- net income for the period translated at the average rate and at the closing rate;
- equity (excluding net income for the period) translated at the historic exchange rate and at the closing rate.

The portion attributable to equity holders of the parent is recorded in equity under "Foreign exchange rate adjustments" and the portion attributable to minority shareholders under "Non-controlling interests".

3.3.2 Elimination of intra-group transactions

The impact of intercompany transactions on the consolidated balance sheet and consolidated income statement is eliminated. Dividends, as well as gains and losses on intercompany asset disposals, are also eliminated. Where appropriate, capital losses from asset disposals resulting in impairment are maintained.

By way of exception, the IFRS 17 amendments to IFRS 9 and IAS 32 allow intra-group assets to be retained on the balance sheet if they are held as underlying items of insurance contracts with direct participation features. These assets are then valued at market value through profit or loss. These include financial liabilities issued by a Group entity (amendment to IFRS 9). The application of this exception is assessed instrument by instrument. The provisions of these amendments are applied from the 2023 fiscal year for significant transactions.

3.3.3 Business combinations

In accordance with revised IFRS 3, "Business Combinations", and IAS 27, "Consolidated and Separate Financial Statements":

- combinations between mutual insurers are included within the scope of IFRS 3;
- costs directly linked to business combinations are recognized in net income for the period;
- contingent considerations payable are included in the cost of the business combination at their fair value at the date of acquisition of a controlling interest in an entity, even if they are only potential. Depending on the settlement method, transferred considerations are recognized against:
  - capital and later price revisions will not be booked,
  - or debts and later adjustments are recognized against income (financial debts) or according to the appropriate standards (other debts outside the scope of IFRS 9);
- on an entity's acquisition date, non-controlling interests may be valued:
  - either at fair value (method resulting in the allocation of a share of the goodwill to non-controlling interests),
  - or at the share in the fair value of the identifiable assets and liabilities of the entity acquired (method similar to that applicable to transactions prior to December 31, 2009).

The choice between these two methods must be made for each business combination.

Whatever method is chosen when the acquisition is made, increases in the percentage of interest in an entity already controlled are systematically recognized in capital:

- when an entity is acquired, any share previously held by the Group must be revalued at fair value through profit or loss. Consequently, in the event of a step acquisition, goodwill is determined by referring to the fair value at the date of control;
- when the Group loses control of a consolidated company, any share previously held by the Group must be revalued at fair value through profit or loss.

3.3.4 Purchase commitments granted to minority shareholders of fully consolidated subsidiaries

The Group has entered into commitments with minority shareholders of certain fully consolidated group subsidiaries to buy out their shares. These buyback commitments are optional commitments (sales of put options). The exercise price for these options may be an amount fixed contractually, or may be established according to a calculation formula defined upon the acquisition of the subsidiary's securities and taking into account its future activity, or may be set as the fair value of the subsidiary's securities on the day on which the options are exercised.

For accounting purposes, these commitments are treated as follows:

- pursuant to the provisions of IAS 32, the Group recognizes a financial liability with respect to the put options sold to minority shareholders in fully-consolidated entities. This liability is initially recognized at the discounted value of the put option exercise price under "Other liabilities";
- the obligation to record a liability even though the put options are not exercised means, for purposes of consistency, that the same accounting treatment as that for transactions related to non-controlling interests must be applied. As a result, the corresponding entry for this liability is deducted from "Non-controlling interests" underlying the options and the balance is deducted from "Consolidated reserves attributable to equity holders of the parent";
- subsequent changes in this liability relating to any change in the estimated exercise price of the options and the carrying amount of "Non-controlling interests" are fully recognized as "Consolidated reserves attributable to equity holders of the parent";
- in the event of a buyback, the liability is settled by the cash payment related to the acquisition of minority shareholders' stakes in the subsidiary in question. However, when the commitment expires, if the buyback does not take place, the liability is written off against "Non-controlling interests" and "Consolidated reserves attributable to equity holders of the parent" according to their respective amounts;

- as long as the options have not been exercised, results from non-controlling interests subject to put options are included in the consolidated income statement as "Non-controlling interests".

3.3.5 Fiscal year reporting date of consolidated entities

The entities included in the scope of consolidation close their accounts on December 31.

3.4 Changes in the scope of consolidation during the 2024 fiscal year

The main changes in the scope of consolidation in the 2024 fiscal year are presented below:

CHANGES IN THE PERCENTAGE OF OWNERSHIP INTEREST IN SUBSIDIARIES (WITH NO IMPACT ON CONTROL)

- Increase in the ownership interest in the Azure and Vermilion entities following the exercise of the put option on non-controlling interests in the first and fourth quarters;
- Decrease in the ownership interest in Loomis Sayles Sakorum Long Short Growth Equity following the arrival of new investors during the first and second quarters;
- Increase in the ownership interest in the Solomon Partners entities following the exercise of the put option in the second quarter;
- Increase in the ownership rate of Fenchurch Partners LPP following the purchase of the share capital held by managers in the third and fourth quarter;
- Increase in the ownership interest of EDF Investment Group following a capital increase subscribed by Natixis Belgium in the fourth quarter;
- Increase in the ownership interest of Thematics Asset Management entities following the acquisition of non-controlling interests in the fourth quarter.

OTHER CHANGES IN SCOPE

Newly consolidated entities

DURING THE FIRST QUARTER OF 2024:

- Creation and full consolidation of Aval Master FCT;
- Full consolidation of VEGA Obligation EURO.

DURING THE SECOND QUARTER OF 2024:

- Creation and full consolidation of CE DEVELOPPEMENT III;
- Full consolidation of Natixis ESG Conservative FUND;
- Consolidation using the equity method of Clipperton Holding;
- Creation and consolidation of two Natixis Investment Managers International Branches, in Luxembourg and Belgium;
- Full consolidation of Loomis Sayles Global Allocation.

DURING THE THIRD QUARTER OF 2024:

- Full consolidation of Allocation Pilotée Offensive;
- Creation and full consolidation of Ophélia Master SME FCT;
- Creation and full consolidation of LOOMIS SAYLES (NETHERLANDS) BV, FRENCH BRANCH and VAUBAN INFRASTRUCTURE PARTNERS, GERMAN BRANCH;
- Acquisition and consolidation using the equity method of AUDERE PARTNERS.

DURING THE FOURTH QUARTER OF 2024:

- Creation and full consolidation of CAPITOLE MASTER FCT, GE;
- Acquisition and full consolidation of BRED MADAGASIKARA BANQUE POPULAIRE;
- Acquisition and full consolidation of HSBC EPARGNE ENTREPRISE.

Deconsolidated entities

DURING THE FIRST QUARTER OF 2024:

- Liquidation of HU Oney PSP;
- Dissolution of the entities AEW Value Investor Asia II GP Limited and Natixis Investment Manager UK (Fund) Limited LLC;
- Deconsolidation of the Mifcos entity after failing to meet thresholds;
- Deconsolidation of the Kupka entity after failing to meet thresholds.

DURING THE SECOND QUARTER OF 2024:

- Disposal of Vialink;
- Liquidation of Coopest;
- Liquidation of Natixis Investment Managers SA Zweigniederlassung Deutschland and Natixis Investment Managers SA Belgian Branch;
- Deconsolidation, following the crossing below the thresholds, of the entities DNCA Invest Nordern, OPCI France Europe Immo and FCT NA Financement de l'Économie – compartment Immocorp II (insurance).

DURING THE THIRD QUARTER OF 2024:

- Liquidation of LOOMIS SAYLES & COMPANY, LP, DUTCH BRANCH.

DURING THE FOURTH QUARTER OF 2024:

- Disposal of CGI Bâtiment;
- Sale of Natixis JSC, MOSCOW;
- Liquidation of AURORA;
- Liquidation of ONEY GMBH;
- Liquidation of NIM Canada Holding LTD;
- Deconsolidation of the OCÉORANE entity after failing to meet thresholds;
- Deconsolidation of the subsidiaries Foncier Participations, Foncière d'Evreux, Gramat Balard and Sipari following the crossing below the thresholds.

Mergers and universal asset transfers

- The CE Holding Participation entity was the subject of a universal transfer of assets to BPCE SA in the first quarter;
- Merger and acquisition of Natixis ASG Holding INC and Natixis Investment Manager LLC by Natixis Investment Manager LLC (formerly NIM USH) in the first quarter;
- Merger and acquisition of BPCE Achats by BPCE Services (which becomes BPCE Achats & Services) in the second quarter;
- Merger and acquisition of Natixis Investment Managers SA by NIM International in the second quarter;
- Merger and acquisition of FR FLANDRE INVEST by Oney BANK in the third quarter;
- Merger and acquisition of CE DEVELOPPEMENT and CE DEVELOPPEMENT II by CE DEVELOPPEMENT III in the third quarter.

3.5 Goodwill

3.5.1 Value of goodwill

in millions of euros	12/31/2024	12/31/2023
Opening net value	**4,224**	**4,207**
Acquisitions(1)	58	71
Disposals	0	(2)
Foreign exchange rate adjustments	102	(55)
Other changes(2)	(72)	2
CLOSING NET VALUE	**4,312**	**4,224**

(1) Acquisition of 70% of BRED Madagasikara Banque Populaire (+€58 million in goodwill) and HSBC Epargne Entreprise (+€1 million in goodwill).
(2) Corresponds to the reclassification to the asset held for sale line of the goodwill of the MV Credit entities for -€72 million taking into account the ongoing disposal.

At December 31, 2024, the gross value of goodwill amounted to €5,005 million, while impairment losses stood at -€693 million.

Certain goodwill items recognized in the United States give rise to tax amortization over 15 years, leading to a difference between the carrying amount of the goodwill and its tax base. This difference in treatment generated a deferred tax liability of €367 million at December 31, 2024, compared with €342 million at December 31, 2023.

Breakdown of goodwill

	Net carrying amount	
in millions of euros	12/31/2024	12/31/2023
Regional Banks(1)(2)	691	633
Banque BCP France	42	42
Other	21	21
Retail Banking	**754**	**696**
Financial Solutions & Expertise	**88**	**88**
Insurance	**38**	**38**
Retail Banking and Insurance	880	822
Asset & Wealth Management(3)	3,280	3,257
Corporate & Investment Banking	151	144
TOTAL GOODWILL	**4,312**	**4,224**

(1) Regional Banks: Banque de Savoie, goodwill carried by Banque Populaire du Sud (transfer of Banque Dupuy, de Parseval's and Banque Marze's goodwill, post-merger), goodwill carried by Banque Populaire Aquitaine Centre Atlantique (transfer of CCSO – Pelletier's goodwill, post-merger) and goodwill carried by Banque Populaire Méditerranée (transfer of Banque Chaix's goodwill, post-merger).
(2) Including +€58 million recognized upon acquisition of 70% of BRED Madagasikara Banque Populaire.
(3) Including +€1 million related to the acquisition of HSBC Epargne Entreprise and -€72 million corresponding to the reclassification to the asset held for sale line of the goodwill of the MV Credit entities.

3.5.2 Goodwill impairment tests

All items of goodwill are impaired, based on the value in use of the cash-generating units (CGUs) to which they have been allocated.

At December 31, 2024, the Regional Banks CGU represented the sum of the CGUs of the following banks: BP Aquitaine Centre Atlantique, Banque Populaire Sud, Retail Groupe Banque Populaire Auvergne Rhône Alpes CGU and Banque Populaire Méditerranée. Goodwill is allocated to groups of CGUs (and non-CGUs) and the financial assumptions presented for each group are averages of the assumptions for their component CGUs.

Key assumptions used to calculate recoverable value

Value in use was primarily calculated based on the discounting of the estimate of each CGU's future cash flows (*i.e.* the discounted cash flow (DCF) method) as they result from the business lines' latest results forecasts.

For CIB, the valuation exercise was carried out on the M&A scope, *i.e.* the only scope bearing goodwill, while enriching the valuation methods used (multi-criteria approach including a DCF approach as well as valuation methods using stock market multiples and comparable transactions) in continuity with the previous exercise. These tests did not lead to the recognition of any impairment at December 31, 2024.

The following assumptions were used:

	Discount rate	Long-term growth rate
Retail Banking and Insurance		
Regional Banks	9% - 10.5%	2.0%
Insurance	9.90%	2.0%
Financial Solutions & Expertise	10.25%	2.0%
Asset & Wealth Management	**10.9%**	**2.0%**
Digital & Payments	**8.75%**	**2.0%**
Corporate & Investment Banking	**11.1%**	**2.0%**

Future cash flows are based on forecast data from the latest multi-year profit trajectory forecasts for the business lines.

The discount rates were determined by taking into account:

- for the Regional Banks, Insurance, FSE, and Digital & Payments CGUs, based on a risk-free rate (10-year OAT) based on a 12-month average of the daily rates of the French State bond, to which is added a risk premium calculated on the basis of a sample of companies representative of each CGU;
- For the Asset & Wealth Management and Corporate & Investment Banking CGUs, the 10-year OAT (75%) and the 10-year US Treasury (25%) are averaged over a one-year period. This is then increased by a risk premium based on a sample of representative companies in the CGU, averaged over one year.

Sensitivity of recoverable values

A 50 bps increase in discount rates (assumption based on the historical annual variability observed over one year using 2013-2024 historical data) combined with a 50 bps reduction in perpetual growth rates would reduce the value in use of CGUs by:

- -7.4% for the Regional Banks CGU;
- -4.9% for the Insurance CGU;
- -6.0% for the Financial Solutions & Expertise CGU;
- -8.0% for the Asset & Wealth Management CGU;
- -8.7% for the Corporate & Investment Banking CGU (M&A activity);

and would not lead to the recognition of any impairment losses for these CGUs.

Similarly, the sensitivity of these CGUs' future cash flows, as forecast in the business plan, to changes in the main assumptions would not significantly affect their recoverable value:

- for the Regional Banks, the sensitivity of future business plan flows to a 5% decline in normative net income combined with a 25 basis point increase in the target prudential ratio would have a negative impact on the value of the CGU of -4.0% and no impact in terms of impairment;
- for BPCE Assurances, the sensitivity of future cash flows, as forecast in the business plan, to a 5% point fall in recurring net income combined with an increase in the capital adequacy ratio of 5 basis points would have a negative impact on the CGU's value of -4.0% and would have no impact in terms of impairment;
- for Financial Solutions & Expertise, the sensitivity of future cash flows, as forecast in the business plan, to a 5% point fall in recurring net income combined with an increase in the target prudential ratio of 25 basis points would have a negative impact on the CGU's value of -4.5% and would have no impact in terms of impairment;
- for Asset & Wealth Management, a 10% decline in the equity markets (a uniform decline across all years) would have a -11% negative impact on the CGU's recoverable value and would not lead to the recognition of impairment;
- for Corporate & Investment Banking, sensitivity to the dollar would have an insignificant impact on the recoverable amount and would not result in the recognition of impairment.

Note 4 / Notes to the income statement

Key points

Net banking income (NBI) includes:

- interest income and expenses;
- fees and commissions;
- net gains or losses on financial instruments at fair value through profit or loss;
- net gains or losses on financial instruments at fair value through other comprehensive income;
- net gains or losses arising from the derecognition of financial assets measured at amortized cost;
- net income from insurance activities;
- income and expenses from other activities.

4.1 Interest and similar income and expenses

Accounting principles

Interest income and expenses are recognized in the income statement for all financial instruments measured at amortized cost using the effective interest method, which includes interbank and customer items, the portfolio of securities at amortized cost, debt securities, subordinated debt and lease liabilities. This item also includes interest receivable on fixed income securities classified as financial assets at fair value through other comprehensive income and hedging derivatives, it being specified that accrued interest on cash flow hedging derivatives is taken to income in the same manner and period as the accrued interest on the hedged item.

Interest income also consists of interest on non-SPPI debt instruments not held under a trading model as well as interest on the related economic hedges (classified by default as instruments at fair value through profit or loss).

The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument to the net carrying amount of the financial asset or financial liability.

The effective interest rate calculation takes account of all transaction fees paid or received as well as premiums and discounts. Transaction fees paid or received that are an integral part of the effective interest rate of the contract, such as loan set-up fees and commissions paid to financial partners, are treated as additional interest.

Negative interest is presented as follows:

- a negative interest on an asset is presented as an interest expense in NBI;
- a negative interest on a liability is presented as interest income in NBI.

	2024 fiscal year			2023 fiscal year		
in millions of euros	Interest income	Interest expenses	Net	Interest income	Interest expenses	Net
Loans to/borrowings from banks[1]	9,592	(3,644)	5,949	9,425	(4,198)	5,227

TOTAL INTEREST INCOME AND EXPENSES	**56,997**	**(49,413)**	**7,584**	**50,593**	**(43,304)**	**7,289**

(1) Interest income on loans and advances with banks includes €3,301 million (€3,047 million in 2023 fiscal year) in respect of the remuneration of *Livret A*, LDD and LEP savings accounts centralized at the Caisse des Dépôts and Consignations.
(2) Interest income from financial assets with a known credit risk (S3) amounted to €802 million in 2024, including €801 million of financial assets at amortized cost (€766 million in 2023).

4.2 Fee and commission income and expenses

Accounting principles

Under IFRS 15 "Revenue from Contracts with Customers", recognition of revenue from ordinary activities reflects the transfer of control of goods and services promised to customers in an amount corresponding to the consideration that the entity expects to receive in exchange for these goods and services. The recognition of this revenue calls for a five-step approach:

- identification of contracts with customers;
- identification of specific performance obligations (or items) to be recognized separately from one another;
- determination of the overall transaction price;
- allocation of the transaction price to the various specific performance obligations;
- recognition of revenue when performance obligations are met.

This approach applies to contracts entered into by an entity with its customers, with the exception of leases (covered by IFRS 16), insurance contracts (covered by IFRS 17) and financial instruments (covered by IFRS 9). If specific stipulations relating to revenue or contract costs are given under a different standard, these will first be applied.

This method primarily applies to the following Group activities:

- commission income, notably that relating to banking services when this income is not included in the effective interest rate, or that relating to asset management or financial engineering services;
- income from other activities (see Note 4.6), in particular for services included in leases.

As a result, fees and commissions are recorded based on the type of service rendered and on the method of accounting for the financial instruments to which the service relates.

This line includes mainly fees and commissions receivable or payable on recurring services (payment processing, custody fees, etc.) and occasional services (fund transfers, late payment penalties, etc.), fees and commissions receivable or payable on execution of significant transactions, and fees and commissions receivable or payable on trust assets held or managed on behalf of the Group's customers.

However, fees and commissions that form an integral part of the effective yield on a contract are recorded under "Net interest income".

Commissions on services

Commissions on services are analyzed to separately identify their different items (or performance obligations) and to assign the appropriate share of revenues to each item. Each item is then recorded in the income statement by type of service provided, and according to the method used to recognize the associated financial instrument:

- fees and commissions payable or receivable on recurring services are deferred over the period in which the service is provided (payment processing, custody fees, etc.).
- fees and commissions payable or receivable on occasional services are recognized in full in income when the service is provided (fund transfers, payment penalties, etc.).
- commissions payable or receivable on execution of a significant transaction are recognized in full in income on completion of the transaction.

When there is some uncertainty about the amount of a commission (incentive fees in asset management, variable financial engineering fees and commissions, etc.), only the amount that the Group is already certain to receive, given the information available at the closing date, is recognized.

Fees and commissions that form an integral part of the effective yield on an instrument, such as fees on loan commitments given or loan set-up fees, are recognized and amortized as an adjustment to the effective interest rate over the estimated term of the applicable loan. These fees and commissions are recognized as "Interest income" rather than "Commission income".

Fiduciary and similar fees and commissions are those that result in assets being held or invested on behalf of individual customers, pension schemes or other institutions. Trust-management services mainly cover asset management business and custody services on behalf of third parties.

in millions of euros	2024 fiscal year			2023 fiscal year

(1) Of which performance fees of €77 million (€55 million for Europe) in 2024, compared with €82 million (€58 million for Europe) in 2023.

4.3 Gains (losses) on financial instruments at fair value through profit or loss

Accounting principles

"Gains (losses) on financial instruments at fair value through profit or loss" includes gains and losses (including the related interest) from financial assets and liabilities classified as held for trading or designated at fair value through profit or loss.

"Gains and losses on hedging transactions" include gains and losses arising from the revaluation of derivatives used as fair value hedges, as well as gains and losses from the revaluation of the hedged item in the same manner, the revaluation at fair value of the macro-hedged portfolio and the ineffective portion of cash flow hedges.

in millions of euros	2024 fiscal year	2023 fiscal year
Gains and losses on financial instruments mandatorily recognized at fair value through profit or loss[1]	**3,309**	**4,948**
Gains and losses on financial instruments designated at fair value through profit or loss	**(759)**	**(2,706)**
Gains and losses on financial assets designated at fair value through profit or loss	16	4

Ineffective portion of fair value hedges (FVH)	(1)	(139)
Changes in fair value hedges	*(1,105)*	*(1,816)*
Changes in fair value of hedged items	*1,104*	*1,677*
Gains and losses on foreign exchange transactions	**439**	**608**
TOTAL GAINS (LOSSES) ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS	**2,976**	**2,708**

(1) In the 2024 fiscal year, "Gains and losses on financial instruments mandatorily recognized at fair value through profit or loss" included:
- at December 31, 2024, a valuation adjustment recorded on the liability valuation of derivatives in respect of own credit risk (DVA) of -€57 million (expense) compared to an expense of -€33 million at December 31, 2023;
- in addition, the value adjustment concerning the valuation of the counterparty risk (CVA) of financial assets was -€35 million (expense) at December 31, 2024 compared to income of +€52 million at December 31, 2023;
- the Funding Valuation Adjustment (FVA) included in the valuation of non-collateralized or imperfectly collateralized derivatives is also recorded on this line for an amount of -€68 million (expense) at December 31, 2024 compared to -€2 million (expense) at December 31, 2023.

DAY ONE PROFIT

in millions of euros	2024 fiscal year	2023 fiscal year
Day one profit at the start of the year	**199**	**273**
Deferred profit on new transactions	426	194
Profit recognized in income during the year	(382)	(268)
DAY ONE PROFIT AT YEAR-END	**243**	**199**

4.4 Net gains (losses) on financial instruments at fair value through other comprehensive income

Accounting principles

Financial assets at fair value through other comprehensive income include:

- SPPI debt instruments managed under a hold to collect and sell business model at fair value through other comprehensive income recyclable to profit or loss. If they are sold, changes in fair value are taken to income;
- equity instruments at fair value through other comprehensive income not recyclable to profit or loss. In the event of disposal, changes in fair value are not transferred to profit or loss but are taken directly to consolidated reserves. Only dividends affect income when they correspond to a return on investment.

Changes in the value of SPPI debt instruments managed under a hold to collect and sell business model recognized at fair value through other comprehensive income recyclable to profit or loss include:

- income and expenses recognized in net interest income.
- net gains or losses on derecognized debt financial assets at fair value through other comprehensive income;
- impairment/reversals recognized in "Cost of credit risk";
- gains and losses recognized directly in other comprehensive income.

in millions of euros	2024 fiscal year	2023 fiscal year
Net gains or losses on debt instruments	(14)	(4)
Net gains or losses on equity instruments (dividends)	177	187
TOTAL NET GAINS (LOSSES) ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH OTHER COMPREHENSIVE INCOME	**163**	**183**

4.5 Gains (losses) arising from derecognition of financial assets at amortized cost

Accounting principles

This item includes net gains or losses on financial assets at amortized cost arising from the derecognition of financial assets at amortized cost (loans and advances, debt securities) and financial liabilities at amortized cost.

	2024 fiscal year			2023 fiscal year		
in millions of euros	Gains	Losses	Net	Gains	Losses	Net
Loans or advances to banks	16	(25)	(9)	26	(22)	4

TOTAL GAINS OR LOSSES ON FINANCIAL INSTRUMENTS AT AMORTIZED COST	**138**	**(141)**	**(4)**	**62**	**(53)**	**8**

4.6 Income and expenses from other activities

Accounting principles

Income and expenses from other activities mainly include:

- income and expenses on investment property (rental income and expense, gains and losses on disposals, depreciation, amortization and impairment);
- income and expenses on operating leases;
- income and expenses on real estate development activities (revenues, purchases used).

	2024 fiscal year			2023 fiscal year		
in millions of euros	Income	Expense	Net	Income	Expense	Net
Income and expenses from real estate activities	2	(1)	1	4	(5)	(1)

(1) Including, in 2023, €87 million of reversals related to the favorable outcome of the "*Échange Image-Chèque*" [Check Imaging Exchange] (EIC) fine.

Income and expenses from insurance activities are presented in Note 9.2.

4.7 Operating expenses

Accounting principles

Operating expenses include mainly payroll costs (wages and salaries net of rebilled amounts), social security charges, and employee benefit expenses such as pension costs. Operating expenses also include the full amount of administrative costs and external service costs.

in millions of euros	2024 fiscal year	2023 fiscal year
Payroll costs[(1)]	**(11,632)**	**(11,161)**
Taxes other than on income[(2)]	(414)	(886)
External services and other operating expenses	(3,671)	(3,604)
Other administrative costs[(2)]	**(4,086)**	**(4,490)**
Depreciation, amortization and impairment for property, plant and equipment and intangible assets[(1)]	(1,187)	(1,149)
Amounts attributed to acquisition costs net of amortization	12	26
Total overheads by nature[(1)]	(16,893)	(16,773)
Overheads from insurance activities attributable[(3)]	(510)	(445)
TOTAL OVERHEADS EXCLUDING NBI[(4)]	**(16,384)**	**(16,328)**
of which operating expenses	*(15,239)*	*(15,218)*
of which depreciation, amortization and impairment for property, plant and equipment and intangible assets	*(1,145)*	*(1,110)*

(1) Including all overheads by nature of all Group activities, including all overheads of the insurance activities presented in Note 9.2.8.
(2) Taxes other than on income included, in particular, the contribution to the SRF (Single Resolution Fund) for which there were no expenses in 2024 (compared to €457 million in 2023) and the TSC (Tax for the Support of Local Authorities) for €23 million in 2024 (compared to €23 million in 2023).
(3) Attributable expenses are deducted from total overheads and presented in NBI in accordance with IFRS 17 and ANC recommendation 2022-01.
(4) Operating expenses included €208 million in transformation and restructuring costs in 2024 (compared to €213 million in 2023).

Contributions to banking resolution mechanisms

The terms and conditions governing the establishment of the Deposit Resolution Guarantee Fund (FGDR) were amended by the Ministerial Order of October 27, 2015. For the Deposit Guarantee Fund, the cumulative amount of contributions made to the fund by the Group for deposit, collateral and securities guarantee mechanisms amount to €1,678 million. Contributions (which are non-refundable in the event of a voluntary withdrawal of approval to operate) represent €356 million. Contributions paid in the form of partner or association certificates and cash security deposits recognized as assets on the balance sheet totaled €1,323 million as of December 31, 2024.

European directive 2014/59/EU, known as the BRRD (the Bank Recovery and Resolution Directive), which sets out a framework for the recovery and resolution of banks and investment firms, and European Regulation No. 806/2014 (the Single Resolution Mechanism (SRM) Regulation) set up a resolution fund from 2015. In 2016, this fund became a Single Resolution Fund (SRF) between the Member States participating in the Single Supervisory Mechanism (SSM). The SRF is a resolution funding mechanism at the disposal of the resolution authority (Single Resolution Board). The latter may draw on this fund in the context of the implementation of the resolution procedures.

The Single Resolution Board set the level of contributions to the Single Resolution Fund for 2024 in accordance with Delegated Regulation 2015/63 and Implementing Regulation 2015/81 supplementing the BRRD on *ex-ante* contributions to bank resolution financing mechanisms. The target in terms of the funds to be collected for the resolution fund was achieved at December 31, 2023. The amount of the contributions paid by the Group was zero in 2024 for both the portion recognized as an expense and the portion in the form of an irrevocable payment commitment (IPC) guaranteed by cash deposits entered as assets on the balance sheet. However, contributions may be called in the future depending in particular on the evolution of the covered deposits and the possible use of the funds. The share of the IPCs corresponds to 15% of the calls for funds guaranteed by cash deposits until 2022 and 22.5% for the 2023 contribution. These deposits have been bearing interest at €STER -20 bps since May 1, 2023. The cumulative amount of contributions recognized as assets on the balance sheet totaled €645 million at December 31, 2024. It is recognized at amortized cost on the asset side of the balance sheet under "Accrued income and other assets" and was not impaired at December 31, 2024. In effect, the conditions for using the SRF resources, and therefore for calling on irrevocable payment commitments, are strictly governed by regulations. These resources may only be called up in the event of a resolution procedure by an institution and after intervention of at least 8% of total liabilities by shareholders and holders of relevant capital instruments and other commitments usable for bail-in purposes. In addition, the SRF contribution must not exceed 5% of the total liabilities of the institution subject to a resolution procedure.

4.8 Gains or losses on other assets

Accounting principles

Gains or losses on other assets includes gains and losses on disposals of property, plant and equipment and intangible assets, as well as gains and losses on disposals of consolidated investments in associates.

in millions of euros	2024 fiscal year	2023 fiscal year
Gains or losses on disposals of property, plant and equipment and intangible assets used in operations	11	11
Gains or losses on disposals of consolidated investments[1]	17	(3)
TOTAL GAINS OR LOSSES ON OTHER ASSETS	**28**	**8**

(1) Including -€24 million concerning the liquidation of Aurora, +€56 million concerning the disposal of Vialink, and -€15 million concerning the disposal of Natixis Moscow. (see Note 1.3 significant events)

Note 5 / Notes to the balance sheet

5.1 Cash and amounts due from central banks

Accounting principles

This item mainly includes cash and assets held with central banks at amortized cost.

in millions of euros	12/31/2024	12/31/2023
Cash	2,908	2,774
Central banks	130,278	149,895
TOTAL CASH AND AMOUNTS DUE FROM CENTRAL BANKS	**133,186**	**152,669**

5.2 Financial assets and liabilities at fair value through profit or loss

Accounting principles

Financial assets and liabilities at fair value through profit or loss comprise instruments held for trading, including derivatives; certain assets and liabilities that the Group chose to recognize at fair value at their date of acquisition or issue using the fair value option available under IFRS 9; and non-SPPI assets.

The criteria for classification as financial assets are described in Note 2.5.1.

Date of recognition

Securities are recorded in the balance sheet on the settlement-delivery date.

Temporary sales of securities are also recorded on the settlement-delivery date.

When such transactions are recorded under "Assets and liabilities at fair value through profit or loss", the commitment is recorded as an interest rate derivative.

The first-in, first-out (FIFO) method is applied to any partial disposals of securities, except in special cases.

5.2.1 Financial assets at fair value through profit or loss

Accounting principles

Financial assets at fair value through profit or loss are:

- financial assets held for trading, *i.e.* securities acquired or issued principally for the purpose of selling them in the near term;
- financial assets that the Group has chosen to recognize at fair value through profit or loss at inception using the fair value option available under IFRS 9. The qualifying criteria used when applying this option are described above;
- non-SPPI debt instruments;
- equity instruments measured by default at fair value through profit or loss (which are not held for trading purposes).

These assets are measured at fair value at the date of initial recognition and at each closing date. Changes in fair value over the period, interest, dividends, and gains or losses on disposals on these instruments are recognized in "Gains (losses) on financial instruments at fair value through profit or loss", with the exception of non-SPPI debt financial assets whose interest is recorded in "Interest income".

Financial assets in the trading book mainly include proprietary securities transactions, repurchase agreements and derivatives contracted by the Group to manage its risk exposure.

Assets designated at fair value through profit or loss

IFRS 9 allows entities to designate financial assets at fair value through profit or loss on initial recognition. However, an entity's decision to do so may not be reversed.

Compliance with the criteria stipulated by the standard must be verified prior to any recognition of an instrument using the fair value option.

This option may only be applied to eliminate or significantly reduce an accounting mismatch. Applying the option eliminates accounting mismatches stemming from the application of different valuation rules to instruments managed under a single strategy.

Financial assets in the trading book mainly include proprietary securities transactions, repurchase agreements and derivatives contracted by the Group to manage its risk exposure.

(1) Consisting of non-SPPI assets that fall outside the scope of a trading activity including units of UCITS and private equity investment funds (FCPR) presented in bonds and other debt securities (€6,010 million at December 31, 2024, *versus* €5,705 million at December 31, 2023). Loans to customers include, among others, certain non-SPPI loans. This category also includes equity instruments the Group decided not to recognize through other comprehensive income for a total of €2,892 million at December 31, 2024, *versus* €2,605 million at December 31, 2023.

(2) The criteria used by Groupe BPCE to categorize financial assets at fair value through profit or loss if they do not meet the SPPI criterion are provided in Note 2.5.1.

(3) Only in the case of an "accounting mismatch".

(4) This information is presented after netting effects, in accordance with IAS 32 (see Note 5.18.1).

(5) Restated figures for 2023 (see 6.1.4 Statement of changes in equity).

5.2.2 Financial liabilities at fair value through profit or loss

Accounting principles

These are financial liabilities held for trading or classified in this category on a voluntary basis at initial recognition using the fair value option available under IFRS 9. The trading book includes liabilities arising from short-selling transactions, repurchase agreements and derivatives. The qualifying criteria used when applying this option are described above.

These liabilities are measured at fair value at the date of initial recognition and at each closing date.

The changes in fair value over the period, interest, and gains or losses related to these instruments are booked as "Gains (losses) on financial instruments at fair value through profit or loss", with the exception of changes in fair value attributable to own credit risk associated with financial liabilities designated at fair value through profit or loss, which have been booked, since January 1, 2016, in "Revaluation of own credit risk on financial liabilities designated at fair value through profit or loss" within "Gains and losses recognized directly in other comprehensive income". If the liability is derecognized before its maturity (early redemption, for example), fair value gains or losses attributable to own credit risk are directly transferred to consolidated reserves.

Financial liabilities designated at fair value through profit or loss

IFRS 9 allows entities to designate financial liabilities at fair value through profit or loss on initial recognition. However, an entity's decision to do so may not be reversed.

Compliance with the criteria stipulated by the standard must be verified prior to any recognition of an instrument using the fair value option.

In practice, this option may be applied only under the specific circumstances described below:

Elimination of or significant reduction in an accounting mismatch

Applying the option eliminates accounting mismatches stemming from the application of different valuation rules to instruments managed under a single strategy.

Harmonization of accounting treatment for management and performance measurement

The option applies for liabilities managed and measured at fair value, provided that such management is based on a formally documented risk management policy or investment strategy, and that internal monitoring also relies on a fair value measurement.

Hybrid financial instruments containing one or more embedded derivatives

An embedded derivative is a component of a financial or non-financial hybrid (combined) instrument that qualifies as a derivative. It must be separated from the host contract and accounted for as a derivative if the hybrid instrument is not measured at fair value through profit or loss, and if the economic characteristics and risks associated with the derivative are not closely related to those of the host contract.

The fair value option may be applied to a financial liability when the embedded derivative substantially modifies the cash flows of the host contract and when the separate recognition of the embedded derivative is not specifically prohibited by IFRS 9 (*e.g.* an early redemption option embedded in a debt instrument). The option allows the entire instrument to be measured at fair value and therefore avoids the need to extract, recognize or separately measure the embedded derivative.

This accounting treatment applies in particular to some structured debt issues containing material embedded derivatives.

Financial liabilities in the trading book include liabilities arising from short-selling transactions, repurchase agreements and derivatives.

(2) Restated figures for 2023 (see 6.1.4 Statement of changes in equity).

These liabilities are measured at fair value on the closing date with changes in value, including coupon, recorded in the "Gains (losses) on financial instruments at fair value through profit or loss" line on the income statement, with the exception of changes in fair value attributable to own credit risk associated with financial liabilities designated at fair value through profit or loss, which are recognized in "Revaluation of own credit risk on financial liabilities designated at fair value through profit or loss" in accordance with IFRS 9.

Conditions for designating financial liabilities at fair value through profit or loss

At Group level, financial liabilities designated at fair value through profit or loss are mostly held by the Global Financial Services division. They mainly comprise issues originated and structured for customers and for which the risks and hedges are managed collectively. These issues include significant embedded derivatives for which changes in value are offset by those of the derivative instruments hedging them.

Financial liabilities designated at fair value through profit or loss, excluding Global Financial Services, also include some structured debt issues and structured deposits containing embedded derivatives (*e.g.* structured medium-term notes and equities for personal savings plans).

The cumulative amount of changes in fair value reclassified in the "Consolidated reserves" component during the period concerns the repayments of "Debt securities" classified as "Financial liabilities at fair value" and amounts to €0 million at December 31, 2024.

The amount contractually due on loans at maturity comprises the outstanding principal amount at the reporting date plus accrued interest not yet due. In the case of securities, the redemption value is generally used.

Total revaluations attributable to own credit risk came to €315 million at December 31, 2024, *versus* €332 million at December 31, 2023. The change is recorded in non-recyclable gains and losses recognized directly in other comprehensive income.

5.2.3 Trading derivatives

Accounting principles

A derivative is a financial instrument or other contract with all three of the following characteristics:

- its value changes in response to the change in a specific interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided that, in the case of a non-financial variable, this variable may not be specific to one of the parties to the contract;
- it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors;
- it is settled at a future date.

All derivatives are recognized on the balance sheet at the trade date and are measured at fair value at inception. They are remeasured at their fair value at each reporting period regardless of whether they were acquired for trading or hedging purposes.

Trading derivatives are recognized on the balance sheet under "Financial assets at fair value through profit or loss" and "Financial liabilities at fair value through profit or loss". Realized and unrealized gains and losses are taken to income on the "Gains or losses on financial instruments at fair value through profit or loss" line.

The notional amounts of derivative instruments are merely an indication of the volume of the Group's business in financial instruments and do not reflect the market risks associated with such instruments. Positive or negative fair values represent the replacement value of these instruments. These values may vary significantly depending on changes in market parameters.

in millions of euros	12/31/2024 Notional amount	12/31/2024 Positive fair value[1]	12/31/2024 Negative fair value	12/31/2023 Notional amount	12/31/2023 Positive fair value	12/31/2023 Negative fair value

o/w on organized markets	*330,863*	*1,856*	*1,018*	*328,300*	*1,767*	*432*
o/w over-the-counter transactions	*17,933,985*	*51,767*	*42,539*	*12,750,879*	*41,199*	*34,578*

(1) The positive fair value of derivative transactions includes €7 million at December 31, 2024 (*versus* €56 million at December 31, 2023) in respect of the insurance activity. It is presented on the assets side of the balance sheet under "insurance activities financial investments" (see Note 9.2.4).

5.3 Hedging derivatives

Accounting principles

A derivative is a financial instrument or other contract with all three of the following characteristics:

- its value changes in response to the change in a specific interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided that, in the case of a non-financial variable, this variable may not be specific to one of the parties to the contract;
- it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors;
- it is settled at a future date.

All derivatives are recognized on the balance sheet at the trade date and are measured at fair value at inception. They are remeasured at their fair value at each reporting period regardless of whether they were acquired for trading or hedging purposes.

Changes in the fair value of derivatives are recognized in net income for the period, except for derivatives qualifying as cash flow hedges or as hedges of net investments in foreign operations for accounting purposes.

Derivatives may only be designated as hedges if they meet the criteria set out in IAS 39 at inception and throughout the term of the hedge. These criteria include formal documentation that the hedging relationship between the derivatives and the hedged items is both prospectively and retrospectively effective.

Fair value hedges mainly consist of interest rate swaps that protect fixed-rate financial instruments against changes in fair value attributable to changes in market interest rates. They transform fixed-rate assets or liabilities into floating-rate instruments. Fair value hedges include, in particular, hedges of loans, securities, deposits and fixed-rate subordinated debt.

Fair value hedging is also used to manage the overall interest rate risk position.

Cash flow hedges fix or control the variability of cash flows arising from floating-rate instruments. Cash flow hedging is also used to manage the overall interest rate risk position.

The notional amounts of derivative instruments are merely an indication of the volume of the Group's business in financial instruments and do not reflect the market risks associated with such instruments.

The hedging relationship qualifies for hedge accounting if, at the inception of the hedge, there is formal documentation of the hedging relationship identifying the hedging strategy, the type of risk hedged, the designation and characteristics of the hedged item and the hedging instrument. In addition, the effectiveness of the hedge must be demonstrated at inception and subsequently verified.

Derivatives contracted as part of a hedging relationship are designated according to the purpose of the hedge.

Groupe BPCE chose the option available in IFRS 9 not to apply the provisions of the standard relative to hedge accounting, and to continue to apply IAS 39, as adopted by the European Union, for the recognition of these transactions, *i.e.* excluding certain provisions relating to macro-hedging.

Fair value hedges

Fair value hedges are intended to reduce exposure to changes in the fair value of an asset or liability carried on the balance sheet, or of a firm commitment, in particular the interest rate risk on fixed-rate assets and liabilities.

The gain or loss on the revaluation of hedging instruments attributable to the risk being hedged is recognized in income in the same manner as the gain or loss on the hedged item. The ineffective portion of the hedge, if any, is recorded in the income statement under "Gains or losses on financial instruments at fair value through profit or loss".

Accrued interest on the hedging instrument is taken to income in the same manner as the accrued interest on the hedged item.

Where identified assets or liabilities are hedged, the revaluation of the hedged component is recognized on the same line of the balance sheet as the hedged item.

The ineffective portion relating to the dual-curve valuation of collateralized derivatives is taken into account when calculating the effectiveness of a hedge.

If a hedging relationship ceases (investment decision, failure to fulfill effectiveness criteria, or because the hedged item is sold before maturity), the hedging instrument is transferred to the trading book. The revaluation difference recorded in the balance sheet in respect of the hedged item is amortized over the residual life of the initial hedge. If the hedged item is sold before maturity or redeemed early, the cumulative amount of the revaluation gain or loss is recognized in net income for the period.

Cash flow hedges

The purpose of cash flow hedges is to hedge the exposure to the variability of cash flow that is attributable to a particular risk associated with a recognized asset or liability or with a future transaction (hedge of interest rate risk on floating-rate assets or liabilities, hedge of conditions relating to future transactions such as future fixed interest rates, future prices, exchange rates, etc.).

The portion of the gain or loss on the hedging instrument that is deemed to be an effective hedge is recognized on a separate line of "Gains and losses recognized directly in equity". The ineffective portion of the gain or loss on the hedging instrument is recorded in the income statement under "Gains or losses on financial instruments at fair value through profit or loss".

Accrued interest on the hedging instrument is taken to income under interest income in the same manner as the accrued interest on the hedged item.

The hedged items are accounted for using the treatment applicable to their specific asset category.

If a hedging relationship ceases (because the hedge no longer meets the effectiveness criteria, the derivative is sold or the hedged item ceases to exist), the cumulative amounts recognized in other comprehensive income are transferred to the income statement as and when the hedged item impacts profit or loss, or immediately if the hedged item ceases to exist.

Special case: portfolio hedging (macro-hedging)

Documentation as cash flow hedges

Some Group institutions document their macro-hedging of interest rate risk as cash flow hedges (hedging of portfolios of loans or borrowings).

In this case, the portfolios of assets or liabilities that may be hedged are, for each maturity band:

- floating-rate assets and liabilities; the entity incurs a risk of variability in future cash flows from floating-rate assets or liabilities insofar as future interest rate levels are not known in advance;
- future transactions deemed to be highly probable (forecasts): assuming total outstandings remain constant, the entity is exposed to the risk of variability in future cash flows on future fixed-rate loans insofar as the interest rate at which the loan will be granted is not yet known. Similarly, the Group may be exposed to the risk of variability in future cash flows on the funding that it will need to raise in the market.

IAS 39 does not permit the designation of a net position by maturity band. The hedged item is therefore deemed to be equivalent to a share of one or more portfolios of identified floating-rate instruments (portion of deposit outstandings or floating-rate loans); the effectiveness of the hedges is measured by creating a hypothetical instrument for each maturity band and comparing its changes in fair value from inception to those for the documented hedging derivatives.

The characteristics of this instrument model those of the hedged item. Effectiveness is then assessed by comparing the changes in value of the hypothetical instrument with the actual hedging instrument. This method requires the preparation of a maturity schedule.

The effectiveness of the hedge must be shown prospectively and retrospectively.

The hedge is effective prospectively if, for each target maturity band, the nominal amount of items to be hedged is higher than the notional amount of the hedging instruments.

The retrospective test calculates the retrospective effectiveness of a hedge initiated at various balance sheet dates.

At each balance sheet date, changes in the fair value of hedging instruments, excluding accrued interest, are compared with those of hypothetical instruments. The ratio of their respective changes should be between 80% and 125%.

If the hedged item is sold or the future transaction is no longer highly probable, the cumulative unrealized gain or loss recognized in other comprehensive income is transferred immediately to profit or loss.

When the hedging relationship ceases, if the hedged item is still shown on the balance sheet, or if it is still highly probable, unrealized cumulative gains and loss in comprehensive income are amortized on a straight-line basis. If the derivative has not been canceled, it is reclassified as a trading derivative, and subsequent changes in its fair value are recognized in income.

Documentation as fair value hedges

Some of the Group's institutions document their macro-hedging of interest rate risk as fair value hedges by applying the carve-out arrangements under IAS 39 as adopted by the European Union.

The version of IAS 39 adopted for use by the European Union does not include certain hedge accounting provisions that appear incompatible with the strategies implemented by European banks to reduce their overall exposure to interest rate risk. In particular, this carve-out allows the Group to make use of hedge accounting for interbank interest rate risk on customer transactions at fixed rates (loans, savings accounts and demand deposits). The Group mainly uses plain vanilla interest rate swaps designated at inception as fair value hedges of fixed-rate deposits or loans.

Macro-hedging derivatives are accounted for in the same manner as derivatives used to hedge the fair value of specific transactions (micro-hedging).

In a macro-hedging relationship, gains and losses on the revaluation of the hedged item are recorded in "Revaluation differences on interest rate risk, hedged portfolios assets", under balance sheet assets for hedges of a portfolio of financial assets and under balance sheet liabilities for hedges of a portfolio of financial liabilities.

The hedges are deemed effective if the derivatives offset the interest rate risk on the underlying fixed-rate portfolio. The ineffective portion relating to the dual-curve valuation of collateralized derivatives is taken into account.

Effectiveness is tested in two ways:

- asset-based testing: for plain vanilla swaps designated as hedging instruments at inception, the Group verifies that no over-hedging exists both prospectively at the date the hedging relationship is designated and retrospectively at each balance sheet date;
- quantitative testing: for other swaps, the change in the fair value of the actual swap must offset the changes in the fair value of a hypothetical instrument that exactly reflects the underlying hedged item. These tests are conducted prospectively at the date the instrument is designated as a hedge and retrospectively at each balance sheet date.

If a hedging relationship ceases, the revaluation adjustment is amortized on a straight-line basis over the remaining term of the initial hedge, if the hedged item has not been derecognized. It is taken directly to income if the hedged item is no longer recorded in the balance sheet. In particular, derivatives used for macro-hedging may be disqualified for hedge accounting purposes when the nominal amount of the hedged items falls below the notional amount of the hedging instruments, for example in the case of the prepayment of loans or the withdrawal of deposits observed and modeled.

Hedges of net investments in foreign operations

A net investment in a foreign operation is the amount of the investment held by the consolidating entity in the net assets of the operation.

The purpose of a hedge of a net investment in a foreign operation is to minimize the foreign exchange effect for a consolidating entity of an investment in an entity whose functional currency is different from the presentation currency of the consolidating entity's financial statements. Net investment hedges are accounted for in the same manner as cash flow hedges.

Unrealized gains and losses initially recognized in other comprehensive income are taken to income when the net investment is sold in full or in part (or when partially sold with loss of control).

Fair value hedges mainly consist of interest rate swaps that protect fixed-rate financial instruments against changes in fair value attributable to changes in market interest rates. They transform fixed-rate assets or liabilities into floating-rate instruments.

Fair value macro-hedges are used to manage the overall interest rate risk position, in particular to hedge:

- fixed-rate loan portfolios;
- demand deposits;
- PEL home purchase savings deposits;
- the inflation component of the *Livret A* or *Livret d'Epargne Populaire* (LEP) savings accounts.

In the Ministerial Order of July 28, 2023, the government decided to set the rate of the *Livret A* savings account at 3%, until January 31, 2025, by way of an exception to the regulatory calculation formula. The absence of an inflation component during this period was taken into account by the Group as a source of ineffectiveness (or, where applicable, disqualification) of the hedges of the inflation component of the *Livret A* savings account, with no significant impact on income.

Fair value micro-hedges are notably used to hedge:

- fixed-rate liabilities;
- fixed-rate liquidity reserve securities and inflation-indexed securities.

Cash flow hedges fix or control the variability of cash flows arising from floating-rate instruments. Cash flow hedging is also used to manage the overall interest rate risk position.

Cash flow hedges are mainly used to:

- hedge floating-rate liabilities;
- hedge the risk of changes in value of future cash flows on liabilities;
- provide macro-hedging of floating-rate assets.

The main causes of ineffective hedging are related to:

- inefficiency due to "dual-curve" valuations: the value of collateralized derivatives (with margin calls yielding €STR) is based on the €STR discount curve, while the fair value of the hedged component of the item hedged is calculated using a EURIBOR discount curve;
- the time value of options;
- over-hedging for asset-based testing of macro-hedges (notional amounts of hedging derivatives higher than the nominal amount of the hedged items, in particular where prepayments on the hedged items were higher than expected);
- credit value adjustments and debit value adjustments linked to credit risk and own credit risk on derivatives;
- differences in interest rate fixing dates between the hedged item and the hedge.

The notional amounts of derivative instruments are merely an indication of the volume of the Group's business in financial instruments and do not reflect the market risks associated with such instruments.

(1) The positive fair value of hedging derivatives included €82 million at December 31, 2024 (*versus* €87 million at December 31, 2023) in respect of insurance activity. It is presented on the assets side of the balance sheet under "Insurance activities financial investments" (See Note 9.2.1).

All hedging derivatives are included in "Hedging derivatives" in balance sheet assets and liabilities.

Currency swaps are documented both as interest rate fair value hedges and as currency cash flow hedges. Total fair value is nevertheless recorded under currency derivatives. These derivatives were mainly recorded under currency fair value hedges and are recorded under currency cash flow hedges in order to better reflect the weight of the currency component (associated with the cash flow hedge) in total fair value.

5.4 Financial assets at fair value through other comprehensive income

Accounting principles

Financial assets at fair value through other comprehensive income are initially recognized at fair value, plus any transaction costs.

Debt instruments measured at fair value through other comprehensive income recyclable to profit or loss

For each reporting period, these instruments are carried at their fair value and changes in fair value (excluding accrued interest) are recorded under "Gains and losses recognized directly in other comprehensive income recyclable to profit or loss" (as the foreign currency assets are monetary assets, changes in the fair value of the foreign currency component affect income). The principles used to determine fair value are described in Note 10.

These instruments are subject to IFRS 9 impairment requirements. Information about credit risk is provided in Note 7.1. If they are sold, these changes in fair value are taken to income.

Interest income accrued or received on debt instruments is recorded under "Interest and similar income" based on the effective interest method. This method is described in Note 5.5 "Assets at amortized cost".

Equity instruments measured at fair value through other comprehensive income not recyclable to profit or loss

For each reporting period, these instruments are carried at their fair value and changes in fair value are recorded under "Gains and losses recognized directly in other comprehensive income not recyclable to profit or loss" (as the foreign currency assets are not monetary assets, changes in the fair value of the foreign currency component do not affect income). The principles used to determine fair value are described in Note 10.

The designation at fair value through other comprehensive income not recyclable to profit or loss is an irrevocable option that is applied on an instrument-by-instrument basis only to equity instruments not held for trading purposes. Realized and unrealized losses continue to be recorded in other comprehensive income with no impact on income. These financial assets are not impaired.

In the event of disposal, changes in fair value are not transferred to profit or loss but are taken directly to consolidated reserves.

Only dividends affect income when they correspond to a return on investment. They are recorded in "Net gains (losses) on financial instruments at fair value through other comprehensive income" (Note 4.4).

in millions of euros	12/31/2024	12/31/2023
Loans and advances	119	459
Debt securities	52,479	43,513
Shares and other equity securities[1]	4,568	4,102
FINANCIAL ASSETS AT FAIR VALUE THROUGH OTHER COMPREHENSIVE INCOME	**57,166**	**48,073**
Of which impairment for expected credit losses[2]	(34)	(26)
Of which gains and losses recognized directly in equity (before tax)[3]	(518)	(395)
• *Debt instruments*	*(864)*	*(656)*
• *Equity instruments*	*346*	*261*

(1) Shares and other equity securities include strategic equity interests and certain long-term private equity securities. As these securities are not held for sale, their classification as equity instruments designated at fair value through other comprehensive income is appropriate.
(2) Details presented in Note 7.1.2.2.
(3) Including the portion attributable to non-controlling interests (-€2 million at December 31, 2024, compared with -€3 million at December 31, 2023).

EQUITY INSTRUMENTS DESIGNATED AT FAIR VALUE THROUGH OTHER COMPREHENSIVE INCOME

Accounting principles

Equity instruments designated at fair value through other comprehensive income can include:

- investments in associates;
- shares and other equity securities.

On initial recognition, equity instruments designated at fair value through other comprehensive income are carried at fair value plus any transaction costs.

On subsequent closing dates, changes in the fair value of the instrument are recognized in other comprehensive income (OCI).

These changes in fair value that accrue to other comprehensive income will not be reclassified to profit or loss in subsequent years (other comprehensive income not recyclable to profit or loss).

Dividends are only taken to income when they meet the required conditions.

in millions of euros	12/31/2024				12/31/2023			
		Dividends recognized over the period	Derecognition over the period			Dividends recognized over the period	Derecognition over the period	
	Fair value	Equity instruments held at the end of the period	Fair value at the disposal date	Total profit or loss at the disposal date	Fair value	Equity instruments held at the end of the period	Fair value at the disposal date	Total profit or loss at the disposal date
Investments in associates	3,565	169	124	(28)	3,192	178	61	(16)
Shares and other equity securities	1,003	8	0	(0)	910	9	91	(2)
TOTAL	**4,568**	**177**	**124**	**(28)**	**4,102**	**187**	**152**	**(18)**

Investments in associates include strategic investments, "tool" entities (IT for example) and certain long-term private equity securities. As these equity investments are not held for sale, their classification as equity instruments designated at fair value through other comprehensive income is appropriate.

The cumulative amount of changes in fair value reclassified to the "Consolidated reserves" component during the period mainly concerns the liquidation of non-consolidated securities and amounts to -€28 million at December 31, 2024, compared to -€8 million at December 31, 2023.

5.5 Assets at amortized cost

Accounting principles

Assets at amortized cost are SPPI financial assets managed under a hold to collect business model. Most loans originated by the Group are classified in this category. Information about credit risk is provided in Note 7.1.

Financial assets at amortized cost include loans and advances to banks and customers as well as securities at amortized cost such as treasury bills and bonds.

Loans and advances are initially recorded at fair value plus any costs and less any income directly related to the arrangement of the loan or to the issue.

When loans are extended under conditions that are less favorable than market conditions, a discount corresponding to the difference between the nominal value of the loan and the sum of future cash flows discounted at the market interest rate is deducted from the nominal value of the loan. The market interest rate is the rate applied by the vast majority of local financial institutions at a given time for instruments and counterparties with similar characteristics.

On subsequent closing dates, these financial assets are measured at amortized cost using the effective interest method.

The effective interest rate is the rate that exactly discounts estimated future cash flows to the carrying amount of the loan at inception. This rate includes any discounts recorded in respect of loans granted at below-market rates, as well as any external transaction income or costs directly related to the implementation of the loans, which are treated as an adjustment to the effective yield on the loan. No internal cost is included in the calculation of amortized cost.

State-guaranteed loans

The State-guaranteed loan (SGL) is a support scheme set up under Article 6 of the amended French Finance act for 2020 (act No. 2020-289 of March 23, 2020) and the ministerial order issued by the Minister of the Economy and Finance on March 23, 2020, establishing a State guarantee for credit institutions and financing companies from March 16, 2020, to meet the cash flow requirements of companies impacted by the Covid-19 health crisis. The scheme was extended until June 30, 2022, by Finance act No. 2021-1900 of December 30, 2021 for 2022. The SGL is subject to common eligibility criteria applicable by all institutions issuing the loan, as set out by law.

The SGL is a one-year loan with capital repayments deferred for this period. The beneficiary companies may decide, at the end of the first year, to repay the SGLs over one to five additional years or to start repaying the capital only from the second year of the repayment period, paying only the interest and the cost of the State guarantee in the meantime.

For eligible companies, the amount of the SGL is generally capped at 25% of the company's revenues (excluding innovative and recently created companies, and excluding the Seasonal SGL for customers in the Tourism/Hotels/Catering sector, for example). The SGL provides a guarantee covering between 70% and 90% of the loan, depending on the size of the company. The issuing bank incurs the residual risk. The State guarantee covers a portion of the total amount due on the loan (principal, interest and incidental expenses) until it becomes due. The State guarantee may be enforced before the loan is due if a credit event should occur.

The prepayment penalty is set in the contract, at a reasonable level (2% of the principal amount outstanding during the initial loan period, then 3%-6% of the principal amount outstanding during the repayment period). The terms and conditions for extending the loan are not set in advance but are established two to three months before the extension option expires, in line with market conditions.

The SGLs may not be covered by another collateral security or guarantee besides the State guarantee, with the exception of those granted pursuant to a ministerial order by the Minister of the Economy and Finance. The self-employed professional or business leader may request or be offered loan repayment Insurance, but such Insurance is not mandatory.

In view of these features, the SGLs meet the criteria of a basic lending arrangement (see Note 2.5.1). These loans are therefore recognized at amortized cost, because they are managed in a hold to collect business model (see Note 2.5.1). On subsequent closing dates, they will be measured at amortized cost using the effective interest method.

The State guarantee is considered to be an integral part of the terms of the loan and is taken into account when calculating impairment for expected credit losses. The guarantee fee paid to the government by Groupe BPCE on granting the loan is recorded in income over the initial term of the SGL, using the effective interest method. The impact is recognized in net interest income.

A State-guaranteed loan granted to a borrower considered to be non-performing on inception (Stage 3) is classified as a POCI (Purchased or Originated Credit-Impaired) asset.

However, the grant of a State-guaranteed loan to a given counterparty is not in itself evidence of deterioration in risk, requiring a downgrade to Stage 2 or 3 of the other outstandings of this counterparty.

The Resilience SGL, opened on April 6, 2022, is an additional SGL for companies impacted by the consequences of the conflict in Ukraine (in particular for companies that are at – or close to – the 25% ceiling of the SGL). The authorized ceiling is 15% of the average revenue over the last three fiscal years, or the last two fiscal years if they have only two fiscal years or the last fiscal year if they only have one fiscal year, or calculated as annualized revenue using a straight-line projection based on revenue achieved to date if they have no closed fiscal year. Except for its amount, subject to the new ceiling of 15% of revenue, the additional SGL takes the same form as the SGLs introduced at the beginning of the health crisis: same maximum duration (up to six years), same minimum repayment-free period (12 months), same guaranteed portion and guarantee premium. The Resilience SGL could be fully combined with any SGLs already obtained until June 30, 2022. This system was extended until December 31, 2023, as part of the amended French Finance act for 2023.

Loan renegotiations and restructuring

When contracts are modified, IFRS 9 requires the identification of financial assets that are renegotiated, restructured or otherwise modified (whether or not as a result of financial hardship), but not subsequently derecognized. Any profit or loss arising from the modification of a contract is recognized in income. The gross carrying amount of the financial asset must be recalculated so it is equal to the present value of the renegotiated or amended contractual cash flows at the initial effective interest rate. The materiality of the modifications is, however, analyzed on a case by case basis.

"Restructured" amounts correspond to loans where an arrangement has been reached that represents a concession to debtors in financial hardship or in danger of being so. "Restructured" amounts therefore require a combination of two elements: a concession and financial difficulties.

To qualify as a "restructuring", an arrangement must result in a more favorable situation for the debtor (*e.g.* suspended payments of interest or principle, extension of maturities, etc.) and take the form of additional clauses to an existing contract or the full or partial refinancing of an existing loan.

Financial difficulty is measured by a number of criteria, such as payments more than 30 days past due or an at-risk classification. The arrangement of a restructuring does not necessarily mean the counterparty in question is classed as in default by Basel standards. Whether they are classed as in default depends on the viability test carried out during the counterparty's restructuring.

In the event of restructuring following a proven credit loss event, the loan is considered as an impaired loan (in Stage 3) and is subject to a discount equal to the difference between the present value of the initially expected contractual cash flows and the discounting of the future expected capital and interest flows following the restructuring. The discount rate used is the initial effective interest rate. This discount is expensed to "Cost of credit risk" in the income statement and offset against the corresponding item on the balance sheet. It is written back to net interest income in the income statement over the life of the loan using an actuarial method. If the discount is immaterial, the effective interest rate on the restructured loan is adjusted and no discount is recognized.

The restructured loan is reclassified as performing (not impaired, Stage 1 or Stage 2) when no uncertainty remains as to the borrower's capacity to honor the commitment.

For substantially restructured loans (for example, the conversion of all or part of a loan into an equity instrument), the new instruments are booked at fair value. The difference between the carrying amount of the derecognized loan (or portion of the loan) and the fair value of the assets received in exchange is taken to income under "Cost of credit risk". Any previously established impairment loss on the loan is adjusted. It is fully reversed in the event of full conversion of the loan into new assets.

The widespread moratoria granted to business customers in response to temporary cash flow difficulties arising from the Covid-19 crisis modified these loans' repayment schedules without substantially modifying their features. These loans were therefore amended without being derecognized. In addition, the granting of the moratorium is not in itself an indication of financial distress for the companies in question.

Fees and commissions

Costs directly attributable to the arrangement of loans are external costs which consist primarily of commissions paid to third parties such as business provider fees.

Income directly attributable to the issuance of new loans principally comprises set-up fees charged to customers, rebilled costs and loan commitment fees (if it is more probable than improbable that the loan will be drawn down). Loan commitment fees received that will not result in any drawdowns are apportioned on a straight-line basis over the life of the commitment.

Expenses and income arising on loans with a term of less than one year at inception are deferred on a *pro rata* basis with no recalculation of the effective interest rate. For floating or adjustable rate loans, the effective interest rate is adjusted at each rate resetting date.

Date of recognition

Loans and securities are recorded in the balance sheet on the settlement-delivery date.

Temporary sales of securities are also recorded on the settlement-delivery date.

The first-in, first-out (FIFO) method is applied to any partial disposals of securities, except in special cases.

For repurchase transactions, a loan commitment given is recorded between the transaction date and the settlement-delivery date.

5.5.1 Securities at amortized cost

in millions of euros	12/31/2024	12/31/2023
Treasury bills and equivalent	15,967	14,523
Bonds and other debt securities	11,307	11,990
Impairment for expected credit losses	(252)	(140)
TOTAL SECURITIES AT AMORTIZED COST	**27,021**	**26,373**

The fair value of securities at amortized cost is presented in Note 10.

The classification of outstanding loans and impairment for credit losses by stage is detailed in Note 7.1.

5.5.2 Loans and advances to banks and similar at amortized cost

in millions of euros	12/31/2024	12/31/2023
Current accounts with overdrafts	5,556	5,907
Repurchase agreements	580	935
Accounts and loans[1]	106,876	98,885
Other loans or advances to banks and similar	76	99
Security deposits paid	2,814	2,911
Impairment for expected credit losses	(41)	(106)
TOTAL LOANS AND ADVANCES TO BANKS	**115,862**	**108,631**

(1) *Livret A*, LDD and LEP savings accounts centralized with Caisse des Dépôts et Consignations and recorded under "Accounts and loans" amounted to €101 billion at December 31, 2024, *versus* €96 billion at December 31, 2023.

The fair value of loans and advances due to banks and similar is presented in Note 10.

The classification of outstanding loans and impairment for credit losses by stage is detailed in Note 7.1.

5.5.3 Loans and advances to customers at amortized cost

in millions of euros	12/31/2024	12/31/2023
Current accounts with overdrafts	**11,379**	**10,832**
Other facilities granted to customers	**847,683**	**834,018**
Loans to financial sector customers	24,623	19,357
Credit facilities[(1)]	126,426	124,110
Equipment loans	221,381	212,922
Home loans	430,823	435,375
Export loans	3,185	2,675
Repurchase agreements	2,481	2,088
Finance leases	22,773	21,815
Subordinated loans	469	366
Other loans	15,524	15,310
Other loans or advances to customers	**5,935**	**7,274**
Security deposits paid	**1,488**	**1,548**
Gross loans and advances to customers	**866,485**	**853,672**
Impairment for expected credit losses	(14,642)	(14,215)
TOTAL LOANS AND ADVANCES TO CUSTOMERS	**851,843**	**839,457**

(1) The State-guaranteed loans (SGL) are included in short-term credit facilities and totaled €10 billion at December 31, 2024, *versus* €17 billion at December 31, 2023.

The fair value of loans and advances to customers is presented in Note 10.

The classification of outstanding loans and impairment for credit losses by stage is detailed in Note 7.1.

5.6 Accrued income and other assets

in millions of euros	12/31/2024	12/31/2023[(1)]
Collection accounts	1,117	1,473
Prepaid expenses	1,017	926
Accrued income	959	915
Other accrued income	5,533	4,080
Accrued income – assets	8,626	7,395
Settlement accounts in debit on securities transactions	203	115
Other accounts receivable	7,615	7,101
Other assets	7,818	7,216
TOTAL ACCRUED INCOME AND OTHER ASSETS	**16,444**	**14,611**

(1) Restated figures for 2023 (see 6.1.4. Statement of changes in equity).

5.7 Non-current assets held for sale and associated liabilities

Accounting principles

Where a decision is made to sell non-current assets and it is highly probable that the sale will occur within 12 months, these assets are shown separately on the balance sheet on the "Non-current assets held for sale" line. Any liabilities associated with these assets are also shown separately on the balance sheet on the "Liabilities associated with non-current assets held for sale" line.

Once classified in this category, non-current assets are no longer depreciated/amortized and are measured at the lowest of their carrying amount or fair value less sales costs. Financial instruments continue to be measured in accordance with IFRS 9.

A non-current asset (or group of assets) is held for sale when its carrying amount is recovered by its sale. The asset (or group of assets) must be immediately available for sale and it must be highly likely that the sale will be completed within the next 12 months.

Natixis Investment Managers reached an agreement to sell its subsidiary "MV Credit" to the American investment company Clearlake Capital Group. However, completion of the disposal is subject to obtaining regulatory approvals. At December 31, 2024, Natixis, through Natixis Investment Managers, maintained the full consolidation of the subsidiary and presented, in accordance with the provisions of IFRS 5 "Non-current assets held for sale and discontinued operations", assets and liabilities of this entity in two separate balance sheet items.

Figures relating to the entities held for sale are shown below:

in millions of euros	12/31/2024	12/31/2023
Financial assets at fair value through other comprehensive income	322	0
Loans and advances to banks and similar at amortized cost	18	0
Loans and advances to customers at amortized cost	1	0
Deferred tax assets	1	0
Accrued income and other assets	12	0
Property, plant and equipment	2	0
Intangible assets	10	0
Goodwill	72	0
NON-CURRENT ASSETS HELD FOR SALE	**438**	**0**
Debt securities	297	0
Amounts due to banks and similar	1	0
Current tax liabilities	(1)	0
Deferred tax liabilities	1	0
Accrued expenses and other liabilities	13	0
LIABILITIES ASSOCIATED WITH NON-CURRENT ASSETS HELD FOR SALE	**312**	**0**

5.8 Investment property

Accounting principles

In accordance with IAS 40, investment property is property held to earn rent and for capital appreciation.

The accounting treatment for investment property is identical to that used for property, plant and equipment for all Group entities except for certain Insurance entities, which recognize the property they hold as Insurance investments at fair value, with any adjustment to fair value recorded in income. Fair value is calculated using a multi-criteria approach, by capitalizing rent at market rates and through comparisons with market transactions.

The fair value of the Group's investment property is based on regular expert valuations, except in special cases significantly affecting the value of the relevant asset.

Investment property leased under an operating lease may have a residual value that will reduce the depreciable amount of the asset.

Gains or losses on the disposal of investment property are recognized in income on the "Net income or expenses on other activities" line, with the exception of insurance activities, which are recognized in "Revenue from insurance activities".

	12/31/2024			12/31/2023		
in millions of euros	Gross amount	Accumulated depreciation and impairment	Net amount	Gross amount	Accumulated depreciation and impairment	Net amount
Property recognized at historic cost	1,347	(614)	733	1,322	(605)	717
TOTAL INVESTMENT PROPERTY			**733**			**717**

Investment property held by the insurance subsidiaries is reported with insurance investments (see Note 9).

The fair value of investment property came to €1,218 million at December 31, 2024, (€1,100 million at December 31, 2023).

The fair value of investment property is classified in Level 3 of the fair value hierarchy in accordance with IFRS 13.

5.9 Property, plant and equipment and intangible assets

Accounting principles

This item includes property owned and used in the business, movable assets acquired under operating leases, property acquired under finance leases and temporarily unleased assets held under finance leases. Interests in non-trading real estate companies (SCIs) are accounted for as property, plant, and equipment.

In accordance with IAS 16 and IAS 38, property, plant and equipment and intangible assets are recognized as assets only if they meet the following conditions:

- it is probable that the company will enjoy future economic benefits associated with the asset;
- the cost of the asset can be measured reliably.

Property, plant and equipment and intangible assets used in operations are initially recognized at cost plus any directly attributable acquisition costs. Software developed internally that fulfills the criteria for recognition as a non-current asset is recognized at its production cost, which includes external charges and the payroll costs of employees directly assigned to the project.

The component-based approach is applied to all buildings.

Internally created software is recognized as an asset in the balance sheet under "Intangible assets" for its direct development cost when the criteria for recognition of an asset as set out in IAS 38 are met.

After initial recognition, property, plant and equipment and intangible assets are measured at cost less any accumulated depreciation, amortization or impairment. The depreciable amount of the asset takes account of its residual value where this is material and can be measured reliably.

Property, plant and equipment and intangible assets are depreciated or amortized in order to reflect the pattern in which the asset's future economic benefits are expected to be consumed by the entity, which generally corresponds to the asset's useful life. Where an asset consists of a number of components that have different uses or economic benefit patterns, each component is recognized separately and depreciated over a period that reflects the useful life of that component.

The depreciation and amortization periods used by the Group are as follows:

- buildings: 20 to 60 years;
- internal fixtures and fittings: 5 to 20 years;
- furniture and special equipment: 4 to 10 years;
- IT equipment: 3 to 5 years;
- software: not more than 5 years.

Other items of property, plant and equipment and intangible assets are depreciated over their estimated useful life, which generally ranges from 5 to 10 years.

Property, plant and equipment and intangible assets are tested for impairment whenever there is any evidence that they may be impaired at the balance sheet date. If this is the case, the revised recoverable amount of the asset is compared to its net carrying amount. If the revised recoverable amount of the asset is lower than its carrying amount, an impairment loss is recognized in income.

This loss is reversed in the event of a change in the estimated recoverable amount or if there is no longer any evidence of impairment.

Equipment leased under operating leases (group as lessor) is recognized as an asset on the balance sheet under property, plant and equipment.

	12/31/2024			12/31/2023		
in millions of euros	Gross amount	Accumulated depreciation and impairment	Net amount	Gross amount	Accumulated depreciation and impairment	Net amount
Property, plant and equipment	**11,560**	**(7,533)**	**4,027**	**11,387**	**(7,410)**	**3,978**
Real estate assets	4,305	(2,088)	2,217	4,185	(2,004)	2,181

TOTAL INTANGIBLE ASSETS	**4,284**	**(3,137)**	**1,147**	**4,023**	**(2,913)**	**1,110**

5.10 Debt securities

Accounting principles

Issues of debt securities not classified as financial liabilities at fair value through profit or loss or through other comprehensive income are initially recognized at fair value less any transaction costs. They are subsequently measured at amortized cost at each reporting date using the effective interest method.

These instruments are recognized on the balance sheet under "Amounts due to banks", "Amounts due to customers" or "Debt securities".

Debt securities are classified based on the nature of the underlying, with the exception of subordinated notes presented under "Subordinated debt".

Securities are recorded in the balance sheet on the settlement-delivery date.

The first-in, first-out (FIFO) method is applied to any partial disposals of securities, except in special cases.

A new category of liabilities eligible for the numerator of the Total Loss Absorbing Capacity (TLAC) calculation has been introduced by French law and is commonly referred to as "Senior non-preferred debt". These liabilities rank between own funds and "Other senior preferred debt".

in millions of euros	12/31/2024	12/31/2023
Bonds	158,093	147,688
Interbank market instruments and negotiable debt securities	108,198	110,457
Other debt securities that are neither preferred nor subordinated	362	844
Senior non-preferred debt	34,925	30,895
Total	301,579	289,884
Accrued interest	3,378	2,714
TOTAL DEBT SECURITIES	**304,957**	**292,598**

Green bond issues are detailed in Chapter 2 "Sustainability Report" (Part 3 - Social information).

The fair value of debt securities is presented in Note 10.

5.11 Amounts due to banks and similar and customers

Accounting principles

Debts, which are not classified as financial liabilities measured at fair value through profit or loss or as equity, are recorded in the balance sheet under "Amounts due to banks" or "Amounts due to customers".

These debts issued are initially recognized at their fair value less transaction costs and are measured at the reporting date according to the amortized cost method using the effective interest method.

These instruments are recognized on the balance sheet under "Amounts due to banks", "Amounts due to customers" or "Debt securities" (see Note 5.10).

Temporary sales of securities are recorded on the settlement-delivery date.

For repurchase transactions, a loan commitment received is recorded between the transaction date and the settlement-delivery date when such transactions are recorded as "Liabilities".

The long-term refinancing operations (TLTRO 3) with the ECB were repaid in full at the end of March 2024.

As a reminder, these transactions were recognized at amortized cost in accordance with the rules of IFRS 9. Interest is recognized in the income statement by the effective interest method estimated based on the assumption that the loan production targets set by the ECB are met. As these loans are remunerated *via* an adjustable rate, the effective interest rate used may change from one period to another. Groupe BPCE achieved the loan production targets set by the ECB. This means the -0.50% interest bonus has been booked as income for the 12-month period concerned. On October 28, 2022, the ECB announced a change in the remuneration of the TLTRO 3:

- between June 23, 2022, and November 22, 2022, the applicable rate is the ECB's average deposit facility rate from the TLTRO 3 start date until November 22, 2022;
- from November 23, the applicable rate is the ECB's average deposit facility rate applicable until the maturity date or the early repayment date of each TLTRO 3 transaction in progress.

As a reminder, the effect of this change was recognized as an adjustment to income for the period from June 23, 2022, to November 22, 2022, and prospectively for the new period from November 23, 2022. In the consolidated financial statements at December 31, 2023, and for the first quarter of 2024, the effective interest rate is the last known deposit facility rate (4%).

5.11.1 Amounts due to banks and similar

in millions of euros	12/31/2024	12/31/2023
Demand deposits	11,211	10,714
Repurchase agreements	1,241	1,797

Lease liabilities	1,303	1,392
Other liabilities	9,451	9,292
TOTAL ACCRUED EXPENSES AND OTHER LIABILITIES	**20,892**	**22,492**

5.13 Provisions

Accounting principles

Provisions other than those relating to employee benefits and similar, regulated home purchase savings products, off-balance sheet commitments, and insurance contracts mainly consist of provisions for restructuring, claims and litigation, fines and penalties, and tax risks (excluding income tax).

The provisions are liabilities of uncertain timing or amount. A provision must be recognized when there is a present obligation (legal or implicit) resulting from past events, the settlement of which is likely to require an outflow of resources, and the amount of which can be reliably estimated.

The amount recognized in provisions is the best estimate of the expense required to extinguish the present commitment at the reporting date.

Provisions are discounted when the impact of discounting is material.

Changes in provisions are recognized in the income statement on the lines corresponding to the nature of the future expenditure.

Provisions on regulated home purchase savings products

Regulated home purchase savings accounts (*Comptes Épargne Logement* – CEL) and regulated home purchase savings plans (*Plans Épargne Logement* – PEL) are retail products marketed in France governed by the 1965 law on home purchase savings schemes and subsequent implementing decrees.

Regulated home purchase savings schemes generate two types of commitments for establishments selling them:

- a commitment to provide a loan to the customer in the future at a rate set on inception of the contract (for PEL products) or at a rate contingent upon the savings phase (for CEL products);
- a commitment to pay interest on the savings in the future at a rate set on inception of the contract for an indefinite period (for PEL products) or at a rate set on a half-yearly basis according to an indexing formula regulated by law (for CEL products).

Commitments with potentially unfavorable consequences are measured for each generation of regulated home purchase savings plans and for all regulated home purchase savings accounts.

A provision is recognized for the associated risks by discounting future potential earnings from at-risk outstandings:

- at-risk savings deposits correspond to the uncertain future level of savings for plans in existence at the date the provision is calculated. This is estimated on a statistical basis for each future period taking account of historical investor behavior patterns, and corresponds to the difference between the probable savings deposits and the minimum expected savings deposits;
- at-risk loan outstandings correspond to the loan outstandings granted but not yet due at the calculation date plus statistically probable loan outstandings based on historical customer behavior patterns as well as earned and future rights relating to regulated home purchase savings accounts and plans.

The commitments are estimated using the Monte Carlo method in order to reflect the uncertainty of future interest rate trends and their impact on customer behavior models and at-risk outstandings. On this basis, a provision is recorded for a given generation of contracts in the event of a situation liable to be detrimental for the Group, with no netting between generations.

The provision is recognized under liabilities in the balance sheet and changes are recorded in net interest income and expenses.

5.13.1 Summary of provisions

in millions of euros	12/31/2023	Increase	Used	Reversals unused	Other changes(1)	12/31/2024
Provisions for employee benefits(2)(3)	1,253	276	(121)	(96)	(48)	1,265
Provisions for restructuring costs(4)	132	17	(14)	(24)	0	111
Legal and tax risks(5)	934	170	(20)	(124)	34	994
Loan and guarantee commitments(6)	882	612	(8)	(545)	(7)	934
Provisions for regulated home savings products	613	11	0	(143)	0	482
Other operating provisions	1,010	212	(32)	(214)	(12)	963
TOTAL PROVISIONS	**4,825**	**1,297**	**(194)**	**(1,145)**	**(34)**	**4,748**

(1) The other changes include in particular the change in the revaluation surplus of post-employment defined-benefit plans (-€86 million before tax) and the foreign exchange rate adjustments (+€47 million).

(2) Of which €1,071 million for post-employment defined-benefit plans and other long-term employee benefits.

(3) With regard to the right to paid leave, and following the decision of the Court of Cassation of September 13, 2023, it should be noted that Article 37 of the act of April 22, 2024 now defines the terms and conditions for aligning the French Labor Code with European law. These amendments concern in particular the reference period to be used, the possibility of deferring rights to paid leave, the retroactive period applicable to these provisions and lastly the number of days of leave to which the employee is entitled in the event of accident or illness of professional or non-professional origin. Groupe BPCE has provisioned for the potential impact in its financial statements at December 31, 2024.

(4) At December 31, 2024, provisions for restructuring notably included €65 million for the voluntary departure plan at Crédit Foncier (compared to €66 million at December 31, 2023).

(5) The provisions for legal and tax risks include €348 million for the net exposure on the Madoff case (compared to €328 million at December 31, 2023).

(6) The provisions for loan and guarantee commitments are detailed in Note 7.1.2.

Information on main risks and management procedures to which Groupe BPCE is exposed, including legal risks, is presented in Chapter 7.10 "Risk factors and risk management - Legal risks".

5.13.2 Commitments on regulated home purchase savings contracts

5.13.2.1 Deposits collected for regulated home purchase savings schemes

in millions of euros	12/31/2024	12/31/2023
Deposits collected for regulated home purchase savings plans (PEL)		
• plans less than 4 years old	11,269	7,668
• plans more than 4 years but less than 10 years old	10,821	41,389
• plans more than 10 years old	39,213	18,938
Deposits collected for regulated home purchase savings plans (PEL)	61,303	67,995

Provisions for regulated home purchase savings account (CEL) loans		(1)
Provisions for regulated home purchase savings loans	1	(2)
TOTAL PROVISIONS FOR REGULATED HOME PURCHASE SAVINGS SCHEMES	**482**	**613**

5.14 Subordinated debt

Accounting principles

Subordinated debt differs from other debt and bonds in that it will be repaid only after all the senior and unsecured creditors, but before the repayment of participating loans and securities and deeply subordinated notes.

Subordinated debt which the issuer is obliged to repay is classified as debt and initially recognized at fair value less any transaction costs. It is subsequently measured at amortized cost at each reporting date using the effective interest method.

in millions of euros	12/31/2024	12/31/2023
Term subordinated debt	18,338	18,829
Perpetual subordinated debt	286	286
Mutual guarantee deposits	91	101
Subordinated debt and similar	18,715	19,216
Accrued interest	696	646
Revaluation of the hedged component	(1,009)	(1,061)
SUBORDINATED DEBT AT AMORTIZED COST	18,401	18,801
TOTAL SUBORDINATED DEBT[(1)]	**18,401**	**18,801**

(1) Of which €251 million for the insurance entities at December 31, 2024 (similar to December 31, 2023).

The fair value of subordinated debt is presented in Note 10.

CHANGES IN SUBORDINATED DEBT[(1)] AND SIMILAR DURING THE FISCAL YEAR

in millions of euros	12/31/2023	Issue[(2)]	Redemption[(3)]	Other changes[(4)]	12/31/2024
Term subordinated debt[(5)]	17,768	1,601	(2,534)	492	17,329
Perpetual subordinated debt	286				286
Mutual guarantee deposits	101	9	(19)		91
SUBORDINATED DEBT AND SIMILAR	18,155	1,611	(2,553)	492	17,705
TOTAL	**18,155**	**1,611**	**(2,553)**	**492**	**17,705**

(1) Excluding accrued interest.
(2) In its dual role as an issuer on the bond market (to refinance the excess of the Group's financing needs over its customers' deposits and to provide the Group with additional capital and capacity to absorb losses), and as the organizer/manager of the Group's internal capital management transactions as a central institution, BPCE SA issued €1.6 billion of Tier-2 bonds on the market in 2024 (compared with €2 billion at December 31, 2023).
(3) The redemptions of subordinated loans and notes were due to the maturing of such borrowings or the exercising of a call.
(4) The other changes mainly concern the revaluation of hedged debt and exchange rate fluctuations.
(5) Including the revaluation of the hedged component.

The deeply subordinated notes qualifying as equity instruments are presented in Note 5.15.2.

5.15 Ordinary shares and equity instruments issued

Accounting principles

Financial instruments issued by the Group qualify as debt or equity instruments depending on whether or not the issuer has a contractual obligation to deliver cash or another financial asset to the holder of the instrument, or to exchange the instrument under conditions that are potentially unfavorable to the Group. This obligation must arise from specific contractual terms and conditions, not merely economic constraints.

In addition, when an instrument qualifies as equity:

- its remuneration impacts equity. However, in accordance with the amendment to IAS 12 of December 2017, which applies from January 1, 2019, the tax consequences of dividend payments can be recognized in consolidated reserves, gains and losses recognized directly in equity, or in profit or loss, depending on the source of the amounts paid. Accordingly, when the payment corresponds to the notion of a dividend within the meaning of IFRS 9, the tax consequence is taken to income. This rule applies to interest on perpetual deeply subordinated notes, which is treated as a dividend for accounting purposes;
- it cannot be an underlying instrument eligible for hedge accounting;
- if the issue is in a foreign currency, the instrument is fixed at its historical value resulting from its conversion to euros at its initial date of transfer to equity.

Finally, when these instruments are issued by a subsidiary, they are included in "Non-controlling interests". When their remuneration is of a cumulative nature, it is charged to "Income attributable to equity holders of the parent" and increases the income of "Non-controlling interests". However, when their remuneration is not of a cumulative nature, it is drawn from consolidated reserves attributable to equity holders of the parent.

5.15.1 Cooperative shares

Accounting principles

IFRIC 2 "Members' Shares in Cooperative Entities and Similar Instruments" clarifies the provisions of IAS 32. In particular, it stipulates that the contractual right of the holder of cooperative shares in cooperative entities to request redemption does not, in itself, automatically give rise to an obligation for the issuer. Rather, the entity must consider all of the terms and conditions of the financial instrument in determining its classification as a debt or equity.

Based on this interpretation, cooperative shares are classified as equity if the entity has an unconditional right to refuse redemption of the cooperative shares or if local laws, regulations or the entity's articles of association unconditionally prohibit or curtail the redemption of cooperative shares.

Based on the existing provisions of the Group's articles of association relating to minimum capital requirements, cooperative shares issued by the Group are classified as equity.

As the local savings companies (LSCs) are considered to be fully consolidated structured entities, their consolidation impacts consolidated reserves.

At December 31, 2024, the share capital was broken down as follows:

- €12,964 million in cooperative shares fully subscribed by the cooperative shareholders of the Banques Populaires (compared to €12,795 million at December 31, 2023);
- €12,553 million in cooperative shares fully subscribed by the cooperative shareholders of the Caisses d'Epargne (compared to €12,404 million at December 31, 2023).

Since January 1, 2024, the Banques Populaires have carried out capital increases of €169 million (an increase of €339 million in 2023), resulting in an increase in the "Share capital" item.

The shareholders' equity of the local savings companies is also included in "Consolidated reserves" after the elimination of the Caisses d'Epargne cooperative shares held. Issues of members shares by local savings companies since January 1, 2024, resulted in an increase in reserves of €79 million (increase of €168 million in 2023).

At December 31, 2024, additional paid-in capital is broken down as follows:

- €947 million linked to cooperative shares subscribed for by the cooperative shareholders of the Banques Populaires;
- €2,885 million linked to cooperative shares subscribed by the cooperative shareholders of the Caisses d'Epargne.

5.15.2 Perpetual deeply subordinated notes classified as equity

At December 31, 2024, Groupe BPCE had issued no perpetual deeply subordinated notes classified as equity.

5.16 Non-controlling interests

5.16.1 Material non-controlling interests

At December 31, 2024, like December 31, 2023, material non-controlling interests with regard to the Group's equity consisted mainly of the share of the non-controlling interests in the Oney Bank group.

		2024 fiscal year

5.18 Offsetting of financial assets and financial liabilities

Accounting principles

Financial assets and liabilities were offset on the balance sheet in accordance with IAS 32. Under this standard, a financial asset and financial liability are offset and a net balance is recorded in the balance sheet if and only if:

- the Group has the legally enforceable right to offset the recorded amounts; and
- it has the intention either to settle the net amount or to simultaneously realize the asset and settle the liability.

Within Groupe BPCE, most offset amounts are the result of repurchase agreements and derivatives transactions largely carried out by the GFS division with clearing houses, which meet the requirements of IAS 32:

- for listed derivatives, the positions recorded under the respective asset and liability items for:
  - index options and futures options are offset by maturity and by currency,
  - equity options are offset by ISIN code and maturity date;
- for OTC derivatives, this comprises the netting, by currency, of the asset valuations and liability valuations of the derivatives;
- for repurchase agreements, the amount recorded in the balance sheet corresponds to the net value of repurchase and reverse repurchase agreements:
  - entered into with the same counterparty and which,
    - have the same maturity date,
    - are operated *via* the same custodian or settlement-delivery platform,
    - are denominated in the same currency.

Since December 31, 2020, the OTC derivatives traded by the GFS division with the clearing houses LCH Clearnet Ltd, Eurex Clearing AG and CME Clearing are not subject to netting within the meaning of IAS 32, but are settled daily (application of the Settlement to Market principle as provided for by these three clearing houses, which treats margin calls as daily settlement for derivatives instead of as collateral).

Financial assets and liabilities under netting agreements may only be offset if they meet the restrictive netting criteria set by IAS 32.

Offsetting may not be performed for derivatives or OTC repurchase agreements subject to master agreements that do not meet the net settlement criteria or where the realization of a simultaneous settlement of the asset and liability cannot be demonstrated or for which the offsetting right can only be exercised in the event of default, insolvency or bankruptcy by one of the parties to the agreement. However, the impact of such agreements in terms of reducing the exposure is presented in the second table.

For these instruments, the "Related financial assets and financial instruments received as collateral" and "Related financial liabilities and financial instruments pledged as collateral" columns include in particular:

- for repurchase agreements:
  - loans or borrowings resulting from reverse repurchase agreements with the same counterparty, and securities pledged or received as collateral (for the fair value of said securities),
  - margin calls in the form of securities (for the fair value of said securities);
- for derivatives, the fair values of reverse transactions with the same counterparty, as well as margin calls in the form of securities.

Margin calls received or paid in cash are shown in "Margin calls received (cash collateral)" and "Margin calls paid (cash collateral)".

5.18.1 Financial assets

Impact of offsetting on financial assets under netting agreements in the balance sheet

	12/31/2024			12/31/2023		
in millions of euros	Gross amount of financial assets[1]	Gross amount of financial liabilities offset in the balance sheet	Net amount of financial assets recognized in the balance sheet	Gross amount of financial assets[1]	Gross amount of financial liabilities offset in the balance sheet	Net amount of financial assets recognized in the balance sheet
Derivatives (trading and hedging)	66,319	4,991	61,328	56,217	4,311	51,906
Repurchase agreements	112,331	30,638	81,693	107,043	26,643	80,400

(1) Includes the gross amount of financial liabilities subject to netting or an enforceable master netting agreement or similar and financial liabilities not subject to any agreement.

Impact of netting agreements on financial liabilities not recognized in the financial statements

	12/31/2024				12/31/2023			
in millions of euros	Net amount of financial liabilities recognized in the balance sheet	Related financial assets and financial instruments pledged as collateral[1]	Margin calls paid (cash collateral)	Net exposure	Net amount of financial liabilities recognized in the balance sheet	Related financial assets and financial instruments pledged as collateral	Margin calls paid (cash collateral)	Net exposure
Derivatives (trading and hedging)	57,817	30,005	6,671	21,141	49,982	33,925	6,804	9,253
Repurchase agreements	117,341	115,846	160	1,335	115,737	113,461	50	2,226
TOTAL	**175,158**	**145,851**	**6,831**	**22,476**	**165,719**	**147,386**	**6,854**	**11,479**

(1) Including collateral received in the form of securities.

The net exposure does not reflect the accounting position, because it takes into account the reduced exposure arising from agreements that do not meet the restrictive netting criteria set by IAS 32.

5.19 Transferred financial assets, other financial assets pledged as collateral and assets received as collateral that can be sold or repledged

Accounting principles

A financial asset (or group of similar financial assets) is derecognized when the contractual rights to the asset's future cash flows have expired or when such rights are transferred to a third party, together with substancially all of the risks and rewards associated with ownership of the asset. In such case, rights and obligations created or retained as a result of the transfer are recorded in a separate line under financial assets and liabilities.

When a financial asset is derecognized, a gain or loss on disposal is recorded in the income statement reflecting the difference between the carrying amount of the asset and the consideration received.

In the event that the Group has neither transferred nor retained substancially all of the risks and rewards, but has retained control of the asset, the asset continues to be recognized on the balance sheet to the extent of the Group's continuing involvement.

In the event that the Group has neither transferred nor retained substancially all of the risks and rewards and has not retained control of the asset, the asset is derecognized and all of the rights and obligations created or retained as a result of the transfer are recorded in a separate line under financial assets and liabilities.

If all the conditions for derecognizing a financial asset are not met, the Group keeps the asset in the balance sheet and records a liability representing the obligations arising when the asset is transferred.

The Group derecognizes a financial liability (or a part of a financial liability) only when it is extinguished, *i.e.* when the obligation specified in the contract is discharged, terminated or expires.

Repurchase agreements

Securities sold under repurchase agreements are not derecognized in the vendor's accounts. A liability representing the commitment to return the funds received is identified and recognized under "Securities sold under repurchase agreements". This debt is a financial liability recorded at amortized cost or at fair value through profit or loss when this liability is considered part of a trading business model.

The assets received are not recognized in the purchaser's books, but a receivable is recorded with respect to the vendor representing the funds loaned. The amount disbursed in respect of the asset is recognized under "Securities purchased under resale agreements". On subsequent balance sheet dates, the securities continue to be accounted for by the vendor in accordance with the rules applicable to the category in which they were initially classified. The receivable is valued according to methods specific to its category: at amortized cost when classified in "Loans and advances", or at fair value through profit or loss when it is considered part of a trading business model.

Outright securities lending

Securities loaned under outright securities lending transactions are not derecognized in the vendor's accounts. They continue to be recognized in their original accounting category and are valued accordingly. For the borrower, the securities borrowed are not recognized.

Transactions leading to substantial changes in financial assets

When an asset is subject to substantial changes (in particular following renegotiation or remodeling due to financial hardship) there is derecognition, since the rights to the initial cash flows have essentially expired. The Group considers that this is the case for:

- changes leading to a change of counterparty, especially if the new counterparty has a very different credit quality than the previous counterparty;
- changes intended to move from a very structured to basic indexing, as the two assets are not exposed to the same risks.

Transactions leading to substantial changes in financial liabilities

A substantial change to the terms of a lending instrument must be recorded as the extinguishment of the existing debt and its replacement with a new debt. The amendment to IFRS 9 of October 12, 2017 clarified the treatment under IFRS 9 of modifications of liabilities recognized at amortized cost if the modification does not result in derecognition: the profit or loss resulting from the difference between the original cash flows and the modified cash flows discounted at the original effective interest rate must be recognized in profit or loss. To assess the substantial nature of the change, IFRS 9 includes a threshold of 10% based on discounted cash flows, integrating potential costs and fees: when the difference is greater than or equal to 10%, all of the costs or fees incurred are recognized as profit or loss on debt extinguishment.

The Group may consider other changes to be substantial, such as a change of issuer (even within the same group) or a change in currency.

5.19.1 Transferred financial assets not fully derecognized and other financial assets pledged as collateral

At December 31, 2024

5.19.1.1 Comments on transferred financial assets

SECURITIES REPURCHASING AND LENDING

Groupe BPCE repurchases and loans securities.

Under the terms of the agreements, the securities may be sold on by the purchaser throughout the duration of the repurchase or lending agreement. The purchaser must nevertheless return them to the vendor at the end of the agreement. Cash flows generated by the securities are also transferred to the vendor.

The Group believes that it retains almost all of the risks and benefits of securities under repurchase or loan agreements. They are therefore not derecognized. Financing has been recorded in liabilities for the repurchasing or lending of financed securities.

SALES OF RECEIVABLES

Groupe BPCE sells receivables as security (Articles L. 211-38 or L. 313-23 *et seq.* of the French Monetary and Financial Code) under guaranteed refinancing operations, notably with the central bank. This type of disposal for security involves the legal transfer of the associated contractual rights, and therefore a "transfer of assets" within the meaning of the amendment to IFRS 7. The Group nevertheless remains exposed to substancially all the risks and benefits, and as such the receivables are maintained on the balance sheet.

CONSOLIDATED SECURITIZATIONS

Securitizations consolidated with outside investors constitute an asset transfer according to the amendment to IFRS 7.

The Group has an indirect contractual obligation to transfer to outside investors the cash flow from assets transferred to the securitization fund (although these assets are included in the Group's balance sheet through the consolidation of the fund).

In the interest of transparency, for consolidated securitization transactions:

- the share of receivables sold attributable to external investors is considered to be pledged as collateral to third parties;
- the share of receivables sold attributable to units and bonds subscribed for by the Group, and eliminated on consolidation, is not considered to be pledged as collateral unless these securities were brought to Groupe BPCE's single treasury and central bank collateral management pool and used as part of a refinancing mechanism.

The securitization transactions performed by BPCE in 2014 (BPCE Master home loans), 2016 (BPCE consumer loans 2016_5) and 2017 (BPCE home loans 2017_5) and Mercure Master SME FCT were fully subscribed for by the Group, while the senior tranches of the BPCE home loans FCT 2020, BPCE home loans FCT 2021, BPCE consumer loans FCT 2022, BPCE home loans FCT 2023, BPCE home loans FCT 2024, BPCE consumer loans FCT 2024, Ophelia Master SME FCT and BPCE Financement Purple Master Credit Cards securitizations were subscribed for by external investors (Note 13.1).

5.19.1.2 Comments on financial assets pledged as collateral but not transferred

Financial assets provided as collateral but not transferred are generally pledged. The main mechanisms involved are the CRH (Caisse de Refinancement de l'Habitat) and securities pledged as collateral for European Central Bank (ECB) refinancing operations.

Moreover, in accordance with French law, the intrinsic guarantees attached to issues of covered bonds are not recognized under guarantee commitments given. The covered bonds issued by BPCE SFH and Compagnie de Financement Foncier benefit from a legal privilege comprised of eligible assets.

5.19.1.3 Financial assets received as collateral that can be sold or repledged

This heading covers financial assets received as security under financial guarantee agreements with the right to reuse the assets in the absence of any default on the part of the owner of the guarantee.

The fair value of the financial assets received as collateral that Groupe BPCE may sell or repledge amounted to €277 billion at December 31, 2024, compared to €244 billion at December 31, 2023.

The fair value of the financial assets received as collateral that were actually sold or repledged amounted to €225 billion at December 31, 2024, compared with €185 billion at December 31, 2023.

5.19.2 Fully derecognized financial assets for which the Group retains an ongoing commitment

Fully derecognized transferred financial assets for which the Group retains an ongoing commitment consist of asset transfers to a deconsolidated securitization vehicle in which Groupe BPCE has an interest or an obligation, although this does not call into question the transfer of almost all of the benefits and risks relating to the assets transferred.

Ongoing commitments retained by the Group in relation to securitization vehicles were not significant on December 31, 2024.

Note 6 / Commitments

Accounting principles

Commitments are materialized by the existence of a contractual obligation and are binding.

It must not be possible for commitments included in this item to be deemed financial instruments falling within the scope of IFRS 9 for classification and measurement purposes. However, loan commitments and guarantees given are covered by IFRS 9 impairment rules, as set out in Note 7.

The effects of the rights and obligations covered by such commitments must be subject to the occurrence of conditions or subsequent transactions. Commitments are broken down into:

- loan commitments (confirmed credit facilities or refinancing agreements);
- guarantee commitments (off-balance sheet commitments or assets received as collateral).

The amounts shown correspond to the nominal value of commitments given.

6.1 Loan commitments

in millions of euros	12/31/2024	12/31/2023
Loan commitments given to:		
• banks	1,163	1,351
• customers	154,527	152,728
Credit facilities granted	*145,104*	*142,961*
Other commitments[(1)]	*9,422*	*9,767*
TOTAL LOAN COMMITMENTS GIVEN	**155,689**	**154,079**
Loan commitments received from:		
• banks[(2)]	92,896	79,120
• customers	1,182	633
TOTAL LOAN COMMITMENTS RECEIVED	**94,078**	**79,752**

(1) The amount at December 31, 2023, was adjusted for the contribution of insurance entities.
(2) The increase mainly relates to loan commitments received from the ECB for €50 billion.

6.2 Guarantee commitments

in millions of euros	12/31/2024	12/31/2022
Guarantee commitments given to:		
• banks	8,439	8,166
• customers[(1)]	52,586	47,634
TOTAL GUARANTEE COMMITMENTS GIVEN	**61,025**	**55,800**
Guarantee commitments received from:		
• banks	26,947	21,640
• customers[(2)]	197,223	194,497
TOTAL GUARANTEE COMMITMENTS RECEIVED	**224,170**	**216,138**

(1) The guarantees given by CEGC in connection with its activity are treated as insurance contracts for accounting purposes, in accordance with IFRS 17 "Insurance Contracts". They are recorded on the liabilities side of the balance sheet and are not included in guarantees given to customers shown in the table above.
(2) The guarantees received under State-guaranteed loans amounted to €10 billion *versus* €17 billion at December 31, 2023.

Guarantee commitments are off-balance sheet commitments.

SPECIFIC CASE OF GUARANTEES GIVEN TO UCITS BY THE GLOBAL FINANCIAL SERVICES DIVISION

The capital and/or yield on the units of certain UCITS are subject to a guarantee granted by the Global Financial Services division. The guarantees are only enforced if, on the maturity date, the net asset value of each unit is below the guaranteed net asset value.

The capital and/or performance guarantees to certain UCITS are recognized as derivatives and are subject to measurement at fair value in accordance with the provisions of IFRS 13.

Note 7 / Exposures to risks

The market risk management disclosures required by IFRS 7 are presented in Chapter 7 "Risk factors and risk management".

Exposures to risks are discussed below by type of risk: credit, market, overall interest rate, foreign exchange and liquidity risk.

Information relating to capital management and regulatory ratios is presented in the "Risk management" section.

Information on adjustments on account of financial difficulties is provided in Chapter 7.5 "Risk factors and risk management – Credit risk".

Information on the effect and consideration of climate risks on credit risk management is presented in Chapter 7.16 "Risk factors and risk management – Environmental risks".

Information on liquidity risk (analysis of financial assets and liabilities and commitments by contractual maturity date) is provided in Chapter 7.9 "Risk factors and risk management – Liquidity, interest rate and exchange rate risks".

7.1 Credit risk

Key points

Credit risk is the risk that one party to a financial transaction fails to fulfill its obligations, causing the other party to incur a financial loss.

IFRS 9

STAGE 1
EXPECTED CREDIT LOSS (ECL) AT 1 YEAR

↔ Material change in the credit risk

STAGE 2
ECL AT MATURITY
In the event of a significant increase in the credit risk

↔ Objective impairment criterion

STAGE 3
ECL AT MATURITY
Deterioration of the credit risk to the point where the asset is non-performing

Certain disclosures relating to risk management required by IFRS 7 are also provided in the risk management report. They include:

- the breakdown of gross exposures by category and approach (separation of credit and counterparty risk);
- the breakdown of gross exposure by geographic area;
- the concentration of credit risk by borrower (BPCE14);
- the credit quality of the renegotiated exposures (CQ1);
- the performing and non-performing exposures and the corresponding provisions (CR1);
- the quality of the performing and non-performing exposures by number of days past due (CQ3);
- the quality of the exposures by geographic area (CQ4);
- the credit quality of loans and advances by industry (CQ5);
- the breakdown of the guarantees received by type on the financial instruments (CR3);
- the credit risk exposures by portfolio and by default probability range (CR6).

This information forms an integral part of the financial statements certified by the Statutory Auditors.

7.1.1 Cost of credit risk

Accounting principles

Cost of risk applies to debt instruments classified as financial assets at amortized cost or at fair value through other comprehensive income recyclable to profit or loss as well as to loan commitments and financial guarantees given that are not recognized at fair value through profit or loss. It also applies to receivables relating to leasing contracts, business loans and contract assets.

This item therefore covers net impairment and provision charges for credit risk.

Credit losses related to other types of instruments (derivatives or securities designated at fair value) recorded as a result of credit institution counterparty default are also included under this item.

Irrecoverable loans not covered by provisions for impairment are loans that have acquired the character of permanent loss before being provisioned in Stage 3.

7.1.1.1 Cost of credit risk for the period

in millions of euros	2024 fiscal year	2023 fiscal year
Net charge to provisions and provisions for impairment	(1,988)	(1,605)
Recoveries of bad debts written off	89	91
Irrecoverable loans not covered by provisions for impairment[1]	(185)	(217)
Impact of guarantees not taken into account in impairment	23	///
TOTAL COST OF CREDIT RISK	**(2,061)**	**(1,731)**

7.1.1.2 Cost of credit risk for the period by type of asset and stage

in millions of euros	2024 fiscal year	2023 fiscal year
Financial assets at fair value through profit or loss	(0)	(16)
Financial assets at fair value through other comprehensive income	(27)	(42)
Financial assets at amortized cost	(1,954)	(1,536)
of which loans and advances	*(1,805)*	*(1,459)*
of which debt securities	*(149)*	*(77)*
Other assets	(44)	(25)
Loan and guarantee commitments	(59)	(112)
Impact of guarantees not taken into account in impairment	23	///
TOTAL COST OF CREDIT RISK	**(2,061)**	**(1,731)**
of which Stage 1	*283*	*(10)*
of which Stage 2	*(106)*	*122*
of which Stage 3	*(2,238)*	*(1,843)*

7.1.2 Change in gross carrying amounts and expected credit losses on financial assets and commitments

Accounting principles

General principles

Expected credit losses are represented by impairments of assets classified at amortized cost and at fair value through other comprehensive income recyclable to profit or loss, and by provisions for loan and guarantee commitments.

The financial instruments concerned (see Note 7.1.1) are impaired or covered by a provision for expected credit losses (ECL) at the date *of* initial recognition.

When the financial instruments do not individually show objective evidence of loss, impairment, or provisions for expected credit losses are measured based on past losses and reasonable and justifiable discounted future cash flow forecasts.

Financial instruments are divided into three categories (Stages) depending on the increase in credit risk observed since initial recognition. A specific credit risk measurement method applies to each category of instrument:

Stage 1 (S1)

- performing loans for which there has been no significant increase in credit risk since the initial recognition of the financial instrument or certain assets for which the standard makes it possible to presume that they have a low credit risk at the reporting date;
- the impairment or the provision for credit risk corresponds to 12-month expected credit losses;
- interest income is recognized in income using the effective interest method applied to the gross carrying amount of the instrument before impairment.

Stage 2 (S2)

- performing loans for which credit risk has increased materially since the initial recognition of the financial instrument are transferred to this category;
- the impairment or the provision for credit risk is determined on the basis of the financial instrument's lifetime expected credit losses;
- interest income is recognized in income, as for Stage 1 assets, using the effective interest method applied to the gross carrying amount of the instrument before impairment.

Stage 3 (S3)

- these are loans for which there is objective evidence of impairment loss due to an event which represents a known credit risk occurring after the initial recognition of the instrument in question. This category covers receivables for which a default event has been identified, as defined in Article 178 of European Regulation No. 575/2013 of June 26, 2013 on prudential requirements for credit institutions. Default situations are now more tightly identified for outstandings with significant amounts past due (introduction of relative and an absolute threshold for past due payments) and the criteria for a return to non-defaulted status have been clarified with the introduction of a probation period and of explicit criteria for a classification as default of restructured

- the impairment or the provision for credit risk is calculated based on the financial instrument's lifetime expected credit losses (expected credit losses at maturity) on the basis of the recoverable amount of the receivable, *i.e.* the present value of estimated recoverable future cash flows;
- interest income is recognized through profit or loss using the effective interest method applied to the net carrying amount of the instrument after impairment;
- the financial assets purchased or originated and impaired for credit risk on their initial recognition because the entity does not expect to recover all the contractual cash flows (Purchased or Originated Credit-Impaired financial instruments or POCI) also belong to Stage 3. These assets may be transferred to Stage 2 if their credit risk improves.

In accordance with IAS 37, the guarantees received and recognized separately from the hedged instrument give rise to the recognition of a repayment asset under "Accrued income and other assets" in the balance sheet. The carrying amount of this asset represents the amount of expected credit losses, recorded as asset impairments, for which the Group is virtually certain to receive compensation. The changes in the carrying amount of this asset are recorded under "Cost of risk" in the income statement.

For operating or finance lease receivables (which fall within the scope of IFRS 16) the Group has elected not to make use of the option of applying the simplified approach as set out in IFRS 9 paragraph 5.5.15.

The methodological changes carried out over the period and presented below constitute a change in estimates which translates into an impact on net income.

Method for measuring the increase in credit risk and expected credit losses

The principles for measuring the increase in credit risk and expected credit losses applicable to most of the Group's exposures are described below. Only a few portfolios held by Group entities – representing a limited volume of exposures – cannot be treated according to the methods described below and are subject to appropriate valuation techniques.

Significant increase in credit risk

A significant increase in credit risk is measured on an individual basis for each instrument by taking into account all reasonable and supportable information and by comparing the default risk on the financial instrument at the reporting date with the default risk on the financial instrument at the date of initial recognition. A counterparty-based approach (applying the contagion principle to all outstanding loans to the counterparty in question) is also possible, in particular with regard to the watchlist criterion.

What's more, in addition to this assessment carried out in the group's central model, institutions can, in order to take into account the specific risks of their portfolios, estimate the significant increase in credit risk on the basis of a given portfolio by tightening ratings assigned to the latter on a geographic or sectoral basis. This severity may lead to a downgrading from Stage 1 to Stage 2, while downgrading to Stage 3 remains based on an individual analysis.

In accordance with IFRS 9, a counterparty with a significant deterioration in credit risk (Stage 2) that has just been originated will be classified as Stage 1.

Assessment of increases in credit risk involves comparing the ratings on the initial recognition date with those applicable at the reporting date. The same principles as those used to classify an exposure in Stage 2 are applied in case of a decline in the material deterioration in credit risk.

In most cases, a measurement showing an increase in risk leads to the asset's transfer to Stage 2 before it is individually impaired (Stage 3).

However, prior to the above analysis, the following general analysis criteria are applied:

The standard provides that the credit risk of a financial instrument has not increased significantly since its initial recognition if this risk is considered to be low at the reporting date. This provision is applied to certain investment-grade debt securities that are managed as part of Groupe BPCE's liquidity reserve, as required by Basel III regulations, as well as debt securities classified as insurance activities financial investments. Investment grade ratings are those equal to or above BBB- or its equivalent by Standard & Poor's, Moody's or Fitch. In this case, these assets remain classified as Stage 1;

A counterparty approach for a Stage 2 classification (with application of the contagion principle to all outstandings existing on the counterparty in question) is applied in particular with regard to the High Credit Risk qualitative criterion derived from the Group's internal rating engines. This criterion includes the counterparties placed on the watchlist, with a sensitive rating (particularly in cases where the notion of watchlist is not used), in a situation of restructuring or in the presence of financial difficulties if the criteria for downgrading to Stage 3 are not met;

In addition, according to the standard, there is a rebuttable presumption of a significant increase in the credit risk associated with a financial asset since initial recognition when contractual payments are overdue by more than 30 days; Lastly, an unfavorable change in country risk is a criterion for classifying all of the outstandings concerned as Stage 2.

Assessment of a material increase in credit risk is made at the level of each instrument, based on indicators and thresholds that vary according to the type of exposure and counterparty.

For the Individual customers, Professionals, SMEs, Public Sector and Social Housing portfolios:

The significant increase in credit risk is assessed on the basis of the following levels of rating downgrades since inception:

<table>
<tr><th>Score at origin</th><th>Individual customers</th><th>Professionals</th><th>SME, Public sector, Social housing</th></tr>
<tr><td>3 to 11 (AA to BB+)</td><td>3 notches</td><td rowspan="3">3 notches</td><td rowspan="2">3 notches</td></tr>
<tr><td>12 (BB)</td><td rowspan="2">2 notches</td></tr>
<tr><td>13 (BB-)</td><td>2 notches</td></tr>
<tr><td>14 to 15 (B+ to B)</td><td rowspan="2">1 notch</td><td>2 notches</td><td rowspan="2">1 notch</td></tr>
<tr><td>16 (B-)</td><td>1 notch</td></tr>
<tr><td>17 (CCC to C)</td><td></td><td></td><td>Sensitive notches classified as S2</td></tr>
</table>

Moreover, additional qualitative criteria are used to classify as Stage 2 all contracts with payments more than 30 days past due (unless the 30-day presumption of non-payment is rebutted), rated at-risk or undergoing adjustments or financial hardship if the downgrade to Stage 3 criteria are not met.

For the Large Corporates, Banks and Sovereigns portfolios, the quantitative criterion is based on the rating changes since initial recognition. The same qualitative criteria apply as for Individual customers, Professionals and SMEs, as well as for contracts placed on the watchlist, along with additional criteria based on the level of country risk.

The downgrade thresholds **on the portfolios of Large Corporates and Banks** are the following:

Score at origin	Significant degradation
1 to 7 (AAA to A-)	3 notches
8 to 10 (BBB+ to BBB-)	2 notches
11 to 21 (BB+ to C)	1 notch

For Sovereigns, the downgrade thresholds on the eight-point rating scale are as follows:

Score at origin	Significant degradation
1	6 notches
2	5 notches
3	4 notches
4	3 notches
5	2 notches
6	1 notch
7	S2 directly (unless newly originated contract)
8	S2 directly (unless newly originated contract)

For Specialized Financing: the criteria applied vary according to the characteristics of the exposures and the related rating system. The exposures noted under the engine dedicated to large exposures are treated in the same way as Large Corporates; other exposures are treated in the same way as SMEs.

For all these portfolios, the ratings used to measure risk deterioration correspond to ratings from internal systems where available, as well as external ratings, particularly in the absence of internal ratings.

In accordance with IFRS 9, the recognition of guarantees and collateral does not influence the assessment of a material increase in credit risk: this depends on changes in credit risk relating to the debtor without taking into account such guarantees.

In order to assess the material increase in credit risk, the Group provides for a process based on two levels of analysis:

- a first level based on rules and criteria defined by the Group that are binding on the Group's institutions (known as the "central model");
- a second level linked to an expert assessment of the risk carried by each institution on its portfolios, which may lead to an adjustment of the criteria defined by the Group for downgrading to Stage 2 (portfolio or sub-portfolio switch to ECL at maturity). These criteria are adapted for each closing to the current macro-economic context.

Measurement of expected credit losses

Expected credit losses are defined as being an estimate of credit losses (*i.e.* the present value of cash flow shortfalls) weighted by the probability of occurrence of these losses over the expected lifetime of the financial instrument in question. They are calculated individually for each exposure.

In practice, for Stage 1 and Stage 2 financial instruments, expected credit losses are calculated as the product of a number of inputs:

- cash flows expected over the lifetime of the financial instrument, discounted at the valuation date – these flows are determined according to the characteristics of the contract, its effective interest rate and, for real estate loans, the level of prepayment expected on the contract;
- Loss Given Default (LGD);
- the probability of default (PD) over the coming year for Stage 1 financial instruments and to maturity for Stage 2 financial instruments.

The Group's methodology draws on existing concepts and mechanisms to define these inputs, and in particular on internal models developed to calculate regulatory capital requirements (Basel framework) and projection models used in the stress test system. Certain adjustments are made to comply with the specifics of IFRS 9:

- IFRS 9 inputs aim to provide an accurate estimate of expected credit losses for accounting provision purposes, whereas prudential inputs are more cautious for regulatory framework purposes. Several of the safety buffers applied to prudential inputs are therefore restated;
- IFRS 9 inputs must allow expected credit losses to be estimated until the contract's maturity, whereas prudential inputs are defined to estimate 12-month expected losses. 12-month inputs are thus projected over long periods;
- IFRS 9 parameters must be forward-looking and take into account the expected economic environment over the projection period, whereas prudential parameters correspond to mid-cycle estimates (for PD) or bottom-of-the-cycle estimates (for LGD and the cash flows expected over the lifetime of the financial instrument). Prudential PD and LGD inputs are therefore also adjusted to reflect forecasts of future economic conditions.

Expected credit loss calculations take into account assets pledged as collateral and other credit enhancements that form an integral part of the instrument's contractual conditions and that the entity does not recognize separately. The estimate of expected cash flow shortfalls on secured financial instruments reflects the amount and the timing for enforcing the collateral, if such collateral is considered to be part of the contractual terms of the secured instrument.

The IFRS 9 model validation process is fully aligned with the Group's existing model validation process. Models are reviewed by an independent unit responsible for internal validation and the unit's conclusions are then examined by the Group Models Committee. Subsequent recommendations are monitored up by the validation unit.

Recognition of forward-looking information

Forward-looking macro-economic data are taken into account in a methodological framework applicable at two levels:

- at the Group level, in the determination of a shared framework for taking the forward looking into account in the projection of PD and LGD inputs over the amortization horizon of operations within the central model;
- at the level of each entity, with regard to its own portfolios.

The amount of expected credit losses is calculated using an average ECL by scenario, weighted by probability of occurrence, taking into consideration past events, current circumstances and reasonable and justifiable forecasts of the economic environment.

Groupe BPCE uses forward-looking data to estimate any significant increase in credit risk and to measure expected credit losses. To do this, Groupe BPCE uses the projections of macro-economic variables used to define its budget process, considered as the most probable, framed by optimistic and pessimistic scenarios in order to define alternative trajectories.

To determine a significant increase in credit risk, as well as applying rules based on the comparison of risk parameters between the initial recognition date and the reporting date, the calculation is supplemented by forward-looking information such as sector or geographical macro-economic scenarios.

To measure expected credit losses, the Group has chosen three macro-economic scenarios, which are detailed in the following paragraph.

Methodology for calculating expected losses in the central model

The parameters used to measure expected credit losses are adjusted to economic conditions by defining three economic scenarios (central/pessimist/optimist) over a three-year period.

The definition and review of these scenarios follows the same organization and governance as that defined for the budget process, with a quarterly review of their relevance since the Covid-19 crisis, which may lead to a revision of macro-economic projections in the event of a significant deviation in the situation observed on the basis of proposals from economic research and validation by the Executive Management Committee.

The probability of occurrence of the Baseline scenario and the optimistic and pessimistic scenarios is reviewed on a quarterly basis by the Group Watchlist and Provisions Committee. The inputs thus defined allow expected credit losses for all exposures to be valued, regardless of whether they belong to a scope approved using an internal method or are processed using the standardized method for the calculation of risk-weighted assets.

The variables defined in each of these scenarios allow for the distortion of the PD and LGD parameters and the calculation of an expected credit loss for each economic scenario. Projections of inputs for periods longer than three years are based on the mean reversion principle. These economic scenarios are associated with probabilities of occurrence, making it possible to calculate the average probable loss, which is used as the amount of the IFRS 9 expected credit loss.

For December 31, 2024, closing:

The Group's central scenario was built in an uncertain geopolitical environment: elections in Western countries (European Parliament, US presidential election), armed conflicts (Russia/Ukraine, Middle East) and potential worsening of the situation in various geographic areas.

After the 2020-2021 pandemic and the two years of high inflation and subsequent rate hikes by central banks, various economic indicators are affected: some countries have entered a slight recession, real estate prices are trending down, sovereign debt peaks at unprecedented highs (recent downgrade of France's rating by S&P), and lastly the challenges related to the climate transition are beginning to change the historical paradigm in place for more than 50 years concerning the global organization of production and trade against a backdrop of geopolitical tensions between the United States and China.

The Group's central scenario is based on the following structuring assumptions: no change in the current pace of the climate transition (*i.e.* without a significant inflection in the transition or the frequency of extreme climate events compared to recent history), no escalation or major evolution in the geopolitical conflicts and finally no crisis of confidence concerning sovereign debt.

The main characteristics of the Group's central scenario, which is the one used to prepare its strategic plan, are therefore:

A continuation of the decline in inflation, allowing the ECB to start lowering its interest rates in 2024 with a continuation of this decrease in 2025 just like the FED. In this scenario, oil prices decline slightly, remaining in the $70-80 range;

This positively affects the growth outlook, with GDP growth reaching the long-term average by 2025 in France and the Eurozone. The US economy is following a soft landing scenario after growing stronger than expected in 2023 with GDP growth of around 2% each year for the next four years;

This return to a normalized growth outlook will lead to a decrease in the unemployment rate by 2026;

On the other hand, uncertainties concerning sovereign debt will lead to a rise in long-term rates, while short-term interest rates are declining and curves are steepening;

The current negative trend in real estate prices will continue over the next three years, although it will stabilize over time;

Weak but steady growth in the equity markets after 2024.

Due to the political uncertainties arising from the dissolution of the National Assembly in June 2024, the scenario was reviewed several times before being finally validated by the Group ALM Committee on September 18, 2024.

As for the central scenario, the slight changes in the economic situation observed since the last closing did not lead to an in-depth revision of the pessimistic and optimistic limits, determined when the macro-economic scenario was prepared in June 2024. As a result, the pessimistic scenario continues to assume a continuation of the trade war between the US and China against a backdrop of tension in Taiwan, while the optimistic scenario, based on a statistical deviation from the central scenario, results in a gradual return of the market, inflation to low levels and a more vigorous recovery in activity.

During 2024, the following methodological changes were implemented:

All of the Retail risk parameters were recalibrated to take into account recent regulatory changes (IRB Repair in particular) relating to this portfolio;

New forward-looking PD models (PDFL) were put into production in order to integrate several methodological improvements and to improve the performance of the system. The main changes include the increase in the granularity of the models (now distinguishing between customers with and without real estate loans in the Retail portfolio, and small businesses and other specific populations in the Non-Retail portfolio), the launch of the PDFL model for companies between €10 million and €500 million ("High Segment") and the updating of the PD anchoring point (which since the first application of IFRS 9 had been fixed at the default rate for the year 2017).

These changes generated a reversal of €259 million recorded in cost of risk.

In addition, Groupe BPCE has extended and adapted this approach by adjusting for a number of factors specific to certain scopes or significant markets. Each scenario is therefore weighted based on how close it is to the *consensus* forecast for the main economic variables in each scope or significant market of the Group.

For Retail Banking, the projections are calculated using the main macro-economic variables such as GDP, the unemployment rate, interest rates on 10-year French sovereign debt and real estate. For Corporate & Investment Banking, which is more geographically diversified, the macro-economic variables used relate to the international economy. In addition to macro-economic variables for the France zone, the Eurozone and US GDP variables are also used.

For Retail Banking and Corporate & Investment Banking, the macro-economic variables in France are as follows:

At December 31, 2024:

	Pessimistic 2024			
	GDP	**Unempl.**	**RRE**	**10Y yld**
2024	(0.42%)	8.07%	(8.15%)	4.04%
2025	(3.00%)	9.12%	(8.00%)	5.25%
2026	0.50%	9.05%	(6.00%)	4.60%

	Central 2024			
	GDP	**Unempl.**	**RRE**	**10Y yld**
2024	1.10%	7.50%	(6.00%)	2.85%
2025	1.40%	7.64%	(1.50%)	2.90%
2026	1.57%	7.40%	0.00%	2.70%

	Optimistic 2024			
	GDP	**Unempl.**	**RRE**	**10Y yld**
2024	1.86%	7.22%	(4.93%)	2.63%
2025	3.90%	6.54%	1.75%	2.10%
2026	2.64%	6.23%	3.00%	2.20%

At December 31, 2023:

	Pessimistic 2023			
	GDP	**Unempl.**	**RRE**	**10Y yld**
2023	0.10%	7.90%	(3.00%)	3.93%
2024	(1.50%)	8.50%	(5.50%)	4.89%
2025	(0.75%)	9.50%	(9.00%)	4.70%

	Central 2023			
	GDP	**Unempl.**	**RRE**	**10Y yld**
2023	0.60%	7.40%	(2.50%)	3.03%
2024	0.90%	7.50%	(4.00%)	3.09%
2025	1.60%	6.93%	(3.00%)	3.19%

	Optimistic 2023			
	GDP	**Unempl.**	**RRE**	**10Y yld**
2023	0.90%	7.03%	(2.13%)	2.36%
2024	2.70%	6.75%	(2.88%)	1.74%
2025	3.36%	5.00%	1.50%	2.05%

For Corporate & Investment Banking, the 2024 macro-economic scenarios for the Euro and US zones used to determine the weightings for these zones are as follows:

	Pessimistic 2024		**Central 2024**		**Optimistic 2024**	
	Eurozone GDP	*US GDP*	*Eurozone GDP*	*US GDP*	*Eurozone GDP*	*US GDP*
2024	(1.05%)	1.01%	0.70%	2.10%	1.57%	2.64%
2025	(3.90%)	(1.50%)	1.40%	1.80%	4.05%	4.20%
2026	1.20%	1.50%	1.45%	2.03%	3.26%	2.29%

Reminder: scenarios used in 2023

	Pessimistic 2023		**Central 2023**		**Optimistic 2023**	
	Eurozone GDP	US GDP	Eurozone GDP	US GDP	Eurozone GDP	US GDP
2023	(0.20%)	0.55%	0.70%	1.10%	1.20%	1.51%
2024	(2.00%)	(0.50%)	0.90%	0.60%	3.08%	1.43%
2025	(1.10%)	0.60%	1.50%	2.20%	3.45%	3.40%

	Pessimistic			Central			Optimistic		
	2024	2025	2026	2024	2025	2026	2024	2025	2026
S&P 500	4,687	4,203	3,783	5,254	5,359	5,466	5,962	6,515	7,150
SLS	17.2	43.5	10.5	4.6	5.1	2.6	(1.8)	(14.1)	(1.4)
VIX	24.0	36.0	25.0	17.5	16.3	15.0	11.0	11.3	10.0
Fed.Ref. Rate	6.1%	6.5%	6.5%	5.0%	3.3%	3.3%	4.5%	1.6%	1.6%
Spread SONIA 6-12M	0.1%	0.1%	(0.2%)	0.1%	0.1%	0.0%	0.1%	0.0%	0.5%

For Retail Banking, the post-model adjustments that reflected the positive impact of the various measures to support the economy were eliminated due to the reduction in the benefits provided by the moratoria and SGLs as well as the evolution of the economic situation since the implementation of these adjustments.

Weighting of scenarios at December 31, 2024

In order to take into account the geographical diversity of its exposures, particularly for Corporate & Investment Banking, Groupe BPCE has had to distinguish the weightings of its economic scenarios according to the geographic area in question.

The expected credit losses are calculated by assigning to each of the scenarios a weighting determined according to the proximity of the consensus of the forecasters with each of the baseline, pessimistic and optimistic scenarios on the GDP growth variable.

Thus, the weightings used for the France zone are as follows:

- central scenario: 80% at December 31, 2024 compared with 50% at December 31, 2023;
- pessimistic scenario: 15% at December 31, 2024 compared with 20% at December 31, 2023;
- optimistic scenario: 5% at December 31, 2024 compared with 30% at December 31, 2023.

For exposures in the Eurozone (excluding France) and the US, mainly in Corporate & Investment Banking, the weightings are as follows:

- in the Eurozone (excluding France): 13% pessimistic, 78% central and 9% optimistic *versus* 18% pessimistic, 76% central and 6% optimistic at December 31, 2023;
- in the US zone: 10% pessimistic, 65% central and 25% optimistic *versus* 15% pessimistic, 36% central and 49% optimistic at December 31, 2023.

Environmental risks are not taken into account in the central models at this stage. However, they are recorded at the institution level (see below).

Expected credit losses built up in addition to the central model

Additional provisions have been recorded by the Group's institutions to cover the specific risks of their portfolios, in addition to the provisions described above and calculated by the Group's tools. These provisions were mainly allocated in 2020 and 2021 for the consequences of the Covid-19 crisis. In recent years, they were supplemented by additional documented provisions for sectors likely to be most affected by a worsening macro-economic context (rising inflation, soaring energy prices, shortages, etc.).

In 2024, these provisions mainly concerned the real estate rental and services sectors as well as real estate professionals. In addition, several sectors have been subjected to provisions reversals such as the tourism-hotel-catering industry and the construction industry.

In this context, the Group continued to strengthen the identification and monitoring of the most affected sectors. The sectoral monitoring approach is reflected in (i) a classification according to their level of risk of economic sectors and sub-sectors established centrally by Groupe BPCE's Risk division, updated regularly and communicated to all Group institutions, (ii) a tightening of LGD rates on a geographical or sectoral basis.

To a lesser extent and only for a limited number of institutions, expected credit losses due to climate risks were constituted by certain institutions. They are constituted in accordance with the general principles defined by the Group and mainly concern physical climate risk. These provisions are made in anticipation of direct losses, by sector or by geographic area, caused by extreme or chronic weather events resulting in an increased risk of default following a cessation or reduction in activity. They are not created individually because they cover an overall risk in certain sectors of the economy and on a local, regional or national scope, depending on the institution. Transition risks are also taken into account in these expected credit losses. They correspond to the economic and financial consequences of a societal transition to a low-carbon economy, aimed at limiting greenhouse gas emissions (regulations, market, technology, reputation), to which a business sector cannot align itself.

Climate risk is taken into account by applying a stress on the counterparty's rating level, or an overall provisioning rate depending on the customer segment according to its vulnerability to climate risks.

ECL sensitivity analysis

Sensitivity analyses are carried out on the impairment outstandings on all instruments classified as Stage 1 and Stage 2 in the Group's central model. These analyses are based on a weighting of 100% of each of the scenarios used without impacting the status of these outstandings or any model adjustments.

A weighting of the pessimistic scenario at 100% would lead to a 23% increase in expected credit losses for instruments classified in S1 and S2. Conversely, a weighting of the optimistic scenario at 100% would lead to a decrease of 14% in ECL. Lastly, a weighting of the central scenario at 100% would lead to a decrease of 3% in ECL.

Method for measuring assets classified as Stage 3

Financial assets for which there is objective evidence of impairment loss due to an event representing a counterparty risk and occurring after initial recognition are classified as Stage 3. The criteria for identifying assets are in line with the definition of default under Article 178 of European Regulation No. 575/2013, of June 26, 2013, on prudential requirements for credit institutions, consistent with EBA guidelines (EBA/GL/2016/07) on the application of the definition of default, and Delegated Regulation (EU) 2018/1845 of the European Central Bank on the threshold for assessing the materiality of credit obligations past due.

Loans and advances are considered as impaired and are classified as Stage 3 if the following two conditions are met:

- there is objective evidence of impairment on an individual or portfolio basis: there are "triggering events" or "loss events" identifying counterparty risk occurring after the initial recognition of the loans in question. Objective evidence of impairment includes:
  - the occurrence of a payment past due for at least three consecutive months, the amount of which exceeds the absolute thresholds (of €100 for a retail exposure, otherwise €500) and the relative threshold of 1% of the counterparty's exposures,
  - the restructuring of loans if certain criteria are met, or regardless of whether any payment has been missed, the observation of financial hardship experienced by the counterparty leading to the expectation that some or all of the amounts owed may not be recovered. Restructured loans are classed as Stage 3 when the loss is greater than 1% of the difference between the net present value before restructuring and the net present value after restructuring;
- these events are liable to lead to the recognition of incurred credit losses, *i.e.* expected credit losses for which the probability of occurrence has become certain.

The **Stage 3 classification is maintained for a probationary period of three months** after the disappearance of all the above-mentioned default indicators. The probationary period in Stage 3 is extended to **one year** for **restructured contracts that have been subject to a Stage 3 transfer.**

When moving out of Stage 3, Groupe BPCE does not apply an additional probationary period of Stage 2 classification prior to any transfer to Stage 1 (if the asset concerned meets the conditions for such classification).

Debt securities such as bonds or securitized transactions (ABS, CMBS, RMBS, cash CDOs) are considered impaired and are classified as Stage 3 when there is a known counterparty risk.

The Group uses the same impairment indicators for Stage 3 debt securities as those used for individually assessing the impairment risk on loans and advances, irrespective of the portfolio to which the debt securities are ultimately designated. For perpetual deeply subordinated notes (TSSDI) that meet the definition of debt instruments within the meaning of IAS 32, particular attention is also paid if, under certain conditions, the issuer may be unable to pay the coupon or extend the issue beyond the scheduled redemption date.

Impairment for expected credit losses on Stage 3 financial assets is determined as the difference between the amortized cost and the recoverable amount of the receivable, *i.e.* the present value of estimated recoverable future cash flows, whether these cash flows come from the counterparty's activity or from the potential activation of guarantees (if these guarantee are considered as being part of the contractual terms and conditions of the guaranteed instrument). For short-term assets (maturity of less than one year), there is no discounting of future cash flows. Impairment is determined globally, without distinguishing between interest and principal. Expected credit losses arising from Stage 3 off-balance sheet commitments are taken into account through provisions recognized on the liability side of the balance sheet. They are calculated on the basis of the maturity schedules determined based on historic recoveries for each category of receivable.

For the purposes of measuring expected credit losses, pledged assets and other credit enhancements that form an integral part of the contractual conditions of the instrument and that the entity does not recognize separately are taken into account in the estimate of expected cash flow shortfalls.

The write-offs are based on individual analyses, taking into account the specific nature of each situation. In addition to the factors clearly attesting that all or part of the receivable will not be recovered (*e.g.* cessation of recovery actions, receipt of the certificate of non-recoverability), other groups of indicators are also likely to be taken into account (entry into liquidation procedure, disappearance or insufficiency of residual assets and/or absence of collateral, absence of manifest desire of executives to respect their commitments and absence of shareholder support, chances of recovery based exclusively on legal recovery actions brought against third parties combined with a very low probability of success of these actions).

These factors must be considered as part of an overall analysis and do not constitute an automatic indicator of a write-off. When, in view of the situation of the case, it is reasonably certain that all or part of the receivable will not be recovered, the amount to be recognized as losses is determined on the basis of the most objective possible external and internal elements.

Subsequent recoveries of receivables already recorded as losses are also recognized in the cost of credit risk item.

Recognition of impairment of assets classified at amortized cost and at fair value through other comprehensive income, and of provisions for loan and guarantee commitments

For debt instruments recognized on the balance sheet in the financial assets at amortized cost category, impairment is recorded against the line on which the asset was initially shown for its net amount (regardless of whether the asset is S1, S2, S3 or POCI). Impairment charges and reversals are recognized in the income statement under "Cost of credit risk".

For debt instruments recognized as financial assets at fair value through other comprehensive income on the balance sheet, impairment is carried on the liabilities side of the balance sheet at the level of other comprehensive income recyclable to profit or loss, with a corresponding entry on the income statement under "Cost of credit risk" (regardless of whether the asset is classified S1, S2, S3 or POCI).

For loan and financial guarantee commitments given, provisions are recorded on the liabilities side of the balance sheet under "Provisions" (irrespective of whether the commitment given is classified S1, S2, S3 or POCI). Additions to/reversals from provisions are recognized in the income statement under "Cost of credit risk".

7.1.2.1 Change in S1/S2 credit losses

At December 31, 2024, the total expected S1 and S2 credit losses amounted to €5,590 million and can be broken down as follows:

in millions of euros	12/31/2024	12/31/2023
Central model	3,622	3,854
Complements to the central model	1,807	1,774
Other	161	211
TOTAL EXPECTED CREDIT LOSSES S1/S2	**5,590**	**5,839**

7.1.2.2 Change in the gross carrying amount and credit losses on financial assets through other comprehensive income

	Stage 1		Stage 2		Stage 3		TOTAL	
in millions of euros	Gross carrying amount	Impairment for expected credit losses	Gross carrying amount	Impairment for expected credit losses	Gross carrying amount	Impairment for expected credit losses	Gross carrying amount	Impairment for expected credit losses

(1) Other changes include the amortization of receivables, the change in credit risk parameters and changes in exchange rates.

7.1.3 Measurement and management of credit risk

Credit risk arises whenever a counterparty is unable to meet its payment obligations and may result from a reduction in credit quality or default by the counterparty.

Commitments exposed to credit risk consist of existing or potential receivables and particularly loans, debt securities, equities, performance swaps, performance bonds, or confirmed or undrawn facilities.

Credit risk management procedures and assessment methods, risk concentration, the quality of performing financial assets, and the analysis and breakdown of outstandings are described in the risk management report.

7.1.4 Guarantees received on IFRS 9 impaired instruments

The statement below shows the credit and counterparty risk exposure for all Groupe BPCE's financial assets. This exposure to credit risk (determined without taking into account the impact of any unrecognized netting or collateral agreements) and to counterparty risk is based on the net carrying amount of the financial assets.

in millions of euros	Maximum risk exposure	Impairment	Maximum exposure net of impairment	Guarantees
Debt securities at amortized cost	310	(241)	69	0
Loans and advances to banks at amortized cost	33	(30)	3	0
Loans and advances to customers at amortized cost	24,254	(9,624)	14,630	11,872
Debt securities – Fair value through other comprehensive income recyclable to profit or loss	4	(4)	0	0
Customer loans and advances - FVOCI R	(4)	6	2	0
Loan commitments	568	(130)	438	134
Guarantee commitments	818	(278)	540	75
TOTAL IMPAIRED FINANCIAL INSTRUMENTS (S3)	**25,983**	**(10,301)**	**15,682**	**12,081**

7.1.5 Credit risk mitigation mechanisms: assets obtained by taking possession of collateral

The policy followed by Groupe BPCE entities is to sell assets obtained by taking possession of collateral as soon as possible. The amount of these assets was non-material at December 31, 2024.

7.2 Market risk

Market risk refers to the possibility of financial loss due to market trends, such as:

- interest rates: interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate due to changes in market rates of interest;
- exchange rates;
- prices: market price risk is the risk of a potential loss resulting from changes in market prices, whether they are caused by factors specific to the instrument or its issuer or by factors affecting all market-traded instruments. Variable-income securities, equity derivatives and commodity derivatives are exposed to this type of risk;
- and more generally, any market parameter involved in the valuation of portfolios.

Systems for the measurement and monitoring of market risks are presented in the risk management report.

The information provided in the risk management report required under IFRS 7 and relating to the management of market risk comprises:

- VaR for the Groupe BPCE scope;
- the conclusions of the global stress tests.

7.3 Overall interest rate risk and exchange rate risk

Interest rate risk is the risk that unfavorable changes in interest rates will adversely impact the Group's annual results and net worth. Foreign exchange risk is the risk of losses resulting from changes in exchange rates.

The Group's approach to the management of overall interest rate risk and foreign exchange risk is discussed in Chapter 7.9 "Risk factors and risk management – Liquidity, interest rate and exchange rate risks".

7.4 Liquidity risk

Liquidity risk is the risk that the bank will not be able to meet its commitments or maturities at any given time.

The funding procedures and liquidity risk management arrangements are disclosed in the risk management report.

Disclosures relating to the management of liquidity risk required by IFRS 7 are provided in Chapter 7.9 "Risk factors and risk management – Liquidity, interest rate and exchange rate risks".

Note 8 / Employee benefits and similar

Accounting principles

There are four categories of employee benefits:

- **short-term employee benefits** such as wages, salaries, paid annual leave, bonuses, and profit sharing and incentive schemes which are expected to be paid within 12 months of the end of the period in which the employee renders the service are recognized in expenses.
- **post-employment benefits** paid to retired staff break down into two categories: defined-contribution plans and defined-benefit plans.

Defined-contribution plans such as French national plans are those for which Groupe BPCE's obligation is limited to payment of a contribution; there is no obligation for the employer regarding a certain level of benefits. Contributions paid into these plans are recognized as an expense for the period.

Defined-benefit plans are those for which Groupe BPCE has undertaken to provide a given amount or level of benefits.

Defined-benefit plans are subject to provisions calculated based on an actuarial assessment of the amount of the obligation, taking into account demographic and financial assumptions. When these plans are funded by external funds meeting the definition of plan assets, the amount of the provision is reduced by the fair value of these assets.

The cost of defined-benefit plans recorded in expenses for the period includes: the service cost (representing the rights acquired by beneficiaries over the period), the past service cost (revaluation differences on actuarial liabilities following an amendment or reduction in the plan), the net financial cost (effect of unwinding the discount on the net obligation for interest income generated by plan assets) and the effect of pension drawdowns.

Revaluation differences on actuarial liabilities caused by changes in demographic and financial assumptions and past-experience effects are recorded in gains and losses recognized directly in other comprehensive income not recyclable to net income:

- **other long-term employee benefits** include awards accruing to current employees and payable 12 months or more after the end of the period in which the employee renders the related service. They mainly include long-service awards and deferred variable remuneration payable in cash.

These benefits are calculated using the same actuarial method as that applied for defined-benefit pension plans. The accounting method differs in terms of revaluation differences on actuarial liabilities, which are recorded under expenses;

- **termination benefits** are granted to employees on termination of their employment contract before the normal retirement date in the event of dismissal or acceptance of termination for compensation. They are covered by a provision. Termination benefits that are not expected to be paid within the 12 months following the balance sheet date are discounted to present value.

Share-based payments include payments in equity instruments or cash, the amount of which depends on the change in the value of the equity instruments or a valuation formula.

A personnel expense is systematically recorded for an amount equal to the fair value of the instruments awarded, spread over the period over which the rights are acquired.

8.1 Payroll costs

Payroll costs include all personnel expenses and the associated social security charges and payroll-based taxes.

They include expenses for employee benefits and share-based payments.

Information on employees by category is presented in Chapter 2, "Sustainability Report" (Part 3 - Social information).

in millions of euros	2024 fiscal year	2023 fiscal year
Wages and salaries	(7,244)	(6,974)
Expenses for defined-benefit and defined-contribution pension plans and other long-term employee benefits	(789)	(701)
Other social security charges and payroll-based taxes	(2,911)	(2,825)
Profit sharing and incentive schemes	(688)	(661)
TOTAL PAYROLL COSTS[1]	**(11,632)**	**(11,161)**

(1) Including all overheads by nature of all Group activities, including all overheads of the insurance activities presented in Note 9.1.8.

8.2 Employee benefits

Groupe BPCE grants its staff a variety of employee benefits.

The Banques Populaires private supplementary pension plan, managed by Caisse Autonome de Retraite des Banques Populaires (CAR-BP), covers the pension benefits deriving from the closure of the Banques Populaires banking pension scheme at December 31, 1993.

The pension plans managed by CAR-BP are partially covered by Insurance for annuities paid to beneficiaries over a certain age, and for obligations in respect of beneficiaries below this age.

The annuities paid to beneficiaries over the reference age are managed under the insurer's (CNP) general pension plan. The assets in this general plan are reserved for the insurer's pension obligations and their composition is adjusted in line with foreseeable payment trends. They mostly comprise fixed income instruments so as to enable the insurer to apply the capital guarantee that it is obliged to provide for this type of assets. The insurer is responsible for the fund's Asset/Liability management.

Other obligations are managed in a diversified fund managed as a unit-linked policy and are not covered by any particular guarantee from the insurer. The management of these obligations is based on a target strategic allocation that mostly invests in interest rate products (60%, over 95% of which are government bonds), but which also includes equity investments (40%, with 20% invested in the Eurozone). The allocation is adjusted to optimize the portfolio's expected performance, subject to a risk constraint comprising many criteria. The corresponding asset/liability reviews are performed each year and are presented to the CAR-BP Technical, Financial and Risk Committee and to the Groupe BPCE Employee Benefits Monitoring Committee for information. The relatively aggressive asset allocation is made possible by the long-term investment horizon and by the regulation mechanisms integrated in the plan's financial management system.

The Caisses d'Epargne's former private supplementary pension plan (a retained-benefit plan), previously managed by Caisse Générale de Retraite des Caisses d'Epargne (CGRCE), is now incorporated within Caisse Générale de Prévoyance des Caisses d'Epargne (CGP). Beneficiaries' rights were crystallized on the date of the plan's closure, on December 31, 1999. The strategic guidelines for the management of the Caisses d'Epargne retained-benefit plan are set by the CGP Board of Directors based on asset/liability reviews submitted first to a Joint Investment Committee. The Groupe BPCE Employee Benefits Monitoring Committee also receives the reviews for information purposes.

The bond allocation is a decisive component of the plan's assets. To manage interest rate risk, the CGP is obliged to replicate expected payouts with equivalent assets *via* a matching process. Liability constraints require the holding of long-term assets to ensure the duration is as close as possible to the duration of liabilities. The wish to be able to review annuities on an annual basis, which is decided by the CGP Board of Directors, means the portfolio holds a large portion of inflation-indexed bonds.

The CAR-BP and CGP plans are presented under "Supplementary pension and other plans".

Other employee benefits include:

- pensions and other post-employment benefits: end-of-career awards and other benefits granted to retirees;
- other benefits: long-service awards and other long-term employee benefits.

8.2.1 Analysis of employee-related assets and liabilities recorded in the balance sheet

	Post-employment defined-benefit plans		Other long-term employee benefits			
in millions of euros	Supplementary pensions and other plans	End-of-career awards	Long-service awards	Other benefits	12/31/2024	12/31/2023
Actuarial liabilities	5,587	720	221	471	7,000	7,049
Fair value of plan assets	(6,812)	(667)	(11)		(7,490)	(7,680)
Fair value of reimbursement rights		(31)			(31)	(30)
Effect of ceiling on plan assets	1,462	2			1,464	1,619
Net amount reported on the balance sheet	**237**	**24**	**210**	**471**	**942**	**958**
Passive employee benefits	237	153	210	471	1,071	1,062
Active employee benefits[1]		129			129	104

(1) Mostly shown as assets on the balance sheet under "Accrued income and other assets".

Actuarial liabilities represent the Group's obligation in respect of beneficiaries. They are calculated by independent actuaries using the projected unit credit method based on demographic and financial assumptions that are reviewed on a regular basis and at least once a year.

When these plans are funded by assets meeting the definition of plan assets, the amount of the provision corresponds to actuarial liabilities less the fair value of these assets.

Hedging assets no longer meeting the definition of plan assets are recorded under assets.

8.2.2 Changes in amounts recognized on the balance sheet

Changes in actuarial liabilities

	Post-employment defined-benefit plans		Other long-term employee benefits			
in millions of euros	Supplementary pensions and other plans	End-of-career awards	Long-service awards	Other benefits	2024 fiscal year	2023 fiscal year

ACTUARIAL LIABILITIES AT END OF YEAR	**5,587**	**720**	**221**	**471**	**7,000**	**7,049**

The pension reform in France (Act 2023-270 of April 14, 2023 on the rectifying financing of social security for 2023 and application decrees 2023-435 and 2023-436 of June 3, 2023) has been taken into account for the valuation of the actuarial debt as of December 31, 2024. Considered as a modification of a plan recognized in past service cost, the impact is therefore recognized in the income statement.

Change in plan assets

	Post-employment defined-benefit plans		Other long-term employee benefits		
in millions of euros	Supplementary pensions and other plans	End-of-career awards	Long-service awards	2024 fiscal year	2023 fiscal year
Fair value of plan assets at start of year	**7,049**	**650**	**11**	**7,710**	**7,435**
Interest income	230	22		252	275

Benefits paid	(212)	(6)		(218)	(209)
Other items recorded in income	2			2	(3)
Changes recorded in income	**30**	**16**		**46**	**72**
Revaluation adjustments – Return on plan assets	(282)	4		(278)	212
Changes recognized directly in other comprehensive income not recyclable to profit or loss	**(282)**	**4**		**(278)**	**212**
Foreign exchange rate adjustments	14			14	(5)
Other changes in scope					
Other changes	1	28		29	(4)
FAIR VALUE OF PLAN ASSETS AT END OF YEAR[(1)]	**6,812**	**698**	**11**	**7,521**	**7,710**

(1) Of which €31 million in reimbursement rights included in end-of-career awards (*versus* €30 million at December 31, 2023).

Amounts paid in cash to beneficiaries reduce the amount of provisions recorded to this end by an equivalent amount. A total of €218 million was charged against pension plan assets.

Interest income on plan assets is calculated by applying the same discount rate as that used to discount commitments. The difference between the actual return at the balance sheet date and this interest income is a revaluation difference recorded in equity not recyclable to profit or loss for post-employment benefits.

8.2.3 Expenses for defined-benefit pension plans and other long-term employee benefits

Expenses for defined-benefit pension plans and other long-term employee benefits

The various components of the expense recognized for defined-benefit plans and other long-term employee benefits are included under "Payroll costs".

in millions of euros	Post-employment defined-benefit plans	Other long-term employee benefits	2024 fiscal year	2023 fiscal year
Service cost	(52)	(162)	(214)	(113)

8.3 Share-based payments and equivalent

Accounting principles

Share-based payments are those based on shares issued by the Group, regardless of whether the transactions are settled in the form of equity or cash indexed to the share price or on a valuation formula.

In accordance with IFRS 2 on "Share-based payments", grants of bonus shares to employees give rise to the recognition of an expense representing the fair value of the goods or services received at the grant date. The fair value of the services received is determined by reference to the fair value of the shares at the grant date, less the discounted amount of dividends not received by employees over the vesting period and taking into account any attendance conditions.

The expense is spread on a straight-line basis over the vesting period. The expense is adjusted over the vesting period to reflect the loss of rights.

The corresponding adjustment for the expense recorded under equity-settled plans is an increase in equity.

For cash-settled plans for which the Group has a liability, the expense corresponds to the fair value of that liability. This amount is expensed over the vesting period when its payment is subject to a presence condition, by the counterpart of a liability account. It is then remeasured at fair value through profit or loss at each closing date until it is settled. The revaluation of the debt at the closing date takes into account not only the fulfillment of the performance and/or presence condition but also the change in value of the underlying shares.

Where deferred variable remuneration plans provide for a cash payment based on a formula that is not representative of the fair value of the share, these plans fall within the scope of IAS 19. The principles applicable under IAS 19 to this type of plan are similar to those under IFRS 2 for cash-settled plans.

DEFERRED VARIABLE REMUNERATION PLANS

Since 2010 and until 2020, Natixis has granted each year to certain categories of its employees plans whose payment was based on Natixis shares.

Further to the delisting of Natixis on July 21, 2021, plans settled in cash indexed to the Natixis share price (for their non-vested components) have been modified following the delisting of the Natixis share on July 21, 2021 : their payment is now indexed to a formula based in particular on the price of the simplified public tender offer for Natixis shares (*i.e.* €4) and the change in net income attributable to equity holders of Groupe BPCE. The accounting treatment of these amended plans is described in Note 5.16. It should be noted that the plans granted in 2021 did not have to be modified because their conditions had already been adapted when they were created, in the event of a delisting of the Natixis share.

The deferred variable compensation plans awarded since 2022 are exclusively cash-settled and indexed to changes in net income attributable to equity holders of Groupe BPCE.

In June 2021, BPCE entered into a liquidity agreement with each beneficiary of bonus shares, consisting of a promise to sell that may be exercised by the beneficiary within 60 calendar days from the date of availability of the shares, followed by a promise to buy granted by BPCE to each beneficiary for the benefit of BPCE, that may be exercised by BPCE during 60 calendar days from the end of the exercise period for the promise to sell. The liquidity contract had no impact on Natixis' consolidated financial statements at December 31, 2024, given certain characteristics of these plans and their remaining unchanged status. Thus, the accounting treatment of these plans in Natixis' consolidated financial statements remains unchanged: the expense as calculated at the grant date of each plan continues to be spread over the vesting period and to be adjusted at the closing date based on changes in the presence and performance assumptions (see Note 5.16).

With regard to the 2025 plan, as the grants were not formally made at the closing date, the cost assessment was made on the basis of the best possible estimate at December 31, 2024. Furthermore, this plan will be settled fully in cash indexed to a valuation formula. It will provide for different payment dates depending on the categories of beneficiary populations (whether categories of personnel are regulated or not within the meaning of the CRD; whether they are members or not of senior management; whether employees are covered or not by the local regulations in force in the United Kingdom).

Natixis' subsidiaries may also establish their own share-based payment plans. The impact relating to these plans at December 31, 2024, was -€23.7 million (expense) compared to +€20.4 million (income) in 2023.

The characteristics of Natixis' deferred variable remuneration plans are detailed in the paragraphs below.

LONG-TERM CASH-SETTLED PAYMENT PLANS INDEXED ON A VALUATION FORMULA

Payments under these plans are subject to presence and performance criteria for the categories of regulated personnel within the meaning of the CRD.

Years the plan was granted	Grant date	Number of units granted at inception/Cash indexed in €	Vesting date	Number of units vested by beneficiaries/Cash indexed in €	Fair value of indexed cash unit at valuation date *(in euros)*

2025 plan(1)	03/06/2025		March 2032		

(1) Concerning the 2025 plan, the grants were not formally made at December 31, 2024.

SHARE-BASED PAYMENT PLANS SUBJECT TO LIQUIDITY CONTRACTS

Years the plan was granted	Grant date	Number of shares concerned at December 31, 2024
2021 plan	01/13/2022	223,081

The shares in the process of being acquired under the liquidity contracts give rise to a liability of €1 million at December 31, 2024.

EXPENSE FOR THE YEAR REPRESENTED BY DEFERRED VARIABLE REMUNERATION PLANS

	2024 fiscal year			
in millions of euros	Plans settled in shares subject to a liquidity contract	Plans settled in cash indexed to a valuation formula	Total	2023 fiscal year
Previous plans	(9)	(72)	(81)	(36)
Plans from the fiscal year		(60)	(60)	(32)
TOTAL	**(9)**	**(132)**	**(141)**	**(68)**

VALUATION PARAMETERS USED FOR THE COST ESTIMATE FOR THESE PLANS

	12/31/2024	12/31/2023
Fair value of the indexed cash unit[1]	[0.893; 1.299]	[4.52; 4.89]
Risk-free interest rates	2.57%	3.65%
Loss of rights rate	5.32%	5.37%

(1) Corresponds to the range of fair values of indexed cash units, which as of 2021 are differentiated by plan and by year.

DEFERRED VARIABLE REMUNERATION PLANS SETTLED IN CASH

Some employees are awarded deferred cash-settled loyalty and performance bonus benefits. These bonuses are subject to presence and performance conditions. In terms of accounting treatment, they are accounted for under "Other long-term employee benefits". The estimated expense takes into account an actuarial estimate of these conditions being met. It is spread over the rights vesting period. The amount recognized in respect of the 2024 fiscal year was:

Years the plan was granted	Grant date	Vesting date	2024 fiscal year *(in millions of euros)*	2023 fiscal year *(in millions of euros)*
2020 plan	01/22/2020	March 2021 March 2022		
2021 plan	01/20/2021	March 2022 March 2023		(1)
TOTAL				**(1)**

Note 9 / Insurance activities

General principles

Insurance activities cover personal insurance and non-life insurance activities. In Groupe BPCE these activities are performed by dedicated subsidiaries subject to the specific regulations applicable to the Insurance sector.

The entities concerned by these measures are mainly CEGC, BPCE Assurances, NA, BPCE Vie and its consolidated funds, BPCE Life, BPCE Assurances IARD, BPCE IARD, Surassur, Oney Insurance, Oney Life, Prépar Vie and Prépar IARD.

Financial assets and liabilities of insurance companies are therefore recognized in accordance with the provisions of IFRS 9. They are classified in the categories defined by this standard and follow its measurement rules (Note 2.5.1).

Insurance assets and liabilities are measured and presented in accordance with IFRS 17.

Scope of application

IFRS 17 applies to:

- issued insurance contracts (including issued reinsurance treaties);
- held reinsurance treaties;
- investment contracts issued with discretionary participation features, provided that the entity also issues insurance contracts.

Groupe BPCE has these three types of contracts.

However, the financial guarantees given by entities in the banking sector within Groupe BPCE, although meeting the accounting definition of an insurance contract, are still treated under IFRS 9 on financial instruments.

Measurement models

In accordance with IFRS 17, insurance assets and liabilities are recognized at present value.

Insurance assets and liabilities are measured using a building blocks approach (general approach), applicable by default to all contracts falling within the scope of IFRS 17, with an adaptation for insurance contracts with direct participation features (see below). This approach requires the measurement of technical provisions comprising the following three blocks:

- a first block equal to the present value of the estimate of future cash flows – Best Estimate (BE);
- a risk adjustment for non-financial risk, to take into account the uncertainty of these estimates of future cash flows (Risk Adjustment – RA);
- a Contractual Service Margin (CSM).

