreements is calculated using the following formulas:

$$100 \text{ X } \frac{\text{Number of employees covered by collective bargaining agreements}}{\text{total number of employees}}$$

C. Social dialog coverage rate & workplace representation

- To calculate the required information, the Group indicates in which of the EEA countries it employs a significant number of employees (*i.e.* at least 50 employees representing at least 10% of the total number of employees) and indicates the percentage of employees by country and by establishment, that have employee representation. The notion of "establishment" includes any place of operations where the company carries out an economic activity on a non-temporary basis with human resources and goods.

$$100 \text{ X } \frac{\text{Number of employees working in establishments in which employees are represented by representatives}}{\text{number of employees}}$$

D. Percentage of employees covered by a collective agreement (outside the EU)

Definition

The employees covered by a collective agreement are the fixed-term contracts (CDD), permanent contracts (CDI), work-study students.

Declaration template on collective bargaining coverage and social dialog

	12/31/2024		
	Collective bargaining coverage		**Social dialogue**
Coverage rate	**Employees - EEA (for countries > 50 employees representing > 10% of total employees)**	**Employees - non-EEA (estimate for regions with > 50 employees representing > 10% of total employees)**	**Workplace representation (EEA only) (for countries with > 50 employees representing > 10% of total employees)**
0-19%			
20-39%			
40-59%			
60-79%			
80-100%	France		France

3.1.5.5 (S1-9) DIVERSITY METRICS

Scope:

- for the Group scope excluding Natixis, see *3.1.5.1 General introduction*.
- for the Natixis scope, see 3.1.5.14.4 (S1-9) Diversity metrics.

Definition:

Senior management metric:

- Senior management means employees:
  - who are entrusted with responsibilities for which the importance implies a great deal of independence in the organization of their schedule;
  - who are empowered to make decisions on a largely autonomous basis;
  - who receive pay within the highest levels of pay systems applied in their company or establishment.

Breakdown of employees by age group metric:

- Taken into account in the calculation of the indicators of fixed-term contracts (CDD), permanent contracts (CDI), work-study and VIE.

Calculation:

Breakdown by gender at senior management level in number and percentage:

$$\textbf{\% of women in senior management: } \frac{\text{number of women in senior management}}{\text{number of employees in senior management}}$$

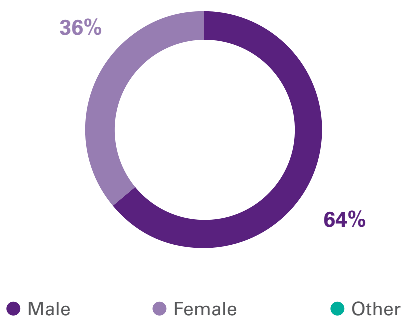
$$\textbf{\% of men in senior management: } \frac{\text{number of men in senior management}}{\text{number of employees in senior management}}$$

Breakdown of employees by age group:

$$\frac{\text{number of employees by age group}}{\text{total number of employees (au sens de l'indicateur S1-6)}}$$

- Breakdown by age group:
  - under 30;
  - between 30 and 50 years;
  - 50 years and over.

Breakdown by gender at senior management level



Breakdown of employees by age group and percentage - Own workers

	12/31/2024	
Age groups	**Number of employees (own workers)**	**%**
< 30 years	5,820	17.07
> 30 and < 50 years	18,184	53.35
> 50 years	10,051	29.49
Not reported	32	0.09
TOTAL SALARIED EMPLOYEES	**34,087**	**100**

3.1.5.6 (S1-10) ADEQUATE WAGES

- for the Group scope excluding Natixis, see 3.1.5.1 General introduction;
- for the Natixis scope, see 3.1.5.14.5 (S1-10) Adequate wages – Natixis.

All Group employees receive an adequate wage in accordance with the applicable benchmarks. The adequate wage refers to the minimum social wages set by legislation or collective bargaining or applicable benchmarks.

3.1.5.7 (S1-11) SOCIAL PROTECTION

[No small-group narrative: refer via explanatory note on the group report].

3.1.5.8 (S1-12) PERSONS WITH DISABILITIES

Scope

- for the Group scope excluding Natixis, see *3.1.5.1 General introduction*.
- for the Natixis scope, refer to 3.1.5.14.6 (S1-12) Persons with disabilities – Natixis.

Definition

- number of employees with disabilities as of December 31 of the reference year.
- in order to maintain consistency between this metric and the other metrics published under the CSRD, the "own workers" data is to be considered as registered workforce (number of contracts) and not in FTE. The types of contract to be taken into account are those of S1-6 (permanent [CDI], fixed-term [CDD], work-study students, VIE).

Calculation

- Calculation formula: $\frac{\text{Own workers registered with disabilities at December 31 of the reference year}}{\text{total own workers (at December 31 of the reference year)}}$

Percentage of employees with disabilities in 2024 within the meaning of the CSRD in France and International scope: 4.58%.

3.1.5.9 (S1-13) TRAINING AND SKILLS DEVELOPMENT METRICS

Performance assessment

Scope

- for the Group scope excluding Natixis, see *3.1.5.1 General introduction*.
- for the Natixis scope, see 3.1.5.14.7 (S1-13) Training and skills development metrics – Natixis.

Definition

- All performance, career development and professional appraisal interviews must be taken into account.

Calculation

- Population: permanent contracts (CDI).
- Calculation formula: $\frac{\text{workforce registered with disabilities at December 31 of the reference year}}{\text{total workforce (as at December 31 of the reference year)}}$

Breakdown by gender of employees who participated in regular performance and career development reviews

	12/31/2024	
Gender	**Number of assessments**	**%**
Male	14,460	94.27
Female	12,652	92.76
Other*		
Not declared		
TOTAL SALARIED EMPLOYEES	**27,112**	**93.56**

* Gender as specified by the employees themselves.

Training hours completed in 2024

Scope

- For the Group scope excluding Natixis, see *3.1.5.1 General introduction*.
- For the Natixis scope, see Natixis CSRD publication - *3.1.3.10 (S1-13) Training and skills development metrics*.

Definition

- The calculation is made on the basis of training hours completed during the reference year, including training not completed.

Calculation

- Population: fixed-term contracts (CDD), permanent contracts (CDI), work-study students and VIE.
- Calculation formula: $\frac{\text{number of training hours completed in the reference year}}{\text{total number of employees as of December 31 of the reference year}}$

Average number of training hours by type of contract and by gender

	12/31/2024				
	Women	**Men**	**Other(*)**	**Not Comunicated**	**Total**
Average number of training hours	18	18			18
Permanent employees	19	18			18
Temporary employees	13	13			13
Non-guaranteed hours employees					

*Gender as specified by the employees themselves.

3.1.5.10 (S1-14) HEALTH AND SAFETY METRICS

A. Health and Safety Management System

Scope

For the **France scope:** the regulations require that all employees, according to the criteria defined in S1-6, are covered by a health and safety management system. For the **international scope:** data will be collected in accordance with local obligations and/or practices.

- for the Group scope excluding Natixis, see *3.1.5.1 General introduction*.
- for the Natixis scope, see 3.1.5.14.8 (S1-14) *Health and safety metrics - Natixis*.

Calculation

- Population: permanent contracts (CDI), fixed-term contracts (CDD), work-study students, VIE.
- Calculation formula: $\frac{\text{number of employees covered by the health and safety management system}}{\text{total number of employees}}$
- Percentage of own workers covered by the health and safety management system based on legal requirements and/or recognized standards or guidelines.

99.77%

EMPLOYEE HEALTH AND SAFETY MANAGEMENT SYSTEM COVERAGE RATE

B. Work-related accident frequency rate

Scope

- for the Group scope excluding Natixis, see *3.1.5.1. General introduction*.
- for the Natixis scope, see 3.1.5.14.8 (S1-14) *Health and safety metrics - Natixis*.

Definition

The indicator used relates to the frequency rate of workplace accidents:

- the notion of "days lost" is interpreted as "days of absence" linked to work stoppage due to workplace/commuting accidents;
- the Group measures and collects data related to workplace and commuting accidents recognized by the social security;
- however, for occupational illnesses, BPCE is not in a position to collect similar data.

Calculation

- Population: permanent contracts (CDI), fixed-term contracts (CDD).
- The calculation of the indicator excludes:
  - data on occupational illnesses (not available BPCE);
  - absences and accidents of non-salaried workers (in accordance with the publication deadline granted by the standard).
- The indicator used for the workplace accident rate is the frequency rate of workplace accidents involving permanent (CDI) and fixed-term (CDD) contracts. The formula for calculating the frequency rate, according to INSEE, is as follows:

$$\frac{\text{number of accidents with lost time}}{\text{hours worked X 1,000,000}}$$

$$\frac{\text{the number of days of absence due to workplace}}{\text{commuting accidents is to be considered in number of calendar days}}$$

Occupational health and safety

	12/31/2024
Number of fatalities due to work-related accidents or illnesses	2
Number of work-related accidents over the period	246
Work-related accident rate (in %)	5.14
Number of days lost due to work-related accidents	6,747

C. Regarding the health and safety indicators that we will not report, we are planning the following action plan:

Limitation on published information:

The quantitative information required by the CSRD standard is not published in Groupe BPCE's CSRD sustainability report, given the unavailability of data.

Action plan:

- determine a common definition of the term "occupational illness";
- list the companies for which the data can be collected *via* the information systems;
- list the scopes on which the data can be collected manually (if unavailable in the tools);
- define data collection methods.

3.1.5.11 (S1-15) WORK-LIFE BALANCE METRICS

Scope

- For the Group scope excluding Natixis, see *3.1.5.1. General introduction*.
- for Natixis, see 3.1.5.14.9 (S1-15) Work-life balance – Natixis

Definition

- The concept of family leave takes into account the following arrangements:
  - maternity leave;
  - paternity leave;
  - parental leave;
  - caregiver leave provided for by legislation or collective agreements.
- Population: permanent contracts (CDI)/fixed-term contracts (CDD)/work-study students/VIE.

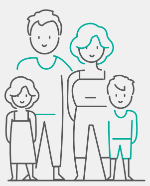
Calculation

"% of employees entitled to family leave"

- Calculation formula: $\dfrac{\text{number of employees eligible for family leave}}{\text{total number of employees}}$

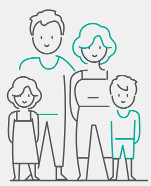
"% of employees concerned who took such leave, with a breakdown by gender"

- Calculation formula: $\dfrac{\text{Number of employees taking family leave}}{\text{number of eligible employees}}$



100%

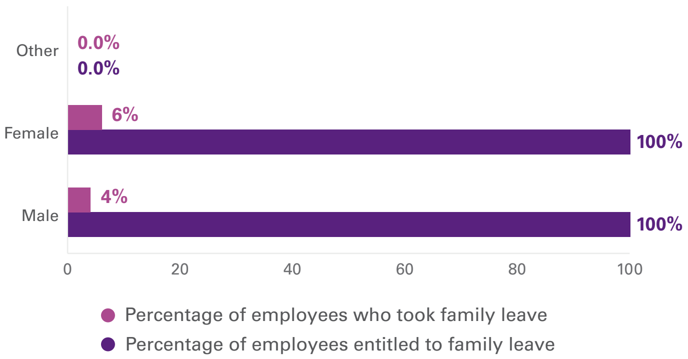
OVERALL RATE OF EMPLOYEES ENTITLED TO FAMILY LEAVE



5.08%

OVERALL RATE OF EMPLOYEES WHO TOOK FAMILY LEAVE

BREAKDOWN BY GENDER OF THE PERCENTAGE OF EMPLOYEES ENTITLED TO AND HAVING TAKEN FAMILY LEAVE



3.1.5.12 (S1-16) REMUNERATION METRICS (PAY GAP AND TOTAL REMUNERATION)

Gender pay gap metric

Scope

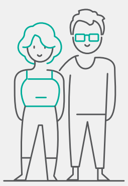
- for the Group scope excluding Natixis, see *3.1.5.1. General introduction*.
- for the Natixis scope, see 3.1.5.14.10 (S1-16) Remuneration metrics (pay gap and total remuneration) – Natixis.

Definition

- The consolidated population includes own workers on permanent contracts (CDI) who are present and paid at full rate throughout the reference year excluding:
  - corporate representatives;
  - employees on fixed-term contracts (CDD);
  - temporary workers;
  - work-study employees;
  - expatriate French employees;
  - people without an employment contract and employees on long-term illness (ALD).
- Fixed wage and variable pay **are taken into account.**
- **Elements taken into account in the fixed wage**: theoretical full-time annual fixed wage + fixed annual duty allowance, if applicable, for the reference year.
- **Elements taken into account in the variable pay**:
  - BPCE excluding Natixis: value-sharing bonus paid in the reference year + performance bonus or any individual bonus + variable pay paid in the reference year;
  - Natixis: variable pay awarded in respect of the previous year (including deferred portions) + exceptional bonus awarded if applicable.

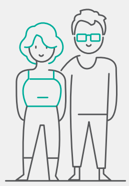
Calculation: $$\frac{\text{Average gross annual remuneration of male employees - average gross annual remuneration of female employees}}{\text{average gross remuneration of male employees}} \text{ X 100}$$

As the way in which the data is presented is different for Natixis, two distinct metrics are presented:



18.99%

GENDER PAY GAP WITHIN THE BPCE SCOPE EXCLUDING NATIXIS



34.10%

GENDER PAY GAP BETWEEN MEN AND WOMEN AT NATIXIS

Annual total remuneration metric

Scope

- for the Group scope excluding Natixis, see *3.1.5.1. General introduction*.
- for the Natixis scope, see 3.1.5.14.10 (S1-16) *Remuneration metrics (pay gap and total remuneration - Natixis)*.

Definition

- The consolidated population includes own workers on permanent contracts (CDI) who are present and paid at full rate throughout the reference year excluding:
  - corporate representatives;
  - employees on fixed-term contracts (CDD);
  - temporary workers;
  - work-study employees;
  - expatriate French employees;
  - people without an employment contract and employees on long-term illness (ALD).
- Fixed wage and variable pay **are taken into account.**
- **Elements taken into account in the fixed wage**: theoretical full-time annual fixed wage + fixed annual duty allowance, if applicable, for the reference year.
- **Elements taken into account in the variable pay**:
  - BPCE excluding Natixis: value-sharing bonus paid in the reference year + performance bonus or any individual bonus + variable pay paid in the reference year;
  - Natixis: variable pay awarded in respect of the previous year (including deferred portions) + exceptional bonus awarded if applicable.

Calculation

- **Annual total remuneration ratio metric:** $\frac{\text{annual total remuneration for the highest-paid person in the company}}{\text{median level of annual total remuneration excluding the highest-paid individual}}$

  – If the maximum annual total pay is the same for several employees, then they are excluded from the denominator in the calculation presented above (median level of annual total pay (excluding the highest-paid individual).

The ratio of total annual remuneration between the highest-paid employee and the median of other employees is 90.6 in 2024.

The ratio of total annual remuneration is established based on the scope of the BPCE Group, on the basis of gross remuneration, without neutralizing the differences in living standards between the countries in which the Group operates. Indeed, salary practices also reflect the economic conditions specific to each country, as well as market practices specific to the various business lines present in the Groupe BPCE. Therefore total annual remuneration ratio, therefore, incorporates very diverse local realities in terms of labor markets and living standards.

3.1.5.13 (S1-17) INCIDENTS, COMPLAINTS AND SEVERE HUMAN RIGHTS IMPACTS

Limitation on published information:

Given the multitude of channels for reporting alerts, BPCE will not be able to provide an exhaustive response to this metric and proposes to include it in the next fiscal year through the action plan mentioned below.

Action plan to publish metrics in future publications:

- Bring together the relevant contacts (Compliance, diversity & harassment officer, labor & legal relations).
- Agree on a common definition on the terms expected in the metrics: incidents of discrimination, harassment, complaints, violation of social factors and human rights, serious human rights issues and incidents for employees.
- Identify whistleblowing channels such as Group alert tools, dedicated local email address, harassment or diversity contact, emergency number, listening unit.

3.1.5.14 ANNEX - NATIXIS SCOPE

3.1.5.14.1 General Introduction to metrics S1-6 to S1-17

The following scopes are cited throughout the methods defining each metric:

- **Managed scope**: companies forming part of Natixis and its subsidiaries, at least 50% owned directly or indirectly, and for which individual data is available in the global Human Resources Information Systems (HRIS).
- **Other entities of the AWM divisio**n: companies owned directly or indirectly at least 50% worldwide and for which individual data is not available in the Global HR Information Systems. Two of these companies (DNCA Finance France, Natixis US Advisors) were subject to manual collection for this first disclosure. We will refer to them as "AWM entities with manual collection" in the rest of this disclosure.
- **CIB M&A stores**: companies owned directly or indirectly at least 50% worldwide and for which individual data is not available in Global HR Information Systems (Peter J. Solomon/Azure Capital Limited/Vermilion Partners Limited/Fenchurch Advisory Partners/Natixis Partners Espana/Natixis Partners).
- **Scope of financial investments**: Natixis Algérie

3.1.5.14.2 (S1-6) Characteristics of the undertaking's employees - Natixis

- **Breakdown of own workers by gender**
- **Scope of coverage:**
- France & International managed scope
- Other entities of the AWM France & International division
- Scope of financial investments
- **Use of proxies:**

Proxies were calculated based on the own workers of entities in the "Other Natixis entities" scope, which is collected at the end of the year.

A proxy is calculated to obtain the percentage distribution of men and women: at the end of the year, the entities communicate information on their own workers (permanent, fixed-term, young jobs), when available. A proportion of male/female is calculated based on this file with regards to the M/F breakdown of own workers for year Y-1.

- **Own workers by country**
- **Scope of coverage**
- France & International managed scope
- Other entities of the AWM France & International division
- **Employees by type of contract, by gender**
- **Scope of coverage**
- France & International managed scope
- Other entities of the AWM France & International division
- Scope of financial investments
- **Use of proxies:**

A proxy is calculated to obtain the breakdown of men and women as a percentage: at the end of the year, the entities communicate information on their own workers (permanent, fixed-term, youth employment), when available. A proportion of Men/Women is calculated based on this file with regards to the M/F breakdown of their own workers for year N-1.

- **Employees by type of contract, by region**
- **Scope of coverage:**
- France & International managed scope
- Other entities of the AWM France & International division
- Scope of financial investments
- **Total number of employees who left the Group during the reference period and employee turnover during the reference period**
- **Scope of coverage:**
- France & International managed scope
- AWM entities with manual collection
- Scope of financial investments

3.1.5.14.3 (S1-8) Collective bargaining coverage and social dialogue - Natixis

- **Scope of coverage**
- France managed scope
- International managed scope: entities with the largest own workforce
- AWM entities with manual collection
- Scope of financial investments

3.1.5.14.4 (S1-9) Diversity metrics - Natixis

- **Senior management**
- **Scope of coverage:**
- France managed scope
- **Breakdown of employees by age group:**
- **Scope of coverage:**
- France & International managed scope
- Other entities of the AWM France & International division
- Scope of financial investments
- **Use of proxies:**

A proxy is calculated to obtain the percentage breakdown of men and women: at the end of the year, the entities communicate their own workers (permanent, fixed-term, young jobs) where the information is available. A proportion of male/female is calculated on the basis of this file with regard to the M/F breakdown of the own workers for year Y-1.

3.1.5.14.5 (S1-10) Adequate wages - Natixis

- **Scope of coverage**:
- France & International managed scope;
- AWM entities with manual collection.

3.1.5.14.6 (S1-12) Persons with disabilities - Natixis

- **Scope of coverage:**
- France managed scope (in first year of disclosure).

Note: from the second year of disclosure, the metric will be published at the level of the World scope.

3.1.5.14.7 (S1-13) Training and skills development metrics - Natixis

- **Performance assessment**
- **Scope of coverage:**
- France & International managed scope
- Scope of financial investments
- **Training hours completed in 2024**
- **Scope of coverage:**
- France managed scope

3.1.5.14.8 (S1-14) Health and safety metrics - Natixis

- **Health and Safety Management System**
- **Scope of coverage:**
- France managed scope
- International managed scope: entities with the largest number of own workers
- AWM entities with manual collection
- Scope of financial investments
- **Work-related accident frequency rate**
- **Scope of coverage:**
- France managed scope
- International managed scope: entities with the largest number of own workers
- AWM entities with manual collection
- Scope of financial investments

3.1.5.14.9 (S1-15) Work-life balance metrics - Natixis

- **Scope of coverage:**
- France managed scope

3.1.5.14.10 (S1-16) Pay metrics (pay gap and total remuneration) - Natixis

- **Scope of coverage:**
- France & International managed scope
- AWM entities with manual collection
- Scope of financial investments

3.2 S2 - Workers in the value chain

3.2.1 SBM-2 - Interests and views of stakeholders

See the corresponding section in Groupe BPCE's sustainability report.

3.2.2 SBM-3 - Material impacts, risks and opportunities and interaction with strategy and business model

See the corresponding section in Groupe BPCE's sustainability report.

3.2.3 Impact, risk and opportunity management

3.2.3.1 (S2-1) POLICIES RELATED TO VALUE CHAIN WORKERS

See the corresponding section in Groupe BPCE's sustainability report.

3.2.3.2 (S2-2) PROCESSES FOR ENGAGING WITH VALUE CHAIN WORKERS ABOUT IMPACTS

See the corresponding section in Groupe BPCE's sustainability report.

3.2.3.3 (S2-3) PROCESSES TO REMEDIATE NEGATIVE IMPACTS AND CHANNELS FOR VALUE CHAIN WORKERS TO RAISE CONCERNS

See the corresponding section in Groupe BPCE's sustainability report.

3.2.3.4 (S2-4) TAKING ACTION ON MATERIAL IMPACTS ON VALUE CHAIN WORKERS, AND APPROACHES TO MANAGING MATERIAL RISKS AND PURSUING MATERIAL OPPORTUNITIES RELATED TO VALUE CHAIN WORKERS, AND EFFECTIVENESS OF THOSE ACTIONS

See the corresponding section in Groupe BPCE's sustainability report.

3.2.4 Metrics and targets

3.2.4.1 (S2-5) TARGETS RELATED TO MANAGING MATERIAL NEGATIVE IMPACTS, ADVANCING POSITIVE IMPACTS, AND MANAGING MATERIAL RISKS AND OPPORTUNITIES

See the corresponding section in Groupe BPCE's sustainability report.

3.3 S3 - Affected communities

3.3.1 SBM-2 - Interests and views of stakeholders

See the corresponding section in Groupe BPCE's sustainability report.

3.3.2 SBM-3 - Material impacts, risks and opportunities and interaction with strategy and business model

See the corresponding section in Groupe BPCE's sustainability report.

See the corresponding section in Groupe BPCE's sustainability report.

3.4.3.4 (S4-4) TAKING ACTION ON MATERIAL IMPACTS ON CONSUMERS AND END-USERS, AND APPROACHES TO MANAGING MATERIAL RISKS AND PURSUING MATERIAL OPPORTUNITIES RELATED TO CONSUMERS AND END-USERS, AND EFFECTIVENESS OF THOSE ACTIONS

See the corresponding section in Groupe BPCE's sustainability report.

3.4.4 Metrics and targets

3.4.4.1 (S4-5) TARGETS RELATED TO MANAGING MATERIAL NEGATIVE IMPACTS, ADVANCING POSITIVE IMPACTS, AND MANAGING MATERIAL RISKS AND OPPORTUNITIES

See the corresponding section in Groupe BPCE's sustainability report.

PART 4 - Governance information

4.1 G1 - BUSINESS CONDUCT

4.1.1 Impact, risk and opportunity management

4.1.1.1 GOV-1 - THE ROLE OF THE ADMINISTRATIVE, MANAGEMENT AND SUPERVISORY BODIES

See the corresponding section in Groupe BPCE's sustainability report.

4.1.1.2 (IRO-1) DESCRIPTION OF THE PROCESSES TO IDENTIFY AND ASSESS MATERIAL IMPACTS, RISKS AND OPPORTUNITIES

See the corresponding section in Groupe BPCE's sustainability report.

4.1.1.3 (G1-1) CORPORATE CULTURE AND BUSINESS CONDUCT POLICIES

See the corresponding section in Groupe BPCE's sustainability report.

4.1.1.4 (G1-2) MANAGEMENT OF RELATIONSHIPS WITH SUPPLIERS

See the corresponding section in Groupe BPCE's sustainability report.

4.1.1.5 (G1-3) PREVENTION AND DETECTION OF CORRUPTION AND BRIBERY

See the corresponding section in Groupe BPCE's sustainability report.

4.1.2 Metrics and targets

4.1.2.1 (G1-4) CONFIRMED INCIDENTS OF CORRUPTION OR BRIBERY

See the corresponding section in Groupe BPCE's sustainability report.

4.1.2.2 (G1-6) PAYMENT PRACTICES

BPCE undertakes to comply with regulatory payment terms, in accordance with the legal definition, which stipulates a period of 60 days from the date of receipt of the goods or performance of the services. In 2024, 94.3% of payments (by amount) met this commitment.

In addition, BPCE complies with the policy implemented by the Group to pay suppliers within 30 days (from the date on which the contractual or statutory payment period begins to run), and the average payment period complies with this requirement, and amounts to 27.38 days.

Finally, there are no ongoing legal proceedings concerning late payments.

Background information on the published indicators (MDR-M):

The average payment term for invoices paid in 2024 includes all invoices paid between January 1 and December 31, 2024, regardless of their date of issue. Expense claims are not taken into account in this analysis.

The payment term is calculated as the difference between the issue date (i.e. not from the date of receipt or recognition) and the settlement date.

Several indicators resulting from this analysis are monitored on a quarterly basis, among which the most significant are: the average payment term (expressed in days) and the total amount of invoices paid after 60 days.

The objective is to achieve the lowest possible values for these two indicators, and thus comply with the regulations in force.

LIMITATION ON PUBLISHED INFORMATION:

The indicator "description of the company's standard payment terms (in number of days) by major supplier category and the percentage of payments made within these terms", corresponding to the publication requirement of paragraph 33b of DR G1-6 of the CSRD standard is not published. BPCE is not in a position to publish this indicator for the 2024 reference year, given the unavailability of data.

An action plan will be put in place to meet the disclosure requirement.

PART 5 - INDICATORS OF THE EUROPEAN TAXONOMY ON SUSTAINABLE ACTIVITIES

It should be noted that for the Petit Groupe BPCE, we do not have the taxonomy data for 2023. As a result, we failed to publish the corresponding columns, which are empty.

Template 0 - Summary of KPIs to be disclosed by credit institutions under Article 8 Taxonomy Regulation

		Total environmentally sustainable assets	KPI****	KPI*****	% coverage (over total assets)***	% of asset excluded from the GAR (Article 7 (2) and (3) and Section 1.1.2 of Annex V)	% of assets excluded from the denominator of the GAR (Article 7 (1) and Section 1.2.4 of Annex V)
Main KPI	Green asset ratio (GAR) stock	2,918	0.60%	0.73%	58.18%	46.94%	41.82%

		Total environmentally sustainable activities	KPI	KPI	% coverage (over total assets)	% of asset excluded from the GAR (Article 7 (2) and (3) and Section 1.1.2 of Annex V)	% of assets excluded from the denominator of the GAR (Article 7 (1) and Section 1.2.4 of Annex V)
Additional KPIs	GAR (flow)	453	1.15%	1.67%	83.91%	58.39%	16.09%
	Trading book*						
	Financial guarantees	2,358	5.84%	7.34%			
	Assets under management	9,688	0.86%	0.70%			
	Fees and commissions received**						

* For credit institutions not fulfilling the conditions of Article 94 (1) or Article 325a (1) of the CRR.

** Fees and commissions on services other than loans and asset management.

Institutions shall provide forward-looking information for these KPIs, in particular on the targets concerned, and relevant explanations of the method applied.

*** Percentage of assets covered by the KPI, compared to total banking assets.

**** Based on the KPI of the counterparty's turnover.

***** Based on the KPI of the counterparty's CapEx, except for general lending activities, for which the turnover KPI is used.

1. This template shall include information for loans and advances, debt securities and equity instruments in the banking book, towards financial corporates, non-financial corporates (NFC), including SMEs, households (including residential real estate, house renovation loans and motor vehicle loans only) and local governments/municipalities (house financing).

2. The following accounting categories of financial assets should be considered: Financial assets at amortised cost, financial assets at fair value through other comprehensive income, investments in subsidiaries, joint ventures and associates, financial assets designated at fair value through profit or loss and non-trading financial assets mandatorily at fair value through profit or loss, and real estate collaterals obtained by credit institutions by taking possession in exchange in of cancellation of debts.

3. Banks with non-EU subsidiary should provide this information separately for exposures towards non-EU counterparties. For non-EU exposures, while there are additional challenges in terms of absence of common disclosure requirements and methodology, as the EU taxonomy and the NFRD apply only at EU level, given the relevance of these exposures for those credit institutions with non-EU subsidiaries, these institutions should disclose a separate GAR for non-EU exposures, on a best effort basis, in the form of estimates and ranges, using proxies, and explaining the assumptions, caveats and limitations.

4. For motor vehicle loans, institutions shall only include those exposures generated after the date of application of the disclosure.

1. This template shall include information for loans and advances, debt securities and equity instruments in the banking book, towards financial corporates, non-financial corporates (NFC), including SMEs, households (including residential real estate, house renovation loans and motor vehicle loans only) and local governments/municipalities (house financing).

2. The following accounting categories of financial assets should be considered: Financial assets at amortised cost, financial assets at fair value through other comprehensive income, investments in subsidiaries, joint ventures and associates, financial assets designated at fair value through profit or loss and non-trading financial assets mandatorily at fair value through profit or loss, and real estate collaterals obtained by credit institutions by taking possession in exchange in of cancellation of debts.

3. Banks with non-EU subsidiary should provide this information separately for exposures towards non-EU counterparties. For non-EU exposures, while there are additional challenges in terms of absence of common disclosure requirements and methodology, as the EU taxonomy and the NFRD apply only at EU level, given the relevance of these exposures for those credit institutions with non-EU subsidiaries, these institutions should disclose a separate GAR for non-EU exposures, on a best effort basis, in the form of estimates and ranges, using proxies, and explaining the assumptions, caveats and limitations.

4. For motor vehicle loans, institutions shall only include those exposures generated after the date of application of the disclosure.

1. In this template, credit institutions provide information on the exposures of the banking book to sectors covered by the taxonomy (level 4 of NACE sectors), using the relevant NACE codes for the counterparty's main activity.

2. The attachment of the counterparty to a NACE sector is based exclusively on the nature of the direct counterparty. The classification of exposures jointly concerning more than one debtor is based on the characteristics of the debtor that was the most relevant, or the most significant, for the authorization of the exposure by the institution. The breakdown by NACE code of the exposures incurred jointly depends on the characteristics of the most relevant or significant debtor. The information is published by the institutions by NACE code with the level of detail required in the template.

293	NACE code not identified												

1. In this template, credit institutions provide information on the exposures of the banking book to sectors covered by the taxonomy (level 4 of NACE sectors), using the relevant NACE codes for the counterparty's main activity.

2. The attachment of the counterparty to a NACE sector is based exclusively on the nature of the direct counterparty. The classification of exposures jointly concerning more than one debtor is based on the characteristics of the debtor that was the most relevant, or the most significant, for the authorization of the exposure by the institution. The breakdown by NACE code of the exposures incurred jointly depends on the characteristics of the most relevant or significant debtor. The information is published by the institutions by NACE code with the level of detail required in the template.

293 NACE code not identified	483	-		

1. In this template, credit institutions provide information on the exposures of the banking book to sectors covered by the taxonomy (level 4 of NACE sectors), using the relevant NACE codes for the counterparty's main activity.

2. The attachment of the counterparty to a NACE sector is based exclusively on the nature of the direct counterparty. The classification of exposures jointly concerning more than one debtor is based on the characteristics of the debtor that was the most relevant, or the most significant, for the authorization of the exposure by the institution. The breakdown by NACE code of the exposures incurred jointly depends on the characteristics of the most relevant or significant debtor. The information is published by the institutions by NACE code with the level of detail required in the template.

1. The institution shall disclose in this template the GAR KPIs on stock of loans calculated based on the data disclosed in template 1, on covered assets, and by applying the formulas proposed in this template.

2. Information on the GAR (green asset ratio of ""eligible" activities) shall be accompanied with information on the proportion of total assets covered by the GAR.

3. Credit institutions can, in addition to the information included in this template, show the proportion of assets funding taxonomy relevant sectors that are environmentally sustainable (Taxonomy-aligned). This information would enrich the information on the KPI on environmentally sustainable assets compared to total covered assets.

4. Credit institutions shall duplicate this template for the information based on income received and CapEx.

1. The institution shall disclose in this template the GAR KPIs on stock of loans calculated based on the data disclosed in template 1, on covered assets, and by applying the formulas proposed in this template.

2. Information on the GAR (green asset ratio of '"eligible" activities) shall be accompanied with information on the proportion of total assets covered by the GAR.

3. Credit institutions can, in addition to the information included in this template, show the proportion of assets funding taxonomy relevant sectors that are environmentally sustainable (Taxonomy-aligned). This information would enrich the information on the KPI on environmentally sustainable assets compared to total covered assets.

4. Credit institutions shall duplicate this template for the information based on income received and CapEx.

Nuclear and fossil gas - Template 1 - Activities related to nuclear energy and fossil gas

Row	Nuclear energy related activities	
1.	The undertaking carries out, funds or has exposures to research, development, demonstration and deployment of innovative electricity generation facilities that produce energy from nuclear processes with minimal waste from the fuel cycle.	NO
2.	The undertaking carries out, funds or has exposures to construction and safe operation of new nuclear installations to produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production, as well as their safety upgrades, using best available technologies.	YES
3.	The undertaking carries out, funds or has exposures to safe operation of existing nuclear installations that produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production from nuclear energy, as well as their safety upgrades.	YES
	Fossil gas related activities	
4.	The undertaking carries out, funds or has exposures to construction or operation of electricity generation facilities that produce electricity using fossil gaseous fuels.	YES
5.	The undertaking carries out, funds or has exposures to construction, refurbishment, and operation of combined heat/cool and power generation facilities using fossil gaseous fuels.	YES
6.	The undertaking carries out, funds or has exposures to construction, refurbishment and operation of heat generation facilities that produce heat/cool using fossil gaseous fuels.	NO

2.4 Statutory Auditors' report on the BPCE sustainability report

Report on the certification of sustainability information and verification of the disclosure requirements under Article 8 of Regulation (EU) 2020/852

Year ended December 31, 2024

This is a translation into English of the statutory auditors' report on the certification of sustainability information and verification of the disclosure requirements under Article 8 of Regulation (EU) 2020/852 of the Company issued in French and it is provided solely for the convenience of English speaking users.

This report should be read in conjunction with, and construed in accordance with, French law and the H2A guidelines on "*Limited assurance engagement - Certification of sustainability reporting and verification of disclosure requirements set out in Article 8 of Regulation (EU) 2020/852*".

To the General Assembly

BPCE

7, promenade Germaine Sablon

75013 PARIS

This report is issued in our capacity as statutory auditors of BPCE group. It covers the sustainability information and the information required by Article 8 of Regulation (EU) 2020/852, relating to the year ended December 31, 2024 and included in section 2.3 "BPCE Sustainability report" in the chapter 2 of the universal registration document (below "BPCE Sustainability report").

Pursuant to Article L. 233-28-4 of the French Commercial Code, BPCE is required to include the above mentioned information in a separate section of the group management report. This information has been prepared in the context of the first time application of the aforementioned articles, a context characterized by uncertainties regarding the interpretation of the laws and regulations, the use of significant estimates, the absence of established practices and frameworks in particular for the double-materiality assessment, and an evolving internal control system. It enables an understanding of the impact of the activity of the group on sustainability matters, as well as the way in which these matters influence the development of the business of the group, its performance and position. Sustainability matters include environmental, social and corporate governance matters.

Pursuant to Article L.821-54 paragraph II of the aforementioned Code our responsibility is to carry out the procedures necessary to issue a conclusion, expressing limited assurance, on:

- compliance with the sustainability reporting standards adopted pursuant to Article 29 b of Directive (EU) 2013/34 of the European Parliament and of the Council of 14 December 2022 (hereinafter ESRS for European Sustainability Reporting Standards) of the process implemented by BPCE to determine the information reported, and compliance with the requirement to consult the social and economic committee provided for in the sixth paragraph of Article L. 2312-17 of the French Labour Code;
- compliance of the sustainability information included in BPCE Sustainability report included the group management report with the requirements of Article L. 233-28-4 of the French Commercial Code, including ESRS; and
- compliance with the reporting requirements set out in Article 8 of Regulation (EU) 2020/852.

This engagement is carried out in compliance with the ethical rules, including independence, and quality control rules prescribed by the French Commercial Code.

It is also governed by the H2A guidelines on "*Limited assurance engagement - Certification of sustainability reporting and verification of disclosure requirements set out in Article 8 of Regulation (EU) 2020/852*".

In the three separate sections of the report that follow, we present, for each of the sections of our engagement, the nature of the procedures that we carried out, the conclusions that we drew from these procedures and, in support of these conclusions, the elements to which we paid particular attention and the procedures that we carried out with regard to these elements. We draw your attention to the fact that we do not express a conclusion on any of these elements taken individually and that the procedures described should be considered in the overall context of the formation of the conclusions issued in respect of each of the three sections of our engagement.

Finally, where deemed necessary to draw your attention to one or more disclosures of sustainability information provided by BPCE in the BPCE Sustainability report, we have included an emphasis of matter paragraph hereafter.

Limits of our engagement

As the purpose of our engagement is to express limited assurance, the nature (choice of techniques), extent (scope) and timing of the procedures are less than those required to obtain reasonable assurance.

Furthermore, this engagement does not provide guarantee regarding the viability or the quality of the management of BPCE, in particular it does not provide an assessment, of the relevance of the choices made by BPCE in terms of action plans, targets, policies, scenario analyses and transition plans, which would go beyond compliance with the ESRS reporting requirements.

It does, however, allow us to express conclusions regarding the entity's process for determining the sustainability information to be reported, the sustainability information itself, and the information reported pursuant to Article 8 of Regulation (EU) 2020/852, as to the absence of identification or, on the contrary, the identification of errors, omissions or inconsistencies of such importance that they would be likely to influence the decisions that readers of the information subject to this engagement might make.

Any comparative information that would be included in the group management report are not covered by our engagement.

Compliance with the ESRS of the process implemented by BPCE to determine the information reported, and compliance with the requirement to consult the social and economic committee provided for in the sixth paragraph of Article L. 2312-17 of the French Labour Code

Nature of procedures carried out

Our procedures consisted in verifying that:

- the process defined and implemented by BPCE has enabled it, in accordance with the ESRS, to identify and assess its impacts, risks and opportunities related to sustainability matters, and to identify the material impacts, risks and opportunities, that lead to the publication of information disclosed in the BPCE Sustainability report, and
- the information provided on this process also complies with the ESRS.

We also checked the compliance with the requirement to consult the social and economic committee.

Conclusion of the procedures carried out

On the basis of the procedures we have carried out, we have not identified any material errors, omissions or inconsistencies regarding the compliance of the process implemented by BPCE with the ESRS.

Concerning the consultation of the social and economic committee provided for in the sixth paragraph of Article L. 2312-17 of the French Labour Code we inform you that as of the date of this report, this consultation has not yet been held.

Emphasis of matter

Without qualifying the conclusion expressed above, we draw your attention to the information provided in:

- the paragraph "Introductory remarks" of the BPCE Sustainability report, which recalls the existence of two scopes for publishing sustainability information (BPCE and Groupe BPCE) and the reasons why the sustainability report for the BPCE scope refers to the sustainability report of the Groupe BPCE scope, as well as the modalities of these references, and specifies that the double materiality analysis for these two scopes is identical.
- paragraph 1.1.2.3 "Sources of estimation and outcome uncertainty" which refers to the corresponding section in the Groupe BPCE Sustainability report, for which we make the same observation as for the Groupe BPCE scope, concerning the uncertainty and limitations related to the methodologies used to perform the double materiality analysis regarding the thematic standards E2, E3, E4, and E5 (pollution, aquatic and marine resources, biodiversity and ecosystems, and resource use and circular economy) for the year 2024.

Elements that received particular attention

We set out below the elements that have been the subject of particular attention in relation to our assessment of compliance with the ESRS of the process implemented by BPCE to determine the information reported.

- Concerning the identification of stakeholders

Information on the identification of stakeholders is set out in section 1.2.2 SBM-2 - Interests and views of stakeholders of the BPCE Sustainability report.

We interviewed management and others within the entity as appropriate and inspected available documentation.

We also assessed the consistency of the primary stakeholders identified by BPCE in view of the nature of its activities and its geographical location, taking into account its business relationships, its cooperative dimension and value chain

- Concerning the identification of impacts, risks and opportunities

Information on the identification of impacts, risks and opportunities is provided in section 1.4.1 "IRO-1 - Description of the processes to identify and assess material impacts, risks and opportunities" of the BPCE Sustainability report.

We obtained an understanding of the process implemented by BPCE to identify actual or potential impacts – both negative and positive – risks and opportunities (IROs), in relation to the sustainability matters mentioned in paragraph AR 16 of ESRS 1, "Application requirements", and where applicable, those specific to BPCE, as presented in the above cited note.

In particular, we assessed the approach taken by BPCE to determine its impacts and dependencies, which may be a source of risks or opportunities, including the dialogue undertaken, where appropriate, with stakeholders.

We obtained an understanding of the group's mapping of identified IROs, including a description of their distribution within the group's own operations and its value chain, as well as their time horizon (short, medium or long term), and assessed the consistency of this mapping with our knowledge of BPCE group and, where applicable, with the risk analyses conducted by BPCE.

- Concerning the assessment of impact materiality and financial materiality

Information on the assessment of impact materiality and financial materiality is provided in section 1.4.1 "IRO-1 - Description of the processes to identify and assess material impacts, risks and opportunities" of the BPCE Sustainability report.

Through interviews with management and inspection of available documentation, we obtained an understanding of the process implemented by the entity to assess impact materiality and financial materiality, and assessed its compliance with the criteria defined in ESRS 1.

In particular, we assessed the way in which BPCE established and applied the materiality criteria defined in ESRS 1, including those relating to the setting of thresholds, in order to determine the following material information reported:

- metrics relating to material IROs identified in accordance with the relevant ESRS standards;
- entity-specific disclosures.

Compliance of the sustainability information included in BPCE Sustainability report with the requirements of Article L.233-28-4 of the French Commercial Code, including the ESRS

Nature of procedures carried out

Our procedures consisted in verifying that, in accordance with legal and regulatory requirements, including the ESRS:

- the disclosures provided enable an understanding of the general basis for the preparation and governance of the sustainability information included in BPCE Sustainability report, including the basis for determining the information relating to the value chain and the exemptions from disclosures used;
- the presentation of this information ensures its readability and understandability;
- the scope chosen by BPCE for providing this information is appropriate; and
- on the basis of a selection, based on our analysis of the risks of non-compliance of the information provided and the expectations of users, that this information does not contain any material errors, omissions or inconsistencies, i.e. that are likely to influence the judgement or decisions of users of this information.

Conclusion of the procedures carried out

Based on the procedures we have carried out, we have not identified material errors, omissions or inconsistencies regarding the compliance of the sustainability information included in BPCE Sustainability report, with the requirements of Article L.233-28-4 of the French Commercial Code, including the ESRS.

Emphasis of matter

Without qualifying the conclusion expressed above, and in connection with the statement made above regarding the paragraph "Introductory remarks" concerning the scope of publication of sustainability information for BPCE and Groupe BPCE, we draw your attention to:

- the paragraph "Introductory remarks", which specifies that the greenhouse gas emission reduction targets are calculated only for the Groupe BPCE scope, as an integral part of the transition strategy covering the entire group scope;paragraph 2.2.4.2 "(E1-6) gross scopes 1, 2, 3 and total ghg emissions" which outlines the calculation of financed emissions related to the value chain (category 15 of scope 3 according to the *GHG protocol*) as well as the limitations related to data availability, assumptions used, and methodologies applied to determine estimates related to decarbonization targets and the greenhouse gas emissions balance.

Elements that received particular attention

- Information provided in application of the standards relating to general requirements and general disclosure (ESRS 1 – Climate change))

We set out below the elements that have been the subject of particular attention in relation to our assessment of compliance with the ESRS of the following information disclosed in the paragraphs 2.2.3.1 "(E1-1) Transition plan for climate change mitigation" and 2.2.4 "Metrics and targets".

With regard to the information published on the greenhouse gas emissions (ESRS E1-6), as mentioned in the paragraph 2.2.4.2 "(E1-6) Gross scopes 1, 2, 3 and total ghg emissions", our work consisted primarily of:

- obtaining an understanding of the process, methods, frames, data and estimates used by BPCE to prepare the information (including procedures and internal control);
- with regard to Scope 3 emissions (categories 1, 2 and 6) regarding BPCE own operations:
  - assessing the appropriateness of the emission factors used and the calculation of the related conversions, taking into account the uncertainty inherent in the state of scientific or economic knowledge and the quality of the external data;
  - reconciling physical data, on a sample basis, to the underlying data used to draw up the greenhouse gas emissions assessment and tracing to supporting documents
- with regard to financed emissions(scope 3, category 15 of *GHG Protocol*) :
  - Understanding the scope of covered assets as described and assess its justification in regard of the applicable framework;
  - Verifying that the base used for computing financed emissions corresponds to the scope of covered assets as described in note 2.2.4.2 and reconciling it with the consolidated general balance
  - assessing the appropriateness of the method for determining estimates, including the sectoral proxies chosen;
  - verifying the accuracy of the calculations used to prepare this information on a sample basis.

Compliance with the reporting requirements set out in Article 8 of Regulation (EU) 2020/852

Nature of procedures carried out

Our procedures consisted in verifying the process implemented by BPCE to determine the eligible and aligned nature of the activities of the entities included in the consolidation.

They also involved verifying the information reported pursuant to Article 8 of Regulation (EU) 2020/852, which involves checking:

- the compliance with the rules applicable to the presentation of this information to ensure that it is readable and understandable;
- on the basis of a selection, the absence of material errors, omissions or inconsistencies in the information provided, i.e. information likely to influence the judgement or decisions of users of this information.

Conclusion of the procedures carried out

Based on the procedures we have carried out, we have not identified any material errors, omissions or inconsistencies relating to compliance with the requirements of Article 8 of Regulation (EU) 2020/852.

Emphasis of matters

Without qualifying the conclusion expressed above, and in connection with the statement made above regarding the paragraph "Introductory remarks" concerning the scope of publication of sustainability information for BPCE and Groupe BPCE, we draw your attention to the information in paragraph 2.1 "Indicators of the European taxonomy on sustainable activities" of the BPCE Sustainability report, which refers to sections 2.1 and 5 "Indicators of the European taxonomy on sustainable activities" of the Groupe BPCE Sustainability Report, for which we make the same statements as for the Groupe BPCE scope, regarding:

- the main methodological assumptions used to assess the alignment of loans granted to individuals;
- the main existing limitations in the presentation of information, including those concerning the presentation of cash flow information regarding the KPI on off-balance-sheet exposures.

Elements that received particular attention

We concluded that there are no elements that received particular attention to report.

Done at Neuilly-sur-Seine and Paris La Défense, March 21, 2025

3 DUTY OF CARE PLAN

3.1 Duty of Care plan

3.1.1 Purpose of the Duty of Care

French Act No. 2017-399 of March 27, 2017 on the Duty of Care of parent companies and ordering companies requires the establishment and effective implementation of a Duty of Care plan. The plan includes reasonable vigilance measures to identify risks and prevent serious violations of human rights and fundamental freedoms, health and safety of people and the environment, resulting from the company's activities and those of the companies it controls, as specified below, as well as the activities of suppliers or subcontractors with which there is an established commercial relationship, when these activities are related to this relationship.

This plan must include risk mapping, measures to assess and mitigate the risks of serious harm, monitoring their implementation and an whistlebowing mechanism.

The act also requires the preparation of an annual report on the effective implementation of the Group's Duty of Care plan.

The main components of the Duty of Care plan and the report on its effective implementation are included in this chapter.

3.1.2 Scope

As a parent company, BPCE SA draws up a Duty of Care plan and reports on the effective implementation of this plan for itself and for the companies it directly or indirectly controls within the meaning of Article L. 233-16 II of the French Commercial Code. This entity will be referred below under the name "BPCE."

The list of subsidiaries under exclusive control is given in Note 13.4 to the consolidated financial statements of BPCE SA, Section 6.3 of the Universal Registration Document under point III-3 – BPCE subsidiaries (FC statutory consolidation method).

Where necessary, it should be noted that the Banques Populaires and the Caisses d'Epargne are not subsidiaries of BPCE SA, and therefore do not fall within the scope of this Duty of Care plan.

However, the process of preparing the plan is part of a global strategy to take into account environmental, social and governance (ESG) issues and risks within Groupe BPCE. Groupe BPCE is made up of the two major cooperative networks, Banque Populaire and Caisse d'Epargne, as well as BPCE, the collective bringing together the central institution and its departments, the Retail Banking business lines as well as the global business lines (Corporate & Investment Banking and Asset & Wealth Management). As numerous risk identification and prevention measures are implemented at this level, "Groupe BPCE" will be referred to several times in this plan.

3.1.3 Governance

The Duty of Care plan was prepared by the Impact department, the CSR departments of the business lines (Retail banking, Insurance, Global Business Lines), the Risk division, the Human Resources department, the Group Security department, BPCE Achats, the Compliance department and the Legal department. The effective implementation of the Duty of Care plan is placed under the responsibility of the business lines, subsidiaries and functional departments concerned.

In terms of ESG issues and risks, a cross-functional approach has been adopted, involving specialized committees chaired by the Chairman of BPCE's Management Board or one of the members of BPCE's Executive Management Committee (CDG). Issues related to the Duty of Care are regularly addressed: environmental transition, responsible employer, Conduct and Ethics reporting.

The 2024 Duty of Care plan was reviewed by the Executive Management Committee on March 11, 2025.

3.1.4 Plan development process

3.1.4.1 Guidelines

The Duty of Care plan is part of a continuous improvement process. It is subject to change in line with the results of regularly assessed risk mapping, changes in the activities carried out, financed or induced by the internal operations of the entities covered, and priority issues identified in terms of ESG.

The Duty of Care measures implemented by BPCE are based on Groupe BPCE's purpose: *"Resolutely cooperative, innovative and committed players, bankers and local insurers, Groupe BPCE's companies and employees support their cooperative shareholders and customers with financial solutions adapted to each individual and build sustainable and responsible relationships with them."*

In 2024, Groupe BPCE rolled out its strategic project VISION 2030, a growth project at the service of its customers and their support in the face of the challenges of the environmental, demographic, technological and geopolitical transitions. This commitment is reflected in an internal transformation plan and the mobilization of the strength of the Group's regional and international economic footprint, in order to support all players in the economy in their transitions and thus strengthen their positive impact on society and the environment. Sustainability, both environmental and societal, is therefore at the heart of Groupe BPCE's strategy.

Groupe BPCE is also committed to respecting and promoting human rights, which is one of the cornerstones of its corporate social responsibility (CSR).

Groupe BPCE is a signatory of the United Nations Global Compact and adheres to its "Ten Principles," including the two relating to Human Rights:

- *support and respect the protection of international proclaimed Human Rights*[1] *in its areas of activity and sphere of influence;*
- *make sure they are not complicit in Human Rights violations.*

It also builds on the guiding principles on business and Human Rights set out in the United Nations' "*Protect, Respect and Remedy*" framework.

These commitments were reaffirmed in Groupe BPCE's Human Rights Charter, validated by the Executive Management Committee in September 2024 and published on the Group's website: https://www.groupebpce.com/app/uploads/2025/02/01-25-charte-droits-humains-groupe-eng.pdf.

Lastly, as a responsible bank and company, Groupe BPCE places professional ethics at the heart of its operating model. Compliance with the rules of good conduct by employees enables each entity to carry out its activities honestly, loyally and professionally, and to serve the best interests of its customers. The Group's convictions and commitments have been set out in the form of "Principles" in Groupe BPCE's Code of Conduct and Ethics Standards: https://www.groupebpce.com/app/uploads/2024/02/Code_of_conduct-EN-4.pdf.

3.1.4.2 Contributions

BPCE's Duty of Care plan is based on contributions from all of its internal and external stakeholders.

Among the internal stakeholders, the departments concerned *(Governance)* are also responsible for monitoring the risk mitigation and remediation measures. The employees, directors and cooperative shareholders are consulted *via* questionnaires.

The system for consulting external stakeholders was strengthened in 2024, through the improvement of customer and supplier questionnaires. Regular discussions are held with investors, NGOs and trade unions.

The dialog implemented with all stakeholders feeds into the identification and assessment of ESG impacts and risks and makes it possible to measure the effectiveness of the measures implemented by BPCE to prevent potential harm to the environment, human rights, health and safety in the exercise of its Duty of Care.

3.1.5 Risk mapping

To establish the Duty of Care plan, BPCE's activities are subject to a risk analysis to identify potential serious violations of human rights and fundamental freedoms, health and safety of people and the environment.

The following challenges have been identified:

Human rights and fundamental freedoms	Discrimination, harassment, infringement of equality, respect for private and family life, the right to strike, freedom of assembly and association as well as infringement of freedom of opinion, non-compliance with legal working conditions (including forced labor, child labor), infringement of the right to decent remuneration and social protection.
Health and safety of people	Health risk, harm to the safety of workers and unequal access to the right to health, harm to personal data protection.
Environment	Damage to the fight against global warming, damage to biodiversity, the risk of pollution (water, air, soil), poor waste management, risk of damage to natural resources.

The scope of the vigilance approach is based on three pillars:

- "Employees": responsible management of employees in their work;
- "Purchasing": deployment of a responsible purchasing policy with suppliers and subcontractors with whom BPCE has an established commercial relationship;
- "Activities": prevention of negative ESG impacts related to BPCE's activities in its banking and insurance business lines.

(1) This responsibility relates to the internationally recognized human rights set out in the International Bill of Human Rights and the principles set out in the International Labour Organization's Declaration on Fundamental Principles and Rights at Work.

3.1.6 Employee pillar

On December 31, 2024, 34,591 employees were working for BPCE, 9,385 of them outside France. Natixis groups together the Group's global business lines (Corporate & Investment Banking and Asset & Wealth Management) and employs 16,299 people.

3.1.6.1 Identification and prioritization of risks: risk mapping

In order to identify and prevent risks of infringement of the human rights, fundamental freedoms, health and safety of its employees, BPCE relies on appropriate risk assessment systems.

The systems for listening to employees and the whistleblowing mechanism[1] also contribute to the identification of potential risks in this area.

In terms of its employee relations, BPCE's areas of vigilance include: working conditions; health and safety at work; diversity, inclusion and prevention of discrimination; freedom of association and collective bargaining.

These issues are already strictly governed by the applicable regulations, notably in France, by labor law and by policies on the safety of people and property. BPCE has not identified any major risk of harm to its employees' human rights or health and safety.

Groupe BPCE is present in over 50 countries with very contrasting levels of risk in terms of human rights, health and safety. A review was carried out at Natixis's sites, where most of the Group's international employees work.

A map has been drawn up to identify more specifically the risks relating to working conditions, discrimination and personal safety at the various Natixis sites. These assessments are based on recognized external databases, such as ILO (International Labour Organization) statistics or the ITUC (International Trade Union Confederation) Global Rate Index.

In addition, the Security department is responsible for assessing risks (security, safety, health, natural disasters) in the countries where Group companies are based, using in particular a Travel Risk Management tool.

On the basis of these analyses, the sites with more than 50 employees within the Natixis scope that present a risk in terms of human rights, health and safety are as follows: Algeria, China, Hong Kong, India and the United Arab Emirates. These five sites accounted for 1,604 employees at the end of 2024, representing 9.9% of Natixis's worldwide headcount (including financial investments).

3.1.6.2 Risk prevention and mitigation measures

BPCE has a social foundation, made up of a set of voluntary charters, agreements and operational measures, ensuring the protection of employees, as well as the safety of individuals in the exercise of their profession.

All our companies assess occupational hazards and target appropriate preventive actions and solutions. Each has a Social and Economic Committee and a Health, Safety and Working Conditions Commission (CSSCT).

Working conditions

Groupe BPCE's commitments to its employees are enshrined in the Group's Human Rights charter.

In particular, Groupe BPCE:

- strives to create an inclusive and respectful environment, without distinction or discrimination, which promotes the well-being of its employees and offers remuneration that values employee commitment;
- ensures the implementation of an adequate prevention and protection system to guarantee health and safety at work and undertakes to protect the privacy of its employees and the confidentiality of their data in accordance with the applicable regulations;
- respects the rights of its employees to freedom of association and collective bargaining.

At Natixis' international operations, including in the five high-risk countries, the employees' working conditions comply with or improve local regulations, in particular:

- child labor and forced labor are strictly prohibited;
- working hours comply at least with the provisions of local law. In some locations, employees benefit from more favorable conditions, including the possibility of teleworking and having additional days off;
- salaries are above the local minimum and remuneration surveys are regularly carried out to verify their competitiveness in their reference market;
- maternity leave complies with local regulations or improves them;
- employees benefit from health protection in addition to local schemes.

Employee management policy

Employment management is carried out within the framework of collective agreements, which cover the following main themes: management of jobs and career paths (*gestion des emplois et des parcours professionnels* - GEPP); mandatory annual negotiations; quality of life and working conditions; health, welfare and retirement; safety of people and property at Groupe BPCE level.

Remuneration policy

The remuneration policy is based on the sharing and creation of value through health and personal protection, profit-sharing and incentive schemes. These schemes are negotiated at company level.

It also incorporates the fundamental objectives of professional equality and non-discrimination. In this respect, the Group ensures, in particular, equal treatment of women and men in terms of pay.

Health and quality of life at work

Within Groupe BPCE, quality of life at work and working conditions (QLWC) are about creating an environment that enables everyone to do a good job, so as to reconcile customer satisfaction, social progress and economic performance. Concrete actions are implemented to improve the quality of work, to facilitate the reconciliation of private and professional life, and to maintain the physical, mental and social well-being of our employees. Each Group company has appointed a QLWC contact.

(1) The act on the duty of care of parent companies and ordering companies requires the implementation of a whistleblowing and reporting mechanism.

Since 2009, several QLWC agreements have been signed within the Group:

- agreements on stress measurement and prevention;
- agreements on working conditions;
- agreements to expand the possible fields of intervention by articulating all QLWC topics to facilitate the implementation at the local level of each company;
- agreements including new provisions on occupational health, workload regulation and support for managers.

To better support sensitive situations (chronic illnesses, family caregivers, single parenthood, etc.), companies are implementing increasingly comprehensive systems covering a wide range, from information to financial support, including training, administrative assistance, psychological support, better organization of work, maintaining ties during long-term absences and preparing for a return to work. Twenty-six Groupe BPCE companies, including BPCE SA, Natixis and Banque Palatine, are signatories of the Cancer@Work charter.

Psychosocial risks related to work/life balance are monitored as part of the occupational risk management program. Lastly, since 2017, BPCE SA has been a signatory of the Charter of Fifteen Commitments to Lifetime Balance, and in 2020 it signed a collective agreement with the representative trade unions on new ways of organizing work and their consequences on working conditions.

Health and safety at work

Supervision of the safety of people and property is carried out by the Group Security department within the Group’s Corporate Secretary’s Office. Each year, it draws up an inventory and assessment of risks (including fire, assault, traffic, biological, chemical, heatwave and extreme cold). Property safety covers security risks (theft and damage) and major risks (fire, industrial and natural hazards).

It draws up and implements annual plans for the prevention and improvement of working conditions, and monitors claims by means of indicators at company level and for Groupe BPCE as a whole[1]. Incident management is based on the implementation of resources for monitoring, detecting and dealing with emergencies.

A global approach to occupational risk prevention, common to the Group’s institutions, has been implemented since 2021.

It relies in particular on a management tool with full functional coverage. Multi-disciplinary teams can interact and share elements contributing to the improvement of occupational risk prevention: such as: Single Document – Action Plans – Safety Visits – Workstation Instructions – Training – Workplace Accidents/Occupational Illnesses – Incivilities – Periodic Checks – Statistics.

International subsidiaries with local regulations specifying the controls to be carried out are also concerned by the deployment of Groupe BPCE’s permanent controls for the health and safety of people and property.

Within the Groupe BPCE scope, there were 1,166 workplace accidents with lost time in 2024 (*vs.* 923 in 2023).

Diversity, inclusion and prevention of discrimination and harassment

For several years now, Groupe BPCE has been committed to promoting diversity, as illustrated by the signature of various charters and the implementation of specific measures:

- The Diversity Charter, signed in 2010, encourages companies to promote and respect diversity in their workforce;
- The AFNOR professional equality label obtained for some of our companies, the signature of professional equality agreements and the Diversity Charter in 2021;
- The deployment since 2006 of a policy designed to promote the social and professional integration of people with disabilities; reinforced by the signature of several agreements and the AGEFIPH Charter, for example;
- The existence of alert procedures for reporting acts of harassment or discrimination and appointment of specially-trained HR and SEC harassment officers;
- The signing of a group “management of employment and career paths” (GEPP) agreement in 2022, making intergenerational balance a priority through quantified commitments; the signing, in 2024, of the Landoy charter to promote the employment of people over 50;
- The support for the All Equals network and the signature by BPCE’s Executive Management Committee, in 2024, of the “L'Autre Cercle” charter, encouraging companies to guarantee the promotion and respect of LGBT+ diversity in their workforce.

Within Groupe BPCE, in 2024, the proportion of female senior managers was 36%. The equal pay index is 92/100 (stable *vs.* 2023).

Indicators such as the employment rate of disabled people (6.37% for Groupe BPCE in 2023 *vs.* 6% in 2021) are also monitored.

Freedom of association and collective bargaining

At Groupe BPCE level, the dialog with employee representatives takes place through three main bodies, bringing together the employee representatives and management of the entities concerned:

- the Group Works Council, a forum for information, exchange and dialog;

- the Strategy Committee, a forum for sharing on the strategic plan and the overall vision of the Group;

- the body for negotiating agreements, bringing together the three representative trade unions at Group level.

It is also supported by annual follow-up commissions concerning the GEPP and the career paths of mandated employees.

Protection of the personal data of employees

In accordance with the Group’s data protection policy, an information notice on the processing of employee personal data has been published. This information notice has been disseminated within each entity within the scope of Groupe BPCE’s supervision.

(1) The Group’s security policy applies to all Groupe BPCE companies, in France and abroad, to all permanent employees and temporary staff working within these companies, or authorized to access the group’s assets, contractually or through agreements, to service providers or other essential activities.

3.1.6.3 System for monitoring the measures implemented

BPCE assesses the satisfaction and well-being of its employees by means of feedback systems which, by giving employees a voice, make it possible to identify the consequences for the workforce of the ongoing transformations. This overview of impacts makes it possible to guide the support plan and, if necessary, to adjust the transformation.

Employee commitment is measured every two years through the Groupe BPCE Diapason survey developed with IPSOS. Other feedback systems and surveys are proposed on an *ad hoc* or regular basis, such as YourPulse, to assess employee satisfaction and well-being.

The results, shared with employees, help to better define their expectations and give rise to action plans. Complementary reporting systems enable employees to report problems in their work/life balance at any time.

These systems enable BPCE to prevent any risk of infringement of human rights, fundamental freedoms, health and safety, as well as to measure the effectiveness of the policies and actions implemented.

3.1.7 Purchasing pillar – suppliers and subcontractors

3.1.7.1 Identification and prioritization of CSR risks: mapping

As part of an AFNOR-supported initiative, BPCE Achats & Services and three other banking groups have drawn up a CSR risk map based on a common nomenclature comprising over 100 purchasing categories (142 in 2023).

The level of risk for each purchasing category is assessed with a focus on three areas:

- fair practices and ethics: fraud and corruption, personal data protection, property rights and patents;
- human rights and social conditions: child labor, forced labor and modern slavery, discrimination, health and safety, working conditions and freedom of association;
- environment: climate change and greenhouse gases, loss of biodiversity, depletion of natural resources, pollution, waste and end-of-life management.

Presented to the Purchasing and CSR departments from 2018 and associated with the Duty of Care plan, this mapping makes it possible to identify, rank and prioritize, by purchasing category, the CSR risks to be monitored with suppliers. It also incorporates the risk associated with the country in which the majority of the added value on each product and service is generated. This mapping is continuously updated by AFNOR.

Each purchasing category is assessed on a scale of four CSR risk levels: low, limited, high, very high. To assess the level of risk, the AFNOR expert takes into account the probability and potential severity of the risk for each factor.

Purchasing categories identified as carrying a high or very high CSR risk include work on buildings, waste recycling, IT equipment, vehicles, promotional items, ATMs, energy, air travel, furniture.

3.1.7.2 Risk prevention or mitigation measures

BPCE Achats & Services deploys a responsible purchasing policy, which involves the suppliers and subcontractors with which Groupe BPCE maintains commercial relations. This policy is based on the following principles of action: integration of CSR criteria at every stage of the purchasing process, assessment of suppliers' CSR performance, assessment of the environmental impact of purchasing projects, promotion of the economic and social development of the local economic fabric, development of the use of inclusive suppliers[1].

The action plans implemented by BPCE Achats & Services as part of its responsible purchasing policy involve suppliers in the implementation of the vigilance measures. The Banking & Insurance" Sector's responsible purchasing charter, a reference document for tender documents, formalizes the commitments taken by the signatories, including Groupe BPCE and their expectations with regard to their suppliers.

On July 9, 2024, the committee for awarding the Responsible Supplier Relations and Purchasing Label (*Label Relations Fournisseurs et Achats Responsables* - RFAR) - composed of the Business Mediation Department, reporting to the French Ministry of the Economy and Finance, and the National Purchasing Council (*Conseil national des achats* - CNA) - awarded the Responsible Supplier Relations and Purchasing Label to BPCE Achats & Services.

Risk management system

The assessment of the CSR risks by BPCE Achats & Services is based in particular on:

- regular review of the CSR risk mapping for the various purchasing categories, in order to identify the level of risk in each category;
- the incorporation of CSR criteria adapted to the different purchasing categories in all calls for tenders;

(1) Social and inclusive company within the scope of the Social & Solidarity Economy (SSE) listed in a database established by the public inclusion market website.

- the incorporation of CSR criteria in the "Know Your Supplier" analysis of suppliers, particularly during their sourcing. The subjects of due diligence with regard to suppliers are as follows: monitoring of the dependency rate, payment terms, negative press, sanctions and the presence of politically exposed persons, and the fight against corruption.

Based on the risk assessment work, specific mitigation measures have been developed:

- in 2024, BPCE Achats & Services adopted an additional CSR risk mapping module. This AFNOR module makes it possible to identify and integrate CSR criteria specific to the purchase category into specifications;
- for high-risk and very high-risk purchasing categories, a specific system has been set up by BPCE Achats & Services within the framework of the consultations it leads: suppliers must answer a sector-specific questionnaire and communicate the actions taken to mitigate risks and prevent serious harm. This action plan, assessed by BPCE Achats & Services, generates a rating that is significantly integrated into the supplier's overall score. Depending on the results, an improvement plan is established with the chosen suppliers, subject to review six months later;
- for the other purchasing categories, CSR requirements are gradually being implemented in the consultations;
- professionalization of the Purchasing function, through the gradual dissemination of best practices and the roll-out of training programs: in particular, all purchasers have been trained on the CSR issues and risks identification tool covering all 142 purchasing categories.

Contractual guarantees

BPCE Achats & Services systematically includes clauses in its contracts to ensure that its suppliers and their subcontractors comply with all regulations relating to fundamental rights and freedoms, health and safety of people, social and labor regulations, and environmental regulations that are applicable to it, be they of contractual (company agreements, business unit agreements, collective agreements), national, European or international origin. The supplier must justify this at the Groupe BPCE's request. BPCE Achats & Services also includes clauses in its contracts allowing workers employed by suppliers and their subcontractors to rely on the whistleblowing system set up within Groupe BPCE (*see Whistleblowing system in 3.1.9*) and to be explicitly informed by their employer of the existence of this system.

Audits may be carried out by BPCE Achats & Services to ensure that the elements declared by the supplier in the CSR questionnaire (notably with regard to working conditions) are compliant.

Since November 1, 2023, a Carbon clause has been added to all new contracts; its aim is to encourage suppliers to carry out a GHG emissions assessment or to co-construct with BPCE teams a plan to reduce the GHGs associated with the service.

Monitoring of the relationship

As part of its efforts to promote a sustainable and balanced relationship with suppliers, BPCE Achats & Services has set up regular meetings with the Group's strategic suppliers (defined in particular according to the volume of purchases, the criticality of the services delivered for the continuity of banking activities and/ or essential to the Group's development). These meetings aim to promote understanding of the supplier's strategy, its positioning and the potential developments that it anticipates.

Prevention and detection of corruption

Within the framework of the controls led by the French Anti-Corruption Agency (*Agence française anticorruption* - AFA) of the implementation of the obligations to prevent and detect corruption, which may impose sanctions, and in connection with the obligations of the so-called "Sapin 2" act, BPCE Achats & Services has set up a system to assess supplier risks. Several criteria are taken into account in respect of risks of probity shortcomings: sanctions, the presence of politically exposed persons (PEPs), negative press (fraud, corruption, etc.), country of establishment and business sector. Suppliers are classified by risk level. In the event of high risk, an additional questionnaire is sent to the supplier, whose answers are analyzed by a dedicated team. The implementation of this system was shared with the Crédit Agricole Group's Purchasing department, with the choice of Altares' IndueD platform. Any presence of the supplier on a national or international sanctions list is also taken into account.

3.1.7.3 System for monitoring the measures implemented

As part of the Responsible Supplier Relations and Purchasing Label, BPCE Achats & Services is formally committed to a continuous improvement plan in terms of responsible purchasing, which is audited annually by an approved auditor[1].

The effectiveness of the system is also measured using several annual indicators:

- the rate of consultations including the consideration of supplier CSR performance assessments;
- the compliance rate of purchasing files measured during internal controls.

The systems for monitoring the relationship, namely the meetings with strategic and important suppliers as well as the system for "listening to the voice of suppliers" make it possible to identify areas for optimization and to implement progress plans.

(1) The list of approved assessment bodies can be found on the website of the French Ministry of the Economy, Finance and Industrial and Digital Sovereignty.

3.1.8 Activities pillar - Customer relations and financing and investment activities

3.1.8.1 Identification and prioritization of risks: risk mapping

The areas in which BPCE's activities are likely to give rise to risks to human rights and fundamental freedoms, the health and safety of individuals and the environment are:

- corporate financing and investment activities;
- relations with individual customers, with two main challenges: customer protection (offer transparency, data security and confidentiality) and non-discrimination (offer accessibility and inclusive finance).

Groupe BPCE has developed an internal methodology for assessing ESG issues and risks, based on expert assessments. Each sector is assessed on the basis of the six environmental issues defined by the European taxonomy: mitigation – transition climate risk, adaptation – physical climate risk, biodiversity, pollution (other than greenhouse gases), water and the circular economy. The assessment is based on a double materiality analysis: impact on the activity of companies in the sector (financial materiality) and impact of the activity of companies in the sector on the environment and social aspects (impact materiality). An environmental sectoral classification follows from this assessment and identifies specific points of attention. Elements of a social and societal nature and sustainable governance enrich these sectoral analyses.

3.1.8.2 Risk prevention and mitigation measures

For several years, Groupe BPCE has been engaged in a transition, both as a company and as a player in the financing of the economy, notably through:

- the development of sectoral policies in sensitive sectors;
- the alignment of the financing and insurance portfolios with trajectories based on scientific scenarios compatible with the objectives of the Paris Agreement, as well as the decarbonization ambitions proposed by some of the group's asset management companies to their investor customers;
- the integration of ESG criteria in its financing and investment activities.

ESG policies in sensitive sectors

In order to mitigate the human and environmental impacts related to its activities, Groupe BPCE has for several years been developing sector policies, including exclusion and assessment criteria, to regulate its activities in the most sensitive sectors.

For the banking activities, these sector policies cover the thermal coal, oil and natural gas industries. Within the scope of Natixis, policies cover the defense industry as well as the tobacco industry. In the nuclear, mining and metals and palm oil sectors, Natixis also applies specific non-public policies.

For example, at the end of 2023, Groupe BPCE strengthened its criteria in the oil and gas sector by excluding:

- projects dedicated solely to bringing a new oil field into production, or related production or export infrastructure (new Floating Production Storage and Offloading (FPSO), platform or pipeline);
- exploration and production of oil from ultra-deepwater drilling;
- new "Greenfield" liquefied natural gas (LNG) production or export projects fueled by 25% or more shale gas.

For BPCE Assurances' activities, specific policies have also been defined in the coal, oil and gas, tobacco and defense sectors.

Similarly, certain affiliates of Natixis Investment Managers have adopted and published their own sector and/or exclusion policies.

Portfolio decarbonization trajectories

Groupe BPCE has defined action plans and decarbonization trajectories adapted to the economic sectors that have the highest greenhouse gas emissions, for its financing and insurance portfolios. The group sets its targets based on the scientific knowledge available at the date of decision-making and by taking into account scenarios compatible with the objectives of the Paris Agreement to limit global warming to +1.5°C by 2100 compared to pre-industrial levels. Achievement of these targets depends on many factors external to Groupe BPCE and, in particular, the decarbonization efforts of its customers, government policies in force and the development of low-carbon technologies, which are critical for long-term horizons.

The targets are listed *in chapter 2 of the Universal Registration Document, section 2.2.4 Metrics and targets* (E1-4) Targets related to climate change mitigation and adaptation.

Management of ESG impacts in financing activities

The management of environmental impacts is based on a set of methods, tools and processes used to initiate relationships and grant financing.

Credit policies

Groupe BPCE's credit policies include documentation of sectoral ESG issues and points of attention to guide the analysis of financing applications on these aspects when they are relevant for the sector. These elements are compiled from the ESG sector knowledge base and reviewed and enhanced in coordination with Groupe BPCE entities and institutions as part of the regular updating of credit policies.

When relevant, Groupe BPCE's credit policies refer to Groupe BPCE's proactive commitments (in particular, ESG policies in the coal and oil/gas sectors), requiring the exclusion criteria set in the context of credit decisions to be taken into account.

For the Natixis scope, restrictive criteria relating to ESG issues have been incorporated into certain sectoral credit policies relating to sectors that are particularly sensitive to these issues in the context of Natixis' activities. Natixis' credit sector policies also reflect the ESG policies specific to this scope, which also covers sensitive sectors from the point of view of social and governance issues such as defense and tobacco.

ESG risk rating of counterparties and transactions

As part of the Natixis credit granting process, a Green Weighting Factor (GWF) score is systematically allocated to corporate counterparties and at the transaction level in the case of dedicated financing.

This score is derived from an estimate of the impact of the transaction on the climate and incorporates criteria related to exposure to the risk of biodiversity loss and its pressure factors for the financing of customers in sectors where the impact on biodiversity is relevant (Key Biodiversity Areas).

Several subsidiaries of the Financial Solutions & Expertise division (SOCFIM, BPCE Lease – Crédit-Bail Immobilier) and Compagnie Européenne de Garanties et Cautions (CEGC) also include the dedicated GWF score for the financing of real estate transactions as part of their lending process. BPCE Factor, BPCE Lease, and CEGC also include the counterparties' non-financial ratings in the credit file when available.

In addition, work has been undertaken to develop an internal ESG risk rating methodology for SME/ISEs and Large Corporates, incorporating the specificities of each customer. This methodology, which is independent of the credit rating, will make it possible to systematically and consistently assess the level of ESG risk associated with a counterparty. The roll-out of this rating is planned from 2025.

Equator Principles (Natixis CIB)

As a signatory of the Equator Principles, Natixis applies a market methodology aiming to assess the environmental and social risks of the projects financed and the management of these risks by customers regardless of their sector of activity. Since October 2020, Natixis has applied the amended version of the Principles (EP Amendment IV), which includes more exhaustive criteria regarding respect for human rights (including the rights of indigenous communities) and requires the analysis of physical and transition climate risks.

Natixis also integrates an in-depth analysis of the impact on biodiversity into its project financing operations: in application of the Equator Principles, Natixis requires its customers to study all the potential risks and impacts of their projects from an environmental, social, health and safety perspective, and to implement all necessary means to minimize and correct potential impacts. Damage to biodiversity is an integral part of this vigilance. The quality of the impact studies and management systems put in place by the customer is taken into account in the project assessment. Carried out by an independent consultant, the assessment pays particular attention to the preservation of natural and critical habitats, in line with the regulatory framework applying to the project. For projects located in non-designated countries, additional actions are required to meet the conditions of the International Finance Corporation.

Specific analysis of sensitive transactions and ESG controversies (Natixis)

As part of the due diligence carried out when entering into a relationship with Large Corporate customers and in monitoring its portfolio customers, Natixis CIB takes into account potential controversies, in particular concerning ESG issues. In the event of significant risks, Groupe BPCE analyzes and manages the associated risks. In certain cases, Groupe BPCE may decide not to enter into a relationship or not to renew its commitments with the customer.

In addition, Natixis' risk department produces detailed analyzes of customers and transactions for which ESG issues are considered to be major. 1,864 transactions have been analyzed over the last three years (including 800 in 2024).

Management of ESG impacts in investment activities on behalf of third parties

Risk management and integration of ESG factors

Natixis Investment Managers (Natixis IM), along with 19 of its affiliated asset management companies[1] worldwide, representing a total of around €1,190 billion in assets under management, are signatories of the United Nations Principles for Responsible Investment (UNPRI). As such, they are committed to respecting the six PRI principles, including the incorporation of environmental, social and governance (ESG) factors into investment analysis and decision-making processes, and to actively engaging with companies by including sustainability issues in their engagement policies and practices.

For Natixis IM's asset management companies, the integration of ESG factors into the investment process leads to more informed decisions, a better understanding of corporate risks, the identification of sustainable investment trends, and the selection of companies that contribute to these trends.

It also meets regulatory requirements. The "UCITS"[2] and "AIFM"[3] directives require sustainability risk to be integrated into the investment process and to disclose how it is integrated. The "SFDR"[4] regulation requires European asset managers to disclose whether they take into account the main negative impacts of their investments on sustainability factors, thus reinforcing the consideration of financial materiality aspects.

At December 31, 2024, assets under management in articles 8 and 9[5] SFDR accounted for €530 billion of total assets managed by Natixis IM affiliates.

Each Natixis IM management companies is responsible for its investment process and for integrating ESG factors in compliance with their fiduciary duty.

Several Natixis IM management company affiliates have developed dedicated non-financial research capabilities and have integrated sustainability criteria into their investment decision-making models. For the management of listed assets, they rely on proprietary systems and raw data to establish their own scoring models and methodologies, which are then explained to customers. All Natixis IM management companies also use external data providers to complete their internal analyzes or to monitor ESG controversies.

(1) AEW (including AEW Capital), DNCA Finance, Mirova, Ostrum AM, Ossiam, Dorval AM, Vega IM, Thematics AM, Flexstone, MV Crédit, Naxicap, Seventure Partners, Vauban IP, Loomis Sayles, Harris Oakmark, Vaughan Nelson, IML, WCM and Ecofi.
(2) Directive 2009/65/ EC of the European Parliament and of the Council of July 13, 2009.
(3) Directive 2011/61/EU of the European Parliament and of the Council of June 8, 2011.
(4) Regulation (EU) 2019/2088 of the European Parliament and of the Council of November 27, 2019.
(5) Article 8: concerns products that notably promote environmental and/or social characteristics or a combination of these characteristics, provided that the companies in which the investments are made apply good governance practices, i.e. incorporation of ESG criteria in the investment decision-making process. Article 9: concerns financial products that pursue a sustainable investment objective assessed through indicators.

For private assets, all asset management companies carry out due diligence on companies or assets they invest in and collect information and indicators directly from them. These due diligences rely on external audits carried out in partnership with specialized consultants.

For example, as part of the pre-acquisition due diligence process for real estate assets, AEW and AEW Capital conduct a detailed review of environmental and technical risks. This assessment may include an energy, environmental or technical audit and a resilience audit. These asset management companies interact with local communities, developers, local authorities and external consultants to obtain the most comprehensive understanding possible of the risks and opportunities associated with the assets.

Vauban IP, an infrastructure specialist, assesses the impacts and climate risks of operations, from the pre-acquisition phase to the disposal, including annual reviews during the holding phase. It has entered into a partnership with the consulting firm Carbone 4 to carry out this assessment. As part of the due diligence process, Vauban IP also checks, where relevant, the social license to operate projects to ensure that the potential concerns of communities are taken into account. In addition, it collects data from portfolio companies to monitor their compliance with the main United Nations and OECD standards on modern slavery and human rights. This data is then audited as part of the proactive audit process of the SFDR report.

Naxicap, a private equity management company, carries out ESG due diligence during the pre-investment phase, in partnership with an external service provider. Particular attention is paid to the activities of the target company in sectors or countries at risk, taking into account its entire value chain, as well as its practices in recent years. In addition, Naxicap verifies the existence of material controversies likely to affect the Company's main stakeholders. Key ESG indicators are monitored post-investment using the annual ESG questionnaire shared with companies. Similar practices are followed by Seventure as part of its ESG due diligence and its regular monitoring.

Flexstone assesses significant environmental risks during the due diligence process including climate risks.[1] It also takes into account material social risks as part of this process, in particular by excluding any investment that does not comply with international human rights standards as well as active investments in high-risk sectors.

Responsible investment policies

The European asset management companies have developed responsible investment policies that explain their overall ESG approach, provide detailed guidance on the integration of environmental factors, and explain their sectoral policies and/or the minimum safeguards that they apply.

Depending on the different investment strategies[2], the European direct management companies ban controversial weapons from their investments, and have exclusion policies in the coal, non-conventional oil and gas, and tobacco sectors. Some affiliates have developed more restrictive exclusion policies, based on recognized reference frameworks for fossil fuels. The majority of asset management companies offering investment products in unlisted assets completely exclude fossil fuels.

All European direct listed asset management companies have defined minimum safeguards on the social issues to which their investments are subject, based on regulatory exclusions related to international standards.[3]

Private asset companies have also adopted these international standards or have adopted specific approaches to their investment universes by including, for example, clauses in real estate managers' contracts.

The majority of non-European affiliates[4] have developed a global responsible investment approach that formalizes their commitment to incorporating material ESG factors into their investment processes. They implement specific restrictions at the request of customers.

Engagement policy with portfolio companies

Beyond exclusion, Natixis IM sees engagement and dialogue with companies and issuers as significant levers for positively influencing corporate governance.

Natixis IM's European affiliated asset management companies have developed engagement and voting policies that encourage companies to transform their strategy and reduce their risks, while contributing to ESG issues. Engagement and dialog have also enabled Natixis IM's asset management companies to develop in-depth knowledge of the companies in which they invest, and in particular of the sustainability challenges they face.

Prevention of risks of infringement of the rights of individual customers

BPCE is subject to a set of laws and regulations relating to the fight against money laundering, criminal activities and the financing of terrorism, compliance with national and international sanctions measures (asset freezes, embargoes) and the fight against corruption (law known as "Sapin II"), or the protection of personal data. They form the basis of its management of non-compliance risks.

Internal policies aimed at preventing potential breaches that customers may suffer, particularly in terms of data protection and cybersecurity, complete this system.

Customer protection – Supervision of commercial practices

As part of the distribution of products and services to individual customers, the protection system includes a set of rules relating to the validation of the products marketed as well as the commercial processes (regardless of the channel used).

Employees must ensure that customers' interests are protected at all times and that they communicate transparently and with integrity. These principles are enshrined in Groupe BPCE's Code of Conduct and Ethical Standards.

A clear, transparent procedure for handling customer complaints enables each institution to track and analyze malfunctions by type. The feedback system is used as a complaints management tool and as a means of continuously improving the range of banking products and services.

(1) It is important to note that as a "Limited Partner" and minority investor, Flexstone does not have data on the climate risk profile of the underlying companies, unless such data is provided by the manager.
(2) For Ossiam, due to the quantitative management and monitoring of a benchmark index, these exclusions only concern products with ESG criteria and for AEW, exclusions for environmental criteria are put in place depending on the characteristics of the assets/buildings.
(3) United Nations Global Compact, United Nations Guiding Principles on Business and Human Rights and/or OECD Guidelines for Multinational Enterprises on Responsible Business Conduct.
(4) Excluding index management.

Complaints management focuses in particular on the grounds for complaint, the products and services concerned by these complaints and the processing times. Key indicators are regularly submitted to Groupe BPCE bank directors, Internal Control departments and all sales structures.

Personal data protection and prevention of cybersecurity risks

BPCE's vigilance measures are based on the Group's systems to prevent cyberthreats, preserve information systems, and protect personal data.

Personal data protection

BPCE strives to comply with the regulations in force, including the General Data Protection Regulation (GDPR), by implementing appropriate policies and procedures.

Groupe BPCE's data protection policy, which describes the standards related to the processing of personal data, applies to all entities.

To oversee matters related to the protection of personal data at the central level, a dedicated Executive Committee, on which four members of the BPCE Executive Management Committee are present or represented, has been established.

Moreover, all employees are required to follow a personal data protection awareness training course.

Information notices intended for customers and prospects of the network banks and Natixis are widely distributed and accessible to any person through the websites and applications. In particular, they describe the main processing operations carried out in compliance with the rules set by the GDPR, the rights that any natural person may exercise over their data as well as the points of contact.

Cybersecurity

The Group Information Systems Security Policy (ISSP-G) defines the guiding principles for IS protection and specifies the provisions to be complied with by all Groupe BPCE entities.

BPCE provides customers with various communication channels for reporting incidents and/or expressing their concerns and also carries out preventive actions to raise their awareness of the threats to which they may be exposed. "Security" pages are published on the institutional websites of Groupe BPCE's entities.

In terms of communication on cybersecurity attacks, procedures are in place to quickly inform customers and regulatory authorities in the event of a significant attack, in accordance with legal obligations.

3.1.8.3 System for monitoring the measures implemented

Each business line, subsidiary and functional department concerned ensures that the measures put in place effectively prevent potential serious harm to the environment, human rights, health and safety, related to BPCE's activities and identified through the risk monitoring tools.

Monitoring indicators make it possible to measure the progress made on the areas identified.

Lastly, different stakeholder consultation and discussion channels supplement this monitoring system.

3.1.9 Whistleblowing mechanism

The French Act on the Duty of Care of parent companies and ordering companies requires the implementation of a whistleblowing and reporting mechanism.

The whistleblowing system set up by Groupe BPCE as part of the fight against fraud and corruption has been extended to allow the reporting of facts falling within the scope of the Duty of Care. This system, applicable in all Group entities, is described in a procedure, updated in 2023, and approved by BPCE SA's SEC. It can be consulted on the Group's website (https://groupebpce.com/en/the-groupe/compliance/) and reports can notably be made on the secure Whispli platform (https://bpce.whispli.com/speakup?locale=en).

The whistleblowing system is open to all employees and third parties, who can express their concerns *via* a URL link if they are aware of serious violations of human rights and fundamental freedoms, personal health and safety, or the environment. This whistleblowing option is included in the internal rules and in the Groupe BPCE Human Rights charter. Moreover, a statistical reporting of alerts is presented to BPCE SA's ethics committee.

Groupe BPCE has chosen to equip itself with the same tool for all of the Group's institutions, regardless of the country in which they are based (Europe, United States, etc.) and regardless of the business line (Retail banking, Corporate & Investment Banking, etc.). Consequently, all the screens to which the whistleblower has access have been translated into more than 15 languages, in line with the countries in which Groupe BPCE is based.

Groupe BPCE entities protect whistleblowers. Under no circumstances may they be subject to any disciplinary action or legal proceeding, provided they have acted impartially and in good faith. The system implemented by Groupe BPCE offers every guarantee in terms of data security, complies with the highest standards in terms of confidentiality and respect for anonymity (encrypted data, impossibility of recovering whistleblowers' IP addresses, etc.), in compliance with the act of December 9, 2016, known as the "Sapin 2" act, as amended by act No. 2022-401 of March 21, 2022 aimed at improving the protection of whistleblowers.

In addition, an e-learning training program has been launched for all employees and new arrivals to support the roll-out of the tool and provide information on the rights and duties of a whistleblower, as well as the protection afforded to whistleblowers.

3.2 Report on the effective implementation of the vigilance plan

With the aim of making impact accessible to all, the Group has defined specific areas of action.

Since the entry into force of the act on the Duty of Care of parent companies and ordering companies, BPCE has improved its system aimed at preventing risks of harm to the environment, human rights and fundamental freedoms, the health and safety of people.

In the 2024 fiscal year, this approach was strengthened with the launch of the VISION 2030 strategic project, reaffirming Groupe BPCE's desire to support environmental and societal transitions.

Groupe BPCE's commitment to respecting and promoting human rights was also reaffirmed by the publication of the Group's human rights charter, validated by the Executive Management Committee in September 2024.

Through this charter, Groupe BPCE recognizes the principles and international standards that aim to guarantee minimum standards in terms of human rights and strives to ensure that all of its stakeholders comply with them.

These commitments are broken down into principles of action with regard to employees, suppliers, customers and society.

In 2024, specific actions were also rolled out for each of the three pillars that structure the vigilance approach.

3.2.1 Employees

In the 2024 fiscal year, the following actions were carried out:

- several of the Group's companies invested in obtaining the Professional Equality label;
- BPCE's Executive Management Committee signed the "Autre Cercle" charter, encouraging companies to promote and respect LGBT+ diversity in their workforce;
- Groupe BPCE has signed the Landoy charter, to promote the employment of people over the age of 50;
- several actions aimed at raising awareness of visible and non-visible disabilities and improving the inclusion of employees with disabilities were carried out by BPCE's Human Resources departments;
- the partnership with Paris 2024 was an opportunity to reinforce the Group's efforts and commitments in the fight against sedentary lifestyles, and to contribute to the well-being of its employees.

3.2.2 Purchases

In the 2024 fiscal year, BPCE Achats & Services continued to roll out its "responsible purchasing" policy, including:

- The proposal for a "listen to the voice of suppliers" system for Group companies;
- The implementation of a training module "Developing more socially responsible and inclusive purchasing" for buyers and their business lines, in order to increase the use of the inclusion market;
- Training of all buyers in the tool for identifying CSR issues and risks;
- Continuation of the process of systematically taking into account CSR criteria, including the carbon footprint, in all specifications, consultations and supplier relations.

In July 2024, BPCE Achats & Services was awarded the Responsible Supplier Relations and Purchasing Label *(Label Relations Fournisseurs et Achats Responsables* - RFAR)[1].

This demanding label demonstrates the effective implementation of the commitments of the Supplier Relations and Responsible Purchasing Charter (signed by the Group) and the recommendations of ISO 20400, an international standard on responsible purchasing. It is awarded for a period of three years, subject to annual verification of major criteria by an approved auditor: BPCE Achats & Services is therefore formally committed to a continuous progress plan in terms of responsible purchasing.

To date, 13 Group companies, including BPCE SA, have been certified, with the support of BPCE Achats & Services.

(1) The award committee for the Supplier Relations and Responsible Purchasing label is composed of the Business Mediation Department, reporting to the French Ministry of the Economy and Finance, and the National Purchasing Council (*Conseil national des achats* - CNA).

3.2.3 Business

During the 2024 fiscal year, several actions were taken by BPCE to prevent the highest risk of breaches.

Groupe BPCE affirmed its ambition to make impact accessible to all and is continuing its efforts to align its financing and insurance portfolios with trajectories based on scientific scenarios compatible with the objectives of the Paris Agreement and by adopting decarbonization trajectories proposed by European asset management companies to their investor customers. Groupe BPCE reports on the progress made in chapter 2, section 2 - Environmental information of the Universal Registration Document.

Overall reinforcement of the ESG risk management system

In 2024, the ESG Risks division continued to strengthen the overall ESG risk management system as part of its multi-year action plan. The work focused in particular on:

- Strengthening sector knowledge, through an in-depth analysis of the impacts and risks associated with the main sectors sensitive to climate and environmental issues as part of a Business Environment Scan exercise;
- The development of methodologies for assessing climate transition and environmental risks, the effective deployment of which is scheduled for 2025;
- The implementation of a Groupe BPCE-wide reputation risk policy and the creation of a Group Reputation Risk Committee, tasked with ruling on the most sensitive issues.

Training development

In 2024, specific training on ESG issues was offered to the members of the BPCE Supervisory Board, including:

- Climate and environmental risks;
- The challenges of the energy transition and managing climate and environmental risks;
- CSRD and transition plan;
- The fresco of climate solutions.

The training of Groupe BPCE employees in ESG issues has been strengthened, in particular, through:

- The Climate School: launched at group level in 2022, this training aims to raise employee awareness, develop skills and commitment to the success of the sustainable transition. Since 2023, an "Understanding the environment to better act collectively" learning path has been offered. In 2024, it was enriched with a second program, "Agir", which reviews the group's initiatives.
- The launch of the BPCE Impact Campus: at the end of 2024, the Impact Campus was created to structure ESG training for all Groupe BPCE employees. This new and customized training system will be available from 2025 for all employees. It includes a common core of general knowledge, advanced and in-depth modules on strategic sectors for the group and training offered by business line, co-constructed with them, to tangibly support their transformations. As part of the "VISION 2030" project, this system aims to raise awareness and train 100% of Groupe BPCE's employees and governance.

4 REPORT ON CORPORATE GOVERNANCE

4.1 Introduction

Dear shareholders,

In addition to the management report and in accordance with Article L. 225-68 of the French Commercial Code, this report by the Supervisory Board contains information on:

- the composition of the Supervisory Board and implementation of the principle of balanced representation of women and men;
- the conditions governing the preparation and organization of the Supervisory Board's work during the fiscal year ended December 31, 2024;
- the principles and rules governing the determination of all types of remuneration and benefits granted to corporate officers.

This report was reviewed by the Appointments Committee and the Remuneration Committee, then approved by the Supervisory Board at its meeting of February 5, 2025.

The Statutory Auditors will issue attest, appended to their report on the annual financial statements, the provision of information required by law in the report on corporate governance (Article L. 225-235 of the French Commercial Code).

4.2 Corporate Governance Code

In preparing this report, BPCE referred to the Corporate Governance Code for listed companies published in December 2008 and revised in December 2022 by the French Association of Private Enterprises (*Association française des entreprises privées* – AFEP) and the Movement of French Enterprises (*Mouvement des entreprises de France* – MEDEF), hereinafter referred to as the Afep-Medef Code, and including the recommendations of October 2008 on executive compensation, as set out in Article L. 225-68 of the French Commercial Code.

Only certain provisions were not followed, insofar as they are not deemed to apply to BPCE's operating procedures as the central institution of a cooperative group and its equal ownership by the Banque Populaire and Caisse d'Epargne networks, which is reflected in the composition of its Board. These provisions were as follows: terms of office, the proportion of independent directors on the Supervisory Board and its committees, Board member ownership of a material number of shares and the publication of the CEO pay ratio.

Regarding terms of office, unlike the maximum four-year term recommended in the Afep-Medef Code, the statutory term of office of the members of the Supervisory Board of BPCE is six years, *i.e.* the maximum permitted by law. The benefit of a four-year term, as presented by the Afep-Medef Code, is that it gives shareholders sufficiently frequent opportunity to provide an opinion on Board Member performance. However, this is unnecessary for BPCE, as its shareholders are limited to Banques Populaires and Caisses d'Epargne, which are already amply represented on the Supervisory Board, *via* the Chairmen of the Boards, the Chairmen of the Management Board and the Chief Executive Officers of these institutions, as members or non-voting directors. Indeed, 20 members or non-voting directors of the Supervisory Board come from the 29 Banques Populaires and Caisses d'Epargne shareholders of BPCE. Accordingly, a shorter term of office would not substantially change the composition of the Supervisory Board. In addition, BPCE staggers reappointments, renewing the terms of office of half of the members of the Supervisory Board every three years, in order to avoid mass reappointments and promote a smooth Board member reappointment process. This gives shareholders sufficiently frequent opportunity, every three years, to provide an opinion on the members of the Supervisory Board, as recommended in the Afep-Medef Code.

Regarding Supervisory Board member ownership of a material number of shares, BPCE's articles of association take into account the fact that, in accordance with act No. 2008-776 of August 4, 2008, members of the Supervisory Board are no longer required to own shares in the company. As a result, members of the Supervisory Board of BPCE do not own a material number of shares and are not shareholders in a personal capacity, but the two categories of shareholders are represented through their appointment, which ensures that the company's interests are respected.

Concerning the proportion of independent directors on the Board and its committees, BPCE does not follow the recommendation of the Afep-Medef Code, under which independent directors must represent half of the members of the Boards of companies that are not under control, as defined by Article L. 233-3 of the French Commercial Code. In fact, this recommendation is not compatible with Article L. 512-106 of the French Monetary and Financial Code, which stipulates that the representatives of cooperative shareholders proposed by the Chairmen of the Steering and Supervisory Boards of the Caisses d'Epargne and the Chairmen of the Boards of Directors of the Banques Populaires account for a majority of the Supervisory Board of BPCE. In addition to this legal rule, good governance rules result from Groupe BPCE's unique structure: a balance of power must be maintained, as well as balanced representation of the Banque Populaire and Caisses d'Epargne networks. However, this organizational structure does not compromise the quality of the work and discussions of the Board, an objective of the Afep-Medef Code recommendation.

However, BPCE wishes to demonstrate the independence of the members of its Supervisory Board representing the cooperative shareholders proposed by the Chairmen of the Steering and Supervisory Boards of the Caisses d'Epargne and the Chairmen of the Boards of Directors of the Banques Populaires. The report "Coopératives et mutuelles: un gouvernement d'entreprise original" [Cooperatives and mutual insurance companies: original corporate governance], drafted within the framework of the French Institute of Directors in January 2006, explains why the elected directors of the cooperative companies that are the Banques Populaires and the Caisses d'Epargne fully meet the definition of "independent director". Thus, "the question of "independent directors" concerns a specific type of company, which is the listed company. (...) In cooperative companies, the governance logic is radically different. (...) The legitimacy and control of a mutualist executive, and therefore their independence, depends on the mandate they exercise through their election. Removing a director from the electoral process would dissociate him from the interests of the organization and its cooperative shareholders. From another perspective, it is a fact that the directors of cooperatives and mutual societies commit themselves out of conviction and not out of financial interest. They devote a significant portion of their time and energy to their responsibilities as directors. They are wide open to the local, non-profit and/or political world. These are all characteristics that make them truly independent directors, an independence that is beyond doubt, but is continually reinforced by an authentic democratic process."