In Groupe BPCE, the general approach is used in direct business, in particular for payment protection insurance, multi-year personal protection contracts (excluding funeral) and for the guarantee activity. It is also used for the main reinsurance treaties issued for investment and pension activities (with certain adjustments to take into account the participating nature of the contracts, mainly under the disaggregation option or OCI option – see Note 9.2).

The Best Estimate corresponds to the present value, measured at each balance sheet date, of the estimate of future cash flows (receivable and payable, including future premiums on current contracts and acquisition cash flows) allocated to fulfilling contracts within the timeframe defined in accordance with IFRS 17 requirements, weighted by their probability of occurrence. Only the flows from current contracts are subject to measurement (a group of contracts may nevertheless be recognized in advance when facts and circumstances indicate that it is onerous (see below)). These flows are discounted using the discount rate described below.

The carrying amount *of* the Best Estimate is broken down into a liability (or asset) for remaining coverage (materializing the commitment for insurance services not yet provided) and a liability (or asset) for incurred claims (materializing the commitment for incurred claims that have not yet been paid in full). When options and guarantees are granted to policyholders, the Best Estimate includes an assessment of their cost. Lastly, receivables and payables arising from insurance or reinsurance operations issued are now included in the value of the Best Estimate.

The risk adjustment for non-financial risk corresponds to the consideration of the uncertainty of the estimates of future cash flows included in the Best Estimate measurement. It is also measured at the end of each reporting period. The level of the risk adjustment for non-financial risk is not standardized. Groupe BPCE has defined its risk adjustment for non-financial risk methodologies according to the types of insurance liabilities that pose different risks. The risk adjustment for non-financial risk of the liabilities for remaining coverage is mainly based on a VaR (Value at Risk)-type confidence level methodology, capitalizing on the prudential requirements and based on a multi-year vision of risk with an ultimate corresponding to the extinction of the risk. Intra-entity diversification is also taken into account. The risk adjustment for non-financial risk in respect of liabilities for incurred claims is mainly based on Groupe BPCE's level of risk appetite and corresponds to a level of confidence determined using actuarial calculation methods.

The CSM represents, when the contracts were issued, the expected profit on contracts, not yet earned, measured for each group of insurance contracts. This is measured at the contract inception date and then adjusted over time, notably to take into account any changes in future assumptions of non-financial origin (at each reporting date, changes in future assumptions impact the measurement of the Best Estimate and Risk Adjustment, with a corresponding adjustment to the CSM when they are of non-financial origin, and to income or OCI when they are of financial origin). It is recognized on the balance sheet and then in income in line with the services provided to policyholders, over the duration of the remaining coverage of the contracts. If a loss is expected at inception or during the coverage period (onerous contracts, representing an expected net cash outflow for the entity), this is not subject to a negative CSM, but is immediately recognized in income. The share of CSM representative of the service rendered over the period is allocated to profit or loss through coverage units, which represent the duration of coverage of the contracts, the quantity of services provided and the service rendered by the Groupe BPCE entities to the policyholders. When applying the general approach to payment protection insurance and guarantee activities, the coverage units are defined on the basis of the outstanding principal.

The discount rates applied to the estimate of future cash flows must reflect the time value of money, the cash flow characteristics, and the liquidity characteristics of the insurance contracts, and be consistent with observable current market prices. Under the general approach, the Best Estimate and the risk adjustment for non-financial risk are measured on the basis of current rates (at the reporting date) while the CSM remains adjusted on the basis of the discount rates determined at the date of initial recognition of the group of contracts. Groupe BPCE adopts a bottom-up approach to determine these discount rates, by using a risk-free rate curve (based on interbank swap rates) to which is added an illiquidity premium, depending on the characteristics and liquidity of the insurance contracts concerned. The risk-free rate curve used is adapted from the applicable rate curve in the context of prudential requirements (adjustments mainly concern liquid parameters and extrapolation beyond the last liquidity point).

A Variable Fee Approach (VFA) model, adapted from the general approach, is mandatory for insurance contracts with direct participation features, which meet the following three criteria:

- the contractual terms specify that the policyholder participates in a share of a clearly identified pool of underlying items;
- the insurer expects to pay to the insured an amount equal to a substantial share of the fair value returns on the identified pool of underlying items;
- a substantial proportion of the benefits that the entity expects to pay to the policyholder must vary with the fair value of the identified pool of underlying items.

In Groupe BPCE, this model is used in direct business to measure investment and pension contracts as well as funeral contracts.

In the case of insurance contracts with direct participation features, the service provided to the policyholder corresponds mainly to the financial management of the underlying items. The cash flows of these contracts vary depending on the performance of the underlying items. An increase in the value of the underlying items entails an increase in the value of the contracts. Conversely, a decrease in the value of the underlying items entails a decrease in the value of the contracts. Changes in the underlying items adjust the CSM for the insurer's share and impact the *Best Estimate* for the policyholder's share. The CSM in the VFA approach also takes into account changes in future financial assumptions and the effects on the Best Estimate and the risk adjustment for non-financial risk of the accretion.

Underlying items include, in particular, items allocated to policyholders as part of the profit-sharing feature (including, in particular, the share of financial assets and investment property representing with-profits savings commitments) and unit-linked products.

In Groupe BPCE, the majority of the financial assets underlying VFA contracts are measured at fair value through profit or loss or through other comprehensive income under IFRS 9. Investment property is also measured at fair value through profit or loss as permitted by IAS 40.

In the VFA approach, the Best Estimate includes the valuation of the cost of options and guarantees granted to policyholders. Insurance liabilities also reflect the pooling of contracts portfolios for flow of insurance contracts with direct participation features backed by the general fund. Future flexible premiums under current contracts are included in the Best Estimate measurement.

Adaptations to the methodologies of the general model have been made concerning the coverage units and the rate curve for contracts eligible for the VFA model. Thus, the coverage units used in the VFA model are based on changes in policyholders' savings contracts outstandings and are adjusted to correct for a "bow-wave" effect. This is generated by two effects recognized in CSM, in respect of the period just ended: the difference between the rate of return on assets attributable to contracts (in the real world) and that assessed by actuarial models (in risk-neutral measurement), and the release of the time value of options and guarantees (TVOG). Coverage units that take account of the bow-wave effect enable CSM amortization to be recorded in the income statement, more accurately reflecting the investment service provided to policyholders over the past period. In addition, the rate curve is based on the same methodology as that applicable under the general model, with the illiquidity premium determined according to the nature of the financial assets underlying the contracts eligible for this model.

Finally, the general approach is supplemented by a simpler optional model based on the allocation of premiums ("Premium allocation approach" – PAA). It applies to:

- all insurance contracts except contracts with direct participation features, insofar as this method leads to a result close to the general approach;
- contracts with a short-term coverage period (*i.e.* over a period of less than 12 months).

In Groupe BPCE, this model is used in direct business for annual personal protection contracts and for all non-life insurance contracts (fire, accidents and miscellaneous risks).

The initial liability for remaining coverage recognized is equal to the premiums received (*i.e.* no CSM is recognized). The premiums are then spread out and recognized in the income statement as time passes. Acquisition costs incurred may be recognized immediately as expenses when they occur or over the coverage period. The liabilities for incurred claims not yet disbursed and for groups of onerous contracts nevertheless remain measured according to the provisions of the general model. Insurance liabilities are only discounted if the effect of the passage of time is significant, particularly with regard to provisions for incurred claims (Best Estimate and Risk adjustment for non-financial risk). The provisions concerning the measurement of the risk adjustment for liabilities for incurred claims are similar to those applicable under the general model.

Contract boundaries (horizon)

Under IFRS 17, cash flows lie within the boundary of an insurance contract if they arise from substantive rights and obligations that exist during the reporting period in which the entity can compel the policyholder to pay the premiums or in which the entity has a substantive obligation to provide the policyholder with services. A substantive obligation to provide services set out in an insurance contract ceases notably when the entity has the practical ability to reassess the insured risks and can therefore set a price or a level of services that fully reflects these risks.

Groupe BPCE analyzed in depth the characteristics of its contracts in order to compute the cash flows included in the scope of its insurance contracts and thus to determine the horizon or "boundary" of these contracts. In this respect, based on the requirements of IFRS 17, the Group includes, in particular, within the boundary of investment contracts, future flexible premiums in respect of contracts in force at the reporting date.

Contract recognition and derecognition dates

A group of issued insurance contracts must be recognized at the first of the following dates:

- The start-date of the coverage period for the group of contracts;
- The date at which the first payment by a policyholder becomes due or, in the absence of a due date, the date at which the first payment is received; and
- In the event of a group of onerous contracts, the date at which the group becomes onerous.

Only contracts that satisfy individually the above recognition criteria at the end of the reporting period are included in the group of contracts. If this is not the case, the contracts are included in the group of contracts during later accounting periods.

An insurance contract is derecognized in the following cases:

- When it is extinguished, *i.e.* when the obligation specified in it expires, or when it is discharged or canceled;
- When it is subject to an outgoing transfer (transfer to a third party);
- When the conditions of a contract are substantially modified, triggering a change in the recognition of the contract if these new conditions had always existed (different classification, different valuation model, etc.). In this case, a new contract based on the modified conditions is then recognized as a replacement for the initial contract (which is then derecognized).

The first of the three cases mentioned above is the one that most commonly occurs within the framework of the activities of Groupe BPCE's insurance entities. In this case, derecognition of the insurance contract entails eliminating the Best Estimate and the risk adjustment for non-financial risk, as a counterpart to the CSM of the group of contracts, without having any direct and immediate effect on income.

Level of aggregation of contracts

The standard defines the level of aggregation for "groups of contracts" to be used to assess insurance contract liabilities and their CSM.

The first step is to identify the portfolios of insurance contracts, *i.e.* contracts subject to similar risks and managed together.

Each portfolio is then divided into three parts according to their profitability profile:

- contracts that are onerous at initial recognition;
- contracts which, at initial recognition, have no significant possibility of becoming onerous;
- the remaining contracts in the portfolio.

In addition, the standard as published by the IASB introduces the principle of "annual cohorts" prohibiting the inclusion in the same group of contracts issued more than one year apart.

A group of contracts is therefore a grouping of contracts from the same portfolio, the same profitability profile and the same cohort.

Nevertheless, the standard as adopted by the European Union provides for an optional exemption from the application of this rule for the following contracts:

- groups of insurance contracts with direct participation features and groups of investment contracts with discretionary participation features whose cash flows affect or are affected by cash flows to policyholders of other contracts;
- groups of insurance contracts which are managed across generations of contracts and meet certain conditions and for which the application of the matching adjustment has been approved by the supervisory authorities.

This exemption will be reviewed before the end of 2027, based on the results of the IASB's post implementation review of IFRS 17.

Groupe BPCE applies the option to exempt the application of annual cohorts to investment/pension contracts and funeral contracts.

Groupe BPCE's classification by portfolio was carried out in accordance with the requirements of IFRS 17 as well as with internal segmentation and the way in which contracts are managed. Groupe BPCE uses the contract as an elementary level under IFRS 17. Thus, no disaggregation for the various guarantees included in a contract has been made. Grouping by homogeneous profitability levels was completed following studies carried out on the basis of information and criteria available internally, such as products, contracts and policyholders.

Specific Provisions for held reinsurance treaties

IFRS 17 requires a separate analysis, measurement and accounting of direct insurance contracts (and issued reinsurance treaties) from held reinsurance treaties. These requirements entail the assessment of a Best Estimate, a risk adjustment for non-financial risk and a CSM specific to held reinsurance treaties.

The assumptions used to assess the Best Estimate of held reinsurance treaties must be consistent with those used to assess the Best Estimate of the underlying groups of direct insurance contracts. The latter must also reflect the effect of the risk of non-performance by the issuer of reinsurance contracts held, relating mainly to the reinsurer's credit risk and litigation risk.

The risk adjustment for non-financial risk must correspond to the amount of risk transferred by the held reinsurance treaty policyholder to the issuer of the latter.

Under held reinsurance treaties, the CSM may represent a reinsurance loss or gain (thus, the provisions relating to onerous contracts do not apply in the case of held reinsurance treaties). However, when the contracts underlying the reinsurance treaties are onerous, an income is recognized in the income statement in respect of the held reinsurance contracts (referred to as the "loss recovery component"), representing the reinsurer's participation in the losses. CSM held (whether representing a reinsurance cost or gain) is recognized in the income statement over the term of the held reinsurance treaties (and not over the term of the underlying contracts) and on the basis of coverage units which must reflect the services received.

As the VFA model is not applicable to reinsurance treaties, only the general model and the PAA model can be applied. The accounting models applicable to held reinsurance treaties may differ from those used for the underlying direct insurance contracts. The provisions relating to the level of aggregation of contracts remain identical to those applicable to direct insurance contracts, however references made to onerous contracts (in respect of direct insurance contracts) are replaced by references to contracts on which there is a net gain on initial recognition.

IFRS 17 provides for the entity to recognize a group of held reinsurance contracts according to the following rules:

- The general case in which initial recognition date is the start of the coverage period for the group of held reinsurance contracts;
- For proportionate treaties, initial recognition date is deferred until recognition date for the underlying contracts if this date is later than the start of the coverage period for the group of held reinsurance contracts;
- Lastly, if the underlying insurance contracts are onerous, initial recognition date is the recognition date for the loss component, provided that the held reinsurance contract is signed by this date.

Lastly, payables and receivables arising from held reinsurance operations (including debts for cash deposits and reinsurance current accounts) are now included in the value of the Best Estimate.

Groupe BPCE's reinsurance treaties were measured using the general model (in particular the main treaty for investment and pension activities) or the PAA model, depending on their time horizon determined in accordance with IFRS 17. Under the main held reinsurance treaty, the coverage units are based on changes in the outstandings of held contracts.

Key assumptions and judgments

For the purposes of applying IFRS 17, insurance liabilities are measured using estimation techniques, judgments and assumptions (notably claims and mortality laws, generally based on historical data, and assumptions concerning expenses and fees and commissions). More specifically, for the valuation of investment and pension contracts, lapse and future flexible premiums laws are also taken into account.

IFRS 17 does not prescribe the coverage units to be applied. Judgment and estimates must be used to best reflect the service provided during the period. Certain criteria must nevertheless be taken into account when determining coverage units: the probable duration of coverage for each contract, the quantity of services measured in relation to the service provided from the insured's point of view, and the service provided, which is defined as the insurer's readiness to cover an insured event.

The assumptions and judgments applied in calculating the risk adjustment for non-financial risk result in a confidence level for Groupe BPCE of 80% at December 31, 2024, identical to that at December 31, 2023.

In terms of discount rates, the risk-free rate curve used by Groupe BPCE to discount insurance contract cash flows is presented in the table below:

	12/31/2024				
Currency	**1 year**	**5 years**	**10 years**	**20 years**	**30 years**
Euro	2.23%	2.15%	2.27%	2.26%	2.26%

	12/31/2023				
Currency	**1 year**	**5 years**	**10 years**	**20 years**	**30 years**
Euro	3.36%	2.32%	2.39%	2.42%	2.44%

The illiquidity premium for insurance contracts with direct participation features measured under the VFA approach was between 0.94% and 1.25% at December 31, 2024, and between 0.80% and 1.12% at December 31, 2023, depending on the insurance subsidiaries.

The restatement of margins between banking entities distributing insurance products and insurance entities (see below) also involves estimates.

Transition valuation methods

IFRS 17 is applied retrospectively. Current insurance contracts have been remeasured on the transition date according to the three methods below:

- *Full Retrospective Approach (FRA)*

The Full Retrospective Approach (FRA) provides for the definition, recognition and measurement of each of the groups of insurance contracts as if IFRS 17 had always been applied since the inception of the contracts.

Groupe BPCE has adopted this approach mainly for portfolios of contracts and reinsurance treaties eligible for the PAA approach, and for the most recent years for portfolios of payment protection insurance and guarantee contracts.

If it is not possible to apply this method based on the available data, the following two methods can be used:

- *Modified Retrospective Approach (MRA)*

The Modified Retrospective Approach (MRA) is a retrospective method that aims to obtain a result as close as possible to that obtained by the FRA approach, based on the use of reasonable and justifiable information obtained without excessive cost or effort. The MRA approach allows the following calculation simplifications:

- measurement of groups of contracts on initial recognition: in particular, IFRS 17 make it possible to dispense with the annual cohorts to define the level of aggregation of groups of contracts in stock at the transition date. Groupe BPCE has adopted this simplification for portfolios of contracts for which the MRA approach has been adopted;
- measurement of the CSM at the transition date for contracts measured under the general approach: a CSM at the date of initial recognition is first valued on the basis of estimated future cash flows at transition, adjusted for actual cash flows between the date of initial recognition and transition. The CSM at the transition date results from the CSM at the date of initial recognition, amortized using coverage units between the date of initial recognition and the transition date. Discount rates at the initial recognition date may be determined based on an observable yield curve for at least three years prior to the transition date, or based on an average spread between an observable yield curve and an estimated curve. Finally, the risk adjustment for non-financial risk at the date of initial recognition must be determined by adjusting the risk adjustment for non-financial risk at the transition date with the release of risk expected prior to the transition date. Groupe BPCE has retained these simplifications for portfolios of contracts eligible for the general approach for which the MRA approach in transition has been adopted. The provisions concerning coverage units and have been applied consistently to current contracts at the transition date and those post-transition;

- measurement of the CSM at the transition date for contracts measured under the VFA approach: a CSM at the date of initial recognition is first measured on the basis of the fair value of the items underlying the contracts at transition, net of the estimated future cash flows at transition, adjusted for fees and levies and the change in the risk adjustment for non-financial risk relating to the period between the date of initial recognition and transition. The CSM at the transition date results from the CSM at the date of initial recognition, amortized using coverage units between the date of initial recognition and the transition date. Groupe BPCE has adopted this simplification for portfolios of contracts eligible for the VFA approach for which the MRA approach in transition has been adopted. The provisions concerning coverage units and mutualization have been applied consistently to contracts in force at the transition date and those post-transition;
- measurement of insurance finance income or expenses: the MRA approach simplifies the task of determining discount rates for groups of contracts and calculating other comprehensive income (OCI), where a breakdown of finance income or expenses is used. As permitted by IFRS 17, Groupe BPCE has mainly retained an OCI equivalent to that of the underlying items for investment and pension contract portfolios and zero for other portfolios valued using the MRA approach in transition.

In particular, Groupe BPCE has adopted this approach for its investment, pension, payment protection insurance portfolios (with the exception of the most recent years for certain portfolios) and for its main issued reinsurance treaty.

- *Fair Value Approach (FVA)*

The Fair Value Approach (FVA) is based only on the data available at the transition date without taking into account past financial flows.

In the Fair Value Approach, the contractual service margin is measured at the transition date as the difference between the fair value of the group of insurance contracts at that date and the fulfilment cash flows measured at that same date.

Groupe BPCE has adopted this approach for certain multi-year personal protection and non-significant payment protection insurance portfolios as well as for one of its main held reinsurance treaties.

Groupe BPCE has mainly applied the modified retrospective (MRA) and fair value (FVA) approaches to measure insurance and held reinsurance liabilities at the transition date, given operational constraints (*e.g.* historical data availability).

Presentation of the financial statements

The requirements of IFRS 17 in terms of presentation of the financial statements are detailed in Notes 9.2 and 9.3.

Groupe BPCE applies ANC recommendation No. 2022-01 of April 8, 2022, on the format of consolidated financial statements of banking sector institutions prepared in accordance with international accounting standards.

Internal margins between banking entities distributing insurance products and insurance entities are restated. This is reflected on the balance sheet by a reclassification between the CSM and BE aggregates within the insurance contracts issued item. In the income statement, fees and commissions income from banks is eliminated against fees and commissions expense from insurers, and overheads attributable to insurance contracts (non-margined) are reclassified to insurance expenses, presented as a deduction from NBI. The effect of these restatements is presented for the segment reporting in the retail banking networks concerned, mainly the Banques Populaires and Caisses d'Epargne sub-divisions of the Retail Banking and Insurance business line.

Groupe BPCE has chosen to review the calculations related to insurance contracts on an annual basis without taking into account the results of the calculations at the interim closing date (within the meaning of IAS 34) as permitted by IFRS 17.

9.1 Notes to the income statement for the insurance activities

Accounting principles

IFRS 17 introduces the distinction between insurance service result and insurance finance income and expenses.

The standard also requires a separate presentation of these aggregates under held reinsurance treaties.

Expenses directly attributable to insurance contracts are presented in NBI.

IFRS 17 requires the distinction between cash flows directly attributable to the fulfillment of contracts and non-attributable cash flows. Only cash flows attributable to the fulfillment of contracts are included in the measurement of liabilities and presented in the aggregates required by IFRS 17. The problem of distinguishing between attributable and non-attributable cash flows mainly concerns overheads. As the attributable nature of overheads is not defined in IFRS 17, it has been determined on the basis of an allocation of expenses according to a systematic and rational method. A portion of the attributable costs is classified as acquisition costs under IFRS 17.

The investment component (which corresponds to the amounts that the entity is required to repay to the policyholder under an insurance contract in all circumstances, whether or not the insured event occurs) is excluded from the income statement. The investment component mainly concerns contracts measured under VFA in Groupe BPCE.

The standard offers the option of breaking down insurance finance income or expenses for the period between financial income or expenses and equity (disaggregation option or OCI option), in order to ensure greater consistency in the income statement between the impact of financial assets and insurance liabilities. For contracts valued according to the general approach or the PAA approach, this means that undiscounting accretion at the original rate (or on the basis of the effective interest rate for participating contracts and participating reinsurance treaties not eligible for the VFA model) is presented in income statement, and changes in current discount rates are presented in equity. For insurance contracts with direct participation features (VFA), this means that an amount equal to but opposite to the finance income amount of the underlying items of the contracts can be recorded under insurance financial expenses. The remaining financial expense is recognized directly in other comprehensive income. This option applies by portfolio.

For insurance contracts issued, Groupe BPCE applies this option systematically under the VFA approach and mainly under the general approach and PAA approach. It also applies it to certain held reinsurance treaties.

For insurance contracts with direct participation features measured using the VFA approach, the standard allows optionally (risk mitigation option) to:

- reduce mismatches between the valuation of derivatives and non-derivative financial instruments measured at fair value through profit or loss used as hedging instruments and the valuation of hedged financial items that would be allocated to the CSM if this option did not exist; or
- reduce mismatches between changes of financial origin affecting held reinsurance treaties which impact income statement or OCI (impossibility of applying the VFA approach to reinsurance), while changes of financial origin affecting VFA contracts covered are allocated to CSM.

Groupe BPCE activates this option on savings scope as part of the hedging provided by the main held reinsurance treaties.

Groupe BPCE has chosen to split the change in the risk adjustment for non-financial risk between insurance service result and finance income or expenses from insurance as permitted by IFRS 17.

ANC recommendation No. 2022-01 of April 8, 2022, on the format of the consolidated financial statements of banking sector institutions prepared in accordance with international accounting standards allows optionally to present insurance activities financial investments on a separate asset line in the balance sheet subject to also presenting the net investment income from insurance activities as a separate item on the income statement. Groupe BPCE has adopted this presentation, which is in line with its previous presentation.

ANC recommendation No. 2022-01 of April 8, 2022, also calls for the cost of credit risk on insurance activities financial investments to be isolated on a separate line and presented after the items “Finance income or expenses from insurance contracts issued” and “Finance income or expenses from reinsurance contracts held”, in order to reflect the financial performance of insurance activities within a financial conglomerate with separate banking and insurance activities.

9.1.1 Revenue from insurance contracts issued

Accounting principles

Revenue from insurance contracts issued (including reinsurance treaties issued) reflect the provision of insurance and investment services during the year. As a result, with the exception of the PAA approach, premiums no longer appear in the income statement.

This aggregate includes, for contracts measured according to the general approach and the VFA approach,

- the release of estimated benefits and expenses for the period (excluding investment components);
- reversal of the risk adjustment for non-financial risk;
- the amortization of the contractual service margin in respect of current services provided over the period;
- amortization of acquisition cash flows;
- other income items, including in particular experience adjustments on premium receipts relating to current and past services.

The aggregate includes, for contracts valued according to the PAA approach, the amount of expected premiums allocated to the period.

in millions of euros	2024 fiscal year	2023 fiscal year
Release of estimated benefits and expenses for the period	1,250	1,222
Reversal of the risk adjustment for non-financial risk	168	162
Amortization of the contractual service margin	1,064	988
Amortization of acquisition cash flows	158	138
Other income items	41	40
Revenue from insurance contracts issued (excluding PAA)	2,680	2,550
Revenue from insurance contracts issued – PAA	2,381	2,261
TOTAL REVENUE FROM INSURANCE CONTRACTS ISSUED	**5,061**	**4,811**

9.1.2 Service expenses from insurance contracts issued

Accounting principles

Service expenses from insurance contracts issued (including reinsurance treaties issued) include:

- services and expenses incurred (excluding repayments of investment components). They include, in particular, claims expenses, attributable management fees and commissions, the portion attributable to insurance contracts issued of operating expenses or depreciation, amortization and impairment, which are presented in NBI under IFRS 17;
- recognition and reversal of onerous components, *i.e.* losses on onerous groups of contracts and reversals of such losses;
- amortization of acquisition costs and experience adjustments (difference between estimated and actual amounts) on current and past service acquisition costs.

in millions of euros	2024 fiscal year	2023 fiscal year
Services and expenses incurred	(3,308)	(2,991)
Recognition and recovery of onerous components	15	(51)
Acquisition costs	(493)	(441)
TOTAL EXPENSES FROM INSURANCE CONTRACTS ISSUED	**(3,785)**	**(3,482)**

9.1.3 Income and expenses from reinsurance contracts held

Accounting principles

IFRS 17 requires that the aggregates in respect of held reinsurance treaties be presented separately from the income and expenses from insurance contracts issued.

Income and expenses from reinsurance contracts held therefore include:

- on the one hand, cession expenses (cost of reinsurance);
- on the other hand, cession income (amounts recoverable from reinsurers).

in millions of euros	2024 fiscal year	2023 fiscal year
Cession expenses	(1,337)	(1,461)
Cession income	1,162	1,298
TOTAL INCOME OR EXPENSES FROM REINSURANCE CONTRACTS HELD	**(175)**	**(163)**

9.1.4 Net investment income from insurance activities

Accounting principles

The item includes net income from insurance financial investments valued in accordance with IFRS 9 and net income from insurance investment property valued in accordance with IAS 40.

The accounting principles applicable under IFRS 9 are presented in Note 2.5.1 for general accounting principles and in Note 4 for specific accounting principles.

Insurance investment property covered by IAS 40 is measured at historical cost or at fair value with the change recognized in profit or loss in the case of properties underlying insurance contracts with direct participation features.

in millions of euros	2024 fiscal year	2023 fiscal year
Interest and similar income	1,131	1,020
Interest and similar expenses	(40)	(106)
Gains (losses) on financial instruments at fair value through profit or loss	2,577	3,517
Net gains (losses) on financial instruments at fair value through other comprehensive income	(19)	(20)
Net income from investment property	(7)	(150)
TOTAL NET INVESTMENT INCOME FROM INSURANCE ACTIVITIES	**3,643**	**4,261**

9.1.5 Finance income or expenses from insurance contracts issued

Accounting principles

Finance income or expenses from insurance contracts issued recognized in net income include:

- the accretion effect, which corresponds to the unwinding of the discount on contracts at the current rate at the beginning of the period for contracts measured using the general approach and the PAA approach;
- the effect of the change in the current discount rate and the economic environment for contracts measured using the general approach and the PAA approach;
- finance income or expenses from insurance contracts with direct participation features (VFA), which correspond to the change in fair value of the underlying items;
- the effect of the risk mitigation option (see Note 9.2 Accounting principles), which under VFA results in the recognition in income of an item that would otherwise be allocated to CSM;
- reclassifications of items recognized in net income to equity in respect of the application of the disaggregation option or OCI option (see Note 9.2 Accounting principles).

Finance income or expenses from insurance contracts issued and recognized in equity reflect the application of the disaggregation option.

in millions of euros	2024 fiscal year	2023 fiscal year
Accretion effect	(30)	2
Change in interest rates and economic environment recognized in net income	(55)	(8)
Finance income or expenses from insurance contracts with direct profit sharing	(3,838)	(6,340)
Effect of risk mitigation option	24	91
Reclassification of items recognized in net income to equity	312	1,819
FINANCE INCOME OR EXPENSES FROM INSURANCE CONTRACTS ISSUED RECOGNIZED IN NET INCOME	(3,588)	(4,437)
Finance income or expenses from insurance contracts issued recognized in equity	(342)	(1,856)
TOTAL FINANCE INCOME OR EXPENSES FROM INSURANCE CONTRACTS ISSUED RECOGNIZED IN EQUITY AND NET INCOME	**(3,929)**	**(6,293)**

(1) Including reclassification of risk mitigation to equity.
(2) Mainly includes the disaggregation option and other movements relating to investments in associates and joint ventures.

9.1.6 Finance income or expenses from reinsurance contracts held

Accounting principles

This item includes, for held reinsurance treaties, aggregates identical to those appearing in finance income or expenses from insurance contracts issued, except for those concerning the VFA approach, which is not applicable to reinsurance.

in millions of euros	2024 fiscal year	2023 fiscal year
Accretion effect	3	3
Change in interest rates and economic environment recognized in net income	84	342
Reclassification of items recognized in net income to equity	(5)	(9)
Finance income or expenses from reinsurance contracts held recognized in net income	82	337
Finance income or expenses from reinsurance contracts held recognized in equity	5	9
TOTAL FINANCE INCOME OR EXPENSES FROM REINSURANCE CONTRACTS HELD RECOGNIZED IN EQUITY AND NET INCOME	**87**	**345**

(1) Mainly includes the disaggregation option and other movements relating to investments in associates and joint ventures.

9.1.7 Cost of credit risk on insurance activities financial investments

Accounting principles

The cost of risk relates to debt instruments classified as financial assets at amortized cost or financial assets at fair value through other comprehensive income recyclable to profit or loss.

This item therefore covers net impairment and provision charges for credit risk.

Irrecoverable loans not covered by provisions for impairment are loans that have acquired the character of permanent loss before being provisioned in Stage 3.

in millions of euros	2024 fiscal year	2023 fiscal year
Net charge to provisions and provisions for impairment	9	(16)
TOTAL COST OF CREDIT RISK ON INSURANCE ACTIVITIES FINANCIAL INVESTMENTS[(1)]	**9**	**(16)**

(1) Investments at amortized cost and at fair value through other comprehensive income.

9.1.8 Overheads from insurance activities by nature and function

Accounting principles

IFRS 17 requires expenses directly attributable to insurance contracts to be presented within NBI. Non-attributable overheads are as operating expenses or as depreciation, amortization and impairment.

Overheads attributable to acquisition costs are spread over the life of the contracts according to criteria that reflect the passage of time. In Groupe BPCE, acquisition costs are mainly amortized at the same rate as the CSM, *i.e.* using the same coverage units.

in millions of euros	2024 fiscal year	2023 fiscal year
Payroll costs	**(334)**	**(307)**
Taxes other than on income	(39)	(39)
External services and other operating expenses	(282)	(259)
Other administrative costs	**(321)**	**(298)**
TOTAL OPERATING EXPENSES	(655)	(605)
Depreciation, amortization and impairment for property, plant and equipment and intangible assets	(42)	(39)
Amounts attributed to acquisition costs net of amortization	12	26
TOTAL INSURANCE ACTIVITIES OVERHEADS BY NATURE	**(685)**	**(618)**
Attributable acquisition costs	(112)	(89)
Attributable claims management expenses	(162)	(140)
Attributable administrative costs	(155)	(151)
Attributable financial management expenses	(23)	(21)
Other attributable overheads	(57)	(44)
Non-attributable overheads	(176)	(173)
TOTAL INSURANCE ACTIVITIES OVERHEADS BY DESTINATION	**(685)**	**(618)**

(1) Overheads of insurance entities relating to insurance contracts, excluding fees and commissions.

9.2 Notes to the balance sheet for the insurance activities

Accounting principles

On the balance sheet, commitments relating to IFRS 17 contracts are presented according to the asset or liability position of the carrying amount of IFRS 17 portfolios and the type of contract (separate presentation of the carrying amount of IFRS 17 portfolios of direct insurance contracts and issued reinsurance from that of held reinsurance treaties).

The carrying amount of commitments relating to IFRS 17 contracts also includes amounts of receivables and payables relating to insurance operations and held reinsurance operations.

Groupe BPCE applies the option of presenting insurance activities financial investments as a separate item on the assets side of the balance sheet, with the corollary of presenting net investment income from insurance activities on a separate line of the income statement, as authorized by ANC recommendation No. 2022-01 of April 8, 2022 (Note 9.2).

The accounting principles applicable to insurance financial investments (other than investment property) are governed by IFRS 9 and are presented in Note 2.5.1 for general accounting principles and in Note 5 for specific accounting principles.

The accounting principles applicable to insurance investment property, which are covered by IAS 40, are described in Note 9.2.4.

9.2.1 Insurance activities financial investments

in millions of euros	12/31/2024	12/31/2023
Financial assets at fair value through profit or loss	68,815	58,111
Hedging derivatives	82	87
Financial assets at fair value through other comprehensive income	44,503	42,689
Investment property	1,457	1,481
Loans and advances at amortized cost	775	1,247
TOTAL INSURANCE ACTIVITIES FINANCIAL INVESTMENTS	**115,631**	**103,615**

The tables below show the maturities of the insurance activities financial investments.

in millions of euros	Less than 1 month	From 1 month to 3 months	From 3 months to 1 year	From 1 year to 5 years	More than 5 years	Not determined	Total at 12/31/2024
Financial assets at fair value through profit or loss						68,815	68,815
Hedging derivatives					82		82
Financial assets at fair value through other comprehensive income	229	534	2,423	15,352	25,684	280	44,503

(1) The criteria used by BPCE to categorize financial assets at fair value through profit or loss if they do not meet the SPPI criterion are provided in Note 2.5.1.
(2) Financial instruments mandatorily measured at fair value through profit or loss include non-SPPI debt instruments for €25,648 million as well as equity instruments for which it has not been chosen to measure them through equity.
(3) Financial instruments measured at fair value through profit or loss considered part of a trading activity and similar mainly include investments on unit-linked contracts.
(4) Only in the case of an "accounting mismatch".

At December 31, 2024, financial assets classified at fair value through profit or loss mainly comprised investments in unit-linked funds (UCITS or FCPR) and non-standard UCITS.

Non-basic assets (non-SPPI) are essentially non-standard UCITS.

Financial assets designated at fair value under option through profit or loss and credit risk

The maximum credit risk exposure for debt instruments in the form of securities amounted to €12 million at December 31, 2024, compared to €9 million at December 31, 2023.

9.2.5 Assets at amortized cost

Accounting principles: See Note 5.5

9.3.3 Market risk

Sensitivity of financial assets and insurance liabilities to equity market risks

The sensitivity analysis consisted of measuring the impact of a 10% change in the equity market on financial assets and insurance contracts. This information is presented net of deferred taxes.

The scope of financial assets studied includes equities, UCITS carrying an equity risk, structured products and convertible bonds held by the main insurance entities. The scope of insurance contracts studied covers direct business insurance contracts, mainly relating to the investment pension business of the main insurance entities.

At December 31, 2024

	Impact on net income			Impact on equity[(1)]		
in millions of euros	In respect of insurance contracts	In respect of financial assets	Net impact on income	In respect of insurance contracts	In respect of financial assets	Net impact on equity
EQUITY MARKET SENSITIVITY						
+10% change in the equity market	(1,938)	1,966	28	(1,938)	1,977	39
-10% change in the equity market	1,938	(1,965)	(27)	1,938	(1,977)	(39)

(1) The impact on equity includes the impact on net income.

At December 31, 2023

-10% change in the equity market	1,914	(1,933)	(19)	1,914	(1,941)	(27)

(1) The impact on equity includes the impact on net income.

Sensitivity of financial assets and insurance liabilities to real estate market risks

The sensitivity analysis consisted of measuring the impact of a 10% change in the real estate market on financial assets and insurance contracts. This information is presented net of deferred taxes.

The scope of insurance contracts studied covers direct business insurance contracts, mainly relating to investment pension and guarantee activities for the main insurance entities.

At December 31, 2024

	Impact on net income			Impact on equity[(1)]		
in millions of euros	In respect of insurance contracts	In respect of financial assets	Net impact on income	In respect of insurance contracts	In respect of financial assets	Net impact on equity

9.3.4 Liquidity risk

Maturity of cash flows from liabilities related to insurance and reinsurance contracts held

in millions of euros	12/31/2024[1]						
	<1 year	From 1 year to 2 years	From 2 years to 3 years	From 3 years to 4 years	From 4 years to 5 years	> 5 years	TOTAL
Insurance contracts issued - Liabilities	5,847	5,515	5,191	5,044	4,889	82,203	108,688
Reinsurance contracts held - Liabilities	258	(1)	3	4	4	(107)	161

(1) This table presents, for all insurance contracts issues and reinsurance contract held, which are liabilities, the projected maturity of the present value of future cash flows (Best Estimate).

in millions of euros	12/31/2023[1]			
	<1 year	From 1 year to 5 years	> 5 years	TOTAL
Liabilities arising from insurance contracts issued	7,483	24,519	74,135	106,137
Liabilities arising from reinsurance contracts held	175	(12)	(14)	149

(1) This schedule includes all of the Insurance contracts issued – Liabilities and Reinsurance contracts held – Liabilities included in the balance sheet.

The amounts payable on demand correspond to the total outstandings of insurance contracts, in the build up phase, for which policyholders have a surrender option or which are transferable to a third-party insurer, as well as the value of receivables and liabilities arising from these contracts. The contracts concerned correspond to investment pension contracts and funeral contracts. At December 31, 2024, the amounts payable on demand under these contracts amounted to €121,857 million compared to €101,903 million at December 31, 2023. The IFRS carrying amount of the contracts to which these amounts payable on demand relate was €111,992 million at December 31, 2024, compared to €88,556 million at December 31, 2023.

9.3.5 Insurance risk

Sensitivities of insurance contracts to insurance risks

The scope of insurance contracts studied covers insurance contracts in direct business (for the gross portion of reinsurance held), mainly for investment pension, payment protection insurance, non-life insurance and guarantee activities for the main insurance entities.

The main assumptions used in the valuation of insurance contracts for the closing of the financial statements at December 31, 2024, are presented in Note 9 General principles. These include mortality, surrender and claims assumptions.

The information is presented net of deferred taxes.

At December 31, 2024

		Impact on net income		Impact on equity[1]	
in millions of euros	Change in assumptions	Gross of reinsurance held	Net of reinsurance held	Gross of reinsurance held	Net of reinsurance held
LIFE, SAVINGS, RETIREMENT AND INSURANCE ACTIVITY					
Surrender	10%	(7)	(7)	(12)	(12)
Surrender	(10%)	6	6	11	11
Mortality	10%	(20)	(21)	(23)	(22)

Ultimate claims costs	(5%)	40	40	40	39

(1) The impact on equity includes the impact on net income.
(2) Including probability of default at ultimate net of recourse for the guarantee activity.

9.3.6 Concentration risk

It should be noted that Groupe BPCE has a very low concentration due to the geographical dispersion of its policyholders, inherent in the distribution of contracts mainly in the retail banking networks established throughout France. The reinsurance program also limits the concentration of risks.

Note 10 / Fair value of financial assets and liabilities

Key points

This section sets out the principles for measuring the fair value of financial instruments as defined in IFRS 13 "Fair Value Measurement" and the methods used by Groupe BPCE entities to measure the value of their financial instruments.

Financial assets and liabilities are recorded in the balance sheet either at fair value or at amortized cost. An indication of the fair value of items measured at amortized cost is provided in the notes.

For instruments traded on an active market with a quoted price, the fair value is equal to the quoted price, corresponding to Level 1 in the fair value hierarchy.

The fair value of other financial instruments not traded on an active market, including in particular loans, borrowings and derivatives traded over the counter, is calculated using valuation techniques that rely on widely used models and observable data, corresponding to Level 2 in the fair value hierarchy. When internal data or proprietary models are used (Level 3 in the fair value hierarchy), independent controls are used to validate the value obtained.

DETERMINATION OF FAIR VALUE

General principles

The fair value of an instrument is the price that would be received to sell an asset or paid to transfer a liability in a standard arm's length transaction between market participants at the valuation date.

Fair value is therefore based on the exit price.

On first recognition, fair value is usually the transaction price and is thus the price paid to purchase the asset or the price received to assume the liability.

In subsequent measurements, the estimated fair value of assets and liabilities must be based primarily on observable market data, while ensuring that all inputs used in the fair value calculation are consistent with the price that market participants would use in a transaction.

In this case, fair value consists of a mid-market price and additional valuation adjustments determined according to the instruments in question and the associated risks.

The mid-market price is obtained based on:

- the instrument's quoted price if the instrument is quoted on an active market. A financial instrument is regarded as quoted on an active market if quoted prices are readily and regularly available from a Stock Exchange, dealer, broker, industry group, pricing service or regulatory agency, and these prices represent actual and regularly occurring transactions on the principal market or, failing that, on the most favorable market, on an arm's length basis;
- if the market for a financial instrument is not active, fair value is established using valuation techniques. The techniques used must maximize the use of relevant observable entry data and minimize the use of non-observable entry data. They may refer to observable data from recent transactions, the fair value of similar instruments, discounted cash flow analysis and option pricing models, proprietary models in the case of hybrid instruments or non-observable data when no pricing or market data are available.

Additional valuation adjustments include factors related to valuation uncertainties, such as market and credit risk premiums, in order to recognize the costs incurred by a divestment transaction on the principal market.

The main additional adjustments are as follows:

BID/ASK ADJUSTMENT – LIQUIDITY RISK

This adjustment is the difference between the bid price and the ask price corresponding to the selling costs. It reflects the cost requested by a market player in respect of the risk of acquiring a position or of selling at a price proposed by another market player.

MODEL UNCERTAINTY ADJUSTMENT

This adjustment takes into account imperfections in the valuation techniques used, and in particular risk factors not considered even though observable market inputs are available. This is the case when the risks inherent in the instruments differ from those incurred by the observable market data used to determine their valuation.

INPUT UNCERTAINTY ADJUSTMENT

Observing certain prices or inputs used in valuation techniques may be difficult or the price or input may not be available on a sufficiently regular basis to determine the exit price. Under these circumstances, an adjustment may be necessary to reflect the probability of different values being used by market participants for the same inputs when measuring the fair value of the financial instrument in question.

CREDIT VALUATION ADJUSTMENT (CVA)

This adjustment applies to valuations that do not account for the counterparty's credit quality. It corresponds to the assessment of the loss linked to the risk of default by a counterparty and aims to take into account the fact that the Group may not recover the full market value of the transactions.

The method for determining the CVA is primarily based on the use of market inputs in connection with professional market practices, for all segments of counterparties subject to this calculation. In the absence of liquid market inputs, proxies by type of counterparty, rating and geographic area are used.

FUNDING VALUATION ADJUSTMENT (FVA)

The FVA is intended to take into account the liquidity cost associated with uncollateralized or imperfectly collateralized OTC derivatives. It is generated by the need to fund or refinance margin calls to be paid or received in the future, associated with hedging derivatives which are collateralized. Measuring a future financing/refinancing requirement (*i.e.* until maturity of the exposures), it is based on expected future exposures for non-collateralized derivatives and a liquidity spread curve.

DEBIT VALUATION ADJUSTMENT (DVA)

The DVA is symmetrical to the CVA and represents the assessment of the loss, from the counterparty's perspective, on liability valuations of derivatives. It reflects the impact of the Group's credit quality on the valuation of these instruments. This adjustment is based on the observation of the zero coupon spread of a sample of comparable institutions, taking into account the level of liquidity of the BPCE zero coupon spread during the period. The DVA adjustment is established after taking into account the funding valuation adjustment (FVA).

DETERMINATION OF AN ACTIVE MARKET

The following criteria are used to determine whether or not a market is active:

- the level of activity and trend of the market (including the level of activity on the primary market);
- the length of historical data on prices observed in similar market transactions;
- scarcity of prices recovered by a service provider;
- wide bid-ask price spread; and
- steep price volatility over time or between different market participants.

The valuation control system is presented in Section 6.8 "Market risks".

Fair value hierarchy

For financial reporting purposes, IFRS 13 requires that the fair value of financial and non-financial instruments be broken down into a fair value hierarchy that reflects the level of observability of the models and inputs used to perform the valuations. The fair value hierarchy is presented in the following three fair value levels:

- Level 1: market values are determined directly using prices quoted on active markets for identical assets or liabilities;
- Level 2: market values are determined using valuation techniques whose significant parameters are observable on the markets, either directly or indirectly;
- Level 3: market values are determined using valuation models that are not recognized and/or are based on parameters that are not observable on the market, insofar as these are likely to have a significant impact on valuation.

For derivatives, the fair values are broken down according to the dominant risk factor, namely interest rate risk, foreign exchange risk, credit risk and equity risk.

LEVEL 1: VALUATION USING PRICES QUOTED ON A LIQUID MARKET

Level 1 comprises instruments whose fair value is determined based on directly usable prices quoted on active markets.

Level 1 mainly includes securities listed on a Stock Exchange or traded continuously on other active markets, derivatives traded on organized markets (futures, options, etc.) whose liquidity can be demonstrated, and units of UCITS that calculate and report their net asset value on a daily basis.

LEVEL 2: VALUATION USING OBSERVABLE MARKET MODELS AND INPUTS

Level 2 fair value comprises instruments other than those mentioned in Level 1 fair value and instruments measured using a valuation technique incorporating inputs that are either directly observable (prices) or indirectly observable (derived from prices) through to the instrument's maturity. This mainly includes:

Simple instruments:

Most over-the-counter derivatives, swaps, credit derivatives, forward rate agreements, caps, floors and plain vanilla options are traded in active markets, *i.e.* liquid markets in which trades occur regularly.

These instruments are valued using generally accepted models (discounted future cash flow method, Black & Scholes model, interpolation techniques), and on the basis of directly observable inputs.

For these instruments, the extent to which models are used and the observability of inputs has been documented.

Instruments measured using Level 2 inputs also include:

- securities that are less liquid than those classified as Level 1, whose fair value is determined based on external prices put forward by a reasonable number of active market makers and which are regularly observable without necessarily being directly executable (prices mainly taken from contribution and consensus databases); where these criteria are not met, the securities are classified as Level 3 fair value;
- securities not quoted on an active market whose fair value is determined based on observable market data (for example, using market data for listed peers or the earnings multiple method based on techniques widely used in the market);

- shares of UCITS that do not calculate and report their net asset value on a daily basis but which are subject to regular reporting or which offer observable data from recent transactions;
- issued debt instruments designated at fair value when the underlying derivatives are classified as Level 2;
- "issuer credit risk" is also considered to be observable. It is measured using the discounted future cash flow method, using inputs such as the yield curve and revaluation spreads. For each issue, this valuation represents the sum of the notional amount outstanding and its sensitivity, taking into account the existence of calls and the difference between the revaluation spread (based on the BPCE cash reoffer curve at December 31, 2023, as for previous closing dates) and the average issue spread. Changes in revaluation of own debt are generally not material for issues with an initial maturity of less than one year.

Complex instruments:

Certain hybrid and/or long-maturity financial instruments are measured using a recognized model on the basis of market inputs derived from observable data such as yield curves, implied volatility layers of options, market consensus data or active over-the-counter markets.

The main models for determining the fair value of these instruments are described below by type of product:

- **Equity products**: equity products generally have specific characteristics that justify the choice of model.

The main models used for equity products are local volatility, local volatility combined with Hull & White one factor (H&W1F) and Local Stochastic Volatility ("LSV") and may be available in a single or multi-underlying framework.

The local volatility model treats volatility as a function of time and the price of the underlying. Its main property is that it considers the implied volatility of the option (derived from market data) relative to its exercise price.

The local volatility hybrid model, paired with the H&W1F, consists of pairing the local volatility model described above with a Hull & White one-factor type fixed income model, described below (see fixed-income products).

The LSV model is based on the joint diffusion of the underlying asset and its volatility (two factors in total), with a local volatility function (known as a decorator), to ensure consistency with all vanilla options.

- **Fixed income products**: fixed income products generally have specific characteristics that justify the choice of model.

The main models used to value and manage fixed income products are the Hull & White one-factor (H&W1F), two-factor (H&W2F) and one-factor stochastic volatility (H&W1FVS) models.

The H&W1F model is used to model the yield curve with a single Gaussian factor, calibrated on vanilla interest rate options.

The H&W2F model is used to model the yield curve with two factors, calibrated on vanilla interest rate options and spread-option type instruments.

The H&W1VS model is used to model both the Gaussian factor representing the yield curve and its volatility (like the LSV model for equities).

- **Foreign exchange products**: foreign exchange products generally have specific characteristics that justify the choice of model.

The main models used to value and manage foreign exchange products are local and stochastic volatility models (like the LSV model for Equity), as well as hybrid models, which combine modeling of the underlying foreign exchange transaction with two Hull & White one-factor models to understand the yield curves of domestic and foreign economies.

- **Credit derivatives:** credit derivative products generally have specific characteristics that justify the choice of model.

The main models used to value and manage credit products are the Hull & White one credit factor model (H&W1F Credit) and the hybrid Bi-Hull & White Rate/Credit model (Bi-H&W Rate/Credit).

The H&W1F Credit model allows the diffusion of the credit curve (CDS curve) with a Gaussian factor.

The Bi-H&W Rate/Credit model allows for the joint diffusion of the yield curve and the credit curve, each with a Gaussian factor correlated between them.

- **Commodity products:** commodity products generally have specific characteristics that justify the choice of model.

The main models used to value and manage commodity products are the Black & Scholes models, with local volatility and local volatility combined with the Hull & White one factor (H&W1F), a version extended for all these models to a multi-underlying framework to manage all the futures of the commodity family.

The Black & Scholes model is based on lognormal dynamics of the underlying asset and a deterministic volatility assumption.

The local volatility model treats volatility as a function of time and the price of the underlying. Its main property is that it considers the implied volatility of the option (derived from market data) relative to its exercise price.

The H&W1F model consists of coupling the local volatility model described above with a Hull & White one-factor fixed income model described above (see fixed-income products).

The inputs relating to all Level 2 instruments were demonstrated to be observable and documented. From a methodology perspective, observability is based on four inseparable criteria:

- inputs are derived from external sources (primarily a recognized contributor, for example);
- they are updated periodically;
- they are representative of recent transactions;
- their characteristics parameters are identical to the characteristics of the transaction. If necessary, a proxy may be used, provided that the relevance of such an arrangement is demonstrated and documented.

The fair value of instruments obtained using valuation models is adjusted to take account of liquidity risk (bid-*ask*), counterparty risk, the risk relating to the cost of financing uncollateralized or partially collateralized derivatives, own credit risk (measurement of liability derivative positions), and modeling and input risk.

The margin generated when these instruments begin trading is immediately taken to profit or loss.

LEVEL 3: VALUATION USING UNOBSERVABLE MARKET INPUTS

Level 3 comprises instruments measured using unrecognized models and/or models based on unobservable market data, where they are liable to materially impact the valuation. This mainly includes:

- unlisted shares whose fair value could not be determined using observable inputs;
- private equity securities not listed on an active market, measured at fair value with models commonly used by market participants, in accordance with International Private Equity Valuation (IPEV) standards, but which are sensitive to market fluctuations and whose fair value determination necessarily involves a judgment call;
- hybrid equity, interest rate, currency derivatives and credit derivatives that are not classified in Level 2;
- loans to be syndicated for which there is no secondary market price;
- loans in the securitization process for which fair value is determined based on an expert appraisal;
- loan trading activity for which the market is illiquid;
- investment property whose fair value is calculated using a multi-criteria approach, by capitalizing rent at market rates and through comparisons with market transactions;
- instruments with a deferred day one margin;
- units of UCITS for which the fund has not published a recent NAV at the valuation date, or for which there is a lock-up period or any other constraint calling for a significant adjustment to available market prices (NAV, etc.) in respect of the low liquidity observed for such shares;
- issued debt instruments designated at fair value are classified as Level 3 when the underlying derivatives are classified as Level 3. The associated "issuer credit risk" is regarded as observable and it is therefore classified as Level 2;
- CDS contracted with credit enhancers (monoline insurers), for which the valuation model used to measure write downs is similar to the Credit Valuation Adjustment (CVA) used for counterparty risk. The model also takes into account the expected amortization of exposures and the counterparty spread implicit in market data;
- plain vanilla derivatives are also classified as Level 3 fair value when the exposure is beyond the liquidity horizon determined by underlying currencies or by volatility ranges (*e.g.* certain foreign currency options and volatility caps/floors).

In accordance with Regulation 2019/876 of May 20, 2019 (CRR II) amending European Regulation 575/2013 of June 26, 2013 (CRR) relating to Pillar III requirements, for each of the models used, a description of the stress tests applied and the ex-*post* control system (validation of the accuracy and consistency of the internal models and modeling procedures) is provided in Chapter 7 "Risk factors and risk management".

Under IFRS 9, day one profit should be recognized only if it is generated by a change in the factors that market participants would consider in setting a price, *i.e.* only if the model and parameters input into the valuation are observable.

If the selected valuation model is not recognized by current market practices, or if one of the inputs significantly affecting the instrument's valuation is not observable, the trading profit on the trade date cannot be recognized immediately in the income statement. It is taken to income on a straight-line basis over the life of the transaction or until the date the inputs become observable. Any losses incurred at the trade date are immediately recognized in income statement.

At December 31, 2024, the scope of instruments for which the recognition of day one profit/loss has been deferred mainly included:

- multi-underlying structured equity and index products;
- mono-underlying structured products indexed to sponsored indexes;
- synthetic loans;
- options on funds (multi-assets and mutual funds);
- structured fixed income products;
- securitization swaps.

The table below provides the main unobservable inputs and the value ranges for these instruments at December 31, 2024:

Main types of products	Valuation techniques used	Main unobservable data	Unobservable data ranges min - max (Dec. 2024)
Sticky CMS/Volatility Bonds	Interest rate options valuation models	Mean reversion inputs	[0.5%; 2.5%]
Callable Spread Options and Corridor Callable Spread Options	Model representing several yield curve factors	Mean reversion spread	[0%; 25%]
Bermuda Accreting		Accreting factor	[71%; 90%]
Volatility caps/floors	Interest rate options valuation models	Interest rate volatility	[59 bps; 113 bps]
Simple and complex equity, equity basket or fund derivatives	Different valuation models for equity, equity basket or fund options	Equity volatility	[9%; 159%]
		Fund volatility	[0%; 30%]
		Stock/stock correlation	[(8.87%); 99%]
		Repo of general baskets	[(0.76%); 1.11%]
Exchange rate derivatives	Exchange rate option valuation models	Currency volatility	[2.04%; 16.05%]
Long-term PRDC/PRDKO/TARN	Hybrid currency/interest rate options valuation model	Correlation between foreign exchange rates and interest rates as well as long-term volatility levels	[(40%); 60%]
			[2.615%; 17.15%]
CDO	The default rates are based on the market prices of the underlying PFI bonds, and the recovery rates are based on historical ratings agency data	Correlation between the asset base spread between the cash asset and derivative asset, recovery rate	50.00%
Securitization swaps	Discounted expected cash flows based on early redemption assumptions on the underlying portfolio	Prepayment rate	[27.6%; 53.9%]
Hybrid equity/fixed income/forex (FX) derivatives	Hybrid models coupled with equity, forex and interest rate diffusion	Equity-FX correlations	[(91%); 63%]
		Equity-FI correlations	[11.87; 22.58]
		FI-FX correlations	[(23%); 0.4%]
Helvetix: Strip of long-term options, Strip of quanto options, Strip of digital options	Black & Scholes model	EUR/CHF / EUR/USD correlations	[32.88%; 34.44%]
Helvetix: Options spread and digital options spread	Gaussian copula	Long-term USD/CHF & EUR/CHF volatility	USD/CHF volatility: [8.42%;11.09%] - EUR/CHF volatility: [7.14%; 8.39%]

Group policy on fair value transfers

Transfers between fair value levels are reviewed and validated by the Valuation Committee, which includes the Finance and Risk Management functions and the business lines. To do so, the Committee relies on observability studies of the valuation models and/or inputs that are carried out periodically.

These fair value transfers are also presented to the Umbrella Valuation Committee, which did not note any significant events during the 2024 fiscal year.

As a reminder, the main reclassification carried out at December 31, 2023, concerned the transfer to Level 2 of the fair value of certain OTC derivatives and issues, due to the automatic application of the materiality process of the valuation models and/or unobservable parameters on a broader scope of transactions at Level 3.

Instruments not carried at fair value on the balance sheet

IFRS 13 requires disclosure in the notes to the financial statements of the fair value, and the associated fair value levels, of all financial instruments carried at amortized cost, including loans. These fair values represent an estimate of the fair value of the instruments measured at amortized cost as at December 31, 2024. They may fluctuate from day to day due to changes in several parameters, including interest rates and the quality of counterparties' loans. They may, therefore, be significantly different from the amounts actually received or paid on the maturity date of these instruments. In the majority of cases, these fair values are not intended to be immediately realized and they do not represent the effective fair value of the instruments from a going concern perspective. The valuation methods used to determine the fair value disclosed in the notes to the financial statements are described below.

ASSETS AND LIABILITIES OF THE GFS BUSINESS LINES, THE BPCE CASH MANAGEMENT POOL, AND THE BANQUES POPULAIRES AND CAISSES D'EPARGNE FINANCIAL PORTFOLIOS

Credit and loans recognized at amortized cost and amounts payable under finance leases

The fair value of these instruments is determined by discounting future cash flows. The discount rate applied for a given loan is the rate at which the Group would grant a loan with similar characteristics to a similar counterparty at the closing date. The "interest rate" and "counterparty risk" components are reassessed.

The fair value of repurchase agreements is calculated by discounting expected cash flows at the market rate on the reporting date and adding a liquidity spread.

If there is a quoted price that meets the criteria of IFRS 13, the quoted price is used.

The fair value of loans with an initial term of less than one year is considered to be their carrying amount. This is also generally the case for financial assets with a term of one year or less and current accounts. The corresponding receivables are classified in Level 2 of the fair value hierarchy. Loans and advances granted to affiliates are also classified in Level 2.

Borrowings and savings

Within the GFS division, the assessment of the fair value of securities borrowings and debts is based on the method of discounting future cash flows using inputs on the closing date such as the interest rate curve of the underlying and the spread at which this division lends or borrows.

The fair value of debts maturing in less than one year is considered to be the carrying amount. These liabilities are classified in Level 2 of the fair value hierarchy, as are debts payable to affiliates.

The fair value of other amounts due to banks and customers with a term of over one year is deemed to be equal to the present value of future cash flows discounted at the interest rate observed at the reporting date, plus the own credit risk of Groupe BPCE.

Investment property recognized at cost

The fair value of investment property (excluding investment property held by insurance companies) is determined using the rent capitalization method, which is widely used by real estate professionals. The capitalization rate applied to the property depends on a number of factors such as location, the quality and type of building, use, type of ownership, quality of lessee and characteristics of the lease, the interest rate and competition in the real estate market.

FINANCIAL INSTRUMENTS OF THE RETAIL BANKING BUSINESS LINES

For financial instruments not measured at fair value on the balance sheet, fair value calculations are provided for information purposes and must only be interpreted as estimates.

In most cases, the values indicated are not liable to be realized and generally may not be realized in practice.

These fair values are thus only provided for information purposes in the notes to the financial statements. They are not indicators used in order to monitor Retail Banking activities, for which the business model is mainly based on the collection of contractual cash flows.

Consequently, the following simplified assumptions were used:

The carrying amount of the assets and liabilities is deemed to be their fair value in certain cases.

These notably include:

- short-term financial assets and liabilities (whose initial term is one year or less) provided that sensitivity to interest-rate risk and credit risk is not material during the period;
- demand liabilities;
- floating-rate loans and borrowings;
- transactions in a regulated market (particularly regulated savings products), whose prices are set by the public authorities.

Fair value of the loan portfolio

The fair value of loans is measured using internal valuation models that discount future payments of recoverable capital and interest over the remaining loan term. The "interest rate" component is thus revalued. Except when the data used by the managers are available, the "credit risk" component is established at the outset and not subsequently remeasured. Prepayment options are factored into the model *via* an adjustment to loan repayment schedules.

Fair value of debts

The fair value of fixed-rate debt owed to banks and customers with a term of over one year is deemed to be equal to the present value of future cash flows discounted at the interest rate observed at the reporting date. Own credit risk is not generally taken into account.

10.1 Fair value of financial assets and liabilities

10.1.1 Fair value hierarchy of financial assets and liabilities

The following statement provides a breakdown of financial instruments by type of price and valuation model:

	12/31/2024

10.1.4 Sensitivity of Level 3 assets and liabilities to changes in the principal assumptions

A sensitivity of the fair value of the instruments valued on the basis of the main non-observable parameters was assessed at December 31, 2024. The amounts reported below are intended to illustrate the uncertainty inherent in the use of judgment required to estimate the main unobservable inputs at the valuation date. They do not represent a measure of market risk on Level 3 instruments.

The estimate is based on the valuation adjustment policy. For equities and debt securities, the estimate is based on a shock of +/-1%.

At December 31, 2024, the Group assessed the sensitivity of the fair value of the instruments of the Global Financial Services division measured using the main unobservable inputs. This sensitivity is intended to illustrate the uncertainty inherent in the use of judgment required to estimate the main unobservable inputs at the valuation date. It does not represent a measure of market risk on Level 3 instruments.

The estimate is based on the valuation adjustment policy. For equities and debt securities, the estimate is based on a shock of +/-1%.

The potential impact ranges between -€73 million and €120 million in the income statement.

10.2 Fair value of financial assets and liabilities at amortized cost

For financial instruments not measured at fair value on the balance sheet, fair value calculations are provided for information purposes and must only be interpreted as estimates.

In most cases, the values indicated are not liable to be realized and generally may not be realized in practice.

These fair values are thus only provided for information purposes in the notes to the financial statements. They are not indicators used for management purposes in Retail Banking, whose business model is based on the collection of expected cash flows.

The simplified assumptions used to measure the fair value of instruments at amortized costs are presented in Note 10.1.

	12/31/2024

Note 11 / Income taxes

11.1 Income tax

Accounting principles

Income taxes include all domestic and foreign taxes payable on the basis of taxable profits. Income taxes also include taxes, such as withholding taxes, which are payable by a subsidiary, an associate or a joint arrangement on distributions of dividends to the entity that draws up financial statements. The CVAE (Business Added Value Tax) is not considered as an income tax.

Income taxes include:

- current taxes, which are the amount of income taxes payable on taxable profit or recoverable on a tax loss over a given period. They are calculated on the taxable income for the period for each fiscal entity in the tax consolidation scope by applying the applicable tax rates and rules set by the tax authorities and on the basis of which tax shall be paid (received);
- and deferred taxes (see Note 11.2).

Where it is probable that one of the Group's tax positions will not be accepted by the tax authorities, this situation is reflected in the financial statements when calculating current tax (due or recoverable) and deferred tax (asset or liability).

IAS 12 "Income Taxes" gave no particular details on how to account for uncertainties in income taxes, and was clarified by IFRIC 23 "Uncertainty over Income Tax Treatments", which was adopted by the European Commission on October 23, 2018 with effect from January 1, 2019.

This interpretation clarifies how to apply the deferred income tax recognition and measurement requirements when there is uncertainty over income tax treatments. If there is doubt as to the acceptability of the income tax treatment by the tax authority under tax law, then this tax treatment is an uncertain tax treatment. Assuming it is likely that the tax authority will not accept the income tax treatment used, IFRIC 23 states that the amount of the uncertainty to be reflected in the financial statements shall be estimated using the method that will better predict the resolution of the uncertainty. To determine this amount, two approaches may be used: the most likely amount or the expected value of the tax treatment (that is, the weighted average of the different scenarios possible). Furthermore, IFRIC 23 requires the measurement of tax uncertainties to be reassessed if facts and circumstances change or new information arises.

The Group reflects uncertainties regarding its tax treatment for income tax in its financial statements when it deems it probable that the tax authority will not accept its treatment. To ascertain whether a tax position is uncertain and to assess its effect on the amount of tax, the Group assumes that the tax authority will examine all amounts reported and have full knowledge of all related information. It bases its judgment on administrative policy, case-law and on the existence of any corrections made by the administration relating to similar tax uncertainties. The Group revises the estimate of the amount it expects to pay or recover from the tax authority due to tax uncertainties in the event of changes in the associated facts and circumstances, as these changes may result from (including, but not limited to) changes in tax law, the expiry of a statutory limitation period, or the outcome of audits and measures conducted by the tax authorities.

When it is likely that the competent tax authorities will question the treatment adopted, these uncertainties are reflected in tax income and expenses by a provision for tax risks presented under tax liabilities.

Groupe BPCE is audited for prior years. Where the Group disagrees with the rectification, it will state its reasons for doing so and, in accordance with the above, a provision will be recorded in the amount of the estimated risk.

Tax uncertainties are reported as assets or liabilities and according to whether they relate to a current or deferred tax under the balance sheet headings "Deferred tax assets", "Current tax assets", "Deferred tax liabilities" and "Current tax liabilities".

in millions of euros	2024 fiscal year	2023 fiscal year
Current taxes[(1)]	(1,211)	(1,264)
Deferred taxes	(146)	(76)
INCOME TAXES	**(1,357)**	**(1,340)**

(1) The rules of the OECD Pillar II aiming at the implementation of a minimum global corporate tax rate of 15%, transposed into French law by the Finance act for 2024, are now applicable to fiscal years beginning from January 1, 2024. In this context, Groupe BPCE applies the exception provided by the amendment to IAS 12 of May 2023 on the recognition of deferred taxes assets and liabilities related to the OECD Pillar II income taxes. In accordance with the amendment, the amount of the additional tax in respect of Pillar II is presented under the current tax expense. However, it only concerns a very limited number of jurisdictions. This first estimate of the current tax expense is made on the basis of data available to date.

RECONCILIATION BETWEEN THE TAX EXPENSE IN THE FINANCIAL STATEMENTS AND THE THEORETICAL TAX EXPENSE

	2024 fiscal year		2023 fiscal year	
	in millions of euros	*Tax rate*	*in millions of euros*	*Tax rate*
Net income (attributable to equity holders of the parent)	3,520		2,804	
Value adjustments on goodwill				
Non-controlling interests	79		38	
Share in net income of equity-accounted associates	(57)		(35)	
Income taxes	1,357		1,340	
INCOME BEFORE TAX AND VALUE ADJUSTMENTS ON GOODWILL	4,899		4,146	
Effects of permanent differences[1]	231		685	
Consolidated taxable income (A)	**5,130**		**4,831**	
Standard income tax rate in France (B)		**25.83%**		**25.83%**
Theoretical tax expense (income) at the tax rate applicable in France (AxB)	**(1,325)**		**(1,248)**	
Impact of the change in unrecognized deferred tax assets and liabilities	5		(36)	
Reduced rate of tax and tax-exempt activities	35		32	
Difference in tax rates on income taxed outside France	17		31	
Tax on prior periods, tax credits and other taxes[2]	52		(23)	
Other items[3]	(141)		(96)	
INCOME TAX EXPENSE (INCOME) RECOGNIZED	(1,357)		(1,340)	
EFFECTIVE TAX RATE (INCOME TAX EXPENSE DIVIDED BY TAXABLE INCOME)		**26.45%**		**27.74%**

(1) The permanent differences mainly include the impact of the add-backs of the share of costs and expenses on the dividends received. In 2023, they also included the impact of the contribution to the SRF (Single Resolution Fund).
(2) Tax on prior periods, tax credits and other taxes mainly include the impacts of corporate tax liquidation on companies.
(3) Other items mainly include the effects of provisions for tax adjustments and the Group's tax consolidation (including the Group's tax credits now presented on this item).

11.2 Deferred taxes

Accounting principles

Deferred tax assets and liabilities are recognized when temporary differences arise between the carrying amount of assets and liabilities on the balance sheet and their tax base, irrespective of when the tax is expected to be recovered or settled.

The tax rate and tax rules used to calculate deferred taxes are those resulting from current tax legislation, and which will be applicable when the tax becomes payable or recoverable.

Deferred tax liabilities and assets are offset at the level of each tax entity. The tax entity may either be a single entity or a tax consolidation group. Deferred tax assets are recognized only to the extent that it is probable that the entity will be able to recover them in the foreseeable future.

Deferred tax assets and liabilities are recognized as tax income or expense in the income statement, except for those related to:

- revaluation differences on post-employment benefits;
- unrealized gains and losses on financial assets at fair value through other comprehensive income; and
- changes in the fair value of derivatives used as cash flow hedges;

for which the corresponding deferred tax assets and liabilities are recognized as unrealized gains and losses directly in other comprehensive income.

Deferred tax assets and liabilities are not discounted to their present value.

On May 23, 2023, the International Accounting Standards Board (IASB), in charge of preparing IFRS, published the final version of the amendment to IAS 12 on tax accounting. It specifically deals with the expected accounting impacts of the application of the entry into force of the OECD's so-called "Pillar II" tax rules aimed at implementing a set minimum global corporate tax rate at 15%. The proposed amendments to the standard seek an exemption from the recognition of deferred taxes associated with this additional tax with, in return, information to be provided in the notes to the financial statements. This text applies to the annual financial statements as of January 1, 2023, *i.e.* for Groupe BPCE, to the consolidated financial statements for December 31, 2023.

Groupe BPCE has set up a project structure to monitor the various associated regulations as well as compliance with Pillar II rules and the additional information requirements introduced by these amendments to IAS 12. At this stage of the project, it appears that the number of jurisdictions that would be affected by the application of a top-up-tax should be limited and the financial stakes not significant. Given the insignificant nature of its potential exposure, the Group will not publish data on exposure to this additional tax in the context of this closing.

Deferred tax assets and liabilities on temporary differences arise from the recognition of the items listed in the statement below (positive figures indicate deferred tax assets, while negative figures in brackets represent deferred tax liabilities):

in millions of euros	2024 fiscal year	2023 fiscal year[1]
Deferred taxes resulting from accounting-tax timing differences	**4,234**	**4,134**
Provisions for employee-related liabilities	177	173
Provisions for regulated home savings products	124	159
Provisions on a portfolio basis	897	901
Other non-deductible provisions	942	895
Deferred tax on tax loss carryforwards[2]	1,754	1,817
Unrecognized deferred tax assets and liabilities[2]	(902)	(895)
Other sources of temporary differences	1,240	1,085
Deferred taxes on gains and losses recognized directly in equity	**(232)**	**(250)**
Financial assets at fair value through non-recyclable other comprehensive income[3]	(164)	(120)
Financial assets at fair value through recyclable other comprehensive income[3]	124	80
Cash flow hedges	(70)	(102)
Actuarial gains and losses on employee benefits	(37)	(18)
Own credit risk	(81)	(86)
Unrecognized deferred tax assets and liabilities	(3)	(4)
Deferred income taxes[4]	**(1,165)**	**(950)**
NET DEFERRED TAX ASSETS AND LIABILTIES	**2,837**	**2,935**
Recognized		
- As assets in the balance sheet	4,160	4,575
- As liabilities in the balance sheet	(1,323)	(1,640)

(1) Restated figures for 2023 (see 6.1.4 "Statement of changes in equity").
(2) The amount of deferred tax on losses recognized is €852 million, of which €503 million is capitalized on the loss from Natixis and its previous tax consolidation. The tax loss base capitalized by Natixis in France is €1,946 million out of a total of €2,276 million of tax loss carryforwards. At December 31, 2024, Natixis performed tests to measure the potential impact on its deferred tax assets of the assumptions made in the context of the institution of the tax business plans. These tests, which measure in particular the impact of a +/-10% variation in NBI growth assumptions, confirm the probability for Natixis of being able to offset its tax losses against future taxable profits, which are taken into account for the purposes of capitalizing deferred taxes.
(3) Deferred taxes associated with these instruments are presented net of deferred taxes corresponding to the cancellation of provisions for impairment under French GAAP.
(4) Of which a deferred tax liability relating to the tax amortization of goodwill by Natixis in the United States.

Deferred tax assets are only recognized at the reporting date if it is probable that the tax entity concerned will recover the tax savings over a specified period. Groupe BPCE applies the following principles:

- the tax business plans are based on the strategic plan (four years) with a longer-term projection;
- as a precaution, the maximum timeframe used to capitalize a net deferred tax asset is 10 years.

These savings will be realized by deducting tax differences and losses carried forward against profits estimated future taxable liabilities within this horizon.

At December 31, 2024, deductible temporary differences, tax losses and unused tax credits for which no deferred tax asset has been recorded in the balance sheet amounted to €913 million.

Note 12 / Other information

12.1 Segment reporting

Groupe BPCE has two core business lines:

Retail Banking and Insurance, which is central to the transformation, includes:

- the Banque Populaire network, comprising the 14 Banques Populaires and their subsidiaries, Crédit Maritime Mutuel and the mutual guarantee companies;
- the Caisse d'Epargne network, consisting of the 15 Caisses d'Epargne;
- the Financial Solutions & Expertise (FSE) division, encompassing the specialized financing activities: factoring, leasing, consumer loans, sureties & financial guarantees, and the "retail securities" business, in addition to Socfim, BPCE Solutions immobilières and Pramex;
- Insurance, serving the Groupe BPCE networks and their customers through two core business lines: Personal Insurance (life insurance, personal and payment protection insurance) and non-life insurance (mainly vehicles, multi-risk home insurance, personal accident insurance, legal protection and health);
- the Digital & Payments division, which brings together the payments activities and the activities of Oney, in order to support the digitization of retail and strengthen the quality of service from end to end of the payment chain;
- the Other Networks, including Banque Palatine, the bank for mid-sized companies and their managers, and Private Banking, support their customers through long-term relationships based on close relationships, a wealth of expertise and tailor-made solutions.

Global Financial Services, comprising the two divisions of Natixis:

- Asset & Wealth Management:
  - Asset Management, present on the various international markets, brings together the expertise of management and distribution companies as well as employee savings ("Natixis Interépargne", the leading player in employee savings account management in France);
  - Wealth Management, with Natixis Wealth Management, which offers wealth management and financing solutions for large private investors;
- Corporate & Investment Banking:

Corporate & Investment Banking advises and supports corporates, institutional investors, insurance companies, banks, public sector entities and film and audiovisual financing.

- The Corporate center, which primarily includes:
  - the Group's central institution and holding companies;
  - run-off activities of Crédit Foncier and BPCE International;
  - cross-business activities;
  - the contribution to the Single Resolution Fund and the contribution to the Deposit Guarantee Fund.

12.2 Information on leases

12.2.1 Leases as lessor

Accounting principles

Leases are analyzed to determine whether in substance and economic reality they are operating leases or finance leases.

Finance leases

A finance lease is a lease that transfers to the lessee most of the risks and rewards incidental to ownership of an asset.

IFRS 16 standard for Leases gives in particular five examples of situations that, individually or collectively, permit to distinguish finance lease to operating lease:

- the lease transfers ownership of the asset to the lessee at the end of the lease term;
- the lease provides the lessee with the option to purchase the asset at a price that is expected to be sufficiently below the fair value at the date the option becomes exercisable for it to be reasonably certain, at the inception of the lease, that the option will be exercised;
- the lease term covers most of the economic life of the asset even if there is no transfer of ownership;
- at the inception of the lease, the present value of lease payments amounts to at least virtually all of the fair value of the leased asset;
- the leased assets are of such a specialized nature that only the lessee can use them without major modifications.

IFRS 16 also describes three indicators that may also individually or collectively lead to a lease being classified as a finance lease:

- if the lessee can cancel the lease, the lessor's losses associated with the cancellation are borne by the lessee;
- gains or losses from the change in the fair value of the residual value accrue to the lessee;
- the lessee has the ability to extend the lease at a rent that is significantly lower than the market rent.

At the start of the contract, assets under finance leases are recorded in the lessor's balance sheet in the form of a receivable amount equal to the net investment in the lease. The net investment corresponds to the amount of lease payments receivable from the lessee, discounted at the interest rate implicit in the lease plus any unguaranteed residual value of the asset accruing to the lessor. More specifically, the lease payments used to calculate the net investment include fixed payments less any lease incentives payable and variable payments that depend on an index or rate.

IFRS 16 requires unguaranteed residual values to be reviewed on a regular basis. A reduction in the estimated unguaranteed residual value modifies the income allocation over the lease term. In this case, a new payment schedule is drawn up and a charge is recorded to adjust the amount of financial income already recorded.

Any impairment recorded for counterparty risk on receivables in respect of finance leases is calculated in accordance with IFRS 9 using the same method as for financial assets at amortized cost (Note 5.5). This impairment is recorded on the income statement under "Cost of credit risk".

Finance lease income is considered interest and is recognized in the income statement under "Interest and similar income". This income is recognized using the interest rate implicit in the lease, which reflects a constant periodic rate of return on the lessor's net investment. The rate of return implicit in the lease is the discount rate that makes the following two items equal:

- the net investment;
- and the initial value of the asset (the fair value at the inception of the lease, plus any initial direct costs comprising expenses incurred specifically by the lessor to set up the lease).

Operating leases

A lease which is not considered to be a finance lease is classified as an operating lease.

Assets provided under operating leases are shown in the balance sheet under property, plant and equipment or intangible assets in the case of equipment leases, and investment property in the case of property leases. Lease income from operating leases is recognized in the income statement on a straight-line basis over the lease term under "Income and expenses from other activities".

• > 5 years	120	170

12.2.2 Leases as lessee

Accounting principles

IFRS 16 applies to contracts that, irrespective of their legal form, meet the definition of a lease as laid down by the standard. The standard requires the identification of an asset, and that the lessee controls the right to use this asset for a period of time. Control is established if the lessee holds the following two rights throughout the period of use:

- the right to obtain almost all of the economic benefits arising from use of the asset;
- the right to decide how the asset is used.

The existence of an identified asset requires that the lessor has no substantive rights to substitute alternative assets, with this requirement being assessed according to facts and circumstances in place at the start of the contract. If the lessor can freely substitute the leased asset, the contract becomes a non-lease contract whose purpose is to provide capacity rather than an asset.

The asset can be comprised of a portion of a larger asset, such as a floor within a building. However, a portion of an asset that is not physically distinct within a grouping without a pre-determined location is not an identified asset.

With certain exceptions, lessees are required under IFRS 16 to record leases in the balance sheet as a right-of-use asset under "Property, plant and equipment" or "Investment property" and as lease liabilities under "Other liabilities".

On the date of initial recognition, no deferred tax is reported if the value of the asset is equal to the value of the liability. Deferred tax is recorded for subsequent net temporary differences arising from changes in amounts recognized as right-of-use assets and lease liabilities.

At the commencement date, the lessee measures the lease liability at the present value of the lease payments that are not paid at that date.

These payments include fixed lease payments and in-substance fixed lease payments, variable lease payments based on an index or a rate calculated using the latest index or rate in force, any residual value guarantees and, where appropriate, any amount to be paid to the lessor under options that are reasonably certain to be exercised.

Lease payments used to determine the lease liability exclude variable payments that are not based on an index or a rate, taxes such as VAT, whether recoverable or not, and the housing tax.

Right-of-use is recognized as an asset on the commencement date of the lease for an amount equal to the lease liability on that date, adjusted for any payments made to the lessor at or before that date and not taken into account for the measurement of the lease liability, less any lease incentives received. If appropriate, this amount is adjusted for initial direct costs incurred by the lessee and an estimate of costs to be incurred in dismantling or restoring the asset if required by the terms and conditions of the lease, as long as the outflow of cash is probable and can be determined in a reliable manner.

The right-of-use asset is amortized on a straight-line basis and the lease liability is calculated on an actuarial basis over the term of the lease using the lessees' incremental borrowing rate mid-way through the contract.

The amount of lease liabilities is subsequently readjusted to take into account variations in the indices or rates to which the leases are indexed. As this adjustment reflects the right of use, it has no impact on the income statement.

For entities that are part of the financial solidarity mechanism that centralize their funding with the Group Treasury, the rate is calculated at Group level and adjusted, as applicable, to the currency applicable to the lessee.

The lease term is the non-cancellable period for which a lessee has the right to use an underlying asset, together with the periods covered by an option to extend the lease if the lessee is reasonably certain to exercise that option; and the periods covered by an option to terminate the lease if the lessee is reasonably certain not to exercise that option.

For French "3/6/9" commercial leases, the term used is usually nine years. The reasonable certainty of whether the options relating to the lease term will be exercised is assessed by considering Group entities' real estate management strategy.

At the end of the lease, the contract is no longer enforceable and the lessee and the lessor each has the right to terminate the lease without permission from the other party with no more than an insignificant penalty.

The term of leases that are not extended or canceled at the end of the term (leases with automatic renewal) is determined by expert appraisal and, in the absence of specific information, assigned a reasonable term of three years.

For leases recognized in the balance sheet, the expense relating to the lease liability is reported as an interest expense under net banking income while the depreciation expense on the right-of-use asset is recognized as a depreciation expense under gross operating income.

Leases not recognized in the balance sheet and variable payments that are excluded from lease liabilities are recorded as an expense for the period under operating expenses.

Impact of leases on the income statement – lessee

in millions of euros	12/31/2024	12/31/2023
EXPENSES FROM LEASE TRANSACTIONS	**(506)**	**(495)**
Interest expenses on lease liabilities	(31)	(24)
Depreciation of right-of-use assets	(387)	(380)
Variable lease expenses not included in measurement of lease liabilities	(36)	(41)
Expenses on short-term leases[1]	(38)	(37)
Expenses on underlying assets of low value[1][2]	(16)	(13)
INCOME FROM SUB-LEASING/OPERATING LEASES	**1**	**4**

(1) Related to leases not recognized in the balance sheet.
(2) 2023 data restated for vehicle rental expenses for comparative purposes.

Income from such leases is presented using the same approach as lessors: as income from other activities for operating leases and as interest income for finance leases.

Schedule of lease liabilities

in millions of euros	12/31/2024	12/31/2023
AMOUNTS OF NON-DISCOUNTED FUTURE PAYMENTS	**1,174**	**1,192**

Commitments on leases not yet recognized in the balance sheet

In accordance with IFRS 16, future minimum payments relating to leases to which the Group is committed but whose underlying assets have not yet been made available are not recognized on the balance sheet prior to their commencement date. The following table shows the minimum payments expected on these contracts.

in millions of euros	12/31/2024	12/31/2023 corrected[1]	12/31/2023
AMOUNTS OF NON-DISCOUNTED FUTURE PAYMENTS	**0**	**2**	**1,356**
< 1 year	0	0	151
1-5 years	0	1	603
> 5 years	0	1	602

(1) The undiscounted future payment amounts for 2023 have been amended compared to the published version.

12.3 Related party transactions

For Groupe BPCE, related parties are considered to be all consolidated companies, including companies carried under the equity method, and the Group's key management personnel.

The Social Housing Companies in which the Group is the sole major shareholder are also covered.

12.3.1 Transactions with consolidated companies

All intercompany transactions carried out during the period and balances outstanding at the end of the period with fully consolidated companies are eliminated in full on consolidation without exceptions (see 3.3.2).

The statement below only provides data on intercompany transactions concerning:

- entities over which the Group exercises joint control (joint operations) in respect of the non-eliminated portion: no significant transactions were identified in this category;

entities over which the Group exercises significant influence and which are equity-accounted (associates). No significant transaction was identified in this respect.

A list of fully consolidated subsidiaries is presented in Note 13 "Scope of consolidation".

12.3.2 Transactions with company directors

The Group's company directors are the Members of the Management Board and Supervisory Board of BPCE. The short-term employee benefits, post-employment benefits, long-term employee benefits and termination benefits of BPCE's company directors are described in the "Remuneration, benefits in kind, loans, guarantees and attendance fees received by BPCE directors and corporate officers" section in Chapter 4 "Corporate governance report".

Short-term employee benefits

Short-term employee benefits paid out to the Group's company directors amounted to €5 million in 2024 and €5 million in 2023.

These include remuneration, directors' attendance fees and benefits paid to members of the Management Board and Supervisory Board.

Post-employment benefits, long-term employee benefits and termination benefits

Post-employment benefits, long-term employee benefits, and termination benefits of BPCE's company directors are described in the "Rules and principles governing the determination of remuneration and benefits" section in Chapter 4, "Corporate governance report". The amount provisioned by BPCE SA in respect of retirement benefits came to €1 million at December 31, 2024 (€1 million at December 31, 2023).

12.3.3 Relations with social housing companies

Groupe BPCE is a longstanding partner in the HLM social housing movement in France and a key player in the social housing production process. The Group acts as an operator (the leading privately-owned bank involved in the construction of social housing which it finances in particular through *Livret A* passbook savings account deposits) and is one of the main distributors of subsidized loans and intermediary rental loans for the construction of rental housing for low-income families. The Group is also the sole major shareholder in certain social housing companies.

In view of the economic substance of the Group's dealings with the social housing sector, where organizations are subject to specific regulations, some social housing companies have been classified as related parties.

Banking transactions with social housing companies

12.5 Interests in non-consolidated structured entities

12.5.1 Nature of interests in non-consolidated structured entities

A non-consolidated structured entity is a structured entity that is not controlled and is therefore not accounted for using the full consolidation method. As a result, the interests held in a joint venture or associate which is classed as a structured entity falls within the scope of this note.

The same is true of controlled structured entities that are not consolidated due to holding threshold reasons.

This includes all structured entities in which Groupe BPCE holds an interest and acts in one or more of the following capacities:

- originator/structurer/arranger;
- placement agent;
- manager; or
- in any other capacity that has a major impact on the structuring or management of the transaction (*e.g.* provision of financing, guarantees or structuring derivatives, tax investor, major investor, etc.).

An interest in an entity corresponds to all types of relationships, contractual or not, that expose Groupe BPCE to a risk of fluctuations in returns relating to the entity's performance. Interests in another entity may be evidenced by, among others, the holding of equity instruments or debt securities, as well as, by other types of relationships, such as financing, short-term credit facilities, credit enhancement, the provision of guarantees or structured derivatives.

As a result, the following are not included in the scope of this note:

- structured entities which are associated with Groupe BPCE through a current transaction alone. This corresponds to an unstructured financial instrument which generally does not have a material impact on the variability of the structured entity's returns and which could be concluded by Groupe BPCE with structured entities or classically governed entities alike. The main kinds of current transactions are:
  - plain vanilla fixed income, foreign exchange, and other underlying derivatives, as well as securities lending/borrowing and repurchase transactions,
  - plain vanilla guarantees and financing granted to family non-trading real estate companies (SCI) or to certain holdings;
- external structured entities in which Groupe BPCE simply acts as an investor.

These are:

- investments in external UCITS that the Group does not manage, except for those in which the Group owns almost all the shares;
- a limited scope of interests held in securitization vehicles (exposures on these funds are included in the information published on securitization in Chapter 7.7 "Risk Factors and Risk Management – Securitization transactions");
- interests held in external real estate funds or private equity funds in which Groupe BPCE acts as a simple minority investor.

The structured entities with which the Group has a relationship can be divided into four categories: entities involved in asset management, securitization vehicles, entities created for structured financing purposes, and entities created for other types of transactions.

Asset Management

Financial asset management (also known as portfolio management) consists of managing equity or funds entrusted by investors by investing in equities, bonds, mutual funds or hedge funds, etc.

The Asset Management line of business which uses structured entities is represented by collective investment management or fund management. More specifically, it encompasses collective investment vehicles within the meaning of the French Monetary and Financial Code (other than securitization structures) as well as equivalent bodies governed by foreign law. These notably include entities such as UCITS, real estate funds and private equity funds.

Securitization

Securitization transactions are generally established as structured entities in which assets or derivatives representing credit risk are isolated.

These entities serve to diversify the underlying credit risks and to split them into various levels of subordination (tranches) with a view, generally, to sell them to investors seeking a certain level of return, according to the degree of risk accepted.

These vehicles' assets and the liabilities that they issue are rated by the rating agencies, which monitor that the level of risk associated with each tranche of risk sold is commensurate with the attributed rating.

The kind of securitization transactions used and which require the intervention of structured entities are as follows:

- transactions where the Group (or a subsidiary) sells on its own behalf to a dedicated vehicle, in cash or synthetic form, the credit risk associated with one of its asset portfolios;
- securitization transactions performed on behalf of third parties. These transactions consist of housing in a dedicated structure (generally a Special Purpose Entity (SPE)) the assets belonging to another company. The SPE issues shares that can, in certain cases, be subscribed for directly by investors, or subscribed for by a multi-seller conduit which refinances the acquisition of these shares through the issue of "short-term notes" (commercial papers).

Structured financing (of assets)

Structured financing covers the range of activities and products set up to provide financing to economic players while reducing risks through the use of complex structures. These include the financing of movable assets (pertaining to aeronautic, marine or terrestrial transport, telecommunications, etc.), real estate assets and the acquisition of targeted companies (LBO financing).

The Group may need to create a structured entity that houses a specific financing transaction on behalf of a customer. This is a contractual and structural organization. The particularities of these types of financing are related to risk management, with the use of notions such as limited recourse or waivers of recourse, standard and/or structural subordination and the use of dedicated legal vehicles used in particular to carry a single-contract finance lease representing the financing granted.

Other activities

This comprises all remaining activities.

12.5.2 Nature of risks associated with interests held in non-consolidated structured entities

Assets and liabilities recognized in the Group's various balance sheet accounts relating to interests in non-consolidated structured entities contribute to determining the risks associated with these entities. The values recorded under the balance sheet assets, along with financing and guarantee commitments given less guarantee commitments received and provisions recorded in liabilities, are used to assess the maximum exposure to risk of losses. It should be noted that the maximum exposure to the risk of loss does not take into account financial liabilities at fair value through profit or loss. This exposure is limited, in the specific case of optional derivatives, to the sale of options.

The "notional amounts" line corresponds to the notional amount of options sold to structured entities.

The data are presented below, aggregated based on their activity classification.

At December 31, 2024

SIZE OF STRUCTURED ENTITIES	**148,474**	**1,161,147**	**54,830**	**9,765**

At December 31, 2023

in millions of euros	Securitization	Asset Management	Structured Financing	Other activities
SIZE OF STRUCTURED ENTITIES	**156,349**	**895,695**	**54,008**	**26,903**

Securitization transactions in which Groupe BPCE is simply an investor are listed in Chapter 7.7 "Risk Factors and Risk Management – Securitization transactions".

The size criterion used varies according to the types of structured entities:

- securitization: the total amount of issues recorded in the entities' liabilities;
- asset management: the net assets of collective investment vehicles (other than securitization);
- structured financing: the total amount of financing outstandings remaining due by the entities to all banks;
- other activities: total assets.

12.5.3 Income and carrying amount of assets transferred to sponsored non-consolidated structured entities

A structured entity is sponsored by a group entity when the following two indicators are both satisfied:

- it is involved in the creation and structuring of the structured entity;
- it contributes to the success of the entity by transferring assets to it or by managing relevant activities.

When the Group entity's role is limited to one of advisor, arranger, custodian or placement agent, the structured entity is not considered to be sponsored.

Groupe BPCE plays the role of sponsor for:

- UCITS initiated by an investment management company belonging to Groupe BPCE and in which Groupe BPCE holds no investment or any other interest. Reported income includes management and incentive fees charged by Groupe BPCE entities, as well as profit or loss from ordinary business with these funds;
- a US activity involving the origination and disposal of portfolios of home loans to securitization vehicles created by the GFS division with third parties and in which Groupe BPCE holds no interests. Reported income includes structuring fees as well as gains or losses on the disposal of receivables.

For the non-consolidated structured entities that the Group sponsors without holding any interests, the impact on the financial statements is presented below:

2024 fiscal year

in millions of euros	Securitization	Asset Management
Income from entities	**15**	**1,419**
Net interest income		
Net fee and commission income	3	1,407
Gains (losses) on financial instruments at fair value through profit or loss	12	12
CARRYING AMOUNT OF ASSETS TRANSFERRED TO THE ENTITY DURING THE FISCAL YEAR	**279**	

2023 fiscal year

in millions of euros	Securitization	Asset Management
Income from entities	**8**	**1,330**
Net interest income		
Net fee and commission income	2	1,318
Gains (losses) on financial instruments at fair value through profit or loss	6	13
CARRYING AMOUNT OF ASSETS TRANSFERRED TO THE ENTITY DURING THE FISCAL YEAR	**116**	

12.6 Locations by country

12.6.1 Net banking income and headcount by country

12.7 Statutory Auditors' fees

Fees in respect of duties performed by the Statutory Auditors for the whole of Groupe BPCE (including Statutory Auditors not belonging to the same network as those responsible for auditing BPCE's financial statements) in respect of the 2023 and 2024 fiscal years were as follows:

	Statutory Auditors responsible for auditing BPCE's financial statements												Other Statutory Auditors					
	PwC				Forvis Mazars				Deloitte									
	Amount		%		Amount		%		Amount		%		KPMG Audit[2]		Other		TOTAL	
in thousands of euros[1]	2024	2023	2024	2023	2024	2023	2024	2023	2024	2023	2024	2023	2024	2023	2024	2023	2024	2023
Certification of financial statements	17,540	17,349	60%	81%	10,098	9,675	72%	79%	4,943	4,483	59%	63%	4,486	4,194	730	669	37,796	36,369
Services other than financial statement certification[3][4]	11,559	4,028	40%	19%	4,000	2,576	28%	21%	3,485	2,648	41%	37%	535	701	37	53	19,615	10,005
TOTAL	**29,099**	**21,377**	**100%**	**100%**	**14,097**	**12,250**	**100%**	**100%**	**8,428**	**7,130**	**100%**	**100%**	**5,021**	**4,895**	**767**	**721**	**57,412**	**46,374**
o/w fees paid to commissioned Statutory Auditor for certification of financial statements of consolidating entities	8,676	9,114			8,730	8,693			4,820	4,308			4,486	4,174	730	669	27,441	26,957
o/w fees paid to commissioned Statutory Auditor for services other than financial statement certification of consolidating entities	9,435	1,788			2,892	1,110			1,718	861			535	701	37	51	14,617	4,512
% Change	**36%**				**15%**				**18%**				**3%**		**6%**		**24%**	

(1) Amounts relating to services provided appear on the income statement for the fiscal year, notably including unrecoverable VAT.

(2) For the KPMG audit network, amounts include fees paid to the network when it signs the financial statements of shareholder institutions (and their subsidiaries) or direct subsidiaries of BPCE SA. Consequently, they do not take into account fees paid by BPCE SA of €5.9 million for services other than financial statement certification.

(3) In 2024, "services other than financial statement certification" mainly concerned to assignments carried out at the request of BPCE (€10 million), in particular for services rendered during the acquisition of entities, letters of comfort relating to issues and findings resulting from specific controls as well as on assignments performed out at the request of Natixis SA and its subsidiaries (€5.1 million), in particular support missions on regulatory changes, tax missions and technical assistance missions.

(4) In 2024, "Services other than financial statement certification" included fees relating to the sustainability report (CSRD) for Group entities required to publish it for a total amount of €2.15 million.

Note 13 / Detail of the scope of consolidation

13.1 Securitization transactions

Accounting principles

Securitization is a financial engineering technique that aims to enhance balance sheet liquidity. From a technical perspective, assets to be securitized are grouped according to the quality of the associated collateral or guarantees and sold to special purpose entities that finance their acquisition by issuing securities underwritten by investors.

Entities created specifically for this purpose are consolidated if the Group exercises control over them. Control is assessed according to the criteria provided in IFRS 10.

The following statement lists the securitization transactions carried out by the Retail Banking and Insurance entities without (full or partial) derecognition:

in millions of euros	Type of assets	Inception date	Expected maturity	Nominal at inception	12/31/2024
Elide 2014	Residential home loans	11/18/2014	October 2039	915	0
Elide 2017-1	Residential home loans	02/02/2017	December 2037	1,842	313
Elide 2017-2	Residential home loans	04/27/2017	October 2041	1,051	253
Elide 2018	Residential home loans	05/29/2018	September 2046	1,390	496
Elide 2021	Residential home loans	03/25/2021	March 2049	2,920	1,802
Elide 2022	Residential home loans	11/24/2022	November 2050	2,500	1,955
Elide 2024	Residential home loans	05/23/2024	January 2052	2,000	1,892

TOTAL				**129,846**	**133,267**

GROUPE BPCE SECURITIZATION TRANSACTION

At December 31, 2024, several new special purpose entities (Securitization Mutual Funds – *fonds communs de titrisation* or "FCT") were consolidated within Groupe BPCE:

- on May 29, 2024, a securitization transaction resulted in the sale of personal loans (€0.89 billion) to BPCE Consumer Loans FCT 2024 and a subscription by external investors of the senior notes issued by the FCT (€0.75 billion) as well as the subscription by the institutions of subordinated notes, thus ensuring the over-collateralization of the transaction and residual shares allowing for the recovery of interest flows on the securitized receivables.
- on July 12, 2024, a securitization transaction resulted in the sale of equipment loans (€1.306 billion) to BPCE Ophelia Master SME FCT and a subscription by external investors of the senior notes issued by the FCT (€0.8 billion) as well as the subscription by the institutions of subordinated notes, thus ensuring the over-collateralization of the transaction and residual shares allowing for the recovery of interest flows on the securitized receivables.
- on October 29, 2024, a securitization transaction resulted in the sale of residential real estate loans (€0.8 billion) to BPCE Home Loans FCT 2024 and a subscription by external investors of the senior notes issued by the FCT (€0.75 billion) as well as the subscription by the institutions of subordinated notes, thus ensuring the over-collateralization of the operation and residual shares allowing for the recovery of interest flows on the securitized receivables.

Despite their placement in the market, these transactions are not deconsolidated since the entities that transferred the loans subscribed for subordinated securities and residual shares. They therefore retain control within the meaning of IFRS 10. They follow the previous securitization transactions: BPCE Master Home Loans, BPCE Consumer Loans 2016 and 2022 (securitization of personal loans), BPCE Home Loans FCT 2017, 2020, 2021 and 2023 (securitization of home loans) and Mercure Master SME 2023 for equipment loans.

SECURITIZATION TRANSACTIONS CARRIED OUT WITH FULL OR PARTIAL DERECOGNITION

Note: Crédit Foncier had entered into two public securitization transactions backed by home loans (Crédit Foncier Home Loans No. 1 in May 2014 and Crédit Foncier Home Loans No. 2 in August 2015).

As a receivables manager, Crédit Foncier did not have the ability to use its power to influence the variability of returns. Therefore, it did not control the securitization funds within the meaning of IFRS 10, and the funds were not consolidated.

However, given its ongoing ties with CFHL-2, the criteria needed to establish full derecognition of assets under IFRS 9 were not entirely met. As a result, the transaction led to deconsolidation in accordance with IFRS 10, and to partial derecognition in accordance with IFRS 9.

The CFHL-2 assets transferred were recognized in proportion to Crédit Foncier's continued involvement. As a result, the Group continues to recognize the maximum loss associated with each of the residual ties to the fund (swaps, clean-up calls, management fees) in balance sheet assets. The fair value of these residual ties was remeasured at each closing date.

On September 30, 2024, CFF exercised its right (Clean Up Call), enabling it to repurchase the remaining outstanding loans from the FCT.

The result of the transaction amounted to +€11 million at December 31, 2024.

13.2 Guaranteed UCITS

Guaranteed UCITS are funds designed to reach a specific amount at the end of a given period, determined by applying a predefined calculation formula based on financial market indicators and, where appropriate, to distribute revenues derived from the investments as determined using the same methods. The portfolio management targets of these funds are guaranteed by a credit institution.

Based on an analysis of the substance of these funds in accordance with IFRS 10, the Group does not control relevant activities (as management flexibility is limited) and is not exposed to variable returns (as a solid risk monitoring system has been implemented) and therefore does not consolidate these structures.

13.3 Other interests in consolidated subsidiaries and structured entities

MAJOR RESTRICTIONS

The Group has not been faced with any major restrictions relating to stakes held in its structured or non-structured subsidiaries.

SUPPORT OF CONSOLIDATED STRUCTURED ENTITIES

The Group did not grant any financial support to consolidated structured entities.

13.4 Scope of consolidation at December 31, 2024

Only those entities providing a material contribution are consolidated. For entities meeting the definition of financial sector entities given in Regulation (EU) No. 575/2013 of the European Parliament and of the Council of June 26, 2013 (the CRR), the accounting consolidation thresholds have been aligned, since December 31, 2017, with those applied for the prudential scope of consolidation. Article 19 of the CRR sets a threshold of €10 million in total balance sheet and off-balance sheet assets. For non-financial sector entities, materiality is assessed at the level of the consolidated entities. Based on the principle of ascending materiality, any entity included at a sub-consolidation level is included at all higher consolidation levels, even if it is not material at those levels.

The percentage interest is specified for each entity in the scope of consolidation. The percentage of interest describes the share of equity held by the Group, either directly or indirectly, in companies within the scope. The percentage of interest can be used to determine the share attributable to equity holders of the parent in the net assets of the company held.

13.5 Non-consolidated companies at December 31, 2024

The French national accounting standards authority Regulation No. 2016-09 of December 2, 2016, requires companies that prepare their consolidated financial statements in accordance with international standards as adopted by the European Union to publish additional information relating to companies not included in their scope of consolidation as well as significant equity interests.

Non-consolidated companies include:

- significant interests that do not fall within the scope of consolidation; and
- companies excluded from the scope of consolidation owing to their non-material nature.

(1) Amount of shareholders' equity and income for the last fiscal year known at the reporting date and based on applicable accounting standards according to the country of location.

Information on companies excluded from the scope of consolidation due to their non-material nature is available on Groupe BPCE's website at the following address: https://www.groupebpce.com/en/investors/results-and-publications/reference-documents/

6.2 Statutory auditors' report on the consolidated financial statements

Year ended December 31, 2024

This is a translation into English of the statutory auditors' report on the financial statements of the Company issued in French and it is provided solely for the convenience of English-speaking users. This statutory auditors' report includes information required by French law, such as information about the appointment of the statutory auditors or verification of the management report and other documents provided to shareholders. This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

To the General Assembly

BPCE

7 promenade Germaine Sablon

75013 Paris

I. OPINION

In compliance with the engagement entrusted to us by your Annual General Meeting, We have audited the accompanying consolidated financial statements of the Group BPCE for the year ended the December 31, 2024.

In our opinion, the consolidated financial statements give a true and fair view of the assets and liabilities and of the financial position of the Group as at December 31, 2024 and of the results of its operations for the year then ended in accordance with International Financial Reporting Standards as adopted by the European Union.

The opinion expressed above is consistent with the content of our in relation to the Audit Committee.

II. BASIS FOR THE OPINION

AUDIT FRAMEWORK

We conducted our audit in accordance with the standards of professional practice applicable in France. We believe that the evidence we have obtained is sufficient and appropriate to base our opinion.

Our responsibilities under those standards are further described in the "Statutory auditors' responsibilities in relation to the audit of the consolidated financial statements" section of this report.

INDEPENDENCE

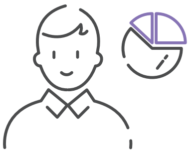
We conducted our audit engagement in compliance with independence requirements of the French Commercial Code (code de commerce) and the French Code of Ethics (code de déontologie) for statutory auditors, for the period from January 1st, 2024 to the date of our report, and specifically we did not provide any prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No 537/2014.

III. JUSTIFICATION FOR ASSESSMENTS - KEY AUDIT MATTERS

In accordance with the requirements of Articles L. 821-53 and R.821-180 of the French Commercial Code (code de commerce) relating to the justification of our assessments, we inform you of the key audit matters relating to risks of material misstatement that, in our professional judgment, were of most significance in our audit of the consolidated financial statements of the current period, as well as how we addressed those risks.

These matters were addressed in the context of our audit of the consolidated financial statements as a whole, approved in the conditions mentioned above, and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the consolidated financial statements.

Impairment of loans and receivables (Statutes 1, 2 and 3)



Identified risk and key judgments

Groupe BPCE is exposed to credit risks. These risks resulting from the inability of its customers or counterparties to meet their financial commitments relate in particular to its customer lending activities.

In accordance with the "impairment" component of IFRS 9, your Group sets up impairments and provisions to cover the risks of expected losses (outstanding under status 1 and 2) or proven losses (outstanding losses under status 3).

The rules for impairment for risks in respect of expected losses require the constitution of a first impairment status materializing an expected loss in 1 year from the origin of a new financial asset classified at amortized cost or fair value by equity and on off-balance sheet commitments; and a second status materializing an expected loss at maturity, in the event of a significant deterioration in credit risk. These impairments for expected losses (statuses 1 and 2) are determined mainly on the basis of models integrating different parameters (probability of default, losses at default, exposures, etc.) and incorporating forward-looking information.

These impairments for expected losses are supplemented, where appropriate, by allocations on a sectoral basis with regard to local specificities.

Outstanding loans bearing proven counterparty risk (status 3) are subject to impairments determined mainly on an individual basis. These impairments are assessed by management on the basis of future recoverable flows, taking into account the estimated available guarantees on each of the appropriations concerned.

We considered that the identification and assessment of credit risk was a key point of the audit given that the provisions induced constitute a significant estimate for the preparation of the accounts, and call for the judgment of management both in the attribution of outstanding loans to the different statuses and in the determination of the parameters and methods for calculating impairments for outstanding loans in statuses 1 and 2,than in the assessment of the individual level of provisioning of outstanding loans in status 3.

The stock of impairments for credit losses on outstanding loans and similar to customers and credit institutions amounted to €14,683 million, of which €1,057 million under status 1, €3,973 million under status 2 and €9,653 million under status 3.

The cost of risk for the 2024 financial year amounted to €2,061 million (compared to €1,731 million for the 2023 financial year).

For further details on accounting policies and exposures, refer to notes 5.5 and 7.1 to the notes.

Our response

Depreciation of outstanding loans under status 1 and 2

Our work mainly consisted of:

- verifying the existence of an internal control system allowing the ratings of the various counterparties to be updated at an appropriate frequency;
- verifying the existence of a governance that reviews the adequacy of impairment models, the parameters used to calculate impairment at an appropriate frequency, and analyses the evolution of impairment in accordance with IFRS9 rules;
- assess the appropriateness of the macroeconomic models, parameters and assumptions used for the impairment calculations;
- to carry out counter-calculations on the main types of outstanding loans;
- to carry out controls on the IT system as a whole set up by Groupe BPCE, including a review of the general IT controls, interfaces and on-board controls for specific data used to process information relating to IFRS 9;
- to carry out checks on the tool used to assess the expected impact in terms of credit losses from the application of sectoral downgrades;
- to verify the correct documentation and justification of the sectoral provisions recorded in the group. In this respect, we have (i) assessed the criteria for the group's identification of the business sectors considered to be more sensitive to the impact of the current economic context, (ii) assessed the appropriate level of the provisions thus estimated.

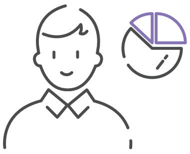
Depreciation of outstanding loans in status 3

As part of our audit procedures, we generally reviewed the control framework for identifying exposures classified as status 3, monitoring credit and counterparty risks, assessing non-recovery risks, and determining impairments and related provisions on an individual basis.

Our work consisted of assessing the quality of the monitoring system for sensitive, doubtful and contentious counterparties, as well as the credit review process. In addition, on the basis of a sample of files selected on the basis of materiality and risk criteria, we carried out contradictory analyses of the amounts of impairments and provisions.

We have also appreciated the detailed information in the notes required by IFRS 9 under the "Impairment" component as at December 31, 2024.

Level 2 and Level 3 Financial Instruments as defined in IFRS 13



Identified risk and key judgments

Groupe BPCE holds a significant proportion of financial instruments measured at fair value, which are broken down into three levels defined by IFRS 13 according to the fair value determination method used.

rket value is determined according to different approaches depending on the nature and complexity of the instruments: use of directly observable quoted prices (instruments classified as Level 1 in the fair value hierarchy), valuation models with mostly observable parameters (instruments classified as Level 2) and valuation models with mostly unobservable parameters (instruments classified as Level 3).

For the most complex financial instruments, these approaches can therefore involve a significant amount of judgement taking into account:

- the use of internal valuation models;
- the use of valuation parameters that are not observable on the market;
- additional valuation adjustments to take account of certain market, counterparty or liquidity risks.

We considered the measurement of complex Level 2 and Level 3 fair value financial instruments to be a key focus of the audit due to the materiality of the exposures and the use of judgment in the determination of fair value.

For further details on accounting principles and fair value levels, refer to Note 10.

Our response

We tested the effectiveness of key controls that we considered relevant to our audit, including those related to:

- the validation and periodic review, by the risk department, of valuation models,
- independent verification of valuation parameters,
- the determination of the main valuation adjustments,
- the validation and periodic review of the observability criteria taken into account to classify complex financial instruments in the fair value hierarchy and to take into account the impact on margin on the first day.

We carried out this due diligence with the assistance of our valuation experts, with whom we also carried out independent valuation work consisting of examining, on a sample basis, the assumptions, methodologies and market parameters feeding into the valuation models used to estimate the main valuation adjustments as at 31 December 2024.

We also examined, on the basis of samples, any existing margin call spreads with market counterparties, allowing us to assess the appropriateness of valuations.

Finally, we have assessed the information on the valuation of financial instruments published in the notes.

Valuation of insurance contract liabilities in the "Retirement Savings" classes

Identified risk and key judgments

Groupe BPCE records direct equity contracts as liabilities for its insurance activities in the "retirement savings" classes.

These liabilities are measured using a *Variable Fee Approach* (VFA) model, which requires the valuation of actuarial liabilities based on significant judgments about the data used, assumptions about future periods, and the result of estimation techniques. These liabilities comprise the following three blocks:

- The estimate of the present value of the estimates of future cash flows (*BE)* relating to these valued long-term contracts is based on technical and financial assumptions, and significant judgments:
- The assessment of the risk *adjustment (RA)* is based on assumptions about the group's level of confidence in the risk factors associated with the technical liabilities, and on a value-at-risk approach, which is the maximum loss within the defined level of confidenec.
- Finally, the amortization of the *Contractual Service Margin (CSM),* corresponding to the fraction of CSM recognized as revenue from insurance activities for the year, is determined on the basis of the units of coverage. These hedging units are adjusted to take into account the expected return of the underlying items resulting from so-called "real world" assumptions.

In addition, the internal margins between the banking entities distributing insurance products and the insurance entities are restated.

Due to the sensitivity of the measurement of these liabilities to these key judgments and assumptions, we considered the measurement of the liabilities related to insurance contracts in the savings and retirement classes as a key focus of the audit.

As of December 31, 2024, liabilities related to insurance contracts in the "savings and retirement" classes of business valued under the Variable Fee Approach (VFA) amounted to €112,699 million and those measured under the general approach amounted to €2,848 million. They are broken down as follows:

- the estimated present value of future cash flows is €104,903 million;

- the adjustment for non-financial risk amounted to €2,018 million;

- the margin on contractual services amounted to €8,625 million.

For further details on the accounting principles and valuation of these contracts, refer to Notes 9 and 9.2.7 of the Appendix.

Our response

In order to cover the risk of valuation of these liabilities related to insurance contracts in the "savings and retirement" classes, we have implemented the following audit procedures with the assistance of our actuarial specialists:

- We assessed the methodology for assessing the future cash flows (BE), RA and CSM related to these contracts and checked their compliance with the accounting standards in force;
- We assessed the internal control environment of the information systems involved in the processing of technical data, calculations and their transfer to accounting;
- We assessed the design and tested the operating effectiveness of the key controls put in place by the group. In particular, we assessed:
  - The system of controls relating to the validation of the future cash flow projection model;
  - Documentation and controls relating to key judgments and assumptions made by the finance department;
- We have tested on a sample basis and based on our risk assessment, the calculation models used to estimate future cash flows, the adjustment for non-financial risk and CSM, and any material changes to the calculation models;
- We tested the reliability of the data used as a basis for the estimates by means of a sample;
- We tested by sampling the units of coverage and the main so-called "real-world" assumptions used for the recognition of the CSM in the result;
- We performed analytical procedures on developments to identify any significant inconsistent or unexpected variations.

Finally, we assessed the appropriateness of the disclosures in the notes to the consolidated financial statements, including the risk sensitivity information and the presentation of restatements relating to internal contractual service margins.

Valuation of goodwill and intangible assets with an indefinite life

Identified risk and key judgments

Groupe BPCE notes goodwill in its consolidated financial statements. Indeed, the external growth operations carried out by Groupe BPCE have led it (i) to assess the control arrangements exercised over the acquired entities in accordance with IFRS 10 *'Consolidated Financial Statements'* and (ii) to carry out a purchase price allocation exercise in accordance with IFRS 3 *'Business Combinations'*. Following this allocation exercise, the unallocated surplus corresponding to the residual identifiable net asset was recorded in goodwill.

These goodwill and acquired intangible assets with an indefinite life are subject to impairment tests at least annually, based on the assessment of the recoverable amount of the cash-generating units (CGUs) to which they are attached or as soon as there are indications of impairment losses. The determination of the recoverable amount is based on the discounting of the estimated future cash flows of the CGU as they result from the medium-term plans drawn up by the entities concerned and assessed by the Group.

We considered impairment testing of goodwill and intangible assets with an indefinite life to be a key focus of the audit by its very nature, as it requires the exercise of judgment, particularly in determining discount rates, economic scenarios or financial projections.

As of December 31, 2024, goodwill in gross terms amounted to €5,005 million and cumulative impairment losses amounted to €693 million.

The terms of the impairment test implemented by Groupe BPCE as well as the key assumptions used to determine the recoverable amount and the sensitivities of the recoverable amounts are described in note 3.5 of the notes.

Our response

With the help of our experts, we evaluated the process put in place by Groupe BPCE to identify the indicators of possible impairment loss and carried out a critical review of the methods of implementing impairment tests.

In particular, we carried out the following work:

- Comparison of assumptions and parameters with external sources
- examination of the reasonableness, particularly in the current economic and financial context, of the medium-term plans selected for each CGU concerned, involving:
  - the comparison with the group's strategic plan approved by the management bodies (supervisory board or board of directors);
  - the assessment of the coherence and reliability of the main assumptions used to construct them, in particular with regard to the financial trajectories drawn up during past years and actually implemented;
  - analysis of sensitivity to different valuation parameters (equity, discount rate, etc.).
- verification of the consistency of the information published on the results of these impairment tests.

Provisions for legal and non-compliance risks

Identified risk and key judgments

Groupe BPCE is the subject of litigation before the courts, investigations and requests for information from regulatory and tax authorities in various jurisdictions.

The assessment of the resulting legal and non-compliance (including tax) risks is based on management's estimate at the reporting date.

The recognition of a provision, the determination of its amount and the information communicated in the notes require the exercise of judgment, in particular because of the difficulty of estimating the probability of the risk materialising as well as the outcome and financial consequences of ongoing proceedings.

As a result, we considered the estimation of the allowances for legal and non-compliance risks to be a key focus of the audit given the sensitivity of these allowances to management's assumptions and options.

Refer to notes 2.3, 5.13 and 11.1 of the notes to the consolidated financial statements for more details.

Our response

We examined the system for identifying, assessing, and provisioning legal and non-compliance risks.

We have taken note of the status of the ongoing proceedings and the main risks identified by the Group, based in particular on regular exchanges with management (and more specifically the Group's legal, compliance and tax departments) as well as on the review of the documentation made available to us.

We also assessed the reasonableness of the assumptions and data used by management in estimating the amount of allowances recognized at the cut-off date. In particular, we have involved specialists in tax law to critically review the tax risk analyses identified by the Group and the related provisions.

We have also conducted procedures to confirm ongoing disputes with the Group's legal advisors.

Finally, we checked that the provisions thus valued were correctly recorded in the accounts and the information given in this respect in the notes to the consolidated accounts.

IV. SPECIFIC VERIFICATIONS

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations of the information pertaining to the Group presented in the management report of the Board of Directors.

We have no matters to report as to its fair presentation and its consistency with the consolidated financial statements

V. OTHER LEGAL AND REGULATORY VERIFICATIONS OR INFORMATION

FORMAT FOR THE PRESENTATION OF THE CONSOLIDATED FINANCIAL STATEMENTS INTENDED TO BE INCLUDED IN THE ANNUAL FINANCIAL REPORT

We have also proceeded, in accordance with the professional practice standard on the auditor's due diligence relating to annual and consolidated accounts presented in the European Single Electronic Format (ESEF), to verify compliance with this format defined by the European delegated regulation No. 2019/815 of December 17, 2018, in the presentation of the consolidated accounts included in the annual financial report mentioned in Article L.451-1-2 of the Monetary and Financial Code, prepared under the responsibility of the Chairman of the Management Board. As for consolidated accounts, our due diligence includes verifying the compliance of the tagging of these accounts with the format defined by the aforementioned regulation.

Based on our work, we conclude that the presentation of the consolidated accounts included in the annual financial report complies, in all its significant aspects, with the European Single Electronic Format.

APPOINTMENT OF STATUTORY AUDITORS

Forvis Mazars SA was appointed Statutory Auditors in the first articles of association dated 19 December 2006 of GCE Nao (which became BPCE in July 2009), at its formation. The firms PricewaterhouseCoopers Audit and Deloitte & Associés were appointed as statutory auditors of BPCE by the general assembly, respectively, on July 2, 2009, and May 22, 2015.

, 2024, Forvis Mazars SA was in the 18th year of its uninterrupted mission, including 16 years since the company became a public interest entity, PricewaterhouseCoopers Audit in the 16th year of its uninterrupted mission and Deloitte & Associés was in the 10th year of its uninterrupted mission.

VI. RESPONSIBILITIES OF MANAGEMENT AND CORPORATE GOVERNANCE IN RELATION TO THE CONSOLIDATED FINANCIAL STATEMENTS

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards as adopted by the European Union, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to goingconcern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The Audit Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risks management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The consolidated financial statements were approved by the Board of Directors.

VII. STATUTORY AUDITORS' RESPONSIBILITIES RELATING TO THE AUDIT OF THE CONSOLIDATED FINANCIAL STATEMENTS.

OBJECTIVES AND AUDIT APPROACH

Our role is to issue a report on the consolidated financial statements. Our objective is to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As specified in Article L.821-55 of the French Commercial Code (code de commerce), our statutory audit does not include assurance on the viability of the Company or the quality of management of the affairs of the Company.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- Identifies and assesses the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control.
- Evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management in the consolidated financial statements.
- Assesses the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of his audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the consolidated financial statements or, if
- such disclosures are not provided or inadequate, to modify the opinion expressed therein.
- Evaluates the overall presentation of the consolidated financial statements and assesses whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtains sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. The statutory auditor is responsible for the direction, supervision and performance of the audit of the consolidated financial statements and for the opinion expressed on these consolidated financial statements.

REPORT TO THE AUDIT COMMITTEE

We submit a report to the Audit Committee which includes in particular a description of the scope of the audit and the audit program implemented, as well as the results of our audit. We also report, if any, significant deficiencies in internal control regarding the accounting and financial reporting procedures that we have identified.

Our report to the Audit Committee includes the risks of material misstatement that, in our professional judgment, were of most significance in the audit of the consolidated financial statements of the current period and which are therefore the key audit matters, that we are required to describe in this report.

We also provide the Audit Committee with the declaration provided for in Article 6 of Regulation (EU) N° 537/2014, confirming our independence within the meaning of the rules applicable in France such as they are set in particular by Articles L.821-27 to L.821-34 of the French Commercial Code (code de commerce) and in the French Code of Ethics (code de déontologie) for statutory auditors. Where appropriate, we discuss with the Audit Committee the risks that may reasonably be thought to bear on our independence, and the related safeguards.

(1) Including changes (excluding cash flows) in insurance and reinsurance assets and liabilities.
(2) Income/expenses from financing activities include interest paid on subordinated debt for €767 million (€800 million in 2023). From the 2024 fiscal year, the interest paid on the subordinated debt has been isolated on the "Income/expenses from financing activities" line.
(3) The net increase (decrease) arising from transactions with shareholders include:
- net changes in BPCE SA's share capital and additional paid-in capital for +€841 million in 2024;
- dividend payouts of -€891 million (-€861 million in 2023);
- the remuneration of deeply subordinated notes recorded in equity for -€276 million (-€253 million in 2023).

(4) Other increases (decreases) generated by financing activities mainly include the impact of repayments for -€2,534 million (-€2,428 million in 2023) and the subscription of a new loan for +€1,601 million (+€1,985 million in 2023) and the payment of interest on the subordinated debt for -€767 million.
(5) The current accounts with overdrafts do not include *Livret A*, LDD and LEP savings accounts centralized with Caisse des Dépôts et Consignations.

6.3.6 Notes to the BPCE financial statements

Note 1 / General framework

1.1 Groupe BPCE

Groupe BPCE comprises the Banque Populaire network, the Caisse d'Epargne network, the BPCE central institution and their subsidiaries.

TWO BANKING NETWORKS: THE BANQUES POPULAIRES AND THE CAISSES D'EPARGNE

Groupe BPCE is a cooperative group whose shareholders own the two retail banking networks: the 14 Banques Populaires and the 15 Caisses d'Epargne. Each of the two networks owns an equal share in BPCE, the Group's central institution.

The Banque Populaire network consists of the Banques Populaires and the mutual guarantee companies which grant them the exclusive benefit of their guarantees.

The Caisse d'Epargne network consists of the Caisses d'Epargne and the local savings companies (LSCs).

The Banques Populaires are wholly-owned by their cooperative shareholders.

The capital of the Caisses d'Epargne is wholly-owned by the LSCs. Local savings companies are cooperative structures with open-ended share capital owned by cooperative shareholders. The LSCs are tasked with coordinating the cooperative shareholder base, in line with the general objectives defined by the individual Caisse d'Epargne with which they are affiliated, and cannot perform banking transactions.

BPCE

BPCE, a central institution as defined by the French Banking Law and a credit institution licensed to operate as a bank, was created pursuant to act No. 2009-715 of June 18, 2009. BPCE was incorporated as a French limited liability company governed by a Management Board and a Supervisory Board, whose share capital is owned jointly and equally by the 14 Banques Populaires and the 15 Caisses d'Epargne.

BPCE's corporate mission embodies the continuity of the cooperative principles underlying the Banques Populaires and the Caisses d'Epargne.

Specifically, BPCE represents the interests of its various affiliates in dealings with the supervisory authorities, defines the range of products and services offered by them, organizes depositor protection, approves key appointments of company directors and oversees the smooth operation of the Group's institutions.

As a holding company, BPCE is the head entity of the Group and holds the joint ventures between the two networks in Retail Banking and Insurance, corporate banking and financial services, and their production units. It defines the Group's corporate strategy and growth and expansion policies.

The network and BPCE's main subsidiaries are organized around two core business lines:

- Retail Banking and Insurance, which includes the Banque Populaire network, the Caisse d'Epargne network, the Financial Solutions & Expertise division (including factoring, consumer loans, leasing, sureties & financial guarantees, and the "retail securities" business), the Digital and Payments (integrating the payments subsidiaries and the Oney group) and Insurance divisions, and Other networks;
- Global Financial Services combining Asset & Wealth Management (Natixis Investment Managers and Natixis Wealth Management) and Corporate & Investment Banking (Natixis Corporate & Investment Banking).

In respect of the Group's financial functions, BPCE is responsible, in particular, for the centralized management of surplus funds, for the execution of any financial transactions required to develop and fund the Group, and for choosing the most appropriate counterparty for these transactions in the broader interests of the Group. BPCE also provides banking services to the other Group entities.

1.2 Guarantee mechanism

The purpose of the guarantee and solidarity system is, in accordance with Articles L. 511-31, L. 512-107-5 and L. 512-107-6 of the French Monetary and Financial Code, to guarantee the liquidity and solvency of the Group and BPCE-affiliated institutions, as well as to organize the financial solidarity between them.

BPCE is responsible for taking all necessary measures to ensure the solvency of the Group and each of the networks and to organize financial solidarity within the Group. This financial solidarity is based on legislative provisions establishing a legal principle of solidarity obliging the central institution to restore the liquidity or solvency of affiliates in difficulty and/or all affiliates of the Group. By virtue of the unlimited nature of the principle of solidarity, BPCE is entitled at any time to ask any one or several or all of the affiliates to contribute to the financial efforts that may be necessary to restore the situation, and may, if necessary, mobilize all the cash and equity capital of the affiliates in the event of difficulty for one or more of them.

In the event of difficulties, BPCE will have to do everything necessary to restore the financial situation and may in particular make unlimited use of the resources of any, several or all affiliates, or implement the appropriate mechanisms of internal solidarity of the Group and by calling on the guarantee fund common to the two networks of which it determines the rules of operation, the triggering conditions, in addition to the funds of the two networks as well as the contributions of the affiliated institutions for its endowment and reconstitution.

BPCE manages the Banque Populaire Network Fund, the Caisse d'Epargne Network Fund and the Mutual Guarantee Fund.

The **Banque Populaire Network Fund** was formed by a deposit made by the Banques Populaires of €450 million that was booked by BPCE in the form of a 10-year term account which is indefinitely renewable.

The deposit made to the **Caisse d'Epargne Network Fund** by the Caisses d'Epargne of €450 million was booked by BPCE in the form of a 10-year term account which is indefinitely renewable.

The **Mutual Guarantee Fund** was formed by deposits made by the Banques Populaires and the Caisses d'Epargne. These deposits were booked by BPCE in the form of 10-year term accounts which are indefinitely renewable. The amount of the deposits by network was €197 million at December 31, 2024.

The total amount of deposits made to BPCE in respect of the Banque Populaire Network Fund, the Caisse d'Epargne Network Fund and the Mutual Guarantee Fund may not be less than 0.15% and may not exceed 0.3% of the Group's total risk-weighted assets.

The booking of deposits in the institutions' individual accounts under the guarantee and solidarity system results in the recording of an item of an equivalent amount under a dedicated capital heading.

Mutual guarantee companies granting the exclusivity of their guarantees to a Banque Populaire benefit from a liquidity and capital adequacy guarantee in their capacity as affiliates of the central institution.

The liquidity and capital adequacy of the local savings companies are secured, firstly, at the level of each individual local savings company by the Caisse d'Epargne of which the local savings company in question is a shareholder.

The Management Board of BPCE holds all the requisite powers to mobilize the resources of the various contributors without delay and in accordance with the agreed order, on the basis of prior authorizations given to BPCE by the contributors.

1.3 Significant events

PROPOSED ACQUISITION OF SOCIÉTÉ GÉNÉRALE EQUIPMENT FINANCE (SGEF)

On April 11, 2024, the Group announced the signing of a memorandum of understanding with Société Générale to acquire the activities of Société Générale Equipment Finance (excluding the activities of SGEF in the Czech Republic and Slovakia).

Today, SGEF is one of the European leaders in the leasing of capital equipment, with a wide range of equipment financing solutions and associated services.

BPCE, which is already the second-largest provider in lease financing in France thanks to BPCE Lease, would become the European leader in capital equipment leasing solutions for manufacturers, dealers, distributors and corporates.

This project will help BPCE to achieve its international growth ambitions, diversify its revenues and strengthen its ability to create value. The acquisition will be carried out at a price of €1.1 billion (based on the net equity of €0.96 billion at the date of completion of the acquisition) and will represent a limited impact on Groupe BPCE's CET1 ratio, which is estimated at -40 bps.

The transaction was completed on February 28, 2025, after obtaining the necessary approvals from the relevant regulatory and competition authorities.

DISPOSAL OF NATIXIS BANK JSC, MOSCOW

On December 24, 2024, Natixis SA sold all of the shares of its subsidiary Natixis Bank JSC, Moscow, as well as the subordinated loan granted to BUROKRAT LLC.

The gain or loss on disposal was recorded for an amount of -€15 million on the "Net gains or losses on other assets" line in the consolidated income statement at December 31, 2024.

1.4 Events after the reporting period

ANNOUNCEMENT OF A PROJECT TO MERGE THE GROUP'S ASSET MANAGEMENT ACTIVITIES WITH THOSE OF GENERALI

On January 21, 2025, Assicurazioni Generali S.p.A. ("Generali") and BPCE signed a non-binding Memorandum of Understanding (MoU) aimed at bringing together, in a joint venture, the asset management activities of Generali Investments Holding ("GIH") and Natixis Investment Managers (NIM). BPCE (*via* Natixis IM) and GIH would each hold 50% of the combined activities with balanced governance and control. In the future, the interest held in the joint venture would be accounted for using the equity method, due to joint control.

The activities that would be contributed by NIM are now included in the "Asset Management/AWM" business segment presented in Note 12.1.

With €1,900 billion in assets under management (at September 30, 2024), the proposed merger would create a global asset management platform with leading positions and critical size in both Europe and North America. The combined entity would be ranked first by revenues and second by assets under management in Europe; ninth by assets under management and first in global insurance management.

The new joint venture would offer a full range of solutions in traditional and alternative asset classes, meeting customers' increasingly sophisticated needs.

The combined platform would also be uniquely positioned to continue to develop its activities on behalf of third parties in Europe, North America and regions with high growth potential in Asia, leveraging a global distribution network integrating an efficient centralized distribution platform as well as local multi-channel partnerships.

The employee representative bodies of the various parties concerned will be consulted before the final agreements relating to the transaction are signed.

The effective completion of the transaction will depend on obtaining the usual regulatory authorizations, with a completion date expected in early 2026.

The signing of the Memorandum of Understanding had no impact on the consolidated financial statements at December 31, 2024.

CAPITAL INCREASE OF BPCE SA

Following the authorization of the general shareholders' meeting on December 18, 2024, the management board decided to proceed with the first drawdown of the capital increase of BPCE SA on February 19, 2025, for an amount of €1.3 billion.

Note 2 / Applicable accounting standards and comparability

2.1 Regulatory framework

The consolidated financial statements of BPCE were prepared under International Financial Reporting Standards (IFRS) as adopted by the European Union and applicable at the reporting date, excluding certain provisions of IAS 39 relating to hedge accounting.

2.2 Accounting standards

The standards and interpretations used and detailed in the annual financial statements at December 31, 2023 were complemented by standards, amendments and interpretations whose application is mandatory for reporting periods starting from January 1, 2024.

BPCE chose the option available in IFRS 9 not to apply the provisions of the standard relative to hedge accounting, and to continue to apply IAS 39, as adopted by the European Union, for the recognition of these transactions, *i.e.* excluding certain provisions relating to macro-hedging.

Regulation (EU) 2017/2395 dated December 12, 2017 relating to transitional arrangements for mitigating the impact of the introduction of IFRS 9 on capital and for the large exposures treatment of certain public-sector exposures was published in the Official Journal of the European Union (OJEU) on December 27, 2017. BPCE has decided not to opt to neutralize IFRS 9 transitional impacts at the prudential level due to the limited impact when applying the standard.

The other standards, amendments and interpretations adopted by the European Union did not have a material impact on the Group's financial statements.

NEW STANDARDS PUBLISHED AND NOT YET APPLICABLE

IFRS 18

IFRS 18 "Presentation and Disclosures in Financial Statements" will replace IAS 1 "Presentation of Financial Statements". It was published by the IASB on April 9, 2024. Subject to its adoption by the European Commission, IFRS 18 will be applicable as of January 1, 2027, with comparative data at January 1, 2026. Early application is authorized.

Amendment to IFRS 9 phase 1

On May 30, 2024, the IASB published the amendments to IFRS 9 "Classification and Measurement of Financial Instruments" (amendments to IFRS 9 and IFRS 7) applicable as of January 1, 2026 subject to adoption by the European Commission. These amendments provide details on the basic nature of loans, the classification of non-recourse loans and securitizations.

2.3 Use of estimates and judgments

Preparation of the financial statements requires making estimates and assumptions in certain areas with regard to uncertain future events.

These estimates are based on the judgment of the individuals preparing these financial statements and the information available at the reporting date.

Actual future results may differ from these estimates.

With respect to the financial statements for the period ended December 31, 2024, in particular, accounting estimates requiring assumptions were mainly used for the following measurements:

- the fair value of financial instruments determined on the basis of valuation models (Note 10);
- the amount of expected credit losses on financial instruments as well as on loan and guarantee commitments (Note 7.1);
- the results of hedge effectiveness tests (Note 5.3);
- provisions recognized as liabilities in the balance sheet (Note 5.13);
- insurance assets and liabilities (Note 9);
- calculations related to the cost of pensions and future employee benefits (Note 8.2);
- uncertainties relating to the tax treatment of income tax (Note 11);
- deferred taxes (Note 11);
- goodwill impairment tests (Note 3.4.2);
- the lease term to be used for the recognition of rights-of-use and lease liabilities (Note 12.2.2).

Judgment must also be exercised to assess the business model and the basic characteristics of a financial instrument. The procedures are described in the relevant paragraphs (Note 2.5.1).

Estimates and judgments are also used in the Group's activities to estimate climate and environmental risks. Governance and commitments regarding these risks are presented in Chapter 2 "Sustainability Report". Information on the effect and consideration of climate risks on credit risk management (Note 7) is presented in Chapter 7.16 "Risk factors and risk management – Environmental risks". The accounting treatment of the main green financial instruments is presented in Notes 2.5, 5.5, 5.10, 5.11.2.

CLIMATE AND ENVIRONMENTAL RISKS

Risks related to the climate and the environment are risk factors likely to affect the main risks borne by BPCE (credit and counterparty risk, market risk, operational risks, structural balance sheet risks, risks related to the Group's activities, insurance, strategic risk, legal and compliance risks, reputation risk).

Climate and environmental risks include physical risks and transition risks:

- physical risks result from damage directly caused to people and property by events related to climate and environmental changes. They can be related to acute events, linked to extreme conditions circumscribed in time and space (such as heat waves, landslides, floods, late frosts, fires, storms, situations of water stress or air pollution, water or soil pollution) or to chronic events of a more gradual nature (such as changes in rainfall patterns, rise in sea levels and average temperatures, loss of biodiversity, the depletion of natural resources),
- transition risks result from the adjustment of economic players and stakeholders to the transition to a low-carbon economy that is more respectful of environmental balances. These adjustments are reflected in regulatory, technological or socio-demographic changes.

These risks are likely to have a significant impact on the financial position of counterparties and on the assets to which BPCE is exposed, particularly through its financing, investment or insurance activities, as well as its own activities. These impacts can be direct (damage to people, total or partial destruction, or unavailability of economic assets, drop in yields and productivity, stranded assets, costs of regulatory compliance, etc.) or indirect through effects on the macro-economic environment (relative attractiveness of geographic areas and sectors of activity, changes in monetary and fiscal policies, social changes, etc.).

BPCE incorporates climate and environmental risks into its risk supervision system and is gradually developing methods and tools for identifying, assessing, monitoring and managing these risks. The implementation of this system is described in section 6.16 "Environmental, Social and Governance Risks".

In particular, BPCE takes physical risk into account in the internal assessment of its capital requirements (ICAAP process) by applying adverse scenarios to drought (impacting various economic sectors such as agriculture and construction) and flooding (on the real estate portfolio). Transition risk is also implicitly included in this work: internal counterparty rating models already take into account possible changes in the economic environment over a short period of time (one to three years) and, therefore, cover the possible impacts of short-term climate transition. Work was carried out to integrate this risk on the real estate portfolios of individuals in the quantification of the economic capital of the ICAAP 2025 specifically in connection with an unfavorable change in the DPE regulation, then supplemented by an add-on on portfolios that do not have, at this stage, a specific economic assessment model.

In addition, some BPCE institutions recognize impairments for the effects of physical and transition risks on credit risk. These impairments were defined by the institutions according to the specific characteristics of their credit exposure portfolio, from a geographical and sectoral point of view, when the risk was assessed locally as material. Discussions are also underway at BPCE level to harmonize the consideration of climate and environmental risks in the provisioning policy.

The inclusion of climate and environmental risks in BPCE's financial statements will benefit from the gradual improvement of the ESG risk supervision system. In particular, work is underway to roll out an ESG risk rating at the customer level and an asset assessment of the physical risks on the residential real estate portfolio in France, as well as to develop and formalize the scenarios and methodologies for stress tests to be used on physical and transition risks.

2.4 Presentation of the consolidated financial statements and reporting date

As no specific format is required under IFRS, the presentation used by the Group for summarized statements follows Recommendation No. 2022-01 issued by the French national accounting standards authority on April 8, 2022.

The consolidated financial statements are based on the accounts at December 31, 2023. The Group's consolidated financial statements at December 31, 2024 were approved by the Management Board on February 3, 2025. They will be presented to the General Meeting on May 22, 2025.

The amounts presented in the financial statements and in the notes are shown in millions of euros, unless otherwise indicated. Rounding may lead to differences between the amounts shown in the financial statements and those referred to in the notes.

2.5 General accounting principles and valuation methods

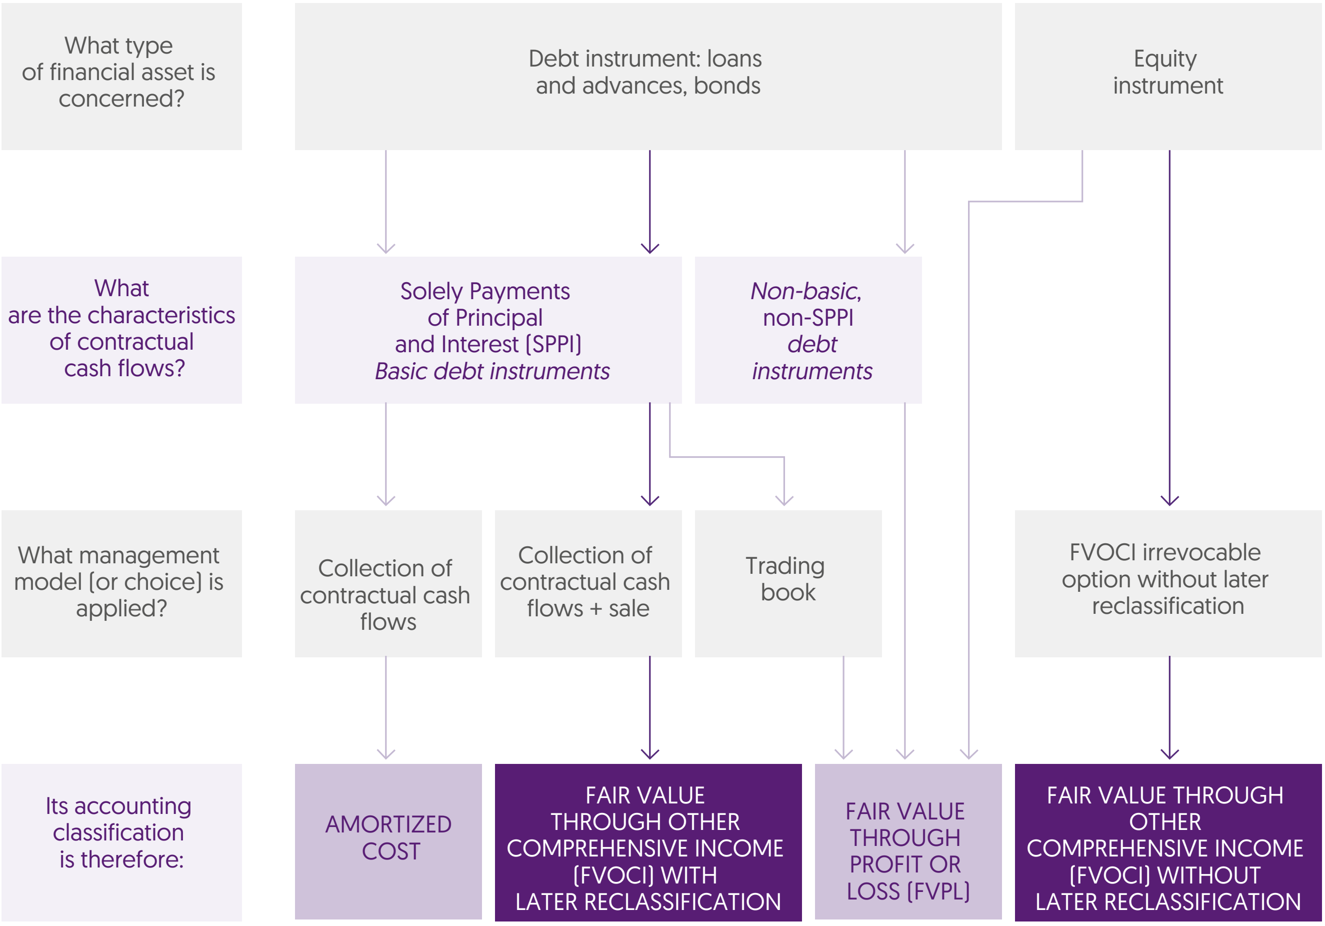
The general accounting principles set out below apply to the main items of the financial statements. Specific accounting principles are presented in the Notes to which they refer.

2.5.1 Classification and measurement of financial assets and liabilities

IFRS 9 is applicable to BPCE.

FINANCIAL ASSETS

On initial recognition, financial assets are classified at amortized cost, at fair value through other comprehensive income, or at fair value through profit or loss, according to the type of instrument (debt or equity), the characteristics of their contractual cash flows and how the entity manages its financial instruments (its business model).



Business model

The entity's business model represents the way in which it manages its financial assets to produce cash flow. Judgment is exercised to ascertain the business model.

The choice of business model must take into account all information regarding the manner in which cash flows were generated in the past, along with all other relevant information.

For example:

- the way in which the performance of financial assets is assessed and presented to the main company directors;
- risks having an impact on the business model's performance, in particular the way in which these risks are managed;
- the way in which directors are paid (for example, if pay is based on the fair value of assets under management or on the contractual cash flows received);
- the frequency of, volume of and reason for sales.

Moreover, the choice of business model must be made at a level which reflects the way in which groups of financial assets are managed collectively with a view to achieving a given economic objective. The business model is therefore not decided on an instrument by instrument basis, but rather at a higher level of aggregation, by portfolio.

The standard provides for three business models:

- a business model whose objective is to hold financial assets in order to receive contractual cash flows ("hold to collect model"). This model, under which the concept of "holding" is relatively similar to holding to maturity, remains valid if disposals occur under the following conditions:
  - the disposals are due to an increase in credit risk,
  - the disposals occur just before maturity and at a price that reflects the contractual cash flows that are still owed,
  - other disposals may also be compatible with the "hold to collect" model's objectives if they are infrequent (even if their value is significant) or if their value is insignificant when considered both individually and overall (even if they are frequent).

For BPCE, the "hold to collect" model applies to financing activities (excluding the loan syndication activity) carried out by Retail Banking, Corporate & Investment Banking and Financial Solutions & Expertise;

- a mixed business model under which assets are managed with the objective of both receiving contractual cash flows and disposing of financial assets ("hold to collect and sell model").

BPCE applies the "hold to collect and sell" model primarily to the portion of portfolio management activities for securities in the liquidity reserve that is not managed solely under a "hold to collect" model;

- a model intended for other financial assets, especially those held for trading, for which the collection of contractual cash flows is incidental. This business model applies to the loan syndication activity (for the portion of outstandings to be sold that was identified at the outset) and to the capital market activities carried out primarily by Corporate & Investment Banking.

Types of contractual cash flows: the SPPI (Solely Payments of Principal and Interest) test

A financial asset is classified as generating solely payments of principal and interest if, on specific dates, it gives rise to cash flows that are solely payments of principal and interest on the outstanding amount due. The SPPI test should be performed for each financial asset on initial recognition.

The principal amount is defined as the financial asset's fair value at its acquisition date. Interest is the consideration for the time value of money and the credit risk incurred on the principal amount, as well as other risks such as liquidity risk, administrative costs and the profit margin.

The instrument's contractual terms must be taken into account to assess whether contractual cash flows are solely payments of principal and interest. All elements that may cast doubt as to whether only the time value of money and credit risk are represented must therefore be analyzed. For example:

- events that would change the amount and date of the cash flows. Any contractual option that creates risk exposure or cash flow volatility that is not consistent with a basic lending arrangement, such as exposure to fluctuations in the price of stocks or of a market index, or the introduction of leverage, would make it impossible to categorize contractual cash flows as SPPI;
- the applicable interest rate features (for example, consistency between the rate resetting period and the interest calculation period). If a clear determination cannot be made through qualitative analysis, a quantitative analysis (a benchmark test) is carried out. This test involves comparing the contractual cash flows for the asset in question with the contractual cash flows of a benchmark asset;
- early redemption and extension conditions. For the borrower or lender, a contractual option permitting prepayment of financial instruments does not violate the SPPI test for contractual cash flows if the prepayment amount mainly represents the unpaid amounts of principal and interest and, if applicable, a reasonable additional remuneration for the early termination of the contract.

Furthermore, although they do not strictly meet the criteria for remuneration of the time value of money, certain assets with a regulated interest rate are classified SPPI if this regulated rate provides consideration that corresponds substantially to the passage of time and presents no exposure to a risk that would be inconsistent with a basic lending arrangement. This is the case in particular for financial assets representing the portion of *Livret A* passbook savings account inflows that is centralized with Caisse des Dépôts et Consignations.

Financial assets that generate SPPI are debt instruments such as fixed-rate loans, floating-rate loans without an interest rate tenor mismatch or that are not linked to a security or to a market index, and fixed-rate or floating-rate debt securities.

Non-SPPI financial assets include UCITS units, debt instruments convertible or redeemable into a fixed number of shares and structured loans.

To qualify as SPPI assets, the securities held in a securitization vehicle must meet specific conditions. The contractual terms of the tranche must meet the SPPI criterion. The pool of underlying assets must meet the SPPI conditions. The risk inherent in the tranche must be lower than or equal to the exposure to the vehicle's underlying assets.

A non-recourse loan (*e.g.* infrastructure financing-type project financing) is a loan secured only by physical collateral. If there is no possible recourse to the borrower, the structure of other possible recourses or protection mechanisms for the lender in the event of default must be examined in order to categorize these loans as SPPI assets: acquisition of the underlying asset, collateral provided (security deposits, margin call, etc.), enhancements provided.

Accounting categories

Debt instruments (loans, receivables or debt securities) may be measured at amortized cost, at fair value through other comprehensive income recyclable to profit or loss or at fair value through profit or loss.

A debt instrument is valued at amortized cost if it meets the following two conditions:

- the asset is held under a hold to collect business model; and
- the contractual terms of the financial asset define it as generating SPPI within the meaning of the standard.

A debt instrument is valued at fair value through other comprehensive income if it meets the following two conditions:

- the asset is held under a hold to collect and sell business model; and
- the contractual terms of the financial asset define it as generating SPPI within the meaning of the standard.

Equity instruments are, by default, recorded at fair value through profit or loss unless they qualify for an irrevocable option for valuation at fair value through other comprehensive income not recyclable to profit or loss (provided they are not held for trading purposes and accordingly classified as financial assets at fair value through profit or loss), without subsequently being reclassified through profit or loss. If opting for the latter category, dividends continue to be recognized in income.

Financing through the issuance of green financial products or investments in such products are accounted for at amortized cost unless they are held as part of a short-term disposal activity.

All other financial assets are recorded at fair value through profit or loss. These financial assets include financial assets held for trading, financial assets at fair value through profit or loss and non-SPPI assets. Financial assets may only be designated at fair value through profit or loss in order to eliminate or significantly reduce an accounting mismatch. This option enables the elimination of accounting mismatches stemming from the application of different valuation rules to instruments managed under a single strategy.

FINANCIAL LIABILITIES

The general rule is the measurement of financial liabilities at amortized cost, except for liabilities incurred for trading purposes (trading liabilities) and financial liabilities that the entity chooses to measure at fair value under the fair value option.

At the date of initial recognition, the accounting principles described for financial assets apply identically to financial liabilities, as follows:

- financial liabilities subsequently classified as measured at amortized cost are recognized at fair value less or increased by transaction costs;
- financial liabilities at fair value through profit or loss are recognized at fair value and the associated transaction costs will be recognized directly in the income statement.

If a financial liability is designated as being measured at fair value through profit or loss then:

- the amount of the change in fair value attributable to changes in the credit risk of the liability (*i.e.* the issuer spread) is to be presented in shareholders' equity unless this recognition would have the effect of creating or increasing an accounting mismatch in income (this mismatch is determined at the initial recognition and is not subsequently revised). The amounts recorded in equity are not subsequently recycled in profit or loss;
- the remainder of the change in the fair value of the financial liability is presented in profit or loss.

For the treatment of modifications of liabilities recognized at amortized cost, if the modification does not result in derecognition, the profit or loss resulting from the difference between the original cash flows and the modified cash flows discounted at the original effective interest rate must be recognized in profit or loss.

2.5.2 Foreign currency transactions

The method used to account for assets and liabilities relating to foreign currency transactions entered into by the Group depends upon whether the asset or liability in question is classified as a monetary or a non-monetary item.

Monetary assets and liabilities denominated in foreign currencies are translated into the functional currency of the Group entity on whose balance sheet they are recognized, at the closing rates prevailing at the closing date. All resulting currency exchange differences are recognized in income. However, there are two exceptions to this rule:

- only the portion of the currency exchange differences calculated based on the amortized cost of financial assets at fair value through other comprehensive income is recognized in income, with any additional gains and losses being recognized in "Gains and losses recognized directly in other comprehensive income";
- currency exchange differences arising on monetary items designated as cash flow hedges or as part of a net investment in a foreign operation are recognized in "Gains and losses recognized directly in other comprehensive income".

Non-monetary assets carried at historic cost are translated using the exchange rate prevailing at the transaction date. Non-monetary assets carried at fair value are translated using the exchange rate in effect at the date on which the fair value was determined. Currency exchange differences on non-monetary items are recognized in profit or loss if gains and losses relating to the items are recorded in profit or loss, and in "Gains and losses recognized directly in other comprehensive income" if gains and losses relating to the items are recorded in "Gains and losses recognized directly in other comprehensive income".

Note 3 / Consolidation

3.1 Scope of consolidation – consolidation and valuation methods

The Group's financial statements include the financial statements of all the entities over which it exercises control or significant influence, whose consolidation had a material impact on the aforementioned financial statements.

The scope of entities consolidated by BPCE is described in Note 13 – Detail of the scope of consolidation.

3.1.1 Entities controlled by the Group

The subsidiaries controlled by BPCE are fully consolidated.

Definition of control

Control exists when the Group has the power to govern an entity's relevant activities, when it is exposed to or is entitled to variable returns due to its links with the entity and has the ability to exercise its power over the entity to influence the amount of returns it obtains.

The existence and effect of potential voting rights that are currently exercisable or convertible are considered when assessing the control exercised. These potential voting rights may result, for example, from share call options traded on the market, debt or equity instruments that are convertible into ordinary shares, or equity warrants attached to other financial instruments. However, potential voting rights are not taken into account to calculate the percentage of ownership.

Exclusive control is presumed to exist when the Group holds directly or indirectly either the majority of the subsidiary's voting rights, or at least half of an entity's voting rights and a majority within the management bodies, or is in a position to exercise significant influence.

Special case: structured entities

Entities described as structured entities are those organized in such a way that voting rights are not a key criterion when determining who has control. This is the case in particular when voting rights only apply to administrative duties and relevant activities are managed through contractual agreements.

A structured entity frequently exhibits some or all of the following characteristics:

(a) well-defined activities;

(b) a specific and well-defined aim, for example: implementing a lease eligible for specific tax treatment, carrying out research and development, providing an entity with a source of capital or funding, or providing investors with investment options by transferring associated risk and advantages to the structured entity's assets;

(c) insufficient equity for the structured entity to finance its activities without subordinated financial support; and

(d) financing through the issuance, to investors, of multiple instruments inter-related by contract and which create concentrations of credit risk or other risks ("tranches").

The Group therefore considers, among others, collective investment undertakings within the meaning of the French Monetary and Financial Code and equivalent bodies governed by foreign law as structured entities.

Full consolidation method

The full consolidation of a subsidiary in the Group's consolidated financial statements begins at the date on which the Group takes control and ends on the day on which the Group loses control of this entity.

The portion of interest which is not directly or indirectly attributable to the Group corresponds to a non-controlling interest.

Income and all components of other comprehensive income (gains and losses recognized directly in other comprehensive income) are divided between the Group and non-controlling interests. The comprehensive income of subsidiaries is divided between the Group and non-controlling interests, including when this division results in the allocation of a loss to non-controlling interests.

Changes to the percentage interest in subsidiaries that do not lead to a change in control are recognized as transactions affecting equity.

The effects of these transactions are recognized in equity at their after-tax amount and therefore do not impact consolidated income attributable to equity holders of the parent.

Detail of the scope of consolidation

Non-material controlled entities are excluded from the scope in accordance with the principle set out in Note 13.5.

Employee pension funds and supplementary health insurance plans are excluded from the scope of consolidation insofar as IFRS 10 does not apply to either post-employment benefit funds or other long-term employee benefit plans, to which IAS 19, "Employee Benefits", applies.

Likewise, interests acquired with a view to their subsequent short-term disposal are recorded as available for sale and recognized in accordance with the provisions of IFRS 5 "Non-Current Assets Held for Sale and Discontinued Operations".

3.1.2 Investments in associates and joint ventures

Definition

An associate is an entity over which the Group has significant influence. Significant influence is the power to participate in the financial and operating policy decisions of an entity, without exercising control or joint control over those policies. It is presumed to exist if the Group holds, directly or indirectly, 20% or more of the voting rights of an entity.

A joint venture is a partnership in which the parties which exercise joint control over the entity have rights over its net assets.

Joint control is the contractually agreed sharing of control over a company, which exists only when the strategic decisions require the unanimous consent of the parties sharing control.

Equity method

Income, assets, and liabilities of investments in associates and joint ventures are accounted for in the Group's consolidated financial statements using the equity method.

An investment in an associate or a joint venture is initially recognized at its acquisition cost and subsequently adjusted for the Group share in the income and other comprehensive income of the associate or joint venture.

The equity method is applied from the date on which the entity becomes an associate or a joint venture. On the acquisition of an associate or a joint venture, the difference between the cost of investment and the Group's share in the net fair value of the entity's identifiable assets and liabilities is recognized in goodwill. When the net fair value of the entity's identifiable assets and liabilities is higher than the cost of investment, the difference is recognized in income.

The share of net income of entities accounted for under the equity method is included in the Group's consolidated income.

When a group entity carries out a transaction with a group joint venture or associate, the profit or loss resulting from this transaction is recognized in interests held by third parties in the associate or joint venture.

The net investment in an associate or joint venture is subject to impairment testing if there is objective evidence of impairment arising from one or more events occurring after the initial recognition of the net investment and if the events have an impact on estimated cash flows, provided this impact can be reliably calculated.

In such cases, the total carrying amount of the investment (including goodwill) is subject to impairment testing in accordance with the provisions of IAS 36 "Impairment of Assets".

Exception to the equity method

When the investment is held by a venture capital organization, an investment fund, an investment company with variable share capital or a similar entity such as an Insurance asset investment fund, the investor may choose not to recognize the investment using the equity method. In this case, revised IAS 28 "Investments in Associates and Joint Ventures" authorizes the investor to recognize the investment at its fair value (with changes in fair value recognized in income) in accordance with IFRS 9.

These investments are therefore recognized as "Financial assets at fair value through profit or loss".

The Global Financial Services division's private equity subsidiaries have chosen to measure their investments in this way, considering that this valuation method provides more relevant information.

3.1.3 Investments in joint activities

Definition

A joint activity is a partnership where parties that have joint control over an entity have direct rights over the entity's assets, and obligations for its liabilities.

Accounting treatment of joint activities

An investment in a joint enterprise is accounted for by integrating all interests held in the joint activity, *i.e.* the entitled share in each asset and liability and item of income. These interests are allocated by nature to the various lines of the consolidated balance sheet, consolidated income statement and the statement of net income and gains and losses recognized directly in other comprehensive income.

3.2 Consolidation rules

The consolidated financial statements are prepared using uniform accounting policies for reporting similar transactions in comparable circumstances. Where material, consolidation adjustments are made to ensure the consistency of the measurement methods applied by consolidated entities.

3.2.1 Foreign currency translation

The consolidated financial statements are expressed in euros.

Balance sheet items of foreign subsidiaries and branches whose functional currency is not the euro are translated using the exchange rate in force at the reporting date. Income and expense items are translated at the average exchange rate for the period, which is the approximate value of the transaction price if there are no significant fluctuations.

Foreign exchange rate adjustments arise from a difference in:

- net income for the period translated at the average rate and at the closing rate;
- equity (excluding net income for the period) translated at the historic exchange rate and at the closing rate.

The portion attributable to equity holders of the parent is recorded in equity under "Foreign exchange rate adjustments" and the portion attributable to minority shareholders under "Non-controlling interests".

3.2.2 Elimination of intra-group transactions

The impact of intercompany transactions on the consolidated balance sheet and consolidated income statement is eliminated. Dividends, as well as gains and losses on intercompany asset disposals, are also eliminated. Where appropriate, capital losses from asset disposals resulting in impairment are maintained.

By way of exception, IFRS 17 amendments to IFRS 9 and IAS 32 allow intra-group assets to be intra-group assets to be retained on the balance sheet if they are held as underlying items of insurance contracts with direct participation features. These assets are then valued at market value through profit or loss. These include financial liabilities issued by a Group entity (amendment to IFRS 9). The application of this exception is assessed instrument by instrument. The provisions of these amendments are applied from the 2023 fiscal year for significant transactions.

3.2.3 Business combinations

In accordance with revised IFRS 3, "Business Combinations" and IAS 27, "Consolidated and Separate Financial Statements":

- combinations between mutual insurers are included within the scope of IFRS 3;
- costs directly linked to business combinations are recognized in net income for the period;
- contingent considerations payable are included in the cost of the business combination at their fair value at the date of acquisition of a controlling interest in an entity, even if they are only potential. Depending on the settlement method, transferred considerations are recognized against:
  - capital and later price revisions will not be booked,
  - or debts and later adjustments are recognized against income (financial debts) or according to the appropriate standards (other debts outside the scope of IFRS 9);
- on an entity's acquisition date, non-controlling interests may be valued:
  - either at fair value (method resulting in the allocation of a share of the goodwill to non-controlling interests),
  - or at the share in the fair value of the identifiable assets and liabilities of the entity acquired (method similar to that applicable to transactions prior to December 31, 2009).

The choice between these two methods must be made for each business combination.

Whatever method is chosen when the acquisition is made, increases in the percentage of interest in an entity already controlled are systematically recognized in capital:

- when an entity is acquired, any share previously held by the Group must be revalued at fair value through profit or loss. Consequently, in the event of a step acquisition, goodwill is determined by referring to the fair value at the acquisition date; and
- when the Group loses control of a consolidated company, any share previously held by the Group must be revalued at fair value through profit or loss.

3.2.4 Purchase commitments granted to minority shareholders of fully consolidated subsidiaries

The Group has entered into commitments with minority shareholders of certain fully consolidated group subsidiaries to buy out their shares. These buyback commitments are optional commitments (sales of put options). The exercise price for these options may be an amount fixed contractually, or may be established according to a calculation formula defined upon the acquisition of the subsidiary's securities and taking into account its future activity, or may be set as the fair value of the subsidiary's securities on the day on which the options are exercised.

For accounting purposes, these commitments are treated as follows:

- pursuant to the provisions of IAS 32, the Group recognizes a financial liability with respect to the put options sold to minority shareholders in fully-consolidated entities. This liability is initially recognized at the discounted value of the put option exercise price under "Other liabilities";
- the obligation to record a liability even though the put options are not exercised means, for purposes of consistency, that the same accounting treatment as that for transactions related to non-controlling interests must be applied. As a result, the corresponding entry for this liability is deducted from "Non-controlling interests" underlying the options and the balance is deducted from "Consolidated reserves attributable to equity holders of the parent";
- subsequent changes in this liability relating to any change in the estimated exercise price of the options and the carrying amount of "Non-controlling interests" are fully recognized as "Consolidated reserves attributable to equity holders of the parent";
- in the event of a buyback, the liability is settled by the cash payment related to the acquisition of minority shareholders' stakes in the subsidiary in question. However, when the commitment expires, if the buyback does not take place, the liability is written off against non-controlling interests and "Consolidated reserves attributable to equity holders of the parent" according to their respective amounts;
- as long as the options have not been exercised, results from non-controlling interests subject to put options are included in the consolidated income statement as "Non-controlling interests".

3.2.5 Fiscal year reporting date of consolidated entities

The entities included in the scope of consolidation close their accounts on December 31.

3.3 Changes in the scope of consolidation during the 2024 fiscal year

The main changes in the scope of consolidation in the 2024 fiscal year are presented below:

CHANGES IN THE PERCENTAGE OF OWNERSHIP INTEREST IN SUBSIDIARIES (WITH NO IMPACT ON CONTROL)

- Increase in the ownership interest in the Azure and Vermilion entities following the exercise of the put option on non-controlling interests in the first and fourth quarters;
- Decrease in the ownership interest in Loomis Sayles Sakorum Long Short Growth Equity following the arrival of new investors during the first and second quarters;
- Increase in the ownership interest in the Solomon Partners entities following the exercise of the put option in the second quarter;
- Increase in the ownership interest of Fenchurch Partners LPP following the purchase of the share capital held by managers in the third and fourth quarter;
- Increase in the ownership interest of EDF Investment Group following a capital increase subscribed by Natixis Belgium in the fourth quarter;
- Increase in the ownership interest of Thematics Asset Management entities following the buyback of non-controlling interests in the fourth quarter;
- Decrease in the ownership interest of BPCE Achats & Services following the sale of BPCE shares to CE and BP.

OTHER CHANGES IN SCOPE

Newly consolidated entities

DURING THE FIRST QUARTER OF 2024:

- Creation and full consolidation of Aval Master FCT;
- Full consolidation of VEGA Obligation EURO.

DURING THE SECOND QUARTER OF 2024:

- Full consolidation of Natixis ESG Conservative FUND;
- Consolidation using the equity method of Clipperton Holding;
- Creation and consolidation of two Natixis Investment Managers International Branches, in Luxembourg and Belgium;
- Full consolidation of Loomis Sayles Global Allocation.

DURING THE THIRD QUARTER OF 2024

- Full consolidation of Allocation Pilotée Offensive;
- Creation and full consolidation of LOOMIS SAYLES (NETHERLANDS) BV, FRENCH BRANCH and VAUBAN INFRASTRUCTURE PARTNERS, GERMAN BRANCH;
- Acquisition and consolidation using the equity method of AUDERE PARTNERS.

DURING THE FOURTH QUARTER OF 2024

- Acquisition and full consolidation of HSBC EPARGNE ENTREPRISE.

Deconsolidated entities

DURING THE FIRST QUARTER OF 2024:

- Liquidation of HU Oney PSP;
- Dissolution of the entities AEW Value Investor Asia II GP Limited and Natixis Investment Manager UK (Fund) Limited LLC;
- Deconsolidation of the Mifcos entity following the crossing below the thresholds;
- Deconsolidation of the Kupka entity following the crossing below the thresholds.

DURING THE SECOND QUARTER OF 2024:

- Liquidation of Natixis Investment Managers SA Zweigniederlassung Deutschland and Natixis Investment Managers SA Belgian Branch;
- Deconsolidation, following the crossing below the thresholds, of the entities DNCA Invest Nordern, OPCI France Europe Immo and FCT NA Financement de l'Économie – compartment Immocorp II (insurance).

DURING THE THIRD QUARTER OF 2024

- Liquidation of LOOMIS SAYLES & COMPANY, LP, DUTCH BRANCH.

DURING THE FOURTH QUARTER OF 2024

- Sale of Natixis JSC, MOSCOW;
- Liquidation of ONEY GMBH;
- Liquidation of NIM Canada Holding LTD;
- Deconsolidation of the OCÉORANE entity following the crossing below the thresholds;
- Deconsolidation of the subsidiaries Foncier Participations, Foncière d'Evreux, Gramat Balard and Sipari following the crossing below the thresholds.

Mergers and universal asset transfers

- Merger and acquisition of Natixis ASG Holding INC and Natixis Investment Manager LLC by Natixis Investment Manager LLC (formerly NIM USH) in the first quarter;
- Merger and acquisition of BPCE Achats by BPCE Services (which becomes BPCE Achats & Services) in the second quarter;
- Merger and acquisition of Natixis Investment Managers SA by NIM International in the second quarter;
- Merger and acquisition of FR FLANDRE INVEST by Oney BANK in the third quarter.

3.4 Goodwill

3.4.1 Value of goodwill

in millions of euros	12/31/2024	12/31/2023
Opening net value	**3,626**	**3,608**
Acquisitions[1]	1	71
Disposals		(2)
Foreign exchange rate adjustments	102	(54)
Other changes[2]	(72)	3
CLOSING NET VALUE	**3,656**	**3,626**

(1) Acquisition of HSBC Epargne Entreprise (+€1 million in goodwill).
(2) Corresponds to the reclassification to the asset held for sale line of the goodwill of the MV Credit entities for -€72 million taking into account the ongoing disposal.

At December 31, 2024, the gross value of goodwill amounted to €4,191 million, while the total of impairment losses was -€534 million.

Certain goodwill items recognized in the United States give rise to tax amortization over 15 years, leading to a difference between the carrying amount of the goodwill and its tax base. This difference in treatment generated a deferred tax liability of €367 million at December 31, 2024, compared with €342 million at December 31, 2023.

Breakdown of goodwill

	Net carrying amount	
in millions of euros	12/31/2024	12/31/2023
Financial Solutions & Expertise	89	89
Insurance	93	93
Retail Banking and Insurance	182	182
Asset & Wealth Management[1]	3,325	3,302
Corporate & Investment Banking	151	143
TOTAL GOODWILL	**3,656**	**3,626**

(1) Including €1 million related to the acquisition of HSBC Epargne Entreprise and -€72 million corresponding to the reclassification of the goodwill of the MV Credit entities as assets held for sale.

3.4.2 Goodwill impairment tests

All items of goodwill are impaired, based on the value in use of the cash-generating units (CGUs) to which they have been allocated.

Key assumptions used to calculate recoverable value

The determination of values in use was mainly based on the discounting of the estimated future cash flows of the CGUs (*i.e.* Discounted Cash Flows (DCF) method as shown by the latest business line earnings forecasts.

For CIB, the valuation exercise was carried out on the M&A scope, *i.e.* the only scope bearing goodwill, while enriching the valuation methods used (multi-criteria approach including a DCF approach as well as valuation methods using stock market multiples and comparable transactions) in continuity with the previous exercise.

The following assumptions were used:

	Discount rate	Long-term growth rate
Retail Banking and Insurance		
Insurance	9.90%	2.0%
Financial Solutions & Expertise	10.25%	2.0%
Asset & Wealth Management	**10.9%**	**2.0%**
Digital & Payments	**8.75%**	**2.0%**
Corporate & Investment Banking	**11.1%**	**2.0%**

Future cash flows are based on forecast data from the latest multi-year profit trajectory forecasts for the business lines.

The discount rates were determined by taking into account:

- for the Insurance, FSE, and Digital & Payments CGUs, based on a risk-free rate (10-year OAT) based on a 12-month average of the daily rates of French government bonds, plus a premium risk calculated on the basis of a sample of companies representative of each CGU;
- For the Asset & Wealth Management and Corporate & Investment Banking CGUs, the 10-year OAT (75%) and the 10-year US Treasury (25%) are averaged over a one-year period. This is then increased by a risk premium based on a sample of representative companies in the CGU, averaged over one year.

Sensitivity of recoverable values

A 50 bps increase in discount rates (assumption based on the historical annual variability observed over one year using 2013-2024 historical data) combined with a 50 bps reduction in perpetual growth rates would reduce the value in use of CGUs by:

- -4.9% for the Insurance CGU;
- -6.0% for the Financial Solutions & Expertise CGU;
- -8.0% for the Asset & Wealth Management CGU;
- -8.7% for the Corporate & Investment Banking CGU (M&A activity);

and would not lead to the recognition of any impairment losses for these CGUs.

Similarly, the sensitivity of these CGUs' future cash flows, as forecast in the business plan, to changes in the main assumptions would not significantly affect their recoverable value:

- for Financial Solutions & Expertise, the sensitivity of future cash flows, as forecast in the business plan, to a 5% point fall in recurring net income combined with an increase in the target prudential ratio of 25 basis points would have a negative impact on the CGU's value of -4.5% and would have no impact in terms of impairment;
- for BPCE Assurances, the sensitivity of future cash flows, as forecast in the business plan, to a 5% point fall in recurring net income combined with an increase in the capital adequacy ratio of 5 bps would have a negative impact on the CGU's value of -4.0% and would have no impact in terms of impairment;
- for Asset & Wealth Management, a 10% decline in the equity markets (a uniform decline across all years) would have a -11% negative impact on the CGU's recoverable value and would not lead to the recognition of impairment;
- for Corporate & Investment Banking, sensitivity to the dollar would have an insignificant impact on the recoverable amount and would not result in the recognition of impairment.

Note 4 / Notes to the income statement

Key points

Net banking income (NBI) includes:

- interest income and expenses;
- fees and commissions;
- gains (losses) on financial instruments at fair value through profit or loss;
- net gains (losses) on financial instruments at fair value through other comprehensive income;
- gains (losses) arising from derecognition of financial assets measured at amortized cost;
- net income from insurance activities;
- income and expenses from other activities.

4.1 Interest and similar income and expenses

Accounting principles

Interest income and expenses are recognized in the income statement for all financial instruments measured at amortized cost using the effective interest method, which includes interbank and customer items, the portfolio of securities at amortized cost, debt securities, subordinated debt and lease liabilities. This item also includes interest receivable on fixed income securities classified as financial assets at fair value through other comprehensive income and hedging derivatives, it being specified that accrued interest on cash flow hedging derivatives is taken to income in the same manner and period as the accrued interest on the hedged item.

Interest income also consists of interest on non-SPPI debt instruments not held under a trading model as well as interest on the related economic hedges (classified by default as instruments at fair value through profit or loss).

The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument to the net carrying amount of the financial asset or financial liability.

The effective interest rate calculation takes account of all transaction fees paid or received as well as premiums and discounts. Transaction fees paid or received that are an integral part of the effective interest rate of the contract, such as loan set-up fees and commissions paid to financial partners, are treated as additional interest.

Negative interest is presented as follows:

- a negative interest on an asset is presented as an interest expense in NBI;
- a negative interest on a liability is presented as interest income in NBI.

	2024 fiscal year			2023 fiscal year		
in millions of euros	Interest income	Interest expenses	Net	Interest income	Interest expenses	Net
Loans to/borrowings from banks	13,409	(7,135)	6,274	11,994	(7,261)	4,732

TOTAL INTEREST INCOME AND EXPENSES	**37,651**	**(35,360)**	**2,291**	**33,278**	**(31,528)**	**1,750**

(1) Interest income from financial assets with a known credit risk (S3) amounted to €223 million in 2024, all from financial assets at amortized cost, compared to €263 million in 2023.

4.2 Fee and commission income and expenses

Accounting principles

Under IFRS 15 "Revenue from Contracts with Customers", recognition of revenue from ordinary activities reflects the transfer of control of goods and services promised to customers in an amount corresponding to the consideration that the entity expects to receive in exchange for these goods and services. The recognition of this revenue calls for a five-step approach:

- identification of contracts with customers;
- identification of specific performance obligations (or items) to be recognized separately from one another;
- determination of the overall transaction price;
- allocation of the transaction price to the various specific performance obligations;
- recognition of revenue when performance obligations are met.

This approach applies to contracts entered into by an entity with its customers, with the exception of leases (covered by IFRS 16), insurance contracts (covered by IFRS 17) and financial instruments (covered by IFRS 9). If specific stipulations relating to revenue or contract costs are given under a different standard, these will first be applied.

This method primarily applies to the following Group activities:

- commission income, notably that relating to banking services when this income is not included in the effective interest rate, or that relating to asset management or financial engineering services;
- income from other activities (see Note 4.6), particularly in the case of services included in leases.

As a result, fees and commissions are recorded based on the type of service rendered and on the method of accounting for the financial instruments to which the service relates.

This line includes mainly fees and commissions receivable or payable on recurring services (payment processing, custody fees, etc.) and occasional services (fund transfers, late payment penalties, etc.), fees and commissions receivable or payable on execution of significant transactions, and fees and commissions receivable or payable on trust assets held or managed on behalf of the Group's customers.

However, fees and commissions that form an integral part of the effective yield on a contract are recorded under "Net interest income".

Commissions on services

Commissions on services are analyzed to separately identify their different items (or performance obligations) and to assign the appropriate share of revenues to each item. Each item is then recorded in the income statement by type of service provided and according to the method used to recognize the associated financial instrument:

- fees and commissions payable or receivable on recurring services are deferred over the period in which the service is provided (payment processing, custody fees, etc.);
- fees and commissions payable or receivable on occasional services are recognized in full in income when the service is provided (fund transfers, payment penalties, etc.);
- commissions payable or receivable on execution of a significant transaction are recognized in full in income on completion of the transaction.

When there is some uncertainty about the amount of a commission (incentive fees in asset management, variable financial engineering fees and commissions, etc.), only the amount that the Group is already certain to receive, given the information available at the closing date, is recognized.

Fees and commissions that form an integral part of the effective yield on an instrument, such as fees on loan commitments given or loan set-up fees, are recognized and amortized as an adjustment to the effective interest rate over the estimated term of the applicable loan. These fees and commissions are recognized as "Interest income" rather than "Commission income".

Fiduciary and similar fees and commissions are those that result in assets being held or invested on behalf of individual customers, pension schemes or other institutions. Trust-management services mainly cover asset management business and custody services on behalf of third parties.

	2024 fiscal year			2023 fiscal year		
in millions of euros	Income	Expense	Net	Income	Expense	Net
Cash and interbank transactions	68	(118)	(50)	60	(119)	(59)

(1) Of which performance fees of €77 million (€55 million for Europe) in 2024, compared with €82 million (€58 million for Europe) in 2023.

4.3 Gains (losses) on financial instruments at fair value through profit or loss

Accounting principles

"Gains (losses) on financial instruments at fair value through profit or loss" includes gains and losses (including the related interest) from financial assets and liabilities classified as held for trading or designated at fair value through profit or loss.

"Gains and losses on hedging transactions" include gains and losses arising from the revaluation of derivatives used as fair value hedges, as well as gains and losses from the revaluation of the hedged item in the same manner, the revaluation at fair value of the macro-hedged portfolio and the ineffective portion of cash flow hedges.

in millions of euros	2024 fiscal year	2023 fiscal year
Gains and losses on financial instruments mandatorily recognized at fair value through profit or loss[1]	**2,511**	**4,447**
Gains and losses on financial instruments designated at fair value through profit or loss	**(775)**	**(2,710)**
Gains and losses on financial liabilities designated at fair value through profit or loss	(775)	(2,710)
Gains and losses on hedging transactions	**24**	**81**
• Ineffective portion of cash flow hedges (CFH)	(12)	(3)
• Ineffective portion of fair value hedges (FVH)	36	84
Changes in fair value hedges	*610*	*1,258*
Changes in hedged items	*(574)*	*(1,174)*
Gains and losses on foreign exchange transactions	**320**	**491**
TOTAL GAINS (LOSSES) ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS	**2,080**	**2,309**

(1) In 2024, "Gains and losses on financial instruments mandatorily recognized at fair value through profit or loss" included:
- at December 31, 2024, a valuation adjustment recorded on the liability valuation of derivatives in respect of own credit risk (DVA) of -€41 million (expense) compared to an expense of -€36 million; at December 31, 2023;
- in addition, the value adjustment concerning the valuation of the counterparty risk (CVA) of financial assets was -€32 million (expense) at December 31, 2024 compared to income of +€51 million at December 31, 2023;
- the Funding Valuation Adjustment (FVA) included in the valuation of non-collateralized or imperfectly collateralized derivatives is also recorded on this line for an amount of -€79 million (expense) at December 31, 2024, compared to -€25 million (expense) at December 31, 2023.

DAY ONE PROFIT

in millions of euros	2024 fiscal year	2023 fiscal year
Day one profit at the start of the year	**199**	**273**
Deferred profit on new transactions	426	194
Profit recognized in income during the year	(382)	(268)
DAY ONE PROFIT AT YEAR-END	**243**	**199**

4.4 Net gains (losses) on financial instruments at fair value through other comprehensive income

Accounting principles

Financial assets at fair value through other comprehensive income include:

- SPPI debt instruments managed under a hold to collect and sell business model at fair value through other comprehensive income recyclable to profit or loss. If they are sold, changes in fair value are taken to income;
- equity instruments at fair value through other comprehensive income not recyclable to profit or loss. In the event of disposal, changes in fair value are not transferred to profit or loss but are taken directly to consolidated reserves. Only dividends affect income when they correspond to a return on investment.

Changes in the value of SPPI debt instruments managed under a hold to collect and sell business model recognized at fair value through other comprehensive income recyclable to profit or loss include:

- income and expenses recognized in net interest income;
- net gains or losses on derecognized debt financial assets at fair value through other comprehensive income;
- impairment/reversals recognized in "Cost of credit risk";
- gains and losses recognized directly in other comprehensive income.

in millions of euros	2024 fiscal year	2023 fiscal year
Net gains or losses on debt instruments	11	(13)
Net gains or losses on equity instruments (dividends)	97	94
TOTAL NET GAINS (LOSSES) ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH OTHER COMPREHENSIVE INCOME	**108**	**81**

4.5 Net gains or losses arising from derecognition of financial assets at amortized cost

Accounting principles

This item includes net gains or losses on financial assets at amortized cost arising from the derecognition of financial assets at amortized cost (loans and advances, debt securities) and financial liabilities at amortized cost.

	2024 fiscal year			2023 fiscal year		
in millions of euros	Gains	Losses	Net	Gains	Losses	Net

4.6 Income and expenses from other activities

Accounting principles

Income and expenses from other activities mainly include:

- income and expenses on investment property (rental income and expense, gains and losses on disposals, depreciation, amortization and impairment);
- income and expenses on operating leases;
- income and expenses on real estate development activities (revenues, purchases used).

	2024 fiscal year			2023 fiscal year		
in millions of euros	Income	Expense	Net	Income	Expense	Net
Income and expenses from real estate activities	2		2	3	(2)	1
Income and expenses from leasing transactions	438	(376)	62	368	(303)	65

TOTAL OVERHEADS EXCLUDING NBI[4]	**(8,646)**	**(8,514)**
of which operating expenses	*(8,094)*	*(8,001)*
of which depreciation, amortization and impairment for property, plant and equipment and intangible assets	*(552)*	*(513)*

(1) Including all overheads by nature of all Group activities, including all overheads of the insurance activities presented in Note 9.2.8.
(2) Taxes other than on income included, in particular, the contribution to the SRF (Single Resolution Fund) for which we incurred no expenses in 2024 (compared to €301 million in 2023) and the TSC (Tax for the Support of Local Authorities) for €8 million in 2024 (and to €8 million in 2023).
(3) Attributable expenses are deducted from total overheads and presented in NBI in accordance with IFRS 17 and ANC recommendation 2022-01.
(4) Operating expenses include €98 million in transformation and restructuring costs in 2024 (compared to €139 million in 2023).

Contributions to banking resolution mechanisms

The terms and conditions governing the establishment of the Deposit Guarantee Fund (FGDR) were amended by the Ministerial Order of October 27, 2015. For the Deposit Guarantee Fund, the cumulative amount of contributions made to the fund by the Group for deposit, collateral and securities guarantee mechanisms amounts to €41 million. Contributions (which are non-refundable in the event of a voluntary withdrawal of approval to operate) represent €7 million. Contributions paid in the form of partner or association certificates and cash security deposits recognized as assets on the balance sheet total €33 million at December 31, 2024.

European directive 2014/59/EU, known as the BRRD (the Bank Recovery and Resolution directive), which sets out a framework for the recovery and resolution of banks and investment firms, and European Regulation 806/2014 (the Single Resolution Mechanism (SRM) Regulation) set up a resolution fund from 2015. In 2016, this fund became a Single Resolution Fund (SRF) between the Member States participating in the Single Supervisory Mechanism (SSM). The SRF is a resolution funding mechanism at the disposal of the resolution authority (Single Resolution Board). The latter may draw on this fund in the context of the implementation of the resolution procedures.

The Single Resolution Board set the level of contributions to the Single Resolution Fund for 2024 in accordance with Delegated Regulation 2015/63 and Implementing Regulation 2015/81 supplementing the BRRD on ex-ante contributions to bank resolution financing mechanisms. The target in terms of the funds to be collected for the resolution fund was achieved at December 31, 2023. The amount of the contributions paid by the Group was zero in 2024 for both the portion recognized as an expense and the portion in the form of an irrevocable payment commitment (IPC) guaranteed by cash deposits entered as assets on the balance sheet. However, contributions may be called in the future depending, in particular, on the evolution of the covered deposits and the possible use of the funds. The share of the IPCs corresponds to 15% of the calls for funds guaranteed by cash deposits until 2022 and 22.5% for the 2023 contribution. These deposits have been bearing interest at €STER -20 bps since May 1, 2023. The cumulative amount of contributions recognized as assets on the balance sheet totaled €645 million at December 31, 2024. It is recognized at amortized cost on the asset side of the balance sheet under "Accruals and other assets" and was not subject to impairment at December 31, 2024. In effect, the conditions for using the SRF resources, and therefore for calling on irrevocable payment commitments, are strictly governed by regulations. These resources may only be called up in the event of a resolution procedure by an institution and after intervention of at least 8% of total liabilities by shareholders and holders of relevant capital instruments and other commitments usable for bail-in purposes. In addition, the SRF contribution must not exceed 5% of the total liabilities of the institution subject to a resolution procedure.

4.8 Gains or losses on other assets

Accounting principles

Gains or losses on other assets includes gains and losses on disposals of property, plant and equipment and intangible assets, as well as gains and losses on disposals of consolidated investments in associates.

Cash	32	30
Central banks	118,929	133,776
TOTAL CASH AND AMOUNTS DUE FROM CENTRAL BANKS	**118,961**	**133,806**

5.2 Financial assets and liabilities at fair value through profit or loss

Accounting principles

Financial assets and liabilities at fair value through profit or loss comprise instruments held for trading, including derivatives; certain assets and liabilities that the Group chose to recognize at fair value at their date of acquisition or issue using the fair value option available under IFRS 9; and non-SPPI assets.

The criteria for classification as financial assets are described in Note 2.5.1.

Date of recognition

Securities are recorded in the balance sheet on the settlement-delivery date.

Temporary sales of securities are also recorded on the settlement-delivery date.

When such transactions are recorded under "Assets and liabilities at fair value through profit or loss", the commitment is recorded as an interest rate derivative.

The first-in, first-out (FIFO) method is applied to any partial disposals of securities, except in special cases.

5.2.1 Financial assets at fair value through profit or loss

Accounting principles

Financial assets at fair value through profit or loss are:

- financial assets held for trading, *i.e.* securities acquired or issued principally for the purpose of selling them in the near term;
- financial assets that the Group has chosen to recognize at fair value through profit or loss at inception using the fair value option available under IFRS 9. The qualifying criteria used when applying this option are described above;
- non-SPPI debt instruments;
- equity instruments measured by default at fair value through profit or loss (which are not held for trading purposes).

These assets are measured at fair value at the date of initial recognition and at each closing date. Changes in fair value over the period, interest, dividends, and gains or losses on disposals on these instruments are recognized in "Gains (losses) on financial instruments at fair value through profit or loss", with the exception of non-SPPI debt financial assets whose interest is recorded in "Interest income".

Financial assets in the trading book mainly include proprietary securities transactions, repurchase agreements and derivatives contracted by the Group to manage its risk exposure.

Assets designated at fair value through profit or loss

IFRS 9 allows entities to designate financial assets at fair value through profit or loss on initial recognition. However, an entity's decision to do so may not be reversed.

Compliance with the criteria stipulated by the standard must be verified prior to any recognition of an instrument using the fair value option.

This option may only be applied to eliminate or significantly reduce an accounting mismatch. Applying the option eliminates accounting mismatches stemming from the application of different valuation rules to instruments managed under a single strategy.

Financial assets in the trading book mainly include proprietary securities transactions, repurchase agreements and derivatives contracted by the Group to manage its risk exposure.

(1) Consisting of non-SPPI assets that fall outside the scope of a trading activity including units of UCITS and private equity investment funds (FCPR) presented in bonds and other debt securities for €2,931 million at December 31, 2024, compared to €2,948 million at December 31, 2023. Loans to customers include, among others, certain non-SSPI loans. This category also includes equity instruments the Group decided not to recognize through other comprehensive income for a total of €1,012 million at December 31, 2024 compared to €843 million at December 31, 2023.

(2) The criteria used by the Group to categorize financial assets at fair value through profit or loss if they do not meet the SPPI criterion are provided in Note 2.5.1.

(3) Only in the case of an "accounting mismatch".

(4) This information is presented after netting effects, in accordance with IAS 32 (see Note 5.18.1).

(5) Restated figures for 2023 (see Note 6.3.4 "Statement of changes in equity").

5.2.2 Financial liabilities at fair value through profit or loss

Accounting principles

These are financial liabilities held for trading or classified in this category on a voluntary basis at initial recognition using the fair value option available under IFRS 9. The trading book includes liabilities arising from short-selling transactions, repurchase agreements and derivatives. The qualifying criteria used when applying this option are described above.

These liabilities are measured at fair value at the date of initial recognition and at each closing date.

The changes in fair value over the period, interest, and gains or losses related to these instruments are booked as "Gains (losses) on financial instruments at fair value through profit or loss", with the exception of changes in fair value attributable to own credit risk associated with financial liabilities designated at fair value through profit or loss, which have been booked, since January 1, 2016, in "Revaluation of own credit risk on financial liabilities designated at fair value through profit or loss" within "Gains and losses recognized directly in other comprehensive income". If the liability is derecognized before its maturity (early redemption, for example), fair value gains or losses attributable to own credit risk are directly transferred to consolidated reserves.

Financial liabilities designated at fair value through profit or loss

IFRS 9 allows entities to designate financial liabilities at fair value through profit or loss on initial recognition. However, an entity's decision to do so may not be reversed.

Compliance with the criteria stipulated by the standard must be verified prior to any recognition of an instrument using the fair value option.

In practice, this option may be applied only under the specific circumstances described below:

Elimination of or significant reduction in an accounting mismatch

Applying the option eliminates accounting mismatches stemming from the application of different valuation rules to instruments managed under a single strategy.

Harmonization of accounting treatment for management and performance measurement

The option applies for liabilities managed and measured at fair value, provided that such management is based on a formally documented risk management policy or investment strategy, and that internal monitoring also relies on a fair value measurement.

Hybrid financial instruments containing one or more embedded derivatives

An embedded derivative is a component of a financial or non-financial hybrid (combined) instrument that qualifies as a derivative. It must be separated from the host contract and accounted for as a derivative if the hybrid instrument is not measured at fair value through profit or loss, and if the economic characteristics and risks associated with the derivative are not closely related to those of the host contract.

The fair value option may be applied to a financial liability when the embedded derivative substantially modifies the cash flows of the host contract and when the separate recognition of the embedded derivative is not specifically prohibited by IFRS 9 (*e.g.* an early redemption option embedded in a debt instrument). The option allows the entire instrument to be measured at fair value and therefore avoids the need to extract, recognize or separately measure the embedded derivative.

This accounting treatment applies in particular to some structured debt issues containing material embedded derivatives.

Financial liabilities in the trading book include liabilities arising from short-selling transactions, repurchase agreements and derivatives.

(1) Restated figures for 2023 (see 6.3.4 Statement of changes in equity).
(2) This information is presented after netting effects, in accordance with IAS 32 (see Note 5.18.2).

These liabilities are measured at fair value on the closing date with changes in value, including coupon, recorded in the "Gains (losses) on financial instruments at fair value through profit or loss" line on the income statement, with the exception of changes in fair value attributable to own credit risk associated with financial liabilities designated at fair value through profit or loss, which are recognized in "Revaluation of own credit risk on financial liabilities designated at fair value through profit or loss" in accordance with IFRS 9.

Conditions for designating financial liabilities at fair value through profit or loss

At Group level, financial liabilities designated at fair value through profit or loss are mostly held by the Global Financial Services division. They mainly comprise issues originated and structured for customers and for which the risks and hedges are managed collectively. These issues include significant embedded derivatives for which changes in value are offset by those of the derivative instruments hedging them.

Financial liabilities designated at fair value through profit or loss, excluding Global Financial Services, also include some structured debt issues and structured deposits containing embedded derivatives (*e.g.* structured BMTNs and equities for personal savings plans).

The cumulative amount of changes in fair value reclassified in the "Consolidated reserves" component during the period concerns the repayments of "Debt securities" classified as "Financial liabilities designated at fair value" and amounted to €0 million at December 31, 2024.

The amount contractually due on loans at maturity comprises the outstanding principal amount at the reporting date plus accrued interest not yet due. In the case of securities, the redemption value is generally used.

Total revaluations attributable to own credit risk were €315 million at December 31, 2024, compared to €332 million at December 31, 2023. The change is recorded in non-recyclable gains and losses recognized directly in other comprehensive income.

5.2.3 Trading derivatives

Accounting principles

A derivative is a financial instrument or other contract with all three of the following characteristics:

- its value changes in response to the change in a specific interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided that, in the case of a non-financial variable, this variable may not be specific to one of the parties to the contract;
- it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors;
- it is settled at a future date.

All derivatives are recognized on the balance sheet at the trade date and are measured at fair value at inception. They are remeasured at their fair value at each reporting period regardless of whether they were acquired for trading or hedging purposes.

Trading derivatives are recognized on the balance sheet under "Financial assets at fair value through profit or loss" and "Financial liabilities at fair value through profit or loss". Realized and unrealized gains and losses are taken to income on the "Gains or losses on financial instruments at fair value through profit or loss" line.

The notional amounts of derivative instruments are merely an indication of the volume of the Group's business in financial instruments and do not reflect the market risks associated with such instruments. Positive or negative fair values represent the replacement value of these instruments. These values may vary significantly depending on changes in market parameters.

in millions of euros	12/31/2024 Notional amount	12/31/2024 Positive fair value(1)	12/31/2024 Negative fair value	12/31/2023 Notional amount	12/31/2023 Positive fair value	12/31/2023 Negative fair value

TOTAL TRADING DERIVATIVES	**18,422,092**	**59,248**	**49,868**	**13,176,887**	**48,608**	**41,549**
o/w on organized markets	*314,125*	*1,209*	*1,019*	*426,009*	*1,018*	*429*
o/w over-the-counter transactions	*18,107,967*	*58,039*	*48,849*	*12,750,878*	*47,590*	*41,121*

(1) The positive fair value of trading derivatives includes €7 million at December 31, 2024 (*versus* €56 million as of December 31, 2023) in respect of insurance activities. It is presented on the assets side of the balance sheet under "Insurance activities financial investments" (see Note 9.2.4).

5.3 Hedging derivatives

Accounting principles

A derivative is a financial instrument or other contract with all three of the following characteristics:

- its value changes in response to the change in a specific interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided that, in the case of a non-financial variable, this variable may not be specific to one of the parties to the contract;
- it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors;
- it is settled at a future date.

All derivatives are recognized on the balance sheet at the trade date and are measured at fair value at inception. They are remeasured at their fair value at each reporting period regardless of whether they were acquired for trading or hedging purposes.

Changes in the fair value of derivatives are recognized in net income for the period, except for derivatives qualifying as cash flow hedges or as hedges of net investments in foreign operations for accounting purposes.

Derivatives may only be designated as hedges if they meet the criteria set out in IAS 39 at inception and throughout the term of the hedge. These criteria include formal documentation that the hedging relationship between the derivatives and the hedged items is both prospectively and retrospectively effective.

Fair value hedges mainly consist of interest rate swaps that protect fixed-rate financial instruments against changes in fair value attributable to changes in market interest rates. They transform fixed-rate assets or liabilities into floating-rate instruments. Fair value hedges include, in particular, hedges of loans, securities, deposits and fixed-rate subordinated debt.

Fair value hedging is also used to manage the overall interest rate risk position.

Cash flow hedges fix or control the variability of cash flows arising from floating-rate instruments. Cash flow hedging is also used to manage the overall interest rate risk position.

The notional amounts of derivative instruments are merely an indication of the volume of the Group's business in financial instruments and do not reflect the market risks associated with such instruments.

The hedging relationship qualifies for hedge accounting if, at the inception of the hedge, there is formal documentation of the hedging relationship identifying the hedging strategy, the type of risk hedged, the designation and characteristics of the hedged item and the hedging instrument. In addition, the effectiveness of the hedge must be demonstrated at inception and subsequently verified.

Derivatives contracted as part of a hedging relationship are designated according to the purpose of the hedge.

BPCE chose the option available in IFRS 9 not to apply the provisions of the standard relative to hedge accounting, and to continue to apply IAS 39, as adopted by the European Union, for the recognition of these transactions, *i.e.* excluding certain provisions relating to macro-hedging.

Fair value hedges

Fair value hedges are intended to reduce exposure to changes in the fair value of an asset or liability carried on the balance sheet, or of a firm commitment, in particular the interest rate risk on fixed-rate assets and liabilities.

The gain or loss on the revaluation of hedging instruments attributable to the risk being hedged is recognized in income in the same manner as the gain or loss on the hedged item. The ineffective portion of the hedge, if any, is recorded in the income statement under "Gains or losses on financial instruments at fair value through profit or loss".

Accrued interest on the hedging instrument is taken to income in the same manner as the accrued interest on the hedged item.

Where identified assets or liabilities are hedged, the revaluation of the hedged component is recognized on the same line of the balance sheet as the hedged item.

The ineffective portion relating to the dual-curve valuation of collateralized derivatives is taken into account when calculating the effectiveness of a hedge.

If a hedging relationship ceases (investment decision, failure to fulfill effectiveness criteria, or because the hedged item is sold before maturity), the hedging instrument is transferred to the trading book. The revaluation difference recorded in the balance sheet in respect of the hedged item is amortized over the residual life of the initial hedge. If the hedged item is sold before maturity or redeemed early, the cumulative amount of the revaluation gain or loss is recognized in net income for the period.

Cash flow hedges

The purpose of cash flow hedges is to hedge the exposure to the variability of cash flow that is attributable to a particular risk associated with a recognized asset or liability or with a future transaction (hedge of interest rate risk on floating-rate assets or liabilities, hedge of conditions relating to future transactions such as future fixed interest rates, future prices, exchange rates, etc.).

The portion of the gain or loss on the hedging instrument that is deemed to be an effective hedge is recognized on a separate line of "Gains and losses recognized directly in equity". The ineffective portion of the gain or loss on the hedging instrument is recorded in the income statement under "Gains or losses on financial instruments at fair value through profit or loss".

Accrued interest on the hedging instrument is taken to income under interest income in the same manner as the accrued interest on the hedged item.

The hedged items are accounted for using the treatment applicable to their specific asset category.

If a hedging relationship ceases (because the hedge no longer meets the effectiveness criteria, the derivative is sold or the hedged item ceases to exist), the cumulative amounts recognized in other comprehensive income are transferred to the income statement as and when the hedged item impacts profit or loss, or immediately if the hedged item ceases to exist.

Special case: portfolio hedging (macro-hedging)

Documentation as cash flow hedges

Some Group institutions document their macro-hedging of interest rate risk as cash flow hedges (hedging of portfolios of loans or borrowings).

In this case, the portfolios of assets or liabilities that may be hedged are, for each maturity band:

- floating-rate assets and liabilities; the entity incurs a risk of variability in future cash flows from floating-rate assets or liabilities insofar as future interest rate levels are not known in advance;
- future transactions deemed to be highly probable (forecasts): assuming total outstandings remain constant, the entity is exposed to the risk of variability in future cash flows on future fixed-rate loans insofar as the interest rate at which the loan will be granted is not yet known. Similarly, the Group may be exposed to the risk of variability in future cash flows on the funding that it will need to raise in the market.

IAS 39 does not permit the designation of a net position by maturity band. The hedged item is therefore deemed to be equivalent to a share of one or more portfolios of identified floating-rate instruments (portion of deposit outstandings or floating-rate loans); the effectiveness of the hedges is measured by creating a hypothetical instrument for each maturity band and comparing its changes in fair value from inception to those for the documented hedging derivatives.

The characteristics of this instrument model those of the hedged item. Effectiveness is then assessed by comparing the changes in value of the hypothetical instrument with the actual hedging instrument. This method requires the preparation of a maturity schedule.

The effectiveness of the hedge must be shown prospectively and retrospectively.

The hedge is effective prospectively if, for each target maturity band, the nominal amount of items to be hedged is higher than the notional amount of the hedging instruments.

The retrospective test calculates the retrospective effectiveness of a hedge initiated at various balance sheet dates.

At each balance sheet date, changes in the fair value of hedging instruments, excluding accrued interest, are compared with those of hypothetical instruments. The ratio of their respective changes should be between 80% and 125%.

If the hedged item is sold or the future transaction is no longer highly probable, the cumulative unrealized gain or loss recognized in other comprehensive income is transferred immediately to profit or loss.

When the hedging relationship ceases, if the hedged item is still shown on the balance sheet, or if it is still highly probable, unrealized cumulative gains and loss in comprehensive income are amortized on a straight-line basis. If the derivative has not been canceled, it is reclassified as a trading derivative, and subsequent changes in its fair value are recognized in income.

Documentation as fair value hedges

Some of the Group's institutions document their macro-hedging of interest rate risk as fair value hedges by applying the carve-out arrangements under IAS 39 as adopted by the European Union.

The version of IAS 39 adopted for use by the European Union does not include certain hedge accounting provisions that appear incompatible with the strategies implemented by European banks to reduce their overall exposure to interest rate risk. In particular, this carve-out allows the Group to make use of hedge accounting for interbank interest rate risk on customer transactions at fixed rates (loans, savings accounts and demand deposits). The Group mainly uses plain vanilla interest rate swaps designated at inception as fair value hedges of fixed-rate deposits or loans.

Macro-hedging derivatives are accounted for in the same manner as derivatives used to hedge the fair value of specific transactions (micro-hedging).

In a macro-hedging relationship, gains and losses on the revaluation of the hedged item are recorded in "Revaluation differences on interest rate risk, hedged portfolios assets", under balance sheet assets for hedges of a portfolio of financial assets and under balance sheet liabilities for hedges of a portfolio of financial liabilities.

The hedges are deemed effective if the derivatives offset the interest rate risk on the underlying fixed-rate portfolio. The ineffective portion relating to the dual-curve valuation of collateralized derivatives is taken into account.

Effectiveness is tested in two ways:

- asset-based testing: for plain vanilla swaps designated as hedging instruments at inception, the Group verifies that no over-hedging exists both prospectively at the date the hedging relationship is designated and retrospectively at each balance sheet date;
- quantitative testing: for other swaps, the change in the fair value of the actual swap must offset the changes in the fair value of a hypothetical instrument that exactly reflects the underlying hedged item. These tests are conducted prospectively at the date the instrument is designated as a hedge and retrospectively at each balance sheet date.

If a hedging relationship ceases, the revaluation adjustment is amortized on a straight-line basis over the remaining term of the initial hedge, if the hedged item has not been derecognized. It is taken directly to income if the hedged item is no longer recorded in the balance sheet. In particular, derivatives used for macro-hedging may be disqualified for hedge accounting purposes when the nominal amount of the hedged items falls below the notional amount of the hedging instruments, for example in the case of the prepayment of loans or the withdrawal of deposits observed and modeled.

Hedges of net investments in foreign operations

A net investment in a foreign operation is the amount of the investment held by the consolidating entity in the net assets of the operation.

The purpose of a hedge of a net investment in a foreign operation is to minimize the foreign exchange effect for a consolidating entity of an investment in an entity whose functional currency is different from the presentation currency of the consolidating entity's financial statements. Net investment hedges are accounted for in the same manner as cash flow hedges.

Unrealized gains and losses initially recognized in other comprehensive income are taken to income when the net investment is sold in full or in part (or when partially sold with loss of control).

Fair value hedges mainly consist of interest rate swaps that protect fixed-rate financial instruments against changes in fair value attributable to changes in market interest rates. They transform fixed-rate assets or liabilities into floating-rate instruments.

Fair value macro-hedges are used to manage the overall interest rate risk position, in particular to hedge:

- fixed-rate loan portfolios;
- demand deposits;
- PEL home purchase savings deposits;
- the inflation component of the *Livret A* or *Livret d'Epargne Populaire* (LEP) savings accounts.

In the Ministerial Order of July 28, 2023, the government decided to set the rate of the *Livret A* savings account at 3%, until January 31, 2025 by way of an exception to the regulatory calculation formula. The absence of an inflation component during this period was taken into account by the Group as a source of ineffectiveness (or, where applicable, disqualification) of the hedges of the inflation component of the *Livret A* savings account, with no significant impact on income.

Fair value micro-hedges are notably used to hedge:

- fixed-rate liabilities;
- fixed-rate liquidity reserve securities and inflation-indexed securities.

Cash flow hedges fix or control the variability of cash flows arising from floating-rate instruments. Cash flow hedging is also used to manage the overall interest rate risk position.

Cash flow hedges are mainly used to:

- hedge floating-rate liabilities;
- hedge the risk of changes in value of future cash flows on liabilities; and
- provide macro-hedging of floating-rate assets.

The main causes of ineffective hedging are related to:

- inefficiency due to dual-curve valuations: the value of collateralized derivatives (with margin calls yielding €STR) is based on the €STR discount curve, while the fair value of the hedged component of the item hedged is calculated using a EURIBOR discount curve;
- the time value of options;
- over-hedging for asset-based testing of macro-hedges (notional amounts of hedging derivatives higher than the nominal amount of the hedged items, in particular where prepayments on the hedged items were higher than expected);
- credit value adjustments and debit value adjustments linked to credit risk and own credit risk on derivatives;
- differences in interest rate fixing dates between the hedged item and the hedge.

The notional amounts of derivative instruments are merely an indication of the volume of the Group's business in financial instruments and do not reflect the market risks associated with such instruments.

(1) The positive fair value of hedging derivatives included €82 million at December 31, 2024 (*versus* €87 million at December 31, 2023) in respect of insurance activity. It is presented on the assets side of the balance sheet under "Insurance activities financial investments" (see Note 9.2.1).

All hedging derivatives are included in "Hedging derivatives" in balance sheet assets and liabilities.

Currency swaps are documented both as interest rate fair value hedges and as currency cash flow hedges. Total fair value is nevertheless recorded under currency derivatives. These derivatives were mainly recorded under currency fair value hedges and are recorded under currency cash flow hedges in order to better reflect the weight of the currency component (associated with the cash flow hedge) in total fair value.

5.4 Financial assets at fair value through other comprehensive income

Accounting principles

Financial assets at fair value through other comprehensive income are initially recognized at fair value, plus any transaction costs.

Debt instruments measured at fair value through other comprehensive income recyclable to profit or loss

For each reporting period, these instruments are carried at their fair value and changes in fair value (excluding accrued interest) are recorded under "Gains and losses recognized directly in other comprehensive income recyclable to profit or loss" (as the foreign currency assets are monetary assets, changes in the fair value of the foreign currency component affect income). The principles used to determine fair value are described in Note 10.

These instruments are subject to IFRS 9 impairment requirements. Information about credit risk is provided in Note 7.1. If they are sold, these changes in fair value are taken to income.

Interest income accrued or received on debt instruments is recorded under "Interest and similar income" based on the effective interest method. This method is described in Note 5.5 – Assets at amortized cost.

Equity instruments measured at fair value through other comprehensive income not recyclable to profit or loss

For each reporting period, these instruments are carried at their fair value and changes in fair value are recorded under "Gains and losses recognized directly in other comprehensive income not recyclable to profit or loss" (as the foreign currency assets are not monetary assets, changes in the fair value of the foreign currency component do not affect income). The principles used to determine fair value are described in Note 10.

The designation at fair value through other comprehensive income not recyclable to profit or loss is an irrevocable option that is applied on an instrument-by-instrument basis only to equity instruments not held for trading purposes. Realized and unrealized losses continue to be recorded in other comprehensive income with no impact on income. These financial assets are not impaired.

In the event of disposal, changes in fair value are not transferred to profit or loss but are taken directly to consolidated reserves.

Only dividends affect income when they correspond to a return on investment. They are recorded in "Net gains (losses) on financial instruments at fair value through other comprehensive income" (Note 4.4).

in millions of euros	12/31/2024	12/31/2023
Loans and advances	119	459
Debt securities	13,796	12,654
Shares and other equity securities[1]	2,082	1,743
FINANCIAL ASSETS AT FAIR VALUE THROUGH OTHER COMPREHENSIVE INCOME	**15,997**	**14,856**
Of which impairment for expected credit losses[2]	(21)	(14)
Of which gains and losses recognized directly in other comprehensive income (before tax)	(40)	(58)
• *Debt instruments*	*(141)*	*(51)*
• *Equity instrument*	*101*	*(7)*

(1) Shares and other equity securities include strategic equity interests and certain long-term private equity securities. As these securities are not held for sale, their classification as equity instruments designated at fair value through other comprehensive income is appropriate.

(2) Details presented in Note 7.1.2.2.

EQUITY INSTRUMENTS DESIGNATED AT FAIR VALUE THROUGH OTHER COMPREHENSIVE INCOME

Accounting principles

Equity instruments designated at fair value through other comprehensive income can include:

- investments in associates;
- shares and other equity securities.

On initial recognition, equity instruments designated at fair value through other comprehensive income are carried at fair value plus any transaction costs.

On subsequent closing dates, changes in the fair value of the instrument are recognized in other comprehensive income (OCI).

These changes in fair value that accrue to other comprehensive income will not be reclassified to profit or loss in subsequent years (other comprehensive income not recyclable to profit or loss).

Dividends are only taken to income when they meet the required conditions.

	12/31/2024				12/31/2023			
		Dividends recognized over the period	Derecognition over the period			Dividends recognized over the period	Derecognition over the period	
in millions of euros	Fair value	Equity instruments held at the end of the period	Fair value at the disposal date	Total profit or loss at the disposal date	Fair value	Equity instruments held at the end of the period	Fair value at the disposal date	Total profit or loss at the disposal date
Investments in associates	1,974	96	11	(19)	1,626	92	15	6
Shares and other equity securities	108	1	0		117		0	(0)
TOTAL	**2,082**	**97**	**11**	**(19)**	**1,743**	**92**	**15**	**6**

Investments in associates include strategic investments, "tool" entities (IT for example) and certain long-term private equity securities. As these equity investments are not held for sale, their classification as equity instruments designated at fair value through other comprehensive income is appropriate.

The cumulative amount of changes in fair value reclassified to the "Consolidated reserves" component during the period mainly concerns the liquidation of non-consolidated securities and was -€19 million at December 31, 2024, compared to -€1 million at December 31, 2023.

5.5 Assets at amortized cost

Accounting principles

Assets at amortized cost are SPPI financial assets managed under a hold to collect business model. Most loans originated by the Group are classified in this category. Information about credit risk is provided in Note 7.1.

Financial assets at amortized cost include loans and advances to banks and customers as well as securities at amortized cost such as treasury bills and bonds.

Loans and advances are initially recorded at fair value plus any costs and less any income directly related to the arrangement of the loan or to the issue.

When loans are extended under conditions that are less favorable than market conditions, a discount corresponding to the difference between the nominal value of the loan and the sum of future cash flows discounted at the market interest rate is deducted from the nominal value of the loan. The market interest rate is the rate applied by the vast majority of local financial institutions at a given time for instruments and counterparties with similar characteristics.

On subsequent closing dates, these financial assets are measured at amortized cost using the effective interest method.

The effective interest rate is the rate that exactly discounts estimated future cash flows to the carrying amount of the loan at inception. This rate includes any discounts recorded in respect of loans granted at below-market rates, as well as any external transaction income or costs directly related to the implementation of the loans, which are treated as an adjustment to the effective yield on the loan. No internal cost is included in the calculation of amortized cost.

State-guaranteed loans

The State-guaranteed loan (SGL) is a support scheme set up under Article 6 of the amended French Finance act No. 2020-289 of March 23, 2020, and the ministerial order issued by the Minister of the Economy and Finance on March 23, 2020, establishing a State guarantee for credit institutions and financing companies from March 16, 2020, to meet the cash flow requirements of companies impacted by the Covid-19 health crisis. The scheme was extended until June 30, 2022 by Finance act No. 2021-1900 of December 30, 2021 for 2022. The SGL is subject to common eligibility criteria applicable by all institutions issuing the loan, as set out by law.

The SGL is a one-year loan with capital repayments deferred for this period. The beneficiary companies may decide, at the end of the first year, to repay the SGLs over one to five additional years or to start repaying the capital only from the second year of the repayment period, paying only the interest and the cost of the State guarantee in the meantime.

For eligible companies, the amount of the SGL is generally capped at 25% of the company's revenues (excluding innovative and recently created companies, and excluding the Seasonal SGL for customers in the Tourism/Hotels/Catering sector, for example). The State provides a guarantee covering between 70% and 90% of the loan, depending on the size of the company. The issuing bank incurs the residual risk. The State guarantee covers a portion of the total amount due on the loan (principal, interest and incidental expenses) until it becomes due. The State guarantee may be enforced before the loan is due if a credit event should occur.

The prepayment penalty is set in the contract, at a reasonable level (2% of the principal amount outstanding during the initial loan period, then 3%-6% of the principal amount outstanding during the repayment period). The terms and conditions for extending the loan are not set in advance but are established two to three months before the extension option expires, in line with market conditions.

The SGLs may not be covered by another collateral security or guarantee besides the State guarantee, with the exception of those granted pursuant to a ministerial order by the Minister of the Economy and Finance. The self-employed professional or business leader may request or be offered loan repayment Insurance, but such Insurance is not mandatory.

In view of these features, the SGLs meet the criteria of a basic lending arrangement (see Note 2.5.1). These loans are therefore recognized at amortized cost, because they are managed in a hold-to-collect business model (see Note 2.5.1). On subsequent closing dates, they will be measured at amortized cost using the effective interest method.

The State guarantee is considered to be an integral part of the terms of the loan and is taken into account when calculating impairment for expected credit losses. The guarantee fee paid to the government by BPCE on granting the loan is recorded in income over the initial term of the SGL, using the Effective Interest method. The impact is recognized in net interest income.

A State-guaranteed loan granted to a borrower considered to be non-performing on inception (Stage 3) is classified as a POCI (Purchased or Originated Credit-Impaired) asset.

However, the grant of a State-guaranteed loan to a given counterparty is not in itself evidence of deterioration in risk, requiring a downgrade to Stage 2 or 3 of the other outstandings of this counterparty.

The Resilience SGL, opened on April 6, 2022, is an additional SGL for companies impacted by the consequences of the conflict in Ukraine (in particular for companies that are at – or close to – the 25% ceiling of the SGL). The authorized ceiling is 15% of the average revenue over the last three fiscal years, or the last two fiscal years if they have only two fiscal years or the last fiscal year if they only have one fiscal year, or calculated as annualized revenue using a straight-line projection based on revenue achieved to date if they have no closed financial year. Except for its amount, subject to the new ceiling of 15% of revenue, the additional Resilience SGL takes the same form as the SGLs introduced at the beginning of the health crisis: same maximum duration (up to six years), same minimum repayment-free period (12 months), same guaranteed portion and guarantee premium. The Resilience SGL could be fully combined with any SGLs already obtained until June 30, 2022. This system was extended until December 31, 2023 as part of the amended French Finance act for 2023.

Loan renegotiations and restructuring

When contracts are modified, IFRS 9 requires the identification of financial assets that are renegotiated, restructured or otherwise modified (whether or not as a result of financial hardship), but not subsequently derecognized. Any profit or loss arising from the modification of a contract is recognized in income. The gross carrying amount of the financial asset must be recalculated so it is equal to the present value of the renegotiated or amended contractual cash flows at the initial effective interest rate. The materiality of the modifications is, however, analyzed on a case by case basis.

"Restructured" amounts correspond to loans where an arrangement has been reached that represents a concession to debtors in financial hardship or in danger of being so. "Restructured" amounts therefore require a combination of two elements: a concession and financial difficulties.

To qualify as a "restructuring", an arrangement must result in a more favorable situation for the debtor (*e.g.* suspended payments of interest or principle, extension of maturities, etc.) and take the form of additional clauses to an existing contract or the full or partial refinancing of an existing loan.

Financial difficulty is measured by a number of criteria, such as payments more than 30 days past due or an at-risk classification. The arrangement of a restructuring does not necessarily mean the counterparty in question is classed as in default by Basel standards. Whether they are classed as in default depends on the viability test carried out during the counterparty's restructuring.

In the event of restructuring following a proven credit loss event, the loan is considered as an impaired loan (in Stage 3) and is subject to a discount equal to the difference between the present value of the initially expected contractual cash flows and the discounting of the future expected capital and interest flows following the restructuring. The discount rate used is the initial effective interest rate. This discount is expensed to "Cost of credit risk" in the income statement and offset against the corresponding item on the balance sheet. It is written back to net interest income in the income statement over the life of the loan using an actuarial method. If the discount is immaterial, the effective interest rate on the restructured loan is adjusted and no discount is recognized.

The restructured loan is reclassified as performing (not impaired, Stage 1 or Stage 2) when no uncertainty remains as to the borrower's capacity to honor the commitment.

For substantially restructured loans (for example, the conversion of all or part of a loan into an equity instrument), the new instruments are booked at fair value. The difference between the carrying amount of the derecognized loan (or portion of the loan) and the fair value of the assets received in exchange is taken to income under "Cost of credit risk". Any previously established impairment loss on the loan is adjusted. It is fully reversed in the event of full conversion of the loan into new assets.

The widespread moratoria granted to business customers in response to temporary cash flow difficulties arising from the Covid-19 crisis modified these loans' repayment schedules without substantially modifying their features. These loans were therefore amended without being derecognized. In addition, the granting of the moratorium is not in itself an indication of financial distress for the companies in question.

Fees and commissions

Costs directly attributable to the arrangement of loans are external costs which consist primarily of commissions paid to third parties such as business provider fees.

Income directly attributable to the issuance of new loans principally comprises set-up fees charged to customers, rebilled costs and loan commitment fees (if it is more probable than improbable that the loan will be drawn down). Loan commitment fees received that will not result in any drawdowns are apportioned on a straight-line basis over the life of the commitment.

Expenses and income arising on loans with a term of less than one year at inception are deferred on a *pro rata* basis with no recalculation of the effective interest rate. For floating or adjustable rate loans, the effective interest rate is adjusted at each rate resetting date.

Date of recognition

Loans and securities are recorded in the balance sheet on the settlement-delivery date.

Temporary sales of securities are also recorded on the settlement-delivery date.

The first-in, first-out (FIFO) method is applied to any partial disposals of securities, except in special cases.

For repurchase transactions, a loan commitment given is recorded between the transaction date and the settlement-delivery date.

(1) *Livret A*, LDD and LEP savings accounts centralized with Caisse des Dépôts et Consignations and recorded under “Accounts and loans” amounted to €630 million at December 31, 2024 *versus* €542 million at December 31, 2023.
(2) Receivables arising from transactions with the network amounted to €245,303 million at December 31, 2024 (€232,017 million at December 31, 2023).

The fair value of loans and advances due to banks and similar is presented in Note 10.

The classification of outstanding loans and impairment for credit losses by stage is detailed in Note 7.1.

5.5.3 Loans and advances to customers at amortized cost

in millions of euros	12/31/2024	12/31/2023
Current accounts with overdrafts	**2,137**	**2,145**
Other facilities granted to customers	**169,539**	**158,607**
Loans to financial sector customers	21,453	16,756
Credit facilities[(1)]	53,935	49,678
Equipment loans	30,362	27,808
Home loans	33,139	35,737
Export loans	2,642	2,219
Repurchase agreements	1,504	1,125
Finance leases	18,068	16,856
Subordinated loans	(31)	21
Other loans	8,467	8,408
Other loans or advances to customers	**5,902**	**7,129**
Security deposits paid	**848**	**1,097**
Gross loans and advances to customers	**178,426**	**168,978**
Impairment for expected credit losses	(2,835)	(2,811)
TOTAL LOANS AND ADVANCES TO CUSTOMERS	**175,591**	**166,167**

(1) The State-guaranteed loans (SGL) are included in short-term credit facilities and totaled €1 billion just like at December 31, 2023.

The fair value of loans and advances to customers is presented in Note 10.

The classification of outstanding loans and impairment for credit losses by stage is detailed in Note 7.1.

5.6 Accrued income and other assets

in millions of euros	12/31/2024	12/31/2023
Collection accounts	397	53
Prepaid expenses	524	449
Accrued income	366	359
Other accrued income	4,009	2,846
Accrued income – assets	5,296	3,707
Settlement accounts in debit on securities transactions	194	105
Other accounts receivable	4,437	4,279
Other assets	4,631	4,384
TOTAL ACCRUED INCOME AND OTHER ASSETS	**9,927**	**8,091**

5.7 Non-current assets held for sale and associated liabilities

Accounting principles

Where a decision is made to sell non-current assets and it is highly probable that the sale will occur within 12 months, these assets are shown separately on the balance sheet on the "Non-current assets held for sale" line. Any liabilities associated with these assets are also shown separately on the balance sheet on the "Liabilities associated with non-current assets held for sale" line.

Once classified in this category, non-current assets are no longer depreciated/amortized and are measured at the lowest of their carrying amount or fair value less sales costs. Financial instruments continue to be measured in accordance with IFRS 9.

A non-current asset (or group of assets) is held for sale when its carrying amount is recovered by its sale. The asset (or group of assets) must be immediately available for sale and it must be highly likely that the sale will be completed within the next 12 months.

Natixis Investment Managers reached an agreement to sell its subsidiary "MV Credit" to the American investment company Clearlake Capital Group. However, completion of the disposal is subject to obtaining regulatory approvals. At December 31, 2024, Natixis, through Natixis Investment Managers, maintained the full consolidation of the subsidiary and presented, in accordance with the provisions of IFRS 5 "Non-Current Assets Held for Sale and Discontinued Operations", assets and liabilities of this entity in two separate balance sheet items.

Figures relating to the entities held for sale are shown below:

in millions of euros	12/31/2024	12/31/2023
Financial assets at fair value through other comprehensive income	322	0
Loans and advances to banks and similar at amortized cost	18	0
Loans and advances to customers at amortized cost	1	0
Deferred tax assets	1	0
Accrued income and other assets	12	0
Property, plant and equipment	2	0
Intangible assets	10	0
Goodwill	72	0
NON-CURRENT ASSETS HELD FOR SALE	**438**	**0**
Debt securities	297	0
Amounts due to banks and similar	1	0
Current tax liabilities	(1)	0
Deferred tax liabilities	1	0
Accrued expenses and other liabilities	13	0
LIABILITIES ASSOCIATED WITH NON-CURRENT ASSETS HELD FOR SALE	**312**	**0**

5.8 Investment property

Accounting principles

In accordance with IAS 40, investment property is property held to earn rent and for capital appreciation.

The accounting treatment for investment property is identical to that used for property, plant and equipment for all Group entities except for certain Insurance entities, which recognize the property they hold as Insurance investments at fair value, with any adjustment to fair value recorded in income. Fair value is calculated using a multi-criteria approach, by capitalizing rent at market rates and through comparisons with market transactions.

The fair value of the Group's investment property is based on regular expert valuations, except in special cases significantly affecting the value of the relevant asset.

Investment property leased under an operating lease may have a residual value that will reduce the depreciable amount of the asset.

Gains or losses on the disposal of investment property are recognized in income on the "Net income or expenses on other activities" line, with the exception of insurance activities, which are recognized in "Revenue from insurance activities".

in millions of euros	12/31/2024			12/31/2023		
	Gross amount	Accumulated depreciation and impairment	Net amount	Gross amount	Accumulated depreciation and impairment	Net amount
Property recognized at historic cost	78	(58)	20	103	(75)	28
TOTAL INVESTMENT PROPERTY			**20**			**28**

Investment property held by the insurance subsidiaries is reported with insurance investments (see Note 9).

The fair value of investment property came to €33 million at December 31, 2024 (€52 million at December 31, 2023).

The fair value of investment property is classified in Level 3 of the fair value hierarchy in accordance with IFRS 13.

5.9 Property, plant and equipment and intangible assets

Accounting principles

This item includes property owned and used in the business, movable assets acquired under operating leases, property acquired under finance leases and temporarily unleased assets held under finance leases. Interests in non-trading real estate companies (SCIs) are accounted for as property, plant, and equipment.

In accordance with IAS 16 and IAS 38, property, plant and equipment and intangible assets are recognized as assets only if they meet the following conditions:

- it is probable that the company will enjoy future economic benefits associated with the asset;
- the cost of the asset can be measured reliably.

Property, plant and equipment and intangible assets used in operations are initially recognized at cost plus any directly attributable acquisition costs. Software developed internally that fulfills the criteria for recognition as a non-current asset is recognized at its production cost, which includes external charges and the payroll costs of employees directly assigned to the project.

The component-based approach is applied to all buildings.

Internally created software is recognized as an asset in the balance sheet under "Intangible assets" for its direct development cost when the criteria for recognition of an asset as set out in IAS 38 are met.

After initial recognition, property, plant and equipment and intangible assets are measured at cost less any accumulated depreciation, amortization or impairment. The depreciable amount of the asset takes account of its residual value where this is material and can be measured reliably.

Property, plant and equipment and intangible assets are depreciated or amortized in order to reflect the pattern in which the asset's future economic benefits are expected to be consumed by the entity, which generally corresponds to the asset's useful life. Where an asset consists of a number of components that have different uses or economic benefit patterns, each component is recognized separately and depreciated over a period that reflects the useful life of that component.

The depreciation and amortization periods used by the Group are as follows:

- buildings: 20 to 60 years;
- internal fixtures and fittings: 5 to 20 years;
- furniture and special equipment: 4 to 10 years;
- IT equipment: 3 to 5 years;
- software: not more than 5 years.

Other items of property, plant and equipment and intangible assets are depreciated over their estimated useful life, which generally ranges from 5 to 10 years.

Property, plant and equipment and intangible assets are tested for impairment whenever there is any evidence that they may be impaired at the balance sheet date. If this is the case, the revised recoverable amount of the asset is compared to its net carrying amount. If the revised recoverable amount of the asset is lower than its carrying amount, an impairment loss is recognized in income.

This loss is reversed in the event of a change in the estimated recoverable amount or if there is no longer any evidence of impairment.

Equipment leased under operating leases (group as lessor) is recognized as an asset on the balance sheet under property, plant and equipment.

in millions of euros	12/31/2024 Gross amount	12/31/2024 Accumulated depreciation and impairment	12/31/2024 Net amount	12/31/2023 Gross amount	12/31/2023 Accumulated depreciation and impairment	12/31/2023 Net amount

TOTAL INTANGIBLE ASSETS	**3,565**	**(2,555)**	**1,010**	**3,324**	**(2,337)**	**987**

5.10 Debt securities

Accounting principles

Issues of debt securities not classified as financial liabilities at fair value through profit or loss or through other comprehensive income are initially recognized at fair value less any transaction costs. They are subsequently measured at amortized cost at each reporting date using the effective interest method.

These instruments are recognized on the balance sheet under “Amounts due to banks”, “Amounts due to customers” or “Debt securities”.

Debt securities are classified based on the nature of the underlying, with the exception of subordinated notes presented under “Subordinated debt”.

Securities are recorded in the balance sheet on the settlement-delivery date.

The first-in, first-out (FIFO) method is applied to any partial buyback of securities, except in special cases.

A new category of liabilities eligible for the numerator of the Total Loss Absorbing Capacity (TLAC) calculation has been introduced by French law and is commonly referred to as “Senior non-preferred debt”. These liabilities rank between own funds and “Other senior preferred debt”.

in millions of euros	12/31/2024	12/31/2023
Bonds	152,805	141,250
Interbank market instruments and negotiable debt securities	94,080	96,235
Other debt securities that are neither preferred nor subordinated	352	840
Senior non-preferred debt	34,925	30,895
Total	282,161	269,220
Accrued interest	3,238	2,545
TOTAL DEBT SECURITIES	**285,399**	**271,765**

Green bond issues are detailed in Chapter 2 “Sustainability Report” (Part 3 - Environmental information).

The fair value of debt securities is presented in Note 10.

5.11 Amounts due to banks and similar and customers

Accounting principles

Debts, which are not classified as financial liabilities measured at fair value through profit or loss or as equity, are recorded in the balance sheet under "Amounts due to banks" or "Amounts due to customers".

These debts issued are initially recognized at their fair value less transaction costs and are measured at the reporting date according to the amortized cost method using the effective interest method.

These instruments are recognized on the balance sheet under "Amounts due to banks", "Amounts due to customers" or "Debt securities" (see Note 5.10).

Temporary sales of securities are recorded on the settlement-delivery date.

For repurchase transactions, a loan commitment received is recorded between the transaction date and the settlement-delivery date when such transactions are recorded as "Liabilities".

The long-term refinancing operations (TLTRO 3) with the ECB were repaid in full at the end of March 2024.

As a reminder, these transactions were recognized at amortized cost in accordance with the rules of IFRS 9. Interest is recognized in the income statement by the effective interest method estimated based on the assumption that the loan production targets set by the ECB are met. As these loans are remunerated *via* an adjustable rate, the effective interest rate used may change from one period to another. BPCE achieved the loan production targets set by the ECB. This means the -0.50% interest bonus has been booked as income for the 12-month period concerned. On October 28, 2022, the ECB announced a change in the remuneration of the TLTRO 3:

- between June 23, 2022 and November 22, 2022, the applicable rate is the ECB's average deposit facility rate from the TLTRO 3 start date until November 22, 2022;
- from November 23, the applicable rate is the ECB's average deposit facility rate applicable until the maturity date or the early repayment date of each TLTRO 3 transaction in progress.

As a reminder, the effect of this change was recognized as an adjustment to income for the period from June 23, 2022 to November 22, 2022 and prospectively for the new period from November 23, 2022. In the consolidated financial statements at December 31, 2023 and for H1 2024, the effective interest rate is the last known deposit facility rate.

5.11.1 Amounts due to banks and similar

in millions of euros	12/31/2024	12/31/2023
Demand deposits	38,265	43,200
Repurchase agreements	1,241	1,797
Accrued interest	99	148
Amounts due to banks and similar – repayable on demand	39,605	45,145
Term deposits and loans[(1)]	129,259	139,545
Repurchase agreements	7,118	5,540
Accrued interest	389	820
Amounts due to banks and similar – repayable at agreed maturity dates[(2)]	136,766	145,905
Guarantee deposits received	645	530
TOTAL AMOUNTS DUE TO BANKS AND SIMILAR	**177,016**	**191,579**

(1) The debt related to the long-term refinancing TLTRO 3 with the ECB was repaid in full during Q1 2024 (against €16 billion at December 31, 2023).
(2) Payables arising from transactions with the network amounted to €129,928 million at December 31, 2024 (€130,387 million at December 31, 2023).

The fair value of amounts due to banks and similar is presented in Note 10.

5.11.2 Amounts due to customers

in millions of euros	12/31/2024	12/31/2023
Current accounts	**36,261**	**27,903**

Lease liabilities	963	950
Other liabilities	5,659	5,757
TOTAL ACCRUED EXPENSES AND OTHER LIABILITIES	**11,527**	**12,504**

5.13 Provisions

Accounting principles

Provisions other than those relating to employee benefits and similar, regulated home purchase savings products, off-balance sheet commitments, and insurance contracts mainly consist of provisions for restructuring, claims and litigation, fines and penalties, and tax risks (excluding income tax).

The provisions are liabilities of uncertain timing or amount. A provision must be recognized when there is a present obligation (legal or implicit) resulting from past events, the settlement of which is likely to require an outflow of resources, and the amount of which can be reliably estimated.

The amount recognized in provisions is the best estimate of the expense required to extinguish the present commitment at the reporting date.

Provisions are discounted when the impact of discounting is material.

Changes in provisions are recognized in the income statement on the lines corresponding to the nature of the future expenditure.

Provisions on regulated home purchase savings products

Regulated home purchase savings accounts (*Comptes Épargne Logement* – CEL) and regulated home purchase savings plans (*Plans Épargne Logement* – PEL) are retail products marketed in France governed by the 1965 Law on home purchase savings schemes, and subsequent implementing decrees.

Regulated home purchase savings schemes generate two types of commitments for establishments selling them:

- a commitment to provide a loan to the customer in the future at a rate set on inception of the contract (for PEL products) or at a rate contingent upon the savings phase (for CEL products);
- a commitment to pay interest on the savings in the future at a rate set on inception of the contract for an indefinite period (for PEL products) or at a rate set on a half-yearly basis according to an indexing formula regulated by law (for CEL products).

Commitments with potentially unfavorable consequences are measured for each generation of regulated home purchase savings plans and for all regulated home purchase savings accounts.

A provision is recognized for the associated risks by discounting future potential earnings from at-risk outstandings:

- at-risk savings deposits correspond to the uncertain future level of savings for plans in existence at the date the provision is calculated. This is estimated on a statistical basis for each future period taking account of historical investor behavior patterns, and corresponds to the difference between the probable savings deposits and the minimum expected savings deposits;
- at-risk loan outstandings correspond to the loan outstandings granted but not yet due at the calculation date plus statistically probable loan outstandings based on historical customer behavior patterns as well as earned and future rights relating to regulated home purchase savings accounts and plans.

The commitments are estimated using the Monte Carlo method in order to reflect the uncertainty of future interest rate trends and their impact on customer behavior models and at-risk outstandings. On this basis, a provision is recorded for a given generation of contracts in the event of a situation liable to be detrimental for the Group, with no netting between generations.

The provision is recognized under liabilities in the balance sheet and changes are recorded in net interest income and expenses.

5.13.1 Summary of provisions

in millions of euros	12/31/2023	Increase	Used	Reversals unused	Other changes[1]	12/31/2024
Provisions for employee benefits[2][3]	664	209	(118)	(25)	(3)	726
Provisions for restructuring costs[4]	125	14	(11)	(20)	0	108
Legal and tax risks[5]	501	54	(12)	(31)	29	541
Loan and guarantee commitments[6]	421	412	(5)	(373)	3	457
Provisions for regulated home savings products	2	1	0	0	0	3
Other operating provisions	363	68	(9)	(38)	(2)	381
TOTAL PROVISIONS	**2,076**	**758**	**(155)**	**(488)**	**26**	**2,218**

(1) The other changes include in particular the change in the revaluation surplus of post-employment defined-benefit plans (-€20 million before tax) and the foreign exchange rate adjustments (+€47 million).
(2) Of which €668 million for post-employment defined-benefit plans and other long-term employee benefits.
(3) With regard to the right to paid leave, and following the decision of the Court of Cassation of September 13, 2023, it should be noted that Article 37 of the act of April 22, 2024 now defines the terms and conditions for aligning the French Labor Code with European law. These amendments concern in particular the reference period to be used, the possibility of deferring rights to paid leave, the retroactive period applicable to these provisions, and lastly the number of days of leave to which the employee is entitled in the event of accident or illness of professional or non-professional origin. BPCE has provisioned for the potential impact in its financial statements at December 31, 2024.
(4) At December 31, 2024, provisions for restructuring notably included €65 million for the voluntary departure plan at Crédit Foncier (compared to €66 million at December 31, 2023).
(5) The provisions for legal and tax risks include €348 million for the net exposure on the Madoff case (compared to €328 million at December 31, 2023).
(6) The provisions for loan and guarantee commitments are detailed in Note 7.1.2.

Information on main risks and management procedures to which BPCE is exposed to, including legal risks is presented in Section 7.10 of Chapter 7 "Risk factors & risk management".

5.14 Subordinated debt

Accounting principles

Subordinated debt differs from other debt and bonds in that it will be repaid only after all the senior and unsecured creditors, but before the repayment of participating loans and securities and deeply subordinated notes.

Subordinated debt which the issuer is obliged to repay is classified as debt and initially recognized at fair value less any transaction costs. It is subsequently measured at amortized cost at each reporting date using the effective interest method.

in millions of euros	12/31/2024	12/31/2023
Term subordinated debt	18,340	18,831
Perpetual subordinated debt	286	286
Subordinated debt and similar	18,626	19,117
Accrued interest	696	646
Revaluation of the hedged component	(1,009)	(1,062)
SUBORDINATED DEBT AT AMORTIZED COST	18,312	18,701
TOTAL SUBORDINATED DEBT[1]	**18,312**	**18,701**

(1) Of which €251 million for the insurance entities at December 31, 2024 (similar to December 31, 2023).

The fair value of subordinated debt is presented in Note 10.

CHANGES IN SUBORDINATED DEBT[1] AND SIMILAR DURING THE FISCAL YEAR

in millions of euros	12/31/2023	Issue[2]	Redemption[3]	Other changes[4]	12/31/2024
Term subordinated debt[5]	17,769	1,601	(2,533)	494	17,331
Perpetual subordinated debt	286				286
SUBORDINATED DEBT AND SIMILAR	18,055	1,601	(2,533)	494	17,617
TOTAL	**18,055**	**1,601**	**(2,533)**	**494**	**17,617**

(1) Excluding accrued interest.
(2) In its dual role as an issuer on the bond market (to refinance the excess of the Group's financing needs over its customers' deposits and to provide the Group with additional capital and capacity to absorb losses), and as the organizer/manager of the Group's internal capital management transactions as a central institution, BPCE SA issued €1.6 billion of Tier-2 bonds on the market in 2024 (compared to €2 billion on December 31, 2023).
(3) The redemptions of subordinated loans and notes were due to the maturing of such borrowings or the exercising of a call.
(4) The other changes mainly concern the revaluation of hedged debt and exchange rate fluctuations.
(5) Including the revaluation of the hedged component.

Deeply subordinated notes qualifying as equity instruments are presented in Note 5.15.2.

5.15 Ordinary shares and equity instruments issued

Accounting principles

Financial instruments issued by the Group qualify as debt or equity instruments depending on whether or not the issuer has a contractual obligation to deliver cash or another financial asset to the holder of the instrument, or to exchange the instrument under conditions that are potentially unfavorable to the Group. This obligation must arise from specific contractual terms and conditions, not merely economic constraints.

In addition, when an instrument qualifies as equity:

- its remuneration impacts equity. However, in accordance with the amendment to IAS 12 of December 2017, which applies from January 1, 2019, the tax consequences of dividend payments can be recognized in consolidated reserves, gains and losses recognized directly in equity, or in profit or loss, depending on the source of the amounts paid. Accordingly, when the payment corresponds to the notion of a dividend within the meaning of IFRS 9, the tax consequence is taken to income. This rule applies to interest on perpetual deeply subordinated notes, which is treated as a dividend for accounting purposes;
- it cannot be an underlying instrument eligible for hedge accounting;
- if the issue is in a foreign currency, the instrument is fixed at its historical value resulting from its conversion to euros at its initial date of transfer to equity.

Finally, when these instruments are issued by a subsidiary, they are included in "Non-controlling interests". When their remuneration is of a cumulative nature, it is charged to "Income attributable to equity holders of the parent" and increases the income of "Non-controlling interests". However, when their remuneration is not of a cumulative nature, it is drawn from consolidated reserves attributable to equity holders of the parent.

5.15.1 Share capital

BPCE's share capital amounted to €198 million at December 31, 2024 (compared with €189 million at December 31, 2023), *i.e.* 39,571,376 shares with a par value of €5 per share, which breaks down as follows:

- 19,785,688 ordinary shares held by the Banques Populaires for €99 million;
- 19,785,688 ordinary shares held by the Caisses d'Epargne for €99 million.

At December 31, 2024, additional paid-in capital amounted to €16,758 million (€15,926 million at December 31, 2023).

5.15.2 Perpetual deeply subordinated notes classified as equity

Issuing entity	Issue date	Currency	Amount (in original currency)	Call date	Interest step-up date(1)	Rate	Nominal *in millions of euros*	
							12/31/2024	12/31/2023
BPCE	11/30/2018	EUR	700 million	02/28/2025	11/30/2023	7.95%	700	700
BPCE	09/28/2021	EUR	2,690 million	09/28/2026	09/28/2026	3.00%	2,690	2,690
BPCE	06/28/2022	EUR	1,800 million	06/28/2027	06/28/2027	7.38%	1,800	1,800
TOTAL							**5,190**	**5,190**

(1) Interest step-up date or date of transition from fixed to variable rate:
- either an increased interest rate of EURIBOR 3 months +5.04% after November 30, 2023 dedicated to the November 30, 2018 issue;
- or an increased interest rate of EURIBOR 3 months +3.25% after September 28, 2026 dedicated to the September 28, 2021 issue;
- or an increased interest rate of EURIBOR 3 months +5.04% after June 28, 2027 dedicated to the June 28, 2022 issue.

Issues of perpetual deeply subordinated notes are recognized in equity due to the discretionary nature of their remuneration.

5.16 Non-controlling interests

5.16.1 Material non-controlling interests

At December 31, 2024, like at December 31, 2023, the material non-controlling interests with regard to the Group's equity consisted mainly of the share of the non-controlling interests in the Oney Bank group.

		2024 fiscal year

5.17 Changes in gains and losses recognized directly in other comprehensive income

Accounting principles

In the event of disposal of equity financial assets recognized in other comprehensive income, changes in fair value are not transferred to profit or loss. These items are described as being not recyclable to profit or loss.

5.18 Offsetting of financial assets and financial liabilities

Accounting principles

Financial assets and liabilities were offset on the balance sheet in accordance with IAS 32. Under this standard, a financial asset and financial liability are offset and a net balance is recorded in the balance sheet if and only if:

- the Group has the legally enforceable right to offset the recorded amounts; and
- it has the intention either to settle the net amount or to simultaneously realize the asset and settle the liability.

Within BPCE, most offset amounts are the result of repurchase agreements and derivatives transactions largely carried out by the GFS division with clearing houses, which meet the requirements of IAS 32:

- for listed derivatives, the positions recorded under the respective asset and liability items for:
  - index options and futures options are offset by maturity and by currency,
  - equity options are offset by ISIN code and maturity date;
- for OTC derivatives, this comprises the netting, by currency, of the asset valuations and liability valuations of the derivatives;
- for repurchase agreements, the amount recorded in the balance sheet corresponds to the net value of repurchase and reverse repurchase agreements:
  - entered into with the same counterparty and which,
  - have the same maturity date,
  - are operated *via* the same custodian or settlement-delivery platform,
  - are denominated in the same currency.

Since December 31, 2020, the OTC derivatives traded by the GFS division with the clearing houses LCH Clearnet Ltd, Eurex Clearing AG and CME Clearing are not subject to netting within the meaning of IAS 32, but are settled daily (application of the Settlement to Market principle as provided for by these three clearing houses, which treats margin calls as daily settlement for derivatives instead of as collateral).

Financial assets and liabilities under netting agreements may only be offset if they meet the restrictive netting criteria set by IAS 32.

Offsetting may not be performed for derivatives or OTC repurchase agreements subject to master agreements that do not meet the net settlement criteria or where the realization of a simultaneous settlement of the asset and liability cannot be demonstrated or for which the offsetting right can only be exercised in the event of default, insolvency or bankruptcy by one of the parties to the agreement. However, the impact of such agreements in terms of reducing the exposure is presented in the second table.

For these instruments, the "Related financial assets and financial instruments received as collateral" and "Related financial liabilities and financial instruments pledged as collateral" columns include in particular:

- for repurchase agreements:
  - loans or borrowings resulting from reverse repurchase agreements with the same counterparty, and securities pledged or received as collateral (for the fair value of said securities),
  - margin calls in the form of securities (for the fair value of said securities);
- for derivatives, the fair values of reverse transactions with the same counterparty, as well as margin calls in the form of securities.

Margin calls received or paid in cash are shown in "Margin calls received (cash collateral)" and "Margin calls paid (cash collateral)".

5.18.1 Financial assets

Impact of offsetting on financial assets under netting agreements in the balance sheet

	12/31/204			12/31/2023		
in millions of euros	Gross amount of financial assets[1]	Gross amount of financial liabilities offset in the balance sheet	Net amount of financial assets recognized in the balance sheet	Gross amount of financial assets	Gross amount of financial liabilities offset in the balance sheet	Net amount of financial assets recognized in the balance sheet
Derivatives (trading and hedging)	68,880	4,980	63,900	57,613	4,308	53,305
Repurchase agreements	114,414	30,638	83,776	109,242	26,643	82,598
Financial assets at fair value	183,294	35,618	147,676	166,855	30,952	135,903
Repurchase agreements (loans and advances portfolio)	**3,778**	**1,877**	**1,901**	**2,905**	**1,593**	**1,312**
Other financial instruments (portfolio of loans and advances)	**324**	**324**	**0**	**479**	**479**	**0**
TOTAL	**187,396**	**37,819**	**149,577**	**170,239**	**33,024**	**137,215**

(1) Includes the gross amount of financial assets subject to netting or an enforceable master netting agreement or similar and financial assets not subject to any agreement.

Impact of netting agreements on financial assets not recognized in the financial statements

in millions of euros	12/31/2024				12/31/2023			
	Net amount of financial assets recognized in the balance sheet	Related financial liabilities and financial instruments received as collateral[(1)]	Margin calls received (cash collateral)	Net exposure	Net amount of financial assets recognized in the balance sheet	Related financial liabilities and financial instruments received as collateral	Margin calls received (cash collateral)	Net exposure
Derivatives (trading and hedging)	63,900	38,329	8,314	17,257	53,305	35,328	7,452	10,525
Repurchase agreements	85,677	83,287	108	2,283	83,911	82,261	36	1,614

Repurchase agreements	109,658	108,752	15	891	111,227	109,932	11	1,284
TOTAL	**168,540**	**139,655**	**6,606**	**22,279**	**163,172**	**144,264**	**7,370**	**11,538**

(1) Including collateral received in the form of securities.

The net exposure does not reflect the accounting position, because it takes into account the reduced exposure arising from agreements that do not meet the restrictive netting criteria set by IAS 32.

5.19 Transferred financial assets, other financial assets pledged as collateral and assets received as collateral that can be sold or repledged

Accounting principles

A financial asset (or group of similar financial assets) is derecognized when the contractual rights to the asset's future cash flows have expired or when such rights are transferred to a third party, together with substancially all of the risks and rewards associated with ownership of the asset. In such case, rights and obligations created or retained as a result of the transfer are recorded in a separate line under financial assets and liabilities.

When a financial asset is derecognized, a gain or loss on disposal is recorded in the income statement reflecting the difference between the carrying amount of the asset and the consideration received.

In the event that the Group has neither transferred nor retained substancially all of the risks and rewards, but has retained control of the asset, the asset continues to be recognized on the balance sheet to the extent of the Group's continuing involvement.

In the event that the Group has neither transferred nor retained substancially all of the risks and rewards and has not retained control of the asset, the asset is derecognized and all of the rights and obligations created or retained as a result of the transfer are recorded in a separate line under financial assets and liabilities.

If all the conditions for derecognizing a financial asset are not met, the Group keeps the asset in the balance sheet and records a liability representing the obligations arising when the asset is transferred.

The Group derecognizes a financial liability (or a part of a financial liability) only when it is extinguished, *i.e.* when the obligation specified in the contract is discharged, terminated or expires.

Repurchase agreements

Securities sold under repurchase agreements are not derecognized in the vendor's accounts. A liability representing the commitment to return the funds received is identified and recognized under "Securities sold under repurchase agreements". This debt is a financial liability recorded at amortized cost or at fair value through profit or loss when this liability is considered part of a trading business model.

The assets received are not recognized in the purchaser's books, but a receivable is recorded with respect to the vendor representing the funds loaned. The amount disbursed in respect of the asset is recognized under "Securities purchased under resale agreements". On subsequent balance sheet dates, the securities continue to be accounted for by the vendor in accordance with the rules applicable to the category in which they were initially classified. The receivable is valued according to methods specific to its category: at amortized cost when classified in "Loans and advances", or at fair value through profit or loss when it is considered part of a trading business model.

Outright securities lending

Securities loaned under outright securities lending transactions are not derecognized in the vendor's accounts. They continue to be recognized in their original accounting category and are valued accordingly. For the borrower, the securities borrowed are not recognized.

Transactions leading to substantial changes in financial assets

When an asset is subject to substantial changes (in particular following renegotiation or remodeling due to financial hardship) there is derecognition, since the rights to the initial cash flows have essentially expired. The Group considers that this is the case for:

- changes leading to a change of counterparty, especially if the new counterparty has a very different credit quality than the previous counterparty;
- changes intended to move from a very structured to basic indexing, as the two assets are not exposed to the same risks.

Transactions leading to substantial changes in financial liabilities

A substantial change to the terms of a lending instrument must be recorded as the extinguishment of the existing debt and its replacement with a new debt. The amendment to IFRS 9 of October 12, 2017 clarified the treatment under IFRS 9 of modifications of liabilities recognized at amortized cost if the modification does not result in derecognition: the profit or loss resulting from the difference between the original cash flows and the modified cash flows discounted at the original effective interest rate must be recognized in profit or loss. To assess the substantial nature of the change, IFRS 9 includes a threshold of 10% based on discounted cash flows, integrating potential costs and fees: when the difference is greater than or equal to 10%, all of the costs or fees incurred are recognized as profit or loss on debt extinguishment.

The Group may consider other changes to be substantial, such as a change of issuer (even within the same group) or a change in currency.

5.19.1 Transferred financial assets not fully derecognized and other financial assets pledged as collateral

At December 31, 2024

in millions of euros	Net carrying amount				
	"Outright" securities lending	Repurchase agreements	Assets transferred or pledged as collateral	Securitizations	12/31/2024

5.19.1.1 Comments on transferred financial assets

SECURITIES REPURCHASING AND LENDING

BPCE repurchases and loans securities.

Under the terms of the agreements, the securities may be sold on by the purchaser throughout the duration of the repurchase or lending agreement. The purchaser must nevertheless return them to the vendor at the end of the agreement. Cash flows generated by the securities are also transferred to the vendor.

The Group believes that it retains almost all of the risks and benefits of securities under repurchase or loan agreements. They are therefore not derecognized. Financing has been recorded in liabilities for the repurchasing or lending of financed securities.

SALES OF RECEIVABLES

BPCE assigns receivables as collateral (Articles L. 211-38 or L. 313-23 *et seq.* of the French Monetary and Financial Code) in the context of guaranteed refinancing, in particular with the central bank. This type of disposal for security involves the legal transfer of the associated contractual rights, and therefore a "transfer of assets" within the meaning of the amendment to IFRS 7. The Group nevertheless remains exposed to virtually all the risks and benefits, and as such the receivables are maintained on the balance sheet.

CONSOLIDATED SECURITIZATIONS

Securitizations consolidated with outside investors constitute an asset transfer according to the amendment to IFRS 7.

The Group has an indirect contractual obligation to transfer to outside investors the cash flow from assets transferred to the securitization fund (although these assets are included in the Group's balance sheet through the consolidation of the fund).

In the interest of transparency, for consolidated securitization transactions:

- the share of receivables sold attributable to external investors is considered to be pledged as collateral to third parties;
- the share of receivables sold attributable to units and bonds subscribed for by the Group, and eliminated on consolidation, is not considered to be pledged as collateral unless these securities were brought to BPCE's single treasury and central bank collateral management pool and used as part of a refinancing mechanism.

The senior units of the BPCE Financement Purple Master Credit Cards securitization transactions are subscribed by external investors.

5.19.1.2 Comments on financial assets pledged as collateral but not transferred

Financial assets provided as collateral but not transferred are generally pledged. The main mechanisms involved are the CRH (Caisse de Refinancement de l'Habitat) and securities pledged as collateral for European Central Bank (ECB) refinancing operations.

Moreover, in accordance with French law, the intrinsic guarantees attached to issues of covered bonds are not recognized under guarantee commitments given. The covered bonds issued by Compagnie de Financement Foncier benefit from a legal privilege comprised of eligible assets.

5.19.1.3 Financial assets received as collateral that can be sold or repledged

This heading covers financial assets received as security under financial guarantee agreements with the right to reuse the assets in the absence of any default on the part of the owner of the guarantee.

The fair value of the financial assets received as collateral that BPCE may sell or repledge amounted to €254 billion at December 31, 2024, compared to €266 billion at December 31, 2023.

The fair value of the financial assets received as collateral that were actually sold or repledged amounted to €219 billion at December 31, 2024, compared with €178 billion at December 31, 2023.

5.19.2 Fully derecognized financial assets for which the Group retains an ongoing commitment

Fully derecognized transferred financial assets for which the Group retains an ongoing commitment consist of asset transfers to a deconsolidated securitization vehicle in which BPCE has an interest or an obligation, although this does not call into question the transfer of almost all of the benefits and risks relating to the assets transferred.

Ongoing commitments retained by the Group in relation to securitization vehicles were not significant on December 31, 2024.

Note 6 / Commitments

Accounting principles

Commitments are materialized by the existence of a contractual obligation and are binding.

It must not be possible for commitments included in this item to be deemed financial instruments falling within the scope of IFRS 9 for classification and measurement purposes. However, loan commitments and guarantees given are covered by IFRS 9 impairment rules, as set out in Note 7.

The effects of the rights and obligations covered by such commitments must be subject to the occurrence of conditions or subsequent transactions. Commitments are broken down into:

- loan commitments (confirmed credit facilities or refinancing agreements);
- guarantee commitments (off-balance sheet commitments or assets received as collateral).

The amounts shown correspond to the nominal value of commitments given.

6.1 Loan commitments

in millions of euros	12/31/2024	12/31/2023
Loan commitments given to:		
• banks	2,281	1,653
• customers	93,183	88,338
Credit facilities granted	84,937	*79,701*
Other commitments[1]	8,246	8,637
TOTAL LOAN COMMITMENTS GIVEN	**95,464**	**89,991**
Loan commitments received from:		
• banks	88,633	75,661
• customers	53	62
TOTAL LOAN COMMITMENTS RECEIVED	**88,686**	**75,723**

(1) The amount at December 31, 2023, was adjusted for the contribution of insurance entities.
(2) The increase mainly relates to loan commitments received from the ECB for €50 billion.

6.2 Guarantee commitments

in millions of euros	12/31/2024	12/31/2023
Guarantee commitments given to:		
• banks	7,804	8,605
• to customers[1]	38,384	33,270
Total guarantee commitments given	46,188	41,875
Guarantee commitments received from:		
• banks	23,280	22,294
• from customers[2]	113,164	98,521
TOTAL GUARANTEE COMMITMENTS RECEIVED	**136,444**	**120,815**

(1) The guarantees given by CEGC in connection with its activity are treated as insurance contracts for accounting purposes, in accordance with IFRS 17 "Insurance contracts". They are recorded on the liabilities side of the balance sheet and are not included in guarantees given to customers shown in the table above.
(2) The guarantees received under State-guaranteed loans amounted to €1 billion at December 31, 2024, compared to €1 billion at December 31, 2023.

Guarantee commitments are off-balance sheet commitments.

SPECIFIC CASE OF GUARANTEES GIVEN TO UCITS BY THE GLOBAL FINANCIAL SERVICES DIVISION

The capital and/or yield on the units of certain UCITS are subject to a guarantee granted by the Global Financial Services division. The guarantees are only enforced if, on the maturity date, the net asset value of each unit is below the guaranteed net asset value.

The capital and/or performance guarantees to certain UCITS are recognized as derivatives and are subject to measurement at fair value in accordance with the provisions of IFRS 13.

Note 7 / Exposures to risks

The market risk management disclosures required by IFRS 7 are presented in Chapter 7 “Risk factors & risk management”.

Exposures to risks are discussed below by type of risk: credit, market, overall interest rate, foreign exchange and liquidity risk.

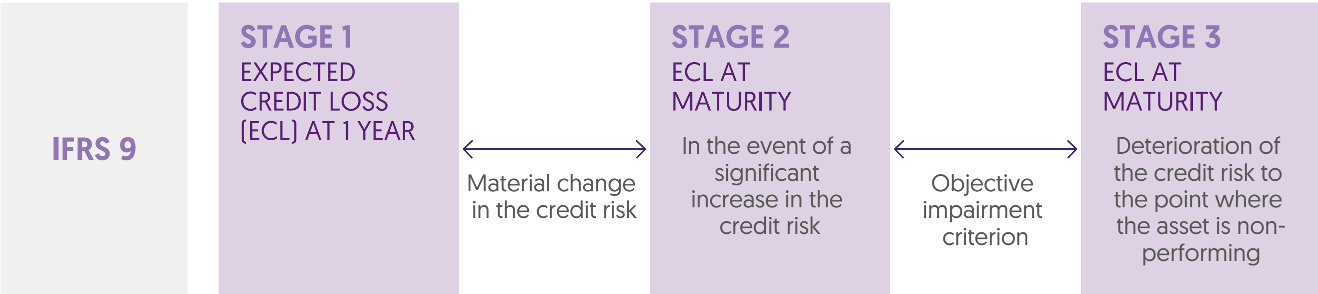
Information relating to capital management and regulatory ratios is presented in Chapter 7 “Risk management”.

Information on the effect and consideration of climate risks on credit risk management is presented in Chapter 7.16 “Risk management – Environmental risks”.

7.1 Credit risk

Key points

Credit risk is the risk that one party to a financial transaction fails to fulfill its obligations, causing the other party to incur a financial loss.



Certain disclosures relating to risk management required by IFRS 7 are also provided in the risk management report. They include:

- the breakdown of gross exposures by category and approach (separation of credit and counterparty risk);
- the breakdown of gross exposure by geographic area;
- the concentration of credit risk by borrower (BPCE14);
- the credit quality of the renegotiated exposures (CQ1);
- the performing and non-performing exposures and the corresponding provisions (CR1);
- the quality of the performing and non-performing exposures by number of days past due (CQ3);
- the quality of the exposures by geographic area (CQ4);
- the credit quality of loans and advances by industry (CQ5);
- the breakdown of the guarantees received by type on the financial instruments (CR3).

This information forms an integral part of the financial statements certified by the Statutory Auditors.

7.1.1 Cost of credit risk

Accounting principles

Cost of risk applies to debt instruments classified as financial assets at amortized cost or at fair value through other comprehensive income recyclable to profit or loss as well as to loan commitments and financial guarantees given that are not recognized at fair value through profit or loss. It also applies to receivables relating to leasing contracts, business loans and contract assets.

This item therefore covers net impairment and provision charges for credit risk.

Credit losses related to other types of instruments (derivatives or securities designated at fair value) recorded as a result of credit institution counterparty default are also included under this item.

Irrecoverable loans not covered by provisions for impairment are loans that have acquired the character of permanent loss before being provisioned in Stage 3.

7.1.1.1 Cost of credit risk for the period

in millions of euros	2024 fiscal year	2023 fiscal year
Net charge to provisions and provisions for impairment	(632)	(505)
Recoveries of bad debts written off	50	54

of which Stage 2	*(39)*	25
of which Stage 3	*(655)*	*(490)*

7.1.2 Change in gross carrying amounts and expected credit losses on financial assets and commitments

Accounting principles

General principles

Expected credit losses are represented by impairments of assets classified at amortized cost and at fair value through other comprehensive income recyclable to profit or loss, and by provisions for loan and guarantee commitments.

The financial instruments concerned (see Note 7.1.1) are impaired or covered by a provision for expected credit losses (ECL) at the date of initial recognition.

When the financial instruments do not individually show objective evidence of loss, impairment, or provisions for expected credit losses are measured based on past losses and reasonable and justifiable discounted future cash flow forecasts.

Financial instruments are divided into three categories (Stages) depending on the increase in credit risk observed since initial recognition. A specific credit risk measurement method applies to each category of instrument:

Stage 1 (S1)

- performing loans for which there has been no significant increase in credit risk since the initial recognition of the financial instrument or certain assets for which the standard makes it possible to presume that they have a low credit risk at the reporting date;
- the impairment or the provision for credit risk corresponds to 12-month expected credit losses;
- interest income is recognized in income using the effective interest method applied to the gross carrying amount of the instrument before impairment.

Stage 2 (S2)

- performing loans for which credit risk has increased materially since the initial recognition of the financial instrument are transferred to this category;
- the impairment or the provision for credit risk is determined on the basis of the financial instrument's lifetime expected credit losses;
- interest income is recognized in income, as for Stage 1 assets, using the effective interest method applied to the gross carrying amount of the instrument before impairment.

Stage 3 (S3)

- these are loans for which there is objective evidence of impairment loss due to an event which represents a known credit risk occurring after the initial recognition of the instrument in question. This category covers receivables for which a default event has been identified, as defined in Article 178 of European Regulation No. 575/2013 of June 26, 2013, on prudential requirements for credit institutions. Default situations are now more tightly identified for outstandings with significant amounts past due (introduction of relative and an absolute threshold for past due payments) and the criteria for a return to non-defaulted status have been clarified with the introduction of a probation period and of explicit criteria for a classification as default of restructured loans;
- the impairment or the provision for credit risk is calculated based on the financial instrument's lifetime expected credit losses (expected credit losses at maturity) on the basis of the recoverable amount of the receivable, *i.e.* the present value of estimated recoverable future cash flows;

- interest income is recognized through profit or loss using the effective interest method applied to the net carrying amount of the instrument after impairment;
- the financial assets purchased or originated and impaired for credit risk on their initial recognition because the entity does not expect to recover all the contractual cash flows (Purchased or Originated Credit-Impaired financial instruments or POCI) also belong to Stage 3. These assets may be transferred to Stage 2 if their credit risk improves.

In accordance with IAS 37, the guarantees received and recognized separately from the hedged instrument give rise to the recognition of a repayment asset under "Accrued income and other assets" in the balance sheet. The carrying amount of this asset represents the amount of expected credit losses, recorded as asset impairments, for which the Group is virtually certain to receive compensation. The changes in the carrying amount of this asset are recorded under "Cost of risk" in the income statement.

For operating or finance lease receivables (which fall within the scope of IFRS 16) the Group has elected not to make use of the option of applying the simplified approach as set out in IFRS 9 paragraph 5.5.15.

The methodological changes carried out over the period and presented below constitute a change in estimates which translates into an impact on net income.

Method for measuring the increase in credit risk and expected credit losses

The principles for measuring the increase in credit risk and expected credit losses applicable to most of the Group's exposures are described below. Only a few portfolios held by Group entities – representing a limited volume of exposures – cannot be treated according to the methods described below and are subject to appropriate valuation techniques.

Significant increase in credit risk

A significant increase in credit risk is measured on an individual basis for each instrument by taking into account all reasonable and supportable information and by comparing the default risk on the financial instrument at the reporting date with the default risk on the financial instrument at the date of initial recognition. A counterparty-based approach (applying the contagion principle to all outstanding loans to the counterparty in question) is also possible, in particular with regard to the watchlist criterion.

What's more, in addition to this assessment carried out in the Group's central model, institutions can, in order to take into account the specific risks of their portfolios, estimate the significant increase in credit risk on the basis of a given portfolio by tightening ratings assigned to the latter on a geographic or sectoral basis. This severity may lead to a downgrading from Stage 1 to Stage 2, while downgrading to Stage 3 remains based on an individual analysis.

In accordance with IFRS 9, a counterparty with a significant deterioration in credit risk (Stage 2) that has just been originated will be classified as Stage 1.

Assessment of increases in credit risk involves comparing the ratings on the initial recognition date with those applicable at the reporting date. The same principles as those used to classify an exposure in Stage 2 are applied in case of a decline in the material deterioration in credit risk.

In most cases, a measurement showing an increase in risk leads to the asset's transfer to Stage 2 before it is individually impaired (Stage 3).

However, prior to the above analysis, the following general analysis criteria are applied:

The standard provides that the credit risk of a financial instrument has not increased significantly since its initial recognition if this risk is considered to be low at the reporting date. This provision is applied to certain investment-grade debt securities that are managed as part of Groupe BPCE's liquidity reserve, as required by Basel III regulations, as well as debt securities classified as insurance activities financial investments. Investment grade ratings are those equal to or above BBB- or its equivalent by Standard & Poor's, Moody's or Fitch. In this case, these assets remain classified as Stage 1;

A counterparty approach for a Stage 2 classification (with application of the contagion principle to all outstandings existing on the counterparty in question) is applied in particular with regard to the High Credit Risk qualitative criterion derived from the Group's internal rating engines. This criterion includes the counterparties placed on the watchlist, with a sensitive rating (particularly in cases where the notion of watchlist is not used), in a situation of restructuring or in the presence of financial difficulties if the criteria for downgrading to Stage 3 are not met;

The standard also includes a rebuttable presumption that the credit risk has significantly increased since the initial recognition if the contractual payments are more than 30 days past due;

Lastly, an unfavorable change in country risk is a criterion for classifying all of the outstandings concerned as Stage 2.

Assessment of a material increase in credit risk is made at the level of each instrument, based on indicators and thresholds that vary according to the type of exposure and counterparty.

For the Individual customers, Professionals, SMEs, Public Sector and Social Housing portfolios:

The significant increase in credit risk is assessed on the basis of the following levels of rating downgrades since inception:

Score at origin	Individual customers	Professionals	SME, Public sector, Social housing
3 to 11 (AA to BB+)	3 notches		
12 (BB)			3 notches
13 (BB-)	2 notches	3 notches	2 notches
14 to 15 (B+ to B)		2 notches	
16 (B-)	1 notch	1 notch	1 notch
17 (CCC to C)			Sensitive notches classified as S2

Moreover, additional qualitative criteria are used to classify as Stage 2 all contracts with payments more than 30 days past due (unless the 30-day presumption of non-payment is rebutted), rated at-risk or undergoing adjustments or financial hardship if the downgrade to Stage 3 criteria are not met.

For the Large Corporates, Banks and Sovereigns portfolios, the quantitative criterion is based on the rating changes since initial recognition. The same qualitative criteria apply as for Individual customers, Professionals and SMEs, as well as for contracts placed on the watchlist, along with additional criteria based on the level of country risk.

The downgrade thresholds **on the portfolios of Large Corporates and Banks** are the following:

Score at origin	Significant degradation
1 to 7 (AAA to A-)	3 notches
8 to 10 (BBB+ to BBB-)	2 notches
11 to 21 (BB+ to C)	1 notch

For Sovereigns, the downgrade thresholds on the eight-point rating scale are as follows:

Score at origin	Significant degradation
1	6 notches
2	5 notches
3	4 notches
4	3 notches
5	2 notches
6	1 notch
7	S2 directly (unless newly originated contract)
8	S2 directly (unless newly originated contract)

For Specialized Financing, the criteria applied vary according to the characteristics of the exposures and the related rating system. The exposures noted under the engine dedicated to large exposures are treated in the same way as Large Corporates; other exposures are treated in the same way as SMEs.

For all these portfolios, the ratings used to measure risk deterioration correspond to ratings from internal systems where available, as well as external ratings, particularly in the absence of internal ratings.

In accordance with IFRS 9, the recognition of guarantees and collateral does not influence the assessment of a material increase in credit risk, which depends on changes in credit risk relating to the debtor without taking into account such guarantees.

In order to assess the material increase in credit risk, the Group provides for a process based on two levels of analysis:

- a first level based on rules and criteria defined by the Group that are binding on the Group's institutions (known as the "central model");
- a second level linked to an expert assessment of the risk carried by each institution on its portfolios, which may lead to an adjustment of the criteria defined by the Group for downgrading to Stage 2 (portfolio or sub-portfolio switch to ECL at maturity). These criteria are adapted for each closing to the current macro-economic context.

Measurement of expected credit losses

Expected credit losses are defined as being an estimate of credit losses (*i.e.* the present value of cash flow shortfalls) weighted by the probability of occurrence of these losses over the expected lifetime of the financial instrument in question. They are calculated individually for each exposure.

In practice, for Stage 1 and Stage 2 financial instruments, expected credit losses are calculated as the product of a number of inputs:

- cash flows expected over the lifetime of the financial instrument, discounted at the valuation date – these flows are determined according to the characteristics of the contract, its effective interest rate and, for real estate loans, the level of prepayment expected on the contract;
- Loss Given Default (LGD);
- the probability of default (PD) over the coming year for Stage 1 financial instruments and to maturity for Stage 2 financial instruments.

The Group's methodology draws on existing concepts and mechanisms to define these inputs, and in particular on internal models developed to calculate regulatory capital requirements (Basel framework) and projection models used in the stress test system. Certain adjustments are made to comply with the specifics of IFRS 9:

- IFRS 9 inputs aim to provide an accurate estimate of expected credit losses for accounting provision purposes, whereas prudential inputs are more cautious for regulatory framework purposes. Several of the safety buffers applied to prudential inputs are therefore restated;

- IFRS 9 inputs must allow expected credit losses to be estimated until the contract's maturity, whereas prudential inputs are defined to estimate 12-month expected losses. 12-month inputs are thus projected over long periods;
- IFRS 9 parameters must be forward-looking and take into account the expected economic environment over the projection period, whereas prudential parameters correspond to mid-cycle estimates (for PD) or bottom-of-the-cycle estimates (for LGD and the cash flows expected over the lifetime of the financial instrument). Prudential PD and LGD inputs are therefore also adjusted to reflect forecasts of future economic conditions.

Expected credit loss calculations take into account assets pledged as collateral and other credit enhancements that form an integral part of the instrument's contractual conditions and that the entity does not recognize separately. The estimate of expected cash flow shortfalls on secured financial instruments reflects the amount and the timing for enforcing the collateral, if such collateral is considered to be part of the contractual terms of the secured instrument.

The IFRS 9 model validation process is fully aligned with the Group's existing model validation process. Models are reviewed by an independent unit responsible for internal validation and the unit's conclusions are then examined by the Group Models Committee. Subsequent recommendations are monitored up by the validation unit.

Recognition of forward-looking information

Forward-looking macro-economic data are taken into account in a methodological framework applicable at two levels:

- at the Group level, in the determination of a shared framework for taking the forward looking into account in the projection of PD and LGD inputs over the amortization horizon of operations within the central model;
- at the level of each entity, with regard to its own portfolios.

The amount of expected credit losses is calculated using an average ECL by scenario, weighted by probability of occurrence, taking into consideration past events, current circumstances and reasonable and justifiable forecasts of the economic environment.

BPCE uses forward-looking data to estimate any significant increase in credit risk and to measure expected credit losses. To do this, BPCE uses the projections of macro-economic variables used to define its budget process, considered as the most probable, framed by optimistic and pessimistic scenarios in order to define alternative trajectories.

To determine a significant increase in credit risk, as well as applying rules based on the comparison of risk parameters between the initial recognition date and the reporting date, the calculation is supplemented by forward-looking information such as sector or geographical macro-economic scenarios.

To measure expected credit losses, the Group has chosen three macro-economic scenarios, which are detailed in the following paragraph.

Methodology for calculating expected losses in the central model

The parameters used to measure expected credit losses are adjusted to economic conditions by defining three economic scenarios (central/pessimist/optimist) over a three-year period.

The definition and review of these scenarios follows the same organization and governance as that defined for the budget process, with a quarterly review of their relevance since the Covid-19 crisis, which may lead to a revision of macro-economic projections in the event of a significant deviation in the situation observed on the basis of proposals from economic research and validation by the Executive Management Committee.

The probability of occurrence of the Baseline scenario and the optimistic and pessimistic scenarios is reviewed on a quarterly basis by the Group Watchlist and Provisions Committee. The inputs thus defined allow expected credit losses for all exposures to be valued, regardless of whether they belong to a scope approved using an internal method or are processed using the standardized method for the calculation of risk-weighted assets.

The variables defined in each of these scenarios allow for the distortion of the PD and LGD parameters and the calculation of an expected credit loss for each economic scenario. Projections of inputs for periods longer than three years are based on the mean reversion principle. The economic scenarios are associated with probabilities of occurrence, making it possible to calculate the average probable loss, which is used as the amount of the IFRS 9 expected credit loss.

For December 31, 2024 closing:

The Group's central scenario was built in an uncertain geopolitical environment: elections in Western countries (European Parliament, US presidential election), armed conflicts (Russia/Ukraine, Middle East) and potential worsening of the situation in various geographic areas.

After the 2020-2021 pandemic and the two years of high inflation and subsequent rate hikes by central banks, various economic indicators are affected: some countries have entered a slight recession, real estate prices are trending down, sovereign debt peaks at unprecedented highs (recent downgrade of France's rating by S&P), and lastly the challenges related to the climate transition are beginning to change the historical paradigm in place for more than 50 years concerning the global organization of production and trade against a backdrop of geopolitical tensions between the United States and China.

The Group's central scenario is based on the following structuring assumptions: no change in the current pace of the climate transition (*i.e.* without a significant inflection in the transition or the frequency of extreme climate events compared to recent history), no escalation or major evolution in the geopolitical conflicts and finally no crisis of confidence concerning sovereign debt.

The main characteristics of the Group's central scenario, which is the one used to prepare its strategic plan, are therefore:

A continuation of the decline in inflation, allowing the ECB to start lowering its interest rates in 2024 with a continuation of this decrease in 2025 just like the FED. In this scenario, oil prices decline slightly, remaining in the $70-80 range;

This positively affects the growth outlook, with GDP growth reaching the long-term average by 2025 in France and the Eurozone. The US economy is following a soft landing scenario after growing stronger than expected in 2023 with GDP growth of around 2% each year for the next four years;

This return to a normalized growth outlook will lead to a decrease in the unemployment rate by 2026;

On the other hand, uncertainties concerning sovereign debt will lead to a rise in long-term rates, while short-term interest rates are declining and curves are steepening;

The current negative trend in real estate prices will continue over the next three years, although it will stabilize over time;

Weak but steady growth in the equity markets after 2024.

Due to the political uncertainties arising from the dissolution of the National Assembly in June 2024, the scenario was reviewed several times before being finally validated by the ALM Group Committee on September 18, 2024.

As for the central scenario, the slight changes in the economic situation observed since the last closing did not lead to an in-depth revision of the pessimistic and optimistic limits, determined when the macro-economic scenario was prepared in June 2024. As a result, the pessimistic scenario continues to assume a continuation of the trade war between the US and China against a backdrop of tension in Taiwan, while the optimistic scenario, based on a statistical deviation from the central scenario, results in a gradual return of the market, inflation to low levels and a more vigorous recovery in activity.

During 2024, the following methodological changes were implemented:

All of the Retail risk parameters were recalibrated to take into account recent regulatory changes (IRB Repair in particular) relating to this portfolio;

New forward-looking PD models (PDFL) were put into production in order to integrate several methodological improvements and to improve the performance of the system. The main changes include the increase in the granularity of the models (now distinguishing between customers with and without real estate loans in the Retail portfolio, and small businesses and other specific populations in the Non-Retail portfolio), the launch of the PDFL model for businesses between €10 million and €500 million ("High-Level Segment") and the updating of the PD anchoring point (which since the first application of IFRS 9 had been fixed at the default rate for the year 2017).

In addition, BPCE has extended and adapted this approach by adjusting for a number of factors specific to certain scopes or significant markets. Each scenario is therefore weighted based on how close it is to the consensus forecast for the main economic variables in each scope or significant market of the Group.

For Retail Banking, the projections are calculated using the main macro-economic variables such as GDP, the unemployment rate, interest rates on 10-year French sovereign debt and real estate. For Corporate & Investment Banking, which is more geographically diversified, the macro-economic variables used relate to the international economy. In addition to macro-economic variables for the France zone, the Eurozone and US GDP variables are also used.

For Retail Banking and Corporate & Investment Banking, the macro-economic variables in France are as follows:

At December 31, 2024

Pessimistic 2024	GDP	Unempl.	RRE	10Y yld
2024	(0.42%)	8.07%	(8.15%)	4.04%
2025	(3.00%)	9.12%	(8.00%)	5.25%
2026	0.50%	9.05%	(6.00%)	4.60%

Central 2024	GDP	Unempl.	RRE	10Y yld
2024	1.10%	7.50%	(6.00%)	2.85%
2025	1.40%	7.64%	(1.50%)	2.90%
2026	1.57%	7.40%	0.00%	2.70%

Optimistic 2024	GDP	Unempl.	RRE	10Y yld
2024	1.86%	7.22%	(4.93%)	2.63%
2025	3.90%	6.54%	1.75%	2.10%
2026	2.64%	6.23%	3.00%	2.20%

At December 31, 2023:

Pessimistic 2023	GDP	Unempl.	RRE	10Y yld
2023	0.10%	7.90%	(3.00%)	3.93%
2024	(1.50%)	8.50%	(5.50%)	4.89%
2025	(0.75%)	9.50%	(9.00%)	4.70%

Central 2023	GDP	Unempl.	RRE	10Y yld
2023	0.60%	7.40%	(2.50%)	3.03%
2024	0.90%	7.50%	(4.00%)	3.09%
2025	1.60%	6.93%	(3.00%)	3.19%

Optimistic 2023	GDP	Unempl.	RRE	10Y yld
2023	0.90%	7.03%	(2.13%)	2.36%
2024	2.70%	6.75%	(2.88%)	1.74%
2025	3.36%	5.00%	1.50%	2.05%

For Corporate & Investment Banking, the 2024 macro-economic scenarios for the Euro and US zones used to determine the weightings for these zones are as follows:

	Pessimistic 2024		Central 2024		Optimistic 2024	
	Eurozone GDP	US GDP	Eurozone GDP	US GDP	Eurozone GDP	US GDP
2024	(1.05%)	1.01%	0.70%	2.10%	1.57%	2.64%
2025	(3.90%)	(1.50%)	1.40%	1.80%	4.05%	4.20%
2026	1.20%	1.50%	1.45%	2.03%	3.26%	2.29%

Reminder: scenarios used in 2023

	Pessimistic 2023		Central 2023		Optimistic 2023	
	Eurozone GDP	US GDP	Eurozone GDP	US GDP	Eurozone GDP	US GDP
2023	(0.20%)	0.55%	0,70%	1.10%	1.20%	1.51%
2024	(2.00%)	(0.50%)	0.90%	0.60%	3.08%	1.43%
2025	(1.10%)	0.60%	1.50%	2.20%	3.45%	3.40%

	Pessimistic			Central			Optimistic		
	2024	**2025**	**2026**	**2024**	**2025**	**2026**	**2024**	**2025**	**2026**
S&P 500	4,687	4,203	3,783	5,254	5,359	5,466	5,962	6,515	7,150
SLS	17.2	43.5	10.5	4.6	5.1	2.6	(1.8)	(14.1)	(1.4)
VIX	24.0	36.0	25.0	17.5	16.3	15.0	11.0	11.3	10.0
Fed.Ref. Rate	6.1%	6.5%	6.5%	5.0%	3.3%	3.3%	4.5%	1.6%	1.6%
Spread SONIA 6-12M	0.1%	0.1%	(0.2%)	0.1%	0.1%	0.0%	0.1%	0.0%	0.5%

For Retail Banking, the post-model adjustments that reflected the positive impact of the various measures to support the economy were eliminated due to the reduction in the benefits provided by the moratoria and SGLs as well as the evolution of the economic situation since the implementation of these adjustments.

Weighting of scenarios at December 31, 2024

In order to take into account the geographical diversity of its exposures, particularly for Corporate & Investment Banking, BPCE has had to distinguish the weightings of its economic scenarios according to the geographic area in question.

The expected credit losses are calculated by assigning to each of the scenarios a weighting determined according to the proximity of the consensus of the forecasters with each of the baseline, pessimistic and optimistic scenarios on the GDP growth variable.

Thus, the weightings used for the France zone are as follows:

- central scenario: 80% at December 31, 2024 compared with 50% at December 31, 2023;
- pessimistic scenario: 15% at December 31, 2024 compared with 20% at December 31, 2023;
- optimistic scenario: 5% at December 31, 2024 compared with 30% at December 31, 2023.

For exposures in the Eurozone (excluding France) and the US, mainly in Corporate & Investment Banking, the weightings are as follows:

- in the Eurozone (excluding France): 13% pessimistic, 78% central and 9% optimistic *versus* 18% pessimistic, 76% central and 6% optimistic at December 31, 2023;
- in the US zone: 10% pessimistic, 65% central and 25% optimistic *versus* 15% pessimistic, 36% central and 49% optimistic at December 31, 2023.

Environmental risks are not taken into account in the central models at this stage. However, they are recorded at the institution level (see below).

Expected credit losses built up in addition to the central model

Additional provisions have been recorded by the Group's institutions to cover the specific risks of their portfolios, in addition to the provisions described above and calculated by the Group's tools. These provisions were mainly allocated in 2020 and 2021 for the consequences of the Covid-19 crisis. In recent years, they were supplemented by additional documented provisions for sectors likely to be most affected by a worsening macro-economic context (rising inflation, soaring energy prices, shortages, etc.).

During 2024, these provisions mainly concerned the hotel, office real estate, construction site risks on renewable energies and transport sectors.

In this context, the Group continued to strengthen the identification and monitoring of the most affected sectors. The sectoral monitoring approach is reflected in a classification according to their level of risk of economic sectors and sub-sectors established centrally by BPCE's Risk division, updated regularly and communicated to all Group institutions.

ECL sensitivity analysis

Sensitivity analyses are carried out on the impairment outstandings on all instruments classified as Stage 1 and Stage 2 in the Group's central model. These analyses are based on a weighting of 100% of each of the scenarios used without impacting the status of these outstandings or any adjustments applied to the model.

A weighting of the pessimistic scenario at 100% would lead to a 27% increase in expected credit losses for instruments classified in S1 and S2. Conversely, a weighting of the optimistic scenario at 100% would lead to a decrease of 12% in ECL. Lastly, a weighting of the central scenario at 100% would lead to a decrease of 3% in ECL.

Method for measuring assets classified as Stage 3

Financial assets for which there is objective evidence of impairment loss due to an event representing a counterparty risk and occurring after initial recognition are classified as Stage 3. The criteria for identifying assets are in line with the definition of default under Article 178 of European Regulation No. 575/2013 of June 26, 2013, on prudential requirements for credit institutions, consistent with EBA guidelines (EBA/GL/2016/07) on the application of the definition of default, and Delegated Regulation (EU) 2018/1845 of the European Central Bank on the threshold for assessing the materiality of credit obligations past due.

Loans and advances are considered as impaired and are classified as Stage 3 if the following two conditions are met:

- there is objective evidence of impairment on an individual or portfolio basis: there are "triggering events" or "loss events" identifying counterparty risk occurring after the initial recognition of the loans in question. Objective evidence of impairment includes:
  - the occurrence of a payment past due for at least three consecutive months, the amount of which exceeds the absolute thresholds (of €100 for a retail exposure, otherwise €500) and the relative threshold of 1% of the counterparty's exposures,
  - the restructuring of loans if certain criteria are met, or regardless of whether any payment has been missed, the observation of financial hardship experienced by the counterparty leading to the expectation that some or all of the amounts owed may not be recovered. Restructured loans are classed as Stage 3 when the loss is greater than 1% of the difference between the net present value before restructuring and the net present value after restructuring;
- these events are liable to lead to the recognition of incurred credit losses, *i.e.* expected credit losses for which the probability of occurrence has become certain.

The **Stage 3 classification is maintained for a probationary period of three months** after the disappearance of all the above-mentioned default indicators. The probationary period in Stage 3 is extended to **one year** for **restructured contracts that have been subject to a Stage 3 transfer.**

When moving out of Stage 3, BPCE does not apply an additional probationary period of Stage 2 classification prior to any transfer to Stage 1 (if the asset concerned meets the conditions for such classification).

Debt securities such as bonds or securitized transactions (ABS, CMBS, RMBS, cash CDOs) are considered impaired and are classified as Stage 3 when there is a known counterparty risk.

The Group uses the same impairment indicators for Stage 3 debt securities as those used for individually assessing the impairment risk on loans and advances, irrespective of the portfolio to which the debt securities are ultimately designated. For perpetual deeply subordinated notes (TSSDI) that meet the definition of debt instruments within the meaning of IAS 32, particular attention is also paid if, under certain conditions, the issuer may be unable to pay the coupon or extend the issue beyond the scheduled redemption date.

Impairment for expected credit losses on Stage 3 financial assets is determined as the difference between the amortized cost and the recoverable amount of the receivable, *i.e.* the present value of estimated recoverable future cash flows, whether these cash flows come from the counterparty's activity or from the potential activation of guarantees (if these guarantees are considered as being part of the contractual terms and conditions of the guaranteed instrument). For short-term assets (maturity of less than one year), there is no discounting of future cash flows. Impairment is determined globally, without distinguishing between interest and principal.

Expected credit losses arising from Stage 3 off-balance sheet commitments are taken into account through provisions recognized on the liability side of the balance sheet. They are calculated on the basis of the maturity schedules determined based on historic recoveries for each category of receivable.

For the purposes of measuring expected credit losses, pledged assets and other credit enhancements that form an integral part of the contractual conditions of the instrument and that the entity does not recognize separately are taken into account in the estimate of expected cash flow shortfalls.

The write-offs are based on individual analyses, taking into account the specific nature of each situation. In addition to the factors clearly attesting that all or part of the receivable will not be recovered (*e.g.* cessation of recovery actions, receipt of the certificate of non-recoverability), other groups of indicators are also likely to be taken into account (entry into liquidation procedure, disappearance or insufficiency of residual assets and/or absence of collateral, absence of manifest desire of executives to respect their commitments and absence of shareholder support, chances of recovery based exclusively on legal recovery actions brought against third parties combined with a very low probability of success of these actions).

These factors must be considered as part of an overall analysis and do not constitute an automatic indicator of a write-off. When, in view of the situation of the case, it is reasonably certain that all or part of the receivable will not be recovered, the amount to be recognized as losses is determined on the basis of the most objective possible external and internal elements.

Subsequent recoveries of receivables already recorded as losses are also recognized in the cost of credit risk item.

Recognition of impairment of assets classified at amortized cost and at fair value through other comprehensive income, and of provisions for loan and guarantee commitments

For debt instruments recognized on the balance sheet in the financial assets at amortized cost category, impairment is recorded against the line on which the asset was initially shown for its net amount (regardless of whether the asset is S1, S2, S3 or POCI). Impairment charges and reversals are recognized in the income statement under "Cost of credit risk".

For debt instruments recognized as financial assets at fair value through other comprehensive income on the balance sheet, impairment is carried on the liabilities side of the balance sheet at the level of other comprehensive income recyclable to profit or loss, with a corresponding entry on the income statement under "Cost of credit risk" (regardless of whether the asset is classified S1, S2, S3 or POCI).

For loan and financial guarantee commitments given, provisions are recorded on the liabilities side of the balance sheet under "Provisions" (irrespective of whether the commitment given is classified S1, S2, S3 or POCI). Additions to/reversals from provisions are recognized in the income statement under "Cost of credit risk".

7.1.2.1 Change in S1/S2 credit losses

At December 31, 2024, the total expected S1 and S2 credit losses amounted to €965 million and can be broken down as follows:

in millions of euros	12/31/2024	12/31/2023
Central model	730	789
Complements to the central model	75	89
Other	161	195
TOTAL EXPECTED CREDIT LOSSES S1/S2	**965**	**1,073**

7.1.2.2 Change in the gross carrying amount and credit losses on financial assets through other comprehensive income

(1) Other changes include the amortization of receivables, the change in credit risk parameters and changes in exchange rates.

7.1.3 Measurement and management of credit risk

Credit risk arises whenever a counterparty is unable to meet its payment obligations and may result from a reduction in credit quality or default by the counterparty.

Commitments exposed to credit risk consist of existing or potential receivables and particularly loans, debt securities, equities, performance swaps, performance bonds, or confirmed or undrawn facilities.

Credit risk management procedures and assessment methods, risk concentration, the quality of performing financial assets, and the analysis and breakdown of outstandings are described in the risk management report.

7.1.4 Guarantees received on IFRS 9 impaired instruments

The statement below shows the credit and counterparty risk exposure for all BPCE's financial assets. This exposure to credit risk (determined without taking into account the impact of any unrecognized netting or collateral agreements) and to counterparty risk is based on the net carrying amount of the financial assets.

in millions of euros	Maximum risk exposure	Impairment	Maximum exposure net of impairment	Guarantees
Debt securities at amortized cost	303	(238)	65	(0)
Loans and advances to banks at amortized cost	27	(25)	3	(0)
Loans and advances to customers at amortized cost	6,109	(2,170)	3,939	2,245
Customer loans and advances - FVOCI R	8	6	2	0
Loan commitments	262	(70)	192	102
Guarantee commitments	258	(112)	145	132
TOTAL IMPAIRED FINANCIAL INSTRUMENTS (S3)	**6,966**	**(2,608)**	**4,346**	**2,479**

7.1.5 Credit risk mitigation mechanisms: assets obtained by taking possession of collateral

The policy followed by BPCE entities is to sell assets obtained by taking possession of collateral as soon as possible. The amount of these assets was non-material at December 31, 2024.

7.2 Market risk

Market risk refers to the possibility of financial loss due to market trends, such as:

- interest rates: interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate due to changes in market rates of interest;
- exchange rates;
- prices: market price risk is the risk of a potential loss resulting from changes in market prices, whether they are caused by factors specific to the instrument or its issuer, or by factors affecting all market traded instruments. Variable-income securities, equity derivatives and commodity derivatives are exposed to this type of risk; and
- more generally, any market parameter involved in the valuation of portfolios.

Systems for the measurement and monitoring of market risks are presented in the risk management report.

The information provided in the risk management report required under IFRS 7 and relating to the management of market risk comprises:

- VaR for the Groupe BPCE scope;
- the conclusions of the global stress tests.

7.3 Overall interest rate risk and exchange rate risk

Interest rate risk is the risk that unfavorable changes in interest rates will adversely impact the Group's annual results and net worth. Foreign exchange risk is the risk of losses resulting from changes in exchange rates.

The Group's approach to the management of overall interest rate risk and foreign exchange risk is discussed in Chapter 7 "Risk management – Liquidity, interest rate and foreign exchange risks".

7.4 Liquidity risk

Liquidity risk is the risk that the bank will not be able to meet its commitments or maturities at any given time.

The funding procedures and liquidity risk management arrangements are disclosed in the risk management report.

Note 8 / Employee benefits and similar

Accounting principles

There are four categories of employee benefits:

- short-term employee benefits such as wages, salaries, paid annual leave, bonuses, and profit sharing and incentive schemes which are expected to be paid within 12 months of the end of the period in which the employee renders the service are recognized in expenses.
- post-employment benefits paid to retired staff break down into two categories: defined-contribution plans and defined-benefit plans.

Defined-contribution plans such as French national plans are those for which BPCE's obligation is limited to payment of a contribution; there is no obligation for the employer regarding a certain level of benefits. Contributions paid into these plans are recognized as an expense for the period.

Defined-benefit plans are those for which BPCE has undertaken to provide a given amount or level of benefits.

Defined-benefit plans are subject to provisions calculated based on an actuarial assessment of the amount of the obligation, taking into account demographic and financial assumptions. When these plans are funded by external funds meeting the definition of plan assets, the amount of the provision is reduced by the fair value of these assets.

The cost of defined-benefit plans recorded in expenses for the period includes: the service cost (representing the rights acquired by beneficiaries over the period), the past service cost (revaluation differences on actuarial liabilities following an amendment or reduction in the plan), the net financial cost (effect of unwinding the discount on the net obligation for interest income generated by plan assets) and the effect of pension drawdowns.

Revaluation differences on actuarial liabilities caused by changes in demographic and financial assumptions and past-experience effects are recorded in gains and losses recognized directly in other comprehensive income not recyclable to net income:

- other long-term employee benefits include awards accruing to current employees and payable 12 months or more after the end of the period in which the employee renders the related service. They mainly include long-service awards and deferred variable remuneration payable in cash.

  These benefits are calculated using the same actuarial method as that applied for defined-benefit pension plans. The accounting method differs in terms of revaluation differences on actuarial liabilities, which are recorded under expenses;
- termination benefits are granted to employees on termination of their employment contract before the normal retirement date in the event of dismissal of acceptance of termination for compensation. They are covered by a provision. Termination benefits that are not expected to be paid within the 12 months following the balance sheet date are discounted to present value.

Share-based payments include payments in equity instruments or cash, the amount of which depends on the change in the value of the equity instruments or a valuation formula.

A personnel expense is systematically recorded for an amount equal to the fair value of the instruments awarded, spread over the period over which the rights are acquired.

8.1 Payroll costs

Payroll costs include all personnel expenses and the associated social security charges and payroll-based taxes.

They include expenses for employee benefits and share-based payments.

Information on employees by category is presented in Chapter 2, "Sustainability Report" (Part 3 - Social information).

in millions of euros	2024 fiscal year	2023 fiscal year
Wages and salaries	(3,890)	(3,689)
Expenses for defined-benefit and defined-contribution pension plans and other long-term employee benefits	(242)	(172)
Other social security charges and payroll-based taxes	(1,329)	(1,248)
Profit sharing and incentive schemes	(259)	(253)
TOTAL PAYROLL COSTS[1]	**(5,720)**	**(5,362)**

(1) Including all overheads by nature of all Group activities, including all overheads of the insurance activities presented in Note 9.1.8.

8.2 Employee benefits

BPCE grants its staff a variety of employee benefits:

- pensions and other post-employment benefits : end-of-career awards and other benefits granted to retirees;
- other benefits : long-service awards and other long-term employee benefits.

8.2.1 Analysis of employee-related assets and liabilities recorded in the balance sheet

			Other long-term employee benefits			
in millions of euros	Supplementary pensions and other plans	End-of-career awards	Long-service awards	Other benefits	12/31/2024	12/31/2023
Actuarial liabilities	743	238	68	434	1,483	1,446
Fair value of plan assets	(722)	(168)			(890)	(898)
Fair value of reimbursement rights		(31)			(31)	(30)
Effect of ceiling on plan assets	50	2			52	40
Net amount reported on balance sheet	**71**	**41**	**68**	**434**	**614**	**558**
Passive employee benefits	72	93	68	435	668	604
Active employee benefits[1]		51			51	45

(1) Mostly shown as assets on the balance sheet under "Accrued income and other assets".

Actuarial liabilities represent the Group's obligation in respect of beneficiaries. They are calculated by independent actuaries using the projected unit credit method based on demographic and financial assumptions that are reviewed on a regular basis and at least once a year.

When these plans are funded by assets meeting the definition of plan assets, the amount of the provision corresponds to actuarial liabilities less the fair value of these assets.

Hedging assets no longer meeting the definition of plan assets are recorded under assets.

8.2.2 Changes in amounts recognized on the balance sheet

Changes in actuarial liabilities

			Other long-term employee benefits			
in millions of euros	Supplementary pensions and other plans	End-of-career awards	Long-service awards	Other benefits	2024 fiscal year	2023 fiscal year
ACTUARIAL LIABILITIES AT THE START OF THE YEAR	**778**	**235**	**66**	**367**	**1,446**	**1,361**

Other changes		1		2	3	5
ACTUARIAL LIABILITIES AT END OF YEAR	**743**	**238**	**68**	**434**	**1,483**	**1,446**

The pension reform in France (act 2023-270 of April 14, 2023 on the rectifying financing of social security for 2023 and application decrees 2023-435 and 2023-436 of June 3, 2023) has been taken into account for the valuation of the actuarial debt at December 31, 2024. Considered as a modification of a plan recognized in past service cost, the impact is therefore recognized in the income statement.

Change in plan assets

in millions of euros	Post-employment defined-benefit plans: Supplementary pensions and other plans	Post-employment defined-benefit plans: End-of-career awards	2024 fiscal year	2023 fiscal year

Changes recognized directly in other comprehensive income not recyclable to profit or loss	**(21)**	**1**	**(20)**	**24**
Foreign exchange rate adjustments	14	(1)	13	(7)
Other changes		1	1	7
FAIR VALUE OF PLAN ASSETS AT END OF YEAR[1]	**722**	**199**	**921**	**928**

(1) Of which €31 million in reimbursement rights included in end-of-career awards (*versus* €30 million on December 31, 2023).

Amounts paid in cash to beneficiaries reduce the amount of provisions recorded to this end by an equivalent amount. A total of €35 million was charged against pension plan assets.

Interest income on plan assets is calculated by applying the same discount rate as that used to discount commitments. The difference between the actual return at the balance sheet date and this interest income is a revaluation difference recorded in equity not recyclable to profit or loss for post-employment benefits.

8.2.3 Expenses for defined-benefit pension plans and other long-term employee benefits

Expenses for defined-benefit pension plans and other long-term employee benefits

The various components of the expense recognized for defined-benefit plans and other long-term employee benefits are included under "Payroll costs".

in millions of euros	Post-employment defined-benefit plans	Other long-term employee benefits	2024 fiscal year	2023 fiscal year
Service cost	(14)	(150)	(164)	(99)
Net interest cost	(10)	(2)	(12)	(3)
Other (o/w asset ceiling by result)	(1)		(1)	3
Expense for the period	**(25)**	**(152)**	**(177)**	**(99)**
Benefits paid	17	88	105	79
Plan participant contributions	5		5	5
Change in provisions due to contributions	**22**	**88**	**110**	**84**
TOTAL	**(3)**	**(64)**	**(67)**	**(15)**

Gains and losses on defined-benefit plans recorded directly in other comprehensive income

in millions of euros	Supplementary pensions and other plans	End-of-career awards	2024 fiscal year	2023 fiscal year
Accumulated revaluation difference at the start of the period	**137**	**(99)**	**38**	**25**
Revaluation differences over the period	(1)	(9)	(10)	50

8.3 Share-based payments and equivalent

Accounting principles

Share-based payments are those based on shares issued by the Group, regardless of whether the transactions are settled in the form of equity or cash indexed to the share price or on a valuation formula.

In accordance with IFRS 2 on "Share-based payments", grants of bonus shares to employees gives rise to the recognition of an expense representing the fair value of the goods or services received at the grant date. The fair value of the services received is determined by reference to the fair value of the shares at the grant date, less the discounted amount of dividends not received by employees over the vesting period and taking into account any attendance conditions.

The expense is spread on a straight-line basis over the vesting period. The expense is adjusted over the vesting period to reflect the loss of rights.

The corresponding adjustment for the expense recorded under equity-settled plans is an increase in equity.

For cash-settled plans for which the Group has a liability, the expense corresponds to the fair value of that liability. This amount is expensed over the vesting period when its payment is subject to a presence condition, by the counterpart of a liability account. It is then remeasured at fair value through profit or loss at each closing date until it is settled. The revaluation of the debt at the closing date takes into account not only the fulfillment of the performance and/or presence condition but also the change in value of the underlying shares.

Where deferred variable remuneration plans provide for a cash payment based on a formula that is not representative of the fair value of the share, these plans fall within the scope of IAS 19. The principles applicable under IAS 19 to this type of plan are similar to those under IFRS 2 for cash-settled plans.

DEFERRED VARIABLE REMUNERATION PLANS

Since 2010 and until 2020, Natixis has granted each year to certain categories of its employees plans whose payment was based on Natixis shares.

Following the delisting of the Natixis share on July 21, 2021, plans settled in cash indexed to the Natixis share price (for their non-vested components) have been modified : their payment is now indexed to a formula based in particular on the price of the simplified public tender offer for Natixis shares (*i.e.* €4) and the change in net income attributable to equity holders of Groupe BPCE. The accounting treatment of these amended plans is described in Note 5.16. It should be noted that the plans granted in 2021 did not have to be modified because their conditions had already been adapted when they were created, in the event of a delisting of the Natixis share.

The deferred variable compensation plans awarded since 2022 are exclusively cash-settled and indexed to changes in net income attributable to equity holders of BPCE.

In June 2021, BPCE entered into a liquidity agreement with each beneficiary of bonus shares, consisting of a promise to sell that may be exercised by the beneficiary within 60 calendar days from the date of availability of the shares, followed by a promise to buy granted by BPCE to each beneficiary for the benefit of BPCE, that may be exercised by BPCE during 60 calendar days from the end of the exercise period for the promise to sell.

The liquidity contract had no impact on Natixis' consolidated financial statements at December 31, 2024, given certain characteristics of these plans and their remaining unchanged status. Thus, the accounting treatment of these plans in Natixis' consolidated financial statements remains unchanged: the expense as calculated at the grant date of each plan continues to be spread over the vesting period and to be adjusted at the closing date based on changes in the presence and performance assumptions (see Note 5.16).

With regard to the 2025 plan, as the grants were not formally made at the closing date, the cost assessment was made on the basis of the best possible estimate at December 31, 2024. Furthermore, this plan will be settled fully in cash indexed to a valuation formula. It will provide for different payment dates depending on the categories of beneficiary populations (whether categories of personnel are regulated or not within the meaning of the CRD; whether they are members or not of senior management; whether employees are covered or not by the local regulations in force in the United Kingdom).

Natixis' subsidiaries may also establish their own share-based payment plans. The impact relating to these plans at December 31, 2024, was -€23.7 million (expense) compared to +€20.4 million (income) in 2023.

The characteristics of Natixis' deferred variable remuneration plans are detailed in the paragraphs below.

LONG-TERM CASH-SETTLED PAYMENT PLANS INDEXED ON A VALUATION FORMULA

Payments under these plans are subject to presence and performance criteria for the categories of regulated personnel within the meaning of the CRD.

Years the plan was granted	Grant date	Number of units granted at inception/ Cash indexed in €	Vesting date	Number of units vested by beneficiaries/ Cash indexed in €	Fair value of indexed cash unit at valuation date *(in euros)*
2021 plan			March 2022	849,167	4.40
			March 2023	819,472	4.68

Plans from the fiscal year		(60)	(60)	(32)
TOTAL	**(9)**	**(132)**	**(141)**	**(68.0)**

VALUATION PARAMETERS USED FOR THE COST ESTIMATE FOR THESE PLANS

	12/31/2024	12/31/2023
Fair value of the indexed cash unit(1)	[0.893; 1.299]	[4.52; 4.89]
Risk-free interest rates	2.57%	3.65%
Loss of rights rate	5.32%	5.37%

(1) Corresponds to the range of fair values of indexed cash units, which as of 2021 are differentiated by plan and by year.

DEFERRED VARIABLE REMUNERATION PLANS SETTLED IN CASH

Some employees are awarded deferred cash-settled loyalty and performance bonus benefits. These bonuses are subject to presence and performance conditions. In terms of accounting treatment, they are accounted for under "Other long-term employee benefits". The estimated expense takes into account an actuarial estimate of these conditions being met. It is spread over the rights vesting period. The amount recognized in respect of the 2024 fiscal year was:

Years the plan was granted	Grant date	Vesting date	2024 fiscal year *(in millions of euros)*	2023 fiscal year *(in millions of euros)*
2020 plan	01/22/2020	March 2021 March 2022		
2021 plan	01/20/2021	March 2022 March 2023		(1)
TOTAL				**(1)**

Note 9 / Insurance activities

General principles

Insurance activities cover personal insurance and non-life insurance activities. In BPCE these activities are performed by dedicated subsidiaries subject to the specific regulations applicable to the Insurance sector.

The entities concerned by this measure are mainly CEGC, BPCE Assurances, NA, BPCE Vie and its consolidated funds, BPCE Life, BPCE Assurances IARD, BPCE IARD, Surassur, Oney Insurance, Oney Life.

Financial assets and liabilities of insurance companies are therefore recognized in accordance with the provisions of IFRS 9. They are classified in the categories defined by this standard and follow its measurement rules (Note 2.5.1).

Insurance assets and liabilities are measured and presented in accordance with IFRS 17.

Scope of application

IFRS 17 applies to:

- issued insurance contracts (including issued reinsurance treaties);
- held reinsurance treaties;
- investment contracts issued with discretionary participation features, provided that the entity also issues insurance contracts.

BPCE has these three types of contracts.

However, the financial guarantees given by entities in the banking sector within BPCE, although meeting the accounting definition of an insurance contract, are still treated under IFRS 9 on financial instruments.

Measurement models

In accordance with IFRS 17, insurance assets and liabilities are recognized at present value.

Insurance assets and liabilities are measured using a building blocks approach (general approach), applicable by default to all contracts falling within the scope of IFRS 17, with an adaptation for insurance contracts with direct participation features (see below). This approach requires the measurement of technical provisions comprising the following three blocks:

- a first block equal to the present value of the estimate of future cash flows – Best Estimate (BE);
- a risk adjustment for non-financial risk, to take into account the uncertainty of these estimates of future cash flows (Risk Adjustment – RA);
- a Contractual Service Margin (CSM).

For BPCE, the general approach is used in direct business, in particular for payment protection insurance, multi-year personal protection contracts (excluding funerals) and for the guarantee activity. It is also used for the main reinsurance treaties issued for investment and pension activities (with certain adjustments to take into account the participating nature of the contracts, mainly under the disaggregation option or OCI option - see Note 9.2).

The Best Estimate corresponds to the present value, measured at each balance sheet date, of the estimate of future cash flows (receivable and payable, including future premiums on current contracts and acquisition cash flows) allocated to fulfilling contracts within the timeframe defined in accordance with IFRS 17 requirements, weighted by their probability of occurrence. Only the flows from current contracts are subject to measurement (a group of contracts may nevertheless be recognized in advance when facts and circumstances indicate that it is onerous (see below)). These flows are discounted using the discount rate described below. The carrying amount of the Best Estimate is broken down into a liability (or asset) for remaining coverage (materializing the commitment for insurance services not yet provided) and a liability (or asset) for incurred claims (materializing the commitment for incurred claims that have not yet been paid in full). When options and guarantees are granted to policyholders, the Best Estimate includes an assessment of their cost. Lastly, receivables and payables arising from insurance or reinsurance operations issued are now included in the value of the Best Estimate.

The risk adjustment for non-financial risk corresponds to the consideration of the uncertainty of the estimates of future cash flows included in the Best Estimate measurement. It is also measured at the end of each reporting period. The level of the risk adjustment for non-financial risk is not standardized. BPCE has defined its risk adjustment for non-financial risk methodologies according to the types of insurance liabilities that pose different risks. The risk adjustment for non-financial risk of the liabilities for remaining coverage is mainly based on a VaR (Value at Risk)-type confidence level methodology, capitalizing on the prudential requirements and based on a multi-year vision of risk with an ultimate corresponding to the extinction of the risk. Intra-entity diversification is also taken into account. The risk adjustment for non-financial risk in respect of liabilities for incurred claims is mainly based on BPCE's level of risk appetite and corresponds to a level of confidence determined using actuarial calculation methods.

The CSM represents, when the contracts were issued, the expected profit on contracts, not yet earned, measured for each group of insurance contracts. This is measured at the contract inception date and then adjusted over time, notably to take into account any changes in future assumptions of non-financial origin (at each reporting date, changes in future assumptions impact the measurement of the Best Estimate and Risk Adjustment, with a corresponding adjustment to the CSM when they are of non-financial origin, and to income or OCI when they are of financial origin). It is recognized on the balance sheet and then in income in line with the services provided to policyholders, over the duration of the remaining coverage of the contracts. If a loss is expected at inception or during the coverage period (onerous contracts, representing an expected net cash outflow for the entity), this is not subject to a negative CSM, but is immediately recognized in income. The share of CSM representative of the service rendered over the period is allocated to profit or loss through coverage units, which represent the duration of coverage of the contracts, the quantity of services provided and the service rendered by the BPCE entities to the policyholders. When applying the general approach to payment protection insurance and guarantee activities, the coverage units are defined on the basis of the outstanding principal.

The discount rates applied to the estimate of future cash flows must reflect the time value of money, the cash flow characteristics, and the liquidity characteristics of the insurance contracts, and be consistent with observable current market prices. Under the general approach, the Best Estimate and the risk adjustment for non-financial risk are measured on the basis of current rates (at the reporting date) while the CSM remains adjusted on the basis of the discount rates determined at the date of initial recognition of the group of contracts. BPCE adopts a bottom-up approach to determine these discount rates, by using a risk-free rate curve (based on interbank swap rates) to which is added an illiquidity premium, depending on the characteristics and liquidity of the insurance contracts concerned. The risk-free rate curve used is adapted from the applicable rate curve in the context of prudential requirements (adjustments mainly concern liquid parameters and extrapolation beyond the last liquidity point).

A Variable Fee Approach (VFA) model, adapted from the general approach, is mandatory for insurance contracts with direct participation features, which meet the following three criteria:

- the contractual terms specify that the policyholder participates in a share of a clearly identified pool of underlying items;
- the insurer expects to pay to the insured an amount equal to a substantial share of the fair value returns on the identified pool of underlying items;
- a substantial proportion of the benefits that the entity expects to pay to the policyholder must vary with the fair value of the identified pool of underlying items.

In BPCE, this model is used in direct business to measure investment and pension contracts as well as funeral contracts.

In the case of insurance contracts with direct participation features, the service provided to the policyholder corresponds mainly to the financial management of the underlying items. The cash flows of these contracts vary depending on the performance of the underlying items. An increase in the value of the underlying items entails an increase in the value of the contracts. Conversely, a decrease in the value of the underlying items entails a decrease in the value of the contracts. Changes in the underlying items adjust the CSM for the insurer's share and impact the Best Estimate for the policyholder's share. The CSM in the VFA approach also takes into account changes in future financial assumptions and the effects on the Best Estimate and the risk adjustment for non-financial risk of the accretion.

Underlying items include, in particular, items allocated to policyholders as part of the profit-sharing feature (including, in particular, the share of financial assets and investment property representing with-profits savings commitments) and unit-linked products.

For BPCE, the majority of the financial assets underlying VFA contracts are measured at fair value through profit or loss or through other comprehensive income under IFRS 9. Investment property is also measured at fair value through profit or loss as permitted by IAS 40.

In the VFA approach, the Best Estimate includes the valuation of the cost of options and guarantees granted to policyholders. Insurance liabilities also reflect the pooling of contracts portfolios for flow of insurance contracts with direct participation features backed by the general fund. Future flexible premiums under current contracts are included in the Best Estimate measurement.

Adaptations to the methodologies of the general model have been made concerning the coverage units and the rate curve for contracts eligible for the VFA model. Thus, the coverage units used in the VFA model are based on changes in policyholders' savings contracts outstandings and are adjusted to correct for a "bow-wave" effect. This is generated by two effects recognized in CSM, in respect of the period just ended: the difference between the rate of return on assets attributable to contracts (in the real world) and that assessed by actuarial models (in risk-neutral measurement), and the release of the time value of options and guarantees (TVOG). Coverage units that take account of the bow-wave effect enable CSM amortization to be recorded in the income statement, more accurately reflecting the investment service provided to policyholders over the past period. In addition, the rate curve is based on the same methodology as that applicable under the general model, with the illiquidity premium determined according to the nature of the financial assets underlying the contracts eligible for this model.

Finally, the general approach is supplemented by a simpler optional model based on the allocation of premiums ("Premium allocation approach" – PAA). It applies to:

- all insurance contracts except contracts with direct participation features, insofar as this method leads to a result close to the general approach;
- contracts with a short-term coverage period (*i.e.* over a period of less than 12 months).

For BPCE, this model is used in direct business for annual personal protection contracts and for all non-life insurance policies (fire, accidents and miscellaneous risks).

The initial liability for remaining coverage recognized is equal to the premiums received (*i.e.* no CSM is recognized). The premiums are then spread out and recognized in the income statement as time passes. Acquisition costs incurred may be recognized immediately as expenses when they occur or over the coverage period. The liabilities for incurred claims not yet disbursed and for groups of onerous contracts nevertheless remain measured according to the provisions of the general model. Insurance liabilities are only discounted if the effect of the passage of time is significant, particularly with regard to provisions for incurred claims (Best Estimate and Risk adjustment for non-financial risk). The provisions concerning the measurement of the risk adjustment for liabilities for incurred claims are similar to those applicable under the general model.

Contract boundaries (horizon)

Under IFRS 17, cash flows lie within the boundary of an insurance contract if they arise from substantive rights and obligations that exist during the reporting period in which the entity can compel the policyholder to pay the premiums or in which the entity has a substantive obligation to provide the policyholder with services. A substantive obligation to provide services set out in an insurance contract ceases notably when the entity has the practical ability to reassess the insured risks and can therefore set a price or a level of services that fully reflects these risks.

BPCE analyzed in depth the characteristics of its contracts in order to compute the cash flows included in the scope of its insurance contracts and thus to determine the horizon or "boundary" of these contracts. In this respect, based on the requirements of IFRS 17, the Group includes in particular within the boundary of investment contracts future flexible premiums in respect of contracts in force at the reporting date.

Contract recognition and derecognition dates

A group of issued insurance contracts must be recognized at the first of the following dates:

- The start-date of the coverage period for the group of contracts;
- The date at which the first payment by a policyholder becomes due or, in the absence of a due date, the date at which the first payment is received; and
- In the event of a group of onerous contracts, the date at which the group becomes onerous.

Only contracts that satisfy individually the above recognition criteria at the end of the reporting period are included in the group of contracts. If this is not the case, the contracts are included in the group of contracts during later accounting periods.

An insurance contract is derecognized in the following cases:

- When it is extinguished, *i.e.* when the obligation specified in it expires, or when it is discharged or canceled;
- When it is subject to an outgoing transfer (transfer to a third party);
- When the conditions of a contract are substantially modified, triggering a change in the recognition of the contract if these new conditions had always existed (different classification, different valuation model, etc.). In this case, a new contract based on the modified conditions is then recognized as a replacement for the initial contract (which is then derecognized).

The first of the three cases mentioned above is the one that most commonly occurs within the framework of the activities of BPCE's insurance entities. In this case, derecognition of the insurance contract entails eliminating the Best Estimate and the risk adjustment for non-financial risk, as a counterpart to the CSM of the group of contracts, without having any direct and immediate effect on income.

Level of aggregation of contracts

The standard defines the level of aggregation of contracts to be used to assess insurance contract liabilities and their CSM.