With regard to Supervisory Board meetings, BPCE has not formalized, in its institutional agenda, the organization of an annual meeting without the presence of the executive company directors. In addition, it is specified that no internal text of BPCE provides for the mandatory presence of executive corporate officers who attend Supervisory Board meetings only at the invitation of its Chairman. Sometimes, part of the Supervisory Board meetings take place without the presence of the executive company directors, in particular when decisions of the Supervisory Board or the opinions of the Board committees concerning the executive company directors are discussed.

In addition, the Fédération Nationale des Banques Populaires and the Fédération Nationale des Caisses d'Epargne, bodies that organize discussions, hear ideas and provide representation, each hold annual meetings bringing together all the Chairmen of the Boards of Directors and the Chief Executive Officers of the Banques Populaires and all the Chairmen of the Steering and Supervisory Boards and Management Board of Caisses d'Epargne without the presence of Statutory Auditors and the company directors of BPCE. These meetings, which guarantee the free expression of all participants, who represent BPCE's shareholders, promote strategic discussions and, accordingly, protect the interests of the institutions they represent.

Regarding information on company director pay, BPCE does not apply the recommendation that stipulates that information on pay ratios should be published, thereby enabling comparison of company director pay and employee pay. BPCE considers that the main objective pursued by the legislator when drafting this legal provision, which is now included in this recommendation, is to enable shareholders or investors in public companies to assess the remuneration of executives in relation to the company's performance and the average remuneration of the company's employees, in accordance with the provisions of paragraph b of 1 of Article 9b of directive 2017/828 of the European Parliament and of the Council of May 17, 2017 (known as the SRD 2 directive). In this respect, BPCE, whose shares are not listed, considers that the publication of all information relating to the variable pay of executives and the performance of BPCE and the Group is sufficient to enable shareholders and potential investors to assess whether the remuneration rewards long-term performance and to measure the evolution of the performance and remuneration of executives in the medium and long term.

Finally, with the exception of the CEO pay ratio, BPCE formally adheres to and implements the Afep-Medef Code recommendations on executive pay.

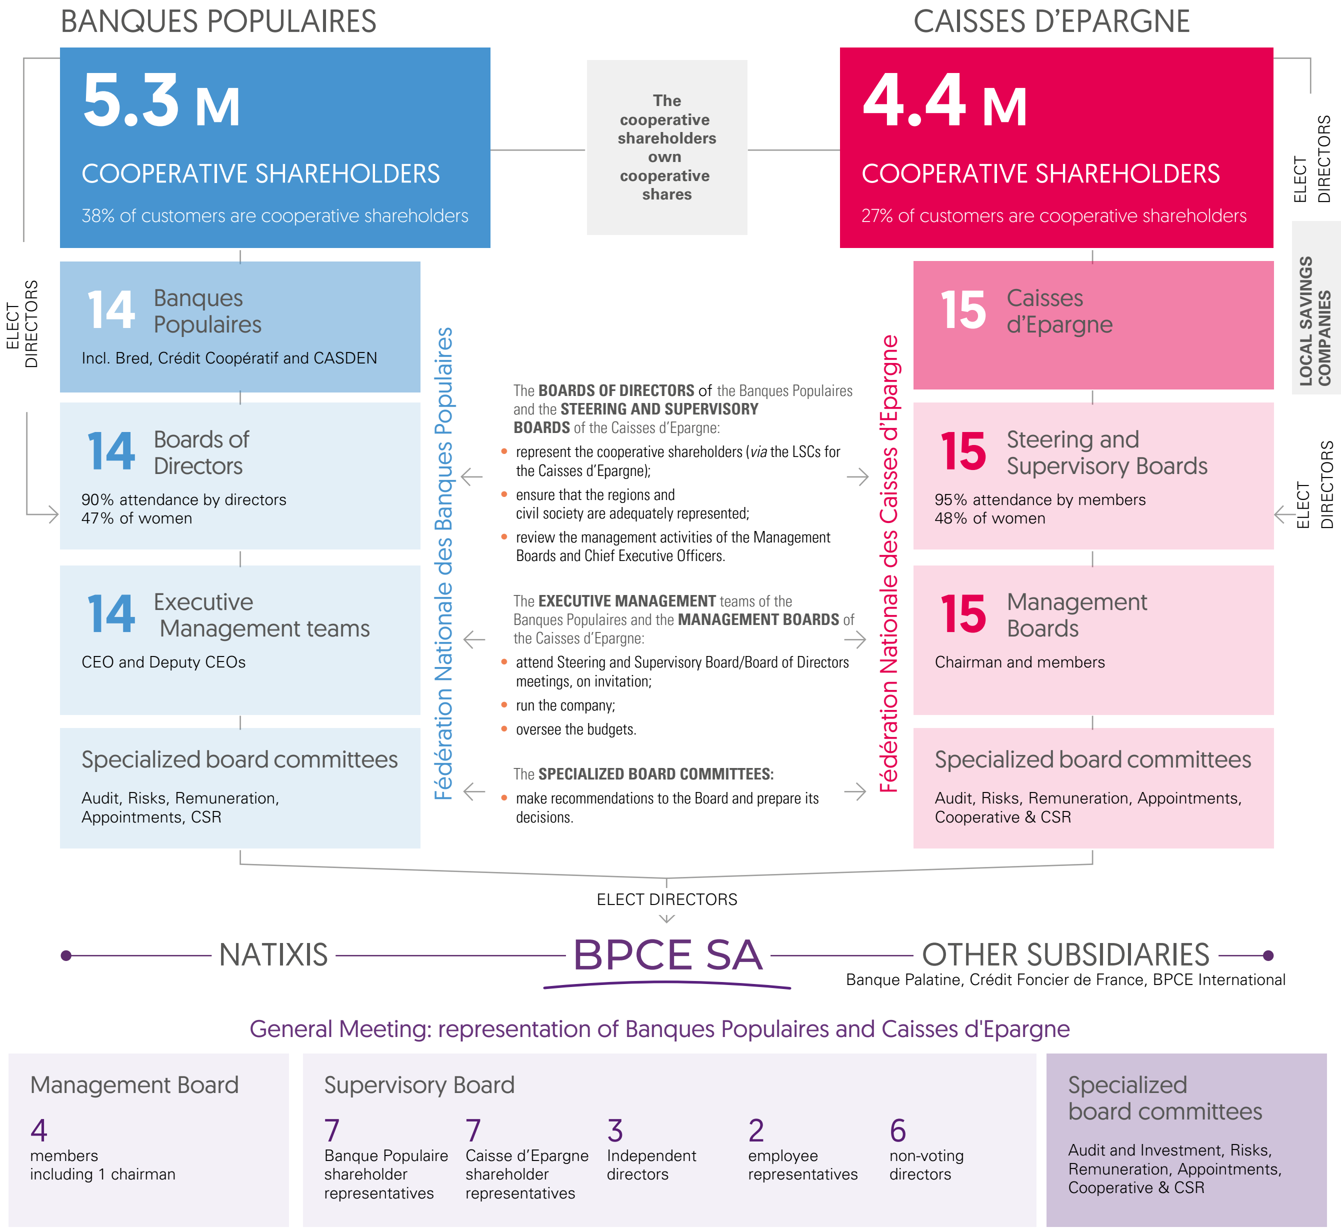
Statement of non-compliance with the Afep-Medef Code[1]

Independent directors	Recommendations partly implemented (not followed regarding proportion of independent directors on the Board)
Board meetings and committee meetings	Recommendations partly implemented (not followed regarding the organization of an annual meeting without the presence of executive company directors)
Directors' terms of office	Recommendations partly implemented (not followed regarding the six-year term)
Audit Committee	Recommendations partly implemented (not followed regarding the proportion of independent directors on the committee)
Committee responsible for appointments	Recommendations partly implemented (not followed regarding the proportion of independent directors on the committee)
Committee responsible for pay	Recommendations partly implemented (not followed regarding the proportion of independent directors on the committee)
Shareholding obligation of company directors	Recommendations not implemented
Information on pay awarded to company directors	Recommendations partially implemented (not followed with regard to the publication of the equity ratio)

(1) BPCE has implemented the provisions of the Afep-Medef Code, adapting them to its Management Board/Supervisory Board governance model.

4.3 Composition of the management and supervisory bodies

4.3.1 Groupe BPCE's governance organization chart



The **MANAGEMENT BOARD of BPCE SA:**

- exercises all banking, financial, administrative, and technical powers ;
- involves the Group's internal solidarity mechanisms ;
- performs duties as the company's central institution as specified by law and, where applicable, after receiving prior authorization from the Supervisory Board, as specified by the articles of association.

The **SUPERVISORY BOARD of BPCE SA:**

- approves the policy and strategic guidelines of the Group and each of the networks ;
- verifies and audits the parent company and consolidated financial statements.

The **AUDIT AND INVESTMENT COMMITTEE:**

- is tasked with preparing financial information, the statutory audit of the annual and consolidated financial statements by the Statutory Auditors and the independence of the Statutory Auditors ;
- reviews the transactions as defined in BPCE's articles of association and is responsible for monitoring investments in accordance with the procedures described in section 4.4.2.

The **RISK COMMITTEE:**

- assists the Supervisory Board with regard to BPCE's overall strategy and risk appetite, both current and future, and when it monitors the implementation of this strategy ;
- is responsible for assessing the effectiveness of the internal control and risk management systems and, more generally, performs the missions described in 4.4.2.

The **APPOINTMENTS COMMITTEE:**

- makes proposals to the Supervisory Board regarding the choices of Supervisory Board members, non-voting directors and experts from outside the Group, as well as the appointment of the Chairman of the Management Board;
- is also responsible for the ongoing assessment of the individual and collective qualities of the members of the Management Board and the members of the Supervisory Board.

The **REMUNERATION COMMITTEE:**

- makes proposals to the Board regarding the levels and conditions of pay granted to the members of the Management Board and the Chairman of the Board, and the distribution of attendance fees payable to the Board members.

The **COOPERATIVE AND CSR COMMITTEE:**

- is in charge of making proposals and recommendations aimed at promoting the cooperative and social values of long-term engagement as well as professional and interpersonal ethics. It also ensures that Group and network activities represent these values, thereby strengthening the cooperative banking model of the Group and each of the networks.

4.3.2 Supervisory Board

The terms of the members of the Supervisory Board of BPCE were renewed at the Ordinary Shareholders' Meeting of May 22, 2015 for a period of six years, *i.e.* until the General Meeting called to approve the financial statements for the fiscal year ending December 31, 2020. Under the staggered reappointment procedure for members of the Supervisory Board, the Supervisory Board acknowledged the resignation of eight of its members at its meeting of May 17, 2018. The Combined General Meeting held on May 25, 2018 subsequently appointed eight new members for a period of six years, *i.e.* until the General Meeting called to approve the financial statements for the fiscal year ending December 31, 2023. Similarly, the Combined General Meeting of May 27, 2021 appointed nine members for a period of six years, *i.e.* until the General Meeting called to approve the financial statements for the fiscal year ended on December 31, 2026, and the Ordinary Shareholders' Meeting of May 23, 2024 appointed eight members for a period of six years, *i.e.* until the General Meeting called to approve the financial statements for the fiscal year ended on December 31, 2029.

In accordance with Article L. 225-79-2 of the French Commercial Code, two employee representative members were appointed on March 31, 2021 and May 4, 2021 by the two unions that received the most votes in the first round of elections referred to in Articles L. 2122-1 and L. 2122-4 of the French Labor Code, namely Fédération SU-UNSA Banque/Assurance and the Fédération CFDT des Banques et Assurances.

Guidelines

Pursuant to Article 21 of the articles of association, the Supervisory Board of BPCE is composed of ten to nineteen members. As of December 31, 2024, the Supervisory Board comprised nineteen members: seven representatives of category A shareholders (the Caisses d'Epargne et de Prévoyance), seven representatives of category B shareholders (the Banques Populaires),[1] three independent members within the meaning of the Afep-Medef Code and two members representing the employees of BPCE and its direct or indirect subsidiaries having their registered office in France.

The Supervisory Board includes six non-voting directors acting in an advisory capacity.

Among the non-voting directors, the Chairman of Fédération Nationale des Caisses d'Epargne and the Chairman of Fédération Nationale des Banques Populaires, who cannot be members of the Supervisory Board, are non-voting directors as of right, in accordance with Article 28.1 of BPCE's articles of association.

The other four non-voting directors are appointed by the Ordinary Shareholders' Meeting in accordance with Article 31.9 of BPCE's articles of association: two from among the candidates proposed by category A shareholders and two from among the candidates proposed by category B shareholders.

The non-voting directors are tasked with ensuring that BPCE fulfills its assigned responsibilities, particularly those set out by law, without interfering or getting involved in BPCE's management.

In accordance with Article L. 2312-72 of the French Labor Code, the articles of association also stipulate the presence of one non-voting representative from the company's Works Council.

The Supervisory Board includes a bureau consisting of the Chairman, the Vice-Chairman, a member Chairman of the Management Board of a Caisse d'Epargne and a member Chief Executive Officer of a Banque Populaire. The Supervisory Board bureau serves as a forum for exchange and discussion about important matters before they are presented to the Supervisory Board. It is not a decision-making body.

BPCE's articles of association are available on the BPCE website: https://groupebpce.com/en/investors/regulated-information/other-information

Appointment

During the company's life and subject to co-opting, members of the Supervisory Board are appointed by the shareholders at the Ordinary Shareholders' Meeting, as indicated in Article 21 of BPCE's articles of association, on a motion by category A or B shareholders, depending on the category in question.

Independent members are proposed by the Appointments Committee to the Supervisory Board, which asks the Management Board to put their appointment to a vote at the Ordinary shareholders' Meeting.

The two members representing employees of BPCE and its subsidiaries are appointed by each of the two unions that received the most votes in the first round of elections referred to in Articles L. 2122-1 and L. 2122-4 of the French Labor Code.

Members of the Supervisory Board hold office for a term of six years. Their duties end at the close of the Ordinary Shareholders' Meeting convened to rule on the financial statements for the past fiscal year, held during the year in which their term expires.

The Supervisory Board is partially reappointed every three years, and for the first time since the General Meeting that approved the financial statements for the fiscal year ended December 31, 2017.

The members of the Supervisory Board are eligible again under the conditions set out by the articles of association, specifically the provisions of Article 21 regarding the completion of a half-term without reaching the mandatory age limit of 70. They are automatically deemed to have resigned once they no longer carry out the responsibilities set out in Article 21 of the articles of association. Furthermore, no persons may be appointed as members of the Supervisory Board if, from the date of their appointment, they cannot complete at least half of their term before reaching the above-cited age limit.

(1) A complete description of the shareholder categories is provided in Section 8.2.2 "Category A and B shares".

Appointment and succession policy - Diversity

In application of the French Monetary and Financial Code and in accordance with the guidelines of the European Banking Authority (EBA) on internal governance and the guidelines of the EBA and ESMA (European Securities and Markets Authority) on the assessment of the suitability of members of the management body and key function holders, at its meeting of February 7, 2024, the Supervisory Board adopted a policy for the appointment and succession of BPCE's executive management and members of the Supervisory Board.

This policy is designed to anticipate any unforeseen vacancies or the end of the term of office of members of the Supervisory Board of BPCE.

In this context, the system, which formalizes what is already practiced by BPCE under the regulations and articles of association, organizes the appointment and reappointment of members of the Supervisory Board as well as their successors. It does this by providing the option to quickly propose individuals who match identified needs, thus ensuring continuity within BPCE's management bodies.

The appointment process is as follows:

- for the appointment of Supervisory Board candidates from the Banques Populaires and Caisses d'Epargne, the Supervisory Board's collective skills matrix is communicated to FNBP and FNCE. The representatives of the Banques Populaires and Caisses d'Epargne networks are appointed, in accordance with BPCE's articles of association, from among the candidates proposed by category A shareholders (the Caisses d'Epargne) and the category B shareholders (the Banques Populaires), who are represented by FNCE and FNBP, respectively. Before the Ordinary Shareholders' Meeting, the Appointments Committee ensures that the candidate(s) meet(s) the suitability criteria defined in the suitability assessment policy (notably integrity, individual and collective skills, availability, and independence), as well as individual requirements such as personality and ability to integrate into the Group;
- external independent directors (in accordance with the Afep-Medef Code) are selected according to a process defined by the Appointments Committee, which may either identify for itself those external figures from major companies whose diversity and depth match the vacancy or choose to use an external recruitment firm. In either case, three candidates are submitted for review to the Appointments Committee, which proposes one of them to the Supervisory Board following discussions with the candidates and verification of their compliance with the suitability criteria defined in the suitability assessment policy and independence criteria, per the Afep-Medef Code, as defined in the Supervisory Board's internal rules (particularly any specific conflicts of interest that may arise from financial links between BPCE and the Group in which an independent member holds executive office);
- the Appointments Committee also examines the competence and integrity of the members representing employees who are appointed by the two trade unions that have won the most votes in the first round of the last Social and Economic Committee (CSE) elections, within the scope of BPCE and its direct or indirect subsidiaries. If the Appointments Committee makes favorable recommendations on the candidate(s) presented, their appointment may be proposed either to the General Meeting or, in the event of a provisional appointment, to the Supervisory Board.

The renewal process weighs the results of the assessment of the individual suitability of the members of the Supervisory Board during their previous term of office and, in the case of external independent members, the results of the review of the independent member qualification as defined in the Afep-Medef Code.

The succession process defines and distinguishes between temporary absence and permanent absence, and the applicable deadlines beyond which the appointment process is applied.

The appointment and succession policy also reiterates the two aspects that are checked before any members of the Supervisory Board are appointed or succeeded: the aptitude criteria, which are also covered in a dedicated policy described below, as well as the diversity criteria observed by the Appointments Committee when reviewing any candidate.

To that end, the Appointments Committee verifies the fitness of Supervisory Board candidates with respect to their integrity, skills, and independence while pursuing a goal of diversity within the Supervisory Board, meaning a situation where the characteristics of the members of the Supervisory Board differ to an extent that ensures a variety of viewpoints within the Supervisory Board, given that the cooperative nature of the Group greatly helps to promote diversity.

In particular, the Appointments Committee checks the following criteria:

- training;
- quantitative target of 40% of members with at least six years of professional experience as board chair, management, member of the Management Board or company management, it being specified that members who are representing employees and appointed by their trade union are not included in this proportion;
- quantitative target of 40% of Board members under the age of 65, it being specified that members who are representing employees and appointed by their trade union are not included in this proportion;
- balanced geographical representation;
- representation of the different types of market;
- representation of the professional categories of the Group's cooperative shareholders;
- minimum quantitative objective of 40% representation of the under-represented gender, it being specified that, pursuant to the French Commercial Code, the members representing employees are not included in this proportion.

With respect to these criteria, when assessing a candidate for the Supervisory Board, the Appointments Committee strives to maintain or achieve a balance and have a skill set appropriate for the Group's activities and strategic plan, as well as the technical responsibilities assigned to the various Supervisory Board Committees.

None of these criteria on its own, however, is sufficient to mark the presence or absence of diversity, which is assessed collectively within the Supervisory Board. This is because the Appointments Committee prioritizes the synergy of technical skills, the diversity of cultures and experiences in order to achieve a set of profiles that enhances the angles of analysis and viewpoints on which the Supervisory Board may rely when conducting its discussions and making its decisions, thereby encouraging good governance.

Finally, the Appointments Committee reports to the Supervisory Board any changes that it recommends making to the composition of the Supervisory Board in order to achieve the goals set out in the diversity policy.

The composition of the Supervisory Board at December 31, 2024, the Supervisory Board's skills matrix and the items presented in Section 4.3.5 aim in particular to reflect the diversity within the Board (age, geographical representation, experience/training, etc.).

The Supervisory Board, on the recommendation of the Appointments Committee, periodically reviews the effectiveness of BPCE's appointment and succession policy and reviews its design and implementation.

In this respect, at its meeting of December 12, 2024, the Supervisory Board reviewed the appointment and succession assessment policy and decided to maintain its initial wording.

Aptitude assessment policy

In accordance with the EBA and ESMA guidelines, the Supervisory Board also adopted, at its meeting of February 7, 2024, a policy for assessing the suitability of the members of the Management Board and the members of the Supervisory Board and holders of key BPCE positions.

This policy, which formalizes the practices already existing within BPCE, aims to define the methods of the assessment carried out by the Appointments Committee, particularly the function of the persons assessed (members of the Management Board, the Supervisory Board or individuals in key positions), the frequency of this assessment and the criteria used by the Appointments Committee.

The aptitude assessment policy specifies:

- the annual nature of the assessment and the cases in which a reassessment must be carried out;
- the skills expected for any appointment, distinguishing between those required for the Management Board, the Supervisory Board, and the specialized committees;
- the details of the assessment of each aptitude criterion (including integrity, skills, independence, and availability);
- the role of the operational departments and the Appointments Committee in the assessment process.

The Supervisory Board, on the recommendation of the Appointments Committee, periodically verifies the effectiveness of BPCE's aptitude policy and reviews its design and implementation.

In this respect, at its meeting of December 12, 2024, the Supervisory Board, on the recommendation of the Appointments Committee, modified the suitability assessment policy in order to clarify certain points.

Diversity of the Supervisory Board

At December 31, 2024, with eight women on its Supervisory Board out of a total of seventeen members, BPCE had a proportion of 47.06% women, it being specified that, in accordance with Article L. 225-79 of the French Commercial Code, the members representing the employees of BPCE and its direct or indirect subsidiaries having their registered office in France are not taken into account in this calculation. At December 31, 2024, BPCE respected the minimum proportion of 40% of members of each gender on its Supervisory Board, and thus complied with the provisions of Article L. 225-69-1 of the French Commercial Code.

Independence

In keeping with the corporate governance guidelines and best practices set out in the Supervisory Board's internal rules adopted on July 31, 2009 and amended on February 7, 2024, members of the Supervisory Board:

- take care to maintain their independence of judgment, decision, and action in all circumstances. They avoid being influenced by anything that is contrary to the company's interests, which it is their duty to defend;
- undertake to avoid any conflict that may exist between their moral and material interests and those of the company. They inform the Supervisory Board of any conflict of interest that may affect them. In such cases, they abstain from taking part in any discussions and decisions on the matters in question.

Furthermore, the Chairman and Vice-Chairman of the Supervisory Board do not chair any of the Supervisory Board's specialized committees.

In addition to the ten Chairmen of the Boards of Directors and of the Steering and Supervisory Boards representing the Banques Populaires and the Caisses d'Epargne, the Supervisory Board and each of its committees include external independent members, individuals from outside the Group, as defined in the Afep-Medef Code.

The definition below is based on the Afep-Medef Code recommendations. However, BPCE does not follow the Afep-Medef Code recommendations concerning the proportion of independent directors on the Supervisory Board and its committees: because of Groupe BPCE's cooperative structure, the proportion of directors representing the Banque Populaire and Caisse d'Epargne networks is larger than the proportion of external independent directors as defined in the Afep-Medef Code (three in number).

The criteria stated below are designed to define the status of an external independent member. The guiding principle is that "members are independent if they have no relations of any sort with the company, its group or its management, which might compromise the free exercise of their judgment."

External independent members must not:

- be an employee or executive corporate officer of the company or Groupe BPCE, or an employee or director of one of the company's shareholders, and must not have been so during the previous five years;
- be an executive corporate officer of a company in which the company directly or indirectly holds a directorship or in which a designated employee or an executive corporate officer of the company (either currently or in the last five years) holds a directorship;

- be a customer (or directly or indirectly linked to a customer), supplier, investment banker or commercial banker, if the business relationship is such that it could compromise the free exercise of the member's judgment;
- have close family ties with an executive or non-executive corporate officer of the company or its group;
- have been an auditor, accountant, or permanent or alternate Statutory Auditor of the company or of any Groupe BPCE companies during the last five years;
- have been a non-executive corporate officer of the company for longer than 12 years; or
- receive additional remuneration or have received significant additional remuneration from the company or the Group in addition to the remuneration paid to them for their duties as members of the Supervisory Board, including participation in any stock option plan or any other performance-based remuneration formula.

The Supervisory Board may find that one or more of its members, although meeting the criteria above, should not be classified as externally independent given their individual situation or that of the company, with regard to their shareholdings or for any other reason.

The conflicts of interest specific to the external independent members of the Supervisory Board are defined in Section 4.6.1 of this report.

Pursuant to Article 3.2 of the internal rules, at its meeting of December 5, 2024, the Appointments Committee reviewed the independent status of Valérie Pancrazi, Anne-Claude Pont and Kadidja Sinz based on the criteria defined by the Supervisory Board's internal rules, and confirmed their independence as defined in the Afep-Medef Code.

Availability

Pursuant to the requirements set by the European Central Bank (ECB), at its meeting of December 19, 2019, the Supervisory Board of BPCE acknowledged a Fit and Proper policy governing in particular the assessment of Board member availability. This policy implements a system to ensure that Board members dedicate sufficient time to their roles and responsibilities.

To this end, the Appointments Committee assesses the availability of potential Board members by checking the number of corporate offices held and determining the amount of time allotted to each office.

This policy is appended to the suitability assessment policy adopted by the Supervisory Board at its meeting of February 7, 2024.

Assessment

Pursuant to the French Monetary and Financial Code and the Afep-Medef Code and in accordance with the EBA/ESMA guidelines on governance, assessments of the operation and organization of the Supervisory Board are carried out annually internally and once every three years, by an external firm chosen by the Appointments Committee. In 2024, the assessment of the operation and organization of the Supervisory Board was carried out internally by the Appointments Committee, without the involvement of an external firm, on the basis of a questionnaire to which the members of the Supervisory Board and the non-voting directors were invited to respond.

The summary of the responses to the questionnaire was presented to the Supervisory Board meeting on December 12, 2024 in the presence of the Management Board.

The assessment carried out revealed elements of satisfaction, particularly with regard to the composition of the Board, the quality of the information provided to the Board and the discussions, the improvement of the deadlines for the transmission of files, the relations with the Management Board and with the Chairman of the Board, the operation of the committees and the quality of the training provided.

Expectations remain on certain topics, mainly technological issues (digital and artificial intelligence), the European and international economic and banking environment as well as CSR, ESG criteria and climate risks.

Some areas for improvement have already been implemented or are in the process of being implemented, such as the inclusion on the agenda of the Supervisory Board twice a year of IT topics, in particular the organization and management of the IT function, the Group's risks and IT strategy, as well as the strengthening of the training program on these subjects as well as on the international and ESG impacts and risks.

The Appointments Committee also carried out periodic individual assessments of the fitness of the members of the Supervisory Board and Management Board. On this occasion, it checked their integrity by verifying the absence of any negative news concerning them in terms of the fight against money laundering and the financing of terrorism, or their good repute. Following this individual assessment of the members of the Board and the members of the Management Board, the Appointments Committee noted that the rules for holding multiple offices were complied with and that sufficient time was devoted to the exercise of their duties, that their level of skills was compatible with the exercise of their duties, that there was nothing to call into question their good repute, their honesty, or their integrity and that there were no new conflicts of interest liable to call into question their independence of spirit to be declared.

Training

GUIDELINES

In compliance with Article L. 511-53 of the French Monetary and Financial Code, BPCE is committed to training the members of its Supervisory Board.

BPCE regularly updates its training system in order to meet the regulatory requirements of the ACPR and the ECB and strengthen the skills of all Board members, taking into account the diversity of their experiences and needs, as well as the proposals made as part of the Board's assessment.

The Supervisory Board has drawn up a training program with the aim of complying with best practices and market standards (expectations of regulators and supervisors) and enabling the consolidation of knowledge and the development of a skills matrix.

The training program takes into consideration that most Board members - who are also executives within a Banque Populaire or Caisse d'Epargne - already benefit from training programs organized by the two networks' Federations and/or their respective institutions.

Board members who are employee representatives also receive additional training provided by a third-party training firm in accordance with applicable legal and regulatory provisions.

Training may be provided by internal and/or external providers.

Furthermore, Natixis' training modules are open to members of the Supervisory Board of BPCE and are designed to be consistent with the existing module specific to members of the Supervisory Board of BPCE. The training programs of the Federations, designed for members of the Network Boards, are also open to members of the Supervisory Board of BPCE.

ARTICULATION OF THE TRAINING PROGRAM

The training program offered by BPCE is based on three main areas:

- a training program reserved for new members of the Supervisory Board of BPCE entitled "Training new directors," consisting of two modules:
  - a mandatory three-hour core curriculum to welcome new Board members, outlining their roles and responsibilities and specifying the role of the central institution,
  - a one-day module, for independent or non-executive members, whose objective is to present the Group, its business lines, and its players;
- an initial regulatory training program (Fit and Proper) for new members. Training is carried out by internal and/or external stakeholders.

  The objective is to train directors in the fundamental skills specific to the management of a systemic credit institution in an in-depth manner, taking into account regulatory changes and current issues. This system, developed to respond as a priority to new members of the Supervisory Board of BPCE, is also open to:

  - other members of the Board who wish to update their skills;
  - Chairmen of the Steering and Supervisory Board of the Caisses d'Epargne;
  - Chairmen of the Board of Directors of the Banques Populaires;
  - the Directors of the main subsidiaries of BPCE and Natixis.

These two systems are offered in the first and second half-year of 2024 so that new Board members can complete these training courses within six months of their appointment.

In addition, BPCE is developing continuous training consisting of e-learning modules on banking fundamentals and a final quiz (including Fit and proper modules).

- a continuous training course entitled "Continuing education- Areas of Expertise/Topics/News" open to all members of the Board. Training will be carried out by internal and/or external stakeholders.

The objective is to offer training on current topics, identified topics and technical and complex topics.

TRAINING OFFERED IN 2024

During the 2024 fiscal year, members of the Supervisory Board of BPCE had the opportunity to receive training in particular on the following subjects as part of the continuous training path:

- Climate issues such as:
  - the challenges of the energy transition and managing climate and environmental risks,
  - CSRD and transition plan,
  - the fresco of climate solutions;
- IT-related topics and cybersecurity risks such as:
  - IT and Cyber & GDPR risks,
  - the digital operational resilience of the financial sector (Digital Operational Resilience Act or "DORA");
- Anti-Money Laundering and Counter Terrorism Financing (AML-CTF);
- financial issues and risks such as:
  - hedge funds,
  - ALM risk management,
  - Basel 4 news,
  - the IFRS 9 provisioning model,
  - internal models;
- legal and governance issues such as:
  - the evolution of directors' responsibilities framework: from responsibility to accountability,
  - prevention of conflicts of interest and ethics,
  - the governance of cooperative banks: Overview of the governance and organization of cooperative banks in France and Europe;

- the retail banking business model;
- changes in the insurance business model and BPCE Assurances: News;
- what questions are being asked about monetary policy?

Since the second half of 2024, an e-learning training system consisting of modules on the fundamentals of the bank and a final quiz has been made available to the members of the Supervisory Board of BPCE in order to complete the knowledge relating to the nine "Fit and Proper" skills taking into account regulatory changes and current issues. A DORA module is also available.

Lastly, during 2024, individual training booklets were set up for the members of the BPCE Supervisory Board to give them an overview of the training courses attended (BPCE/Natixis/Federations/Institutions) over the last three years and, where applicable, recommendations for training to be carried out. These booklets are updated regularly to include their participation in training.

2025 TRAINING PROGRAM

At its meeting of December 12, 2024, the Supervisory Board approved the principles of the training program for 2025. This program notably takes into account the needs expressed through the annual assessment of the Board.

Training plans by topic are drawn up to pay particular attention to the following topics:

- IT/Cyber/Digital
- International/Economy/Competition
- ESG impact and risks
- Finance/Risks
- Governance/Legal/Compliance
- Payments.

Dedicated training is offered by the Appointments Committee to certain members of the Supervisory Board or committees, in the event that the need to strengthen their skills or knowledge on technical or targeted subjects has been identified.

In addition, individualized monitoring of Supervisory Board members is carried out through booklets in order to give them an overview of the training courses attended (BPCE/Natixis/Fédérations/Institutions) over the last three years and, where applicable, recommendations for training to be carried out.

As part of its e-learning training system comprising several modules (including Fit and Proper), BPCE will develop new modules relating to climate risks and technological innovation and the associated risks.

Members

The terms of office of eight directors and one non-voting director expired at the end of the Annual General Shareholders' Meeting called to approve the financial statements for the fiscal year ended on December 31, 2023.

Consequently, at its meeting of May 23, 2024, the Ordinary Shareholders' Meeting of BPCE appointed:

- on the proposal of category A shareholders, Françoise Lemalle, Didier Patault and Valérie Savani as members of the Supervisory Board, for a term of six years expiring at the end of the Annual General Meeting called to approve the financial statements for the fiscal year ending on December 31, 2029;
- on the proposal of category B shareholders:
  - François Brun, Philippe Henri, Daniel Karyotis and Jérôme Saddier as members of the Supervisory Board for a period of six years expiring at the end of the Annual General Shareholders' Meeting called to approve the financial statements for the fiscal year ending on December 31, 2029,
- Valérie Pancrazi as an independent member of the Supervisory Board, for a period of six years expiring at the end of the Annual General Shareholders' Meeting called to approve the financial statements for the fiscal year ending on December 31, 2029.
- In addition, on the proposal of the category B shareholders, the Ordinary Shareholders' Meeting of BPCE on the same date appointed Mathieu Réquillart as non-voting director of the Supervisory Board, to replace Sabine Calba (who resigned) for the duration of the remaining term of office of the latter, *i.e.* until the General Meeting called to approve the financial statements for the fiscal year ending December 31, 2026.

Following the Ordinary Shareholders' Meeting, at its meeting of May 23, 2024 the Supervisory Board of BPCE noted:

- the reappointment of Françoise Lemalle, Didier Patault, Daniel Karyotis and Valérie Pancrazi as members of the Supervisory Board;
- the appointment of four new members of the Supervisory Board: Valérie Savani, François Brun, Philippe Henri, Jérôme Saddier (following the non-renewal of the terms of office of Catherine Amin-Garde, Gérard Bellemon, Thierry Cahn and Bernard Dupouy as members of the Supervisory Board);
- the appointment of Mathieu Réquillart as non-voting director of the Supervisory Board (to replace Sabine Calba, who resigned).

At the same meeting, the Supervisory Board of BPCE also appointed:

- Éric Fougère as Chairman of the Supervisory Board of BPCE, to replace Thierry Cahn, whose term of office as Chairman had expired. Éric Fougère will serve for a three-year term expiring at the end of the Annual General Meeting to be called in 2027 to approve the financial statements for the fiscal year ending on December 31, 2026;
- Marie Pic-Pâris Allavena as Vice-Chairwoman of the Supervisory Board of BPCE, replacing Éric Fougère, whose term of office as Vice-Chairman had expired. Marie Pic-Pâris Allavena will serve for a three-year term expiring at the end of the Annual General Meeting to be called in 2027 to approve the financial statements for the fiscal year ending on December 31, 2026.

In addition, at its meeting of June 25, 2024, the Supervisory Board duly noted the immediate assumption of duties of Philippe Hourdain, as non-voting director by right of the Supervisory Board (replacing André Joffre), for the duration of his term of office as Chairman of Fédération Nationale des Banques Populaires and ending no later than by the end of the Annual General Meeting called in 2030 to approve the financial statements for the fiscal year ending on December 31, 2029.

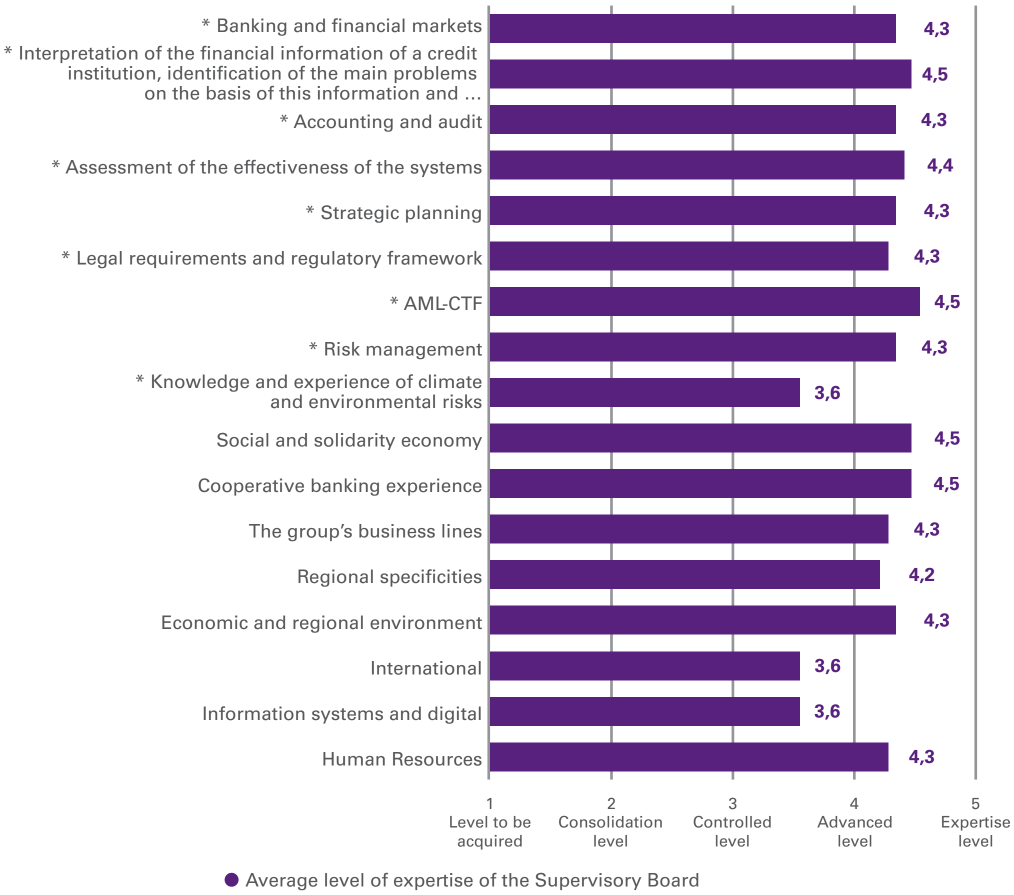
SUPERVISORY BOARD - DISTRIBUTION OF COLLECTIVE EXPERTISE

Skills are assessed collectively by the Supervisory Board, which favors their complementarity. Training, which may be provided by internal and/or external providers, is offered to Board members in order to strengthen the skills they have, it being specified that the training program takes into account the diversity of experiences and needs of the Board members, as well as proposals made as part of the Board's annual assessment.



* Fundamental skills specific to the management of a credit institution as listed in the ACPR/ECB approval request forms for members of the management body

AUDIT AND INVESTMENT COMMITTEE

The Audit and Investment Committee's members were chosen for their expertise in accounting, finance, and internal control.

Since August 2, 2018, the Audit and Investment Committee has been chaired by Kadidja Sinz, independent member, Chief Executive Officer of Liberty Specialty Markets Europe.

The other members are:

- Daniel Karyotis, Chief Executive Officer of Banque Populaire Auvergne Rhône Alpes;
- Philippe Henri, Chairman of the Board of Directors of Banque Populaire Méditerranée;
- Didier Patault, Chairman of the Management Board of Caisse d'Epargne Île-de-France.
- Benoît Pellerin, Chairman of the Steering and Supervisory Board of Caisse d'Epargne Normandie;
- Anne-Claude Pont, independent member, Chairwoman of Wilov.

The following are also members of the Audit and Investment Committee, in their capacity as non-voting directors, without voting rights:

- Frédérique Destailleur, Chairwoman of the Management Board of Caisse d'Epargne Aquitaine Poitou-Charentes;
- Jean-Paul Julia, Chief Executive Officer of BRED Banque Populaire.

The Chairman and Vice-Chairman of the Supervisory Board are permanent guests of the Audit and Investment Committee.

The heads of Group Internal Audit, Risk Management, Compliance and Permanent Control are invited to the meetings of the Audit Committee as non-voting participants.

The biographies of Audit and Investment Committee members are available in Section 4.3.5.

RISK COMMITTEE

The members of the Risk Committee were chosen for their knowledge, skills and expertise in risk management and control practices.

Since March 29, 2018, the Risk Committee has been chaired by Anne-Claude Pont, independent member, Chairwoman of Wilov.

The other members are:

- Benoît Catel, Chief Executive Officer of Banque Populaire Grand Ouest;
- Christine Fabresse, Chairwoman of the Management Board of Caisse d'Epargne CEPAC;
- Jérôme Saddier, Chairman of the Board of Directors of Crédit Coopératif;
- Valérie Savani, Chairwoman of the Steering and Supervisory Board of Caisse d'Epargne Loire Centre;
- Kadidja Sinz, independent member, Chief Executive Officer of Liberty Specialty Markets Europe.

The following members also sit on the Risk Committee, in their capacity as non-voting directors, without voting rights:

- Bruno Deletré, Chairman of the Management Board of Caisse d'Epargne Grand Est Europe;
- Mathieu Réquillart, Chief Executive Officer of Banque Populaire Val de France.

The Chairman and Vice-Chairman of the Supervisory Board are permanent guests of the Risk Committee.

The heads of Group Internal Audit, Risk Management, Compliance and Permanent Control are invited to the meetings of the Risk Committee as non-voting participants.

The biographies of Risk Committee members are available in Section 4.3.5.

APPOINTMENTS COMMITTEE

The members of the Appointments Committee were selected on the basis of their knowledge, skills and expertise regarding the selection process and aptitude requirements.

Since May 9, 2019, the Appointments Committee has been chaired by Valérie Pancrazi, independent member, Independent Advisor of VAP Conseils.

The other members are:

- Philippe Henri, Chairman of the Board of Directors of Banque Populaire Méditerranée;
- Daniel Karyotis, Chief Executive Officer of Banque Populaire Auvergne Rhône Alpes;
- Françoise Lemalle, Chairwoman of the Steering and Supervisory Board of Caisse d'Epargne Côte d'Azur;
- Catherine Mallet, Chairwoman of the Board of Directors of Banque Populaire Occitane;
- Didier Patault, Chairman of the Management Board of Caisse d'Epargne Île-de-France;
- Philippe Rougeot, Chairman of the Steering and Supervisory Board of Caisse d'Epargne Languedoc-Roussillon.

The Chairman and Vice-Chairman of the Supervisory Board are permanent guests of the Appointments Committee.

At the invitation of the Chairman of the Appointments Committee, the member of the Management Board in charge of Group human resources attends the meetings of the Appointments Committee without the right to vote.

The biographies of Appointments Committee members are available in Section 4.3.5.

REMUNERATION COMMITTEE

The members of the Remuneration Committee were chosen for their knowledge, skills and expertise concerning remuneration policies and practices, risk management and control activities, specifically with regard to the mechanism for aligning the pay structure with the institution's risk and capital profiles.

Since May 9, 2019, the Remuneration Committee has been chaired by Valérie Pancrazi, independent member, Independent Advisor of VAP Conseils.

The other members are:

- François Brun, Chairman of the Board of Directors of CASDEN;
- Bertrand Guyard, employee representative;
- Philippe Henri, Chairman of the Board of Directors of Banque Populaire Méditerranée;
- Daniel Karyotis, Chief Executive Officer of Banque Populaire Auvergne Rhône Alpes;
- Françoise Lemalle, Chairwoman of the Steering and Supervisory Board of Caisse d'Epargne Côte d'Azur;
- Didier Patault, Chairman of the Management Board of Caisse d'Epargne Île-de-France;
- Philippe Rougeot, Chairman of the Steering and Supervisory Board of Caisse d'Epargne Languedoc-Roussillon.

The Chairman and Vice-Chairman of the Supervisory Board are permanent guests of the Remuneration Committee.

At the invitation of the Chairman of the Remuneration Committee, the member of the Management Board in charge of Group human resources participates in the meetings of the Remuneration Committee without the right to vote.

The biographies of Remuneration Committee members are available in Section 4.3.5.

COOPERATIVE AND CSR COMMITTEE

The Cooperative and CSR Committee's members were chosen for their expertise and professional experience:

Since June 25, 2024, the Cooperative and CSR Committee has been chaired by Philippe Hourdain, non-voting director as of right, Chairman of the Fédération Nationale des Banques Populaires.

The other members are:

- Alain Di Crescenzo, non-voting director as of right, Chairman of the Fédération Nationale des Caisses d'Epargne;
- Éric Fougère, Chairman of the Steering and Supervisory Board of Caisse d'Epargne Bourgogne Franche-Comté, Chairman of the Supervisory Board of BPCE;
- Nicolas Getti, employee representative;
- Daniel Karyotis, Chief Executive Officer of Banque Populaire Auvergne Rhône Alpes;
- Didier Patault, Chairman of the Management Board of Caisse d'Epargne Île-de-France.
- Marie Pic-Pâris Allavena, Chairwoman of the Board of Directors of Banque Populaire Val de France, Vice-Chairwoman of the Supervisory Board of BPCE.

The biographies of Cooperative and CSR Committee members are available in Section 4.3.5.

4.3.3 Management Board

Guidelines

The Management Board consists of between two and five individuals, who may be selected from among the shareholders.

The age limit for serving on the Management Board is 65. When members reach the age limit, they are deemed to have resigned as of the date of the next meeting of the Supervisory Board, which decides on a replacement.

The Supervisory Board appoints the Chairman of the Management Board, who then provides it with recommendations on the other members to be appointed to the Management Board.

Members of the Management Board are appointed for four-year terms, with their terms of office ending at the conclusion of the Ordinary shareholders' Meeting to approve the financial statements for the previous year and held during the year in which their term of office expires.

Appointment and succession policy - Diversity

In application of the French Monetary and Financial Code and in accordance with the guidelines of the European Banking Authority (EBA) on internal governance and the guidelines of the EBA and ESMA (European Securities and Markets Authority) on the assessment of the suitability of members of the management body and key function holders, at its meeting of February 7, 2024, the Supervisory Board adopted a policy for the appointment and succession of BPCE's executive management and members of the Supervisory Board.

This policy anticipates unforeseen vacancies or the end of terms of office of the Chairman and members of the Management Board of BPCE.

In this context, this system organizes the appointment and reappointment of the Chairman and members of the Management Board as well as their succession, and thus defines the terms and conditions under which the Chairman and members of the Management Board are to be replaced in the event of temporary or permanent absence.

The appointment and succession policy also reiterates the two aspects that are checked before any members of the Supervisory Board are appointed or succeeded: the aptitude criteria, which are also covered in a dedicated policy described below, as well as the diversity criteria observed by the Appointments Committee when reviewing any candidate.

Accordingly, and in compliance with the internal rules, the Appointments Committee:

- is in charge of submitting motions to the Supervisory Board on potential candidates for the office of Chairman of the Management Board Chairman;
- regularly reviews and assesses the integrity and expertise of candidates for the office of member of the Management Board (appointed by the Board based on motions from the Chairman of the Management Board).

In compliance with this prerequisite the Appointments Committee reviews and assesses candidates for the office of member of the Management Board in terms of their integrity, expertise, independent judgment and availability while pursuing a goal of diversity within the Management Board.

To that end, the Appointments Committee examines the following criteria: education; professional experience; age; and strategic, managerial, business and financial expertise, while making every effort to achieve balanced gender representation on the Management Board.

With respect to these criteria, the Appointments Committee:

- when assessing a candidate for the office of member of the Management Board, strives to maintain or achieve a balance and have a skill set appropriate for the Group's activities and strategic plan; and
- ensures that at all times the members of the Management Board collectively have the necessary skills to understand the risks, challenges and potential developments involved in running a cooperative banking group.

The Supervisory Board, on the recommendations of the Appointments Committee, periodically reviews the effectiveness of BPCE's appointment and succession policy and reviews its design and implementation.

In this respect, at its meeting of December 12, 2024, the Supervisory Board reviewed the appointment and succession assessment policy and decided to maintain its initial wording.

Aptitude assessment policy

In accordance with the EBA and ESMA guidelines, the Supervisory Board also adopted, at its meeting of February 7, 2024, a policy for assessing the suitability of the members of the Management Board and the members of the Supervisory Board and holders of key BPCE positions.

This policy, which formalizes the practices already existing within BPCE, aims to define the methods of the assessment carried out by the Appointments Committee, particularly the function of the persons assessed (members of the Management Board, the Supervisory Board or individuals in key positions), the frequency of this assessment and the criteria used by the Appointments Committee.

The aptitude assessment policy specifies:

- the annual nature of the assessment and the cases in which a reassessment must be carried out;
- the skills expected for any appointment, distinguishing between those required for the Management Board, the Supervisory Board, and the specialized committees;
- the details of the assessment of each aptitude criterion (including integrity, skills, independence, and availability);
- the role of the operational departments and the Appointments Committee in the assessment process.

The Supervisory Board, on the recommendation of the Appointments Committee, periodically verifies the effectiveness of BPCE's aptitude policy and reviews its design and implementation.

In this respect, at its meeting of December 12, 2024, the Supervisory Board, on the recommendation of the Appointments Committee, modified the suitability assessment policy in order to clarify certain points.