The first step is to identify the portfolios of insurance contracts, *i.e.* contracts subject to similar risks and managed together.

Each portfolio is then divided into three parts according to their profitability profile:

- contracts that are onerous at initial recognition;
- contracts which, at initial recognition, have no significant possibility of becoming onerous;
- the remaining contracts in the portfolio.

In addition, the standard as published by the IASB introduces the principle of "annual cohorts" prohibiting the inclusion in the same group of contracts issued more than one year apart.

A group of contracts is therefore a grouping of contracts from the same portfolio, the same profitability profile and the same cohort.

Nevertheless, the standard as adopted by the European Union provides for an optional exemption from the application of this rule for the following contracts:

- groups of insurance contracts with direct participation features and groups of investment contracts with discretionary participation features whose cash flows affect or are affected by cash flows to policyholders of other contracts;
- groups of insurance contracts which are managed across generations of contracts and meet certain conditions and for which the application of the matching adjustment has been approved by the supervisory authorities.

This exemption will be reviewed before the end of 2027, based on the results of the IASB's post implementation review of IFRS 17.

BPCE applies the option to exempt the application of annual cohorts to investment/pension contracts and funeral contracts.

BPCE's classification by portfolio was carried out in accordance with the requirements of IFRS 17 as well as with internal segmentation and the way in which contracts are managed. BPCE uses the contract as an elementary level under IFRS 17. Thus, no disaggregation for the various guarantees included in a contract has been made. Grouping by homogeneous profitability levels was completed following studies carried out on the basis of information and criteria available internally, such as products, contracts and policyholders.

Specific Provisions for held reinsurance treaties

IFRS 17 requires a separate analysis, measurement and accounting of direct insurance contracts (and issued reinsurance treaties) from held reinsurance treaties. These requirements entail the assessment of a Best Estimate, a risk adjustment for non-financial risk and a CSM specific to held reinsurance treaties.

The assumptions used to assess the Best Estimate of held reinsurance treaties must be consistent with those used to assess the Best Estimate of the underlying groups of direct insurance contracts. The latter must also reflect the effect of the risk of non-performance by the issuer of reinsurance contracts held, relating mainly to the reinsurer's credit risk and litigation risk.

The risk adjustment for non-financial risk must correspond to the amount of risk transferred by the held reinsurance treaty policyholder to the issuer of the latter.

Under held reinsurance treaties, the CSM may represent a reinsurance loss or gain (thus, the provisions relating to onerous contracts do not apply in the case of held reinsurance treaties). However, when the contracts underlying the reinsurance treaties are onerous, an income is recognized in the income statement in respect of the held reinsurance contracts (referred to as the "loss recovery component"), representing the reinsurer's participation in the losses. CSM held (whether representing a reinsurance cost or gain) is recognized in the income statement over the term of the held reinsurance treaties (and not over the term of the underlying contracts) and on the basis of coverage units which must reflect the services received.

As the VFA model is not applicable to reinsurance treaties, only the general model and the PAA model can be applied. The accounting models applicable to held reinsurance treaties may differ from those used for the underlying direct insurance contracts. The provisions relating to the level of aggregation of contracts remain identical to those applicable to direct insurance contracts, however references made to onerous contracts (in respect of direct insurance contracts) are replaced by references to contracts on which there is a net gain on initial recognition.

IFRS 17 provides for the entity to recognize a group of held reinsurance contracts according to the following rules:

- The general case in which initial recognition date is the start of the coverage period for the group of held reinsurance contracts;
- For proportionate treaties, initial recognition date is deferred until recognition date for the underlying contracts if this date is later than the start of the coverage period for the group of held reinsurance contracts;
- Lastly, if the underlying insurance contracts are onerous, initial recognition date is the recognition date for the loss component, provided that the held reinsurance contract is signed by this date.

Lastly, payables and receivables arising from held reinsurance operations (including debts for cash deposits and reinsurance current accounts) are now included in the value of the Best Estimate.

BPCE's reinsurance treaties were measured using the general model (in particular the main treaty for investment and pension activities) or the PAA model, depending on their time horizon determined in accordance with IFRS 17. Under the main held reinsurance treaty, the coverage units are based on changes in the outstandings of held contracts.

Key assumptions and judgments

For the purposes of applying IFRS 17, insurance liabilities are measured using estimation techniques, judgments and assumptions (notably claims and mortality laws, generally based on historical data, and assumptions concerning expenses and fees and commissions). More specifically, for the valuation of investment and pension contracts, lapse and future flexible premiums laws are also taken into account.

IFRS 17 does not prescribe the coverage units to be applied. Judgment and estimates must be used to best reflect the service provided during the period. Certain criteria must nevertheless be taken into account when determining coverage units: the probable duration of coverage for each contract, the quantity of services measured in relation to the service provided from the insured's point of view, and the service provided, which is defined as the insurer's readiness to cover an insured event.

The assumptions and judgments applied in calculating the risk adjustment for non-financial risk result in a confidence level for BPCE of 80% at December 31, 2024, identical to that at December 31, 2023.

In terms of discount rates, the risk-free rate curve used by BPCE to discount insurance contract cash flows is presented in the table below:

	12/31/2024				
Currency	**1 year**	**5 years**	**10 years**	**20 years**	**30 years**
Euro	2.23%	2.15%	2.27%	2.26%	2.26%

	12/31/2023				
Currency	**1 year**	**5 years**	**10 years**	**20 years**	**30 years**
Euro	3.36%	2.32%	2.39%	2.42%	2.44%

The illiquidity premium for insurance contracts with direct participation features measured under the VFA approach is between 0.94% at December 31, 2024, and 0.80% at December 31, 2023.

Transition valuation methods

IFRS 17 is applied retrospectively. Current insurance contracts have been remeasured on the transition date according to the three methods below:

- *Full Retrospective Approach (FRA)*

The Full Retrospective Approach (FRA) provides for the definition, recognition and measurement of each of the groups of insurance contracts as if IFRS 17 had always been applied since the inception of the contracts.

BPCE has adopted this approach mainly for portfolios of contracts and reinsurance treaties eligible for the PAA approach, and for the most recent years for portfolios of payment protection insurance and guarantee contracts.

If it is not possible to apply this method based on the available data, the following two methods can be used:

- *Modified Retrospective Approach (MRA)*

The Modified Retrospective Approach (MRA) is a retrospective method that aims to obtain a result as close as possible to that obtained by the FRA approach, based on the use of reasonable and justifiable information obtained without excessive cost or effort. The MRA approach allows the following calculation simplifications:

- measurement of groups of contracts on initial recognition: in particular, IFRS 17 make it possible to dispense with the annual cohorts to define the level of aggregation of groups of contracts in stock at the transition date. BPCE has adopted this simplification for portfolios of contracts for which the MRA approach has been adopted;

- measurement of the CSM at the transition date for contracts measured under the general approach: a CSM at the date of initial recognition is first valued on the basis of estimated future cash flows at transition, adjusted for actual cash flows between the date of initial recognition and transition. The CSM at the transition date results from the CSM at the date of initial recognition, amortized using coverage units between the date of initial recognition and the transition date. Discount rates at the initial recognition date may be determined based on an observable yield curve for at least three years prior to the transition date, or based on an average spread between an observable yield curve and an estimated curve. Finally, the risk adjustment for non-financial risk at the date of initial recognition must be determined by adjusting the risk adjustment for non-financial risk at the transition date with the release of risk expected prior to the transition date. BPCE has retained these simplifications for portfolios of contracts eligible for the general approach for which the MRA approach in transition has been adopted. The provisions concerning coverage units and have been applied consistently to current contracts at the transition date and those post-transition;
- measurement of the CSM at the transition date for contracts measured under the VFA approach: a CSM at the date of initial recognition is first measured on the basis of the fair value of the items underlying the contracts at transition, net of the estimated future cash flows at transition, adjusted for fees and levies and the change in the risk adjustment for non-financial risk relating to the period between the date of initial recognition and transition. The CSM at the transition date results from the CSM at the date of initial recognition, amortized using coverage units between the date of initial recognition and the transition date. BPCE has adopted this simplification for portfolios of contracts eligible for the VFA approach for which the MRA approach in transition has been adopted. The provisions concerning coverage units and mutualization have been applied consistently to contracts in force at the transition date and those post-transition;
- measurement of insurance finance income or expenses: the MRA approach simplifies the task of determining discount rates for groups of contracts and calculating other comprehensive income (OCI), where a breakdown of finance income or expenses is used. As permitted by IFRS 17, BPCE has mainly retained an OCI equivalent to that of the underlying items for investment and pension contract portfolios and zero for other portfolios valued using the MRA approach in transition.

In particular, BPCE has adopted this approach for its investment/pension, payment protection insurance portfolios (with the exception of the most recent years for certain portfolios) and for its main issued reinsurance treaty.

- *Fair Value Approach (FVA)*

The Fair Value Approach (FVA) is based only on the data available at the transition date without taking into account past financial flows.

In the Fair Value Approach, the contractual service margin is measured at the transition date as the difference between the fair value of the group of insurance contracts at that date and the fulfilment cash flows measured at that same date.

BPCE has adopted this approach for certain multi-year personal protection and non-significant payment protection insurance portfolios as well as for one of its main held reinsurance treaties.

BPCE has mainly applied the modified retrospective (MRA) and fair value (FVA) approaches to measure insurance and held reinsurance liabilities at the transition date, given operational constraints (*e.g.* historical data availability).

Presentation of the financial statements

The requirements of IFRS 17 in terms of presentation of the financial statements are detailed in Notes 9.2 and 9.3.

Groupe BPCE applies ANC recommendation No. 2022-01 of April 8, 2022, on the format of consolidated financial statements of banking sector institutions prepared in accordance with international accounting standards.

9.1 Notes to the income statement for the insurance activities

Accounting principles

IFRS 17 introduces the distinction between insurance service result and insurance finance income and expenses.

The standard also requires a separate presentation of these aggregates under held reinsurance treaties.

Expenses directly attributable to insurance contracts are presented in NBI.

IFRS 17 requires the distinction between cash flows directly attributable to the fulfillment of contracts and non-attributable cash flows. Only cash flows attributable to the fulfillment of contracts are included in the measurement of liabilities and presented in the aggregates required by IFRS 17. The problem of distinguishing between attributable and non-attributable cash flows mainly concerns overheads. As the attributable nature of overheads is not defined in IFRS 17, it has been determined on the basis of an allocation of expenses according to a systematic and rational method. A portion of the attributable costs is classified as acquisition costs under IFRS 17.

The investment component (which corresponds to the amounts that the entity is required to repay to the policyholder under an insurance contract in all circumstances, whether or not the insured event occurs) is excluded from the income statement. The investment component mainly concerns contracts measured under VFA in BPCE.

The standard offers the option of breaking down insurance finance income or expenses for the period between finance income or expenses and equity (disaggregation option or OCI option), in order to ensure greater consistency in the income statement between the impact of financial assets and insurance liabilities. For contracts valued according to the general approach or the PAA approach, this means that undiscounting accretion at the original rate (or on the basis of the effective interest rate for participating contracts and participating reinsurance treaties not eligible for the VFA model) is presented in income statement, and changes in current discount rates are presented in equity. For insurance contracts with direct participation features (VFA), this means that an amount equal to but opposite to the finance income amount of the underlying items of the contracts can be recorded under insurance financial expenses. The remaining financial expense is recognized directly in other comprehensive income. This option applies by portfolio.

For insurance contracts issued, BPCE applies this option systematically under the VFA approach and mainly under the general approach and PAA approach. It also applies it to certain held reinsurance treaties.

For insurance contracts with direct participation features measured using the VFA approach, the standard allows on option (risk mitigation option) to:

- reduce mismatches between the valuation of derivatives and non-derivative financial instruments measured at fair value through profit or loss used as hedging instruments and the valuation of hedged financial items that would be allocated to the CSM if this option did not exist; or
- reduce mismatches between changes of financial origin affecting held reinsurance treaties which impact income statement or OCI (impossibility of applying the VFA approach to reinsurance), while changes of financial origin affecting VFA contracts covered are allocated to CSM.

BPCE activates this option on savings scope as part of the hedging provided by the main held reinsurance treaties.

BPCE has chosen to split the change in the risk adjustment for non-financial risk between insurance service result and finance income or expenses from insurance as permitted by IFRS 17.

ANC recommendation No. 2022-01 of April 8, 2022 on the format of the consolidated financial statements of banking sector institutions prepared in accordance with international accounting standards allows optionally to present insurance activities financial investments on a separate asset line in the balance sheet subject to also presenting the net investment income from insurance activities as a separate item on the income statement. BPCE has adopted this presentation, which is in line with its previous presentation.

ANC recommendation No. 2022-01 of April 8, 2022, also calls for the cost of credit risk on insurance activities financial investments to be isolated on a separate line and presented after the items “Finance income or expenses from insurance contracts issued” and “Finance income or expenses from reinsurance contracts held”, in order to reflect the financial performance of insurance activities within a financial conglomerate with separate banking and insurance activities.

9.1.1 Revenue from insurance contracts issued

Accounting principles

Revenue from insurance contracts issued (including reinsurance treaties issued) reflect the provision of insurance and investment services during the year. As a result, with the exception of the PAA approach, premiums no longer appear in the income statement.

This aggregate includes, for contracts measured according to the general approach and the VFA approach,

- the release of estimated benefits and expenses for the period (excluding investment components);
- reversal of the risk adjustment for non-financial risk;
- the amortization of the contractual service margin in respect of current services provided over the period ;
- amortization of acquisition cash flows;
- other income items, including in particular experience adjustments on premium receipts relating to current and past services.

The aggregate includes, for contracts valued according to the PAA approach, the amount of expected premiums allocated to the period.

in millions of euros	2024 fiscal year	2023 fiscal year
Release of estimated benefits and expenses for the period	1,450	1,394
Reversal of the risk adjustment for non-financial risk	151	148
Amortization of the contractual service margin	748	687
Amortization of acquisition cash flows	184	165
Other income items	38	41
Revenue from insurance contracts issued (excluding PAA)	2,571	2,434
Revenue from insurance contracts issued – PAA	2,147	2,038
TOTAL REVENUE FROM INSURANCE CONTRACTS ISSUED	**4,718**	**4,472**

9.1.2 Service expenses from insurance contracts issued

Accounting principles

Service expenses from insurance contracts issued (including reinsurance treaties issued) include:

- services and expenses incurred (excluding repayments of investment components). They include in particular claims expenses, attributable management fees and commissions, the portion attributable to insurance contracts issued of operating expenses or depreciation, amortization and impairment, which are presented in NBI under IFRS 17;
- recognition and reversal of onerous components, *i.e.* losses on onerous groups of contracts and reversals of such losses;
- amortization of acquisition costs and experience adjustments (difference between estimated and actual amounts) on current and past service acquisition costs.

in millions of euros	2024 fiscal year	2023 fiscal year
Services and expenses incurred	(3,393)	(3,046)
Recognition and recovery of onerous components	16	(51)
Acquisition costs	(539)	(482)
TOTAL SERVICE EXPENSES FROM INSURANCE CONTRACTS ISSUED	**(3,915)**	**(3,579)**

9.1.3 Income and expenses from reinsurance contracts held

Accounting principles

IFRS 17 requires that the aggregates in respect of held reinsurance treaties be presented separately from the income and expenses from insurance contracts issued.

Income and expenses from reinsurance contracts held therefore includes:

- on the one hand, cession expenses (cost of reinsurance);
- on the other hand, cession income (amounts recoverable from reinsurers).

in millions of euros	2024 fiscal year	2023 fiscal year
Cession expenses	(1,142)	(1,264)
Cession income	989	1,108
TOTAL INCOME OR EXPENSES FROM REINSURANCE CONTRACTS HELD	**(153)**	**(155)**

9.1.4 Net investment income from insurance activities

Accounting principles

The item includes net income from insurance financial investments valued in accordance with IFRS 9 and net income from insurance investment property valued in accordance with IAS 40.

The accounting principles applicable under IFRS 9 are presented in Note 2.5.1 for general accounting principles and in Note 4 for specific accounting principles.

Insurance investment property covered by IAS 40 is measured at historical cost or at fair value with the change recognized in profit or loss in the case of properties underlying insurance contracts with direct participation features.

in millions of euros	2024 fiscal year	2023 fiscal year
Interest and similar income	1,121	1,019
Interest and similar expenses	(39)	(105)
Gains (losses) on financial instruments at fair value through profit or loss	2,243	3,108
Net gains (losses) on financial instruments at fair value through other comprehensive income	(19)	(20)
Net income from investment property	(12)	(140)
TOTAL NET INVESTMENT INCOME FROM INSURANCE ACTIVITIES	**3,295**	**3,861**

9.1.5 Finance income or expenses from insurance contracts issued

Accounting principles

Finance income or expenses from insurance contracts issued recognized in net income include:

- the accretion effect, which corresponds to the unwinding of the discount on contracts at the current rate at the beginning of the period for contracts measured using the general approach and the PAA approach;
- the effect of the change in the current discount rate and the economic environment for contracts measured using the general approach and the PAA approach;
- finance income or expenses from insurance contracts with direct participation features (VFA), which correspond to the change in fair value of the underlying items;
- the effect of the risk mitigation option (see Note 9.2 Accounting principles), which under VFA results in the recognition in income of an item that would otherwise be allocated to CSM;
- reclassifications of items recognized in net income to equity in respect of the application of the disaggregation option or OCI option (see Note 9.2 Accounting principles).

Finance income or expenses from insurance contracts issued and recognized in equity reflect the application of the disaggregation option.

in millions of euros	2024 fiscal year	2023 fiscal year
Accretion effect	(30)	1
Change in interest rates and economic environment recognized in net income	(54)	(8)
Finance income or expenses from insurance contracts with direct profit-sharing	(3,457)	(5,825)
Effect of risk mitigation option	24	91
Reclassification of items recognized in net income to equity[1]	261	1,685
Finance income or expenses from insurance contracts issued recognized in net income	**(3,257)**	**(4,056)**
Finance income or expenses from insurance contracts issued recognized in equity[2]	(263)	(1,696)
TOTAL FINANCE INCOME OR EXPENSES FROM INSURANCE CONTRACTS ISSUED RECOGNIZED IN EQUITY AND NET INCOME	**(3,520)**	**(5,752)**

(1) Including reclassification of risk mitigation to equity.
(2) Mainly includes the disaggregation option and other movements relating to investments in associates and joint ventures.

9.1.6 Finance income or expenses from reinsurance contracts held

Accounting principles

This item includes, for held reinsurance treaties, aggregates identical to those appearing in finance income or expenses from insurance contracts issued, except for those concerning the VFA approach, which is not applicable to reinsurance.

in millions of euros	2024 fiscal year	2023 fiscal year
Accretion effect	3	3
Change in interest rates and economic environment recognized in net income	83	342
Reclassification of items recognized in net income to equity	(5)	(9)
Finance income or expenses from reinsurance contracts held recognized in net income	81	336
Finance income or expenses from held reinsurance contracts recognized in equity[1]	5	9
TOTAL FINANCE INCOME OR EXPENSES FROM REINSURANCE CONTRACTS HELD RECOGNIZED IN EQUITY AND NET INCOME	**86**	**345**

(1) Mainly includes the disaggregation option and other movements relating to investments in associates and joint ventures.

9.1.7 Cost of credit risk on insurance activities financial investments

Accounting principles

The cost of risk relates to debt instruments classified as financial assets at amortized cost or financial assets at fair value through other comprehensive income recyclable to profit or loss.

This item therefore covers net impairment and provision charges for credit risk.

Irrecoverable loans not covered by provisions for impairment are loans that have acquired the character of permanent loss before being provisioned in Stage 3.

in millions of euros	2024 fiscal year	2023 fiscal year
Net charge to provisions and provisions for impairment	5	(15)
TOTAL COST OF CREDIT RISK ON INSURANCE ACTIVITIES FINANCIAL INVESTMENTS[1]	**5**	**(15)**

(1) *Investments at amortized cost and at fair value through other comprehensive income.*

9.1.8 Overheads from insurance activities by nature and function

Accounting principles

IFRS 17 requires expenses directly attributable to insurance contracts to be presented within NBI. Non-attributable overheads are as operating expenses or as depreciation, amortization and impairment.

Overheads attributable to acquisition costs are spread over the life of the contracts according to criteria that reflect the passage of time. For BPCE, acquisition costs are mainly amortized at the same rate as the CSM, *i.e.* using the same coverage units.

in millions of euros	12/31/2024	12/31/2023
Payroll costs	**(296)**	**(288)**
Taxes other than on income	(35)	(35)
External services and other operating expenses	(286)	(271)
Other administrative costs	**(321)**	**(306)**
TOTAL OPERATING EXPENSES	(618)	(594)
Depreciation, amortization and impairment for property, plant and equipment and intangible assets	(38)	(37)
Amounts attributed to acquisition costs net of amortization	13	27
TOTAL INSURANCE ACTIVITIES OVERHEADS BY NATURE	**(643)**	**(604)**
Attributable acquisition costs	(111)	(88)
Attributable claims management expenses	(157)	(136)
Attributable administrative costs	(145)	(142)
Attributable financial management expenses	(17)	(13)
Other attributable overheads	(38)	(29)
Non-attributable overheads	(176)	(196)
TOTAL INSURANCE ACTIVITIES OVERHEADS BY FUNCTION	**(643)**	**(604)**

(1) Overheads of insurance entities relating to insurance contracts, excluding fees and commissions.

9.2 Notes to the balance sheet for the insurance activities

Accounting principles

On the balance sheet, commitments relating to IFRS 17 contracts are presented according to the asset or liability position of the carrying amount of IFRS 17 portfolios and the type of contract (separate presentation of the carrying amount of IFRS 17 portfolios of direct insurance contracts and issued reinsurance from that of held reinsurance treaties).

The carrying amount of commitments relating to IFRS 17 contracts also includes amounts of receivables and payables relating to insurance operations and held reinsurance operations.

BPCE applies the option of presenting insurance activities financial investments as a separate item on the assets side of the balance sheet, with the corollary of presenting net investment income from insurance activities on a separate line of the income statement, as authorized by ANC recommendation No. 2022-01 of April 8, 2022 (Note 9.2).

The accounting principles applicable to insurance financial investments (other than investment property) are governed by IFRS 9 and are presented in Note 2.5.1 for general accounting principles and in Note 5 for specific accounting principles.

The accounting principles applicable to insurance investment property, which are covered by IAS 40, are described in Note 9.2.4.

9.2.1 Insurance activities financial investments

in millions of euros	12/31/2024	12/31/2023
Financial assets at fair value through profit or loss	63,947	52,078
Hedging derivatives	82	87
Financial assets at fair value through other comprehensive income	41,331	39,876
Investment property	1,392	1,408
Loans and advances at amortized cost	742	1,211
TOTAL INSURANCE ACTIVITIES FINANCIAL INVESTMENTS	**107,493**	**94,660**

The tables below show the maturities of the insurance activities financial investments.

in millions of euros	Less than 1 month	From 1 month to 3 months	From 3 months to 1 year	From 1 year to 5 years	More than 5 years	Not determined	12/31/2024
Financial assets at fair value through profit or loss						63,947	63,947
Hedging derivatives					82		82
Financial assets at fair value through other comprehensive income	229	516	2,350	14,221	23,734	280	41,331
Loans and advances at amortized cost	14	22	19	101	77	509	742

Repurchase agreements	**7**		**7**	**55**		**55**
TOTAL	**35,879**	**28,068**	**63,947**	**27,680**	**24,398**	**52,078**

(1) The criteria used by BPCE to categorize financial assets at fair value through profit or loss if they do not meet the SPPI criterion are provided in Note 2.5.1.
(2) Financial instruments mandatorily measured at fair value through profit or loss include basic (non-SPPI) debt instruments for €25,092 million as well as equity instruments for which it has not been chosen to measure them through equity.
(3) Financial instruments measured at fair value through profit or loss considered part of a trading activity and similar mainly include investments on unit-linked contracts.

At December 31, 2024, financial assets classified at fair value through profit or loss mainly comprise investments in unit-linked funds (UCITS or FCPR) and non-standard UCITS.

Non-basic assets (non-SPPI) are essentially non-standard UCITS.

9.2.5 Assets at amortized cost

Accounting principles: See Note 5.5

in millions of euros	12/31/2024	12/31/2023
Loans and advances to banks at amortized cost	239	251
Loans and advances to customers at amortized cost	509	963
Impairment	(6)	(3)
TOTAL ASSETS AT AMORTIZED COST	**742**	**1,211**

9.2.6 Fair value hierarchy of insurance activities investments at fair value

(1) Accounting principles: See Note 10.1

	12/31/2024			
in millions of euros	Listing on an active market (Level 1)	Measurement techniques using observable data (Level 2)	Measurement techniques using unobservable data (Level 3)	TOTAL
FINANCIAL ASSETS

9.2.8 Financial liabilities at fair value through profit or loss

Information on financial liabilities at fair value through profit or loss of insurance subsidiaries required by IFRS 17 is included in Note 5.2.2.

9.2.9 Amounts due to banks and similar and customers

Information on amounts due to banks and customers of insurance subsidiaries required by IFRS 17 is included in Note 5.11.

9.2.10 Debt securities

Information on debt securities of insurance subsidiaries required by IFRS 17 is included in Note 5.10.

9.2.11 Subordinated debt

Information on subordinated debt of insurance subsidiaries required by IFRS 17 is included in Note 5.14.

9.3 Exposures to risks

Certain credit risk management disclosures required by IFRS 7 are presented in Chapter 7 "Risk factors and risk management – Insurance, asset management, financial conglomerate risks". The same applies to certain information relating to concentration, market and liquidity risks required by IFRS 7.

This information forms an integral part of the financial statements certified by the Statutory Auditors.

9.3.1 Impairment for credit risk

Impairment charges for credit risk are presented in Note 9.2.7 and Note 7.

9.3.2 Change in gross carrying amounts and expected credit losses on financial assets and commitments

9.3.2.1 Change in the gross carrying amount and credit losses on financial assets through other comprehensive income

9.3.3 Market risk

Sensitivity of financial assets and insurance liabilities to equity market risks

The sensitivity analysis consisted in measuring the impact of a 10% change in the equity market in respect of financial assets and insurance contracts. This information is presented net of deferred taxes.

The scope of financial assets studied includes equities, UCITS carrying an equity risk, structured products and convertible bonds held by the main insurance entities. The scope of insurance contracts studied covers direct business insurance contracts, mainly relating to the investment pension business of the main insurance entities.

At December 31, 2024

	Impact on net income			Impact on equity[1]

Sensitivity to interest rates						
+100 bps change in interest rates	887	(980)	(93)	2,547	(2,815)	(268)
-100 bps change in interest rates	(952)	1,098	146	(2,818)	3,154	336

(1) The impact on equity includes the impact on net income.

9.3.4 Liquidity risk

Maturity of cash flows from liabilities related to insurance and held reinsurance contracts

in millions of euros	12/31/2024[(1)]						
	< 1 year	From 1 year to 2 years	From 2 years to 3 years	From 3 years to 4 years	From 4 years to 5 years	> 5 years	TOTAL
Insurance contracts issued - Liabilities	5,786	5,115	4,796	4,658	4,528	76,373	101,254
Reinsurance contracts held – Liabilities	200	5	8	9	8	(101)	129

(1) This table presents, for all insurance contracts issued and reinsurance contracts held, which are liabilities, the projected maturity of the present value of future cash flows (Best Estimate).

in millions of euros	12/31/2023[(1)]			
	< 1 year	From 1 year to 5 years	> 5 years	TOTAL
Liabilities arising from insurance contracts issued	7,314	23,205	67,345	97,863
Liabilities arising from reinsurance contracts held	168	(43)	(30)	95

(1) This schedule includes all of the Insurance contracts issued - Liabilities and Reinsurance contracts held - Liabilities included in the balance sheet.

The amounts payable on demand correspond to the total outstandings of insurance contracts, in the build up phase, for which policyholders have a surrender option or which are transferable to a third-party insurer, as well as the value of receivables and liabilities arising from these contracts. The contracts concerned correspond to investment pension contracts and funeral contracts. At December 31, 2024, the amounts payable on demand under these contracts amounted to €113,544 million compared to €101,903 million at December 31, 2023. The IFRS carrying amount of the contracts to which these amounts payable on demand relate was €103,514 million on December 31, 2024, compared to €88,556 million at December 31, 2023.

9.3.5 Insurance risk

Sensitivities of insurance contracts to insurance risks

The scope of insurance contracts studied covers insurance contracts in direct business (for the gross portion of reinsurance held), mainly for investment pension, payment protection insurance, non-life insurance and guarantee activities for the main insurance entities.

The main assumptions used in the valuation of insurance contracts for the closing of the financial statements at December 31, 2024 are presented in Note 9 General principles. These include mortality, surrender and claims assumptions.

The information is presented net of deferred taxes.

At December 31, 2024

in millions of euros	Change in assumptions	Impact on net income		Impact on equity[1]	
		Gross of reinsurance held	Net of reinsurance held	Gross of reinsurance held	Net of reinsurance held
Investment pensions and payment protection activities					
Surrender	10%	(6)	(6)	(8)	(8)
Surrender	(10%)	7	7	9	9
Mortality	10%	(20)	(20)	(12)	(12)
Mortality	(10%)	20	20	12	12
Guarantee activities[2]					
Ultimate claims costs	5%	(43)	(43)	(43)	(43)
Ultimate claims costs	(5%)	43	43	43	43

(1) The impact on equity includes the impact on net income.
(2) Including probability of default at ultimate net of recourse for the guarantee activity

At December 31, 2023

in millions of euros	Change in assumptions	Impact on net income		Impact on equity[1]	
		Gross of reinsurance held	Net of reinsurance held	Gross of reinsurance held	Net of reinsurance held
Investment pensions and payment protection activities					
Surrender	10%	(6)	(6)	(7)	(7)
Surrender	(10%)	6	6	7	7
Mortality	10%	(19)	(19)	(8)	(8)
Mortality	(10%)	19	19	8	8
Guarantee activities[2]					
Ultimate claims costs	5%	(40)	(40)	(40)	(40)
Ultimate claims costs	(5%)	40	40	40	39

(1) The impact on equity includes the impact on net income.
(2) Including probability of default at ultimate net of recourse for the guarantee activity

9.3.6 Concentration risks

It should be noted that BPCE has a very low concentration due to the geographical dispersion of its policyholders, inherent in the distribution of contracts mainly in the retail banking networks established throughout France. The reinsurance program also limits the concentration of risks.

Note 10 / Fair value of financial assets and liabilities

Key points

This section sets out the principles for measuring the fair value of financial instruments as defined in IFRS 13 “Fair Value Measurement” and the methods used by BPCE entities to measure the value of their financial instruments.

Financial assets and liabilities are recorded in the balance sheet either at fair value or at amortized cost. An indication of the fair value of items measured at amortized cost is provided in the notes.

For instruments traded on an active market with a quoted price, the fair value is equal to the quoted price, corresponding to Level 1 in the fair value hierarchy.

The fair value of other financial instruments not traded on an active market, including in particular loans, borrowings and derivatives traded over the counter, is calculated using valuation techniques that rely on widely used models and observable data, corresponding to Level 2 in the fair value hierarchy. When internal data or proprietary models are used (Level 3 in the fair value hierarchy), independent controls are used to validate the value obtained.

DETERMINATION OF FAIR VALUE

General principles

The fair value of an instrument is the price that would be received to sell an asset or paid to transfer a liability in a standard arm’s length transaction between market participants at the valuation date.

Fair value is therefore based on the exit price.

On first recognition, fair value is usually the transaction price and is thus the price paid to purchase the asset or the price received to assume the liability.

In subsequent measurements, the estimated fair value of assets and liabilities must be based primarily on observable market data, while ensuring that all inputs used in the fair value calculation are consistent with the price that market participants would use in a transaction.

In this case, fair value consists of a mid-market price and additional valuation adjustments determined according to the instruments in question and the associated risks.

The mid-market price is obtained based on:

- the instrument’s quoted price if the instrument is quoted on an active market. A financial instrument is regarded as quoted on an active market if quoted prices are readily and regularly available from a Stock Exchange, dealer, broker, industry group, pricing service or regulatory agency, and these prices represent actual and regularly occurring transactions on the principal market or, failing that, on the most favorable market, on an arm’s length basis;
- if the market for a financial instrument is not active, fair value is established using valuation techniques. The techniques used must maximize the use of relevant observable entry data and minimize the use of non-observable entry data. They may refer to observable data from recent transactions, the fair value of similar instruments, discounted cash flow analysis and option pricing models, proprietary models in the case of hybrid instruments or non-observable data when no pricing or market data are available.

Additional valuation adjustments include factors related to valuation uncertainties, such as market and credit risk premiums, in order to recognize the costs incurred by a divestment transaction on the principal market.

The main additional adjustments are as follows:

BID/ASK ADJUSTMENT – LIQUIDITY RISK

This adjustment is the difference between the bid price and the ask price corresponding to the selling costs. It reflects the cost requested by a market player in respect of the risk of acquiring a position or of selling at a price proposed by another market player.

MODEL UNCERTAINTY ADJUSTMENT

This adjustment takes into account imperfections in the valuation techniques used, and in particular risk factors not considered even though observable market inputs are available. This is the case when the risks inherent in the instruments differ from those incurred by the observable market data used to determine their valuation.

INPUT UNCERTAINTY ADJUSTMENT

Observing certain prices or inputs used in valuation techniques may be difficult or the price or input may not be available on a sufficiently regular basis to determine the exit price. Under these circumstances, an adjustment may be necessary to reflect the probability of different values being used by market participants for the same inputs when measuring the fair value of the financial instrument in question.

CREDIT VALUATION ADJUSTMENT (CVA)

This adjustment applies to valuations that do not account for the counterparty’s credit quality. It corresponds to the assessment of the loss linked to the risk of default by a counterparty and aims to take into account the fact that the Group may not recover the full market value of the transactions.

The method for determining the CVA is primarily based on the use of market inputs in connection with professional market practices, for all segments of counterparties subject to this calculation. In the absence of liquid market inputs, proxies by type of counterparty, rating and geographic area are used.

FUNDING VALUATION ADJUSTMENT (FVA)

The FVA is intended to take into account the liquidity cost associated with uncollateralized or imperfectly collateralized OTC derivatives. It is generated by the need to fund or refinance margin calls to be paid or received in the future, associated with hedging derivatives which are collateralized. Measuring a future financing/refinancing need (*i.e.* until maturity of the exposures), it is based on expected future exposures for non-collateralized derivatives and a yield liquidity curve of spread.

DEBIT VALUATION ADJUSTMENT (DVA)

The DVA is symmetrical to the CVA and represents the assessment of the loss, from the counterparty's perspective, on liability valuations of derivatives. It reflects the impact of the Group's credit quality on the valuation of these instruments. This adjustment is based on the observation of the zero coupon spread of a sample of comparable institutions, taking into account the level of liquidity of the BPCE zero coupon spread during the period. The DVA adjustment is established after taking into account the funding valuation adjustment (FVA).

DETERMINATION OF AN ACTIVE MARKET

The following criteria are used to determine whether or not a market is active:

- the level of activity and trend of the market (including the level of activity on the primary market);
- the length of historical data on prices observed in similar market transactions;
- scarcity of prices recovered by a service provider;
- wide bid-ask price spread; and
- steep price volatility over time or between different market participants.

The valuation control system is presented in Section 6.8 "Market risks".

Fair value hierarchy

For financial reporting purposes, IFRS 13 requires that the fair value of financial and non-financial instruments be broken down into a fair value hierarchy that reflects the level of observability of the models and inputs used to perform the valuations. The fair value hierarchy is presented in the following three fair value levels:

- Level 1: market values are determined directly using prices quoted on active markets for identical assets or liabilities;
- Level 2: market values are determined using valuation techniques whose significant parameters are observable on the markets, either directly or indirectly;
- Level 3: market values are determined using valuation models that are not recognized and/or are based on parameters that are not observable on the market, insofar as these are likely to have a significant impact on valuation.

For derivatives, the fair values are broken down according to the dominant risk factor, namely interest rate risk, foreign exchange risk, credit risk and equity risk.

LEVEL 1: VALUATION USING PRICES QUOTED ON A LIQUID MARKET

Level 1 comprises instruments whose fair value is determined based on directly usable prices quoted on active markets.

Level 1 mainly includes securities listed on a Stock Exchange or traded continuously on other active markets, derivatives traded on organized markets (futures, options, etc.) whose liquidity can be demonstrated, and units of UCITS that calculate and report their net asset value on a daily basis.

LEVEL 2: VALUATION USING OBSERVABLE MARKET MODELS AND INPUTS

Level 2 fair value comprises instruments other than those mentioned in Level 1 fair value and instruments measured using a valuation technique incorporating inputs that are either directly observable (prices) or indirectly observable (derived from prices) through to the instrument's maturity. This mainly includes:

Simple instruments:

Most over-the-counter derivatives, swaps, credit derivatives, forward rate agreements, caps, floors and plain vanilla options are traded in active markets, *i.e.* liquid markets in which trades occur regularly.

These instruments are valued using generally accepted models (discounted future cash flow method, Black & Scholes model, interpolation techniques), and on the basis of directly observable inputs.

For these instruments, the extent to which models are used and the observability of inputs has been documented.

Instruments measured using Level 2 inputs also include:

- securities that are less liquid than those classified as Level 1, whose fair value is determined based on external prices put forward by a reasonable number of active market makers and which are regularly observable without necessarily being directly executable (prices mainly taken from contribution and consensus databases); where these criteria are not met, the securities are classified as Level 3 fair value;
- securities not quoted on an active market whose fair value is determined based on observable market data (for example, using market data for listed peers or the earnings multiple method based on techniques widely used in the market);
- shares of UCITS that do not calculate and report their net asset value on a daily basis but which are subject to regular reporting or which offer observable data from recent transactions;
- issued debt instruments designated at fair value when the underlying derivatives are classified as Level 2;
- "issuer credit risk" is also considered to be observable. It is measured using the discounted future cash flow method, using inputs such as the yield curve and revaluation spreads. For each issue, this valuation represents the sum of the notional amount outstanding and its sensitivity, taking into account the existence of calls and the difference between the revaluation spread (based on the BPCE cash reoffer curve at December 31, 2023, as for previous closing dates) and the average issue spread. Changes in revaluation of own debt are generally not material for issues with an initial maturity of less than one year.

Complex instruments:

Certain hybrid and/or long-maturity financial instruments are measured using a recognized model on the basis of market inputs derived from observable data such as yield curves, implied volatility layers of options, market consensus data or active over-the-counter markets.

The main models for determining the fair value of these instruments are described below by type of product:

- **equity products:** equity products generally have specific characteristics which justify the choice of model.

The main models used for equity products are local volatility, local volatility combined with Hull & White one factor (H&W1F) and Local Stochastic Volatility ("LSV") and may be available in a single or multi-underlying framework.

The local volatility model treats volatility as a function of time and the price of the underlying. Its main property is that it considers the implied volatility of the option (derived from market data) relative to its exercise price.

The local volatility hybrid model, paired with the H&W1F, consists in pairing the local volatility model described above with a Hull & White one-factor type fixed income model, described below (see fixed-income products).

The LSV model is based on the joint diffusion of the underlying asset and its volatility (two factors in total), with a local volatility function (known as a decorator), to ensure consistency with all vanilla options;

- **fixed income products:** fixed income products generally have specific characteristics which justify the choice of model.

The main models used to value and manage fixed income products are the Hull & White one-factor (H&W1F), two-factor (H&W2F) and one-factor stochastic volatility (H&W1FVS) models.

The H&W1F model is used to model the yield curve with a single Gaussian factor, calibrated on vanilla interest rate options.

The H&W2F model is used to model the yield curve with two factors, calibrated on vanilla interest rate options and spread-option type instruments.

The H&W1VS model is used to model both the Gaussian factor representing the yield curve and its volatility (like the LSV model for equities);

- **foreign exchange products:** foreign exchange products generally have specific characteristics which justify the choice of model.

The main models used to value and manage foreign exchange products are local and stochastic volatility models (like the LSV model for Equity), as well as hybrid models, which combine modeling of the underlying foreign exchange transaction with two Hull & White one-factor models to understand the yield curves of domestic and foreign economies;

- **credit derivatives:** the products generally have specific characteristics which justify the choice of model.

The main models used to value and manage credit products are the Hull & White one credit factor model (H&W1F Credit) and the hybrid Bi-Hull & White Rate/Credit model (Bi-H&W Rate/Credit).

The H&W1F Credit model allows the diffusion of the credit curve (CDS curve) with a Gaussian factor.

The Bi-H&W Rate/Credit model allows for the joint diffusion of the yield curve and the credit curve, each with a Gaussian factor correlated between them.

- **commodity products:** commodity products generally have specific characteristics which justify the choice of model.

The main models used to value and manage commodity products are the Black & Scholes models, with local volatility and local volatility combined with the Hull & White one factor (H&W1F), a version extended for all these models to a multi-underlying framework to manage all the futures of the commodity family.

The Black & Scholes model is based on lognormal dynamics of the underlying asset and a deterministic volatility assumption.

The local volatility model treats volatility as a function of time and the price of the underlying. Its main property is that it considers the implied volatility of the option (derived from market data) relative to its exercise price.

The H&W1F model consists of coupling the local volatility model described above with a Hull & White one-factor fixed income model described above (see fixed-income products).

The inputs relating to all Level 2 instruments were demonstrated to be observable and documented. From a methodology perspective, observability is based on four inseparable criteria:

- inputs are derived from external sources (primarily a recognized contributor, for example);
- they are updated periodically;
- they are representative of recent transactions;
- their characteristics parameters are identical to the characteristics of the transaction. If necessary, a proxy may be used, provided that the relevance of such an arrangement is demonstrated and documented.

The fair value of instruments obtained using valuation models is adjusted to take account of liquidity risk (bid-ask), counterparty risk, the risk relating to the cost of financing uncollateralized or partially collateralized derivatives, own credit risk (measurement of liability derivative positions), and modeling and input risk.

The margin generated when these instruments begin trading is immediately taken to profit or loss.

LEVEL 3: VALUATION USING UNOBSERVABLE MARKET INPUTS

Level 3 comprises instruments measured using unrecognized models and/or models based on unobservable market data, where they are liable to materially impact the valuation. This mainly includes:

- unlisted shares whose fair value could not be determined using observable inputs;
- private equity securities not listed on an active market, measured at fair value with models commonly used by market participants, in accordance with International Private Equity Valuation (IPEV) standards, but which are sensitive to market fluctuations and whose fair value determination necessarily involves a judgment call;

- hybrid equity, interest rate, currency derivatives and credit derivatives that are not classified in Level 2;
- loans to be syndicated for which there is no secondary market price;
- loans in the securitization process for which fair value is determined based on an expert appraisal;
- loan trading activity for which the market is illiquid;
- investment property whose fair value is calculated using a multi-criteria approach, by capitalizing rent at market rates and through comparisons with market transactions;
- instruments with a deferred day one margin;
- units of UCITS for which the fund has not published a recent NAV at the valuation date, or for which there is a lock-up period or any other constraint calling for a significant adjustment to available market prices (NAV, etc.) in respect of the low liquidity observed for such shares;
- issued debt instruments designated at fair value are classified as Level 3 when the underlying derivatives are classified as Level 3. The associated "issuer credit risk" is regarded as observable and it is therefore classified as Level 2;
- CDS contracted with credit enhancers (monoline insurers), for which the valuation model used to measure write downs is similar to the Credit Valuation Adjustment (CVA) used for counterparty risk. The model also takes into account the expected amortization of exposures and the counterparty spread implicit in market data;
- plain vanilla derivatives are also classified as Level 3 fair value when the exposure is beyond the liquidity horizon determined by underlying currencies or by volatility ranges (*e.g.* certain foreign currency options and volatility caps/floors).

In accordance with Regulation 2019/876 of May 20, 2019 (CRR II) amending European Regulation 575/2013 of June 26, 2013 (CRR) relating to Pillar III requirements, for each of the models used, a description of the stress tests applied and the *ex-post* control system (validation of the accuracy and consistency of the internal models and modeling procedures) is provided in Chapter 7 "Risk management".

Under IFRS 9, day one profit should be recognized only if it is generated by a change in the factors that market participants would consider in setting a price, *i.e.* only if the model and parameters input into the valuation are observable.

If the selected valuation model is not recognized by current market practices, or if one of the inputs significantly affecting the instrument's valuation is not observable, the trading profit on the trade date cannot be recognized immediately in the income statement. It is taken to income on a straight-line basis over the life of the transaction or until the date the inputs become observable. Any losses incurred at the trade date are immediately recognized in income statement.

At December 31, 2024, the scope of instruments for which the recognition of day one profit/loss has been deferred mainly included:

- multi-underlying structured equity and index products;
- mono-underlying structured products indexed to sponsored indexes;
- synthetic loans;
- options on funds (multi-assets and mutual funds);
- structured fixed income products;
- securitization swaps.

The table below provides the main unobservable inputs and the value ranges for these instruments at December 31, 2024:

Instrument class	Main types of products	Valuation techniques used	Main unobservable data	Unobservable data ranges min - max (Dec. 2024)
Interest rate derivatives	Sticky CMS/Volatility Bonds	Interest rate options valuation models	Mean reversion inputs	[0.5%; 2.5%]
Interest rate derivatives	Callable Spread Options and Corridor Callable Spread Options	Model representing several yield curve factors	Mean reversion spread	[0%; 25%]
Interest rate derivatives	Bermuda Accreting		Accreting factor	[2%; 4%]
Interest rate derivatives	Volatility caps/floors	Interest rate options valuation models	Interest rate volatility	[59 bps; 113 bps]
Equity	Simple and complex equity, equity basket or fund derivatives	Different valuation models for equity, equity basket or fund options	Equity volatility	[9%; 159%]
			Fund volatility	[0%; 30%]
			Stock/stock correlation	[(8.87%); 99%]
			Repo of general baskets	[(0.76%); 1.11%]
Forex	Exchange rate derivatives	Exchange rate option valuation models	Currency volatility	[2.04%; 16.05%]
Forex	Long-term PRDC/PRDKO/TARN	Hybrid currency/interest rate options valuation model	Correlation between foreign exchange rates and interest rates as well as long-term volatility levels	[(40%); 60%]
				[2.615%; 17.15%]
Credit	CDO	The default rates are based on the market prices of the underlying PFI bonds, and the recovery rates are based on historical ratings agency data	Correlation between the asset base spread between the cash asset and derivative asset, recovery rate	50%
Credit	Securitization swaps	Discounted expected cash flows based on early redemption assumptions on the underlying portfolio	Prepayment rate	[27.6%; 53.9%]
Hybrids	Hybrid equity/fixed income/forex (FX) derivatives	Hybrid models coupled with equity, forex and interest rate diffusion	Equity-FX correlations	[(91%); 63%]
			Equity-FI correlations	[11.87; 22.58]
			FI-FX correlations	[(23%); 0.4%]
Forex	Helvetix: Strip of long-term options, Strip of quanto options, Strip of digital options	Black & Scholes model	EUR/CHF / EUR/USD correlations	[32.88%; 34.44%]
	Helvetix: Options spread, and digital options spread	Gaussian copula	Long-term USD/CHF & EUR/CHF volatility	USD/CHF volatility: [8.42%; 11.09%] - EUR/CHF volatility: [7.14%; 8.39%]

Group policy on fair value transfers

Transfers between fair value levels are reviewed and validated by the Valuation Committee, which includes the Finance and Risk Management functions and the business lines. To do so, the Committee relies on observability studies of the valuation models and/or inputs that are carried out periodically.

These fair value transfers are also presented to the Umbrella Valuation Committee, which did not note any significant events during the 2024 fiscal year.

As a reminder, the main reclassification carried out at December 31, 2023, concerned the transfer to Level 2 of the fair value of certain OTC derivatives and issues, due to the automatic application of the materiality process of the valuation models and/or unobservable parameters on a broader scope of transactions at Level 3.

Instruments not carried at fair value on the balance sheet

IFRS 13 requires disclosure in the notes to the financial statements of the fair value, and the associated fair value levels, of all financial instruments carried at amortized cost, including loans. These fair values represent an estimate of the fair value of the instruments measured at amortized cost as at December 31, 2024. They may fluctuate from day to day due to changes in several parameters, including interest rates and the quality of counterparties' loans. They may, therefore, be significantly different from the amounts actually received or paid on the maturity date of these instruments. In the majority of cases, these fair values are not intended to be immediately realized and they do not represent the effective fair value of the instruments from a going concern perspective. The valuation methods used to determine the fair value disclosed in the notes to the financial statements are described below.

ASSETS AND LIABILITIES OF THE GFS BUSINESS LINES AND THE BPCE CASH MANAGEMENT POOL

Credit and loans recognized at amortized cost and amounts payable under finance leases

The fair value of these instruments is determined by discounting future cash flows. The discount rate applied for a given loan is the rate at which the Group would grant a loan with similar characteristics to a similar counterparty at the closing date. The interest rate and counterparty risk components are reassessed.

The fair value of repurchase agreements is calculated by discounting expected cash flows at the market rate on the reporting date and adding a liquidity spread.

If there is a quoted price that meets the criteria of IFRS 13, the quoted price is used.

The fair value of loans with an initial term of less than one year is generally considered to be their carrying amount. This is also the case for financial assets with a term of one year or less and current accounts. The corresponding receivables are classified in Level 2 of the fair value hierarchy. Loans and advances granted to affiliates are also classified in Level 2.

Borrowings and savings

Within the GFS division, the assessment of the fair value of securities borrowings and debts is based on the method of discounting future cash flows using inputs on the closing date such as the interest rate curve of the underlying and the spread at which this division lends or borrows.

The fair value of debts maturing in less than one year is considered to be the carrying amount. In this case, the debts are classified in Level 2 of the fair value hierarchy, as are debts payable to affiliates.

The fair value of other amounts due to banks and customers with a term of over one year is deemed to be equal to the present value of future cash flows discounted at the interest rate observed at the reporting date, plus the own credit risk of BPCE.

Investment property recognized at cost

The fair value of investment property (excluding investment property held by insurance companies) is determined using the rent capitalization method, which is widely used by real estate professionals. The capitalization rate applied to the property depends on a number of factors such as location, the quality and type of building, use, type of ownership, quality of lessee and characteristics of the lease, the interest rate and competition in the real estate market.

FINANCIAL INSTRUMENTS OF THE RETAIL BANKING BUSINESS LINES

For financial instruments not measured at fair value on the balance sheet, fair value calculations are provided for information purposes and must only be interpreted as estimates.

In most cases, the values indicated are not liable to be realized and generally may not be realized in practice.

These fair values are thus only provided for information purposes in the notes to the financial statements. They are not indicators used in order to monitor retail banking activities, for which the business model is mainly based on the collection of contractual cash flows.

Consequently, the following simplified assumptions were used:

The carrying amount of the assets and liabilities is deemed to be their fair value in certain cases.

These notably include:

- short-term financial assets and liabilities (whose initial term is one year or less) provided that sensitivity to interest-rate risk and credit risk is not material during the period;
- demand liabilities;
- floating-rate loans and borrowings;
- transactions in a regulated market (particularly regulated savings products), whose prices are set by the public authorities.

Fair value of the loan portfolio

The fair value of loans is measured using internal valuation models that discount future payments of recoverable capital and interest over the remaining loan term. The "interest rate" component is thus revalued. Except when the data used by the managers are available, the "credit risk" component is established at the outset and not subsequently remeasured. Prepayment options are factored into the model *via* an adjustment to loan repayment schedules. Fair value of the loan portfolio to large companies, local authorities and credit institutions.

Fair value of debts

The fair value of fixed-rate debt owed to banks and customers with a term of over one year is deemed to be equal to the present value of future cash flows discounted at the interest rate observed at the reporting date. Own credit risk is not generally taken into account.

10.1 Fair value of financial assets and liabilities

10.1.1 Fair value hierarchy of financial assets and liabilities

The following statement provides a breakdown of financial instruments by type of price and valuation model:

10.1.4 Sensitivity of Level 3 assets and liabilities to changes in the principal assumptions

A sensitivity of the fair value of the instruments valued on the basis of the main non-observable parameters was assessed at December 31, 2024. The amounts reported below are intended to illustrate the uncertainty inherent in the use of judgment required to estimate the main unobservable inputs at the valuation date. It does not represent a measure of market risk on Level 3 instruments.

The estimate is based on the valuation adjustment policy. For equities and debt securities, the estimate is based on a shock of +/-1%. At December 31, 2024, the Group assessed the sensitivity of the fair value of the instruments of the Global Financial Services division measured using the main unobservable inputs. This sensitivity is intended to illustrate the uncertainty inherent in the use of judgment required to estimate the main unobservable inputs at the valuation date. It does not represent a measure of market risk on Level 3 instruments.

The estimate is based on the valuation adjustment policy. For equities and debt securities, the estimate is based on a shock of +/-1%.

The potential impact ranges between -€73 million and +€120 million in the income statement.

10.2 Fair value of financial assets and liabilities at amortized cost

For financial instruments not measured at fair value on the balance sheet, fair value calculations are provided for information purposes and must only be interpreted as estimates.

In most cases, the values indicated are not liable to be realized and generally may not be realized in practice.

These fair values are thus only provided for information purposes in the notes to the financial statements. They are not indicators used for management purposes in retail banking, whose business model is based on the collection of expected cash flows.

The simplified assumptions used to measure the fair value of instruments at amortized costs are presented in Note 10.1.

	12/31/2024

Note 11 / Income taxes

11.1 Income tax

Accounting principles

Income taxes include all domestic and foreign taxes payable on the basis of taxable profits. Income tax also includes taxes, such as withholding taxes, which are payable by a subsidiary, an associate or a joint arrangement on distributions of dividends to the entity that draws up financial statements. The CVAE (Business Added Value Tax) is not considered as an income tax.

Income taxes include:

- current taxes, which are the amount of income taxes payable on taxable profit or recoverable on a tax loss over a given period. They are calculated on the taxable income for the period for each fiscal entity in the tax consolidation scope by applying the applicable tax rates and rules set by the tax authorities and on the basis of which tax shall be paid (received);
- deferred taxes (see Note 11.2).

Where it is probable that one of the Group's tax positions will not be accepted by the tax authorities, this situation is reflected in the financial statements when calculating current tax (due or recoverable) and deferred tax (asset or liability).

IAS 12 "Income Taxes" gave no particular details on how to account for uncertainties in income taxes, and was clarified by IFRIC 23 "Uncertainty over Income Tax Treatments", which was adopted by the European Commission on October 23, 2018 with effect from January 1, 2019.

This interpretation clarifies how to apply the deferred income tax recognition and measurement requirements when there is uncertainty over income tax treatments. If there is doubt as to the acceptability of the income tax treatment by the tax authority under tax law, then this tax treatment is an uncertain tax treatment. Assuming it is likely that the tax authority will not accept the income tax treatment used, IFRIC 23 states that the amount of the uncertainty to be reflected in the financial statements shall be estimated using the method that will better predict the resolution of the uncertainty. To determine this amount, two approaches may be used: the most likely amount or the expected value of the tax treatment (that is, the weighted average of the different scenarios possible). Furthermore, IFRIC 23 requires the measurement of tax uncertainties to be reassessed if facts and circumstances change or new information arises.

The Group reflects uncertainties regarding its tax treatment for income tax in its financial statements when it deems it probable that the tax authority will not accept its treatment. To ascertain whether a tax position is uncertain and to assess its effect on the amount of tax, the Group assumes that the tax authority will examine all amounts reported and have full knowledge of all related information. It bases its judgment on administrative policy, case-law and on the existence of any corrections made by the administration relating to similar tax uncertainties. The Group revises the estimate of the amount it expects to pay or recover from the tax authority due to tax uncertainties in the event of changes in the associated facts and circumstances, as these changes may result from (including, but not limited to) changes in tax law, the expiry of a statutory limitation period, or the outcome of audits and measures conducted by the tax authorities.

When it is likely that the competent tax authorities will question the treatment adopted, these uncertainties are reflected in tax income and expenses by a provision for tax risks presented under tax liabilities.

The Group is audited for prior years. Where the Group disagrees with the rectification, it will state its reasons for doing so and, in accordance with the above, a provision will be recorded in the amount of the estimated risk.

Tax uncertainties are reported as assets or liabilities and according to whether they relate to a current or deferred tax under the balance sheet headings "Deferred tax assets", "Current tax assets", "Deferred tax liabilities" and "Current tax liabilities".

in millions of euros	2024 fiscal year	2023 fiscal year
Current taxes[(1)]	(566)	(460)
Deferred taxes	(158)	(249)
INCOME TAXES	**(724)**	**(709)**

(1) The rules of the OECD Pillar II aiming at the implementation of a minimum global corporate tax rate of 15%, transposed into French law by the Finance act for 2024, are now applicable to fiscal years beginning from January 1, 2024. In this context, Groupe BPCE applies the exception provided by the amendment to IAS 12 of May 2023 on the recognition of deferred taxes assets and liabilities related to the OECD Pillar II income taxes. In accordance with the amendment, the amount of the additional tax in respect of Pillar II is presented under the current tax expense. This first estimate of the current tax expense is made on the basis of data available to date.

RECONCILIATION BETWEEN THE TAX EXPENSE IN THE FINANCIAL STATEMENTS AND THE THEORETICAL TAX EXPENSE

	2024 fiscal year		2023 fiscal year	
	in millions of euros	Tax rate	*in millions of euros*	Tax rate
Net income (attributable to equity holders of the parent)	1,712		1,229	
Value adjustments on goodwill	0		0	
Non-controlling interests	(67)		7	
Share in net income of equity-accounted associates	48		3	
Income taxes	(724)		709	
INCOME BEFORE TAX AND VALUE ADJUSTMENTS ON GOODWILL	2,455		1,947	
Effects of permanent differences[(1)]	25		296	
Consolidated taxable income (A)	**2,480**		**2,243**	
Standard income tax rate in France (B)		**25.83%**		**25.83%**
Theoretical tax expense (income) at the tax rate applicable in France (AxB)	**(641)**		**(579)**	
Impact of the change in unrecognized deferred tax assets and liabilities	4		(33)	
Reduced rate of tax and tax-exempt activities	10		4	
Difference in tax rates on income taxed outside France	21		38	
Tax on prior periods, tax credits and other taxes[(2)]	29		(30)	
Other items[(3)]	(147)		(109)	
INCOME TAX EXPENSE (INCOME) RECOGNIZED	(724)		(709)	
EFFECTIVE TAX RATE (INCOME TAX EXPENSE DIVIDED BY TAXABLE INCOME)		**29.19%**		**31.61%**

(1) The permanent differences mainly include the impact of the add-backs of the share of costs and expenses on the dividends received. In 2023, they also included the impact of the contribution to the SRF (Single Resolution Fund).
(2) Tax on prior periods, tax credits and other taxes mainly include the impacts of corporate tax liquidation on companies.
(3) Other items mainly include the effects of provisions for tax adjustments and the Group's tax consolidation (including the Group's tax credits now presented on this item).

11.2 Deferred taxes

Accounting principles

Deferred tax assets and liabilities are recognized when temporary differences arise between the carrying amount of assets and liabilities on the balance sheet and their tax base, irrespective of when the tax is expected to be recovered or settled.

The tax rate and tax rules used to calculate deferred taxes are those resulting from current tax legislation, and which will be applicable when the tax becomes payable or recoverable.

Deferred tax liabilities and assets are offset at the level of each tax entity. The tax entity may either be a single entity or a tax consolidation group. Deferred tax assets are recognized only to the extent that it is probable that the entity will be able to recover them in the foreseeable future.

Deferred tax assets and liabilities are recognized as tax income or expense in the income statement, except for those related to:

- revaluation differences on post-employment benefits;
- unrealized gains and losses on financial assets at fair value through other comprehensive income; and
- changes in the fair value of derivatives used as cash flow hedges;

for which the corresponding deferred tax assets and liabilities are recognized as unrealized gains and losses directly in other comprehensive income.

Deferred tax assets and liabilities are not discounted to their present value.

On May 23, 2023, the International Accounting Standards Board (IASB), in charge of preparing IFRS, published the final version of the amendment to IAS 12 on tax accounting. It specifically deals with the expected accounting impacts of the application of the entry into force of the OECD's so-called "Pillar II" tax rules aimed at implementing a set minimum global corporate tax rate at 15%. The proposed amendments to the standard seek an exemption from the recognition of deferred taxes associated with this additional tax with, in return, information to be provided in the notes to the financial statements. This text applies to the annual financial statements as of January 1, 2023, *i.e.* for BPCE, to the consolidated financial statements for December 31, 2023.

BPCE has set up a project structure to monitor the various associated regulations as well as compliance with Pillar II rules and the additional information requirements introduced by these amendments to IAS 12. At this stage of the project, it appears that the number of jurisdictions that would be affected by the application of a top-up-tax should be limited and the financial stakes not significant. Given the insignificant nature of its potential exposure, the Group will not publish data on exposure to this additional tax in the context of this closing.

Deferred tax assets and liabilities on temporary differences arise from the recognition of the items listed in the statement below (positive figures indicate deferred tax assets, while negative figures in brackets represent deferred tax liabilities):

in millions of euros	2024 fiscal year	2023 fiscal year[1]
Deferred taxes resulting from accounting-tax timing differences	**1,913**	**1,877**
Provisions for employee-related liabilities	72	71
Provisions for regulated home savings products	1	1
Provisions on a portfolio basis	155	132
Other non-deductible provisions	431	426
Deferred tax on tax loss carryforwards[2]	1,702	1,785
Unrecognized deferred tax assets and liabilities[2]	(890)	(882)
Other sources of temporary differences	443	343

Own credit risk	(81)	(86)
Unrecognized deferred tax assets and liabilities	0	0
Deferred income taxes[4]	**(1,102)**	**(892)**
NET DEFERRED TAX ASSETS AND LIABILITIES	**620**	**774**
Recognized		
- As assets in the balance sheet	1,835	2,110
- As liabilities in the balance sheet	(1,215)	(1,337)

(1) 2023 restated figures (see 6.3.4 Statement of changes in equity).
(2) The amount of deferred tax on losses recognized is €812 million, of which €503 million is capitalized on the loss from Natixis SA and its previous tax consolidation. The tax loss base capitalized by Natixis in France is €1,946 million out of a total of €2,276 million of tax loss carryforwards. At December 31, 2023, Natixis performed tests to measure the potential impact on its deferred tax assets of the assumptions made to prepare tax business plans. These tests, which measure in particular the impact of a +/-10% variation in NBI growth assumptions, confirm the probability for Natixis of being able to offset its tax losses against future taxable profits, which are taken into account for the purposes of capitalizing deferred taxes.
(3) Deferred taxes associated with these instruments are presented net of deferred taxes corresponding to the cancellation of provisions for impairment under French GAAP.
(4) Of which a deferred tax liability relating to the tax amortization of goodwill by Natixis in the United States.

Deferred tax assets are only recognized at the reporting date if it is probable that the tax entity concerned will recover the tax savings over a specified period. BPCE applies the following principles:

- the tax business plans are based on the strategic plan (four years) with a longer-term projection;
- as a precaution, the maximum timeframe used to capitalize a net deferred tax asset is 10 years.

These savings will be realized by deducting tax differences and losses carried forward against profits estimated future taxable liabilities within this horizon.

At December 31, 2024, deductible temporary differences, tax losses and unused tax credits for which no deferred tax asset has been recorded in the balance sheet amounted to €896 million.

Note 12 / Other information

12.1 Segment reporting

BPCE has two core business lines:

Retail Banking and Insurance, which is central to the transformation, includes:

- the Financial Solutions & Expertise (FSE) division, encompassing the specialized financing activities: factoring, leasing, consumer loans, sureties & financial guarantees, and the "retail securities" business, in addition to Socfim, BPCE Solutions immobilières and Pramex;
- Insurance, serving the Groupe BPCE networks and their customers through two core business lines: Personal Insurance (life insurance, personal and payment protection insurance) and non-life insurance (mainly vehicles, multi-risk home insurance, personal accident insurance, legal protection and health);
- the Digital & Payments division, which brings together the Payments activities and the activities of Oney, in order to support the digitization of retail and strengthen the quality of service from end to end of the payment chain;
- the Other Networks, including Banque Palatine, the bank for mid-sized companies and their managers, and private banking, support their customers through long-term relationships based on close relationships, a wealth of expertise and tailor-made solutions.

Global Financial Services, comprising the two divisions of Natixis:

- Asset & Wealth Management: Asset Management, present on the various international markets, brings together the expertise of management and distribution companies as well as employee savings ("Natixis Interépargne", the leading player in employee savings account management in France),
  - Wealth Management, with Natixis Wealth Management, which offers wealth management and financing solutions for large private investors;
- Corporate & Investment Banking:

  Corporate & Investment Banking advises and supports corporates, institutional investors, Insurance companies, banks, public sector entities and film and audiovisual financing.
- The Corporate center, which primarily includes:
  - the Group's central institution and holding companies;
  - run-off activities of Crédit Foncier and BPCE International;
  - cross-business activities;
  - the contribution to the Single Resolution Fund and the contribution to the Deposit Guarantee Fund.

12.2 Information on leases

12.2.1 Leases as lessor

Accounting principles

Leases are analyzed to determine whether in substance and economic reality they are operating leases or finance leases.

Finance leases

A finance lease is a lease that transfers to the lessee most of the risks and rewards incidental to ownership of an asset.

IFRS 16 standard for leases gives in particular five examples of situations that, individually or collectively, permit to distinguish finance lease to operating lease:

- the lease transfers ownership of the asset to the lessee at the end of the lease term;
- the lease provides the lessee with the option to purchase the asset at a price that is expected to be sufficiently below the fair value at the date the option becomes exercisable for it to be reasonably certain, at the inception of the lease, that the option will be exercised;
- the lease term covers most of the economic life of the asset even if there is no transfer of ownership;
- at the inception of the lease, the present value of lease payments amounts to at least virtually all of the fair value of the leased asset;
- the leased assets are of such a specialized nature that only the lessee can use them without major modifications.

IFRS 16 also describes three indicators that may also individually or collectively lead to a lease being classified as a finance lease:

- if the lessee can cancel the lease, the lessor’s losses associated with the cancellation are borne by the lessee;
- gains or losses from the change in the fair value of the residual value accrue to the lessee;
- the lessee has the ability to extend the lease at a rent that is significantly lower than the market rent.

At the start of the contract, assets under finance leases are recorded in the lessor’s balance sheet in the form of a receivable amount equal to the net investment in the lease.

The net investment corresponds to the amount of lease payments receivable from the lessee, discounted at the interest rate implicit in the lease plus any unguaranteed residual value of the asset accruing to the lessor.

More specifically, the lease payments used to calculate the net investment include fixed payments less any lease incentives payable and variable payments that depend on an index or rate.

IFRS 16 requires unguaranteed residual values to be reviewed on a regular basis. A reduction in the estimated unguaranteed residual value modifies the income allocation over the lease term. In this case, a new payment schedule is drawn up and a charge is recorded to adjust the amount of financial income already recorded.

Any impairment recorded for counterparty risk on receivables in respect of finance leases is calculated in accordance with IFRS 9 using the same method as for financial assets at amortized cost (Note 5.5). This impairment is recorded on the income statement under “Cost of credit risk”.

Finance lease income is considered to be interest and is recognized in the income statement under “Interest and similar income”. This income is recognized using the interest rate implicit in the lease, which reflects a constant periodic rate of return on the lessor’s net investment. The rate of return implicit in the lease is the discount rate that makes the following two items equal:

- the net investment; and
- the initial value of the asset (the fair value at the inception of the lease, plus any initial direct costs comprising expenses incurred specifically by the lessor to set up the lease).

Operating leases

A lease which is not considered to be a finance lease is classified as an operating lease.

Assets provided under operating leases are shown in the balance sheet under property, plant and equipment or intangible assets in the case of equipment leases, and investment property in the case of property leases. Lease income from operating leases is recognized in the income statement on a straight-line basis over the lease term, under “Income and expenses from other activities”.

12.2.2 Leases as lessee

Accounting principles

IFRS 16 applies to contracts that, irrespective of their legal form, meet the definition of a lease as laid down by the standard. The standard requires the identification of an asset, and that the lessee controls the right to use this asset for a period of time. Control is established if the lessee holds the following two rights throughout the period of use:

- the right to obtain almost all of the economic benefits arising from use of the asset;
- the right to decide how the asset is used.

The existence of an identified asset requires that the lessor has no substantive rights to substitute alternative assets, with this requirement being assessed according to facts and circumstances in place at the start of the contract. If the lessor can freely substitute the leased asset, the contract becomes a non-lease contract whose purpose is to provide capacity rather than an asset.

The asset can be comprised of a portion of a larger asset, such as a floor within a building. However, a portion of an asset that is not physically distinct within a grouping without a pre-determined location is not an identified asset.

With certain exceptions, lessees are required under IFRS 16 to record leases in the balance sheet as a right-of-use asset under "Property, plant and equipment" or "Investment property", and as lease liabilities under "Other liabilities".

On the date of initial recognition, no deferred tax is reported if the value of the asset is equal to the value of the liability. Deferred tax is recorded for subsequent net temporary differences arising from changes in amounts recognized as right-of-use assets and lease liabilities.

At the commencement date, the lessee measures the lease liability at the present value of the lease payments that are not paid at that date.

These payments include fixed lease payments and in-substance fixed lease payments, variable lease payments based on an index or a rate calculated using the latest index or rate in force, any residual value guarantees and, where appropriate, any amount to be paid to the lessor under options that are reasonably certain to be exercised.

Lease payments used to determine the lease liability exclude variable payments that are not based on an index or a rate, taxes such as VAT, whether recoverable or not, and the housing tax.

Right-of-use is recognized as an asset on the commencement date of the lease for an amount equal to the lease liability on that date, adjusted for any payments made to the lessor at or before that date and not taken into account for the measurement of the lease liability, less any lease incentives received. If appropriate, this amount is adjusted for initial direct costs incurred by the lessee and an estimate of costs to be incurred in dismantling or restoring the asset if required by the terms and conditions of the lease, as long as the outflow of cash is probable and can be determined in a reliable manner.

The right-of-use asset is amortized on a straight-line basis and the lease liability is calculated on an actuarial basis over the term of the lease using the lessees' incremental borrowing rate mid-way through the contract.

The amount of lease liabilities is subsequently readjusted to take into account variations in the indices or rates to which the leases are indexed. As this adjustment reflects the right of use, it has no impact on the income statement.

For entities that are part of the financial solidarity mechanism that centralize their funding with the Group Treasury, the rate is calculated at Group level and adjusted, as applicable, to the currency applicable to the lessee.

The lease term is the non-cancellable period for which a lessee has the right to use an underlying asset, together with the periods covered by an option to extend the lease if the lessee is reasonably certain to exercise that option; and the periods covered by an option to terminate the lease if the lessee is reasonably certain not to exercise that option.

For French "3/6/9" commercial leases, the term used is usually nine years. The reasonable certainty of whether the options relating to the lease term will be exercised is assessed by considering Group entities' real estate management strategy.

At the end of the lease, the contract is no longer enforceable and the lessee and the lessor each has the right to terminate the lease without permission from the other party with no more than an insignificant penalty.

The term of leases that are not extended or canceled at the end of the term (leases with automatic renewal) is determined by expert appraisal and, in the absence of specific information, assigned a reasonable term of three years.

For leases recognized in the balance sheet, the expense relating to the lease liability is reported as an interest expense under net banking income while the depreciation expense on the right-of-use asset is recognized as a depreciation expense under gross operating income.

Leases not recognized in the balance sheet and variable payments that are excluded from lease liabilities are recorded as an expense for the period under operating expenses.

Impact of leases on the lessee income statement

in millions of euros	12/31/2024	12/31/2023
EXPENSES FROM LEASE TRANSACTIONS	**(253)**	**(228)**
Interest expenses on lease liabilities	(21)	(15)
Depreciation of right-of-use assets	(228)	(208)
Variable lease expenses not included in measurement of lease liabilities	(2)	(5)
Expenses on short-term leases(1)	(0)	(0)
Expenses on underlying assets of low value(1)(2)	(1)	(1)
INCOME FROM SUB-LEASING/OPERATING LEASES	**1**	**3**

(1) Related to leases not recognized in the balance sheet.
(2) 2023 data restated for vehicle rental expenses for comparative purposes.

When the Group sub-lets all or part of an asset it leases, the sub-letting contract is analyzed in substance using the same approach as that applied by lessors who distinguish between operating and finance leases.

Income from such leases is presented using the same approach as lessors: as income from other activities for operating leases and as interest income for finance leases.

Schedule of lease liabilities

in millions of euros	12/31/2024	12/31/2023
AMOUNTS OF NON-DISCOUNTED FUTURE PAYMENTS	**802**	**748**
< 1 year	133	129
1-5 years	410	364
> 5 years	259	255

12.3 Related party transactions

For BPCE, related parties are considered to be all consolidated companies, including companies carried under the equity method, and the Group's key management personnel.

The Social Housing Companies in which the Group is the sole major shareholder are also covered.

12.3.1 Transactions with consolidated companies

All intercompany transactions carried out during the period and balances outstanding at the end of the period with fully consolidated companies are eliminated in full on consolidation without exception (see 3.3.2).

The statement below only provides data on intercompany transactions concerning:

- entities over which the Group exercises joint control (joint operations) in respect of the non-eliminated portion: no significant transactions were identified in this category;
- entities over which the Group exercises significant influence and which are equity-accounted (associates). No significant transaction was identified in this respect.
- BPCE's parent entities, namely the Caisses d'Epargne and the Banque Populaires.

A list of fully consolidated subsidiaries is presented in Note 13 "Scope of consolidation".

12.3.2 Transactions with company directors

The Group's company directors are the members of the Management Board and Supervisory Board of BPCE. The short-term employee benefits, post-employment benefits, long-term employee benefits and termination benefits of BPCE's company directors are described in the "Remuneration, benefits in kind, loans, guarantees and attendance fees received by BPCE directors and corporate officers" section in Chapter 4 "Corporate governance report".

Short-term employee benefits

Short-term employee benefits paid out to the Group's company directors amounted to €5 million in 2024 and €5 million in 2023.

These include remuneration, directors' attendance fees and benefits paid to members of the Management Board and Supervisory Board.

Post-employment benefits, long-term employee benefits and termination benefits

Post-employment benefits, long-term employee benefits and termination benefits of the Group's company directors are described in the Chapter 4 on Corporate Governance. The amount provisioned by BPCE in respect of retirement benefits came to €1 million at December 31, 2024 (€1 million at December 31, 2023).

12.4 Partnerships and associates

12.4.1 Investments accounted for using equity method

12.4.1.1 Partnerships and other associates

The Group's main equity-accounted investments are the following joint ventures and associates:

in millions of euros	12/31/2024	12/31/2023
EDF Investment Group (EIG)	1,033	526

Non-financial companies	5	(8)
SHARE IN NET INCOME OF EQUITY-ACCOUNTED ASSOCIATES	**48**	**(3)**

12.5 Interests in non-consolidated structured entities

12.5.1 Nature of interests in non-consolidated structured entities

A non-consolidated structured entity is a structured entity that is not controlled and is therefore not accounted for using the full consolidation method. As a result, the interests held in a joint venture or associate which is classed as a structured entity falls within the scope of this note.

The same is true of controlled structured entities that are not consolidated due to holding threshold reasons.

This includes all structured entities in which BPCE holds an interest and acts in one or more of the following capacities:

- originator/structurer/arranger;
- placement agent;
- manager; or
- in any other capacity that has a major impact on the structuring or management of the transaction (*e.g.* provision of financing, guarantees or structuring derivatives, tax investor, major investor, etc.).

An interest in an entity corresponds to all types of relationships, contractual or not, that expose BPCE to a risk of fluctuations in returns relating to the entity's performance. Interests in another entity may be evidenced by, among others, the holding of equity instruments or debt securities, as well as, by other types of relationships, such as financing, short-term credit facilities, credit enhancement, the provision of guarantees or structured derivatives.

As a result, the following are not included in the scope of this note:

- structured entities which are associated with BPCE through a current transaction alone. This corresponds to an unstructured financial instrument which generally does not have a material impact on the variability of the structured entity's returns and which could be concluded by BPCE with structured entities or classically governed entities alike. The main kinds of current transactions are:
  - plain vanilla fixed income, foreign exchange, and other underlying derivatives, as well as securities lending/borrowing and repurchase transactions,
  - plain vanilla guarantees and financing granted to family non-trading real estate companies (SCI) or to certain holdings;
- external structured entities in which BPCE simply acts as an investor.

These are:

- investments in external UCITS that the Group does not manage, except for those in which the Group owns almost all the shares;
- a limited scope of interests held in securitization vehicles (exposures on these funds are included in the information published in Chapter 7 "Risk Management – Securitizations"); and
- interests held in external real estate funds or private equity funds in which BPCE acts as a simple minority investor.

The structured entities with which the Group has a relationship can be divided into four categories: entities involved in asset management, securitization vehicles, entities created for structured financing purposes, and entities created for other types of transactions.

Asset Management

Financial asset management (also known as portfolio management) consists of managing equity or funds entrusted by investors by investing in equities, bonds, mutual funds or hedge funds, etc.

The Asset Management line of business which uses structured entities is represented by collective investment management or fund management. More specifically, it encompasses collective investment vehicles within the meaning of the French Monetary and Financial Code (other than securitization structures) as well as equivalent bodies governed by foreign law. These notably include entities such as UCITS, real estate funds and private equity funds.

Securitization

Securitization transactions are generally established as structured entities in which assets or derivatives representing credit risk are isolated.

These entities serve to diversify the underlying credit risks and to split them into various levels of subordination (tranches) with a view, generally, to sell them to investors seeking a certain level of return, according to the degree of risk accepted.

These vehicles' assets and the liabilities that they issue are rated by the rating agencies, which monitor that the level of risk associated with each tranche of risk sold is commensurate with the attributed rating.

The kind of securitization transactions used and which require the intervention of structured entities are as follows:

- transactions where the Group (or a subsidiary) sells on its own behalf to a dedicated vehicle, in cash or synthetic form, the credit risk associated with one of its asset portfolios;
- securitization transactions performed on behalf of third parties. These transactions consist of housing in a dedicated structure (generally a Special Purpose Entity (SPE)) the assets belonging to another company. The SPE issues shares that can, in certain cases, be subscribed for directly by investors, or subscribed for by a multi-seller conduit which refinances the acquisition of these shares through the issue of short-term notes (commercial paper).

Structured financing (of assets)

Structured financing covers the range of activities and products set up to provide financing to economic players while reducing risks through the use of complex structures. These include the financing of movable assets (pertaining to aeronautic, marine or terrestrial transport, telecommunications, etc.), real estate assets and the acquisition of targeted companies (LBO financing).

The Group may need to create a structured entity that houses a specific financing transaction on behalf of a customer. This is a contractual and structural organization. The particularities of these types of financing are related to risk management, with the use of notions such as limited recourse or waivers of recourse, standard and/or structural subordination and the use of dedicated legal vehicles used in particular to carry a single-contract finance lease representing the financing granted.

Other activities

This comprises all remaining activities.

12.5.2 Nature of risks associated with interests held in non-consolidated structured entities

Assets and liabilities recognized in the Group's various balance sheet accounts relating to interests in non-consolidated structured entities contribute to determining the risks associated with these entities.

The values recorded under the balance sheet assets, along with financing and guarantee commitments given less guarantee commitments received and provisions recorded in liabilities, are used to assess the maximum exposure to risk of losses. It should be noted that the maximum exposure to the risk of loss does not take into account financial liabilities at fair value through profit or loss. This exposure is limited, in the specific case of optional derivatives, to the sale of options.

The "notional amounts" line corresponds to the notional amount of options sold to structured entities.

The data are presented below, aggregated based on their activity classification.

At December 31, 2024

Excluding insurance activities investments *in millions of euros*	Securitization	Asset Management	Structured Financing	Other activities
Financial assets at fair value through profit or loss	**128**	**1,549**	**760**	**8**

SIZE OF STRUCTURED ENTITIES	**148,355**	**912,467**	**50,692**	**1,384**

At December 31, 2023

in millions of euros	Securitization	Asset Management	Structured Financing	Other activities
SIZE OF STRUCTURED ENTITIES	**156,230**	**673,806**	**49,841**	**5,734**

Securitization transactions in which BPCE is simply an investor are listed in Chapter 7 “Risk Management – Securitization”.

The size criterion used varies according to the types of structured entities:

- securitization: the total amount of issues recorded in the entities’ liabilities;
- asset management: the net assets of collective investment vehicles (other than securitization);
- structured financing: the total amount of financing outstandings remaining due by the entities to all banks;
- other activities: total assets.

12.5.3 Income and carrying amount of assets transferred to sponsored non-consolidated structured entities

A structured entity is sponsored by a group entity when the following two indicators are both satisfied:

- it is involved in the creation and structuring of the structured entity;
- it contributes to the success of the entity by transferring assets to it or by managing relevant activities.

When the Group entity’s role is limited to one of advisor, arranger, custodian or placement agent, the structured entity is not considered to be sponsored.

BPCE plays the role of sponsor for:

- UCITS initiated by an investment management company belonging to BPCE and in which BPCE holds no investment or any other interest. Reported income includes management and incentive fees charged by BPCE entities, as well as profit or loss from ordinary business with these funds;
- a US activity involving the origination and disposal of portfolios of home loans to securitization vehicles created by the GFS division with third parties and in which the Group holds no interests. Reported income includes structuring fees as well as gains or losses on the disposal of receivables.

For the non-consolidated structured entities that the Group sponsors without holding any interests, the impact on the financial statements is presented below:

2024 fiscal year

in millions of euros	Securitization	Asset Management
Income from entities	**15**	**1,426**
Net interest income		
Net fee and commission income	3	1,414
Gains (losses) on financial instruments at fair value through profit or loss	12	12
CARRYING AMOUNT OF ASSETS TRANSFERRED TO THE ENTITY DURING THE FISCAL YEAR	**279**	

2023 fiscal year

in millions of euros	Securitization	Asset Management
Income from entities	**8**	**1,330**
Net interest income		
Net fee and commission income	2	1,318
Gains (losses) on financial instruments at fair value through profit or loss	6	13
CARRYING AMOUNT OF ASSETS TRANSFERRED TO THE ENTITY DURING THE FISCAL YEAR	**116**	

12.6 Statutory Auditors' fees

Fees in respect of duties carried out by the Statutory Auditors, and by their networks, responsible for auditing BPCE's financial statements in respect of the 2023 and 2024 fiscal years were as follows:

	PwC				Forvis Mazars				Deloitte				TOTAL
	Amount		%		Amount		%		Amount		%		Amount

Change (as a %)	**38%**				**14%**				**25%**				**30%**

(1) Amounts relating to services provided appear on the income statement for the fiscal year, notably including unrecoverable VAT.

(2) In 2024, "services other than financial statement certification" mainly related to assignments carried out at the request of BPCE SA (€10 million), in particular for services rendered during the acquisition of entities, for comfort letters relating to issues and findings resulting from specific controls as well as on assignments carried out at the request of Natixis SA and its subsidiaries (€5.1 million), in particular support missions on regulatory changes, tax missions and technical assistance missions.

(3) In 2024, "Services other than financial statement certification" includes fees relating to the sustainability report (CSRD) for Group entities required to publish it for a total amount of €2.01 million.

Note 13 / Detail of the scope of consolidation

13.1 Securitization transactions

Accounting principles

Securitization is a financial engineering technique that aims to enhance balance sheet liquidity. From a technical perspective, assets to be securitized are grouped according to the quality of the associated collateral or guarantees and sold to special purpose entities that finance their acquisition by issuing securities underwritten by investors.

Entities created specifically for this purpose are consolidated if the Group exercises control over them. Control is assessed according to the criteria provided in IFRS 10.

BPCE'S INTERNAL SECURITIZATION TRANSACTION

In 2024, no new internal securitization transaction was carried out by BPCE.

SECURITIZATION TRANSACTIONS CARRIED OUT WITH FULL OR PARTIAL DERECOGNITION

Note: Crédit Foncier had entered into two public securitization transactions backed by home loans (Crédit Foncier Home Loans No. 1 in May 2014 and Crédit Foncier Home Loans No. 2 in August 2015).

As a receivables manager, Crédit Foncier did not have the ability to use its power to influence the variability of returns. Therefore, it does not control the securitization funds within the meaning of IFRS 10, and the funds were not consolidated.

However, given its ongoing ties with CFHL-2, the criteria needed to establish full derecognition of assets, this time under IFRS 9, were not entirely met. As a result, the transaction led to deconsolidation in accordance with IFRS 10, and to partial derecognition in accordance with IFRS 9.

The CFHL-2 assets transferred were recognized in proportion to Crédit Foncier's continued involvement. As a result, the Group continues to recognize the maximum loss associated with each of the residual ties to the fund (swaps, clean-up calls, management fees) in balance sheet assets. The fair value of these residual ties was remeasured at each closing date.

On September 30, 2024, CFF exercised its right (Clean Up Call), enabling it to repurchase the remaining outstanding loans from the FCT.

The result of the transaction amounted to +€11 million at December 31, 2024.

13.2 Guaranteed UCITS

Guaranteed UCITS are funds designed to reach a specific amount at the end of a given period, determined by applying a predefined calculation formula based on financial market indicators and, where appropriate, to distribute revenues derived from the investments as determined using the same methods. The portfolio management targets of these funds are guaranteed by a credit institution.

Based on an analysis of the substance of these funds in accordance with IFRS 10, the Group does not control relevant activities (as management flexibility is limited) and is not exposed to variable returns (as a solid risk monitoring system has been implemented) and therefore does not consolidate these structures.

13.3 Other interests in consolidated subsidiaries and structured entities

MAJOR RESTRICTIONS

The Group has not been faced with any major restrictions relating to stakes held in its structured or non-structured subsidiaries.

SUPPORT OF CONSOLIDATED STRUCTURED ENTITIES

The Group did not grant any financial support to consolidated structured entities.

13.4 Scope of consolidation at December 31, 2024

Only those entities providing a material contribution are consolidated. For entities meeting the definition of financial sector entities given in Regulation (EU) No. 575/2013 of the European Parliament and of the Council of June 26, 2013 (the CRR), the accounting consolidation thresholds have been aligned, since December 31, 2017, with those applied for the prudential scope of consolidation. Article 19 of the CRR sets a threshold of €10 million in total balance sheet and off-balance sheet assets. For non-financial sector entities, materiality is assessed at the level of the consolidated entities. Based on the principle of ascending materiality, any entity included at a sub-consolidation level is included at all higher consolidation levels, even if it is not material at those levels.

The percentage interest is specified for each entity in the scope of consolidation. The percentage of interest describes the share of equity held by the Group, either directly or indirectly, in companies within the scope. The percentage of interest can be used to determine the share attributable to equity holders of the parent in the net assets of the company held.

13.5 Non-consolidated companies at December 31, 2024

The Regulation of the French national accounting standards authority No. 2016-09 of December 2, 2016 requires companies that prepare their consolidated financial statements in accordance with international standards as adopted by the European Union to publish additional information relating to companies not included in their scope of consolidation as well as significant equity interests.

Non-consolidated companies include:

- significant interests that do not fall within the scope of consolidation; and
- companies excluded from the scope of consolidation owing to their non-material nature.

The main significant interests that do not fall within the scope of consolidation, and details of the share of equity held either directly or indirectly by the Group, are as follows:

Company	Location	Share of equity held	Reason for non-consolidation	Equity amount[1] *in millions of euros*	Amount of income *in millions of euros*
OPPORTUNITÉ PLACEMENT CILOGER 2	FRANCE	10.12%	Holding in an entity not consolidated because the Group does not exercise control, joint control or significant influence (including tax optimization structures)	90	0
SYSTÈME TECHNOLOGIQUE ECHGE ET TRAIT	FRANCE	15.04%	Holding in an entity not consolidated because the Group does not exercise control, joint control or significant influence (including tax optimization structures)	135	20

(1) Amount of shareholders' equity and income for the last fiscal year known at the reporting date and based on applicable accounting standards according to the country of location.

Information on companies excluded from the scope of consolidation due to their non-material nature is available on Groupe BPCE's website at the following address: https://www.groupebpce.com/en/investors/results-and-publications/reference-documents.

6.4 Statutory auditors' report on the consolidated financial statements

Year ended December 31, 2024

This is a translation into English of the statutory auditors' report on the financial statements of the Company issued in French and it is provided solely for the convenience of English-speaking users. This statutory auditors' report includes information required by French law, such as information about the appointment of the statutory auditors or verification of the management report and other documents provided to shareholders. This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

At the General Assembly

BPCE

7 promenade Germaine Sablon

75013 Paris

I. OPINION

In compliance with the engagement entrusted to us by your Annual General Meeting, we have audited the accompanying consolidated financial statements of BPCE (previously Groupe BPCE SA) for the year ended December 31, 2024.

In our opinion, the consolidated financial statements give a true and fair view of the assets and liabilities and of the financial position of the Group as at December 31, 2024 and of the results of its operations for the year then ended in accordance with International Financial Reporting Standards as adopted by the European Union.

The audit opinion expressed above is consistent with our report to the Audit Committee.

II. BASIS FOR THE OPINION

AUDIT FRAMEWORK

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the Statutory Auditors' Responsibilities for the Audit of the Consolidated Financial Statements section of our report.

INDÉPENDANCE INDEPENDENCE

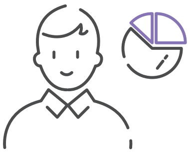
We conducted our audit engagement in compliance with independence requirements of the French Commercial Code (code de commerce) and the French Code of Ethics (code de déontologie) for statutory auditors, for the period from January 1st, 2024 to the date of our report, and specifically we did not provide any prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No 537/2014.

III. RATIONALE FOR ASSESSMENTS - KEY AUDIT MATTERS

In accordance with the requirements of Articles L. 821-53 and R.821-180 of the French Commercial Code (code de commerce) relating to the justification of our assessments, we inform you of the key audit matters relating to risks of material misstatement that, in our professional judgment, were of most significance in our audit of the consolidated financial statements of the current period, as well as how we addressed those risks.

These matters were addressed in the context of our audit of the consolidated financial statements as a whole, approved in the conditions mentioned above, and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the consolidated financial statements.

Impairment of loans and receivables (Statutes 1, 2 and 3)



Identified risk and key judgments

BPCE is exposed to credit risks. These risks, resulting from the inability of its clients or counterparties to meet their financial commitments, particularly affect its customer lending activities.

In accordance with the 'impairment' component of IFRS 9 standard, your Group establishes impairments and provisions intended to cover the risks of expected losses (outstandings in statuses 1 and 2) or incurred losses (outstandings in status 3).

The impairment rules for expected loss risks require the establishment of a first impairment status representing an expected loss at 1 year from the origination of a new financial asset classified at amortized cost or fair value through equity and on off-balance sheet commitments; and a second status representing an expected loss at maturity, in case of a significant deterioration in credit risk. These impairments for expected losses (statuses 1 and 2) are determined mainly based on models incorporating various parameters (default probabilities, loss given default, exposures, ...) and including forward-looking information.

Outstandings of credits bearing a proven counterparty risk (status 3) are subject to impairments determined essentially on an individual basis. These impairments are assessed by management based on recoverable future cash flows considering the estimated available guarantees for each of the credits concerned.

We considered the identification and evaluation of credit risk to be a key point of the audit given that the induced provisions constitute a significant estimate for the preparation of the accounts, and call upon management's judgment both in the attachment of credit outstandings to the different statuses and in the determination of the parameters and calculation modalities of the impairments for outstandings in statuses 1 and 2, as well as in the assessment of the level of individual provisioning of credit outstandings in status 3.

The stock of impairments for credit losses on outstanding loans and similar to customers and credit institutions amounted to €2,862 million, of which €262 million under status 1, €406 million under status 2 and €2,194 million under status 3.

The cost of risk for the 2024 financial year amounted to €607 million (compared to €527 million for the 2023 financial year).

For further details on accounting policies and exposures, refer to notes 5.5 and 7.1 to the notes.

Our response

Impairment of outstanding loans under status 1 and 2

Our work mainly consisted of: :

- verifying the existence of an internal control system allowing an appropriate frequency update of the ratings of the different counterparties;
- verifying the existence of governance reviewing at an appropriate frequency the adequacy of impairment models, the parameters used for the calculation of impairments, and analyzing the developments of impairments with respect to IFRS 9;
- assessing the appropriateness of the models, parameters, and macroeconomic assumptions used for the calculations of impairmperforming counter-calculations on the main types of credit outstandings;
- to carry out controls on the IT system as a whole set up by BPCE, including a review of general IT controls, interfaces and on-board controls for specific data used to process information relating to IFRS 9;

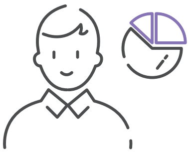
Impairment of credit outstandings in status 3

In the context of our audit procedures, we have, in general, examined the control system related to the census of exposures classified in status 3, the monitoring of credit and counterparty risks, the assessment of non-recovery risks, and the determination of impairments and provisions on an individual basis.

Our work consisted of assessing the quality of the monitoring system for sensitive, dubious, and litigious counterparties, as well as the credit review process. Furthermore, based on a sample of files selected on materiality and risk criteria, we have carried out contradictory analyses of the amounts of impairments and provisions.

We also appreciated the detailed information required by IFRS 9 standard under the 'Impairments' component as of December 31, 2024.

Level 2 and Level 3 Financial Instruments as defined in IFRS 13



Identified risk and key judgments

BPCE holds a significant proportion of financial instruments measured at fair value, which are broken down into three levels defined by IFRS 13 according to the fair value determination method used.

Market value is determined according to different approaches depending on the nature and complexity of the instruments: use of directly observable quoted prices (instruments classified as Level 1 in the fair value hierarchy), valuation models with mostly observable parameters (instruments classified as Level 2) and valuation models with mostly unobservable parameters (instruments classified as Level 3).

For the most complex financial instruments, these approaches can therefore involve a significant amount of judgement taking into account:

- the use of internal valuation models;
- the use of valuation parameters that are not observable on the market;
- aditional valuation adjustments to take account of certain market, counterparty or liquidity risks.

We considered the measurement of complex Level 2 and Level 3 fair value financial instruments to be a key focus of the audit due to the materiality of the exposures and the use of judgment in the determination of fair value.

For further details on accounting principles and fair value levels, refer to Note 10.

Our response

We tested key controls that we considered relevant to our audit, including those related to:

- the validation and periodic review, by the risk department, of valuation models,
- independent verification of valuation parameters,
- the determination of the main valuation adjustments,

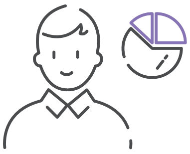
the validation and periodic review of the observability criteria taken into account to classify complex financial instruments in the fair value hierarchy and to take into account the impact on margin on the first day.

We carried out this due diligence with the assistance of our valuation experts, with whom we also carried out independent valuation work consisting of examining, on a sample basis, the assumptions, methodologies and market parameters feeding into the valuation models used to estimate the main valuation adjustments as at 31 December 2024.

We also examined, on the basis of samples, any existing margin call spreads with market counterparties, allowing us to assess the appropriateness of valuations.

Finally, we have assessed the information on the valuation of financial instruments published in the notes.

Valuation of insurance contract liabilities in the "Retirement Savings" classes



Identified risk and key judgments

BPCE records direct equity contracts as liabilities for its insurance activities in the "retirement savings" classes.

These liabilities are measured using a *Variable Fee Approach* (VFA) model, which requires the valuation of actuarial liabilities based on significant judgments about the data used, assumptions about future periods, and the result of estimation techniques. These liabilities comprise the following three blocks:

- The estimate of the present value of the estimates of future cash flows (*BE)* relating to these valued long-term contracts is based on technical and financial assumptions, and significant judgments:
- The assessment of the risk *adjustment (RA)* is based on assumptions about the group's level of confidence in the risk factors associated with the technical liabilities, and on a value-at-risk approach, which is the maximum loss within the defined level of confidence.
- Finally, the amortization of the *Contractual Service Margin (CSM),* corresponding to the fraction of CSM recognized as revenue from insurance activities for the year, is determined on the basis of the units of coverage. These hedging units are adjusted to take into account the expected return of the underlying items resulting from so-called "real world" assumptions.

In addition, the internal margins between the banking entities distributing insurance products and the insurance entities are restated.

Due to the sensitivity of the measurement of these liabilities to these key judgments and assumptions, we considered the measurement of the liabilities related to insurance contracts in the savings and retirement classes as a key focus of the audit.

As of December 31, 2024, liabilities related to insurance contracts in the "savings and retirement" classes of business valued under the Variable Fee Approach (VFA) amounted to €103,943 million and those measured under the general approach amounted to €2,819 million. They are broken down as follows:

- *the estimated present value of future cash flows is €99,442 million;*
- *the adjustment for non-financial risk amounted to €1,869 million;*
- *the margin on contractual services amounted to €5,451 million.*

For further details on the accounting principles and valuation

Our response

In order to cover the risk of valuation of these liabilities related to insurance contracts in the "savings and retirement" classes, we have implemented the following audit procedures with the assistance of our actuarial specialists:

- We assessed the methodology for assessing the future cash flows (BE), RA and CSM related to these contracts and checked their compliance with the accounting standards in force;
- We assessed the internal control environment of the information systems involved in the processing of technical data, calculations and their transfer to accounting;
- We assessed the design and tested the operating effectiveness of the key controls put in place by the group. In particular, we assessed:
  - The system of controls relating to the validation of the future cash flow projection model;
  - Documentation and controls relating to key judgments and assumptions made by the finance department;
- We have tested on a sample basis and based on our risk assessment, the calculation models used to estimate future cash flows, the adjustment for non-financial risk and CSM, and any material changes to the calculation models;
- We tested the reliability of the data used as a basis for the estimates by means of a sample;
- We tested by sampling the units of coverage and the main so-called "real-world" assumptions used for the recognition of the CSM in the result;
- We performed analytical procedures on developments to identify any significant inconsistent or unexpected variations.

Finally, we assessed the appropriateness of the disclosures in the notes to the consolidated financial statements, including the risk sensitivity information and the presentation of restatements relating to internal contractual service margins.

Valuation of goodwill and intangible assets with an indefinite life

Identified risk and key judgments

BPCE notes goodwill in its consolidated financial statements. Indeed, the external growth operations carried out by the group have led it to (i) assess the control arrangements exercised over the acquired entities in accordance with IFRS 10 *'Consolidated Financial Statements'* and (ii) carry out a purchase price allocation exercise in accordance with IFRS 3 *'Business Combinations'*. Following this allocation exercise, the unallocated surplus corresponding to the residual identifiable net asset was recorded in goodwill.

These goodwill and acquired intangible assets with an indefinite life are subject to impairment tests at least annually, based on the assessment of the recoverable amount of the cash-generating units (CGUs) to which they are attached or as soon as there are indications of impairment losses. The determination of the recoverable amount is based on the discounting of the estimated future cash flows of the CGU as they result from the medium-term plans drawn up by the entities concerned and assessed by the group.

We considered impairment testing of goodwill and intangible assets with an indefinite life to be a key focus of the audit by its very nature, as it requires the exercise of judgment, particularly in determining discount rates, economic scenarios or financial projections.

As of December 31, 2024, goodwill in gross terms amounted to €4,191 million and cumulative impairment losses amounted to €534 million.

The terms of the impairment test implemented by BPCE and the key assumptions used to determine the recoverable amount and the sensitivities of the recoverable amounts are described in note 3.4 to the notes.

Our response

With the help of our experts, we evaluated the process put in place by BPCE to identify indicators of possible impairment losses and carried out a critical review of the methods of implementing impairment tests.

In particular, we carried out the following work:

- Comparison of assumptions and parameters with external sources
- examination of the reasonableness, particularly in the current economic and financial context, of the medium-term plans selected for each CGU concerned, involving:
  - the comparison with the group's strategic plan approved by the management bodies (supervisory board or board of directors);
  - the assessment of the coherence and reliability of the main assumptions used to construct them, in particular with regard to the financial trajectories drawn up during past years and actually implemented;
  - analysis of sensitivity to different valuation parameters (equity, discount rate, etc.).
- verification of the consistency of the information published on the results of these impairment tests.

Provisions for legal and non-compliance risks

Identified risk and key judgments

Groupe BPCE is the subject of litigation before the courts, investigations and requests for information from regulatory and tax authorities in various jurisdictions.

The assessment of the resulting legal and non-compliance (including tax) risks is based on management's estimate at the reporting date.

The recognition of a provision, the determination of its amount and the information communicated in the notes require the exercise of judgment, in particular because of the difficulty of estimating the probability of the risk materialising as well as the outcome and financial consequences of ongoing proceedings.

As a result, we considered the estimation of the allowances for legal and non-compliance risks to be a key focus of the audit given the sensitivity of these allowances to management's assumptions and options

Refer to notes 2.3, 5.13 and 11.1 of the notes to the consolidated financial statements for more details.

Our response

We examined the system for identifying, assessing, and provisioning legal and non-compliance risks.

We have taken note of the status of the ongoing proceedings and the main risks identified by the Group, based in particular on regular exchanges with management (and more specifically the Group's legal, compliance and tax departments) as well as on the examination of the documentation made available to us.

We also assessed the reasonableness of the assumptions and data used by management in estimating the amount of allowances recognized at the cut-off date. In particular, we involved specialists in tax law to critically review the tax risk analyses identified by the group and the related provisions.

We have also conducted procedures for the confirmation of ongoing disputes with the group's legal advisors.

Finally, we checked that the provisions thus valued were correctly recorded in the accounts and the information given in this respect in the notes to the consolidated accounts.

IV. SPECIFIC VERIFICATIONS

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations of the information pertaining to the Group presented in the management report of the Board of Directors.

We have no matters to report as to its fair presentation and its consistency with the consolidated financial statements.

V. OTHER LEGAL AND REGULATORY VERIFICATIONS OR INFORMATION

FORMAT OF PRESENTATION OF THE CONSOLIDATED FINANCIAL STATEMENTS INTENDED TO BE INCLUDED IN THE ANNUAL FINANCIAL REPORT

We have also proceeded, in accordance with the professional practice standard on the auditor's due diligence relating to annual and consolidated accounts presented in the European Single Electronic Format (ESEF), to verify compliance with this format defined by the European delegated regulation No. 2019/815 of December 17, 2018, in the presentation of the consolidated accounts included in the annual financial report mentioned in Article L.451-1-2 of the Monetary and Financial Code, prepared under the responsibility of the Chairman of the Management Board. As for consolidated accounts, our due diligence includes verifying the compliance of the tagging of these accounts with the format defined by the aforementioned regulation.

Based on our work, we conclude that the presentation of the consolidated accounts included in the annual financial report complies, in all its significant aspects, with the European Single Electronic Format.

Due to technical limitations inherent in the macro-tagging of consolidated accounts according to the European Single Electronic Format, it is possible that the content of certain tags in the annexed notes may not be reproduced identically to the consolidated accounts attached to this report.

APPOINTMENT OF STATUTORY AUDITORS

Forvis Mazars SA was appointed Statutory Auditors in the first articles of association dated 19 December 2006 of GCE Nao (which became BPCE in July 2009), at its formation. The firms PricewaterhouseCoopers Audit and Deloitte & Associés were appointed as statutory auditors of BPCE by the general assembly, respectively, on July 2, 2009, and May 22, 2015.

As of December 31, 2024, Forvis Mazars SA was in the 18th year of its uninterrupted mission, including 16 years since the company became a public interest entity, PricewaterhouseCoopers Audit in the 16th year of its uninterrupted mission and Deloitte & Associés was in the 10th year of its uninterrupted mission.

VI. RESPONSIBILITIES OF MANAGEMENT AND THOSE CHARGED WITH GOVERNANCE FOR THE CONSOLIDATED FINANCIAL STATEMENTS

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards as adopted by the European Union, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The Audit Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risks management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The consolidated financial statements were approved by the Board of Directors.

VII. STATUTORY AUDITORS' RESPONSIBILITIES FOR THE AUDIT OF THE CONSOLIDATED FINANCIAL STATEMENTS

OBJECTIVES AND AUDIT APPROACH

Our role is to issue a report on the consolidated financial statements. Our objective is to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As specified in Article L.821-55 of the French Commercial Code (code de commerce), our statutory audit does not include assurance on the viability of the Company or the quality of management of the affairs of the Company.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- Identifies and assesses the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control;
- Evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management in the consolidated financial statements.
- Assesses the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of his audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the consolidated financial statements or, if such disclosures are not provided or inadequate, to modify the opinion expressed therein.
- Evaluates the overall presentation of the consolidated financial statements and assesses whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtains sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. The statutory auditor is responsible for the direction, supervision and performance of the audit of the consolidated financial statements and for the opinion expressed on these consolidated financial statements.

REPORT TO THE AUDIT COMMITTEE

We submit a report to the Audit Committee which includes in particular a description of the scope of the audit and the audit program implemented, as well as the results of our audit. We also report, if any, significant deficiencies in internal control regarding the accounting and financial reporting procedures that we have identified.

Our report to the Audit Committee includes the risks of material misstatement that, in our professional judgment, were of most significance in the audit of the consolidated financial statements of the current period and which are therefore the key audit matters, that we are required to describe in this report

We also provide the Audit Committee with the declaration provided for in Article 6 of Regulation (EU) N°537/2014, confirming our independence within the meaning of the rules applicable in France such as they are set in particular by Articles L.821-27 to L.821-34 of the French Commercial Code (code de commerce) and in the French Code of Ethics (code de déontologie) for statutory auditors. Where appropriate, we discuss with the Audit Committee the risks that may reasonably be thought to bear on our independence, and the related safeguards.

6.5 BPCE management report

6.5.1 Significant events of 2024

6.5.1.1 Economic and financial environment

2024: DISINFLATION WITHOUT RECESSION AND POLITICAL UNCERTAINTY IN FRANCE

The global economy was resilient in 2024, as it was in 2023, even returning to an increase in activity of 3.2% per year, despite the shrinkage of international trade relative to GDP and the emergence of new major uncertainties. Two events marked the year in particular: the surprise dissolution of the French National Assembly and Donald Trump's presidential election in the United States. The profound divergence in growth trajectories between the major economic areas, which had already been observed prior to 2023, was reinforced, displaying a striking contrast: the European continent continued to lag behind the strategies of the race for industrial hegemony implemented by China and the United States. Overall, the global economy benefited mainly from the decline in inflation and the exceptional dynamism of private demand in the United States. Inflation on both sides of the Atlantic has been defeated, without a recession being automatically triggered by the aggressive tightening of key rates by the Fed and the ECB since March and July 2022, respectively. The relaxation of fiscal policies, particularly in the United States, which offset the monetary brake, boosted activity. In addition, disinflation has once again boosted the purchasing power of private agents on both sides of the Atlantic.

In 2024, China confirmed a process of structural slowdown, while the US economy exceeded the forecast of a simple soft landing, thanks to the still bold dynamism of its private demand. Conversely, the Eurozone took refuge in a persistently sluggish growth perspective despite signs of improvement in the first half of the year as the energy crisis eased. In the United States, as in China, the dynamics came from abysmal public deficits. In addition to a now less expansionary fiscal policy and the negative effects of the previous monetary tightening, Europe also suffered from a violent lag in its production prices relative to the United States and especially compared to China, due to the repercussions of the energy crisis of 2022. The economic recovery in the Eurozone was, therefore, quite modest in 2024, reaching 0.8%, compared to 0.5% in 2023. The support came mainly from foreign trade, as the contribution of domestic demand remained insufficient, despite disinflation, with household savings rates well above their historical average in the four main countries.

France entered an unknown situation of very marked economic and political uncertainty after the dissolution of the National Assembly on June 9. Its fiscal credibility, already tarnished by an unanticipated public deficit of 5.5% of GDP in 2023 and by the downgrade of its sovereign rating by Standard & Poor's, the most powerful American agency, then that of Moody's, became the main victim of ambitious election campaign promises, with no real basis in terms of financing. With Prime Minister Michel Barnier's government censored on December 4, political uncertainty, despite the appointment of François Bayrou, replaced inflationary fears. The public deficit also slipped again, reaching 6.1% of GDP in 2024. The sovereign spread with Germany reached nearly 80 basis points (bps) after the dissolution of the National Assembly, compared to only 50 bps previously.

French GDP grew by 1.1%, as in 2023. It benefited from the significant growth in public spending and a record contribution from foreign trade, the latter mainly due to the decline in imports. It was artificially boosted by the impact of the Olympic and Paralympic Games in Paris in the third quarter. Conversely, with a wait-and-see policy giving way to mistrust, business investment fell due to tightening financing conditions and increased reluctance on the part of private players. Consumption increased almost as in 2023, even though households experienced clear gains in purchasing power (+2.1% after +0.9%), boosted by the decline in prices. Given the general increase in uncertainty and probably the long-term risk of a tax increase in the face of the drift in public finances, the household savings rate increased to 17.9%, a level 4 points higher than that before the health crisis. Real estate investment by households remained in sharp contraction.

Inflation declined markedly, due to the year-on-year slowdown in the prices of food, manufactured products, energy and services, particularly in telecommunications: 2.0% per year on average, compared with 4.9% in 2023 and 5.2% in 2022. The unemployment rate stabilized at around 7.4%, compared to 7.3% in 2023, reflecting an increase in employment close to that of the active population: 214,000 net jobs were created in one year, for 256,000 additional assets, according to INSEE.

Regarding monetary policy, the resilience of domestic demand and inflation in services in the United States led the Fed to postpone the start of the key rate cuts previously planned for 2024 until September. The Fed made three successive reductions, one of 50 bps in September, which is rather unusual in magnitude, then two of 25 bps in November and December, *i.e.* a total of 100 bps, bringing key rates at the end of December within the range of 4.25% -4.5%, compared to 5.25% -5.5% previously. The ECB began its monetary easing process on June 6, before the Fed and for the first time in its history, even if it meant causing a temporary rise in the dollar exchange rate against the euro. This decision was motivated by a structural European deficit in productivity gains, the weakness of domestic demand and the more significant decline in inflation on the other side of the Atlantic. Then, three additional cuts of 25 bps were made in September, October, and December, for a total decrease of 100 bps over the year. On December 12, the deposit facility rate, the refinancing rate, and the marginal lending rate were reduced to 3%, 3.15%, and 3.4%, respectively. The 125 bps spread in favor of US key rates, the exceptional economic dynamism of the United States and the anticipation of more favorable growth with the election of Donald Trump have, therefore, fueled the weakness of the euro against the dollar. The latter stood at $1.04 on December 30, 2024, compared to approximately $1.11 at the end of 2023 (12/27). The ECB also announced that it would begin, as of the second half of the year, with the exit of the PEPP asset acquisition program launched during the pandemic, at the rate of a cautious disengagement of €7.5 billion per month.

Despite the sharp decline in inflation, 10-year rates on both sides of the Atlantic have rebounded, after their sharp easing at the end of 2023, due to the postponement of the monetary easing process until the second half of the year. The 10-year OAT averaged at 3% for the year, as in 2023. However, it reached 3.29% on June 28 and ended at 3.19% on December 31, due to an increased risk premium of almost 83 bps with Germany, despite the 100 bps reduction in the ECB's deposit facility rate. Lastly, the CAC 40 suffered significantly from the dissolution of the National Assembly and the political and budgetary uncertainty. It fell by 2.2% in 2024 (compared to an increase of 16.5% in 2023), reaching 7,380.74 on December 31, compared to 7,543.18 points at the end of 2023.

6.5.1.2 Significant events of the fiscal year

HOLDING COMPANY ACTIVITY

As a holding company, BPCE SA subscribed to the following capital increases and acquisitions:

- Caisse de Refinancement de l'Habitat for €40 million, as part of the annual capital adjustment of this entity reflecting the change in the share of refinancing borrowed by each shareholder;
- Hexarq for €45 million;
- IPaidThat for €28 million.

Proposed acquisition of Société Générale Equipment Finance (SGEF)

On April 11, 2024, the Group announced the signing of a memorandum of understanding with Société Générale to acquire the activities of Société Générale Equipment Finance (excluding the activities of SGEF in the Czech Republic and Slovakia).

Today, SGEF is one of the European leaders in the leasing of capital equipment, with a wide range of equipment financing solutions and associated services.

Groupe BPCE, which is already the second-largest provider in lease financing in France thanks to BPCE Lease, would become the European leader in capital equipment leasing solutions for manufacturers, dealers, distributors and corporates.

This project will help Groupe BPCE to achieve its international growth ambitions, diversify its revenues and strengthen its ability to create value. The acquisition will be carried out at a price of €1.1 billion (based on the net equity of €0.96 billion at the date of completion of the acquisition) and will represent a limited impact on the CET1 ratio, which is estimated at -40 bps at Groupe BPCE.

The operation was carried out on February 28, 2025, after obtaining the necessary regulatory and competition authorities.

BPCE SA capital increases

Pursuant to the first and second resolutions of the BPCE Combined General Meeting of December 18, 2024, the General Meeting delegated to the Management Board its authority to decide, with the prior authorization of the Supervisory Board, one or several increases in BPCE's share capital by issuing Category A shares reserved for Category A shareholders (Caisses d'Epargne), on the one hand, and Category B shares reserved for Category B shareholders (Banques Populaires), on the other, for a period of 18 months. The maximum total amount of share capital increases (including additional paid-in capital) that may be carried out under these delegations may not exceed €4 billion.

REFINANCING AND CAPITAL CIRCULATION ACTIVITIES

2024 was marked by a fall in interest rate in the second half of the year and a tightening of liquidity.

In this context, in its dual role (i) as an issuer on the bond market (to refinance the excess of the Group's financing needs over its customers' deposits and to provide the Group with additional share capital and capacity to absorb losses), and (ii) as the organizer/manager of the Group's internal capital management operations as a central institution, in 2024, BPCE SA issued on the market:

- €1.6 billion in Tier-2 bonds, of which €0.5 billion in Tier-2 "Social Local Economic Development" bonds,
- €6.6 billion in senior non-preferred bonds; these issuances help strengthen Groupe BPCE's capital and TLAC (Total Loss-Absorbing Capacity) and MREL ratios.

BPCE SA also subscribed the following major transactions internally:

- €0.5 billion for a deeply subordinated Tier-1 loan to replace the call of a deeply subordinated Tier-1 note of the same amount issued by Natixis SA,
- €0.1 billion in Tier-2 instruments issued by Natixis SA,
- €0.06 billion in Tier-2 instruments issued by Banque Palatine.

As a recognized social issuer, BPCE SA issued the first Shared Coupon Bond (OCP) in the amount of €0.4 billion to the Fondation de l'Assistance Publique-Hôpitaux de Paris (AP-HP). The innovative nature of this issue lies in its combination of the issuer's ESG objectives with a charitable financial return for investors.

BPCE SA also repaid €15.7 billion in long-term refinancing transactions (TLTRO 3) with the ECB.

In 2024, BPCE SA's balance sheet base increased by €10 billion. This increase is mainly due to long-term liquidity circulation operations within the Group.

6.5.2 Company position and activity in 2024

Changes in the BPCE balance sheet

			Change 2024/2023	
in billions of euros	12/31/2024	12/31/2023	*in billions of euros*	%
Amounts due from banks	413.2	401.5	+11.7	+3%
Amounts due from customers	2.9	2.8	+0.1	+4%
Securities transactions	6.3	6.5	(0.2)	(3%)
Associates, equity interests and long-term investments	28.5	28.1	+0.4	+1%
Other assets	10.3	12.4	(2.1)	(17%)
TOTAL ASSETS	**461.2**	**451.3**	**+9.9**	**+2%**
Amounts due to banks	270.7	262.5	+8.2	+3%
Customer deposits	5.4	4.7	+0.7	+15%
Debt securities and subordinated debt	160.1	158.9	+1.2	+1%
Other liabilities	4.8	6.5	(1.7)	(26%)
Shareholders' equity and fund for general banking risks	20.2	18.7	+1.5	+8%
TOTAL LIABILITIES	**461.2**	**451.3**	**+9.9**	**+2%**

The total balance sheet of BPCE SA under French GAAP amounted to €461.2 billion at December 31, 2024, an increase of €9.9 billion compared with December 31, 2023.

Under assets, the increase of +€11.7 billion in the "Amounts due from banks" item is mainly due to an increase in term intra-group receivables, despite a decrease in the balance of the Central Bank account. This change in receivables from Group entities is the result of the new methods for circulating long-term liquidity within the Group.

The "Amounts due from customers" item remained stable at €2.9 billion at December 31, 2024, mainly on loans to financial customers and subordinated loans.

"Securities transactions" were down by -€0.2 billion. This change was due to:

- Amortization of the mortgage securitization portfolio for:
  - -€0.1 billion on US securities
  - -€0.1 billion on Italian securities,
- An increase of +€0.1 billion on government securities and similar securities,
- The repayment of BPCE SFH shares for -€0.4 billion,
- The purchase of AVAL Master FCT shares for +€0.3 billion.

The item "Investments in affiliates and other long-term investments" increased by +€0.4 million mainly due to the following changes:

- subscription of BPCE to capital increases: BPCE Immo d'Exploitation for +€90 million, BPCE Payments for +€74 million and Caisse de Refinancement de l'Habitat (CRH) for +€40 million,
- repayment of the advance in BPCE Payments' current account for -€86.9 million,
- repayment of the NATIXIS SA perpetual deeply subordinated notes and preference shares in USD for -€424 million,
- repayment of the BPCE International perpetual deeply subordinated notes and preference shares for -€100 million,
- additional provisions for impairment of -€99 million (including Oney Bank and Palatine) and reversals of impairment of +€898 million (including Natixis, CFF and BPCE International).

"Other assets" decreased by -€2.1 billion, mainly on guarantee deposits paid related to margin calls against Natixis.

Under liabilities, the +€8.2 billion increase in "Amounts due to banks" is explained by the increase in deposits by Group institutions, the circulation of long-term liquidity within the Group and the cessation of refinancing with the ECB (TLTRO 3).

The item "Debt securities and subordinated debt" increased by +€1.2 billion, mainly due to the net increase of +€3.8 billion in senior non-preferred bonds, the decrease of -€1.2 billion in senior bonds and the decrease in interbank market securities and negotiable debt securities for -€1.4 billion.

The "Other liabilities" item was down by -€1.7 billion, in particular on the accrual accounts.

The increase in shareholders' equity is mainly due to the 2024 net income for +€1,455 million and regulated provisions and investment subsidies for -€15 million. Note the completion in 2024 of a capital increase of +€9 million and an increase in the associated additional paid-in capital of +€832 million.

BPCE Income statement

in millions of euros	2024	2023	Change 2024/2023 in millions of euros	Change 2024/2023 %
Net banking income	1,068	869	+199	+23%
Operating expense	(630)	(616)	(14)	+2%
Gross operating income	**438**	**253**	**+185**	**+73%**
Cost of risk	(20)	(1)	(19)	NA
Net gains or losses on long-term investments	790	36	+754	NA
Income before tax	**1,208**	**288**	**+920**	**+319%**
Income tax	262	276	(14)	(5%)
Funding/reversal of fund for general banking risks and regulated provisions	(15)	(18)	+3	(17%)
NET INCOME	**1,455**	**546**	**+909**	**+166%**

BPCE SA's 2024 result stands at €1,455 million, up +€909 million compared to 2023, notably in connection with reversals of provisions following impairment tests on investments and an increase in dividends received. Gross operating income amounted to €438 million, gains on fixed assets to +€790 million, charges to regulated provisions to -€15 million and income tax to +€262 million.

Net banking income

in millions of euros	2024	2023	Change 2024/2023 in millions of euros	Change 2024/2023 %
Financial Management	(485)	(575)	+90	(16%)
Eurotitres	97	93	+4	+5%
Holding	1,185	1,089	+96	+9%
Central institution	272	262	+10	+4%
NET BANKING INCOME	**1,068**	**869**	**+200**	**+23%**

In 2024, BPCE SA's net banking income totaled €1,068 million, up +€200 million compared with 2023.

BPCE SA is responsible for ensuring the Group's liquidity and capital adequacy by guaranteeing that the regulatory ratios are met. These activities are part of the Financial Management business line, which delivered net banking income of -€485 million in 2024, an increase of +€90 million compared with 2023. This change was mainly due to the increase in the central treasury's result, partly offset by higher expenses on subordinated debt.

Eurotitres' net banking income amounted to €97 million in 2024 up by +€4 million compared to 2023.

Net banking income from the Holding activity was up by +€96 million, mainly due to the +€127 million increase in dividends received over the year.

The net banking income of the central institution business line amounted to +€272 million in 2024. This represents the rebilling of "central institution" activities (listed in the French Monetary and Financial Code), presented as net banking income.

Operating expense

in millions of euros	2024	2023	Change 2024/2023 in millions of euros	Change 2024/2023 %
Payroll costs	(564)	(528)	(36)	+7%
Other expenses	(503)	(396)	(107)	+27%
Gross operating expenses	**(1,067)**	**(924)**	**(143)**	**+15%**
Rebilled expenses	**437**	**414**	**+23**	**+5%**
Net operating expenses	**(630)**	**(510)**	**(120)**	**+24%**
Charges from exceptional projects	0	(106)	+106	(100%)
OPERATING EXPENSES	**(630)**	**(616)**	**(14)**	**+2%**

Operating expenses amounted to -€630 million in 2024, an increase of 14 million euros compared to 2023. This rise is primarily due to costs incurred for strategic projects. However, this increase is partially offset by the cessation of contributions to the Single Resolution Fund, as the ceiling was reached in 2023, which had resulted in a charge of -103 million euros that year.

Rebilled expenses stood at €437 million in 2024, up +€23 million compared to 2023.

COST OF RISK

The cost of risk amounted to -€20 million in 2024, a change of -€19 million, mainly due to the provision for guarantee commitments.

NET GAINS OR LOSSES ON LONG-TERM INVESTMENTS

Net gains or losses on long-term investments amounted to +€790 million in 2024. They consist of provisions and reversals of impairment on equity interests, shares in affiliated companies and other long-term securities, following the annual exercise of goodwill impairment tests, notably with Natixis (+€620 million), Crédit Foncier (+€211 million), BPCE International (+€53 million), Oney Bank (-€48 million) and Banque Palatine (-€23 million).

INCOME TAX

In 2024, income taxes totaled +€262 million, representing -€14 million compared with 2023.

FUND FOR GENERAL BANKING RISKS, REGULATED PROVISIONS AND NET INCOME

No movement was made to the fund for general banking risks.

Concerning regulated provisions, an allowance of -€15 million was recognized for accelerated amortization of the acquisition costs of equity interests.

Net income came to €1,455 million.

NON-TAX DEDUCTIBLE EXPENSES

Disclosure of luxury expenditures

In accordance with the provisions of Article 223 *quater* and *quinquies* of the French General Tax Code, the financial statements for the past fiscal year included €463,019 in non-deductible expenses pursuant to Article 39.4 of said Code. The additional tax due in this respect is €119,598.

No other luxury non-tax deductible expenses were incurred.

PROPOSED ALLOCATION OF NET INCOME

It is proposed to the General Meeting:

- to allocate the net income of +€1,455,068,738.13 to "Retained earnings". As a result of this allocation, the balance of the "Retained earnings" item is €3,130,426,437.45;
- to distribute a dividend of €1,099,465,646.88 to shareholders, by deduction from the "Retained earnings" item. As a result of this allocation, the balance of the "Retained earnings" item is €2,030,960,790.57. The dividend per share is €26.48.

In accordance with the provisions of Article L. 243 *bis* of the French General Tax Code, the following dividends were distributed in respect of the previous three years:

Reporting date		Dividend per share	Portion of dividend eligible for the 40% allowance	Portion of dividend not eligible for the 40% allowance
12/31/2021	Category "A" and "B" shares	€21.8300	€787,968,126.82	/
12/31/2022	Category "A" and "B" shares	€22.4100	€808,903,606.14	/
12/31/2023	Category "A" and "B" shares	€22.2500	€840,750,648.50	/

INFORMATION ON SUBSIDIARIES, EQUITY INVESTMENTS AND BRANCHES

Activity and results of the main subsidiaries

The activity and results of the main subsidiaries are described in Chapter 1 of this document. A list of subsidiaries and equity investments is available in Chapter 6 "BPCE parent company annual financial statements".

Investments and controlling interests

The year 2024 was mainly marked by the following changes:

- buyback of shares from minority shareholders of Natixis governed by the liquidity contract as part of the Pléiade Project for €6.2 million;
- merger between BPCE Services (Absorbing) and BPCE Achats (Absorbed) on April 30, 2024, with a retroactive effect from January 1, 2024;
- subscription to the capital increase of BPCE Immo Exploitation for €90 million;
- subscription to the capital increase of BPCE Payments for €74 million;
- subscription to the capital increase of Caisse de Refinancement de l'Habitat for €40 million following the reallocation of share capital among the shareholders;
- subscription to the capital increase of Hexarq for €45 million;
- acquisition of IPaidThat for €28 million;
- acquisition of capital of B. Connect for €3.4 million.

Branches

BPCE SA owns no branches.

EMPLOYEE PROFIT-SHARING SCHEME

Information concerning employee profit-sharing is provided in Chapter 8.

INFORMATION CONCERNING CORPORATE OFFICERS

Information concerning corporate officers is provided in Chapter 4.

List of directorships and offices

Information concerning the list of directorships and offices of corporate officers is provided in Chapter 4.

Remuneration and benefits

Information concerning remuneration and benefits granted by BPCE SA to corporate officers is provided in Chapter 4.

Related-party agreements

Information concerning commitments and related-party agreements is provided in Chapter 8.

INFORMATION REGARDING OWNERSHIP OF SHARE CAPITAL

Information concerning the ownership of the share capital is provided in Chapter 8.

TRADING BY BPCE IN ITS OWN SHARES

In 2024, BPCE SA did not trade in its own shares.

INFORMATION ON INACTIVE ACCOUNTS (ARTICLES L. 312-19, L. 312-20 AND R. 312-21 OF THE FRENCH MONETARY AND FINANCIAL CODE)

As BPCE SA holds no individual current accounts, it is not affected by these articles.

TRANSFERS AND SALES OF SHARES

In 2024, BPCE SA sold its €95 million interest in Visa Inc.

RESEARCH & DEVELOPMENT ACTIVITIES

BPCE SA's research and development activities chiefly focus on modeling credit risks.

MANAGEMENT OF FINANCIAL RISKS

Information relating to the management of financial risks is provided in Chapter 7.

MAIN RISKS

Information relating to the main risks and uncertainties facing BPCE SA is provided in Chapter 7.

HARDSHIPS

BPCE SA did not encounter any particular difficulties during the 2024 fiscal year. The economic and financial environment is also described in Section 5.2 of Chapter 5.

SOCIAL, ENVIRONMENTAL AND SOCIETAL INFORMATION

This information is provided in Chapter 2.

CONTROLS OF ACCOUNTING AND FINANCIAL REPORTING QUALITY

This information is provided in Section 6.8.

EVENTS AFTER THE REPORTING PERIOD

Following the authorization of the General Meeting of December 18, 2024, the Management Board decided to carry out the first drawdown of BPCE SA’s capital increase on February 19, 2025, for €1.3 billion.

Following the approval of the relevant regulatory and competition authorities (see 6.5.1.2 Significant events of the fiscal year), BPCE SA acquired all of Société Générale Equipment Finance activities on February 28, 2025, for a total price of 1.1 billion euros. The Brazilian operations were purchased directly by BPCE SA, while the activities in other countries were acquired through two holding companies of BPCE SA.

At the same time as this acquisition, BPCE SA replaced Société Générale in the financing of all subsidiaries and thus included, in its financial statements, outstanding loans for a total of approximately €8 billion.

RECENT DEVELOPMENTS AND OUTLOOK

The outlook for the economic environment and recent and forthcoming regulatory changes are described in Paragraph 5.8 of Chapter 5.

Statement of results for the five previous years

in euros	2020	2021	2022	2023	2024

6.6.2 Notes to the parent company annual financial statements

Note 1 / General framework

1.1 Groupe BPCE

Groupe BPCE comprises the Banque Populaire network, the Caisse d'Epargne network, the BPCE central institution and its subsidiaries.

TWO BANKING NETWORKS: THE BANQUES POPULAIRES AND THE CAISSES D'EPARGNE

Groupe BPCE is a cooperative group whose shareholders own the two retail banking networks: the 14 Banques Populaires and the 15 Caisses d'Epargne. Each of the two networks owns an equal share in BPCE, the Group's central institution.

The Banque Populaire network consists of the Banques Populaires and the mutual guarantee companies which grant them the exclusive benefit of their guarantees.

The Caisse d'Epargne network consists of the Caisses d'Epargne and the local savings companies (LSCs).

The Banques Populaires are wholly-owned by their cooperative shareholders.

The capital of the Caisses d'Epargne is wholly-owned by the LSCs. Local savings companies are cooperative structures with open-ended share capital owned by cooperative shareholders. The LSCs are tasked with coordinating the cooperative shareholder base, in line with the general objectives defined by the individual Caisse d'Epargne with which they are affiliated, and cannot perform banking transactions.

BPCE

BPCE, a central institution as defined by the French Banking Law and a credit institution licensed to operate as a bank, was created pursuant to act No. 2009-715 of June 18, 2009. BPCE was incorporated as a French limited liability company (*société anonyme*) governed by a Management Board and a Supervisory Board, whose share capital is owned jointly and equally by the 14 Banques Populaires and the 15 Caisses d'Epargne.

BPCE's corporate mission embodies the continuity of the cooperative principles underlying the Banques Populaires and the Caisses d'Epargne.

Specifically, BPCE represents the interests of its various affiliates in dealings with the supervisory authorities, defines the range of products and services offered by them, organizes depositor protection, approves key appointments of company directors and oversees the smooth operation of the Group's institutions.

As a holding company, BPCE is the head entity of the Group and holds the joint ventures between the two networks in Retail Banking and Insurance, corporate banking and financial services, and their production units. It defines the Group's corporate strategy and growth and expansion policies.

BPCE's main subsidiaries are organized around two major business lines:

- Retail Banking and Insurance, which includes the Banque Populaire network, the Caisse d'Epargne network, the Financial Solutions & Expertise division (including factoring, consumer loans, leasing, sureties & financial guarantees, and the "retail securities" business), the Digital & Payments (integrating the payments subsidiaries and the Oney group) and Insurance divisions, and Other networks;
- Global Financial Services combining Asset & Wealth Management (Natixis Investment Managers and Natixis Wealth Management) and Corporate & Investment Banking (Natixis Corporate & Investment Banking).

In respect of the Group's financial functions, BPCE is responsible, in particular, for the centralized management of surplus funds, for the execution of any financial transactions required to develop and fund the Group, and for choosing the most appropriate counterparty for these transactions in the broader interests of the Group. BPCE also provides banking services to the other Group entities.

1.2 Guarantee mechanism

The purpose of the guarantee and solidarity system is, in accordance with Articles L. 511-31, L. 512-107-5 and L. 512-107-6 of the French Monetary and Financial Code, to guarantee the liquidity and solvency of the Group and BPCE-affiliated institutions, as well as to organize the financial solidarity between them.

BPCE is responsible for taking all necessary measures to ensure the solvency of the Group and each of the networks and to organize financial solidarity within the Group. This financial solidarity is based on legislative provisions establishing a legal principle of solidarity obliging the central institution to restore the liquidity or solvency of affiliates in difficulty and/or all affiliates of the Group. By virtue of the unlimited nature of the principle of solidarity, BPCE is entitled at any time to ask any one or several or all of the affiliates to contribute to the financial efforts that may be necessary to restore the situation, and may, if necessary, mobilize all the cash and equity capital of the affiliates in the event of difficulty for one or more of them.

In the event of difficulties, BPCE will have to do everything necessary to restore the financial situation and may in particular make unlimited use of the resources of any, several or all affiliates, or implement the appropriate mechanisms of internal solidarity of the Group and by calling on the guarantee fund common to the two networks of which it determines the rules of operation, the triggering conditions, in addition to the funds of the two networks as well as the contributions of the affiliated institutions for its endowment and reconstitution.

BPCE manages the Banque Populaire Network Fund, the Caisse d'Epargne Network Fund and the Mutual Guarantee Fund.

The Banque Populaire Network Fund was formed by a deposit made by the Banques Populaires of €450 million that was booked by BPCE in the form of a 10-year term account which is indefinitely renewable.

The deposit made to the Caisse d'Epargne Network Fund by the Caisses d'Epargne of €450 million was booked by BPCE in the form of a 10-year term account which is indefinitely renewable.

The Mutual Guarantee Fund was formed by deposits made by the Banques Populaires and the Caisses d'Epargne. These deposits were booked by BPCE in the form of 10-year term accounts which are indefinitely renewable. The amount of the deposits by network was €197 million at December 31, 2024.

The total amount of deposits made to BPCE in respect of the Banque Populaire Network Fund, the Caisse d'Epargne Network Fund and the Mutual Guarantee Fund may not be less than 0.15% and may not exceed 0.3% of the Group's total risk-weighted assets.

The booking of deposits in the institutions' parent company financial statements under the guarantee and solidarity system results in the recording of an item of an equivalent amount under a dedicated capital heading.

Mutual guarantee companies granting the exclusivity of their guarantees to a Banque Populaire benefit from a liquidity and capital adequacy guarantee in their capacity as affiliates of the central institution.

The liquidity and capital adequacy of the local savings companies are secured, firstly, at the level of each individual local savings company by the Caisse d'Epargne of which the local savings company in question is a shareholder.

The Management Board of BPCE holds all the requisite powers to mobilize the resources of the various contributors without delay and in accordance with the agreed order, on the basis of prior authorizations given to BPCE by the contributors.

1.3 Significant events

HOLDING COMPANY ACTIVITY

As a holding company, BPCE SA acquired or subscribed to the following capital increases:

- Caisse de Refinancement de l'Habitat for €40 million, as part of the annual capital adjustment of this entity reflecting the change in the share of refinancing borrowed by each shareholder;
- Hexarq for €45 million;
- IPaidThat for €28 million.

Proposed acquisition of Société Générale Equipment Finance (SGEF)

On April 11, 2024, the Group announced the signing of a memorandum of understanding with Société Générale to acquire the activities of Société Générale Equipment Finance (excluding the activities of SGEF in the Czech Republic and Slovakia).

Today, SGEF is one of the European leaders in the leasing of capital equipment, with a wide range of equipment financing solutions and associated services.

Groupe BPCE, which is already the second-largest provider in lease financing in France thanks to BPCE Lease, would become the European leader in capital equipment leasing solutions for manufacturers, dealers, distributors and corporates.

This project will help Groupe BPCE to achieve its international growth ambitions, diversify its revenues and strengthen its ability to create value. The acquisition will be carried out at a price of €1.1 billion (based on the net equity of €0.96 billion at the date of completion of the acquisition) and will represent a limited impact on the CET1 ratio, which is estimated at -40 bps on Groupe BPCE's CET1 ratio.

The transaction was completed on February 28, 2025, after obtaining the approval of the relevant regulatory and competition authorities.

The other transactions are described in the management report on the parent company financial statements.

BPCE SA capital increases

Pursuant to the first and second resolutions of the BPCE Combined General Meeting of December 18, 2024, the General Meeting delegated to the Management Board its authority to decide, with the prior authorization of the Supervisory Board, one or several increases in BPCE's share capital by issuing Category A shares reserved for Category A shareholders (Caisses d'Epargne), on the one hand, and Category B shares reserved for Category B shareholders (Banques Populaires), on the other, for a period of 18 months. The maximum total amount of share capital increases (including additional paid-in capital) that may be carried out under these delegations may not exceed €4 billion.

REFINANCING AND CAPITAL CIRCULATION ACTIVITIES

2024 was marked by lower interest rates in the second half of the year and a tightening of liquidity.

In this context, in 2024, in its dual role (i) as an issuer on the bond market (to refinance the excess of the Group's financing needs over its customers' deposits and to provide the Group with additional capital and capacity to absorb losses), and (ii) as the organizer/manager of the Group's internal capital management operations as a central institution BPCE:

- issued on the market:
  - €1.6 billion in Tier-2 bonds, of which €0.5 billion in Tier-2 "Social Local Economic Development" bonds,
  - €6.6 billion in senior non-preferred bonds; these issuances help strengthen Groupe BPCE's capital and TLAC (Total Loss-Absorbing Capacity) and MREL ratios.
- underwrote the following main transactions:
  - €0.5 billion for a additional Tier 1 supersubordinated loan to replace the call for a additional Tier-1 supersubordinated loan of the same amount issued by Natixis,
  - €0.1 billion in Tier-2 instruments issued by Oney Bank,
  - €0.06 billion in Tier-2 instruments issued by Banque Palatine.

As a recognized social issuer, BPCE SA issued the first Shared Coupon Bond (OCP) in the amount of €0.4 billion for the Fondation de l'Assistance Publique-Hôpitaux de Paris (AP-HP).

The innovative nature of this issue lies in its combination of the issuer's ESG objectives with a charitable financial return for investors.

BPCE also repaid €15.7 billion in long-term refinancing transactions (TLTRO 3) with the ECB.

In 2024, BPCE SA's balance sheet base increased by €10 billion. This increase is mainly due to long-term liquidity circulation operations within the Group.

1.4 Events after the reporting period

Following the authorization of the General Meeting of December 18, 2024, the Management Board decided to carry out the first drawdown of BPCE SA's capital increase on February 19, 2025, for €1.3 billion.

Following the approval from the relevant regulatory and competition authorities (see note 1.3 Significant Events), BPCE SA acquired all of the Société Générale Equipment Finance activities on February 28, 2025, for a total price of €1.1 billion. BPCE SA purchased the business in Brazil directly, and the activities in other countries through two holding companies of BPCE SA,the activities in other countries through two holding companies of BPCE SA, and the activities in other countries through two holding companies of BPCE SA.

At the same time as this acquisition, BPCE SA replaced Société Générale in the financing of all subsidiaries and thus included, in its financial statements, outstanding loans for a total of approximately €8 billion.

Note 2 / Accounting policies

2.1 Valuation methods, presentation of parent company financial statements and reporting date

The format of the summary statements used complies with the format proposed by Regulation No. 2014-07 of the French national accounting standards authority.

The parent company annual financial statements for the fiscal year ended on December 31, 2024, were approved by the Management Board on February 3, 2025. They will be presented to the General Meeting on May 22, 2025.

The amounts presented in the financial statements and in the Notes are shown in millions of euros, unless otherwise indicated. Rounding may lead to differences between the amounts shown in the financial statements and those referred to in the Notes.

2.2 Changes in accounting methods

Regulation No. 2023-05 of November 10, 2023, of the French national accounting standards authority (ANC) relating to IT solutions, amending ANC Regulation No. 2014-03 of June 5, 2014, relating to the general chart of accounts, is mandatory as of January 1, 2024. It has no significant impact on the parent company financial statements.

The other texts adopted by the French national accounting standards authority (ANC) that had mandatory application in 2024 did not have a significant impact on the parent company financial statements.

Unless otherwise stated, BPCE did not elect to apply in advance the texts adopted by the French national accounting standards authority for which application is optional.

2.3 Accounting policies and valuation methods

The financial statements for the fiscal year are presented in identical format to those for the previous fiscal year. Generally accepted accounting principles have been applied in compliance with the principle of prudence based on the following principles:

- the going-concern principle;
- consistency of accounting methods from one period to the next;
- independence of fiscal years;

and observance of the general rules governing the preparation and presentation of annual financial statements.

The basic method for valuing accounting entries is the historical cost method and all balance sheet items are presented, as appropriate, net of amortization, provisions, and allowances for impairment.

Specific accounting principles are presented in the Notes to which they refer.

2.4 Principles applicable to banking resolution mechanisms

The terms and conditions governing the establishment of the deposit and resolution guarantee fund (FGDR) are governed by the Ministerial Order of October 27, 2015.

For the Guarantee Fund in respect of cash, collateral and securities deposits, the cumulative amount of contributions made by BPCE represented a non-material amount. Cumulative contributions (which are non-refundable in the event of a voluntary withdrawal of authorization) had no material impact on BPCE's financial statements. Contributions paid in the form of partner or association certificates and cash security deposits recognized as assets in the balance sheet were not material.

The resolution fund was set up in 2015 in accordance with European directive No. 2014/59/EU known as BRRD (Bank Recovery and Resolution Directive), which established a framework for the recovery and resolution of banks and investment firms, *i.e.* European Regulation 806/2014 (Single Resolution Mechanism (SRM) Regulation). In 2016, it became the Single Resolution Fund (SRF), formed by the Member States participating in the Single Supervisory Mechanism (SSM). The SRF is a financing mechanism available to the resolution authority (Single Resolution Board) for the implementation of resolution procedures.

The Single Resolution Board set the level of contributions for 2024 in accordance with Delegated Regulation 2015/63 and Implementing Regulation 2015/81 supplementing the BRRD on *ex-ante* contributions to bank resolution financing mechanisms. The target in terms of the funds to be collected for the resolution fund was achieved at December 31, 2023. The amount of contributions paid by Groupe BPCE was zero in 2024 for both the portion recognized as an expense and the portion in the form of irrevocable payment commitments (IPC) guaranteed by cash deposits recorded as assets on the balance sheet. However, contributions may be called in the future depending, in particular, on the evolution of the covered deposits and the possible use of the funds. The share of the IPCs corresponded to 15% of the calls for funds until 2022 and 22.5% for the 2023 contribution. These deposits are remunerated at Ester -20 bps since May 1, 2023. The cumulative amount of contributions recognized as assets on the balance sheet totaled €106 million at December 31, 2024. It is recognized on the asset side of the balance sheet under "Other assets" and was not subject to impairment at December 31, 2024. In effect, the conditions for using the SRF resources, and therefore for calling on irrevocable payment commitments, are strictly governed by regulations. These resources may only be called up in the event of a resolution procedure by an institution and after intervention of at least 8% of total liabilities by shareholders and holders of relevant capital instruments and other commitments usable for bail-in purposes. In addition, the SRF contribution must not exceed 5% of the total liabilities of the institution subject to a resolution procedure.

Note 3 / Information on the income statement

3.1 Interest and similar income and expenses

Accounting principles

Interest and similar commission income is recognized on a *pro rata* basis.

Negative interest is presented as follows:

- a negative interest on an asset is presented as an interest expense in NBI;
- a negative interest on a liability is presented as interest income in NBI.

Commissions and fees related to granting or acquiring a loan are treated as additional interest amortized over the effective life of the loan, on a *pro rata* basis according to the outstanding amount due.

The portion of income received during the year from bonds or negotiable debt securities is also recognized. The same applies to perpetual deeply subordinated notes that meet the definition of a Tier-1 regulatory capital instrument. The Group considers that these revenues are effectively similar in nature to interest.

	2024 fiscal year			2023 fiscal year		
in millions of euros	Income	Expense	Net	Income	Expense	Net
Transactions with banks[(1)(2)]	18,515	(11,740)	6,775	13,939	(8,479)	5,460
Customer transactions	67	(154)	(87)	35	(119)	(84)
Bonds and other fixed-income securities	1,151	(6,953)	(5,802)	1,090	(5,666)	(4,576)

TOTAL	**20,261**	**(21,059)**	**(798)**	**15,583**	**(16,414)**	**(831)**

(1) In 2024, transactions with credit institutions included an adjustment to the remuneration of the current account of a Group institution for €19 million.
(2) Interest (similar income and expenses) on transactions with banks include interest on TLTRO 3 refinancings mentioned in Note 4.1 and those of associated loans granted to Group institutions.
(3) Macro-hedging transactions are presented net.

3.2 Income from variable-income securities

Accounting principles

Income from variable-income securities includes dividends and other income from equities and other variable-income securities, equity interests, other long-term investments, and investments in affiliates.

Dividends are recognized when the right to receive payment has been decided by the competent body.

in millions of euros	2024 fiscal year	2023 fiscal year
Equities and other variable-income securities	0	0
Equity interests and other long-term investments	17	18
Investments in affiliates	1,409	1,282
TOTAL	**1,426**	**1,300**

3.3 Commissions

Accounting principles

Commissions that are similar in nature to interest are recognized under "Interest and similar income and expenses" (see Note 3.1).

Other commission income is recognized according to the type of service provided as follows:

- commissions received for an *ad hoc* service are recognized on completion of the service;
- commissions received for an ongoing or discontinued service paid for in several installments are recognized over the period in which the service is provided.

	2024 fiscal year			2023 fiscal year

* Mainly concerns the securities custody business and, since 2023, the activity of the Financial Solutions division carried out on behalf of the Group.

3.4 Net gains or losses on trading book transactions

Accounting principles

Net gains or losses on trading book transactions include:

- net gains or losses on balance sheet and off-balance sheet securities transactions;
- net gains or losses on outright forward currency exchange transactions, arising from currency purchases and sales and the periodic valuation of foreign currency and precious metal transactions;
- net gains or losses arising from transactions in forward financial instruments, in particular interest rate, currency exchange and stock market index futures, whether firm or conditional, including those used to hedge trading book transactions.

* Rebilling of "central institution" activities (listed in the French Monetary and Financial Code), are presented in NBI.

3.7 Operating expenses

Accounting principles

Operating expenses include payroll costs (wages and salaries), employee profit-sharing and incentive schemes, social security charges and payroll taxes. Other administrative costs are also recorded, including other taxes and fees paid for external services.

in millions of euros	2024 fiscal year	2023 fiscal year
Wages and salaries	(328)	(308)
Pension costs and similar obligations(1)	(42)	(38)
Other social security charges	(126)	(119)

Total payroll costs	**(587)**	**(543)**
Taxes other than on income(2)	8	(13)
Other operating expenses(3)	(761)	(751)
Rebilled expenses	720	700
Total other operating expenses	**(33)**	**(64)**
TOTAL	**(620)**	**(607)**

(1) Including charges, utilizations, and reversals of provisions for employee benefits (see Note 4.93).
(2) The change includes the adjustment related to the calculation of the final tax coefficient for 2023 (VAT).
(3) Other operating expenses included the contribution to the SRF (Single Resolution Fund) for which we had no expense in 2024 (compared to €103 million in 2023).

The average number of employees in service during the year, broken down by professional category, is as follows in 2024: 3,169 managers and 424 non-managers, *i.e.* a total of 3,593 employees, compared with 3,005 managers and 285 non-managers, *i.e.* a total of 3,290 employees in 2023.

3.8 Cost of risk

Accounting principles

"Cost of risk" includes only the cost related to credit risk (or counterparty risk). Credit risk is the existence of a potential loss related to the possibility of the counterparty defaulting on its obligations. The term "counterparty" refers to any legal entity that receives a loan or an off-balance sheet commitment, is party to a forward financial instrument or is the issuer of a debt security.

Cost of credit risk is calculated when the loan is classified as non-performing, *i.e.* when it is probable that the Group will not collect all or part of the sums owed under the terms of the commitments made by the counterparty in accordance with the initial contractual provisions, notwithstanding any guarantees or collateral.

The credit risk is also measured when a credit risk is identified on performing loans showing a significant increase in credit risk since their initial recognition (see Notes 4.1, 4.2.1 and 4.3.1).

Cost of credit risk therefore consists of all the impairment charges and reversals related to receivables due from customers and banks, fixed-income securities held to maturity (if there is known to be a risk of default by the issuer), provisions for off-balance sheet commitments (excluding off-balance sheet financial instruments) as well as losses on irrecoverable loans and recoveries of bad debts written off.

However, charges to and reversals of provisions, losses on irrecoverable loans or recoveries of impaired loans relating to interest on non-performing loans for which provisioning is mandatory are classified under "Interest and similar income" and "Other banking income" in the income statement. For trading securities, available-for-sale securities, equity securities available for sale in the medium term and forward financial instruments, cost of counterparty risk is recognized directly in the items recording the gains and losses on these portfolios, except where there is a known risk of default by the counterparty that may effectively be isolated and where changes in counterparty risk provisions are therefore recorded in "Cost of risk".

The majority of receivables on BPCE SA's balance sheet relate to institutions benefiting from the guarantee and solidarity system presented in Note 1.2.

in millions of euros	2024 fiscal year					2023 fiscal year				
	Charges	Reversals and uses	Losses	Recoveries of bad debts written off	Total	Charges	Reversals and uses	Losses	Recoveries of bad debts written off	Total

Other					0					0
TOTAL	(20)	**0**	**0**	**0**	**(20)**	**(1)**	**0**	**0**	**0**	**(1)**

In 2024, the allocation corresponded to provisions for off-balance sheet guarantee commitments for €20 million.

3.9 Gains or losses on long-term investments

Accounting principles

Gains or losses on long-term investments include:

- gains or losses on disposals of property, plant and equipment and intangible assets used for the bank's operations, arising from the difference between capital gains and losses on disposals, and charges to and reversals of provisions;
- gains or losses on investments in associates, other long-term investments, equity interests, affiliates, and held-to-maturity securities, arising from the difference between provision reversals and capital gains on disposals, and provision charges and losses on disposals.

in millions of euros	2024 fiscal year				2023 fiscal year			
	Equity interests and other long-term investments	Held-to-maturity securities	Property, plant and equipment and intangible assets	Total	Equity interests and other long-term investments	Held-to-maturity securities	Property, plant and equipment and intangible assets	Total
Impairment								
Charges	(99)	0	0	(99)	(335)	0	0	(335)

TOTAL	**790**	**0**	**0**	**790**	**36**	**0**	**0**	**36**

Gains or losses on investments in associates, equity interests, affiliates and other long-term investments included specifically:

- provisions for impairment of investments in associates:
  - Oney Bank (€48 million),
  - Banque Palatine (€23 million),
  - BPCE Solutions Immobilières (€7 million);
- reversals of provisions for impairment on investments in associates:
  - Natixis (€620 million),
  - Crédit Foncier (€211 million),
  - BPCE International (€53 million).

The valuation of equity interests carried out in 2024 is described in Note 4.4.

3.10 Non-recurring income

Accounting principles

This item only includes income and expenses before tax, which are generated or occur on a non-recurring basis and are not related to the Group's regular activities.

No non-recurring income was recorded in the 2024 and 2023 fiscal years.

3.11 Income tax

Accounting principles

As of 2010, BPCE opted to apply the provisions of Article 91 of the amended French Finance Act for 2008 which extended the tax consolidation regime to networks of mutual banks. This option is modeled on the tax consolidation for mutual insurers and takes into account consolidation criteria not based on ownership interest (the scheme is usually available if at least 95% of the share capital of a subsidiary is owned by a parent company).

As head of the Group, BPCE signed a tax consolidation agreement with members of its group (including the 14 Banques Populaires, the 15 Caisses d'Epargne, and BPCE subsidiaries, including BPCE International, Crédit Foncier, Banque Palatine, Natixis, BPCE Assurances, BPCE Payments and BPCE SFH).

In accordance with the terms of this agreement, BPCE recognizes a receivable for the tax to be paid to it by the other members of the tax consolidation group along with a payable corresponding to the tax to be paid to the tax authorities on behalf of the consolidation group.

The rules of the OECD Pillar II aiming at the implementation of a minimum global corporate tax rate of 15%, transposed into French law by the Finance act for 2024, are now applicable to fiscal years beginning from January 1, 2024. In view of the legal and conventional provisions to date, BPCE, as the ultimate parent entity of the entire Groupe BPCE, will be the entity liable for this additional tax. However, this additional tax only concerns a very limited number of jurisdictions. This first estimate of the tax expense is made on the basis of data available to date.

Note, however, the specific cases of jurisdictions where Groupe BPCE entities are established where local tax regulations provide for the payment to the tax authorities of any top-up tax due in respect of that jurisdiction. In such a case, the relevant Groupe BPCE entity could be required to pay and therefore recognize, the additional tax in respect of that jurisdiction (tax legislation still to be adopted).

The income tax expense for the period corresponds to the tax expense of BPCE in respect of 2024, corrected to reflect the impact of tax consolidation upon the Group.

3.11.1 Income tax for 2024

Income tax is determined at the level of the BPCE tax consolidation group. BPCE SA's contribution breaks down as follows:

in millions of euros	2024 fiscal year		
Taxable bases at the following rates:	**25%**	**19%**	**15%**
Tax on current income(1)	1,369		
Tax on non-recurring income	0		
Taxable bases	**1,369**	**0**	**0**

* Since 2023, guarantees and asset financing have been in the Holding company.

The various activities are detailed in the management report (Section 6.5).

Note 4 / Balance sheet information

Unless otherwise indicated, explanatory notes for balance sheet items are presented net of depreciation, amortization, impairment, and provisions.

Certain information relating to credit risk required by Regulation No. 2014-07 of the French national accounting standards authority (ANC) is presented in the risk management report.

4.1 Interbank transactions

Accounting principles

Loans and advances to banks cover all loans and advances made in connection with banking transactions with the exception of those represented by a security. They also include securities purchased under resale agreements, regardless of the type of underlying asset, and loans and advances relating to securities under repurchase agreements. They are broken down between demand loans and advances and term loans and advances. Loans to banks are recorded in the balance sheet at their nominal value, with the exception of buybacks of customer loans which are recorded at acquisition cost, plus accrued interest and net of any impairment charges recognized for credit risk.

Amounts due to banks are presented according to their term (demand deposits and current accounts or term deposits and borrowings) and amounts due to customers are classified according to their nature (regulated savings accounts and other deposits for customers). Depending on the counterparty involved, these items include securities and other assets sold under repurchase agreements. Accrued interest is recorded under related payables.

Guarantees received are booked as off-balance sheet items. They are remeasured on a regular basis. The total carrying amount of all guarantees received for a single loan is limited to the principal amount outstanding on the loan.

Restructured loans

Within the meaning of the French national accounting standards authority's (ANC) Regulation No. 2014-07, restructured loans are non-performing loans whose initial characteristics (term, interest rate) are modified to allow the counterparties to repay the amounts due.

A discount is taken on restructured loans to reflect the difference between the present value of the contractual cash flows at inception and the present value of expected principal and interest repayments after restructuring. The discount rate used for fixed-rate loans is the initial effective interest rate and the discount rate used for variable-rate loans is the most recent effective interest rate prior to the restructuring date. The effective rate is the contractual rate. This discount is expensed to "Cost of risk" in income and offset against the corresponding outstanding in the balance sheet. It is written back to net interest income in the income statement over the life of the loan using an actuarial method.

A restructured loan may be reclassified as performing when the new repayment dates are observed. When a loan that has been reclassified becomes overdue, regardless of the restructuring terms agreed, the loan is downgraded to non-performing.

Non-performing loans

Non-performing loans consist of all outstanding amounts (whether or not they are due, guaranteed or other), where at least one commitment made by the obligor has involved a known credit risk, classified as such on an individual basis. Loans are considered "at risk" when it is probable that the Group will not collect all or part of the sums due under the terms of the commitments made by the counterparty, notwithstanding any guarantees or collateral.

Non-performing loans are identified in compliance with the French national accounting standards authority's (ANC) Regulation No. 2014-07, particularly in the case of loans with payments more than three months past due (more than six months past due for real estate loans and more than nine months past due for loans to local authorities).