Members

COMPOSITION OF THE MANAGEMENT BOARD AT DECEMBER 31, 2024

Nicolas Namias, Chairman of the Management Board
Béatrice Lafaurie, Member of the Management Board in charge of Group Human resources
Hélène Madar, Member of the Management Board in charge of the Retail Banking and Insurance division
Jérôme Terpereau, Member of the Management Board in charge of Group Finance

4.3.4 Executive Management Committee – BPCE governing body

Composition of the Executive Management Committee at February 6, 2025

- Nicolas Namias, Chairman of the Management Board;
- Béatrice Lafaurie, Head of Human Resources, member of the Management Board;
- Hélène Madar, Head of Retail Banking and Insurance, member of the Management Board;
- Jérôme Terpereau, Head of Group Finance, member of the Management Board;
- Laurent Bénatar, Chief Technology & Operations Officer[1];
- Jacques Beyssade, Group Secretary General;
- Corinne Cipière, Chief Executive Officer of BPCE Assurances;
- Fabrice Gourgeonnet, Chief Executive Officer[1] of Financial Solutions & Expertise;
- Mohamed Kallala, Chief Executive Officer of Natixis;
- Philippe Setbon, Deputy Chief Executive Officer of Natixis;
- Franck Leroy, Group Chief Risk Officer[1];
- Yves Tyrode, Chief Digital & Payments Officer[1].

In addition, Christine Jacglin, who reports directly to Nicolas Namias, is Deputy Chief Executive Officer in charge of the Group Internal Audit.

Diversity

At February 6, 2025, the Executive Management Committee comprised three women out of a total of 12 members, a proportion of 25%.

As of December 31, 2024, the gender distribution of the top 10% senior management positions was 34.4%, *i.e.* 126 women out of 366 employees.

(1) The title of Chief Executive Officer is not governed by Article L. 225-66 of the French Commercial Code.

4.3.5 Directorships and offices held by corporate officers

Supervisory Board:

Éric FOUGÈRE
Born on 08/13/1967 - Nationality: French

Chairman of the Steering and Supervisory Board of Caisse d'Epargne Bourgogne Franche-Comté

Chairman of the Supervisory Board of BPCE (since 05/23/2024) and member of the Cooperative and CSR Committee (since 05/27/2021) (term end date: 2027 GSM)

- **Independent Director:** TF1[(1)] (since 04/01/2019)
- **Manager**: SC Crevaux (since 07/31/2009)

A graduate of ESSEC, Marie Pic-Pâris Allavena began her career in banking at BNP Paribas, then in the Crédit Agricole group, where she developed expertise in the structuring of complex banking transactions (aircraft financing, LBO).

In 1994, she founded her company – Futurekids – a computer school for children who were introduced to new technologies starting at age three.

She sold her company in 2002 and held management positions in consulting firms.

In 2006, she joined Serge Eyrolles, as General Secretary of the Eyrolles group (independent, family-owned publishing group). She was appointed Chief Executive Officer of the Eyrolles group in 2008. For the past 15 years, she has broadened the historical editorial line in professional and technical fields to more general audience topics. Eyrolles books are now translated into 40 languages. Lastly, Marie Pic-Pâris Allavena developed digital books very early on, forging partnerships with major players such as Apple and Amazon, thereby making it possible to distribute content on all platforms and in all formats.

Benoît Catel is a graduate of the École Supérieure de Commerce de Lille, IEP Paris and holds the DESCF (Diplôme d'Études Supérieures Comptables et Financières).

He began his career at Compagnie Bancaire in 1987 where he held various accounting and financial positions.

In 1992, he joined GMF Banque to become head of accounting.

He joined Groupe Caisse d'Epargne in 1994 at Caisse d'Epargne Île-de-France Ouest, where he was first the Director of Accounting and then of Banking Production and, finally, a member of the Management Board, in charge of the Finance and Risks division.

From 2001, he held the same position at Caisse d'Epargne Côte d'Azur, before taking over the Development division within the Management Board.

In 2006, he was appointed Director of the Local Government, Social Housing and Social Economy market at Caisse Nationale des Caisses d'Epargne.

In 2009, he was appointed Chief Executive Officer of Banque de la Réunion (a subsidiary of BPCE IOM) and then, from 2012 to 2015, he managed Volksbank Romania, a former subsidiary of Groupe BPCE.

In April 2015, he joined Crédit Foncier as Deputy Chief Executive Officer, in charge of business development. Then in January 2018, he took over as general manager for almost two years.

From November 2019 to May 2023, Benoît Catel was Chief Executive Officer of Crédit Coopératif and in June 2023, he became Chief Executive Officer of Banque Populaire Grand Ouest and was appointed to the Supervisory Board of BPCE.

After starting his career at Société Générale in the financial markets, Daniel Karyotis held the position of financial analyst in charge of the banking sector at Standard & Poor's for five years. In 1992, he joined Caisse d'Epargne Champagne Ardennes where he held various management positions until 1997. He then became Chief Executive Officer of Caisse d'Epargne du Pas de Calais from 1998 to 2001, then Chairman of the Management Board of Caisse d'Epargne Champagne Ardennes from 2002 to 2007. In 2007, he became Chairman of the Management Board of Banque Palatine, then in 2012 he was appointed Chief Executive Officer and member of the Management Board in charge of Groupe BPCE's Finance, Risks and IT. In April 2016, he led the merger of the three Banque Populaire banks in the Auvergne-Rhône-Alpes region, which gave rise to Banque Populaire Auvergne Rhône Alpes (the largest of the Banque Populaire banks in the region), of which he has been the Chief Executive Officer since December 2016.

Daniel Karyotis is a director of SIPAREX and the Paul BOCUSE Foundation.

Daniel Karyotis has also been a non-voting director of the Supervisory Board of BPCE since 2016. On December 16, 2021, he was appointed a member of the Supervisory Board, the Audit Committee, the Appointments Committee, the Remuneration Committee and the Cooperative and CSR Committee of BPCE.

Christine Fabresse, a graduate of Montpellier Business School, began her career in 1987 in Avignon, at Crédit Lyonnais. She worked at Crédit Lyonnais for 15 years as Director of Corporate Business Centers, Regional Director of the Individual and Professional Market, and then from 2001 on as Director of Human Resources Development. In 2003, she became Director of Group HR Policies and Group Mobility at Crédit Agricole SA.

In 2006, she joined the Executive Management Committee of LCL as Head of the Retail Network. In 2008, she joined the Executive Committee of Caisse Nationale des Caisses d'Epargne as Director of Sales, before being appointed in 2011 to the Commercial Banking and Insurance division of BPCE, as Director of Development of the Caisse d'Epargne network.

In 2013, she was appointed Chairwoman of the Management Board of Caisse d'Epargne Languedoc-Roussillon, an office she held for more than five years before joining the Management Board of BPCE as Chief Executive Officer in charge of Retail Banking and Insurance for the Banques Populaires and Caisses d'Epargne networks. She then chaired the Board of Directors of Banque Palatine.

Since April 2022, Christine Fabresse has been Chairwoman of the Management Board of Caisse d'Epargne CEPAC and a non-voting director of the Supervisory Board of BPCE. In November 2023, she was appointed to the Supervisory Board of BPCE.

- **Member of the bureau:** Normandie Administrateurs indépendants (since June 2014)

A civil engineer, graduated from Mines Paris Tech (class of 1982), Benoît Pellerin began his career with the Danone group (engineering, management control, Group purchasing, Internal Audit, etc.), where he spent 12 years. He then became Chairman and Chief Executive Officer and shareholder of the Groupe Pays d'Auge Finances, which became Spirit France in 2007. He developed the Group internationally and made it the world leader in the Calvados category with the Boulard, Père Magloire and Lecompte brands.

Since 2012, specializing in business development strategy consulting, he has also been Chairman of Normandie Administrateurs Indépendants and a member of the national office of APIA. Together with these associations of managers or former managers of SMEs/mid-caps, he is committed to promoting good governance practices in SMEs. A member of the Investment Committee of the Normandie Participations regional fund, an investor in several innovative companies and in the Normandie Capital Investissement fund, he also provides voluntary support to managers in various organizations promoting entrepreneurship, such as the Réseau Entreprendre Normandie Ouest and the Institute for Entrepreneurial Mentoring.

Decorated with the National Service Medal, a Naval Reserve Officer, and a Frigate captain of the French Marine Reserve, Benoît Pellerin was an auditor of the first national session of the IHEDN entitled "Issues and Maritime Strategies" (2016). He is a member of the Fondation de la Mer, more specifically in charge of fundraising, and is also a shareholder of innovative maritime companies.

Bertrand GUYARD

Born on 12/15/1964 - Nationality: French

Member of the Supervisory Board and the Remuneration Committee of BPCE

Employee representative

(since 05/27/2021 - term end date: 2027 GSM)

Business address: 5, avenue de la Liberté – 94220 CHARENTON-LE-PONT

OFFICES HELD AS OF DECEMBER 31, 2024

Within Groupe BPCE

- **Member of the Supervisory Board and Remuneration Committee of BPCE – Member representing employees** (since 05/27/2021)
- **Leading Method & Quality Expert, Natixis** (since September 2021)

Outside Groupe BPCE

- **Manager: SCI Ritalevi, SCI Saint Rémi.**

A graduate with a DUT GEA and a DUGECA in advanced accounting, Bertrand Guyard worked for eleven years at CCF Reims (Crédit Commercial de France) in the securities custody business, where he held positions in the securities and private banking back-offices. In 1999 he joined the CCBP (which became Natixis Banque Populaire) at the time of the sale of the securities activities, which were consolidated within Eurotitres. He was successively responsible for the Accounting Control department then the Operational Risk Correspondent position in conjunction with the Risk division. In 2009, he became head of the Vetting department (carrying out KYC due diligence for CIB clients in the context of AML/CFT), initially reporting to Natixis Compliance and then to T&T's Client Support Group Operation. Since September 2021, he has held the position of Expert Leader Method & Quality within the same department.

- **Independent member of the Supervisory Board:** GAGEO SAS (since December 2017)
- **Independent member of the Board of Directors:** FREY SIIC[1] (Listed real estate investment company) since 05/15/2024

A graduate of École Polytechnique, with a post-graduate degree in Financial Markets from Université Paris Dauphine and École Nationale des Ponts et Chaussées, Valérie Pancrazi began her professional career in 1988 as the Head of securitization transactions and international finance for Compagnie Bancaire group (Paribas). In June 1992, she became Chief Executive Officer of Bear Stearns Finance SA. From February 1999 to October 2004, Valérie Pancrazi worked at AXA RE, first as Deputy Chief Executive Officer of AXA RE Finance, then special advisor to the Chairman and finally Head of Corporate Finance. From November 2004 to June 2007, she was Head of private equity investment mandates for French and international AXA group entities at AXA Private Equity (now ARDIAN). Since 2009, Valérie Pancrazi has been an independent advisor (VAP Conseils) and, since 2012, an expert in corporate finance and international financial transactions at the Paris Court of Appeal.

In May 2019, she was appointed as an independent member of the Supervisory Board of BPCE and Chairwoman of the Appointments Committee and the Remuneration Committee.

Anne-Claude PONT

Born on 05/15/1960 - Nationality: French

Chairwoman of Wilov

Independent member of the Supervisory Board, Chairwoman of the Risk Committee and member of the Audit and Investment Committee of BPCE (since 03/29/2018 - term end date: 2027 GSM)

Business address: 15, rue Linné – 75005 PARIS

OFFICES HELD AS OF DECEMBER 31, 2024

Within Groupe BPCE

- **Independent member of the Supervisory Board, Chairwoman of the Risk Committee, and member of the Audit and Investment Committee of BPCE** (since 03/29/2018)
- **Director:** Compagnie Européenne de Garanties et Cautions (CEGC) (since 07/09/2020)
- **Director: Natixis Foundation** (since 01/23/2024)

Outside Groupe BPCE

- **Chairwoman:** WILOV (since 08/19/2016)

Anne-Claude Pont has nearly 30 years of experience in corporate finance and management. After graduating from ESCP (Management Information System option) and working in an IT services company, she began her career at Crédit Lyonnais in the United States. When she returned to France, she joined Compagnie Bancaire (Groupe Paribas) where she was put in charge of International Cash Management. She continued her career at German group HVB, where she became Chief Executive Officer in France, Head of Markets, human resources, and Information Systems. In 2007, Anne-Claude Pont joined RBS to grow its FI (Financial Institutions) business in France, Belgium, and Luxembourg, as a Managing Director and member of the Executive Committee. Finally, in 2016, she co-founded Wilov, the first 100% smartphone-connected auto insurer, where the price adjusts to daily usage levels ("Pay when you drive"). Anne-Claude Pont is a certified director (Sciences-Po-IFA 2015) and a member of several networks (including IFA, FBA, France Digitale and France Fintech).

In March 2018, she was appointed as an independent member of the Supervisory Board of BPCE, Chairwoman of the Risk Committee and member of the Audit and Investment Committee.

Kadidja SINZ

Born on 04/29/1957 - Nationality: French

Chief Executive Officer of Liberty Specialty Markets Europe

Independent member of the Supervisory Board, Chairwoman of the Audit and Investment Committee, and member of the Risk Committee of BPCE (since 08/02/2018 - term end date: 2027 GSM)

Business address: 42, rue Washington – 75008 PARIS

OFFICES HELD AS OF DECEMBER 31, 2024

Within Groupe BPCE

- **Independent member of the Supervisory Board, Chairwoman of the Audit and Investment Committee, and member of the Risk Committee of BPCE** (since 08/02/2018)

Outside Groupe BPCE

- **Chief Executive Officer:** Liberty Specialty Markets Europe (since 2016) and Head of Liberty Mutual Insurance Europe SE in France

Kadidja Sinz holds an advanced degree in private international law and an Executive MBA. She also graduated from Institut d'Études Politiques de Paris in international relations and the Centre des Hautes Études en Assurance.

She began her career in the United States at Chubb, a US firm specializing in political risks. Later, she joined AIG in France to hone her skills at the European level before joining ACE, then XL (bought out by AXA) in 2010. In 2016, she joined US insurer Liberty Mutual, which specializes in corporate risk, as Chief Executive Officer for Europe.

Kadidja Sinz was appointed as an independent member of the Supervisory Board of BPCE in August 2018, Chairwoman of the Audit and Investment Committee and member of the Risk Committee.

- **Chairman:** Association European Savings and Retail Banking Group (ESBG) (since 12/13/2024)
- **Manager:** SCI Nantucket (since July 2018)

An alumnus of the École Nationale d'Administration (ENA) with degrees from Stanford Graduate School of Business (Executive Program), ESSEC and Institut d'Études Politiques de Paris, Nicolas Namias began his career in 2004 in the Treasury department of the French Ministry of Economy and Finance. He was first tasked with preparing for the international financial summits of the G8 and G20, before being named as the Government's Substitute Commissioner to the *Autorité des marchés financiers* (AMF), the French financial markets authority. In 2008, he joined the Finance division of Groupe BPCE, then became Head of Planning for Commercial Banking and Insurance. In 2012, he was named Technical Advisor to the Prime Minister for the funding of the economy, businesses, and international economic affairs.

Nicolas Namias returned to Groupe BPCE in 2014 as Head of Strategic Planning at Natixis and a member of the Executive Committee. In September 2017, he was appointed Chief Financial and Strategy Officer and as a member of the Natixis Executive Management Committee.

In June 2018, Nicolas Namias was appointed as a member of the Management Board of BPCE in charge of Finance, Strategy, Legal Affairs and the Secretary's Office of the Supervisory Board. As of November 2018, he is a member of the Management Board of BPCE in charge of Group Finance and Strategy.

From August 3, 2020 to December 2, 2022, Nicolas Namias was Chief Executive Officer of Natixis and a member of the Management Board of BPCE.

He was appointed Chairman of the Management Board of BPCE as of December 3, 2022.

Béatrice LAFAURIE

Born on 10/12/1967 - Nationality: French

Member of the Management Board of BPCE - Head of Group Human Resources

(since 03/25/2021 - term end date: 2027 GSM)

Business address: 7, promenade Germaine Sablon – 75013 PARIS

OFFICES HELD AS OF DECEMBER 31, 2024

Within Groupe BPCE

- **Member of the Management Board of BPCE in charge of Group Human Resources** (since 03/25/2021)

Outside Groupe BPCE

After graduating from Sciences Po Paris and obtaining a Masters in human resources from Paris Dauphine University, Béatrice Lafaurie began her career in human resources in the Crédit Agricole group's life insurance subsidiary, Prédica. She subsequently joined the Human Resources department of Groupe Caisse d'Epargne before moving to Crédit Foncier as Head of Human Resources until 2007.

She then joined SNCF, where she successively held the positions of Head of Recruitment, Regional Head of Human Resources, Head of Human Resources for the High-Speed division and Group Head of Human Resources Development. She had been Head of Human Resources for the SNCF Mobilités branch since 2015 and was appointed Head of Human Resources for SNCF Voyageurs, and a member of the Executive Committee, on the creation of the branch in 2020.

On March 25, 2021, Béatrice Lafaurie was appointed member of the BPCE Management Board in charge of BPCE's Human Resources.

4.4 Role and operating rules of governing bodies

4.4.1 Supervisory Board

Duties and powers

The Supervisory Board performs the duties attributed to it by law. At any time, throughout the year, it carries out all checks and controls it deems appropriate and may request any documents it regards as expedient in fulfilling its mission.

To this effect, the Supervisory Board:

- receives a report from the Management Board on the company's business activities once every quarter;
- examines and checks the parent company and consolidated financial statements prepared and presented by the Management Board within three months of the end of the fiscal year, along with a written report on the position and activities of the company and its subsidiaries during the past year;
- presents to the Ordinary shareholders' Meeting a report on corporate governance that states the makeup of the managerial and supervisory bodies, the role and operation of the governing bodies, the diversity policy applied to members of the Supervisory Board, the principles and rules for determining remuneration and benefits of any kind given to corporate officers, and including its observations on the management report prepared by the Management Board and the financial statements for the previous fiscal year.

In addition to these powers, the Supervisory Board has the authority to:

OWN POWERS

- appoint the Chairman of the Management Board;
- appoint the other members of the Management Board, based on motions by the Chairman of the Management Board;
- set the method and amount of pay received by each member of the Management Board;
- grant the status of Chief Executive Officer to one or more members of the Management Board, based on a motion by the Chairman of the Management Board, and withdraw said status as applicable;
- propose the appointment of the Statutory Auditors at the General Shareholders' Meeting, after they are recommended by the Audit Committee;
- decide to move the registered office to another location within the same department or to an adjacent department, subject to ratification of the decision by the next Ordinary Shareholders' Meeting.

DECISIONS SUBJECT TO A SIMPLE MAJORITY

The following operations proposed by the Management Board must receive prior authorization from the Supervisory Board, acting by simple majority of its present or represented members:

- approval of the policy and strategic guidelines of Groupe BPCE and each of the networks;
- authorize:
  - any proposed Transaction (as defined in BPCE's articles of association[1] under "Definitions") for an amount exceeding €100 million,
  - any proposed Transaction (as defined in BPCE's articles of association[1] under "Definitions") carried out by BPCE and not in line with BPCE's strategic plan, regardless of the amount;
- approval of the company's annual budget and definition of the rules for calculating contributions due from affiliated institutions;
- authorization of related-party agreements pursuant to the French Commercial Code;
- approval of the Group's internal solidarity mechanisms;
- approval of the national and international agreements involving each of the networks and the Group as a whole;
- approval of the general criteria that must be met by the directors of Groupe BPCE's affiliated institutions, including age limits, which may not exceed:
  - 65 for Chief Executive Officers or members of the Management Board, or
  - 70 for Chairmen of Boards of Directors and Steering and Supervisory Boards, it being stipulated that no individuals may be appointed Chairman of a Board of Directors or a Steering and Supervisory Board if they cannot, on the date of first appointment, complete at least half the term as Chairman before reaching this age limit; however, the age limit remains set at 68 for offices currently held on the date of the Supervisory Board Meeting that approved the age limit set in this section;
- authorization of the directors of affiliated institutions as well as the withdrawal of such authorization and all other dismissals as set out in Article L. 512-108 of the French Monetary and Financial Code;
- approval of the creation or elimination of a Banque Populaire or Caisse d'Epargne, including through the merger of two or more Banques Populaires or two or more Caisses d'Epargne;
- examination and approval of the main risk limits applicable to the Group and each network, as defined by the Management Board; regular examinations and checks on the Group's risks, any changes therein and the systems and procedures used to control them; examination of Internal Control audits and finding, and the main conclusions of audits performed by the Group Internal Audit;
- appointment of BPCE's representatives to the Natixis Board of Directors. Representatives from the Caisses d'Epargne and from the Banques Populaires will be of identical number and will together hold, at a minimum, the majority of seats on the Board;
- upon recommendation from the Appointments Committee, examination and assessment of the integrity and skills of candidates for the Supervisory Board and the non-voting directors, Chairman, and other members of the Management Board;
- adoption of the Board's internal rules.

(1) https://groupebpce.com/en/investors/regulated-information/other-information

DECISIONS SUBJECT TO A QUALIFIED MAJORITY (13 OUT OF 19 MEMBERS)

The following operations proposed by the Management Board are subject to the prior authorization of the Supervisory Board and a favorable vote from at least 13 of its 19 present or represented members:

- any decision to subscribe for or acquire (or any agreement binding the company therein), by any means (including by transfer of assets to the company), securities or rights of any kind whatsoever, be they issued by a company or any other entity and directly or indirectly representing an investment or contribution of more than one (1) billion euros;
- any decision to transfer (or any agreement binding the company therein), by any means, securities or rights of any kind whatsoever held by the company and representing a divestment of more than one (1) billion euros for the company;
- any decision by the company to issue equity securities or shares giving immediate or eventual access to the company's capital, without pre-emptive rights;
- any decision to submit to the General Shareholders' Meeting any changes to the articles of association with regard to the company that amend the terms of governance;
- any merger, demerger, spin-off, or related decision involving the company;
- any decision to appoint the Chairman or remove the Chairman of the company's Management Board from office;
- any decision relating to the admission of company shares or shares in any of its main direct or indirect subsidiaries to trading on a regulated market;
- any decision to approve the disposal of securities.

Internal rules

The internal rules of the Supervisory Board[1], adopted at the Board Meeting of July 31, 2009 and amended at the Board meeting of February 7, 2024, form the Supervisory Board's Governance Charter, which sets out its internal operating procedures, notably for the purpose of ensuring that governing bodies interact efficiently and operate smoothly.

The internal rules enhance the quality of the work done by members of the Supervisory Board by promoting the application of corporate governance principles and best practices in the interest of ethics and efficiency.

Their purpose is also to supplement the articles of association, notably by:

- specifying the procedures for convening Supervisory Board and Supervisory Board Committee meetings, as well as the rules under which they are to deliberate;
- specifying the general and specific powers of the Board under the law, as set out in Articles 27.1 and 27.2 of the company's articles of association;
- note that the decisions requiring the prior approval of the Board for transactions (as defined by the articles of association under "Definitions") are set out in Articles 27.3 and 27.4 of the company's articles of association[1];
- specifying the rules governing the information of the Board;
- specifying the duties of the various committees, for which they serve as the internal rules;
- specifying the professional secrecy and confidentiality obligations binding the members of the Supervisory Board and its committees;
- defining the penalties that apply in the event members of the Supervisory Board or of a committee fail to comply with any of their obligations.

The Supervisory Board's rules of procedure are available on the BPCE website: https://groupebpce.com/en/investors/regulated-information/other-information

Ethics and Compliance Charter

The Supervisory Board of BPCE adopted an Ethics and Compliance Charter for its members at its meeting of June 22, 2016 and amended at its meeting of February 7, 2024. The Ethics and Compliance Charter is divided into four main chapters that set out good governance principles, in addition to reiterating several laws and regulations.

Chapter 1 covers the Board members' professionalism, as expressed in different ways:

- the total number of offices held by members of the Supervisory Board and their availability (time spent preparing for meetings and reviewing issues);
- expertise, *i.e.* consolidation of knowledge and understanding of information that may be used in performing their duties;
- diligence and effectiveness (active participation);
- duty to intervene and raise the alarm, *i.e.* expressing viewpoints and participating in discussions;
- risk culture, *i.e.* the standards, attitudes, and behaviors of Board members in relation to risk awareness, risk-taking and risk management;
- respect for corporate responsibility and good faith.

Chapter 2 covers ethics, as expressed by:

- respect for the law and the company's articles of association;
- integrity (lack of a criminal record, incompatibility with certain duties);
- good credit history, which is checked by the Risk division of the institution or network in which the member also holds office, under the authority of the BPCE Risk division (except for independent members, whose credit history is checked using any rating either internal or external to the company in which they play a primary role);
- gifts or benefits (soliciting or accepting direct or indirect benefits is prohibited).

(1) https://groupebpce.com/en/investors/regulated-information/other-information

Chapter 3 covers confidentiality:

- banking secrecy and the duty of discretion;
- management of inside information (with the understanding that all members are on the list of permanent insiders);
- reporting of transactions on financial instruments issued by BPCE and Groupe BPCE companies;
- compliance with blackout periods on financial instruments issued by Groupe BPCE companies.

Chapter 4 covers conflicts of interest:

- independence of judgment;
- incompatibility with the duties performed on their own behalf in other investment banks or investment companies outside Groupe BPCE (unless explicitly approved by the Chairman of the Supervisory Board and the Chairman of the Management Board of BPCE);
- due diligence in business relationships.

Activity of the Supervisory Board

In accordance with Article 25.1 of the articles of association, the Supervisory Board meets as often as the company's interests, laws and regulations require, and at least once every quarter in order to examine the Management Board's quarterly report. Board meetings may be convened by its Chairman, its Vice-Chairman or by one half of its members and take place at the registered office or any other location stated in the notice of meeting.

In accordance with Article L. 823-17 of the French Commercial Code, the Statutory Auditors are invited to Board meetings examining full-year and half-year financial statements.

The Supervisory Board of BPCE met eleven times between January 1 and December 31, 2024. In 2024, the average attendance rate for members of the Supervisory Board was 97.46%.In addition to the topics regularly discussed – quarterly reports of the Management Board, related-party agreements, approvals of executives, current events, and other matters for information – the main topics discussed during the Board meetings were as follows:

GOVERNANCE - INTERNAL OPERATING PROCEDURES OF THE BOARD

- determination of the remuneration of the members of the Management Board for the 2023 fiscal year (payment of deferred portions due in 2024 and variable portion for 2023), setting of the determination criteria (performance criteria, triggering criteria, quantitative and qualitative criteria) for the variable pay of the members of the Management Board in respect of the 2024 fiscal year;
- approval of the 2024 remuneration policy for corporate officers;
- setting a minimum capital threshold for Groupe BPCE for the allocation of variable portions of Groupe BPCE risk takers for the 2024 fiscal year;
- adoption of the revised Group standard on risk-takers;
- taking note of the report provided for in Article 266 of the Ministerial Order of November 3, 2014 on internal control concerning the policy and practices for the remuneration of risk takers;
- review of the terms and conditions for the remuneration of non-executive directors and non-voting directors;
- presentation of the Supervisory Board's corporate governance report;
- opinion of the Social and Economic Committee on BPCE's economic and financial position in 2023;
- preparation of the Annual General Meeting, deed of the payment of a dividend with the option of payment in cash or securities;
- proposal to the Annual General Meeting to appoint the Statutory Auditors in charge of the sustainability report;
- proposal to the Annual General Meeting to renew the term of office of an independent member of the Supervisory Board;
- monitoring of the regulatory radar set up in order to present to the Supervisory Board the regulatory changes in progress;
- taking note of the end of terms of office of members and the resignation of a non-voting director of the Supervisory Board;
- approval of the appointment by the General Meeting of members and of a non-voting director of the Supervisory Board;
- appointment of the Chairman and Vice-Chairman of the Supervisory Board and review of remuneration terms;
- review of the composition of the Supervisory Board bureau;
- review of the composition of the Supervisory Board Committees;
- taking note of the start of duties by a non-voting director as of right and appointment of the Chairman of the Cooperative and CSR Committee;
- approval of the appointment of Natixis directors;
- review of the policy for the prevention and management of conflicts of interest for executive management and members of the Supervisory Board;
- review of the policy for the appointment and succession of executive management and members of the Supervisory Board;
- review and update of the policy for assessing the suitability of executive management and members of the Supervisory Board;
- monitoring of the company's policy on professional and pay equality;
- annual review of the progress of HR work and review of the HR policy in terms of executive management and development of potential executives;
- monitoring of the Supervisory Board's annual assessment process and review of the assessment report;
- monitoring of the individual assessment of the suitability of the members of the Supervisory Board and the Management Board;
- annual review of independent member status on the Supervisory Board;
- review of the dashboard of persons comprising the "regulated population";
- definition of mandatory training;
- implementation of the 2025 training program for members of the Supervisory Board.

STRATEGIC OPERATIONS

- approval of the proposed acquisition by BPCE of Société Générale Equipment Finance (SGEF);
- approval of the strategic partnership project between BPCE and BNP Paribas;
- approval of the "VISION 2030" strategic project and the growth objectives resulting from the 2026 financial trajectory;
- approval in principle of the proposed acquisition by Caisse d'Epargne Hauts-de-France of Bank Nagelmackers;
- approval in principle of the proposed acquisition by BRED Banque Populaire of the stake of Société Générale's subsidiary in Madagascar, Société Générale Madagasikara;
- authorization of the proposed sale by Natixis Investment Managers of all the share capital of the asset management company MV Credit Limited;
- monitoring of the implementation of the strategic operations authorized by the Supervisory Board since the end of 2023;
- review of the proposed merger of the asset management business lines of Natixis Investment Managers and Generali Investments Holding;
- presentation of an update on the analysis of the competition with a benchmark of the strategic movements of French banks in 2024.

FINANCE

- presentation of the annual financial statements, as of December 31, 2023, of Groupe BPCE, BPCE and BPCE SA;
- presentation of the 2024 quarterly and first-half financial statements of Groupe BPCE, BPCE and BPCE SA;
- taking note of the bottom line for 2024 and the 2025 budget of Groupe BPCE, approval of the 2025 budget of BPCE SA;
- acknowledgment of the 2025/2027 dividend payment policy;
- monitoring of the report on the assignments and services provided by the Statutory Auditors within Groupe BPCE;
- presentation of an update on the analysis of the competition with benchmark of Groupe BPCE's results compared to French peers.

AUDIT – COMPLIANCE – RISKS

- follow-up on the reports and investigations of the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector, and the European Central Bank (ECB);
- risk monitoring: monitoring of consolidated risks, forward-looking risk management approach, monitoring of the Group's internal ceilings and limits, monitoring of risk governance and annual review and reconsideration of Groupe BPCE's risk appetite, modification of operational limits;
- taking note of the main changes in the system for monitoring compliance with prudential requirements;
- annual review of the system for reporting significant incidents and assessment of the 2023 reports;
- review of the Group's annual report on the operation of internal control (RACI) and risk measurement and monitoring;
- annual assessment by the Supervisory Board of the Group's Internal Control functions;
- examination of the annual reports on the organization of internal control systems for the fight against money laundering and terrorist financing and the freezing of assets, on a parent-company and consolidated basis, for the 2023 fiscal year;
- monitoring of the recommendations of the Group Internal Audit and of the supervisor;
- quarterly monitoring of the program to strengthen BPCE's roles and responsibilities as a central institution (Riqueti program);
- acknowledgment of the measures taken in 2023 to ensure the control of essential outsourced services, including the monitoring of critical or important services and review of the 2024 outsourcing policy;
- monitoring and annual review of Groupe BPCE's recovery plan as well as in the USA;
- follow-up on the ICAAP (Internal Capital Adequacy Assessment Process) for 2024, the methods used within this framework and the results of internal stress tests used to determine figures for 2024;
- follow-up to the 2024 ILAAP (Internal Liquidity Adequacy Assessment Process) report;
- review of the summary of BCBS 239 self-assessments by type of risk and current action plans;
- acknowledgment of the limitations under BCBS 239;
- update of the solidarity mechanism;
- acknowledgment of the definition of the role and responsibilities of the central institution, the content of the Riqueti 2024/2025 roadmap and the resulting initiatives;
- climate and environmental risks: acknowledgment of the action plan and quarterly monitoring from 09/30/2024;
- acknowledgment of the follow-up letters from the ECB and the work in progress to respond to them;
- acknowledgment of the work carried out as part of the 2023 Supervisory Review and Evaluation Process (SREP).

CSR

Monitoring of the work of the Cooperative and CSR Committee relating in particular to:

- CSR actions and cooperative guidelines of the Banques Populaires and the Caisses d'Epargne;
- monitoring of environmental issues:
  - assessment of the 2021-2024 ESG program,
  - monitoring of the preparation of the VISION 2030 program: positioning, key indicators, priority deliverables, program for 2024-2026,
  - Net Zero trajectory,
  - the Group's biodiversity approach;
- review of the Group conduct and ethics reporting;
- review of sustainability reports: work on the production of the 2023 non-financial performance statement and monitoring of the new CSRD regulation (scope, acculturation, work, double materiality analysis).

INFORMATION SYSTEMS AND DIGITAL

- acknowledgment of the joint technological platform of the Banques Populaires and the Caisses d'Epargne;
- presentation of the key elements of the 2030 technology strategy;
- Digital Operational Resilience Framework (DORA) - approval of the management framework and associated policies.

Depending on the type of matters submitted to the Supervisory Board, discussions were held and decisions made on the basis of the reports presented by the relevant Board Committees.

4.4.2 Specialized committees

The Supervisory Board has instituted five specialized committees in charge of preparing its decisions and making recommendations. Their duties, resources, operating procedures, and composition are set out in the Supervisory Board's internal rules.

As far as possible, and depending on applicable circumstances, any discussion by the Supervisory Board that falls within the remit of a committee created by the Board is preceded by the referral of the matter to said committee and a decision may only be made after that committee has issued its recommendations or motions.

Under no circumstances may the specialized committees be consulted either for the purpose of delegating powers to said committees, powers that are allocated to the Supervisory Board by law or the articles of association, or to reduce or limit the Management Board's powers.

Whenever it is necessary to consult a committee, the Chairman of that committee receives from the Management Board, within a reasonable time frame (given the circumstances), all of the items and documents that will enable the committee to carry out its work and formulate its opinions, recommendations and motions relating to the Supervisory Board's upcoming agenda.

The members of the committees are chosen by the Supervisory Board on the proposal of the Chairman of the Board from among its members, taking into account the mapping of the Supervisory Board's skills, the results of the assessment of the skills of the members carried out by the Appointments Committee and the skills required by the duties assigned to the committee in question, as set out in the Policy on the assessment of the suitability of the members of the Management Board and the Supervisory Board. Members may be dismissed by the Supervisory Board.

The term of office for committee members coincides with their term of office as members of the Supervisory Board. The renewal of both terms of office may take place concomitantly.

Each committee is made up of at least three and at most seven members, except for the Remuneration Committee which has eight members, including one employee representative as stipulated by Article L. 225-79-2 of the French Commercial Code.

The Supervisory Board may also appoint a person from outside Groupe BPCE or a non-voting director to any of these committees. The Cooperative and CSR Committee includes both non-voting directors as of right among its members.

A Chairman is in charge of organizing the work conducted by each committee. The Chairman of each committee is appointed by the Supervisory Board.

Audit and Investment Committee

DUTIES

In accordance with Article 3.4 of the Supervisory Board's internal rules, the Audit and Investment Committee assists the Supervisory Board in its role of auditing and controlling the financial statements and the Management Board's report on the company's business.

The Audit and Investment Committee is tasked with overseeing the process for preparing financial information, the statutory audit of the annual and consolidated financial statements by the Statutory Auditors and their independence.

Accordingly, it ensures the quality of information provided to shareholders and, more generally, fulfills the duties set out in the French Commercial Code.

The Audit and Investment Committee is also responsible for reviewing transactions as defined in BPCE's articles of association and monitoring investments in accordance with the procedures described below.

The Audit and Investment Committee oversees:

Preparation of financial information

In this respect, its duties include:

- reviewing the quarterly, half-year and annual consolidated financial statements of the company and Group, as well as the parent company financial statements, which are presented by the Management Board prior to their review by the Supervisory Board;
- verifying that the information provided is clear;
- reviewing the scope of consolidated companies and supporting evidence thereof;
- assessing the appropriateness of accounting methods adopted in preparing the company's individual financial statements and the consolidated financial statements of the company and the Group;
- reviewing the prudential and accounting impacts of any material acquisition by the company or the Group.

Statutory audit of the annual and consolidated financial statements, and of the Statutory Auditors' independence

In this respect, its duties include:

- ensuring that the "Framework for Statutory Auditor Assignments at Groupe BPCE," approved by the Supervisory Board of BPCE and which defines the rules and principles aimed at guaranteeing Statutory Auditor independence in Groupe BPCE companies, is observed and updated;
- issuing a recommendation on the procedure for selecting the Statutory Auditors nominated by the General Meeting;
- in accordance with applicable regulations, authorizing services (other than certification of the financial statements) that are provided by the Group's Statutory Auditors;
- ensuring that the Statutory Auditors are independent, specifically by reviewing fees paid to them by Group companies as well as fees paid to any network to which they might belong and by overseeing, on a quarterly basis, any services that do not fall within the strict framework of the statutory audit;
- reviewing the Statutory Auditors' work schedule, the results of their audits and recommendations, and any follow-up action.

Monitoring of the Group's operations

In this respect, it is asked to review and issue a prior opinion on any material internal or external growth operations submitted for the approval of the Supervisory Board, including in particular:

- any equity investments or divestments, contributions, mergers, spin-offs, restructuring operations, joint ventures, strategic deals, alliances, or partnerships entered into by BPCE or its subsidiaries;
- any acquisitions or disposals, including acquisitions or disposals of equity interests, carried out by the Banques Populaires and the Caisses d'Epargne, specifically reviewing the associated terms and conditions as well as the prudential and accounting impacts.

The Audit and Investment Committee is also responsible for monitoring the development of investments, acquisitions and equity investments related to a transaction subject to the approval of the Supervisory Board.

ACTIVITY

The Audit and Investment Committee met nine times (including twice in a joint meeting with the Risk Committee) between January 1 and December 31, 2024. The average attendance rate at these meetings was 98.51%.

The main issues that it addressed were as follows:

- presentation of the annual financial statements of the Group and BPCE as of December 31, 2023;
- presentation of the 2024 quarterly and half-year financial statements of the Group and of BPCE;
- financial instruments valuation system: main changes for 2023;
- presentation of the 2024 bottom line and review of the 2025 budget of the Group and BPCE;
- review and examination of the Group's capital adequacy and liquidity ratios;
- monitoring of cost of risk;
- regular information on the results of BPCE's main subsidiaries;
- monitoring of the work and presentation of the Statutory Auditors' audit plan;
- report on the assignments and services provided by the Statutory Auditors within Groupe BPCE, review of their independence, and update on their fees;
- approval of services performed by the Statutory Auditors other than the certification of the financial statements, annual delegation concerning the pre-approval of services other than the certification of the financial statements;
- annual review of the system for overseeing the Statutory Auditors' involvement in the Group;
- monitoring of Oney's trajectory;
- update on the CSRD sustainability report:
  - result of the auditor's call for tenders,
  - methods of implementation,
  - double materiality analysis,
  - work of the Statutory Auditors responsible for certifying the information on sustainability;
- review and monitoring of the acquisition by BPCE of Société Générale Equipment Finance (SGEF);
- review of the proposed acquisition by BRED of Société Générale Madagasikara, a subsidiary of Société Générale in Madagascar;
- review of the proposed acquisition by Caisse d'Epargne Hauts-de-France of Bank Nagelmackers;
- review of the proposed sale by Natixis Investment Managers of all the share capital of the asset management company MV Credit Limited;
- review of the proposed strategic partnership in payments between BPCE and BNP Paribas;
- review of the proposed merger of the asset management business lines of Natixis Investment Managers and Generali Investments Holding.

Risk Committee

DUTIES

In accordance with Article 3.5 of the Supervisory Board's internal rules, the Risk Committee assists the Supervisory Board with regard to BPCE's overall strategy and risk appetite, both current and future, and when the latter controls the implementation of the strategy. In this context, it is responsible for assessing the effectiveness of the internal control and risk management systems and, more generally, performs the missions provided for in Articles L. 511-92 *et seq.* of the French Monetary and Financial Code and by the Ministerial Order of November 3, 2014, amended on February 25, 2021, on the internal control of banking sector companies.

In this respect, its duties include:

- conducting a regular review of the strategies, policies, procedures, systems, tools and limits referred to in Article 148 of the Ministerial Order of November 3, 2014 on internal control of banking sector companies and the underlying assumptions, and sharing its findings with the Supervisory Board;
- reviewing the total risk exposure of company and Group activities, based on the associated reports;
- examining different possible scenarios, including stress scenarios, in order to assess how the institution's risk profile would respond to external and internal events;
- advising the Supervisory Board on the company's overall strategy and risk appetite, both current and future, and assisting the Supervisory Board when it reviews the implementation of this strategy by the members of the Management Board and the Head of Risk Management;
- assisting the Supervisory Board in monitoring implementation of the institution's capital and liquidity management strategies as well as other relevant risks, such as market risk, credit risk, operational risk (including legal and IT risks) and reputational risk, in order to assess their adequacy for the risk appetite and risk strategy that have been approved;
- assisting the Supervisory Board in regularly reviewing the policies established to comply with the provisions of the Ministerial Order of November 3, 2014 on internal control of banking sector companies, assessing the effectiveness of these policies and that of the provisions and procedures implemented for the same purposes as well as any corrective measures undertaken in the event of failures; To this end, the Risk Committee communicates, coordinates and collaborates effectively with the Audit and Investment Committee;

- reviewing the annual report(s) on risk measurement and supervision and on the conditions under which internal control is conducted throughout the Group;
- proposing to the Board the materiality criteria and thresholds referred to in Article 98 of the Ministerial Order of November 3, 2014 on internal control of banking sector companies, *i.e.* the criteria and thresholds used to identify incidents that must be brought to the Board's attention;
- ensuring the independence of the Group Internal Audit, which is authorized to request or access all items, systems, or information required for the successful completion of its duties;
- reviewing the annual schedule of the Group Internal Audit;
- ensuring the follow-up of the findings of the audits performed by the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector, and/or the European Central Bank (ECB), and of the Group Internal Audit, whose summaries regarding the company and Group entities are addressed to the Committee;
- reviewing the follow-up letters sent by the ACPR and/or by the ECB and issuing an opinion on the draft replies to these letters;
- determining, in accordance with its purview, if the prices of products and services (referred to in Books II and III of the French Monetary and Financial Code: financial instruments, savings products, banking transactions, investment services) offered to customers are compatible with the company's risk strategy and, if not, to present an action plan to the Supervisory Board to remedy the situation;
- determining if incentives provided by the company's pay practices and policy are compatible with the risks incurred by the company, its share capital and liquidity and the likelihood that the expected benefits will vest, as well as their staggered vesting over time.

ACTIVITY

The Risk Committee met twelve times (including twice in a joint meeting with the Audit and Investment Committee) between January 1 and December 31, 2024. The average attendance rate at these meetings was 98.89%.

In addition to the main risk-related issues and the possible impacts of major current events on the Group, it addressed the following topics:

Finance

- review of the methodology and results of the annual ICAAP (Internal Capital Adequacy Assessment Process) to analyze the capital adequacy for risks and half-yearly update;
- annual review of the ILAAP (Internal Liquidity Adequacy Assessment Process) report;
- annual presentation of the Contingency Funding Plan (CFP);
- update on the capital requirements under the MREL for the year 2024;
- annual summary of BCBS 239 self-assessments and half-yearly review;
- half-yearly monitoring of internal caps and Group limits (credit and counterparty risks, market risks, interest rate risks and liquidity risks);
- examination of the compatibility of product and service prices with the risk strategy;
- overview and results of internal stress tests;
- review of the assessment by the JST of the 2023 Recovery Plan (PPR) and adoption of the 2024 PPR;
- annual assessment by the resolution authorities, review of the best fortunes clause of the solidarity mechanism and multi-year work program requested by the Single Resolution Board (SRB).

Risks

- presentation of the 2024 roadmap of the Group Risk Department;
- presentation of the impact of the VISION 2030 strategic project on the Group's risk profile;
- framing of major risk appetite balances;
- annual review of risk appetite: update of the internal risk framework;
- annual review and update of the Group's risk appetite indicators;
- half-yearly forward-looking risk analysis;
- presentation of the roll-out and model change plan for the Group's internal models scope;
- annual review of the assessment of the Group's internal rating systems, including model risk and its management system;
- presentation of the closing of the SREP recommendations for 2023: Market Risk in the banking book;
- presentation of the Group counterparty risk management system;
- update of the IRRBB (interest rate risks for banking book) policy;
- climate risk: presentation of the annual work program and monitoring;
- ESG risks: presentation of the action plan and monitoring;
- credit risk: detailed presentation of the remediation program and quarterly monitoring;
- quarterly monitoring of the Group's consolidated risk scorecards and BPCE SA risks;
- half-yearly monitoring of internal caps and Group limits (credit and counterparty risks, market risks, interest rate risks and liquidity risks);
- annual review of the resources of the second line of defense of the functions reporting to the risk division;
- annual review of the system for reporting significant incidents and assessment of the 2023 reports;
- annual assessment of the Risk division.

Group Corporate Secretary's Office

- 2023 Groupe BPCE and BPCE SA annual reports on internal control (RACI);
- 2023 Group and BPCE SA annual reports on the Internal Control of Money Laundering and the Financing of Terrorism (RACI AML-CTF);
- roles and responsibilities of BPCE as a central institution: detailed presentation of the expansion program and quarterly monitoring;
- 2023 assessment of the Contingency and Business Continuity Plan (BPC);
- update on the Volcker SRAB system;
- annual results of the mapping of non-compliance risks, the mapping of operational risks and the macro-mapping of risks;
- half-yearly monitoring of compliance and permanent control functions;
- presentation of the results of the half-yearly reporting of the risk and compliance functions of the institutions;
- outsourcing policy for 2024 and monitoring of essential services outsourced in 2023, including the monitoring of critical and important services;

- annual regulatory RCSI 2023 report (Group and BPCE SA) and monitoring of institutions reporting an unsatisfactory result in the RCSI 2022 report;
- annual assessment of the Compliance function;
- annual review of the system for monitoring compliance with prudential requirements;
- annual review of the resources of the second line of defense of the functions under the responsibility of the Corporate Secretary's Office;
- presentation of the SREP 2024 newsletter.

Digital, Technology and Cybersecurity

- quarterly monitoring of information services security and cybersecurity dashboards;
- update on resilience and new sovereignty issues;
- mapping of private information systems and associated risks;
- presentation of risks related to the production of financial reports and business interruptions;
- presentation of the action plan for the convergence of IT authorization processes;
- Digital Operational Resilience System (DORA) - Presentation of the management framework and associated policies;
- presentation of the main findings of the ECB's Risk IT mission;
- global Digital Transformation strategy: technological & digital master plan.

Business lines and portfolio review

- presentation of the activity and risks of BPCE's subsidiaries and business lines: BPCE Factor, MIROVA (affiliate of Natixis Investment Managers), BPCE Assurances (life and non-life business), SWILE, BPCE Energeco, Parnasse Garantie, Natixis Algérie, Payments division, GFS CIB business lines in the US;
- assessment of risks and results of GFS market activities for 2023 and outlook for 2024;
- presentation of the activity and infrastructure financing risks at GFS;
- presentation of the activity and risks of GFS' Strategic Equity Capital Market activity;
- presentation of the activity and risks of financing the social housing sector;
- presentation of the run-off of US oil and gas financing;
- presentation of the commercial real estate sector review;
- presentation of the hedge fund supervision system;
- presentation of Bred Banque Populaire's international development strategy.

Internal Audit

- presentation of the reports issued and follow-up of recommendations;
- presentation of the risk assessment of the various activities;
- presentation of the 2025 annual audit plan;
- annual assessment of the audit function.

JOINT AUDIT AND RISK COMMITTEE

Two joint audit and risk committees were held between January 1 and December 31, 2024.The main issues that it addressed were as follows:

- presentation of the 2026/2030 strategic plan;
- presentation of the various ratings agency ratios (ALAC, RAC, etc.);
- presentation of CSRD-related issues;
- overview of accounting audit findings;
- study on interest rate risk:
- review of the prudent valuation adjustment (PVA) system at Group level.

Appointments Committee

DUTIES

In accordance with Article 3.2 of the Supervisory Board's internal rules, the Appointments Committee is responsible for making proposals to the Supervisory Board concerning:

- the choice of members of the Supervisory Board and non-voting directors who come from outside the Group, it being recalled that the members of the Supervisory Board from inside the Group are proposed to the Board in compliance with the company's articles of association and Article L. 512-106 of the French Monetary and Financial Code;
- the appointment of the Chairman of the Management Board.

The Appointments Committee is also responsible for continuously assessing the individual and collective qualities of the members of the Management Board and Supervisory Board.

With regard to the appointment and selection process:

The Appointments Committee makes proposals and recommendations to the Supervisory Board concerning:

- the policy on monitoring the assessment of the suitability of the members of the Supervisory Board and the Management Board; and
- the Management Board and Supervisory Board appointment and succession policy which it reviews periodically.

The Appointments Committee examines and assesses the integrity and skills of the candidates for the office of member of the Management Board and member or non-voting director of the Supervisory Board in accordance with the Appointments Policy and the Aptitude Policy adopted by the Supervisory Board.

To this end, the Appointments Committee specifies:

- the duties and qualifications required for the functions performed on the Supervisory Board;
- the assessment of the time to be devoted to the functions performed on the Management Board and Supervisory Board;
- the gender balance target to be achieved on the Supervisory Board.