Non-performing loans are considered to be irrecoverable when full or partial collection is deemed to be highly unlikely, and a write-off is considered. Loans and advances whose terms have lapsed, terminated lease financing arrangements and perpetual loans which have been rescinded, are considered as irrecoverable. The existence of guarantees covering nearly all risks, along with the conditions for classification as non-performing loans, shall be taken into consideration in order to qualify a non-performing loan as irrecoverable and to assess the associated impairment provision. A debt that has been classified as non-performing for more than one year is assumed to be irrecoverable, unless a write-off is not foreseen. Reclassification of a debt from non-performing to irrecoverable does not automatically entail the reclassification of the counterparty's other non-performing loans and commitments to irrecoverable.

For non-performing loans, accrued interest or interest due but not yet received is recognized in banking income and impaired accordingly. For irrecoverable loans and advances, accrued interest due but not yet received is not recognized.

Non-performing loans are reclassified as performing once the obligor resumes regular payments in accordance with the original repayment schedule, provided that the counterparty is no longer considered to be at risk of default.

Repurchase agreements

Securities repurchase agreements are recognized in accordance with French national accounting standards authority's (ANC) Regulation No. 2014-07, supplemented by FBF Instruction No. 94-07, as amended.

The assets sold continue to be recorded in the vendor's balance sheet, with a corresponding entry for the amount collected, representing its debt to the purchaser, under liabilities. The buyer records the amount paid under assets, representing the amount owed to the vendor. At each balance sheet date, the assets, as well as the liability towards the buyer or the amount owed to the vendor, are measured in accordance with the rules specific to these transactions.

Impairment

Loans for which recovery is uncertain result in the recognition of an impairment loss on the asset to cover the risk of loss. Impairment losses are calculated on a case-by-case basis, taking into account the present value of guarantees received. They are determined at least quarterly and are calculated in reference to available guarantees and a risk analysis. At a minimum, impairment losses cover the interest not received on non-performing loans.

Impairment for probable losses includes all impairment charges, calculated as the difference between the principal amount outstanding and the projected cash flows discounted at the initial effective interest rate. Projected cash flows are determined by category of receivables, based on past losses and/or expert analysis, and are positioned over time using debt schedules based on past collection records.

Impairment charges and reversals recognized for non-recovery risk are recorded under "Cost of risk" except for the impairment of interest on non-performing loans, which is recorded as impaired interest under "Interest and similar income".

The reversal of the impairment related to the passage of time alone is recorded under "Cost of risk".

Irrecoverable loans and advances are written off as losses and the corresponding impairment allowances are reversed.

Loans and advances due from banks

in millions of euros	12/31/2024	12/31/2023
Current accounts	3,895	3,353
Overnight loans	895	4,949
Securities purchased under demand repurchase agreements	0	0

Subordinated and participating loans*	5,389	4,909
Securities purchased under term repurchase agreements	300	0
Accrued interest on term accounts	2,206	1,967
Term receivables	**342,781**	**321,689**
Non-performing loans	**0**	**0**
o/w irrecoverable non-performing loans	*0*	*0*
Impairment of interbank loans and advances	**0**	**0**
o/w impairment of irrecoverable non-performing loans	*0*	*0*
TOTAL	**347,573**	**330,142**

* Subordinated loans and participating loans concern undated super subordinated loans granted to institutions that meet the definition of additional Tier-1 capital or Tier-2 subordinated loans.

At December 31, 2024, receivables to networks can be broken down into €4,614 million in demand accounts and €320,530 million in term accounts. At December 31, 2023, receivables to networks can be broken down into €6,297 million in demand accounts, and €302,682 million in term accounts.

Loans and advances due from banks, therefore, mainly relate to institutions benefiting from the guarantee and solidarity system presented in Note 1.2, which explains the absence of impairment.

The decrease in the item "Term accounts and loans" is mainly due to long-term liquidity operations within Groupe BPCE.

Amounts due to banks

in millions of euros	12/31/2024	12/31/2023
Current accounts	35,764	39,877
Overnight deposits	1,228	1,574
Securities sold under demand repurchase agreements	0	0
Other amounts due	4	7
Accrued interest on demand accounts	98	140
Demand accounts	**37,094**	**41,598**
Term accounts and loans	222,385	206,080
Securities sold under term repurchase agreements	10,196	13,789
Accrued interest payable on term loans	1,042	1,030
Term accounts	**233,623**	**220,899**
TOTAL	**270,717**	**262,497**

At December 31, 2024, amounts payable to networks can be broken down into €36,070 million in demand accounts and €215,715 million in term accounts. At December 31, 2023, amounts payable to networks can be broken down into €40,665 million in demand accounts, and €190,337 million in term accounts.

At December 31, 2024, the €16,305 million increase in the "Term accounts and loans" item is mainly due to long-term liquidity transactions within the Group, partly offset by the full repayment of TLTRO 3 operations mentioned in Note 1.3.

4.2 Customer transactions

Accounting principles

Amounts due from customers include loans to entities other than banks, with the exception of debt securities issued by customers, assets purchased under resale agreements, and receivables corresponding to securities sold under repurchase agreements. They are broken down between business loans, current accounts with overdrafts and other facilities granted to customers. Loans granted to customers are recorded in the balance sheet at their nominal value, with the exception of repurchases of customer loans which are recorded at acquisition cost, plus accrued interest and net of any impairment charges recognized for credit risk. Fees and marginal transaction costs are added to the principal amount outstanding on the loan in question.

Guarantees received are booked as off-balance sheet items. They are remeasured on a regular basis. The total carrying amount of all guarantees received for a single loan is limited to the principal amount outstanding on the loan.

Restructured loans

Within the meaning of the French national accounting standards authority's (ANC) Regulation No. 2014-07, restructured loans are non-performing loans whose initial characteristics (term, interest rate) are modified to allow the counterparties to repay the amounts due.

A discount is taken on restructured loans to reflect the difference between the present value of the contractual cash flows at inception and the present value of expected principal and interest repayments after restructuring. The discount rate used for fixed-rate loans is the initial effective interest rate and the discount rate used for variable-rate loans is the most recent effective interest rate prior to the restructuring date. The effective rate is the contractual rate. This discount is expensed to “Cost of risk” in income and offset against the corresponding outstanding in the balance sheet. It is written back to net interest income in the income statement over the life of the loan using an actuarial method.

A restructured loan may be reclassified as performing when the new repayment dates are observed. When a loan that has been reclassified becomes overdue, regardless of the restructuring terms agreed, the loan is downgraded to non-performing.

Non-performing loans

Non-performing loans consist of all outstanding amounts (whether or not they are due, guaranteed or other), where at least one commitment made by the obligor has involved a known credit risk, classified as such on an individual basis. Loans are considered “at risk” when it is probable that the Group will not collect all or part of the sums due under the terms of the commitments made by the counterparty, notwithstanding any guarantees or collateral.

Non-performing loans are identified in compliance with the French national accounting standards authority's (ANC) Regulation No. 2014-07, particularly in the case of loans with payments more than three months past due (more than six months past due for real estate loans and more than nine months past due for loans to local authorities).

Non-performing loans are considered to be irrecoverable when full or partial collection is deemed to be highly unlikely, and a write-off is considered. Loans and advances whose terms have lapsed, terminated lease financing arrangements and perpetual loans which have been rescinded, are considered as irrecoverable. The existence of guarantees covering nearly all risks, along with the conditions for classification as non-performing loans, shall be taken into consideration in order to qualify a non-performing loan as irrecoverable and to assess the associated impairment provision. A debt that has been classified as non-performing for more than one year is assumed to be irrecoverable, unless a write-off is not foreseen. Reclassification of a debt from non-performing to irrecoverable does not automatically entail the reclassification of the counterparty’s other non-performing loans and commitments to irrecoverable.

For non-performing loans, accrued interest or interest due but not yet received is recognized in banking income and impaired accordingly. For irrecoverable loans and advances, accrued interest due but not yet received is not recognized.

Non-performing loans are reclassified as performing once the obligor resumes regular payments in accordance with the original repayment schedule, provided that the counterparty is no longer considered to be at risk of default.

Repurchase agreements

Securities repurchase agreements are recognized in accordance with French national accounting standards authority's (ANC) Regulation No. 2014-07, supplemented by FBF Instruction No. 94-07, as amended.

The assets sold continue to be recorded in the vendor’s balance sheet, with a corresponding entry for the amount collected, representing its debt to the purchaser, under liabilities. The buyer records the amount paid under assets, representing the amount owed to the vendor. At each balance sheet date, the assets, as well as the liability towards the buyer or the amount owed to the vendor, are measured in accordance with the rules specific to these transactions.

Impairment

Loans for which recovery is uncertain result in the recognition of an impairment loss on the asset to cover the risk of loss. Impairment losses are calculated on a case-by-case basis, taking into account the present value of guarantees received and the costs of taking possession and selling the collateral. They are determined at least quarterly and are calculated in reference to available guarantees and a risk analysis. At a minimum, impairment losses cover the interest not received on non-performing loans.

Impairment for probable losses includes all impairment charges, calculated as the difference between the principal amount outstanding and the projected cash flows discounted at the initial effective interest rate. Projected cash flows are determined by category of receivables, based on past losses and/or expert analysis, and are positioned over time using debt schedules based on past collection records.

Impairment charges and reversals recognized for non-recovery risk are recorded under “Cost of risk” except for the impairment of interest on non-performing loans, which is recorded as impaired interest under “Interest and similar income”.

The reversal of the impairment related to the passage of time alone is recorded under “Cost of risk”.

Irrecoverable loans and advances are written off as losses and the corresponding impairment allowances are reversed.

4.3 Treasury bills, bonds, equities and other fixed/variable-income securities

Accounting principles

The term "securities" covers interbank market securities, treasury bills and other negotiable debt securities, bonds and other fixed-income instruments (*i.e.* whose returns do not change), equities and other variable-income instruments.

For accounting purposes, securities transactions are governed by the French national accounting standards authority's (ANC) Regulation No. 2014-07, which sets out the general accounting and measurement rules applicable to securities and the rules governing specific transactions such as temporary sales of securities.

Securities are classified in the following categories: investments in associates and affiliates, other long-term investments, debt securities held to maturity, equity securities available for sale in the medium term, securities available for sale, and trading securities.

With respect to trading securities, securities available for sale, debt securities held to maturity, and equity securities available for sale in the medium term, provisions for counterparties with known default risks whose impact can be separately identified are recognized in the form of impairments. Changes in impairment are recorded under "Cost of risk".

In the event of a securities lending transaction, the securities loaned cease to appear on the balance sheet and a receivable representing the carrying amount of the securities loaned is recognized as an asset.

In the case of a securities borrowed transaction, the borrowed securities are recorded in the trading securities category with a corresponding liability to the securities debt to the lender for an amount equal to the market price of the securities borrowed on the date of borrowing. Securities borrowed are presented in the balance sheet as a deduction from the debt representing the value of the securities borrowed.

Trading securities

These are securities acquired or sold with the intention to resell or repurchase them after a short holding period. In order to be eligible for this category, the securities must be tradable on an active market at the date of their initial recognition and their market prices must be accessible, representing actual transactions regularly occurring in the market under normal trading conditions. They may be either fixed- or variable-income instruments.

Trading securities are recorded in the accounts at cost on their acquisition date, less transaction costs and including accrued interest, where applicable. In the event of short selling, the debt is recorded under liabilities in the amount of the selling price of the securities, less transaction costs.

They are marked to market at the end of the fiscal year based on the market price on the most recent trading day. The overall balance of differences resulting from fluctuations in prices is taken to the income statement. For UCITS and investment funds, market value corresponds to net asset values reflecting available market information at the balance sheet date.

Securities classified as trading securities may not be transferred to another accounting category (except in exceptional market situations requiring a change of strategy or in the absence of an active market for fixed-income securities), and the rules for their presentation and measurement continue to apply until they are sold, redeemed in full or written off.

Available-for-sale securities

Securities that do not qualify for recognition in any other category are considered as available-for-sale securities.

Available-for-sale securities are recorded in the accounts at cost on their acquisition date, less transaction costs.

Where applicable, for fixed-income securities, accrued interest is recognized as a balancing entry in the income statement under "Interest and similar income".

Any difference between the acquisition price and the redemption value (premium or discount) for fixed-income instruments is recorded in the income statement over the remaining term of the security using the actuarial method.

Available-for-sale securities are measured at the lower of acquisition cost or market price. For UCITS and investment funds, market value corresponds to net asset values reflecting available market information at the balance sheet date.

Unrealized capital losses are subject to an impairment charge that can be estimated for each group of similar securities, with no offsetting against capital gains recorded on other categories of securities.

Gains generated by hedging instruments, if any, as defined by Article 2514-1 of the French national accounting standards authority's (ANC) Regulation No. 2014-07, are taken into account for the calculation of impairment. Unrealized capital gains are not recognized.

Gains and losses on disposal of available-for-sale securities, as well as impairment charges and reversals are recorded under "Net gains or losses on available-for-sale securities and equivalent".

Held-to-maturity securities

These include fixed-income securities with fixed maturity that were acquired or have been reclassified from "Trading securities" or "Available-for-sale securities" and which the company intends and is able to hold to maturity. The securities should not be subject to an existing restriction, legal or otherwise, liable to have an adverse effect on the company's intention to hold the securities to maturity. Classification as held-to-maturity securities is not incompatible with their designation as items hedged against interest rate risk.

Securities held to maturity are recorded in the accounts at cost as of their acquisition date, less transaction costs. When previously classified as available for sale, they are recorded at cost and the previously recognized impairment charges are reversed over the residual life of the relevant securities.

The difference between the acquisition cost and the redemption value of the securities, and the corresponding interest, are recognized in accordance with the same rules as those applicable to fixed-income securities available for sale.

An impairment loss may be recognized if there is a strong probability that the institution will not hold the securities to maturity due to new circumstances or if there is a risk of default by the issuer. Unrealized capital gains are not recognized.

Debt securities held to maturity cannot be sold or transferred to another category of securities, with certain exceptions.

However, pursuant to the provisions of the French national accounting standards authority's (ANC) Regulation No. 2014-07, fixed-income trading or available-for-sale securities reclassified to the category of debt securities held to maturity as a result of market illiquidity may be sold when the market on which they are traded becomes active again.

Other changes in available-for-sale and held-to-maturity securities

The change in bonds and other fixed-income securities classified as available-for-sale securities mainly reflects the amortization of shares in a portfolio of mortgage loan or public asset securitizations for a nominal amount of €51 million.

The change in bonds and other fixed-income securities classified as held-to-maturity securities mainly reflects the amortization of shares in a portfolio of mortgage loan or public asset securitizations for a nominal amount of €238 million, the repayment of BPCE SFH securities for a nominal amount of €400 million and the purchase of AVAL Master FCT securities for €284 million.

The market value of held-to-maturity securities stood at €1,943 million.

At December 31, 2024, unrealized capital gains totaled €172 million, and capital losses €463 million.

Treasury bills, bonds and other fixed-income securities: breakdown by type of listing

	12/31/2024				12/31/2023			
in millions of euros	Transaction	Available-for-sale securities	Securities held to maturity	Total	Transaction	Available-for-sale securities	Securities held to maturity	Total

o/w subordinated notes				*0*				*0*

Unrealized losses on available-for-sale securities (before taking into account hedging derivatives) totaled €105 million at December 31, 2024, compared with €193 million at December 31, 2023.

Unrealized gains on available-for-sale securities totaled €24 million at December 31, 2024 compared with €24 million at December 31, 2023.

Unrealized gains on held-to-maturity securities amounted to €10 million at December 31, 2024, compared with €9 million at December 31, 2023.

Unrealized capital losses on held-to-maturity securities, whether or not they are subject to an impairment charge for counterparty risk, totaled €39 million at December 31, 2024 compared with €156 million at December 31, 2023.

At December 31, 2024, bonds and other fixed-income securities issued by public-sector organizations amounted to €1,053 million compared with €968 million at December 31, 2023.

Equities and other variable-income securities: breakdown by type of listing

	12/31/2024			12/31/2023		
in millions of euros	Transaction	Available-for-sale securities	Total	Transaction	Available-for-sale securities	Total
Listed securities		1,213	1,213		1,222	1,222
Unlisted securities		82	82		83	83
Accrued interest			0			0
TOTAL	**0**	**1,295**	**1,295**	**0**	**1,305**	**1,305**

At December 31, 2024, equities and other variable-income securities included €1,295 million in UCITS, with accumulation funds accounting for €1,213 million of that total (compared with €1,305 million in UCITS at December 31, 2023, including €1,213 million in accumulation funds).

Unrealized losses on impaired available-for-sale securities totaled €319 million at December 31, 2024. At December 31, 2023, unrealized losses subject to impairment amounted to €332 million.

Unrealized gains on available-for-sale securities totaled €137 million at December 31, 2024. At December 31, 2023, unrealized gains on available-for-sale securities amounted to €84 million.

4.3.2 Changes in held-to-maturity securities

in millions of euros	12/31/2023	Purchases	Disposals and Redemptions	Transfer of category	Conversion	Discount/ premium	Other changes	12/31/2024
Bonds and other fixed-income securities	2,282	284	(638)	0	56	15	(18)	1,981
TOTAL	**2,282**	**284**	**(638)**	**0**	**56**	**15**	**(18)**	**1,981**

The changes are explained by the amortization of securities in the mortgage or public asset securitization portfolio for a nominal amount of €238 million, the repayment of BPCE SFH shares for a nominal value of €400 million and the purchase of AVAL Master FCT shares for €284 million.

4.3.3 Reclassification of assets

Accounting principles

In the interest of harmonizing accounting practices and ensuring consistency with IFRS, the French national accounting standards authority's (ANC) Regulation No. 2014-07 reiterates the provisions of opinion No. 2008-19 of December 8, 2008 on the reclassification of securities out of the "Trading securities" and "Available-for-sale securities" categories.

Reclassification from the "Trading securities" category to the "Available-for-sale" and "Held-to-maturity" categories is now possible in the following two cases:

- under exceptional market circumstances calling for a change of strategy;
- where fixed-income securities are no longer, after their acquisition, tradable on active markets, and provided that the company has the intention and ability to hold them in the foreseeable future or until they reach maturity.

Reclassifications from the "Available-for-sale" category to the "Held-to-maturity" category are effective as from the reclassification date in either of the following conditions:

- under exceptional market circumstances calling for a change of strategy;
- where fixed-income securities are no longer tradable on an active market.

The regulation authorizes institutions to sell all or part of the securities reclassified as "securities held-to-maturity" provided that the following two conditions are met:

- the reclassification was motivated by an exceptional situation requiring a change in strategy;
- the market has become active again for these securities.

Furthermore, reclassification from the available-for-sale securities portfolio to the held-to-maturity portfolio remains possible, without exception, through a simple change of intention if, at the transfer date, all the criteria for a held-to-maturity portfolio are met. In this case, the sale of these securities is only authorized in very limited cases.

Reclassification due to a change of intention (provisions of CRB Regulation No. 90-01 prior to CRC Regulation No. 2008-17, replaced by ANC Regulation No. 2014-07)

BPCE has not reclassified any assets in the last two fiscal years.

In the 2024 fiscal year, the amortization of held-to-maturity securities reclassified in 2015 as available-for-sale securities represented a nominal amount of €51 million.

4.4 Equity interests, affiliates and other long-term investments

Accounting principles

Investments in associates and affiliates

Securities falling into this category are securities which, if held over the long term, are deemed useful for the company's operations, mainly by allowing the company to exercise significant influence or control over the administrative bodies of the issuing companies.

Investments in associates and affiliates are recorded at cost, including transaction costs, if the amounts are significant.

They are individually measured at the balance sheet date at the lower of acquisition cost or value in use. Value in use is determined, in particular, on the basis of criteria such as the strategic nature of the investment, the intention to support the business or retain the investment, share price performance and recent transactions, net carrying amounts, restated net assets and forecasts. Impairment is recognized for any unrealized capital losses, calculated for each line of securities, and is not offset with unrealized capital gains. Unrealized capital gains are not recognized.

Securities recorded under investments in associates and affiliates cannot be transferred to any other accounting category.

Other long-term investments

Other long-term investments are securities acquired with the intention of promoting the development of lasting business relationships, by creating special ties with the issuer, without taking an active part in its management due to the small percentage of voting rights that the investment represents.

Other long-term investments are recognized at acquisition cost, less transaction costs.

They are included in the balance sheet at the lower of historical cost or value in use. Value in use is determined for listed and unlisted securities based on the amount the company would agree to pay to obtain the securities, given its investment objective, if it were to acquire them. An impairment charge is recognized for any unrealized capital losses. Unrealized capital gains are not recognized.

Securities classified as other long-term investments may not be transferred to any other accounting category.

4.4.1 Change in equity interests, investments in affiliates and other long-term investments

in millions of euros	12/31/2023	Increase	Decrease	Conversion	Other changes	12/31/2024

Impairment	**(6,715)**	**(99)**	**898**	**0**	**0**	**(5,916)**
TOTAL	**28,112**	**206**	**226**	**37**	**(2)**	**28,579**

Equity interests and other long-term investments

Other long-term securities include shareholder and partnership certificates for the deposit guarantee fund (non-material amount) and perpetual deeply subordinated notes (meeting the definition of additional Tier-1 capital purchased) from group institutions.

The main acquisitions and disposals of equity interests the in 2024, at gross value, were as follows:

- subscription to the capital increase of Hexarq (€45 million);
- subscription to the capital increase of Caisse de Refinancement de l'Habitat following the reallocation of share capital among the shareholders (€40 million);
- subscription to the capital increase of Epi Interim Company SE (€8 million);
- acquisition of IPaidThat (€28 million).

The main reductions in securities carried out in 2024 were linked to the conversion of 50.46% of Visa Inc. class C shares into Visa Inc. class A preferred shares (€22 million).

The main reductions in perpetual deeply subordinated notes and preference shares recorded in 2024 were as follows:

- Natixis $500 million; these transactions were replaced by perpetual deeply subordinated notes meeting the definition of additional Tier-1 capital of €475 million (see Note 4.1);
- BPCE International repayment of €100 million.

Shares in real estate companies are non-material.

Investments in affiliates

The main changes related to:

- subscription to the capital increase of BPCE Immo Exploitation (€90 million);
- subscription to the capital increase of BPCE Payments (€74 million).

The main decrease in current account advances granted in 2024 concerned:

- BPCE Payments decrease (€87 million).

Valuation of investments in affiliates as of December 31, 2024

BPCE's main banking subsidiaries are measured on the basis of discounted multi-year forecasts of expected dividend flows (Dividend Discount Model). The forecasts of expected dividend flows are based on the medium-term financial projections prepared by the entities concerned as part of the annual budgeting process and established for the Group's management purposes.

These valuations are based on the concept of value in use. As a result, they take into account the specific situation of BPCE, the fact that these investments belong to Groupe BPCE and their integration within the financial solidarity mechanism, their strategic interest for BPCE and the fact that they are held with a long-term objective.

These valuations are therefore not transaction prices. In particular, they are based on technical parameters based on a long-term vision of ownership and group affiliation and not on valuation parameters at their limits. In particular:

- discount rate:
  - the discount rates at December 31, 2024, for all entities are based on a twelve month average of daily French government bond rates of 2.9% (identical to the long-term average of 2.9% last year) and an equity risk premium assumption of 7.1% corresponding to the average of twelve month values from Bloomberg and FactSet (compared with a historical long-term premium of 6.8% last year),
  - these changes reflect the rise in interest rates and a market correction of the risk premium,
  - the discount rate used for Natixis is 11.40%, which reflects the fact that it is part of Groupe BPCE and is therefore lower than the rate used by the market for other listed banks;
- prudential requirements:
  - the valuation work carried out by DDM is based on the capital requirements (CET1 capital) applicable to the various entities concerned, reflecting their affiliation with the BPCE SA central institution. These are below the levels observed or targeted on the market in a context where banking players operate, at their level, with a capital buffer compared to the requirements set by the European Central Bank (ECB).

The valuation work carried out in connection with the closing of the financial statements for 2024 mainly resulted in the recognition of the following changes:

- a reversal of €620 million on Natixis shares, increasing the net carrying amount to €11,262 million at December 31, 2024;
- a reversal of €211 million on Crédit Foncier shares, increasing the net carrying amount to €2,243 million at December 31, 2024;
- a reversal of €53 million on BPCE International shares, thus increasing the net carrying amount to €616 million at December 31, 2024;
- an impairment of €48 million on Oney Bank shares, thus reducing the net carrying amount to €292 million at December 31, 2024;
- an impairment of €23 million on Banque Palatine shares, thus reducing the net carrying amount to €930 million at December 31, 2024;
- an impairment of €7 million on BPCE Solutions Immobilières shares, thus reducing the net carrying amount to zero at December 31, 2024.

A sensitivity analysis based on a 25 basis points decrease in the discount rate was performed and would increase the value in use of investments in affiliates by 2.9%.

A sensitivity analysis based on a 25 basis points increase in the discount rate was performed as well and would reduce the value in use of investments in affiliates by 2.7%.

4.4.2 Statement of subsidiaries and equity investments

4.5 Property, plant and equipment and intangible assets

The rules for recognizing fixed assets are defined by the French national accounting standards authority's (ANC) Regulation No. 2014-03) on IT solutions, amended in particular by ANC Regulation No. 2023-05 on November 10, 2023.

4.5.1 Intangible assets

Accounting principles

An intangible asset is an identifiable non-monetary asset without physical substance. Intangible assets are recorded at acquisition cost (purchase price including costs). These assets are amortized over their estimated useful lives.

IT solutions developed internally are recognized as an asset in the balance sheet at their direct development cost, which includes external expenses and personnel costs directly attributable to their production and preparation when they meet the capitalization criteria.

Acquired IT solutions are amortized over a maximum period of five years.

Internally developed IT solutions are amortized over their useful life, which may not exceed fifteen years.

Goodwill is not amortized but is subject, as appropriate, to impairment testing.

Leasehold rights are amortized on a straight-line basis over the residual term of the lease and, if necessary, are tested for impairment relative to market value.

in millions of euros	12/31/2023	Increase	Decrease	Other changes	12/31/2024

Depreciation, amortization and impairment	**(103)**	**(10)**	**0**	**0**	**(113)**
TOTAL NET AMOUNT	**107**	**50**	**(44)**	**0**	**113**

* Concerns the impairment of the Eurotitres goodwill.

4.5.2 Property, plant and equipment

ACCOUNTING PRINCIPLES

Property, plant, and equipment consist of tangible assets held for use in the production or supply of goods and services, for lease to third parties or for administrative purposes and which are expected to be used during more than one fiscal year.

Insofar as buildings are assets consisting of a number of components that have different uses at the outset, each component is recognized separately at cost and a depreciation schedule specific to each component is used.

The depreciable amount is the gross value less the residual value where the latter is material, lasting and can be measured reliably.

Other property, plant and equipment is recorded at acquisition cost, production cost or restated cost. The cost of fixed assets denominated in foreign currencies is translated into euros at the exchange rate prevailing on the transaction date. These assets are depreciated according to the period over which the asset's future economic benefits are expected to be consumed by the entity, which generally corresponds to the asset's useful life.

Where applicable, assets may be subject to impairment.

Investment property consists of non-operating assets.

in millions of euros	12/31/2023	Increase	Decrease	Other changes	12/31/2024
Land	0				0
Buildings	2				2
Shares in non-trading real estate companies	0				0

TOTAL NET AMOUNT	**4**	**(7)**	**7**	**0**	**4**

4.6 Debt securities

Accounting principles

Debt securities are presented according to the type of underlying: retail certificates of deposit, interbank and negotiable debt securities, bonds, and other debt securities, apart from subordinated debt, which is recorded separately under liabilities.

A new category of liabilities eligible for the numerator in the TLAC (Total Loss Absorbing Capacity) calculation has been introduced by French law and is commonly referred to as "Senior non-preferred debt". These liabilities rank between own funds and "Other senior preferred debt".

Accrued interest on these instruments is disclosed separately as a related payable, as a balancing entry to the income statement entry.

Issue premiums are recognized in full during the period or are recognized on a straight-line basis over the life of the debt. Issue and redemption premiums are spread over the life of the loan *via* a deferred expenses account.

For structured debt, applying the principle of conservatism, only the certain portion of remuneration or principal is recognized. Unrealized gains are not recorded. Unrealized losses are subject to a provision.

in millions of euros	12/31/2024	12/31/2023
Certificates of deposit and savings bonds	0	0
Interbank market instruments and negotiable debt securities	49,611	50,978
Bonds	48,664	49,840
Senior non-preferred debt	35,825	32,016
Other debt securities	0	0
Accrued interest	1,789	1,310
TOTAL	**135,889**	**134,144**

The amount of additional paid-in capital and redemption premiums remaining to be amortized totaled €209 million.

The unamortized balance is the difference between the amount initially received and the redemption price for debt securities.

4.7 Other assets and other liabilities

	12/31/2024		12/31/2023	
in millions of euros	Assets	Liabilities	Assets	Liabilities
Remaining payments due on investments in associates	0	40	0	46
Securities settlement accounts[1]	218	34	44	75
Premiums on options bought and sold	2	0	1	0
Amounts payable on borrowed securities and other securities debt[2]	0	0	0	0
Tax and social security receivables and liabilities	442	504	922	594
Security deposits paid and received[3]	4,331	343	7,428	320
Other accounts receivable, other accounts payable	397	332	647	381
TOTAL	**5,390**	**1,253**	**9,042**	**1,416**

(1) This line concerns the securities custody activity.
(2) In accordance with ANC Regulation No. 2020-10, the amount of debt on borrowed securities is reduced by the value of identical securities classified by the institution as trading securities and up to the amount of the debt.
(3) The decrease in guarantee deposits paid is mainly due to margin calls for €2,815 million, of which €2,773 million paid to Natixis.

4.8 Accrual accounts

in millions of euros	12/31/2024		12/31/2023	
	Assets	Liabilities	Assets	Liabilities

Items in process of collection	383	0	0	31
Other	146	74	24	88
TOTAL	**4,772**	**2,840**	**3,233**	**4,380**

* Including €2,700 million in accrued interest receivable on interest rate swaps and €2,316 million in accrued interest payable on interest rate swaps.

4.9 Provisions

Accounting principles

This item covers provisions intended to cover risks and expenses directly or unrelated to banking transactions within the meaning of Article L. 311-1 of the French Monetary and Financial Code and related transactions defined in Article L. 311-2 of the same Code, clearly specified as to their purpose, and whose amount or timing cannot be precisely determined. Unless covered by a specific text or relating to banking or related operations, such provisions may only be recognized if the company has an obligation to a third party at the end of the fiscal year and no equivalent consideration is expected in return, in accordance with French national accounting standards authority (ANC) Regulation No. 2014-03.

In particular, this item includes a provision for employee benefits and a provision for counterparty risk on guarantee and loan commitments given.

Employee benefits

Employee benefits are accounted for in accordance with French national accounting standards authority (ANC) recommendation No. 2013-R-02. They are classified into four categories:

Short-term employee benefits

Short-term employee benefits mainly include wages, paid annual leave, incentive schemes, profit-sharing, and bonuses payable within twelve months of the end of the period in which the employee renders the service. They are recognized as an expense for the period, including amounts remaining due at the balance sheet date.

With regard to the right to paid leave, and following the decision of the Court of Cassation of September 13, 2023, it should be noted that Article 37 of the act of April 22, 2024, now defines the terms and conditions for aligning the French Labor Code with European law. These amendments concern, in particular, the reference period to be used, the possibility of deferring rights to paid leave, the retroactive period applicable to these provisions, and lastly, the number of days of leave to which the employee is entitled in the event of accident or illness of professional or non-professional origin. Groupe BPCE has provisioned for the corresponding impact in its financial statements at December 31, 2024.

Long-term employee benefits

Long-term employee benefits are generally linked to seniority accruing to current employees and payable twelve months or more after the end of the period in which the employee renders the related service. These consist mainly of long-service awards. A provision is set aside for the amount of these obligations at the balance sheet date.

The obligations are valued using an actuarial method that takes account of demographic and financial assumptions such as age, length of service, the likelihood of the employee being employed by the Group at retirement and the discount rate. The valuation also allocates costs over the working life of each employee (projected unit credit method).

Termination benefits

Termination benefits are granted to employees on termination of their employment contract before the normal retirement date, either as a result of a decision by the Group to terminate a contract or a decision by an employee to accept voluntary redundancy. A provision is set aside for termination benefits. Termination benefits payable more than twelve months after the reporting date are discounted to present value.

Post-employment benefits

Post-employment benefits include lump-sum retirement bonuses, pensions and other post-employment benefits.

These benefits can be broken down into two categories: defined-contribution plans, which do not give rise to an obligation for the Group, and defined-benefit plans, which give rise to an obligation for the Group and are therefore measured and recognized by means of a provision.

The Group records a provision in liabilities for employee benefits obligations that are not funded by contributions charged to income and paid out to pension funds or insurance companies.

Post-employment benefits are measured in the same way as long-term employee benefits.

The measurement of these obligations takes into consideration the value of plan assets as well as unrecognized actuarial gains and losses.

Actuarial gains and losses on post-employment benefits, arising from changes in actuarial assumptions (early retirement, discount rate, etc.) or experience adjustments (return on plan assets, etc.), are amortized under the corridor method, *i.e.* for the portion exceeding a variation of +/-10% of the defined-benefit obligation or the fair value of plan assets.

The annual expense recognized in respect of defined-benefit plans includes the current service cost, net interest cost (the effect of discounting the obligation) less hedging assets, and the amortization of any unrecognized items that are actuarial gains or losses.

4.9.1 Statement of changes in provisions

* The change mainly concerns the effects of tax consolidation.

4.9.2 Provisions and impairments for counterparty risks

in millions of euros	12/31/2023	Charges	Reversals	Used	Other changes	12/31/2024
Provisions for execution risk on signature commitments	1	20				21
Provisions for counterparty risks recognized as liabilities	**1**	**20**	**0**	**0**	**0**	**21**
TOTAL	**1**	**20**	**0**	**0**	**0**	**21**

4.9.3 Provisions for employee benefits

Post-employment benefits related to defined-contribution plans

Defined-contribution plans refer to mandatory social security pension plans, as well as those managed by the pension funds AGIRC and ARRCO, and the supplementary pension plans to which the Banques Populaires and the Caisses d'Epargne belong. BPCE's obligations under these plans are limited to the payment of contributions (€44 million in 2024).

Post-employment benefits related to defined-benefit plans and long-term employee benefits

BPCE's obligations in this regard relate to the following plans:

- the Banque Populaire private supplementary pension plan, managed by Caisse Autonome de Retraite des Banques Populaires (CARBP), covers the pension benefits deriving from the closure of the former banking pension plan at December 31, 1993;
- the Caisse d'Epargne private supplementary pension plan, previously managed by Caisse Générale de Retraite des Caisses d'Epargne (CGRCE), but now incorporated within Caisse Générale de Prévoyance des Caisses d'Epargne (CGPCE), which is a retained-benefit plan. The plan was closed on December 31, 1999, and beneficiary entitlements were crystallized at this date. The retained-benefits plan is considered as a fund providing long-term employee benefits;
- pensions and other post-employment benefits such as end-of-career awards and other benefits granted to retirees;
- other benefits such as long-service awards and other long-term employee benefits.

These commitments are calculated in accordance with the provisions of the French national accounting standards authority's (ANC) recommendation No. 2013-R-02 as amended on November 5, 2021.

At December 31, 2024, pension plan assets were allocated as follows:

- for Banque Populaires CARBP pension plan: 49.8% in bonds, 35.9% in equities, 5.7% in money-market assets, 8.6% in investment funds.

In 2024, of the total -€1 million in actuarial gains and losses generated on CARBP's actuarial liabilities, -€0.5 million can be attributed to differences related to updated financial assumptions, and -€0.5 million to experience adjustments;

- for Caisses d'Epargne CGPCE pension plan: 83.2% in bonds, 12.5% in equities, 1.6% in real estate assets and 2.7% in money-market assets.

In 2024, of the total -€0.8 million of actuarial gains and losses generated on the CGPCE actuarial liability, -€2 million come from gains and losses related to the updating of financial assumptions and +€1.2 million from experience adjustments.

The pension reform in France (act 2023-270 of April 14, 2023 on the rectifying financing of social security for 2023 and application decrees 2023-435 and 2023-436 of June 3, 2023) has been taken into account for the valuation of the actuarial debt as of December 31, 2023. Considered as a modification of a plan recognized in past service cost, the impact is therefore recognized in the income statement.

Stock option purchase plans

Since the formation of BPCE, company directors have neither received share subscription or purchase options, nor been awarded bonus shares.

4.10 Subordinated debt

Accounting principles

Subordinated debt comprises proceeds from issues of both term and perpetual subordinated debt securities, and mutual guarantee deposits. In the event of the obligor's liquidation, the repayment of subordinated debt is only possible after all other creditors have been satisfied.

Accrued interest payable on subordinated debt is disclosed separately as a related payable, as a balancing entry to the income statement entry.

in millions of euros	12/31/2024	12/31/2023
Term subordinated debt	18,300	18,797
Perpetual subordinated debt	0	0
Perpetual deeply subordinated debt	5,190	5,190

BPCE's share capital amounted to €198 million at December 31, 2024, *i.e.* 39,571,376 shares with a nominal value of €5 per share, compared to €189 million at December 31, 2023. It can be broken down into:

- 19,785,688 ordinary shares held by the Banques Populaires for €98.9 million;
- 19,785,688 ordinary shares held by the Caisses d'Epargne for €98.9 million.

At the Ordinary Shareholders' Meeting of May 23, 2024, BPCE decided:

- to allocate the 2023 earnings of €545,877,911.66 to "Retained earnings";
- to distribute €840,750,648.50 in dividends to its shareholders, €22.25 per share, taken in full from "Retained earnings";
- the shareholders opted for the payment of the 2024 dividend in shares, which resulted in the issuance of 1,784,830 new shares.

4.13 Fixed-term assets and liabilities by residual maturity

Assets and liabilities with fixed due dates are presented by residual maturity and include accrued interest.

Note 5 / Information on off-balance sheet and similar transactions

5.1 Commitments given and received

ACCOUNTING PRINCIPLES

Loan commitments

Loan commitments given to banks and similar entities include in particular funding agreements, agreements to pay or commitments to pay, documentary credit confirmations and other commitments given to banks and similar institutions.

Loan commitments granted to customers include credit facilities granted, back-up credit lines for commercial paper, commitments on securities issuance and other commitments to customers other than banks and similar entities.

Loan commitments received mostly include funding agreements and other commitments received from banks and similar entities.

Guarantee commitments

Guarantee commitments to banks mostly include sureties and financial guarantees issued to banks and similar entities.

Guarantee commitments to customers mostly include sureties and financial guarantees issued to customers other than banks and similar entities.

Guarantee commitments received mostly include sureties and financial guarantees received from banks and similar entities.

5.1.1 Loan commitments

in millions of euros	12/31/2024	12/31/2023

Guarantee commitments received from customers	9	11
TOTAL GUARANTEE COMMITMENTS RECEIVED	**589**	**1,912**

* "Other guarantees given to banks" mainly concerns guarantees given to Group institutions.

5.1.3 Other commitments not recognized off-balance sheet

in millions of euros	12/31/2024 Commitments given	12/31/2024 Commitments received	12/31/2023 Commitments given	12/31/2023 Commitments received
Other securities pledged as collateral provided to banks	93,174	10,301	83,652	9,831
Other securities pledged as collateral received from customers	0	0	0	0
TOTAL	**93,174**	**10,301**	**83,652**	**9,831**

At December 31, 2024, receivables pledged as collateral under funding arrangements included in particular:

- €83,346 million in negotiable debt securities pledged to the Banque de France under the TRICP system, compared with €71,056 million at December 31, 2023;
- €5,767 million in loans pledged as collateral for funding received from the European Investment Bank (EIB) compared with €5,609 million at December 31, 2023.

No other major commitments were given by BPCE as collateral for its own commitments or for those of third parties.

BPCE did not receive a significant amount of assets as collateral from customers.

5.2 Forward financial instruments

Accounting principles

Trading and hedging transactions in interest rate, currency or equity forward financial instruments are recognized in accordance with the provisions of the French national accounting standards authority's (ANC) Regulation No. 2014-07.

Commitments on these instruments are recorded as off-balance sheet items at the nominal value of the contracts. The amount recognized for these commitments represents the volume of unwound forward transactions at the reporting date.

The accounting policies applied vary depending on the type of instrument and the original purpose of the transaction.

Forward transactions

Interest rate swaps and similar contracts (forward rate agreements, collars, etc.) are classified as follows according to their initial purpose:

- micro-hedging (assigned hedges);
- macro-hedging (overall Asset/liability management);
- speculative positions/isolated open positions;
- for use with a trading book.

Amounts received or paid in respect of the first two categories are recognized in income on a *pro rata* basis.

Income and expenses related to instruments used for hedging an asset or a group of similar assets are recognized in income symmetrically with the income and expenses on the hedged item. Gains and losses on hedging instruments are recognized on the same line as the income and expenses on the hedged item, under "Interest and similar income" and "Interest and similar expenses". The "Net gains or losses on trading book transactions" line is used when the hedged items are in the trading book.

In the event of overhedging, a provision may be made for the hedging instrument, in the amount of the overhedged portion, if the instrument shows an unrealized loss. In such case, the charge to provisions will affect "Net gains or losses on trading book transactions".

Income and expenses related to forward financial instruments used for hedging purposes or for managing overall interest rate risk are recognized in the income statement on a *pro rata* basis under "Interest and similar income" and "Interest and similar expenses". Unrealized gains and losses are not recognized.

Income and expense related to certain contracts, qualifying as isolated open positions, are recorded in the income statement either when the contracts are settled or on a *pro rata* basis, depending on the type of instrument.

Recognition of unrealized gains or losses is determined based on the type of market involved (organized, other markets considered as organized, or over the counter).

On over-the-counter markets (including transactions processed by a clearing house), a provision is recorded for any unrealized losses relative to the instrument's mark-to-market under "Provisions" in liabilities. Unrealized capital gains are not recognized.

Instruments traded on organized markets or other markets considered as organized are continuously quoted and liquid enough to justify being marked to market. The cost of liquidity and counterparty risk will be taken into account in the valuation of isolated open positions.

Contracts classified as specialized asset management contracts are measured after applying a discount to reflect counterparty risk and cost and taking into account the net present value of future management costs if these valuation adjustments are material. Derivatives traded with a counterparty that is a member of the Groupe BPCE solidarity mechanism (see Note 1.2) are not subject to these valuation adjustments except where applicable for the cost of liquidity. Changes in value from one accounting period to another are recognized immediately in the income statement under "Net gains or losses on trading book transactions".

Balances on terminations or transfers are recognized as follows:

- balances on transactions classified under specialized asset management contracts or isolated open positions are immediately recognized in the income statement;
- for micro-hedging and macro-hedging transactions, balances are amortized over the remaining term of the initially hedged item or immediately recognized in the income statement.

Options

The notional amount of the underlying asset of an option or forward contract is recognized by distinguishing between hedging contracts and contracts traded for the purposes of capital market transactions.

For transactions involving interest rate, foreign exchange or equity options, the premiums paid or received are recognized in a temporary account. At the end of the fiscal year, any options traded in an organized or similar market are measured and recognized in the income statement. For over-the-counter (OTC) options, provisions are recognized for capital losses but unrealized capital gains are not recognized. When an option is sold, repurchased, or exercised, or when an option expires, the corresponding premium is recognized immediately in the income statement.

Income and expenses for hedging instruments are recognized symmetrically with those from the hedged item. Seller options are not eligible for classification as macro-hedging instruments.

Over-the-counter markets may be treated as organized markets when market makers ensure continuous quotations within a range that reflect market practices when the underlying financial instrument is itself quoted on an organized market.

The notional amounts of contracts listed in this table are solely intended to provide an indication of the volume of BPCE's activities involving financial instruments at the balance sheet date and do not reflect the market risk associated with these instruments.

Commitments on interest rate derivatives traded over the counter mainly consisted of interest rate swaps for forward instruments and interest rate guarantees for options.

Commitments on foreign exchange instruments traded over the counter mainly consisted of currency swaps.

5.2.2 Breakdown by type of portfolio of interest rate financial instruments traded on an over-the-counter market

TOTAL	**461,229**	**461,229**	**451,263**	**451,263**

The breakdown of the balance sheet by currency is carried out before taking into account the effects of foreign exchange derivatives.

5.4 Foreign currency transactions

Accounting principles

Gains and losses on foreign currency transactions are determined in accordance with the French national accounting standards authority's (ANC) Regulation No. 2014-07.

Receivables, liabilities, and off-balance sheet commitments denominated in foreign currencies are measured at the exchange rate prevailing at the balance sheet date. Realized and unrealized foreign exchange gains and losses are recognized in the income statement. Income and expenses paid or received in foreign currencies are recognized at the exchange rate prevailing at the transaction date.

Fixed assets and investments in associates denominated in foreign currencies but financed in euros are recognized at acquisition cost.

Non-settled spot foreign exchange transactions are measured at the closing rates prevailing at the balance sheet date.

Discounts or premiums on foreign exchange forward contracts used for hedging purposes are recognized in the income statement on a *pro rata* basis. Other foreign exchange contracts and forward instruments denominated in foreign currencies are marked to market. Outright foreign exchange forward contracts, and those hedged by forward instruments, are restated over the remaining term. Foreign exchange swaps are recognized as pairs of spot purchase/forward sale transactions.

in millions of euros	12/31/2024	12/31/2023
Spot foreign exchange transactions		
Currencies receivable not received	114	168
Currencies deliverable not delivered	114	170

Note 6 / Other information

6.1 Consolidation

In reference to Article 4111-1 of French national accounting standards authority (ANC) Regulation No. 2014-07, and in accordance with Article 111-1 of ANC Regulation No. 2020-01 of the Accounting Regulations Committee, BPCE prepares its consolidated financial statements under international accounting standards.

Its parent company financial statements are incorporated in the consolidated financial statements of Groupe BPCE and BPCE.

6.2 Remuneration, receivables, loans and commitments

Total remuneration paid in 2024 to members of the Management Board amounted to €4.5 million and €0.97 million was paid to members of the Supervisory Board.

Provisions for retirement bonuses at the end of 2024 amounted to €1.6 million for members of the Management Board.

6.3 Operations in non-cooperative countries

Article L. 511-45 of the French Monetary and Financial Code and the Ministerial Order of October 6, 2009, issued by the French Economy Minister, require credit institutions to disclose, in the notes to their annual financial statements, information on their presence and activities in countries and territories that have not entered into an administrative assistance agreement with France for the exchange of information with the aim of combating tax fraud and tax evasion.

These obligations are part of the broader worldwide goal of combating non-cooperative tax havens, which were defined at OECD meetings and summits, and are also designed to prevent money laundering and terrorist financing.

Since its foundation, Groupe BPCE has adopted a prudent approach. It ensures that entities belonging to its networks are regularly informed about updates to the OECD list of territories that are considered as non-cooperative when it comes to exchanging information for tax purposes, and about the potential consequences of maintaining operations in non-cooperative territories. In addition, lists of non-cooperative territories have been integrated, in part, into software packages used to prevent money laundering with the objective of ensuring appropriate due diligence for transactions with non-cooperative countries and territories (implementation of Ministerial Decree No. 2009-874 of July 16, 2009). A central inventory of the Group’s locations and activities in non-cooperative territories has been drawn up for the information of executive bodies.

This statement is based on the list of countries given in the Ministerial Order of February 16, 2024, taken in accordance with Article 238-0-A of the French General Tax Code.

At December 31, 2024, BPCE had no offices or activities in non-cooperative tax havens.

6.7 Statutory Auditors' report on the financial statements

For the year ended December 31, 2024

This is a free translation into English of the Statutory Auditors' report issued in French and is provided solely for the convenience of English speaking readers. This report includes information specifically required by European regulations or French law, such as information about the appointment of Statutory Auditors. This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

BPCE

7, promenade Germaine Sablon

75013 Paris

To the Annual General Shareholders' Meeting

I. OPINION

In compliance with the engagement entrusted to us by your Annual General Shareholders' Meeting, we have audited the accompanying financial statements of BPCE for the year ended December 31, 2024.

In our opinion, the financial statements give a true and fair view of the assets and liabilities and of the financial position of the Company at December 31, 2024 and of the results of its operations for the year then ended in accordance with French accounting principles.

The audit opinion expressed above is consistent with our report to the Audit Committee.

II. BASIS FOR OPINION

AUDIT FRAMEWORK

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under these standards are further described in the "Responsibilities of the Statutory Auditors relating to the audit of the financial statements" section of our report.

INDEPENDENCE

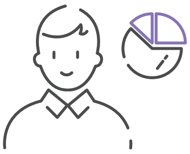
We conducted our audit engagement in compliance with the independence rules provided for in the French Commercial Code (*Code de commerce*) and the French Code of Ethics (*Code de déontologie*) for Statutory Auditors for the period from January 1, 2024 to the date of our report, and, in particular, we did not provide any non-audit services prohibited by article 5(1) of Regulation (EU) No. 537/2014.

III. JUSTIFICATION OF ASSESSMENTS – KEY AUDIT MATTERS

In accordance with the requirements of articles L.821-53 and R.821-180 of the French Commercial Code relating to the justification of our assessments, we inform you of the key audit matters relating to the risks of material misstatement that, in our professional judgment, were the most significant in our audit of the financial statements, as well as how we addressed those risks.

These matters were addressed as part of our audit of the financial statements as a whole, and therefore contributed to the opinion we formed as expressed above. We do not provide a separate opinion on specific items of the financial statements

Valuation of associates, equity interests, and long-term investments and the accounting methods of structural operations in 2024



Description of risk and main judgments

Associates, equity interests and long-term investments are recognized at their acquisition cost and impaired on the basis of their value in use.

BPCE's main banking subsidiaries are valued on the basis of a discounted multiannual forecasts of expected dividend flows (dividend discount model). Forecasts of expected dividend flows are based on medium-term financial projections prepared by the entities concerned as part of Groupe BPCE's annual budgeting procedure and drawn up for Group management purposes.

We deemed the valuation of associates, equity interests, and long-term investments to be a key audit matter, as it required the exercise of judgment with regard to the structuring assumptions used to determine business plans and the valuation inputs applied, particularly in the current economic climate.

As of December 31, 2024, associates, equity interests and long-term investments recognized in BPCE's financial statements amounted to

€28,579 million, including an impairment of €5,916 million at December 31, 2024.

The impairment of associates, equity interests and long-term investments resulted in a net reversal of €799 million in 2024.

For more information on accounting principles and exposures, see Note 4.4 to the financial statements.

How our audit addressed this risk

To assess the reasonableness of the estimated value in use of equity interests and long-term investments, with the guidance of our experts, we verified that the estimated values determined by management were based on an appropriate measurement method and reasonable assumptions.

Depending on the securities in question, our audit work consisted in:

- analyzing the relevance of the valuation methods used;
- examining the assumptions and inputs used according to the profile of each entity, by comparing them to external sources;
- assessing the reasonableness of the medium-term business plans used for each entity in question, which entailed:
  - comparing these business plans with the strategic plans validated by the entities' governance bodies (Supervisory Board or Board of Directors);
  - evaluating the relevance of the main assumptions used to prepare the plans, particularly regarding the financial trajectories developed during past financial years and actually carried out;
  - analyzing sensitivity to different valuation inputs (shareholders' equity, discount rates, etc.);
- verifying the arithmetical accuracy of the calculation of the values of the main subsidiaries.

IV. SPECIFIC VERIFICATIONS

In accordance with professional standards applicable in France, we have also performed the specific verifications required by French legal and regulatory provisions.

INFORMATION GIVEN IN THE MANAGEMENT REPORT AND IN THE OTHER DOCUMENTS PROVIDED TO THE SHAREHOLDERS WITH RESPECT TO THE COMPANY'S FINANCIAL POSITION AND THE FINANCIAL STATEMENTS

We have no matters to report as to the fair presentation and the consistency with the financial statements of the information given in the Management Board's management report and in the other documents provided to the shareholders with respect to the Company's financial position and the financial statements, with the exception of the following item.

- Concerning the fair presentation and the consistency with the financial statements of the information about payment terms referred to in article D.441-6 of the French Commercial Code, we have the following matter to report: as indicated in the management report, this information does not include banking and related transactions, as the Company has decided that such transactions do not fall within the scope of the required information

REPORT ON CORPORATE GOVERNANCE

We attest that the Supervisory Board's report on corporate governance sets out the information required by articles L.225-37-4 and L.22-10-10 of the French Commercial Code.

Regarding the information related to the elements that your company considered likely to have an impact in the event of a public purchase or exchange offer, provided in accordance with the provisions of article L.22-10-11 of the French Commercial Code, we have verified their compliance with the documents from which they originate and which have been communicated to us. Based on this work, we have no comments to make on this information.

OTHER INFORMATION

In accordance with French law, we have verified that the required information concerning the purchase of investments and controlling interests has been properly disclosed in the management report.

V. OTHER VERIFICATIONS AND INFORMATION PURSUANT TO LEGAL AND REGULATORY REQUIREMENTS

PRESENTATION OF THE FINANCIAL STATEMENTS TO BE INCLUDED IN THE ANNUAL FINANCIAL REPORT

In accordance with professional standards applicable to the Statutory Auditors' procedures for annual and consolidated financial statements presented according to the European single electronic reporting format, we have verified that the presentation of the financial statements to be included in the annual financial report referred to in paragraph I of article L.451-1-2 of the French Monetary and Financial Code (*Code monétaire et financier*) and prepared under the responsibility of the Chairman of the Management Board, complies with this format, as defined by European Delegated Regulation No. 2019/815 of December 17, 2018.

On the basis of our work, we conclude that the presentation of the financial statements to be included in the annual financial report complies, in all material respects, with the European single electronic reporting format..

APPOINTMENT OF THE STATUTORY AUDITORS

Forvis Mazars SA was appointed as Statutory Auditors in the first by-laws dated December 19, 2006, of GCE Nao (whose corporate name became BPCE in July 2009), upon its incorporation. PricewaterhouseCoopers Audit and Deloitte & Associés were appointed as BPCE's Statutory Auditors by the Annual General Shareholders' Meetings of July 2, 2009, and May 22, 2015, respectively.

As of December 31, 2024, Forvis Mazars SA was in the eighteenth consecutive year of its engagement, of which sixteen years since becoming a public interest entity. PricewaterhouseCoopers Audit and Deloitte & Associés were in the sixteenth and tenth consecutive year of their engagement respectively

VI. RESPONSIBILITIES OF MANAGEMENT AND THOSE CHARGED WITH GOVERNANCE FOR THE FINANCIAL STATEMENTS

Management is responsible for preparing financial statements giving a true and fair view in accordance with French accounting principles, and for implementing the internal control procedures it deems necessary for the preparation of financial statements that are free of material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern, and using the going concern basis of accounting, unless it expects to liquidate the Company or to cease operations.

The Audit Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risk management systems, as well as, where applicable, any internal audit systems, relating to accounting and financial reporting procedures.

The financial statements were approved by the Management Board.

VII. RESPONSIBILITIES OF THE STATUTORY AUDITORS RELATING TO THE AUDIT OF THE FINANCIAL STATEMENTS

OBJECTIVE AND AUDIT APPROACH

Our role is to issue a report on the financial statements. Our objective is to obtain reasonable assurance about whether the financial statements as a whole are free of material misstatement. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions taken by users on the basis of these consolidated financial statements.

As specified in article L.821-55 of the French Commercial Code, our audit does not include assurance on the viability or quality of the Company's management

As part of an audit conducted in accordance with professional standards applicable in France, the Statutory Auditors exercise professional judgment throughout the audit. They also:

- identify and assess the risks of material misstatement in the financial statements, whether due to fraud or error, design and perform audit procedures in response to those risks, and obtain audit evidence considered to be sufficient and appropriate to provide a basis for their opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtain an understanding of the internal control procedures relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control;
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management and the related disclosures in the notes to the financial statements;
- assess the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of the audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the Statutory Auditors conclude that a material uncertainty exists, they are required to draw attention in the audit report to the related disclosures in the financial statements or, if such disclosures are not provided or are inadequate, to issue a qualified opinion or a disclaimer of opinion;
- evaluate the overall presentation of the financial statements and assess whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.

REPORT TO THE AUDIT COMMITTEE

We submit a report to the Audit Committee which includes, in particular, a description of the scope of the audit and the audit program implemented, as well as the results of our audit. We also report any significant deficiencies in internal control that we have identified regarding the accounting and financial reporting procedures.

Our report to the Audit Committee includes the risks of material misstatement that, in our professional judgment, were the most significant for the audit of the financial statements and which constitute the key audit matters that we are required to describe in this report.

We also provide the Audit Committee with the declaration provided for in article 6 of Regulation (EU) No. 537/2014, confirming our independence within the meaning of the rules applicable in France, as defined in particular in articles L.821-27 to L.821-34 of the French Commercial Code and in the French Code of Ethics for Statutory Auditors. Where appropriate, we discuss any risks to our independence and the related safeguard measures with the Audit Committee.

6.8 Controls of accounting and financial reporting quality

6.8.1 Roles and responsibilities in preparing and processing accounting and financial information

General principles of responsibility within the Group

The production of accounting and financial information and verifications to ensure its accuracy are performed by the Finance functions of the entities included in the Group's scope of consolidation.

Each entity has the resources to ensure the quality of accounting and financial data, in particular by seeing that current regulations and Group standards are being properly implemented, and reconciling accounting and operating results, where applicable.

Each entity prepares, on a monthly or quarterly basis, financial statements and regulatory information required at the local level, along with reporting documents for the Finance division.

Within the Group, the preparation and processing of financial and accounting information falls under the responsibility of the Finance function. This responsibility is carried out within the central institution, mainly by four departments of the division:

- The Financial Management department;
- The Performance Oversight department;
- The Regulatory Steering and Prudential Management department (including the Accounting department);
- The Architecture and Reporting department.

In addition to these four departments, the Finance division also includes the Monitoring and Foresight Studies department.

The Finance division collects the accounting and financial data produced by the entities within the Group's scope of consolidation. It is also responsible for consolidating and verifying these data for use in Group oversight and communication to third parties (auditors, investors, etc.).

In addition to consolidating accounting and financial information, the Finance division has broad control duties:

- It coordinates Asset/liability management by defining the Group's Asset/liability management rules and standards and ensuring they are properly applied;
- It manages and checks the Group's balance sheet ratios and structural risks;
- It defines accounting standards and principles applicable to the Group and ensures they are properly applied;
- It coordinates the steering and reporting of the Group's financial performance in accordance with strategic plan objectives;
- It manages the Pillar II approach and related matters within the Group;
- It monitors the financial planning of Group entities and capital transactions;
- It ensures the reliability of accounting and financial information shared outside the Group;
- It steers planning and strategic operations;
- It manages emergency financial plans in the event of idiosyncratic or systemic crises and coordinates the resolution plan.

Main functions, within the central institution, involved in preparing and publishing accounting and financial information and their responsibilities

Within the Group, the main functions involved in preparing and publishing accounting and financial information are accounting, finance control, reporting, investor relations and financial management.

Within the central institution, these functions are carried out mainly by four departments reporting to the Chief Financial Officer: the Regulatory Steering and Prudential Management department, the Performance Oversight department, the Financial Management department and the Architecture and Reporting department.

THE REGULATORY STEERING AND PRUDENTIAL MANAGEMENT DEPARTMENT

Within this department, the main unit contributing to the preparation of accounting and financial information is the Accounting department, which is responsible for preparing the parent company and consolidated financial statements (Groupe BPCE and BPCE) and the associated regulatory reports (in particular COREP and FINREP). Its main duties are:

- Preparing the consolidated financial statements of Groupe BPCE and individual statements of BPCE SA, calculating the regulatory ratios and preparing the corresponding reports;
- Coordinating the accounting process within the Group;
- Providing a regulatory watch on French and IFRS accounting standards applied by the Group in coordination with shareholder institutions, BPCE subsidiaries and the Statutory Auditors;
- Acting as the interface between the supervisory authorities (European Central Bank and the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector) and affiliated institutions in accordance with Article L. 512-107 of the French Monetary and Financial Code and, in particular, to ensure compliance with the regulatory standards and management ratios of affiliated institutions;
- Representing the Group in its dealings with industry bodies (French national accounting standards authority, European Banking Federation, etc.);
- Producing accounting and regulatory statements (including tax) for BPCE SA and the entities under its authority.

Within the Group, the Group Accounting department relies on the accounting functions of each entity, which are responsible for the publication of the parent company financial statements and, where applicable, the consolidated financial statements, regulatory reports and disclosures to the central institution.

The other units of this department are **Capital Management and Financial Strategy** (in charge of managing solvency issues and the Pillar II approach within the Group and coordinating and monitoring the management of scarce resources within the Group), **Taxation and Financial Resilience**.

THE PERFORMANCE OVERSIGHT DEPARTMENT

The Performance Oversight department is responsible for producing management information. Its main duties are:

- Coordinating oversight of the financial planning, budget and multi-year rolling forecast process;
- Coordinating oversight of business performance in support of the Retail Banking and Insurance division;
- Analyzing the performance of the Group, its business lines and entities, especially for the publication of each quarter's results;
- Steering and challenging the subsidiaries' financial performances to safeguard the Group's financial ratios;
- Coordinating and steering approaches for the analysis of the Group's operating costs;
- Helping prepare the Group's strategic and financial plans;
- Managing the expenses of the central institution;
- Coordinating the finance control process within the Group.

The Performance Oversight department relies on the Group's Management Control functions, which are responsible for the operational management of each entity and for the production of management information for both the entity and the central institution.

THE ARCHITECTURE AND REPORTING DEPARTMENT

The Architecture and Reporting department is responsible for securing the key IS Finance & Risk applications, ensuring the reliability of complex production processes (transformed data with the preparation of regulatory and management reports) and ensuring that these processes comply with BCBS 239 principles. Its main duties are:

- Making strategic choices regarding the design and construction of data bases as well as regulatory and management processes based on the main risk and financial calculators, in current, *ad hoc* and crisis situations, while ensuring the coordination of all related projects;
- Operating, through its technological fiber, complex production systems (Finance and Risk production, treasury systems and banking activities) and pool project efforts for other business lines;
- Guaranteeing a centralized and consistent vision across the entire IS Finance & Risk chain;
- Simplifying, harmonizing, integrating and pooling in a logic of operational efficiency and process security by relying on technological levers;
- Implementing innovative tools (simulations, proactive exercises, data analysis, etc.) and promoting an open innovation approach (Artificial Intelligence, Green Finance, etc.) directly linked to the ongoing search for operational efficiency;
- Accelerating the implementation of responses to regulatory recommendations and requirements (*e.g.* coordination of BCBS 239 into LOD1 and the ECB Data Finance/Risk dialog).

THE FINANCIAL MANAGEMENT DEPARTMENT

The Financial Management department is responsible for the optimal and sustainable management of liquidity and refinancing and is also in charge of financial communication. Its main duties are:

- Organizing, coordinating and supervising the refinancing of Groupe BPCE on the financial markets in order to ensure, at the best possible price, the realization of a sustainable refinancing plan over time, making it possible to finance the various activities of the Group over a duration consistent with the assets created and to allocate this liquidity to the various business lines and to control its use and evolution;
- Managing the optimization of scarce resources, collateralized refinancing, collateral management and green refinancing strategy;
- Producing regulatory ratios and ensuring compliance with them, as well as internal constraints resulting in particular from stress tests guaranteeing the sustainability of the refinancing of the Group's business model even in the event of a crisis;
- Developing the Group's interest rate and liquidity risk management system and its application to the entities;
- Coordinating and producing presentations of quarterly results, the financial structure and the development of the Group's business lines to enable third parties to form an opinion on its financial strength, profitability and outlook;
- Coordinating and preparing the presentation of extra-financial information (universal registration document and its quarterly amendments) filed with the *Autorité des marchés financiers* (AMF), the French financial markets authority, and the Pillar III report, integrating the contributions of other BPCE functions;
- Organizing relations with institutional investors, financial analysts and rating agencies by ensuring coordination with the other rated entities of the Group;
- Organizing and maintaining relationships with credit investors likely to hold and/or acquire debt instruments (short, medium or long term) issued by BPCE or Natixis.

The Financial Management department relies on the eponymous functions organized in each entity and which are responsible for communicating information relating to financial management both on behalf of the entity and for the central institution.

6.8.2 Production processes for accounting and financial data

General system and process for preparing consolidated accounting and financial data

The central institution prepares the consolidated financial statements of BPCE, Groupe BPCE and the parent company financial statements of BPCE SA. It also produces and oversees Groupe BPCE's regulatory ratios on a consolidated basis and those of affiliated institutions in the regulatory financial reports.

It also ensures the proper application by the institutions affiliated to Groupe BPCE of the accounting and prudential rules and verifies the compliance of the reports with the applicable regulatory requirements.

To ensure the reliability of the production processes, the Finance division uses:

- An appropriate body of standards distributed to all Group entities;
- A single consolidated IT system (except for the exceptions mentioned below) guarantees consistent treatment and analysis;
- A comprehensive body of documents respecting regulatory requirements;
- A standardized control mechanism, the structure of which is described in Section 5.8.3 below.

Groupe BPCE institutions publishing financial statements on a consolidated basis under IFRS are all of the Banques Populaires and Caisses d'Epargne and the Group's main subsidiaries, essentially Natixis, Crédit Foncier and Banque Palatine.

BODY OF STANDARDS

Within the central institution, the Finance division has designed and deployed a set of standards to all Group entities to ensure the reliability of the production of accounting and financial information in compliance with accounting and prudential rules or requirements defined by intra- or supra-national regulations for the publication of regulatory reports. This body is mainly based on:

- The definition and dissemination of accounting policies for the Group, both for French GAAP and international (IFRS) accounting standards;
- The deployment of a consolidation framework intended to ensure the reliability of the process of preparing consolidated data (whether accounting, tax or prudential).

This standard also includes the analysis and interpretation of new texts issued during a given period. These principles are periodically communicated through:

- Group instructions for institutions that set out the common rules relating to the production of accounting and tax information or regulatory reports, in particular those relating to capital adequacy and liquidity (change in the scope of consolidation, schedule of the various works to meet deadlines, any changes in information systems, reminder of regulatory changes, etc.);
- Presentations at national days on accounting, taxation, capital adequacy and liquidity (Accounting and Tax Days, Asset/Liability Management Days, etc.) with a focus on regulatory changes;
- A training and facilitation system aimed in particular at the accounting and financial information production teams within the consolidated entities.

A SINGLE CONSOLIDATED INFORMATION SYSTEM

To ensure the production of its accounting and financial information, the Group uses market software packages or develops internal solutions in compliance with the rules defined by its IT master plan (in particular in terms of security, sustainability, quality, etc.).

As part of this plan, the Group has developed an architecture to organize a data model shared between the Risk and Finance divisions, both locally and centrally: the Standardized Exchange Zone (ZEN). This is one of the main sources of information for the central risk and finance information systems, thus ensuring the consistency of the common data used in the main central reporting systems as well as between local and central reporting (scope, production date, etc.)

To ensure the consolidation of accounting and prudential information and to produce the reports intended for the executive management, the supervisory body, the supervisory and control authorities or intended for publication, the consolidation is carried out on a quarterly basis on the basis of the financial statements of each Group entity. Data from the entities are entered into a central database where consolidation procedures are then carried out and which is based on a mixed solution in the Group's business lines:

- For the majority of Group entities and in particular the Caisses d'Epargne and Banques Populaires, information is communicated on an individual basis to ensure a more detailed view of each entity's contribution to the Group's financial statements and ratios. The system, managed by the central institution, is based on a single central consolidation tool used by all entities for the consolidation of the Group and the sub-consolidations that need to be produced. This ensures internal consistency as regards scopes, accounting treatment and analysis;
- For some entities, and in particular the Natixis sub-group, the consolidation is carried out by their own consolidation tool and then communicated to the central institution on the basis of a consolidation package representative of their financial statements and their ratios to ensure the production of the Group's financial statements and ratios. Natixis is equipped with a consolidation tool enabling the production of its consolidated financial statements and ratios, guaranteeing the consistency of the data and providing a transparent overview of its subsidiaries.

These consolidation tools have archiving and security procedures including the daily back-up of the consolidation database. System restoration tests are regularly carried out.

BODY OF DOCUMENTS

To ensure the reliability of the production processes for accounting and financial information, the central institution has drawn up and deployed a comprehensive body of documents in line with requirements set out in Articles 3e), 11e), 255 and 256 of the Ministerial Order of November 3, 2014 as amended on internal control.

In accordance with the requirements defined by the Group, this documentary database comprises three levels of information:

- Level 1: an inventory of deferrals. It groups deferrals listing all documents produced by all functions and transmitted "[...] to the executive management or the supervisory body [...] to the supervisory and control authorities [...]" or "[...] intended to be published [...]" within the meaning of Article 11 c) of the Ministerial Order of November 3, 2014, as amended, on internal control. This inventory, which is updated every year, includes minimum information on each of the reports in order to understand the objective and assess the associated risk (person responsible, objective, content, methods of dissemination, regulatory reference, risks covered, recipients, etc.). It distinguishes between external reports (regulatory reports) and internal reports (management reports);
- Level 2: operating methods or procedures. They formalize the sequencing of operations to implement the production, publication and control processes;
- Level 3: a description of the key processes (mainly the most complex processes). The process diagram positions the sequencing of the production and control steps, by identifying the players and tools used.

CHANGES IN 2024

In 2024, the Group continued its efforts to standardize and streamline its working methods to ensure the production of consolidated accounting and financial data, while adapting them to internal and regulatory changes, including:

- Implementation of the requirements relating to the publication of Pillar III ESG information (Implementing Regulation (EU) 2022/2453), Article 8 of the Taxonomy Regulation (EU Regulation 2020/852 and the Delegated Regulations (EU) 2021/2139, (EU) 2022/1214, (EU) 2021/2178, (EU) 2023/2486, (EU) 2023/2485) as well as the CSRD (Corporate Sustainability Reporting Directive) (directive (EU) 2022/2464) and its transposition into French law (Order No. 2023-1142 of December 6, 2023).
- Preparatory work for the implementation of the new prudential requirements (CRR3 reform). These changes are rooted in the publication of June 19, 2024 of the banking package consisting of Regulation 2024/1623 amending Regulation CRR 575/2013 and Directive (EU) 2024/1619 amending Directive CRD 2013/36/EU. Most of the measures will apply from January 1, 2025.
- The continuation of the project to implement the OECD's so-called "Pillar II" tax rules aimed at establishing a minimum global corporate tax rate of 15%.
- The implementation of operational efficiency projects aimed at pooling reports as well as the replacement of the consolidation tool by a single tool shared with all GFS Group entities to guarantee the consistency of processing and analyses.

6.8.3 Accounting and financial data control process

General system

The Group's internal control system contributes to the management of all types of risk and enhances the quality of accounting and financial information.

It is organized in accordance with legal and regulatory requirements, including those arising from the amended Ministerial Order of November 3, 2014 on internal control and texts governing BPCE. It concerns all Group companies, which are monitored on a consolidated basis.

The system is governed by an umbrella charter addressing the organization of Group internal control, which sets out the main principles, defines the scope of application, and lists all contributors along with their role, with the aim of ensuring that the internal control system of each company and the Group works effectively. This system is supplemented by frameworks, including the framework on controls of accounting and financial information.

Deployment of the control system for accounting and financial data

The Group has defined and implemented an accounting and financial information control system designed to:

- Ensure that production processes are reliable and implemented in an environment of secure controls, making it possible to detect or prevent omissions, errors, fraud or corruption;
- Verify the quality of the accounting and financial information, whether it is intended for the executive management or the supervisory body, transmitted to the supervisory and regulatory authorities or included in the documents intended for publication in accordance with the requirements defined by the amended Ministerial Order of November 3, 2014, on internal control and in particular Article 11 c).

This system is implemented by various participants at three levels, ensuring a strict separation between the different lines of defense:

- Level one controls are exercised by all persons involved in the production and publication of accounting and financial information (for accounting information, these controls are coordinated by the accounting function and for reports by the overseer (or report owner);
- Level two controls are carried out by a specialized and dedicated function (the Financial Control function), working with other level two control participants, as applicable.

Within the Group, this system is governed by rules and principles defined mainly around three guidelines updated under the coordination of the Group Secretary General:

- The *Framework for quality control of accounting and financial information approved* by the Group Internal Control Coordination Committee. This Framework defines the rules and principles of controls and responsibilities for accounting and related processes, as well as for the production and publication of reports intended for publication or transmission to the executive management, the supervisory body or the regulatory and control authorities;
- The *Framework for the preparation and publication of reports and management indicators* approved by the Standards and Methods, Risks, Compliance and Permanent Control Committee. This Framework defines rules and principles relating to deferrals and provides operational details to ensure the implementation of regulatory requirements relating to deferrals (including those defined by the amended Ministerial Order of November 3, 2014 on internal control and requirements derived from BCBS 239 principles);
- The *Framework for Statutory Auditor assignments at Groupe BPCE,* approved by the Supervisory Board of BPCE, which sets out the rules and principles governing statutory audits in the Group.

WITHIN THE ENTITIES

Internal control procedures are decentralized by nature owing to the Group's unique organizational structure and are adapted to the particular requirements of each consolidated entity, in compliance with the general rules and principles set by the Group.

AT THE CENTRAL INSTITUTION

Level one controls

In addition to the level one self-checking and control procedures performed in the entities responsible for preparing parent company or consolidated financial statements, the quality of accounting and financial controls is also verified by the Accounting department, which oversees the production of accounting and financial information.

To this end, the Accounting department:

- Sets accounting and prudential standards at the Group level for the production of parent company and consolidated financial statements that meet French and IFRS accounting standards, and the production of regulatory reports for national or supranational oversight and control authorities;
- Coordinates the accounting process, thereby increasing the quality of level one controls;
- Examines the reports covering accounting and regulatory data that it receives by conducting multiple controls using data contained in the consolidation packages sent by the entities in the Group's scope of consolidation for the purposes of preparing the parent company and regulatory consolidated financial statements;
- Performs, within the framework of the missions of the central institution falling within the scope of Article L. 511-31 of the French Monetary and Financial Code, a regular review of the regulatory statements of affiliates before their transmission to the *Autorité de contrôle prudentiel et de résolution*, the French Prudential Supervisory Authority for the banking and insurance sector, and in accordance with the rules agreed with this authority (multiple analyses and consistency checks);
- Controls, under the tax consolidation regime for cooperative banking groups (Article 223 A *et seq.* of the French General Tax Code), the tax consolidation packages sent to the central institution by the entities falling within the scope of this regime.

In addition, for the reports for which they are responsible, the other departments of the Finance division organize and implement the related process control system in addition to those deployed by the Accounting department, where applicable.

Level two controls

Within the Group, the system is managed by the Group Financial Control department. The Head of this department is a standing guest member of the Group Internal Control Coordination Committee and has been granted powers to set standards for the function. In conjunction with the shareholder institutions and Group subsidiaries, the department maintains functional ties between local Financial Control departments and the central institution to ensure the quality of the entire control system.

Under its groupwide duties, the department's primary activities are to:

- Draft and distribute the body of standards and documentation for the sector and ensuring its implementation;
- Facilitate the sharing of best practices within an *ad hoc* Committee (Financial Controller Committee), working groups and training courses for local permanent or periodic controllers;
- Organize the monitoring and evaluation of the accounting and financial information control system within the Group by deploying reporting to the central institution for the entities that appear to be the most material, and by visiting entities, in particular those whose financial control systems are weaker than others;
- Implement accounting controls to prevent and detect fraud, corruption or influence peddling;
- Verify, on behalf of the Audit Committee, the Group's regulatory audit system and in particular services other than financial statement certification.

In addition to these sovereign missions, the department implements controls on accounting processes and internal (for management purposes) or external (regulatory) reports for the central institution or entities for which the central institution acts under mandate or delegation. This work, identified according to a risk-based approach, is carried out, where appropriate, with other second-level controllers.

Other control systems

In addition to Level 1 and Level 2 controls, controls are implemented by:

- The Group's Statutory Auditors, which work on a panel basis and base their opinions partly on the conclusions of each consolidated entity's Statutory Auditors, particularly regarding compliance with the Group's standards as laid down by BPCE and partly on the effectiveness of local internal control procedures. To make the certification process as efficient as possible, the Framework for Statutory Auditor Assignments at Groupe BPCE recommends that each Group entity has at least one representative of the Group's Statutory Auditors certifying BPCE's financial statements;
- BPCE's Group Internal Audit, which notably ensures compliance in audits of the Group's institutions and internal control procedures, including accounting and financial audits.

CHANGES IN 2024

In 2024, the Group adapted its control system for accounting and financial information to take into account regulatory changes and continue its streamlining efforts. The main actions carried out by the central institution were as follows:

- Adapting the Group's permanent control tool (PRISCOP) with, in particular, the collection of control results:
  - Level 1 (implemented by the Asset/Liability Management function) covering interest rate and liquidity risks;
  - Level 2 (implemented, in particular, by the Financial Control function) covering the quality of the processes and indicators of the main regulatory reports published by the Group.
- Defining a new risk-based approach to accounting and similar processes aimed at rationalizing resources and obtaining a synthetic and consolidated view of the risk areas in this field;
- Intensifying second-level controls on the consolidated financial statements published by BPCE;
- Strengthening the supervision of Financial Control as part of the implementation of the "Supervision" program intended to strengthen the supervision of the Group's main entities;
- Maintaining a robust coordination and support system for the Group's entities, including the adaptation of training courses for second-level control players and the updating of the control guides made available to them to facilitate the implementation of controls on accounting processes and reports published by the Group;
- Launching a project to implement an internal control system for reporting known as the CSRD (Corporate Sustainability Reporting Directive) published by the Group and certain entities subject to this new requirement, which aims to strengthen transparency and make companies accountable for their environmental, social and governance (ESG) impacts.

BODIES RESPONSIBLE FOR ACCOUNTING AND FINANCIAL INFORMATION

Once per quarter, the Management Board of BPCE finalizes the consolidated financial statements and presents them to the Supervisory Board for verification and control.

Parent company financial statements are prepared once per year, in accordance with regulations in force.

The Supervisory Board of BPCE checks and controls the parent company and consolidated financial statements prepared by the Management Board of BPCE and presents its observations about the financial statements for the fiscal year at the Ordinary Shareholders' Meeting. For this purpose, the Supervisory Board has set up a specialist committee in charge of preparing its decisions and formulating recommendations: the Audit Committee.

Details on this committee's duties, including oversight of the accounting and financial information production process, the statutory audit of the annual and consolidated financial statements and the Statutory Auditors' independence, are provided in the section relating to "Corporate governance report".

The Finance Committee brings together executives from each of the two networks and is tasked with examining all financial matters relating to the shareholder community. It examines these matters in accordance with the Group committees in these areas and issues an advisory opinion.

In addition, the Management Board of BPCE has tasked the Finance division with organizing the coordination, information and decision-making process on financial and accounting matters through the Finance function's supervisory committees, organized around three categories:

- Permanent committees;
- Coordination and reporting committees: these comprise key managers from the Finance function or key managers from each business line department with finance duties (financial control, accounting, cash management, Asset/liability management and tax);
- Temporary committees that manage and coordinate projects with fixed deadlines.

In order to ensure the transparency and security of the system, these committees are formally governed by regulations that define the operation, organization, composition and role of each committee, along with the rules for reporting on their discussions. The Finance division's committees systematically involve representatives.

6.9 Persons responsible for auditing the financial statements

6.9.1 Statutory audit system

Within the Group, the main rules that govern the statutory audit system and aim to guarantee Statutory Auditor independence in Groupe BPCE companies are defined in the Framework for Statutory Auditor Assignments at Groupe BPCE, updated and validated by the Supervisory Board of BPCE.

Applicable to all of the Group's companies, this Framework primarily defines:

- The rules governing the selection of Statutory Auditors for the Group and its entities;
- The rules governing the services that may be provided by Statutory Auditors (or their networks);
- The role of Audit Committees with respect to monitoring the system.

On the appointment of group Statutory Auditors: in line with the regulations in force, the Group recommends that each group company continues to designate at least one network of Statutory Auditors that certify BPCE’s consolidated and parent company financial statements to ensure there is a consistent, harmonized financial audit system available across the Group. However, each company’s audit committee retains the authority to select Statutory Auditors subject to the approval of the company’s General Meeting.

On the prior approval of services other than financial statement certification: in line with the opinion provided by the Haute autorité de l'audit (H2A), the audit committee of BPCE introduced a prior approval procedure, for a one year period, of an exhaustive list of categories of services other than financial statement certification. These provisions, which are set out in the annexes to the Framework for Statutory Auditor Assignments, are reviewed annually by the BPCE Audit Committee and communicated to all Group entities.

In terms of system oversight, each company’s Audit Committee:

- Examines the services rendered by the Statutory Auditors. Aside from the prior approval of services other than financial statement certification in compliance with provisions that have been defined in the Framework for Statutory Auditor Assignments, the committee examines the fees and types of services rendered as recorded in each company’s income statement;
- Ensures compliance with the principles laid out in the Framework for Statutory Auditor Assignments, rules governing the rotation of Statutory Auditors and the rotation of signatory partners and the implementation of a Statutory Auditor selection procedure at the end of each maximum term of office;
- This approach relies on the permanent control system (Financial Control function). A Group standard on the control of the independence of the Statutory Auditors, validated by the standards and methods committee, specifies the role of this function in this area and the main procedures it must implement. The work carried out within this framework is presented to each company’s Audit Committee and, on a consolidated basis, to the Group Audit Committee.

6.9.2 Statutory Auditors of BPCE

BPCE's Statutory Auditors are responsible for auditing the parent company financial statements of BPCE SA and the consolidated financial statements of BPCE and Groupe BPCE. At December 31, 2024, the Statutory Auditors were:

PricewaterhouseCoopers Audit	Deloitte & Associés	Forvis Mazars SA
63, rue de Villiers	6, place de la Pyramide	61, rue Henri-Regnault
92208 Neuilly-sur-Seine Cedex	92908 Paris-La Défense Cedex	92075 Paris-La Défense Cedex

PricewaterhouseCoopers Audit (672006483 RCS Nanterre), Deloitte & Associés (572028041 RCS Nanterre) and Forvis Mazars (784824153 RCS Nanterre) are registered as Statutory Auditors, members of the Compagnie Régionale des Commissaires aux Comptes de Versailles and under the authority of the Haute autorité de l'audit (H2A).

PricewaterhouseCoopers audit

The Combined General Meeting of BPCE of May 27, 2021, voting under the conditions of quorum and majority applicable to Ordinary Shareholders' Meetings, resolved to renew the term of PricewaterhouseCoopers Audit for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting to be held in 2027, convened to approve the financial statements for the year ending December 31, 2026.

PricewaterhouseCoopers Audit is represented by Mr Laurent Tavernier and Mr Antoine Priollaud

Substitute: Jean-Baptiste Deschryver, of 63, rue de Villiers, 92208 Neuilly-sur-Seine Cedex, appointed for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting to be held in 2027, convened to approve the financial statements for the year ending December 31, 2026.

Deloitte & Associés

The Combined General Meeting of BPCE of May 27, 2021, voting under the conditions of quorum and majority applicable to Ordinary Shareholders' Meetings, resolved to appoint Deloitte & Associés for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting to be held in 2027, convened to approve the financial statements for the year ending December 31, 2026.

Deloitte & Associés is represented by Mrs Marjorie Blanc Lourme.

Substitute: BEAS, represented by Damien Leurent, of 6, place de la Pyramide, 92908 Paris-La Défense, appointed for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting to be held in 2027, convened to approve the financial statements for the year ending December 31, 2026.

Substitute: BEAS, represented by Damien Leurent, of 6, place de la Pyramide, 92908 Paris-La Défense, appointed for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting to be held in 2027, convened to approve the financial statements for the year ending December 31, 2026.

Forvis Mazars

Following a proposal made by the Supervisory Board and the opinion of the Audit Committee, the General Meeting of BPCE of May 24, 2019, voting under the conditions of quorum and majority applicable to Ordinary Shareholders' Meetings, resolved to renew the term of Forvis Mazars for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting to be held in 2025, convened to approve the financial statements for the year ending December 31, 2024.

Forvis Mazars is represented by Mr Emmanuel Thierry and Mrs Laurence Karagulian.

Substitute: Anne Veaute, of 61, rue Henri-Regnault, 92075 Paris-La Défense Cedex, appointed for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting held in 2025, convened to approve the financial statements for the year ended December 31, 2024.

7

RISK FACTORS & RISK MANAGEMENT

Some disclosures required under IFRS 7 & IFRS 17 on the nature and the extent of various risks are presented in this report and covered by the Statutory Auditor's opinion on the consolidated financial statements. Such disclosures are flagged by the statement "Information provided in the respect of IFRS 7" & "Information provided in the respect of IFRS 17" and should be interpreted as an integral part of the notes to the consolidated financial statements.

The Pillar III report is available in the "Results and publications" section of Groupe BPCE website (www.groupebpce.com), under "Pillar III".

7.1.1 Types of risk

Risk macro-categories	Definition
Credit and counterparty risk	
• Credit risk	The risk of loss from the inability of clients, issuers or other counterparties to honor their financial commitments. It includes counterparty risk related to market transactions (replacement risk) and securitization activities. It can be exacerbated by concentration risk.
• Securitization risks	Transactions for which the credit risk inherent in a set of exposures is housed in a dedicated structure (generally a mutual fund or "conduit") and then divided into tranches for acquisition by investors.
Financial risks	
• Market risk	The risk of loss of value on financial instruments resulting from changes in market inputs, from the volatility of these inputs or from the correlations between these inputs. Inputs include exchange rates, interest rates and prices of securities (equities, bonds), commodities, derivatives or any other assets, such as real estate assets.
• Liquidity risk	The risk that the Group cannot meet its cash requirements or collateral requirements when they fall due and at a reasonable cost.
• Structural interest rate risks	The risk of loss in interest income or in the value of a fixed-rate structural position in the event of changes in interest rates. Structural interest rate risks are associated with commercial activities and proprietary transactions.
• Credit spread risk	The risk associated with a decline in the creditworthiness of a specific issuer or a specific category of issuers.
• Foreign exchange risk	The risk of loss in interest income or in the value of a fixed-rate structural position in the event of changes in exchange rates. Structural interest rate and exchange rate risks are associated with commercial activities and proprietary transactions.
Non-financial risks	
• Non-compliance risk	The risk of a legal, administrative or disciplinary penalty, material financial loss or reputational risk arising from a failure to comply with the provisions specific to banking and financial activities (whether these are stipulated by directly applicable national or European laws or regulations), with professional or ethical standards, or instructions from executive management, notably issued in accordance with the policies of the supervisory body.
• Operational risk	The risk of losses arising from the inadequacy or failure of internal processes, people and systems or from external events, including legal risk. Operational risk includes risks related to events with a low probability of occurrence but a high impact, the risks of internal and external fraud defined by the regulations, and risks related to the model.
• Insurance underwriting risk	In addition to asset-liability risk management (interest rate, valuation, counterparty and exchange rate risks), these risks include pricing risk in respect of mortality risk premiums and structural risks related to life and non-life insurance activities, including pandemics, accidents and disasters (earthquakes, hurricanes, industrial accidents, terrorist acts and military conflicts).
• Model risk	Model risk is defined as the risk of adverse consequences - financial loss and/or possible damage to the Group's reputation - resulting from model-based decisions due to errors in the design, implementation or use of these models.
• Legal risk	Legal risk defined in French regulations as the risk of any dispute with a counterparty, resulting from any inaccuracy, lacunae or insufficiency that may be attributable to the company in respect of its operations.
• Reputational risk	Reputational risk is defined as the risk of damage to the trust of the company, its customers, counterparties, suppliers, employees, shareholders, supervisors or any other third party whose trust, in any capacity whatsoever, is a necessary condition for the normal continuation of the activity.
Strategic business and ecosystem risks	
• Solvency risk	The risk that the company will be unable to honor its long-term commitments and/or ensure the continuity of its ordinary operations in the future.
• ESG risks	Environmental, social and governance risks: direct and indirect risks (*i.e. via* assets/liabilities held) arising from extreme or chronic physical risk events related to climate and the environment (loss of biodiversity, pollution, *etc.*), risks related to the transition to a low-carbon economy with lower environmental impact (regulatory, technological or stakeholder behavior changes), risks related to social issues (rights, well-being, interests of people and stakeholders) or corporate governance issues (ethics and culture, supplier relations, business conduct). These risks are expressed through the main risk categories to which Groupe BPCE is exposed.

7.1.2 Regulatory changes

Progress of the banking union

The new banking package (CRR3 regulation and CRD6 directive) was published on June 19, 2024, in the Official Journal of the European Union.

This banking package implements the final component of the Basel III regulatory reform within the European Union. Most provisions of the CRR3 regulation will come into effect on January 1, 2025. However, the rules concerning market risks have been postponed by one year to January 1, 2026, in order to maintain a consistent global regulatory framework.

The governance of financial institutions is at the core of the provisions of the CRD6 directive, which will be applicable starting from January 11, 2026.

CRR3 introduces significant technical modifications that directly influence risk management in banks. These adjustments primarily concern the methods for calculating credit risks, market risks, and credit valuation adjustments (CVA). Furthermore, CRR3 imposes more rigorous reporting and data collection standards to enhance the transparency and comparability of financial information.

Among the key issues, the introduction of the output floor (which establishes that capital requirements calculated using internal models cannot fall below 72.5% of the requirements set out by the standardized approach) is of major importance.

Regarding the resolution framework, the Eurogroup validated a pragmatic approach in June 2022 and requested the Commission to strengthen the reform project on a limited number of topics (hierarchy of claims, notion of public interest, etc.) concerning, in particular, the treatment applicable to medium-sized banks. The European Commission published its proposals for revising the resolution framework and the crisis management and deposit insurance framework (CMDI) on April 18, 2023, which continues to be the subject of intense discussions. The trilogue began in December 2024. In France, Article 2-I of the DDADUE 2025 bill transposes various provisions of the 2024/1174 directive "Daisy Chains II".

A sustained regulatory agenda

The regulatory agenda remains robust for banks, and Groupe BPCE is closely monitoring the issues, whether they pertain to the banking sector or the broader economic environment and its cooperative banking model.

The Digital Operational Resilience Act (DORA) came into effect on January 17, 2025. The requirements of this regulation relate to the management of risks associated with information technology and aim to mitigate cyberattacks and other risks linked to information systems. It includes provisions on the governance of financial entities, risk management, and the reporting of ICT (Information and Communication Technologies) related incidents, and introduces resilience testing every three years. The designation of critical ICT third-party providers is expected by June 30, 2025. Finally, European supervisory authorities published a report on January 17, 2025, studying the feasibility of strengthening the centralization of major ICT-related incident reporting.

The 2023/225 directive regarding consumer credit contracts was published in the Official Journal of the European Union on October 30, 2023. The transposition deadline runs until November 20, 2025, and the new regime will be fully applicable from November 20, 2026. The main developments concern the scope (a new definition of the credit contract concluded between a lender and a consumer, which effectively excludes the GAFAM), the establishment of a mandatory creditworthiness assessment, the enhancement of pre-contractual information, as well as the modalities for conducting activities for providers not falling under sectoral regulation.

The 2002/65 directive concerning the distance marketing of financial services to consumers, known as the Distance Marketing in Financial Services Directive (DMFSD), has finally been repealed and replaced by the 2023/2673 directive, set to apply from June 2026. The developments particularly involve pre-contractual information and the facilitation of the right of withdrawal through the introduction of a "withdrawal function" accessible via the provider's interface.

In France, Article 2-VII of the DDADUE 2025 bill empowers the government to transpose the two directives 2023/2225 of October 18, 2023, and 2023/2673 of November 22, 2023, by ordinance.

The European Commission published a set of measures on May 24, 2023, known as the "Retail Investment Package," aimed at enhancing the protection of retail clients in terms of investment in financial products. While the formal prohibition of inducements was removed from these measures, the Council's position of June 12, 2024, introducing an "inducement test," which could effectively become a de facto prohibition, calls for heightened vigilance regarding the ongoing discussions. The trilogues will commence on March 18, 2025. France emphasizes two priorities for simplifying these texts: simplifying the customer journey and simplifying benchmarks/VFM and inducement test.

The proposal to revise the Payment Services Directive (PSD3) presented by the European Commission on June 28, 2023, was amended by the European Parliament during its plenary session on April 23, 2024. This proposal also contributes to the development of open banking (access to banking and financial data). Impact assessments are ongoing. The trilogue has been postponed to the first quarter of 2025, as has the implementation date, now set for late 2026 to early 2027.

It should also be noted that Articles 2 IV to VI of the DDADUE 2025 bill, currently under parliamentary discussion, participate in the implementation of Regulation 2024/886 concerning instant payments, applicable since January 9, 2025, regarding free payment services.

On June 28, 2023, the European Commission published its proposal for a regulatory framework for financial data access (Framework for Financial Data Access - FIDA), previously referred to as "open finance." This initiative is part of the European Commission's digital finance strategy, which aims to establish a European financial data space. The trilogues will begin in 2025. The regulation known as the AI Act, dated June 13, 2024, establishes the first legal framework for artificial intelligence in Europe. This regulation will come into effect on August 2, 2026, but some measures will be implemented starting February 2, 2025 (prohibiting high-risk AI).

Ordinance 2023-1142 of December 7, 2023, transposing Directive 2022/2464 regarding the publication of sustainability information by companies, known as CSRD, applies to reports published in 2025. It is set to be amended within the framework of Articles 7 to 12 of the DDADUE 2025 law adopted on February 17, 2025. Two proposals for directives known as Omnibus I were published on February 26, 2025, aimed specifically at postponing and modifying the CSRD and the CS3D. A draft delegated regulation aimed at amending the Taxonomy Regulation was published on February 26, 2025, and is open for public consultation.

Furthermore, Regulation 2023/2631 on European green bonds ("European Green Bond Standard") published on November 30, 2023, and applicable from December 21, 2024, defines requirements for issuers wishing to use the label "European Green Bond" or "EuGB." To implement this regulation, the DDADUE 2025 bill plans to assign the supervision of green bond issuers to the AMF.

The legislative package presented by the European Commission in July 2021 completely overhauls the European framework regarding AML-CFT, particularly by strengthening the harmonization of rules applicable to customer due diligence and vigilance, redefining compliance functions, and establishing a new authority, the AMLA, which will be based in Frankfurt. The two draft regulations AMLAR and AMLR, as well as the draft directive AMLD, were published in the Official Journal of the European Union on June 19, 2024.

7.2 Risk factors

The banking and financial environment in which Groupe BPCE operates is exposed to numerous risks and requires the implementation of an increasingly demanding and strict policy to control and manage these risks.

Some of the risks to which Groupe BPCE is exposed are set out below. However, this is not a comprehensive list of all of the risks incurred by Groupe BPCE in the course of conducting its business or given the environment in which it operates. The risks presented below are those identified to date as significant and specific to Groupe BPCE, and liable to have a material adverse impact on its business, financial position and/or results. For each of the risk sub-classes listed below, the risk factor considered to date by Groupe BPCE as the most significant is listed first.

The risks presented below are those identified to date as liable to have an adverse impact on the businesses of BPCE SA.

The risk factors described below are presented as of the date of this document and the situation described may change, even significantly, at any time.

Credit and counterparty risk

Groupe BPCE is exposed to credit and counterparty risks that could have a material adverse effect on the Group’s business, financial position and income.

Groupe BPCE is significantly exposed to credit and counterparty risk through its financing or market activities. The Group could thus incur losses in the event of default by one or more counterparties, in particular if the Group encounters legal or other difficulties in exercising its collateral or if the value of the collateral does not allow it to fully cover the exposure in the event of a default. Despite the due diligence carried out by the Group aimed at limiting the effects of having a concentrated credit portfolio, both in units and sectors, counterparty defaults may be amplified within a specific economic sector or world region by the effects of interdependence between these counterparties. Default by one or more major counterparties could thus have a material adverse effect on the Group’s cost of risk, results and financial position.

For information, on December 31, 2024, Groupe BPCE’s gross exposure to credit risk amounted to €1,511 billion, with the following breakdown for the main types of counterparty: 37% for retail customers, 30% for corporates, 16% for central banks and other sovereign exposures, and 6% for the public sector and similar entities. The credit risk-weighted assets amounted to €398 billion (including counterparty risk).

The main economic sectors to which the Group was exposed in its non-financial companies portfolio were Real Estate (38% of gross exposures at December 31, 2024), Wholesale and Retail Trade (11%), Finance/Insurance (10%) and Specialized, Scientific and Technical Activities (6%).

Groupe BPCE develops its activities mainly in France. The Group’s gross exposure (gross carrying amount) to France was €1,070 billion, representing 82% of the total gross exposure. The remaining exposures were mainly concentrated in the United States, for 5%, with other countries accounting for 12% of the total gross exposures.

For further information, please see Chapters 5 “Credit risks” and 6 “Counterparty risk” in this document.

A substantial increase in impairments or provisions for expected credit losses recognized in Groupe BPCE's accounts could have a material adverse effect on its results and financial position.

In the course of its activities, Groupe BPCE regularly recognizes charges for impairments in order to reflect, if necessary, actual or potential losses on its portfolio of loans and advances, on its portfolio of fixed-income securities (at amortized cost or at fair value through other comprehensive income) and in respect of its commitments given. These impairments are booked in the income statement under “Cost of risk”. Groupe BPCE’s total charges for asset impairments are based on the Group’s measurement of past losses on loans, volumes and types of loans granted, industry standards, loans in arrears, economic conditions and other factors associated with the recoverability of various types of loans. While Groupe BPCE makes every effort to set aside a sufficient level of provisions for asset impairment expenses, its lending activities may cause it, in the future, to have to increase its expenses for losses on loans, due to a rise in non-performing loans or for other reasons such as the deterioration of market conditions or factors affecting certain countries. Any substantial increase in charges for losses on loans, material change in Groupe BPCE’s estimate of the risk of loss associated with its portfolio of loans, or any loss on loans exceeding past impairment expenses, could have an adverse impact on Groupe BPCE’s results and financial position.

For information, Groupe BPCE’s cost of risk amounted to €2,061 million in 2024 compared to €1,731 million in 2023, with credit risks accounting for 87% of Groupe BPCE’s risk-weighted assets. On the basis of gross exposures, 37% relate to retail customers and 30% to corporate customers (of which 68% of exposures are located in France).

Consequently, the risk associated with a significant increase in impairment expenses on assets booked to Groupe BPCE’s loans and advances portfolio is significant in terms of impact and probability, and is therefore monitored carefully and proactively. In addition, prudential requirements supplement these provisioning mechanisms *via* the prudential backstop process, which results in a deduction in equity of non-performing loans beyond a certain maturity in line with the quality of the guarantees and according to a regulatory timetable defined by regulatory texts.

A decline in the financial strength and performance of other financial institutions and market players may have an unfavorable impact on Groupe BPCE.

Groupe BPCE’s ability to execute transactions may be affected by a decline in the financial strength of other financial institutions and market players. Financial institutions are closely interconnected owing to their trading, clearing, counterparty and financing operations. A default by a significant sector player (systemic risk), or even mere rumors or concerns regarding one or more financial institutions or the financial industry in general, may lead to a general contraction in market liquidity and subsequently to losses or further defaults in the future. Groupe BPCE is directly or indirectly exposed to various financial counterparties, such as investment service providers, commercial or investment banks, clearing houses and CCPs, mutual funds, hedge funds, and other institutional clients, with which it regularly conducts transactions. The default or failure of any such counterparties may have an adverse impact on Groupe BPCE’s financial position. Moreover, Groupe BPCE may be exposed to the risk associated with the growing involvement of operators subject to little or no regulation in its business segment and to the emergence of new products subject to little or no regulation (including in particular crowdfunding and trading platforms). This risk would be exacerbated if the assets held as collateral by Groupe BPCE could not be sold or if their selling price would not cover all of Groupe BPCE's exposure to defaulted loans or derivatives, or in the event of fraud, embezzlement or other misappropriation of funds committed by financial sector participants in general to which Groupe BPCE is exposed, or if a key market operator such as a CCP defaults.

In addition, the distribution risk in the event of market difficulties or a deterioration in the economic environment may entail a potential loss in a severe scenario.

The exposures to "financial institutions" represented 4% of Groupe BPCE's total gross exposures of €1,511 billion at December 31, 2024. In geographic terms, 67% of gross exposures to "institutions" are located in France.

Financial risks

Significant changes in interest rates may have a material adverse impact on Groupe BPCE's net banking income and profitability.

Groupe BPCE's net interest margin over a given period represents a significant portion of its revenues. Consequently, changes in the margin have a significant impact on Groupe BPCE's net banking income and profitability for the period. The costs of the resource as well as the conditions of return on the asset, in particular those attached to new production, are therefore very sensitive elements, in particular to factors that may be beyond Groupe BPCE's control, as these significant changes could entail significant temporary or long-term repercussions, even if a rise in interest rates is expected to be generally favorable in the medium to long term.

The recent environment has been marked by a sharp rise in interest rates initiated by the European Central Bank at the end of 2022, maintaining them at very high levels during 2023, exposure to interest rate risk and more generally to price risk was thus reinforced by the combination of unfavorable factors, namely the marked increase in regulated rates, the reallocation of part of the savings following the rapid exit from the low interest rate environment, the rise in interbank spreads, while, conversely, the rate of new loans was temporarily constrained by the level of the usury rate in 2022 and 2023. While inflation has begun a gradual decline, global central banks including the European Central Bank (ECB), after completing their monetary policy tightening cycle at the end of 2023, initiated a cycle of gradual reductions in key rates during 2024. The European Central Bank (ECB) announced its first rate cut (-25 bps) in June 2024, and the US Federal Reserve in September 2024. Despite this cautious start to the rate-cutting cycle, short-term and long-term interest rates remain at high levels not seen since 2008. Indeed, the ECB's rates are in the range of 3.0%-3.15%, while the US Federal Reserve (FED) has lowered its key rates in the range of 4.25%-4.5%.

At the same time, the *Livret A* savings account rate, to which Groupe BPCE is exposed due to the regulated savings accounts held by its customers, has experienced a trajectory similar to that of inflation with a rapid increase and then stability at 3% since February 2023 (rate announced stable until February 2025). From February 2025, the *Livret A* savings account rate was reduced to 2.4%.

The corollary of this atypical situation, in terms of intensity and economic impact, was a significant reduction in Groupe BPCE's bank loan production in 2024 after a peak in activity in the first months of the inflationary period. This situation has resulted in an 11% decrease in loan production with a more marked effect on home loans to households with -21% between 2023 and 2024, after the sharp decline already observed between 2022 and 2023 to -44%.

As a result of the increase in the average resource cost on the customer balance sheet for the two main regional banking networks (Banques Populaires and Caisses d'Epargne), Groupe BPCE gradually passed on the rate increase levels observed in 2024 to the rates of new home loans and other fixed-rate consumer and corporate loans.

On the other hand, customers have continued to gradually switch their low-interest accounts to higher-yielding products (regulated passbook accounts and term accounts). In this context of squeezed margins, given the speed with which the rapid rate increases were being passed on, Groupe BPCE adjusted its interest rate hedging policy by increasing the volume of its interest rate swaps (macro-hedging) so as to protect the value of its balance sheet and its future net interest margin.

Consequently, even if the context of rising rates is generally favorable in the medium to long term, these significant changes can have major repercussions, whether temporary or lasting. Groupe BPCE's interest rate risk indicators reflect this exposure.

The sensitivity of the net present value of Groupe BPCE's balance sheet to a +/-200 bps variation in interest rates remained lower than the 15% Tier-1 limit. At December 31, 2024, Groupe BPCE's sensitivity to Tier-1 interest rate increases stood at -9.62% compared to -10.8% at December 31, 2023. This indicator, calculated according to a static approach (contractual or conventional flow of all balance sheet items) and in a stress scenario (immediate and significant interest rate shock), makes it possible to highlight the distortion of the balance sheet over a long horizon.

To better control the Group's exposure to interest rate risk, this approach must be supplemented by a dynamic approach (including new production forecasts). Following regulatory changes and modifications of its management system, since 2023 Groupe BPCE has deployed an internal revenue sensitivity indicator on the commercial banking networks and the Supervisory Outlier Test (SOT) Net Interest Margin (NIM) regulatory indicator at Group level, in addition to its internal indicators. The introduction of the SOT NIM supplements the information communicated as part of the interest rate risk management system by a margin view over a one-year horizon, and must be published in the financial statements, even if it will not directly generate a Pillar I expense. *At December 31, 2024, the most penalizing scenario for the Group in terms of the SOT NIM was the downside scenario. The indicator stands at -1.2% and remains below the 5% limit compared to the first quarter.*

The dynamic approach in terms of sensitivity of future revenues is reinforced by a multi-scenario vision allowing a broader approach by taking into account the uncertainties related to business forecasts (new activity and changes in customer behavior), possible changes in commercial margin, *etc.* This is achieved through the sensitivity of the Group's revenues by measuring the change in the Group's forecast net interest margin at one year according to four scenarios (rise in rates, decline in rates, steepening of the yield curve, flattening of the yield curve) compared to the core scenario. This revenue sensitivity indicator covers all commercial banking activities and aims to estimate the sensitivity of the institutions' results to interest rate fluctuations.

Groupe BPCE is dependent on its access to funding and other sources of liquidity, which may be limited for reasons outside its control, thus potentially having a material adverse impact on its results.

Access to short-term and long-term funding is critical for the conduct of Groupe BPCE's business. Non-collateralized sources of funding for Groupe BPCE include deposits, issues of long-term debt and short/medium-term negotiable debt securities, banks loans and credit lines. Groupe BPCE also uses secured funding, notably through repurchase agreements and the issuance of covered bonds or securitization *via* dedicated vehicles or conduits. Geopolitical instabilities in the world with variable rate tranches can have an impact on payment arrears and default rates as well as on final legal maturities. If Groupe BPCE were unable to access the secured and/or unsecured debt market at conditions deemed acceptable, or incurred an unexpected outflow of cash or collateral, including a significant decline in customer deposits, its liquidity may be negatively affected. Furthermore, if Groupe BPCE were unable to maintain a satisfactory level of customer deposits (*e.g.* in the event its competitors offer higher rates of return on deposits), it may be forced to obtain funding at higher rates, which would reduce its net interest margin and results.

Groupe BPCE's liquidity, and therefore its results, may also be affected by unforeseen events outside its control, such as general market disruptions, which may in particular be related to geopolitical or health, a resurgence of financial crises, operational hardships affecting third parties, negative opinions on financial services in general or on the short/long-term outlook for Groupe BPCE, changes in Groupe BPCE's credit rating, or even the perception of the position of the Group or other financial institutions among market operators.

Groupe BPCE's access to the capital markets, and the cost of long-term unsecured funding, are directly related to changes in its credit spreads on the bond and credit derivatives markets, which it can neither predict nor control. Liquidity constraints may have a material adverse impact on Groupe BPCE's business, financial position, results and ability to meet its obligations to its counterparties. Similarly, a change in the monetary policy stance, in particular that of the European Central Bank, may impact Groupe BPCE's financial position.

However, to deal with these risk factors, Groupe BPCE has significant liquidity reserves made up of cash deposits with central banks and available securities and receivables eligible for central bank refinancing mechanisms. *Groupe BPCE's liquidity reserve amounted to €302 billion at December 31, 2024 covering 177% short-term funding and short-term maturities of MLT debt compared to 161% at December 31, 2023. The LCR (Liquidity Coverage Ratio) averaged 149% over 12 months on December 31, 2024 versus 145% at December 31, 2023.* Given the importance of these risks for Groupe BPCE in terms of impact and probability, these risks are monitored proactively and closely, with Groupe BPCE also pursuing a very active policy of diversifying its investor base.

Downgraded credit ratings could have an adverse impact on BPCE's funding cost, profitability and the continuity of some businesses.

Groupe BPCE's long-term ratings at December 31, 2024, were A+ for Fitch ratings, A1 for Moody's, A+ for R&I and A+ Standard and Poor's, which revised this rating upwards in July 2024, thus demonstrating its assessment of the Group's solidity. The decision to downgrade these credit ratings may have a negative impact on the funding of BPCE and its affiliates active in the financial markets. A ratings downgrade may affect Groupe BPCE's liquidity and competitive position, increase funding costs, limit access to financial markets and trigger obligations under some bilateral contracts governing trading, derivative and collateralized funding transactions, thus adversely impacting its profitability and business continuity.

Furthermore, BPCE's unsecured long-term funding cost is directly linked to its credit spreads (the yield spread over and above the yield on government issues with the same maturity that is paid to bond investors), which in turn are heavily dependent on its ratings. An increase in credit spreads may raise BPCE's funding cost. Shifts in credit spreads are correlated to the market and sometimes subject to unforeseen and highly volatile changes. Accordingly, a change in perception of an issuer solvency due to a rating downgrade could have an adverse impact on that issuer's profitability and business continuity.

Groupe BPCE is exposed to credit spread risk at the level of its assets in a scenario of widening credit spreads, on its portfolio of securities at fair value or at amortized cost. The Group holds a significant bond portfolio eligible for the liquidity reserve, mainly composed of sovereign and corporate bonds, which makes its valuation sensitive to changes in the credit spreads of its securities.

Market fluctuations and volatility could expose Groupe BPCE, and in particular its major corporate & investment banking business lines (Natixis CIB and Natixis IM), to favorable or unfavorable fluctuations in its trading and investment activities, which could adversely affect Groupe BPCE's results of operations and financial position.

In the course of its third-party trading or investment activities, Groupe BPCE may carry positions in the bond, currency, commodity and equity markets, and in unlisted securities, real estate assets and other asset classes. These positions may be affected by volatility on the markets (especially the financial markets), i.e. the degree of price fluctuations over a given period on a given market, regardless of the levels on the market in question. Certain market configurations and fluctuations may also generate losses on a broad range of trading and hedging products used, including swaps, futures, options and structured products, which could adversely impact Groupe BPCE's operating results and financial position. Similarly, extended market declines and/or major crises may reduce the liquidity of certain asset classes, making it difficult to sell certain assets and in turn generating material losses.

The market risk-weighted assets totaled €13 billion, i.e. around 4% of Groupe BPCE's total risk-weighted assets, on December 31, 2024. For information, the weight of Corporate & Investment Banking activities in the Group's net banking income was 19% for the year 2024. For more detailed information and examples, see Note 10.1.2 "Analysis of financial assets and liabilities classified in Level 3 of the fair value hierarchy" to the consolidated financial statements of Groupe BPCE, included in the Universal Registration Document.

Groupe BPCE's revenues from brokerage and other activities associated with fee and commission income may decrease in the event of market downturns.

A market downturn is liable to lower the volume of transactions (particularly financial services and securities transactions) executed by Groupe BPCE entities for their customers and as a market maker, thus reducing the net banking income from these activities. In particular, in the event of a decline in market conditions, Groupe BPCE may record a lower volume of customer transactions and a drop in the corresponding fees, thus reducing revenues earned from this activity. Furthermore, as management fees invoiced by Groupe BPCE entities to their customers are generally based on the value or performance of portfolios, any decline in the markets causing the value of these portfolios to decrease or generating an increase in the amount of redemptions would reduce the revenues earned by these entities through the distribution of mutual funds or other products (for the Caisses d'Epargne and the Banques Populaires) or through asset management activities. In addition, any deterioration in the economic environment could have an unfavorable impact on the seed money contributed to asset management structures with a risk of partial or total loss.

Even where there is no market decline, if funds managed for third parties throughout Groupe BPCE and other Groupe BPCE products underperform the market, redemptions may increase and/or inflows decrease as a result, with a potential corresponding impact on revenues from the asset management activities.

In 2024 the total net amount of fees and commissions received was €11,036 million, representing 47% of Groupe BPCE's net banking income. For more detailed information on the amounts of fees and commissions received by Groupe BPCE, see Note 4.2 "Fee and commission income and expenses" to the consolidated financial statements of Groupe BPCE in the Universal Registration Document.

Changes in the fair value of Groupe BPCE's portfolios of securities and derivative products, and its own debt, are liable to have an adverse impact on the net carrying amount of these assets and liabilities, and as a result on Groupe BPCE's net income and equity.

The net carrying amount of Groupe BPCE's securities, derivative products and other types of assets at fair value, and of its own debt, is adjusted (at balance sheet level) at the date of each new financial statement. These adjustments are predominantly based on changes in the fair value of assets and liabilities during an accounting period, *i.e.* changes taken to profit or loss or recognized directly in other comprehensive income. Changes recorded in the income statement, but not offset by corresponding changes in the fair value of other financial instruments, have an impact on net banking income and thus on net income. All fair value adjustments have an impact on equity and thus on Groupe BPCE's capital adequacy ratios. Such adjustments are also liable to have an adverse impact on the net carrying amount of Groupe BPCE's assets and liabilities, and thus on its net income and equity. The fact that fair value adjustments are recorded over an accounting period does not mean that additional adjustments will not be necessary in subsequent periods.

At December 31, 2024 total financial assets/liabilities at fair value through profit or loss amounted to €231 billion (with €218 billion in financial assets at fair value held for trading) and €219 billion (with €175 billion in financial liabilities at fair value held for trading) respectively. For more detailed information, see also Note 4.3 "Gains (losses) on financial instruments at fair value through profit or loss", Note 4.4 "Gains (losses) on financial assets measured at fair value through other comprehensive income before tax", Note 5.2 "Financial assets and liabilities at fair value through profit or loss" and Note 5.4 "Financial assets at fair value through other comprehensive income" to the consolidated financial statements of Groupe BPCE in the Universal Registration Document.

Non-financial risks

In the event of non-compliance with applicable laws and regulations, Groupe BPCE could be exposed to significant fines and other administrative and criminal penalties that could have a material adverse effect on its financial position, activities and reputation.

The risk of non-compliance is defined as the risk of sanction – judicial, administrative or disciplinary – but also of financial loss or damage to reputation, resulting from non-compliance with laws and regulations, professional standards and practices, and ethical standards specific to banking and insurance activities, whether national or international.

The banking and insurance sectors are subject to increased regulatory oversight, both nationally and internationally. Recent years have seen an increase in the volume of new regulations that have introduced significant changes affecting relationships between investment service providers and customers or investors (*e.g.* MIFID II, PRIIPS, the Insurance Distribution Directive, Market Abuse Regulation, Personal Data Protection Regulation, Benchmark Index Regulation, *etc.*). These new regulations have major impacts on the company's operational processes.

In terms of financial security, the regulatory framework on the fight against money laundering and the financing of terrorism is part of a European trajectory. The Anti-Money Laundering (AML) package, currently in trialogue, will significantly harmonize and raise the level of requirements for regulated professions, particularly the financial sector. This package includes a systemic change in the supervision function due to the establishment, in 2024, of a new European authority, the AML Authority. It will have dual powers: (i) in terms of supervision. By 2027, it will have around 40 entities under its direct supervision, and will supervise the rest of the financial sector indirectly *via* national authorities, and (ii) in terms of coordinating the EU's financial intelligence units (FIUs). The gradual increase in the EBA's powers in AML-CTF areas also confirms the trend towards bringing these regulations into line with prudential rules, in terms of consolidated supervision requirements for banking groups.

The risk of non-compliance could result, for example, in the use of inappropriate means to promote and market the bank's products and services, inadequate management of potential conflicts of interest, disclosure of confidential or privileged information, failure to comply with due diligence when dealing with suppliers, failure to comply with legal and regulatory obligations to detect financial transactions likely to derive from criminal offenses (*e.g.*: corruption, tax fraud, drug trafficking, concealed work, the financing of the proliferation of weapons of mass destruction, *etc.*) committed by customers and linked to acts of terrorism. The risk of non-compliance may also lead to failures in the implementation of international sanctions (embargoes, asset freezes on individuals targeted by national measures applicable in the jurisdictions in which Groupe BPCE is present, European Union restrictions, or extraterritorial sanctions from certain foreign authorities).

Within BPCE, the Compliance function is responsible for overseeing the system for preventing and managing non-compliance risks. Despite this system, Groupe BPCE remains exposed to the risk of fines or other significant sanctions from the regulatory and supervisory authorities, as well as civil or criminal legal proceedings that could have a significant adverse impact on its financial position, activities and reputation.

Any interruption or failure of the information systems belonging to Groupe BPCE or third parties, particularly external service providers may generate losses (including commercial losses) and may have a material adverse impact on Groupe BPCE's results.

As is the case for the majority of its competitors, Groupe BPCE is highly dependent on information and communication systems, as a large number of increasingly complex transactions are processed in the course of its activities. Any failure, interruption or malfunction in these systems may cause errors or interruptions in the systems used to manage customer accounts, general ledgers, deposits, transactions and/or to process loans. For example, if Groupe BPCE's information systems were to malfunction, even for a short period, the affected entities would be unable to meet their customers' needs in time and could thus lose transaction opportunities. Similarly, a temporary failure in Groupe BPCE's information systems despite back-up systems and contingency plans could also generate substantial information recovery and verification costs, or even a decline in its proprietary activities if, for example, such a failure were to occur during the implementation of a hedging transaction. The inability of Groupe BPCE's systems to adapt to an increasing volume of transactions may also limit its ability to develop its activities and generate losses, particularly losses in sales, and may therefore have a material adverse impact on Groupe BPCE's results.

Groupe BPCE is also exposed to the risk of malfunction or operational failure by one of its clearing agents, foreign exchange markets, clearing houses, custodians or other financial intermediaries or external service providers that it uses to carry out or facilitate its securities transactions. As interconnectivity with its customers continues to grow, Groupe BPCE may also become increasingly exposed to the risk of the operational malfunction of customer information systems. Groupe BPCE's communication and information systems, and those of its customers, service providers and counterparties, may also be subject to failures or interruptions resulting from cybercriminal or cyberterrorist acts. For example, as a result of its digital transformation, Groupe BPCE's information systems are becoming increasingly open to the outside (cloud computing, big data, *etc.*). Many of its processes are gradually going digital. Use of the Internet and connected devices (tablets, smartphones, apps used on tablets and mobiles, *etc.*) by employees and customers is on the rise, increasing the number of channels serving as potential vectors for attacks and disruptions, and the number of devices and applications vulnerable to attacks and disruptions. Consequently, the software and hardware used by Groupe BPCE's employees and external agents are constantly and increasingly subject to cyberthreats. As a result of any such attacks, Groupe BPCE may face malfunctions or interruptions in its own systems or in third-party systems that may not be adequately resolved. Any interruption or failure of the information systems belonging to Groupe BPCE or third parties may generate losses (including commercial losses) due to the disruption of its operations and the possibility that its customers may turn to other financial institutions during and/or after any such interruptions or failures.

The risk associated with any interruption or failure of the information systems belonging to Groupe BPCE or third parties is significant for Groupe BPCE in terms of impact and probability, and is therefore carefully and proactively monitored.

Lastly, it is necessary to note the risk of outsourcing, particularly in external IT services or more generally in connection with critical and important external services within the meaning of French regulations.

Reputational and legal risks could unfavorably impact Groupe BPCE's profitability and business outlook.

As a major player in the financial system, Groupe BPCE relies on the notion of a trusted third party for the general public, its individual customers, companies, investors and all economic players. Damage to Groupe BPCE's reputation, particularly when associated with an unfavorable media campaign, could compromise the relationship of trust between the Group and both internal and external stakeholders.

Groupe BPCE is exposed to reputational risks due to the diversity of its international banking, financial and insurance activities. This risk may arise following criticism concerning, in particular, the promotion and marketing of its products and services, the nature of the financing and investments made, as well as the reputation of the Group's partners. In addition, concerns may arise around BPCE's environmental strategy and social policies or its governance.

In addition, Groupe BPCE's reputation could also be compromised by the actions of external entities, such as cybercrime or cyber-terrorism, internal or external fraud, or the misappropriation of funds. BPCE could restrict its ability to enter into new relationships or maintain existing relationships with its counterparties, customers or service providers and weaken its attractiveness to employees and candidates, this negatively impacting its financial position and business outlook.

Inadequate management of reputational risk would limit the mitigation of negative impacts and could also increase Groupe BPCE's legal risk. This could lead to an increase in the number of legal actions and the risk of being ordered to pay damages, while exposing the Group to sanctions from regulatory authorities. For more information, please refer to the "Legal Risks" chapter of this document. Like reputational risk, these litigations could also have repercussions on Groupe BPCE's financial position and its business outlook.

At December 31, 2024, the total provisions for legal and tax risks amounted to €994 million.

Unforeseen events may interrupt Groupe BPCE's operations and cause losses and additional costs.

Unforeseen events, such as a serious natural disaster, events related to climate risk (physical risk directly associated with climate change), pandemics, attacks or any other emergency situation can cause an abrupt interruption in the operations of Groupe BPCE entities, affecting in particular the Group's core business lines (liquidity, payment instruments, securities services, loans to individual and corporate customers, and fiduciary services) and trigger material losses, if the Group is not covered or not sufficiently covered by an insurance policy. These losses could relate to material assets, financial assets, market positions or key employees, and have a direct and potentially material impact on Groupe BPCE's net income. Moreover, such events may also disrupt Groupe BPCE's infrastructure, or that of a third party with which Groupe BPCE does business, and generate additional costs (relating in particular to the cost of re-housing the affected personnel) and increase Groupe BPCE's costs (such as insurance premiums). Such events may invalidate insurance coverage of certain risks and thus increase Groupe BPCE's overall level of risk.

At December 31, 2024, the majority of Groupe BPCE's operational risk losses were in the business line "Payment and settlement" at 41%. They concentrated on the Basel category "External fraud" for 37%.

The failure or inadequacy of Groupe BPCE's risk management and hedging policies, procedures and strategies may expose it to unidentified or unexpected risks which may trigger unforeseen losses.

Groupe BPCE's risk management and hedging policies, procedures and strategies may not succeed in effectively limiting its exposure to all types of market environments or all kinds of risks, and may even prove ineffective for some risks that the Group was unable to identify or anticipate. Furthermore, the risk management techniques and strategies employed by Groupe BPCE may not effectively limit its exposure to risk and do not guarantee that overall risk will actually be lowered. These techniques and strategies may prove ineffective against certain types of risk, in particular risks that Groupe BPCE had not already identified or anticipated, given that the tools used by Groupe BPCE to develop risk management procedures are based on assessments, analyses and assumptions that may prove inaccurate or incomplete. Some of the indicators and qualitative tools used by Groupe BPCE to manage risk are based on the observation of past market performance. To measure risk exposures, the risk management department analyzes these observations, particularly statistically.

These tools and indicators may not be able to predict future risk exposures leading to model risk. For example, these risk exposures may be due to factors that Groupe BPCE may not have anticipated or correctly assessed in its statistical models or due to unexpected or unprecedented shifts in the market. This would limit Groupe BPCE's risk management capability. As a result, losses incurred by Groupe BPCE may be higher than those anticipated on the basis of past measurements. Moreover, the Group's quantitative models cannot factor in all risks. While no significant problem has been identified to date, the risk management systems are subject to the risk of operational failure, including fraud. Some risks are subject to a more qualitative analysis, which may prove inadequate and thus expose Groupe BPCE to unexpected losses. Groupe BPCE is also exposed to the risk of cybercrime. Cybercrime refers to a set of malicious and/or fraudulent acts using digital means, including those based on artificial intelligence (AI), to achieve higher levels of persuasion, in order to access data (personal, banking, insurance, technical or strategic), processing and users to cause significant harm to a company and its employees, partners, customers and counterparties.

Actual results may vary compared to assumptions used to prepare Groupe BPCE's financial statements, which may expose it to unexpected losses.

In accordance with current IFRS standards and interpretations, Groupe BPCE must use certain estimates when preparing its financial statements, in particular accounting estimates relating to the determination of impairment for credit risk and provisions for employee benefits or provisions for litigation, estimates relating to the determination of the fair value of certain financial assets and liabilities, etc. If the values used for the estimates by Groupe BPCE prove to be materially inaccurate, in particular in the event of major and/or unexpected market trends, or if the methods used to calculate these values are modified due to future changes in IFRS standards or interpretations, Groupe BPCE may be exposed to unexpected losses.

Information on the use of estimates and judgments is provided in Note 2.3 "Use of estimates and judgments" to the Group's consolidated financial statements included in the Universal Registration Document.

Strategic, business and ecosystem risks

Environmental, Social and Governance risks (ESG), together with their repercussions for economic players, could adversely affect Groupe BPCE's activities, results and financial position.

Environmental, Social and Governance (ESG) risks are a set of risk factors arising from the impacts of climate change, environmental issues (biodiversity, pollution, natural resources, water), social issues (respect for human rights, well-being and the interests of people and stakeholders) and governance issues (ethics and corporate culture, business practices, supplier relations). These risks are likely to materialize in the short, medium or long term. They are factors that aggravate other categories of risk to which Groupe BPCE is exposed (credit and counterparty risk, market risk, operational risk, structural balance sheet risk, risk related to insurance activities, strategic risk, legal risk, compliance risk and reputation risk). Groupe BPCE is mainly exposed to ESG risks indirectly through its customers and counterparties and its investments, either on its own behalf or on behalf of third parties. It is also directly exposed to these risks through its own business activities.

Environmental risks include physical risks and transition risks: Physical risks result from damage directly caused to people and property by events related to climate and environmental changes. These risks can be related to acute events, linked to extreme conditions circumscribed in time and space (such as heat waves, landslides, floods, late frosts, fires, storms, situations of water stress or air, water or soil pollution) or to chronic events of a more gradual and diffuse nature (such as changes in rainfall patterns, rise in sea levels and average temperatures, loss of biodiversity, the depletion of natural resources). Physical risks are likely to affect a wide variety of geographical areas and economic sectors and impact the business, assets and financial profile of the counterparties to which Groupe BPCE is exposed, particularly through its financing, investment or insurance activities. Groupe BPCE is also likely to be directly affected by climatic or environmental events that affect its operating sites, employees or suppliers. Transition risks result from adjustments made by economic players and stakeholders during the transition to a low-carbon economy that is more respectful of environmental balances. These adjustments are reflected in regulatory, technological or socio-demographic changes that may affect the business models, operating models and financial profiles of economic players as well as the value of the assets to which Groupe BPCE is exposed, particularly through its financing and investment activities. Groupe BPCE is also directly exposed to transition risks through regulatory changes and changes in stakeholder expectations, particularly with regard to its product and service offering as well as its voluntary commitments.

Social risks arise from issues related to the rights, well-being, and interests of people and stakeholders (company and value chain employees, communities concerned, consumers and end users). Through their potential impact on activities (work organization, supply chains, products, etc.) and the associated reputation issues, these risks are likely to affect the financial profile of the counterparties to which Groupe BPCE is exposed, particularly through its financing and investment activities. They may also lead to increased reputation risk for Groupe BPCE, either directly or through its counterparties.

Governance risks include issues related to ethics and corporate culture (governance structure, business integrity and transparency, etc.), supplier relationship management, influence activities and business conduct practices. Through their potential impact on activities (corporate governance standards, control systems, commercial practices, etc.) and the associated reputation issues, these risks are likely to affect the financial profile of the counterparties to which Groupe BPCE is exposed, in particular through its financing and investment activities. They may also lead to increased reputation risk for Groupe BPCE, either directly or through its counterparties.

Overall, Environmental, Social and Governance risks could adversely affect Groupe BPCE's business, results and financial position.

Groupe BPCE may be vulnerable to political, macro-economic and financial environments or to specific circumstances in its countries of operation.

Some Groupe BPCE entities are exposed to country risk, which is the risk that economic, financial, political or social conditions in a country (particularly in countries where the Group conducts business) may affect their financial interests. Groupe BPCE predominantly does business in France (77% of net banking income for the fiscal year ended December 31, 2024) and North America (13% of net banking income for the fiscal year ended December 31, 2024), with other European countries and the rest of the world accounting for 3% and 7%, respectively, of net banking income for the fiscal year ended December 31, 2024. Note 12.6 "Locations by country" to the consolidated financial statements of Groupe BPCE, contained in the 2024 Universal Registration Document, lists the entities established in each country and gives a breakdown of net banking income and income before tax by country of establishment.

A significant change in the political or macro-economic environment of such countries or regions may generate additional expenses or reduce profits earned by Groupe BPCE.

The economic outlook remains weakened by the uncertainties and downward risks that surround them, especially when they are increasing against a backdrop of geopolitical tensions. In particular, two major events marked the year 2024, the effects of which may extend into 2025 and beyond: the surprise dissolution of the French National Assembly on June 9 and the presidential election of Donald Trump in the United States on November 5. Generally, the extent of the imbalances to be eliminated can also always tip the developed economies into a downward spiral, whether it is the significance of public and private debts on both sides of the Atlantic and in China, the resurgence of an inflationary expectation mechanism or the heterogeneity of geographical and sectoral situations, combined with overlapping global risks, thus fueling the return of the risk of financial instability. In addition, there is the potential occurrence of natural disasters or health risks. Joint threats mainly concern geopolitical and economic uncertainties: the context of the war waged by Russia against Ukraine and the conflict in the Middle East; the still latent risks of tensions between Taiwan and China; the availability of nuclear weapons in Iran; the Sino-US geostrategic confrontation and the development of protectionist trends, particularly in the US; the deepening economic decline in Europe, Germany and France, in the face of the strategies of the race for industrial hegemon implemented by China and the United States; the emergence of Eurosceptic and protectionist governments in several major European economies; even the behavior of European and French consumers, whose savings rate remains well above its pre-health crisis level.

France entered a situation of political instability after the dissolution of the National Assembly. The business climate, which declined in the summer just after the dissolution, remained below its long-term average. Its fiscal credibility, already tarnished by an unanticipated public deficit of 5.5% of GDP in 2023 and by the downgrade of its sovereign rating on May 31 by Standard & Poor's, the most powerful American agency (rating downgraded to AA-, from AA since 2013), then Moody's rating on December 4 (Aa3 from Aa2), became the main victim of ambitious election campaign promises, with no real basis in terms of financing. With the censorship of the government of Prime Minister Michel Barnier on December 4, political instability took over from inflationary fears, despite the appointment of François Bayrou. It has increased, fueling the budgetary uncertainty it generates. The public deficit once again increased, reaching 6.1% of GDP in 2024. In addition to maintaining the widening of the sovereign yield spread with Germany by nearly 80 basis points (bps), compared to only 50 bps before the dissolution of the National Assembly, this shock would have already cost 0.1 point of GDP in lost growth in 2024 according to the *Observatoire Français des Conjonctures Économiques* (OFCE), which was mainly due to lower private investment.

Once again, 2025 has begun amidst a period of radical geopolitical, political and economic uncertainty, particularly in France, where the political situation remains very uncertain, despite the constitution of a government before the Christmas holidays by the new Prime Minister François Bayrou. Internationally, the impact of the election of the new US President remains to be seen, whether it is the rapid implementation of customs measures that could slow global trade – by leading to tensions. widespread commercialization and strong potential for retaliation from China – the risk of losses in economic efficiency and price increases (and therefore of persistently higher interest rates) or the favorable magnitude of the planned fiscal expansion. Added to this is the reaction of monetary policy to the potential resurgence of inflationary seeds and to Donald Trump's desire to drive down the dollar.

We can also see a deepening of the economic decline in Europe, Germany and France, due to a loss of competitiveness – also linked to higher energy costs than on the other side of the Atlantic – and to the attractiveness of the Eurozone, in view of the race for industrial hegemony between the two main competitors, China and the United States. The race between the American champion and the Chinese outsider involves a budgetary headlong rush which is set to continue through 2025 and into 2026. Systems to support American industry, such as the *Chips Act* and the IRA, greatly increase the attractiveness of investments from the United States. The profitability gap in their favor could result in Europe losing out to the United States on key localization projects. As for the Chinese offensive, it is based on price competitiveness, coupled with a rise in technological range. Europe, which has suffered a largely specific energy crisis with the economic sanctions against Russia, has seen the price of its exports increase by more than 30% since the end of 2019, against a maximum of 5% for Chinese exports. In addition, the need to restore a certain fiscal discipline in the Member States of the Eurozone, after the overrun in public finances which was justified by the pandemic, could lead certain countries, such as Italy and France, to present debt and public deficit reduction plans. This would then gradually involve a restriction on public spending, likely to cause a drop in demand.

Across the Atlantic, the Trump program is based on four main areas, namely deregulation, protectionism, reduction in taxation and public spending, and finally the control of migration flows. It would be moderately inflationary in the short term in 2025 but favorable to growth, while widening public and commercial deficits (to more than 6% of GDP?). If the increase in tariffs is only 10%, it can probably be offset by the appreciation of the dollar and by the margins of exporters and distributors. Moreover, following the example of the first presidential term, it is not impossible that the anxiety-provoking statements of protectionism are more of a negotiating technique aimed at forcing Europe to take responsibility for financing its own defense and for China to strengthen its internal demand. The most significant protectionist measure, which would only take effect in 2026, concerns the 60% increase in customs duties vis-à-vis the Middle Kingdom, whose economy is tending to change (significant decline in the weight of real estate in favor of cutting-edge industries and technological services). In retaliation, while avoiding a war on increased customs duties, China may then make it more difficult to export certain strategic inputs such as Gallium, Germanium and Antimony.

In addition, the economic development of Europe's main trading partners, in particular China, could also present risks. Chinese public and private over-indebtedness is slowing down the country's ability to keep pace with growth. 10 years after the announcement of the China 2025 plan, which aimed for industrial pre-eminence in 10 key sectors, China's leadership is still only asserted at the cost of increased trade tensions with its American, Asian and European partners and the instability of the Chinese financial system.

In addition, other perennial sources of instability, such as the continuation of the war in Ukraine, the situation in the Middle East or the Red Sea, could cause tensions on oil and gas prices and shipping costs, resulting in upwards risk on inflation and downwards risk on activity. A scenario in which Ukraine is abandoned in its struggle against Russia could also create the conditions for a climate of concern for Europe. Without going as far as an invasion of Taiwan by China, a major escalation of tensions between these two countries is likely to lead to the implementation of severe sanctions against China, such as the freezing of all Chinese assets and the disconnection of China from all SWIFT platforms, similar to what happened in Russia after the invasion of Ukraine. This poses a major risk for the global economy, particularly for trade flows through the Taiwan Strait. It is used by almost half of the world's container ships, connecting the electronic equipment factories (leading semiconductors) in East Asia to the rest of the world. This corridor is also used to supply the continent with natural gas and oil. All this could still cause a deep recession, especially in Europe.

In France, in addition to a significant risk of an additional increase in the interest rate risk premium vis-à-vis Germany and a continued drift in public spending, a wait-and-see attitude may turn into mistrust, due to political instability. It may lead to rather cautious spending behavior by households and businesses, despite the a priori favorable effect of less budgetary consolidation. In particular, savings incentives may remain strong, slowing the expected decline in the household savings rate, due to a need for precaution, with rising unemployment and individual customers' concern about budgetary imbalances. Regarding companies, the proportion of business leaders who have said that they are postponing their planned investments and hires has increased significantly, according to the BPI France and Rexecode survey on SMEs and mid-sized companies in November 2024. Moreover, despite the relative maintenance of margin levels for all non-financial companies, the increase in financing costs is weighing on corporate profits. The latter fell to a historically low level in 2024. This could even result in an accentuation of the decline in productive investment, despite the improvement in monetary and financial conditions and the trend towards investment in digital and energy transitions. Furthermore, the rather modest improvement in household spending, the main driver of activity, would then be insufficient to counteract the increased prudence of companies in terms of employment, management of inventories and investment, due to the environment of still high interest rates, the deterioration of the cash position of VSEs/SMEs and the rise in insolvencies. In particular, nearly 66,500 companies have failed, reaching the highest level since at least 2009, according to a 2024 report prepared by BPCE *L'Observatoire*. In the fourth quarter of 2024 alone, 17,966 insolvencies were recorded, according to this source. This record number of insolvencies, which could have dangerous consequences, particularly in terms of jobs, constitutes a warning for economic and political players as we enter 2025, which already promises to be difficult on an economic level and uncertain on a political and budgetary level: 68,000 insolvencies are expected and 240,000 jobs are at r

However, the identical renewal of the services voted in the last Finance Law, in addition to the capacity of the French State to raise taxes and take on debt to finance itself as well as the Social Security must *a priori* lead to an *ex-ante* reduction in the budget deficit, hence a reduction in the budget impulse. The Finance Act for 2025 was adopted on February 5, 2025, and provides for an exceptional contribution on the profits of large companies that will only apply to the fiscal year ended December 31, 2025 (an exceptional contribution of 41.20%, increasing the rate effective tax rate to 36.2%). The corporate income tax rate remained at 25.83% for the fiscal year ended December 31, 2024.

The consensus forecasts presented for 2025, particularly for France, therefore reproduce the economic trends already at work, without necessarily integrating specific measures likely to be taken by the new government, nor the effects of an even more prolonged wait-and-see period, in the event of a misunderstood direction of economic policy.

Lastly, the physical risks related to extreme climate events (heat waves, fires, droughts, floods, etc.) or environmental degradation as well as the risks associated with the transition to an economy with a lower environmental impact are likely to have a material impact on people, companies and public players and have a negative impact on the French economy.

For more detailed information, see Sections 5.2 "Economic and financial environment" and 5.8 "2025 economic outlook" in the 2024 Universal Registration Document.

The risk of a pandemic (such as the coronavirus – Covid-19) and its economic consequences may adversely impact the Group's activities, results and financial position.

The emergence of Covid-19 in late 2019 and rapid spread of the pandemic across the globe led to a deterioration in economic conditions in multiple business segments, a deterioration in the financial position of economic players, while also disrupting the financial markets. In response, many affected countries were forced to implement preventive health measures (closed borders, lockdown measures, restrictions on certain economic activities, *etc.*). Government (guaranteed loans, tax and social assistance, *etc.*) and banking (moratoriums) schemes were put in place. Some counterparties emerged weakened from this unprecedented period.

Massive fiscal and monetary policy measures to support activity were put in place between 2020 and 2022, notably by the French government (State-guaranteed loans for businesses and professional customers on the one hand, for individual customers on the other hand, short-time working measures as well as numerous other fiscal, social and bill-paying measures) and by the European Central Bank (more abundant and cheaper access to very large refinancing packages) with a restrictive monetary policy on rates over the last few quarters. Groupe BPCE has participated in the French State-guaranteed loan program in the interest of financially supporting its customers and helping them overcome the effects of this crisis on their activities and income (*e.g.* automatic six-month deferral on loans to certain professional customers and micro-enterprises/SMEs). There is no way to guarantee, however, that such measures will be enough to offset the negative impacts of the pandemic on the economy or to fully stabilize the financial markets over the long term. In particular, the repayment of State-guaranteed loans may lead to defaults on the part of borrowers and financial losses for Groupe BPCE up to the portion not guaranteed by the State.

Groupe BPCE may not achieve the objectives of its VISION 2030.

On June 26, 2024, Groupe BPCE presented its strategic plan "VISION 2030" based on three pillars: (i) forging our growth for the long term, (ii) giving our customers trust in their future, and (iii) expressing our cooperative values in all territories. The first pillar aims to make Groupe BPCE a leading banking group promoting diversified growth, open to partnerships, and capable of achieving high levels of performance. The second pillar aims to make the Group into a facilitator for access to housing for all, and for all types of needs, to be the go-to player for territorial competitiveness, to protect customers at every moment and stage in their lives, and to simplify client relationship models (from 100% physical to 100% digital), notably with the help of AI. The third pillar aims to give full expression to the cooperative values promoted by the Group, which draws its strength from its multifaceted activities and the range of its expertise, from its positive global impact, and from its cooperative shareholders and employees, proud and committed in their day-to-day lives. The new growth model is being implemented in three major geographical circles – France, Europe and the rest of the World – and is based on organic growth, acquisitions, and partnerships.

This strategic vision is accompanied by a trajectory for 2026 based on a macroeconomic scenario that assumes, from 2025 onwards, a rebound in economic growth at rates that may vary from one geographical region to the next, a moderate fall in inflation in 2025 and 2026, a fall in the three-month Euribor and relative stability in long-term interest rates (10-year OAT).

The success of the 2026 financial trajectory is grounded in a large number of initiatives to be rolled out within the various business lines of Groupe BPCE. Although most of the goals defined in the strategic plan are expected to be achieved, some may not, owing to changes in the economic environment or possible changes in accounting and/or tax regulations. If Groupe BPCE does not achieve these goals, the 2026 financial trajectory could be affected.

Groupe BPCE may encounter difficulties in adapting, implementing and incorporating its policy governing acquisitions or joint ventures.

Groupe BPCE may consider acquisition or partnership opportunities in the future. Although Groupe BPCE carries out an in-depth analysis of any potential acquisitions or joint ventures, in general it is impossible to carry out an exhaustive appraisal in every respect. As a result, Groupe BPCE may have to manage initially unforeseen liabilities. Similarly, the results of the acquired company or joint venture may prove disappointing and the expected synergies may not be realized in whole or in part, or the transaction may give rise to higher-than-expected costs. Groupe BPCE may also encounter difficulties with the consolidation of new entities. The failure of an announced acquisition or failure to consolidate a new entity or joint venture may place a strain on Groupe BPCE's profitability. This situation may also lead to the departure of key employees. In the event that Groupe BPCE is obliged to offer financial incentives to its employees in order to retain them, this situation may also lead to an increase in costs and a decline in profitability. Joint ventures also expose Groupe BPCE to additional risks and uncertainties such as dependency on systems, controls and persons that would be outside its control and may, in this respect, see its liability incurred, suffer losses or incur damage to its reputation. Moreover, conflicts or disagreements between Groupe BPCE and its partners may have a negative impact on the targeted benefits of the joint venture.

At December 31, 2024, the total investments accounted for using the equity method amounted to €2.1 billion and that of goodwill amounted to €4.3 billion. For further information, please refer to Note 12.4.1 "Partnerships and associates" and Note 3.5 "Goodwill" to the consolidated financial statements of Groupe BPCE, included in the Universal Registration Document.

Intense competition in France, Groupe BPCE's main market, or internationally, may cause its net income and profitability to decline.

Groupe BPCE's main business lines operate in a very competitive environment both in France and other parts of the world where it does substantial business. This competition is heightened by consolidation, either through mergers and acquisitions or cooperation and arrangements. Consolidation has created a certain number of companies which, like Groupe BPCE, can offer a wide range of products and services ranging from insurance, loans and deposits to brokerage, investment banking and asset management. Groupe BPCE is in competition with other entities based on a number of factors, including the execution of transactions, products and services offered, innovation, reputation and price. If Groupe BPCE is unable to maintain its competitiveness in France or in its other major markets by offering a range of attractive and profitable products and services, it may lose market share in certain key business lines or incur losses in some or all of its activities.

For example, at December 31, 2024, in France, Groupe BPCE was the 1st bank for SMEs[1] and 2nd for individual, professional and self-employed customers. The Group had a 26% market share in home loans[2]. For Retail Banking and Insurance, loan outstandings amounted to €724 billion at December 31, 2024, compared to €719 billion at December 31, 2023, with savings deposits[3] of €937 billion at December 31, 2024, compared to €918 billion at December 31, 2023 (for more information on the contribution of each business line, and each network, see section 5.4.2. "The Group's business lines" of the 2024 Universal Registration Document).

(1) 2023 Kantar SME-SMI survey.
(2) Market share: 21.9% in household deposits/savings and 26.3% in home loans (Banque de France Q3 2024). Penetration rate of 38.4% (rank 2) among professionals and individual entrepreneurs (2021-2022 Pépites survey, CSA).
(3) Balance sheet and financial savings.

In addition, any slowdown in the global economy or in the economies in which Groupe BPCE's main markets are located is likely to increase competitive pressure, in particular through increased pressure on prices and a contraction in the volume of activity of Groupe BPCE and its competitors. New, more competitive rivals subject to separate or more flexible regulation or other prudential ratio requirements could also enter the market. These new market participants would thus be able to offer more competitive products and services. Advances in technology and the growth of e-commerce have made it possible for institutions other than custodians to offer products and services that were traditionally considered as banking products, and for financial institutions and other companies to provide electronic and internet-based financial solutions, including electronic securities trading. These new entrants may put downward pressure on the price of Groupe BPCE's products and services or affect Groupe BPCE's market share. Advances in technology could lead to rapid and unexpected changes on Groupe BPCE's markets of operation. Groupe BPCE's competitive position, net income and profitability may be adversely affected should it prove unable to adequately adapt its activities or strategy in response to such changes.

Groupe BPCE's ability to attract and retain skilled employees is paramount to the success of its business and failing to do so may affect its performance.

The employees of Groupe BPCE entities are the Group's most valuable resource. Competition to attract qualified employees is fierce in many areas of the financial services sector. Groupe BPCE's earnings and performance depend on its ability to attract new employees and retain existing employees. The current upheavals (technological, economic and customer requirements), particularly in the banking sector, demand major efforts to support and train employees. Without enough support, this could prevent Groupe BPCE from taking advantage of potential opportunities in terms of sales or efficiency, which could in turn affect its performance.

At December 31, 2024 Groupe BPCE had a registered workforce of 103,418 employees.

Groupe BPCE could be exposed to unidentified or unanticipated risks that may have a negative impact on its results and financial position if its model-based risk measurement system should fail.

Groupe BPCE's risk measurement system is based specifically on the use of models. Groupe BPCE's portfolio of models mainly includes the Corporate & Investment Banking market models and the credit models of Groupe BPCE and its entities. The models used for strategic decision-making and risk management monitoring (credit, financial (ALM and market), operational including compliance and climatic) could fail, exposing BPCE to unidentified or unanticipated risks that could result in significant losses.

Insurance risks

At December 31, 2024, net banking income from insurance activities increased by 10% (+€61 million) to €694 million compared to €633 million for 2023.

A deterioration in market conditions, in particular excessive fluctuations in interest rates (both upwards and downwards) and/or a deterioration in spreads or equity markets, or an increase in reinsurance costs could have a significant adverse impact on the financial position and solvency of Life and Non-Life insurance companies.

The main risk to which Groupe BPCE's insurance subsidiaries are exposed is financial risk. Exposure to this risk is mainly linked to the capital guarantee on the scope of euro funds for savings products and to unrealized capital gains or losses on portfolio investments.

Among financial risks, interest-rate risk is structurally significant due to the predominantly bond-based composition of assets backing commitments. Significant fluctuations in interest rates may have the following consequences:

- in the case of higher rates: reduce the competitiveness of the euro-denominated offer (by making new investments more attractive) and trigger waves of redemptions and major arbitrages on unfavorable terms with unrealized capital losses on outstanding bonds;
- in the case of lower rates: in the long term, make the return on general funds too low to enable them to honor their capital guarantees.

As a result of asset allocation, the widening of spreads and the decline in the equity markets could also have a significant unfavorable impact on the results of Groupe BPCE's insurance activities, through the decline in the valuation of investments at fair value through profit or loss, as well as the constitution of provisions for impairment .

Moreover, the increase in claims and extreme events, particularly environmental events, could lead to an increase in reinsurance, reducing the overall profitability of the insurance activities.

A mismatch between the level and cost of claims anticipated by insurers, on the one hand, and premiums and provisions on the other, could have a significant adverse impact on the results and financial position of the non-life, personal protection and surety portion of its insurance activities.

The main risk to which Groupe BPCE's insurance subsidiaries are exposed in connection with these latter activities is underwriting risk. This risk arises from the mismatch between, on the one hand, the claims actually incurred and the sums actually paid out as compensation for them and, on the other hand, the assumptions used by subsidiaries to set their product rates and establish technical provisions for potential compensation.

Companies use both their own experience and industry data to establish loss ratio and actuarial estimates, including the pricing of insurance products and the establishment of related technical provisions. However, reality may differ from these estimates, and unforeseen risks such as pandemics or natural disasters could result in higher-than-expected payments to policyholders. In this respect, changes in climate phenomena (known as "physical" climate risks) are subject to particular vigilance.

In the event of claims exceeding the underlying assumptions initially used to establish provisions, or if events or trends lead to changes in the underlying assumptions, companies could be exposed to greater liabilities than anticipated, which could adversely affect their results and financial position. This could be the case in connection with the climatic hazards described above.

The various actions implemented in recent years, particularly in terms of financial coverage, reinsurance, business diversification and investment management, have contributed to the resilience of the solvency of Groupe BPCE's insurance subsidiaries.

Regulatory risks

Groupe BPCE is subject to many regulation in France and in several other countries around the world where it operates; regulatory measures and changes could have a material adverse impact on Groupe BPCE's business and results.

The business and results of Groupe BPCE entities may be materially impacted by the policies and actions of various regulatory authorities in France or the European Union, other governments of the European Union, the United States, foreign governments and international organizations. Such constraints may limit the ability of Groupe BPCE entities to expand their businesses or conduct certain activities. The nature and impact of future changes in such policies and regulatory measures are unpredictable and are beyond Groupe BPCE's control. Moreover, the general political environment has evolved unfavorably for banks and the financial industry, resulting in additional pressure on the part of legislative and regulatory bodies to adopt more stringent regulatory measures, despite the fact that these measures may have adverse consequences on lending and other financial activities, and on the economy. Because of the uncertainty surrounding the new legislative and regulatory measures, it is not possible to predict what impact they will have on Groupe BPCE; however, this impact may be highly adverse.

Groupe BPCE may have to reduce the size of some of its activities to comply with new requirements. New measures are also liable to increase the cost of compliance with new regulations. This could cause revenues and consolidated profit to decline in the relevant business lines, sales to decline in certain activities and asset portfolios, and asset impairment expenses.

The new banking package (CRR III/CRD VI directive) was published on June 19, 2024 in the Official Journal of the European Union. This banking package implements the last phase of the Basel III regulatory reform in the European Union. Most of the provisions of the CRR III are applicable from January 1, 2025. However, the rules relating to market risks have been postponed for one year to January 1, 2026. The implementation of these reforms may result in higher capital and liquidity requirements, which could impact Groupe BPCE funding costs.

On November 26, 2024, the Financial Stability Board ("FSB"), in consultation with the Basel Committee on Banking Supervision and national authorities, reported the 2024 list of global systemically important banks ("G-SIBs"). Groupe BPCE is classified as a G-SIB by the FSB. Groupe BPCE also appeared on the list of global systemically important financial institutions (G-SIFIs) in 2024.

These regulatory measures, which may apply to various Groupe BPCE entities, and any changes in such measures may have a material adverse impact on Groupe BPCE's business and results.

Legislation and regulations have recently been enacted or proposed in recent years with a view to introducing a number of changes, some permanent, in the global financial environment. These new measures, aimed at avoiding a new global financial crisis, have significantly altered the operating environment of Groupe BPCE and other financial institutions, and may continue to alter this environment in the future. Groupe BPCE is exposed to the risk associated with changes in legislation and regulations. These include the new prudential backstop rules, which measure the difference between the actual provisioning levels of defaulted loans and guidelines including target rates, depending on the age of the default and the presence of guarantees.

In today's evolving legislative and regulatory environment, it is impossible to foresee the impact of these new measures on Groupe BPCE. The development of programs aimed at complying with these new legislative and regulatory measures (and updates to existing programs), and changes to the Group's information systems in response to or in preparation for new measures generates significant costs for the Group, and may continue to do so in the future. Despite its best efforts, Groupe BPCE may also be unable to fully comply with all applicable laws and regulations and may thus be subject to financial or administrative penalties. Furthermore, new legislative and regulatory measures may require the Group to adapt its operations and/or may affect its results and financial position. Lastly, new regulations may require Groupe BPCE to strengthen its capital or increase its total funding costs.

The late publication of regulatory standards could also lead to delays in their implementation in Groupe BPCE's tools.

The risk associated with regulatory measures and subsequent changes to such measures is significant for Groupe BPCE in terms of impact and probability, and is therefore carefully and proactively monitored.

BPCE may have to help entities belonging to the financial solidarity mechanism in the event they experience financial difficulties, including entities in which BPCE holds no economic interest.

As the central institution of Groupe BPCE, BPCE is responsible for ensuring the liquidity and solvency of each regional bank (Banques Populaires and Caisses d'Epargne) and the other members of the group of affiliates. The group of affiliates includes BPCE subsidiaries, such as Natixis, Crédit Foncier de France, Oney and Banque Palatine. In the case of Groupe BPCE, all the institutions affiliated with the central institution of Groupe BPCE benefit from a guarantee and solidarity system whose purpose, in accordance with Articles L. 511-31, L. 512-107-5 and L. 512-107-6 of the French Monetary and Financial Code, is to guarantee the liquidity and solvency of all affiliated institutions and to organize financial solidarity within the Group.

This financial solidarity is based on legislative provisions establishing a legal principle of solidarity, imposing a performance obligation on the central institution to restore the liquidity or solvency of affiliates in difficulty and/or all affiliates of the Group. By virtue of the unlimited nature of the principle of solidarity, BPCE is entitled at any time to ask any one or several or all of the affiliates to contribute to the financial efforts that may be necessary to restore the situation, and may, if necessary, mobilize all the cash and equity capital of the affiliates in the event of difficulty for one or more of them.

The three guarantee funds created to cover Groupe BPCE's liquidity and insolvency risks are described in Note 1.2 "Guarantee mechanism" to the consolidated financial statements of Groupe BPCE included in this Universal Registration Document. At December 31, 2024, the Banque Populaire and Caisse d'Epargne funds each contained €450 million. The Mutual Guarantee Fund holds €197 million in deposits per network. The regional banks are obligated to make additional contributions to the guarantee fund on their future profits. While the guarantee fund represents a substantial source of resources to fund the solidarity mechanism, there is no guarantee these revenues will be sufficient. If the guarantee funds prove insufficient, BPCE, due to its missions as a central institution, will have to do everything necessary to restore the situation and will have the obligation to make up the deficit by implementing the internal solidarity mechanism that it has put in place, by mobilizing its own resources, and may also make unlimited use of the resources of several or all of its affiliates.

As a result of this obligation, if a member of the Group were to encounter major financial difficulties, the event underlying these financial difficulties could have a negative impact on the financial position of BPCE and that of the other affiliates thus called upon to provide support under the legal principle of financial solidarity.

Investors in BPCE's securities could suffer losses if BPCE and all of its affiliates were to be subject to liquidation or resolution procedures.

The EU regulation on the Single Resolution Mechanism No. 806/214 and the EU Directive for the recovery and resolution of banks No. 2014/59, as amended by EU Directive No. 2019/879 (the "BRRD"), as transposed into French law in Book VI of the French Monetary and Financial Code, give the resolution authorities the power to impair BPCE securities or, in the case of debt securities, to convert them to capital.