Regarding the appraisal:

In accordance with the aptitude assessment policy adopted by the Supervisory Board, the Appointments Committee:

- assesses the balance and diversity of knowledge, skills and experience individually and collectively held by the candidates for the office of member of the Management Board and of the Supervisory Board;
- periodically, and at least once a year, assesses:
  - the structure, size, composition, and effectiveness of the Supervisory Board with respect to its assigned tasks, and submits all useful recommendations to the Board,
  - the knowledge, skills, and experience of the members of the Management Board and the members of the Supervisory Board, both individually and collectively, and reports on this assessment to the Board;

- recommends, when necessary, training aimed at guaranteeing the individual and collective aptitude of the members of the Supervisory Board and the members of the Management Board.

The Appointments Committee also ensures that the Supervisory Board is not dominated by any one person or small group of people under conditions that are detrimental to the company's interests.

The Appointments Committee has access to all the relevant information and data it needs to perform its duties, including information on compliance with anti-money laundering and terrorist financing rules and aggregated information on declarations. suspicious transactions and risk factors related to money laundering and terrorist financing.

ACTIVITY

The Appointments Committee met six times between January 1 and December 31, 2024. The average attendance rate at these meetings was 97.62%.

The main issues that it addressed were as follows:

- update on the reappointments of Board members whose terms of office expire at the end of the next General Meeting;
- examination of the integrity and skills of the members and non-voting directors of the Supervisory Board;
- review of the mapping of the collective skills of the Supervisory Board and its committees;
- implementation of the recommendations of the previous Supervisory Board evaluation;
- launch of the Supervisory Board's annual assessment process and review of the assessment report;
- annual individual assessment of the members of the Supervisory Board;
- annual individual assessment of the company's executive management;
- annual review of independent member status on the Supervisory Board;
- annual review of Management Board and Supervisory Board policies: conflict of interest management and prevention policy, appointment and succession policy, aptitude assessment policy;
- assessment of the composition of the Board and its committees: mapping of collective skills;
- 2024 training plan: individual recommendations;
- mandatory training and consequences;
- training program for members of the Supervisory Board for 2025;
- review of the Supervisory Board's report on corporate governance for the 2023 fiscal year and of the draft of the Supervisory Board's report on corporate governance for the 2024 fiscal year (governance section).

Remuneration Committee

DUTIES

In accordance with Article 3.3 of the Supervisory Board's internal rules, the Remuneration Committee is responsible for making proposals to the Supervisory Board concerning:

- the amounts and conditions of pay, compensation and benefits of any kind awarded to members of the company's Management Board, including benefits in kind, provident insurance, and pension plans;
- the pay granted to the Chairman of the Supervisory Board and, where applicable, the Vice-Chairman;
- the distribution of the remuneration (formerly attendance fees) among members of the Supervisory Board and committees and the total amount submitted for approval at the company's General Shareholders' Meeting.

Furthermore, the Remuneration Committee:

- conducts an annual review:
  - of the principles of the company's remuneration policy,
  - of the pay, compensation and benefits of any kind granted to corporate officers of the company,
  - of the remuneration policy for categories of personnel, including members of the Management Board, risk takers, persons exercising control duties and any employees who, as a result of their total income, are in the same pay bracket, whose professional activities have a material impact on the company's or Group's risk profile;
- directly controls the remuneration of the head of the risk management function mentioned in Article L. 511-64 of the French Monetary and Financial Code and, where applicable, the compliance officer;
- reports regularly on its work to the Supervisory Board;
- examines the draft of the Supervisory Board's corporate governance report;
- gives its opinion to the Board on the policy for granting stock options or similar securities and on the list of beneficiaries;
- is informed of the Group's remuneration policy, particularly the policy regarding the main company directors of affiliated institutions;
- reviews and issues opinions on the insurance policies taken out by the company covering the liability of company directors;
- gives its opinion to the Board on the section of the annual report covering issues within the remit of the Remuneration Committee.

ACTIVITY

The Remuneration Committee met three times between January 1 and December 31, 2024. The average attendance rate at these meetings was 100%.

The main issues that it addressed were as follows:

- remuneration of the members of the Management Board for the 2023 fiscal year (payment of deferred portions due in 2024 and the variable portion for 2023) and for the 2024 fiscal year (variable indicators, performance for the remuneration for 2024, draft report on the BPCE remuneration policy for 2024, technical changes in the "article 82" regime);
- remuneration policy applicable to risk-takers identified by BPCE (revision of the Group standard on risk-takers for the 2024 fiscal year, criterion for the allocation of variable portions for the 2024 fiscal year, identification of risk-takers within the scope of BPCE SA for the 2024 fiscal year including the malus systems, focus on the FSE division credit companies with a total balance sheet in excess of €5 billion);

- report on the annual mission of the Internal Audit on risk takers;
- review of remuneration for the Heads of BPCE SA control functions;
- benchmarking of remuneration for Management Board members;
- implementation of the Long-Term Incentive Plan (LTIP) and impact on the variable portion for 2024;
- review of the corporate officer remuneration policy for the 2024 fiscal year;
- review of the Supervisory Board's report on corporate governance for the 2024 fiscal year (remuneration section);
- review of the new distribution of the remuneration package approved by the General Meeting;
- review of the report on internal control of banks regarding the policy and practices governing pay in respect of 2023 granted to members of the executive body and persons whose professional activities have a material impact on the corporate risk profile of the company, pursuant to Article 266 of the Ministerial Order of November 3, 2014 on internal control of banking sector companies;
- presentation of the gender equality index for 2023.

Cooperative and CSR Committee

DUTIES

In accordance with Article 3.7 of the Supervisory Board's internal rules, the Cooperative and CSR Committee is in charge of making proposals and recommendations aimed at promoting the cooperative and social values of long-term engagement as well as professional and interpersonal ethics. It also ensures that Group and network activities represent these values, thereby strengthening the cooperative and CSR dimension of the Group and each of the networks.

As such, the Cooperative and CSR Committee is tasked with:

- monitoring the marketing and remuneration practices of cooperative shares by the Banques Populaires (BP) and the Caisses d'Epargne (CEP);
- monitoring changes in the share capital of BP and CEP and its proper distribution among cooperative shareholders;
- learning about the actions taken by BPCE, the Fédération des Banques Populaires and the Fédération des Caisses d'Epargne to promote cooperative values;
- formulating strategy and institutional communication proposals related to ESG (environmental, social and governance) issues;
- reviewing the non-financial performance statement, as well as any other document or report relating to current or future legal obligations (taxonomy, etc.);
- examining the development of action plans implementing projects chosen by the Group for their interest in terms of CSR;
- monitoring the communication plan and the indicators used to measure the actions of the Group's strategic plan around the actions falling within the scope of the Cooperative and CSR Committee;
- more generally, making any proposal it deems useful regarding CSR actions.

ACTIVITY

The Cooperative and CSR Committee met four times between January 1 and December 31, 2024. The average attendance rate at these meetings was 100%.

The main issues that it addressed were as follows:

- monitoring of the work of the Group's ESG program:
  - assessment of the ESG 2021-2024 program and preparation of the Impact 2030 program,
  - Net Zero trajectory: structuring of the Credit - Carbon Emissions link (NZBA),
  - biodiversity approach;
- Sustainability report:
  - 2023 non-financial performance statement with carbon audit focus,
  - new CSRD regulation: scope and acculturation method
- Impact VISION 2030: positioning, key indicators and program for 2024-2026;
- Impact program:
  - focus on the "Net Zero Trajectory" project, Individual Customers, Residential Real Estate,
  - focus on the "Net Zero Trajectory" project, B2B segment: 2024 work plan,
  - news and key indicators (outstanding practices of institutions, priority deliverables),
  - progress report: main projects, deliverables and key indicators;
- CSRD regulations: progress report and analysis of "Double materiality";
- monitoring of the Métamorph-OSE program;
- review of the Group conduct and ethics reporting;
- key performance indicators of the Group's ESG strategy;
- current events on FNBP projects:
  - Cooperative and Societal Footprint 2023 - results and lessons learned from data collection,
  - progress report Elan Coopératif Banque Populaire,
  - Water strategy;
- current events on FNCE projects:
  - microcredit: creation of the Parcours Confiance microfinance institute,
  - Impact Tour Caisse d'Epargne,
  - "Living tomorrow" Housing study,
  - call for projects.

(1) On May 23, 2024, the Supervisory Board noted the end of the terms of office of Catherine Amin-Garde, Gérard Bellemon, Thierry Cahn, Bernard Dupouy and the appointment by the General Meeting of May 23, 2024 of Valérie Savani, François Brun, Philippe Henri and Jérôme Saddier as members of the Supervisory Board with effect from May 23, 2024.
(2) On May 23, 2024, the Supervisory Board noted the end of the term of office of Sabine Calba and the appointment by the General Meeting of May 23, 2024 of Mathieu Réquillart as a non-voting director of the Supervisory Board with effect from May 23, 2024.
(3) On June 25, 2024, the Supervisory Board noted the end of the term of office of André Joffre, non-voting director as of right of the Supervisory Board and the assumption of office of Philippe Hourdain as a non-voting director as of right, with effect from June 25, 2024.

4.4.4 Management Board

In accordance with Article 18 of BPCE's articles of association[1], the Management Board has the broadest powers to act under all circumstances in the company's name, within the corporate purpose and subject to decisions requiring prior authorization by the Supervisory Board and the General Shareholders' Meeting.

In particular, the Management Board:

- performs duties as the company's central institution as specified by law and, where applicable, after receiving prior authorization from the Supervisory Board, as specified by the company's articles of association;
- exercises all banking, financial, administrative, and technical powers;
- approves the appointment of executive management at the company's main subsidiaries;
- appoints the person(s) responsible for assuming the temporary management or control functions of an affiliated institution in the event of the dismissal of the persons mentioned in Article L. 512-108 of the French Monetary and Financial Code decided by the Supervisory Board;
- decides, in an emergency, to suspend one or more executive managers of an affiliated institution as a protective measure;
- uses the Group's internal solidarity mechanisms, notably by calling on the guarantee and solidarity funds of the Networks and the Group;
- approves the articles of association of affiliated institutions and local savings companies and any changes thereto;
- determines the rules governing the pay granted to executive management of affiliated institutions, including any contingent pay and benefits granted to such individuals on or after termination of employment;
- authorizes any proposed Operation referred to in point a) of the "Definitions" section of the articles of association:
  - for an amount of less than €100 million when realized by the company, it being specified that when the amount is less than €3 million, this authorization is given according to the terms and conditions it determines,
  - for an amount greater than 1% of the relevant institution's Core Equity Tier-1 capital (assessed as of December 31 of the preceding fiscal year) or in any event greater than €15 million but less than €100 million when it is generated by the company's subsidiaries, the Banques Populaires and/or the Caisses d'Epargne and their subsidiaries;
- authorizes any Sensitive Transaction of less than €100 million;
- authorizes any proposed Transaction referred to in points a) and b) (i) of the "Definitions" section of the articles of association carried out exclusively within the Group by the company's subsidiaries, the Banques Populaires and/or the Caisses d'Epargne and their subsidiaries that does not modify the risk profile of the Group or of BPCE SA group defined in the Risk Appetite Statement (RAS) for an amount greater than 1% of the relevant institution's Core Equity Tier-1 capital (assessed as of December 31 of the preceding fiscal year) or in any event more than €15 million;
- it being specified that, for each of the authorizations referred to above, in the event that several Group entities are involved in the same transaction, the above thresholds will be assessed with regard to the cumulative amount of their respective investments;
- enacts more generally, in order to ensure the purposes defined in Article L. 511-31 of the French Monetary and Financial Code, the general internal requirements applicable to affiliated institutions.

The Management Board is required to comply with the limitations of powers defined in Articles 27.1, 27.2, 27.3 and 27.4 of these articles of association.

In relations with third parties, the company is bound even by the acts of the Management Board that do not fall within the scope of the corporate purpose, unless it can prove that the third party knew the act exceeded this purpose or must have known this given the circumstances; publication of the articles of association alone is insufficient to constitute such proof.

The Chairman of the Management Board represents the company in its dealings with third parties.

On the recommendation of the Chairman of the Management Board, the Supervisory Board may grant the same power of representation to one or more members of the Management Board, who shall then bear the title of Chief Executive Officer. The Chairman of the Management Board and the Chief Executive Officer(s), if any, are authorized to appoint a special representative to deputize them in respect of part of their powers.

With the authorization of the Supervisory Board, the members of the Management Board may, on the recommendation of the Chairman of the Management Board, divide management tasks between them. However, in no event should this division have the effect of removing the Management Board's capacity as a collegial management body.

Once every three months, the Management Board presents a written report to the Supervisory Board on the company's performance. Within three months of the end of each accounting period, the Management Board completes the parent company financial statements and presents them to the Supervisory Board for verification and control. It also submits the consolidated financial statements to the Supervisory Board within this same period, where applicable.

4.4.5 General Meetings

With regard to the terms and conditions on shareholder participation in the General Meeting (Article 30 of BPCE's articles of association[1]):

1° General Shareholders' Meetings are called and convened in accordance with the regulations in force.

The meetings take place at the registered office or at any other location specified in the notice of meeting.

Meetings may also be held exclusively by videoconference or other means of telecommunication allowing the identification of shareholders. In this case, the right to object mentioned in the second paragraph of Article L. 225-103-1 of the French Commercial Code is exercised after the notice of meeting within a period of seven (7) days from the publication of the notice of meeting or the sending of this notice by mail by a registered letter with acknowledgment of receipt to the company.

(1) https://groupebpce.com/en/investors/regulated-information/other-information

The Ordinary Shareholders' Meeting called to approve the annual financial statements for the previous fiscal year convenes within five months from the reporting date of the fiscal year.

2° Only category A shareholders, category B shareholders and owners of ordinary shares are entitled to take part in the General Shareholders' Meetings.

Their participation is subject to the registration of the shares in the name of the shareholder by the second business day preceding the General Meeting at twelve midnight, Paris time, in the registered share accounts maintained by the company.

3° Shareholders unable to personally attend the General Shareholders' Meeting may select one of the following three options:

- to grant a proxy to another shareholder or, if the shareholder is a natural person, to the shareholder's spouse; or
- to vote by absentee ballot; or
- to send a power of attorney to the company without designating a representative.

4° General Shareholders' Meetings are chaired by the Chairman of the Supervisory Board or, in the Chairman's absence, by the Vice-Chairman. In the absence of both the Chairman and Vice-Chairman, General Shareholders' Meetings are chaired by a member of the Supervisory Board specially appointed for this purpose by the Supervisory Board. Failing this, the General Shareholders' Meeting elects its own Chairman.

The General Shareholders' Meeting appoints its officers.

The duties of scrutineer are performed by two consenting shareholders representing, themselves or as proxies, the greatest number of shares. The officers of the General Shareholders' Meeting appoint a Secretary, who may be selected from outside the shareholders' ranks.

A register of attendance is kept in accordance with regulations in force.

5° The Ordinary Shareholders' Meeting convened on first notice may validly transact business only if the shareholders present or represented own at least one-fifth of the voting shares. The Ordinary Shareholders' Meeting convened on second notice may validly transact business regardless of the number of shareholders present or represented.

Resolutions of the Ordinary Shareholders' Meeting are carried by majority vote of the shareholders present or represented, including shareholders who have voted by absentee ballot.

The Ordinary Shareholders' Meeting called to approve the financial statements for the past fiscal year is consulted on the components of pay due or granted for the fiscal year ended to the Chairman of the Management Board and to each member of the Management Board.

It is consulted on the total amount of remuneration of any kind paid during the past fiscal year to the Company's executive management and to the categories of personnel mentioned in Article L. 511-71 of the French Monetary and Financial Code, whose professional activities have a significant impact on the risk profile of the company or group.

The Ordinary Shareholders' Meeting may, in accordance with Article L. 511-78 of the French Monetary and Financial Code, decide to increase the amount of the variable portion to an amount greater than the amount of the fixed pay, up to a limit of twice this fixed remuneration, for the Company's executive management as well as categories of personnel, mentioned in Article L. 511-71 of the same code, whose professional activities have a significant impact on the risk profile of the company or group. This resolution is carried by a two-thirds majority of the votes of the shareholders present or represented, including the shareholders having voted by absentee ballot. If at least half the shareholders are not present or represented, the resolution is carried by a three-quarters majority vote.

6° The Extraordinary Shareholders' Meeting convened on first notice may only validly transact business only if the shareholders present or represented own at least one-quarter of the voting shares.

The Extraordinary Shareholders' Meeting, convened on second notice, may validly transact business only if the shareholders present or represented own at least one-fifth of the voting shares.

Resolutions of the Extraordinary Shareholders' Meeting are carried by a two-thirds majority of the votes of the shareholders present or represented, including shareholders who have voted by absentee ballot.

Ordinary and Extraordinary Shareholders' Meetings exercise their respective powers in accordance with the regulations in force.

7° Copies or extracts of the minutes of the General Shareholders' Meeting are validly certified by the Chairman of the Supervisory Board, by the Vice-Chairman, a member of the Management Board, or by the Secretary of the General Shareholders' Meeting.

8° Ordinary and Extraordinary Shareholders' Meetings exercise their respective powers in accordance with the regulations in force.

4.4.6 Dialogue with shareholders

BPCE is equally owned by the Banques Populaires and the Caisses d'Epargne. In addition to the participation of shareholders in the General Meeting, meetings are held every month with the BPCE Executive Management Committee and the executive company directors (Chairmen of the Management Boards and Chief Executive Officers) and every three months with the non-executive company directors (Chairmen of the Boards of Directors and of the Supervisory Boards) of the two networks.

In addition, the link with shareholders is strengthened by the composition of the Supervisory Board of BPCE, which comprises 14 members out of 19 representing equally category A shareholders (the Caisses d'Epargne) and category B shareholders (the Banques Populaires) as well as 6 non-voting directors representing equally the category A and B shareholders, thus allowing a broad representation of the shareholders.

4.5 Rules and principles governing the determination of remuneration and benefits

4.5.1 Remuneration policy, pay components, benefits in kind, loans, guarantees and remuneration received by members of the Supervisory Board of BPCE[1]

At the meeting on May 19, 2017, the Supervisory Board set the pay for the Chairman and Vice-Chairman of the Supervisory Board as well as the terms for distributing pay for attendance at meetings among the members of the Supervisory Board. These terms and conditions were reviewed by the Supervisory Board at its meetings of March 26, 2020, June 16, 2022, March 23, 2023 and June 25, 2024.

The remuneration package for the members of the Supervisory Board of BPCE was set at €1,600,000 for the 2023 fiscal year and subsequent years by the Ordinary Shareholders' Meeting of May 25, 2023. This pay is detailed in the statement regarding pay collected by the non-executive corporate officers of BPCE.

With the exception of the Chairman, who receives a fixed annual fee, the members of the Supervisory Board receive remuneration on the basis of their activities.

The Chairman and Vice-Chairman of the Supervisory Board do not receive any additional remuneration for their participation in committees.

Pay granted to the Chairman of the Supervisory Board

- annual fixed pay: €450,000;
- variable remuneration paid: €0.

Pay granted to Supervisory Board members

Pay granted to the Vice-Chairman of the Supervisory Board:

- annual fixed pay: €130,000;
- variable remuneration paid for each meeting attended: €3,000.

Other members of the Supervisory Board:

- variable remuneration paid for each meeting attended: €3,000.

Additional pay granted to Supervisory Board Committee members

Audit and Investment Committee

Pay granted to the Chairman of the committee:

- annual fixed pay: €40,000;
- variable remuneration paid for each meeting attended: €1,500.

Other members of the committee:

- variable remuneration paid for each meeting attended: €1,500.

Risk Committee

Pay granted to the Chairman of the committee:

- annual fixed pay: €40,000;
- variable remuneration paid for each meeting attended: €1,500.

Other members of the committee:

- variable remuneration paid for each meeting attended: €1,500.

Appointments Committee

Pay granted to the Chairman of the committee:

- annual fixed pay: €15,000;
- variable remuneration paid for each meeting attended: €1,500.

Other members of the committee:

- variable remuneration paid for each meeting attended: €1,500.

Remuneration Committee

Pay granted to the Chairman of the committee:

- annual fixed pay: €15,000;
- variable remuneration paid for each meeting attended: €1,500.

Other members of the committee:

- variable remuneration paid for each meeting attended: €1,500.

Cooperative and CSR Committee

Pay granted to the Chairman of the committee:

- annual fixed pay: €15,000;
- variable remuneration paid for each meeting attended: €1,500.

Other members of the committee:

- variable remuneration paid for each meeting attended: €1,500.

As a reminder, the Chairman and Vice-Chairman of the Supervisory Board do not receive any pay for participating in the Cooperative and CSR Committee.

(1) The figures in this paragraph are gross amounts.

Remuneration paid to non-voting directors

Pursuant to Article 28.3 of the articles of association[1], the Supervisory Board has resolved to compensate non-voting directors by making a deduction from the pay for attendance at meetings allocated to members of the Supervisory Board at the General Shareholders' Meeting.

In this respect, non-voting directors receive variable remuneration of:

- €3,000 paid in respect of each meeting of the Supervisory Board that they attended;
- €1,500 paid in respect of each committee meeting that they attended.

Rules governing pay granted to the members of the Supervisory Board

Attendance fees were eliminated by Article 185 of the PACTE act (act no. 2019-486 of May 22, 2019), which replaced them with "pay" that may be paid to directors and members of the Supervisory Board of a French limited liability company (*société anonyme*).

The change in legal terminology has no impact on the tax or social security charges applicable to the sums paid to directors and members of the Supervisory Board.

As such, any references to "attendance fees" below should be construed from a legal point of view as "pay."

Attendance fees are subject to single mandatory withholding tax at the global rate of 30%, consisting of a non-discharging flat 12.80% of the income tax plus social security contributions at the global rate of 17.20%.

Taxpayers may, if they so choose, opt for the progressive income tax scale instead of the flat 12.80% when filing their tax return. This option can be used for the full amount, provided that it applies to all income and gains that fall within the scope of the single flat-rate withholding tax, which are collected or earned during a single year by all members of the tax household.

The following taxation conditions apply:

- withholdings:
  - a non-exempting flat-rate withholding tax, serving as income tax, at a rate of 12.80%. This tax entitles taxpayers to a tax credit that can be applied to the tax calculated for the year in which the attendance fees are collected at either the flat rate or using the progressive scale, as per their choice. Taxpayers may ask to be exempted from this withholding if they provide the attendance fee distributing company with a sworn statement that the baseline tax income thresholds set out by law have been met, no later than November 30 of the year preceding the year in which the attendance fees are paid,
  - social security charges at rates applicable on the date of the levy (17.20% since January 1, 2018, including a CSG [*contribution sociale généralisée* – general social security tax] of 6.8 points deductible from taxable income for the year of the payment, if the taxpayer has opted for the progressive scale),
  - declaration of attendance fees on the 2042 income tax return and taxation at the flat rate of 12.80% or, optionally, using the progressive income tax scale. The tax credit attributed for the non-exempting flat withholding tax is determined in this way.

Other pay

This pay is understood to be the total amount of remuneration received by each corporate officer in respect of their offices held on the Boards of the subsidiaries of BPCE as well as FNCE and FNBP during the fiscal year concerned.

Each payment relates to the corporate officer's presence at Board meetings and is calculated on the basis of the total budget for attendance at meetings set by each company's General Meeting.

(4) Amounts paid in 2024: all amounts paid and received in 2024 (due in 2023 and paid in 2024 and due in 2024 and paid in 2024) excluding withholding taxes (amounts actually received by members include withholding taxes).
(5) The two members of the Supervisory Board representing the employees have waived their BPCE pay in favor of their unions.
N/A: Not Applicable.

4.5.2 Corporate officer remuneration policy for the 2025 fiscal year

The remuneration policy described below was defined by the Supervisory Board on February 5, 2025, based on a motion by the Remuneration Committee.

This policy sets the principles and criteria for determining, distributing and granting the fixed, variable and non-recurring items making up the total remuneration and benefits of any kind that may be granted to the members of the Management Board for the 2025 fiscal year.

The main changes in the remuneration policy for the 2025 fiscal year approved by the Supervisory Board at its meeting held on February 5, 2025, compared to the remuneration policy for the 2024 fiscal year approved by the Supervisory Board at its meetings of February 7, 2024 and March 29, 2024, concern:

- the addition of the financial criteria of BPCE collective net income attributable to equity holders of the parent (scope corresponding to the level of consolidation of BPCE SA and its subsidiaries (in particular BPCE business lines: Natixis, SEF, Insurance, Digital & Payments, etc. as well as the "resource pool" subsidiaries: BPCE SI, BPCE IT, etc.)) with a weighting of 17.5%, the cost/income ratio of the BPCE collective with a weight of 7.5% and the NBI of the BPCE collective with a weight of 5%;

- reduction in the weighting of Groupe BPCE financial criteria to 17.5% for Groupe BPCE's net income attributable to equity holders of the parent, 7.5% for Groupe BPCE's cost/income ratio and 5% for Groupe BPCE's net banking income in order to maintain a total of 60% for financial criteria;

- the update of the qualitative criteria for the annual variable pay for the 2025 fiscal year.

The other elements of the 2024 remuneration policy for the 2025 fiscal year are renewed.

The Chairman of the Management Board is paid solely in respect of his corporate office.

The other members of the Management Board receive an employment contract. Their pay is divided 90%/10%, respectively, between the employment contract and corporate office.

The principles and rules for determining their pay and other benefits granted in respect of their office and employment contract are approved by the Supervisory Board based on a motion by the Remuneration Committee.

The terms and conditions of payment of the yearly and multi-year variable pay granted to the members of the Management Board comply with the provisions applicable to governing the remuneration granted to persons whose professional activities have a material impact on the corporate risk profile as set out by the "CRD 5" corpus of texts, consisting in particular of directive 2019/878 ("CRD 5" directive).

This regulation was transposed into French law in the French Monetary and Financial Code, in particular by Ministerial Order No. 2014-158 of February 20, 2014 and Ministerial Order No. 2020-1635 of December 21, 2020, as well as by regulatory provisions, amended by Decree No. 2020-1637 of December 22, 2020 and a Ministerial Order of the same day.

Remuneration policy applicable to the Chairman of the Management Board

Components of remuneration	Principles and criteria adopted
Fixed pay	In accordance with Article 19 of BPCE's articles of association and on the recommendation of the Remuneration Committee, the Supervisory Board determines the pay of the Chairman of the Management Board. It takes into account the special responsibilities of the Chairman of the Management Board in relation to the other members of the Management Board. This pay primarily reflects the professional experience related to the position held and the responsibilities exercised, and is determined by comparison to market practices. For the Chairman of the Management Board who does not benefit from the supplementary defined-benefit pension plan for Groupe BPCE executive directors, it includes a specific supplement equal to 20% of his or her fixed pay under the Article 82 supplementary pension scheme. The fixed pay of the Chairman of the Management Board is periodically reviewed.
Annual variable pay	For the Chairman of the Management Board: the annual variable portion is determined based on target pay equal to 100% of his fixed pay (including the special supplement, if applicable) for the fiscal year, with a maximum of 120%. The annual variable pay is determined on the basis of financial and qualitative criteria previously approved by the Supervisory Board. It is awarded if the criterion for triggering variable pay is met, specifically pertaining to the Group Basel III Common Equity Tier-1 ratio. For the 2025 fiscal year, this ratio must be higher than the threshold required by the ECB and communicated to BPCE in its letter of December 10, 2024, *i.e.* the minimum CET1 level, supplemented by the P2R, the P2G and the combined buffers[9]. No variable pay is granted if this criterion is not met. The financial criteria account for 60% of the variable pay and are defined based on quantitative factors that reflect the level of achievement of a number of the financial fundamentals of the Group and the BPCE collective. These criteria are defined by the Supervisory Board and take into account[10]: - net income attributable to equity holders of the parent for Groupe BPCE (17.5%); - the Groupe BPCE's cost/income ratio (7.5%); - the Groupe BPCE's net banking income (5%); - net income attributable to equity holders of the parent for the BPCE collective (17.5%); - the BPCE collective's cost/income ratio (7.5%); - the BPCE collective's net banking income (5%). For each of these criteria, if the target as set by the Supervisory Board is reached, members of the Management Board would be entitled to receive the entire fixed percentage. For the 2025 fiscal year, the portion of qualitative criteria in the annual variable pay is 40%. They appear in the form of KPI (Key Performance Indicators) by major business lines and major functions with reference to the VISION 2030 program and they include a criterion related to the Environment, Climate and decarbonization trajectories with a weighting of 5% within the 40%. Only financial criteria can be used to determine outperformance. In accordance with the regulations applicable to the executive management, part of the annual variable pay of the Chairman of the Management Board is deferred over five years and does not vest faster than on a *pro rata* basis; the deferred rate (40% to 60%) depends on the amount of variable pay (including the LTI amount acquired for the fiscal year)[3]. The payment of the deferred portions of the annual variable pay awarded for the year 2025 will be conditional on the achievement of a financial criterion representative of the Group's financial position, which will be set by the Supervisory Board awarding the annual variable pay for the 2025 fiscal year. In addition, at least half of the annual variable pay awarded to the Chairman of the Management Board, including the portion acquired at the allocation, is indexed. The methods for indexing portions of deferred variable pay will be set by the Supervisory Board allocating variable pay for the 2025 fiscal year. The indexed portions of the annual variable pay awarded in respect of 2025 will be subject to a deferral period of 12 months before their payment.
Multi-year variable pay	As a reminder, on March 29, 2024, the Supervisory Board decided to grant the Chairman of the Management Board a three-year Long-Term Incentive Plan (LTIP), the amount of which is based on an indicator of organic CET1 creation. The organic creation of CET1 aims to enhance the generation of organic / endogenous capital while limiting the cost of capital. The indicator of organic CET1 creation of the system relates to the organic creation of CET1 of Groupe BPCE for 50% and that of BPCE SA and its subsidiaries for 50%. The amount acquired under the LTIP is determined each year for the 2024, 2025 and 2026 fiscal years, according to Method A described below, and supplemented, where applicable, by any positive difference between the result of Method B (see below) calculated at the beginning of 2027 and the sum of the results determined according to Method A for the three fiscal years 2024, 2025 and 2026.

(1) The CET1 ratio requirement set by the ECB, including the "Pillar II Guidance" component, is not subject to disclosure.
(2) The Supervisory Board has established specific expected targets for these financial goals, but for confidentiality reasons, they are not publicly disclosed.
(3) The total variable portion allocated to risk-takers identified by the so-called "group 1" companies within Groupe BPCE for the year in question (including, where applicable, the LTIP amount acquired in respect of the year in question) is taken into account to determine the percentage of deferred annual variable pay. This point applies in particular to executives appointed to new positions during the year.

Components of remuneration	Principles and criteria adopted
	Method A, for each fiscal year:

Organic CET1 creation indicator for the fiscal year	≤ 0 bp	Annual target	≥ Cap *i.e.* annual target x 2
LTIP amount acquired for the fiscal year	0	= 10% of the Fixed Pay*	= 20% of the Fixed Pay*
	LTIP amount calculated by linear interpolation between the thresholds of 0% at the Target and the Target at the Cap		

* *i.e.* the annual fixed pay for 2024 including the special supplement.

Method B:

Organic creation indicators recorded over the three fiscal years	≤ 0 bp	3-year target *i.e.* annual target x 3	≥ Cap *i.e.* 3-year target x 2
LTIP amount acquired under the plan	0	= 30% of the Fixed Pay*	= 60% of the Fixed Pay*
	LTIP amount calculated by linear interpolation between the thresholds of 0% at the Target and the Target at the Cap		

* *i.e.* the annual fixed pay for 2024 including the special supplement.

The amount acquired under the LTIP will take into account the prorated presence in the institution over the three-year period in the event of departure before the end of the LTIP (December 31, 2026) or arrival after January 1, 2024.

The multi-year variable pay acquired under the LTIP will be paid from 2027 until 2031 to the Chairman of the Management Board in accordance with the CRD regulation applicable to the executive management and the standards in force within the Group (deferral, indexation, deferral period and trigger criterion).

Grants of stock options/ preference shares	The Chairman of the Management Board does not receive any stock options or preference shares.
Grants of bonus shares	The Chairman of the Management Board does not receive any bonus shares.
Attendance fees	The Chairman of the Management Board does not collect attendance fees.
Sign-on bonus	The Chairman of the Management Board does not receive a sign-on bonus.
Benefits in kind	Based on a motion by the Remuneration Committee, the Supervisory Board may resolve to grant an annual housing allowance to the Chairman of the Management Board. The Supervisory Board has decided to grant the Chairman of the Management Board the benefit of collective and mandatory insurance plans (incapacity, disability, death) and additional reimbursement of healthcare costs applicable to BPCE SA employees.

Post-employment benefits for the Chairman of the Management Board

The commitments made in favor of Nicolas Namias, Chairman of the Management Board, relating to the involuntary-termination severance pay and retirement bonus were authorized by the Supervisory Board on February 2, 2023 in accordance with the related-party agreements procedure.

Components of remuneration	Principles and criteria adopted
Involuntary-termination severance pay and retirement bonus	The Chairman of the Management Board, under certain conditions, receives a severance or bonus when his duties cease. **Involuntary-termination severance pay** The Chairman of the Management Board may, under certain conditions and by decision of the Supervisory Board, receive involuntary-termination severance pay equal to at least 12 months' pay (fixed and variable portions), and up to 24 months, earned for 12 years' seniority with the Group. Payment is subject to the following conditions: • **Conditions for receiving involuntary-termination severance pay** The severance may not be paid unless the termination of the duties of Chairman of the Management Board of BPCE SA is involuntary (involuntary end to term of office due to removal by the General Meeting, withdrawal of approval, involuntary resignation, or non-renewal by the Supervisory Board), other than for serious misconduct and without a change of position within Groupe BPCE. This severance is not paid if the Chairman of the Management Board of BPCE SA leaves the Group at his own initiative. The payment of the involuntary-termination severance payment causes the Chairman of the Management Board of BPCE SA to lose any right to the retirement bonus to which he may have been entitled. If he is re-assigned to another position with Groupe BPCE under an employment contract, the termination of said employment contract, with notification given more than 12 months after he is forcibly removed from his corporate office, entitles him – barring gross negligence or willful misconduct – to receive the severance pay provided for in the applicable collective bargaining agreement. Conversely, if the employment contract is terminated with notification given less than 12 months after he is forcibly removed from corporate office, he is entitled – barring gross negligence or willful misconduct – to receive involuntary-termination severance pay, minus any remuneration required by law to be paid in respect of the termination of the employment contract. • **Performance conditions** Involuntary-termination severance pay is only due if Groupe BPCE generated positive net income in the last fiscal year preceding the termination of the corporate office. In addition, payment of the involuntary-termination severance payment is subject to the condition that the Chairman of the Management Board of BPCE SA has obtained at least 33.33% of the maximum variable portion on average over the last three years of his term of office. • **Determination of the severance pay** The monthly benchmark pay used in the calculation is equal to one-twelfth of the sum of the fixed pay (excluding the special supplement and benefits) granted for the last calendar year of work preceding the termination of the corporate office and the average of the variable pay (whether paid immediately or deferred) for the last three calendar years of work preceding the termination of the corporate office. Amounts paid in respect of the relevant corporate office are taken into account. The amount of the retirement bonus is equal to: Monthly benchmark pay x (12 months +1 month per year of seniority with the Group). Seniority is calculated in years and fractions of a year. The amount of the involuntary-termination severance pay is capped at 24 times the monthly benchmark pay, which corresponds to a period of 12 years' seniority with the Group. Where at least 50% of the maximum variable component is awarded on average during the last three years of the corporate office in progress (or during the term of office served, plus the previous term of office served if the term was renewed), the involuntary-termination severance pay will be paid in full. Where at least 33.33% of the maximum variable component is not awarded on average over this period, no involuntary-termination severance pay is granted. Between 33.33% and 50%, the amount of involuntary-termination severance pay is calculated on a straight-line basis, at the discretion of the Supervisory Board. Regardless, any compensation paid for an employment contract is deducted from the amount of involuntary-termination severance pay. **Retirement bonus** The Chairman of the Management Board may, under certain conditions and by decision of the Supervisory Board, receive a retirement bonus equal to no less than 6 months' and no more than 12 months' salary, provided he has at least 10 years' seniority, without any minimum presence conditions. Payment is subject to the following conditions: • **Conditions for receiving a retirement bonus** Payment of the retirement bonus is subject to the same performance conditions as those applicable to the involuntary-termination severance pay mentioned above, *i.e.*: – the Group must have generated positive net income in the fiscal year preceding the termination of the corporate office; and – beneficiaries must have been awarded a minimum percentage of variable pay on average during the last three years of the current term of office. The retirement bonus may only be paid when the social security pension is drawn, provided that the beneficiary falls within the applicable scope (defined below) at the time the pension is drawn. Payment of the retirement bonus is at the discretion of the Supervisory Board after consultation with the Remuneration Committee. Payment of the retirement bonus is excluded from payment of any other departure bonus. As such, if involuntary-termination severance is paid, Nicolas Namias will not be entitled to the retirement bonus.

Components of remuneration	Principles and criteria adopted
Involuntary-termination severance pay and retirement bonus (continued)	• **Amount of the retirement bonus** The monthly benchmark pay used in the calculation is equal to one-twelfth of the sum of the fixed pay (excluding benefits and the special supplement) granted for the last calendar year of work preceding the termination of the corporate office and the average of the top three variable pay amounts allocated (whether paid immediately or deferred) for the last five calendar years of work preceding the termination of the corporate office. Amounts paid in respect of the relevant corporate office are taken into account. The amount of the retirement bonus is equal to: Monthly benchmark pay x (6 +0.6 A) where A is the number, which may be a fraction, of years served in a corporate office within the relevant scope (*i.e.* terms of office served as Chief Executive Officer of Banque Populaire, Chairman of the Management Board of Caisse d'Epargne, Chief Executive Officer of CFF until November 6, 2019, Chief Executive Officer of BPCE I until December 31, 2018, Chief Executive Officer of Banque Palatine, and member of the Management Board of BPCE SA). For an executive benefiting from this scheme who is then appointed to the Executive Management Committee of Natixis or who, following a transfer to BPCE SA, holds the position of Chief Executive Officer or Deputy CEO at BPCE SA, the terms during which these offices are held will be taken into account when determining A. Conversely, the terms during which these offices are held before the executive becomes a beneficiary of this scheme will not be taken into account. Should the offices included in the calculation of A be held simultaneously, these terms will be counted only once (no double-counting). The amount of the retirement bonus is capped at 12 times the monthly benchmark pay, which corresponds to a period of 10 years' of corporate office. Regardless, any compensation paid for termination of an employment contract is deducted from the retirement bonus.
Supplementary pension plan	The Chairman of the Management Board is entitled to: – the mandatory CGP collective supplementary defined-contribution pension plan for all BPCE employees and by extension applicable to BPCE company directors. The contribution rate is 6% from Bracket A and 4% from the pensionable portion of pay in excess of Bracket A and capped at eight times the annual ceiling for social security annuities; 70% of this contribution is paid by the company and 30% by the employee; – the mandatory AXA collective supplementary defined-contribution pension plan for all BPCE senior executives (AFB agreement) and by extension applicable to BPCE company directors. The contribution rate is 3.5% of pensionable pay capped at eight times the annual ceiling for social security annuities. This contribution is funded entirely by the company. Furthermore, there are other supplementary pension plans offered to the Chairman of the Management Board, based his professional career spent with the Group, namely: the pension plan for executive directors of Groupe BPCE: pension plan governed by Article L. 137-11 of the French Social Security Code. – until June 30, 2014, Chairmen of Caisse d'Epargne Management Boards, members of the Management Board of the former CNCE and Chief Executive Officers of Crédit Foncier, Banque Palatine and BPCE International could benefit from a supplementary defined-benefit pension plan entitling them to additional retirement income based on their salary; – until June 30, 2014, Banque Populaire Chief Executive Officers could benefit from a differential defined-benefit pension plan. Effective July 1, 2014, these two pension plans were harmonized under a single supplementary pension plan, now closed to new members and subject to conditions: – they must end their career with Groupe BPCE. This condition is met when beneficiaries are Group employees on the day before their social security pension is drawn following voluntary retirement; – they must have served in an executive management position for at least the required minimum period (seven years) at the date on which their social security pension is drawn. Beneficiaries who meet the above conditions are entitled to an annuity set at 15% of benchmark pay, *i.e.* their average annual pay earned in the three highest-paid years during the five calendar years before the date on which their social security pension is drawn and capped at four times the annual ceiling for social security annuities. Annual pay refers to the sum of the following types of pay received for the year in question: – fixed pay, excluding benefits in kind or duty-related bonuses; – variable pay – not exceeding 100% of fixed pay – and defined as the total variable amount paid, including the portion that may have been deferred over several years and subject to attendance and performance requirements, in accordance with regulations on variable pay granted by credit institutions. Once drawn, this supplementary pension may be paid to a spouse or former non-remarried spouse, at a rate of 60%. This plan, which is funded entirely by the Group, is covered by two insurance contracts taken out with the Quatrem and Allianz insurance companies, with a target obligation coverage rate of 100% of assets and 100% of pension recipients. Expenses paid by the company consist of the 32% contribution on annuities paid by the insurer to the beneficiaries. The supplementary pension plan for executive directors governed by Article L. 137-11 of the French Social Security Code, is governed by the provisions of Section 25.6.2 of the Afep-Medef Code. It complies with the principles governing the capacity of beneficiaries, overall establishment of base pay, seniority conditions, the progressive increase in potential entitlements depending on seniority, the reference period used to calculate benefits and the prevention of artificially inflated pay. In accordance with the provisions of the PACTE act and Order No. 2019-697 of July 3, 2019, the conditional rights provided by this plan were crystallized as of December 31, 2019. Thus, no new additional rights are granted under this plan for periods of employment after January 1, 2020, it being recalled that the rights are calculated on the end-of-career salary. If the Chairman of the Management Board is not on the Group's supplementary executive pension plan, he is entitled to participate in a pension plan through a Group insurance contract under Article 82 of the French General Tax Code, in which company directors of Groupe BPCE who do not benefit from the "Pension plan for company directors of Groupe BPCE" may participate, as this policy is funded solely through voluntary payments by the company directors who have decided to participate therein. The Chairman of the Management Board participates in this plan. As such, the Chairman's fixed pay includes a 20% special supplement.

Remuneration policy applicable to the members of the Management Board

Components of remuneration	Principles and criteria adopted
Fixed pay	Based on a motion by the Remuneration Committee, the Supervisory Board sets the pay granted to the members of the Management Board. This fixed pay primarily reflects professional experience related to the position held and the responsibilities exercised, and is determined by comparison to market practices. For the member of the Management Board who does not benefit from the supplementary defined-benefit pension plan for Groupe BPCE company directors, it includes a specific supplement equal to 20% of his or her fixed pay under the Article 82 supplementary pension scheme. The fixed pay of the members of the Management Board is periodically reviewed.
Annual variable pay	For the members of the Management Board, the annual variable pay is determined based on target pay equal to 80% of their fixed pay (including the special supplement, if applicable) for the fiscal year, with a maximum of 100%. The annual variable pay is determined on the basis of financial and qualitative criteria previously approved by the Supervisory Board. It is awarded if the criterion for triggering variable pay is met, specifically pertaining to the Group Basel III Common Equity Tier-1 ratio. For the 2025 fiscal year, this ratio must be higher than the threshold required by the ECB and communicated to BPCE in its letter of December 10, 2024, *i.e.* the minimum CET1 level, supplemented by the P2R, the P2G and the combined buffers.[1]No variable pay is granted if this criterion is not met. The financial criteria account for 60% of the variable pay and are defined based on quantitative factors that reflect the level of achievement of a number of the financial fundamentals of the Group and the BPCE collective. These criteria are defined by the Supervisory Board and take into account:[2] - net income attributable to equity holders of the parent for Groupe BPCE (17.5%); - the Groupe BPCE's cost/income ratio (7.5%); - the Groupe BPCE's net banking income (5%); - net income attributable to equity holders of the parent for the BPCE collective (17.5%); - the BPCE collective's cost/income ratio (7.5%); - the BPCE collective's net banking income (5%). For each of these criteria, if the target as set by the Supervisory Board is reached, members of the Management Board would be entitled to receive the entire fixed percentage. For the 2025 fiscal year, the portion of qualitative criteria in the annual variable pay is 40%. They appear in the form of KPI (Key Performance Indicators) by major business lines and major functions with reference to the VISION 2030 program and they include a criterion related to the Environment, Climate and decarbonization trajectories with a weighting of 5% within the 40%. Only financial criteria can be used to determine outperformance. In accordance with the regulations applicable to the executive management, part of the annual variable pay of the members of the Management Board is deferred over five years and does not vest faster than on a *pro rata* basis; the deferred rate (40% to 60%) depends on the amount of variable pay (including the LTI amount acquired for the fiscal year)[3]. The payment of the deferred portions of the annual variable pay awarded for the year 2025 will be conditional on the achievement of a financial criterion representative of the Group's financial position, which will be set by the Supervisory Board awarding the annual variable pay for the 2025 fiscal year. In addition, at least half of the annual variable pay awarded to the members of the Management Board, including the portion acquired at the allocation, is indexed. The methods for indexing portions of deferred variable pay will be set by the Supervisory Board allocating variable pay for the 2025 fiscal year. The indexed portions of the annual variable pay awarded in respect of 2025 will be subject to a deferral period of 12 months before their payment.

(1) The CET1 ratio requirement set by the ECB, including the "Pillar II Guidance" component, is not subject to disclosure.
(2) The Supervisory Board has established specific expected targets for these financial goals, but for confidentiality reasons, they are not publicly disclosed.
(3) The total variable portion allocated to risk-takers by the so-called "group 1" companies within Groupe BPCE for the year in question (including, where applicable, the LTIP amount acquired for the year in question) is taken into account to determine the percentage of deferred annual variable pay. This point applies in particular to executives appointed to new positions during the year.

Components of remuneration	Principles and criteria adopted
Multi-year variable pay	As a reminder, on March 29, 2024, the Supervisory Board decided to grant the members of the Management Board a three-year Long-Term Incentive Plan (LTIP), the amount of which is based on an indicator of organic CET1 creation. The organic creation of CET1 aims to enhance the generation of organic / endogenous capital while limiting the cost of capital. The indicator of organic CET1 creation of the system relates to the organic creation of CET1 of Groupe BPCE for 50% and that of BPCE SA and its subsidiaries for 50%. The amount acquired under the LTIP is determined each year for the 2024, 2025 and 2026 fiscal years, according to Method A described below, and supplemented, where applicable, by any positive difference between the result of Method B (see below) calculated at the beginning of 2027 and the sum of the results determined according to Method A for the three fiscal years 2024, 2025 and 2026.

Method A, for each fiscal year:

<table>
<tr><td>Organic CET1 creation indicator for the fiscal year</td><td>≤ 0 bp</td><td>Annual target</td><td>≥ Cap
i.e. annual target x 2</td></tr>
<tr><td rowspan="2">LTIP amount acquired for the fiscal year</td><td>0</td><td>= 10% of the Fixed Pay*</td><td>= 20% of the Fixed Pay*</td></tr>
<tr><td colspan="3">LTIP amount calculated by linear interpolation between the thresholds of 0% at the Target and the Target at the Cap</td></tr>
</table>

* *i.e.* the annual fixed pay for 2024 including the special supplement.

Method B:

<table>
<tr><td>Organic creation indicators recorded over the three fiscal years</td><td>≤ 0 bp</td><td>3-year target
i.e. annual target x 3</td><td>≥ Cap
i.e. 3-year target x 2</td></tr>
<tr><td rowspan="2">LTIP amount acquired under the plan</td><td>0</td><td>= 30% of the Fixed Pay*</td><td>= 60% of the Fixed Pay*</td></tr>
<tr><td colspan="3">LTIP amount calculated by linear interpolation between the thresholds of 0% at the Target and the Target at the Cap</td></tr>
</table>

* *i.e.* the annual fixed pay for 2024 including the special supplement.

The amount acquired under the LTIP will take into account the prorated presence in the institution over the three-year period in the event of departure before the end of the LTIP (December 31, 2026) or arrival after January 1, 2024.

The multi-year variable pay acquired under the LTIP will be paid from 2027 until 2031 to the Chairman of the Management Board in accordance with the CRD regulation applicable to the effective managers and the standards in force within the Group (deferral, indexation, deferral period and trigger criterion).

Exceptional pay	Members of the Management Board do not receive any exceptional pay.
Grants of stock options/ preference shares	Members of the Management Board do not receive any stock options or preference shares.
Grants of bonus shares	Except when related to the nature of the corporate office, members of the Management Board do not receive any bonus shares.
Attendance fees	Members of the Management Board do not collect attendance fees.
Sign-on bonus	Members of the Management Board do not receive a sign-on bonus.
Benefits in kind	Based on a motion by the Remuneration Committee, the Supervisory Board may resolve to grant an annual housing allowance to members of the Management Board. The Supervisory Board has also decided to grant members of the Management Board collective and mandatory insurance plans (incapacity, disability, death) and additional reimbursement of healthcare costs applicable to BPCE SA employees.

Post-employment benefits

The commitments made in favor of Jérôme Terpereau, Béatrice Lafaurie and Hélène Madar relating to the involuntary-termination severance pay and retirement bonus were approved by the Supervisory Board on February 2, 2023 in accordance with the related-party agreements procedure.

Components of remuneration	Principles and criteria adopted
Involuntary-termination severance pay and retirement bonus	Members of the Management Board, under certain conditions, receive a severance or bonus when their duties cease. **Involuntary-termination severance pay** The members of the Management Board may, under certain conditions and by decision of the Supervisory Board, receive involuntary-termination severance pay equal to at least 12 months' pay (fixed and variable portions), and up to 24 months, earned for 12 years' seniority with the Group. Payment is subject to the following conditions: • **Conditions for receiving involuntary-termination severance pay** The severance may not be paid unless the termination of the duties of the member of the Management Board of BPCE SA is involuntary (involuntary end to term of office due to removal by the General Meeting, withdrawal of approval, involuntary resignation, or non-renewal by the Supervisory Board), other than for serious misconduct and without a change of position within Groupe BPCE. This severance is not paid if the member of the Management Board concerned leaves the Group on his own initiative. The payment of the involuntary-termination severance pay causes the member of the Management Board to lose any right to the retirement bonus to which he may have been entitled. If he is re-assigned to another position with Groupe BPCE under an employment contract, the termination of said employment contract, with notification given more than 12 months after he is forcibly removed from his corporate office, entitles him – barring gross negligence or willful misconduct – to receive the severance pay provided for in the applicable collective bargaining agreement. Conversely, if the employment contract is terminated with notification given less than 12 months after he is forcibly removed from corporate office, he is entitled – barring gross negligence or willful misconduct – to receive involuntary-termination severance pay, minus any remuneration required by law to be paid in respect of the termination of the employment contract. • **Performance conditions** Involuntary-termination severance pay is only due if Groupe BPCE generated positive net income in the last fiscal year preceding the termination of the corporate office. In addition, the payment of the involuntary-termination severance pay is subject to the condition that the member of the Management Board has obtained at least 33.33% of the maximum variable portion on average over the last three years of his term of office. • **Determination of the severance pay** The monthly benchmark pay used in the calculation is equal to one-twelfth of the sum of the fixed pay (excluding the special supplement and benefits) granted for the last calendar year of work preceding the termination of the corporate office or the employment contract and the average of the variable pay (whether paid immediately or deferred) for the last three calendar years of work preceding the termination of the corporate office or the employment contract. Amounts in respect of the relevant corporate office and employment contract are taken into account. The amount of the severance pay is equal to: Monthly benchmark pay x (12 months +1 month per year of seniority with the Group). Seniority is calculated in years and fractions of a year. The amount of the involuntary-termination severance pay is capped at 24 times the monthly benchmark pay, which corresponds to a period of 12 years' seniority with the Group. Where at least 50% of the maximum variable component is awarded on average during the last three years of the corporate office in progress (or during the term of office served, plus the previous term of office served if the term was renewed), the involuntary-termination severance pay will be paid in full. Where at least 33.33% of the maximum variable component is not awarded on average over this period, no involuntary-termination severance pay is granted. Between 33.33% and 50%, the amount of involuntary-termination severance pay is calculated on a straight-line basis, at the discretion of the Supervisory Board. Regardless, any compensation paid for termination of the employment contract is deducted from the amount of involuntary-termination severance pay. **Retirement bonus** The members of the Management Board may, under certain conditions and by decision of the Supervisory Board, receive a retirement bonus equal to no less than 6 months' and no more than 12 months' salary, provided they have at least 10 years of seniority, without any minimum presence conditions. Payment is subject to the following conditions: • **Conditions for receiving a retirement bonus** Payment of the retirement bonus is subject to the same performance conditions as those applicable to the involuntary-termination severance pay mentioned above, *i.e.*: – the Group must have generated positive net income in the fiscal year preceding the termination of the corporate office; and – beneficiaries must have been awarded a minimum percentage of variable pay on average during the last three years of the current term of office. The retirement bonus may only be paid when the social security pension is drawn, provided that the beneficiary falls within the applicable scope (defined below) at the time the pension is drawn. Payment of the retirement bonus is at the discretion of the Supervisory Board after consultation with the Remuneration Committee. Payment of the retirement bonus is excluded from payment of any other departure bonus. As such, if involuntary-termination severance is paid, the member of the Management Board will not be entitled to the retirement bonus.

Components of remuneration	Principles and criteria adopted
Involuntary-termination severance pay and retirement bonus (continued)	• **Amount of the retirement bonus** The monthly benchmark pay used in the calculation is equal to one-twelfth of the sum of the fixed pay (excluding benefits and the special supplement) granted for the last calendar year of work preceding the termination of the corporate office or the employment contract and the average of the top three variable pay amounts allocated (whether paid immediately or deferred) for the last five calendar years of work preceding the termination of the corporate office or the employment contract. Amounts in respect of the relevant corporate office and employment contract are taken into account. The amount of the retirement bonus is equal to: Monthly benchmark pay x (6 +0.6 A) where A is the number, which may be a fraction, of years served in a corporate office within the relevant scope (*i.e.* terms of office served as Chief Executive Officer of Banque Populaire, Chairman of the Management Board of Caisse d'Epargne, Chief Executive Officer of CFF until November 6, 2019, Chief Executive Officer of BPCE I until December 31, 2018, Chief Executive Officer of Banque Palatine, and member of the Management Board of BPCE SA). For an executive benefiting from this scheme who is then appointed to the Executive Management Committee of Natixis or who, following a transfer to BPCE SA, holds the position of Chief Executive Officer or Deputy CEO at BPCE SA, the terms during which these offices are held will be taken into account when determining A. Conversely, the terms during which these offices are held before the executive becomes a beneficiary of this scheme will not be taken into account. Should the offices included in the calculation of A be held simultaneously, these terms will be counted only once (no double-counting). The amount of the retirement bonus is capped at 12 times the monthly benchmark pay, which corresponds to a period of 10 years' of corporate office. Regardless, any compensation paid for termination of an employment contract is deducted from the retirement bonus.
Supplementary pension plan	Members of the Management Board receive: – the mandatory CGP collective supplementary defined-contribution pension plan for all BPCE employees and by extension applicable to BPCE company directors. The contribution rate is 6% from Bracket A and 4% from the pensionable portion of pay in excess of Bracket A and capped at eight times the annual ceiling for social security annuities; 70% of this contribution is paid by the company and 30% by the employee; – the mandatory AXA collective supplementary defined-contribution pension plan for all BPCE senior executives (AFB agreement) and by extension applicable to BPCE company directors. The contribution rate is 3.5% of pay capped at eight times the annual ceiling for social security annuities. This contribution is funded entirely by the company. Furthermore, there are other supplementary pension plans offered to the members of the Management Board, based on their professional career spent with the Group, namely: the pension plan for executive directors of Groupe BPCE: pension plan governed by Article L. 137-11 of the French Social Security Code. – until June 30, 2014, Chairmen of Caisse d'Epargne Management Boards, members of the Management Board of the former CNCE and Chief Executive Officers of Crédit Foncier, Banque Palatine and BPCE International could benefit from a supplementary defined-benefit pension plan entitling them to additional retirement income based on their salary; – until June 30, 2014, Banque Populaire Chief Executive Officers could benefit from a differential defined-benefit pension plan. Effective July 1, 2014, these two pension plans were harmonized under a single supplementary pension plan, now closed to new members and subject to conditions: – they must end their career with Groupe BPCE. This condition is met when beneficiaries are Group employees on the day before their social security pension is drawn following voluntary retirement; – they must have served in an executive management position for at least the required minimum period (seven years) at the date on which their social security pension is drawn. Beneficiaries who meet the above conditions are entitled to an annuity set at 15% of benchmark pay, *i.e.* their average annual pay earned in the three highest-paid years during the five calendar years before the date on which their social security pension is drawn and capped at four times the annual ceiling for social security annuities. Annual pay refers to the sum of the following types of pay received for the year in question: – fixed pay, excluding benefits in kind or duty-related bonuses; – variable pay – not exceeding 100% of fixed pay – and defined as the total variable amount paid, including the portion that may have been deferred over several years and subject to attendance and performance requirements, in accordance with regulations on variable pay granted by credit institutions. Once drawn, this supplementary pension may be paid to a spouse or former non-remarried spouse, at a rate of 60%. This plan, which is funded entirely by the Group, is covered by two insurance contracts taken out with the Quatrem and Allianz insurance companies, with a target obligation coverage rate of 100% of assets and 100% of pension recipients. Expenses paid by the company consist of the 32% contribution on annuities paid by the insurer to the beneficiaries. The supplementary pension plan for executive directors governed by Article L. 137-11 of the French Social Security Code, is governed by the provisions of Section 25.6.2 of the Afep-Medef Code. It complies with the principles governing the capacity of beneficiaries, overall establishment of base pay, seniority conditions, the progressive increase in potential entitlements depending on seniority, the reference period used to calculate benefits and the prevention of artificially inflated pay. For the members of the Management Board who benefit from this plan, the annual vesting of conditional entitlements is contingent on Groupe BPCE generating a net income for the period considered. Members of the Management Board who are not on the Group's supplemental executive pension plan are entitled to participate in **a pension plan through a Group insurance contract** under Article 82 of the French General Tax Code, in which company directors of Groupe BPCE who do not benefit from the "Pension plan for company directors of Groupe BPCE" may participate, as this policy is funded solely through voluntary payments by the company directors who have decided to participate therein. As such, the fixed pay of the members of the Management Board members on that plan includes a 20% special supplement.

Remuneration policy applicable to the Chairman and members of the Supervisory Board

Components of remuneration	Principles and criteria adopted
Fixed annual pay	The remuneration package allocated to the members of the Supervisory Board of BPCE is determined by the General Meeting. Based on recommendations from the Remuneration Committee, the Supervisory Board sets the guidelines for allocating pay between the members of the Supervisory Board. With the exception of the Chairman, who receives a fixed annual fee, the members of the Supervisory Board receive remuneration on the basis of their activities. **Fixed pay granted to the members of the Supervisory Board** With the exception of the Chairman, who receives a fixed annual fee, and the Vice-Chairman, who receives fixed annual pay, the members of the Supervisory Board are not paid any fixed annual amounts. **Additional remuneration paid to members of Board committees** The Chairmen of the Audit Committee, Risk Committee, Appointments Committee, Remuneration Committee, and the Cooperative and CSR Committee also receive an additional annual amount in payment for their committee work. The members of these committees do not receive any additional fixed annual pay. **Remuneration paid to non-voting directors** The non-voting directors of the Board do not receive any fixed annual pay.
Variable pay	**Variable pay for members of the Supervisory Board** The members of the Supervisory Board, with the exception of the Chairman, collect a fee for each meeting they attend during the fiscal year. The fixed annual sum received by the Vice-Chairman is larger than the supplemental portion. **Additional remuneration paid to members of Board committees** The members (including the Chairmen) of the Board committees collect a fee for each meeting they attend during the fiscal year. Committee Chairmen receive a fixed annual sum that is greater than the supplemental portion in view of their specific responsibilities. **Remuneration paid to non-voting directors** Pursuant to Article 28.3 of the company's articles of association, the Supervisory Board has decided to award remuneration to the non-voting directors by making a deduction from the remuneration package allocated to the members of the Supervisory Board by the General Shareholders' Meeting. As such, non-voting directors collect a fee for each meeting they attend during the fiscal year.
Benefits in kind	The Chairman and members of the Supervisory Board and of the Board committees do not receive any benefits in kind.

4.5.3 Remuneration and benefits of all kinds awarded to company directors for the 2024 fiscal year

The remuneration of BPCE SA's company directors for the 2024 fiscal year complies with the remuneration policy defined by the Supervisory Board meetings of February 7, 2024 and March 29, 2024 on the proposal of the Remuneration Committee.

The Chairman of the Management Board is paid solely in respect of his corporate office.

The other members of the Management Board receive an employment contract. Their pay is divided 90%/10%, respectively, between the employment contract and corporate office. The implementation of the employment contract for Béatrice Lafaurie was authorized and approved by the Supervisory Board on March 25, 2021. The implementation of the employment contract for Jérôme Terpereau was authorized and approved by the Supervisory Board on March 24, 2022. The implementation of the employment contract for Hélène Madar was authorized and approved by the Supervisory Board on February 2, 2023.

Pay received by the Chairman and the members of the Management Board for the 2024 fiscal year:

Fixed pay for 2024

	Fixed annual pay[1]	Comments
Nicolas Namias Chairman of the Management Board	€1,200,000 (including a special supplement in respect of the supplemental pension scheme pursuant to Article 82 of the French General Tax Code)	Unchanged in 2024
Béatrice Lafaurie Head of Group Human Resources, member of the Management Board	€600,000 (including a special supplement in respect of the pension scheme pursuant to Article 82 of the French General Tax Code)	Unchanged in 2024
Hélène Madar Head of Retail Banking and Insurance, member of the Management Board	€600,000 (including a special supplement in respect of the pension scheme pursuant to Article 82 of the French General Tax Code)	Unchanged in 2024
Jérôme Terpereau Head of Group Finance, member of the Management Board	€600,000 (including a special supplement in respect of the pension scheme pursuant to Article 82 of the French General Tax Code)	Unchanged in 2024

(1) Excluding benefits in kind.

Annual variable pay in respect of the 2024 fiscal year

ACHIEVEMENT OF TARGETS SET FOR THE 2024 FISCAL YEAR

The annual variable pay in respect of 2024 was determined based on quantitative and qualitative criteria that were the same for all members of the Management Board and had previously been submitted to the Remuneration Committee for review on February 6, 2024 and March 25, 2024, then validated by the Supervisory Board on February 7, 2024 and March 29, 2024.

The contribution of these criteria, validated by the Supervisory Board on February 5, 2025 after receiving the opinion of the Remuneration Committee on February 4, 2025, were as follows:

- the trigger criterion is observation of the Group Basel III Common Equity Tier 1 ratio. This level corresponds to the minimum threshold of the CET1 level, plus the P2R, the P2G and the phase-in combined buffers set by the ECB. No variable pay is granted if this criterion is not met. This criterion was verified at December 31, 2024;
- quantitative criteria account for 60% of variable pay: net income attributable to equity holders of the parent (30%), the Group's cost/income ratio (15%), and the Group's net banking income (15%). The contribution under the quantitative criteria amounts to 65.93%;
- qualitative criteria account for 40% of variable pay, related in particular to the control of current expenses excluding investment (BPCE), ensuring that Groupe BPCE has a strong strategic position in IT, AI and Payments, Human Resources (good HR integration of acquisitions, continuation of the management policy for executives including meeting, by non-executives, of those on the aptitude list), management of the profitability of subsidiaries and acquisitions, CSR and BPCE employee membership. The contribution of the qualitative criteria amounts to 40%;
- the contribution on all the criteria amounts to 105.93% (before application of the cap rules).

	Variable pay	Variable pay awarded in respect of the 2024 fiscal year
Nicolas Namias Chairman of the Management Board	Target at 100% of fixed pay including the special supplement, with a maximum of 120% of fixed pay including the special supplement	€1,200,000 x (105.93% x 100%) *i.e.* €1,271,160
Béatrice Lafaurie Head of Group Human Resources, member of the Management Board	Target at 80% of fixed pay including the special supplement, with a maximum of 100% of fixed pay including the special supplement	€600,000 x (105.93% x 80%) *i.e.* €508,464
Hélène Madar Head of Retail Banking and Insurance, member of the Management Board	Target at 80% of fixed pay including the special supplement, with a maximum of 100% of fixed pay including the special supplement	€600,000 x (105.93% x 80%) *i.e.* €508,464
Jérôme Terpereau Head of Group Finance, member of the Management Board	Target at 80% of fixed pay including the special supplement, with a maximum of 100% of fixed pay including the special supplement	€600,000 x (105.93% x 80%) *i.e.* €508,464

TERMS AND CONDITIONS OF PAYMENTS

In accordance with the remuneration policy approved by the Supervisory Board meetings of February 7, 2024 and March 29, 2024, a portion of the annual variable pay awarded to the members of the Management Board is deferred in equal installments over five years (*i.e.* 2027 to 2031 for the variable pay awarded in respect of the 2024 fiscal year). This deferred portion represents, for Nicolas Namias, 60% of his annual variable pay awarded for the 2024 fiscal year, for Béatrice Lafaurie, Hélène Madar and Jérôme Terpereau, 50% of their annual variable pay awarded for the 2024 fiscal year. It is specified that, in accordance with the remuneration policy, all of the annual variable pay allocated by Group companies for 2024 as well as the total of the LTIP amounts acquired in respect of 2024, are taken into account when determining the percentage of deferred annual variable pay. This particularly applies to executives who may take up new offices during the year.

In addition, in accordance with the remuneration policy approved by the Supervisory Board meetings of February 7, 2024 and March 29, 2024, at least half of the annual variable pay awarded to the members of the Management Board is indexed.

The indexed variable portion varies according to the net income attributable to equity holders of the parent. The indexation coefficients are calculated using the underlying net income attributable to equity holders of the parent of the three fiscal years preceding the year of payment at the numerator and the underlying net income attributable to equity holders of the parent of the three fiscal years preceding the year of allocation at the denominator. Indexation coefficients are rounded to the fourth decimal place.

Payment of the deferred portion is contingent upon attaining a standard Return on Equity (ROE) for the core Group business lines that is at least equal to 4% during the fiscal year before payment falls due.

The payment structure of the annual variable pay awarded to the members of the Management Board for the 2024 fiscal year is as follows:

Annual variable pay awarded in respect of the 2024 fiscal year

	NON-DEFERRED PORTION vested on grant from 60% to 40% depending on the amount of the variable pay (including the LTIP amount vested in respect of 2024)		DEFERRED PORTION whose vesting is subject to performance conditions from 40% to 60% depending on the amount of variable pay (including the LTIP amount vested in respect of 2024)				
	Not indexed	Indexed (deferred for one year)	Indexed				
	Vesting: March 2025 Payment: March 2025	Vesting: March 2025 Payment: March 2026	Vesting: March 2026 Payment: March 2027	Vesting: March 2027 Payment: March 2028	Vesting: March 2028 Payment: March 2029	Vesting: March 2029 Payment: March 2030	Vesting: March 2030 Payment: March 2031
Nicolas Namias deferred at 60%	40%	-	12%	12%	12%	12%	12%
Béatrice Lafaurie Hélène Madar Jérôme Terpereau deferred at 50%	50%	-	10%	10%	10%	10%	10%

Multi-year variable pay

LTIP AMOUNT ACQUIRED FOR THE 2024 FISCAL YEAR

Nicolas Namias, Béatrice Lafaurie, Hélène Madar and Jérôme Terpereau are beneficiaries of the Long-Term Incentive Plan granted by the Supervisory Board on March 29, 2024.

The amount of this multi-year variable pay over three years is calculated according to an indicator measuring the organic creation of CET1. At the end of the three years, this remuneration amounts to 30% of the annual fixed pay for 2024 including the specific supplement if the indicator reaches its target each year and is capped at 60% of this same base in the event of outperformance.

On the basis of the financial data as of December 31, 2024, the LTIP amount acquired in respect of the 2024 fiscal year, calculated in accordance with method A as presented in the remuneration policy (see page 478), is estimated for each beneficiaries at 9.73% of their 2024 fixed pay including the specific supplement. The definitive LTIP amounts acquired for the 2024 fiscal year will be recognized by the Supervisory Board during the 1st half-year 2025.

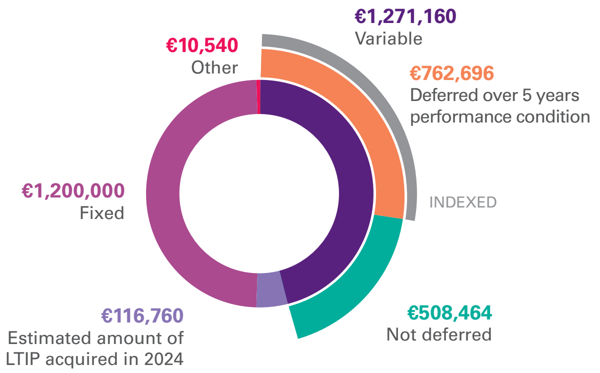
	Estimate of the LTIP amount acquired for the 2024 fiscal year
Nicolas Namias Chairman of the Management Board	€1,200,000 x 9.73% *i.e.* €116,760
Béatrice Lafaurie Head of Group Human Resources, member of the Management Board	€600,000 x 9.73% *i.e.* €58,380
Hélène Madar Head of Retail Banking and Insurance, member of the Management Board	€600,000 x 9.73% *i.e.* €58,380
Jérôme Terpereau Head of Group Finance, member of the Management Board	€600,000 x 9.73% *i.e.* €58,380

The multi-year variable pay acquired under the LTIP will be paid from 2027 until 2031 in accordance with the CRD regulation applicable to the executive management and the standards in force within the Group (deferral, indexation, deferral period and trigger criterion).

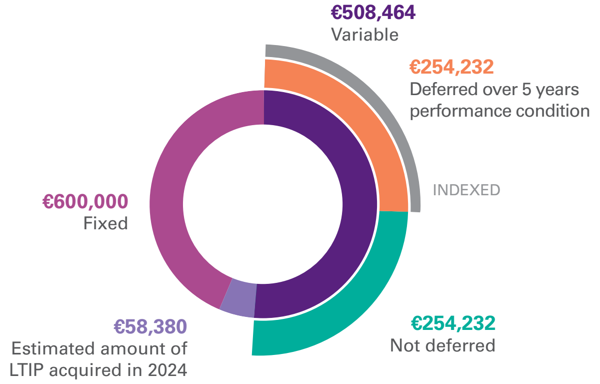
REMUNERATION MIX FOR THE 2024 FISCAL YEAR

The structure of the remuneration of the members of the Management Board for the 2024 fiscal year is as follows, it being specified that the terms of the LTIP (deferred, indexing, deferral period and triggering criteria) will be set in early 2027, in accordance with the LTIP regulations:

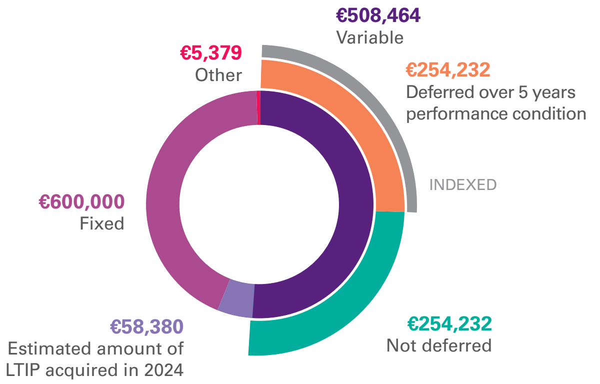
For **Nicolas Namias**, Chairman of the Management Board:



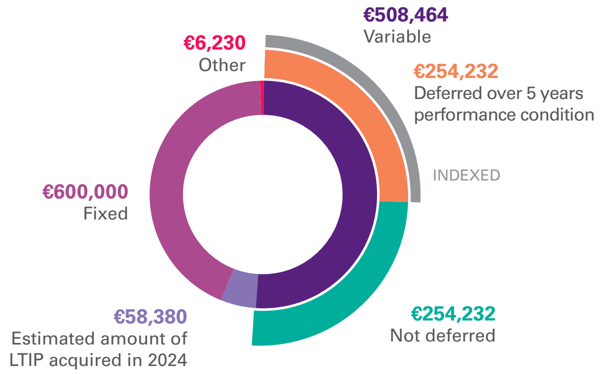
For **Béatrice Lafaurie**, Member of the Management Board - Head of Group Human Resources:



For **Hélène Madar**, Head of Retail Banking and Insurance, member of the Management Board:



For **Jérôme Terpereau**, Head of Group Finance, member of the Management Board:



OTHER ITEMS

The members of the Management Board receive a company car allowance except for Béatrice Lafaurie, who has waived this benefit.

STANDARDIZED TABLES SUMMARIZING PAY GRANTED COMPANY DIRECTORS, IN ACCORDANCE WITH AMF RECOMMENDATIONS

AMF Table 1

Summary table of remuneration and options and shares granted to each company director from January 1 to December 31, 2024

		Fiscal year	Total pay due in respect of the fiscal year (fixed and variable) (Table 2)	Total pay received during the fiscal year (fixed and variable) (Table 2)	Value of multi-year variable pay received during the fiscal year[1]	Value of stock options allocated during the fiscal year (Table 4)	Value of performance shares granted during the fiscal year (Table 6)
Nicolas Namias	Chairman of the Management Board	2023	€2,525,500	€1,254,177	€0	€0	€0
		2024	€2,598,460	€1,750,580	€116,760	€0	€0
	For positions held at BPCE before August 4, 2020	2023	€0	€141,405	€0	€0	€0
		2024	€0	€40,801	€0	€0	€0
	For positions held at Natixis from August 4, 2020 to December 2, 2022[2]	2023	€0	€787,256	€0	€0	€0
		2024	€0	€458,587	€0	€0	€0
Béatrice Lafaurie	Head of Group Human Resources member of the Management Board	2023	€1,125,984	€987,142	€0	€0	€0
		2024	€1,166,844	€977,685	€58,380	€0	€0
	For positions held previously at BPCE	2023	€0	€5,178	€0	€0	€0
		2024	€0	€2,471	€0	€0	€0
Hélène Madar	Member of the Management Board - Retail Banking and Insurance division since April 1, 2023	2023	€847,601	€453,113	€0	€0	€0
		2024	€1,172,223	€816,308	€58,380	€0	€0
	For positions held previously at BPCE	2023	€0	€17,222	€0	€0	€0
		2024	€0	€9,245	€0	€0	€0
Jérôme Terpereau	Member of the Management Board - Retail Banking and Insurance then Head of Group Finance division since April 1, 2023	2023	€1,129,680	€788,461	€0	€0	€0
		2024	€1,173,074	€953,406	€58,380	€0	€0

(1) LTIP amount vested for the 2024 fiscal year estimated on the basis of the financial data as of December 31, 2024 and presented to the Supervisory Board on February 5, 2025.
(2) Nicolas Namias received remuneration from Natixis, a company under the control of BPCE as defined by Article L. 233-16 of the French Commercial Code, for his duties as Chief Executive Officer of Natixis from August 4, 2020 to December 2, 2022. The amount paid also includes payment and shares deliveries in respect of the deferred variable pay installments of previous years at Natixis.

AMF Table 2

Summary statement of pay granted and paid to each company director

In the following statements:

The expression "amount allocated" corresponds to the remuneration and benefits allocated to a corporate officer in respect of their duties during the fiscal year, regardless of the date of payment.

The expression "amount paid" corresponds to the remuneration and benefits actually paid to a corporate officer in respect of their duties during the fiscal year, regardless of the grant date.

Pay statement: Nicolas Namias

	2023 fiscal year		2024 fiscal year	
Chairman of the Management Board	**Amounts allocated**	**Amounts paid**	**Amounts allocated**	**Amounts paid**
Fixed pay	€1,200,000	€1,200,000	€1,200,000	€1,200,000

4.5.4 Procedures in Groupe BPCE for applying Articles L. 511-71 to L. 511-88 of the French Monetary and Financial Code on remuneration policy and practices

In accordance with Article L. 511-71 of the French Monetary and Financial Code, the General Meeting of May 27, 2016 decided that, for the 2016 and subsequent fiscal years, the variable portion of the total remuneration of each of the persons referred to in Article L. 511-71 of the French Monetary and Financial Code identified by BPCE SA, could exceed the amount of their fixed pay without exceeding double the amount of the fixed pay.

In accordance with Article L. 511-73 of the French Monetary and Financial Code, the BPCE General Meeting will be consulted in 2025 on the budget for all types of remuneration paid during the previous fiscal year to the members of the Management Board and other BPCE employees whose professional activities have a material impact on the company or Group risk profile.

Information on the policies and practices on pay granted to members of the executive body and persons whose professional activities have a material impact on the corporate risk profile will be the subject of a report published on the BPCE website prior to the General Meeting, in accordance with the same terms applicable to the universal registration document.

4.6 Potential conflicts of interest

4.6.1 Members of the Supervisory Board

Integrity of members

Pursuant to Article L. 511-98 of the French Monetary and Financial Code, the integrity and expertise of all newly appointed members are subject to review by the Appointments Committee.

In accordance with the internal rules of the Supervisory Board of BPCE, members of the Supervisory Board must perform their duties with loyalty and professionalism.

They must not take any initiatives intended to harm the company's interests and they must act in good faith in all circumstances.

In addition, the members of the Supervisory Board and its committees, as well as any person called to attend their meetings, are bound by professional secrecy under the conditions provided for by Article L. 511-33 of the French Monetary and Financial Code and to an obligation of discretion regarding their deliberations, as well as any information of a confidential nature or presented as such by the Chairman of the meeting, under the conditions provided for by Article L. 225-92 of the French Commercial Code.

The Chairman of the Board stresses that the proceedings of a meeting are confidential whenever regulations or the interests of the company or the Group may require it. The Chairman of each Board Committee does the same.

The Chairman of the Board or one of its committees takes the measures necessary to ensure the confidentiality of discussions. This may require all persons taking part in a meeting to sign a confidentiality agreement.

If a member of the Board or one of its committees fails to comply with an obligation, in particular the obligation of confidentiality, the Chairman of the Supervisory Board refers the matter to the Board in order to issue a warning to said member, independently of any measures taken under the applicable legal, regulatory or statutory provisions. Said member is given advance notice of the penalties being considered and will be able to present observations to the Supervisory Board.

In addition, members of the Supervisory Board:

- undertake to devote the necessary time and attention to their duties;
- attend all meetings of the Supervisory Board and the committees of which they are members, unless this is impossible;
- stay informed about the company's business lines, activities, issues, and values;
- endeavor to maintain the level of knowledge they need to fulfill their duties;
- request and make every effort to obtain, in a timely manner, the information deemed necessary to be able to hold informed discussions at Supervisory Board Meetings.

Finally, members of the Supervisory Board participate in the training programs set up for them.

Conflict of interest prevention and management policy

In accordance with the EBA and ESMA guidelines, the Supervisory Board adopted, at its meeting of February 7, 2024, a policy for the prevention and management of conflicts of interest of executive management and of the members and non-voting directors of the Supervisory Board.

The purpose of this policy is to enhance the Group's conflict of interest management system by formalizing the detection, management and prevention of potential and/or proven conflicts of interest of members of the Management Board and Board members and non-voting directors as well as their related parties.

The Policy for the prevention and management of conflicts of interest formalizes what is already practiced by BPCE, in accordance with legal and regulatory texts and specifically, stipulates that:

- a precise definition of conflicts of interest, *i.e.* any situation in which the independent, fair, impartial, and objective performance of a person's functions is likely to be influenced by another public or private interest distinct from the interest he or she must defend in his or her functions;
- a precise definition of related parties and the obligation to declare them;
- sources of conflicts of interest and ways to identify, prevent and manage them;
- the controls carried out by the operational departments and, in particular, controls of loans and other transactions, of declared mandates, of "good credit history" for the members of the Supervisory Board, and of negative media coverage.

At its meeting of December 12, 2024, the Supervisory Board reviewed the policy for the prevention and management of conflicts of interest and decided to maintain its initial wording.

To the company's knowledge:

- there are no potential conflicts of interest between the duties of the members of the Supervisory Board with regard to the issuer and other private duties or interests. If required, the Supervisory Board's internal rules and the Ethics and Compliance Charter, along with the conflict of interest prevention and management policy, govern the conflicts of interest of any member of the Supervisory Board;
- there is no arrangement or agreement with an individual shareholder, customer, supplier, or other, under which any of the Supervisory Board's members has been selected;
- there are no family ties between the members of the Supervisory Board;
- no restriction, other than legal, is accepted by any of the members of the Supervisory Board regarding the disposal of their equity interest in the company.

In addition, specific conflicts of interest may arise from financial ties that may exist between the Group in which an external independent member holds executive office and BPCE.

In application of the Afep-Medef Code and the EBA guidelines, financial ties are only an obstacle to the qualification of independence if they are significant.

The balanced and immaterial nature of the business relationship is assessed according to cumulative criteria relating to:

- the weight of the debts and receivables of the Group in which the independent member exercises his main activity vis-à-vis Groupe BPCE, in relation to its liabilities or its revenue;
- the dependence of the company in which the independent member exercises executive functions on a Groupe BPCE entity with regard to its financing.

The Appointments Committee reviews business relationships on an annual basis. In 2024, it did not identify any significant business relationships during the fiscal year.

Disclosure of conviction

To the company's knowledge, to date, no member of the Supervisory Board of BPCE has been convicted of fraud in the last five years. To the company's knowledge, to date, no member of the Supervisory Board of BPCE has been declared bankrupt or in liquidation, or had assets placed in receivership, in the last five years.

4.6.2 Members of the Management Board

Independence and integrity

Pursuant to Article L. 511-98 of the French Monetary and Financial Code, the integrity and expertise of all newly appointed members are subject to review by the Appointments Committee.

Members of the Management Board may hold other offices subject to laws and regulations in force. A member of the Management Board may not perform duties similar to those of Chief Executive Officer or Deputy Chief Executive Officer or sole Chief Executive Officer at a Caisse d'Epargne or a Banque Populaire.

Conflicts of interest

The conflict of interest prevention and management policy adopted by the Supervisory Board at its meeting of February 7, 2024 also applies to the members of the Management Board.

To the company's knowledge:

- there are no conflicts of interest between any duties of members of the Management Board with respect to the issuing entity and their private interests or other duties;
- there are no family ties between members of the Management Board.

At the filing date of this document, no member of the Management Board was linked to BPCE or any of its subsidiaries by a service agreement offering benefits.

Disclosure of conviction

To the company's knowledge, to date, no member of the Management Board has, for at least the previous five years, been convicted of fraud, associated with bankruptcies, receiverships or liquidations, convicted of a crime or subject to an official public sanction handed down by statutory or regulatory authorities, or disqualified by a court from acting as a member of the administrative, management or supervisory bodies of an issuer or from participating in the management or conduct of the affairs of any issuer.

5 ACTIVITIES AND FINANCIAL INFORMATION 2024

5.1 Foreword

The financial data for the fiscal year ended December 31, 2024 and the comparative data for 2023 were prepared by applying the accounting policies under IFRS as adopted by the European Union and applicable at that date, excluding some provisions of IAS 39 on hedge accounting. This management report discusses the results of Groupe BPCE and BPCE (formerly BPCE SA group), built around the central institution, BPCE, which was established on July 31, 2009 following the merger of the Banque Populaire and Caisse d'Epargne groups.

BPCE's results are summarized because the activities and results of the two groups are closely related. The main differences in scope relative to Groupe BPCE concern the exclusion of the contributions of the Banques Populaires and the Caisses d'Epargne.

5.2 Economic and financial environment

2024: Reduction in inflation without a recession and political uncertainty in France

The global economy was resilient in 2024, as in 2023, even returning to 3.2% growth in activity for the year, despite the contraction of international trade in relation to GDP and the emergence of major new uncertainties. In particular, two events marked the year: the surprise dissolution of the French National Assembly and the election of Donald Trump as president in the United States. The profound divergence in growth trajectories between the major economic zones, which was already observed until 2023, was reinforced with a striking contrast: the European continent continued to fall behind in the strategic race to industrial leadership implemented by China and the United States. Overall, the global economy benefited mainly from the decline in inflation and the exceptional dynamism of private demand in the United States. Inflation on both sides of the Atlantic has been defeated, without a recession being mechanically triggered by the aggressive tightening of key rates by the Fed and the ECB since March and July 2022 respectively. The easing of fiscal policies, particularly in the United States, which offset the monetary brake, boosted activity. In addition, disinflation has once again boosted the purchasing power of private agents on both sides of the Atlantic.

In 2024, China confirmed a process of structural slowdown, while the US economy exceeded the forecast of a simple soft landing, thanks to the still insolent dynamism of its private demand. Conversely, the Eurozone took refuge in an outlook of persistently sluggish growth, despite signs of improvement in the first half of the year, as the energy crisis eased. In the United States, as in China, the momentum came from abyssal public deficits. In addition to a now less expansionary fiscal policy and the negative effects of the previous monetary tightening, Europe suffered from a violent lag in its production prices relative to the United States and especially compared to China, due to the repercussions of the energy crisis of 2022.The economic recovery in the Eurozone was therefore quite modest in 2024, reaching 0.8%, compared to 0.5% in 2023. The support came mainly from foreign trade, as the contribution of domestic demand remained insufficient, despite disinflation, with household savings rates well above their historical average in the four main countries.

France entered an unknown situation of very marked economic and political uncertainty after the dissolution of the National Assembly on June 9. Its fiscal credibility, already tarnished by an unanticipated public deficit of 5.5% of GDP in 2023 and by the downgrade of its sovereign rating by Standard & Poor's, the most powerful American agency, followed by Moody's, became the main victim of ambitious election campaign promises, with no real basis in terms of financing. With the censorship of the government of Prime Minister Michel Barnier on December 4, political uncertainty took over from inflationary fears, despite the appointment of François Bayrou. The public deficit has also slipped again, reaching 6.1% of GDP in 2024. The sovereign spread with Germany reached nearly 80 basis points (bps) after the dissolution of the National Assembly, compared to only 50 bps previously.

French GDP grew by 1.1%, as in 2023. It benefited from the strong expansion of public spending and a record contribution from foreign trade, the latter mainly due to the decline in imports. It was artificially boosted by the impact of the Olympic and Paralympic Games in Paris in the third quarter. Conversely, with a wait-and-see policy giving way to mistrust, business investment fell, due to the tightening of financing conditions and increased reluctance on the part of private players. Consumption increased almost as much as in 2023, even though households experienced clear gains in purchasing power (+2.1% after +0.9%), boosted by the decline in prices. Given the general increase in uncertainty and probably the future risk of a tax increase in the face of the drift in public finances, the household savings rate increased to 17.9%, *i.e.* a level 4 points higher than before the health crisis. Real estate investment by households remained in sharp contraction.

Inflation declined markedly, due to the year-on-year slowdown in the prices of food, manufactured products, energy and services, notably in telecommunications: 2.0% per year on average, compared to 4.9% in 2023 and 5.2% in 2022. The unemployment rate stabilized at around 7.4%, compared to 7.3% in 2023, reflecting an increase in employment close to that of the active population: 214,000 net jobs were created over the year, for 256,000 additional assets, according to INSEE.

Regarding monetary policy, the resilience of domestic demand and inflation in services in the United States led the Fed to postpone the start of the key rate cuts previously planned for 2024 until September. The Fed made three successive reductions, one of 50 bps in September, which is rather unusual in magnitude, then two of 25 bps in November and December, *i.e.* a total of 100 bps, bringing key rates at the end of December within the range of 4.25%-4.5%, compared to 5.25%-5.5% previously. The ECB began its monetary easing process on June 6, before the Fed and for the first time in its history, even if it meant causing a temporary rise in the dollar-euro exchange rate. This decision was motivated by a structural European deficit in productivity gains, the weakness of domestic demand and the more significant decline in inflation than on the other side of the Atlantic. Next, three additional cuts of 25 bps were made in September, October and December, *i.e.* a total decrease of 100 bps over the year, with the deposit facility rate, the refinancing rate and the marginal lending rate being reduced respectively to 3%, 3.15% and 3.4% on December 12. The 125 bps spread in favor of US key rates, the exceptional economic dynamism of the United States and the anticipation of more favorable growth with the election of Donald Trump have therefore fueled the weakness of the euro against the dollar, with the latter standing at $1.04 on December 30, 2024, compared to approximately $1.11 at the end of 2023 (12/27). As of the second half of the year, the ECB also began to exit from the PEPP asset acquisition program launched during the pandemic, at a cautious disengagement rate of €7.5 billion per month.

Despite the net decline in inflation, 10-year rates on both sides of the Atlantic rebounded, after their sharp easing at the end of 2023, due to the postponement of the monetary easing process, which was finally less intensive than initially expected, until the second half of the year. The 10-year OAT was an annual average of 3%, as in 2023. However, it reached 3.29% on June 28 and ended at 3.19% on December 31, due to a risk premium increased by nearly 83 bps with Germany, despite the 100 bps decline in the ECB deposit facility rate. Lastly, the CAC 40 suffered significantly from the dissolution of the National Assembly and both political and budgetary uncertainty. It fell by 2.2% in 2024 (compared to an increase of 16.5% in 2023), reaching 7,380.74 on December 31, compared to 7,543.18 points at the end of 2023.

Net banking income

Groupe BPCE's net banking income (NBI) reached €23.3 billion in 2024, an increase of +5.0% compared to 2023. This recovery was accompanied by significant momentum throughout the year compared to 2023: a slight decrease of -1.1% in the first quarter, followed by an increase of +2.9% in the second quarter, then +8.0% in the third quarter, and +10.7% in the fourth quarter.

Retail Banking and Insurance revenues increased by +3.8% compared to 2023, with solid performances in the Banque Populaire and Caisses d'Epargne networks, where net banking income grew by +3.7%. This performance was driven by the +5.0% growth in fees and commissions. The net interest margin (NIM) increased by +3.0%, equivalent to €172 million, despite a -9.3% decrease in new loans in a deteriorated real estate market. This recovery is partly due to a decrease in the cost of resources, as well as a significant increase in the credit production rate of +46 basis points over the year. Within BPA, the other divisions continued their development: Financial Solutions & Expertise (+2.2%), Insurance (+9.5%), the Digital and Payments division (+7.0%), while Banque Palatine's revenues were down slightly (-2.3%).

Loan outstandings grew by +1% year-on-year, reaching €724 billion at the end of December 2024, stable for home loans at €400 billion, a +3% increase in equipment loans to €199 billion, and a +4% increase in consumer loans to €41 billion.

At the end of December 2024, savings deposits on the balance sheet stood at €681 billion, an increase of +€5 billion year-on-year.

The dynamic activity in FSE businesses with the retail networks continued, notably driven by Leasing (+8% year-on-year) and Consumer loans (+7% year-on-year) business lines.

In life insurance, outstandings exceeded the €100 billion threshold for the first time, at €103 billion at the end of December 2024, up +12% since the beginning of the year thanks to significant positive net inflows in unit-linked products and euro funds. The non-life insurance of customers of the Banques Populaires and Caisses d'Epargne networks continued to grow, by nearly 34% in 2024.

The activity for the Digital & Payments division saw the increase in the number of card transactions of +5% year-on-year with +54% year-on-year for mobile payments. Oney's revenues were up by +8% in 2024 year-on-year, reflecting the subsidiary's recovery.

The net banking income of the Global Financial Services division increased by +8.0% at current exchange rates and by +8.1% at constant exchange rates compared to 2023 and amounted to €7,947 million. The Asset & Wealth Management and Corporate & Investment Banking divisions saw sustained positive changes: in Wealth & Asset Management, revenues increased by +9.9% at current exchange rates and by +9.9% at constant exchange rates, while revenues from Corporate & Investment Banking were up by +6.6% at current exchange rates and +6.8% at constant exchange rates. The change in the Asset & Wealth Management division's net banking income is the result of several factors: strong growth in fees and commissions on outstandings and financial products with cash income benefiting from the rise in interest rates and the increase in the valuation of the Seed money portfolio. The net banking income of Corporate & Investment Banking was driven by all of its business lines in 2024, with revenue from capital markets increasing by +7.2% at constant exchange rates compared to 2023, financing by +12%, and Investment Banking including M&A activities by +17%.

Operating expense

Groupe BPCE's operating expenses amounted to -€16.4 billion, stable (+0.3%) compared to 2023. Taking into account the impact of the Single Resolution Fund (SRF), which amounted to -€457 million in 2023, expenses continued to increase at +3.2% compared to 2023. This increase in expenses, close to the level of inflation (around +2% in France and +3% in the United States) reflects the support for the activity of the business lines and their development projects.

Groupe BPCE's transformation costs, related to synergy-creating transactions such as mergers of institutions and migrations of IT platforms for digital transformation, are included in operating expenses. Restated for these items, operating expenses are slightly up by +0.4% compared to 2023, *i.e.* +3.3% excluding the contribution to the Single Resolution Fund (SRF).

Retail Banking and Insurance operating expenses, including transformation costs, were up moderately by +0.9%.

In the Global Financial Services division, operating expenses were -€5,651 million, up +7.2% at current exchange rates. They increased both in the Asset & Wealth Management division (+6.1%) driven by variable payroll (in line with performance) and fixed payroll (due to headcount growth) expenses and on Corporate & Investment Banking (+8.4%) to support business growth.

Groupe BPCE's headcount increased by +0.7% in relation to end 2023, to 101,234 employees on December 31, 2024.

Groupe BPCE's gross operating income amounted to over €6.9 billion in 2024, up by +18.1% on 2023.

The cost/income ratio stood at 70.3% in 2024, an improvement of -3.3 points compared to 2023, and -1.4 points after restatement of non-recurring items and the SRF contribution.

Income before tax

Groupe BPCE's cost of risk amounted to -€2.1 billion, up +19% compared to 2023, mainly in the Stage 3 segment, in particular due to certain specific cases and a deterioration in the economic environment.

As a percentage of customer loan outstandings, Groupe BPCE's average annual cost of risk was 24 basis points in 2024 *vs.* 20 points in 2023.

The rate of non-performing loans to gross outstandings was 2.5% on December 31, 2024, a very slight increase in relation to 2023 (2.4%). The coverage rate for non-performing loans, including collateral on impaired loan outstandings, came to 68.1% on December 31, 2024 *versus* 68.2% on December 31, 2023.

In retail banking, the cost of risk relative to the outstandings of the Banque Populaire and Caisses d'Epargne networks was up compared to 2023 (at 24 basis points compared to 21 basis points). The risk ratio was up for Corporate & Investment Banking: 40 basis points in 2024 compared to 24 basis points in 2023, mainly impacted by individual provisions for non-performing loans and compared to a low level in 2023.

Net income (expense) from other assets amounted to €28 million in 2024 compared to €8 million in 2023.

No change in the value of goodwill was recorded in 2024.

Groupe BPCE's pre-tax income was €5.0 billion in 2024, up +18.5% compared to 2023, driven by both Retail Banking and Insurance (+8%), and by the Global Financial Services division (+4.4%).

Net income attributable to equity holders of the parent

Groupe BPCE's income tax expense amounted to -€1,357 million in 2024, up +1.3% compared to 2023.

Net income attributable to equity holders of the parent for Groupe BPCE amounted to €3,520 million in 2024, up by +25.5% compared to 2023.

Capital adequacy

The Common Equity Tier-1 ratio was 16.2% at December 31, 2024 *versus* 15.6% at December 31, 2023.

The change in the Common Equity Tier-1 ratio in 2024 is mainly due to:

- the growth in Common Equity Tier-1, driven in particular by retained earnings (+60 basis points) and to a lesser extent to the collection of cooperative shares (+6 basis points), but mitigated by the increase in the deduction for insufficient provisioning of non-performing loans (-3 basis points) and prudent assessment (-3 basis points);
- the control of risk-weighted assets (-3 basis points), favored by the change in the weighting of local authorities to 0% and the transition to Corporate IRBA for the high-end segment of the Banques Populaires and the Caisses d'Epargne.

At December 31, 2024, the Tier-1 ratio stood at 16.2% and the total capital ratio at 18.8% compared to 15.6% and 18.2%, respectively, at December 31, 2023. These ratio levels remain well above the regulatory requirements defined by the European Central Bank (ECB) during the Supervisory Review and Evaluation Process (SREP) in 2025.

Total Loss Absorbing Capacity (TLAC) amounted to €122.1 billion at end-December 2024. The TLAC ratio was 26.7% on December 31, 2024 *versus* 25.4% on December 31, 2023 for a target of 25.5% as defined in the new "VISION 2030" strategic plan.

The leverage ratio increased over the year (+10 basis points) and stood at 5.1% at December 31, 2024, the change in equity being offset by the increase in balance sheet and off-balance sheet exposures. This ratio is well above the regulatory threshold of 3.5%.

Liquidity

Groupe BPCE's total liquidity reserves amounted to €302 billion on December 31, 2024, including €127 billion in available assets eligible for central bank funding, €67 billion in LCR-eligible assets, and €109 billion in liquid assets placed with central banks.

Short-term funding was €138 billion on December 31, 2024 compared to €146 billion on December 31, 2023.

On December 31, 2024, Groupe BPCE's total liquidity reserves covered 177% of all short-term funding as well as short-term maturities of MLT debt (*versus* 161% at the end of 2023).

The Liquidity Coverage Ratio (LCR) was well above the regulatory requirements of 100%, standing at 142% on the basis of the average of end-of-month LCRs in the fourth quarter of 2024.

5.4.2 The Group's business lines

Groupe BPCE has two core business lines:

Retail Banking and Insurance, which is central to the transformation, includes:

- the Banque Populaire network, comprising the fourteen Banques Populaires and their subsidiaries, Crédit Maritime Mutuel, and the mutual guarantee companies;
- the Caisse d'Epargne network, consisting of the fifteen Caisses d'Epargne;
- the Financial Solutions & Expertise (FSE) division, encompassing the specialized financing activities: factoring, leasing, consumer loans, sureties & financial guarantees, and the "retail securities" business, in addition to Socfim, BPCE Solutions immobilières and Pramex;
- Insurance, serving the Groupe BPCE networks and their customers through two core business lines: Personal insurance (life insurance, personal and payment protection insurance) and Non-life insurance (mainly vehicles, multi-risk home insurance, personal accident insurance, legal protection and health);
- the Digital & Payments division, which brings together the Payments activities and the activities of Oney, in order to support the digitalization of retail and strengthen the quality of service from end to end of the payment chain;
- the Other Networks, including Banque Palatine, the bank for mid-sized companies and their managers, and private banking, support their customers through long-term relationships based on close relationships, a wealth of expertise and tailor-made solutions.