Resolution authorities may write down or convert capital instruments, such as BPCE's Tier-2 subordinated debt securities, if the issuing institution or the group to which it belongs is failing or likely to fail (and there is no reasonable prospect that another measure would avoid such failure within a reasonable time period), becomes non-viable, or requires extraordinary public support (subject to certain exceptions). They shall write down or convert additional capital instruments before opening a resolution proceeding, or if doing so is necessary to maintain the viability of an institution. Any write-down of capital instruments shall be effected in order of seniority, so that Common Equity Tier-1 instruments are to be written down first, then additional Tier-1 instruments are to be written down, followed by Tier-2 instruments. Additional capital instruments must be converted in order of priority, such that additional Tier-1 instruments are converted first followed by Tier-2 instruments. If the write-down or conversion of capital instruments is not sufficient to restore the financial health of the institution, the bail-in power held by the resolution authorities may be applied to write down or convert eligible liabilities, such as BPCE's senior non-preferred and senior preferred securities.

At December 31, 2024, total Tier-1 capital amounted to €73.8 billion and Tier-2 prudential capital to €12.2 billion. Senior non-preferred debt instruments amounted to €36.4 billion at that date, of which €32.5 billion had a maturity of more than one year and were therefore eligible for TLAC and MREL.

As a result of the complete legal solidarity, and in the extreme case of a liquidation or resolution proceeding, one or more affiliates may not find itself subject to court-ordered liquidation, or be affected by resolution measures within the meaning of the "BRRD", without all affiliates and BPCE also being affected. In accordance with Articles L. 613-29 and L. 613-55-5 of the French Monetary and Financial Code, the judicial liquidation proceedings and resolution measures are therefore brought in a coordinated manner with regard to the central institution and all of its affiliates.

Article L.613-29 also provides that, in the event of court-ordered liquidation proceedings being brought against all affiliates, the external creditors (of the same rank or enjoying identical rights) of all affiliates would be treated equally according to the ranking of the creditors and regardless of whether they are attached to a particular affiliated entity. As a result, investors in AT1 instruments and other securities of the same rank would be more affected than holders of Tier-2 and other securities of the same rank, which in turn would be more affected than investors in external senior non-preferred debt, which in turn would be more affected than investors in external senior preferred debt. Similarly, in the event of resolution, and in accordance with Article L. 613-55-5 of the French Monetary and Financial Code, identical depreciation and/or conversion rates would be applied to debts and receivables of the same rank, regardless of their attachment to a particular affiliated entity in the order of the hierarchy recalled above.

Due to the systemic nature of Groupe BPCE and the assessment currently made by the resolution authorities, resolution measures would be more likely to be taken than the opening of judicial liquidation proceedings. A resolution procedure may be initiated against BPCE and all affiliated entities if (i) the default of BPCE and all affiliated entities is proven or foreseeable, (ii) there is no reasonable expectation that another measure could prevent this failure within a reasonable timeframe, and (iii) a resolution measure is required to achieve the objectives of the resolution: (a) guarantee the continuity of critical functions, (b) avoid material adverse impacts to financial stability, (c) protect State resources by minimizing the use of exceptional public financial support and (d) protect client funds and assets, particularly those of depositors. Failure of an institution means that it does not respect requirements for continuing authorization, it is unable to pay its debts or other liabilities when they fall due, it requires extraordinary public financial support (subject to limited exceptions), or the value of its liabilities exceeds the value of its assets.

In addition to the bail-in power, resolution authorities are provided with broad powers to implement other resolution measures with respect to failing institutions or, under certain circumstances, their groups, which may include (without limitation): the total or partial sale of the institution's business to a third party or a bridge institution, the separation of assets, the replacement or substitution of the institution as obligor in respect of debt instruments, modifications to the terms of debt instruments (including altering the maturity and/or the amount of interest payable and/or imposing a temporary suspension on payments), discontinuing the listing and admission to trading of financial instruments, the dismissal of managers or the appointment of a temporary administrator (*administrateur spécial*) and the issuance of new equity or own funds.

The exercise of the powers described above by resolution authorities could result in the partial or total write-down or conversion to equity of the capital instruments and the debt instruments issued by BPCE, or may substantially affect the amount of resources available to BPCE to make payments on such instruments, potentially causing BPCE investors to incur losses.

Tax legislation and its application in France and in countries where Groupe BPCE operates are likely to have an adverse impact on Groupe BPCE's results.

As a multinational banking Group that carries out large and complex international transactions, Groupe BPCE (particularly Natixis) is subject to tax legislation in a large number of countries throughout the world, and structures its activity in compliance with all applicable tax regulations. Changes in tax schemes by the competent authorities in these countries could materially impact Groupe BPCE's results. Groupe BPCE manages its activities with a view to creating value from the synergies and sales capabilities of its various constituent entities. It also strives to structure the financial products sold to its customers by factoring in their tax consequences and ensuring their full tax compliance. The structure of intra-group transactions and financial products sold by entities of Groupe BPCE are based on its own interpretations of applicable tax regulations and laws, generally based on opinions given by independent tax experts, and, as needed, on decisions or specific interpretations by the competent tax authorities. It is possible that in the future tax authorities may challenge some of these interpretations, as a result of which the tax positions of Groupe BPCE entities may be disputed by the tax authorities, potentially resulting in tax re-assessments, which may in turn have an adverse impact on Groupe BPCE's results. In France, the Barnier government being overthrow meant that the Finance Act for 2025 was not adopted before the end of 2024, which created uncertainty about the taxation levels of activities exercised in France by Groupe BPCE in respect of the 2024 fiscal year. The Finance Act for 2025 was adopted on February 5, 2025, and provides for an exceptional contribution on the profits of large companies that will only apply to the fiscal year ended December 31, 2025 (an exceptional contribution of 41.20%, increasing the effective tax rate to 36.2%). The corporate income tax rate remained at 25.83% for the fiscal year ended December 31, 2024.

Details of ongoing tax disputes are presented in the "Legal risks" section of this Universal Registration Document.

7.3 Risk management system

7.3.1 Adequacy of risk management systems

The Group Risk and Compliance Committee, chaired by the Chairman of the Management Board, met five times in 2024 to review the adequacy of Groupe BPCE's risk management systems, and validated the annual review of the Group's risk policies. These systems cover all risks, as described in the Ministerial Order of November 3, 2014 on internal control as amended by the Order of February 25, 2021.

The coverage of risks was found to be adequate, consistent with the risk appetite framework validated by the BPCE Management Board and Supervisory Board, and related closely to the Group's strategy and budget oversight.

7.3.2 Risk appetite

All risks are covered by central and local risk management systems, in line with the Group's risk appetite and strategy.

Groupe BPCE's Supervisory Board approved the Group's risk appetite framework: quantitative indicators, resilience threshold for each indicator and associated governance. During its annual review, the Supervisory Board examined and approved the Group's risk appetite on December 12, 2024.

Risk Appetite Guidelines

As a decentralized and united cooperative Group, Groupe BPCE structures its activity around share capital, held predominantly by the regional institutions, and centralized market funding, optimizing the resources allocated to the entities.

Groupe BPCE:

- through its cooperative nature, is firmly committed to generating recurring and resilient income for its cooperative shareholders and investors by offering the best service to its customers;
- must preserve the solvency, liquidity and reputation of each Group entity – a duty assumed by the central institution through the oversight of consolidated risks, a risk policy and shared tools;
- consists of regional banks, which own the Group and its subsidiaries. In addition to normal management operations, in the event of a crisis, solidarity mechanisms between Group entities ensure the circulation of capital and prevent the entities or the central institution from defaulting;
- focuses on the structural risks of its full-service banking model, with a predominant retail banking component in France, while incorporating other business lines necessary to provide quality service to all of its customers;
- diversifies its exposures by developing certain activities in line with its strategic plan:
  - development of the Corporate & Investment Banking, bancassurance and asset management businesses,
  - international expansion (predominantly Corporate & Investment Banking and asset management, with a more targeted approach for retail banking customers).

Groupe BPCE's risk appetite is defined as the level of risk it is willing to accept with the goal of increasing its profitability while maintaining solvency. This risk appetite must be aligned with the institution's operating environment, strategy and business model, while making customer interests the top priority. In determining its risk appetite, Groupe BPCE aims to steer clear of any major pockets of concentration and to optimize capital allocation.

In terms of risk profile, Groupe BPCE incurs risks intrinsically associated with its retail banking and Corporate & Investment Banking activities. Changes to its business model are increasing the Group's exposure to some types of risks, particularly risks related to asset management and international businesses.

The Group does not conduct business unless it has the associated risks sufficiently under control, nor does it exercise proprietary trading activities. Activities with high risk-reward profiles are strictly controlled.

In all activities, entities and regions of operation, the Group undertakes to meet the highest standards of ethics, conduct, best execution and transaction security.

Risk appetite framework and groupwide implementation

The risk appetite framework is based on a master document providing a qualitative and quantitative description of the risks that Groupe BPCE is willing to assume, and describing the governance and operating guidelines in effect.

The implementation of the risk appetite framework is centered on four key components: (i) the definition of groupwide standards, (ii) the existence of a set of limits in line with those defined by regulations, (iii) the distribution of expertise and responsibilities between the entities and the central institution and (iv) the operation of the governance process within the Group and the different entities, enabling the efficient and resilient application of the risk appetite framework.

The Group's risk appetite framework is regularly updated (at least annually) and is centered on a series of successive limits associated with separate respective authorization levels, *i.e.*:

- an observation or tolerance threshold, which if breached, calls for BPCE Management Board members to decide either to require the breach to be corrected or to allow the transaction to go ahead on an exceptional basis;
- a RAF limit (risk appetite framework) or resilience threshold, the breach of which would pose a potential risk to the continuity and/or stability of the business. Any such breach must be reported to the BPCE Supervisory Board and addressed by a specific action plan validated by the Board;
- an extreme limit in conjunction with the Group's resolution and recovery plan which, if breached, could jeopardize the Group's very survival. This extreme limit concerns certain indicators adopted in respect of the Group's risk appetite.

A quarterly dashboard is prepared by the Group's Risk division, for the purpose of regularly and extensively monitoring all risk indicators and reporting to the supervisory body or/and any committee thereof.

The risk appetite framework is adapted by the entities for consistent groupwide implementation.

The Risk division issues an annual compliance notice to the institutions in their annual draft proposal, ensuring a high level of consistency between the risk appetites implemented locally and that of the Group.

Robust financial strength

Groupe BPCE enjoys high liquidity and solvency levels:

- in terms of solvency, the Group is able to absorb, if need be, the occurrence of a risk at entity or Group level;
- in terms of liquidity, the Group has a significant reserve consisting of cash and securities enabling it to meet regulatory requirements, pass stress tests and access central bank unconventional financing mechanisms. It also has a sufficient amount of high-quality liquid assets eligible for market funding mechanisms and those offered by the European Central Bank.

The Group ensures the robustness of this system by implementing global or dedicated stress tests such as those for climate risk management, which are carried out regularly. They are intended to verify the Group's resilience, particularly in the event of a serious crisis.

Summary of the Group's risk profile in 2024

The following risks are incurred by the Group because of its business model:

CREDIT AND COUNTERPARTY RISKS

Credit risk, generated by the Group's predominant business (*i.e.* lending to individual and corporate customers), is governed by risk policies applied to all Group entities, concentration limits defined by counterparty, country and sector, and finally extensive oversight of loan books.

€398 BILLION

Risk-weighted assets (-0.4% *vs.* 2023)

These exposures are predominantly based on the internal model approach (64% of risk-weighted assets)

€1,511 BILLION

Gross exposures (+1.6% *vs.* 2023)

The loan book has a balanced risk profile

€2.1 BILLION

Cost of risk (+19% *vs.* 2023)

% OF RWAs

Emerging risks

Groupe BPCE places great importance on anticipating and managing emerging risks in today’s constantly changing environment. To this end, a prospective analysis identifying the risks that could impact the Group is carried out every six months and presented to the Risk and Compliance Committee, followed by the Board’s Risk Committee.This forward-looking analysis is complemented by an expanded study of emerging and increasingly important risks, covering nascent or rapidly evolving risks whose impact could be significant in the medium or long term.

Since the previous study, the macroeconomic context has changed. **Although inflation seems to be stabilizing, uncertainties remain**, particularly regarding the political situation in France, the impacts of D. Trump's political decisions, and **the overall increase in geopolitical risks** that could affect economic stability in the short term.

Credit risk, cyber risk, interest rate risk and liquidity risk are still the four main risks weighing on business.

Regarding **credit risk, the context remains deteriorated, with the level of corporate defaults continuing.** The outlook for businesses, particularly small ones, and for the commercial real estate sector remains unfavorable, while the claims ratio for individuals could be exacerbated by a rise in unemployment.

Cyber risk also remains significant. As the economy and financial services have grown increasingly digitized, banks have had to remain constantly vigilant against cyber-threats. The sophistication of cyber-attacks and potential vulnerability of their IS systems are both major risks for Groupe BPCE, in conjunction with the expectations of the regulatory authority.

Climate change is an integral part of the risk management policy, with a risk control mechanism currently being strengthened.

Finally, in the face of a more unstable and conflictual world, **banks' vigilance regarding geopolitical risks is increasing**, and this is also accompanied by a strengthening of risk control mechanisms.

7.3.3 Risk management

Governance of risk management

Risk management is governed by two main bodies at Group level: the Supervisory Board, which is supported by the Board’s Risk Committee, and the Executive Management Committee, of which the Head of Risk Management is a member.

Chaired by the Chairman of the Management Board, the Group Risk and Compliance Committee, an umbrella committee, sets the broad outlines of the risk policy and examines issues related to non-financial risks (specifically those related to banking, insurance and investment service compliance, and to financial security), annually reviews the risk appetite framework, and approves a prospective risk analysis.

Organization of risk management

Groupe BPCE’s Risk division and Corporate Secretary's Office – in charge of compliance and permanent control – measure, monitor and manage risks, pursuant to the Ministerial Order of November 3, 2014 as amended by the Order of February 25, 2021, on internal control.

They ensure that the risk management system is effective, complete and consistent, and that risk-taking is consistent with the guidelines for the business (particularly the targets and resources of the Group and its institutions).

These duties are formalized in Groupe BPCE’s Internal Control Charter, an umbrella charter. It is based on the two charters of the control functions, namely the Internal Audit Charter and the Group Risk, Compliance and Permanent Control Charter.

The various departments of the Group Risk division are involved in all risks (credit, financial, operational, climate and non-banking investments) by acting on:

- the risk policy and the resulting standards;
- permanent monitoring and control;
- coordination.

The departments of the Group’s Risk division operate in three areas (Management, Monitoring and Control):

Management	Monitoring	Control
• present the Management Board and Supervisory Board with a risk appetite framework for the Group and ensure its implementation and roll-out at each major entity; • define the risk policies applicable to the Group’s scope and determine the overall risk ceilings (institutions, customers, business sector), and take part in discussions on the allocation of capital and ensure that portfolio management complies with this system of limits and allocations; • define and implement standards and methods for consolidated risk measurement, risk-taking approval, risk control and reporting, and compliance with risk regulations; • oversee the risk information system, working closely with the IS departments, while defining the standards to be applied for the measurement, control, reporting and management of risks; • are functionally subordinate to the risk and Compliance functions, participating in the work of local Risk Committees or receiving the results of their work, coordinating the departments and approving the appointment or dismissal of all new Heads of Risk Management, Heads of Compliance, or Heads of Risk and Compliance meeting with the relevant managers and/or teams during national or local meetings and during checks on site or at BPCE; • help disseminate risk and compliance awareness and promote the sharing of best practices throughout the Group.	• carry out the macro-level risk mapping exercise, factoring in the overall risk policy, risk appetite and annual permanent control plan, which is part of the internal control system; • conduct permanent monitoring of portfolios and activities, limit breaches and their resolution, centralize risk data and prepare forward-looking risk reports on a consolidated basis; • help the Groupe BPCE Management Board to identify emerging risks, concentration of risk and other various developments, and to devise strategy and adjust risk appetite; • perform stress tests with the goal of identifying areas of risk and the Group’s resilience under various predetermined shock scenarios.	• assess and control the level of risk across the Group; • conduct controls to ensure that the operations and internal procedures of Group companies comply with legal, professional, or internal standards applicable to banking, financial and insurance activities; • implement a permanent second-level Group control system for the risks of the institutions and the sensitive activities of the Group Risk division; • carry out permanent controls to ensure the correct implementation of risk policies or standards in the Group’s institutions.

SPECIALIZED COMMITTEES

Several committees are responsible for defining groupwide methodology standards for measuring, managing, reporting and consolidating all risks throughout the Group.

Group Risk and Compliance Committee	• This committee covers the Group's major risks and prepares issues that are reported to the Supervisory Board's Risk Committee. It examines the Group's main risk areas (all types of risks), including non-compliance, insurance and existing or potentially emerging risks (prospective vision) and validates the associated action plans. It reviews the Group risk dashboard, including the RAF indicators and the revised Ministerial Order of 11/03/2014, potential excesses of the indicators, and alerts on significant incidents under Article 98. • It meets quarterly.
Group Counterparty and Credit Risk Committees	• The Group Credit and Counterparty Committee is a Group decision-making Risk Committee. • This committee covers credit, counterparty, concentration and residual risks. The Committee validates the dashboard for monitoring internal caps, group/individual limits by counterparty, by sector, by country and their breakdown between the entities, where applicable, the sectoral analyses and the analyses of consumer and home loan portfolios. • The Committee meets twice a month, on average.
Group Watch List Committee and IFRS 9 Committee	• The Group Watch List and Provisions Committee is a Group decision-making Risk Committee. • This committee is divided into two parts, with a special Group IFRS 9 Committee, and covers the impairment of loan outstandings (individual loans for significant or shared amounts and statistical provisioning on performing loans) and market outstandings. • It meets quarterly in connection with the closing of accounts.
Group Market Risk Committees	• The Group Market Risk Committee is a Group decision-making and supervisory committee. • This committee covers market, interest rate, securitization, liquidity reserve (investment), liquidity, spread and foreign exchange risks. The committee makes decisions on the review of the ALM risk management system and market risks, action plans and monitoring in the event of overruns, new products authorized for the institutions' own activities and new management activities, and portfolio review (Private Equity, Non-Operating Real Estate and Other Assets). • The Committee meets almost monthly.
Non-Financial Risk Committee	• The Group Non-Financial Risk Committee is a Group decision-making and supervisory committee. • This committee covers risks relating to operational, model, legal, non-compliance, and fraud and the EBCP risk management system, personal and property security as well as Group information systems security. • It also performs consolidated supervision of losses, incidents and alerts, including reports made to the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector, under Article 98 of Ministerial Order A-2014-11-03 as amended by the Order of February 25, 2021, for non-financial risks, and contributes to risk-mapping and monitoring the action plans for reducing non-financial risks. • It meets quarterly.
ALM Committee	• The Asset and Liability Management Committee is a Group decision-making and supervisory committee for balance sheet management, interest rate risk and liquidity management. • The Committee's main duties are to determine the Group's general policy with regard to liquidity and transformation risks (including interest rate risk), examine the consolidated view of the structural risks of the Group and its various entities as well as changes in the balance sheet, define the limits of the structural risks of the Group and the pools and monitor them (with validation by the Risk Department), validate the allocation to liquidity pools and limits; and monitor liquidity consumption at Group and pool level, validate Groupe BPCE's overall annual MLT and ST refinancing program and carry out overall monitoring, and validate the investment and allocation criteria as well as the desired overall profile of the Group's liquidity reserve. • The Committee meets every two months.
ESG Risk Committee	• The ESG Risk Committee is a decision-making and supervisory committee for ESG risks at the level of Groupe BPCE and its various business lines. • It is responsible for consolidated monitoring of Groupe BPCE's ESG risks and ensuring the implementation of the organizational and operational strategy regarding ESG risk management. It validates the main methodological choices and scenarios used within the Group in the context of ESG risk management. It reviews and validates the assessment of the materiality of ESG risks and decides on the Group's ESG risk appetite. • This Committee meets quarterly.
Model Risk Management Committee	• This committee proposes to the governance a resilient model risk management framework, making it possible to propose risk indicators and any associated thresholds to the bodies, to monitor the evolution of the portfolio of models, to ensure the proper dissemination of the model risk management framework within the Group. • It meets every two months.
Group Internal Control Coordination Committee	• This committee brings together, at a minimum, all periodic and permanent control functions (risk and compliance), the financial function responsible for accounting controls, and the Security function, including Information Systems Security. It addresses all cross-cutting actions aimed at strengthening the coherence and effectiveness of internal control. It is a decision-making committee. • It meets on a quarterly basis.

Organization of permanent control functions in the Group's institutions

The Group's Risk division and Corporate Secretary's Office oversee the Group's risk management, compliance and Permanent Control functions, focusing on the management of credit, financial, operational, climate and non-compliance risks, extended to business continuity, financial control and information system security functions. They ensure that the risk policies of the affiliates and subsidiaries comply with those of Groupe BPCE.

The Risk and/or Compliance divisions of subsidiaries not subject to the banking supervision regulatory framework are functionally subordinate to Groupe BPCE's Risk division and Corporate Secretary's Office.

The strong functional authority is exercised by the Head of Risk Management and by the Secretary General, both members of Groupe BPCE's Executive Management Committee. It enables risk controls to be performed objectively, as each Group entity's operational functions are independent from its risk and Compliance functions. It also promotes a risk management and compliance culture and the application of shared risk management standards, and ensures that managers are given independent, objective and detailed information on the Group's risk exposures and any possible deterioration in its risk profile.

Group institutions are responsible for defining, monitoring and managing their risk levels, as well as producing reports and data for submission to the central institution's Risk division and Corporate Secretary's Office. They ensure the quality, reliability and completeness of the data used to control and monitor risks at the company level and on a consolidated basis, in line with Group risk standards and policies.

In this context, BPCE has launched a program aimed at ensuring that BPCE SA fully exercises its responsibilities as the central body in terms of establishing and deploying common rules, managing the associated performance indicators, and conducting ex-post controls to ensure compliance by all affiliates. The control functions of the central body (risk, compliance, permanent control, and IT risks) have initiated a project to adopt the same principles for monitoring the permanent control framework of the group's consolidated entities (including all affiliated entities).

In the course of their work, the Group's institutions rely on the Group Risk, Compliance and Permanent Control Charter. The charter specifies that each institution's supervisory body and executive management promote the risk management culture at all levels of their organization.

A twofold assessment of a) Risk Management functions and b) Compliance functions is conducted annually by the Risk Committee of the Groupe BPCE Supervisory Board and sent to the management of the Group's main establishments.

Standard risk governance structure at a Group institution

Risk function governance

ORGANIZATION

The Risk Governance and Control department is responsible for coordinating and leading the risk function and the second level permanent control of the Risk function within Groupe BPCE. The Risk, Compliance and Permanent Control Charter calls for the Group Risk division to participate, at their own initiative, in the annual performance assessment of the Heads of the Permanent Control functions, particularly risk and/or compliance, in consultation with the Chairman of the Management Board or the Chief Executive Officer.

The Risk Governance and Control department deploys the entire system on a daily basis and contributes to the overall supervision of Group risks, primarily through:

- oversight and updates of key risk and Compliance function documents such as charters and standards;
- analysis of the work done by the Executive Committees on the risks incurred by the Banques Populaires, the Caisses d'Epargne, the FSE and the subsidiaries;
- coordination of the risk management function events through a series of national Risk Management Days, including discussions and exchanges on risk- and compliance-related issues, presentations on the work done by the functions, training and sharing of best practices in the credit, financial, operational, compliance, ESG and IT fields between all Group institutions. Risk Management and Compliance Days also provide opportunities to strengthen groupwide solidarity in the risk management professions in today's ever-changing regulatory environment. These events are supplemented by bimonthly audio conferences and regional platforms or regional meetings of the Heads of Risk Management and Compliance of networks and subsidiaries, to address current topics and projects;
- second-level permanent control of Groupe BPCE's Risk function, as well as the sensitive activities of the Group's Risk division, *via* a dedicated department;
- a document library dedicated to the functions;
- measuring the level of risk culture in the Group's institutions *via* a dedicated self-assessment;
- the performance of operational efficiency work (effective benchmark standards), work related to the risk-based approach (half-yearly risk and compliance reporting, risk appetite framework, macro-mapping of risks, *etc.*);
- the follow-up of all recommendations issued by supervisors and by the General internal audit in the area of risk management and permanent control;
- an assessment of the Risk Management functions is conducted every year and presented to the Risk Committee of the Groupe BPCE Supervisory Board;
- managing the institutions' risk appetite framework: definition in line with the Group framework, consolidation and reporting to the bodies;
- support for new Heads of Institutional Risk Management and/or Compliance as well as risk managers, *via* a dedicated program and the annual training plan for the risk functions;
- frequent on-site meetings with the Heads of Risk Management and teams of the Banques Populaires, Caisses d'Epargne, FSE and subsidiaries;
- in addition to the operational committees attended by the Risk division, dedicated global meetings with BPCE's main subsidiaries: Global Financial Services (Natixis), Crédit Foncier, Banque Palatine, BPCE International (run-off management), the subsidiaries of the Solutions & Financial Expertise (SEF) division, Natixis Algérie and Oney for a complete review with the Head of Risk and/or Compliance, as well as Fransabank with participation in the Audit and Risk Committee as part of the internal control monitoring requested by the ACPR;
- distribution of a newsletter ("Mag R&C") to the heads of Group institutions, the heads of the various functions, including sales, and the employees of the risk, compliance and Permanent Control functions as well as all Group employees and the management of digital tools.

For coordination purposes, the Risk Governance and Control department relies on a half-yearly report drawn up by the institutions, aimed at ensuring that the various components of the local systems are properly implemented and operate under satisfactory conditions, particularly with respect to banking regulations and Group charters. The findings of this report improve operational efficiency and optimize best practices throughout the Group.

Activities specifically focused on the Lagarde report are being monitored in conjunction with the Group's institutions. There is also a system in place to monitor anomalies observed at Group institutions, aimed at ensuring that business is conducted properly and the rules of ethics are applied.

HIGHLIGHTS

- Contribution to the Risk division's transformation projects.
- Implementation of permanent level 2.2 controls on credit files by the permanent risk control division.
- Control of the proper implementation of the Group's credit risk policies in the local policies of the institutions.
- Implementation of monthly monitoring of affiliates' risk appetite indicators.
- Review of the specific headcount benchmark standard for a few institutions.
- Implementation of an induction day for new employees in the Risk function.

Risk and compliance culture

To promote and strengthen the risk and compliance culture at all levels, the Risk function and culture of the Group Risk Governance and Control department is focused on developing risk training and awareness programs at all Group levels, establishing regular communication on risk issues throughout the Group and disseminating and measuring the risk and compliance cultures.

Training	• Risk Academy	A set of certifications (internal control and permanent control at Paris Dauphine) and training courses, the new features of which for 2024 are: • Leveraged Finance e-learning module available to account managers and risk employees to identify an LF transaction/counterparty, to understand the Group's standards on these LF files, calculate a leverage and analyze redemption. • Basel IV video learning providing benchmarks and general impacts to help you understand the impacts of this new regulation. • 2-day classroom training on banking regulations on prudential rules to familiarize yourself with banking regulations and prudential rules. • Training on the fundamentals of Asset and Liability Management pooled by the Risk and Internal Audit functions to offer more sessions and promote interactions between the internal control business lines. • Training of the Finance department dedicated to solvency and leverage ratios open to risk employees taking into account the solvency issues, allowing them to better understand the principles of solvency calculation. • Capital adequacy ratio training course with an addition on the denominator (also offered by the Finance division), liquidity ratio and resolution mechanism in order to deepen the denominator of the capital adequacy and leverage ratios on the subjects of asset risk weighting, make the link with the liquidity ratios and explain the resolution. • Development of an e-learning module dedicated to the fundamentals and understanding of the Group's model risk management system as well as an advanced module for MRM stakeholders to assess potential models and integration arrangements. • Update to the Climate Risk Pursuit awareness-raising program and launch of training courses on green offers to increase awareness of ESG issues and the green financing offers developed by BPCE. • Group Operational Risks tutorial presenting the monthly OR dashboard in all its dimensions and richness.
	• Compliance Academy	In addition to the Mandatory Regulatory Training, Group Compliance and the BPCE Campus provided various training modules on: • Core Compliance: training on the fundamentals of banking compliance and the regulatory risk and compliance framework as well as certifications offered on internal control and risk management of financial institutions, and an Executive Master at Paris Dauphine; • Conduct and Ethics training; • financial security training including certification on AML-CFT operational expertise; • professional training courses on banking inclusion, prevention and over-indebtedness of vulnerable customers, the fundamentals of ADE borrower insurance, financial instruments, *etc.*
	• Permanent control Academy	• A national certification validated by France Competence "Exercising permanent control in the banking and insurance sector" is made available to the Group's institutions in person over a five-day course with a one-day review and a written test before a jury. This training covers the fundamentals of permanent control, its regulatory environment and the risk-based approach; • A 1.5-day national remote training course offered to permanent level-1 controllers in an intra- or inter-company training course; • The banking workshop dedicated to permanent control (Dauphine) over three days.
	• Members of the supervisory bodies and risk committees of the BPs and CEs	• Annual training on risks, compliance and security provided for Fédération Nationale des Banques Populaires and Fédération Nationale des Caisses d'Epargne.
	• Member of the Board of BPCE SA	• Training on risks/compliance/IT security/model risk training.
	• Chief Risk and Compliance Officers and managers	• Support *via* a dedicated course in two sessions for new Risk and Compliance Directors and one session for new risk managers.

Communication	• KIOSK	• The Kiosk constitutes the frame of reference for the Risk function by centralizing normative and regulatory documentation. • The Kiosk also contributes to the Risk Culture.
	• The professional social network Viva Engage GRP - Risk, Compliance and Permanent Control functions	• Corporate social network intended, in particular, for Risk functions within all Group institutions, making it possible to regularly disseminate news items.
	• The risk regulatory Hour	• For the Risk divisions of the Group's institutions and BPCE SA employees (live + replay) on the 2024 topics of: international banking issues for 2023, including the bankruptcies of American regional banks and economic news.
	• "Mag R&C"	• Published twice a year in French and in English to all Groupe BPCE employees, with the core target being members of the risk and compliance functions, decoding topics such as risk, compliance, permanent control, regulatory and non-regulatory, economic and digital security. • With a focus on: the strategic plan, *Riqueti* including the new New Products and New Activities process, monitoring of subsidiaries, the loss database, emerging risks, strengthening the GFS business continuity system, raising awareness of Global customers to fraud, regulatory monitoring, feedback on ECB missions, the ESG METAMORPH'OSE program, crisis management by the Group, permanent control training, IT and cyber risk, and the Group's Generative AI work.
	• Regulatory communication	• Coordination of the risk and compliance Chapters of the regulatory reports (Universal Registration Document, Pillar III, annual report on internal control, ICAAP).
Sharing of best practices	• Sharing of best practices and cross-analyses between operational entities and control functions	• Coordination of Commitment managers of the BPs, CEs and subsidiaries.
		• Risk assessment of sales functions at Group institutions (New Product Committee, implementation and updating of sales processes).
		• Sharing best practices with the risk management function, in particular the chief risk and/or compliance officers, by pooling local risk management systems in the scopes of BP, CE, FSE and subsidiaries, as well as sharing best practices during national days and/or bi-monthly audios identified during discussions.
Measurement of the risk and compliance culture	• Eval'CultuRisk system, self-assessment of the level of risk culture	• The Eval'CultuRisk aims to assess the level of risk culture of Groupe BPCE institutions *via* a questionnaire based on Group standards in accordance with regulatory requirements and best practices in terms of risk culture, particularly as described by the EBA in its internal governance document. • Answering the 86 questions across five topics enables a self-assessment and the implementation of action plans.

Macro-level risk mapping of institutions

The macro-level risk map, based on the Group's internal risk framework, plays a central role in an institution's overall risk management system: by identifying and rating its risks, in particular, through the evaluation of its risk management system, each institution in the Group has its own risk profile and priority risks. This risk-based approach serves to update the risk appetite and the permanent/periodic control plans of Group institutions on a yearly basis.

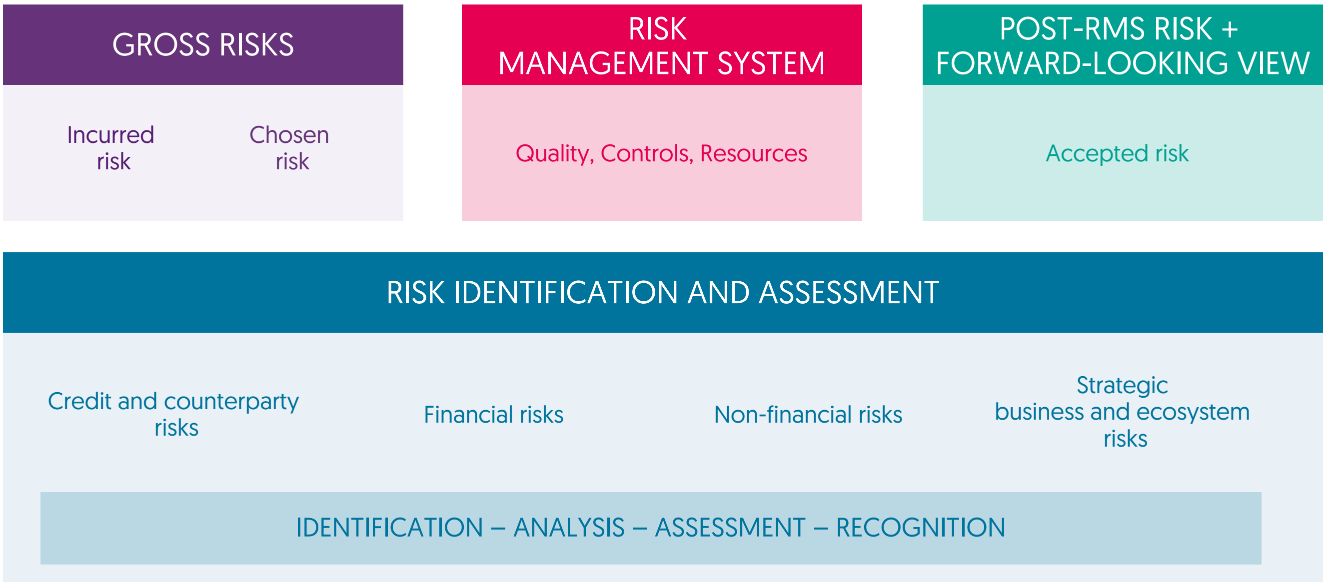
Action plans targeting high-priority risks are defined with the goal of reducing and/or managing risks.

The results of the macro-level risk mapping process contribute to the Group's Supervisory Review and Evaluation Process (SREP), by identifying the main risks under the risk management and prudential approach, included in the annual report on internal control, the ICAAP report and the Universal Registration Document (risk factors chapter).

In 2024, as in previous years, a consolidation of the macro-level risk mapping was carried out for each network. Each institution is able to compare the results of its own macro-level risk mapping with those of its network. Action plans set up by the institutions to address their priority risks were also consolidated.

The macro-risk mapping is integrated into the PRISCOP permanent control management tool, which makes it possible to automate the risk-control links in the risk management system.

The macro-level risk mapping was performed at Group level in 2024 as in previous years, by consolidating the macro-level risk maps of the parent company institutions and subsidiaries.



Consolidated risk oversight

ORGANIZATION

In addition to the risk supervision conducted both individually and by type of risk, Groupe BPCE's Risk division also performs consolidated monitoring of the Group's risks. A Group risk dashboard is produced quarterly. It contains a quarterly Group risk dashboard, which is used to monitor the risk appetite defined by the Group as well as for comprehensive monitoring of risks based on an analysis of the Group's risk profile in each area (mapping of risk-weighted assets, credit risks and counterparty risks – by customer segment –, market risks, structural ALM risks, non-financial risks and risks related to insurance businesses). In addition to the dashboard, a monthly flash report provides the Group with a more responsive and updated overview of Group risks.

The Group Risk division also conducts or coordinates cross-business risk analyses and specific stress tests on the Group's main portfolios or activities and, if needed, for the entities. It has also developed half-year forward-looking risk analyses aimed at identifying economic risk factors (known and emerging; international, national and regional), circumstantial threats (regulations, *etc.*) and their potential impact on the Group. These forward-looking analyses are presented at meetings of the Group Supervisory Board's Risk Committee.

In addition, it carries out risk measurements on a portfolio basis. It reviews and validates risk models developed internally. Lastly, it contributes to efforts to define internal capital requirements as well as internal and external solvency stress tests aimed at measuring the Group's sensitivity to a series of risk factors and its resilience in the event of a severe shock, by determining impacts in terms of cost of risk and RWA.

Stress testing framework

Groupe BPCE has been developing stress tests since 2011 that can be performed using the risk modules for Group strategic analysis purposes and regulatory purposes.

There are two types of stress tests:

- internal stress tests (including reverse stress tests);
- regulatory stress test (including EBA stress test, ECB climate stress test).

The governance of the Group's stress testing system is based on a comprehensive approach covering all Group entities, taking into consideration their specific characteristics, and covering the following risks:

- credit risks: change in cost of risk and risk-weighted assets;
- securitization portfolio and counterparty risk: change in impairment and risk-weighted assets;
- market risks: market shocks, change in securities portfolios and risk-weighted assets;
- revenue risks (including net interest margin and fees and commissions);
- operational risks;
- climate risks;
- insurance risk.

Risks associated with sovereign exposures are addressed according to their accounting classification in market risk or credit risk.

Models are used for each risk category to determine the impacts of scenarios on the various income statement items and capital requirements.

The methodologies used to determine the projections are based on:

- the methodology stipulated by the ECB and the EBA for regulatory stress tests;
- internal methodologies adapted to the Group's business model, as part of the budget exercise and risk management.

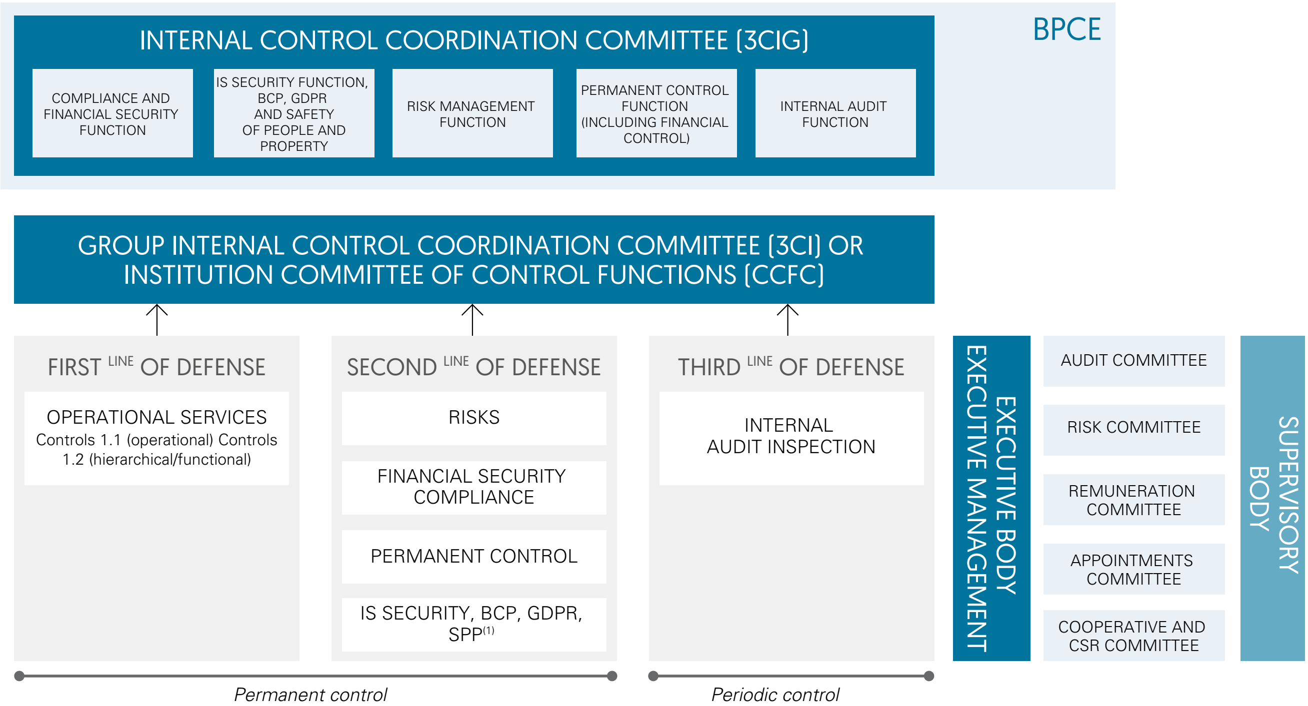
Several scenarios are tested in order to assess all impacts:

Baseline scenario	Baseline scenario comprising the budget scenario.
ICAAP adverse scenarios	Scenarios that are both severe and plausible to provide relevant information on risk and resilience under the ICAAP.
Adverse Preventive Recovery Plan scenarios	Scenarios used as part of the Preventive Recovery Plan to assess the Group's ability to recover. These scenarios are linked to those of the ICAAP (in terms of solvency) and the ILAAP (in liquidity) with possible adjustments in terms of severity.
Reverse scenarios	Unlike stress tests, reverse analyses aim to determine the plausibility of negative events for the Group's financial trajectory. They improve the Group's knowledge of its risks and ensure that stress scenarios are well suited to testing the Group's vulnerabilities.

7.3.4 Internal control

The Group control system relies on three levels of controls, in accordance with banking regulations and sound management practices (two levels of permanent controls and one level of periodic control), as well as the establishment of consolidated control processes in accordance with provisions approved by BPCE's Management Board.

Structure of Groupe BPCE's internal control system



(1) SPP: Safety of People and Property.

Permanent control system

The organization of permanent control in the Group is specified in the Internal Control Charter (updated on July 23, 2020) in paragraph 3 and in the DRCCP Charter (updated on December 9, 2021) in paragraphs 2 and 5 in accordance with the Ministerial Order of November 3, 2014 (revised on February 25, 2021), in particular in Article 12.

In terms of governance, the assessment of the permanent control system is the responsibility of the Group Internal Control Coordination Committee (or 3CI or CCFC in its local implementation).

The permanent control system is based on the taxonomy of controls, which includes definitions of control methods.

The system comprises two types of level 1 controls (first line of defense LOD1) carried out by employees carrying out operational activities. These employees identify the risks associated with their activity and comply with the procedures and limits set:

- level 1.1 consists of production controls (detection of production anomalies, compliance with internal rules and procedures) usually carried out on an ongoing basis;
- level 1.2 consists of controls aimed at identifying risks/compliance with rules/procedures carried out by line managers (a line manager control implies a control distinct from the person who carried it out) or by a separate team dedicated to level 1 control. The formalization of procedures and operating modes describing the controlled operational activities are the responsibility of the first line of defense.

The system also includes two types of level 2 controls (second line of defense LOD2) performed by agents at the central and local levels:

- level 2.1 consists of controls aimed at verifying that the risks have been identified and managed by the first level of control in accordance with the rules and procedures provided for. They are carried out by employees of departments dedicated exclusively to risk management, compliance, security, permanent control or specialized functions that do not perform level 1 controls: these controls are formalized and assessed;
- level 2.2 concerns overall system controls or quality controls performed by each business line of an institution as the head of the Group or of BPCE as the central institution. These controls are formalized and assessed.

COORDINATION OF PERMANENT CONTROLS IN INSTITUTIONS

In accordance with the Group's Risk, Compliance and Permanent Control Charter, it is recommended that a permanent control coordination function be set up in each institution or Group head office covering the entire Risk/Compliance/Security area. The person(s) responsible for permanent control in the institutions is/are the Chief Risk and/or Compliance Officer, it being understood that the designated effective manager remains responsible for the consistency and effectiveness of the internal control system, within the meaning of the Order of November 3, 2014, amended by the Order of February 25, 2021.

COORDINATION OF PERMANENT CENTRAL CONTROLS

In the Corporate Secretary's Office the main role of the Group Coordination of Permanent Controls department is to coordinate the Group's level 1 and 2 permanent control system. In this context, it:

- proposes standards and methodological guides for the exercise of permanent control in Groupe BPCE;
- ensures that the institutions comply with the permanent control standards defined by BPCE, namely the Permanent Control Framework document - operational implementation of the Internal Control Charter - and the control sampling standard and other standards;
- analyzes all the annual control plans of the institutions within its scope of supervision in connection with the central risk management, compliance and security functions;
- performs controls to assess the permanent control system of each entity within its scope of supervision;
- assists the business lines in the review of controls and to ensure their risk coverage is complete. The various permanent control standards are overseen and constantly updated and expanded in the tool;
- performs consolidated reporting of the results of controls carried out by the institutions for the Group Internal Control Committee;
- ensures the transverse management of the system.

PERMANENT CONTROL CULTURE

The control culture has been strengthened by the implementation of a certification in permanent control of the banking and insurance business lines validated by the external body France Compétences. This certification is intended for the level 1 and level 2 Permanent Control functions but also for the LOD2 functions.

HIGHLIGHTS

- Optimization and completeness of the supervision system for BPCE's control functions over its affiliates (strengthening of the role of the central institution), with definition of the monitoring scopes and supervision requirements based on materiality criteria for each of BPCE's LoD2 channels;
- Extension of the scope of the Group control system and integration into the tool new entities by application of the new supervision system (examples: GFS, Banque du Léman, BPCE Vietnam);
- Work on optimizing first-level control systems, in particular on the "real estate loan" and "checks" processes.
- Identification of the owners of level 1 controls at BPCE;
- Review of the Reliability Standard (validated by the Standards and Methods Committee on April 17, 2024);
- Deployment in BPCE subsidiaries (FSE, Insurance, Payments) of a SharePoint to assess, *via* a rating, the quality of an institution's permanent control system in relation to its priority risks, and previously deployed for net cash and bank balances;
- Enhancement of the control framework, in particular on ESG Risks and External Fraud, the convergence between levels 1 and 2 for permanent controls on credit risks and the updating of the controls of BPCE SA subsidiaries (FSE, Insurance, Payments) in order to complete the coverage of their priority risks;
- In terms of permanent control training, the launch of the "essential CPN1," training dedicated to 1st level controllers and the renewal of the Permanent Control certification;
- The ramp-up of the work of the division set up by the Group Risk division dedicated to permanent controls of the risk functions (credit, financial, operational, model, ESG, *etc.*) with controls carried out by the control team.

Structure of integrated control functions

The Group Risk division and the Group Corporate Secretary's Office are responsible for permanent controls at Group level, and the General internal audit for periodic control.

The permanent and periodic control functions of affiliates and subsidiaries, subject to banking supervision, are functionally subordinate, as Consolidated Control departments, to BPCE's corresponding Central Control divisions and report to their entity's executive body.

In 2024, the functional link between the internal control functions of BPCE's direct subsidiaries was strengthened, particularly with regard to the risk function.

These ties have been formally defined in charters for each function, covering:

- a standardized opinion on the appointments and dismissals of Heads of permanent/periodic control functions at direct affiliates and subsidiaries;
- reporting, information and whistleblowing obligations;
- drafting of standard practices by the central institution set out in Group standards, definition or approval of control plans.

The entire system was approved by the Management Board on December 7, 2009, and presented to the Audit Committee on December 16, 2009 and to the BPCE Supervision Board. The Risk, Compliance and Permanent Control Charter was reviewed in December 2021 and the body of standards consists of three Group charters covering all activities.

The Group's Internal Control Charter is the umbrella charter. It is based on two specific charters:

- the Internal Audit Charter; and
- the Risk, Compliance and Permanent Control Charter.

Internal Control Coordination Committee

The Chairman of the BPCE Management Board is responsible for ensuring the consistency and effectiveness of the internal control system. A Group Internal Control Coordination Committee, chaired by the Chairman of the Management Board, meets periodically.

This committee is responsible for dealing with all issues relating to the consistency and effectiveness of the Group internal control system, as well as the results of risk management and internal control work and follow-up work.

The committee's main responsibilities include:

- validating the Group Internal Control Charter, the Group Risk, Compliance and Permanent Control Charter and the Group Internal Audit Charter;
- reviewing dashboards and reports on Group control results, and presenting permanent control coordination initiatives and results;
- validating action plans to be implemented in order to achieve a consistent and efficient Group permanent control system, and assessing progress made on corrective measures adopted subsequent to recommendations issued by the General internal audit, the national or European supervisory authorities, and the Permanent Control functions;
- reviewing the Group's internal control system, identifying any shortcomings, and suggesting appropriate solutions to further secure the institutions and the Group;
- presenting the results of institution controls or benchmarks;
- deciding on any cross-business initiatives or measures aimed at strengthening the Group's internal control system;
- ensuring consistency between measures taken to strengthen permanent control and risk areas identified during the consolidated macro-level risk mapping exercise.

The members of the Executive Management Committee in charge of Risk Management (Group Risk division) and of Compliance and Permanent Controls (Corporate Secretary's Office) as well as the Head of the General internal audit, are members of this committee. Where applicable, the Internal Control Coordination Committee may hear reports from operational managers about measures they have taken to apply recommendations made by internal and external control bodies.

Periodic control (level 3)

ORGANIZATION AND ROLE OF THE GROUP INTERNAL AUDIT

Duties

In accordance with the duties incumbent on the central institution, and pursuant to the rules of collective solidarity, the General internal audit is responsible for periodically verifying the operation of all Group institutions and providing their executive managers with reasonable assurance of their financial strength.

In that role, it ensures the quality, effectiveness, consistency and efficiency of their control system as well as their risk management. The scope of the Internal Audit covers all risks, all institutions, and all activities (included in the scope of accounting and prudential consolidation) including those that are outsourced.

Its top priorities are to assess and to report to the executive and decision-making and supervisory bodies of the entities and the Group as a whole on:

- the adequacy of the entities' governance framework;
- the compliance with laws, regulations and rules by entities;
- the adequacy and compliance of policies and procedures with regard to the risk appetite of the entities;
- the effectiveness of the organization, particularly that of the first and second lines of defense;
- the quality of its financial position;
- the reliability and integrity of accounting and management information;
- the consistency, adequacy and operation of risk assessment and management systems;
- the integrity of the processes guaranteeing the reliability of the entities' methods and techniques, as well as the assumptions and information sources used for its internal models;
- the quality and use of risk detection and assessment tools and the measures taken to mitigate them;
- the security of information systems and their adequacy with regard to regulatory requirements;
- the control of essential critical or important services;
- the level of risks actually incurred;
- the quality of the business continuity system;
- the effective implementation of the recommendations made.

Reporting to the Chairman of the Management Board, the Internal Audit performs its duties independently of the Operational and Permanent Control divisions.

Representation on Group governance bodies and Risk Committees

In the interest of exercising its duties and contributing effectively to the promotion of an auditing culture, the Head of the Internal Audit takes part, without voting rights, in the central institution's key Risk Management Committees.

As indicated above, the Head of the General internal audit is a member of the Group Internal Control Coordination Committee and has a standing invitation to participate in the Supervisory Board's Risk Committee and the Audit Committee of BPCE, the Risk Committee and Audit Committee of Natixis, and the Risk Committee and Audit Committee of the Group's main subsidiaries (Natixis, FSE division entities, Banque Palatine, Oney, Crédit Foncier de France, BPCE International).

Scope of authority

To fulfill its duties, the Group Internal Audit establishes and maintains an inventory of the Group's auditing scope, which is defined in coordination with the Internal Audit departments of the Group institutions.

It makes sure that all institutions, activities and corresponding risks are covered by comprehensive audits, performed at frequencies defined according to the overall risk level of each institution or activity, which must not exceed five years for banking activities.

In doing so, the Group Internal Audit takes into account not only its own audits but also those conducted by the supervisory authorities and the local internal audit by applying the principle of subsidiarity.

The annual audit plan is defined after approval by the Chairman of the Management Board of BPCE and the Management Board of BPCE. It is then presented for discussion to the Group Internal Control Coordination Committee, for an advisory opinion to the Supervisory Board's Risk Committee and for approval by BPCE's Supervisory Board. It is also transmitted to the national and European supervisors.

Reporting

Group Internal Audit audits contain recommendations prioritized by order of importance, which are regularly monitored (at least once every six months).

The Group Internal Audit reports the findings of its work to the executive directives of the audited companies and to their supervisory body. It also reports to the Chairman of the Management Board, the Supervisory Board's Risk Committee and the Supervisory Board of BPCE. It provides them with a report on the implementation of its major recommendations, as well as those of the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector, and the Single Supervisory Mechanism (SSM). It sees to the expedient execution of any corrective measures to the internal control system, in accordance with Article 26 of the amended Ministerial Order of November 3, 2014 on internal control, and may call on the Supervisory Board's Risk Committee to address any measures that have not been executed.

Relations with the Permanent Control divisions of the central institution

In the central institution, the Head of the Internal Audit maintains regular relations and shares information with the heads of the units within the scope of inspection, specifically with the divisions in charge of level 2 controls.

The heads of these divisions are responsible for notifying the Head of the General internal audit in a timely manner of any disruption or major incident that comes to their attention. The Head of the Internal Audit and the Heads of Group Risk Management and Group Compliance and Security notify each other in a timely manner of any inspection or disciplinary procedure initiated by the supervisory authorities and in general of any external audits brought to their attention.

AUDIT WORK CARRIED OUT IN 2024

The 2024 audit plan was built by integrating the assessment of the financial impacts of the rise in interest rates for the Group and its entities (profitability, liquidity, solvency and cost of risk), the analysis of the Group's structural risks (*e.g.* IT security, GDPR) as well as emerging risks or risks impacting customer activity, while meeting the expectations of Supervisors, particularly in terms of risk management.

With 79 missions carried out, the 2024 plan marks a return to normal after several years of international missions as well as missions within the networks related to the health crisis of 2021. In 2024, it returned to a volume similar to 2022, *i.e.* 75 planned missions, 8 missions added, 3 missions postponed and 1 mission canceled, deployed in 3 waves. This plan included 23 internal audit assignments, ISO 2023, carried out by the Group Internal Audit on behalf of certain BPCE business lines (payments division, FSE division, Technology & Operations division, Crédit Foncier de France).

The work of reviewing auditable units, improving the process for closing recommendations, changing the audit methodology of retail banks or industrializing the risk assessment and internal audit missions were the priorities of the year.

AUDIT FUNCTION

Structure of the audit function

The Group Internal Audit department carries out its duties within the framework of business line operations. Its operating procedures – for the purposes of consolidated supervision and optimal use of resources – are set out in a charter approved by BPCE's Management Board on December 7, 2009; the latter was redesigned and approved on December 12, 2022.

The aim of this structure is to cover all of the Group's operational or functional units over a reasonable number of fiscal years, according to the associated risk, and to achieve efficiency between the various complementary audits conducted by the Internal Audits teams of entities.

The Local internal audit departments of the Banques Populaires, the Caisses d'Epargne, and certain direct subsidiaries of BPCE SA, are functionally subordinate to the Group Internal Audit and report to the executive branch of their entity. Some subsidiaries and businesses have chosen to outsource their internal audit directly to the Group Internal Audit, which defines the annual audit plans and work programs and determines and assesses the allocated resources.

These links are duplicated in entities that have subsidiaries or regulated affiliates with their own internal audit department.

The strong functional subordination is also based on operating rules and the Group Internal Audit Standards applicable by the entire function. It is reflected as follows:

- the existence of a single groupwide Audit Charter. It defines the purpose, powers, responsibilities and general organization of the Internal Audit function in the overall internal control system and applies to all Group companies monitored on a consolidated basis; it also sets out the principles and values that prevail in the sector such as independence, integrity, ethics, objectivity, confidentiality, professionalism but also consideration of environmental, social and good governance issues in the organization of its activity; this charter is broken down into thematic standards (audit resources, missions, recommendations, risk assessment, *etc.*);
- the appointment and dismissal of the Heads of Internal Audit of Banques Populaires, Caisses d'Epargne and direct subsidiaries of BPCE SA are subject to the prior approval of the Head of the Groupe BPCE General internal audit;
- the annual evaluations of the Heads of internal audit are transmitted to the Head of the Groupe BPCE General internal audit;

- The Group Internal Audit ensures that each entity's Local Internal Audit department has the necessary resources to perform its duties and adequately cover the multi-year audit plan;
- the multi-year and annual audit programs carried out by the Local internal Audit departments of the Group's institutions are approved in conjunction with the Internal Audit, which is kept regularly informed of their completion or of any change in scope;
- Group Internal Audit issues a formal opinion in a letter and may issue reservations on the multi-year audit plan as well as on the resources allocated, both in terms of number and skills;
- the Local internal audit applies the standards and methods defined and distributed by BPCE's Group Internal Audit, and refers to the audit guides which are, as a matter of principle, common to all Internal Audit function auditors;
- in the course of conducting on-site audits, BPCE's Group Internal Audit periodically verifies that Group companies comply with the Group's Internal Audit standards.

The following items are transmitted to the General internal audit:

- the Internal Audit reports of the Group institutions, as they are produced;
- copies of the annual reports of the entities prepared in accordance with Articles 258 to 264 of the amended Ministerial Order A-2014-11-03 on internal control;
- the presentations made by the Heads of Internal Audit to the Risk Committees, and the minutes of these meetings;
- the presentations made to the supervisory body on internal control activities and findings, and extracts of the minutes of the meetings where they were examined.

The rules governing oversight of the inspection function between Natixis-Global Finance Services and the central institution fall within the framework of the Group's Internal Audit function.

ACTIVITIES IN 2024

The Methods team updated the documentary corpus and finalized the upgrade to the Group audit function's SharePoint in connection with the launch of the IGG Hub. In addition to reviewing and updating audit guides, it updated the Auditable Units of the Group Internal Audit and those intended for the Banques Populaires and Caisses d'Epargne networks (notably by creating a tax audit unit). Work was carried out on identifying regulatory and cross-functional audit units as part of a qualitative measurement of the SREP 2023 (ECB supervisory review and assessment processes). In parallel with improving reporting and using the Risk Assessment Retail, the team continued its work on the Risk Assessment according to expert opinion for scopes other than retail banking and Natixis CIB. Lastly, work was carried out that led to the evolution of the Recommendations standard, particularly as part of an SREP 2023 measure. This work was included in the *Riqueti* project aimed at strengthening the sovereign prerogatives of the central institution. The new standard aims to strengthen the quality of the monitoring and closure of recommendations by the various audit bodies, thus ensuring the sustainability and robustness of the remedial actions undertaken.

The data division of Group Internal Audit continued its structuring and tooling work with the aim of strengthening the place of data within the audit. During the year, the data team set up a robust data infrastructure, integrating a dedicated Alteryx server to streamline and optimize data analyses. The server is expected to open to users at the end of the year.

On this platform, ten standard analyses intended for "retail" banking missions were deployed. In addition, the division has industrialized accounting analyses for ledgers, which makes audit work more efficient and accurate. In an effort to modernize, the hub has also begun deploying a cloud infrastructure on the Google Cloud Platform (GCP). This new environment will host contract analyses and a question-answer tool in natural language, using generative artificial intelligence technologies, particularly the GPT-4o model. Therefore, at the end of the year, the division is working on making data analyses available to auditors for autonomous use *via* the implementation of a robust infrastructure. Finally, the exploration of Generative AI capabilities for auditing continues, with a particular focus on advanced large language models (LLM).

The activity of the Business Projects team was mainly focused on the upgrade of the application base version of the OMEGA tool (application for the management of audit activities). This project required a diagnostic, contractual negotiation and an operational implementation phase. The team was heavily involved in the business support phase, stabilizing the tool, and updating the related documentation. The upgraded database version further enhances the tool's security, in accordance with the recommendations of the Group RSSI. The widespread use of OMEGA by the Group's institutions has now been finalized since the consolidation of the Asset and Wealth Management division, then Banco Primus.

In addition, the support teams managed maintenance under operational conditions (MOC) as well as change support throughout the year.

7.3.5 Recovery Plan

The Supervisory Board of BPCE approved the Group's Recovery Plan for 2025.

The plan is in line with European regulatory measures on the recovery and resolution of banks and investment firms, and with the provisions of the French Monetary and Financial Code.

The objective of the Recovery Plan is to identify measures to restore the Group's financial solidity in the event it deteriorates significantly.

The plan presents the options available to the Group to launch a crisis management system. It assesses the relevance of the different options in various crisis scenarios and the methods and resources available for their implementation.

The Recovery Plan is mainly based on the:

- Group's organizational structure and the specific implications of its cooperative status;
- identification of the Group's critical responsibilities;
- capital and liquidity management systems;
- analysis of financial crisis scenarios;
- identification of options impacting the restoration of the Group's financial position and their impacts on the Group's business model;
- preventative oversight of leading indicators on financial and economic conditions;
- establishment of the organizational structures needed to implement the recovery.

This system is monitored and coordinated by a permanent office at BPCE.

The Recovery Plan is kept up to date and approved by the Supervisory Board, aided by its Risk Committee for these purposes.

The Recovery Plan is updated annually on these various components (description of the Group, analysis of scenarios, analysis of the options available).

7.4 Capital management and capital adequacy

7.4.1 Regulatory framework

Credit institutions' capital is regularly monitored in accordance with regulations defined by the Basel Committee.

These regulations were reinforced following the introduction of Basel III, with an increase in the level of regulatory capital requirements and the introduction of new risk categories.

The Basel III recommendations were incorporated in EU directive 2013/36/EU (Capital Requirements Directive – CRD IV) and Regulation No. 575/2013 (Capital Requirements Regulation – CRR) of *the European* Parliament and of the Council, as amended by Regulation (EU) No. 2019/876 (the "CRR2"). As of January 1, 2014, all EU credit institutions are subject to compliance with the prudential requirements set out in these texts.

Credit institutions subject to CRD and CRR are thus required to continuously observe:

- the Common Equity Tier-1 (CET1) ratio;
- the Tier-1 ratio, *i.e.* CET1 plus Additional Tier-1 (AT1) capital;
- the total capital ratio, *i.e.* Tier-1 plus Tier-2 capital; and
- as of January 1, 2016, the capital buffers which can be used to absorb losses in the event of tensions.

  These buffers include:

  – a capital conservation buffer, comprised of Common Equity Tier-1, aimed at absorbing losses in times of serious economic stress,

  – a countercyclical buffer, aimed at protecting the banking sector from periods of excess aggregate credit growth. This Common Equity Tier-1 surcharge is supposed to be adjusted over time in order to increase capital requirements during periods in which credit growth exceeds its normal trend and to relax them during slowdown phases,

  – a systemic risk buffer for each Member State aimed at preventing and mitigating the systemic risks that are not covered by regulations (low for Groupe BPCE),

  – the different systemic risk buffers aimed at reducing the risk of failure of systemically important financial institutions. These buffers are specific to each bank. Groupe BPCE is on the list of other systemically important institutions (O-SIIs) and global systemically important institutions (G-SIIs). As these buffers are not cumulative, the highest buffer applies.

The capital ratios are equal in terms of the relationship between capital and the sum of:

- credit and dilution risk-weighted assets;
- capital requirements for the prudential supervision of market risk and operational risk, multiplied by 12.5.

In 2024, Groupe BPCE is required to observe a minimum Common Equity Tier-1 ratio of 4.5% under Pillar I, a minimum Tier-1 capital ratio of 6% and, lastly, a minimum total capital ratio of 8%.

Alongside Pillar I minimum capital requirements, Groupe BPCE is subject to additional Tier-1 capital requirements:

- as of January 1, 2019, the Tier-1 capital conservation buffer is 2.5% of the total amount of risk exposures;
- Groupe BPCE's countercyclical buffer equals the EAD-weighted average of the buffers defined for each of the Group's countries of operation. Groupe BPCE's maximum countercyclical buffer as from January 1, 2019 is 2.5%;
- the G-SII buffer has been set at 1% for the Group;
- the systemic risk buffer is applied to all exposures located in the Member State setting this buffer and/or to sectoral exposures located in the same Member State. As most of Groupe BPCE's exposures are located in countries whose systemic risk buffer has been set at 0%, the Group considers that this rate will be very close to 0%.

Credit institutions must comply with the prudential requirements, which are based on three pillars that form an indivisible whole:

Pillar I

Pillar I sets minimum requirements for capital. It aims to ensure that banking institutions hold sufficient capital to provide a minimum level of coverage for their credit risk, market risk and operational risk. The bank can use standardized or advanced methods to calculate its capital requirement.

Review of minimum capital requirements under Pillar 1

	2023	2024
Minimum regulatory capital requirements		
Common Equity Tier-1 (CET1) capital	4.5%	4.5%
Total Tier-1 capital (T1 = CET1 + AT1)	6.0%	6.0%
Regulatory capital (T1 + T2)	8.0%	8.0%
Additional requirements		
Capital conservation buffer	2.5%	2.5%
G-SII buffer applicable to Groupe BPCE [1]	1.0%	1.0%
Maximum countercyclical buffer applicable to Groupe BPCE [2]	2.5%	2.5%
Maximum total capital requirements for Groupe BPCE		
Common Equity Tier-1 (CET1) capital	10.5%	10.5%
Total Tier-1 capital (T1 = CET1 + AT1)	12.0%	12.0%
Regulatory capital (T1 + T2)	14.0%	14.0%

[1] G-SII buffer: global systemic buffer.

[2] The countercyclical buffer requirement is calculated quarterly.

Pillar II

Pillar II establishes a process of prudential supervision that complements and strengthens Pillar I.

It consists of:

- an analysis by the bank of all of its risks, including those already covered by Pillar I;
- an estimate by the bank of the capital requirement for these risks;
- a comparison by the banking supervisor of its own analysis of the bank’s risk profile with the analysis conducted by the bank, in order to adapt its choice of prudential measures where applicable, which may take the form of capital requirements exceeding the minimum requirements or any other appropriate technique.

For 2024, the total capital ratio in force for Groupe BPCE under Pillar II (P2R) is 10.10%, plus a 2.50% capital conservation buffer, a 1% global systemic buffer and a 0.90% countercyclical buffer.

Pillar III

The purpose of Pillar III is to establish market discipline through a series of reporting requirements. These requirements – both qualitative and quantitative – are intended to improve financial transparency in the assessment of exposure to risks, risk assessment procedures and capital adequacy.

7.4.2 Scope of application

Regulatory scope

Groupe BPCE is required to submit consolidated regulatory reports to the European Central Bank (ECB), the supervisory authority for Eurozone banks. Pillar III is therefore prepared on a consolidated basis.

The regulatory scope of consolidation is established based on the statutory scope of consolidation. The main difference between these two scopes lies in the consolidation method for insurance companies, which are accounted for by the equity method within the regulatory scope, regardless of the statutory consolidation method.

The following insurance companies are accounted for by the equity method within the prudential scope of consolidation:

- Surassur;
- BPCE Assurances (formerly Natixis Assurances);
- Compagnie Européenne de Garanties et de Cautions;
- Prépar-Vie;
- Prépar-IARD;
- Oney Insurance;
- Oney Life.

The following insurance companies are accounted for by the equity method within both the statutory and regulatory scopes of consolidation:

- Caisse de Garantie Immobilière du Bâtiment;
- Parnasse Garanties.

In addition, since the second quarter of 2020, the Versailles entity is consolidated using the equity method. This change, which concerns only the regulatory scope, since the entity is still considered to be under control within the meaning of IFRS, follows a detailed analysis of the regulatory texts. The latter stipulate that non-financial entities that do not constitute ancillary services within the meaning of the standard are accounted for using the equity method for the purposes of reporting ratios. This decision, approved by the Group's bodies, allows for an alignment of the scopes used to calculate liquidity and solvency.

EU CC2 – Transition from accounting balance sheet to prudential balance sheet

The table below shows the transition from an accounting balance sheet to a prudential balance sheet for Groupe BPCE at December 31, 2024.

The differences between the data in the statutory scope and those of the prudential scope result from the restatement of subsidiaries excluded from the prudential scope (see description of the prudential scope below) and the reintegration of intra-group transactions related to these subsidiaries.

7.4.3 Composition of regulatory capital

Regulatory capital

Regulatory capital is determined in accordance with Regulation No. 575/2013 of the European Parliament of June 26, 2013, on capital ("CRR") amended by Regulation (EU) No. 2019/876 ("CRR2").

It is divided into three categories: Common Equity Tier-1 capital, Additional Tier-1 capital and Tier-2 capital. Deductions are made from these categories.

These categories are broken down according to decreasing degrees of solidity and stability, duration and degree of subordination.

Regulatory capital

in millions of euros	12/31/2024 Basel III	12/31/2023 Basel III
Share capital and additional paid-in capital	29,349	29,031
Consolidated reserves	53,419	51,870
Net income for the period	3,520	2,804
Gains and losses recognized directly in other comprehensive income	842	699
Consolidated equity attributable to equity holders of the parent	**87,130**	**84,404**
Perpetual deeply subordinated notes classified as other comprehensive income	-	-
Consolidated equity attributable to equity holders of the parent excluding perpetual deeply subordinated notes classified as other comprehensive income	**87,130**	**84,404**
Non-controlling interests	219	205
– o/w prudential filters	-	-
Deductions	(6,352)	(6,126)
– o/w goodwill[1]	(4,255)	(4,104)

– o/w irrevocable payment commitments	(1,147)	(1,136)
Prudential restatements	(7,150)	(7,237)
– o/w shortfall of credit risk adjustments to expected losses	(210)	(204)
– o/w prudent valuation	(1,088)	(970)
– o/w insufficient coverage for non-performing exposures – Pillar II	(1,122)	(1,098)
Common Equity Tier-1 capital[2]	**73,847**	**71,246**
Additional Tier-1 capital	-	-
Tier-1 capital	**73,847**	**71,246**
Tier-2 capital	12,210	12,165
TOTAL REGULATORY CAPITAL	**86,057**	**83,411**

(1) Including non-current assets and entities classified as held for sale.
(2) The Common Equity Tier-1 included €29,581 million in cooperative shares (after taking allowances into account) on December 31, 2024, and €29,314 million at December 31, 2023.

Details of debt instruments recognized as additional Tier-1 and Tier-2 capital, other instruments eligible for TLAC, as well as their characteristics, as required by Implementing Regulation No. 1423/2013 are published at https://groupebpce.com/en/investors/results-and-publications/pillar-iii.

Common Equity Tier-1 (CET1) capital

CORE CAPITAL AND DEDUCTIONS

Common Equity Tier-1 consists of:

- share capital;
- additional paid-in capital or merger premiums;
- reserves, including revaluation differences and gains or losses recognized directly in other comprehensive income;
- retained earnings;
- net income attributable to equity holders of the parent;
- non-controlling interests in banking or related subsidiaries for the share after CET1 eligibility caps.

The following deductions are made:

- treasury shares held and measured at their carrying amount;
- intangible assets (excluding the amount of prudently valued software, exempt from deduction) including start-up costs and goodwill;
- deferred tax assets and liabilities that rely on future profitability;
- prudential filters resulting from CRR Articles 32, 33, 34 and 35: gains or losses on cash flow hedges, gains on transactions in securitized assets, own credit risk;
- negative amounts arising from the comparison between provisions and expected losses (in this calculation, performing loans are clearly separated from loans in default);
- equity interests in eligible banking, financial and insurance institutions, according to the rules on allowances for these holding companies and the phase-in period;
- value adjustments arising from the prudent valuation of assets and liabilities measured at fair value according to a prudential method, deducting any value adjustments;
- defined benefit pension fund assets net of related deferred tax liabilities;
- insufficient hedging of non-performing exposures under Pillar I and Pillar II.

These deductions are supplemented by capital items that are not covered by CRR2.

Changes in CET1 capital

in millions of euros	**CET1 capital**
12/31/2023	**71,246**
Cooperative share issues	90
Income net of proposed dividend payout	2,761
Other items	(250)
12/31/2024	**73,847**

Breakdown of non-controlling interests (minority interests)

in millions of euros	**Non-controlling interests**

Proposed dividend payout	-
Caps on eligible non-controlling interests	(49)
Non-controlling interests (excluding other items)	**0**
Other items	-
PRUDENTIAL AMOUNT – 12/31/2024	**219**

Additional Tier-1 (AT1) capital

Additional Tier-1 capital includes:

- subordinated instruments issued in compliance with the restrictive eligibility criteria set forth by CRR Article 52;
- additional paid-in capital related to these instruments.

Deductions comprise equity interests in eligible banking, financial and insurance institutions, according to the rules on allowances for these holding companies.

As of December 31, 2024, the Group had no additional Tier-1 capital.

Tier-2 capital

Tier-2 capital consists of:

- subordinated instruments issued in compliance with the restrictive eligibility criteria set forth by CRR Article 63;
- additional paid-in capital related to Tier-2 items;
- the amount arising from provisions in excess of expected losses (in this calculation, performing loans are clearly separated from loans in default).

Deductions comprise equity interests in eligible banking, financial and insurance institutions, according to the rules on allowances for these holding companies.

Changes in Tier-2 capital

in millions of euros	Tier-2 capital

Foreign exchange effect	449
12/31/2024	**12,210**

7.4.4 Regulatory capital requirements and risk-weighted assets

In accordance with Regulation No. 575/2013 (CRR) of the European Parliament as amended by Regulation (EU) No. 2019/876 (the "CRR2"), credit risk exposures can be measured using two approaches:

- the "standardized" approach, based on external credit ratings and specific risk weightings according to Basel exposure classes;
- the "internal ratings based" (IRB) approach, based on the financial institution's internal ratings system, broken down into two categories:
  - the Foundation IRB approach – banks use only their probability of default estimates for this approach,
  - the Advanced IRB approach – banks use all their internal component estimates for this approach, *i.e.* probability of default, loss given default, exposure at default and maturity.

The methodology applied for IRB approaches is described in greater detail in Section 5 "Credit risk."

In addition to the requirements related to counterparty risk in market transactions, the regulation of June 26, 2013 provides for the calculation of an additional charge to hedge against the risk of loss associated with counterparty credit risk (CCR). Capital requirements for the Credit Valuation Adjustment (CVA) are determined using the Standardized Approach.

EU OV1 – Overview of risk-weighted assets

The table below complies with the CRR format, presenting capital requirements for credit and counterparty risks, before the CVA and after the application of risk mitigation techniques.

		Risk-Weighted Assets		Total capital requirements
		a	b	c
in millions of euros		12/31/2024	12/31/2023	12/31/2024
1	**Credit risk (excluding CCR)**	**381,359**	**384,292**	**30,509**

Common Equity Tier-1 ratio	16.2%	15.6%
Tier-1 ratio	16.2%	15.6%
Total capital adequacy ratio	18.8%	18.2%

CHANGES IN GROUPE BPCE'S CAPITAL ADEQUACY IN 2024

The Common Equity Tier-1 ratio was 16.2% on December 31, 2024, compared to 15.6% on December 31, 2023.

The change in the Common Equity Tier-1 ratio in 2024 was mainly due to:

- growth in Common Equity Tier 1-capital, driven by retained earnings (+60 basis points) and to a lesser extent by the collection of cooperative shares (+6 basis points), but mitigated notably by the increase in the deduction for insufficient provisioning of non-performing loans (-3 basis points), the prudent valuation (-3 basis points) and other impacts on equity (-3 basis points);
- the control of risk-weighted assets (+3 basis points), favored by the change in the weighting of local authorities to 0% and the transition to corporate IRBA for the high-end segment of the Banques Populaires and the Caisses d'Epargne.

At December 31, 2024, the Tier-1 ratio stood at 16.2% and the total capital ratio at 18.8% compared to 15.6% and 18.2%, respectively, at December 31, 2023. These ratio levels remain well above the regulatory requirements defined by the European Central Bank (ECB) during the Supervisory Review and Evaluation Process (SREP) in 2025.

GROUPE BPCE CAPITAL ADEQUACY MANAGEMENT POLICY

Capital and total loss absorbing capacity (TLAC) targets are determined according to Groupe BPCE's target ratings, in line with prudential constraints.

Capital adequacy management is therefore subject to a high management buffer which not only greatly exceeds prudential constraints on capital adequacy ratios, but is also well above the trigger for the Maximum Distributable Amount.

Capital and TLAC management goes beyond integrating prudential changes (*e.g.* G-SIB classification). As such, the Group predominantly builds its total loss absorbing capacity from CET1 and additionally from subordinated MREL-eligible and TLAC-eligible debt (mainly eligible Tier-2 capital and senior non-preferred debt). The issues of these eligible debts are carried out by BPCE.

Lastly, in addition to this capacity to absorb losses, Groupe BPCE has an MREL. The MREL capacity consists of instruments eligible for loss absorption, as well as senior preferred debt with residual maturity of more than one year.

The Group's current MREL requirement was received in March 2024 by the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector It amounts to 27.30% of the Group's risk-weighted assets (RWA) and is respected with a margin. It does not require the Group to modify or increase its issuance program.

With regard to the subordination constraint, Groupe BPCE complies with Articles 92a 1(a) and 494 of CRR Regulation No. 575/2013 which, since 2022, provides for a requirement of 18% of RWA plus solvency buffers, *i.e.* 22.4% of RWA. The subordination requirement in the leverage base has been set at 6.75% since 2022 pursuant to Article 92a 1(b) of the CRR. This is also respected with a margin.

CAPITAL ALLOCATION EQUITY AND SOLVENCY MANAGEMENT

The Group implemented action plans over the course of 2024 aimed specifically at ensuring the capital adequacy of its networks and its subsidiaries. BPCE SA thus subscribed for €475 million to a Tier 1 issue by Natixis, replacing a Tier 1 issue of $500 million repaid by the subsidiary. BPCE SA also set up a repayable Tier 2 subordinated loan of €60 million for the benefit of its subsidiary Banque Palatine and a second loan of €100 million granted to Natixis.

LEVERAGE RATIO

The entry into force of the Capital Requirements Regulation, known as CRR2, makes the leverage ratio a binding requirement as from June 28, 2021. The minimum requirement for this ratio is 3%, plus a buffer for global systemic banks of 0.5% in 2024.

The leverage ratio is not sensitive to risk factors and as such, it is considered as a measure that complements the solvency and liquidity management system, which already limits the size of the balance sheet. The leverage ratio is projected and managed at the same time as Groupe BPCE's solvency trajectory. The risk of excessive leverage is also measured in the internal stress test *via* the projection of the regulatory leverage ratio.

Groupe BPCE's leverage ratio, calculated according to the capital requirements regulation, known as CRR2, was 5.1% at December 31, 2024, based on phased-in Tier-1 capital.

(1) The financial statements published at December 31, 2023 take into account the effects of the application of IFRS 9 and IFRS 17 relating to insurance activities.

FINANCIAL CONGLOMERATE RATIO

As an institution exercising banking and insurance activities, Groupe BPCE is also required to comply with a financial conglomerate ratio. This ratio is determined by comparing the financial conglomerate's total capital against all the regulatory capital requirements for its banking and insurance activities.

The financial conglomerate ratio demonstrates that the institution's prudential capital sufficiently covers the total regulatory capital requirements for its banking activities (in accordance with CRR2) and insurance sector activities, in accordance with the Solvency 2 regulation.

The calculation of surplus capital is based on the statutory scope. Insurance company capital requirements, determined for the banking capital adequacy ratio by weighting the equity-method value, are replaced with capital requirements based on the solvency margin. The capital requirements within the banking scope are determined by multiplying the risk-weighted assets by the applicable rate under Pillar II, *i.e.* 15.75% at December 31, 2024, compared to 15.22% at December 31, 2023.

At December 31, 2024, Groupe BPCE's surplus capital amounted to €16.2 billion.

Supervisory Review and Evaluation Process

SREP – ICAAP PROCESS

As the supervisory authority under Pillar II, the ECB conducts an annual assessment of banking institutions. This assessment, referred to as the Supervisory Review and Evaluation Process (SREP), is primarily based on:

- an evaluation based on information taken from prudential reports;
- documentation established by each banking institution, including in particular the Internal Capital Adequacy Assessment Process (ICAAP) and the Internal Liquidity Adequacy Assessment Process (ILAAP);
- an assessment of governance & risks, the business model, share capital and liquidity.

Based on the conclusions of the SREP carried out by the ECB in 2024, Groupe BPCE shall maintain a consolidated Common Equity Tier-1 ratio of 10.59% on January 2, 2025, including:

- 1.69% in respect of Pillar II requirements (excluding Pillar II guidance);
- 2.50% in respect of the capital conservation buffer;
- 1.00% in respect of the buffer for global systemically important banks (G-SIB buffer);
- 0.90% in respect of the countercyclical buffer.

The corresponding total capital requirement is 14.65% (excluding Pillar II guidance).

With a Common Equity Tier-1 ratio of 16.2% at the end of 2024, Groupe BPCE has exceeded the specific capital requirements set by the ECB.

As regards the internal capital adequacy assessment under Pillar II, the principles defined in the ICAAP/ILAAP guidelines published by the ECB in February 2018 were applied in Groupe BPCE's ICAAP. The assessment is thus carried out using two different approaches:

- a "normative" approach aimed at measuring the impact of internal stress tests within three years of the initial Pillar I regulatory position;
- an "economic" approach aimed at identifying, quantifying, and hedging risks using internal capital over the short term (one year) and using internal methodologies. The methodologies developed by Groupe BPCE provide a better assessment of risks that are already covered under Pillar I, and also an additional assessment of risks that are not covered by Pillar I.

The results obtained using these two approaches confirmed the Group's financial soundness and no capital buffer is necessary in addition to the existing regulatory buffers.

Outlook

The objectives of the "VISION 2030" strategic plan were, with regard to the Common Equity Tier-1 ratio, to exceed 15.5%, and with regard to the subordinated MREL ratio (*i.e.* TLAC) to exceed 25.5%.

The Group remained on the list of G-SIBs (Global Systemically Important Banks) in November 2023, with a systemic buffer to be respected on the MREL and TLAC ratios of 1%.

MREL – TLAC

In addition to capital adequacy ratios, ratios aiming at verifying the Group's capacity to carry out a bail-in in the event of default are implemented via the Minimum Requirement for own funds and Eligible Liabilities (MREL) and Total Loss Absorbing Capacity. This second ratio is known as TLAC, according to the terminology of the Financial Stability Board, and in Europe it is defined in the BRRD directive and the CRR regulation as subordinated MREL. Groupe BPCE has established internal monitoring of these indicators.

The senior unsecured debt at more than one year and the Group's equity make up the numerator of the MREL ratio. The Group's current MREL requirement was received in March 2024.

The updated total MREL requirement was set at 27.30% of the Group's risk-weighted assets. The total MREL ratio reached 34.6% at December 31, 2024, compared with 33.4% at December 31, 2023.

For subordinated MREL, the numerator only includes junior liabilities through senior non-preferred debt because BPCE has renounced for the time being to use of a senior preferred debt allowance.

The TLAC ratio serves the same purpose as subordinated MREL and only applies to G-SIBs. CRR2, published at the same time as BRRD2, transcribed TLAC into positive law in the form of a minimum subordinated MREL requirement applicable to G-SIBs. As indicated above, the Group has set its own TLAC target above the regulatory requirement, which at December 31, 2024 was 22.40% of risk-weighted assets, *i.e.* 18% plus the 4.40% solvency buffers.

The SRB expects that Groupe BPCE's subordinated MREL requirement will be set at 24.7% in 2025 compared to 22.4% in 2024. This change would result from the application, as part of the calculation of the subordinated MREL, of the threshold set by default in the regulations (*i.e.* 8% of total liabilities) without application of the reductions granted in previous years to Groupe BPCE by the SRB.

TLAC (Total Loss Absorbing Capacity) rose to €122.07 billion at the end of December 2024. The subordinated MREL ratio was 26.73% on December 31, 2024, compared to 25.39% on December 31, 2023.

7.5 Credit risk

Foreword

The Group Risk division strengthened its risk management framework in 2024, particularly for Real Estate Professionals and Retail Professionals. In addition, in line with the difficulties encountered by the commercial real estate sector, reinforced monitoring has been implemented in this sector (dedicated *ad hoc* study, reporting of risk areas observed locally by the institutions, *etc.*).

7.5.1 Credit risk management

As part of its prerogatives, the Credit Risk division is responsible for the following main tasks:

- defining and revising the Group's risk management frameworks through the development of the Group's credit risk policies;
- defining the principles of Risk division through individual limits by counterparty, sectoral frameworks and countries and monitoring compliance;
- analyzing loan granting applications for amounts exceeding individual customer limits or for transactions of a particular nature or which would deviate from the principles of the Group credit policy or which are not delegated by the Group's subsidiaries;
- examining the main files managed in the Watchlist and proposing a provisioning level for defaulted files;
- assessing and controlling the level of credit risk at Group level and, more generally, monitoring the various portfolios by type of customers, asset class and sector;
- implementing the standards and methods for risk taking and management within the Group's consolidated scope in accordance with regulations;
- participating in the development and adequacy of risk measurement and management systems;
- coordinating the credit risk functions, in particular through very frequent audio-conferences, national days, regional platforms or thematic working groups;
- building and managing credit risk applications.

7.5.1.1 Credit risk management

CREDIT POLICY

The overall credit risk policy is governed in particular by the risk appetite framework, structured around the definition of the level of risk and risk appetite indicators. The balance between the search for profitability and the level of risk accepted is reflected in Groupe BPCE's credit risk profile and in the Group's credit risk policies. Groupe BPCE refrains from engaging in activities over which it has insufficient control. Activities with high risk-reward profiles are identified and strictly controlled.

In general, Groupe BPCE's credit approval process is based first and foremost on the customer's ability to repay the loan, *i.e.* future cash flows, with clearly identified sources and channels and a reasonably realistic probability of occurrence.

RATING POLICY

Credit risk measurement relies on internal rating systems tailored to each category of customer and transaction. The Group Risk division is responsible for defining and verifying the performance of these rating systems.

An internal rating methodology common to all Groupe BPCE institutions (specific to each customer segment) is applied for "individual and professional customers", as well as for "corporate customers", "real estate professionals", "project financing", "central banks and other sovereign exposures", "central governments", "public-sector and similar entities" and "financial institutions".

CREDIT RISK GOVERNANCE

A dedicated governance structure is in place for the construction of all credit risk management, granting and classification systems.

Each standard, policy, system or method is the focus of workshops, organized and led by the Group Risk division teams, made up of Group representatives. The purpose of these workshops is to define the rules and expectations for each topic addressed, as it relates to the Group's risk appetite and regulatory constraints. These topics are then decided by a Group committee made up of executive managers.

Compliance with regulatory and internal caps and limits is regularly checked by the Group Risk and Compliance Committee and the Risk Committees of the Supervisory Board. Each institution is responsible for ensuring compliance with internal limits.

The Group Risk division also defines, for all institutions, the common framework of Level 2 permanent controls (CPN2) for credit risks and contributes to the coordination of Level 1 controls.

The Risk function is organized according to the principle of subsidiarity with a strong functional link:	• each institution in Groupe BPCE has a Risk division covering credit and counterparty risks. Each institution manages its risks in accordance with Group standards and prepares a risk report every six months;
	• each Head of Risk is in close contact with the Group Chief Risk Officer. The latter reports to the Chairman of the Management Board of Groupe BPCE and is a member of the Executive Management Committee.
The supervision of grants and the monitoring of portfolios declined or adapted in each Group institution are supervised within a system made up of:	• credit risk policies and sector policies on credit; • Group internal caps, internal caps for institutions in the Banque Populaire and Caisse d'Epargne networks and all BPCE subsidiaries; • a set of Group internal limits covering the major categories of counterparties (a company made up of a parent and its subsidiaries) on a consolidated basis, for the main asset classes excluding retail, supplemented as needed by local limits; predominantly based on the internal rating approach, these methodologies are used to define the maximum risk that Groupe BPCE is willing to take; • at each Group institution, a pro-con analysis or counter-analysis procedure involving the Risk function, which holds the right to veto decisions, calling on the higher-level Credit Committee for arbitration where necessary, or the duly authorized representative.

HIGHLIGHTS

The requirement was also maintained for the operational integration of the main standards, rules and policies in institutions in order to guarantee uniform implementation within the Group.

The 2024 fiscal year, in a context of higher interest rates with inflation appearing to slow down. Geopolitical uncertainties as well as economic caution thwarted business ventures, leading to lower production of loans. The number of defaults in France has also increased significantly and is back to pre-Covid-19 levels. The commercial real estate sector was also strongly impacted by the economic situation, due in particular to an increase in the price of credit for individual customers and rising prices in new buildings given the increase in construction costs. Reinforced monitoring of this sector has been put in place by the Group Risk division.

7.5.1.2 Credit risk supervision

7.5.1.2.1 CREDIT RISK SUPERVISION SYSTEM

Concentration risk framework

The internal caps system used across the Group, which are lower than the regulatory caps, is aimed at increasing the division of risks and is applied to all Group entities.

The internal caps system used by the institutions is lower than or equal to the Group internal caps, and is applied to the Banque Populaire and Caisse d'Epargne networks and the subsidiaries.

A Group individual limits system has also been established for the major counterparties as well as exposure levels for countries and industries. These limits apply to all Group institutions. The individual limits system in place, aimed at dividing up risks and making them individually acceptable in terms of each institution's profits and capital position, *i.e.* without including the value of collateral, to define the maximum amount of acceptable risk for a given counterparty. The aim of this position is to neutralize the operational risk associated with the recognition of collateral and with execution in the event the institution is required to call in the collateral.

Risk monitoring is organized on a sector-by-sector basis *via* a sector watch shared with all the Group's institutions. Sector policies and limits have been established for that purpose.

On behalf of the Group Risk and Compliance Committee, the Group Risk division measures and verifies that these risk supervision mechanisms (individual and topical limits) are correctly implemented at each institution.

The Group Supervisory Board is kept informed as Group internal caps are monitored, and is notified of any possible breaches of limits defined in accordance with the risk appetite framework.

Method used to assign operational limits on internal capital

The quarterly Group risk dashboard is used to monitor consumption of risk-weighted assets in the Group's main asset classes: it compares any differentials in terms of changes between gross exposures and consumption of RWA.

By using these systems, the Group is able to accurately monitor the change in capital needed to cover risks in each asset class, while also observing any changes in the quality of the asset classes in question.

Correlation risk policy

Correlation risk is governed by a special decision-making process, where a counterparty offers its own shares as collateral. A top-up clause is systematically required on such transactions.

For wrong-way risk, usually associated with collateral swaps between credit institutions, BPCE's liquidity reserve procedure defines this criterion as follows: "the counterparty to the repo and the securities received as collateral for that repo shall not be included in the same regulatory group".

However, these transactions may be reviewed on a case-by-case basis, under a special decision-making process, where the collateral consists exclusively of retail loans serving to finance residential real estate.

7.5.1.3 Quality assessment of loan outstandings and impairment policy

System governance

From a regulatory standpoint, Article 118 of the Ministerial Order of November 3, 2014 as amended on internal control specifies that "at least once each quarter, supervised companies must perform an analysis of changes in the quality of their loan commitments". In particular, this review should determine, for material transactions, whether any reclassifications need to be conducted among the internal risk credit risk assessment categories and, if necessary, the appropriate allocations to non-performing loans and charges to provisions.

When a counterparty is placed on either a local Watchlist (WL) or the Group WL, supervision of the counterparty in question is enhanced (Performing WL) or the decision is made to record an appropriate provision (Default WL).

Statistical provisions for performing loans, calculated at Group level for the networks in accordance with IFRS 9 requirements, are measured using a methodology validated by Group committees (reviewed by an independent unit and validated by the Group Models Committee and the RCCP Standards & Methods Committee). These provisions include scenarios of changes in the economic environment determined each year by the Group's Economic Research team, coupled with probabilities of occurrence reviewed quarterly by the Group Watchlist and Provisions Committee.

The allocated provisioning is calculated by taking into account the present value of the guarantees in a prudent approach.

Any defaulted exposures not covered by provisions shall be subject to enhanced justification requirements to explain why no provision has been recorded.

Netting of on-balance sheet and off-balance sheet transactions

For credit transactions, Groupe BPCE is not required to carry out netting of on-balance sheet and off-balance sheet transactions.

Recognition of provisions and impairment under IFRS 9

Since 2023, Groupe BPCE has continued to deploy a prudent IFRS 9 provisioning policy in an economic context that was uncertain due to the geopolitical context, the rise in interest rates and the level of inflation, which remained high.

Provisioning methods

Debt instruments classified as financial assets at amortized cost or at fair value through other comprehensive income, loan commitments and financial guarantees given that are not recognized at fair value through profit or loss, as well as lease receivables and trade receivables, shall be systematically impaired or covered by a provision for expected credit losses (ECL).

Impairment is recorded, for financial assets which have not been individually subject to ECL, based on observed past losses but also on reasonable and supportable DCF forecasts.

Financial instruments are divided into three categories (Stages) depending on the increase in credit risk observed since initial recognition. A specific credit risk measurement method applies to each category of instrument:

1. Stage 1 (S1)	2. Stage 2 (S2)	3. Stage 3 (S3)
Loan outstandings for which credit risk has not increased materially since the initial recognition of the financial instrument. The impairment or the provision for credit risk corresponds to 12-month expected credit losses.	Performing loans for which credit risk has increased materially since the initial recognition of the financial instrument are transferred to this category. The impairment or the provision for credit risk is determined on the basis of the financial instrument's lifetime expected credit losses.	Impaired exposures, within the meaning of IFRS 9, for which there is objective evidence of impairment loss due to an event which represents a known credit risk occurring (*e.g.* non-repayment of the loan at its normal term, collective proceeding, past due payments recorded by the customer, customer unable to finance an investment in new equipment, etc.) after the initial recognition of the instrument in question. This category covers receivables for which a default event has been identified, as defined in Article 178 of the European regulation of June 26, 2013 on prudential requirements for credit institutions.

The Group implements a S3 provisioning policy for its corporate customers. This policy lays the foundations for the calculation of loan impairment and defines the methodology for determining individual impairment based on expert opinion. It also defines the components (credit risk measurement, accounting principles on the impairment of customer receivables under IFRS and French GAAP) and data to include in a non-performing loan or disputed loan assessment, as well as essential items to include in a provisioning record.

A corporate provisioning policy for Group exposures of less than €15 million has been defined and implemented. A provisioning policy was also put in place for professionals in 2024.

The methodology section for determining individual impairment based on expert opinion defines impairment approaches: going concern, gone concern, combined approach.

Groupe BPCE applies the contagion principle. This principle is particularly useful when identifying groups of customer counterparties by using clusters within these groups.

A methodology concerning the practice of haircuts on the value of guarantees to take account of the inevitable risks has been defined and implemented.

Impairment under IFRS 9

Impairment for credit risk amounts to 12-month expected credit losses or lifetime expected credit losses, depending on the level of increase in credit risk since initial recognition (Stage 1 or Stage 2 asset). A set of qualitative and quantitative criteria is used to assess the increase in credit risk.

A significant increase in credit risk is measured on an individual basis by taking into account all reasonable and supportable information and by comparing the default risk on the financial instrument at the reporting date with the default risk on the financial instrument at the date of initial recognition. Any significant increase in credit risk shall be recognized before the transaction is impaired (Stage 3).

In order to assess a significant increase in credit risk, the Group implemented a process based on rules and criteria which apply to all Group entities:

- for the portfolios of individual customers, professionals and small and medium-sized companies, the quantitative criterion is based on the measurement of the difference between the counterparty's rating at the time of granting and its rating at the closing date. This difference – or denotch – is measured on a master scale common to all these counterparties. The number of denotches before downgrading to Stage 2 depends on the rating at grant;
- for the large corporate, bank and specialized financing loan books, it is based on the change in rating since initial recognition;
- these quantitative criteria are accompanied by a set of qualitative criteria, including the existence of a payment more than 30 days past due, the classification of the contract as at-risk, the identification of forbearance exposure or the inclusion of the portfolio on a Watchlist;
- exposures rated by the large corporates, banks and specialized financing software tool are also downgraded to Stage 2 depending on the sector rating and the level of country risk.

The financial assets for which there is objective evidence of impairment loss due to an event representing a counterparty risk and occurring after initial recognition will be considered as impaired and classified as Stage 3. Identification criteria for impaired assets are similar to those under IAS 39 and are aligned with the default criterion. The accounting treatment of restructuring operations due to financial hardships is similar to their treatment under IAS 39.

The expected credit losses on Stage 1 or Stage 2 financial instruments are measured as the product of several inputs:	• cash flows expected over the lifetime of the financial instrument, discounted at the valuation date – these flows are determined according to the characteristics of the contract, its effective interest rate and the level of prepayment expected on the contract; • loss given default (LGD); • probabilities of default (PD), for the coming year in the case of Stage 1 financial instruments and until the contract's maturity in the case of Stage 2 financial instruments.
The Group draws on existing concepts and mechanisms to define these inputs, and in particular on internal models developed to calculate regulatory capital requirements and on projection models used in the stress test system. Certain adjustments are made to comply with the specifics of IFRS 9.	
IFRS 9 inputs:	• aim to provide an accurate estimate of expected credit losses for accounting provision purposes, whereas prudential inputs are more cautious for regulatory framework purposes. Several of the safety buffers applied to prudential inputs are therefore restated; • shall allow expected credit losses to be estimated until the contract's maturity, whereas prudential inputs are defined to estimate 12-month expected losses. 12-month inputs are thus projected over long periods; • shall be forward-looking and take into account the expected economic environment over the projection period, whereas prudential inputs correspond to through-the-cycle estimates (for PD) or downturn estimates (for LGD and the flows expected over the lifetime of the financial instrument). Prudential PD and LGD inputs are therefore also adjusted to reflect forecasts of future economic conditions.

Inputs are adjusted to economic conditions by defining three economic scenarios over a three-year period. The variables defined in each of these scenarios allow for the distortion of the PD and LGD inputs and the calculation of an expected credit loss for each economic scenario. Projections of inputs for periods longer than three years are based on the mean reversion principle. The models used to distort the PD and LGD inputs are based on those developed for the stress test system for consistency reasons. The models for calculating the various parameters used to calculate provisions (PD, LGD, segmentation, etc.) are regularly updated to ensure that they maintain their accuracy, meet the regulator's expectations and more generally to improve their relevance.

The economic scenarios are associated with probabilities of occurrence, making it possible to calculate the average probable loss, which is used as the IFRS 9 impairment amount.

These scenarios are defined using the same organization and governance as those defined for the budget process, requiring an annual review based on proposals from the Economic Research department. For consistency purposes, the Baseline scenario serves as the budget scenario. Two variants – an optimistic view and a pessimistic view – are also developed around this scenario. The probability of occurrence of each scenario is reviewed on a quarterly basis by the Group Watchlist and Provisions Committee. The inputs thus defined are used to measure expected credit losses for all rated exposures, whether they were subject to the IRB or the standardized approach for the calculation of risk-weighted assets. For unrated exposures (insignificant for Groupe BPCE), prudent valuation rules are applied by default.

The IFRS 9 input validation process is fully aligned with the Group's existing model validation process. The validation of the parameters follows a review process by an independent internal model validation unit, then the review of this work is presented to the Group Model Committee. Finally, quarterly monitoring of recommendations by the Group Model Committee has replaced annual monitoring.

7.5.1.3.2 FORBEARANCE, PERFORMING AND NON-PERFORMING EXPOSURES

Forbearance results from the combination of a concession and financial hardships, and may involve performing or non-performing loans. Forced restructuring, over indebtedness proceedings, or any kind of default as defined by the Group standard, which involves a forbearance measure as previously defined, results in classification as a non-performing forborne exposure.

The identification of these situations is based on an expert's guide to the qualification of forbearance situations, in particular on short, medium and long-term financing of non-retail counterparties.

A permanent control system covering forbearance situations relating to non-retail exposures completes the system.

7.5.1.4 Permanent control of credit risks

According to the principle of subsidiarity, the local Risk divisions are responsible for compliance with the permanent control system (deployment, implementation, analysis of results and action plans). They carry out Level 2.1 controls.

The scope of permanent Level 2 controls relating to credit risks covers the process of granting the various asset classes and specific risk pockets. In 2023, a dedicated permanent risk control division was created within the Governance and Risk Control department. It centralizes all permanent Level 2 controls for all risks. The permanent risk control division performs Level 2.2 controls on credit files and on the proper implementation of Group credit risk policies in the Group's institutions.

The control, based on a risk-based approach, covers, in particular:

- adequate coverage of credit risks by controls based in particular on the assessment of credit risks in the macro-risk mapping;
- management of the permanent control framework ensuring convergence between Level 1 and Level 2 controls.

7.5.2 Risk measurement and internal ratings

Current situation

Rating system

Internal rating system models are developed based on historical data for observed defaults and losses. They are used to measure the credit risks to which Groupe BPCE is exposed, expressed as a one-year probability of default (PD), as a Loss Given Default (LGD) and as Credit Conversion Factors (CCF), depending on the characteristics of the transactions.

These internal rating systems are also applied to risk supervision, authorization systems, internal limits on counterparties, etc. and may also serve as a basis for other processes, such as statistical provisioning.

The resulting risk metrics are then used to calculate capital requirements once they have been validated by the supervisory authority in compliance with regulatory requirements.

Internal rating system governance

The internal governance of rating systems is centered on the development, validation, monitoring, and modification of decisions linked to the evolution of these systems. Groupe BPCE's Risk division works independently throughout the Group (Banque Populaire and Caisse d'Epargne networks, Natixis, and other subsidiaries) to review the performance and appropriateness of credit and counterparty risk models, as well as structural balance sheet risks, market risks, and non-financial risks, including operational risks. In performing this duty, the Group Risk division relies on robust governance defined as part of the Model Risk Management (MRM) system applicable to all Group models, described in Section 6.15.

After the completion of this governance process, internal control reports and statements of decisions are made available to Group management (and supervisory authorities for internal models used to determine capital requirements). Each year, a summary of the performances and adequacy of internal models is presented to the Risk Committee of the Group Supervisory Board.

Model development process

The Group Risk division relies on a formalized process describing the main steps taken in developing any new model. This document, which serves as a guide for the entire documentation and validation process, is based on:

- a literary and general description of the model, indicating its scope of application (counterparty type, product type, business line, etc.), the main assumptions on which it is based, and any aspects not covered;
- a descriptive diagram summarizing how the ultimately chosen model works, indicating the various inputs, processes and outputs;
- a detailed description of the modeling steps and approach;
- a literary description of the model's main risk factors.

The internal models developed must meet demanding criteria in terms of risk discrimination and qualification and be assessed by the modeling teams as part of the procedure for assessing the model of the MRM system described above.

These models incorporate the regulatory changes enacted by the European Banking Authority under its IRB Repair program, aimed at improving the comparability of risk parameters input to the models.

Review of internal ratings-based models

The Groupe BPCE Risk division is responsible for reviewing the Group's internal models whenever a new model is being developed or an existing model changed. It also performs the annual review of backtests on credit, market and Asset/Liability management risk models.

The validation team conducts independent analyses in compliance with a charter and procedures that describe interactions with the modeling entities and the steps of the review. This review is based on a set of qualitative and quantitative criteria, and addresses the following seven points:

- data and parameters used by the model: analysis of the quality and representativeness of the data, the integrity of the controls, the error reports, the completeness of the data, etc.;
- methodology and design: analysis of the theory underlying the model, analysis of approximations, calibration methods, risk indicators, aggregation rules, model benchmarking, accuracy and convergence analysis;
- permanent monitoring: the validation team ensures the existence of a monitoring methodology for the model and assesses the risk associated with the implementation of this methodology;
- model performance: assessment of the risk related to the performance of the model both during the design phase and periodically;
- IT development: counter-implementation, code analysis, tests;
- documentation: analysis of the quality and completeness of the methodological documentation received relating to modeling, IT code, model monitoring, data, model governance and IT development;
- governance of the model: assessment of the model's compliance with the Bank's internal standards throughout the model's life cycle.

The level of detail in the review is adjusted for the type of work examined. In any event, it must at least include a document review focusing on the quantitative aspects of rating systems. For a new model or a major change to an existing model, in addition to this review, the computer codes are checked and additional tests are run (comparative calculations).

In conclusion, the review provides an opinion on the validity of the models and the associated parameters. It also generates an opinion on compliance with prudential regulations. Where necessary, the review is accompanied by recommendations.

Finally, as a second line of defense, the model validation team performs an assessment of the model as part of the previously described MRM system.

Model mapping

In terms of the Corporate portfolio, the ECB's decision letter concerning the transition to IRBA was received at the end of January 2024. This file includes LGD, EAD and PD models: a new model for SCIs, an update of the calibration on the non-profit expert grids and the Small Business models and an extension of the model for medium-sized companies on operational holding companies and on the NCE portfolio.

The roll-out of these new developments began in July 2024, with the first transitions to IRBA on both networks for the September 2024 order, covering the scope of application of the High Segment model. It was followed, in January 2025, by the launch of the new version of the Small Business models. The expert grids on Associations and the new model on SCI will be rolled out in the second quarter of 2025.

Models for the Sovereign segment are no longer used to calculate capital requirements since the last quarter of 2024. However, new LGD and EAD models were authorized by the ECB in October 2024 for Large Corporates. The launch is scheduled for March 2025.

The Oney subsidiary has been approved for retail customer credit models in France, with work underway to overhaul the system. The Portugal, Spain and Poland scopes use the standardized approach.

The following table lists the internal credit models used by the Group for risk management purposes and, where authorized by the supervisor, to calculate capital requirements for the Banque Populaire and Caisse d'Epargne networks, Natixis and its subsidiaries, Crédit Foncier and Banque Palatine.

Exposure class	Portfolio	Number of PD (Probability of Default) models	Description/ Methodology	Portfolio	Number of LGD (Loss Given Default) models	Description/ Methodology	Number of CCF/EAD (exposure to default)	Description/ Methodology
Sovereigns, central governments and central banks	Sovereigns and affiliates	1 (NA)	Expert criteria including quantitative and qualitative variables/economic and descriptive variables	Sovereigns and affiliates	1 (NA)	Expert criteria including quantitative and qualitative variables	1 (NA)	Application of regulatory inputs
			Portfolio with low default risk					
	Multilateral development banks	1	Expert criteria					
			Portfolio with low default risk					
Public sector	Municipalities (communes), departments, regions, social housing, hospitals, etc.	10 (NA*)	Expert criteria/statistical modeling (logistic regression)					
			Portfolio with low default risk					
Financial institutions	OECD or non-OECD banks, brokers/dealers	2	Expert criteria	Banks	1	Expert criteria including quantitative and qualitative variables	1	Application of regulatory inputs
			Portfolio with low default risk					
Corporate customers	Large corporates (Rev. >€1 billion)	7	Expert criteria including quantitative and qualitative variables, depending on the business sector					
			Portfolio with low default risk					
	Small and medium-sized companies (Rev. >€3 million)	10 (o/w 2 NA)	Statistical models (logistic regression) or flat scores, on companies publishing parent company or consolidated financial statements, mainly based on balance sheet data depending on the business sector, and banking behavior/history	Other contracts (general, property investment companies, etc.)	8 (o/w 1 NA)	Models based on estimated losses, segmented by type of contract and guarantee, or expert criteria	2 (o/w 1 NA)	Conversion factors, segmented by type of contract
	Non-profits and Insurance companies	2	Expert criteria including quantitative and qualitative variables	Leasing	2	Models based on estimates of asset resale conditions, segmented by type of asset financed		
			Portfolio with low default risk					
	Specialized financing (real estate, asset pool, aircraft, etc.)	6 (o/w 1 NA)	Expert criteria based on features of financed goods/projects	Specialized financing (real estate, asset pool, aircraft, etc.)	4	Models based on estimates of asset resale conditions or future cash flows		
			Portfolio with low default risk					
Retail	Individual customers	7	Statistical models (logistic regression) including behavioral and socioeconomic variables, differentiated by customer profile	Residential real estate	5 (o/w 1 NA)	Models based on estimated losses, segmented by type of contract and guarantee	3 (o/w 1 NA)	Conversion factors, segmented by type of contract
	Professional customers (socioeconomic category differentiated according to certain sectors)	10	Statistical models (logistic regression) including balance sheet and behavioral variables					
	Residential real estate	5 (o/w 2 NA)	Statistical models (logistic regression) including behavioral and socioeconomic variables, or project description variables (quota, etc.), differentiated by customer profile	Other individual and professional customers	4	Models based on estimated losses, segmented by type of contract and guarantee	2	Conversion factors and flat-rate values, segmented by type of contract
				Leasing	2	Models based on estimates of asset resale conditions, segmented by type of asset financed		
	Revolving loans	8	Statistical models (logistic regression) including behavioral and socioeconomic variables	Revolving loans	2	Models based on estimated losses, segmented by type of contract	2	Conversion factors, segmented by type of contract

* NA refers to models not yet approved for the determination of capital requirements.

INTERNAL RATINGS-BASED APPROACHES – RETAIL CUSTOMERS

For retail customers, Groupe BPCE has established standardized internal ratings-based methods and centralized ratings applications used to assess the credit quality of its loan books for better risk supervision. For the Banque Populaire and Caisse d'Epargne networks, they are also used to determine capital requirements under the Advanced IRB method.

The probability of default of retail customers is modeled by the Risk division, based in large part on the banking behavior of the counterparties. The models are segmented by type of customer, distinguishing between individual and professional customers (with or without balance sheets) and according to products owned. The counterparties in each segment are automatically classified using statistical models (usually logistic regression models) into similar and statistically separate risk categories. Probability of default is estimated for each of these categories, based on the observation of average default rates over the longest period possible so as to obtain a period representative of the possible variability of the observed default rates. These estimates are systematically adjusted by applying margins of conservatism to cover any uncertainties. For comparison purposes, risk reconciliation is carried out between internal ratings and agency ratings.

Loss given default (LGD) is an economic loss measured by incorporating all inherent factors in a transaction as well as the costs incurred during the collection process. LGD estimation models for retail customers are applied specifically to each network. LGD values are first estimated by product, and based on whether or not any collateral has been provided. Other factors may also be considered secondarily, where they can be used to statistically distinguish between degrees of loss. The estimation method employed is based on the observation of marginal collection rates, depending on how long the customer has been in default. The advantage of this method is that it can be directly used to estimate LGD rates applied to performing loans and ELBE rates applied to loans in default. Estimates are based on internal collection histories for exposures at default over an extended period. Two margins of conservatism are then systematically added: the first to cover estimate uncertainties and the second to mitigate any economic slowdown effect.

Groupe BPCE uses two models to estimate EAD. The first estimates a Credit Conversion Factor (CCF) for off-balance sheet exposures. This model is automatically applied when off-balance sheet exposures are deemed material (*i.e.* exceeding the limits set for each type of product). The second estimates a flat increase in the balance sheet for non-material off-balance sheet exposures.

INTERNAL RATINGS-BASED APPROACHES – NON-RETAIL CUSTOMERS

Groupe BPCE has comprehensive systems for measuring non-retail customer risks, using either the Foundation IRB or Advanced IRB approach depending on the network and the customer segment. These systems can also be used to assess the credit quality of its loan books for better risk supervision.

The rating system consists in assigning a score to each counterparty. Given the Group's cooperative structure, a network of officers is responsible for determining the customer's rating for the Group based on the uniqueness of the score. The score assigned to a counterparty is usually suggested by a model, then adjusted and validated by Risk function experts after they perform an individual analysis. This process is applied to the entire Non-Retail portfolio, except the new models reserved for Small Businesses, which are automatically rated (as with the Retail portfolio). The counterparty rating models are mainly structured according to the type of counterparty (corporates, institutions, public sector entities, etc.) and size of the company (measured by its annual revenues). When volumes are sufficient (SMEs, ISEs, etc.), the models rely on statistical modeling (logistic regression methods) of customer defaults, combined with qualitative questionnaires.

Failing that, grids built by experts are used. These consist of quantitative elements (financial ratios, solvency, etc.) derived from financial data and qualitative elements assessing the customer's economic and strategic dimensions.

The rating methodologies for low-default portfolios are expert-based; qualitative and quantitative criteria (corresponding to the characteristics of the counterparty to be rated) are used to link the counterparty to a score and a rating, which is then linked to a PD. This PD is based on observation of external default data, but also on internal rating data. A PD scale cannot be quantified due to the low number of internal defaults.

With respect to country risk, the system is based on sovereign ratings and country ratings that limit the ratings that can be given to non-sovereign counterparties. The rating scale is built using past Standard & Poor's ratings to ensure the direct comparability in terms of risks with the rating agencies.

For the new Small Businesses, High Segment, SCI and NGO modules, dedicated scales per model have been defined for regulatory calculations. These scales are connected with the rating scale for internal risk management. For statistical models, the calibration of probabilities of default on the scales defined for regulatory calculations is based on the same principles as those set out for retail customers (in particular the historic representation of default rates, as well as the estimation of uncertainty margins).

LGD models (excluding retail customers) are predominantly applied by type of counterparty, type of asset, and whether or not any collateral has been provided. Similar risk categories are then defined, particularly in terms of collections, procedures and type of environment. LGD estimates are assessed on a statistical basis if the number of defaults is high enough (*e.g.* for the Corporate customers asset class). Past internal data on collections covering the longest possible period are used. If the number of defaults is not high enough, external databases and benchmarks are used to determine expert rates (*e.g.* for banks and sovereigns). Finally, some values are based on stochastic model, for loans in collection. Downturn LGD is checked and margins of conservatism are added if necessary.

Groupe BPCE uses two models to estimate EAD for corporates. The first estimates a Credit Conversion Factor (CCF) for off-balance sheet exposures. This model is automatically applied when off-balance sheet exposures are deemed material (*i.e.* exceeding the limits set for each type of product). The second estimates a flat increase in the balance sheet for non-material off-balance sheet exposures.

STANDARDIZED APPROACH

The "risk measurement and internal ratings" section describes the various approved models used by Groupe BPCE for the different exposures classes. Where the Group does not have an internal model authorized for use in determining capital requirements for a given exposure class, they have to be estimated based on corresponding inputs under the standardized approach. These inputs are based in particular on the credit assessments (ratings) performed by rating agencies recognized by the supervisory authority as meeting ECAI (External Credit Assessment Institutions) requirements, such as Fitch Ratings, Moody's, Standard & Poor's, and Banque de France for Groupe BPCE.

In accordance with Article 138 of Regulation No. 575/2013 (Capital Requirements Regulation or CRR) on capital requirements for credit institutions and investment firms, where a counterparty has been rated by several rating agencies, the counterparty's rating is determined on the basis of the second highest rating.

When an external credit rating directly applicable to a given exposure is required and exists for the issuer or for a specific issuance program, the procedures used to determine the weighting are applied in accordance with CRR Article 139.

For fixed-income securities (bonds), short-term external ratings of the bond take precedence over external ratings of the issuer. If there are no external ratings for the bond, the issuer's long-term external rating is taken into account for senior debt only, except in the specific case of exposure to institutions whose risk weight is derived from the credit rating of the sovereign country in which it is established.

BACKTESTING

All three credit risk inputs are subject to yearly backtesting in order to verify the performance of the rating system. More specifically, backtesting is aimed at measuring the overall performance of models used, primarily to ensure that the model's discriminating power has not declined significantly relative to the modeling period.

Observed default rates are then compared with estimated default rates for each rating. Ratings are checked for through-the-cycle applicability. More specifically, for portfolios with low default rates (public sector and social housing, large corporates, banks, sovereigns and specialized financing), a detailed analysis is carried out using additional indicators, including more qualitative analyses, among other things.

The scope of LGD default values is consistent with the values observed, *i.e.* limited exclusively to exposures at default. Estimated values therefore cannot be directly compared with LGD values measured in the outstanding portfolio. Downturn LGDs are also verified.

Backtesting results may call for the implementation of action plans if the system is deemed not sufficiently prudent or effective. The backtesting results and the associated action plans are discussed by First Line of Defence Committees (LOD1) and then reviewed by the Second Line of Defence Committees (LOD2) (see Internal rating system governance).

On the basis of these exercises, the rating system has been deemed satisfactory overall in terms of effective risk management. Moreover, the calibrations of risk parameters remain conservative on the whole, relative to actual risk observations.

REPORTS ON CREDIT RISK MODELS

Since the Single Supervisory Mechanism (SSM) was implemented in 2014, the European Central Bank (ECB) has been working to strengthen governance of internal model supervision through various investigations.

These include the TRIM (Targeted Review of Internal Models), aimed at assessing the regulatory compliance of internal models specifically targeted by the ECB. To that end, TRIM investigations are based on a set of standardized inspection methodologies and techniques, which the teams mandated by the ECB use on-site. BPCE was subject to TRIM reviews covering several scopes of operation, giving rise to reports prepared by the ECB: a TRIM General Topics, then three specific reviews targeting internal credit risk models (one on the Corporate portfolio and two on the Retail portfolios). As a result, several new initiatives were launched with the aim of further improving the existing system.

The European Central Bank is continuing its investigations through IMI (Internal Model Investigation). Three reviews were carried out in 2021 and 2022: two on the Retail models, in particular on the review of the PD Professional system, and one on the corporate PD models for small businesses and for companies with revenue between €10 million and €500 million (high segment). The latter resulted in a report from the supervisor and an authorization received at the end of July 2022; letters of approval for the retail models were received from the ECB in November 2023.

In 2021 and 2022, significant work was carried out on the Corporate portfolio, both on the review of the PDs of certain specific populations (real estate companies, non-financial holding companies and associations) by capitalizing in particular on the Small Business and High Segment models to file an application for IRBA approval on the BP and CE networks with new LGD/EAD models. This work was reviewed during an ECB mission in early 2023 and the authorization letter was received at the end of January 2024.

IMPACTS ON THE AMOUNT OF GUARANTEES THE INSTITUTION IS REQUIRED TO GIVE IN THE EVENT ITS CREDIT RATING IS DOWNGRADED

The CRR2 and the Delegated act require institutions to report to the competent authorities any contracts the conditions of which lead to additional liquidity outflows following a material deterioration of the credit quality of the institution (*e.g.* a downgrade in its external credit assessment by three notches). The institution shall regularly review the extent of this deterioration in light of what is relevant under the contracts it has entered into and shall notify the result of its review to the competent authorities (CRR 423.2/AD 30.2).

The competent authorities decide the weighting to be assigned to contracts deemed to have a material impact.

For contracts containing early exit clauses on master agreements (framework agreements between the bank and a counterparty for OTC derivative transactions without collateral), the early termination clause allows one counterparty to terminate the contract early following the deterioration of the credit quality of the other counterparty. Accordingly, the number of early terminations generated by credit quality deterioration shall be estimated.

It was agreed that the Group would measure outflows generated by reviewing all the Group's master agreements or credit support annexes on the OTC market, in order to assess the amount of the deposit/collateral required following a downgrade of three notches in the institution's long-term credit rating by three rating agencies (Moody's, S&P, Fitch). The calculation also includes the amount of the deposit/collateral required following a downgrade of one notch in the institution's short-term credit rating, with the Group considering such a downgrade inevitable if the institution's LT credit rating is downgraded three notches.

At Groupe BPCE level, the calculation covers BPCE SA, Natixis, Crédit Foncier and their funding vehicles: BP CB, GCE CB, BPCE

SFH, FCT HL, SCF and VMG. Some intragroup contracts generate outflows at the individual institution level, but are neutralized at the Groupe BPCE consolidated level.

The Group uses a conservative approach in its calculation:

- the impact for each contract is the maximum amount between the three rating agencies between a 1-notch downgrade in the ST rating and a 3-notch downgrade in the LT rating;
- the amount of ratings triggers reported is the sum of all impacts of a 1-notch downgrade in the ST rating and a 3-notch downgrade in the MLT rating;
- the assumption is made that all external ratings are downgraded simultaneously by the three agencies and for all rated entities;
- as the national competent authority has not issued a recommendation, a weighting of 100% is applied to reported outflows for the calculation of the LCR.

7.5.3 Use of credit risk mitigation techniques

Credit risk mitigation techniques are widely used within the Group and are divided into real guarantees and personal guarantees.

A distinction is made between guarantees having an actual impact on collections in the event of hardships and guarantees recognized by the supervisory authority in the weighting of exposures used to reduce capital consumption. For example, a personal and joint guarantee provided in due form by a company director who is a customer of the Group, and collected in accordance with regulations, may be effective without being eligible as a statistical risk mitigation factor.

In some cases, the Group's institutions choose, in addition to employing risk mitigation techniques, to take opportunities to sell portfolios of disputed loans, particularly when the techniques used are less effective or non-existent.

Credit derivatives are also used to reduce risks, and apply almost exclusively to the Corporate customers asset class (and mainly Natixis).

Definition of guarantees

A real guarantee involves one or more solidly measured movable or immovable assets that belong to the debtor or a third party. This guarantee consists of granting the creditor a real right to said asset (mortgage, pledge of real property, pledge of listed liquid securities, pledge of listed liquid merchandise with or without divestiture, pledge, third party guarantee, etc.).

The effect of this collateral is to:

- reduce the credit risk incurred on an exposure, given the rights of the institution subject to exposure, in the event of default or other specific credit events affecting the counterparty;
- obtain the transfer of ownership of certain amounts or assets.

A personal guarantee is collateral that reduces the credit risk on an exposure, due to the commitment provided by a third party to pay a set amount if the counterparty defaults or due to any other specific event.

Accounting recognition under the standardized or IRB approach

Under the standardized approach:	Under the IRB approach:	For retail customers under the IRBA approach:
Personal guarantees and real guarantees are accounted for, subject to eligibility, using an enhanced weighting of the guarantee portion of the exposure. Real guarantees such as cash or liquid collateral are deducted from the gross exposure.	Excluding retail customers, real guarantees are taken into account, subject to eligibility, by decreasing the Loss Given Default applicable to the transactions. Personal guarantees are recognized, subject to eligibility, by substituting a third party's PD with that of a guarantor.	Personal and real guarantees are taken into account, subject to eligibility, by decreasing the Loss Given Default applicable to the transactions.

Conditions for the recognition of guarantees

Articles 207 to 210 of Regulation (EU) 2019/876 of May 20, 2019, amending Regulation (EU) No. 575/2013 set out the conditions for the recognition of guarantees, in particular:

- the credit quality of the obligor and the value of the collateral shall not have a material positive correlation. Securities issued by the obligor shall not qualify as eligible collateral;
- the institution shall properly document the collateral arrangements and have in place clear and robust procedures for the timely liquidation of collateral;
- the institution shall have in place documented policies and practices concerning the types and amounts of collateral accepted;
- the institution shall calculate the market value of the collateral, and revalue it accordingly, whenever it has reason to believe that a significant decrease in the market value of the collateral has occurred.

The division of risks is a credit risk mitigation technique. In practice, individual or topical caps and limits are defined, thus reducing the bank's sensitivity to risks deemed excessive, either individually or industry-wide, in the event of a major incident.

Risk supervision activities may be implemented to reduce exposure to a given risk if it is deemed too high. They also contribute to effective division of risks.

Division of risks

The division of risks is a credit risk mitigation technique. It is reflected in the individual or topical limit systems and helps reduce each institution's sensitivity to risks considered either individually or sectorially to be too significant to carry in the event of major incidents.

Guarantors

The Banque Populaire network has historically used professionals and Mutual Guarantee Companies (such as SOCAMAs, which guarantee loans to craftsmen) to secure its loans, in addition to the real guarantees used.

For loans to individual customers, it also turns to CASDEN Banque Populaire (and primarily its Parnasse Garanties structure) to back loans to all civil servants, to Crédit Logement and increasingly to *Compagnie Européenne de Garanties et Cautions* (CEGC, a subsidiary of BPCE SA).

For home loans, the Caisse d'Epargne network mainly calls on CEGC, FGAS (*Fonds de garantie à l'accession sociale à la propriété*) and, to a lesser extent, Crédit Logement (a financial institution and a subsidiary of most of the main French banking networks). These institutions specialize in the provision of guarantees for bank loans (predominantly home loans).

FGAS offers guarantees from the French government for secured loans. Loans covered by FGAS guarantees granted before December 31, 2006 are given a 0% risk weight, and loans covered by guarantees granted after that date have a risk weight of 15%.

For their home loans, the Banque Populaire and Caisse d'Epargne networks also use several mutual insurers, such as MGEN, Mutuelle de la Gendarmerie, etc.

For professional and corporate customers, the entire Group still uses Banque Publique d'Investissement, while calling on the European Investment Fund or European Investment Bank for guarantee packages in order to substantially reduce credit risk.

In some cases, organizations such as Auxiga are used for the seizure of inventory and the transfer of its ownership to the bank as collateral for commitments made in the event of financial hardships.

Finally, on an occasional basis, Natixis purchases credit insurance for certain transactions and in some circumstances, from private for example (SCOR) or public (Coface, Hermes, other sovereign agencies) reinsurance companies, while also making use of Credit Default Swaps (CDS).

In light of the Covid crisis, the French government allowed its guarantee to be used within the scope of the SGLs granted. Groupe BPCE used this option.

Credit derivatives serving as currency or interest rate hedges are entrusted to approved clearing houses in Europe or the US for Natixis operations in this country.

Concentration of collateral volumes

By type of guarantor:	• for home loan exposures, most collateral takes the form of mortgages (risk diversified by definition, bank better protected by basing credit approval decisions on customer income), insurance-oriented guarantees such as those provided by CEGC (a subsidiary of Groupe BPCE, subject to regular stress testing), Crédit Logement (providing guarantees to multiple banks subject to the same constraints), FGAS (controlled by the French State, considered equivalent to sovereign risk). The CASDEN guarantee, issued to government employees, currently offers solid resilience according to a model based on the robust income of this particular customer base;
	• for professional customer exposures, the most common guarantees are those provided by the Banque Publique d'Investissement (BPI), subject to strict formal constraints, and mortgages. Guarantees provided by institutions such as SOCAMAs, whose solvency depends on the credit institutions of Groupe BPCE, are also used;
	• for corporate customers, the main guarantees used are Banque Publique d'Investissement mortgages and guarantees.
By credit derivative providers:	• the regulations require the use of clearing houses for interest rate risk on the new flow. This security does not, however, cover the counterparty default risk, which is a granular risk. Volumes of collateral provided by clearing houses are gradually on the rise, generating a regulated and supervised risk;
	• the currency risk is hedged at the level of each contract with the introduction of margin calls at a frequency appropriate to the risk. These transactions are matched to interbank counterparties specializing in this type of transaction, within the framework of individual limits authorized by the Group Credit Committee and counterparties.
By credit sector:	• Groupe BPCE has established sector-specific mechanisms to guide the guarantee policy based on the business sector in question. Appropriate recommendations are issued to the institutions.
By geographic area:	• Groupe BPCE is mainly exposed to France and, *via* Natixis, to other countries to a lesser extent. As a result, most guarantees are located in France.

Valuation and management of collateral comprising real guarantees

Groupe BPCE has an automatic valuation tool for real-estate guarantees available to all its networks.

Across the Banque Populaire network, in addition to real guarantees, the valuation tool also takes into account pledges of vehicles, equipment and tools, pleasure craft, and business assets.

The Caisse d'Epargne network uses the revaluation engine for real estate guarantees in all its risk segments.

Within the Group, the guarantees from Mutual Guarantee Companies recognized as providers of sureties considered equivalent to mortgages by the supervisory body are subject to a credit insurance valuation.

An enhanced Group valuation process was established to measure real estate guarantees above certain amounts. The certification obtained by BPCE Solutions immobilières (formerly Crédit Foncier Expertise), a subsidiary of BPCE since the decision was made to place CFF under run-off management, strengthens the Group's synergies.

Guarantees other than those referred to above are assessed and validated on the basis of a systematic valuation, either according to market value where the guarantees are quoted on liquid markets (*e.g.* listed securities), or based on expert opinion demonstrating the value of the guarantee used to hedge risks (*e.g.* the value of recent transactions on aircraft or ships according to their characteristics, the value of commodity holdings, the value of a pledge given on merchandise, or the value of a business based on its location, etc.).

Top 10 borrowers	23.4%	79.2%	23.2%	75.1%
Top 50 borrowers	53.1%	180.0%	51.4%	166.7%
Top 100 borrowers	70.4%	238.6%	69.1%	224.2%

*Total large exposures excluding sovereigns for Groupe BPCE (€250.2.bn at 12/31/2024).

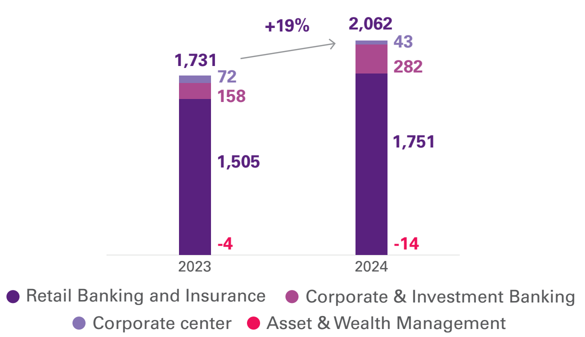
** Regulatory capital, large scope, Groupe BPCE (line 11 CA4 of Corep at 12/31/2024): €73.8bn.

The percentage of the Top 100 borrowers was slightly up over the fiscal year and did not show any particular concentration.

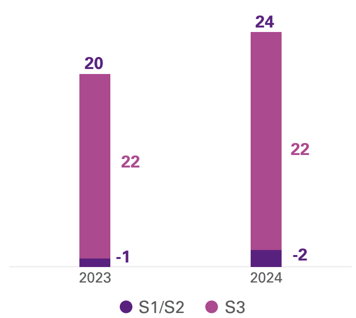
PROVISIONS AND IMPAIRMENTS

Change in the BPCE Group's net cost of risk

(in millions or euros)



Cost of risk in BP (Groupe BPCE)



In 2024, the cost of risk amounted to €2,061 million, up 19% compared to a low basis of comparison in 2023. It can be broken down as follows:

- on performing loans classified as Stage 1 or Stage 2: €177 million reversal provision in 2024 compared with €112 million reversed in 2023;
- provisions for performing loans classified as Stage 3 went from €1,843 million in 2023 to €2,238 million in 2024.

In 2024, Groupe BPCE's cost of risk stood at 24 bps in relation to gross customer outstandings. It included a provision reversal on performing loans of 2 bps (compared with a reversal of 1 bp in 2023) and an allocation of 26 bps for proven risks (compared with an allocation of 22 bps in 2023). The cost of risk stood at 24 bps for the Retail Banking & Insurance division (21 bps in 2023), including a provision reversal for performing loans of 2 bps (as in 2023) and an allocation of 26 bps on outstandings with proven risk (compared with a provision of 23 bps in 2023).

The Corporate & Investment Banking cost of risk amounted to 40 bps (24 bps in 2023) including a reversal of 6 bps for provisioning of performing loans (compared with a reversal of 4 bps in 2023) and a provision of 46 bps on outstandings with proven risk (compared with a provision of 28 bps in 2023).

The ratio of non-performing loans to gross loan outstandings stood at 2.5% on December 31, 2024, up 0.1 pp from the end of December 2023.

7.6 Counterparty risk

7.6.1 Counterparty risk management

Counterparty risk is the credit risk generated on market, investment and/or settlement transactions. It is the risk of the counterparty not being able to meet its obligations to Group institutions.

It is also related to the cost of replacing a derivative instrument if the counterparty defaults, and is similar to market risk given default.

Counterparty risk also arises on cash management and market activities conducted with customers, and on clearing activities *via* a clearing house or external clearing agent.

Exposure to counterparty risk is measured using the internal ratings-based approach and standardized approach.

Measuring counterparty risk

In economic terms, Groupe BPCE and its subsidiaries measure counterparty risk for derivative instruments (swaps or structured products, for instance) using the internal model method for the Global Financial Services (GFS) scope, or the mark-to-market method for the other institutions. In order to perfect the economic measurement of the current and potential risk inherent in derivatives, a tracking mechanism based on a standardized economic measurement is currently being instituted throughout Groupe BPCE.

GFS uses an internal model to measure and manage its own counterparty risk. Using Monte Carlo simulations for the main risk factors, this model measures the positions on each counterparty and for the entire lifespan of the exposure, taking netting and collateralization criteria into account.

The model thus determines the Expected Positive Exposure (EPE) profile and the Potential Future Exposure (PFE) profile, the latter being the main indicator used by GFS for assessing counterparty risk exposure. This indicator is calculated as the 97.7% percentile of the distribution of exposures for each counterparty.

Since 2021, the counterparty risk assessment model developed by GFS (PFE) has been deployed on the Group's exposures beyond GFS. In particular, 2022 made the assessment more reliable. The Group's entities, excluding GFS, continue to use the standard model for assessing the capital requirements for counterparty risk.

Counterparty risk mitigation techniques

Group ceilings and limits regulate counterparty risk. These are validated by the Group Credit and Counterparty Committee.

Use of clearing houses and forward financial instruments (daily margin calls under ISDA agreements, for example) govern relations with the main customers (mainly GFS/Natixis). Accordingly, the Group has implemented the EMIR requirements.

The principles of counterparty risk management are based on:	• a risk measurement determined according to the type of instrument in question, the term of the transactions, and whether or not any netting and collateralization agreements are in place; • counterparty risk limits and allocation procedures; • a value adjustment in respect of counterparty risk: the CVA (Credit Value Adjustment) represents the market value of a counterparty's default risk (see section below); • incorporation of wrong-way risk: wrong-way risk refers to the risk that a given counterparty exposure is heavily correlated with the counterparty's probability of default.
From a regulatory standpoint, counterparty risk is represented by:	• specific wrong-way risk, *i.e.* the risk generated when, due to the nature of the transactions entered into with a counterparty, there is a direct link between its credit quality and the amount of the exposure; • general wrong-way risk, *i.e.* the risk generated when there is a correlation between the counterparty's credit quality and general market factors.

The goal is to enable the bank to better understand the exposure to counterparty credit risk and thus improve the management of such exposure. Specific wrong-way risk is subject to a specific capital requirement, while general wrong-way risk is assessed using the WWR stress scenarios defined for each asset class.

In the event the Bank's external credit rating is downgraded, it may be required to provide additional cash or collateral to investors under agreements that include rating triggers. In particular, in calculating the liquidity coverage ratio (LCR), the amounts of these additional cash outflows and additional collateral requirements are measured. These amounts comprise the payment the bank would have to make within 30 calendar days in the event its credit rating were downgraded by as much as three notches.

Credit valuation adjustment (CVA)

The valuation of financial instruments traded over-the-counter by Groupe BPCE with external counterparties in its capital markets businesses (mainly GFS) and ALM activities include credit valuation adjustments. The CVA is an adjustment to the valuation of the trading book aimed at factoring in counterparty credit risks. It thus reflects the expectation of loss in fair value terms on the existing exposure to a counterparty due to the potential positive value of the contract, the counterparty's probability of default and the estimated collection rate.

The level of the CVA varies according to changes in exposure to existing counterparty risk and in the counterparty's credit rating, which may trigger changes in the Credit Default Swaps (CDS) spread used to determine the probability of default.

7.6.2 Quantitative information

Breakdown of gross counterparty risk exposures by asset class (excluding other assets) and method

7.7 Securitization transactions

7.7.1 Regulatory framework and accounting methods

Regulatory framework

Two European regulations aimed at facilitating the development of the securitization market, preventing risks and ensuring the stability of the financial system, were published in the Official Journal of the European Union on December 28, 2017. The objective of both regulations is to govern securitization transactions in the European Union.

REGULATION (EU) NO. 2017/2402 (1)

Sets a general framework for securitization (the previous rules were spread out in three different directives and two regulations). Establishes appropriate due diligence, risk retention and transparency requirements for parties to securitization transactions, sets loan approval criteria, lays down requirements for selling securitizations to retail clients, and prohibits re-securitization.

This regulation establishes a specific framework for STS (simple, transparent, and standardized) securitization by defining the criteria for transactions to meet in order to qualify as securitizations and the obligations arising from such qualification, such as the obligation to notify European Securities and Markets Authority's securitization programs.

REGULATION (EU) NO. 2017/2401 (2)

It amends the provisions of Regulation (EU) No. 575/2013 pertaining to securitization, including in particular the prudential requirements applicable to credit institutions and investment firms acting as originators, sponsors or investors in securitization transactions. Deals in particular with:

- STS securitizations, and the method for calculating the associated risk-weighted exposure amounts;
- the hierarchy of methods for calculating RWAs and determining the related parameters;
- external credit assessments (performed by external rating agencies).

REGULATORY CAPITAL REQUIREMENTS (OFR)

Hierarchy of methods: securitization capital requirements are calculated in accordance with a hierarchy of methods applied in the order of priority set by the European Commission:

- SEC-IRBA (Securitization Internal Ratings Based Approach): uses the bank's internal rating models, which shall have been approved beforehand by the supervisor. SEC-IRBA calculates regulatory capital requirements in relation to underlying exposures as if these had not been securitized, and then applies certain pre-defined inputs;
- SEC-SA (Securitization Standardized Approach): this method is the last chance to use a formula defined by the supervisor, using as an input the capital requirements that would be calculated under the current Standardized Approach (calculates regulatory capital requirements in relation to underlying exposures – based on their class – and then applies the ratio of defaulted underlying exposures to the total amount of underlying exposures);
- SEC-ERBA (Securitization External Ratings Based Approach): based on the credit ratings of securitization tranches determined by external rating agencies.

If none of these three methods is applicable (SEC-IRBA, SEC-ERBA, SEC-SA), then the risk weight applied to the securitization is 1,250%.

Details:

- introduction of new risk inputs: maturity and thickness of the tranche;
- higher risk weight floor: 15%;
- preferential regulatory treatment for STS securitization exposures;
- risk weight floor lowered to 10% (*versus* 15%);
- SEC-ERBA: STS differentiated risk weight table.

The European regulation defining the new general framework for securitization and creating a clear set of criteria for Simple, Transparent and Standardized (STS) securitizations, as well as the related amendments to the CRR, were published in the Official Journal of the European Union on December 28, 2017, with an effective date of January 2019.

Accounting methods

Securitization transactions in which Groupe BPCE is an investor (*i.e.* the Group invests directly in some securitization positions, provides liquidity, and is a counterparty for derivatives exposures or guarantees) are recognized in accordance with the Group's accounting principles, as referred to in the notes to the consolidated financial statements.

Securitization positions are predominantly recorded under "Securities at amortized cost" and "Financial assets at fair value through other comprehensive income".

Securitization positions classified as "Securities at amortized cost" are measured after their initial recognition at amortized cost based on the effective interest rate. Any position booked to "Securities at amortized cost" is impaired under "Cost of credit risk" in respect of Stage 1 or Stage 2 expected credit losses following a significant increase in credit risk.

Where a position booked to "Securities at amortized cost" is transferred to Stage 3 (defaulted exposures), the impairment is recorded under "Cost of credit risk" (Note 7.1.2 to the financial statements – "Change in gross carrying amounts and expected credit losses on financial assets and commitments").

In the event of disposal, the Group recognizes the gains (losses) on disposal in the income statement under "Net gains (losses) arising from the derecognition of financial assets at amortized cost". Except in the case where the receivable is in default: in the latter case, it is recognized under "Cost of credit risk".

Securitization positions classified as "Financial assets at fair value through other comprehensive income" are remeasured at their fair value at the closing date.

Interest income accrued or received on debt instruments is recognized in income based on the effective interest rate under "Interest and similar income" in net banking income (NBI), while changes in fair value (excluding revenues) are recorded on a separate line in other comprehensive income under "Gains and losses recognized directly in other comprehensive income". They are impaired in respect of Stage 1, 2 or 3 expected credit losses, in accordance with the same methodology used for positions classified as "Securities at amortized cost". This impairment is recorded on the liabilities side of the balance sheet under other comprehensive income recyclable to profit or loss, with a corresponding entry to "Cost of credit risk" in the income statement (Note 7.1.2 to the financial statements – "Change in gross carrying amounts and expected credit losses on financial assets and commitments").

If the position is sold, the Group recognizes the capital gains (losses) on disposal in profit or loss under "Gains (losses) on financial assets measured at fair value through other comprehensive income before tax" unless the position is in Stage 3. In such a case, the loss is recognized in "Cost of credit risk".

Securitization positions classified as "Financial assets at fair value through profit or loss" are measured at fair value, at both the initial recognition date and the reporting date. Changes in fair value over the period, interest, and gains (losses) on disposals related to securitization positions are recognized in "Gains (losses) on financial instruments at fair value through profit or loss".

Synthetic securitization transactions such as Credit Default Swaps are subject to accounting recognition rules specific to trading derivatives (Note 5.2 to the financial statements – "Financial assets and liabilities at fair value through profit or loss").

In accordance with IFRS 9, securitized assets are derecognized when Groupe BPCE has transferred substantially all of the risks and rewards of ownership of the asset.

If the Group transfers the cash flows of a financial asset but neither transfers nor retains substantially all the risks and rewards of ownership of the financial asset, and has not retained control of the financial asset, the Group derecognizes the financial asset and then recognizes separately, if necessary, as assets or liabilities any rights and obligations created or retained in the transfer. If the Group retains control of the financial asset, it continues to recognize the financial asset to the extent of its continuing involvement in the financial asset.

When a financial asset at amortized cost or at fair value through other comprehensive income is fully derecognized, a gain or loss on disposal is recorded in the income statement. The amount is equal to the difference between the carrying amount of the asset and the value of the consideration received, corrected for impairment, and where applicable for any unrealized profit or loss previously recognized directly in other comprehensive income.

Given the relatively low value of the assets in question and relative infrequency of securitization transactions, assets pending securitization continue to be recognized in their original portfolio. Specifically, they continue to be recognized under "Loans and advances to customers at amortized cost" when that is their original classification. For synthetic securitization transactions, assets are not derecognized as long as the institution retains control over them. The assets continue to be recognized in accordance with their original classification and valuation method. Consolidation or non-consolidation of securitization vehicles is analyzed in accordance with IFRS 10 based on the institution's ties with the vehicle. These principles are reiterated in Note 3.2.1 to the financial statements – "Entities controlled by the Group".

Scope of the programs:

- originator: either an entity which, on its own or through affiliates, was directly or indirectly involved in the original agreement which created the obligations (or contingent obligations) of the obligor, giving rise to the securitization transaction or arrangement; or an entity that purchases a third party's on-balance sheet exposures and then securitizes them.
- sponsor: an institution other than an originator institution that establishes and manages an asset-backed commercial paper program or other securitization scheme that purchases exposures from third-party entities.
- investor: the Group's position when it holds securitization positions in which it has invested, but in which it does not act as originator or sponsor. These are mainly tranches acquired in programs initiated or managed by external banks.

Terminology

Traditional securitization: the economic transfer to investors of financial assets such as loans or advances, transforming these loans into financial securities issued on the capital market *via* SSPEs (securitization special purpose entities).

Synthetic securitization: in a synthetic transaction, ownership of the asset is not transferred but the risk is transferred through a financial instrument, *i.e.* the credit derivative.

Re-securitization: a securitization in which the credit risk associated with a portfolio of underlying assets is divided into tranches and for which at least one of the underlying asset exposures is a securitization position.

Tranche: a contractually established segment of the credit risk associated with an exposure or number of exposures.

Securitization position: an exposure to a securitization.

Liquidity facility: the securitization position arising from a contractual agreement to provide funding to ensure timeliness of cash flows to investors.

Originator: either an entity which, on its own or through affiliates, was directly or indirectly involved in the original agreement which created the obligations (or contingent obligations) of the obligor, giving rise to the securitization transaction or arrangement; or an entity that purchases a third party's on-balance sheet exposures and then securitizes them.

Sponsor: an institution other than an originator institution that establishes and manages an asset-backed *commercial paper* program or other securitization scheme that purchases exposures from third-party entities.

Investor: the Group's position when it holds securitization positions in which it has invested, but in which it does not act as originator or sponsor. These are mainly tranches acquired in programs initiated or managed by external banks.

7.7.2 Securitization management at Groupe BPCE

Since 2014, Groupe BPCE has had a residential real estate loan securitization program to ensure the sustainability of its stock of collateral eligible for the Eurosystem, providing it with liquidity reserves.

The banking book EAD (final securitization) amounted to €21.7 billion on December 31, 2024 up by €0.9 billion year-on-year).

The positions were mainly carried by GFS (€17.4 billion), BRED (€2.8 billion) and BPCE SA (€1.4 billion, positions arising from the transfer of a portfolio of home loans and public asset securitizations from Crédit Foncier in September 2014).

The trading book EAD amounted to €610 million at December 31, 2024, and were mainly carried by GFS (€442 million) and BRED (€168 million).

The increase in EAD of the banking book was mainly due to:

- activities under long-term management of GFS (+€1.0 billion), particularly in sponsorship (+€1.3 billion), investor (+€0.6 billion) and originator (-€0.9 billion) euros);
- an increase in outstandings on the BRED scope amounting to +€0.2 billion;
- the decrease in exposures on the BPCE SA portfolio managed in run off for -€0.3 billion;
- the workout portfolio exposures of the Corporate & Investment Banking division (formerly GAPC) and BPCE are managed under a run-off method, whereby positions are gradually amortized but still managed (including disposals) in order to safeguard the Group’s interests by actively reducing positions under acceptable pricing conditions.

Breakdown of EAD by entity

GFS: €17.8 BILLION EAD SECURITIZATION (BANKING + TRADING BOOK)

The GFS exposure is mainly positioned in the banking book (€17.4 billion).

The exposure of the banking book carried by GFS as Sponsor is €11.4 billion:

- the portfolio consists of 40 lines, mainly transactions carried out through the ABCP Magenta sub-funds (€4.6 billion), and a Versailles liquidity line (€6.8 billion) issued by GFS as a guarantee;
- the average WAL (Weighted Average Life) is 1.9 years;
- RWA are calculated mainly using the SEC-SA approach;
- the portfolio is 100% senior with 15% STS.

The exposure of the banking book carried by GFS as Originator is €2.1 billion, of which 94% in senior and 100% non-STS:

- the exposure comes from a total of 222 lines, of which 8 lines amounting to €1.8 billion in synthetic securitizations issued by GFS through the Kibo and Lhotse SPVs. These SPVs are subject to Significant Risk Transfer;
- the average WAL (Weighted Average Life) is 4.9 years;
- traditional securitizations represented €0.3 billion, spread over 214 lines;
- the main approach used to calculate RWA is the SEC-IRBA method.

The exposure of the banking book carried by GFS as Investor is €4.3 billion, of which €0.4 billion in the trading book:

- the exposure as an investor is spread over 260 lines on the banking book and 161 lines on the trading book;
- the main approach used to calculate RWA is the SEC-SA.
- on the banking book, which is totally non-STS (97%), the portfolio is 93% senior and 7% mezzanine.
- on the trading book, the positions are mainly as an investor, with an average WAL (Weighted Average Life) of 2.8 years. The portfolio, which is at 77% non-STS, is at 88% mezzanine and 12% senior.

RWAs of €3.8 billion (€3.5 billion in the banking book and €0.3 billion in the trading book) are mainly calculated according to the SEC-SA approach (€2.4 billion) then the default approach (€489 million), SEC-IRBA (€321 million), SEC-ERBA (€529 million) and NPE (€113 million). In the SEC-ERBA approach, 77% of the exposure comes from lines rated at least A, of which 69% are rated AAA.

BRED: €3 BILLION EAD INVESTOR SECURITIZATION (BANKING + TRADING BOOK)

BRED’s investor exposure is essentially positioned in the banking book.

Concerning this **banking book** exposure:

- It consists of 307 lines, for an EAD of €2.8 billion, mainly housed in the NJR replacement subsidiary (80% of the volume);
- These lines are of excellent quality; 99.9% of the positions in volume are rated at least A; 89% are rated AAA. The portfolio is 99% senior with 81% STS;
- The average WAL (Weighted Average Life) is 1.6 years.

The trading book stands at €168 million in EAD for 70 lines:

- the quality is also high; the securities are at least AA-rated, including 89% AAA in volume;
- the portfolio is 100% senior, with 47% of STS securities in volume;
- the average WAL is 0.9 years.

There are no synthetic positions or re-securitizations in either portfolio.

The RWAs are calculated using the SEC-ERBA approach.

The portfolios are regularly subjected to baseline and stress scenarios that demonstrate their full resilience.

BPCE: €1.4 BILLION EAD INVESTOR SECURITIZATION

BPCE SA’s investor exposure is exclusively positioned in the banking book.

As a reminder, Crédit Foncier’s securitization positions, which boast solid credit quality, were sold to BPCE at balance sheet value, with no impact on the Group’s consolidated financial statements (more than 90% of the securitization portfolio was transferred to BPCE on September 25, 2014). These exposures are recognized in loans and advances (“L&A”) and did not present a significant risk of loss on completion, as confirmed by the external audit carried out at the time of the transfer.

BPCE SA therefore acts as an Investor (securitization positions in which the Group entity has invested, but in which the Group does not act as originator or sponsor. This includes tranches acquired in programs initiated or managed by third-party banks) and this portfolio is subject to extinctive management. It is composed of:

- 22 securitization positions in European RMBS and US Student Loans;
- with a legal maturity of more than five years and an average WAL (Weighted Average Life) of 4.1 years;
- recognized at amortized cost;
- composed only of Senior tranches, non-STS;
- high quality, with 88% of the portfolio being Investment Grade;
- no synthetic securitization or re-securitization.

The risk-weighted assets are calculated according to the SEC-ERBA approach.

This portfolio is monitored through quarterly internal stress tests (RWA and losses to completion) and demonstrates the robustness of the portfolio's credit quality.

The various relevant portfolios are specially monitored by the entities and subsidiaries, and by the central institution. Depending on the scope involved, special management or steering committees regularly review the main positions and management strategies.

The central institution's Group Risk division regularly reviews securitization exposures (quarterly mapping), changes in portfolio structure, risk-weighted assets and potential losses. Regular assessments of potential losses are discussed by the Umbrella Committee, as are disposal opportunities.

At the same time, special purpose surveys are conducted by the teams on potential losses and changes in risk-weighted assets through internal stress scenarios (risk-weighted assets and loss on completion).

Finally, the Group Risk division controls risks associated with at-risk securitization positions by identifying ratings downgrades and monitoring changes in exposures (valuation, detailed analysis). Major exposures are systematically submitted to the Group Watchlist and Provisions Committee, which meets quarterly to determine the appropriate level of provisioning.

7.7.3 Risks related to securitization transactions

Groupe BPCE networks

For originator banks, description of the internal process for assessing deconsolidating transactions from a prudential point of view, supported by an audit trail and the procedures for monitoring the transfer of risk over time through a periodic review.

Since May 2014, Groupe BPCE has implemented a securitization program for loans originated by the Caisses d'Epargne and Banque Populaire networks in order to manage and optimize two elements of Groupe BPCE:

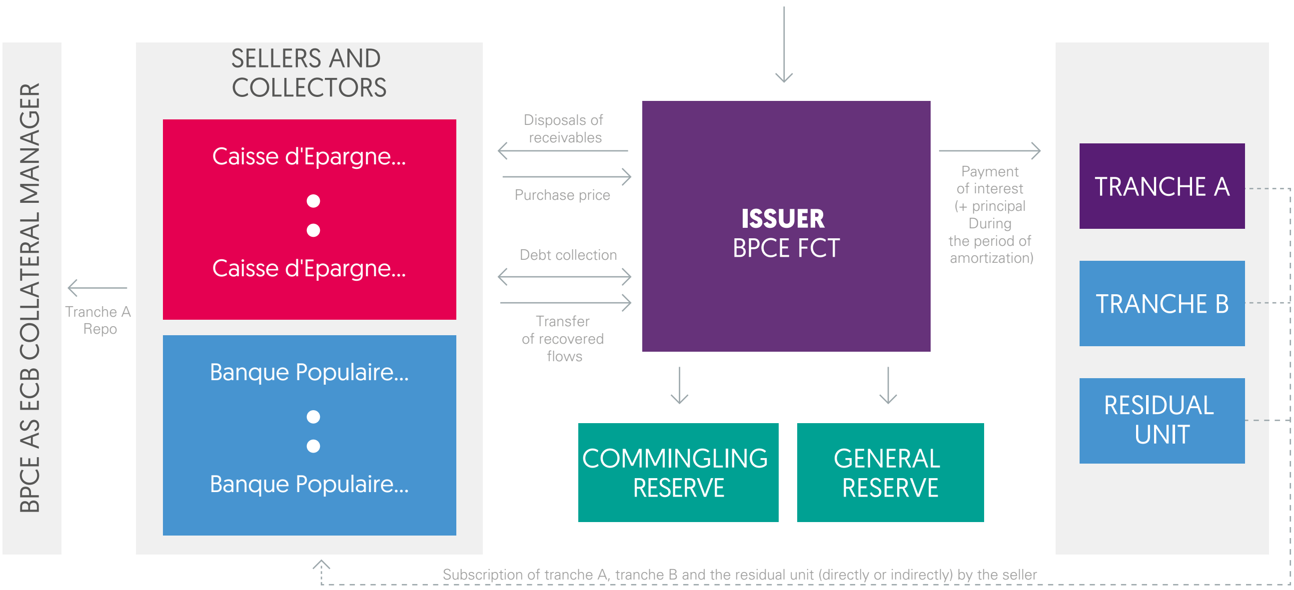
- the Group's liquidity reserves, through "self-owned" securitization transactions;
- the Group's refinancing, through securitization transactions placed on the market or with a limited number of investors.

Self-owned securitization transactions

These transactions aim to ensure the sustainability of the collateral stock eligible for the Eurosystem in the form of securities and thus contribute to the creation of the Group's liquidity reserves.

Loans granted by the BP and CEP networks are securitized by selling them to a French securitization fund (*Fonds Commun de Titrisation* – FCT).

BPCE	NATIXIS	FRANCE SECURITIZATION	BNP PARIBAS SECURITIES SERVICES
• Arranger • Reserve contributor • Agency keeping the accounts of the FCT • Transaction agent	• Custodian	• Day-to-day management of the FCT	• Listing agent • Paying agent • Data protection agent



The loan transfer operation is carried out in three stages:

1) the participants, the "Sellers", assign their receivables to the FCT;
2) the FCT issues bonds: Senior (used for liquidity purposes) and Subordinated (carrying risks) as well as Residual Units (carrying the results of the activity);
3) the Sellers subscribe for the Senior and Subordinated bonds as well as the Residual Units and then upload the Senior bonds to BPCE, which can use them and value them as liquidity reserves for the Group, in accordance with the Group's collateral centralization policy.

In this arrangement, no securities are placed outside the Group. The Sellers are the subscribers of all the securities and therefore retain all the risks and rewards of the receivables sold. In this way, the receivables removed from the balance sheet of the Sellers under French standards are reintegrated under IFRS due to the consolidation of the FCT.

It should be noted that a "demutualization FCT" has been introduced in the Subordinated Bonds and Residual Units circuit for accounting reasons: the purpose of the Demutualization FCT is to break down the quantity of Subordinated Bonds and Residual Units by institution as well as the income from these securities.

Thus, each Seller is faced with a "FCT silo" which includes its assigned receivables on the assets side and the Senior, Subordinated and Residual Units that it has subscribed on the liabilities side, in a scheme equivalent to the securitization that it would have implemented if it had acted alone.

The receivables sold continue to live according to their usual life cycle (evolution of the CRD) and their management/collection continues to be ensured by the Sellers.

In the event of a "reloadable" transaction, the FCT can regularly buy back new receivables in order to maintain its outstanding amount.

Its proper functioning is ensured by an FCT management company (France Titrisation or EuroTitrisation), together with a custodian, GFS, in compliance with the regulations of the FCT.

In addition, the Senior bonds are rated AAA by two rating agencies, which continue to monitor the transaction on an annual basis.

The loans sold in these transactions are either home loans, personal loans or equipment loans (without mixing within the same FCT) originated by the networks.

The table at the end of the presentation shows the characteristics of the transactions as well as the amounts of the securities subscribed and loans sold for the institution.

The transactions classified as "self-owned" refer to the description above.

Securitization financing transactions

After gaining expertise in securitization transactions, the Group launched operations to provide refinancing.

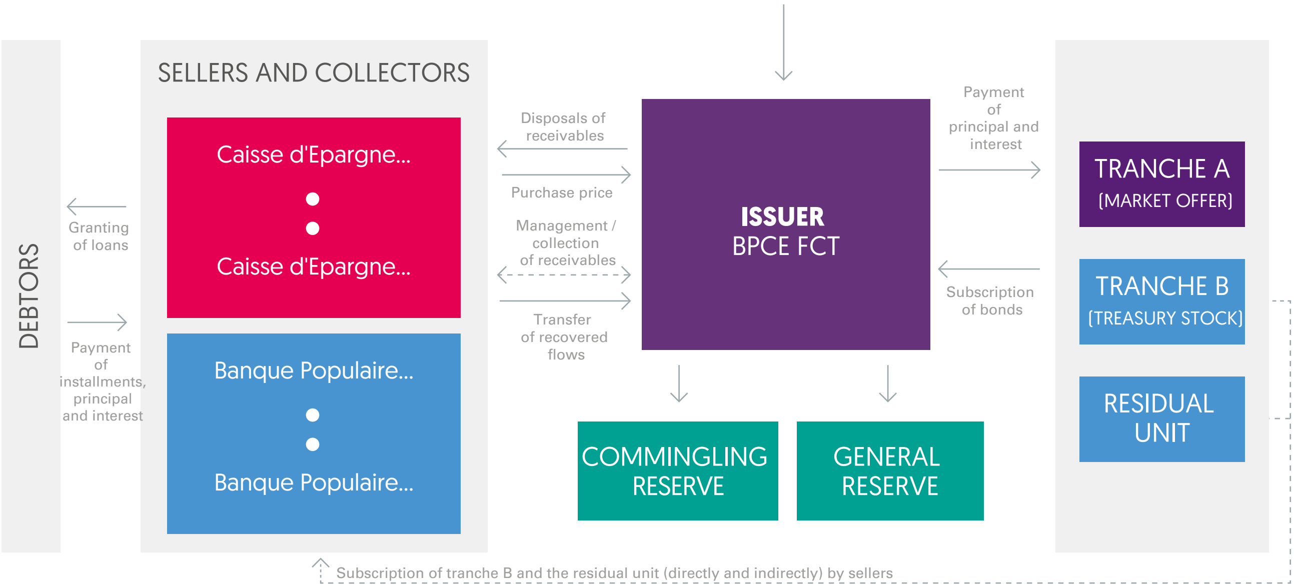
This refinancing is based on the proper repayment of the loan portfolio provided to the FCT and does not use BPCE's signature.

Generally, the price of this refinancing is below that of BPCE's unsecured refinancing.

Receivables can be contributed to the FCT in two ways:

- directly sold to the FCT:

BPCE	[NATIXIS]	[FRANCE SECURITIZATION]	[BNP PARIBAS SECURITIES SERVICES]
• Arranger • Reserve contributor • Agency keeping the accounts of the FCT • Transaction agent	• Custodian • Swap counterparty	• Day-to-day management of the FCT	• Listing agent • Paying agent • Data protection agent



The disposal operation is carried out in three stages:

1) the participants, the "Sellers", assign their receivables to the FCT;
2) to acquire the receivables, the FCT issues Senior bonds (rated AAA) and Subordinated bonds (carrying risks) as well as Residual Units (carrying the results of the activity);
3) the markets underwrite the Senior bonds, the proceeds of which are paid to the Sellers, who subscribe to the Subordinated bonds as well as the Residual Units: the risks and rewards of the loans.

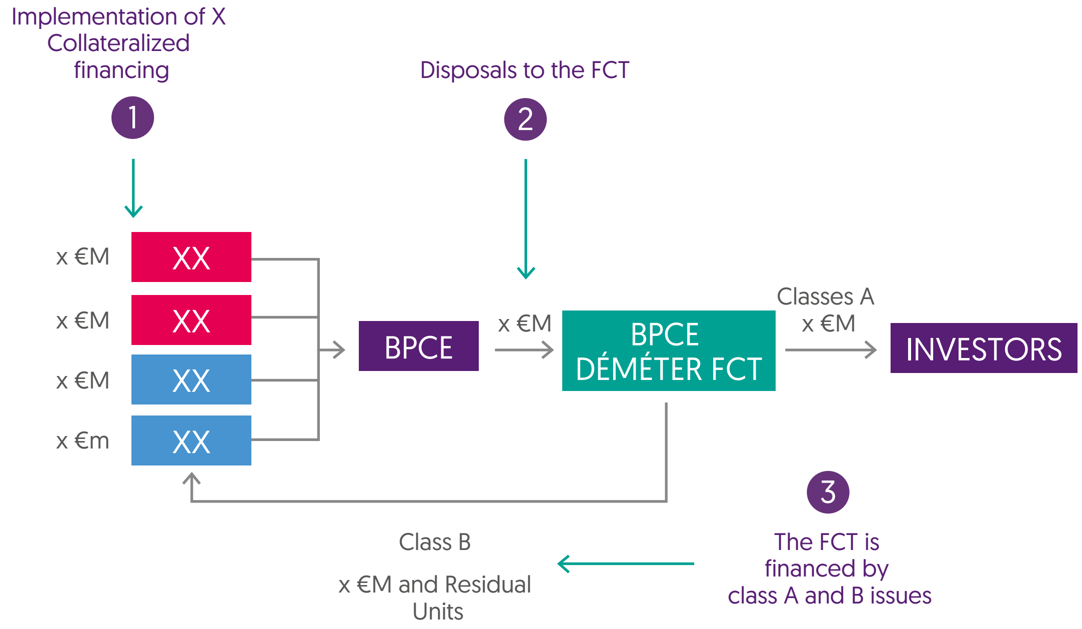
When the receivables sold are remunerated at a fixed rate, as well as the Subordinated bonds, and the Senior bonds are issued at a variable rate, then the FCT enters into a swap with GFS whereby the FCT pays a fixed rate and receives a variable rate in order to hedge the interest rate risk related to the Senior bonds. In addition, GFS processes a back-swap with each of the sellers in proportion to its shareholding.

The accounting behavior of this type of transaction is similar to that described above.

The same applies to the management/recovery of receivables.

Transactions classified as “Refinancing” and “Disposals” in the table at the end of the presentation refer to the description above.

- as collateral for loans assigned to the FCT:



The disposal operation is carried out in three stages:

1) each of the participating institutions enters into a loan (CL or collateralized loan) with BPCE;

2) each CL is immediately transferred to the FCT;

3) the FCT issues senior and subordinated notes to finance the acquisition of the CLs.

Each CL is covered by a portfolio of loans as collateral, in accordance with Article L. 211-38 of the French Monetary and Financial Code Where appropriate, the loan may be covered by cash.

In the event of BPCE’s default, the CL becomes repayable immediately and the CLs are transferred to the FCT.

During the reloading period, collateralized loans in default lead to a replenishment of performing loans.

The accounting behavior of this type of transaction is similar to that described above.

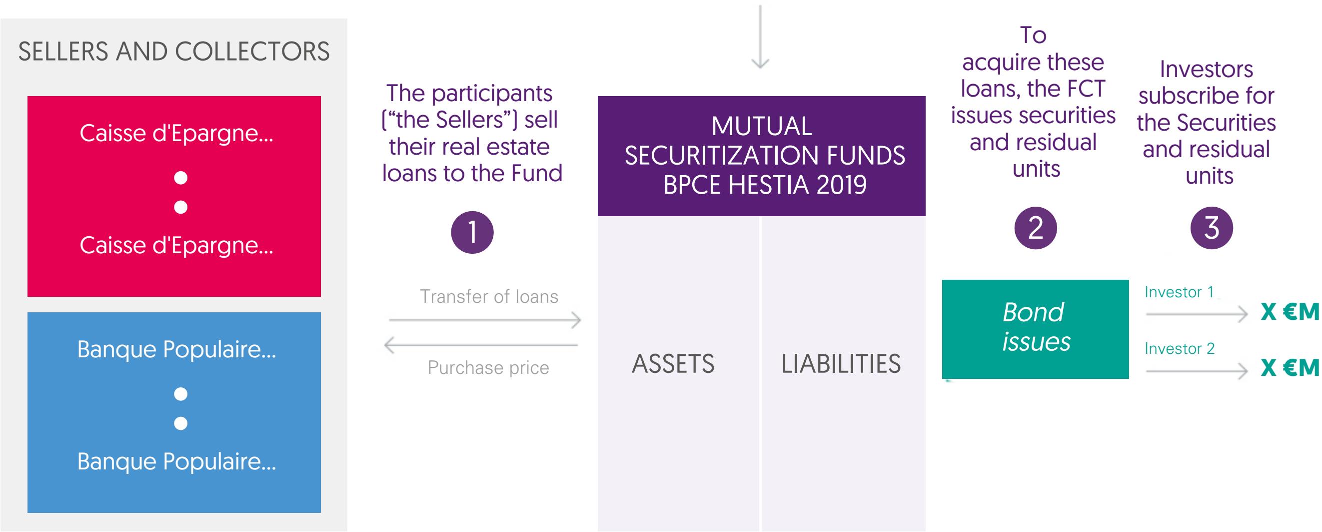
The same applies to the management/recovery of receivables.

Transactions classified as “Refinancing” and “Collateralization” in the table at the end of the presentation refer to the description above.

Supplement concerning the HESTIA transaction, which uses securitization tools but is not a securitization transaction from a regulatory point of view.

In September 2020, BPCE had completed a private transaction for the sale of receivables: FCT HESTIA 2019.

BPCE	NATIXIS	FRANCE SECURITIZATION	BNP PARIBAS SECURITIES SERVICES
• Arranger • Reserve contributor • Agency keeping the accounts of the FCT	• Custodian	• Day-to-day management of the FCT	• Paying agent • Data protection agent



This is a deconsolidating transaction for the selling institutions:

1) the sale to the FCT of €500 million of residential real estate loans originated by four Caisses d'Epargne (CEPAC, CEAPC, CECAZ, CEBPL) which continue to manage these loans on behalf of the FCT;

2) to finance its acquisition, the FCT issues Senior bonds (Class A), Subordinated bonds (Class B) and Residual Units;

3) all the securities are subscribed by the investors to whom all the risks associated with the loans sold are definitively transferred.

In the absence of any tranching in the FCT's liabilities, this transaction is not considered as a securitization transaction from a regulatory point of view (not subject to the provisions of regulation 2017/2402 of the European Parliament of December 12, 2017).

The HESTIA transaction appears in the table at the end of the presentation with the qualification of "Refinancing" and "PTF disposal".

Note 1: the BPCE Master Home Loans FCT transaction already includes the effects, on the assets and liabilities side, of the reissuance/redemption of €18 billion net carried out on January 31, 2024 (from the Investor Report dated December 31, 2023).

Note 2: the FCT HESTIA 2019 transaction uses securitization tools but is not a securitization transaction from a regulatory point of view.

BRED securitization transactions

BRED Banque Populaire regularly securitizes its advances. The securities issued are kept on the balance sheet to strengthen its mobilization capacities at the ECB. The underlying advances are generally home loans and occasionally equipment or professional loans. The stock of eligible securities depends on the rate of securitization. The objective for the bank is not to transfer credit risk but to improve its liquidity.

The control of risks related to securitization transactions is based on several principles:

- the constitution of the pool of advances is determined by the Finance division under the supervision of the project manager. A detailed analysis of the composition of the deposit is carried out;
- the pool of advances is passed through the centralized IT filter;
- the deposit is systematically analyzed in great detail by two rating agencies (S&P and Fitch Ratings in general).

The deposit is generally audited by a recognized and independent firm.

For information, BRED Banque Populaire carried out an STS securitization transaction in 2024 of a portfolio of residential real estate loans, for a value of nearly €2 billion:

- the shares are held in treasury and therefore have no accounting impact in the consolidated financial statements;
- the program has a dual purpose: to strengthen the purchasing power at the ECB and to generate LCR *via* securities exchanges.

In addition, BRED Banque Populaire liquidated the ELIDE 2014 sub-fund in 2024.

7.8 Market risks

7.8.1 Market risk policy

Risk policies governing market transactions are defined by the Risk divisions of institutions with trading activities. These policies are based on a qualitative and forward-looking perspective.

In addition, for the banking book activities, investment policies are defined at Group level. The risk management framework related to this activity is defined in accordance with investment policies and is reviewed annually.

7.8.2 Market risk management

The Risk division works in the areas of risk measurement, definition and oversight of limits, and supervision of market risks. It is tasked with the following duties:

7.8.2.1 Management

Risk measurement:

- establishing the principles of market risk measurement, which are then validated by the various appropriate Risk Committees;
- implementing the tools needed to measure risk on a consolidated basis;
- producing risk measurements, including those corresponding to operational market limits, or ensuring that they are produced as part of the Risk Management process;
- determining policies for adjusting values or delegating them to the Risk divisions of the relevant institutions and centralizing the information;
- performing Level 2 validation of operating results and cash valuation methods.

Definition and oversight of limits:

- examining the limit framework and setting limits (global caps and, where necessary, operational limits) adopted by the various appropriate Risk Committees, as part of the comprehensive Risk Management process;
- examining the list of authorized products for the relevant institutions and the conditions to be observed, and submitting them for approval to the appropriate Market Risk Committee;
- examining requests for investments in financial products, or in new capital market products or activities, by the relevant banking institutions;
- harmonizing processes used to manage trading book allocations and medium- to long-term portfolios of the Banque Populaire and Caisse d'Epargne networks (indicators, definition of indicator limits, oversight and control process, and reporting standards).

7.8.2.2 Monitoring

For the monitoring and control of market risks:

- consolidating the mapping of Group market risks and contributing to the macro-risk mapping of Group and institution risks;
- performing or overseeing daily supervision of positions and risks with respect to allocated limits (overall and operational limits) and established resilience thresholds, organizing the decision-making framework for limit breaches and performing or overseeing permanent supervision of limit breaches and their resolution;
- preparing the consolidated dashboard for the various decision-making bodies;
- defining and performing controls.

MARKET RISK MEASUREMENT METHODS

From a prudential standpoint, Groupe BPCE uses the standardized approach to measure market risk. The risk monitoring system relies on three types of indicators used to manage activity, on an overall basis and by similar activity, by focusing on directly observable criteria, including:

- sensitivity to variations in the underlying instrument, variations in volatility or to correlation, nominal amounts, and diversification indicators. The limits corresponding to these qualitative and quantitative operational indicators thus complement the VaR limits and stress tests;
- daily assessment of global market risk measurement through a 99% one-day VaR;
- stress tests to measure potential losses on portfolios in extreme market conditions. The Group system relies on comprehensive stress tests and specific stress tests for each activity.

Special reports on each business line are sent daily to the relevant operational staff and managers. BPCE's Group Risk division also provides a weekly report summarizing all of the Group's market risk, with a detailed breakdown for GFS and BRED Banque Populaire.

In addition, for GFS, global market risk reports are sent to the central institution on a daily basis. The latter produces a weekly summary of market risk indicators and results for the Group's executive management.

Finally, a global review of Groupe BPCE's consolidated market risks (covering VaR measures and hypothetical/historic stress scenarios) is presented to the Group Market Risk Committee, in addition to risk reports prepared for the entities.

In response to the Revised Pillar III Disclosure Requirements (MRB Table: Qualitative disclosures for banks using the Internal Models Approach), the main characteristics of the various models used for market risk are presented in the GFS Registration Document.

The internal market risk and valuation models used by GFS are validated by the Model Risk Management and Wholesale Banking Validation team of Groupe BPCE's Risk division. This independent validation of the models is part of the broader model risk management framework described in Section 6.15.

More specifically for the valuation models, the following aspects are assessed:

- theoretical and mathematical validation of the model, analysis of the assumptions and their justification in the model documentation;
- algorithmic validation and comparison with alternative models (benchmarking);
- analysis of the stability, the convergence of the numerical method, the stability of the model in the event of stressed scenarios;
- study of implicit risk factors and calibration, analysis of input data, and identification of upstream models;
- measurement of the model risk and validation of the associated reserve methodology.

SENSITIVITIES

Each institution's Risk division monitors and verifies compliance with sensitivity limits on a daily basis. If a limit is breached, an alert procedure is triggered in order to define the measures required to return within operational limits.

VAR

Market risk is also monitored and assessed *via* synthetic VaR calculations, which determine potential losses generated by each business line at a given confidence level (99%) and over a given holding period (one day). For calculation purposes, changes in market inputs used to determine portfolio values are modeled using statistical data.

All decisions relating to risk factors using the internal calculation tool are revised regularly by committees involving all of the relevant participants (Risk division, Front Office and Results department). Quantitative and objective tools are also used to measure the relevance of risk factors.

VaR is based on numerical simulations, using a Monte-Carlo method which takes into account possible non-linear portfolio returns based on the different risk factors. It is calculated and monitored daily for all Group trading books, and a VaR limit is defined on a global level and per business line. The calculation tool generates 10,000 scenarios, which provides satisfactory precision levels. For certain complex products, which account for a minor share of the trading books, their inclusion in the VaR calculation is obtained by using sensitivities. VaR backtesting is carried out on approved scopes and confirms the overall robustness of the model used. Extreme risks, which are not included in VaR, are accounted for using stress tests throughout the Group.

This internal VaR model used by GFS was approved by the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector, in January 2009. GFS thus uses VaR to calculate the capital requirements for market risks in the approved scopes.

STRESS TESTS

Stress tests are calibrated according to severity and occurrence levels, which are consistent with portfolio management objectives:

Trading book stress tests are calibrated over a 10-day period and a 10-year probability of occurrence.

They are based on:

- historical scenarios, which reproduce changes in market conditions observed during past crises, their impacts on current positions and P&Ls. They can be used to assess the exposure of the Group's activities to known scenarios. 12 historical stress tests have been in place since 2010;
- hypothetical scenarios, which involve simulating changes in market conditions in all activities based on plausible assumptions concerning the dissemination of an initial shock. These shocks are based on scenarios defined according to economic criteria (real estate crisis, economic crisis, etc.), geopolitical considerations (terrorist attacks in Europe, toppling of a regime in the Middle East, etc.) or other factors (bird flu, etc.). The Group has had seven theoretical stress tests since 2010.

Banking book stress tests are calibrated over a longer period in line with the banking book's management periods:

- a bond stress test calibrated using a mixed hypothetical-historical approach that reproduces a stress on European sovereigns (similar to the 2011 crisis);
- a bond stress test calibrated using a mixed hypothetical-historical approach that reproduces a stress on corporates (similar to the 2008 crisis);
- an equity stress test calibrated over the 2011 historical period, applied to equity investments for the purpose of the liquidity reserve;
- a private equity and real estate stress test, calibrated over the 2008 historical period, applied to the private equity and real estate portfolios.

The different stress tests are subject to limits set by institution and for the Group. These are monitored as part of the recurring control system and through regular reporting.

7.8.2.3 Control

INDEPENDENT PRICE VERIFICATION

The Group has established an organizational structure tasked with independent price verification (IPV) through:

- creation of a Group valuation team in the Market Risk division;
- Group governance to ensure compliance.

The Valuation Team is responsible for:

- measuring regulatory requirements and implementing said requirements while assessing their impacts on the production and verification of new indicators;
- standardizing and harmonizing the production, certification and communication of market inputs used in valuation processes;
- coordinating and overseeing valuation processes Group-wide, in order to guarantee the convergence of IPV methods and principles;
- harmonizing fair value level processes across the Group.

Group governance is based in particular on:

- a supervision system centered on the Group Valuation Committee and the Group Fair Value Level Committee;
- a body of procedures, including the Group IPV procedure, which explains the validation and escalation system.

RISK MONITORING

The Group Risk division is responsible for monitoring the risks associated with all Groupe BPCE capital market activities, subject to regular review by the Group Market Risk Committee.

Within the scope of the trading book, market risk is monitored daily by measuring Group Value at Risk (VaR) and performing global and historical stress tests. The proprietary VaR calculation system developed by GFS is used by the Group. This system provides a tool for the measurement, monitoring and control of market risk at the consolidated level and for each institution, on a daily basis and taking account of correlations between the various portfolios. There are certain distinctive characteristics of Groupe BPCE that must be considered, in particular:

- for GFS: given the size of its capital markets business, GFS' risk management system is specifically tailored to this entity;
- for the Banque Populaire network: only BRED Banque Populaire has a capital markets business. It monitors the financial transactions carried out by the Banque Populaire network trading floor and Finance division daily, using 99% one-day Value at Risk, sensitivity, volume and stress scenario indicators;
- for Banque Palatine: daily monitoring of trading book activities is based on the Risk division's supervision of 99% one-day Value at Risk, stress tests and compliance with regulatory limits.

All limits (operational indicators, VaR, and stress tests) are monitored daily by each institution's Risk division. Any limit breaches must be reported and, where applicable, are subject to a Management decision concerning the position in question (close, hedge, hold, etc.).

These supervisory mechanisms also have operational limits and resilience thresholds that determine the Group's risk appetite for trading operations.

Banking book risk is supervised and monitored by activity: liquidity reserves, illiquid assets (private equity, non-operational real estate), securitizations and liquid assets excluding liquidity reserves. Liquidity reserves and liquid assets excluding liquidity reserves are monitored monthly, mainly *via* stress test indicators. Illiquid assets and securitizations are monitored quarterly.

The Group's single treasury and central bank collateral management pool is subject to daily monitoring of risks and economic results for all of its activities, which are mainly related to the banking book.

HIGHLIGHTS

- The Group continued to strengthen its financial risk management during this turbulent period marked by the bankruptcies of US regional banks, that of Credit Suisse, high interest rate volatility, concerns about inflation, the difficulties of the Chinese real estate sector and, finally, the crisis in the Middle East.
- Close monitoring of market activities was continued during this period to ensure that changes in exposures following market movements remained in line with the risk appetite and the regulatory framework.
- In addition, the impacts of the sharp rise in interest rates and high inflation on the banking book activities were assessed *via* specific studies and stress test measures. Closer monitoring of interest rate exposures in retail banking was put in place, thus making it possible to adapt the management of interest rate risk to the new market context.
- Liquidity continued to be closely monitored with, in particular, closer management of commercial liquidity and monitoring of customer behavior in the context of interest rates and inflation.

7.8.3 Quantitative information

Group VaR (Monte Carlo, 99%, for one day) amounted to €7.9 million at December 31, 2024, compared to €9 million at December 29, 2023.

The Group VaR RAF threshold was respected throughout the year and remained at relatively low levels, despite a maximum reached at the end of April at 76% of the threshold. The first half of 2024 was relatively volatile, particularly in the interest rate market, linked to the change in Japanese monetary policy and political tensions in Europe, particularly in France. In the second half of the year, the VaR stabilized before declining from November onwards in a context of euphoria in the US markets linked to the US elections.

7.9 Liquidity, interest rate and exchange rate risks

7.9.1 Governance and structure

Like all credit institutions, Groupe BPCE is exposed to structural liquidity, interest rate and exchange rate risks.

These risks are closely monitored by the Group and its institutions to secure immediate and future income, balance the balance sheets and promote the Group's development.

The Audit Committee and Supervisory Board of Groupe BPCE are consulted on general ALM policy and are informed of major decisions taken regarding liquidity, interest rate and exchange rate risk management. The implementation of the chosen policy is delegated to the Group Asset/Liability Management Committee.

Each year, Supervisory Board of Groupe BPCE validates the main lines of the ALM policy, *i.e.* the principles of market risk measurements and levels of risk tolerance. It also reviews the risk limit system each year.

Each quarter, the Audit Committee of Groupe BPCE is informed of the Group's position through management reports containing the main risk indicators.

The Group Asset/Liability Management Committee, chaired by the Chairman of the Management Board of BPCE, is responsible for the operational implementation of the defined policy. It meets every two months and its main duties are as follows:

- determine the Group's general policy on liquidity and transformation risk;
- examine the consolidated view of the structural risks of the Group and its various entities, as well as changes in the balance sheet;
- define the structural risk limits of the Group and the liquidity pools and monitor them (with the approval of the Risk division);
- approve the allocation to liquidity pools and the limits;
- monitor liquidity consumption at Group and liquidity pool level;
- approve the Groupe BPCE's global MLT and ST annual refinancing program and monitor it overall;
- approve the investment and allocation criteria as well as the desired overall profile of the Group's liquidity reserve.

The structural liquidity, interest rate and exchange rate risk management policy is jointly implemented by the Asset/Liability Management division (oversight of funding plan implementation, management of liquidity reserves, cash management, calculation and monitoring of the various risk indicators) and the Risk division (validation of the control framework, validation of models and agreements, controls of compliance with rules and limits). The Group Financial Management department and the Group Risk division are responsible for adapting this framework to their respective functions.

The adaptation of the operational management framework within each institution is subject to validation by the Board of Directors, the Steering Board and/or the Supervisory Board. Each institution has a special operational committee that oversees implementation of the funding strategy, Asset/Liability management and management of liquidity, interest rate and exchange rate risks for the institution, in line with rules and limits set at Group level. The Banque Populaire and Caisse d'Epargne networks implement the risk management system using a shared Asset/Liability management tool.

7.9.2 Liquidity risk management policy

Liquidity risk is defined as the risk of the Group being unable to meet its commitments or to settle or offset a position, due to market conditions factors specific to Groupe BPCE, within a specified period and at a reasonable cost. It reflects the risk of not being able to meet net cash outflows, including those related to collateral requirements, over all time horizons, from the short term to the long term.

Liquidity risk is assessed differently over the short-, medium- and long-term:

- in the short-term, it involves assessing an institution's ability to withstand a crisis;
- in the medium-term, liquidity is measured in terms of cash requirements;
- in the long-term, it involves monitoring the institution's maturity transformation level.

Liquidity risk is likely to materialize in the event of a decline in sources of financing that could be caused by a massive withdrawal of customer deposits or by problems in executing the annual financing plan following a widespread crisis of confidence on the markets or events specific to Groupe BPCE. It could also be triggered by an increase in financing requirements due to an increase in drawdowns on loan commitments, an increase in margin calls or a higher collateral requirement.

All liquidity risk factors are accurately mapped, updated annually and presented to the Group Asset/Liability Management Committee. This mapping identifies the various risks as well as their level of materiality, assessed according to various criteria shared between the Asset/Liability Management and Risk divisions.

Objectives and policies

The liquidity management policy aims mainly to refinance all of the Group's business lines in an optimal and sustainable manner.

This mandate involves the following duties:

- ensure a sustainable refinancing plan at the best possible price, making it possible to finance the Group's various activities over a period consistent with the assets created;
- distribute this liquidity between the various business lines and monitor its use and changes in liquidity levels;
- comply with regulatory ratios and internal constraints resulting in particular from stress tests guaranteeing the sustainability of the Group's business model refinancing plan, even in the event of a crisis.

To this end, the Group relies on three mechanisms:

- centralized funding management aimed primarily at supervising the use of short-term funding, spreading out the maturity dates of medium- and long-term funds and diversifying sources of liquidity;
- supervision of each business line's liquidity consumption, predominantly by maintaining a balance between growth in the credit segment and customer deposit inflows;
- the creation of liquidity reserves, both in cash and collateral, in line with future liabilities and the targets set for securing the Group's liquidity.

These systems are managed and overseen by way of a consistent set of indicators, limits and management rules are combined in a centralized framework of standards and rules for the Group's institutions, so as to ensure the measurement and consolidated management of liquidity risk.

Operational management of liquidity risk

To keep track of its liquidity risks and define appropriate management and/or corrective actions, the Group has established a reliable, comprehensive and effective internal liquidity management and oversight system including a set of associated indicators and their limits. Liquidity risk management and monitoring are carried out at the consolidated Group level and within each of its entities. The definition of these indicators, the calculation methodology and any associated limits are covered in a body of consolidated standards that is reviewed and validated by the decision-making bodies of the Group and its institutions.

LIQUIDITY CONSUMPTION OF THE BUSINESS LINES

The liquidity consumption of the Group's various business lines and within the entities is governed by an internal liquidity allocation system based, on the one hand, on the setting of a target level of short-term, medium-term and long-term market footprint for the Group and, on the other hand, on its distribution among the Group's various entities *via* a liquidity budget system. The Group's market footprint measures its overall dependence to date on bond and money market funding. The sustainability of the Group's market access is measured on a regular basis. The structure of the Group's market footprint (schedule, type of vehicles, currencies, geographic area, investor categories, etc.) is thus closely monitored to ensure that it is not overly dependent on short-term financing and that sources of funds are diversified.

Each entity is required to meet the liquidity budget allocated to it both in terms of actual liquidity consumption and in terms of the projected vision as part of the budget process and the multi-year forecast. Compliance with the liquidity budget allocated to each entity makes it possible to ensure that the market footprint target set by the Group is correctly sized and to adapt, where necessary, the business line projections. Moreover, this also makes it possible to adjust the implementation rate of the multi-year funding plan based on the needs expressed by the business lines and the Group's capacity to carry out public issues on the market.

The financing needs of the business lines are closely correlated with changes in commercial assets and liabilities (customer loans and deposits) both in terms of the liquidity gap between the average assets and liabilities under management and due to the need for liquidity reserves that it can generate through compliance with the LCR (Liquidity Coverage Ratio).

The liquidity gap resulting from commercial activity is measured using the Customer loan-to-deposit ratio (LTD) at both the consolidated and entity level. This indicator allows a relative measure of the Group's autonomy with regard to the financial markets and monitors changes in the structure of the commercial balance sheet.

RISK INDICATORS

The liquidity risk of the Group and its entities is measured based on regulatory ratios as defined by European regulations, with the LCR (liquidity coverage ratio for short-term liquidity) and the NSFR (Net Stable Funding Ratio for long-term liquidity).

This regulatory approach is complemented by an internal "economic" approach consisting of measuring the liquidity gap over a 10-year horizon. It makes it possible to control the flow of medium and long-term debt and to anticipate the Group's refinancing needs. It is governed by Group and individual entity limits.

The liquidity gap is measured using a so-called static approach, which only takes into account on-balance sheet and off-balance sheet positions to date, and incorporates outflow assumptions for unmatured products. These assumptions are based either on internal modeling (early repayment of loans, closing and deposits on home savings plans or PELs, etc.) or on agreements established for all Group entities (notably for customer deposits with no fixed maturity date, demand deposits and passbook savings accounts). The validation of the models and agreements is based on a process shared between the Asset/Liability management function and the Risk function, which ensures a cross-examination of the relevance of the assumptions used and their suitability with respect to the current limit system.

STRESS SIMULATION AND LIQUIDITY RESERVE

Liquidity crisis simulations are regularly carried out to test the Group's ability to meet its commitments and continue its day-to-day business in a context of crisis. This stress test system aims to become a tool to support management decisions and to measure the Group's resilience over a defined period of time, as well as the relevance of its management system.

Under normal circumstances, these simulations aim to regularly measure exposure to liquidity risks by playing out a set of different determined stress scenarios. They make it possible to ensure the correct balance between the Group's liquidity reserve and changes in the net liquidity position under stress, as well as the ability to comply with regulatory requirements.

In a crisis situation, they make it possible to simulate possible changes in the instantaneous liquidity position on the basis of tailor-made scenarios, to identify potential impacts and to define the actions to be taken in the short-term.

The stress calculation methodology is based on the projection of the Group's on-balance sheet and off-balance sheet flows with stressed assumptions defined in the context of stress scenarios and on changes in the liquidity reserve taking into account securities transactions and different valuations (Market, ECB haircuts) according to different scenarios. Thus, for example, we assume that we will only be able to partially renew all maturing refinancing operations, will have to cope with requests for early repayment of deposits or unexpected disbursements on off-balance sheet loan commitments, and will incur a loss of customer deposits or a substantial change in their structure, or a loss of liquidity in certain market assets.

Liquidity stressors are based on different scenarios: idiosyncratic (Group-specific), a systemic crisis affecting all financial institutions, and a combined crisis. Different intensity levels are also used to allow sensitivity analyses.

LIQUIDITY RISK ASSESSMENT SYSTEMS

The Group's consolidated indicators are produced by the Group ALM department based on indicators produced at the level of each entity. The latter are derived from data collected in the entities' information systems in accordance with a Group organization scheme (data collection, correction and validation process).

A first-level control is carried out by the ALM departments of the entities in conjunction with Group ALM, followed by a second-level control carried out by the Risk departments of the entities and the Group.

CONTINGENT FUNDING SYSTEM (CFP)

The Group's Contingency Funding Plan (CFP) summarizes the work implemented by the Group to facilitate its management of liquidity crisis situations. The document is updated annually. It is based on a monitoring and alert system *via* a dashboard listing Early Warning Indicators (EWI) likely to enlighten the Group as to whether or not the CFP should be activated. These EWIs are produced on a daily basis and mainly concern funding, liquidity gap and liquidity reserve indicators. Market indicators (interest rates, exchange rates, equities, CDS, etc.) are also monitored in this daily dashboard. In addition to these quantitative approaches, a qualitative assessment in the form of a confidence index is provided by the functions responsible for issues, the Treasury and Central Bank Collateral Management team, and the Asset/Liability Management and Financial Risk Management teams. The CFP can thus be triggered by a specific market environment that may expose the Group's future liquidity position to increased risks.

During the health crisis of March 2020, while the Group's liquidity position was solid both from a cash and regulatory perspective, the Group activated its CFP in a preventive manner, in order to ensure that all business lines within the Group were aligned if actions were to be implemented. During the 2023 SVB and Credit Suisse episode, the CFP was not activated but the Group was on active vigilance.

The triggering of the CFP generates the establishment of a specific Crisis Management Committee with an escalation process based on the perceived magnitude of the crisis. In addition to this committee, which meets frequently, the CFP centralizes certain financial activities normally located at Global Financial Services with the head of the Treasury and Central Bank Collateral Management team.

The CFP also includes an inventory and an analysis ahead of the financial and business lines that the Group can implement, including potential liquidity gains and the associated costs (loss of profitability) and possible obstacles to their implementation. These levers can be grouped into three categories:

1) liquidity collection: The Group comprises many entities, which allows it to collect liquidity on an ad hoc basis and in a diversified manner;
2) reduction in liquidity consumption: Given its activities, the Group could, if necessary, reduce the financing it grants to the economy, particularly on the most controllable activities of its Corporate & Investment Banking in the event of tensions on its liquidity position;
3) the monetization of liquid assets: The Group has significant collateral reserves that can be converted into cash if necessary.

The knowledge gained from the recent crises (first half of 2020, with the activation of CFP, SVB and Credit Suisse without activation) was used to update the system in all of these components, namely the EWI system, the committee procedure and the related escalation process, together with the assessment of the various levers.

Centralized funding management

The Financial Management department organizes, coordinates and supervises the funding of Groupe BPCE on the markets.

The short-term funding of Groupe BPCE is carried out by the Single Treasury and Central Bank Collateral Management team, created following the merger of the BPCE and Natixis cash management teams. This integrated treasury team is capable of managing the Group's cash position more efficiently, particularly during a credit crunch.

The Group has access to short-term market funding through its two main issuers: BPCE and its subsidiary Natixis.

For medium- and long-term funding requirements (more than one year), in addition to deposits from customers of the Banque Populaire and Caisse d'Epargne networks, which are the primary source of funding, the Group also issues bonds on the financial markets with BPCE as principal operator, offering the broadest range of bonds to investors:

- directly as BPCE for subordinated debt issues (Additional Tier-1 and Tier-2), senior non-preferred debt and vanilla senior preferred debt issues, in multiple currencies, with the main currencies being the euro, the United States dollar, the British pound sterling, the Japanese yen, the Australian dollar and the Singapore dollar;
- or as BPCE SFH, the Group's main issuer of covered bonds; this issuer, operated by BPCE, specializes in *obligations de financement de l'habitat* (OH), a category of secured bond guaranteed by French legislation (backed by residential home loans in France).

Groupe BPCE works with two other specialized operators to round out its MLT funding sources:

- Natixis for structured senior preferred debt issues (private placements only) under the Natixis name, and for covered bonds under German law (backed by commercial real estate loans) under the Natixis Pfandbriefbank AG name;
- Crédit Foncier for issues of covered bonds of the type known as *obligations foncières* (OF), under the Compagnie de Financement Foncier name (a subsidiary of Crédit Foncier). OFs are a category of covered bonds based on French legislation (backed by public sector loans and assets, in line with the new positioning decided on in 2018 for this Group issuer, because this issuer's collateral still includes residential home loan outstandings in France previously produced by Crédit Foncier).

It should be noted that BPCE also contributes to the medium- and long-term refinancing of Corporate & Investment Banking hosted by Natixis (in addition to the structured private placements mentioned above and Natixis' own customer collections), which no longer intends to be an issuer on the markets in the form of a public issue.

BPCE has short-term funding programs governed by French law (NEU CP), UK law (Euro Commercial Paper) and New York State law (US Commercial Paper), and MLT funding programs governed by French law (EMTN and Neu MTN), New York State law (US MTN), Japanese law (Samurai) and New South Wales law (AUD MTN).

Lastly, the Group is also able to conduct market securitization transactions (ABS), primarily *via* RMBS with residential home loans issued by the Banque Populaire and Caisse d'Epargne networks.

INTERNAL LIQUIDITY PRICING

The centralization of the Group's refinancing involves the implementation of liquidity circulation principles within the Group and the rules for pricing this liquidity so that liquidity can circulate in the best possible way between the Group's entities. The principles are validated by the Group's Asset/Liability Management Committee and implemented by the Group's Treasury and Central Bank Collateral Management team. The system is designed to ensure the transparency and consistency of internal prices, guaranteeing fluid liquidity management between the Group's institutions.

In addition to this internal liquidity pricing system, an internal disposal rate system has been developed so that each of the Group's assets and liabilities can be assigned an internal liquidity price. Here again, the principles are decided by the Group's Asset/Liability Management Committee. The respective changes in the liquidity costs of customer deposits and market resources are taken into account in order to ensure the balanced and profitable development of all activities in the Group's various business lines.

Centralized collateral management

In its liquidity management policy, Groupe BPCE attaches great importance to the management and optimization of its collateral. Non-negotiable debt securities (in particular loans originated by the networks) and negotiable debt securities (financial securities, etc.) that are eligible for a funding arrangement, whether Central Bank funding (*via* the 3G pool) or Group funding (covered bonds, securitization, etc.) are classified as collateral.

Three key principles are implemented:

- centralized management of the entities' collateral by the central institution in order to improve oversight and operationality of collateral management. For entities with a 3G Pool (Global Financial Services, Compagnie de Financement Foncier, BRED, Crédit Coopératif, Banque Palatine), each entity is responsible for its own collateral. Nonetheless, these entities cannot directly participate in ECB refinancing operations without prior approval from the central institution;
- a definition of investment and management rules by the central institution, with the entities enjoying autonomy in their decision-making in accordance with Group standards;
- a set of indicators relating to the monitoring of collateral determined at Group level and monitored by the Group's Asset/Liability Management Committee.

Collateral management with respect to non-negotiable debt securities is based on a dedicated information system that makes it possible to identify the receivables and identify their eligibility for the various existing arrangements. A significant portion of these receivables is intended to be secured in order to meet the liquidity reserve requirements as set by the Group, particularly with regard to the stress tests conducted periodically.

The unsecured portion is available to carry out funding operations in the market, either in the form of sales of advances or in the form of mobilization of advances. Groupe BPCE has developed a strong expertise in these refinancing transactions, which has enabled it to structure innovative refinancing mechanisms, thus increasing its ability to diversify its sources of fund-raising from investors.

Adequacy of the institution's liquidity risk management systems

The Group continues to focus on improving risk monitoring through a detailed mapping of liquidity risks and on optimizing the tools and procedures to manage the Group's liquidity position and its balance sheet, on a constant basis, in order to be able to cope with new crises, should they occur.

The work carried out with the review of currency management systems, the diversification of short-term financing, the monitoring of intraday risks and stress tests to increase their operationality play an integral part in ensuring that the systems are more appropriate for monitoring and managing Groupe BPCE's liquidity risks.

To support the strengthening of the various systems, several IT projects aimed at improving the quality of the Group's production have been carried out with the launch of a new ALM management tool and a strengthened capacity to project indicators over time. Significant investments were also launched as part of the management of the Group's collateral with a view to industrializing and securing structured and specialized transactions, to meet the ambitions of ensuring greater diversification of the Group's refinancing.

7.9.3 Quantitative information

Liquidity reserves

in millions of euros	12/31/2024	12/31/2023
Cash placed with central banks	127,307	147,107
LCR securities	66,661	57,757
Assets eligible for central bank funding	108,458	97,307
OVERALL	**302,426**	**302,171**

At December 31, 2024, the liquidity reserves covered 177% of short-term funding debt and MLT debt maturing within a year (€171 billion at December 31, 2024) compared to 161% at December 31, 2023 (ST and MLT maturities of €187 billion).

The increase in the coverage ratio is partly related to the repayments of the TLTRO 3 made in March 2024, which had a downward impact on the expiries of the MLT within one year, as well as the decrease in ST refinancing.

The change in the liquidity reserve during 2024 reflects the Group's liquidity management policy with the desire to maintain a high level of hedging of its liquidity risk.

Liquidity gap

in millions of euros	01/01/2025 to 12/31/2025	01/01/2026 to 12/31/2028	01/01/2029 to 12/31/2032
Liquidity gap	24,278	19,580	16,112

The projected liquidity position shows a structural liquidity surplus over the analysis horizon. Compared with the end of 2023, this surplus is stable over one year and up by €6.0 billion over two to four years and €10.3 billion over five to eight years.

Over the short term, the stability of the Group's liquidity gap is mainly due to the Commercial Banking networks with an increase in customer loans and outflows on demand deposits and home purchase savings plans (PEL). This deterioration in the customer base of the networks is offset by the increase in specialized refinancing.

In the longer term, the liquidity gap improves significantly and still reflects the increase in specialized refinancing by the networks. In addition, the increase in emissions reinforces this improvement. This increase in excess liquidity is limited by the negative contribution of the customer base of the networks with a persistent outflow of demand deposits.

Customer loan-to-deposit ratio

At December 31, 2024, the Group's customer loan-to-deposit ratio remained stable at 128% (also 128% at December 31, 2023).

Sources and uses of funds by maturity

Financial instruments marked to market on the income statement and held in the trading book, variable-income available-for-sale financial assets, non-performing loans, hedging derivatives and revaluation differences on interest rate risk-hedged portfolios are placed in the "Not determined" column. These financial instruments are:

- either held for sale or redeemed prior to their contractual maturity;
- or held for sale or redeemed at an indeterminable date (particularly where they have no contractual maturity);
- or measured on the balance sheet for an amount impacted by revaluation effects.

Accrued interest not yet due is shown in the "Less than one month" column.

The amounts shown are contractual amounts excluding projected interest.

Technical provisions of insurance companies, which, for the most part are equivalent to demand deposits, are not shown in the Table above.

Funding strategy and conditions in 2024

CONTINUATION OF THE MLT ISSUANCE STRATEGY

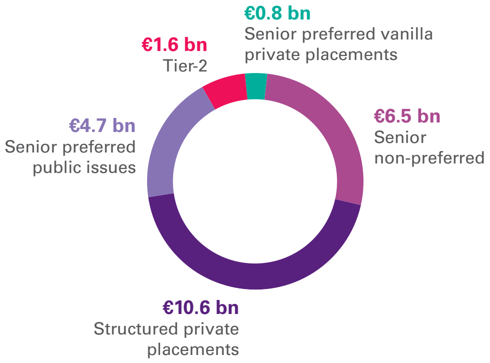
One of the Groupe BPCE's ongoing priorities in terms of medium- and long-term funding in the financial markets is to ensure that sources of funding are properly diversified, in terms of types of investors, types of debt issues, geographic areas and currencies.

Under the 2024 "market" medium- and long-term refinancing program, Groupe BPCE raised a total amount of €38.3 billion in the bond market, of which €27.7 billion excluding structured private placements; public issues represented 66% of the total amount, and private placements represented 34%.

In addition, the Group raised €6.7 billion in ABS in the financial market.

Unsecured bond segment

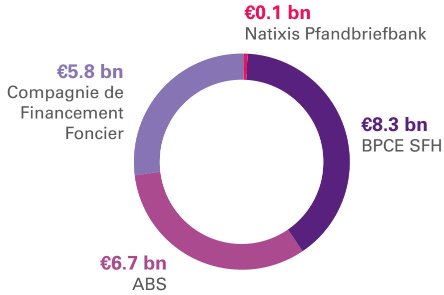
€24.2 billion



In 2024, the amount raised in the unsecured bond segment, excluding structured private placements, was €13.6 billion, of which €1.6 billion in Tier 2, €6.5 billion in the form of senior non-preferred debt and €5.5 billion in the form of senior preferred debt. In addition, €10.6 billion was raised in structured private placements.

Secured bond segment

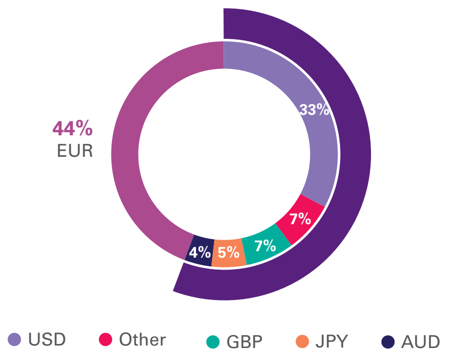
€20.9 billion



In the secured funding segment excluding ABS, the amount raised was €14.2 billion in covered bonds. In addition, €6.7 billion was raised in the form of ABS (mainly RMBS backed by residential mortgage loans granted by the Banque Populaire and Caisse d'Epargne networks).

DIVERSIFICATION OF INVESTOR BASE

56%
IN CURRENCIES OTHER THAN THE EURO



The breakdown by currency of unsecured issues excluding completed structured private placements is a good indicator of the diversification of the Group's medium- and long-term funding sources. In all, 56% (compared to 53% in 2023) was issued in currencies other than the euro in 2024; the five largest currencies were the United States dollar (33%), the British pound sterling (7%), the Japanese yen (5%), the Australian dollar (4%) and the Swiss franc (4%).

The average maturity at issuance (including ABS) for Groupe BPCE as a whole was 6.4 years in 2024, compared with an average maturity of 5.9 years in 2023.

The vast majority of medium- and long-term funding raised in 2024 was at a fixed rate, as in previous years. In general, fixed rate is swapped into floating rate in accordance with the Group's interest rate risk management policy.

A STRATEGY ENRICHED BY INNOVATIVE SOLUTIONS TO MEET THE NEW PRIORITIES OF INVESTORS: "SUSTAINABLE DEVELOPMENT" OBLIGATIONS

Groupe BPCE carried out five social/green public bond issues in 2024 for a total of €3,650 Million (compared to four in 2023 for €2,250 million):

- €500 million 12NC7 Tier-2 LED social Local Economic Development;
- Green Building covered bonds issued by BPCE SFH for €1,500 million over 10 years.
- Senior Preferred of €400 million over 10 years in the form of a shared coupon bond for the Institut Robert-Debré du Cerveau de l'Enfant supported by the Fondation de l'Assistance Publique - Hôpitaux de Paris (a first for a financial institution) in France);
- €750 million of our RMBS BPCE Home Loans FCT 2024 Green Use of Proceeds;
- lastly, Compagnie de Financement Foncier launched its second social issue for €500 million. This transaction was intended to refinance Social Housing and Public Health assets.

In addition to these five transactions, Natixis issued €2,500 million in ESG Structured Private Placements in 2024.

CONCLUSION

The creation of the ESF Financial Issues and Solutions department at the end of 2023 (created to centralize all players involved in MLT Funding in the same team) took on its full meaning in 2024; this has enabled Groupe BPCE to optimize its scarce resources, such as liquidity, collateral and solvency.

7.9.4 Management of structural interest rate risk

Objectives and policies

Structural interest rate risk (or overall interest rate risk) is defined as the risk of loss in value on the balance sheet in the event of a change in interest rates due to all balance sheet and off-balance sheet transactions, except for – if applicable – transactions subject to market risks. Structural interest rate risk is an intrinsic component of the business and profitability of credit institutions.

The objective of the Group's interest rate risk management system is to monitor each institution's maturity transformation level in order to contribute to the growth of the Group and the business lines while evening out the impact of any unfavorable interest rate changes on the value of the Group's banking books and future income.

Interest rate risk oversight and management system

Structural interest rate risk is controlled by a system of indicators and limits set by the Group Asset/Liability Management Committee. It measures structural interest rate risk on the balance sheet, excluding any kind of independent risk (trading, own accounts, etc.). The indicators used are divided into two approaches: a static approach that only takes into account on-balance sheet and off-balance sheet positions at a set date and a dynamic approach which includes commercial and financial forecasts. They can be classified into two sets:

- gap indicators, which compare the amount of liability exposures against asset exposures on the same interest rate index and over different maturities. These indicators are used to validate the main balance sheet aggregates to ensure the sustainability of the financial results achieved. Gaps are calculated on the basis of contractual maturities, the results of common behavioral models for different credit or collection products, outflow agreements for products with no maturity date, and specific agreements for regulated rates;
- sensitivity indicators, both in terms of value and revenues. Value-based indicators measure the change in the net present value of equity in the light of interest rate shocks applied to the static balance sheet. In addition to the regulatory SOT EVE indicator (SOT: supervisory outlier test), which measures sensitivity to regulatory interest rate shocks of +/-200 basis points. Revenue-based indicators measure the sensitivity of projected revenue where there are differences between the change in the market interest rate and the central scenario established quarterly by the Group's economists. This revenue sensitivity indicator covers all commercial banking activities and aims to estimate the sensitivity of the institutions' results to interest rate fluctuations. Following regulatory changes, in 2024, Groupe BPCE rolled out a regulatory revenue sensitivity indicator, the SOT NIM, in addition to its internal indicators.

The dynamic approach in terms of sensitivity of future revenues is reinforced by a multi-scenario vision allowing a broader approach by taking into account the uncertainties related to business forecasts (new activity and changes in customer behavior), possible changes in commercial margin, etc. Internal stress tests are carried out periodically to measure changes in the bank's earnings trajectory in adverse scenarios.

The interest rate position of the Group's institutions is managed in compliance with the Group's standards, which formalize both the indicators monitored and the associated limits, as well as the instruments authorized for hedging interest rate risk. These are strictly "vanilla" (unstructured), option sales are excluded and accounting methods with no impact on the Group's consolidated income are preferred.

Quantitative information

The interest rate position is mainly driven by Retail Banking and Insurance, and primarily by the networks. Measured using a static approach to interest rate gaps, it shows a structural risk exposure to an increase in interest rates with a surplus of fixed-rate assets compared to fixed-rate resources. This structural surplus is due in particular to the percentage of customer deposits at regulated or similar rates (in particular the *Livret A* rate).

The interest rate gap at the end of December 2024, presented below, widened over one year compared to December 2023 (-€13.1 billion). This deterioration in the interest rate gap is mainly due to the government's decision to fix the level of *Livret A* savings accounts until January 2025. This widening of the interest rate gap is reinforced by an outflow on corporate sight deposits and the decrease in new loan production does not make it possible to offset this overall widening of the interest rate gap.

Beyond one year, the interest rate gap improves (+€11.1 billion over the two to four years and +€5.1 billion over five to eight years) due to an increase in specialized refinancing, issues and hedging swaps.

Interest rate gap

in millions of euros	01/01/2025 to 12/31/2025	01/01/2026 to 12/31/2028	01/01/2029 to 12/31/2032
Interest rate gap (fixed-rate*)	(25,646)	(32,149)	(52,590)

* The indicator takes into account all asset and liability positions and floating-rate positions until the next interest rate reset date.

SENSITIVITY INDICATORS

The sensitivity of the net present value of the Group's balance sheet to a +/-200 bps variation in interest rates remained lower than the 15% Tier-1 limit. At December 31, 2024, Groupe BPCE's sensitivity to interest rate increases stood at -9.62% compared to Tier 1 *versus* -10.8% at December 31, 2023. This indicator, calculated according to a static approach (contractual or conventional flow of all balance sheet items) and in a stress scenario (immediate and significant interest rate shock), makes it possible to highlight the distortion of the balance sheet over a long horizon.

To better control the Group's exposure to interest rate risk, it must be supplemented by a dynamic approach (including new production forecasts). This is achieved by measuring the change in the Group's forecast net interest margin at one year according to four scenarios (rise in rates, decline in rates, steepening of the yield curve, flattening of the yield curve) compared to the core scenario. These net interest income sensitivity indicators cover all commercial banking activities and aim to estimate the sensitivity of the institutions' results to interest rate fluctuations. Following regulatory changes and modifications of its management system, since 2023 Groupe BPCE has deployed an internal revenue sensitivity indicator on the commercial banking networks and the Supervisory Outlier Test (SOT) Net Interest Margin (NIM) regulatory indicator at Group level, in addition to its internal indicators. The dynamic approach in terms of the sensitivity of future revenues is reinforced by a multi-scenario vision, which allows a broader approach by taking into account the uncertainties related to business forecasts (new activity and changes in customer behavior) and possible changes in commercial margin.

At December 31, 2024, the most penalizing scenario for the Group in terms of the SOT NIM was the downside scenario. The indicator stands at -1.19% and remains below the 5% limit compared to the first quarter.

EU IRRBB1 – SENSITIVITY OF THE ECONOMIC VALUE OF TIER-1 CAPITAL

		a	b	c
		EVE sensitivity (in %)		SOT NIM (in %)
Regulatory scenarios		12/31/2024	12/31/2023	12/31/2024
1	Shock: Parallel up	(9.62%)	(10.80%)	0.22%
2	Shock: Parallel down	(5.80%)	1.67%	(1.19%)
3	Short rates down/Long rates up (steepening of the yield curve)	(4.97%)	(5.68%)	
4	Short rates up/Long rates down (flattening of the yield curve)	0.92%	1.77%	
5	Short rates up	0.40%	0.29%	
6	Short rates down	(0.13%)	(0.41%)	

7.9.5 Management of structural exchange rate risk

Structural exchange rate risk is defined as the risk of a realized or unrealized loss due to an unfavorable fluctuation in foreign currency exchange rates. The management system distinguishes between the structural exchange risk policy and the management of operational exchange rate risk.

Exchange rate risk oversight and management system

For Groupe BPCE (excluding GFS), exchange rate risk is monitored using regulatory indicators (measuring corresponding capital adequacy requirements by entity). The residual foreign exchange positions held by the Group (excluding Natixis) are not material because virtually all foreign currency assets and liabilities are match-funded in the same currency.

As regards international trade financing transactions, risk-taking is limited to counterparties in countries with freely-translatable currencies, provided that translation can be technically carried out by the technically managed by the entity's information system.

Natixis' structural exchange rate positions on net investments in foreign operations funded with currency forwards are tracked on a quarterly basis by its Asset/Liability Management Committee in terms of sensitivity as well as solvency. The resulting risk indicators are submitted to the Group Asset/Liability Management Committee on a quarterly basis.

Quantitative information

At December 31, 2024, Groupe BPCE's capital requirements for exchange rate risk amounted to €369 million compared to €336 million at the end of 2023. The foreign exchange position is mainly carried by GFS.

7.10 Legal risks

7.10.1 Legal and arbitration proceedings

French Competition Authority

On October 9, 2015, a company operating in the meal voucher industry lodged a complaint with the French Competition Authority (*Autorité de la concurrence*) to contest industry practices with respect to the issuance and acceptance of meal vouchers. The complaint targeted several French companies operating in the meal voucher industry, including Natixis Intertitres, which became Bimpli at the end of 2022.

In its decision of December 17, 2019, the French Competition Authority ruled that Natixis Intertitres had participated in a practice covering the exchange of information and a practice designed to keep new entrants out of the meal voucher market.

Natixis Intertitres was fined €4,360,000 in its own right, along with two other fines totaling €78,962,000, jointly and severally with Natixis who was its parent company.

Since the alliance concluded between Groupe BPCE and Swile on December 14, 2022, Bimpli has been owned by a third party outside the Group.

The Paris Court of Appeal confirmed the decision of the Competition Authority by a judgment delivered on November 16, 2023.

Bimpli and Natixis filed an appeal against this decision on December 20, 2023, along with other French companies in the meal voucher sector.

Although the Group still considers that it has serious arguments to contest these decisions, a provision was made in the Group's financial statements in 2023, in the amount of the estimated risk.

At the end of 2024, Swile (which became BIMPLI on January 1 following a merger-acquisition transaction) and Natixis were summoned – alongside other players in the meal voucher market – before the Paris Commercial Court, by several plaintiffs wanting to obtain compensation for the alleged damages caused by the practices sanctioned by the Competition Authority, including those of Natixis Intertitres.

At this stage, and subject to the legal appraisals requested by the plaintiffs, the total amount of the sums requested is €420,802,622, in addition to €2,475,000 for appraisal costs and €4,060,000 in respect of Article 700 of the French Code of Civil Procedure. All these proceedings are currently pending before the Paris Commercial Court.

7.10.2 Legal and arbitration proceedings specific to Natixis

Like many banking groups, Natixis and its consolidated subsidiaries are subject to legal and tax proceedings and investigations by the supervisory authorities.

The financial consequences, assessed as of December 31, 2024, of those likely to have, or which have had in the recent past, a significant impact on the financial position of Natixis and/or Natixis and its consolidated subsidiaries taken as a whole, their profitability or activity, have been included in Natixis' consolidated financial statements.

The most significant legal and arbitration proceedings are described below, it being specified that their inclusion in the list below does not mean that these proceedings will necessarily have any impact on Natixis and/or its consolidated subsidiaries. Other proceedings, including tax proceedings, have no significant impact on the financial position or profitability of Natixis and/or Natixis and its consolidated subsidiaries taken as a whole, or are not at a sufficiently advanced stage to determine whether they are likely to have such an impact.

Legal and arbitration proceedings

MADOFF FRAUD

The Madoff outstanding amount was estimated at €347.8 million in exchange value at December 31, 2024, fully provisioned at that date, compared to €327.9 million at December 31, 2023. The effective impact of this exposure will depend on both the extent of recovery that Natixis benefits from and the outcome of the measures taken by the bank, notably in terms of legal proceedings. Furthermore, in 2011 a dispute emerged over the application of the insurance policy for professional liability in this case, which had been taken out with successive insurers for a total amount of €123 million. In November 2016, the Paris Court of Appeal vindicated the Commercial Court's prior ruling that primary insurers were liable to cover the losses incurred by Natixis due to the Madoff fraud, up to the amount for which the bank was insured. On September 19, 2018, the Court of Cassation subsequently annulled the judgment under appeal and referred the case back to the Paris Court of Appeal with a differently constituted bench. On September 24, 2019, the Court ruled against Natixis, overturning the ruling by the Commercial Court of Paris. Natixis filed an appeal with the Court of Cassation in December 2019. The Court of Cassation dismissed the appeal on November 4, 2021, so that the judgment of the Paris Court of Appeals of September 24, 2019, unfavorable to Natixis, became final and irrevocable.

Irving H. Picard, the liquidator of Bernard L. Madoff Investment Securities LLC (BMIS), submitted a restitution claim concerning the liquidation of amounts received prior to the discovery of the fraud through a writ filed with the United States Bankruptcy Court for the Southern District of New York against several banking institutions, including a $400 million claim against Natixis. Natixis denies the allegations made against it and has taken the necessary steps to defend its position and protect its rights. Natixis has launched appeals, including a motion to dismiss the case on a preliminary basis, or prior to any ruling on the merits, and a motion to withdraw the reference to transfer certain matters to the United States district court. These proceedings have been subject to numerous rulings and appeals and are still ongoing. A November 2016 ruling by the bankruptcy court dismissed a number of restitution claims initiated by the trustee on the grounds of extraterritoriality. In September 2017, the Second Circuit Court granted the BMIS liquidator and the defendants the right to appeal the bankruptcy court's ruling on the grounds of extraterritoriality directly through the Second Circuit, thereby avoiding the need to file an intermediary appeal with the district court. In February 2019, the Court of Appeals for the Second Circuit overturned the bankruptcy court's extraterritoriality ruling. In August 2019, Natixis joined the group of defendants that filed a request for permission to appeal the Second Circuit Court's ruling before the Supreme Court. In June 2020, the Supreme Court refused to hear the case. On August 30, 2021, the court of the Second Circuit clarified the concept of "good faith" by deciding (i) that it is determined according to the standard of "inquiry notice" which is less favorable to the defendants, and (ii) that the burden of proof lies not with the liquidator of BMIS but with the defendants. These preliminary points having now been decided, the proceedings are continuing on the merits. The liquidator of BMIS has taken steps to split the claim for restitution initially filed against Natixis, with one against Natixis SA (initial action amended to include only the buybacks of Fairfield Sentry shares) and the other against Natixis Financial Products LLC (new action to be brought relating to the buybacks of Groupement Financier shares). Separate proceedings have been initiated and are ongoing. The bankruptcy court issued its decisions in November 2023, dismissing the motions to dismiss filed by Natixis SA and Natixis Financial Products LLC. In December 2023, Natixis SA filed an appeal requesting authorization to appeal the decision, which rejected its request for rejection. The authorization to appeal was rejected on February 2, 2024. The case is ongoing.

Furthermore, the liquidators of Fairfield Sentry Limited and Fairfield Sigma Limited have initiated a large number of proceedings against investors having previously received payments from these funds for redemptions of shares (over 200 proceedings have been filed in New York). Some Natixis entities have been named as defendants in some of these proceedings. Natixis deems these proceedings to be entirely unfounded and is vigorously defending its position. These proceedings have been suspended for several years, and in October 2016 the bankruptcy court authorized the liquidators to modify their initial claim. The defendants filed joint responses in May and June 2017. In August 2018, the bankruptcy court ruled on a motion to dismiss filed by the defendants (requesting that the case be dismissed on a preliminary basis and prior to any ruling on the merits). The judge only gave a ruling on one of the merits (that of personal jurisdiction), having found that the latter was missing from the claim made against the defendants. In December 2018, the judge ruled on the motion to dismiss, rejecting the liquidators' common law claims (unjust enrichment, money had and received, mistaken payment and constructive trust) as well as contractual claims. However, it overturned the motion to dismiss in respect of claim founded on British Virgin Islands' law, while reserving the right to file a plea for the application of Section 546(e) of the safe harbor provision. In May 2019, the liquidators appealed the bankruptcy court's ruling before the District Court. On March 9, 2020, the defendants, including Natixis, submitted a motion to dismiss this appeal and renewed this initial motion on March 16, 2020. The bankruptcy court asked the defendants to limit the motion to dismiss to arguments that can lead to the dismissal of all the actions of the liquidators (as per Section 546(e) of the safe harbor provision or impropriety of the initial petition). In December 2020, the bankruptcy court dismissed the action brought under the law of the British Virgin Islands, considering that the defendants, including Natixis, are covered by Section 546(e) of the safe harbor provision. In August 2022, the District Court upheld the bankruptcy court's decision dismissing the actions of the liquidators against all defendants, including Natixis. The liquidators appealed this decision to the Second Circuit. The case is ongoing.

CRIMINAL COMPLAINT COORDINATED BY ADAM

In March 2009, the Paris public prosecutor's office (Parquet de Paris) launched a preliminary investigation into a complaint filed by Natixis minority shareholders and coordinated by the Association de Défense des Actionnaires Minoritaires (ADAM – Association for the Defense of Minority shareholders). As the plaintiffs have initiated civil proceedings, a judicial investigation opened in 2010. On February 14, 2017, Natixis came under investigation for false and misleading information on account of two messages sent in the second half of 2007, at the beginning of the subprime crisis.

After judicial investigation, a committal for trial was ordered on June 28, 2019.

The committal concerns only one of the two messages, disseminated on November 25, 2007, explaining the risks to which Natixis was exposed at the time as a result of the subprime crisis. The second message was dismissed.

The Paris Criminal Court, in a judgment handed down on June 24, 2021, condemned Natixis, deeming insufficient the information provided by said press release of November 25, 2007, and more specifically the risks to which the bank was exposed at the time due to the subprime crisis.

It imposed a fine of €7.5 million. The civil parties were awarded total compensation of around €2 million. Natixis appealed against this judgment.

The case was appealed to the Paris Court of Appeal from January 22 to 31, 2024. On May 7, 2024, the Paris Court of Appeal issued its decision upholding the conviction of Natixis, but significantly reducing the penalty to a fine of €2 million. In respect of the civil action, the Court of Appeal upheld–in substance–the judgment and awarded the civil parties additional compensation for the costs of the proceedings in question.

Natixis, which has always considered that it has not committed any criminal offense, filed an appeal on May 7, 2024.

EDA SELCODIS

By two summons dated November 20, 2013, Selcodis on the one hand and EDA on the other hand brought proceedings before the Paris Commercial Court jointly against Natixis and two other banking institutions for unlawful agreement, which would have resulted in the refusal to provide a guarantee to EDA and the termination of various loans.

Under the terms of its claims, Selcodis seeks compensation for the loss allegedly suffered as a result of the judicial liquidation of its subsidiary EDA and seeks an order that the defendants be ordered to pay damages, which it assesses at the sum of €32 million. For its part, EDA requests that the defendants be ordered to bear the total amount of the shortfall to be quantified by the court-appointed agent on liquidation.

Natixis considers all of these claims to be unfounded.

On December 6, 2018, the Paris Commercial Court, after consolidating the proceedings, noted their expiry and declared them extinguished. In January 2019 the plaintiffs appealed this judgment.

The judgment was delivered on June 22, 2020. The Court of Appeal ruled out the expiry of the current proceedings. The decision was made not to appeal to the Court of Cassation.

The rescheduling took place in March 2021 to resume the action on the merits. The case is ongoing.

FORMULA FUNDS

Following a review by the AMF in February 2015 of compliance by Natixis Asset Management (new name Natixis IM International) with its professional obligations and more specifically the management of its formula funds, the Sanctions Committee issued its decision on July 25, 2017, issuing a warning and a fine of €35 million. The Sanctions Committee noted several breaches concerning redemption fees paid to the funds and structuring margins.

Natixis IM International has appealed this decision to the French Council of State. In its judgment of November 6, 2019, the Council of State reformed the decision of the Sanctions Commission by reducing the penalty to €20 million. The warning was maintained.

In addition, on March 5, 2018, UFC-QUE CHOISIR, in its capacity as a consumer defense association, brought proceedings against the asset management company before the Paris Court of Justice to obtain compensation for the property damage allegedly suffered by the holders of the aforementioned formula funds.

By a judgment of April 3, 2024, the Paris Court of Justice declared the action of UFC-QUE CHOISIR to be inadmissible and dismissed its claims in full. UFC-QUE CHOISIR has appealed this judgment.

The case is ongoing.

BUCEPHALUS CAPITAL LIMITED/DARIUS CAPITAL CONSEIL

On June 7, 2019, Bucephalus Capital Limited (a UK law firm), together with other firms, brought claims against Darius Capital Partners (a French law firm, now operating under the name Darius Capital Conseil, a 70%-held subsidiary of Natixis Investment Managers) before the Paris Commercial Court, to contest the breach of various contractual obligations, particularly with respect to a framework agreement dated September 5, 2013 setting out their contractual relations and various subsequent agreements. Bucephalus Capital Limited claimed a total of €178,487,500.

In the course of the proceedings, Bucephalus Capital Limited increased the amount of its claims, seeking payment of €418,492,588 or, in the alternative, €320,645,136, in addition to payment of €100,000 under Article 700 of the French Code of Civil Procedure.

By decision of March 16, 2023, the Paris Commercial Court rejected all of Bucephalus Capital Limited's claims and ordered it to pay Darius Capital Conseil's legal costs in the amount of €150,000. Bucephalus Capital Limited filed an appeal on June 28, 2023 and requested a stay of payment of the €150,000. By order of 29 November 2023, the Paris Court of Appeal rejected this request.

The case is ongoing.

EUROPEAN GOVERNMENT BONDS – CARTEL DECISION

On May 20, 2021, the European Commission issued an infringement decision against Natixis and found that it had breached EU competition rules by participating in a cartel on the primary and secondary European government bond market in 2008-2009.

As Natixis had left the cartel more than five years before the Commission began its investigation, it benefited from the limitation period. No fines were imposed on Natixis.

On July 30, 2021, Natixis filed an application with the General Court of the European Union to annul the Commission's decision. The appeal is based, in particular, on the argument that the Commission has the right to issue a decision of infringement only if it can demonstrate a "legitimate interest" in doing so and on the argument of the infringement of the rights of defense of Natixis.

The appeal hearing was held on June 6, 2023.

COLLECTIF PORTEURS H_2O

At the end of December 2023, 6,077 individuals and legal entities, members of an association called "Collectif Porteurs H2O" brought proceedings against the French company Natixis Investment Managers before the Paris Commercial Court, alongside five defendants, to obtain compensation for damage they suffered as investors in seven mutual funds (UCITS) managed by the English entity H2O AM LLP, then the French entity H2O AM Europe, between 2015 and 2021.

At the end of May 2024, 2,929 new plaintiffs, also claiming to be members of the *Collectif Porteurs H_2O* association, voluntarily intervened in the proceedings.

Together, the plaintiffs seek a joint order against Natixis Investment Managers and its co-defendants, including the managers, custodian and Statutory Auditors of the seven funds, for a total amount of €751,408,855.

Natixis Investment Managers considers that the claims made against it are unfounded and will vigorously contest them.

Other procedures

Natixis is the subject of preliminary investigations opened in France by the Parquet National Financier and in Germany by the Cologne Public Prosecutor's Office.

As part of the investigations conducted in France, and in particular the searches carried out on March 28, 2023 at the premises of various banks, including Natixis, the Parquet National Financier issued a press release stating that five preliminary investigations were opened on December 16 and 17, 2021 on charges of aggravated tax fraud and, in some cases, aggravated tax fraud relating to the taxation of dividends received by banks in connection with their securities transactions.

As part of the investigations conducted by the Cologne public prosecutor's office, searches were carried out on June 13, 2023, mainly at the premises of the Natixis Branch in Frankfurt, but also at the headquarters of Natixis Pfandbriefbank AG and Natixis Investment Managers International SA in Frankfurt and Munich.

Investigations are ongoing and are covered by the confidentiality of the inquiry. Natixis intends to cooperate with the authorities while respecting its rights, and will assert its position before the magistrates.

7.10.3 Dependency

BPCE is not dependent upon any specific patents, licenses, industrial procurement contracts, or commercial or financial agreements.

7.11 Non-compliance and security risks

In accordance with the legal and regulatory requirements mentioned above, and with the professional standards and control charters governing Groupe BPCE, the functions managing compliance risk are organized as part of the internal control system of all Groupe BPCE institutions and subsidiaries as a whole.

The Group Compliance division, which reports to the Groupe BPCE Corporate Secretary's Office, performs its duties independently of the operational departments and the other Internal Control departments with which it collaborates.

The Compliance division, "Compliance Verification function" defined by the EBA and included in the Ministerial Order of November 3, 2014, amended by the Ministerial Order of February 25, 2021, is responsible for the prevention, detection, measurement and monitoring of non-compliance risks to ensure their control.

The Group Compliance division carries out its duties within the framework of business line operations.

It helps regulate, manage, control and guide the functions Group institutions. The Compliance Officers appointed within the various direct subsidiaries of BPCE SA and subject to the regulatory banking and financial supervision system, report to it through a strong functional link.

The Group Compliance division carries out all actions designed to strengthen the compliance of products, services and marketing processes, customer protection, compliance with ethical rules, the fight against money laundering and the financing of terrorism, the fight against market abuse, the monitoring of transactions and compliance with sanctions and embargoes. It monitors compliance risks throughout the Group. As such, it builds and revises the standards proposed for the governance of Groupe BPCE, shares best practices and coordinates working groups consisting of departmental representatives.

The dissemination of the culture of non-compliance risk and consideration of the legitimate interests of customers is also reflected in the training of employees in the sector and the awareness-raising of other BPCE departments.

Accordingly, the Group Compliance division:

- draws up the Group's non-compliance risk management systems (risk mapping and DMR) and supervises the permanent control system relating to non-compliance risks;
- prepares internal risk prevention reports for the Group's Risk Executive Committees and the Supervisory Body's Risk Committees;
- determines and validates, in conjunction with HR, the content of training materials intended for the Compliance function;
- coordinates the training of Directors/Heads of Compliance through a dedicated system;
- leads the compliance function of the entities through thematic national days focusing on specialist topics relating to banking and insurance compliance, investment services compliance, financial security, conduct and ethics;
- draws on the expertise of the Compliance functions of Group institutions *via* theme-based working groups, in particular to develop and implement compliance standards.

In addition, BPCE SA Compliance reports to Group Compliance and manages and supervises the Compliance of entities in the Financial Services and Expertise division (FSE), the Payments and Digital division and the Insurance division and the other subsidiaries reporting to BPCE, including Palatine, Natixis Algérie and BPCE International.

7.11.1 Compliance

Organization

Group Compliance includes a division in charge of supervising the compliance systems of the Group's entities and areas of expertise (Banking Compliance and Non-Life Insurance, Financial Savings Compliance, Financial Security, Conduct and Ethics).

GROUPE COMPLIANCE IS ORGANIZED AS FOLLOWS:

CONSOLIDATED AND ETHICS MANAGEMENT

The Consolidated Management and Ethics Department is in charge of overseeing the compliance systems deployed within Groupe BPCE entities. It defines the framework for this supervision and establishes a supervision control plan drawing on the expertise of the Banking & Insurance Compliance, Financial Savings Compliance, Financial Security, and Conduct and Ethics divisions. It manages the mapping of non-compliance risks for Groupe BPCE entities. It organizes the coordination of the Compliance function.

It monitors non-compliance risk indicators, oversees the reporting systems and also covers the centralization of relations with regulators, supervisors and the Group Internal Audit in compliance matters.

BANCASSURANCE COMPLIANCE AND FINANCIAL SAVINGS COMPLIANCE

is to prevent the risk of non-compliance with laws, regulations or professional standards, in the scope of banking, insurance and financial savings activities.

Paying particular attention to all issues relating to compliance with customer protection rules, these two departments participate in the implementation of regulatory changes and projects having an impact on the methods of marketing the products and services under their scopes. They also provide training and coordination for the Compliance function and monitor the compliance systems deployed within the entities.

These divisions must ensure the implementation of the texts and procedures applicable to Groupe BPCE entities and provide an opinion in the approval process for new products.

Financial Savings Compliance also includes oversight of investment services and the operating procedures of investment services compliance officers (RCSIs).

CONDUCT AND ETHICS

(attached to the Consolidated Management and Ethics Department) covers the supervision and management of Groupe BPCE's Conduct and Ethics systems, including the conflicts of interest system, employee ethics (gifts, benefits and external interests), staff training related to conduct and ethics and the whistleblower system.

It is responsible for implementing the texts and procedures applicable to Groupe BPCE entities.

FINANCIAL SECURITY

covers the supervision of anti-money laundering and countering terrorist financing (AML-CTF) systems, compliance with international financial sanctions (embargoes and asset freezes) and the fight against corruption.

It ensures, in particular, the implementation of normative texts in the procedures applicable to Groupe BPCE entities, ensures that money laundering and terrorist financing (ML-TF) risks are taken into account in the procedure for approving new commercial products and services provided by BPCE, provides regulatory reporting to Groupe BPCE supervisors and executives, supervises the content of training courses, carries out supervision checks, and supports and coordinates the Compliance function on all these subjects.

1. Measurement and supervision of non-compliance risk

Non-compliance risks are analyzed, measured, monitored and managed in accordance with the Ministerial Order of November 3, 2014 (amended February 25, 2021), with the aim of:

- ensuring a permanent overview of these risks and the associated risk prevention and mitigation system, including updated identification under the non-compliance risk-mapping exercise;
- ensuring that the largest risks, if necessary, are subject to controls and action plans aimed at supervising them more effectively;
- mapping out its non-compliance risks within the Group and implementing mandatory Level 1 and 2 compliance controls common to all Group retail banking institutions;
- calibrating and measuring the impact of non-compliance risk with the Group's operational risk teams, using the methodology of operational risk tool, covering the risk management systems established by the institutions aimed at reducing gross risk levels.

2. Product governance and supervision

- All new products and services, regardless of their distribution channels, as well as sales materials that fall within the Compliance function's remit, are reviewed by Compliance beforehand. The purpose of this review is to ensure that applicable regulatory requirements are met and that targeted customers – and the public at large – receive clear and fair information;
- With regard to the marketing process, the Compliance function pays particular attention to the duty of information and advice to customers;
- In addition, compliance ensures that conflicts of interest are identified, managed and supervised, and that the primacy of customers' interests is taken into account when making decisions.

Regulatory projects carried out in 2024

The main projects concerned:

- **Customer protection:**

Inactive accounts and safes (Eckert)

- A significant development was introduced in Q1 2024 throughout the Banques Populaires and Caisses d'Epargne networks, enabling the automated sending of email or SMS notifications for NPAI customers (capable adults, emancipated minors or minors in legal administration, and self-employed customers). It allows, in fact, to significantly expand regulatory information both on the annual inactivity status, as well as on the deposit (information prior to the closing of accounts and the transfer to the Caisse des Dépôts et Consignations).
- In terms of managing safe deposit box inactivity, community IT work on the Banques Populaire network side is continuing to better identify them and thus strengthen the existing system.

Handling of customer complaints:

Ongoing improvements to the systems in place. In particular, actions have been taken to improve the effective repayment terms, ensure the repayment of costs incurred and specify the information provided to customers.

- **Bank savings:**

Continued implementation of the multi-holding control measures for regulated savings products provided for by Decree No. 2021-277 of March 12, 2021, on the control of the holding of regulated savings products, which will come into force no later than January 1, 2026.

Implementation of the Ministerial Orders of November 10 and December 20, 2022 amending Article 2B of decision 69-02 concerning movements in savings accounts and participation in the work of the CFONB on the subject.

- **Regulatory customer knowledge (KYC):**

Continuation of several major actions in 2024 with the aim of anchoring the reflexes of systematic updating of Customer Knowledge: raising awareness of networks and management through indicators as well as the deployment of a new campaign to update the knowledge of our remote customers.

In addition, new indicators were developed and delivered in 2024 to improve the global monitoring and management of Customer Knowledge (KYC).

- **Financial savings**

The Group has continued to improve and strengthen its systems for Customer Protection, Product Governance and Supervision, Market Integrity and Transparency, and Sustainable Finance.

The work focused on:

- Updating the body of standards relating to Investor Protection and Product Governance and Supervision in accordance with the Green Industry Law and ACPR recommendation 2024-01;
- The duty of information and advice in terms of sustainable finance;
- Improving the quality of regulatory reporting in accordance with the EMIR-REFIT 2 regulation.

- **Regarding the "Whistleblower" system:**

In the context of legislation that offers much more protection for more whistleblowers (see act of March 21, 2022) and to meet the requirements of act 2017-399 on the duty of care of parent and subcontracting companies, Groupe BPCE has chosen to use the same tool for all Group entities, regardless of the country in which they operate (Europe, the United States, etc.) and regardless of their business line (Retail Banking, Corporate & Investment Banking, etc.).

This system allows for the collection of reports on a secure platform directly accessible by a URL link (**https://www.groupebpce.com**). The whistleblowing system is open to all employees and third parties, who can express their concerns if they are aware of serious violations of human rights and fundamental freedoms, personal health and safety, or the environment.

The platform offers all the guarantees in terms of data security and respects the highest standards in terms of confidentiality and respect for anonymity.

Groupe BPCE entities protect whistleblowers. Under no circumstances may they be subject to any disciplinary action or legal proceeding, provided they have acted without direct financial compensation and in good faith.

Employee training and awareness

Group employees regularly receive training on customer protection issues to maintain the required level of customer service quality. These training sessions are aimed at promoting awareness of compliance and customer protection among new hires and/or sales team employees.

Ethics and compliance training, entitled "Fundamentals of professional ethics", has been set up for all Group employees. BPCE has also established a Code of Good Conduct and Ethics, rolled out to all Groupe BPCE entities.

Groupe BPCE has implemented a mandatory regulatory training system that is reviewed annually.

French Banking Separation and Regulation act (SRAB) and Volcker Rule (VOLCKER)

Since the end of 2014, the Group has gradually complied with the requirements set out in Article 2 of the Ministerial Order of September 9, 2014, implementing Title I of act No. 2013-672 of July 26, 2013, on the separation and regulation of banking activities (SRAB act), amended by the Ministerial Order of March 18, 2019.

In conjunction with the work done in accordance with the SRAB act, a compliance program was adopted and implemented as from July 2015 in response to the Volcker Rule (Section 619 of the US Dodd-Frank act) This program, which takes a broader approach than French law, aims to map all of the BPCE SA group's financial and commercial activities to ensure compliance with US regulations. The Volcker Rule was amended in 2020, giving rise to new Volcker 2.0 and 2.1 provisions that relax the existing system.

Every year, the Group certifies its compliance with the SRAB-Volcker system.

7.11.2 Financial security

This domain covers anti-money laundering and arms financing measures, adherence to international sanctions targeting individuals, entities or countries, and the fight against corruption. The prevention of these risks within Groupe BPCE is based on:

Corporate culture

Promoted across all levels of the company, corporate culture is built on:

- customer relations principles aimed at preventing risks, which are formalized and regularly communicated to the employees;
- a harmonized training system for Group employees and specific training for employees in the financial security sector.

Organizational structure

In accordance with Groupe BPCE's charters, each institution has its own financial security unit. The Group Compliance division has a dedicated department that oversees the sector, defines financial security policy for the entire Group, draws up and validates the various standards and procedures, and ensures that these risks are taken into account during the approval procedure for new commercial products and services by BPCE.

Specialized processes

In accordance with regulations, banks have methods for detecting unusual transactions that are specific to their risk classification. These can be used, if needed, to conduct closer analyses and to submit the required reports to TRACFIN (French financial intelligence agency) or any other competent service as promptly as possible. The Group's risk classification system incorporates the "at-risk countries" factor when addressing money laundering, terrorism, tax fraud and bribery. The system was also reinforced with the establishment of a database and automated scenarios specifically targeting terrorist financing. With regard to compliance with restrictive measures related to international sanctions, the Group's institutions are equipped with filtering tools that generate alerts on customers (in particular with regard to the asset freezing measures to which certain persons or entities are subject) and on international flows (with regard to said asset freezing measures and sanctioning measures targeting countries such as European and/or American embargoes).

Supervision of operations

Internal reports on the prevention of these risks are submitted to company directors and governing bodies, as well as to the central institution.

A regulatory project continued in 2024

- **Financial Security:**

Due to the evolution of the form for reporting suspicions to TRACFIN, a project was launched in 2023 to renovate the data entry interface, in order to take into account the expectations of the financial intelligence unit, particularly in terms of details of the underlying offense and structure of the alert. This project should also provide functionalities in terms of reporting, updating of customer risk profiles, etc.

7.12 Security risks

7.12.1 Business continuity

The management of business interruption risks is addressed by the Group's legal entities in the form of an analysis of the risks associated with the activities carried out. This analysis makes it possible to prioritize their restart. At the same time, the identification of the various possible risk events guides the Legal Entity in the business continuity responses to be provided and the preparation of the actions to be taken in the event of the occurrence of the risk event.

Organization

The Group Business Continuity department, which reports to the Group Security division, performs its tasks independently of operational divisions. These include:

- managing Group business continuity and coordinating the Group Business Continuity function;
- coordinating the Group's crisis management;
- managing the implementation of the Group Contingency and Business Continuity Plans (CBCPs) and keeping them operational;
- ensuring compliance with regulatory provisions governing business continuity;
- participating in the Group's internal and external bodies.

The tools associated with the crisis management system are constantly evolving to improve their ergonomics and increase the range of associated functions.

Improvement projects continued with the following in common:

- streamlining processes and strengthening systems;
- compliance with European texts on operational resilience.

7.12.2 Information System Security (ISS)

Organization

The Group Security department (DSG) is in charge of the Information System Security (ISS) and the fight against cybercrime. It defines, implements and develops Group ISS policies. It provides continuous and consolidated oversight of ISS, along with technical and regulatory oversight. It initiates and coordinates Group projects aimed at reducing risks in its field. It also represents Groupe BPCE vis-à-vis banking industry groups and public authorities.

Groupe BPCE has established a groupwide ISS function. It brings together the Head of Group Information System Security (RSSI-G), who leads this network, and Heads of ISS for all Group entities.

As such, the Heads of ISS of the parent company affiliates, direct subsidiaries and IT EIGs are functionally attached to the RSSI-G. This functional link takes the form of leadership and coordination actions. This means that:

- the RSSI-G is notified of the appointment of any Heads of ISS;
- the Group information systems security policy is adopted by individual entities in accordance with application procedures subject to validation by the Head of Group ISS;
- a report on the institutions' compliance with the Group's ISS policy, permanent controls, risk level, primary incidents and actions is submitted to the RSSI-G.

The project to develop an exhaustive ISS map of the Group's information systems, including the establishments' private information systems, continued.

Two major projects are ongoing:

1. An annual assessment campaign of the Group's maturity on the five pillars of the NIST framework (Detect, Identify, Protect, Respond, Recover) in order to set numerical objectives, to pilot actions and to measure their effectiveness;

2. A Group Identity and Rights Management (IAM) program with the following objectives:

- establishing a Group database of individuals, applications and organizations,
- implementing Group IAM governance,
- including, if possible, all Group applications in the IAM roadmap, with automatic provisioning and an overview of authorizations.

ANTI-CYBERCRIME SYSTEMS

As a result of its digital transformation, the Group's information systems are becoming increasingly open to the outside world (cloud computing, big data, etc.). Many of its processes are gradually going digital. Employees and customers are also increasingly using the internet and interconnected technologies such as tablets, smartphones and applications on tablets and mobile devices.

Consequently, the Group's assets are constantly more exposed to cyber-threats. The targets of these attacks are much broader than the information systems alone. They aim to exploit the potential vulnerabilities and weaknesses of customers, employees, business processes, information systems and security mechanisms at Group buildings and data centers.

A unified Group Security Operation Center (SOC) integrating a level 1, operating in 24x7 is operational.

Several actions have been carried out to strengthen the measures taken to combat cybercrime:

- work to secure websites hosted externally;
- improved website and application security testing capabilities;
- implementation of a Responsible Vulnerability Disclosure program by Groupe BPCE CERT.

RAISING EMPLOYEE AWARENESS OF CYBERSECURITY

In addition to maintaining the Group's common foundation for raising awareness of ISS, the year was marked by the continuation of phishing awareness campaigns and by the renewal of participation in "European Cybersecurity Month".

Within the scope of BPCE SA, in addition to the recurring permanent control activities (review of application authorizations and rights to IS resources) such as risk management (ISS mapping, monitoring of websites published on the Internet, leakage risk monitoring, etc.), awareness-raising and incident and crisis management, several actions to strengthen security were also carried out, including:

- Implementation of a new authorization review system for Office 365 resources (Teams, Onedrive and Sharepoint) not covered by the Sigma system;
- Reinforcement of the workstation password policy and migration to anonymous user logins as part of the deployment of the new workstation;
- Strengthening the detection of data leaks through the implementation of new detection scenarios;
- Resuming the deployment of the technological risk management system, called TRM (Technology Risks Management), which replaces and complements the historical ISS-Cyber system and covers the following topics: Cybersecurity and IS business continuity, and the new topics: Governance & Strategy IT, IT Developments & Projects and IT Operations;
- Deployment of a service provider safety welcome booklet that reminds us of the essential safety rules for external employees.

The BPCE SA ISS team made a significant contribution to strengthening and managing the security of BPCE's IS for the Paris 2024 Olympic and Paralympic Games.

7.12.3 Personal Data Protection

Organization and management of the sector

The Group Security department (DSG) is responsible for the protection of personal data within the Group. It defines, implements and develops the Group's Personal Data Protection policies. It provides continuous and consolidated oversight of its area of activity, along with technical and regulatory oversight. It initiates and coordinates Group projects aimed at reducing risks in its field. It also represents Groupe BPCE vis-à-vis banking industry groups and public authorities.

Groupe BPCE has established a groupwide Privacy function. It brings together the Group Data Protection Officer (DPO-G), who coordinates this function, and the DPOs of all companies.

The department defines, implements and develops the Group's Personal Data Protection policy.

The Group data protection policy:

- ensures the management of the Group's compliance program with the GDPR, as well as the management and coordination of the DPO community, and the coordination between the Group's institutions and the maintenance in operational condition of the standards, guiding principles and model GDPR procedures;
- also coordinates the processing of Data breaches and in particular the CNIL notification phase;
- intervenes in the validation circuit of new products or commercial processes that impact the Group. It also participates in the negotiation of contracts with service providers when they have a Community role;
- provides reporting on the implementation of the GDPR and the Group's level of compliance with it through a permanent control system, for the benefit of Groupe BPCE's governance.

The DPOs of the Caisses d'Epargne and Banques Populaires and more broadly all affiliated parent companies, direct subsidiaries and IT EIGs report functionally to the Group DPO. This functional link means that:

- the Group DPO is notified of any appointment, and has a right of veto;
- the Group Data Protection policy applies within the institutions and that each local adaptation is subject to the opinion of the Group DPO prior to its implementation in the institution;
- a report on the level of compliance of the institutions with the Group data protection policy, the permanent privacy control, the main GDPR incidents and the actions undertaken are sent to the Group DPO.

Monitoring of Personal Data Protection risks

The GDPR risk is monitored through a system based on two areas:

- a first- and second-level permanent control system recorded in the DRIVE and PRISCOP tools, the latter combining the two levels of control;
- a quarterly reporting module presented regularly to the Privacy Executive Committee.

At Group level, this risk is monitored by the permanent control committees and by the Executive Privacy Committees.

In addition, the Group's employees receive GDPR training every three years.

7.13 Operational risks

7.13.1 Operational risk management

Groupe BPCE has set up a system for measuring non-financial risks through the standardized use of indicators. These cover the indicators of the RAF system, the indicators resulting from the amended Ministerial Order of November 3, 2014, but also qualitative indicators aimed at measuring the industry's adherence to operational risk standards.

The Group's operational risk policy consists of keeping all of these indicators below the set limits, by entity and on a consolidated basis. In the event of an overrun, appropriate measures and corrective actions must be taken by the business lines owning the risks to remedy the possible failures. These measures and corrective actions must be monitored by the committee in charge of operational risks.

The operational risk policy is reviewed annually by the dedicated committee.

Organization

The Group Operational Risk division (DROG) – part of the Group Risk division – is in charge of identifying, measuring, monitoring and managing the operational risks incurred in all activities and functions undertaken by Group institutions and subsidiaries.

The operational risk system consists of:

- a central organization and a network of operational risk managers and officers, working in all activities, entities and subsidiaries of Group institutions and subsidiaries;
- a methodology based on a set of standards and an OR tool used throughout the Group.

The Operational Risk function operates in all structures consolidated or controlled by the institution or the subsidiary (banking, financial, insurance, etc.);

- in all activities exposed to operational risks, including outsourced activities, within the meaning of Article 10 q and Article 10 r of the Ministerial Order of November 3, 2014 as amended, "outsourced activities and services or other critical or essential operational tasks".

The Group Non-Financial Risk Committee defines the risk policy rolled out to the institutions and subsidiaries, and the DROG ensures that the policy is applied throughout the Group.

Methodology

The operational risk management system is part of the Risk Assessment Statement (RAS) and Risk Assessment Framework (RAF) systems defined by the Group. These systems and indicators are adapted at the level of each Group institution and subsidiary.

The mapping methodology is part of the Group's permanent control system and includes the Operational Risk, Compliance, Information System Security, Personal and Property Safety and Permanent Control functions.

Measurement of risk exposure is based on a forward-looking model, which quantifies and classes risk scenarios and thus provides the Non-Financial Risk Committees with the necessary elements to define their risk tolerance.

Risk-predictive indicators are produced from the main risks identified in the non-financial risk map.

Risk supervision and monitoring were improved through the drafting of reports aimed at providing a uniform measurement to the Group as a whole of its risk exposure and cost of risk.

BPCE's Operational Risk function ensures that the structure and systems in place at the institutions and subsidiaries allow them to achieve their objectives and fulfill their duties.

To that end, it:

- coordinates the function and performs risk supervision and controls at the institutions/subsidiaries and their subsidiaries;
- centralizes and analyzes the Group's exposure to non-financial risks, verifies the implementation of corrective actions decided by the Operational Risk Committee and reports any excessive implementation times to Executive Management;
- performs controls to ensure that Group standards and methods are observed by the institutions and subsidiaries;
- performs a regulatory watch, distributes and relays operational risk alerts due to incidents with the potential to spread to the appropriate institutions/subsidiaries;
- prepares reports, by institution or subsidiary, for the Group and the regulatory authorities (COREP OR), analyzes the reports and content of the OR committees of the institutions and subsidiaries, and notifies the Group Non-Financial Risk Committee of any inadequate systems and/or excessive risk exposure, which in turn notifies the institution in question.

Two levels of operational risk management

Operational risk oversight within the Group is coordinated at two levels:

1. At the level of each group institution	2. At Groupe BPCE level
The Operational Risk Committee is responsible for adapting the operational risk management policy and ensuring the relevance and effectiveness of the operational risk management system. Accordingly, it: • examines major and recurring incidents, and validates the associated corrective actions; • examines indicator breaches, decides on associated corrective actions, and tracks progress on risk mitigation initiatives; • examines permanent controls carried out by the Operational Risk function and in particular any excessive delays in implementing corrective actions; • helps organize and train the network of Operational Risk officers; • determines if any changes need to be made in local insurance policies; • the frequency of meetings depends on the intensity of the institution's risks, in accordance with three operational schemes reviewed once a year by the Group Non-Financial Risk Committee (CRNFG) and communicated to the entities.	The Group Non-Financial Risk Committee meets quarterly and is chaired by a member of the Executive Management Committee. Its main duties are to define the OR standard, ensure that the OR system is deployed at the Group entities, and define the Group OR policy. Accordingly, it: • examines major risks incurred by the Group and defines its tolerance level, decides on the implementation of corrective actions affecting the Group and monitors their progress; • assesses the level of resources to be allocated; • reviews major incidents within its remit, validates the aggregated map of operational risks at Group level, which is used for the macro-level risk mapping campaign; • monitors major risk positions across all Group businesses, including risks relating to non-compliance, financial audits, personal and property safety, contingency and business continuity planning, financial security and information system security (ISS); • lastly, validates Group RAF indicators related to non-financial risks as well as their thresholds.

7.13.2 Monitoring

Incident and loss data collection

Incident data are collected to build knowledge of the cost of risks, continuously improve management systems, and meet regulatory objectives.

An incident log (incident database) was created to:

- broaden risk analysis and gain the knowledge needed to adjust action plans and assess their relevance;
- produce COREP regulatory half-year operational risk statements;
- produce reports for the executive and governing bodies and for non-management personnel;
- establish a record that can be used for operational risk modeling.

Incidents are reported as they occur, as soon as they are detected, in accordance with Group procedure. A whistleblowing procedure has been set up for major incidents and internal limit breaches to round out the incident data collection system.

Operational risk oversight

MAPPING

The operational risk management system relies on a mapping process which is updated annually by all Group entities.

Mapping enables the forward-looking identification and measurement of high-risk processes. For a given scope, it allows the Group to measure its exposure to risks for the year ahead. This exposure is then assessed and validated by the relevant committees in order to launch action plans aimed at reducing exposure. The mapping scope includes emerging risks, risks related to information and communication technologies and security, including cyber-risks, risks related to service providers and risks of non-compliance.

This same mapping mechanism is used during the Group's ICAAP to identify and measure its main operational risks. The operational risk map also serves as a basis for the macro-risk mapping campaign covering the institutions, and thus for the Group overall.

Action plans and monitoring of corrective actions

Corrective actions are implemented to reduce the frequency, impact or spread of operational risks. They may be introduced following operational risk mapping, breaches of risk indicator thresholds or specific incidents.

Progress on key actions is monitored by each entity's Operational Risk Management Committee.

At Group level, progress on action plans for the principal risk areas is also specifically monitored by the Non-Financial Risk Committee.

Incident alert procedure

The alert procedure for serious incidents has been extended to the entire scope of Groupe BPCE. The aim of this system is to enhance and reinforce the system for collecting loss data across the Group.

An operational risk incident is deemed to be serious when the potential financial impact at the time of detection is over €300,000 or €1 million for GFS. Operational risk incidents with a material impact on the image and reputation of the Group or its subsidiaries are also deemed to be serious.

There is also a procedure in place covering material operational risks, within the meaning of Article 98 of the Ministerial Order of November 3, 2014, as amended by the Ministerial Order of February 25, 2021, for which the minimum threshold is set at 0.5% of Common Equity Tier-1.

Operational risk measurement

Groupe BPCE applies the standardized approach to calculate its capital requirements. Moreover, elements of internal control are considered in the assessment of the Group's net risk exposures.

7.13.3 Control

The permanent risk control division of the Governance and Risk Control department performs two types of Level 2 Controls on Operational Risks:

- compliance checks with standards (comprehensive and automatic):

Groupe BPCE checks the system when it presents any deviations from the Operational Risk Standards on the various themes of Operational Risk Management: organizational system for the management of OR, incidents, mapping, predictive risk indicators, corrective actions, etc.;

- data quality controls (sample and manual):

Groupe BPCE performs Level 2 controls of the Operational Risk function.

These controls are carried out on the basis of the control reports of the Institutions system, and therefore on the same scope as these reports: system, incidents, mapping (risk situations), predictive risk indicators, corrective actions.

The majority of these controls are carried out on the basis of data samples extracted from the operational risk management tool. The results of these Level 2 sample controls are recorded in the permanent controls management tool.

Other controls concern certain points relating to risk coverage. They are exhaustive and their results are subject to specific formalization (minutes of meetings relating to serious incidents, record of decisions, etc.).

Highlights

In addition, with a view to improving our risk management, first- and second-level controls on external fraud are being implemented.

In terms of Insurance, the networks and subsidiaries benefit from coverage of their insurable operational risks under Group insurance policies contracted from leading insurance companies. In addition to this system, an internal Group reinsurance company has been set up.

EU OR1 – Capital requirements for operational risk and risk-weighted exposure amounts

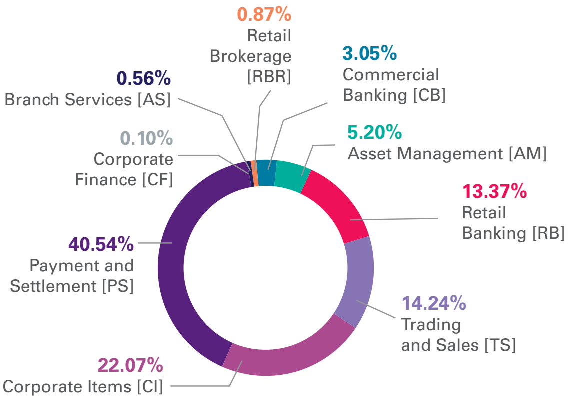
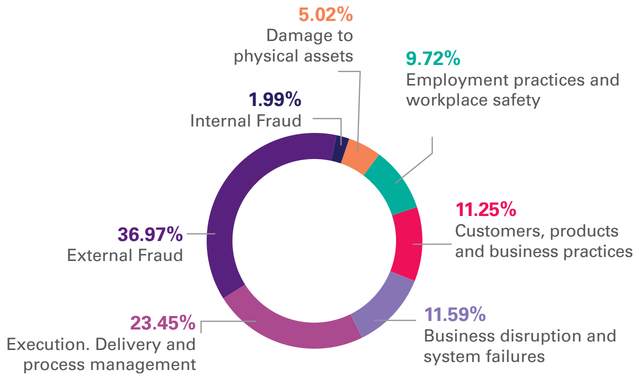
Breakdown of losses by Basel business line



Breakdown of losses by Basel loss event category



Operational risk mitigation techniques

In terms of Insurance, the networks and subsidiaries benefit from coverage of their insurable operational risks under Group insurance policies contracted from leading insurance companies. This system is complemented by a reinsurance captive that allows the adjustment of deductible levels.

COVERAGE OF INSURABLE RISKS

At January 1, 2024, BPCE SA had subscribed, both for itself and for:

- its subsidiaries, including GFS;
- and the Banque Populaire and Caisse d'Epargne networks, with the exception of CASDEN Banque Populaire with respect to the "Property Damage" insurance coverage for Registered Offices & Similar and their contents (including IS equipment) and consequent "losses in banking activities", described below in point E/;

The following main Insurance policies to cover its insurable operational risks and protect its balance sheet and income statement:

A/ Combined "Global Banking (Damages to Valuables and Fraud)" & "Professional Civil Liability" policy with a total maximum payout **of €217 million** per year of insurance, of which:

a) **€92.5 million** per year, combined "Global Banking/ Professional Civil Liability/Cyber-Risks/FIE" and mobilizable under the guaranteed amounts indicated in (ii) and/or (iii) and/ or (iv) and/or F/ below;

b) **€48 million** per claim and per year (sub-limited in "Fraud" to **€35 million** per claim), dedicated to the "Global Banking" risk only;

c) **€25 million** per claim and per year, solely reserved for "Professional Civil Liability" risk;

d) **€51.5 million** per claim and per year, combined "Global Banking/Professional Civil Liability" insurance available in addition to or after use of the amounts guaranteed set out in (ii) and/or (iii) above.

The maximum amount that can be paid out for any one claim under this arrangement is **€100 million** under "Professional Civil Liability" coverage and **€100.5 million** under "Fraud" coverage in excess of the applicable deductibles.

B/ "Regulated Intermediation Liability" (in three areas: Financial Intermediation, Insurance Intermediation and Real Estate Transactions/Management) with a total maximum payout of **€10 million** per claim and €13 million per year.

C/ "Operating Civil Liability" covering **€75 million** per claim, as well as a "Subsidiary Owner Civil Liability"/"Post Delivery-Reception Civil Liability" coverage extension for up to **€35 million** per claim and per year of insurance.

D/ "Company Directors Civil Liability" for up to **€150 million** per claim and per year of insurance.

E/ "Property Damage" to "Registered Offices & Similar" and to their content (including IT equipment) and the consecutive "losses in banking activities", for up to **€300 million** per claim (sub-limited to **€100 million** per claim **and €200 million** per year for consequential "losses in banking activities").

F/ "Protection of Digital Assets against Cyber-Risks" & consecutive "losses of banking activities", up to **€100 million** per claim and **€156.5 million** per policy year of which **€85 million** per year combined with the guaranteed amount indicated in (i) of A/.

This coverage extends worldwide for initial risk or umbrella risk, subject to certain exceptions, mainly in terms of "Professional Civil Liability" where the policy does not cover permanent institutions based in the United States (where coverage is obtained locally by GFS' US operations).

All the insurance policies mentioned above were taken out with reputable, creditworthy insurance companies and in excess of the deductibles and Groupe BPCE's risk-retention capacity.

7.14 Insurance, Asset Management, Financial Conglomerate Risks

Foreword

The quantitative information relating to IFRS 17 impacts mentioned in the paragraphs "Insurance, Asset Management, Financial Conglomerate Risks" below is presented in Chapter 5 "Finance" of the Universal Registration Document (URD).

Organization

The Non-Banking Equity Risk department of the Group Risk division consisted of four units (two business line units and two cross-business units):

- Group Insurance Risks;
- Group Asset Management Risks;
- Financial Conglomerate;
- Stress Tests & Methodologies.

Articulating the missions of each division makes it possible to address the challenges of Complementary Conglomerate Monitoring. Monitoring of the risks inherent in the Insurance and Asset Management entities is supplemented by a capacity for qualitative and quantitative analysis of the interactions between Business Lines and repercussions on the Group.

Insurance risks

Guidelines

Insurance risk is the probability of damage or accident occurring during the insurance coverage period. This risk differs according to the insurance products concerned. Depending on the insurance products concerned, the risk varies according to changes in macro-economic factors, changes in customer behavior, changes in public health policy, pandemics, accidents and natural disasters (*e.g.* earthquakes, industrial accidents or acts of terrorism or war). The credit insurance business is also exposed to credit risk.

Managing insurance risks requires monitoring of the inherent technical risks, while paying particular attention to the financial risks incurred through assets under representation. In addition to protecting the balance sheet and income statement of insurance companies, the aim is to guarantee their solvency and liquidity.

To this end, the Group's companies have put in place systems for measuring, reporting and managing risks. These systems comply with the regulatory requirements in effect since January 1, 2016 with the application of the Solvency II directive (Pillar I Quantitative Solvency Requirements, Pillar II Governance & ORSA, and Pillar III Prudential Reporting and Public Information).

As of January 1, 2023, the Group's companies have been subject to IFRS 17, which harmonizes and updates the recognition, measurement and presentation of commitments in liabilities.

This recognition of liabilities under IFRS 17, concomitant with the recognition of assets under IFRS 9, could lead to greater variability in results compared to IFRS 4 and IAS 39, and conversely it could reduce that of OCI.

In this context, the Group Risk division (DRG) ensures, in coordination with the banking parent companies (BRED, Oney, CASDEN), the operation of the insurance risk monitoring systems within the main companies in which the Group is the reference shareholder. BPCE Assurances, Compagnie Européenne de Garanties et Cautions (CEGC), PREPAR Assurance, Oney Insurance and Oney Life; in addition, coordination is ensured with Parnasse Garanties and its parent company CASDEN, and with Surassur.

Since 2011, the Group has deployed an insurance risk unit. This meets the requirements of the Financial Conglomerates directive 2002/87/EC (FICOD) and its transposition into French law by the Ministerial Order of November 3, 2014 on the supplementary supervision of financial conglomerates, through the Group's cross-functional insurance risk monitoring system, while at the same time ensuring functional and regulatory interoperability between the banking and insurance sectors. The principle of subsidiarity applies to the sector, with controls carried out first by the insurance companies, then at the level of the Risk divisions of the parent companies of the companies, and finally by the Group Risk division.

This system is reflected in:

- coordination of the sector: Insurance Risk Monitoring Committees (CSRA) meet every quarter and are supplemented by frequent discussions with the companies and, where applicable, their parent companies. The Group Risk division also participates in the main Risk Committees of companies reporting directly to BPCE SA. It is also involved in the monitoring and review of Risk Appetite indicators, at Group level, but also at the level of each company. Lastly, it produces a quarterly note summarizing the main risk indicators of the companies and their risk news, which can be reported to the Group Risk and Compliance Committee;
- analysis of the main risk areas: Specific studies are carried out in connection with actual or prospective risks, whether of an economic, financial, regulatory or normative nature (impacts of the interest rate regime and higher inflation, impacts of the transition to IFRS 17 and 9, strengthened analysis of risks relating to real estate markets, etc.);
- the division is also involved in the review of new insurance products distributed by the Group by giving a risk opinion on the insurance products and new distribution processes offered.

Risks inherent to the Group's main companies

BPCE ASSURANCES

BPCE Assurances is the Insurance division of Groupe BPCE and is divided into two business lines:

- the Personal Insurance business, focused on developing portfolios of life insurance and endowment policies for investment and retirement purposes, as well as personal protection insurance portfolios;
- the non-life insurance business, focused on developing portfolios for Auto and Multi-Risk Home insurance, personal accident insurance, legal protection, healthcare and property & casualty insurance.

Given the predominance of the investment solutions activity, the main risks to which BPCE Assurances is exposed are financial. The company is also exposed to underwriting risks (life and non-life), as well as counterparty risk.

Market risk

Market risk is largely borne by subsidiary BPCE Vie on the financial assets that underpin its commitments with guaranteed principal and returns (€74.7 billion). The company is exposed to asset impairment risk (fall in the equity or real estate market) as well as the risk significant changes in interest rates.

A rapid rise in interest rates is likely to reduce the attractiveness of euro-denominated life insurance policies compared to other types of investments. However, this risk is limited due to the prospect of inflows and the reserves set aside to reduce the portfolio's exposure to rising interest rates. This risk also gradually decreases as interest rates stabilize as bonds mature and assets are replaced with higher rates.

Conversely, a drop in interest rates would be liable to generate insufficient returns to cover the capital and guaranteed rates. In response to this risk, for several years BPCE Vie has only sold contracts with zero guaranteed minimum rates ("GMR") (more than 97% of commitments) and, since mid-2021, new contracts include a gross capital guarantee on management fees on outstandings. The average GMR (taking into account these contracts for which the guarantee is reduced by management fees) is -0.04%.

To manage market risk, the sources of return have been diversified, namely *via* investments in new asset classes (funding the economy, infrastructure, etc.). This diversification is managed by a strategic allocation, defined on a yearly basis, that takes into account regulatory constraints, commitments to policyholders and commercial requirements.

Credit risk

Credit risk arises mainly from BPCE Vie's strong allocation of bonds denominated euros. It results from fluctuations affecting the level or volatility of credit spreads and thus the valuation of the company's assets. This risk is managed by monitoring exposures by rating, geographic area and sector, and compliance with BPCE Assurances' internal standards and limits. A qualitative analysis of securities placed under surveillance with different alert levels is also carried out.

On December 31, 2024, 77% of the BPCE Assurances' fixed-income portfolio was invested in securities rated A or higher. It is composed of fixed income assets diversified by geographic area and sector. A significant portion of the portfolio's investments are made with French and sovereign issuers.

Life insurance underwriting risk

The main life insurance underwriting risk is exposed is associated with the investment solutions activity in euros. In a situation of sharp rise in interest rates, the major risk corresponds to a risk of massive redemptions: the company could be forced to sell assets at an inopportune time, thus exposing itself to a risk of financial loss, as well as to the loss of future margins on redeemed policies. If the level of interest rates stabilizes, the risk of massive redemptions would gradually be reduced (the assets of euro-denominated funds benefiting from the level of interest rates). Conversely, in a situation of very low interest rates, BPCE Assurances is subject to the risk of a drop in redemptions.

Non-life insurance underwriting risk

The non-life insurance underwriting risk to which BPCE Assurances is exposed is borne by its subsidiary BPCE Assurances IARD:

- premium risk: to ensure that the premiums paid by the policyholders match the transferred risk, BPCE Assurances IARD implemented a portfolio monitoring policy whereby each policy is given a score based on its track record over three years. The score factors in types of claims, number of claims, their cost and other variables specific to the activity in question (degree of liability and bonuses/penalties for auto insurance, for instance). This supervision policy also helps to detect potential risks arising from large claims, and to arrange adequate reinsurance coverage;
- risk of loss: each time inventory is taken, an actuarial assessment of the provisions for claims payable is conducted based on methods widely recognized by the profession and required by the regulator;
- disaster risk: disaster risk is the exposure to an event of significant magnitude generating a multitude of claims (storm, risk of civil liability, etc.). This risk is therefore reinsured either through the government in the event of a natural disaster or an attack, for example, or through private reinsurers, specifically in the event of a storm or a civil liability claim.

Counterparty risk

The counterparty risk to which BPCE Assurances is exposed mainly concerns reinsurance counterparties. The selection of reinsurers is a key component of managing this risk:

- BPCE Assurances deals with reinsurers that are subject to a financial rating by at least one of the three internationally recognized rating agencies, and that have a Standard & Poor's equivalent rating of A- or higher;
- using several reinsurers ensures counterparty diversification and limits counterparty risk.

CEGC

Compagnie Européenne de Garanties et Cautions is the Group's Security and Guarantee insurance entity. It is exposed to underwriting risk, market risk, reinsurer default risk and operational risk.

In 2024, new home loans guaranteed by CEGC recorded a new slowdown, although it recovered in the second half of the year. Claims made in 2024 remained under control at 20% of earned premiums ("claims to premiums", gross reinsurance ratio).

Under the Solvency II prudential regime, CEGC uses a partial internal model approved by the ACPR. It meets the robustness requirement applicable to home loan guarantors.

In 2024, CEGC covered the Solvency Capital Requirement, thanks to its Tier-1 and Tier-2 capital, as well as its reinsurance coverage.

Underwriting risk

Underwriting risk is the main risk incurred by CEGC. It is essentially a counterparty risk, as the commitments given by CEGC to beneficiaries of guarantees result in direct exposure to individual or corporate insured parties. These commitments are regulated and provisioned under liabilities in the balance sheet. They amounted to €3.2 billion on December 31, 2024 (-2.4% compared to end-2023AMOUNT OF CEGC REGULATED COMMITMENTS *(IN MILLIONS OF EUROS)*

CEGC activities	12/31/2024	Change at 12/31/2024 compared to 12/31/2023
Individual customers	2,821	(2.0%)
Single-family home builders	89	(2.8%)
Property administrators – Realtors	14	1.0%
Corporate customers	30	(42.1%)
Real estate developers	33	41.8%
Small businesses	109	(1.4%)
Social Economy – Social Housing	63	0.3%
Structured collateral	3	(69.0%)
TOTAL	**3,161**	**(2.4%)**

Under IFRS, Best Estimate provisions are measured using default rate parameters that are used to determine future claims and claim rates.

Market and credit risk

CEGC's short-term investment portfolio totaled over €3.8 billion on its balance sheet on December 31, 2024 hedging underwriting provisions.

Market risk associated with the short-term investment portfolio is limited by the company's investment choices.

The company's risk limits are set out in the financial management charter and the asset management agreement established with Ostrum. As an insurance company, CEGC does not require funding since insurance premiums are collected before the disbursement of claims. Nor does CEGC carry transformation risk: the investment portfolio is entirely backed by own funds and technical reserves.

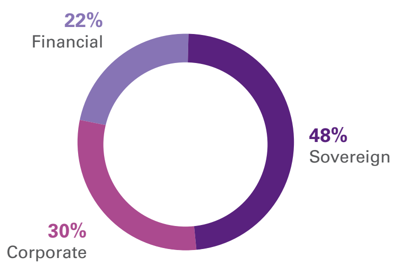
The chart below shows the sectoral breakdown of the bond portfolio between sovereign bonds, financial bonds, *obligations foncières* and other corporate bonds at the end of 2024.

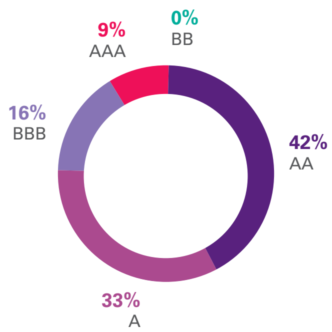
At December 31, 2024, the proportion of bonds with a rating above A- was 84%, in line with the company's financial management charter, and more than 99% of the securities held were classified as "Investment grade".

The average rating of the bond portfolio was A+ as of December 31, 2024.

Breakdown of the bond portfolio by sector at 12/31/2024



Breakdown of the bond portfolio by rating at 12/31/2023



Reinsurance risk

CEGC hedges its liability portfolio by implementing a reinsurance program tailored to its activities.

In loan guarantees, reinsurance is used as a tool for regulatory capital management. It protects guarantee beneficiaries in the event of an economic recession leading to a loss of up to 2% of guaranteed loan outstandings.

In the corporate segments, the program is used to protect CEGC's capital by hedging against high-intensity risks. It has been calibrated to cover three major individual loss events (loss due to the financial failure of a counterparty or a group of counterparties) with the potential to significantly impact CEGC's income statement. Reinsurer default risk is governed by counterparty concentration and rating limits. CEGC's reinsurance programs are underwritten by a broad panel of international reinsurers with a minimum rating of A on the S&P scale.

PREPAR ASSURANCE

The PREPAR Assurance group is made up of two companies:

- PREPAR-VIE, created in 1984, a public limited company with a Management Board and a Supervisory Board;
- PREPAR-IARD, created in 1990, a public limited company with a Board of Directors.

They are wholly-owned subsidiaries of BRED Banque Populaire, of which they form the Insurance division.

PREPAR Assurance offers personal and property insurance policies, mainly with BRED customers, and incidentally with other distribution channels (company employees, brokers, French property investment funds).

The main products currently being marketed at these two entities are as follows:

- open-ended savings contracts, in the form of life insurance or capitalization;
- pension policies in a specific tax framework ("Madelin", PERP and PERI policies);
- "Whole life" contracts, as part of the financing of funerals;
- personal risk insurance contracts such as creditor insurance or "term life insurance";
- "Health/sick leave" guarantees;
- "Financial loss" guarantees;
- "Accidental death" guarantees.

At 31 December 2024, PREPAR-VIE, considered as the parent company of the PREPAR Assurance group, managed approximately 238,000 savings contracts, for a total outstanding of €8.2 billion and 746,000 personal risk insurance contracts.

PREPAR Assurances is subject to the main risks described below.

PREPAR-VIE

- market risk: PREPAR-VIE's portfolio of assets is diversified to address the ALM management issues specific to an entity mainly marketing savings contracts. As a result, PREPAR-VIE is highly exposed to market risk and more specifically to interest rate, equity, real estate and spread sub-risks;
- credit risk: mainly related to bond investments and their receivables;
- life insurance underwriting risk: as a company mainly marketing savings contracts, PREPAR-VIE is subject to mortality, fee and surrender sub-risks.

PREPAR-IARD

- non-life insurance underwriting risk: the financial loss guarantees marketed by PREPAR-IARD are subject to non-life underwriting risk, premium and provisioning risk, as well as catastrophe risk;
- counterparty risk.

These risks are regularly monitored and are reported to the various Group bodies.

Asset management risks

Like the system adopted for the Insurance business line, the operation of this system is based on subsidiarity with the Risk divisions of the parent banks and business lines; in particular, Natixis Investment Managers, which consolidates most of the Group's assets under management.

By setting up an Asset Management Risk System, the Group Risk division pursues the following main objectives:

1) identify the major risks that could impact the Group's solvency trajectory as a Financial Conglomerate to cover its banking or Conglomerate prudential ratios;
2) be associated with the contributions of the sector during Group exercises (ICAAP, PPR, Stress Tests, etc.) so as to identify the risks of the business model on the contribution to results and equity, quantify them and prioritize them;
3) organize the management of the system by specifying a risk review and setting up a formal quarterly meeting;
4) inform Executive Management by presenting a summary of the review of the risks of our asset management activities to the Group Risk and Compliance Committee.

In the Asset Management business line, the Risk division formally ensures: the coordination of the risk system (cross-functional or focus workshops); running cross-functional projects related to the banking sector; information to Executive Management with a summary report for the members of the Group Risk and Compliance Committee.

The system is based on contributions from asset management companies and their work on risks.

Due to its large majority, the system relies mainly on Natixis Investment Managers. The re-use of existing work and methodologies locally is favored to establish supervision at the Group level. The key risk monitoring indicators are determined with NIM in coordination with GFS.

BPCE's Group Risk division focuses on risks that may affect the Group such as redemption risk and the associated potential step-in risk, seed money and operational risks (based on the Group's OR), including through stress tests of NIM and economic capital review. GFS' Risk division regularly monitors NIM's risks through its role as direct parent company.

The Group Risk division, together with GFS and/or NIM, anticipates the impacts of consultations and regulatory changes.

The system also provides for the implementation of an annual review for asset management companies that are not significant at the Group level but significant for their direct parent banking companies for the following entities: Palatine AM and Promepar AM.

Additional monitoring of the financial conglomerate

Groupe BPCE, identified by the ACPR/ECB as a financial conglomerate due to the absolute and relative size of its banking and insurance activities, is subject to the related additional monitoring requirements[1]. Since the entry into force of the Single Supervisory Mechanism (SSM), the ECB has coordinated the supervision of predominantly banking financial conglomerates.

The Complementary Conglomerate Monitoring function was officially created in 2017 following the validation by the Management Board of the function's mission statement. The latter identifies the macro-objectives and stakeholders within the Group. The roles, responsibilities and interactions between each of the players in the sector have been defined. Depending on the themes, committees are organized three to four times a year.

The regulation related to the conglomerate requires an overview of the entire accounting consolidation scope (banking, insurance, Asset Management and non-financial sector). Additional monitoring focuses on:

- capital adequacy of the financial conglomerate;
- monitoring of intra-group transactions between the various entities of the conglomerate;
- monitoring the concentration of risks;
- risk management procedures and internal control system.

In terms of risk monitoring:

- the financial conglomerate approach aims to capture the main interactions between the banking, insurance and asset management sectors that could, due to an exogenous or endogenous event, impact the Group's risk profile and its main trajectories (results, solvency, liquidity);
- it makes it possible to consolidate the banking and insurance sector metrics, in particular capital requirements;
- the complementary supervision is based mainly on the banking system as a whole, and on the insurance and asset management risks.

The conglomerate's excess equity is monitored in the Group's RAF (Risk Appetite Framework). In order to provide a forward-looking view of the Group's solvency through the financial conglomerate's reading grid, Groupe BPCE projects the excess equity over several years under different scenarios.

As part of the overhaul of Conglomerate reports on intragroup transactions and risk concentration, the department is supporting the Group Accounting department for its operational implementation. These reports will enable enhanced monitoring of the risks of contagion between the various entities of the conglomerate and the concentration of risks, in the spirit of the additional monitoring requirements.

The entire system, in its main dimensions – Insurance, Asset Management, Banking, Financial Conglomerate – is the subject of presentations and discussions with the joint ECB/ACPR supervision team, in particular at meetings dedicated to the JST (Joint Supervisory Team). In particular, the organization of the risk management system, as well as the main analyses and points of attention brought to the attention of the Group's Executive Management during the year, are reviewed.

(1) Directive 2002/87/EC of December 16, 2002 (as amended) on the additional supervision of credit institutions, insurance companies and investment firms belonging to a financial conglomerate, transposed into French law by the Order No. 2004-1201 of November 12, 2004, and the Ministerial Order of November 3, 2014 on the additional supervision of financial conglomerates.

Stress tests & methodologies

In a conglomerate approach, a global and integrated system of solvency trajectories and stress tests has been developed. This system encompasses and is based on the three regulations Solvency II, Basel III and Financial Conglomerate. The application of common assumptions in these three dimensions provides a holistic view of the Group's solvency.

The Group Risk division is mainly responsible for:

- the coordination of insurance sector Stress Tests, in particular ORSA[1] (Pillar II of Solvency II); from the determination of stress assumptions to the analysis of results at Group level;
- the design of methodologies for linking the insurance sector to the prudential banking group;
- the analysis of contagion mechanisms and regulatory and economic interactions between the various sectors of the Group as a financial conglomerate.

The Group's insurance companies are included in the banking IST (Internal Stress Tests) as part of the ICAAP (Internal Capital Adequacy Assessment Process) normative approach[2]. The modeling includes:

- the simulation of Solvency II ratios, SCR and MCR, in order to objectify any capital requirements;
- the simulation of "IFRS variables" that impact the bank solvency ratio in accordance with prudential specifications (net income retained or distributed, OCI, value and difference in equity method);
- the fees and commissions paid by companies to the Group's distribution payment networks or asset managers.

As part of ICAAP's economic approach, the Non-Banking Equity Risk department of the Group Risk division:

- developed, and if necessary modified, the Economic Capital model for Insurance Risk in coordination with the companies and the Group Finance division. It carries out the related quarterly production (costing and analysis);
- coordinated, with GFS and Natixis IM, the review of Economic Capital models related to NIM's activity. It monitors the action plan shared with all stakeholders at the end of the review (in order to adapt certain methodologies to the specific features of Asset Management in terms of both risks and business model).

More generally, the Non-Banking Equity Risk department provides its quantitative and methodological expertise on the risks of non-banking activities, to support or challenge work carried out by the business lines and/or the Group (actuarial expertise, company ALM topics, EBA stress tests, quantification of the impact of physical climate risk, etc.).

Activities in 2024

INSURANCE RISKS

- Analysis of BPCE Assurances and Parnasse Garanties' risk profiles
- Monitoring of companies' assets, buybacks and real estate vehicles with regard to the market situation
- Review of Risk Appetite Framework systems

ASSET MANAGEMENT RISKS

- Mapping of the Group's internal asset management companies (excluding NIM)
- Analysis and monitoring of real estate funds (SCPI, SCI, and OPCI) since the summer of 2023 following the real estate market crisis
- Implementation of risk monitoring on the portfolios of Group insurance companies

FINANCIAL CONGLOMERATE

- Review of reports in support of the Group Accounting department
- Identification of conglomerate contagion scenarios
- Monitoring and analysis of intra-group transactions between BPCE Vie and the Group

STRESS TESTS & METHODOLOGIES

- Coordination and analysis of ST ORSAs, the Insurance section of the ICAAP IST and the Conglomerate solvency projections
- Work on ESG risk mapping and contagion channels in the insurance scope
- Quantification of the materiality of risks in the Group Insurance module

(1) Own Risk and Solvency Assessment.
(2) Internal Capital Adequacy Assessment Process.

7.15 Model risks

Introduction

Groupe BPCE aims to optimize returns while operating within the risk appetite limits set by the Board of Directors by monitoring each type of risk and, in particular, the model risk as well as the associated regulatory obligations.

Models must be constantly monitored with regard to their effectiveness.

Simplification and underlying assumptions sometimes come at the expense of accuracy and structural integrity in stressed environments. Groupe BPCE is therefore exposed to a model risk.

Model risk is the risk of financial loss or damage to the Group's reputation resulting from defects in the design, implementation or use of models.

Based on the regulatory definition, the Groupe BPCE distinguishes between **two types of model risk**:

- **model uncertainty risk:** this risk is inherent in the quantitative method, system or approach used to approximate or represent the observation;
- **model risk as an operational risk** (see § 6.13): this is the risk of economic or reputational loss related to errors in the development, implementation or use of the model.

Organization

The Group strives to define and deploy internal standards to identify, measure and limit model risk based on fundamental principles, such as the implementation of **three independent lines of defense**:

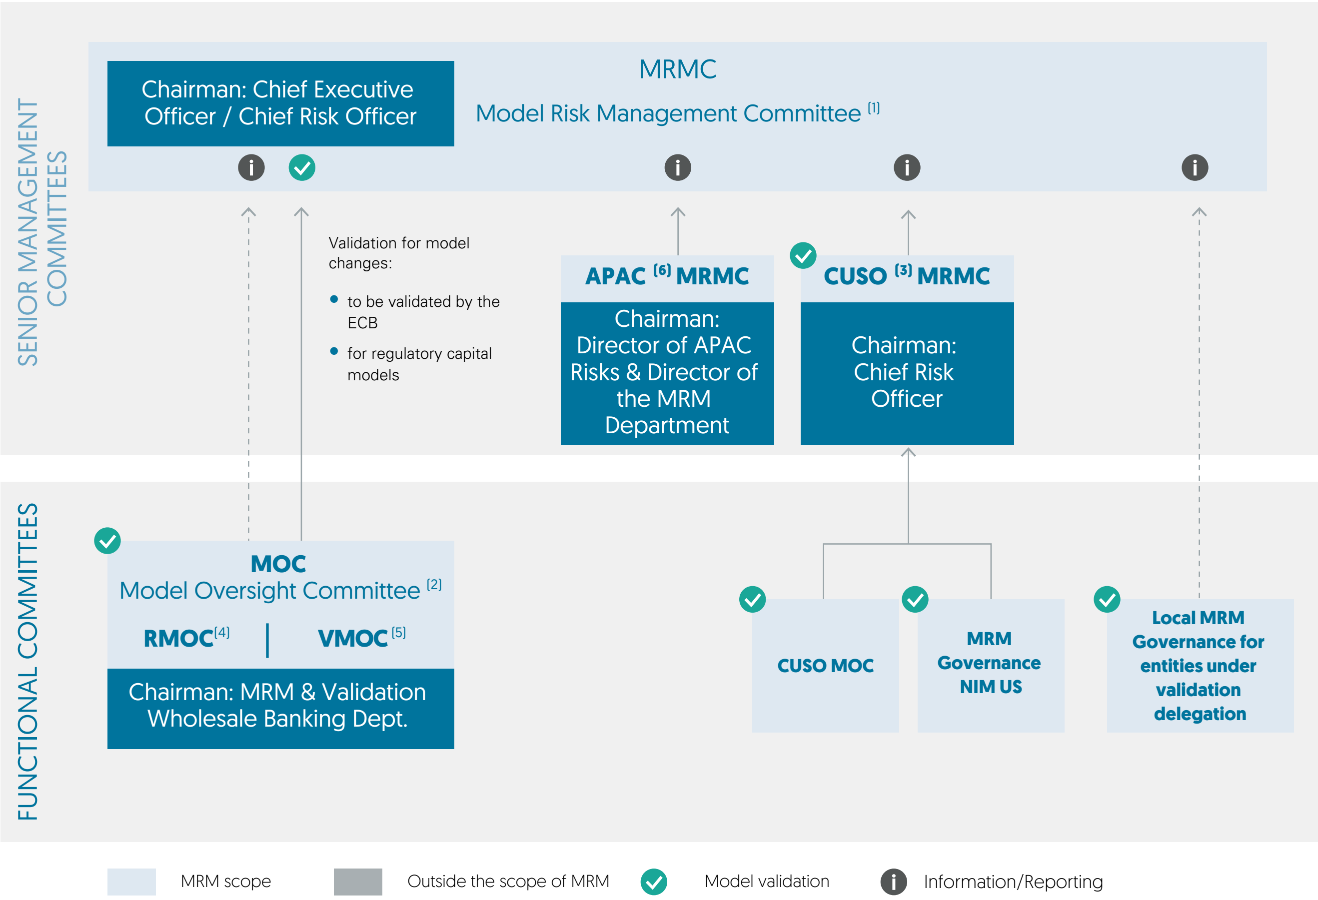
- **a first line of defense** in charge of the design, development and use of the model and the day-to-day management of model risk through the application of controls, **mainly embodied by the Model Owner**;
- **a second line of defense** responsible for the definition, maintenance and operational implementation of the model risk control framework **embodied in particular by the Model Risk Management (MRM)** and validation **functions**;
- **a third line, embodied by Internal Audit**, whose role is to periodically verify the effectiveness of the management of the model risk system and the control system defined by the second line of defense.

Governance

Groupe BPCE has established a robust model risk governance system aimed at assessing, reducing and monitoring changes in model risk throughout the model's life cycle through the definition of indicators and the implementation of dedicated dashboards distributed to Executive Management.

Its implementation is linked to an independent control based on principles in connection with the documentation, design, development, implementation, review, approval, continuous monitoring and use of models to ensure their reliability. An MRM risk management policy has been defined for this purpose. This policy must promote an informed knowledge of how each model works, how it is used, and its strengths, weaknesses and limitations. The policy is supplemented by a body of procedures defining the tools for monitoring the performance of the models, in particular, the validation review, the monitoring of remediation actions and the associated escalation processes, and the monitoring of the model portfolio through an inventory. The system is based on a specific tool used by Groupe BPCE to manage the life cycle of models. A Model Risk Management Committee chaired by the Chairman of the Management Board of BPCE, or the Chief Executive Officer in charge of risks by delegation, is dedicated to the governance/supervision of the models and the associated risk.

Governance of the models is based on the Model Risk Management Committee (MRMC) and the functional model validation committees (Model Oversight Committee), which ensure the implementation of a robust governance framework for the model risk:



(1) MRMC (Model Risk Management Committee)
(2) MOC (Model Oversight Committee)
(3) CUSO (Combined United States Operations)
(4) RMOC (Risk Models Oversight Committee)
(5) VMOC (Valuation Models Oversight Committee)
(6) APAC (Asia and Pacific): Asia-Pacific.

In accordance with regulatory requirements, Groupe BPCE has implemented model validation policies and procedures that define and specify the missions and responsibilities of the various players involved in the model life cycle. Model validation is carried out by validation teams that are independent of Groupe BPCE's Risk division, with the exception of models reviewed by a validation delegation that is itself subject to compliance with a certain number of conditions (expertise, compliance with independence rules, etc.). The delegation of validation is subject to the prior approval of the Model Risk Management Committee (MRMC).

The internal validation process for models is broken down into three steps:

1) **review of the model** and its adequacy, conducted **independently** of the entities having worked on the development of the model;
2) **review** of the conclusions of the validation during a meeting of a functional committee composed of quantitative (modelers and validators) and business line experts. The reviews are presented by the **Model Oversight Committee** (MOC), chaired by the Group Chief Risk Officer, a member of the Executive Management Committee or the Head of the Model Risk Management department; or within local committees chaired by a member of Executive Management for delegated entities;
3) **validation by the Model Risk Management Committee** (MRMC) in the specific case of the analysis of the materiality of certain changes in models which, where applicable, are subject to prior authorization of the European supervisor under European Regulations Nos. 529/2014 and 2015/942 relating to the monitoring of internal models used to calculate capital requirements.

7.16 Environmental, social and governance risks

7.16.1 Definition and reference framework

7.16.1.1 Reference framework

The management of environmental, social and governance risks within Groupe BPCE is part of a threefold framework:

- the regulatory and legislative framework, which includes all the texts in force in the jurisdictions in which Groupe BPCE operates. In France, these include the European Taxonomy or the Sustainable Finance Disclosure Regulation (SFDR) as well as texts stemming from banking or insurance regulations and by extension the European Central Bank's guide on managing climate and environmental risks;
- the framework of standards and best market practices and in particular international references such as the Sustainable Development Goals, the United Nations Global Compact and even the Paris Agreements on climate change;
- the voluntary commitments made by Groupe BPCE directly through sectoral ESG policies in sensitive sectors or as part of market initiatives such as the Net Zero Banking Alliance, the Net Zero Asset Manager Initiative on asset management activities and the Net Zero Asset Owner Alliance for its activities policy, which governs commitments to align greenhouse gas emissions trajectories with carbon neutrality by 2050, and the Principles for Responsible Banking.

Groupe BPCE's environmental, social and governance risk management system aims to ensure compliance with the methodological standards and constraints set by this reference framework while still reflecting Groupe BPCE's risk appetite.

7.16.1.2 Definition of ESG risks

ENVIRONMENTAL RISKS

Environmental risks fall into two main categories:

- Physical risks arising from the impacts of extreme or chronic climatic or environmental events (biodiversity, pollution, water, natural resources) on the activities of Groupe BPCE or its counterparties;
- Transition risks arising from the impacts of the transition to a low-carbon economy, or one with a lower environmental impact, on Groupe BPCE or its counterparties, including regulatory changes, technological developments, and the behavior of stakeholders (including consumers).

SOCIAL RISKS

Social risks arise from the impacts of social factors on Groupe BPCE's counterparties, including issues related to the rights, well-being and interests of individuals and stakeholders (the Company's workforce, employees of the Company's value chain, communities concerned, end users and final consumers).

GOVERNANCE RISKS

Governance risks arise from the impacts of governance factors on Groupe BPCE's counterparties, including issues related to ethics and corporate culture (governance structure, business integrity and transparency, *etc.*), managing supplier relationships and influencing business practices.

7.16.1.3 Climate and environmental scenarios

As part of its strategic business line planning and management and the management of its risks, Groupe BPCE uses climate scenarios to assess the challenges associated with short-, medium- and long-term climate risks.

These scenarios come from leading institutions in scientific research on the climate, such as the Intergovernmental Panel on Climate Change (IPCC), the Network for Greening the Financial System (NGFS) or the International Energy Agency (IEA).

Groupe BPCE mainly uses the SSP2-4.5 scenario to define a medium or "middle of the road" trend. This scenario represents a "middle of the road" pathway that extrapolates past and current global development into the future. Income trends in different countries diverge considerably. There is some cooperation between States, but it is limited. Global population growth is moderate and stabilizes in the second half of the century. Environmental systems are facing a certain deterioration. With regard to greenhouse gas emissions, this scenario represents the average trajectory of future greenhouse gas emissions and assumes that climate protection measures are taken.

For its risk assessment needs in a deteriorated context, Groupe BPCE also relies on the SSP5-8.5 scenario. This scenario assumes development from fossil fuels. Global markets are increasingly integrated, resulting in innovations and technological advances. The social and economic development, however, is based on an intensified exploitation of fossil fuel resources with a high percentage of coal and an energy-intensive lifestyle worldwide. The global economy is growing and local environmental problems such as air pollution are being tackled successfully. With regard to greenhouse gas emissions, this scenario reflects the failure of mitigation policies and the continuity of trends in primary energy consumption and energy mix.

In defining its decarbonization objectives and trajectories, Groupe BPCE also relies on the scenarios of the International Energy Agency. These scenarios, specific to each sector, determine the technological breakthroughs necessary to achieve carbon neutrality by 2050.

Wishing to contribute to the achievement of global carbon neutrality by 2050 by relying on science, Groupe BPCE generally relies on the Net Zero Emissions 2050 scenario (NZE 2050 scenario) of the International Energy Agency published in 2021 to define the targets for aligning its exposure portfolios with the sectors with the most carbon-emitting sectors. This scenario plots sector trajectories compatible with limiting global warming to 1.5°C, in accordance with the most ambitious objectives of the Paris Agreement. When this scenario is not sufficiently precise and granular to be reconciled with the composition of certain sector portfolios, the Group may have to use alternative scenarios by ensuring the quality of the organizations that produce them and their compatibility with the ≤1.5°C target without or with limited overshoot of the global carbon budget.

While the reference base generally used is the International Energy Agency curve, the use of scientific reference curves adapted to each sector and the geographies in which Groupe BPCE's activities are present has made it possible to take into account the specificities of the sectors considered. These scientific scenarios are usually expressed in emission intensity. They are also used by the vast majority of the customers that Groupe BPCE finances in these sectors. This shared use of a scientific reference base makes it possible to optimize the dialog between the bank and its customers.

7.16.1.4 Industry knowledge base

Groupe BPCE has developed a knowledge base shared between the main internal stakeholders in the ESG risk management system (in particular the Impact Department and the ESG Risk Department). This knowledge base is intended to serve as a reference framework within Groupe BPCE on ESG issues related to the main economic sectors and to feed into the work carried out downstream to integrate ESG risks into strategic discussions and the various Groupe BPCE risk management systems.

This knowledge base takes the form of sectoral factsheets bringing together the main ESG issues of the most ESG-sensitive economic sectors. They are based on the current state of scientific, technological and social knowledge gathered by Groupe BPCE's experts. A regular system enhancement process is expected to be in place from 2025 onward.

7.16.1.5 ESG data

The acquisition, dissemination and use within Groupe BPCE of data related to the ESG characteristics of its counterparties and its own activities is a critical issue, particularly for the purposes of managing portfolios and monitoring ESG risks, but also the enhancement of customer knowledge to implement useful support actions, according to the customer segment.

Depending on its needs and available data, Groupe BPCE has several channels for acquiring ESG data on its counterparties:

- the direct collection of data from its counterparties through specific questionnaires and dedicated strategic dialogs;
- the collection of data from non-financial information published by its counterparties, for example in their sustainability report or, from 2025, in their CSRD report for the European companies concerned;
- the use of public databases (open data), made available by governmental institutions such as the French Environment and Energy Management Agency (ADEME) or specialist non-governmental organizations (NGOs) such as World Wildlife Fund (WWF) or Urgewald;
- the use of specialized external data providers such as non-financial or general rating agencies.

In the absence of counterparty-specific data, Groupe BPCE may use approximations (*e.g.* sector averages) and estimates to assess the trajectory of its portfolios and its risks. This type of approach is used, in particular, in portfolios related to individual customers, professionals, and small companies, for whom the issues of data availability and quality are particularly acute.

To address these challenges, Groupe BPCE has defined a governance framework specific to ESG data and developed a dedicated program to implement an infrastructure and processes for collecting, storing, and disseminating structured and consistent ESG data within the Group. This program, in particular, involves mapping ESG data needs and creating an associated roadmap aimed at gradually improving the availability and quality of the ESG data used by the Group.

7.16.2 Governance

SUPERVISORY BOARD OF GROUPE BPCE

Groupe BPCE's Supervisory Board oversees and puts into perspective Groupe BPCE's ESG strategy, with the support of its specialized committees:

- the Risk Committee assesses the effectiveness of internal control and ESG risk management systems within Groupe BPCE. In 2024, the Risk Committee monitored the work to assess the climate and environmental challenges of the business lines and the assessment of the materiality of environmental risks, the definition and implementation of the action plan to strengthen the ESG risk management system, and discussions with the European supervisor;
- the Cooperative and CSR Committee oversees sustainability reports, in conjunction with the Audit Committee and the Impact program. In 2024, the main topics addressed by this committee were: monitoring the ESG program, preparing and implementing the new Impact program (alignment of portfolios, support for customers, reduction of the Group's own footprint and integration of ESG issues into risk management), the new CSRD regulation, the Responsible employer program and Conduct and Ethics reporting;
- the Audit Committee oversees sustainability reports and the inclusion of ESG risks in Groupe BPCE's financial statements, in conjunction with the Cooperative and CSR Committee (joint committee once a year);
- the Remuneration Committee reviews proposals aimed at integrating ESG issues and risks into the executive remuneration policy.

Groupe BPCE's directors receive regular training on the challenges that ESG risks represent for BPCE, the evolution of the scientific context, the regulatory expectations associated with these risks and the strategy and risk management systems implemented in response. In 2024, three specific training sessions on ESG risks were offered to Groupe BPCE directors.

7.16.2.1 Executive Management Committee

The Executive Management Committee validates the ESG strategy, ensures its implementation and oversees Groupe BPCE's risk management. To this end, it relies on committees dedicated to addressing these issues:

- the Environmental Transition Strategy Committee, chaired by the Chairman of the Management Board, validates the Group's Impact strategy in terms of environmental transition and steers its implementation (action plans, indicators by business line, measurement of the Group's ambitions). In 2024, the main topics covered were the publication of the measurement of NZBA trajectories and targets, the review of the indicators of the strategic plan with a Climate focus, the Oil & Gas ESG sector policy, and the monitoring of the Group's Impact program and its actions, particularly in terms of climate and biodiversity;
- the ESG Risk Committee, chaired by the Chief Risk Officer of Groupe BPCE, brings together the heads of Groupe BPCE's business divisions, the Risk and Finance functions and the Impact Department, as well as two of Groupe BPCE's executive managers. In 2024, it replaced the Climate Risk Committee by broadening its area of expertise and its missions. This decision-making and monitoring committee deals with ESG issues from a cross-functional perspective for Groupe BPCE and its various business lines. It is responsible for consolidated monitoring of Groupe BPCE's ESG risks and ensuring the implementation of the organizational and operational strategy regarding ESG risk management. It validates the main methodological choices and scenarios used within the Group in the context of ESG risk management. It reviews and validates the assessment of the materiality of ESG risks and decides on the Group's ESG risk appetite.

In addition, subjects associated with ESG risks are also handled by other Executive Management level committees, which include these subjects within their remit. This concerns in particular:

- the Group Risk and Compliance Committee (CRCG), which integrates ESG risks into Groupe BPCE's consolidated risk monitoring,
- the Standards and Methods Committee (CNM), which reviews and approves the changes in standards necessary for the implementation of the ESG risk management system,
- committees dedicated to risk channels that integrate the relevant ESG risk factors within their area of expertise: Group Credit and Counterparty Committee (CCCG), Group Non-Financial Risk Committee (CNFRG), Group Market Risk Committee (CRMG), Group Reputation Committee (CRRG),
- the Group Regulatory Monitoring Committee (CSRG), which monitors ESG regulations and ensures that regulatory requirements are met,
- the New Products and New Activities Committee (CNPNA), which incorporates issues related to ESG strategy and risks and associated regulations in the assessment of new products and activities,
- the Group Asset/Liability Management Committee (COGAP), which integrates the ESG strategy and risks associated with the management of Groupe BPCE's liquidity reserve.

In the context of Groupe BPCE's cooperative model, two committees support the definition and implementation of the ESG risk management strategy and system by liaising with the managers of Groupe BPCE institutions:

- the Impact Committee, chaired by the Director of Impact, supports the work of defining and implementing the Impact strategy by ensuring the link with managers of Groupe BPCE institutions. It provides cross-functional guidance on the Group's Impact program, prior to its deployment in the institutions;
- the Risk, Compliance and Permanent Control Committee (CRCCP), chaired by the Chief Risk Officer, which provides guidance on the main proposed changes to the ESG risk management system.

At an operational level, Groupe BPCE relies on committees bringing together experts on ESG issues and risks at the level of BPCE and its main entities. In particular, the Sustainable Finance Methodologies Committee, chaired by the Director of Impact, defines the reference methodological approaches in terms of Sustainable Finance and ESG risks for Groupe BPCE.

7.16.2.2 Organization

MISSION AND ORGANIZATION OF THE IMPACT DEPARTMENT

Groupe BPCE's Impact Department, which reports directly to the Chairman of the Management Board, is responsible for Impact's VISION 2030 in terms of environmental, social and governance dimensions. It develops and deploys this expertise and works to share and disseminate the best practices identified in all the Group's companies in a process of continuous improvement. Lastly, it ensures overall coordination and supports each sector to ensure "Impact Inside" operations, while setting up the necessary synergies.

To carry out its missions, the Impact department relies on the CSR/Impact departments of Groupe BPCE's various business lines, the Fédération nationale des Banques Populaires (FNBP), the Fédération nationale des Caisses d'Epargne (FNCE) and, at a more operational level, the CSR departments of the Group's entities. The structuring of an Impact function, with an Impact sponsor in all the Group's establishments, allows the implementation of a dynamic of co-construction of projects and the sharing of local best practices and ensures a global vision of the Groupe BPCE's Impact program, its implementation in institutions and the coordination of roadmaps and CSR projects.

MISSION AND ORGANIZATION OF THE ESG RISK DEPARTMENT

The ESG Risk Department plays a central role in defining and implementing Groupe BPCE's ESG risk supervision system and is responsible for:

- defining and deploying methodologies and risk measurement tools specific to ESG risks;
- contributing to the definition of reference climate/environmental scenarios for Groupe BPCE;
- contributing to the definition and implementation of a stress test system on ESG risks and contributing to cross-functional risk management processes, in particular RAF/ICAAP/ILAAP, on behalf of ESG risks;
- steering and supporting projects aimed at taking ESG risks into account in risk appetite, policies, processes, risk/business methodologies in all Risk functions, entities and business lines;
- supporting the operational implementation of the ESG risk system in all entities, in particular by supervising the permanent control system related to ESG risks;
- defining and implementing consolidated ESG risk monitoring dashboards and monitoring sensitive individual and sector exposures;
- Producing and disseminating consolidated analyses (*ad hoc* or recurring) on ESG risk exposure;
- Defining and developing the internal training system on ESG risks (directors, managers, employees).

To carry out these missions, the ESG Risk Department relies on a network of correspondents across all Groupe BPCE entities and institutions, in charge of supporting the deployment of the ESG risk management system within their entity or establishment.

Given the challenges specific to the Corporate & Investment Banking business lines, Natixis CIB has set up several expertise hubs within its commercial teams (Green & Sustainable Hub), within its risk division (teams dedicated to ESG risks within the department in charge of credit risks and its modeling teams) and within its Strategy & Sustainability division. These teams contribute to Groupe BPCE's work, in particular on large companies and specialized financing, impact and risk assessment methodologies, and are directly involved in supporting the deployment of the system to other entities and institutions in Groupe BPCE.

INTEGRATION INTO THE INTERNAL CONTROL SYSTEM

The ESG risk management system is based on the three lines of defense model in place within Groupe BPCE:

- first line of defense: operational departments within Groupe BPCE's various business lines and functions integrate ESG risks into their processes, policies and controls. ESG risks are taken into account in the level 1.1 and 1.2 control systems according to the risks induced by each activity;
- second line of defense:
  - the ESG Risk Department, which reports directly to BPCE's Chief Risk Officer, establishes the reference framework (methodology and scenarios), structures, coordinates and supports the deployment of the ESG risk management system within Groupe BPCE in collaboration with the Impact division, other departments within the risk division, other Groupe BPCE divisions involved in ESG risk management and all Groupe BPCE entities and institutions,
  - the other risk and compliance functions incorporate ESG risks as a risk factor in the risk management and control system, with the support of the ESG Risk Department,
  - the departments in charge of permanent controls integrate the control points relating to ESG risks to ensure the monitoring and cross-functional control of the effective integration of the ESG risk management system into policies and processes;
- third line of defense: Groupe BPCE's Internal Audit and the departments in charge of the internal audit include ESG risks in their review of the internal control framework to ensure the proper application of the associated risk policies, compliance with commercial practices risk management and compliance with regulatory obligations.

7.16.2.3 Employee training and awareness

Several training modules on ESG issues and associated risks are made available to Groupe BPCE employees. These are deployed in an appropriate manner according to the specificities of each entity. Work on the overhaul of the training system was undertaken in 2024 and aims to enrich these training courses and ensure their overall consistency and proper deployment within Groupe BPCE's entities and institutions. The Vision 2030 strategic project aims to train 100% of employees in ESG issues by December 31, 2026, thanks to the implementation of this dedicated system.

In addition, awareness-raising communications on ESG issues and associated risks are regularly sent to Groupe BPCE employees, contributing to their proper understanding of these topics and updating their knowledge.

7.16.2.4 Remuneration policy

The Supervisory Board, through its Remuneration Committee, is responsible for setting the method and amount of remuneration for each member of the Management Board. It ensures that ESG issues are fully integrated into the remuneration policy.

The remuneration of the Chairman of the Management Board and the members of the BPCE Executive Management Committee (excluding control functions) includes an annual variable portion indexed at 40% on qualitative criteria. The allocation of this variable portion depends in part on the implementation of Groupe BPCE's strategic ambitions on ESG issues. In early 2025, as part of work to strengthen the consideration of these issues in variable compensation, a criterion linked to the environment and climate and decarbonization trajectories was integrated with a weighting of 5% and will apply for the 2025 fiscal year.

In order to raise employee awareness and involve them in the Group's commitment to the fight against global warming, since 2022 the incentive scheme for BPCE SA employees has been partly indexed to the achievement of the Group's strategic objective to reduce its direct footprint.

In addition, certain Groupe BPCE entities use similar criteria to determine the variable remuneration of executives and employees, depending on their context and objectives.

7.16.3 VISION 2030 and Impact strategy

7.16.3.1 Vision 2030 strategic plan

VISION 2030, Groupe BPCE's new strategic project outlines the major priorities it has set for itself in order to build a growth project to serve its customers, in a society marked by four major transitions: environmental, demographic, technological and geopolitical.

Faced with this situation, Groupe BPCE is mobilizing its local and regional presence, its business lines and expertise, to enable its customers, cooperative shareholders and employees to assert their power to act and to trust in the future

The cooperative nature of the Banques Populaires and the Caisses d'Epargne, coupled with their deep local roots, have made Groupe BPCE a positive impact financial player since its inception, which has been particularly committed to the decarbonization of the economy in recent years. Groupe BPCE's global business lines – Natixis Corporate & Investment Banking (Natixis CIB) and Natixis Investment Managers (Natixis IM) – are positioned as key global players in transitions.

7.16.3.2 Impact strategy

ENVIRONMENTAL IMPACT

Faced with the climate emergency, the Group's approach aims to rapidly implement and deploy measures to mitigate and adapt to the already tangible environmental and socio-economic impacts of climate change and the erosion of biodiversity. Making impact accessible to all means raising awareness and massively supporting all its customers in the environmental transition through expertise, consulting offers and global solutions.

Based on the scenarios defined by science, Groupe BPCE and its business lines are positioning themselves as facilitators of transition efforts, with a clear and ambitious objective: to finance a carbon-neutral economy by 2050 by taking action today.

The Group's approach aims to rapidly implement and deploy measures to mitigate and adapt to environmental and socio-economic impacts. It is based on Groupe BPCE's cooperative model, which combines local roots and commitment to society to finance the economy.

- Impact solutions:
  - For individual customers: Supporting energy renovation and the adaptation of housing to aging and loss of autonomy by offering financing solutions and by mobilizing our role as an operator, trusted third party as well as our partnerships.
  - By offering a "Sustainable Tips and Solutions" tool in partnership with ADEME, which makes it possible to simply calculate one's carbon footprint but also to benefit from advice and support for one's energy renovation work, for decarbonized mobility or green savings.
  - By supporting energy renovation projects for individual homes and condominiums at each stage: energy assessment, search for subsidies, guarantee of completion of work, with pathways and financing adapted to each situation.
  - By increasing the number of financing for the energy renovation of buildings.
  - For BtoB customers: Support the transition of the business models of its customers, ranging from SMEs to the largest international companies. The Group is committed to dedicated dialog and contribution of sectoral expertise to integrate ESG issues according to their size and economic sectors, particularly in infrastructure energy, transport, waste management and treatment, etc. Sustainable solutions also exist for investor customers with a range of responsible savings and investments: sustainable development passbook savings accounts, funds with a sustainable investment objective, themed-labeled funds, etc.
- Support for the evolution of the energy mix: Faced with the climate emergency, the priority is to accelerate the advent of a sustainable energy system:
  - by positioning itself among the world leaders in debt project financing in the renewable energy sector;
  - by increasing its financing dedicated to the production and storage of green electricity;
  - by advising its customers, leaders in the infrastructure and equipment sector related to the energy transition, as well as innovative and fast-growing companies in the sector, on their capital raising processes;
  - by advising its customers on energy transformation projects in their financing or capital raising processes;
  - by supporting the reindustrialization of regions and energy sovereignty;
  - with the creation of teams of experts dedicated to low-carbon energies (solar, wind, electrolysis, etc.) and critical metals.
- Management of decarbonization trajectories: The Group is committed to aligning its financing portfolios with a decarbonization trajectory with short-, medium- and long-term milestones:
  - by developing systems to measure carbon emissions;
  - by developing its system for identifying and managing climate, physical and transition risks to which its customers and its own activities are subject, with a view to continuous improvement;
  - by gradually withdrawing from activities with the highest emissions, in particular through adapted ESG sector policies.

In this context, the Group has joined the Net Zero Banking Alliance initiative of the United Nations Environment Program (UNEP FI), and has a decarbonization ambition for the most carbon-emitting sectors.

- Active and innovative issuer in sustainable finance: In its VISION 2030 strategic plan, the Group has set itself the target of issuing more than five green, social or health financing instruments per year, using all the debt instruments at its disposal.

SOCIETAL IMPACT

Stemming from century-old brands deeply rooted in the regions, the needs of society and customers, the companies of Groupe BPCE play a key societal role. The Group is the leading financier of the SSE sector and local authorities and a major player in social housing, social entrepreneurship and microcredit.

- A player in the regions and regions of the world where it operates: Groupe BPCE plays a strong role in local ecosystems that promote regional cohesion, supporting numerous initiatives to promote social inclusion and reduce inequalities, *etc.*
  - The Banques Populaires and the Caisses d'Epargne are key players in the dynamics of the regions, notably by financing the construction or renovation of infrastructure and equipment necessary for education, health and mobility. They are the leading private financier of local authorities and the hospital sector.
  - Globally, Natixis Investment Managers and Natixis Corporate & Investment Banking are developing their Asset & Wealth Management and Corporate & Investment Banking business lines in more than 40 countries in compliance with international commitments, in terms of investment and financing.
- Committed to supporting local and national initiatives:
  - The impact of the sponsorship of the 14 Banques Populaires is measured every year *via* their Cooperative and Societal Footprint. This footprint identifies and values in euros the CSR and cooperative actions implemented within each bank.
  - The 15 Caisses d'Epargne deploy the utility contract in all regions of France: 100% cooperative, 100% regional and 100% useful for the economic, social and environmental development of the regions.

TRANSFORM GROUPE BPCE

In order to support the transitions of its customers, according to the highest standards, Groupe BPCE has launched an internal transformation plan "Impact Inside." To extend its impact solutions to its customers and accelerate each aspect of ESG, Groupe BPCE has undertaken a transformation of all its companies at all levels. It mobilizes its governance and employees, which it undertakes to train in ESG issues, and acts on its own activities by reducing its carbon footprint.

7.16.3.3 Objectives, targets and limits related to environmental and social risks and performance assessment

Groupe BPCE supports the economic transition to help mitigate and adapt to global warming. The growing awareness of stakeholders regarding the challenges related to climate change is also creating a positive dynamic of demand for sustainable solutions. The Group's cooperative model allows it to meet customer expectations and the Company's aspirations by ensuring a fair transition for each customer. Its decentralized model and regional presence are real assets for supporting transitions and contributing to a fair and sustainable transformation of society.

The implementation of the VISION 2030 strategic plan is monitored using key indicators corresponding to objectives to be achieved by the end of 2026. These include:

- supporting the evolution of the energy mix in the regions of the world where the Group operates by contributing to the reduction in the use of carbon-based energies through a 15% increase in new financing for renewable energy projects;
- managing the action plan to decarbonize the financing of the sectors that emit the most greenhouse gases *via* the implementation of absolute value or intensity targets for 2030: oil and gas, electricity production, automotive, air transport, steel, cement, aluminum, residential and commercial real estate and agriculture;
- supporting energy renovation by increasing the total annual amount of financing to €1 billion by 2026;
- assessing the reduction of our own carbon footprint.

More general indicators in terms of sustainability reflect the objectives relating to the support and awareness-raising actions deployed for our customers:

- a number of unique visits to the digital module "Sustainable Tips and Solutions": 6 million (since mid-2023, it has already been visited by more than 3 million Banque Populaire and Caisse d'Epargne customers);
- ESG dialogs covering 100% of the active corporate customers (this dedicated exchange has been rolled out since the beginning of 2023 to already more than 10,000 corporate customers);
- the increase in financing granted to the SSE, social housing and public sector sectors.

The number of local social entrepreneurship projects supported.

Groupe BPCE has committed, over the long term, to developing a capacity to manage the evolution of its balance sheet by taking into account an assessment of the climate impact of its activities and of financed, invested or insured assets. This change is based, among other things, on the implementation of voluntary targets for the gradual alignment of financing, investment and insurance portfolios with trajectories compatible with the Paris Agreement's climate objectives. In order to build this trajectory on its financing activities, in 2021 Groupe BPCE joined the Net Zero Banking Alliance (NZBA), a financial initiative of the United Nations Environment Program - UNEP FI. The members of this initiative finance more than 40% of global assets.

Similarly, BPCE Assurances joined the Net Zero Asset Owner Alliance (NZAOA) in 2022. By issuing guidelines adapted to financial institutions, net zero alliances allow each financial institution, depending on the composition of its loan or investment portfolio, to define science-based targets to combat global warming.

These alliances have also enabled significant mobilization among financial sector players. Thus, the alliance's member banks aim to:

- align carbon emissions from its exposures with a Net Zero trajectory by 2050;
- define trajectories on priority sectors, *i.e.* those with the highest carbon emissions within the portfolios;
- aim for intermediate targets no later than 2030;
- publish annual carbon emissions;
- determine a robust and structured action plan to adapt its portfolios to its alignment strategy.

This approach has enabled the Group to strengthen its knowledge of the challenges and action levers as well as the risks to which customers could be exposed. The definition of alignment targets requires:

- identifying the most carbon-intensive customers in their sector;
- estimating their transition commitment based, in particular, on their public documents on reducing their carbon emissions and strategic development prospects, as well as analyses of data suppliers and customer knowledge;
- determining the evolution of portfolios by 2030 (starting from 2020) according to the targeted objectives of the business lines according to the geographies, technologies and prospects of the customers;
- deducing the absolute emissions or average carbon intensities of the portfolios according to the sectors and any action plans to achieve the Net Zero targets.

Since December 2022, Groupe BPCE published alignment targets[1] for two sectors among those with the highest emissions: electricity production and the oil & gas sector. In December 2023, Groupe BPCE broadened its ambition to reduce carbon emissions by publishing new targets for 2030 for three additional sectors within the scope of Corporate & Investment Banking (Natixis CIB): automotive, steel and cement. Lastly, since June 2024, the trajectories of the real estate (residential and commercial), air transport and agriculture sectors have also been the subject of action plans aimed at reducing financed emissions.

For each sector, the carbon emission reduction targets, and the associated action plans are detailed in periodic publications.

With regard to the environment, excluding climate issues and in particular those relating to biodiversity, the Group is taking concrete steps to preserve it, specifically by adopting policies and practices to promote actions that respect biodiversity. Despite the absence of adapted scientific calculation methods and market benchmarks to assess the impact of these activities, the Group aims to adopt a proactive approach, by actively participating in local work aimed at overcoming these methodological limitations and identifying relevant action levers. To this end, in 2024, Groupe BPCE renewed the commitment previously made by Natixis by joining act4nature international, a coalition that mobilizes companies, public authorities, scientists and environmental associations committed to the protection of biodiversity. In addition, the Group has set concrete objectives in its activities as a banker, insurer and investor, structured around five areas: the integration of biodiversity issues into the strategy, the assessment of impacts and dependencies on nature, the reduction of pressure on ecosystems, the mobilization of a share of financial resources in promoting nature and improving knowledge of biodiversity. For example, Natixis CIB has undertaken to exclude financing for projects that have a significant impact on an area classified as a UNESCO World Heritage Site, or registered under the Ramsar Convention, or covered by categories I-IV of the International Union for Conservation of Nature (IUCN).

In asset management activities, for Natixis Investment Managers, integrating ESG factors into the investment process makes it possible to make more informed decisions, better understand company risks, identify sustainable investment trends, and select companies that contribute to these trends. This approach aims to create long-term value for customers. Several affiliates have developed dedicated non-financial research capabilities and have integrated sustainability criteria into their investment decision-making models. They rely on proprietary systems and raw data to establish their own scoring models and methodologies that they can then transparently explain to customers.

Each Natixis Investment Managers management company is responsible for its investment process and is ultimately responsible for integrating environmental, social and governance factors in compliance with their fiduciary duty. European asset management companies have developed responsible investment policies that explain their overall ESG approach, provide detailed guidance on the integration of environmental factors, and explain their sectoral and/or exclusion policies. The majority of non-European affiliates have developed a global responsible investment approach that formalizes their commitment to integrate material environmental, societal and governance factors into their investment processes. They implement specific restrictions at the request of customers.

The objectives and targets associated with social issues related to the Company's own workers, value chain workers, affected communities and customers and end users are presented in the section of Groupe BPCE's sustainability report dedicated to social information (Part 3).

(1) The alignment measurement methodologies applied are based on current market standards, which are subject to change. Changes in the scope of our analyses of other Group activities thus depend on available and recognized methodologies. In addition, the objectives set by Groupe BPCE are conditioned by the commitments of our customers and their ability to meet them over time. These objectives are also contingent on current government policies and the development of low-carbon technologies, which are critical for long-term horizons. The data used concerning the Group's customers mainly comes from data suppliers or company publications. The measurement estimates will change as the quality of the available data increases.

7.16.4 Environmental, social and governance risk management system

7.16.4.1 ESG risk management framework deployment program

The ESG Risk Department coordinates the implementation of the ESG risk management system at Groupe BPCE level through a dedicated program. This program, initiated in 2021, was reviewed and strengthened during 2024 in line with Groupe BPCE's climate and environmental commitments within the framework of the Vision 2030 strategic plan and regulatory requirements. It defines a multi-year action plan aligned with the timeframe of the strategic plan (2024-2026). It is directly linked to the strategy and actions implemented by the Impact program. This program is monitored quarterly by the ESG Risk Committee, the Groupe BPCE Supervisory Board and the European supervisor.

This program is based on the following four themes:

- ESG risk governance: committee procedure, roles and responsibilities, remuneration;
- strengthening knowledge of risks: monitoring systems, sector analyses and assessments, risk benchmarks, risk analysis methodologies and processes, data;
- operational integration of the work: in coordination with the other risk management departments, taking into account ESG risk factors in their management systems and their respective decision-making processes;
- consolidated risk management mechanisms: dashboards, contributions to RAF/ICAAP/ILAAP systems, training and acculturation plan for directors, managers and employees, contribution to extra-financial communication.

The execution of this program mobilizes the main internal stakeholders in terms of ESG risks, in particular the Impact department, the teams and functions of the other departments of the Risk division, the Finance division and the Compliance division as well as Groupe BPCE's business lines, and in particular the divisions in charge of developing sustainable finance activities.

7.16.4.2 ESG materiality identification and assessment

Groupe BPCE has implemented a process to identify and assess the materiality of ESG risks in order to structure its understanding of the risks to which it is exposed in the short, medium and long term and to identify priority areas for strengthening the risk management system.

This process is coordinated by the ESG Risk Department, under the supervision of the Groupe BPCE ESG Risk Committee and Supervisory Board. It is subject to an annual review to update scientific knowledge and underlying methodologies.

This process consists of four main steps:

- Creation of the ESG risk framework.
- Documentation of ESG risk transmission channels to other risk categories.
- Assessment of the materiality of ESG risks in relation to other risk categories.
- Input into cross-functional risk management exercises (risk appetite system, ICAAP, ILAAP).

In 2024, the scope of risks taken into account in the process of identifying and assessing the materiality of ESG risks only covered climate and environmental risks. Social and governance risks are directly integrated into the cross-functional risk appetite system. Work on the extension of social and governance risks will be planned as part of the annual work update.

ESG RISK FRAMEWORK

Groupe BPCE has established a framework to define the risks covered by climate and environmental risks. This framework is based on current scientific knowledge and reference regulatory texts (*e.g.* European taxonomy) and aims for the most exhaustive possible representation of risks. It must be updated annually and extended to include social and governance risks.

With regard to physical risks, the framework distinguishes between physical risks related to the climate, biodiversity and ecosystems, pollution, water and marine resources, and the use of resources and the circular economy. Climate-related risks are divided into acute or chronic risks related to temperature, wind, water and solid mass, and environmental risks. Environmental risks are divided into those that disrupt regulation services (protection against climate risks, support for production services, mitigation of direct impacts) and those that disrupt supply services (in terms of quality or quantity).

With regard to transition risks, the framework distinguishes between risks related to regulatory changes, technological developments, stakeholder expectations and changes in their behavior.

CLIMATE AND ENVIRONMENTAL RISKS

PHYSICAL RISKS

CLIMATE RISKS

Temperature
e.g. Heat waves/Fire/Temperature changes

Wind
e.g. Storms, cyclones

Water
e.g. Flood/drought/rising sea levels

Solid masses
e.g. Coastal and soil erosion, avalanches

ENVIRONMENTAL RISKS

Biodiversity
e.g. Pollination

Water and marine resources
e.g. Water flow/Fish reserves

Natural resources
e.g. Availability of commodities

Pollution
e.g. Soil, water, air quality

TRANSITION RISKS

Regulatory and legal changes

Technological breakthroughs

Stakeholder behavior
(consumers, civil society, investors, *etc.*)

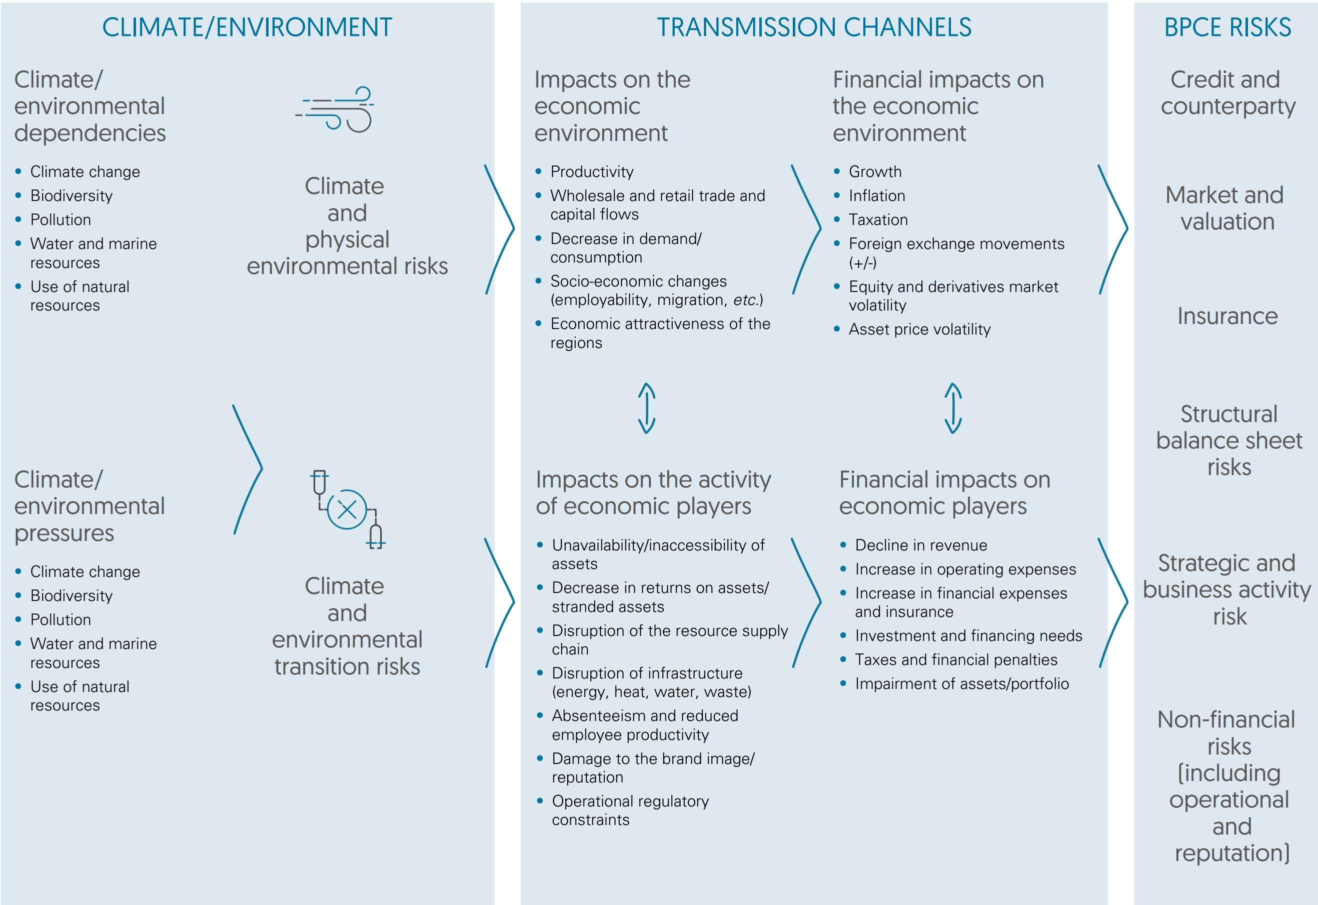
ESG RISK TRANSMISSION CHANNELS

ESG risks are risk factors underlying the other risk categories to which Groupe BPCE is exposed, namely credit and counterparty risks, market and valuation risks, insurance risks, structural risks, balance sheet risks, strategic and business risks and non-financial risks (operational risks, reputational risks, non-compliance risks, *etc.*), as identified in Groupe BPCE's risk taxonomy.

In 2024, Groupe BPCE systematically identified and described transmission channels linking climate and environmental risk factors to the main risk categories of its risk taxonomy. For this exercise, Groupe BPCE relied on its internal experts as well as on the impact mapping carried out by leading institutions such as the NGFS, SBTN and the OCARA methodology.

These transmission channels involve the impacts of climate risks on activities and business models, which are reflected in financial variables at the macroeconomic or microeconomic level and ultimately modify Groupe BPCE's risk exposure. They may materialize directly, in connection with Groupe BPCE's own activities, or indirectly, through the counterparties to which Groupe BPCE is exposed as part of its financing or investment activities. They are summarized in the diagram below.

This work will be subject to an annual review in order to integrate changes in knowledge on climate and environmental risks and to extend the scope of risks covered to include social and governance risks.



ASSESSMENT OF THE MATERIALITY OF ESG RISKS

Based on the transmission channels identified, Groupe BPCE assesses the materiality of climate and environmental risks in relation to the main risk categories to which it is exposed. This assessment distinguishes between physical risks and transition risks for climate risks on the one hand and environmental risks on the other. It is carried out according to three time horizons: short-term (1 to 3 years, financial planning horizon), medium-term (strategic planning horizon, 5 to 7 years), and long-term (~ 2050).

This assessment is based on quantitative or qualitative indicators, which, when available, allow us to assess exposure to risks from a sectoral and geographical point of view, as well as on expert assessments. The internal experts involved in these assessments include the ESG risk department, the other risk divisions, as well as representatives from other departments (impact, compliance, legal) and the business lines concerned.

In 2024, the assessment of climate risks was carried out by almost all of Groupe BPCE's physical entities and aggregated at Groupe BPCE level. It was supplemented by an initial assessment of environmental risks carried out solely at Groupe BPCE level. As part of the assessments' annual update, the climate and environmental risk assessment processes will be converged and extended to social and governance risks.

The summary of the materiality assessment of climate and environmental risks carried out in 2024 is presented below.

	CLIMATE RISKS						ENVIRONMENTAL RISKS					
	Physical risks			Transition risks			Physical risks			Transition risks		
	Short term to 3 years (2026)	Medium term 3 to 7 years (2030)	Long term Beyond 7 years -> 2050	Short term to 3 years (2026)	Medium term 3 to 7 years (2030)	Long term Beyond 7 years -> 2050	Short term to 3 years (2026)	Medium term 3 to 7 years (2030)	Long term Beyond 7 years -> 2050	Short term to 3 years (2026)	Medium term 3 to 7 years (2030)	Long term Beyond 7 years -> 2050
Credit and counterparty risk	Low	Moderate	Moderate	Moderate	High	High	Low	Moderate	Moderate	Low	Moderate	Moderate
Market and asset valuation risk	Low	Low	Low	Low	Low	Low	Low	Low	Low	Low	Low	Low
Structural ALM risks	Low	Moderate	Moderate	Low	Moderate	Moderate	Low	Moderate	Moderate	Low	Moderate	Moderate
Insurance risk	Moderate	Moderate	Moderate	Low	Moderate	Moderate	Moderate	Moderate	Moderate	Low	Moderate	Moderate
Own investment risk	Low	Moderate	Moderate	Low	Low	Low	Low	Moderate	Moderate	Low	Moderate	Moderate
Operational risk (excluding legal risk)	Low	Moderate	Moderate	Low	Low	Low	Low	Low	Moderate	-	-	-
Reputational risk	Low	Low	Low	Moderate	High	High	Low	Low	Low	High	High	Moderate
Legal, compliance and regulatory risk	Low	Low	Low	Moderate	High	High	Low	Low	Low	Moderate	High	Moderate
Strategic business and ecosystem risks	Low	Moderate	Moderate	Moderate	High	High	Low	Low	Moderate	Low	Low	Moderate

INTEGRATION INTO GROUPE BPCE'S RISK APPETITE FRAMEWORK

The work to identify ESG risks and assess their materiality feeds into the main components of Groupe BPCE's risk appetite as part of this system's annual review process.

In this respect, Groupe BPCE's risk framework includes an "Ecosystem risk" category, which groups together environmental risks by distinguishing between physical climate and environmental risks and transition climate and environmental risks, social risks and governance risks.

The materiality assessment of these risk categories as part of the risk appetite system is defined by cross-referencing the materiality of the main risk categories to which Groupe BPCE is exposed (assessed as part of the annual process of defining the risk appetite) and the materiality of climate and environmental risks in relation to these risk categories (assessed according to the process described above). For social and governance risks, the assessment is carried out on an expert basis as part of the risk appetite definition process only. In 2024, the materiality of physical and transition climate and environmental risks was assessed at level 1 out of 3 ("significant") for Groupe BPCE, while the materiality of social and governance risks was assessed at a level of 0 out of 3 ("low").

RISK APPETITE MANAGEMENT

As part of the definition of risk appetite for 2025, Groupe BPCE has introduced a transition risk appetite indicator for the residential real estate loan portfolio. This indicator takes into account the share of real estate assets financed with a degraded Energy Performance Assessment (class F or G) in the stock and is associated with a limit that takes into account the existing portfolio and the stated ambitions in terms of financing energy-efficient home renovation projects. In addition, a transition risk appetite indicator for the Corporate exposure portfolio, taking into account the share of exposure to the sectors most sensitive to climate issues, is kept under observation. Work is planned during 2025 to extend the scope of coverage of risk appetite indicators, both in terms of portfolios and types of risk covered.

For Natixis CIB, the proportion of assets classified as "dark brown" according to the Green Weighting Factor method, constituting the assets most exposed to transition risk, is also monitored in the risk appetite framework. A threshold and a limit were set in 2022, and are regularly reviewed to frame the downward trajectory of the share of these assets.

INTEGRATION INTO THE INTERNAL ASSESSMENT PROCESS OF CAPITAL AND LIQUIDITY REQUIREMENTS

Groupe BPCE takes physical risk into account in the internal assessment of its capital requirements (ICAAP process) by applying adverse scenarios to the risks of drought (impacting various economic sectors such as agriculture and construction) and flooding (on the real estate portfolio). The transition risk was also quantified. Firstly, through the impact of the DPE legislation on the value of real estate assets and then, for 2025, through the impact on the macroeconomic and financial environment of a rapid transition scenario to a low-carbon economy. In addition, work was carried out to integrate this risk on real estate portfolios of individual customers in the quantification of the economic capital of the ICAAP 2025 specifically in connection with an unfavorable change in the DPE regulation, then supplemented by an add-on on portfolios that do not currently have a specific economic valuation model.

Groupe BPCE also takes into account physical and transition risks in the internal assessment of its liquidity requirement (ILAAP process). The quantification of the risk is based on the modeling of the impact of physical risk (Seine flood) on the financial standing of the Group's customers, the ability of insurers to replace liquidity with Groupe BPCE and the behavior of the Group's investors. During 2024, an assessment of the impacts related to reputational risk (in connection with controversies on ESG topics) was also carried out by simulating the reduction in available liquidity from customers and investors and the associated increase in the cost of refinancing.

7.16.4.3 ESG risk assessment methodology

In order to strengthen its ESG risk assessment capabilities, Groupe BPCE has adopted specific methodologies to assess the ESG risks associated with its exposure portfolios in a systematic and consistent manner. These methodologies are based on internal and external expertise and reflect the state of scientific knowledge, current technologies, regulatory environment and market practices. They are regularly reviewed, supplemented and enhanced to gradually improve the accuracy of ESG risk assessment and take into account changes in the context.

ASSESSMENT OF GOVERNANCE, SOCIAL AND ENVIRONMENTAL RISKS

Groupe BPCE has developed an internal methodology for assessing environmental, social and governance issues and risks. This methodology is based on sector notes documenting the main ESG issues and risks related to the sector, according to criteria aligned with the definitions of European taxonomy:

- Six environmental risk criteria: physical climate risks, climate transition risks, biodiversity, water, pollution and circular economy;
- Four social risk criteria: customers, workers, suppliers and civil society;
- Four governance risk criteria: business ethics, CSR strategy, shareholder democracy, and the practices and processes implemented to direct and control customer risk management.

All of these criteria are then rated by in-house experts, according to the principles of double materiality. The scores for the environmental criteria are also aggregated in order to provide a summary score enabling the sectors to be compared. The proposed ratings were validated by the Extra-Financial Risk Committee.

This analysis methodology was deployed in the 26 economic sectors used to manage Groupe BPCE's financing portfolio. It is shared with all Groupe BPCE entities.

Work was carried out in 2024 to improve methods for assessing physical and transition environmental risks. These methods are described below and are intended to replace this methodology in 2025.

PHYSICAL ENVIRONMENTAL RISK ASSESSMENT

Geo-sectoral assessments

In order to strengthen the sensitivity and robustness of its assessments of the physical risk associated with financing outstandings for Professional and Corporate customers, in 2024, Groupe BPCE developed a methodology for analyzing the vulnerability of outstandings to physical risks.

This internal methodology makes it possible to take into account the intrinsic vulnerability of a sector to physical risks and the exposure of a given geographic area to physical risk. It is currently broken down into a fine-grained sectoral grid (NACE2) and a national or regional geographic grid for countries in which Groupe BPCE has a particular concentration of outstandings (France, United States). Six physical climate risks are currently covered, which are among the most representative for Groupe BPCE, and can be simulated under different scenarios and time horizons.

This methodology will be deployed in the internal risk management tools during the course of 2025.

Home loan portfolio

Given its high exposure to home loans issued to individuals, Groupe BPCE has adopted a tool to simulate the physical risks of its financed assets. This tool takes into account the exact coordinates of the asset to assess its risk exposure and certain characteristics to estimate its vulnerability to determine the estimated damages under different scenarios and time horizons. At present, this tool covers the territory of mainland France and Corsica and makes it possible to assess exposure to the two main physical risks for this portfolio (drought - shrink-swell and floods).

This methodology will be deployed in the internal risk management tools during the course of 2025.

TRANSITION ENVIRONMENTAL RISK ASSESSMENT

Sector assessments

In order to strengthen the sensitivity and robustness of its assessments of the transition risk associated with financing outstandings for Professional and Corporate customers, in 2024 Groupe BPCE developed a methodology for the granular analysis of the sensitivity of sectors to this risk.

This internal methodology makes it possible to assign a sectoral score reflecting the transition risk associated with a given NAF code, taking into account the carbon emissions and the main environmental impacts of the companies in the sector. It has been developed in accordance with the Green Weighting Factor methodology (described below), which applies at the company or financed project level. Given the predominant share of French companies in the exposure portfolio, this methodology is focused on the parameters corresponding to the French economy.

This methodology will be deployed in the internal risk management tools during the course of 2025.

Home loan portfolio

To assess the transition risk on its home loan portfolio, Groupe BPCE relies on the Energy Performance Assessment (EPC) of the financed real estate assets. The EPC of the financed asset is collected systematically, making it possible to capture both the risk on the repayment capacity of the loan in the event of an increase in energy expenditure or expenses related to the financing of work to improve energy performance and the risk of loss of value of the asset due to a deteriorated EPC, making it potentially unfit for use in the rental context given the regulations in force.

Green Weighting Factor

Groupe BPCE uses the Green Weighting Factor (GWF) methodology, developed by Natixis CIB, to assess the transition risk related to its counterparties and financed projects.

Using a seven-color rating scale ranging from dark brown to dark green, the GWF assesses the climate impact of transactions, while taking into account the risk of the most material non-climate-related environmental externalities (water, waste, biodiversity, pollution). The GWF covers all bank financing. This assessment is carried out on a granular basis for each of the financing exposures on the balance sheet for all banking products (loans, guarantees, caution letters, documentary credits) regardless of their maturity, in all geographies and for all sectors of activity except the financial sector and administration. The GWF's methodology is also adapted to corporate and dedicated financing.

The GWF methodology offers a vision of the challenges of transition. The GWF integrates:

- induced decarbonization (CO_2 scope 1, 2, 3);
- the contribution to the transition made by certain customers or active projects, with the notion of avoided emissions;
- exposure to the most material environmental risks; and
- a forward-looking view of customers' performance, enabling us to assess their transition potential;
- extract a set of new indicators useful for steering the decarbonization strategy of Corporate & Investment Banking and for regulatory reporting;
- take into account and integrate the non-financial reporting needs of investor customers.

The operational management of Natixis CIB's climate trajectory is based, in particular, on data from the Green Weighting Factor (GWF). This management tool is used periodically and at several levels:

- for credit decisions at the transactional level;
- for strategic dialog with customers;
- for strategic planning: definition of annual color targets for each business line and sub-business line;
- for commercial planning: definition of systems for assessing the individual performance of the financing origination teams;
- for capital allocation and active portfolio management;
- for risk appetite management.

To continuously improve this analysis tool, Corporate & Investment Banking carried out a major overhaul of its decision trees for the dedicated financing part, which will be deployed through a new tool. This overhaul allows for an increased coverage of the scope of analyzed financing and improves the relevance of the assessments of each transaction (based on feedback obtained from users since 2020).

The GWF is currently deployed on Natixis CIB's financing portfolio, and the scores assigned are updated annually as part of the credit file review. Studies are underway to assess the relevance of rolling out other Groupe BPCE portfolios in the future.

7.16.4.4 Integration of ESG risks into the risk management framework

Based on specific ESG risk assessment methodologies, Groupe BPCE is gradually integrating ESG risk factors into its operational decisions through existing systems in the bank's main risk channels.

CREDIT RISK

ESG risks are taken into account in the context of credit decisions from two complementary angles, to be taken into account in an appropriate manner according to the issues specific to each transaction:

- the assessment of the ESG risks to which the counterparty or project is exposed and their impact on the credit risk profile of the counterparty or project,
- the assessment of the reputational risk related to the ESG issues associated with the counterparty or project's activities, in particular with regard to alignment with the voluntary commitments made by Groupe BPCE and its Impact strategy.

Credit policies

Groupe BPCE's credit policies include documentation of sectoral ESG issues and points of attention to guide the analysis of financing applications on these aspects when they are relevant for the sector. These elements are compiled from the ESG sector knowledge base (see above) and reviewed and enhanced in coordination with Groupe BPCE entities and institutions as part of the regular updating of credit policies.

When relevant, Groupe BPCE's credit policies refer to Groupe BPCE's voluntary commitments (in particular, sector ESG policies in the coal and oil/gas sectors), requiring the exclusion criteria set in the context of credit decisions.

At Natixis CIB, restrictive criteria relating to ESG issues have been incorporated into certain sectoral credit policies relating to sectors that are particularly sensitive to these issues in the context of Natixis CIB's activities. Natixis CIB's credit sector policies also reflect the sector ESG policies specific to this scope, which also covers sensitive sectors from the point of view of social and governance issues such as defense and tobacco.

The ESG sectoral policies are described in detail in Section 1.3 of Groupe BPCE's Sustainability Report.

ESG dialog with Corporate customers of the networks

Since 2023, Groupe BPCE has included the ESG dimension in its strategic dialog with the Corporate customers of its retail banking networks. An "ESG dialog" tool was built internally and rolled out to sales teams to address the main challenges and commitments of Corporate customers on environmental, social and governance issues. This tool enhances customer knowledge from the perspective of ESG issues and risks and identifies additional elements to the financial analysis that can be taken into account in assessing the credit file.

An overhaul of the "ESG dialog" tool was launched in 2024 to enrich the underlying questionnaire, provide additional sectoral information on the most sensitive sectors, and clarify the implications regarding the counterparty risk profile in the context of credit analyses. This work is due to be rolled out in retail banking networks in 2025.

ESG risk rating of counterparties/transactions

As part of Natixis CIB's credit granting process, Corporate counterparties are systematically assigned a Green Weighting Factor score (see above) *(*Green Weighting Factor - General Purpose), and at the transaction level in the case of dedicated financing (Green Weighting Factor - Dedicated Purpose)*,* and is subject to a control by the teams in charge of credit risk. This score is included in the loan origination file and is used to inform discussions regarding the transition risk associated with the counterparty or project.

Several subsidiaries of the FSE division and CEGC also use the dedicated Green Weighting Factor score to finance real estate transactions or at the counterparty level when this is available as part of their lending process.

In addition, work has been undertaken to develop an internal ESG risk rating methodology for SME/ISEs and large Corporates, incorporating the specificities of each customer. This methodology, which is independent of the credit rating, will make it possible to systematically and consistently assess the level of ESG risk associated with a counterparty. The roll-out of this rating is planned from 2025.

Equator Principles (Natixis CIB)

As part of the Equator Principles, Natixis CIB applies a market methodology that aims to assess the environmental and social risks of projects financed and the management of these risks by customers, regardless of their business sector. Since October 2020, Natixis CIB has applied the amended version of the Principles (EP Amendment IV), which includes more exhaustive criteria regarding respect for human rights (including the rights of indigenous communities) and requires the analysis of physical and transition climate risks.

The borrower is therefore required to: assess the physical risks associated with climate change for most projects, carry out an assessment of the climate transition risks and an analysis of less greenhouse gas intensive alternatives for projects with CO_2 equivalent emissions of at least 100,000 metric tons per year in total. Depending on the risks identified and the nature of the associated impacts, mitigation measures are requested of the customer. They are covered by specific clauses in the financial documentation ("covenants").

ESG controversy analysis

As part of the due diligence carried out when entering into a relationship with its Large Corporate customers and in monitoring its portfolio clients, Natixis CIB takes into account the potential controversies that its clients may encounter, in particular concerning ESG issues. In the event of significant risks Groupe BPCE analyzes and manages the associated risks. In some instances, Groupe BPCE may decide of its own accord not to enter into a relationship or not to renew its commitments with the customer.

Groupe BPCE has begun work to extend this approach to all Groupe BPCE entities in a manner adapted to their operating context and their customer portfolio.

OPERATIONAL RISKS

Business continuity risks

As part of its business continuity system, Groupe BPCE assesses the climate and environmental risks to which its main operating sites (head offices and administrative buildings) are exposed. These risks are taken into account as part of the business continuity plans defined at the level of Groupe BPCE and its entities and which define the procedures and resources to be implemented in the event of natural disasters in order to protect employees, key assets and activities and to ensure the continuity of essential services.

Groupe BPCE's critical suppliers (Essential, Critical or Important Service Providers or "PECIs") are also subject to an assessment of their business continuity plan, which must take into account the climate and environmental risks to which they are exposed.

Operational risk incidents related to climate risks are specifically identified in Groupe BPCE's incident collection and operational risk monitoring tools, making it possible to monitor their impacts over time.

Reputational risk

The growing awareness and sensitivity of citizens and economic players to environmental, social and governance issues is leading to increased exposure to reputational risks related to these topics.

Faced with these risks, Groupe BPCE relies on a reputational risk management system overseen by the Groupe BPCE Risk division and structured around the Group Reputation Risk Committee, which is tasked with reviewing the most sensitive issues at Groupe BPCE level.

This system is based on the measures implemented in the decision-making processes in order to assess reputational risks and implement mitigation measures if necessary. This concerns in particular:

- the responsible purchasing policy, which requires knowledge and assessment of suppliers' ESG risks, and the implementation of a carbon clause in supplier contracts since 2024;
- the new products/new activities (NPNA) system concerning the characteristics and communication related to Groupe BPCE's products and activities, which includes a systematic opinion from the ESG Risk department;
- the application of sector ESG policies as part of the new relationship, credit and investment processes.

Given the particular sensitivity of its activities to reputational risks, a dedicated system is deployed by Natixis. This system is based in particular on an assessment of the reputational risk arising from Natixis CIB's customers, from inception and throughout the business relationship, including the management of controversies. It is carried out in the normal course of business and, to the extent possible, using the various existing governance mechanisms and committees. An escalation process also makes it possible to transfer all files likely to generate a significant risk of damage to the reputation of Natixis and/or Groupe BPCE to the Natixis Global Culture & Conduct Committee (G3C), composed of members of the entity's executive management.

In addition, a system for monitoring the Group's ESG reputation has been set up, conducting monthly monitoring of the main controversies related to ESG issues that have involved Groupe BPCE and their impact on its overall reputation score. This monitoring is presented quarterly to the ESG Risk Committee.

Groupe BPCE plans to continue to enhance these systems in the course of 2025, in particular by defining a framework for monitoring voluntary commitments and strengthening its reputational risk management system.

Litigation risks

The environmental, social and governance issues are likely to lead to litigation risks for Groupe BPCE. These can be based on legal foundations specific to the ESG issues (duty of care, international treaties or European legislation on the climate and the environment), on broader principles applied in this context (competition law, consumer law, criminal law), or unilateral commitments made by Groupe BPCE.

Groupe BPCE has identified and integrated into its operational risk mapping three main litigation and liability risk situations specifically related to ESG issues:

- Communication using the ecological/sustainable argument in a misleading manner (greenwashing).
- Non-compliance with the voluntary commitments made by Groupe BPCE or voluntary commitments deemed insufficient.
- Controversial activities of Groupe BPCE or its entities, customers and/or suppliers.

As for the reputational risks, the risk management relating to these three situations is based on a set of measures integrated into the Group's main decision-making processes.

In addition, Groupe BPCE's Legal department also defines and disseminates best practices in terms of communication on climate and environmental issues and supports Groupe BPCE's business lines and functions in their implementation in internal and external communication.

FINANCIAL AND MARKET RISKS

Investment risks related to the liquidity reserve

Groupe BPCE incorporates ESG criteria into the management of the liquidity reserve in order to manage both the ESG risks associated with investments and the associated reputational risk.

These ESG criteria are defined according to two axes: a target is set on the proportion of "sustainable" securities (Green, Social or Sustainable) and an exclusion on issuers of securities with a downgraded non-financial rating.

In addition, the criteria defined in the sector ESG policies also apply to securities held in the liquidity reserve.

Risks related to proprietary investments

Groupe BPCE's proprietary investments mainly concern the private equity and real estate (non-operating) investment portfolios. In 2024, Groupe BPCE used two ESG questionnaires to systematically collect information related to ESG characteristics in the creation of new investment files. The questionnaire aims to assess the ESG performance of asset management companies regarding delegated management investments, mainly in relation to the associated reputational risk. For properties managed on its own behalf, the questionnaire aims to collect elements of physical risk and transition risk associated with the invested asset.

This approach aims, at this stage, to promote the sector's acculturation to ESG issues and possibly provide information for discussion as part of the investment decision. It is planned to continue this work and enhance the system in the future.

Market risks

Natixis CIB has developed a monitoring system for the concentration of the trading book according to the ESG characteristics of the securities based on external ESG ratings or sectoral assessments available and integrated this analysis into its quarterly and annual monitoring of concentration risks. No significant concentration related to ESG criteria was identified in the context of short-, medium- or long-term market risks.

Additional work on stress scenarios is underway to enhance the assessment and monitoring of ESG risks in trading books.

RISKS RELATED TO INSURANCE ACTIVITIES

Due to the nature of its business and its management horizons, BPCE Assurances attaches importance to the integration of sustainability risks, particularly climate risks, in its risk management system.

In accordance with the regulations in force, BPCE Assurances incorporates climate risks at each stage of the risk management process, from their identification to their assessment and then their mitigation. BPCE Assurances is actively working on the theme of biodiversity, which has strong links with climate issues.

Climate risks are integrated into a risk mapping specific to insurance, distinguishing between physical and transition risks on the one hand and short/medium-term and long-term horizons on the other. Quantification of risks is an essential component of BPCE Assurances' approach, which is gradually incorporating the concept of dual materiality.

Life insurance business

The financial risks arising from the exposure of the investment portfolio are assessed using several approaches. Among the work carried out, BPCE Assurances, through its subsidiary BPCE Vie, took part in the climate stress tests set up by the ACPR in 2023 and which are based on two long-term trajectories of the Network for Greening the Financial System (NGFS) on the one hand, and in a short-term scenario combining physical risks and transition risks on the other. In parallel with this exercise, various types of work were carried out:

- analysis of the 40 largest exposures in the portfolio (*i.e.* approximately 10% of the outstandings), the objective was to measure the exposure of the companies concerned to physical risks (droughts, floods, *etc.*);
- analysis of the resilience of the various sectors represented in the directly-held bond portfolio to various climate risks (drought, flooding, *etc.*), in line with the trajectories defined by the IPCC;
- analysis of the physical risk exposure of dedicated real estate vehicles and directly owned buildings.

Finally, the measurement of the alignment of the portfolio's temperature with a scenario compatible with the Paris Agreement makes it possible to understand the exposure of the asset portfolio to transition risk.

For several years now, BPCE Assurances has defined objectives and implemented measures to limit its exposure to climate risks and its impact on climate change.

In terms of investments, this is reflected in the combination of several elements:

- implementation of sectoral policies: among the sectoral policies in force, several are directly related to the management of climate risks and concern companies related to fossil fuels;
- investments aligned with the Paris Agreement: in order to limit both its impact on the climate and its exposure to transition risk, BPCE Assurances has set itself ambitious objectives in terms of ESG criteria for its investments.

Any company rated "negative" in terms of sustainability, according to Mirova's ESG analysis, is prohibited from purchasing.

BPCE Assurances has also developed an approach to categorize issuers according to ESG criteria and climate target criteria, which will replace the approach of issuers rated "negative" according to Mirova from January 1, 2025.

Non-life insurance activities

Non-life insurance is particularly exposed to climate risks through the significant and regular increase in claims related to natural hazards.

With regard to non-life insurance products, climate risk management is an integral part of the underwriting, provisioning and reinsurance policies of the guarantees offered to customers.

The property & casualty insurance portfolio for individuals customers and professionals, through its guarantees for home, car and professional multi-risk, carries the risk of claims related to weather events.

Analysis of the contract portfolio is carried out on a regular basis to identify and measure risks, particularly those related to climatic events, to qualify their geographical distribution, and to adapt the underwriting policy.

As part of the ORSA (Own Risk and Solvency Assessment), climate stress tests are also carried out to measure the sensitivity of the solvency ratios to the occurrence of major weather events.

In addition to this work, BPCE Assurance - through its subsidiary BPCE Assurances IARD - conducted the climate stress tests proposed by the ACPR in 2023.

To reduce the impact of climate-related claims on the balance sheet, BPCE Assurances transfers a portion of its risks, including climate-related risks, to global reinsurers through various reinsurance treaties.

Work is underway on the scope of banking institutions, non-life insurance (IARD) and loan guarantees (CEGC) to integrate prospective climate change scenarios into risk modeling.

For several years, BPCE Assurances has identified the challenges and action levers to improve the positive impact of its activities on the climate and the environment. This is reflected in its insurance offers, in the implementation of the management processes for automotive and home claims and in terms of risk prevention for policyholders.

Finally, to limit the consequences of climate events, work has been initiated to encourage policyholders to implement adaptation and prevention measures. This is reflected by:

- integration of prevention into business mail, the institutional website and the social media strategy;
- text messages in advance of climate events to alert policyholders, enable them to take shelter and protect their property.

When filing claims, BPCE Assurances accelerates customer handling by strengthening the teams dedicated to claims reporting and management and quickly mobilizes the networks of experts.

RISKS RELATED TO ASSET MANAGEMENT ACTIVITIES

Natixis Investment Managers (Natixis IM) recognizes the importance of climate risks and their potential impact on investment portfolios. Most affiliates have set up systems for measuring the climate risk exposure of their portfolios managed on behalf of their investors, allowing greater transparency of the environmental issues related to their various management offers.

The most advanced affiliates are developing methodologies for statistical measurement (Value at Risk type) of climate risks. In this context, some asset management companies use external data providers to access these indicators for a specific asset class (*e.g.* MSCI's Real Estate Climate Value-at-Risk) or to access physical and transition scenarios to assess the possible impact of future events on the portfolios.

The measurement of climate risks remains a priority for many affiliates and an area of future development, particularly in order to identify more extensive data sources.

As Natixis IM's ambition is to be at the forefront in terms of support for innovative environmental solutions, it has, for example, invested in Iceberg Data Lab, a fintech that develops assessment tools and provides environmental data solutions to financial institutions.

7.16.4.5 ESG risk monitoring and reporting system

ESG risks are monitored on a consolidated basis at Groupe BPCE level, through a dashboard produced quarterly by the ESG Risk Department and made available to all entities and business lines.

To date, the indicators monitored mainly focus on climate and environmental risks and cover the following points:

- Corporate and Professional customer portfolio: sectoral concentrations compared to the sectoral assessment of climate and environmental risks and the most sensitive sectors,
- Home loan portfolio: concentration of financed assets with a deteriorated energy performance in the loan production stock,
- Liquidity reserve: concentration by ESG rating of the stock and transactions carried out,
- Scope 1 carbon footprint monitoring.

The main indicators in this dashboard are reported quarterly to the ESG Risk Committee. Certain indicators are also included in the management system of Groupe BPCE entities.

At the level of Groupe BPCE entities, the integration of the dashboard indicators in the management and monitoring of the entity's risks is carried out in an appropriate manner according to the challenges, business model and operational context of the entity.

This dashboard is intended to be reviewed and enhanced as the ESG risk management system is strengthened and quantitative measures are developed.

7.16.5 Cross-reference table with regulatory reporting requirements

- Qualitative information on environmental risk

Economic strategy and processes		Corresponding chapter
a)	Economic strategy of the institution to integrate environmental factors and risks, taking into account their impact on the business environment, business model, strategy and financial planning of the institution	7.16.3 VISION 2030 and Impact strategy
b)	Objectives, targets and limits for the assessment and management of the environmental risk in the short, medium and long term, and assessment of performance with regard to these objectives, targets and limits, including forward-looking information relating to the definition of the strategy and economic processes	7.16.3.3 Objectives, targets and limits related to environmental and social risks and performance assessment
c)	Current investing activities and (future) investment targets in favor of environmental objectives and activities aligned with the EU taxonomy	7.16.3.3 Objectives, targets and limits related to environmental and social risks and performance assessment
d)	Policies and procedures for direct and indirect dialog with new or existing counterparties on their strategies for mitigating and reducing environmental risks	7.16.4.4 Integration of ESG risks into the risk management system
e)	Responsibilities of the management body in establishing the risk tolerance framework and in overseeing and managing the implementation of the objectives, strategy and policies defined in the context of environmental risk management, covering relevant transmission channels	7.16.2 Governance
f)	Integration by the management body of the short-, medium- and long-term effects of environmental factors and risks into the organizational structure, both within the institution's business lines and internal control functions	7.16.2 Governance
g)	Integration of measures to manage environmental factors and risks in the internal governance systems, including the role of committees, the distribution of tasks and responsibilities and the feedback circuit between the risk management function and the management body, covering the relevant transmission channels	7.16.2 Governance

Governance		Corresponding chapter
a)	Integration by the institution, in its governance arrangements, of the counterparty's governance performance, including at the level of the committees of the latter's highest governance body and its committees responsible for decisions on economic issues environmental and social	7.16.4.4 Integration of ESG risks into the risk management framework
b)	Consideration by the institution of the role of the counterparty's highest governance body in the publication of non-financial information	7.16.5.4 Integration of ESG risks into the risk management system
c)	Integration by the institution, in the governance system, of the performance of its counterparties in terms of governance, in particular: (i) Ethical considerations (ii) Risk strategy and management (iii) Inclusiveness (iv) Transparency (v) Managing conflicts of interest (vi) Internal communication on critical concerns	7.16.4.4 Integration of ESG risks into the risk management framework
d)	Integration by the institution, in its risk management systems, of the performance of its counterparties in terms of governance in terms of: (i) Ethical considerations (ii) Risk strategy and management (iii) Inclusiveness (iv) Transparency (v) Managing conflicts of interest (vi) Internal communication on critical concerns	7.16.4.4 Integration of ESG risks into the risk management system

7.17 Remuneration policy

Information on the policies and practices on pay granted to members of the executive body and persons whose professional activities have a material impact on the corporate risk profile are available at the following address:

https://groupebpce.com/en/investors/results-and-publications/pillar-iii.

8 LEGAL INFORMATION

8.1 Charter of incorporation and articles of association

8.1.1 General information

BPCE

7, promenade Germaine Sablon – 75013 Paris – FRANCE

Tel: +33 (0)1 58 40 41 42 – www.groupebpce.com

A French limited liability company (*société anonyme*) with a Management Board and a Supervisory Board, governed by its articles of association, the regulations applicable to commercial companies, and the French Monetary and Financial Code.

The company was incorporated on January 22, 2007, the date on which BPCE, a non-trading company, was formed to hold the assets contributed by the Banque Populaire and Caisse d'Epargne groups. The company's duration is 99 years.

Paris Trade and Companies Register Number 493455042 (this number is listed on Page 1 of BPCE's articles of association).

NAF (business activity) code: 6419Z – LEI number: 9695005MSX10YEMGDF46.

The company's fiscal year runs from January 1 to December 31.

BPCE, founded by the French act of June 18, 2009, is the central institution of Groupe BPCE, a cooperative banking group.

As such, it represents the credit institutions affiliated with it. The affiliated institutions, within the meaning of Article L. 511-31 of the French Monetary and Financial Code, are:

- the 14 Banques Populaires and their 31 mutual guarantee companies (SCM), whose sole corporate purpose is to guarantee loans issued by the Banques Populaires;
- the 15 Caisses d'Epargne, whose share capital is held by 175 Local Savings Companies (LSC);
- Natixis; Banque BCP SAS (France); Banque de Tahiti; Banque de Nouvelle-Calédonie; Banque Palatine; Crédit Foncier de France; Compagnie de Financement Foncier; Cicobail; Société Centrale pour le Financement de l'Immobilier (SOCFIM); BPCE International; Batimap; Batiroc Bretagne Pays de Loire; Capitole Finance-Tofinso; Comptoir Financier de Garantie; BPCE Lease Nouméa; BPCE Lease Réunion; BPCE Lease Tahiti; Sud-Ouest Bail; Oney Bank.

The company's role is to guide and promote the business and expansion of the cooperative banking group comprising the Banque Populaire network, Caisse d'Epargne network, the affiliated entities and, in general, the other entities under its control.

The purpose of the company is:

- to be the central institution for the Banque Populaire network, the Caisse d'Epargne network and the affiliated entities, as provided for by the French Monetary and Financial Code. Pursuant to Articles L. 511-31 *et seq.* and Article L. 512-107 of the French Monetary and Financial Code, it is responsible for:
  - defining the Group's policy and strategic guidelines as well as those of each of its constituent networks,
  - coordinating the sales policies of each of its networks and taking all measures necessary for the Group's development, including acquiring or holding strategic equity interests,
  - representing the Group and each of its networks to assert its shared rights and interests, including before the banking sector institutions, as well as negotiating and entering into national and international agreements,
  - representing the Group and each of its networks as an employer to assert its shared rights and interests, as well as negotiating and entering into collective industry-wide agreements,
  - taking all measures necessary to guarantee the liquidity of the Group and each of its networks and, to that end, determining rules for managing the Group's liquidity, including by defining the principles and terms and conditions of investment and management of the cash flows of its constituent entities and the conditions under which these entities may carry out transactions with other credit institutions or investment companies and carry out securitization transactions or issue financial instruments, and performing any financial transaction necessary for liquidity management purposes,
  - taking all measures necessary to guarantee the solvency of the Group and each of its networks, including implementing the appropriate Group internal financing mechanisms and setting up a Mutual Guarantee Fund shared by both networks, for which it determines the rules of operation, the terms and conditions of use in addition to the funds provided for in Articles L. 512-12 and L. 512-86-1, as well as the contributions of affiliated entities for its initial allocation and reconstitution,
  - defining the principles and conditions for organizing the internal control system of the Group and each of its networks, as well as controlling the organization, management and quality of the financial position of affiliated entities, including through on-site checks within the scope defined in paragraph 4 of Article L. 511-31,
  - defining the risk management policy and principles and the limits thereof for the Group and each of its networks, and ensuring permanent risk supervision on a consolidated basis,
  - approving the articles of association of affiliated entities and local savings companies and any changes thereto,
  - approving the persons called upon, in accordance with Article L. 511-13, to determine the business orientation of its affiliated entities,
  - calling for the financial contributions required to perform its duties as a central institution,
  - ensuring that the Caisses d'Epargne duly fulfill the duties provided for in Article L. 512-85;
- to be a credit institution, officially approved to operate as a bank. On this basis, it exercises, both in France and other countries, the prerogatives granted to banks by the French Monetary and Financial Code, and provides the investment services described in Articles L. 321-1 and L. 321-2 of said Code; it exercises the function of central bank for the networks and more generally for the Group;
- to act as an insurance intermediary, and particularly as an insurance broker, in accordance with the regulations in force;
- to act as an intermediary for real estate transactions, in accordance with the regulations in force;
- to acquire stakes, both in France and abroad, in any French or foreign companies, groups or associations with similar purposes to those listed above or with a view to the Group's expansion, and more generally, to undertake any transactions relating directly or indirectly to these purposes that are liable to facilitate the achievement of the company's purposes or its expansion.

The information presented on Groupe BPCE's institutional website is not included in the Groupe BPCE universal registration document, unless explicitly incorporated for reference purposes.

8.1.2 Appropriation of earnings

Distributable income is comprised of the income for the fiscal year, less any losses brought forward and any sums allocated to the legal reserve, plus any retained earnings.

The sums distributed are comprised of the distributable income plus any reserves available to the company.

If the full amount of a preferred dividend for a given fiscal year has not been distributed, no dividend may be paid to shareholders of category "A" or "B" shares during the incorporation period, or to any shareholders after the end of the incorporation period.

The Ordinary shareholders' Meeting, upon a proposal by the Management Board, is entitled to deduct any sums it deems suitable to be carried forward to the following year or to be allocated to one or more extraordinary, general, or special reserve funds. Any sums decided on by the General shareholders' Meeting upon a proposal by the Management Board may be allocated to these funds. In addition, the General shareholders' Meeting may decide, upon a proposal by the Management Board, to pay a dividend from all or part of the sums available for distribution, under the terms and conditions set forth in the company's articles of association.

The Ordinary shareholders' Meeting, upon a proposal by the Management Board, may opt to grant shareholders the option of receiving some or all of their dividend in cash or in shares. This option may also be offered for interim dividends.

Dividend policy

IN 2024

The Ordinary Shareholders' Meeting of BPCE, which met on May 23, 2024, resolved that a dividend of €840,750,648.50 would be paid out in respect of the 2023 fiscal year to category A and B shareholders, equal to €22.25 per share.

In accordance with the fifth resolution adopted by BPCE's General Meeting of May 23, 2024, deciding to grant each shareholder an option between payment of the dividend in cash or in shares for the entire dividend for the 2023 fiscal year, and granting all powers to the Management Board to record the completion of the capital increase resulting from the exercise of the dividend payment option in shares.

At its meeting of June 18, 2024, the Management Board members noted that:

- 15 category A shareholders and 14 category B shareholders opted for the payment of the balance of the 2023 dividend in shares, *i.e.* the subscription of 1,784,830 shares with a nominal value of €5;
- the amount of the capital increase resulting from the exercise of the dividend payment option in shares amounted to €8,924,150.

As a result, on June 18, 2024, BPCE's share capital was increased from €188,932,730 to €197,856,880.

In addition, transfers of 25 category B shares were also made with effect from July 31, 2024 (eight shares) and August 30, 2024 (17 shares) between category B shareholders.

IN 2023

The Ordinary Shareholders' Meeting of BPCE, which met on May 25, 2023, resolved that a dividend of €808,903,606.14 would be paid out in respect of the 2022 fiscal year to category A and B shareholders, equal to €22.41 per share.

In accordance with the sixth resolution adopted by BPCE's General Meeting of May 25, 2023, deciding to grant each shareholder an option between payment of the dividend in cash or in shares for the entire dividend for the 2022 fiscal year and granting all powers to the Management Board to record the completion of the capital increase resulting from the exercise of the dividend payment option in shares.

At its meeting of June 19, 2023, the Management Board members noted that:

- 15 category A shareholders and 14 category B shareholders opted for the payment of the balance of the 2022 dividend in shares, *i.e.* the subscription of 1,690,892 shares with a nominal value of €5;
- the amount of the capital increase resulting from the exercise of the dividend payment option in shares amounts to €8,454,460.

As a result, on June 19, 2023, BPCE's share capital increased from €180,478,270 to €188,932,730.

IN 2022

The Ordinary Shareholders' Meeting of BPCE, which met on May 19, 2022, resolved that a dividend of €787,968,126.82 would be paid out in respect of the 2021 fiscal year to category A and B shareholders, equal to €21.83 per share.

IN 2021

The Combined General Meeting of BPCE, which met on May 27, 2021, resolved that a dividend of €1,297,374,005.20 would be paid out in respect of the 2020 fiscal year to category A and B shareholders, equal to €37.36 per share.

The classification as category A and B shares is defined in Section 8.2.2 of this document.

8.1.3 Company documents

Documents relating to the company, such as its articles of association, financial statements and the Management Board's and Statutory Auditors' reports presented at General Meetings may be viewed at the company's registered office and are also available on BPCE's website: https://groupebpce.com.

8.2 Share capital

8.2.1 Amount of share capital

8.2.1.1 Amount of share capital at December 31, 2024

On December 31, 2024, the share capital was set at one hundred and ninety-seven million, eight hundred and fifty-six thousand, eight hundred and eighty euros (€197,856,880). It is divided into 39,571,376 fully paid-up shares with a nominal value of five euros (€5) each, divided into two categories:

- 19,785,688 category A shares;
- 19,785,688 category B shares.

Regulation (EC) No. 809/2004 requires the following disclosures for each share category:

- The 19,785,688 category A shares are authorized and fully paid up. They were issued at a nominal value of €5 each and there was no reconciliation of the number of category A shares outstanding at the beginning and end of the fiscal year.
- The 19,785,688 category B shares are authorized and fully paid up. They were issued at a nominal value of €5 each and there was no reconciliation of the number of category B shares outstanding at the beginning and end of the fiscal year.

8.2.1.2 Amount of share capital from February 19, 2025

Since February 19, 2025, the share capital has been set at €207,603,030 (two hundred and seven million six hundred and three thousand and thirty euros). It is divided into 41,520,606 fully paid-up shares with a nominal value of five euros (€5) each, divided into two categories:

- 20,760,303 category A shares;
- 20,760,303 category B shares.

Regulation (EC) No. 809/2004 requires the following disclosures for each share category:

- The 20,760,303 category A shares are authorized and fully paid up. They were issued at a nominal value of €5 each and there was no reconciliation of the number of category A shares outstanding at the beginning and end of the fiscal year;
- The 20,760,303 category B shares are authorized and fully paid up. They were issued at a nominal value of €5 each and there was no reconciliation of the number of category B shares outstanding at the beginning and end of the fiscal year.

With the authorization of the Supervisory Board of February 5, 2025, the Management Board decided, on February 11, 2025, to use the delegations granted by the Combined General Meeting of December 18, 2024 and to carry out a capital increase, with cancellation of preferential subscription rights, by way of the issue of 974,615 category A shares to be subscribed by category A shareholders and 974,615 category B shares to be subscribed by category B shareholders, for a total amount (including additional paid-in capital) of €1,299,999,963.90, to be subscribed between February 12, 2025 and February 18, 2025 (inclusive).

On February 19, 2025, the Management Board noted that 15 category A shareholders had subscribed for all of the 974,615 category A shares and 14 category B shareholders had subscribed for all of the 974,615 category B shares of a nominal value of five euros each and that, as the share capital resulting from the share capital increase amounted to €9,746,150, BPCE's share capital was thus increased, as of February 19, 2025, from €197,856,880 to €207,603,030.

8.2.1.3 General principles

There are no shares not representing capital, no shares held as treasury shares by BPCE and no convertible securities, exchangeable securities or securities with warrants.

Shares in BPCE are neither listed nor traded on any market.

The company did not pledge its own shares over the course of the 2024 fiscal year and since January 1, 2025.

In the absence of a BPCE stock option plan within the meaning of Article R. 225-138 of the French Commercial Code and in the absence of any share buyback transactions referenced in Articles R. 228-90 and R. 228-91 of the French Commercial Code, the disclosures arising thereunder are not applicable to BPCE.

Likewise, since no share subscription or purchase options have been granted or any free shares allocated, the provisions of Articles L. 225-185 and L. 225-197-1 of the French Commercial Code are not applicable to BPCE.

In accordance with Regulation (EC) No. 809/2004, it should be noted that BPCE's articles of association do not have any specific provisions governing changes in share capital that are more stringent than is required by law.

8.2.2 Category A and B shares

Definition

category A shares are shares held by category A shareholders, which are the Caisses d'Epargne, and issued by the company in accordance with Articles L. 228-11 *et seq.* of the French Commercial Code.

category B shares are shares held by category B shareholders, which are the Banques Populaires and minority shareholders, and issued in accordance with the above-mentioned articles of the French Commercial Code.

Legal form and registration of shares

The shares issued by the company may only be held in registered form. They are recorded in a register and shareholder accounts and are held by either the company or an approved intermediary.

Rights of category A and B shares

Category A and B shares have the same rights, with the exception of the special rights attributed during the incorporation period, as set forth in the company's articles of association.

These special rights are attached to each share category and can be exercised at Ordinary shareholders' Meetings.

The special rights expire at the end of the incorporation period. Consequently, at the end of that period, category A and B shares will be automatically converted into ordinary shares bearing equivalent rights, without any formalities required.

Each category A and B share entitles its holder to one vote at General Shareholders' Meetings.

The rights of category A shareholders and category B shareholders may not be changed without the approval of a General Shareholders' Meeting convened specifically for this purpose, in accordance with applicable laws.

Incorporation period

When BPCE was first established on July 31, 2009, two distinct share categories were created – one for former CNCE shareholders and one for former BFBP shareholders – in order to guarantee parity for the shareholders of the two companies owning BPCE during the so-called five-year incorporation period, which could be extended by a decision from the General Shareholders' Meeting. After the incorporation period, category A and B shares would be automatically converted into ordinary shares.

The BPCE General Meeting of December 20, 2012 decided to abolish the incorporation period, which was scheduled to end on the date of the Annual General Meeting in May 2015.

The General Meeting decided to preserve the equal ownership structure of BPCE's share capital and to maintain the Supervisory Board's current composition of seven members proposed by category A shareholders, seven members proposed by category B shareholders and four external members.

An equal split will also be maintained in the appointment of non-voting directors, with three appointed from candidates proposed by category A shareholders and three appointed from candidates proposed by category B shareholders, plus Natixis, which is a non-voting director by operation of the law.

The Combined General Meeting of July 11, 2013 reduced the number of non-voting directors proposed by category A and category B shareholders to two, and decided that the Chairman of the Fédération Nationale des Caisses d'Epargne and the Chairman of the Fédération Nationale des Banques Populaires, who cannot be members of the Supervisory Board, be non-voting directors as of right.

The General Meeting of December 20, 2012 also decided to introduce a 10-year period of non-transferability from July 31, 2009 to July 31, 2019. During this period, only free conveyance within the same network is possible.

The new articles of association have already defined the system for the period commencing August 1, 2019: free conveyance of shares within the same network will remain possible and transfers other than free conveyance (*i.e.* to shareholders of another category or to third parties) will also become possible.

Transfers of shares will be subject to a pre-emptive right that may be exercised by shareholders of the same category. The transfer of any shares that are not covered by the pre-emptive right will require the prior approval of the Supervisory Board deliberating with a qualified majority (12 out of 18 members). In the event approval is not obtained, the Management Board will have to find a solution.

The General Meeting also decided to shift Groupe BPCE's solidarity mechanism towards a greater pooling of resources by changing the order of priority in terms of coverage (network funds and the Mutual Guarantee Fund ahead of capacity-based contributions).

Finally, the General Meeting decided to improve the Group's solvency support mechanism by establishing a bonus and netting system that encourages shareholder institutions to contribute to the achievement of the Group target.

8.3 Ownership structure and distribution of voting rights

(1) Percentage of the share capital corresponds to the theoretical voting rights.
(2) Percentage of voting rights takes into account the treasury shares held by BPCE and corresponds to the voting rights exercisable.

Changes in BPCE's share capital are set out under Section 8.2.1 (above).

8.3.3 Improper control

The company is controlled as described in Section 8.3.1; however, the company believes there is no risk of said control being exercised improperly.

8.3.4 Changes of control

To BPCE's knowledge, and in accordance with European regulations, there are no agreements that could lead to a change in control of the company at a subsequent date.

In accordance with Article L. 512-106 of the French Monetary and Financial Code, "the central institution of the Caisses d'Epargne and the Banques Populaires […] is incorporated as a public limited company in which the Banques Populaires and the Caisses d'Epargne together hold the absolute majority of the share capital and voting rights."

8.4 General Meetings

8.4.1 Combined General Meeting of December 18, 2024

A Combined General Meeting of BPCE, chaired by the Chairman of the Supervisory Board, was held on December 18, 2024. The Management Board submitted five resolutions.

Shareholders and various other persons to whom the law recognizes the same right were able to exercise their right to information within the time limits and under the conditions laid down by law.

The following resolutions were submitted for deliberation:

Extraordinary

First resolution: Delegation of authority granted to the Management Board to proceed, with cancellation of shareholders' preferential subscription rights, with one or more issues of category A shares reserved for category A Shareholders, subject to the adoption of the second resolution.

The General Meeting, voting under the conditions of quorum and majority required for Extraordinary Shareholders' Meetings, having reviewed the Management Board's report and the Statutory Auditors' report, and having noted that the Company's share capital has been fully paid up, in accordance with the provisions of Articles L. 225-129 *et seq.* of the French Commercial Code and Article L. 225-138 of the aforementioned code, and subject to the adoption of the second resolution submitted for the approval of this meeting:

4) delegates to the Management Board its authority to decide, with the prior authorization of the Supervisory Board, in the proportion and at the dates and according to the schedules that it will decide, one or more increases in the Company's share capital through the issue of category A shares reserved for category A Shareholders (as such term is defined in the Company's articles of association);

5) resolves that the maximum total amount of share capital increases that may be carried out pursuant to this delegation and the second resolution of this meeting (nominal amount and additional paid-in capital included) may not exceed four billion euros (€4,000,000,000);

6) resolves to cancel the preferential subscription rights of the Company's shareholders to the category A shares that may be issued under this delegation, the subscription of which is reserved for category A Shareholders;

7) resolves that the subscription price of the category A shares that may be issued under this delegation will be set by the Management Board on the basis of the valuation of the Company's share on the date on which the decision to carry out the capital increase;

8) resolves that the category A shares shall be fully paid up upon subscription by payment in cash and by delivery of a subscription form; and

9) resolves that the new category A shares to be issued under this delegation will be subject to all the provisions of the Company's articles of association, will be fully assimilated to the previously issued category A shares and will enjoy the rights attached to the category A shares.

The General Meeting grants full powers to the Management Board to implement this delegation, and in particular:

- determine the characteristics, including the amount of the capital increase, the issue price as well as the amount of the additional paid-in capital that may be requested at the time of issue (within the limit of the ceilings set out above), and the terms and conditions of any issue carried out pursuant to this delegation, as well as the terms and conditions for the payment of the category A shares issued, and in particular to set the opening and closing dates of the subscription periods for category A shares;
- determine the number of category A shares issued under this delegation to which each category A Shareholder may subscribe, within the limits set above;
- close the subscription to any issue early in accordance with legal and regulatory conditions;
- receive subscription forms and deposit funds;
- use, in the order it deems appropriate, one of the options conferred by Article L. 225-134 of the French Commercial Code;
- record, at the end of the subscription period for any issue, in light of the custodian's certificate, the completion of the capital increase;
- make any corresponding amendment to the Company's articles of association;

- allocate, at its sole decision and if it deems it appropriate, the costs, duties and fees resulting from the completion of any issue to the amount of the related additional paid-in capital and to deduct from this amount the necessary sums to increase the legal reserve to one-tenth of the new share capital after each issue of category A shares;
- in general, enter into all agreements to successfully complete the planned issues, take all measures and decisions and carry out all formalities necessary for the issue and the financial servicing of the category A shares issued under this delegation and the exercise of the rights attached thereto and do whatever is necessary and/or useful for this purpose.

The General Meeting acknowledges that, in the event that the Management Board uses this delegation of authority, the Management Board will report to the General Meeting on the use that will be made of it in accordance with the legal and regulatory provisions in force and in particular those of Articles L. 225-129-5 and L. 225-138 of the French Commercial Code.

This delegation of authority is granted for a period of eighteen (18) months from the date of this General Meeting, any issue of category A shares decided under this delegation must be carried out within this period in accordance with Article L. 225-138 of the French Commercial Code.

This resolution was unanimously approved by the category B shareholders present and represented, as the category A shareholders did not take part in the vote pursuant to the provisions of Article L. 225-138 paragraph 1 of the French Commercial Code.

Second resolution: Delegation of authority granted to the Management Board to proceed, with cancellation of shareholders' preferential subscription rights, with one or more issues of category B shares reserved for category B Shareholders, subject to the adoption of the first resolution.

The General Meeting, voting under the conditions of quorum and majority required for Extraordinary Shareholders' Meetings, having reviewed the Management Board's report and the Statutory Auditors' report, and having noted that the Company's share capital has been fully paid up, in accordance with the provisions of Articles L. 225-129 *et seq.* of the French Commercial Code and Article L. 225-138 of the aforementioned code, and subject to the adoption of the first resolution submitted for the approval of this meeting:

1) delegates to the Management Board its authority to decide, with the prior authorization of the Supervisory Board, in the proportion and at the dates and according to the schedules that it will decide, one or more increases in the Company's share capital through the issue of category B shares reserved for category B Shareholders (as such term is defined in the Company's articles of association);

2) resolves that the maximum total amount of share capital increases that may be carried out pursuant to this delegation and the first resolution of this meeting (nominal amount and additional paid-in capital included) may not exceed four billion euros (€4,000,000,000);

3) resolves to cancel the preferential subscription rights of the Company's shareholders to the category B shares that may be issued under this delegation, the subscription of which is reserved for category B Shareholders;

4) resolves that the subscription price of the category B shares that may be issued under this delegation will be set by the Management Board on the basis of the valuation of the Company's share on the date on which the decision to carry out the capital increase;

5) resolves that the category B shares shall be fully paid up upon subscription by payment in cash and by delivery of a subscription form; and

6) resolves that the new category B shares to be issued under this delegation will be subject to all the provisions of the Company's articles of association, will be fully assimilated to the previously issued category B shares and will enjoy the rights attached to the category B shares.

The General Meeting grants full powers to the Management Board to implement this delegation, and in particular:

- determine the characteristics, including the amount of the capital increase, the issue price as well as the amount of the additional paid-in capital that may be requested at the time of issue (within the limit of the ceilings set out above), and the terms and conditions of any issue carried out pursuant to this delegation, as well as the terms and conditions for the payment of the category B shares issued, and in particular to set the opening and closing dates of the subscription periods for category B shares;
- determine the number of category B shares issued under this delegation to which each category B Shareholder may subscribe, within the limits set above;
- close the subscription to any issue early in accordance with legal and regulatory conditions;
- receive subscription forms and deposit funds;
- use, in the order it deems appropriate, one of the options conferred by Article L. 225-134 of the French Commercial Code;
- record, at the end of the subscription period for any issue, in light of the custodian's certificate, the completion of the capital increase;
- make any corresponding amendment to the Company's articles of association;
- allocate, at its sole decision and if it deems it appropriate, the costs, duties and fees resulting from the completion of any issue to the amount of the related additional paid-in capital and to deduct from this amount the necessary sums to increase the legal reserve to one-tenth of the new share capital after each issue of category B shares;
- in general, enter into all agreements to successfully complete the planned issues, take all measures and decisions and carry out all formalities necessary for the issue and the financial servicing of the category B shares issued under this delegation and the exercise of the rights attached thereto and do whatever is necessary and/or useful for this purpose.

The General Meeting acknowledges that, in the event that the Management Board uses this delegation of authority, the Management Board will report to the General Meeting on the use that will be made of it in accordance with the legal and regulatory provisions in force and in particular those of Articles L. 225-129-5 and L. 225-138 of the French Commercial Code.

This delegation of authority is granted for a period of eighteen (18) months from the date of this General Meeting, any issue of category B shares decided under this delegation must be carried out within this period in accordance with Article L. 225-138 of the French Commercial Code.

This resolution was unanimously approved by the category A shareholders present and represented, as the category B shareholders did not take part in the vote pursuant to the provisions of Article L. 225-138 paragraph 1 of the French Commercial Code.

Third resolution: Delegation of authority granted to the Management Board to proceed, with cancellation of preferential subscription rights, with a capital increase reserved for Company employees.

The General Meeting, ruling under the conditions of quorum and majority required for Extraordinary Shareholders' Meetings, having reviewed the Management Board's report and the Statutory Auditors' special report, and ruling in accordance with the provisions of Articles L. 3332-18 *et seq.* of the French Labor Code and Articles L. 225-129, L. 225-129-2, L. 225-129-5, L. 225-129-6 and L. 225-138 *et seq.* of the French Commercial Code:

1) delegates to the Management Board its authority to decide, in the proportion and at the dates and according to the schedules that it will decide, to increase the share capital of the Company in cash, in one or more installments, under the conditions provided for in Articles L. 3332-18 *et seq.* of the French Labor Code, by issuing ordinary Company shares reserved for Company employees who are members of a company savings plan;
2) resolves that the maximum nominal amount of the capital increases that may be carried out under this delegation may not exceed two hundred thousand euros (€200,000);
3) resolves that the subscription price of the shares issued pursuant to this delegation will be set in accordance with the provisions of Articles L. 3332-18 *et seq.* of the French Labor Code; and
4) resolves to cancel the preferential subscription rights of the Company's shareholders to the ordinary shares that may be issued under this delegation, the subscription of which is reserved for Company employees who are members of a company savings plan.

The General Meeting grants full powers to the Management Board to implement this delegation, and in particular:

- set the terms and conditions of the capital increases and determine the dates, terms and conditions of the issues that will be carried out pursuant to this resolution;
- set the opening and closing dates of the subscription periods, the subscription price, the dividend date of the shares issued, the terms and conditions for the payment of the shares and granting deadlines for their payment;
- record the completion of the capital increases up to the amount of the shares that will be effectively subscribed and amend the articles of association accordingly;
- allocate, at its sole decision and if it deems it appropriate, the costs, duties and fees resulting from the completion of any issue to the amount of the related additional paid-in capital and to deduct from this amount the necessary sums to increase the legal reserve to one-tenth of the new share capital after each issue of shares;
- in general, enter into all agreements to successfully complete the planned issues, take all measures and decisions and carry out all formalities necessary for the issue and the financial servicing of the shares issued under this delegation and the exercise of the rights attached thereto and do whatever is necessary and/or useful for this purpose.

This delegation of authority is granted for a period of eighteen (18) months from the date of this General Meeting.

This resolution was rejected because it did not obtain the required majority.

Ordinary

Fourth resolution: Certification of sustainability disclosures: appointment of Statutory Auditors.

The General Meeting, voting under the conditions of quorum and majority required for Ordinary Shareholders' Meetings, on the recommendation of the Audit and Investment Committee, appoints, pursuant to the provisions of Articles L. 821-40 *et seq.* of the French Commercial Code, Forvis Mazars and PricewaterhouseCoopers Audit, as Statutory Auditors in charge of certifying the sustainability disclosures.

Notwithstanding the provisions of Article L. 821-44 *et seq.* of the French Commercial Code and in accordance with Article 38 of Order No. 2023-1142 of December 6, 2023, Forvis Mazars and PricewaterhouseCoopers Audit are appointed to a period of three (3) fiscal years until the end of the General Meeting called to approve the financial statements for the fiscal year ended December 31, 2026.

Forvis Mazars and PricewaterhouseCoopers Audit have stated in advance that they accept these functions and meet the legal conditions to perform them.

This resolution cancels and replaces the ninth resolution adopted by the Ordinary Shareholders' Meeting of May 23, 2024.

This resolution was unanimously approved by the shareholders present and represented.

Fifth resolution: Powers for formalities.

The General Meeting gives full powers to the bearer of an extract or copy of these draft resolutions to complete any legal formalities.

This resolution was unanimously approved by the shareholders present and represented.

8.4.2 Annual General Meeting (approval of the financial statements for the fiscal year ended December 31, 2024)

The Ordinary shareholders' Meeting called to approve the annual financial statements for the previous fiscal year convenes within five months from the reporting date of the fiscal year.

The resolutions on the agenda of the Annual General Meeting are published as part of the first amendment to the universal registration document.

8.5 Material contracts

As of the date of publication of this financial information, with the exception of the agreements referred to in Section 8.6 (related-party agreements), BPCE has not entered into any material contracts other than those entered into in the normal course of business.

8.6 Material changes

The financial statements of BPCE SA, BPCE and Groupe BPCE for the 2024 fiscal year were approved by the Management Board on February 4, 2025. Since that date, there has been no significant change in the financial or commercial situation of BPCE SA, BPCE or Groupe BPCE.

With the exception of the items mentioned in this 2024 universal registration document, in Section 7.2 "Risk factors" in Chapter 7, there has been no significant change since December 31, 2024 in the financial performance of Groupe BPCE, nor in its financial and commercial position, nor since the end of the last period for which audited financial statements have been published, and in particular since the signature of the Statutory Auditors' report on the consolidated financial statements of March 21, 2025.

8.7 Statutory Auditors' special report on related-party agreements and commitments

To the General Meeting of

BPCE

7, promenade Germaine Sablon

75013 Paris

In our capacity as Statutory Auditors of your company, we hereby present our report on related-party agreements.

It is our responsibility to inform you, on the basis of the information provided to us, of the characteristics and essential terms and conditions of the agreements of which we have been informed or which we may have discovered in the course of our work, without having to express an opinion on their usefulness or appropriateness, or on the existence of other agreements. It is your responsibility, under the terms of Article R. 225-58 of the French Commercial Code, to assess the interest involved in concluding these agreements with a view to their approval.

In addition, we are required to inform you in accordance with Article R. 225-58 of the French Commercial Code concerning the execution, during the past fiscal year, of the agreements already approved by the General Meeting.

We performed the procedures we considered necessary to comply with the Professional Code of the *Compagnie nationale des commissaires aux comptes* (France's National Association of Statutory Auditors) relating to this assignment. Our work consisted in verifying that the information provided to us is consistent with the underlying documents from which it was extracted.

For the purposes of this report:

- "BPCE" designates the central institution resulting from the combination of the networks of Caisse d'Epargne and Banque Populaire, a French limited liability company (*société anonyme*) with a Management Board and a Supervisory Board since July 31, 2009;
- "CE Participations" designates the Caisse Nationale des Caisses d'Epargne (CNCE) a French limited liability company (*société anonyme*) with a Management Board and a Supervisory Board, renamed CE Participations on July 31, 2009 with a Board of Directors, as the holding company for all of the Caisse d'Epargne network's equity interests not transferred to BPCE in 2009, and which was merged with BPCE through absorption on August 5, 2010;
- "BP Participations" designates the Banque Fédérale des Banques Populaires (BFBP), a French limited liability company (*société anonyme*) with a Board of Directors, renamed BP Participations on July 31, 2009 as the holding company for all of the Banque Populaire network's equity interests not transferred to BPCE in 2009 and which was merged with BPCE through absorption on August 5, 2010.

8.7.1 Agreements submitted for the approval of the General Meeting

AGREEMENTS AUTHORIZED AND ENTERED INTO DURING THE PAST FISCAL YEAR

We hereby inform you that we have not been informed of any agreements authorized and entered into during the past fiscal year to be submitted for the approval of the General Meeting pursuant to the provisions of Article L. 225-86 of the French Commercial Code.

8.7.2 Agreements already approved by the General Meeting

AGREEMENTS APPROVED IN PREVIOUS FISCAL YEARS THAT WERE STILL BEING EXECUTED IN THE PAST FISCAL YEAR

In accordance with Article R. 225-57 of the French Commercial Code, we were informed that the following agreements, already approved by the General Meeting in previous fiscal years, continued the past fiscal year.

AGREEMENTS WITH MEMBERS OF THE MANAGEMENT BOARD

Commitments due or likely to be due as a result of or subsequent to the termination or change of duties and relating to members of the Management Board

Director concerned on the day of the transactions (decisions of the Supervisory Board of February 2, 2023 renewing the decisions of the Supervisory Board of October 28, 2022): Nicolas Namias, Chairman of the Management Board of BPCE

Directors concerned on the date of the transaction (February 2, 2023): Béatrice Lafaurie, a member of the Management Board of BPCE, Jérôme Terpereau, a member of the Management Board of BPCE, Hélène Madar, a member of the Management Board of BPCE (from April 1, 2023).

The members of the Management Board of BPCE will receive an involuntary-termination severance pay and a retirement bonus under defined conditions.

Regardless, any compensation paid for termination of the employment contract is deducted from the amount of involuntary-termination severance pay.

The amount provisioned at the end of the 2024 fiscal year in respect of retirement bonuses came to €1,578,675.

- Social protection plans applicable to all employees and in favor of certain categories of employees

Director concerned on the day of the transactions (decisions of the Supervisory Board of February 2, 2023 renewing the decisions of the Supervisory Board of October 28, 2022): Nicolas Namias, Chairman of the Management Board of BPCE

Directors concerned on the date of the transactions (February 2, 2023): Béatrice Lafaurie, a member of the Management Board of BPCE, Jérôme Terpereau, a member of the Management Board of BPCE, Hélène Madar, a member of the Management Board of BPCE (from April 1, 2023).

The members of the Management Board of BPCE will be able to benefit, under the same conditions as BPCE employees, from the application of the social protection measures put in place within BPCE for all employees and for certain categories of employees (concerning supplementary pensions, supplementary personal protection and supplementary health insurance).

Members of the Management Board may benefit from the rules governing the maintenance of rights to receive remuneration for a period of 12 months in the case of temporary work disability applicable to executive directors of Groupe BPCE companies.

The Supervisory Board notes that the application of these measures is of real interest to BPCE as it enables it to attract and retain these members of the Management Board.

Employment contracts and amendments entered into between BPCE and members of the Management Board

Director concerned on the date of the transaction (March 25, 2021 and February 10, 2022): Béatrice Lafaurie, a member of the Management Board of BPCE

Director concerned on the date of the transaction (March 24, 2022 and February 2, 2023): Jérôme Terpereau, a member of the Management Board of BPCE

Director concerned on the date of the transaction (February 2, 2023): Hélène Madar, a member of the Management Board of BPCE (from April 1, 2023)

It appeared to be in BPCE's interest to conclude employment contracts with the members of the Management Board (excluding the Chairman), thus enabling them to perform their duties in a subordinate capacity with respect to BPCE, as part of BPCE's strategic plans, and taking into account the financial conditions attached to them.

At the meeting of March 25, 2021, the Supervisory Board approved and authorized the conclusion by BPCE of an amendment to the employment contract concluded between BPCE and Béatrice Lafaurie.

At the meeting of February 10, 2022, the Supervisory Board approved and authorized the conclusion by BPCE of a second amendment to the employment contract concluded between BPCE and Béatrice Lafaurie.

At the meeting of March 24, 2022, the Supervisory Board approved and authorized the conclusion by BPCE of an employment contract with Jérôme Terpereau.

At its meeting of February 2, 2023, the Supervisory Board approved and authorized the signature by BPCE of:

- a second amendment to Jérôme Terpereau's employment contract, made necessary by the change in the scope of his activities,
- an employment contract with Hélène Madar

The Supervisory Board also noted that, in accordance with the rules of the Group health, benefits and pension plans (Articles 83 and 39 of the French General Tax Code), the remuneration used to calculate these Group benefits is that which is subject to social security charges (*i.e.* received under the employment contract and for holding a corporate office).

AGREEMENTS WITH THE SUBSIDIARIES

Tax consolidation agreement between BPCE and Natixis

Joint directors concerned on the date of the transaction: Nicolas Namias, Chairman of the Management Board of BPCE and Chairman of the Board of Directors of Natixis, Catherine

Halberstadt, permanent representative of BPCE on the Board of Directors of Natixis.

The takeover of more than 95% of the share capital of Natixis SA by BPCE in the 2021 fiscal year resulted, as of December 31, 2021, in the termination of the tax consolidation group of which Natixis SA was until then the consolidating parent company.

Correspondingly, Natixis SA and the subsidiaries of its former tax group have agreed to join, as of January 1, 2022, the tax consolidation group of which BPCE is the parent company.

As the parent company of the tax consolidation group, BPCE is solely liable for corporate income tax calculated on the Group's overall taxable income with respect to the French Treasury. In this respect, it is entitled to use, under certain conditions, in accordance with the legal mechanism known as the "broad base", the tax losses carried forward as of December 31, 2021 of the former Natixis tax consolidation group.

In this context, Natixis and BPCE signed a tax consolidation agreement on December 13, 2022, which determines Natixis' contribution to BPCE's income tax. It provides that Natixis will pay the tax that it would have paid to the French Treasury as the parent company of the tax group that it could have formed with its subsidiaries in the absence of the acquisition of more than 95% control by BPCE, taking into account, where applicable, the profits of new tax consolidated companies.

This expanded base is thus contractually strengthened between BPCE and Natixis SA since this agreement provides for the possibility for the latter to allocate this tax loss carryforward on a basis also including the tax profits of subsidiaries that would become members of the BPCE tax group and the tax sub-group of Natixis SA from January 1, 2022. This contractual provision favorable to Natixis SA is in addition to the law.

This agreement could lead Natixis to claim more tax losses from BPCE than BPCE itself will be able to claim from the total income used to calculate the tax due to the French Treasury, thus giving Natixis the benefit of a tax saving that BPCE will not yet have realized.

At its meeting of May 25, 2023, the General Meeting approved the conclusion of this agreement relating to the tax consolidation between BPCE and Natixis.

This agreement has no impact on BPCE's 2024 financial statements. In fact, when the tax due to the Treasury in 2025 in respect of 2024 is settled, it is not anticipated that Natixis will be able to offset more tax losses than BPCE itself will be able to offset against its overall income.

Framework protocol on the maintenance and continuation of commercial relationships and agreements between the BPCE and LBP groups

Joint directors concerned on the date of the transaction: Laurent Mignon, Chairman of the Management Board of BPCE and Chairman of the Board of Directors of Natixis and Nicolas Namias, a member of the Management Board of BPCE, Chief Executive Officer of Natixis and Chairman of the Board of Directors of Natixis Investment Managers.

This transaction is part of the completion of Natixis Investment Managers' acquisition of La Banque Postale's interests in Ostrum AM and AEW Europe and extension of the industrial partnerships in asset management.

The Supervisory Board of BPCE on May 12, 2022 authorized the conclusion of the Framework Agreement, considering that it was in the interest of BPCE in view of the maintenance and continuation of the commercial relations and agreements between the BPCE and LBP groups that it organizes as part of the rationalization and simplification of the capital and industrial partnerships between the two groups.

The Framework Agreement falls within the scope of the regulated agreements procedure only in that it terminates the partnership agreement between Natixis Investment Managers, Ostrum Asset Management, Topco, LBP Asset Management, in the presence of Natixis, BPCE and La Banque Postale, authorized by the Supervisory Board on June 16, 2020.

Re-invoicing agreement relating to the Real Estate Master Plan

Directors concerned on the date of the transaction: Laurent Mignon, Chairman of the Management Board of BPCE and Chairman of the Board of Directors of Natixis, Nicolas Namias, a member of the Management Board of BPCE and Chief Executive Officer of Natixis, and Catherine Halberstadt, permanent representative of BPCE on the Board of Directors of Natixis.

The purpose of this agreement is the rebilling, as part of the real estate master plan, of the cost of the project and future real estate services, to BPCE and Natixis by Natixis Immobilier Exploitation, the real estate operator in charge of real estate management in the Paris region.

The Supervisory Board of BPCE considered that the conclusion of this agreement was justified in view of BPCE's interest in joining the joint program for the transformation and management of Groupe BPCE's real estate sites.

At the meeting of December 17, 2021, the Supervisory Board authorized the conclusion of the rebilling agreement relating to the Real Estate Master Plan to be entered into by Natixis, BPCE, and Natixis Immo Exploitation.

The impact of this agreement at December 31, 2024 was an expense of €1,713,270.17.

Partnership agreement between Natixis Investment Managers, Ostrum Asset Management, Topco, and LBP Asset Management, in the presence of Natixis, BPCE, and La Banque Postale

Joint directors concerned on the date of the transaction: Laurent Mignon, Chairman of the Management Board of BPCE and Chairman of the Board of Directors of Natixis; Christine Fabresse, a member of the Management Board of BPCE and permanent representative of BPCE on the Board of Directors of Natixis Investment Managers; Catherine Halberstadt, a member of the Management Board of BPCE and permanent representative of BPCE on the Board of Directors of Natixis; François Riahi, a member of the Management Board of BPCE, Chief Executive Officer of Natixis and Chairman of the Board of Directors of Natixis Investment Managers; Gérard Bellemon, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis Investment Managers; and Didier Patault, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis Investment Managers.

The purpose of this agreement is to formalize a partnership aimed at creating a leading European player in Asset Management by combining, within Ostrum Asset Management, euro fixed-income and credit strategies, as well as insurance strategies for Ostrum Asset Management and LBP Asset Management.

The Supervisory Board of BPCE considered that this memorandum was justified in terms of corporate interest, given that it aims to implement the overall project between Natixis and La Banque Postale to create a major player in insurance management through the grouping of some of their asset management activities in a joint venture.

At the meeting of June 16, 2020, the Supervisory Board authorized the implementation of the partnership project and approved the terms and conditions of the agreement between Natixis Investment Managers, Ostrum Asset Management, Topco, and LBP Asset Management, in the presence of Natixis, BPCE and La Banque Postale.

At its meeting on May 12, 2022, BPCE's Supervisory Board authorized the signing of the Framework Agreement relating to the maintenance and continuation of commercial relationships and agreements between the BPCE and LBP groups and terminating the partnership agreement between Natixis Investment Managers, Ostrum Asset Management, Topco, LBP Asset Management, in the presence of Natixis, BPCE and La Banque Postale.

This agreement has no impact on BPCE's 2024 financial statements.

Framework partnership agreement between BPCE, Natixis Assurances, BPCE Assurances, Covéa Coopérations, MAAF Assurances, Covéa Protection Juridique and BPCE IARD

Joint directors concerned on the date of the transaction: François Riahi, a member of the Management Board of BPCE, Chief Executive Officer of Natixis and Chairman of the Board of Directors of Natixis Assurances.

This framework agreement focuses on insurance of professional risks for customers of the Caisses d'Epargne and Banques Populaires. This agreement was entered into for five years from January 1, 2020, and can be renewed for successive five-year periods.

The Supervisory Board of BPCE believed that entering into this framework partnership agreement was in BPCE's interest, specifically in light of the strategic rationale behind planned transactions and the financial terms proposed. At its meeting of March 28, 2019, the Supervisory Board authorized the signing of the framework partnership agreement (and its appendices) between BPCE, Natixis Assurances, BPCE Assurances, Covéa Coopérations, MAAF Assurances, Covéa Protection Juridique and BPCE IARD.

This agreement has no impact on BPCE's 2024 financial statements.

Three tax consolidation agreements between BPCE and BPCE Assurances, between BPCE, BPCE Assurances and BPCE Vie, and between BPCE, BPCE Assurances and BPCE Assurances IARD

Joint directors concerned on the date of the transaction: Jean-François Lequoy, a member of the Management Board of BPCE and a member of the Board of Directors of BPCE Assurances.

The acquisition of more than 95% of the share capital of Natixis SA by BPCE in the 2021 fiscal year had the effect of terminating, as of December 31, 2021, the tax consolidation group of which Natixis SA was until then the consolidating parent company, in accordance with the provisions of Article 223 L. 6 d of the French General Tax Code.

Correspondingly, Natixis SA and the subsidiaries of its former tax group have agreed to join, as of January 1, 2022, the tax consolidation group of which BPCE is the parent company.

As the parent company of the tax consolidation group, BPCE is solely liable for corporate income tax calculated on the Group's overall taxable income with respect to the French Treasury.

The methods for applying the specific legislation relating to prudential capital, and more particularly the Commission Delegated Regulation (EU) 2015/35 of October 10, 2014 supplementing Directive 2009/138/EC of the European Parliament and of the Council on access to insurance and reinsurance (Solvency II), have led BPCE and its subsidiary to adapt the tax consolidation agreement in order to allow for a better adjustment of the capital required to carry out its activities.

In this context, three tax consolidation agreements, signed on October 27, 2022 by BPCE, BPCE Assurances, BPCE ASSURANCES IARD and BPCE VIE, determine the contribution of the BPCE Assurances sub-group to BPCE's tax liability and provide that in the event that the overall results of this sub-group, formed by BPCE Assurances and its sub-subsidiaries, show a deficit or a net long-term capital loss, it will receive from BPCE on a final basis, a sum equal to the immediate saving provided to the latter, i.e. the amount of the loss charged, and/or the net long-term capital loss charged, multiplied respectively by the normal tax rate applicable at the time of the year in which this loss is charged or by the effective tax rate applicable to the net long-term capital gain in force at the time of the year in which this net long-term capital loss is charged.

This grant will be made by BPCE to BPCE Assurances in priority to any other payment of corporate tax savings made to the latter by taking into account the deficit or net capital loss realized by another subsidiary member of the tax group of which BPCE is the parent company, as well as the payment of the corporate tax savings relating to the as yet uncompensated portion of the said deficit or capital loss as and when it is set off against the subsequent overall profits of the BPCE tax group.

At its meeting of May 25, 2023, the General Meeting approved the conclusion of these three agreements relating to the tax consolidation between BPCE and BPCE Assurances, between BPCE, BPCE Assurances and BPCE Vie and between BPCE, BPCE Assurances and BPCE Assurances IARD.

This agreement has no impact on BPCE's 2024 financial statements.

Amendment to the agreement governing BPCE's 3(a)(2) US MTN Program

Joint directors concerned on the date of the transaction: François Pérol, Chairman of the Management Board of BPCE and Chairman of the Board of Directors of Natixis, Daniel Karyotis, a member of the Management Board of BPCE, permanent representative of BPCE and a member of the Board of Directors of Natixis, Alain Condaminas, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis, Thierry Cahn, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis, Catherine Halberstadt, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis, Didier Patault, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis and Pierre Valentin, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis.

On April 9, 2013, BPCE established a medium-term note (the "Notes") program *in the* United States within the framework of a scheme defined in Section 3(a)(2) of the Securities Act of 1933 (the "3(a)(2) Program"). Its maximum total nominal amount is $10 billion.

It was proposed to change the limits of the Agreement concerning the guarantee:

- notes issued under the 3(a)(2) Program cannot exceed a total nominal amount of $6 billion per year;
- of which a maximum of $3 billion may not be loaned by BPCE to Natixis (so where applicable, based on Natixis' funding needs, the proceeds from the Notes issued can be loaned by BPCE to Natixis at shorter maturities than those of the Notes).

On February 19, 2014, the Supervisory Board approved the signing of an amendment to the Agreement aimed at changing the sub-limits called for in Article 4 of the Agreement. Furthermore, the proceeds loaned to Natixis can be made available by BPCE for shorter maturities than those of the notes issued, depending on Natixis' funding needs.

This agreement resulted in the recognition of an expense of €1,818,153.75 in BPCE's 2024 financial statements.

Joint and several guarantee agreement between CNCE and Natixis

Directors concerned on the date of the transaction: Charles Milhaud, Chairman of the Management Board of CNCE, Nicolas Mérindol, a member of the Management Board of CNCE, Anthony Orsatelli, a member of the Management Board of CNCE, Pierre Servant, a member of the Management Board of CNCE and Francis Meyer, a member of the Supervisory Board of CNCE (representing CDC).

On October 1, 2004, CNCE and CDC IXIS Capital Markets entered into an agreement by which CNCE provides a joint and several guarantee on the debts of CDC IXIS Capital Markets to third parties.

The guarantee was granted for an indefinite period. CNCE may unilaterally terminate this agreement provided that it announces its intention six months before the termination becomes effective.

The agreement was granted prior approval by the Supervisory Board during its September 30, 2004 meeting.

Following the merger and acquisition of IXIS Corporate & Investment Bank with Natixis, this guarantee was renewed in favor of Natixis.

This agreement has no impact on BPCE's 2024 financial statements.

Two agreements entered into within the scope of the new guarantee granted by CNCE (representing the rights of CDC IXIS following the Refoundation project of December 31, 2004) to Natixis Structured Products to create a special purpose vehicle (SPV).

Directors concerned: Charles Milhaud, Chairman of the Management Board of CNCE, Nicolas Mérindol, a member of the Management Board of CNCE, Anthony Orsatelli, a member of the Management Board of CNCE, Pierre Servant, a member of the Management Board of CNCE and Francis Meyer, a member of the Supervisory Board of CNCE (representing CDC).

These agreements were signed following the sale of Labouchère Bank to allow Natixis Capital Markets (formerly IXIS Corporate & Investment Bank) to carry out transactions on the secondary market, and particularly for Japan, as part of a €10 billion EMTN program. The creation of this SPV, which is located in Jersey, required the following guarantee:

- an amendment to the commitment letter signed on May 28, 2003 by CNCE and Natixis Capital Markets to include the SPV within the scope of the letter;
- a joint and several guarantee between CNCE and Natixis Structured Products enabling the guarantee provided by CNCE to be transferred to Natixis Structured Products.

These agreements have no impact on BPCE's 2024 financial statements.

Amendment to MiFID agreement

Joint directors concerned on the date of the transaction: François Pérol, Chairman of the Management Board of BPCE and Chairman of the Board of Directors of Natixis, Alain Lemaire, a member of the Management Board of BPCE and a member of the Board of Directors of Natixis, Yvan de la Porte du Theil, a member of the Management Board of BPCE and a member of the Board of Directors of Natixis, Steve Gentili, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis, Francis Henry, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis, Bernard Jeannin, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis, Didier Patault, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis and Jean-Marc Carcéles, a member of the Supervisory Board of CNCE and a member of the Board of Crédit Foncier de France.

The CNCE lending activity managed in 2005 was sold to various Groupe Caisse d'Epargne subsidiaries. To this end, CNCE sold to IXIS Corporate & Investment Bank on November 18, 2005 its mid- and long-term French regional public-sector financing activities, under a partial transfer of business assets.

On December 14, 2006, the Supervisory Board approved the execution of a memorandum of understanding between CNCE, IXIS CIB and Crédit Foncier de France regarding the transfer of outstanding "regional public-sector" loans from IXIS CIB. This agreement was entered into on February 19, 2007.

On November 20, 2009, BPCE (taking over the rights of CNCE), Natixis (taking over the rights of IXIS CIB) and Crédit Foncier de France signed an amendment to the agreement specifying the obligations resulting from MiFID for derivatives activities and concerning the categorization of Natixis' counterparties and the notification of their category.

This agreement has no impact on BPCE's 2024 financial statements.

Financial intermediary agreement for Local Authorities and Institutions

Joint directors concerned on the date of the transaction: Alain Lemaire, a member of the Management Board of CNCE and a member of the Board of Crédit Foncier de France, Guy Cotret, a member of the Management Board of CNCE and a member of the Board of Crédit Foncier de France and Jean-Marc Carcéles, a member of the Supervisory Board of CNCE and a member of the Board of Crédit Foncier de France.

On June 19, 2008, CNCE, Crédit Foncier de France and Compagnie de Financement Foncier signed a financial intermediary agreement for local authorities and institutions which took effect on January 1, 2007. The main aim of this agreement was to define the terms of fees and commissions paid to the Caisses d'Epargne in their role as financial intermediaries for Groupe Crédit Foncier which holds the loans granted to local authorities and institutions on its balance sheet.

Given the financial and banking context resulting in the general absence of a market benchmark for medium- and long-term bond issues and in order to restore an economic balance between the parties, the latter agreed, in their respective interests, on the amounts and distribution of fees and commissions. This exemption of an exceptional nature in view of the financial context would be valid only for the primary commissioning of business introducers on new flows due for 2008.

An amendment was signed in the 2011 fiscal year. This agreement was renewed in the 2016 fiscal year.

This agreement has no impact on BPCE's 2024 financial statements.

AGREEMENTS WITH SHAREHOLDERS

Collateral remuneration agreement between BPCE and the Caisses d'Epargne

Joint directors concerned on the date of the transaction: Yves Toublanc, Chairman of the Supervisory Board of CNCE and Chairman of the Steering and Supervisory Board of CE Rhône Alpes, Jean Arondel, a member of the Supervisory Board of CNCE and Chairman of the Steering and Supervisory Board of CE Loire-Centre, Jean-Charles Boulanger, a member of the Supervisory Board of CNCE and Chairman of the Steering and Supervisory Board of CE Aquitaine Poitou-Charentes, Jean-Claude Cette, a member of the Supervisory Board of CNCE and Chairman of the Steering and Supervisory Board of CE Provence-Alpes-Corse, Francis Henry, a member of the Supervisory Board of CNCE and Chairman of the Steering and Supervisory Board of CE Lorraine Champagne-Ardenne, Philippe Lamblin, a member of the Supervisory Board of CNCE and Chairman of the Steering and Supervisory Board of CE Nord France Europe, Pierre Mackiewicz, a member of the Supervisory Board of CNCE and Chairman of the Steering and Supervisory Board of CE Côte d'Azur, Bernard Roux, a member of the Supervisory Board of CNCE and Chairman of the Steering and Supervisory Board of CE Midi-Pyrénées, Pierre Valentin, a member of the Supervisory Board and Chairman of the Steering and Supervisory Board of CE Languedoc-Roussillon, Maurice Bourrigaud, a member of the Supervisory Board of CNCE and Chairman of the Management Board of CE d'Auvergne et du Limousin, Joël Chassard, a member of the Supervisory Board of CNCE and Chairman of the Management Board of CE Normandie, Bernard Comolet, Vice-Chairman of the Supervisory Board of CNCE and Chairman of the Management Board of CE Île-de-France, Alain Denizot, a member of the Supervisory Board of CNCE and Chairman of the Management Board of CE Picardie, Jean-Pierre Deramecourt, a member of the Supervisory Board of CNCE and Chairman of the Management Board of CE d'Alsace, Alain Maire, a member of the Supervisory Board of CNCE and Chairman of the Management Board of CE Bourgogne Franche-Comté, Philippe Monéta, a member of the Supervisory Board of CNCE and Chairman of CE Loire Drôme Ardèche and Didier Patault, a member of the Supervisory Board of CNCE and Chairman of the Management Board of CE Bretagne Pays de Loire.

CNCE and the Caisses d'Epargne have implemented with the Banque de France, GCE group refinancing arrangements involving the direct or indirect use of assets belonging to the Caisses d'Epargne. The companies wished to define the terms and conditions under which the Caisses d'Epargne will receive a minimum financial commission in exchange for transferring assets eligible for ECB Monetary Policy Operations and not otherwise eligible for specific remuneration as securities lending or repo transactions.

The agreement is entered into for three years and is renewable automatically for another three-year period, unless terminated in advance.

At its meeting of June 24, 2009, the CNCE Supervisory Board authorized CNCE to sign this collateral remuneration agreement with each of the Caisses d'Epargne.

This agreement resulted in the recognition of an expense of €212,149.70 in BPCE SA's financial statements for the fiscal year ended December 31, 2024.

Collateral remuneration agreement between BPCE and the Banques Populaires

Joint directors concerned on the date of the transaction: Gérard Bellemon, a member of the Supervisory Board of BPCE and Chairman of the Board of Directors of Banque Populaire Val de France, Thierry Cahn, a member of the Supervisory Board of BPCE and Chairman of the Board of Directors of Banque Populaire d'Alsace, Pierre Desvergnes, a member of the Supervisory Board of BPCE and Chairman of the Board of Directors of Casden Banque Populaire, Steve Gentili, a member of the Supervisory Board of BPCE and Chairman of the Board of Directors of BRED, Jean Criton, a member of the Supervisory Board of BPCE and Chief Executive Officer of Banque Populaire Rives de Paris and Bernard Jeannin, a member of the Supervisory Board of BPCE and Chief Executive Officer of Banque Populaire Bourgogne Franche-Comté.

BPCE and the Banques Populaires have implemented, with the Banque de France, Groupe BPCE refinancing arrangements involving the direct or indirect use of assets belonging to the Banques Populaires. The companies wished to define the terms and conditions under which the Banques Populaires will receive a minimum financial commission in exchange for transferring assets eligible for ECB Monetary Policy Operations and not otherwise eligible for specific remuneration as securities lending or repo transactions.

The purpose of the collateral remuneration agreement is to determine the bases for calculation and payment under which the Banques Populaires will receive a payment from Banque de France in return for directly or indirectly transferring assets that are eligible for ECB Monetary Policy Operations.

At its meeting of February 24, 2010, the Supervisory Board authorized BPCE to sign this collateral remuneration agreement with each of the Banques Populaires.

It was entered into on July 15, 2010 for an indefinite period.

This agreement resulted in the recognition of an expense of €58,146.93 in BPCE SA's financial statements for the fiscal year ended December 31, 2024.

AGREEMENTS WITH CNP ASSURANCES

General framework and specific agreements covering the new partnership arrangements between the CNP group and Groupe BPCE

At its meeting of August 6, 2013, the Supervisory Board authorized François Pérol to constitute an Insurance division at the level of Natixis and engage in negotiations with CNP Assurances with a view to allocating the responsibility for the Group's future life insurance business to Natixis Assurances.

The negotiations with CNP undertaken between October 2013 and July 2014 resulted in the definition of the fundamental principles applicable to the future partnership between BPCE, Natixis and CNP which were duly approved by the Supervisory Board at its meeting of July 31, 2014.

The discussions with CNP continued and resulted, first, in an agreement of principle between CNP Assurances, BPCE and Natixis authorized by the Supervisory Board on November 4, 2014 and then in a general framework agreement complemented by specific application contracts (the "new partnership agreements") authorized by the Supervisory Board on February 18, 2015 and approved by the General Meeting held on May 22, 2015.

The new partnership agreements with CNP Assurances represent a major strategic development for BPCE that is perfectly integrated within the Group's overall bancassurance business model while at the same time preserving the interests of customers, the level of fees and commissions, and service quality during the transitional period.

GENERAL FRAMEWORK AGREEMENT IMPLEMENTED BY BPCE AND ITS ADDENDUM

Joint directors concerned on the date of the transaction: François Pérol, Chairman of the Management Board of BPCE, a member of the Board of Directors of CNP Assurances and Chairman of the Board of Directors of Natixis, Jean-Yves Forel, a member of the Management Board of BPCE and a member of the Board of Directors of CNP Assurances, Laurent Mignon, a member of the Management Board of BPCE and Chief Executive Officer of Natixis, Pierre Valentin, a member of the Board of Directors of Natixis and a member of the Supervisory Board of BPCE, Didier Patault, a member of the Board of Directors of Natixis and a member of the Supervisory Board of BPCE, Thierry Cahn, a member of the Board of Directors of Natixis and a member of the Supervisory Board of BPCE, Catherine Halberstadt, a member of the Board of Directors of Natixis and a member of the Supervisory Board of BPCE, Alain Condaminas, a member of the Board of Directors of Natixis and a member of the Supervisory Board of BPCE and Gérard Bellemon, a member of the Board of Directors of Natixis Assurances and a member of the Supervisory Board of BPCE.

The General Framework Agreement was signed between CNP Assurances, BPCE, Natixis, Natixis Assurances, ABP Vie and ABP Prévoyance.

The purpose of the Agreement is to:

- note the non-renewal of the Existing Agreements;
- define, organize and delimit the contractual whole formed by the New Partnership Agreements of which it is the umbrella agreement;
- determine the term of the New Partnership Agreements, namely seven years as from January 1, 2016. At the end of this seven-year period, BPCE will be able to either extend the New Partnership Agreements for a period of three years as from January 1, 2023 or purchase CNP's insurance outstandings. BPCE will have the option of acquiring the existing portfolio on December 31, 2020, and CNP the option, in 2020 and 2022, of notifying BPCE of its desire to initiate discussions with a view to such disposal;
- define and organize the functioning of the Partnership Committee (and any sub-committees subsequently formed by the Partnership Committee);
- more generally, to organize and monitor the relationships between the Parties for the purposes of the Renewed Partnership.

An addendum to the General Framework Agreement was signed on December 30, 2015 between BPCE, CNP Assurances and Natixis in order to determine a new time limit for the signature of certain of the intended New Partnership Agreements not already signed before December 31, 2015. The addendum was equally designed to amend certain agreements to reflect regulatory or operating developments requiring the modification of certain appendices, and also provides for the deferral to January 1, 2016 of the constitution of the Partnership Committee.

The terms of the General Framework Agreement were modified by the new agreements between CNP Assurances and Groupe BPCE authorized by the Supervisory Board at its meeting of December 19, 2019: these agreements, which entered into force on January 1, 2020, provide in particular for the postponement to December 31, 2030 of the initial expiry date of the existing agreements (previously set at December 31, 2022) with a possible renewal of these agreements at each expiry for successive three-year periods until 2052.

This agreement has no impact on BPCE's financial statements for the fiscal year ended December 31, 2024.

AGREEMENTS BETWEEN CNP ASSURANCES, BPCE, NATIXIS AND ABP VIE (A SUBSIDIARY OF NATIXIS ASSURANCES)

Directors concerned on the transaction date: François Pérol, Chairman of the Management Board of BPCE, Chairman of the Board of Directors of Natixis and a member of the Board of Directors of CNP Assurances, Jean-Yves Forel, a member of the Management Board of BPCE and a member of the Board of Directors of CNP Assurances, Daniel Karyotis, a member of the Management Board of BPCE and permanent representative of BPCE at Natixis, Alain Condaminas, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis, Catherine Halberstadt, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis, Didier Patault, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis, Thierry Cahn, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis, Pierre Valentin, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis and Gérard Bellemon, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis Assurances.

- Tranche 2 new business reinsurance treaty between ABP Vie and CNP Assurances in the presence of BPCE and Natixis: 90% reinsurance by CNP Assurances for new business involving ex-CNP customers.
- Tranche 2 reinsurance administration contract between ABP Vie, CNP Assurances and BPCE in the presence of Natixis, designed to define administrative arrangements:
  - supply by BPCE to CNP Assurances of the list of customers insured, in accordance with the periodicity and other provisions of the contract, in the event of the observance of any interest rate or behavioral market shock; and
  - deployment of the necessary tests to ensure the proper functioning of the procedures (including the exchange of information) provided for by the contract.
- EuroCroissance administration contract between CNP Assurances, BPCE and ABP Vie in the presence of Natixis, designed to define administrative arrangements on similar bases to those applying to the Tranche 2 reinsurance administration contract.

These agreements have no impact on BPCE's 2024 financial statements.

EUROCROISSANCE CONTRACT BETWEEN CNP ASSURANCES AND ABP VIE IN THE PRESENCE OF BPCE

Joint directors concerned on the date of the transaction: François Pérol, Chairman of the Management Board of BPCE, Chairman of the Board of Directors of Natixis and a member of the Board of Directors of CNP Assurances, and Jean-Yves Forel, a member of the Management Board of BPCE and a member of the Board of Directors of CNP Assurances.

The EuroCroissance Lettering Agreement was concluded between CNP Assurances, BPCE and ABP Vie, in the presence of Natixis.

The EuroCroissance contract provides for compensation for the technical commitments arising as a result of payments by insured customers into EuroCroissance funds with effect from January 1 of the calendar year of observance of any interest rate or behavioral market shock, independently of the date of subscription of the corresponding policy with ABP Vie.

This agreement has no impact on BPCE's 2024 financial statements.

RETIREMENT SAVINGS AGREEMENTS BETWEEN CNP ASSURANCES AND BPCE

Joint directors concerned on the date of the transaction: François Pérol, Chairman of the Management Board of BPCE, Chairman of the Board of Directors of Natixis and a member of the Board of Directors of CNP Assurances and Jean-Yves Forel, a member of the Management Board of BPCE and a member of the Board of Directors of CNP Assurances.

- Retirement savings plan partnership agreement between CNP Assurances and BPCE mentioning in particular the termination of the distribution of the life insurance and capitalization products of CNP Assurances by the Caisses d'Epargne network with effect from January 1, 2016 (subject to certain contractual exceptions).

The agreement was signed between CNP Assurances (acting in its name and on behalf of itself and of its subsidiaries) and BPCE (acting in its name and on behalf of itself and, as central institution, in the name and on behalf of the members of the Caisse d'Epargne network and of Banque Palatine, Banque BCP, Banque des Antilles Françaises, Banque de la Réunion, Banque de Nouvelle Calédonie, Banque de Saint-Pierre et Miquelon and Banque de Tahiti).

- Implementation of a Savings Mechanism (MRE) between CNP Assurances and BPCE involving two contracts: a contract providing the assurance of a stable portfolio level for CNP Assurances, acting in the event of additional redemptions, or reduced subsequent payments, compared to the anticipated amounts and conversely, a contract providing for remuneration of BPCE's outperformance if the reverse applies. Both contracts will apply to all retirement savings plan life insurance and capitalization policies issued by CNP Assurances; they will be deactivated in the event of any interest rate or behavioral market shock and would then be renegotiated. BPCE has guaranteed CNP Assurances against any additional tax burden induced by the Savings Mechanism which is intended to be fiscally neutral for CNP Assurances.
- Addendum to the retirement savings plan life insurance commissioning agreement designed to extend the agreement until maturity of the last such policy issued by CNP Assurances. Distributors are remunerated on the basis of a contractual percentage applied to movements and outstandings subject eventually to increase based on the type of policy involved.

The addendum was signed between CNP Assurances and BPCE acting, as central institution, in the name and on behalf of the members of the Caisse d'Epargne network, Banque Palatine, Banque BCP, Banque des Antilles Françaises, Banque de la Réunion, Banque de Nouvelle Calédonie, Banque de Saint-Pierre et Miquelon and Banque de Tahiti.

This agreement has no impact on BPCE's 2024 financial statements.

AGREEMENTS RELATING TO PAYMENT PROTECTION, PROVIDENCE AND HEALTH INSURANCE POLICIES

Joint directors concerned on the date of the transaction: François Pérol, Chairman of the Management Board of BPCE, Chairman of the Board of Directors of Natixis and a member of the Board of Directors of CNP Assurances and Jean-Yves Forel, a member of the Management Board of BPCE and a member of the Board of Directors of CNP Assurances.

- In respect of individual providence policies:
  - Individual personal protection policies commission agreement between CNP Assurances and BPCE acting in its name and on behalf of itself, in the name and on behalf of the members of the Caisse d'Epargne network as central institution of the Caisse d'Epargne network, and on behalf of the Caisses d'Epargne network, of Banque Palatine, Banque BCP, Banque des Antilles Françaises, Banque de la Réunion, Banque de Nouvelle Calédonie, Banque de Saint-Pierre et Miquelon and Banque de Tahiti. Distributors are remunerated on the basis of the premiums paid by policyholders or on the technical results for each distributing institution and type of policy.
- In respect of collective payment protection insurance:
  - An exclusive partnership for seven years between CNP Assurances, BPCE, ABP Vie and ABP Prévoyance subject to coinsurance by CNP Assurances and two subsidiaries of Natixis Assurances (ABP Vie and ABP Prévoyance) amounting respectively to 66% and 34% for all policies distributed by the networks of Banque Populaire (with the exception of BRED, Crédit Coopératif and CASDEN), Caisse d'Epargne, Banque Palatine and Crédit Foncier. In the event of renewal of the agreement, the coinsurance ratio would be adjusted to an equal balance for CNP Assurances (50%) and the two subsidiaries of Natixis Assurances (50%).
  - Management and service-level agreement between CNP Assurances and BPCE defining the relationships between the beneficiaries (namely the networks of Banque Populaire [with the exception of BRED, Crédit Coopératif and CASDEN], Caisse d'Epargne, Banque Palatine and Crédit Foncier) and the insurer (CNP Assurances) and setting out the duties of each party with regard to the management of insurance requests, claims and the associated financial flows. The applicable financial terms and conditions will be defined by type of policy and for each institution.
  - Remuneration agreement between BPCE, CNP Assurances (acting in its name and in the name and on behalf of CNP IAM), ABP Vie and ABP Prévoyance defining the financial terms and conditions prevailing between the insurer and the lending institutions (namely the networks of Banque Populaire (with the exception of BRED, Crédit Coopératif and CASDEN), Caisse d'Epargne, Banque Palatine and Crédit Foncier) with regard to the distribution of payment protection insurance contracts with effect from January 1, 2016 and for the duration of the Agreement. The applicable financial terms and conditions will be defined by type of policy and for each institution.

These agreements have no impact on BPCE's financial statements for the fiscal year ended December 31, 2024.

SIGNATURE OF A SHAREHOLDERS' AGREEMENT FOR ECUREUIL VIE DÉVELOPPEMENT (EVD) BETWEEN CNP ASSURANCES, NATIXIS ASSURANCES AND BPCE IN THE PRESENCE OF ECUREUIL VIE DÉVELOPPEMENT

Joint directors concerned on the date of the transaction: François Pérol, Chairman of the Management Board of BPCE, Chairman of the Board of Directors of Natixis and a member of the Board of Directors of CNP Assurances, Jean-Yves Forel, a member of the Management Board of BPCE and a member of the Board of Directors of CNP Assurances and Gérard Bellemon, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis Assurances.

The shareholders' agreement for Ecureuil Vie Développement (EVD) has been executed between CNP Assurances, Natixis Assurances and BPCE in the presence of Ecureuil Vie Développement. It stipulates that:

EVD's mission is to provide proper interfacing between the Caisses d'Epargne network, Natixis Assurances and CNP.

On March 23, 2015 but taking effect on January 1, 2016, CNP sold to Natixis Assurances 2% of the share capital and voting rights of EVD thereby providing Natixis Assurances with 51% of the share capital of EVD. The sale was completed on the basis of a price of €48 per share or a total of €3,552 for the 74 shares representing 2% of the share capital.

These agreements have no impact on BPCE's 2024 financial statements.

Agreements between CNP Assurances and Groupe BPCE

Joint directors concerned on the date of the transaction: Françoise Lemalle, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis, Thierry Cahn, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis, Bernard Dupouy, a member of the Supervisory Board of BPCE and a member of the Board of Directors of Natixis and Gérard Bellemon, a member of the Supervisory Board of BPCE and a member of the Board of Directors of BPCE Vie.

The purpose of these agreements was to extend the agreements signed in 2015 between BPCE, Natixis and CNP Assurances expiring from December 31, 2022 to December 31, 2030, and thereby reinforce CNP Assurances' multi-partnership model. These agreements provide for the transition to a 50-50 coinsurance split between Natixis Assurances (BPCE Vie and BPCE Prévoyance) and CNP Assurances for collective payment protection insurance and for CNP Assurances to underwrite 34% of individual payment protection insurance policies subscribed for by BPCE Vie.

The Supervisory Board of BPCE deemed that these agreements were justified in terms of the corporate interest given that they are integrated within the Group's overall bancassurance business model while at the same time preserving the interests of customers, the level of fees and commissions, and service quality during the period covered by said agreements.

At its meeting of December 19, 2019, the Supervisory Board authorized the signing of agreements between CNP Assurances and Groupe BPCE.

These agreements have no impact on BPCE's 2024 financial statements.

AGREEMENTS APPROVED DURING THE PAST FISCAL YEAR

We were also informed of the execution, during the past fiscal year, of the following agreements, already approved by the General Meeting of May 23, 2024, in a special report of the Statutory Auditors on the financial statements of March 25, 2024.

Social protection plans applicable to all employees and in favor of certain categories of employees

Director concerned on the date of the transactions (February 7, 2024): Nicolas Namias, Chairman of the Management Board of BPCE, Béatrice Lafaurie, a member of the Management Board of BPCE, Hélène Madar, a member of the Management Board of BPCE, Jérôme Terpereau, a member of the Management Board of BPCE.

With respect to the supplementary pension plan for members of the Management Board who are not potential beneficiaries of the pension plan for executive officers of Groupe BPCE, it appeared in BPCE's interest to enter into a new redeemable group insurance contract according to "Article 82" of the French General Tax Code, allowing the Group's company directors to benefit from a pension plan in line with market practices and therefore to retain talent, and to benefit from more attractive financial conditions.

At its meeting of February 7, 2024, the Supervisory Board approved and authorized BPCE to enter into a redeemable group insurance contract according to "Article 82" of the French General Tax Code.

9 ADDITIONAL INFORMATION

9.1 Statement by the person responsible for the Universal Registration Document and for the annual financial report

I hereby certify that the information contained in this universal registration document is, to the best of my knowledge, true and accurate and contains no omission liable to impair its significance.

I certify that, to the best of my knowledge, the annual financial statements of BPCE SA and the consolidated financial statements of Groupe BPCE and BPCE have been prepared in accordance with the applicable set of accounting standards and give a true and fair view of the assets, liabilities, financial position and profit or loss of the Group and of all the companies included in the consolidation, and that the management report (whose contents are listed in the cross-reference table in Chapter 9) presents a true and fair view of the development and performance of the business and of the financial position of the Group and all the companies included in the consolidation, together with a description of the principal risks and uncertainties they face, and that it has been prepared in accordance with applicable sustainability reporting standards.

Paris, March 21, 2025

Nicolas Namias

Chairman of the Management Board of BPCE

9.4 Cross-reference table for the annual financial report and the management report

Cross-reference table for the annual financial report

In order to facilitate the reading of this document, the cross-reference table below makes it possible to identify, in this Universal Registration Document, the information that constitutes the annual financial report to be published by listed companies in accordance with Articles L. 451-1-2 of the French Monetary and Financial Code and 222-3 of the AMF General Regulation.

Required items		Chapter/Pages
1.	Annual financial statements	Chapter 6/p. 878-919
2.	Consolidated financial statements	Chapter 6/p. 527-698; 707-861
3.	Management report (minimum information within the meaning of Article 222-3 of the AMF General Regulation)	See Cross-reference table in the management report on p.1,124
4.	Declaration by the persons responsible for the annual financial report	Chapter 9/p. 1,118
5.	Statutory Auditors' reports on the parent company and consolidated financial statements	Chapter 6/p. 699-706; 862-869; 920-923

Cross-reference table for the management report

To facilitate the reading of this document, the cross-reference table below shows the information to be included in the management report, in accordance with the provisions of the French Commercial Code applicable to public limited companies with a Board of Directors.

Required items		Reference texts	Chapter/Pages
1. Group position and activity			
1.1	Situation of the company during the past fiscal year, and objective and thorough analysis of the evolution of the business, results, and financial position of the company and the Group, in particular its debt position, with regard to volume and business complexity	Articles L. 225-100-1, I., 1°, L. 232-1, II, L. 233-6 and L. 233-26 of the French Commercial Code	Chapter 5/p. 498-523 ; Chapter 6/p. 527-698 ; 707-861 ; 878-919
1.2	Key financial performance indicators	Article L. 225-100-1, I., 2°	Chapter 5/p. 498-523 ; Chapter 6/p. 527-698 ; 707-861 ; 878-919
1.3	Key non-financial performance indicators relating to the specific activity of the company and the Group, specifically information relating to environmental and personnel issues	Article L. 225-100-1, I., 2°	Chapter 2/p. 46-303
1.4	Significant events occurring between the reporting date of the fiscal year and the date on which the management report was prepared	Articles L. 232-1, II and L. 233-26 of the French Commercial Code	Chapter 5/p. 519 ; Chapter 6/p. 537 ; 717 ; 883
1.5	Identity of the main shareholders and holders of voting rights at General Meetings, and changes made during the fiscal year	Article L. 233-13 of the French Commercial Code	Chapter 8/p. 1101
1.6	Existing branches	Article L. 232-1, II of the French Commercial Code	Chapter 6/p. 674-682
1.7	Significant equity investments in companies with their registered office in France	Article L. 233-6 1 of the French Commercial Code	Chapter 6/p. 697 ; 861
1.8	Transfers of cross-shareholdings	Articles L. 233-29, L. 233-30 and R. 233-19 of the French Commercial Code	N/A
1.9	Foreseeable changes in the situation of the company and the Group and outlook	Articles L. 232-1, II and L. 233-26 of the French Commercial Code	Chapter 5/p. 520-521
1.10	Research & Development activities	Articles L. 232-1, II and L. 233-26 of the French Commercial Code	Chapter 6/p. 875
1.11	Table showing the company's results for each of the last five fiscal years	Article R. 225-102 of the French Commercial Code	Chapter 6/p. 876
1.12	Information on supplier and customer payment terms	Article D. 441-4 of the French Commercial Code	Chapter 6/p. 877
1.13	Amount of inter-company loans granted and statement by the Statutory Auditor	Articles L. 511-6 and R. 511-2-1-3 of the French Monetary and Financial Code	N/A

Required items		Reference texts	Chapter/Pages
2. Internal control and risk management			
2.1	Description of the main risks and uncertainties facing the company	Article L. 225-100-1, I., 3°	Chapter 2/p. 78-98 ;311 Chapter 7/p. 940-952
2.2	Information on the financial risks related to the effects of climate change, and presentation of the measures taken by the company to reduce them by implementing a low-carbon strategy in all aspects of its activity	Article L. 22-10-35, 1°	Chapter 2/p. 99-143; Chapter 7/p. 945-946 ; Chapter 7/p. 1073-1092
2.3	Main characteristics of the internal control and risk management procedures implemented by the company and the Group as regards preparing and processing accounting and financial information	Article L. 22-10-35, 2°	Chapter 6/p. 924-929
2.4	Information on the objectives and policy concerning the hedging of each main category of transactions and on exposure to price, credit, liquidity and cash risks, including the use of financial instruments	Article L. 225-100-1, 4° of the French Commercial Code	Chapter 7/p. 932-1093
2.5	Anti-corruption system	Act No. 2016-1691 of December 9, 2016 known as "Sapin 2"	Chapter 2/p. 182 ; 185 ; 218-226 Chapter 3/p: 401-405 Chapter 7/p 1 057
2.6	Due Diligence Action plan and report on its effective implementation	Article L. 225-102-4 of the French Commercial Code	Chapter 3/p. 394-407
3. Report on corporate governance			
Remuneration information			
3.1	Remuneration policy for corporate officers	Article L. 22-10-8, I., paragraph 2 of the French Commercial Code	Chapter 4/p. 474-475
3.2	Remuneration and benefits of any kind paid during the fiscal year or awarded to each corporate officer during the fiscal year	Article L. 22-10-9, I., 1° of the French Commercial Code	Chapter 4/p. 476-495
3.3	Relative proportion of fixed and variable pay	Article L. 22-10-9, I., 2° of the French Commercial Code	Chapter 4/p. 490-495
3.4	Use of the option to request the return of variable pay	Article L. 22-10-9, I., 3° of the French Commercial Code	N/A
3.5	Commitments of any kind made by the company for the benefit of its corporate officers, namely, contingent remuneration and benefits due or likely to be due as a result of the assumption, termination, or change of their duties, or subsequent to the performance of the latter	Article L. 22-10-9, I., 4° of the French Commercial Code	Chapter 4/p. 474-495 ; Chapter 8/p. 1107
3.6	Remuneration paid or allocated by a company included in the scope of consolidation, within the meaning of Article L. 233-16 of the French Commercial Code	Article L. 22-10-9, I., 5° of the French Commercial Code	Chapter 4/p. 492-495

3.9	Explanation of how total remuneration complies with the adopted remuneration policy, including how it contributes to the company's long-term performance and how performance criteria have been applied	Article L. 22-10-9, I., 8° of the French Commercial Code	Chapter 4/p. 478-487
3.10	Method by which the vote of the last Ordinary Shareholders' Meeting provided for in II of Article L. 225-100 (until December 31, 2020) was taken into account, then in I of Article L. 22-10-34 (from January 1, 2021) of the French Commercial Code	Article L. 22-10-9, I., 9° of the French Commercial Code	N/A
3.11	Deviation from the procedure for implementing the remuneration policy and any exceptions	Article L. 22-10-9, I., 10° of the French Commercial Code	N/A
3.12	Application of the provisions of the second paragraph of Article L. 225-45 of the French Commercial Code (suspension of payment of Directors' remuneration in the event of non-compliance with gender balance on the Board of Directors)	Article L. 22-10-9, I., 11° of the French Commercial Code	N/A
3.13	Allocation and retention of options by corporate officers	Article L. 225-185 of the French Commercial Code	Chapter 4/p. 494-495
3.14	Allocation to, and retention of, bonus shares for company Directors	Articles L. 225-197-1 and L. 22-10-59 of the French Commercial Code	Chapter 4/p. 494-495
Governance information			
3.15	List of all Directorships and offices exercised in any company by each of the corporate officers during the fiscal year	Article L. 225-37-1, 4° of the French Commercial Code	Chapter 4/p. 426-460
3.16	Agreements entered into between an executive officer or a significant shareholder and a subsidiary	Article L. 225-37-2, 4° of the French Commercial Code	Chapter 6/p. 874
3.17	Summary table of current delegations of authority granted by the General Meeting for capital increases	Article L. 225-37-4, 3° of the French Commercial Code	Chapter 6/p. 876
3.18	Procedures for exercising executive management	Article L. 225-37-4, 4° of the French Commercial Code	N/A

Required items		Reference texts	Chapter/Pages
3.19	Composition of the Board, and conditions for the preparation and organization of its work	Article L. 22-10-10, 1° of the French Commercial Code	Chapter 4/p. 412-424 ; 461-471
3.20	Application of the principle of balanced representation of women and men on the Board	Article L. 22-10-10, 2° of the French Commercial Code	Chapter 4/p. 414-415
3.21	Any limitations that the Board places on the powers of the Chief Executive Officer	Article L. 22-10-10, 3° of the French Commercial Code	N/A
3.22	Reference to a Corporate Governance Code and application of the "comply or explain" principle	Article L. 22-10-10, 4° of the French Commercial Code	Chapter 4/p. 410-412
3.23	Specific procedures for the participation of shareholders in the General Meeting	Article L. 22-10-10, 5° of the French Commercial Code	Chapter 4/p. 472-473
3.24	Procedure for assessing current agreements – Implementation	Article L. 22-10-10, 6° of the French Commercial Code	N/A
3.25	Information likely to have an impact in the event of a public tender offer or exchange offer: • structure of the company's share capital; • statutory restrictions on the exercise of voting rights and share transfers, or clauses of agreements brought to the attention of the company pursuant to Article L. 233-11; • direct or indirect shareholdings in the capital of the company of which it is aware pursuant to Articles L. 233-7 and L. 233-12; • list of holders of any securities with special control rights and a description of the latter – control mechanisms provided for in a possible employee shareholding system, when the control rights are not exercised by the latter; • agreements between shareholders of which the company is aware and which may result in restrictions on the transfer of shares and the exercise of voting rights; • rules applicable to the appointment and replacement of members of the Board of Directors and the amendment of the company's articles of association; • powers of the Board of Directors, in particular with regard to the issue or buyback of shares; • agreements entered into by the company which are amended or terminated in the event of a change of control of the company, unless such disclosure, except in the case of a legal obligation to disclose, would seriously harm its interests; • agreements providing for compensation for the members of the Board of Directors or employees, if they resign or are dismissed without real and serious cause or if their employment is terminated due to a takeover bid or exchange offer.	Article L. 22-10-11 of the French Commercial Code	Chapter 8/p. 1,094-1,106
3.26	For public limited companies with a Supervisory Board: Observations of the Supervisory Board on the Management Board's report and the financial statements for the fiscal year	Article L. 225-68, last paragraph, of the French Commercial Code	
4. Shareholding and capital			
4.1	Structure of, and changes in, the company's share capital, and crossing of thresholds	Article L. 233-13 of the French Commercial Code	Chapter 8/p. 1,099-1,100
4.2	Acquisition and disposal by the company of its own shares	Article L. 225-211 of the French Commercial Code	Chapter 6/p. 875
4.3	Statement of employee participation in the share capital on the last day of the fiscal year (proportion of capital represented)	Article L. 225-102, paragraph 1 of the French Commercial Code	Chapter 8/p. 1,101
4.4	Statement of any adjustments for securities giving access to the share capital in the event of share buybacks or financial transactions	Articles L. 228-90 and R. 228-91 of the French Commercial Code	N/A
4.5	Information on transactions by executives and related persons in the company's shares	Article L. 621-18-2 of the French Monetary and Financial Code	N/A
4.6	Amounts of dividends distributed in respect of the three previous fiscal years	Article 243 *bis* of the French General Tax Code	Chapter 6/p. 874; Chapter 8/p. 1,098
5. Sustainability report			
5.1	Information on sustainability	Articles L. 232.6.3 and L. 233-28-4 of the French Commercial Code	Chapter 2/p. 46-392
6. Other information			
6.1	Additional tax information	Articles 223 *quater* and 223 *quinquies* of the French General Tax Code	Chapter 5/p. 659-661 ; 838-840 ; 890-891
6.2	Injunctions or financial penalties for anti-competitive practices	Article L. 464-2 of the French Commercial Code	Chapter 7/p. 1,050-1,053

9.5 Glossary

Acronyms	
EBA	The European Banking Authority, established by EU Regulation on November 24, 2010. It came into being on January 1, 2011 in London, superseding the Committee of European Banking Supervisors (CEBS). This new body has an expanded mandate. It is in charge of harmonizing prudential standards, ensuring coordination among the various national supervisory authorities and performing the role of mediator. The goal is to establish a Europe-wide supervision mechanism without compromising the ability of the national authorities to conduct the day-to-day supervision of credit institutions
ABS	See securitization
ACPR	Autorité de contrôle prudentiel et de résolution (ACPR): French prudential supervisory authority for the banking and insurance sector (formerly the CECEI, or *Comité des établissements de crédit et des entreprises d'investissement*/Credit Institutions and Investment Firms Committee)
AFEP-MEDEF	*Association française des entreprises privées – Mouvement des entreprises de France*/French Association of Private Sector Companies – French Business Confederation
AFS	Available For Sale
ALM	Asset/Liability management
AMF	*Autorité des marchés financiers* (AMF), the French financial markets authority
AT1	Additional Tier-1
BCBS	Basel Committee on Banking Supervision, an organization comprised of the central bank governors of the G20 countries, tasked with strengthening the global financial system and improving the efficacy of prudential supervision and cooperation among bank regulators
ECB	European Central Bank
EIB	European Investment Bank
BMTN	Negotiable medium-term notes
BRRD	Banking Recovery and Resolution Directive
CCF	Credit Conversion Factor
CDO	See securitization
CDPC	Credit Derivatives Products Company, *i.e.* a business specializing in providing protection against credit default through credit derivatives
CDS	Credit Default Swap, a credit derivative contract under which the party wishing to buy protection against a credit event (*e.g.* counterparty default) makes regular payments to a third party and receives a pre-determined payment from this third party should the credit event occur
LTD	Loan-to-Deposit ratio, *i.e.* a liquidity indicator that enables a credit institution to measure its autonomy with respect to the financial markets
CLO	See securitization
CMBS	See securitization
CEGC	*Compagnie Européenne de Garanties et de Cautions*
CET1	Common Equity Tier-1
CFP	Contingency Funding Plan
CNCE	*Caisse Nationale des Caisses d'Epargne*
CPM	Credit Portfolio Management
CRD	Capital Requirements Directive
CRR	Capital Requirements Regulation (European regulation)
CVA	Credit Valuation Adjustment: the expected loss related to the risk of default by a counterparty. The CVA aims to take into account the fact that the full market value of the transactions may not be recovered. The method for determining the CVA is primarily based on the use of market inputs in connection with the practices of market professionals
CVaR	*Credit Value at Risk*, *i.e.* the worst loss expected to be suffered after eliminating the 1% worst-case scenarios, used to determine individual counterparty limits
DVA	*Debit Valuation Adjustment* (DVA), symmetrical to the CVA. Represents the expected loss, from the counterparty's perspective, on valuations of derivative liabilities. It reflects the impact of the entity's own credit quality on the valuation of these instruments
EAD	*Exposure at Default*, *i.e.* the amount owed by the customer at the effective default date. It is the sum of the remaining principal, past due payments, accrued interest not yet due, fees and penalties
OFR	Own Funds Requirements: *i.e.* 8% of risk-weighted assets (RWA)
EL	Expected Loss, *i.e.* the value of the loss likely to be incurred given the quality of the structure of the transaction and any measures taken to mitigate risk, such as collateral. It is calculated by multiplying Exposure at Risk (EAD) by Probability of Default (PD) and by Loss Given Default (LGD)
DVA	Debit Valuation Adjustment (DVA), symmetrical to the CVA. Represents the expected loss, from the counterparty's perspective, on valuations of derivative liabilities. It reflects the impact of the entity's own credit quality on the valuation of these instruments
EURIBOR	Euro Interbank Offered Rate, the benchmark interest rate on the Euro-zone's money market
FBF	*Fédération bancaire française* (French Banking Federation), a professional body representing all banking institutions in France
FCPR	*Fonds commun de placement à risque*/Venture capital investment fund
FGAS	*Fonds de garantie à l'accession sociale*/French State guarantee fund for subsidized loans
FINREP	FINancial REPorting
SRF	Single Resolution Fund

Acronyms	
FSB	The Financial Stability Board: whose mandate is to identify vulnerabilities in the global financial system and to implement principles for regulation and supervision in the interest of financial stability. Its members are central bank governors, finance ministers and supervisors from the G20 countries
GAP	Asset/Liability management
G-SIBs	Global Systemically Important Banks: financial institutions whose distress or failure, because of their size, complexity and systemic inter-dependence, would cause significant disruption to the financial system and economic activity. These institutions meet the criteria established by the Basel Committee and are identified in a list published in November 2011 and updated every year. The constraints applicable to G-SIBs increase with their level of capital
HQLA	High-Quality Liquid Assets
Non-life insurance policies (IARD)	*Incendie, accidents et risques divers*/property and casualty Insurance
IASB	International Accounting Standards Board
ICAAP	Internal Capital Adequacy Assessment Process: Process provided for in Pillar II of the Basel Accords to ensure that firms have sufficient capital to cover all their risks
ILAAP	Internal Liquidity Adequacy Assessment Process: Process provided for in Pillar II of the Basel Accords through which the Group ensures the adequacy of its liquidity level and its management with regard to all its liquidity risks
IFRS	International Financial Reporting Standards
IRB	Internal-Ratings Based: an approach to capital requirements based on the financial institution's internal rating systems
IRBA	Advanced IRB approach
IRBF	Foundation IRB approach
IRC	Incremental Risk Charge: the capital requirement for an issuer's credit migration and default risks, covering a period of one year for fixed income and loan instruments in the trading book (bonds and CDSs). The IRC is a 99.9% Value at Risk measurement; *i.e.* the greatest risk obtained after eliminating the 0.1% worst-case scenarios
L&R	Loans and receivables
LCR	Liquidity Coverage Ratio (one month liquidity ratio): a measurement introduced to improve the short-term resilience of banks' liquidity risk profiles. The LCR requires banks to maintain a reserve of risk-free assets that can be converted easily into cash on the market in order to cover its cash outflows minus cash inflows over a 30-day stress period without the support of central banks
LBO	Leveraged Buyout
AML-CTF	Anti-Money Laundering and Counter Terrorism Financing
LGD	Loss Given Default, a Basel II credit risk indicator corresponding to loss in the event of default
LOD1	First Line of Defense
LOD2	Second Line of Defense
MDA	Maximum Distributable Amount, a new provision for banks placing restrictions on their dividend, Additional Tier-1 (AT1) coupon and bonus payments (under a rule that tightens restrictions as banks deviate from their requirements), if the capital buffers are not met. As these buffers are on top of Pillars I and II, they apply immediately if the bank fails to comply with the combined requirements
SSM	Single Supervisory Mechanism
MREL	Minimum Requirement for own funds and Eligible Liabilities
MRU	Single Resolution Mechanism
NPE	Non-Performing Exposure
NPL	Non-Performing Loan
NSFR	Net Stable Funding Ratio: this ratio is intended to strengthen the longer-term resilience of banks through additional incentives meant to encourage banks to finance their operations using more structurally stable resources. This long-term structural liquidity ratio, applicable to a one-year period, was formulated to provide a viable structure for asset and liability maturities
OH	*Obligations de financement de l'habitat*/Housing financing bond
BCP	Business Continuity Plan
PD	Probability of Default: the likelihood that a counterparty of the bank will default within a one-year period
RMBS	See securitization
RSSI	*Responsable de la Sécurité des Systèmes d'Information*/Head of Information System Security
RUBA	Unified Reporting of Banks and Similar Entities
RWA	Risk-Weighted Assets (RWA): the calculation of credit risks is further refined using a more detailed risk weighting that incorporates counterparty default risk and debt default risk
S&P	Standard & Poor's
SCF	*Compagnie de Financement Foncier*, the Group's covered bond issuer
SEC	US Securities and Exchange Commission
SFH	Housing Finance Company
IS	Information System

Acronyms

SREP	Supervisory Review and Evaluation Process: methodology for assessing and measuring the risks faced by each bank. SREP gives the prudential authorities a set of harmonized tools to analyze a bank's risk profile from four different angles: business model, governance and risk management, risk to capital, and risk to liquidity and funding. The supervisor sends the bank the SREP decisions at the end of the process and sets key objectives. The bank must then "correct" these within a specific time
SRM	Single Resolution Mechanism: an EU-level system to ensure an orderly resolution of non-viable banks with a minimal impact on taxpayers and the real economy. The SRM is one of the pillars of the European Banking Union and consists of an EU-level resolution authority (Single Resolution Board – SRB) and a common resolution fund financed by the banking sector (Single Resolution Fund – SRF).
SVaR	Stressed Value at Risk: the SVaR calculation method is identical to the VaR approach (historical or Monte Carlo method, scope – position, risk factors – choices and modeling – model approximations and numerical methods identical to those used for VaR) and involves a historical simulation (with "one-day" shocks) calculated over a one-year stressed period, at a 99% confidence level scaled up to 10 days. The goal is to assess the impacts of stressed scenarios on the portfolio and current market levels
T1/T2	Tier-1/Tier-2
TLAC	Total Loss Absorbing Capacity: a ratio applicable to G-SIBs that aims to ensure that each G-SIB has the capacity to continue its essential operations for the economy even after a loss has consumed all of its capital. In November 2015, the FSB published the final TLAC calibration: all TLAC-eligible instruments will have to be equivalent to at least 16% of risk-weighted assets at January 1, 2019 and at least 6% of the leverage ratio denominator. TLAC will subsequently have to be equivalent to 18% of risk-weighted assets and 6.75% of the leverage ratio denominator from January 1, 2022
TRS	Total Return Swap, *i.e.* a transaction whereby two parties exchange the income generated and any change in value on two different assets over a given time period
TSS	*Titres super subordonnés*/deeply subordinated notes, *i.e.* perpetual bonds with no contractual redemption commitment that pay interest in perpetuity. In the event of liquidation, they are repaid after other creditors (subordinated loans). These securities pay annual interest contingent on the payment of a dividend or the achievement of a specific result
VaR	Value at Risk: a measurement of market risk on a bank's trading book expressed as a monetary value. It allows the entity performing the calculation to appraise the maximum losses liable to be incurred on its trading book. A statistical variable, VaR is always associated with a confidence interval (generally 95% or 99%) and a specific time frame (in practice, one day or 10 days, as the trading positions involved are meant to be unwound within a few days)

Key technical terms

Netting agreement	A contract whereby two parties to a forward financial instrument (financial contract, securities loan or repurchase agreement) agree to settle their reciprocal claims under these contracts through a single consolidated net payment, particularly in the event of default or contract termination. A master netting agreement extends this mechanism to different transactions through one all-encompassing contract
Equities	An equity security issued by a corporation, representing a certificate of ownership and entitling the holder (the "shareholder") to a proportional share in the distribution of any profits or net assets, as well as a voting right at the General Meeting
Rating agency	An organization that specializes in assessing the creditworthiness of issuers of debt securities, *i.e.* their ability to honor their commitments (repayment of capital and interest within the contractual period)
Risk appetite	Level of risk, expressed through quantitative or qualitative criteria, by type of risk and business line, that the Group is prepared to accept given its strategy. The risk appetite exercise is one of the key strategic oversight tools available to the Group's management team
Standardized approach	An approach used to determine capital requirements relative to credit risk, pursuant to Pillar I of Basel II. Under this approach, the risk weightings used when calculating capital requirements are determined by the regulator
Basel II (the Basel Accords)	A supervisory framework aimed at better anticipating and limiting the risks borne by credit institutions. It focuses on banks' credit risk, market risk and operational risk. The terms drafted by the Basel Committee were adopted in Europe through a European directive and have been applicable in France since January 1, 2008
Basel III (the Basel Accords)	Changes in banking prudential standards which incorporated the lessons of the financial crisis of 2007-2008. They complement the Basel II Accords by strengthening the quality and quantity of minimum own funds that institutions must hold. Basel III also establishes minimum requirements for liquidity risk management (quantitative ratios), defines measures aimed at limiting procyclicality in the financial system (capital buffers that vary according to the economic cycle) and reinforces requirements for financial institutions deemed to be systemically important
"Bank acting as originator"	See securitization
"Bank acting as sponsor"	See securitization
"Bank acting as investor"	See securitization
CRD IV/CRR	(See Acronyms) Directive No. 2013/36/EU (CRD IV) and regulation (EU) No. 575/2013 (CRR), which transpose Basel II in Europe. In conjunction with the EBA's (European Banking Authority) technical standards, they define European regulations for the capital, major risk, leverage and liquidity ratios
Cost/income ratio	A ratio indicating the portion of net banking income (used to cover operating expenses (the company's operating costs). It is calculated by dividing operating costs by net banking income
Collateral	A transferable asset or guarantee pledged to secure reimbursement on a loan in the event the borrower fails to meet its payment obligations.
Haircut	The percentage by which a security's market value is reduced to reflect its value in a stressed environment (counterparty risk or market stress)
Derivative	A financial security or financial contract whose value changes based on the value of an underlying asset, which may be either financial (equities, bonds, currencies, etc.) or non-financial (commodities, agricultural products, etc.) in nature. This change may coincide with a multiplier effect (leverage effect). Derivatives can take the form of either securities (warrants, certificates, structured EMTNs, etc.) or contracts (forwards, options, swaps, etc.). Exchange-traded derivative contracts are called futures
Credit derivative	A financial product whose underlying asset is a credit obligation or debt security (bond). The purpose of the credit derivative is to transfer credit risk without transferring the asset itself for hedging purposes. One of the most common forms of credit derivatives is the credit default swap (CDS)
Senior non-preferred debt	Senior non-preferred debt is a category of securities, advances, instruments or rights introduced by directive (EU) No. 2017/2399 amending directive No. 2014/59/EU (BRRD) that, in the event of the insolvency of the credit institution, rank higher than the securities, advances, instruments or rights considered as subordinated, but lower than that of the other securities, advances, instruments or rights considered as senior (including preferred senior debt)
Senior preferred debt	Preferred senior debt is a category of securities, advances, instruments or rights that, in the event of the insolvency of the credit institution, rank higher than other securities, advances, instruments or rights considered as senior and subordinated (including senior non-preferred debt)
Gross exposure	Exposure before the impact of provisions, adjustments and risk mitigation techniques
Tier-1 capital	Core capital including the financial institution's consolidated shareholders' equity minus regulatory deductions
Tier-2 capital	Supplementary capital mainly consisting of subordinated securities minus regulatory deduction
Fair value	The price that would be received to sell an asset or paid to transfer a liability in a standard arm's length transaction between market participants at the valuation date. Fair value is therefore based on the exit price
Liquidity	In a banking context, liquidity refers to a bank's ability to cover its short-term commitments. Liquidity also refers to the degree to which an asset can be quickly bought or sold on a market without a substantial reduction in value
Rating	An appraisal by a financial rating agency (Fitch Ratings, Moody's, Standard & Poor's) of the creditworthiness of an issuer (company, government or other public entity) or a transaction (bond issue, securitization, covered bond). The rating has a direct impact on the cost of raising capital
Bond	A portion of a loan issued in the form of an exchangeable security. For a given issue, a bond grants the same debt claims on the issuer for the same nominal value, the issuer being a company, a public sector entity or a government
Pillar I	Pillar I sets minimum requirements for capital. It aims to ensure that banking institutions hold sufficient capital to provide a minimum level of coverage for their credit risk, market risk and operational risk. The bank can use standardized or advanced methods to calculate its capital requirement
Pillar II	Pillar II establishes a process of prudential supervision that complements and strengthens Pillar I. It consists of: an analysis by the bank of all of its risks, including those already covered by Pillar I; an estimate by the bank of the capital requirement for these risks; a comparison by the banking supervisor of its own analysis of the bank's risk profile with the analysis conducted by the bank, in order to adapt its choice of prudential measures where applicable, which may take the form of capital requirements exceeding the minimum requirements or any other appropriate technique

Key technical terms

Pillar III	Pillar III is concerned with establishing market discipline through a series of reporting requirements. These requirements – both qualitative and quantitative – are intended to improve financial transparency in the assessment of exposure to risks, risk assessment procedures and capital adequacy
Common Equity Tier-1 ratio	Ratio of Common Equity Tier 1 (CET1) capital to risk-weighted assets. The CET1 ratio is a solvency indicator used in the Basel III prudential accords
Leverage ratio	Tier 1 capital divided by exposures, which consist of assets and off-balance sheet items, after restatements of derivatives, funding transactions and items deducted from capital. Its main goal is to serve as a supplementary risk measurement for capital requirements
Total capital ratio	Ratio of total capital (Tier 1 and 2) to risk-weighted assets (RWAs)
Resecuritization	The securitization of an exposure that is already securitized where the risk associated with an underlying pool of exposures is tranched and at least one of the underlying exposures is a securitization position
Credit and counterparty risk	The risk of loss from the inability of clients, issuers or other counterparties to honor their financial commitments. Credit risk includes counterparty risk related to market transactions and securitization
Market risks	The risk of loss of value on financial instruments resulting from changes in market inputs, from the volatility of these inputs or from the correlations between these inputs
Operational risk	Risks of losses or penalties due in particular to failures of internal procedures and systems, human error or external events
Structural interest rate and foreign exchange risk	The risk of losses or impairment on assets arising from changes in interest rates or exchange rates. Structural interest rate and foreign exchange risks are associated with commercial activities and proprietary transactions
Liquidity risk	The risk that a bank will be unable to honor its payment commitments as they fall due and replace funds when they are withdrawn
Swap	An agreement between two counterparties to exchange different assets, or revenues from different assets, until a given date
Securitization	A transaction whereby credit risk on loans and advances is transferred to investors by an entity through the issuance of negotiable securities. This may involve the transfer of advances (physical securitization) or the transfer of risks only (credit derivatives). Some securitization transactions are subordinated through the creation of tranches: ABS – Asset-Backed Securities, *i.e.* instruments representing a pool of financial assets (excluding mortgage loans), whose performance is linked to that of the underlying asset or pool of assets; CDOs – Collateralized Debt Obligations, *i.e.* debt securities backed by a pool of assets which can be either bank loans (mortgages) or corporate bonds. Interest and principal payments may be subject to subordination (*i.e.* through the creation of tranches); CLO – Collateralized Loan Obligations, *i.e.* credit derivatives backed by a homogeneous pool of commercial loans; CMBS – Commercial Mortgage-Backed Securities; RMBS – Residential Mortgage-Backed Securities, *i.e.* debt securities backed by a pool of assets consisting of residential mortgage loans; Bank acting as originator: the securitization exposures are the retained positions, even where not eligible for the securitization framework due to the absence of significant and effective risk transfer; Bank acting as investor: investment positions purchased in third-party deals; Bank acting as sponsor: a bank is considered a “sponsor” if it, in fact or in substance, manages or advises the program, places securities into the market, or provides liquidity and/or credit enhancements. The program may include, for example, asset-backed commercial paper (ABCP) conduit programs and structured investment vehicles. The securitization exposures include exposures to ABCP conduits to which the bank provides program-wide enhancements, liquidity and other facilities.
Net value	Total gross value less allowances/impairment
Volatility	A measurement of the magnitude of an asset’s price fluctuation and thus a measurement of its risk. Volatility corresponds to the standard deviation of the asset’s immediate returns over a given period

Other terms

Back office	Support or back office department, in charge of administrative functions at a financial intermediary
Backtesting	Method consisting of verifying that the actual result rarely exceeds the VaR (Value at Risk) loss
Bail-in	Tool to limit any assistance from public funds to a troubled institution that is still in operation or in the process of liquidation. The bail-in grants to the prudential supervisory authorities the power to impose on certain creditors of a credit institution that may have solvency problems, the conversion of their receivables into shares of this institution and/or the reduction of the amount of these receivables. The European agreement of June 26, 2015 provides for priority requests, in the event of insufficient equity (following losses), from creditors holding subordinated debt, then senior creditors, then unsecured deposits of large companies, then those of SMEs and finally those of individuals above €100,000. However, guaranteed deposits, covered bonds, employee remuneration, liabilities related to the institution’s vital activities and interbank liabilities with a maturity of less than seven days must not be affected
Broker	Broker
Brokerage	Brokerage
Co-lead	Co-lead
Commodities	Commodities
Corporate	Corporate
Coverage	Hedging (in the sense of customer follow-up)
Covered bonds	Covered or collateralized bond: bond for which the repayment and payment of interest are ensured by income flows from a portfolio of high-quality assets that serves as collateral, often a portfolio of mortgages, and the issuing institution is often the manager of the payment of flows to investors (*obligations foncières* in France, *Pfandbriefe* in Germany)
Datacenter	Datacenter
Equity (tranche)	In a securitization arrangement, refers to the tranche that bears the first losses due to defaults in the underlying portfolio
Fully-loaded	Expresses full compliance with the Basel III solvency requirements (which became mandatory in 2019)
Front office	Customer service (team of market operators)
Hedge funds	Alternative management funds: speculative investment funds that aim for an absolute return and have a great deal of freedom in their management
Holding	Parent company
Investment grade	Long-term rating provided by an external agency ranging from AAA/Aaa to BBB-/Baa3 of a counterparty or underlying issue. A rating equal to or lower than BB+/Ba1 qualifies the instrument as non-investment grade
Joint venture	Joint venture
Loss ratio	Ratio between claims/premiums collected
Mark-to-market	A method that consists of regularly or even continuously valuing a position on the basis of its market value at the time of the valuation
Mark-to-model	Method which consists of valuing a position on the basis of a financial model and therefore assumptions made by the valuer
Monoline	Companies that provide credit enhancement to financial market participants
New Deal	Strategic plan implemented by Natixis
Phase-in	Refers to compliance with current solvency requirements, taking into account the transitional period for the implementation of Basel III
Reporting	Reporting
Spread	Actuarial margin: difference between the actuarial rate of return of a bond and that of a risk-free loan of identical duration
Trading	Trading
Watchlist	Watchlist

BPCE– French public limited company governed
by a Management Board and Supervisory Board with
a capital of 207,603,030 euros.
Registered office: 7, promenade Germaine Sablon, 75013 Paris.
Paris Trade & Companies Register No. 493 455 042. Tel.: +33 (0)1 58 40 41 42.