The Global Financial Services business line, comprising the two divisions of Natixis:

- Asset & Wealth Management:
  - Asset Management, present on the various international markets, brings together the expertise of management and distribution companies as well as employee savings ("Natixis Interépargne", the leading player in employee savings account management in France),
  - Wealth Management, with Natixis Wealth Management, which offers wealth management and financing solutions for large private investors;
- Corporate & Investment Banking:

  Corporate & Investment Banking advises and supports corporates, institutional investors, insurance companies, banks, public sector entities and film and audiovisual financing;
- the Corporate center, which primarily includes:
  - the Group's central institution and holding companies,
  - run-off activities of Crédit Foncier and BPCE International,
  - cross-business activities,
  - the contribution to the Single Resolution Fund and the contribution to the Deposit Guarantee Fund.

The Retail Banking and Insurance division's income before tax was up by +8.0% compared to 2023.

Operating expenses, including transformation costs, were up by +0.9% compared to 2023, while supporting the growth in activity of the business lines. The cost of risk increased compared to 2023, with an annual average of 27 basis points in 2024 compared to 21 points in 2023.

The Banque Populaire and Caisse d'Epargne networks accounted for 65% of the Retail Banking and Insurance division's income before tax in 2024.

Banques Populaires

In an uncertain and changing economic and geopolitical context marked by a fall in the level of inflation and a still high level of interest rates, the Banques Populaires recorded a contraction in new loans of -5% to €36.1 billion in 2024 (excluding short-term loans and SGLs) compared to 2023. Despite a decline in customer acquisition in the individual and professional markets (respectively -10.3% and -4.9%), the base of principal active customers increased +1.4% year-on-year, and that of active professional customers decreased by -0.7% compared to 2023. Lastly, the base of active corporate customers posted growth of +2.9% year-on-year despite a decrease in new relationships (-1.8%).

DECREASE IN ON-BALANCE SHEET DEPOSITS (EXCLUDING CENTRALIZED SAVINGS) OF -1.8%

In a context of declining inflation and high interest rates in 2024, the Banques Populaires posted a decrease in on-balance sheet deposits of -0.6% (*i.e.* -€1.8 billion) to €288.1 billion. Excluding centralized savings, the decrease represented -1.8% (*i.e.* -€4.9 billion), at €261.1 billion.

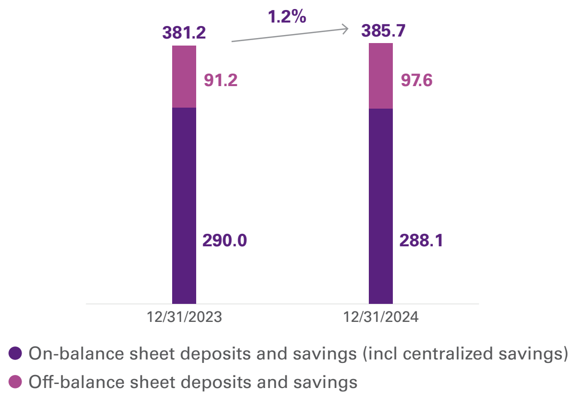
On-balance sheet savings deposits for individual customers increased by +1.1% (*i.e.* +€1.4 billion) to €129.8 billion, benefiting from the high level of interest rates in 2024. As a result, term deposits posted an increase in their outstandings of +17.6% (+€1.2 billion) to €8.3 billion at the end of December 2024. Passbook savings accounts outstandings were also up by +3.0% (*i.e.* +€2.0 billion) to €67.0 billion, driven by *Livret A* and *Livret de Développement Durable et Solidaire* (LDDS) passbook savings accounts, which benefited from a fixed rate of return of 3% throughout 2024. Their outstandings increased by +12.1% (or +€2.7 billion) to €25.5 billion, and by +7.6% (or +€0.9 billion) to €13.1 billion. Despite a decrease in its rate of return in 2024, the *Livret d'Epargne Populaire* saw an increase of +19.3% (*i.e.* +€0.9 billion) in outstandings to €5.3 billion. On the other hand, outstandings of the *Livret Jeune* and Ordinary passbook savings accounts contracted by -9.8% (or -€2.3 billion) to €21.2 billion. Similarly, outstandings on demand deposits fell by -€1.9% (or -€0.7 billion) to €35.4 billion and regulated home purchase schemes outstandings fell by -5.3% (or -€1.1 billion) to €19.1 billion.

Professional, corporate and institutional customers posted a decrease in on-balance sheet savings deposits of -2.0% (*i.e.* -€3.3 billion), to €158.3 billion. This decrease was mainly driven by demand deposits, which fell by -5.7% (*i.e.* -€5.1 billion) to €84.2 billion and term accounts by -2.4% (*i.e.* -€1.2 billion) to €49.9 billion. On the other hand, other deposits recorded an increase in outstandings of +€3.3 billion to €14.6 billion (+29.4%), notably at BRED.

Financial savings deposits stood at €97.6 billion at the end of 2024, up by +€6.4 billion (+7.1%), driven mainly by life insurance +€4.2 billion (+6.8%) and to a lesser extent by UCIs, which grew by +€1.7 billion (+8.1%) and employee savings schemes +€0.5 billion (+6.4%).

Lastly, deposits including financial savings rose by +3.0% in the individual customer market and decreased by -0.7% in the professional, corporate, and institutional customer markets.

Savings deposits *(in billions of euros)*



SLIGHT DECLINE IN LOAN OUTSTANDINGS OF -0.3% IN A CONTEXT OF HIGH INTEREST RATES

The Banques Populaires posted a moderate annual decrease in their customer loan outstandings of -0.3% (*i.e.* -€0.8 billion), to €300.5 billion at the end of December 2024.

In the individual customer market, loan outstandings decreased by -1.7% (*i.e.* -€2.7 billion), to €152.3 billion at the end of December 2024. This decline is mainly due to the -2.3% decrease in home loan outstandings (*i.e.* -€3.3 billion) to €136.8 billion, impacted by a sharp decline in new home loans in a context of high interest rates. In contrast, outstanding personal loans increased by +4.2% (*i.e.* +€0.6 billion) to €15.0 billion at the end of 2024.

In the professional, corporate and institutional markets, the growth in outstandings was +1.3% (or +€1.9 billion), at €148.3 billion at the end of December 2024, supported mainly by the growth in equipment and other loans of +5.0% (or +€4.4 billion) at €93.3 billion.

Loan outstandings *(in billions of euros)*

FINANCIAL PERFORMANCE

Since January 1, 2024, entry into force of the decision to standardize the treatment of BP Développement compared to the other Group structures in order to allocate the share of profit to the shareholders in proportion to their shareholding. For comparability, a pro forma was carried out on the 2023 financial statements.

The Banque Populaire network's net banking income totaled €6.1 billion in 2024, an increase of +4.0% (or +€236 million) compared to 2023 (+3.5% excluding the change in the provision for home-purchase savings schemes).

The net interest margin[1] increased by +6.2% (*i.e.* +€190 million), to €3.2 billion (+5.2% excluding the provision for home-purchase savings schemes). In 2024, it remained impacted by the increase in the cost of customer inflows, penalized by the context of high rates and the increase in arbitrage towards higher-return vehicles (term deposits in particular). Nevertheless, this increase in expenses was more than offset by the increase in interest income from the loan activity, and by the positive contribution of financial activitivites (hedging and mainly high quality liquid assets).

Fees and commissions increased by +2.7% (*i.e.* +€74 million) to €2.9 billion, driven in particular by means of payment (+7.6%), life insurance (+7.3%) and account management (+2.3%).

Incomes and expenses from other activities decreased by -€28 million, due to a base effect in 2023 (Echange Image Cheque fees fine).

Net income from insurance activities was driven by the contribution of BRED's Prépar Vie and Prépar IARD subsidiaries and decreased slightly by -€0.3 million, *i.e.* -0.4% compared to 2023.

Operating expenses increased by +1.9% (*i.e.* -€77 million), at -€4.0 billion, marked by the increase in payroll expenses (+2.8%) and a small change in other expenses (+0.2%).

Gross operating income came out at €2.1 billion, up by +8.4% (+€159 million), while the cost/income ratio improved compared to 2023 at 66.4% (-1.4 points).

The cost of risk posted a deterioration of +25.2% (*i.e.* -€164 million), at -€814 million, driven on the one hand by local sectoral provisions (stages 1 and 2) and on the other hand by a resurgence of defaulted entries (stage 3), particularly in the IT, real estate, healthcare, distribution and industry sectors. In the end, the cost of risk reached 13.35% of NBI (*vs.* 11.10% in 2023). In relation to customer loan outstandings, it amounted to 27 basis points at the end of December 2024, up by +5 basis points compared to its level at the end of December 2023.

The Banques Populaires contributed €1.3 billion to the Retail Banking and Insurance division's income before tax, down -1.7% (-€22 million) relative to 2023.

Caisses d'Epargne

In a tense and shifting economic and geopolitical context marked by a reduction in prices and a still high level of interest rates, the Caisses d'Epargne generated new loans down to €47.1 billion (excluding short-term loans and SGL) in 2024, *i.e.* -12.5% compared to 2023. Despite a decline in customer acquisition in the retail and professional markets (respectively -8.8% and -0.6%), the base of principal active customers increased +1.2% year-on-year, and that of active professional customers increased by +2.3% compared to 2023. Lastly, the base of active corporate customers posted a slowdown in its growth to +4.5% year-on-year (compared to a change of +7.5% in 2023) due to a decline in new relationships (-8.6%).

(1) Fees on centralized savings have been restated from net interest margin and included in fee and commission income.

SLUGGISH GROWTH IN OUTSTANDING BALANCE SHEET DEPOSITS EXCLUDING CENTRALIZED SAVINGS (+0.2%)

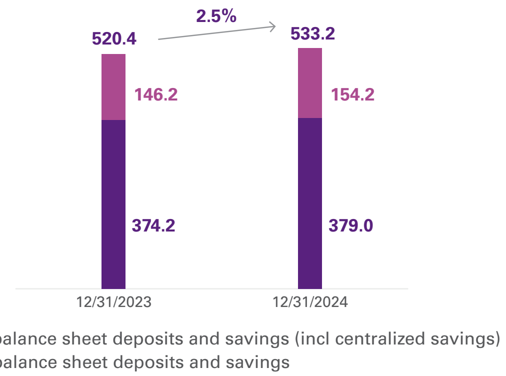
In this context of rise in interest rates, customer investments were mainly directed towards term deposits (+12.0%), passbook savings accounts (+3.2%) and financial savings products (+5.5%) to the detriment of demand deposits (-5.1%) and regulated home purchase schemes savings (-8.1%). As a result, balance sheet outstandings excluding centralized savings for the Caisses d'Epargne were stable at +0.2% (*i.e.* +€600 million), to reach €303.6 billion.

The freezing of the LA/LDDS passbook savings account rates, despite the decrease in the LEP rate, favored precautionary savings in 2024 and directed the investments of the individual customer market towards balance sheet savings, in particular, regulated savings accounts but also towards term deposits. Balance sheet savings increased by +2.6% to €265.2 billion (*i.e.* +€6.6 billion), under the combined effect of the growth in outstandings of passbook savings accounts to €147.1 billion (+3.6% or +€5.1 billion) and term deposits to €6.8 billion (+52.3% or +€2.3 billion). *Livret d'Epargne Populaire* passbook savings accounts increased significantly (+10.3%, or €1.5 billion), as did *Livret A* passbook savings accounts (+3.8% or +€3.3 billion), and *Livret de Développement Durable Solidaire* (LDDS) passbook savings accounts (+8.6% or +€1.6 billion). Conversely, the *Livret Jeune* and *Livret B* passbook savings accounts were down sharply (-5.7%, *i.e.* -€1.2 billion). Lastly, demand deposits and regulated home purchase schemes saw a significant outflow to stand at respectively at €50.8 billion (-1.9%, *i.e.* -€1 billion) and €49.4 billion (-8.1% or -€4.3 billion).

The balance sheet savings of professional, corporate and institutional customers fell sharply. Outstandings in these markets amounted to €113.8 billion at the end of 2024 (-1.6% or -€1.8 billion). This customer base saw a significant outflow for demand deposits (-7.8%, *i.e.* -€4.8 billion for a level of outstandings of €56.7 billion) followed by passbook savings accounts (-1.2%, *i.e.* -€157 million to €12.6 billion) in favor of term deposits (+7.2% or +€2.7 billion to €39.8 billion) in this context of high interest rates.

Financial savings deposits increased, to €154.2 billion in 2024 (+5.5%), mainly due to the change in life insurance outstandings (+5.3% or +€7.6 billion to €148.7 billion) and, to a lesser extent, outstanding UCIs by €5.5 billion (+9.3% or +€466 million).

Savings deposits *(in billions of euros)*



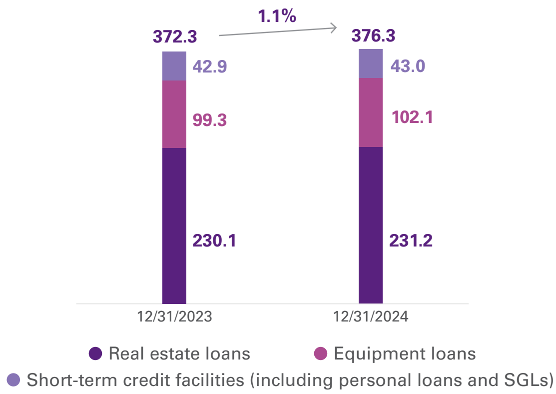
2024 MARKED BY A SLOWDOWN IN LOAN ACTIVITIES (+1.1%)

The high level of interest rates combined with an uncertain macroeconomic context led to a slowdown in the growth of loan outstandings for the Caisse d'Epargne network with an increase of +1.1% (*i.e.* +€3.9 billion), at €376.3 billion at the end of 2024. Thus, once again this year, the network confirmed its support for financing the economy and the regions.

In the individual customer market, loan outstandings grew by +0.8% compared to 2023, to €207.7 billion, in particular on home loans (+0.5% or +€930 million), with outstandings of €186.5 billion in 2024. Consumer loan outstandings posted growth of +3.4% (*i.e.* +€0.7 billion) to €20.9 billion at the end of 2024.

In the professional, corporate and institutional markets, outstandings were also up by +1.4% (*i.e.* +€2.3 billion), bringing them to €168.6 billion at the end of 2024. Their growth is mainly supported by a strong increase in equipment loans (+2.3% or +€2.1 billion) to €96.5 billion, and to a lesser extent real estate loans (+0.3% or +€139 million), to €44.7 billion.

LOAN OUTSTANDINGS *(in billions of euros)*



FINANCIAL PERFORMANCE

Since January 1, 2024, entry into force of the decision to standardize the treatment of CE Développement compared to the other Group structures in order to allocate the share of profit to the shareholders in proportion to their shareholding. For comparability, a pro forma was carried out on the 2023 financial statements.

The Caisse d'Epargne network's net banking income totaled €6.1 billion, an increase of +3.3% (or +€196 million) compared to 2023 (+2.4% excluding the change in the provision for home-purchase savings schemes).

The net interest margin[1] posted a slight decrease of -0.7% (*i.e.* -€18 million), to €2.7 billion (-2.9% excluding the provision for home-purchase saving schemes) with a recovery starting from the 3rd quarter 2024. The net interest margin on customer activity recovered, but remained penalized by the increase in the cost of customer inflows (-33 bps) due to the arbitrage from demand deposits and ordinary passbook savings accounts towards term deposits and regulated savings, despite the recovery in the return on loan stock (+30 bps), particularly for corporate customers. In addition, the net interest margin benefited positive contribution of financial activity on hedging, which continued to increase.

Fees and commissions increased by +7.0% (*i.e.* +€222 million), driven mainly by account management (+7.9%), means of payment (+11.4%), life insurance (+12.6%) and centralization fees and commissions (+7.4%).

Income and expenses from other activities decreased by +30.4% (*i.e.* -€7.8 million), impacted by lower capital gains on investment properties and reversals of provisions for operational risk.

Operating expenses increased by +0.8% (*i.e.* -€35 million), at -€4.2 billion, marked by the increase in payroll expenses (+1.3%) but a stability of the other expenses (-0.1%).

As a result, gross operating income stood at €1.8 billion for the 2024 fiscal year, up +9.6% (or +€161 million) compared to 2023. The cost/income ratio improved significantly to 69.6% (*i.e.* -1.7 points).

The cost of risk of the Caisses d'Epargne, at -€640 million, was up by +15.7% (*i.e.* -€87 million), due to the resurgence of defaults in the professional real estate, agri-food, IT and distribution sectors. In the end, it reached 10.6% of NBI (*vs.* 9.4% in 2023) and in relation to loan outstandings, it stood at 17 basis points at the end of 2024 (*i.e.* +2 basis points compared to 2023).

The Caisses d'Epargne contributed €1.2 billion to the Retail Banking and Insurance division's income before tax in 2024, up +6.7% (or +€75 million) compared to 2023.

Financial Solutions & Expertise (FSE)

In an economic environment marked by a still deteriorating real estate market and a growth in arrears, the Financial Solutions & Expertise division confirmed the resilience of its model in 2024 with strong commercial and financial performance in several of its business lines.

The leasing business was very dynamic, particularly in equipment leasing, where outstandings increased by +10% year-on-year, with a gradual increase in margins. International (Italy and Spain) and long-term leasing activities also experienced strong growth, along with renewable energies, with Energéco exceeding €1 billion in arranged production for the first time. Affected by a persistently gloomy commercial real estate environment, real estate leasing outstandings were down -2% year-on-year at the end of December 2024.

In a declining market, consumer loans maintained a good level of activity, particularly in revolving loans, which saw record production, up +9% year-on-year. In 2024, the Group consolidated its position as the leading banking player in France in consumer loans, with outstandings of over €37 billion, up by +5% year-on-year.

In the extension of 2023, financing demand remained strong in Factoring, resulting in almost stable average financed outstandings (-2%).

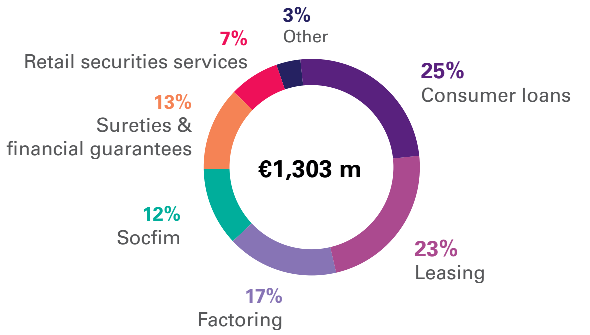
Despite the beginning of a recovery in activity in the second half of the year, 2024 was marked by a still difficult context in real estate, affecting several of the division's business lines, which nevertheless remain resilient. As a result, Socfim saw its short-term production drop by -10% *vs.* 2023, but maintained its medium-to-long-term production (+1%). Similarly, the sureties and guarantees business posted a contraction of -26% in written premiums over the year, but recorded a positive trend in the second half-year, with an increase of +18% in favorable commitments to individual customers. Lastly, BPCE Solutions Immobilières limited the decline in its overall revenues to -2% *vs.* 2023. Positive momentum in Residential (+6% revenues over the year *vs.* 2023) with a significant increase in the fourth quarter.

In line with the exit of HSBC's retail customers in early 2024, the Securities business line recorded a -5% decrease in the volume of transactions compared to 2023. Restated for this effect, transactions were up by +3%, driven by the volatility of the financial markets during the year.

In a market marked by the wait-and-see attitude of executives, Pramex's fees and commissions were down by -3% compared to 2023, as the growth in the creation and management of subsidiaries did not make it possible to offset the decline in the merger and acquisition activity.

(1) Fees and commissions on centralized savings have been restated for the NIM and included in fees and commissions.

BREAKDOWN OF 2024 NBI BY FSE BUSINESS LINE



The net banking income of the Financial Solutions & Expertise division, which amounted to €1.3 billion in 2024, was up +2.2% *vs.* 2023. Growth was driven by leasing (+8%) and consumer loans (+7%).

Operating expenses are strictly controlled (+1% *vs.* 2023), increasing mainly on payroll expenses in order to support the development of the activity. The cost/income ratio stood at 48.8%, an improvement of -0.6 pts.

These good results led to an increase in gross operating income of +3.4%.

The increase in the cost of risk, by +10.6% year-on-year, is due to a gradual return of arrears to historical levels and prudent management.

Net income attributable to equity holders of the parent amounted to €409 million at end 2024, up by +1.0% compared to 2023.

Insurance

The strong momentum of the commercial activity in 2024, allows BPCE Assurances to be one year ahead of the implementation of its strategic plan in terms of revenues, the objective of which is to become the 4th insurer in France by 2030. 2024 was marked by growth in premiums of €2.4 billion (+15%) to €18.8 billion, generated by the Banque Populaire and Caisse d'Epargne networks, across all insurance business lines.

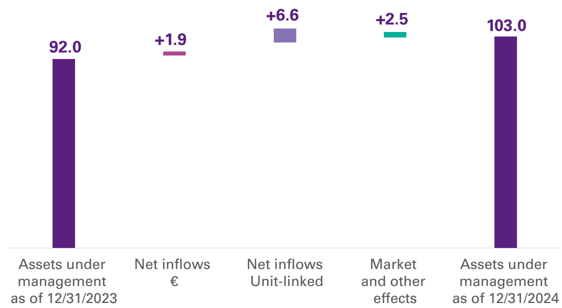
Life Insurance posted significant revenue growth of 17%, amounting to €15.2 billion in 2024 (+€2.2 billion). This performance was supported by three commercial unit-linked borrowings campaigns by the Group, confirming the moderate risk profile of the majority of customers. The "Boost Fonds €" operation in the 3rd quarter of 2024 was also a resounding success.

The Group has considerably strengthened its presence in individual retirement with nearly one out of six Individual Retirement Savings Plan opened in France in a Banque Populaire or a Caisse d'Epargne, as well as the launch of the marketing of the 100% online accessible Individual Retirement Savings Plan.

At the same time, the year was marked by several significant achievements for BPCE Assurances, particularly since June, with the euro-denominated fund, which has a carbon footprint in line with the commitments of the Paris Agreements, with a temperature increase limited to less than 2 degrees Celsius.

Outstanding direct business life insurance outstandings reached a record level of €103 billion, up 12% year-on-year, benefiting in particular from a significant net inflows in unit-linked products (+€6.6 billion) thanks to the success of the marketing campaigns, as well as in euros (+€1.9 billion), supported in particular by the "Boost Fonds €" operation. The share of unit-linked products in direct outstandings was 37.5%, up by 3.6 percentage points year-on-year.

CHANGE IN LIFE INSURANCE ASSETS UNDER MANAGEMENT *(in billions of euros)*



Almost stable revenues from individual protection and borrowers' insurance activities amounted to €1.4 billion in 2024. Premiums for individual protection increased by 7%, driven by the two networks (Banque Populaire +7%/Caisse d'Epargne +9%) with the continued good momentum of the Key Person offer for professionals and Family/Funeral products for individuals. Borrower insurance premiums were down slightly in line with the decline in new loans.

The Property & Casualty business grew steadily by 9% (+€178 million) to €2.2 billion in both networks, with significant increases of 11% in motor insurance and legal protection, as well as 8% in multi-risk residential property, despite a less favorable context in the real estate acquisition market. The professional insurance business recorded a good year, with premium growth of 23%.

Net banking income from insurance for the full year 2024 reached €694 million, up 10% (+14% including the APS pro forma[1]) compared to 2023 as a whole, due in particular to:

- strong growth in life insurance net banking income, with the commercial momentum enhanced by a favorable macroeconomic context (equity market increase of +8% and a decrease in long-term rates of 12 basis points);
- the increase in net banking income from borrower insurance (+17%), in particular due to an improvement in claims over previous years since the beginning of the year.

(1) Change in the accounting classification of the APS entity (platform supporting networks in the distribution of non-life insurance products), rebilling to institutions deducted from non-attributable overheads of Q2-24.

The decline in non-life insurance net banking income compared to last year is due to a strengthening of provisions in a context of additional costs on previous claims. Despite a lenient year in terms of major weather disasters, there was a significant increase in the frequency of water damage in Multi-Risk-Residential in connection with the record precipitation observed in 2024 and an inflation in repair costs (Auto/Multi-risk-Residential) which remained at a high level.

Non-attributable expenses (IFRS 17) amounted to €143 million, down 12% but slightly up by 4% at constant methods[1].

Gross operating income rose sharply to €550 million.

Digital and Payments

In a 2024 economic environment marked by the slowdown in household consumption and a context of interest rates more favorable to refinancing, the Digital and Payments division confirmed the resilience of its model by achieving good performance in a more competitive market, by leading many projects as part of its new "VISION 2030" strategic plan. 2024 was a year full of major events, including:

- the signing in June 2024 of the strategic partnership with BNP Paribas for the creation of an industrial electronic payment processor with the highest standards to become the first processor in France (third at the European level);
- the launch in October 2024 of Wero[1] on instant account-to-account transfers;
- the launch in June 2024 of the new Oney energy renovation offer in partnership with Crédit Foncier de France and Leroy Merlin in parallel to the redesign of its digital customer journeys;
- compliance with Oney's return to breakeven trajectory, which maintained its leading position in the BNPL[2] market in France, developed its B2C activities (+23.5% *vs.* 2023) and recorded solid activity in Europe outside France (+12% *vs.* 2023).

The division's net banking income, which amounted to €873 million, was up 7% compared to 2023. This increase was supported by growth in volumes and good margins in all activities, which are continuing their development strategy and synergies with the networks of BPCE, Natixis, Oney its partners.

At €646 million, operating expenses were down by -1% compared to 2023, thanks to the implementation of efficiency plans while making the necessary investments to execute the Groupe BPCE strategic plan.

These good results led to a significant increase in gross operating income of +39%.

At €126 million, the cost of risk improved significantly (-26% *vs.* 2023) due to the tighter credit conditions and improved collection in France.

In total, pre-tax income amounted to €97 million, up by €165 million compared to 2023, which included a provision for the risk of meal voucher litigation and exceptional transformation expenses at Oney.

Other networks

BANQUE PALATINE

Banque Palatine contributed €103 million to the Retail Banking and Insurance division's pre-tax income, down -26% (-€37 million) compared to 2023, impacted in particular by a context of corporate failures (SMEs/mid-sized companies) observed at the national level in 2024 which weighed on the cost of proven risk for the Bank. Net banking income was down by -2.3% (-€9 million), partially offset by the reduction in operating expenses of -2.3% (+€5 million).

5.4.5 Asset & Wealth Management

Gains or losses on other assets	0	35	(35)	ns
INCOME BEFORE TAX	**759**	**627**	**131**	**20.9%**

Asset & Wealth Management revenues at €3.5 billion were up +9.9% year-on-year at constant exchange rates compared to 2023 (+9.9% at current exchange rates).

Expenses increased by +6.1% at constant exchange rates (+6.1% at current exchange rates) and amounted to €2.8 billion.

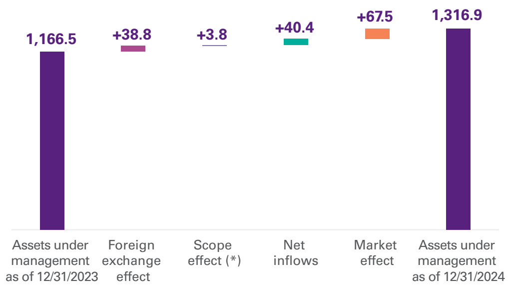
Gross operating income increased by +26.7% at constant exchange rates (+26.7% at current exchange rates) to €744 million.

(1) Wero is a European mobile payment system intended to replace Giropay in Germany, Paylib in France, Payconiq in Belgium and Luxembourg and iDEAL in the Netherlands. The service was launched on July 2, 2024 by the European Payments Initiative.
(2) BNPL: Buy Now Pay Later

Asset Management

Assets under management at end-December 2024 amounted to €1,316.9 billion, up +€150.5 billion or +12.9% at current exchange rates (+9.3% at constant exchange rates) compared to December 31, 2023, mainly due to very sustained inflows (+€40.4 billion), and a favorable market effect (+€67.5 billion) and currency effect (+€38.8 billion).

Year-on-year change in assets under management *(in billions of euros)*



The business line recorded net inflows of +€40.4 billion over 2024, mainly due to bond products:

Active Fundamental had net inflows of +€25 billion. This is mainly due to strong inflows on bond products at Loomis Sayles and DNCA, partially offset by net outflows on equity products mainly at Harris and Loomis.

Solutions reported net inflows of +€11 billion, mainly in diversified products and equities at Solutions US.

Ostrum Asset Management posted net inflows of +€6 billion mainly in life insurance products (+€9 billion) offset by outflows in money market products (-€2 billion).

Private Assets recorded inflows of +€0.5 billion mainly on alternative products at Naxicap Partners, offset by outflows on real estate products.

Quant saw an outflow of -€2 billion, mainly on equity products at OSSIAM (-€2 billion).

Average outstandings at €1,138 billion at December 31, 2024 were up (+10%) compared to 2023 in constant euros. Excluding Ostrum Asset Management, average outstandings amounted to €733 billion, up +14% compared to December 31, 2023 excluding the Alpha Simplex scope effect. The rate of return on outstandings including Ostrum Asset Management reached 25.2 basis points, stable compared to 2023. Excluding Ostrum Asset Management, the rate of return on outstandings reached 36.8 basis points, down -1 basis point compared to 2023.

At December 31, 2024, Asset Management net banking income amounted to €3,322 million, up by +€313 million (+10.4%) compared to December 31, 2023 at constant exchange rates, including a limited scope effect of -€11 million.

Over the period, the business line's NBI was driven by strong growth in fees and commissions on outstandings (mainly at Loomis, Distribution and DNCA) and financial products with cash income benefitting from the rise in interest rates (Global holding, NIE and International Distribution), favorable currency effects and the upward valuation of the Seed money portfolio. However, performance fees and commissions were down -10.3%, mainly at Mirova.

Operating expenses amounted to €2,604 million, up by +€166 million (+6.8%) compared to 2023 at constant exchange rates, with a scope effect of -€28 million.

This increase in expenses is driven by variable payroll costs (in line with the increase in revenues) and fixed payroll costs, which increased due to the growth in headcount and salaries.

Excluding payroll costs, expenses were up mainly on restructuring costs and operating expenses with the deployment of corporate projects.

Wealth management

In 2024, Wealth Management net banking income, at €185 million, was up +1.5% (+€2.7 million) compared to 2023 with an increase in management fees and commissions (+€17 million) and outperformance fees and commissions (+€2 million), partially offset by a decrease in transaction fees and commissions (-€11 million in connection with the new regulations effective as of 2024) and net interest income (-€5 million).

Operating expenses amounted to €158 million, down -4.4% (-€7.3 million) compared to 2023, mainly due to the Luxembourg run-off. Excluding this effect, wealth management expenses saw a limited increase of +€3 million compared to 2023, mainly due to restructuring costs.

5.4.6 Corporate & Investment Banking (CIB)

			Chg. 2024/2023	
	2024	2023 pf	€m	%
Net banking income	4,440	4,166	274	6.6%
Operating expense	(2,889)	(2,666)	(223)	8.4%
Gross operating income	1,551	1,500	51	3.4%
Cost/income ratio	65.1%	64.0%	-	1.1pts
Cost of risk	(282)	(158)	(123)	78.0%
Share in net income of equity-accounted associates	23	13	10	73.8%
Gains or losses on other assets	(0)	(17)	17	ns
INCOME BEFORE TAX	1,293	1,338	(45)	(3.4%)

In 2024, Corporate & Investment Banking's net banking income totaled €4,440 million, up +6.8% compared to 2023 at constant exchange rates.

Global Markets revenues totaled €2,056 million in 2024, an increase of +7.2% compared with 2023 at constant exchange rates.

At €1,437 million in 2024, revenues from Interest rate, Foreign exchange, Loan, Commodities and Short-term credit facilities activities increased by +7.9% compared to 2023 at constant exchange rates. By segment, we note the following changes:

Interest rate and Foreign exchange activities were up +9% at constant exchange rates, benefiting from strong commercial activity.

Revenues from Credit Markets activities were up sharply by +19% at constant exchange rates compared to 2023, driven by all of its sub-activities.

Lastly, driven by commercial activity, revenues from Global Securities Financing (notably Repo), split 50/50 between Fixed Income and Equity, were up +41% at constant exchange rates.

With revenues of €603 million in 2024, the Equity activities were up by nearly +10% at constant exchange rates compared to 2023. Growth was mainly driven by revenues from activities in partnership with Investment Banking relating to Strategic Equity Capital Markets and Global Securities Financing.

Revenues from JV activities (whose results are equally shared between Global Markets and Investment Banking to ensure team alignment) posted an increase in 2024.

Acquisition & Strategic Finance posted revenue growth of +62% at constant exchange rates, driven by momentum in primary activities, particularly in the Aquisition Finance business line.

The Strategic Equity Capital Markets activity generated revenues up +22% at constant exchange rates, driven by the Strategic Equity Transaction activity.

The Debt Capital Markets activity recorded revenues down slightly by -3.6% at constant exchange rates compared to 2023 despite an increase in primary origination.

Revenues from Investment Banking, including M&A activities, were up +17% compared to 2023 at constant exchange rates to €627 million. In a slightly recovering global M&A market, M&A activity grew by +11% at constant exchange rates with revenues of €361 million.

Revenues from the Financing activities were up by +12% compared to 2023 at constant exchange rates with cumulative revenue of €1,770 million. Revenues from Real Asset origination and syndication activities were up by +17% compared to 2023, driven by the recovery in the real estate sector and the dynamism of infrastructure and energy financing and Aviation activities. In 2024, revenues from the financing portfolio were up +14% at constant exchange rates, driven by higher interest margins and fees and commissions in line with the growth in outstandings as well as a lower cost of balance sheet rotation solutions. Revenues from Global Trade were up +5% at constant exchange rates, driven by the customer accounts management activity and a good performance in Trade Finance.

Other revenues were down at -€13 million due in particular to non-recurring impacts (foreign exchange gains on capital repatriation, operational risks).

In 2024, Corporate & Investment Banking operating expenses amounted to €2,889 million, up +8.5% at constant exchange rates compared to 2023. Excluding M&A, CIB expenses were up +5.4% at constant exchange rates, reflecting cost inflation and investments made, in particular with the increase in compensation and headcount, IT costs in order to support the business lines in their ambitions and prepare for 2025 and operating expenses driven by business growth.

Gross operating income totaled €1,551 million, up +3.7% compared with 2023 at constant exchange rates. The cost/income ratio stood at 65.1% in 2024, a +1.1 point deterioration compared to 2023.

At -€282 million, the cost of risk was up by +78.0% compared to 2023, mainly impacted by individual provisions. The cost of risk in 2023 benefited from the reversals of the provisioning of the cost of risk in 2022 related to the Ukraine crisis

Income before tax was €1,293 million, down -3.4% compared to 2023, impacted by the increase in the cost of risk.

5.4.7 Corporate center

	Corporate center		Variation	
			Chg. 2024/2023 pf	
in millions of euros	2024	2023 pf	€m	%
Net banking income	(27)	12	(39)	ns
Operating expense	(831)	(1,244)	413	(33.2%)
Gross operating income	(858)	(1,232)	374	(30.4%)

Gains or losses on other assets	(11)	(1)	(10)	ns
INCOME BEFORE TAX	**(902)**	**(1,310)**	**407**	**(31.1%)**

The Corporate center generated income before tax of -€902 million in 2024 *versus* -€1,310 million in 2023. In 2024, the Corporate center included the following activities and items:

- the contribution of the Crédit Foncier group excluding SRF, which was down by -€53 million. The amortization of the portfolio related to the discontinuation of activities is continuing. Expenses fell and the cost of risk remained under control;
- BPCE International's contribution excluding the SRF was up +€15 million year-on-year. The increase in revenues was driven by favorable interest rate and exchange rate effects on its activities;
- investment activities (for the portion not reallocated to the pools) posted a decrease in pre-tax income: at -€10 million in 2024 compared to +€17 million in 2023;
- the contribution to the Single Resolution Fund stopped in 2024, resulting in a base effect of +€457 million compared to the allocation for 2023.

Lastly, this division includes the contribution of BPCE's central institution, the non-core Natixis division, companies providing resources or central functions and real estate operating companies.

On December 31, 2024, the consolidated balance sheet of Groupe BPCE totaled €1,584.6 billion, up 2.6% compared with December 31, 2023.

Changes in significant consolidated balance sheet items

The main asset items are loans and advances to customers (53.8% of total assets on December 31, 2024) and banks (7.3%), financial assets at fair value through profit or loss (14.5%), cash and net balance of accounts with central banks (8.4%), and insurance business investments (7.3%). Taken together, Insurance activites financial investments account for nearly 91.3% of the Group's assets.

CASH AND AMOUNTS DUE FROM CENTRAL BANKS

Cash and amounts due from central banks amounted to €133.2 billion at December 31, 2024, down 12.8% compared to December 31, 2023 (€152.7 billion).

FINANCIAL ASSETS AT FAIR VALUE THROUGH PROFIT OR LOSS

These financial assets include negotiated transactions for trading. Total financial instruments measured at fair value through profit or loss increased by €15.9 billion compared to December 31, 2023. This change reflects a disparity between:

- the increase in trading derivatives (+€10.7 billion), equity instruments (+€2.8 billion), and securities received under repurchase agreements from banks (+€3.7 billion);
- to the detriment of securities received under repurchase agreements from customers (-€2.4 billion)

(1) Restated figures for 2023 (see 6.1.4 "Statement of changes in equity")

LOANS AND ADVANCES TO BANKS

Loans and advances to banks due from banks (net of provisions) amounted to €115.9 billion at December 31, 2024, up by +€7.2 billion *versus* December 31, 2023. They are divided between the Caisse de dépôts et consignations (CDC) centralization accounts (+€7.3 billion) due to high inflows on passbook savings accounts inherent to the rise in interest rates and term loans (+€0.6 billion) and demand loans (-€0.3 billion) including current accounts with overdrafts. Non-performing loan outstandings and recognized impairments were relatively stable over the period.

LOANS AND ADVANCES TO CUSTOMERS

Net outstanding loans and advances to customers amounted to €851.9 billion in 2024, up €12.4 billion over the fiscal year (+1.5%), driven by GFS at +€10.3 billion, mainly on loans to financial customers (+€4.8 billion), cash loans (+€3.4 billion), equipment loans (+€1.1 billion) as well as by the other entities of Groupe BPCE (including retail banking) for +€2.1 billion.

INSURANCE ACTIVITES FINANCIAL INSTRUMENTS

This financial assets consist of financial investments at fair value through profit or loss and at fair value through other comprehensive income, investment property, and loans and advances at amortized cost. This portfolio totaled €115.6 billion on December 31, 2024 *versus* €103.6 billion in fiscal year 2023. The change in financial assets from insurance activities is mainly due to the financial investments in unit-linked products for €6.9 billion, including net inflows for +€6.6 billion. This increase is also due to the rise in investments measured at fair value through other comprehensive income for +€1.8 billion.

Changes in significant consolidated balanced sheet liability items

FINANCIAL LIABILITIES AT FAIR VALUE THROUGH PROFIT OR LOSS

On the liabilities side, this portfolio consists of debt instruments carried at fair value at the reporting date, with an offsetting entry on the income statement. As of December 31, 2024, it represented €219.0 billion, up compared to December 31, 2023 (€204.1 billion). This change is due to an increase in designated at fair value through profit or loss (+€9.8 billion) and trading derivatives (+€8.5 billion) offset by a reduction in financial liabilities under repurchase agreements (-€5 billion).

AMOUNTS DUE TO BANKS

Amounts due to banks consist mainly of term borrowings and to a lesser extent current accounts. They amounted to €70.0 billion, a decrease of €9.7 billion over the fiscal year (-12.2%). This change includes the decrease in term loans and deposits with banks (-€12.9 billion) mainly related to the repayment of the TLTRO, partially offset by securities given under repurchase agreements to credit institutions (+€2.9 billion).

AMOUNTS DUE TO CUSTOMERS

Amounts due to customers mainly comprise regulated savings accounts, current accounts in credit, and customer accounts. They totaled €723.1 billion on December 31, 2024, an increase of +€11.4 billion compared to December 31, 2023. This increase can mainly be broken down as follows:

- an increase in investments in special account products (+€1.4 billion), driven by +€5.9 billion in *Livret A* passbook savings accounts and +€5.1 billion in *Livret de Développement Durable* (LDD) and *épargne populaire* passbook savings accounts, offsetting a -€3.8 billion decline in inflows into *Livret B* passbook savings accounts and -€5.4 billion in inflows into regulated home savings plans and accounts;
- an increase in other customer accounts (+€11.4 billion). They are divided between demand loans and term loans, including loans from financial customers and term accounts in credit, which increased by +€8.2 billion compared to December 31, 2023;
- a reduction in customer demand accounts in credit of -€3.4 billion.

DEBT SECURITIES

This category mainly includes bonds, certificates of deposit, treasury notes and commercial paper, senior non-preferred debt as well as negotiable debt securities (TCN) and interbank market securities (TMI). These debts amounted to €305.0 billion on December 31, 2024, up by €12.4 billion compared to fiscal year 2023. This change includes an increase in the portion of bonds (+€11.0 billion), the increase in treasury notes and commercial paper (+€2.8 billion), the increase in Non-Preferred Senior debt (+€4.2 billion), the increase in TMI and TCN (+€1.7 billion) and a decrease in certificates of deposit (-€6.8 billion).

INSURANCE AND REINSURANCE CONTRACTS LIABILITIES

This category includes technical liabilities relating to insurance contracts issued. These debts amounted to €117.6 billion on December 31, 2024, an increase of +€11.4 billion. This change is due to +€11.2 billion from direct participating contracts, primarily in life insurance, accounted for under the VFA model. Insurance liabilities, as well as insurance financial investments, include IFRS 17 technical provisions, whose value is correlated with that of financial assets, driven by strong inflows on participating policies as well as by the revaluation of unit-linked products.

SHAREHOLDERS' EQUITY

Shareholders' equity totaled €87.8 billion on December 31, 2024 compared to €84.9 billion on December 31, 2023. This increase of +€2.9 billion includes in particular:

- net income for the period: +€3.6 billion;
- a capital increase: +€0.1 billion;
- the distribution of dividends for -€0.9 billion (of which -€0.4 billion from the Banques Populaires network and -€0.5 billion from the Caisse d'Epargne network);
- changes in gains and losses recognized directly in other comprehensive income: +€0.1 billion.

5.5 BPCE (formerly BPCE SA group) financial data

5.5.1 BPCE results

BPCE's income is calculated after restating the contribution of non-consolidated entities.

In 2024, the transition from Groupe BPCE's net income attributable to equity holders of the parent to BPCE can be broken down as follows:

in millions of euros	2024
Net income attributable to equity holders of Groupe BPCE	3,520
Non-consolidated entities or consolidated under a different method[(1)]	(1,823)
Other items	15
Net income, BPCE share	1,712

(1) Including notably the Banques Populaires, Caisses d'Epargne and their consolidated subsidiaries.

BPCE posted net income up by +39.3% to €1,712 million in 2024.

LIABILITIES	940.8	903.4	37.4	4.1%

On December 31, 2024, the consolidated balance sheet of BPCE totaled €940.8 billion, up 4.1% compared with December 31, 2023.

The change in the balance sheet reflects the increase in financial assets at fair value through profit or loss (+€13.4 billion) and financial investments of insurance activities (+€12.8 billion).

Shareholders' equity totaled €29.7 billion at December 31, 2024 compared to €28.1 billion at December 31, 2023. This +€1.7 billion change was primarily due to:

- net income for the period: +€1.8 billion;
- a capital increase: +€0.8 billion;
- dividends paid: -€0.9 billion;
- interest paid on perpetual deeply subordinated notes and preference shares: -€0.3 billion;
- changes in gains and losses recognized directly in other comprehensive income: +€0.3 billion.

(1) Restated figures for 2023 (see 6.1.4 "Statement of changes in equity")

5.6 Investments

5.6.1 In 2024

On April 11, 2024, Groupe BPCE announced the signing of a memorandum of understanding with Société Générale to acquire the activities of Société Générale Equipment Finance (excluding the activities of SGEF in the Czech Republic and Slovakia).

The transaction is expected to be completed for first-quarter 2025. It is subject to obtaining the approval of the relevant regulatory and competition authorities.

5.6.2 In 2023

Groupe BPCE made no material investments (*i.e.* investments of more than €1 billion requiring the approval of the qualified majority of the Supervisory Board) during the fiscal year.

5.6.3 In 2022

Groupe BPCE made no material investments (*i.e.* investments of more than €1 billion requiring the approval of the qualified majority of the Supervisory Board) during the fiscal year.

5.7 Post-balance sheet events

Announcement of a project to merge Groupe BPCE's Asset Management activities with those of GENERALI

Assicurazioni Generali SpA ("Generali") and BPCE signed a non-binding Memorandum of Understanding (MoU) on January 21, 2025 aimed at bringing together, in a joint venture, the asset management activities of Generali Investments Holding ("GIH") and Natixis Investment Managers (NIM). BPCE (*via* Natixis IM) and GIH would each hold 50% of the combined activities with balanced governance and control. In the future, the interest held in the joint venture would be accounted for using the equity method, due to joint control. The activities that would be contributed by NIM are now included in the "Asset Management/ AWM" business segment presented in note 12.1. With €1,900 billion in assets under management (as of September 30, 2024), the proposed merger would create a global asset management platform with leading positions and critical size in both Europe and North America. The combined entity would be ranked first by revenues and second by assets under management in Europe; 9th by assets under management and 1st in insurance management worldwide.

The new joint venture would offer a full range of solutions in both traditional and alternative asset classes, which would meet the increasingly sophisticated needs of clients. The combined platform would also be uniquely positioned to continue to develop its activities on behalf of third parties in Europe, North America and regions with high growth potential in Asia, leveraging a global distribution network integrating an efficient centralized distribution platform as well as local multi-channel partnerships. The employee representative bodies of the various parties concerned will be consulted before the final agreements relating to the transaction are signed. The effective completion of the transaction will depend on obtaining the usual regulatory authorizations, with a completion date expected in early 2026.

5.8 2025 economic outlook

2025 forecasts: a European and French uncoupling?

The year 2025 has once again begun with a period of very marked geopolitical, political and economic uncertainty, particularly in France, where the political and budgetary situation remains very uncertain. Internationally, the impact of the election of the new US President remains a source of unknowns, particularly regarding the rapid implementation of customs measures liable to slow down global trade. Added to this is the reaction of monetary policy to the potential resurgence of the seeds of inflation. We could also see a deepening of the economic slowdown in Europe, in particular in Germany and France, due to a loss of competitiveness and attractiveness of the Eurozone, in the race to industrial leadership between the two main competitors, China and the United States. In addition, other perennial sources of instability, such as the war in Ukraine, the situation in the Middle East or the Red Sea, could cause tensions on oil and gas prices and shipping costs, resulting in upwards risk on inflation and downwards risk on activity. In France, in addition to a significant risk of an additional increase in the interest rate risk premium compared to Germany, an additional wait-and-see policy may emerge, due to unintended budgetary consequences. Any forecast thus runs the major risk of being caught off guard by unexpected political developments.

In 2025, in the absence of a specific shock, global growth should increase by +3.3% according to the OECD, slightly more than in 2024, mainly driven by emerging countries, due to the decline in inflation on a global scale, monetary easing on both sides of the Atlantic, the American economic dynamism and a certain rebalancing between internal and external demand in China. In the absence of a recovery in energy prices, faster-than-expected disinflation would gradually strengthen the economy, further favoring the purchasing power of private agents in advanced countries. This would make it possible, in an induced manner, to continue the process of easing monetary conditions, more in the Eurozone than in the United States, due to the *a priori* inflationary consequences of the Trump program.

The convergence of economic situations should continue, with China (GDP at 4.5% in 2025, after 5% in 2024) and the United States (respectively more than 2.5%, after 2.8%) seeing a slowdown in activity, while benefiting from significant support, thanks to a higher growth potential and a much more favorable budgetary stimulus. In particular, across the Atlantic, the Trump program, which is based on four main areas, namely deregulation, protectionism, reduction in taxation and public spending and finally the control of migration flows, would be moderately inflationary in the short term but favorable to growth, while widening public and trade deficits. As for the Eurozone, it should regain a slightly less sluggish momentum (respectively 1%, after 0.8%), while continuing to lag behind the other two major economies.

In 2025, French GDP should grow by only +0.8%, compared to +1.1% in 2024. Inflation is expected to reach an annual average of less than 1.4%, compared to 2% in 2024. In particular, disinflation should benefit from a specific decline in gas prices of -15% on February 1 and a decline in prices of food, energy and manufactured goods, while inflation in services should decline more slowly. Activity would probably be driven by the economic momentum still provided by disinflation, the fall in energy costs and the slightly more favorable trend in interest rates, or even by the expected mitigation of the desire to save, in a slightly more buoyant European economic context, although being hampered by Germany. However, this lower cyclical performance, compared to that of 2024, could be explained by the negative impact of the prolonged political uncertainty, despite the favorable effect of a lower reduction in budget expenditure than initially anticipated. The absence of a voted budget and a clear strategy to reduce the drift in public spending would fuel the wait-and-see attitude, followed by the mistrust of private agents. This would lead them to adopt much more cautious spending behaviors. The rather modest improvement in household spending, the main driver of activity, would then be insufficient to counteract the increased prudence of companies in terms of employment, management of inventories and investment, due to the environment of still high interest rates, the deterioration of the cash position of VSEs/SMEs and the rise in defaults.

Savings incentives should remain strong, slowing the expected decrease in the household savings rate, in particular through the formation of precautionary savings. The rise of specific concerns such as fears of losing your job, the effects of the political uncertainty arising from the dissolution of the National Assembly or the concern for budgetary imbalances, has partly replaced the feeling of deterioration in purchasing power and the effect of real cash holdings (the traditional increase in savings during periods of inflation to compensate for the loss of purchasing power of financial assets). In addition, employment is expected to decline, as the partial and gradual recovery of previous losses in productivity and lower activity in the merchant sectors should push the unemployment rate towards an annual average of 7.8%. The savings rate would therefore tend to decline moderately to around 17.6%, after 17.9% in 2024, not returning to the average levels before Covid (14.6% in 2019). Lastly, French growth is likely to remain structurally hampered by the need to better control the drift in public accounts, which are increasingly constrained by the increase in the debt expense and by the implementation of a European excessive deficit procedure. The public deficit would still be very high in 2025: around 5.4% of GDP, compared to 6.1% in 2024.

The FED would only reduce its main key rate by -50 bps by June, or even only -25 bps. If the previously anticipated -75 bps decline were to be true, due to the sharper decline in labor market tensions and the decline in inflation to below 2.5%, the key rate range could then be reach 3.25%-3.5% by the end of 2025. As for the ECB, it would gradually reduce the deposit rate by -100 bps, perhaps by the summer of 2025, given the sluggishness and fragility of the economic cycle, not to mention the sharp easing of the inflation, although this remains heterogeneous across European countries. It should take it from 3% at the end of 2024 to 2% at the end of 2025, in steps of -25 bps, with this cautious pace taking into account the difficulty of settling wages, which is a real cause for concern, as it fuels inflation in services.

In addition, the trend for central bank balance sheets to deflate, the very high and widespread level of public and private debt and the scale of the issues required between 2024 and 2027 to renew debt stocks would prevent long-term yields from falling, despite the easing of key rates and the decline in inflation expectations. Moreover, the risk premiums on the sustainability of public debts in the United States and certain European countries, such as Italy and now France, are likely to increase. In the absence of a lasting and profound questioning of a credible fiscal consolidation path, the 10-year OAT, whose current level reflects more a normalization of the interest rate regime than a rebound in economic activity, would be around an annual average of 3.1% in 2025 after 3.0% in 2024 and 2023, leading to a new steepening of the interest rate curve.

Outlook for the Group and its business lines

In 2025, Groupe BPCE will fully implement its new strategic project, VISION 2030, presented at the Investor Day on June 26, 2024.

This project opens a new chapter in Groupe BPCE's history by promoting growth and the diversification of its activities, revenues and risks in three geographical areas: France, Europe and the World. Faced with the acceleration of the environmental, technological, demographic and geopolitical transitions that are transforming society and can sometimes create uncertainty, Groupe BPCE intends to mobilize its local and regional presence, its business lines and expertise to enable its clients, cooperative shareholders and employees to trust in the future.

VISION 2030 thus outlines the Group’s main strategic priorities and its business lines based on three pillars:

- Forging our growth for the long term;
- Giving our clients trust in their future;
- Expressing our cooperative values in all territories.

VISION 2030 includes commercial, financial and non-financial targets for 2026. The Group reaffirms its financial robustness requirements among the highest in Europe, with a CET1 ratio of over 15.5%, and is targeting net income attributable to equity holders of the parent of around €5 billion in 2026.

The environment remains uncertain, particularly from an economic and geopolitical standpoint. The years 2022 and 2023 were marked by war in Ukraine, an energy crisis and a return of inflation to levels not seen for several decades. In 2024, although a decline in inflation was observed, uncertainties about the political orientations in France and around the world were added to the various uncertainties. The outlook for 2025 points to moderate economic growth in France, supported by low inflation and less unfavorable developments in the real estate market, but weighed on by high public debt and a possible increase in unemployment.

The pressure on retail banking revenues should gradually ease in 2025, with a slight decrease in interest rates and stabilized refinancing costs, and a still high savings rate.

In this context, Groupe BPCE is confident in the implementation of its strategic project VISION 2030, in particular for the development of its activities with individual customers, professionals and companies, as well as the ambitious transformation of its business lines in the fields insurance, payments, financial services and global business lines.

5.9 Alternative performance indicators Article 223-1 of the AMF General Regulation

Notes on methodology

Alternative Performance Indicators	Definition	Rationale for use
Underlying net banking income	Net banking income restated for exceptional items. Details of exceptional items are provided in the table below.	Measurement of Groupe BPCE's net banking income excluding items that do not reflect operating performance or significant non-recurring items.
Underlying operating expenses	Operating expenses restated for exceptional items. Details of exceptional items are provided in the table below.	Measurement of the level of operating expenses.
Underlying cost/income ratio	Ratio calculated based on net banking income and operating expenses excluding exceptional items	Measurement of the Group's operating efficiency
Underlying cost/ income excluding SRF ratio	Ratio calculated based on net banking income and operating expenses excluding exceptional items and restated for the contribution to the SRF (Single Resolution Fund)	Measurement of the Group's operating efficiency.
Cost of risk	"Cost of credit risk" item in the reportable consolidated income statement	Measurement of the level of risk.
Exceptional items	Non-recurring items of a significant amount or items that do not reflect operating performance, in particular transformation and restructuring costs. Details of exceptional items are provided in the table below.	
Underlying net income attributable to equity holders of the parent	Net income attributable to equity holders of the parent restated for exceptional items.	Measurement of Groupe BPCE's income excluding non-recurring items of a significant amount or items that do not reflect operating performance.

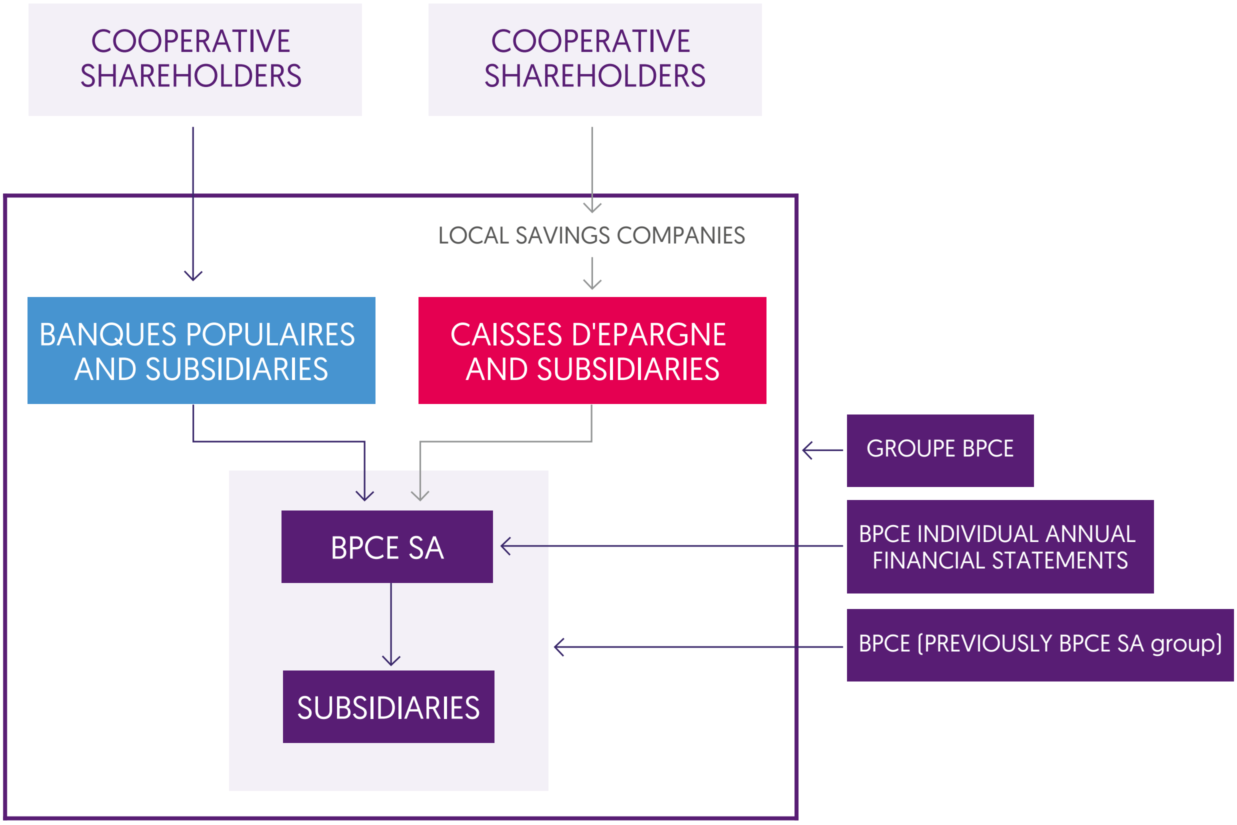
6 FINANCIAL REPORT

Groupe BPCE and BPCE scopes of consolidation

The scope of consolidation of both groups, organized around the central institution, is presented in the diagram below.

In addition to BPCE, Groupe BPCE includes the Banques Populaires, the Caisses d'Epargne and their respective subsidiaries.

BPCE includes BPCE and its subsidiaries. The main difference in terms of consolidation perimeter stems from the contributions of the parent companies, which do not contribute to BPCE's net income.



6.1 IFRS consolidated financial statements of Groupe BPCE as at December 31, 2024

6.1.1 Consolidated income statement

in millions of euros	*Notes*	2024 fiscal year	2023 fiscal year
Interest and similar income	*4.1*	56,997	50,593

(1) Including changes (excluding cash flows) in insurance and reinsurance assets and liabilities.
(2) Income/expenses from financing activities include interest paid on subordinated debt for €767 million (€800 million in 2023). From the 2024 fiscal year, the interest paid on the subordinated debt has been isolated on the "Income/expenses from financing activities" line.
(3) The net increase (decrease) arising from transactions with shareholders include:
- net changes in capital and associated reserves of the Banques Populaires and Caisses d'Epargne amounting to +€90 million (+€507 million in 2023);
- dividend payouts of -€916 million (-€810 million in 2023);

(4) Other increases (decreases) generated by financing activities mainly include the redemptions of subordinated notes for -€2,534 million (-€2,428 million in 2023) , the subscription of new debt for +€1,601 million (+€1,986 million in 2023) and the payment of interest on the subordinated debt for -€767 million.
(5) The current accounts with overdrafts do not include *Livret A*, LDD and LEP savings accounts centralized with Caisse des Dépôts et Consignations.

6.1.6 Notes to the financial statements of Groupe BPCE

Note 1 / General framework

1.1 Groupe BPCE

Groupe BPCE comprises the Banque Populaire network, the Caisse d'Epargne network, the BPCE central institution and their subsidiaries.

TWO BANKING NETWORKS: THE BANQUES POPULAIRES AND THE CAISSES D'EPARGNE

Groupe BPCE is a cooperative group whose shareholders own the two retail banking networks: the 14 Banques Populaires and the 15 Caisses d'Epargne. Each of the two networks owns an equal share in BPCE, the Group's central institution.

The Banque Populaire network consists of the Banques Populaires and the mutual guarantee companies which grant them the exclusive benefit of their guarantees.

The Caisse d'Epargne network consists of the Caisses d'Epargne and the local savings companies (LSCs).

The Banques Populaires are wholly-owned by their cooperative shareholders.

The capital of the Caisses d'Epargne is wholly-owned by the LSCs. Local savings companies are cooperative structures with open-ended share capital owned by cooperative shareholders. The LSCs are tasked with coordinating the cooperative shareholder base, in line with the general objectives defined by the individual Caisse d'Epargne with which they are affiliated, and cannot perform banking transactions.

BPCE

BPCE, a central institution as defined by the French Banking Law and a credit institution licensed to operate as a bank, was created pursuant to act No. 2009-715 of June 18, 2009. BPCE was incorporated as a French limited liability company governed by a Management Board and a Supervisory Board, whose share capital is owned jointly and equally by the 14 Banques Populaires and the 15 Caisses d'Epargne.

BPCE's corporate mission embodies the continuity of the cooperative principles underlying the Banques Populaires and the Caisses d'Epargne.

Specifically, BPCE represents the interests of its various affiliates in dealings with the supervisory authorities, defines the range of products and services offered by them, organizes depositor protection, approves key appointments of company directors and oversees the smooth operation of the Group's institutions.

As a holding company, BPCE is the head entity of the Group and holds the joint ventures between the two networks in Retail Banking and Insurance, corporate banking and financial services, and their production units. It defines the Group's corporate strategy and growth and expansion policies.

The network and BPCE's main subsidiaries are organized around two core business lines:

- Retail Banking and Insurance, which includes the Banque Populaire network, the Caisse d'Epargne network, the Financial Solutions & Expertise division (including factoring, consumer loans, leasing, sureties & financial guarantees, and the "retail securities" business), the Digital & Payments (integrating the payments subsidiaries and the Oney group) and Insurance divisions, and Other networks;
- Global Financial Services combining Asset & Wealth Management (Natixis Investment Managers and Natixis Wealth Management) and Corporate & Investment Banking (Natixis Corporate & Investment Banking).

In respect of the Group's financial functions, BPCE is responsible, in particular, for the centralized management of surplus funds, for the execution of any financial transactions required to develop and fund the Group, and for choosing the most appropriate counterparty for these transactions in the broader interests of the Group. BPCE also provides banking services to the other Group entities.

1.2 Guarantee mechanism

Pursuant to Articles L. 511-31, L. 512-107-5 and L. 512-107-6 of the French Monetary and Financial Code, the guarantee and solidarity mechanism was set up to ensure the liquidity and capital adequacy of the Group and its associates, and to organize financial support within the Group.

BPCE is responsible for taking all necessary measures to ensure the solvency of the Group and each of the networks and to organize financial solidarity within the Group. This financial solidarity is based on legislative provisions establishing a legal principle of solidarity obliging the central institution to restore the liquidity or solvency of affiliates in difficulty and/or all affiliates of the Group. By virtue of the unlimited nature of the principle of solidarity, BPCE is entitled at any time to ask any one or several or all of the affiliates to contribute to the financial efforts that may be necessary to restore the situation, and may, if necessary, mobilize all the cash and equity capital of the affiliates in the event of difficulty for one or more of them.

In the event of difficulties, BPCE will have to do everything necessary to restore the financial situation and may in particular make unlimited use of the resources of any, several or all affiliates, or implement the appropriate mechanisms of internal solidarity of the Group and by calling on the guarantee fund common to the two networks of which it determines the rules of operation, the triggering conditions, in addition to the funds of the two networks as well as the contributions of the affiliated institutions for its endowment and reconstitution.

BPCE manages the Banque Populaire Network Fund, the Caisse d'Epargne Network Fund and the Mutual Guarantee Fund.

The Banque Populaire Network Fund was formed by a deposit made by the Banques Populaires of €450 million that was booked by BPCE in the form of a 10-year term account which is indefinitely renewable.

The deposit made to **the Caisse d'Epargne Network Fund** by the Caisses d'Epargne of €450 million was booked by BPCE in the form of a 10-year term account which is indefinitely renewable.

The Mutual Guarantee Fund was formed by deposits made by the Banques Populaires and the Caisses d'Epargne. These deposits were booked by BPCE in the form of 10-year term accounts which are indefinitely renewable. The amount of the deposits by network was €197 million at December 31, 2024.

The total amount of deposits made to BPCE in respect of the Banque Populaire Network Fund, the Caisse d'Epargne Network Fund and the Mutual Guarantee Fund may not be less than 0.15% and may not exceed 0.3% of the Group's total risk-weighted assets.

The booking of deposits in the institutions' individual accounts under the guarantee and solidarity system results in the recording of an item of an equivalent amount under a dedicated capital heading.

Mutual guarantee companies granting the exclusivity of their guarantees to a Banque Populaire benefit from a liquidity and capital adequacy guarantee in their capacity as affiliates of the central institution.

The liquidity and capital adequacy of the local savings companies are secured, firstly, at the level of each individual local savings company by the Caisse d'Epargne of which the local savings company in question is a shareholder.

The Management Board of BPCE holds all the requisite powers to mobilize the resources of the various contributors without delay and in accordance with the agreed order, on the basis of prior authorizations given to BPCE by the contributors.

1.3 Significant events

PROPOSED ACQUISITION OF SOCIÉTÉ GÉNÉRALE EQUIPMENT FINANCE (SGEF)

On April 11, 2024, the Group announced the signing of a memorandum of understanding with Société Générale to acquire the activities of Société Générale Equipment Finance (excluding the activities of SGEF in the Czech Republic and Slovakia).

Today, SGEF is one of the European leaders in the leasing of capital equipment, with a wide range of equipment financing solutions and associated services.

Groupe BPCE, which is already the second-largest provider in lease financing in France thanks to BPCE Lease, would become the European leader in capital equipment leasing solutions for manufacturers, dealers, distributors and corporates.

This project will help Groupe BPCE to achieve its international growth ambitions, diversify its revenues and strengthen its ability to create value. The acquisition will be carried out at a price of €1.1 billion (based on the net equity of €0.96 billion at the date of completion of the acquisition) and will represent a limited impact on Groupe BPCE's CET1 ratio, which is estimated at -40 bps.

The transaction was completed on February 28, 2025, after obtaining the necessary approvals from the relevant regulatory and competition authorities.

DISPOSAL OF VIALINK

During the first half of 2024, the BRED group sold its stake in Vialink to the Signaturit group.

The result of the transaction amounted to +€56 million at June 30, 2024, recorded in "Gains or losses on other assets".

BRED now holds €19 million in non-consolidated Solar Luxco shares (Signaturit group), or approximately 7%.

BRED continues to use Vialink's products (KYC, electronic signature, etc.) and to maintain a close commercial relationship.

These products are also widely used within Groupe BPCE.

BANK NAGELMACKERS

On July 22, 2024, Caisse d'Epargne Hauts de France announced the signing of a memorandum of understanding with Dajia Insurance Group to acquire 100% of the share capital of Bank Nagelmackers, the oldest bank in Belgium.

Founded in 1747, Bank Nagelmackers is a recognized bank in the Belgian personal banking and private banking markets. It offers a full range of banking products and services, as well as asset management solutions, to 110,000 customers, mainly individual customers. Bank Nagelmackers covers the whole of Belgium *via* a distribution network of 50 points of sale and has 400 employees. It generated NBI of around €130 million for outstanding deposits of €3.9 billion, assets under management of €4.8 billion and loan outstanding of €3 billion.

This acquisition project represents a rare opportunity for Caisse d'Epargne Hauts de France to continue to expand its presence in the Benelux, expand the scope of its activities in Belgium, and continue to develop cross-border synergies.

This external growth transaction is part of Groupe BPCE's approach, articulated in its VISION 2030 strategic project to develop in Europe and diversify its revenues.

The implementation of this project is subject to applicable social procedures and the approval of the relevant regulatory and competition authorities. Closing could take place in the first quarter of 2025.

The proposed transaction would have an estimated impact of -7 bps on the Group's CET1 ratio.

ACQUISITION OF SOCIETE GENERALE MADAGASIKARA

On December 20, 2024, BRED acquired a 70% stake in SG Madagasikara (renamed BRED Madagasikara Banque Populaire) for €152 million from Société Générale.

This acquisition resulted in the recognition of goodwill of €58 million, which may be adjusted within 12 months.

DISPOSAL OF NATIXIS BANK JSC, MOSCOW

On December 24, 2024, Natixis SA transferred all of the shares of its subsidiary Natixis Bank JSC, Moscow, as well as the subordinated loan granted to BUROKRAT LLC.

The gain or loss on disposal was recorded for an amount of -€15 million on the "Net gains or losses on other assets" line in the consolidated income statement at December 31, 2024.

1.4 Events after the reporting period

ANNOUNCEMENT OF A PROJECT TO MERGE THE GROUP'S ASSET MANAGEMENT ACTIVITIES WITH THOSE OF GENERALI

On January 21, 2025, Assicurazioni Generali S.p.A. ("Generali") and BPCE signed a non-binding Memorandum of Understanding (MoU) aimed at bringing together, in a joint venture, the asset management activities of Generali Investments Holding ("GIH") and Natixis Investment Managers (NIM). BPCE (*via* Natixis IM) and GIH would each hold 50% of the combined activities with balanced governance and control. In the future, the interest held in the joint venture would be accounted for using the equity method, due to joint control.

Activities contributed by NIM are now included in the "Asset Management/AWM" business segment presented in Note 12.1.

With €1,900 billion in assets under management (as of September 30, 2024), the proposed merger would create a global asset management platform with leading positions and critical size in both Europe and North America. The combined entity would be ranked first by revenues and second by assets under management in Europe; ninth by assets under management and first in global insurance management.

The new joint venture would offer a full range of solutions in traditional and alternative asset classes, meeting customers' increasingly sophisticated needs.

The combined platform would also be uniquely positioned to continue to develop its activities on behalf of third parties in Europe, North America and regions with high growth potential in Asia, leveraging a global distribution network integrating an efficient centralized distribution platform as well as local multi-channel partnerships.

The employee representative bodies of the various parties concerned will be consulted before the final agreements relating to the transaction are signed.

The effective completion of the transaction will depend on obtaining the usual regulatory authorizations, with a completion date expected in early 2026.

The signing of the Memorandum of Understanding had no impact on the consolidated financial statements at December 31, 2024.

Note 2 / Applicable accounting standards and comparability

2.1 Regulatory framework

The consolidated financial statements of Groupe BPCE were prepared under International Financial Reporting Standards (IFRS) as adopted by the European Union and applicable at the reporting date, excluding certain provisions of IAS 39 relating to hedge accounting.

2.2 Accounting standards

The standards and interpretations used and detailed in the annual financial statements at December 31, 2023 were complemented by standards, amendments and interpretations whose application is mandatory for reporting periods starting from January 1, 2024.

Groupe BPCE used the option available in IFRS 9 not to apply the provisions of the standard relative to hedge accounting, and to continue to apply IAS 39 as adopted by the European Union for the recognition of these transactions, *i.e.* excluding certain provisions relating to macro-hedging.

Regulation (EU) 2017/2395 dated December 12, 2017 relating to transitional arrangements for mitigating the impact of the introduction of IFRS 9 on capital and for the large exposures treatment of certain public-sector exposures was published in the Official Journal of the European Union (OJEU) on December 27, 2017. Groupe BPCE has decided not to opt to neutralize IFRS 9 transitional impacts at the prudential level due to the limited impact when applying the standard.

The standards, amendments and interpretations adopted by the European Union did not have a material impact on the Group's financial statements.

NEW STANDARDS PUBLISHED AND NOT YET APPLICABLE

IFRS 18

IFRS 18 "Presentation and Disclosures in Financial Statements" will replace IAS 1 "Presentation of Financial Statements". It was published by the IASB on April 9, 2024. Subject to its adoption by the European Commission, IFRS 18 will be applicable as of January 1, 2027, with comparative data at January 1, 2026. Early application is authorized.

Amendment to IFRS 9 phase 1

On May 30, 2024, the IASB published the amendments to IFRS 9 "Classification and Measurement of Financial Instruments" (amendments to IFRS 9 and IFRS 7) applicable as of January 1, 2026, subject to adoption by the European Commission. These amendments provide details on the basic nature of loans, the classification of non-recourse loans and securitizations.

2.3 Use of estimates and judgments

Preparation of the financial statements requires making estimates and assumptions in certain areas with regard to uncertain future events.

These estimates are based on the judgment of the individuals preparing these financial statements and the information available at the reporting date.

Actual future results may differ from these estimates.

With respect to the financial statements for the period ended December 31, 2024 in particular, accounting estimates requiring assumptions were mainly used for the following measurements:

- the fair value of financial instruments determined on the basis of valuation models (Note 10);
- the amount of expected credit losses on financial instruments as well as on loan and guarantee commitments (Note 7.1);
- the results of hedge effectiveness tests (Note 5.3);
- provisions recorded under liabilities in the balance sheet and more specifically the provision for regulated home purchase savings products (Note 5.13);
- insurance assets and liabilities (Note 9);
- calculations related to the cost of pensions and future employee benefits (Note 8.2);
- uncertainties relating to the tax treatment of income tax (Note 11);
- deferred taxes (Note 11);
- goodwill impairment tests (Note 3.5.2);
- the lease term to be used for the recognition of rights-of-use and lease liabilities (Note 12.2.2).

Judgment must also be exercised to assess the business model and the basic characteristics of a financial instrument. The procedures are described in the relevant paragraphs (Note 2.5.1).

Estimates and judgments are also used in the Group's activities to estimate climate and environmental risks. Governance and commitments regarding these risks are presented in Chapter 2 "Sustainability Report". Information on the effect and consideration of climate risks on credit risk management (Note 7) is presented in Chapter 7.16 "Risk factors and risk management – Environmental risks". The accounting treatment of the main green financial instruments is presented in Notes 2.5, 5.5, 5.10, 5.11.2.

CLIMATE AND ENVIRONMENTAL RISKS

Climate and environmental risks are likely to affect Groupe BPCE's main risks (credit and counterparty risk, market risk, operational risks, structural ALM risks, risks related to insurance activities, strategic risk, legal and compliance risks, reputational risk).

Climate and environmental risks include physical risks and transition risks:

- physical risks result from damage directly caused to people and property by events related to climate and environmental changes. They can be related to acute events, linked to extreme conditions circumscribed in time and space (such as heat waves, landslides, floods, late frosts, fires, storms, situations of water stress or air pollution, water or soil pollution) or to chronic events of a more gradual nature (such as changes in rainfall patterns, rise in sea levels and average temperatures, loss of biodiversity, the depletion of natural resources),

- transition risks result from the adjustment of economic players and stakeholders to the transition to a low-carbon economy that is more respectful of environmental balances. These adjustments are reflected in regulatory, technological or socio-demographic changes.

These risks are likely to have significant impacts on the financial position of counterparties and on the assets to which Groupe BPCE is exposed, particularly through its financing, investment or insurance activities, as well as its own activities. These impacts can be direct (damage to people, total or partial destruction, or unavailability of economic assets, drop in yields and productivity, stranded assets, costs of regulatory compliance, etc.) or indirect through effects on the macro-economic environment (relative attractiveness of geographic areas and sectors of activity, changes in monetary and fiscal policies, social changes, etc.).

Groupe BPCE incorporates climate and environmental risks into its risk supervision system and is gradually developing methods and tools for identifying, assessing, monitoring and managing these risks. The implementation of this system is described in Section 6.1 "Environmental, Social and Governance Risks".

In particular, Groupe BPCE takes physical risk into account in the internal assessment of its capital requirements (ICAAP process) by applying adverse scenarios to drought (impacting various economic sectors such as agriculture and construction) and flooding (on the real estate portfolio). Transition risk is also implicitly included in this work: internal counterparty rating models already take into account possible changes in the economic environment over a short period of time (one to three years) and, therefore, cover the possible impact of short-term climate transition. Work was carried out to integrate this risk on the real estate portfolios of individuals in the quantification of the economic capital of the ICAAP 2025 specifically in connection with an unfavorable change in the DPE regulation, then supplemented by an add-on on portfolios that do not have, at this stage, a specific economic assessment model.

In addition, some Groupe BPCE institutions recognize impairments for the effects of physical and transition risks on credit risk. These impairments were defined by the institutions according to the specific characteristics of their credit exposure portfolio, from a geographical and sectoral point of view, when the risk was assessed locally as material. Discussions are also underway at Groupe BPCE level to harmonize the consideration of climate and environmental risks in the provisioning policy.

The inclusion of climate and environmental risks in Groupe BPCE's financial statements will benefit from the gradual improvement of the ESG risk supervision system. In particular, work is underway to roll out an ESG risk rating at the customer level and an asset assessment of the physical risks on the residential real estate portfolio in France, as well as to develop and formalize stress test scenarios and methodologies to be used on physical and transition risks.

2.4 Presentation of the consolidated financial statements and reporting date

As no specific format is required under IFRS, the presentation used by the Group for summarized statements follows Recommendation No. 2022-01 issued by the French national accounting standards authority on April 8, 2022.

The consolidated financial statements are based on the accounts at December 31, 2023. The Group's consolidated financial statements at December 31, 2024 were approved by the Management Board on February 3, 2025. They will be presented to the General Meeting on May 22, 2025.

The amounts presented in the financial statements and in the notes are shown in millions of euros, unless otherwise indicated. Rounding may lead to differences between the amounts shown in the financial statements and those referred to in the notes.

2.5 General accounting principles and valuation methods

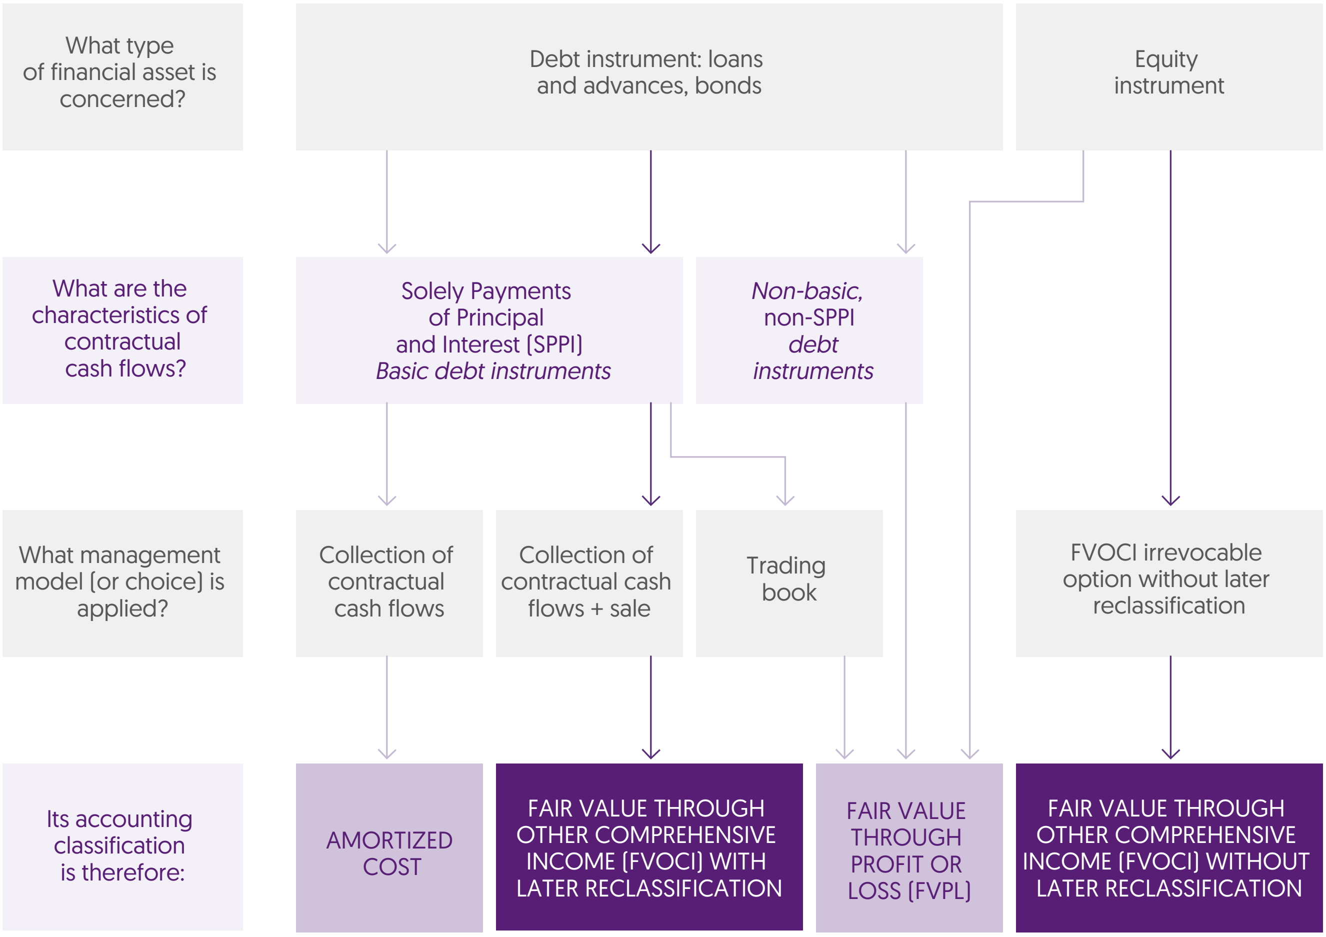
The general accounting principles set out below apply to the main items of the financial statements. Specific accounting principles are presented in the Notes to which they refer.

2.5.1 Classification and measurement of financial assets and liabilities

IFRS 9 is applicable to Groupe BPCE.

FINANCIAL ASSETS

On initial recognition, financial assets are classified at amortized cost, at fair value through other comprehensive income, or at fair value through profit or loss, according to the type of instrument (debt or equity), the characteristics of their contractual cash flows and how the entity manages its financial instruments (its business model).



Business model

The entity's business model represents the way in which it manages its financial assets to produce cash flow. Judgment is exercised to ascertain the business model.

The choice of business model must take into account all information regarding the manner in which cash flows were generated in the past, along with all other relevant information.

For example:

- the way in which the performance of financial assets is assessed and presented to the main company directors;
- risks having an impact on the business model's performance, in particular the way in which these risks are managed;
- the way in which directors are paid (for example, if pay is based on the fair value of assets under management or on the contractual cash flows received);
- the frequency of, volume of and reason for sales.

Moreover, the choice of business model must be made at a level which reflects the way in which groups of financial assets are managed collectively with a view to achieving a given economic objective. The business model is therefore not decided on an instrument by instrument basis, but rather at a higher level of aggregation, by portfolio.

The standard provides for three business models:

- a business model whose objective is to hold financial assets in order to receive contractual cash flows ("hold to collect model"). This model, under which the concept of "holding" is relatively similar to holding to maturity, remains valid if disposals occur under the following conditions:
  - the disposals are due to an increase in credit risk,
  - the disposals occur just before maturity and at a price that reflects the contractual cash flows that are still owed,
  - other disposals may also be compatible with the "hold to collect" model's objectives if they are infrequent (even if their value is significant) or if their value is insignificant when considered both individually and overall (even if they are frequent).

For Groupe BPCE, the "hold to collect" model applies to financing activities (excluding the loan syndication activity) carried out by Retail Banking, Corporate & Investment Banking and Financial Solutions & Expertise;

- a mixed business model under which assets are managed with the objective of both receiving contractual cash flows and disposing of financial assets ("hold to collect and sell model").

Groupe BPCE applies the "hold to collect and sell" model primarily to the portion of portfolio management activities for securities in the liquidity reserve that is not managed solely under a "hold to collect" model;

- a model intended for other financial assets, especially those held for trading, for which the collection of contractual cash flows is incidental. This business model applies to the loan syndication activity (for the portion of outstandings to be sold that was identified at the outset) and to the capital market activities carried out primarily by Corporate & Investment Banking.

Types of contractual cash flows: the SPPI (Solely Payments of Principal and Interest) test

A financial asset is classified as generating solely payments of principal and interest if, on specific dates, it gives rise to cash flows that are solely payments of principal and interest on the outstanding amount due. The SPPI test should be performed for each financial asset on initial recognition.

The principal amount is defined as the financial asset's fair value at its acquisition date. Interest is the consideration for the time value of money and the credit risk incurred on the principal amount, as well as other risks such as liquidity risk, administrative costs and the profit margin.

The instrument's contractual terms must be taken into account to assess whether contractual cash flows are solely payments of principal and interest. All elements that may cast doubt as to whether only the time value of money and credit risk are represented must therefore be analyzed. For example:

- events that would change the amount and date of the cash flows. Any contractual option that creates risk exposure or cash flow volatility that is not consistent with a basic lending arrangement, such as exposure to fluctuations in the price of stocks or of a market index, or the introduction of leverage, would make it impossible to categorize contractual cash flows as SPPI;
- the applicable interest rate features (for example, consistency between the rate resetting period and the interest calculation period). If a clear determination cannot be made through qualitative analysis, a quantitative analysis (a benchmark test) is carried out. This test involves comparing the contractual cash flows for the asset in question with the contractual cash flows of a benchmark asset;
- early redemption and extension conditions. For the borrower or lender, a contractual option permitting prepayment of financial instruments does not violate the SPPI test for contractual cash flows if the prepayment amount mainly represents the unpaid amounts of principal and interest and, if applicable, a reasonable additional remuneration for the early termination of the contract.

Furthermore, although they do not strictly meet the criteria for remuneration of the time value of money, certain assets with a regulated interest rate are classified SPPI if this regulated rate provides consideration that corresponds substantially to the passage of time and presents no exposure to a risk that would be inconsistent with a basic lending arrangement. This is the case in particular for financial assets representing the portion of *Livret A* passbook savings account inflows that is centralized with Caisse des Dépôts et Consignations.

Financial assets that generate SPPI are debt instruments such as fixed-rate loans, floating-rate loans without an interest rate tenor mismatch or that are not linked to a security or to a market index, and fixed-rate or floating-rate debt securities.

Non-SPPI financial assets include UCITS units, debt instruments convertible or redeemable into a fixed number of shares and structured loans.

To qualify as SPPI assets, the securities held in a securitization vehicle must meet specific conditions. The contractual terms of the tranche must meet the SPPI criterion. The pool of underlying assets must meet the SPPI conditions. The risk inherent in the tranche must be lower than or equal to the exposure to the vehicle's underlying assets.

A non-recourse loan (*e.g.* infrastructure financing-type project financing) is a loan secured only by physical collateral. If there is no possible recourse to the borrower, the structure of other possible recourses or protection mechanisms for the lender in the event of default must be examined in order to categorize these loans as SPPI assets: acquisition of the underlying asset, collateral provided (security deposits, margin call, etc.), enhancements provided.

Accounting categories

Debt instruments (loans, receivables or debt securities) may be measured at amortized cost, at fair value through other comprehensive income recyclable to profit or loss or at fair value through profit or loss.

A debt instrument is valued at amortized cost if it meets the following two conditions:

- the asset is held under a hold to collect business model; and
- the contractual terms of the financial asset define it as generating SPPI within the meaning of the standard.

A debt instrument is valued at fair value through other comprehensive income if it meets the following two conditions:

- the asset is held under a hold to collect and sell business model; and
- the contractual terms of the financial asset define it as generating SPPI within the meaning of the standard.

Equity instruments are, by default, recorded at fair value through profit or loss unless they qualify for an irrevocable option for valuation at fair value through other comprehensive income not recyclable to profit or loss (provided they are not held for trading purposes and accordingly classified as financial assets at fair value through profit or loss), without subsequently being reclassified through profit or loss. If opting for the latter category, dividends continue to be recognized in income.

Financing through the issuance of green financial products or investments in such products are accounted for at amortized cost unless they are held as part of a short-term disposal activity.

All other financial assets are recorded at fair value through profit or loss. These financial assets include financial assets held for trading, financial assets at fair value through profit or loss and non-basic (non-SPPI) assets. Financial assets may only be designated at fair value through profit or loss in order to eliminate or significantly reduce an accounting mismatch. This option enables the elimination of accounting mismatches stemming from the application of different valuation rules to instruments managed under a single strategy.

FINANCIAL LIABILITIES

The general rule is the measurement of financial liabilities at amortized cost, except for liabilities incurred for trading purposes (trading liabilities) and financial liabilities that the entity chooses to assess at fair value under the fair value option.

At the date of initial recognition, the accounting principles described for financial assets apply identically to financial liabilities, as follows:

- financial liabilities subsequently classified as measured at amortized cost are recognized at fair value less or increased by transaction costs;
- financial liabilities at fair value through profit or loss are recognized at fair value and the associated transaction costs will be recognized directly in the income statement.

If a financial liability is designated as being measured at fair value through profit or loss then:

- the amount of the change in fair value attributable to changes in the credit risk of the liability (*i.e.* the issuer spread) is to be presented in shareholders' equity unless this recognition would have the effect of creating or increasing an accounting mismatch in income (this mismatch is determined at the initial recognition and is not subsequently revised). The amounts recorded in equity are not subsequently recycled in profit or loss;
- the remainder of the change in the fair value of the financial liability is presented in profit or loss.

For the treatment modifications of liabilities recognized at amortized cost, if the modification does not result in derecognition: the profit or loss resulting from the difference between the original cash flows and the modified cash flows discounted at the original effective interest rate must be recognized in profit or loss.

2.5.2 Foreign currency transactions

The method used to account for assets and liabilities relating to foreign currency transactions entered into by the Group depends upon whether the asset or liability in question is classified as a monetary or a non-monetary item.

Monetary assets and liabilities denominated in foreign currencies are translated into the functional currency of the Group entity on whose balance sheet they are recognized, at the closing rates prevailing at the closing date. All resulting currency exchange differences are recognized in income. However, there are two exceptions to this rule:

- only the portion of the currency exchange differences calculated based on the amortized cost of financial assets at fair value through other comprehensive income is recognized in income, with any additional gains and losses being recognized in "Gains and losses recognized directly in other comprehensive income";
- currency exchange differences arising on monetary items designated as cash flow hedges or as part of a net investment in a foreign operation are recognized in "Gains and losses recognized directly in other comprehensive income".

Non-monetary assets carried at historic cost are translated using the exchange rate prevailing at the transaction date. Non-monetary assets carried at fair value are translated using the exchange rate in effect at the date on which the fair value was determined. Currency exchange differences on non-monetary items are recognized in profit or loss if gains and losses relating to the items are recorded in profit or loss, and in "Gains and losses recognized directly in other comprehensive income" if gains and losses relating to the items are recorded in "Gains and losses recognized directly in other comprehensive income".

IAS 29 "Financial Reporting in Hyperinflationary Economies" sets out a number of quantitative and qualitative criteria for assessing whether an economy is hyperinflationary, including a three-year cumulative inflation rate approaching or exceeding 100%. Laos was in hyperinflation at December 31, 2024. The subsidiary in this country is, therefore, in a situation of hyperinflation within the meaning of IAS 29, but as the impact was insignificant, the subsidiary's financial statements were not restated on December 31, 2024.

Note 3 / Consolidation

3.1 Consolidating entity

Due to the Group's structure as described in Note 1, Groupe BPCE's consolidating entity includes:

- Banques Populaires, namely the 12 Banque Populaire regional banks, CASDEN Banque Populaire and Crédit Coopératif;
- the 15 Caisses d'Epargne;
- the Mutual Guarantee Companies (*sociétés de caution mutuelle*) collectively affiliated with the Banques Populaires to which they are linked;
- the Group's central institution, BPCE.

In addition, the Group comprises:

- the subsidiaries of the Banques Populaires;
- the subsidiaries of the Caisses d'Epargne;
- the subsidiaries held by the central institution, including Natixis, Crédit Foncier, Banque Palatine, the entities of the Financial Solutions & Expertise division, the entities of the Insurance division and the entities of the Digital and Payments division (including the payment subsidiaries and Oney).

3.2 Scope of consolidation – consolidation and valuation methods

The Group's financial statements include the financial statements of all the entities over which it exercises control or significant influence, whose consolidation had a material impact on the aforementioned financial statements.

The scope of entities consolidated by Groupe BPCE is described in Note 13 – Scope of consolidation.

3.2.1 Entities controlled by the Group

The subsidiaries controlled by Groupe BPCE are fully consolidated.

Definition of control

Control exists when the Group has the power to govern an entity's relevant activities, when it is exposed to or is entitled to variable returns due to its links with the entity and has the ability to exercise its power over the entity to influence the amount of returns it obtains.

The existence and effect of potential voting rights that are currently exercisable or convertible are considered when assessing the control exercised. These potential voting rights may result, for example, from share call options traded on the market, debt or equity instruments that are convertible into ordinary shares, or equity warrants attached to other financial instruments. However, potential voting rights are not taken into account to calculate the percentage of ownership.

Exclusive control is presumed to exist when the Group holds directly or indirectly either the majority of the subsidiary's voting rights, or at least half of an entity's voting rights and a majority within the management bodies, or is in a position to exercise significant influence.

Special case: structured entities

Entities described as structured entities are those organized in such a way that voting rights are not a key criterion when determining who has control. This is the case in particular when voting rights only apply to administrative duties and relevant activities are managed through contractual agreements.

A structured entity frequently exhibits some or all of the following characteristics:

(a) well-defined activities;

(b) a specific and well-defined aim, for example: implementing a lease eligible for specific tax treatment, carrying out research and development, providing an entity with a source of capital or funding, or providing investors with investment options by transferring associated risk and advantages to the structured assets;

(c) insufficient equity for the structured entity to finance its activities without subordinated financial support;

(d) financing through the issuance, to investors, of multiple instruments inter-related by contract and which create concentrations of credit risk or other risks ("tranches").

The Group therefore considers, among others, collective investment undertakings within the meaning of the French Monetary and Financial Code and equivalent bodies governed by foreign law as structured entities.

Full consolidation method

The full consolidation of a subsidiary in the Group's consolidated financial statements begins at the date on which the Group takes control and ends on the day on which the Group loses control of this entity.

The portion of interest which is not directly or indirectly attributable to the Group corresponds to a non-controlling interest.

Income and all components of other comprehensive income (gains and losses recognized directly in other comprehensive income) are divided between the Group and non-controlling interests. The comprehensive income of subsidiaries is divided between the Group and non-controlling interests, including when this division results in the allocation of a loss to non-controlling interests.

Changes to the percentage interest in subsidiaries that do not lead to a change in control are recognized as transactions affecting equity.

The effects of these transactions are recognized in equity at their after-tax amount and therefore do not impact consolidated income attributable to equity holders of the parent.

Detail of the scope of consolidation

Non-material controlled entities are excluded from the scope in accordance with the principle set out in Note 13.5.

Employee pension funds and supplementary health insurance plans are excluded from the scope of consolidation insofar as IFRS 10 does not apply to either post-employment benefit funds or other long-term employee benefit plans, to which IAS 19, "Employee Benefits", applies.

Likewise, interests acquired with a view to their subsequent short-term disposal are recorded as available for sale and recognized in accordance with the provisions of IFRS 5 "Non-Current Assets Held for Sale and Discontinued Operations".

3.2.2 Investments in associates and joint ventures

Definitions

An associate is an entity over which the Group has significant influence. Significant influence is the power to participate in the financial and operating policy decisions of an entity, without exercising control or joint control over those policies. It is presumed to exist if the Group holds, directly or indirectly, 20% or more of the voting rights of an entity.

A joint venture is a partnership in which the parties which exercise joint control over the entity have rights over its net assets.

Joint control is the contractually agreed sharing of control over a company, which exists only when the strategic decisions require the unanimous consent of the parties sharing control.

Equity method

Income, assets, and liabilities of investments in associates and joint ventures are accounted for in the Group's consolidated financial statements using the equity method.

An investment in an associate or a joint venture is initially recognized at its acquisition cost and subsequently adjusted for the Group share in the income and other comprehensive income of the associate or joint venture.

The equity method is applied from the date on which the entity becomes an associate or a joint venture. On the acquisition of an associate or a joint venture, the difference between the cost of investment and the Group's share in the net fair value of the entity's identifiable assets and liabilities is recognized in goodwill. When the net fair value of the entity's identifiable assets and liabilities is higher than the cost of investment, the difference is recognized in income.

The share of net income of entities accounted for under the equity method is included in the Group's consolidated income.

When a group entity carries out a transaction with a group joint venture or associate, the profit or loss resulting from this transaction is recognized in interests held by third parties in the associate or joint venture.

The net investment in an associate or joint venture is subject to impairment testing if there is objective evidence of impairment arising from one or more events occurring after the initial recognition of the net investment and if the events have an impact on estimated cash flows, provided this impact can be reliably calculated.

In such cases, the total carrying amount of the investment (including goodwill) is subject to impairment testing in accordance with the provisions of IAS 36 "Impairment of assets".

Exception to the equity method

When the investment is held by a venture capital organization, an investment fund, an investment company with variable share capital or a similar entity such as an Insurance asset investment fund, the investor may choose not to recognize the investment using the equity method. In this case, revised IAS 28 "Investments in Associates and Joint Ventures" authorizes the investor to recognize the investment at its fair value (with changes in fair value recognized in income) in accordance with IFRS 9.

These investments are therefore recognized as "Financial assets at fair value through profit or loss".

The Global Financial Services division's private equity subsidiaries have chosen to measure their investments in this way, considering that this valuation method provides more relevant information.

3.2.3 Investments in joint activities

Definition

A joint activity is a partnership where parties that have joint control over an entity have direct rights over the entity's assets, and obligations for its liabilities.

Accounting treatment of joint activities

An investment in a joint enterprise is accounted for by integrating all interests held in the joint activity, *i.e.* the entitled share in each asset and liability and item of income. These interests are allocated by nature to the various lines of the consolidated balance sheet, consolidated income statement and the statement of net income and gains and losses recognized directly in other comprehensive income.

3.3 Consolidation rules

The consolidated financial statements are prepared using uniform accounting policies for reporting similar transactions in comparable circumstances. Where material, consolidation adjustments are made to ensure the consistency of the measurement methods applied by consolidated entities.

3.3.1 Foreign currency translation

The consolidated financial statements are expressed in euros.

Balance sheet items of foreign subsidiaries and branches whose functional currency is not the euro are translated using the exchange rate in force at the reporting date. Income and expense items are translated at the average exchange rate for the period, which is the approximate value of the transaction price if there are no significant fluctuations.

Foreign exchange rate adjustments arise from a difference in:
