Supplementary pension plan	The Chairman of the Management Board is entitled to: - the mandatory CGP collective supplementary defined-contribution pension plan for all BPCE employees and by extension applicable to BPCE company directors. The contribution rate is 6% from Bracket A and 4% from the pensionable portion of pay in excess of Bracket A and capped at eight times the annual ceiling for social security annuities; 70% of this contribution is paid by the company and 30% by the employee; - the mandatory AXA collective supplementary defined-contribution pension plan for all BPCE senior executives (AFB agreement) and by extension applicable to BPCE company directors. The contribution rate is 3.5% of pensionable pay capped at eight times the annual ceiling for social security annuities. This contribution is funded entirely by the company. Furthermore, there are other supplementary pension plans offered to the Chairman of the Management Board, based his professional career spent with the Group, namely: the pension plan for company directors of Groupe BPCE: pension plan governed by Article L. 137-11 of the French Social Security Code: - until June 30, 2014, Chairmen of Caisse d'Epargne Management Boards, members of the Management Board of the former CNCE, and Chief Executive Officers of Crédit Foncier, Banque Palatine and BPCE International could benefit from a supplementary defined-benefit pension plan entitling them to additional retirement income based on their salary; - until June 30, 2014, the Chief Executive Officers of Banques Populaires could benefit from a supplementary differential defined-benefit pension plan. Effective July 1, 2014, these two pension plans were harmonized under a single supplementary pension plan, now closed to new members and subject to conditions: - they must end their career with Groupe BPCE. This condition is met when beneficiaries are Group employees on the day before their social security pension is drawn following voluntary retirement; - they must have served in an executive management position for at least the required minimum period (seven years) at the date on which their social security pension is drawn. Beneficiaries who meet the above conditions are entitled to an annuity set at 15% of benchmark pay, *i.e.* their average annual pay earned in the three highest-paid years during the five calendar years before the date on which their social security pension is drawn and capped at four times the annual ceiling for social security annuities. Annual pay refers to the sum of the following types of pay received for the year in question: - fixed pay, excluding benefits in kind or duty-related bonuses; - variable pay – not exceeding 100% of fixed pay – and defined as the total variable amount paid, including the portion that may have been deferred over several years and subject to attendance and performance requirements, in accordance with regulations on variable pay granted by credit institutions. Once drawn, this supplementary pension may be paid to a spouse or former non-remarried spouse, at a rate of 60%. This plan, which is funded entirely by the Group, is covered by two insurance contracts taken out with the Quatrem and Allianz insurance companies, with a target obligation coverage rate of 100% of assets and 100% of pension recipients. The expenses paid by the company consist of the 32% contribution on annuities paid by the insurer to the beneficiaries. The supplementary pension plan for company directors, which is subject to Article L. 137-11 of the French Social Security Code, is governed by the provisions of Section 25.6.2 of the Afep-Medef Code. It complies with the principles governing the capacity of beneficiaries, overall establishment of base pay, seniority conditions, the progressive increase in potential entitlements depending on seniority, the reference period used to calculate benefits and the prevention of artificially inflated pay. In accordance with the provisions of the PACTE act and Order No. 2019-697 of July 3, 2019, the conditional rights provided by this plan were crystallized as of December 31, 2019. Thus, no new additional rights are granted under this plan for periods of employment after January 1, 2020, it being recalled that the rights are calculated on the end-of-career salary. If the Chairman of the Management Board is not on the Group's supplementary executive pension plan, he is entitled to participate in a pension plan through a Group insurance contract under Article 82 of the French General Tax Code, in which company directors of Groupe BPCE who do not benefit from the "Pension plan for company directors of Groupe BPCE" may participate, as this policy is funded solely through voluntary payments by the company directors who have decided to participate therein. The Chairman of the Management Board participates in this plan. As such, the Chairman's fixed pay includes a 20% special supplement.

Remuneration policy applicable to the members of the Management Board

Components of remuneration	Principles and criteria adopted
Fixed pay	Based on a motion by the Remuneration Committee, the Supervisory Board sets the pay granted to the members of the Management Board. This fixed pay primarily reflects professional experience related to the position held and the responsibilities exercised, and is determined by comparison to market practices. For the member of the Management Board who does not benefit from the supplementary defined-benefit pension plan for Groupe BPCE company directors, it includes a specific supplement equal to 20% of his or her fixed pay under the Article 82 supplementary pension scheme. The fixed pay of the members of the Management Board is periodically reviewed.
Annual variable pay	For the members of the Management Board, the annual variable pay is determined based on target pay equal to 80% of their fixed pay (including the special supplement, if applicable) for the fiscal year, with a maximum of 100%. The annual variable pay is determined on the basis of financial and qualitative criteria previously approved by the Supervisory Board. It is awarded if the criterion for triggering variable pay is met, specifically pertaining to the Group Basel III Common Equity Tier-1 ratio. For the 2026 fiscal year, this ratio must be higher than the threshold required by the ECB and communicated to BPCE in its letter of October 28, 2025, *i.e.* the minimum CET1 level, supplemented by the P2R, the P2G and the combined buffers.[1] In accordance with the Group's standard on risk-takers, which sets out the regulations applicable within the Group, if this criterion is not met, the rate of reduction applied to the annual variable pay, at least 50%, may not reach 100% if its application allows, possibly combined with other measures, to reach the minimum threshold set at the beginning of the fiscal year in question. The financial criteria account for 60% of the variable pay and are defined based on quantitative factors that reflect the level of achievement of a number of the financial fundamentals of the Group and the BPCE collective. These criteria are defined by the Supervisory Board and take into account:[2] - net income attributable to equity holders of the parent for Groupe BPCE (17.5%); - the Groupe BPCE's cost/income ratio (7.5%); - the Groupe BPCE's net banking income (5%); - net income attributable to equity holders of the parent for the BPCE collective (17.5%); - the BPCE collective's cost/income ratio (7.5%); - the BPCE collective's net banking income (5%). For each of these criteria, if the target as set by the Supervisory Board is reached, members of the Management Board would be entitled to receive the entire fixed percentage. For the 2026 fiscal year, the portion of qualitative criteria in the annual variable pay of the members of the Management Board is 40%. 30% of them consist of the Chairman of the Management Board's shared objectives and 10% of individual objectives. Only financial criteria can be used to determine outperformance. In accordance with the regulations applicable to the executive management, part of the annual variable pay of the members of the Management Board is deferred over five years and does not vest faster than on a pro rata basis; the deferred rate (40% to 60%) depends on the amount of variable pay (including the LTIP amount acquired for the fiscal year).[3] The vesting of the deferred portions of the annual variable pay awarded for the year 2026 will be conditional on the achievement of a financial criterion representative of the Group's financial position, which will be set by the Supervisory Board awarding the annual variable pay for the 2026 fiscal year. In addition, at least half of the annual variable pay awarded to the members of the Management Board, including the portion acquired at the allocation, is indexed. The methods for indexing will be set by the Supervisory Board allocating the annual variable pay for the 2026 fiscal year. The indexed portions of the annual variable pay awarded for 2026 will be subject to a deferral period of 12 months before their payment.

1 The CET1 ratio requirement set by the ECB, including the "Pillar II Guidance" component, is not subject to disclosure.
2 The Supervisory Board has established specific expected targets for these financial goals, but for confidentiality reasons, they are not publicly disclosed.
3 The total variable portion allocated to risk-takers by the so-called "group 1" companies within Groupe BPCE for the year in question (including, where applicable, the LTIP amount acquired for the year in question) is taken into account to determine the percentage of deferred annual variable pay. This point applies in particular to executives appointed to new positions during the year.

Components of remuneration	Principles and criteria adopted
Multi-year variable pay	As a reminder, on March 29, 2024, the Supervisory Board decided to grant the members of the Management Board a three-year Long-Term Incentive Plan (LTIP), the amount of which is based on an indicator of organic CET1 creation. The organic creation of CET1 aims to enhance the generation of organic / endogenous capital while limiting the cost of capital. The indicator of organic CET1 creation of the system relates to the organic creation of CET1 of Groupe BPCE for 50% and that of BPCE SA and its subsidiaries for 50%. The amount acquired under the LTIP is determined each year for the 2024, 2025 and 2026 fiscal years, according to Method A described below, and supplemented, where applicable, by any positive difference between the result of Method B (see below) calculated at the beginning of 2027 and the sum of the results determined according to Method A for the three fiscal years 2024, 2025 and 2026. Method A, for each fiscal year:

Organic CET1 creation indicator for the fiscal year	≤ 0 bp	Annual target	≥ Cap *i.e.* annual target x 2
LTIP amount acquired for the fiscal year	0	= 10% of the Fixed Pay*	= 20% of the Fixed Pay*
	LTIP amount calculated by linear interpolation between the thresholds of 0% at the Target and the Target at the Cap		

* *i.e.* the annual fixed pay for 2024 including the special supplement.

Method B:

Organic creation indicators recorded over the three fiscal years	≤ 0 bp	3-year target *i.e.* annual target x 3	≥ Cap *i.e.* 3-year target x 2
LTIP amount acquired under the plan	0	= 30% of the Fixed Pay*	= 60% of the Fixed Pay*
	LTIP amount calculated by linear interpolation between the thresholds of 0% at the Target and the Target at the Cap		

* *i.e.* the annual fixed pay for 2024 including the special supplement.

The amount acquired under the LTIP will take into account the prorated presence in the institution over the three-year period in the event of departure before the end of the LTIP (December 31, 2026) or arrival after January 1, 2024.

The multi-year variable pay acquired under the LTIP will be paid from 2027 until 2031 to the members of the Management Board in accordance with the CRD regulation applicable to the effective managers and the standards in force within the Group (deferral, indexation, deferral period and trigger criterion).

Exceptional pay	Members of the Management Board do not receive any exceptional pay.
Grants of stock options/ preference shares	Members of the Management Board do not receive any stock options or preference shares.
Grants of bonus shares	Except when related to the nature of the corporate office, members of the Management Board do not receive any bonus shares.
Attendance fees	Members of the Management Board do not collect attendance fees.
Sign-on bonus	Members of the Management Board do not receive a sign-on bonus.
Benefits in kind	Based on a motion by the Remuneration Committee, the Supervisory Board may resolve to grant an annual housing allowance to members of the Management Board. The Supervisory Board has also decided to grant members of the Management Board collective and mandatory insurance plans (incapacity, disability, death) and additional reimbursement of healthcare costs applicable to BPCE SA employees.

Post-employment benefits

The commitments made in favor of Jérôme Terpereau, Béatrice Lafaurie and Hélène Madar relating to the involuntary-termination severance pay and retirement bonus were approved by the Supervisory Board on February 2, 2023 and modified by the Supervisory Board on March 19, 2025, in accordance with the related-party agreements procedure.

Components of remuneration	Principles and criteria adopted
Involuntary-termination severance pay and retirement bonus	Members of the Management Board, under certain conditions, receive a severance or bonus when their duties cease. **Involuntary-termination severance pay** The members of the Management Board may, under certain conditions and by decision of the Supervisory Board, receive involuntary-termination severance pay equal to at least 12 months' pay (fixed and variable portions), and up to 24 months, earned for 12 years' seniority with the Group. Payment is subject to the following conditions: • **Conditions for receiving involuntary-termination severance pay** The severance may not be paid unless the termination of the duties of the member of the Management Board of BPCE SA is involuntary (involuntary end to term of office due to removal by the General Meeting, withdrawal of approval, involuntary resignation, or non-renewal by the Supervisory Board), other than for serious misconduct and without a change of position within Groupe BPCE. This severance is not paid if the member of the Management Board concerned leaves the Group on his own initiative. The payment of the involuntary-termination severance pay causes the member of the Management Board to lose any right to the retirement bonus to which he may have been entitled. If he is re-assigned to another position with Groupe BPCE under an employment contract, the termination of said employment contract, with notification given more than 12 months after he is forcibly removed from his corporate office, entitles him – barring gross negligence or willful misconduct – to receive the severance pay provided for in the applicable collective bargaining agreement. Conversely, if the employment contract is terminated with notification given less than 12 months after he is forcibly removed from corporate office, he is entitled – barring gross negligence or willful misconduct – to receive involuntary-termination severance pay, minus any remuneration required by law to be paid in respect of the termination of the employment contract. • **Performance conditions** Involuntary-termination severance pay is only due if Groupe BPCE generated positive net income in the last fiscal year preceding the termination of the corporate office. In addition, the payment of the involuntary-termination severance pay is subject to the condition that the member of the Management Board has obtained at least 33.33% of the maximum variable portion on average over the last three years of his term of office. • **Determination of the severance pay** The monthly benchmark remuneration taken into account for the calculation is equal to 1/12th of the sum of: - the fixed pay (excluding specific supplement and benefits) paid for the last calendar year of activity (N-1) preceding the termination of the corporate office or employment contract; - the average variable remunerations awarded (paid immediately or deferred) in respect of the last three calendar years of activity (N-1, N-2, N-3) preceding the termination of the corporate office or employment contract; and - the average of the LTIP amounts acquired for years N-1, N-2 and N-3.For example, if the forced departure takes place in N = 2026, the benchmark pay will include the average of the LTIP amounts acquired for the years 2024 and 2025 according to "method A"; if the forced departure occurs in N = 2025, the benchmark pay will include the LTIP amount acquired for 2024 according to "method A". Amounts in respect of the relevant corporate office and employment contract are taken into account. When the term of office does not make it possible to calculate the average of the annual variable pay awarded in respect of the last three calendar years of service, the average is calculated on a weighted basis over a reduced period. When the term of office does not make it possible to calculate the average of the LTIP amounts acquired for years N-1, N-2 and N-3, the average is calculated on a weighted basis over a reduced period. The amount of the retirement bonus is equal to: Monthly benchmark pay x (12 months +1 month per year of seniority with the Group). Seniority is calculated in years and fractions of a year. The amount of the involuntary-termination severance pay is capped at 24 times the monthly benchmark pay, which corresponds to a period of 12 years' seniority with the Group. Where at least 50% of the maximum variable component is awarded on average during the last three years of the corporate office in progress (or during the term of office served, plus the previous term of office served if the term was renewed), the involuntary-termination severance pay will be paid in full. Where at least 33.33% of the maximum variable component is not awarded on average over this period, no involuntary-termination severance pay is granted. Between 33.33% and 50%, the amount of the involuntary-termination severance pay is calculated on a straight-line basis, at the discretion of the Supervisory Board. Regardless, any compensation paid for termination of the employment contract is deducted from the amount of involuntary-termination severance pay. **Retirement bonus** The members of the Management Board may, under certain conditions and by decision of the Supervisory Board, receive a retirement bonus equal to no less than 6 months' and no more than 12 months' salary, provided they have at least 10 years of seniority, without any minimum presence conditions. Payment is subject to the following conditions: • **Conditions for receiving a retirement bonus** Payment of the retirement bonus is subject to the same performance conditions as those applicable to the involuntary-termination severance pay mentioned above, *i.e.*: - the Group must have generated positive net income in the fiscal year preceding the termination of the corporate office; and - beneficiaries must have been awarded a minimum percentage of variable pay on average during the last three years of the current term of office. The retirement bonus may only be paid when the social security pension is drawn, provided that the beneficiary falls within the applicable scope (defined below) at the time the pension is drawn. Payment of the retirement bonus is at the discretion of the Supervisory Board after consultation with the Remuneration Committee. Payment of the retirement bonus is excluded from payment of any other departure bonus. As such, if involuntary-termination severance is paid, the member of the Management Board will not be entitled to the retirement bonus.

Components of remuneration	Principles and criteria adopted
Involuntary-termination severance pay and retirement bonus (continued)	**Amount of the retirement bonus** The monthly benchmark remuneration used to calculate the bonus is equal to 1/12th of the sum of: - the fixed pay (excluding specific supplement and benefits) paid for the last calendar year of activity (N-1) preceding the termination of the corporate office or employment contract; - the average of the three best variable remunerations awarded (paid immediately or deferred) in respect of the last five calendar years of activity (N-1 to N-5) preceding the termination of the corporate office or employment contract; and - the average of the LTIP amounts acquired for years N-1, N-2 and N-3 (for directors benefiting from the LTIP).For example, if the forced departure takes place in N = 2026, the benchmark remuneration will include the average of the LTIP amounts acquired for the years 2024 and 2025 according to "method A"; if the forced departure occurs in N = 2025, the benchmark remuneration will include the LTIP amount acquired for 2024 according to "method A". Amounts in respect of the relevant corporate office and employment contract are taken into account. When the term of office does not make it possible to calculate the average of the three best annual variable remunerations awarded in respect of the last five calendar years of service, the average is calculated on a weighted basis over a reduced period. When the term of office does not make it possible to calculate the average of the LTIP amounts acquired for years N-1, N-2 and N-3, the average is calculated on a weighted basis over a reduced period. The amount of the retirement bonus is equal to: Monthly benchmark pay x (6 + 0.6 A) where A is the number, which may be a fraction, of years served in a corporate office within the relevant scope (*i.e.* terms of office served as Chief Executive Officer of Banque Populaire, Chairman of the Management Board of Caisse d'Epargne, Chief Executive Officer of CFF until November 6, 2019, Chief Executive Officer of BPCE I until December 31, 2018, Chief Executive Officer of Banque Palatine, and member of the Management Board of BPCE SA). For an executive benefiting from this scheme who is then appointed to the Executive Management Committee of Natixis or who, following a transfer to BPCE SA, holds the position of Chief Executive Officer or Deputy CEO at BPCE SA, the terms during which these offices are held will be taken into account when determining A. Conversely, the terms during which these offices are held before the executive becomes a beneficiary of this scheme will not be taken into account. Should the offices included in the calculation of A be held simultaneously, these terms will be counted only once (no double-counting). The amount of the retirement bonus is capped at 12 times the monthly benchmark pay, which corresponds to a period of 10 years' of corporate office. Regardless, any compensation paid for termination of an employment contract is deducted from the retirement bonus.
Supplementary pension plan	Members of the Management Board receive: - the mandatory CGP collective supplementary defined-contribution pension plan for all BPCE employees and by extension applicable to BPCE company directors. The contribution rate is 6% from Bracket A and 4% from the pensionable portion of pay in excess of Bracket A and capped at eight times the annual ceiling for social security annuities; 70% of this contribution is paid by the company and 30% by the employee; - the mandatory AXA collective supplementary defined-contribution pension plan for all BPCE senior executives (AFB agreement) and by extension applicable to BPCE company directors. The contribution rate is 3.5% of pay capped at eight times the annual ceiling for social security annuities. This contribution is funded entirely by the company. Furthermore, there are other supplementary pension plans offered to the members of the Management Board, based on their professional career spent with the Group, namely: the pension plan for company directors of Groupe BPCE: pension plan governed by Article L. 137-11 of the French Social Security Code: - until June 30, 2014, Chairmen of Caisse d'Epargne Management Boards, members of the Management Board of the former CNCE, Chief Executive Officers of Crédit Foncier, Banque Palatine and BPCE International could benefit from a supplementary defined-benefit pension plan entitling them to additional retirement income based on their salary; - until June 30, 2014, Chief Executive Officers of Banques Populaires could benefit from a supplementary differential defined-benefit pension plan. Effective July 1, 2014, these two pension plans were harmonized under a single supplementary pension plan, now closed to new members and subject to conditions: - they must end their career with Groupe BPCE. This condition is met when beneficiaries are Group employees on the day before their social security pension is drawn following voluntary retirement; - they must have served in an executive management position for at least the required minimum period (seven years) at the date on which their social security pension is drawn. Beneficiaries who meet the above conditions are entitled to an annuity set at 15% of benchmark pay, *i.e.* their average annual pay earned in the three highest-paid years during the five calendar years before the date on which their social security pension is drawn and capped at four times the annual ceiling for social security annuities. Annual pay refers to the sum of the following types of pay received for the year in question: - fixed pay, excluding benefits in kind or duty-related bonuses; - variable pay – not exceeding 100% of fixed pay – and defined as the total variable amount paid, including the portion that may have been deferred over several years and subject to attendance and performance requirements, in accordance with regulations on variable pay granted by credit institutions. Once drawn, this supplementary pension may be paid to a spouse or former non-remarried spouse, at a rate of 60%. This plan, which is funded entirely by the Group, is covered by two insurance contracts taken out with the Quatrem and Allianz insurance companies, with a target obligation coverage rate of 100% of assets and 100% of pension recipients. Expenses paid by the company consist of the 32% contribution on annuities paid by the insurer to the beneficiaries. The supplementary pension plan for company directors, which is subject to Article L. 137-11 of the French Social Security Code, is governed by the provisions of Section 25.6.2 of the Afep-Medef Code. It complies with the principles governing the capacity of beneficiaries, overall establishment of base pay, seniority conditions, the progressive increase in potential entitlements depending on seniority, the reference period used to calculate benefits and the prevention of artificially inflated pay. For the members of the Management Board who benefit from this plan, the annual vesting of conditional entitlements is contingent on Groupe BPCE generating a net income for the period considered. Members of the Management Board who are not on the Group's supplemental executive pension plan are entitled to participate in a pension plan through a Group insurance contract under Article 82 of the French General Tax Code, in which company directors of Groupe BPCE who do not benefit from the "Pension plan for company directors of Groupe BPCE" may participate, as this policy is funded solely through voluntary payments by the company directors who have decided to participate therein. As such, the fixed pay of the members of the Management Board members on that plan includes a 20% special supplement.

Remuneration policy applicable to the Chairman and members of the Supervisory Board

Components of remuneration	Principles and criteria adopted
Fixed annual pay	The remuneration package allocated to the members of the Supervisory Board of BPCE is determined by the General Meeting. Based on recommendations from the Remuneration Committee, the Supervisory Board sets the guidelines for allocating pay between the members of the Supervisory Board. With the exception of the Chairman, who receives a fixed annual fee, the members of the Supervisory Board receive remuneration on the basis of their activities. **Fixed pay granted to the members of the Supervisory Board** With the exception of the Chairman, who receives a fixed annual fee, and the Vice-Chairman, who receives fixed annual pay, the members of the Supervisory Board are not paid any fixed annual amounts. **Additional remuneration paid to members of Board committees** The Chairmen of the Audit Committee, Risk Committee, Appointments Committee, Remuneration Committee, and the Cooperative and CSR Committee also receive an additional annual amount in payment for their committee work. The members of these committees do not receive any additional fixed annual pay. **Remuneration paid to non-voting directors** The non-voting directors of the Board do not receive any fixed annual pay.
Variable pay	**Variable pay for members of the Supervisory Board** The members of the Supervisory Board, with the exception of the Chairman, collect a fee for each meeting they attend during the fiscal year. The fixed annual sum received by the Vice-Chairman is larger than the supplemental portion. **Additional remuneration of the members of the Board committees and of Board members who are standing guests of Board committees** The members (including the Chairmen) of the Board committees and the Board members who are standing guests of Board committees collect a fee for each meeting they attend during the fiscal year. Committee Chairmen receive a fixed annual sum that is greater than the supplemental portion in view of their specific responsibilities. **Additional remuneration of the members of the Expert Working Group (EWG)** As the EWG is considered a specialized committee of the Board, the members and non-voting directors of the Supervisory Board who participate in it receive a fee for each meeting they attend during the fiscal year. The Chairman of the EWG does not receive any fixed annual sum. **Remuneration paid to non-voting directors** Pursuant to Article 28.3 of the company's articles of association, the Supervisory Board has decided to award remuneration to the non-voting directors by making a deduction from the remuneration package allocated to the members of the Supervisory Board by the General Shareholders' Meeting. As such, the non-voting directors collect a fee for each meeting they attend during the fiscal year.
Benefits in kind	The Chairman and members of the Supervisory Board and of the Board committees do not receive any benefits in kind.

4.5.3 Remuneration and benefits of all kinds awarded to company directors for the 2025 fiscal year

The remuneration of BPCE SA's company directors for the 2025 fiscal year complies with the remuneration policy defined by the Supervisory Board at its meetings of February 5, 2025 and March 19, 2025 on the proposal of the Remuneration Committee.

The Chairman of the Management Board is paid solely in respect of his corporate office.

The other members of the Management Board receive an employment contract. Their pay is divided 90%/10%, respectively, between the employment contract and corporate office. The implementation of the employment contract for Béatrice Lafaurie was authorized and approved by the Supervisory Board on March 25, 2021. The implementation of the employment contract for Jérôme Terpereau was authorized and approved by the Supervisory Board on March 24, 2022. The implementation of the employment contract for Hélène Madar was authorized and approved by the Supervisory Board on February 2, 2023.

For the 2025 fiscal year, the pay received by the Chairman and the members of the Management Board were as follows:

Fixed pay for 2025

	Fixed annual pay[1]	Comments
Nicolas Namias, Chairman of the Management Board	€1,200,000 (including a special supplement in respect of the supplemental pension scheme pursuant to Article 82 of the French General Tax Code)	Unchanged in 2025
Béatrice Lafaurie Head of Human Resources, member of the Management Board	€600,000 (including a special supplement in respect of the pension scheme pursuant to Article 82 of the French General Tax Code)	Unchanged in 2025
Hélène Madar Head of Retail Banking and Insurance, member of the Management Board	€600,000 (including a special supplement in respect of the pension scheme pursuant to Article 82 of the French General Tax Code)	Unchanged in 2025
Jérôme Terpereau Head of Group Finance, member of the Management Board	€600,000 (including a special supplement in respect of the pension scheme pursuant to Article 82 of the French General Tax Code)	Unchanged in 2025

(1) Excluding benefits in kind.

Annual variable pay for the 2025 fiscal year

Achievement of targets set for the 2025 fiscal year

The annual variable pay for 2025 was determined based on quantitative and qualitative criteria, that were the same for all members of the Management Board, and had previously been submitted to the Remuneration Committee for review on February 4, 2025 and March 17, 2025, then validated by the Supervisory Board on February 5, 2025 and March 19, 2025.

The contribution of these criteria, validated by the Supervisory Board on February 3, 2026 after receiving the opinion of the Remuneration Committee on February 2, 2026, were as follows:

- the trigger criterion is observation of the Group Basel III Common Equity Tier 1 ratio. This level corresponds to the minimum threshold of the CET1 level, plus the P2R, the P2G and the phase-in combined buffers set by the ECB; no variable pay is granted if this criterion is not met. This criterion was verified at December 31, 2025;
- the quantitative criteria account for 60% of variable pay: the net income attributable to equity holders of the parent (17.5%), the cost/income ratio (7.5%) and the net banking income (5%) of Groupe BPCE; and the net income attributable to equity holders of the parent (17.5%), the cost/income ratio (7.5%) and the net banking income (5%) of BPCE. The contribution under the quantitative criteria amounts to 78.09%;
- the share of qualitative criteria in variable pay, which appear in the form of KPIs by major business lines and functions with reference to the VISION 2030 program, represents 40%, including a criterion related to the Environment, Climate and decarbonization trajectories with a weighting of 5%.The contribution of the qualitative criteria amounts to 40%;
- the contribution on all the criteria amounts to 118.09% (before application of the cap rules).

	Variable pay	Variable pay awarded for the 2025 fiscal year
Nicolas Namias, Chairman of the Management Board	Target at 100% of fixed pay including the special supplement, with a maximum of 120% of fixed pay including the special supplement	€1,200,000 x (118.09% x 100%) *i.e.* €1,417,080
Béatrice Lafaurie Head of Human Resources, member of the Management Board	Target at 80% of fixed pay including the special supplement, with a maximum of 100% of fixed pay including the special supplement	€600,000 x (118.09% x 80%) *i.e.* €566,832
Hélène Madar, Head of Retail Banking and Insurance, member of the Management Board:	Target at 80% of fixed pay including the special supplement, with a maximum of 100% of fixed pay including the special supplement	€600,000 x (118.09% x 80%) *i.e.* €566,832
Jérôme Terpereau Head of Group Finance, member of the Management Board	Target at 80% of fixed pay including the special supplement, with a maximum of 100% of fixed pay including the special supplement	€600,000 x (118.09% x 80%) *i.e.* €566,832

Terms and conditions of payment

In accordance with the remuneration policy approved by the Supervisory Board at its meetings of February 5, 2025 and March 19, 2025, a portion of the annual variable pay awarded to the members of the Management Board is deferred in equal installments over five years (*i.e.* 2027 to 2031 for the variable pay awarded for the 2025 fiscal year).This deferred portion represents, for Nicolas Namias, 60% of his annual variable pay awarded for the 2025 fiscal year, for Béatrice Lafaurie, Hélène Madar and Jérôme Terpereau, 50% of their annual variable pay awarded for the 2025 fiscal year. It is specified that, in accordance with the remuneration policy, all of the annual variable pay allocated by Group companies for 2025 as well as the total of the LTIP amounts acquired in respect of 2025, are taken into account when determining the percentage of deferred annual variable pay. This particularly applies to executives who may take up new offices during the year.

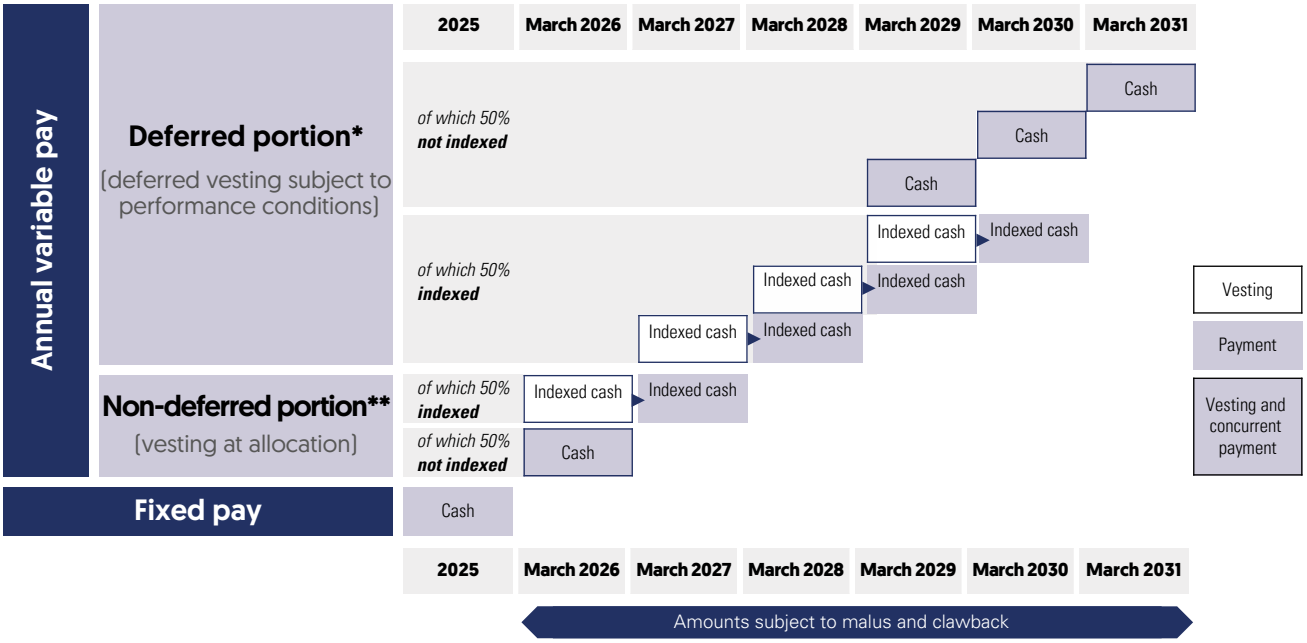
Payment of the deferred portion is contingent upon attaining a standard Return on Equity (ROE) for the core Group business lines that is at least equal to 4% during the fiscal year before payment falls due.

In addition, in accordance with the remuneration policy approved by the Supervisory Board at its meetings of February 5, 2025 and March 19, 2025, at least half of the annual variable pay awarded to the members of the Management Board is indexed.

The indexed variable portion varies according to the net income attributable to equity holders of the parent of Groupe BPCE and BPCE. The indexation coefficients are calculated by retaining, for 50%, the average of Groupe BPCE's underlying net income attributable to equity holders of the parent (NAEP) of the three fiscal years preceding the payment year compared to the average of Groupe BPCE's underlying NAEP of the three fiscal years preceding the grant year, on the one hand, and, for 50%, the average of BPCE's underlying NAEP for the three fiscal years preceding the payment year compared to the average of BPCE's underlying NAEP of the three fiscal years preceding the grant year. Indexation coefficients are rounded to the fourth decimal place.

The payment structure of the annual variable pay awarded to the members of the Management Board for the 2025 fiscal year is as follows:

Annual variable pay awarded for the 2025 fiscal year



* represents 60% of the annual variable pay for Nicolas Namias and 50% for the other members of the Management Board
** represents 40% of the annual variable pay for Nicolas Namias and 50% for the other members of the Management Board

Multi-year variable pay

LTIP AMOUNT ACQUIRED FOR THE 2025 FISCAL YEAR

Nicolas Namias, Béatrice Lafaurie, Hélène Madar and Jérôme Terpereau are beneficiaries of the Long-Term Incentive Plan granted by the Supervisory Board on March 29, 2024.

The amount of this multi-year variable pay over three years is calculated according to an indicator measuring the organic creation of CET1. At the end of the three years, this remuneration amounts to 30% of the annual fixed pay for 2024 including the specific supplement if the indicator reaches its target each year and is capped at 60% of this same base in the event of outperformance.

The LTIP amounts acquired for the 2025 fiscal year presented below are estimates evaluated in accordance with the calculation methodology presented in the remuneration policy (see page 560) on the basis of the financial data approved by the Audit Committee on February 2, 2026. These sums, representing 20% of the 2024 fixed pay including the special supplement, were used to set the deferred rate applicable to the 2025 annual variable pay of each member of the Management Board. The definitive LTIP amounts acquired for the 2025 fiscal year will be recognized by the Supervisory Board during the first half of 2026.

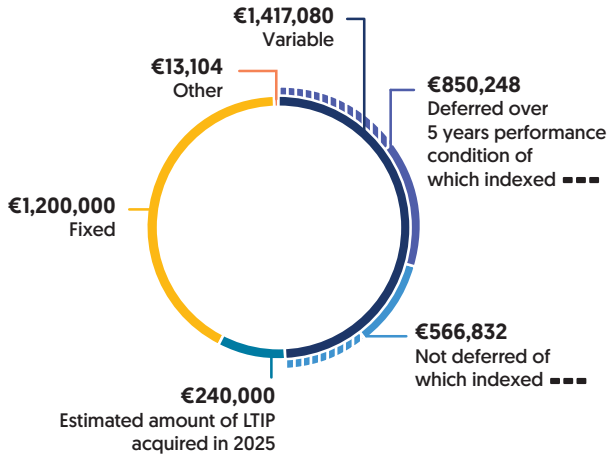
	Estimate of the LTIP amount acquired for the 2025 fiscal year
Nicolas Namias, Chairman of the Management Board	€1,200,000 x 20% *i.e.* €240,000
Béatrice Lafaurie Head of Human Resources, member of the Management Board	€600,000 x 20% *i.e.* €120,000
Hélène Madar Head of Retail Banking and Insurance, member of the Management Board	€600,000 x 20% *i.e.* €120,000
Jérôme Terpereau Head of Group Finance, member of the Management Board	€600,000 x 20% *i.e.* €120,000

The total multi-year variable pay acquired under the LTIP will be established by the Supervisory Board at the beginning of 2027 and will be paid from 2027 until 2031 in accordance with the CRD regulation applicable to the executive management and the standards in force within the Group (deferral, indexation, deferral period and trigger criterion).

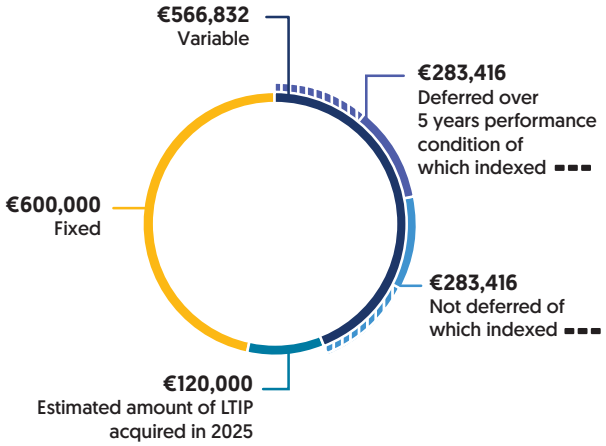
Breakdown of remuneration for the 2025 fiscal year

The structure of the remuneration of the members of the Management Board for the 2025 fiscal year is as follows, it being specified that the terms of the LTIP (deferred, indexing, deferral period and triggering criteria) will be set in early 2027, in accordance with the LTIP regulations:

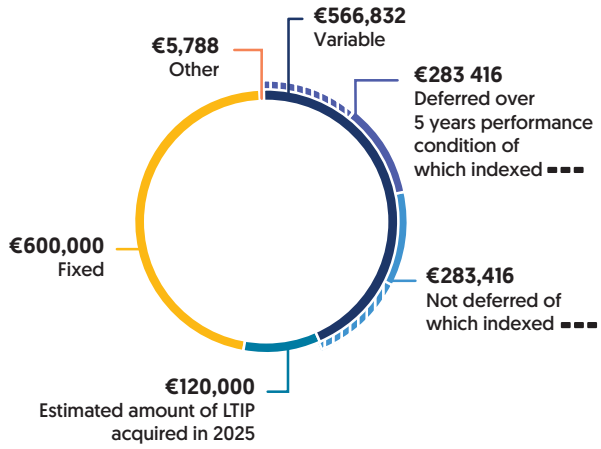
For **Nicolas Namias**, Chairman of the Management Board:



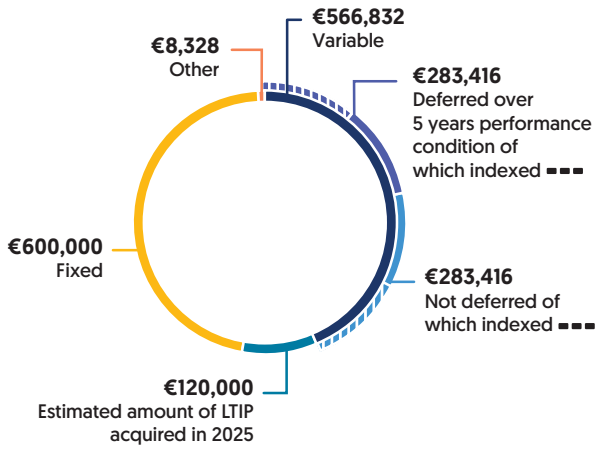
For **Béatrice Lafaurie**, Member of the Management Board – Head of Group Human Resources:



For **Hélène Madar**, Head of Retail Banking and Insurance, member of the Management Board:



For **Jérôme Terpereau**, Head of Group Finance, member of the Management Board:



Other items

The members of the Management Board receive a company car allowance except for Béatrice Lafaurie, who has waived this benefit.

Standardized tables summarizing pay granted company directors, in accordance with AMF recommendations

		2025	€1,295,160	€961,703	€120,000	€0	€0

(1) For the 2024 fiscal year, the amounts correspond to the actual LTIP amounts acquired for the 2024 fiscal year, as recognized by the Supervisory Board on March 19, 2025. For the 2025 fiscal year, the amounts correspond to the LTIP amounts acquired for the 2025 fiscal year, estimated on the basis of the financial data approved by the Audit Committee on February 2, 2026 and presented to the Supervisory Board on February 3, 2026.

(2) Nicolas Namias received remuneration from Natixis, a company under the control of BPCE as defined by Article L. 233-16 of the French Commercial Code, for his duties as Chief Executive Officer of Natixis from August 4, 2020 to December 2, 2022. The amount paid includes payments relating to deferred variable pay from years spent at Natixis.

AMF Table 2

Summary statement of pay granted and paid to each company director

In the following statements:

The expression "amount allocated" corresponds to the remuneration and benefits allocated to a corporate officer in respect of their duties during the fiscal year, regardless of the date of payment.

The expression "amount paid" corresponds to the remuneration and benefits actually paid to a corporate officer in respect of their duties during the fiscal year, regardless of the grant date.

4.5.4 Procedures in Groupe BPCE for applying Articles L. 511-71 to L. 511-88 of the French Monetary and Financial Code on remuneration policy and practices

In accordance with Article L. 511-71 of the French Monetary and Financial Code, the General Meeting of May 27, 2016 decided that, for the 2016 and subsequent fiscal years, the variable portion of the total remuneration of each of the persons referred to in Article L. 511-71 of the French Monetary and Financial Code identified by BPCE SA, could exceed the amount of their fixed pay without exceeding double the amount of the fixed pay.

In accordance with Article L. 511-73 of the French Monetary and Financial Code, the BPCE General Meeting will be consulted in 2026 on the budget for all types of remuneration paid during the previous fiscal year to the members of the Management Board and other BPCE employees whose professional activities have a material impact on the company or Group risk profile.

Information on the policies and practices on pay granted to members of the executive body and persons whose professional activities have a material impact on the corporate risk profile will be the subject of a report published on the BPCE website prior to the General Meeting, in accordance with the same terms applicable to the universal registration document.

4.6 Potential conflicts of interest

4.6.1 Members of the Supervisory Board

Integrity of members

Pursuant to Article L. 511-98 of the French Monetary and Financial Code, the integrity and expertise of all newly appointed members are subject to review by the Appointments Committee.

In accordance with the internal rules of the Supervisory Board of BPCE, members of the Supervisory Board must perform their duties with loyalty and professionalism.

They must not take any initiatives intended to harm the company's interests and they must act in good faith in all circumstances.

In addition, the members of the Supervisory Board and its committees, as well as any person called to attend their meetings, are bound by professional secrecy under the conditions provided for by Article L. 511-33 of the French Monetary and Financial Code and to an obligation of discretion regarding their deliberations, as well as any information of a confidential nature or presented as such by the Chairman of the meeting, under the conditions provided for by Article L. 225-92 of the French Commercial Code.

The Chairman of the Board stresses that the proceedings of a meeting are confidential whenever regulations or the interests of the company or the Group may require it. The Chairman of each Board Committee does the same.

The Chairman of the Board or one of its committees takes the measures necessary to ensure the confidentiality of discussions. This may require all persons taking part in a meeting to sign a confidentiality agreement.

If a member of the Board or one of its committees fails to comply with an obligation, in particular the obligation of confidentiality, the Chairman of the Supervisory Board refers the matter to the Board in order to issue a warning to said member, independently of any measures taken under the applicable legal, regulatory or statutory provisions. Said member is given advance notice of the penalties being considered and will be able to present observations to the Supervisory Board.

In addition, members of the Supervisory Board:

- undertake to devote the necessary time and attention to their duties;
- attend all meetings of the Supervisory Board and the committees of which they are members, unless this is impossible;
- stay informed about the company's business lines, activities, issues, and values;
- endeavor to maintain the level of knowledge they need to fulfill their duties;
- request and make every effort to obtain, in a timely manner, the information deemed necessary to be able to hold informed discussions at Supervisory Board Meetings.

Finally, members of the Supervisory Board participate in the training programs set up for them.

Conflict of interest prevention and management policy

In accordance with the EBA and ESMA guidelines, the Supervisory Board adopted, at its meeting of February 7, 2024, a policy for the prevention and management of conflicts of interest of executive management and of the members and non-voting directors of the Supervisory Board. Changes were made and approved by the Supervisory Board on December 11, 2025.

The purpose of this policy is to enhance the Group's conflict of interest management system by formalizing the detection, management and prevention of potential and/or proven conflicts of interest of members of the Management Board and Board members and non-voting directors as well as their related parties.

The Policy for the prevention and management of conflicts of interest formalizes what is already practiced by BPCE, in accordance with legal and regulatory texts and specifically, stipulates that:

- a precise definition of conflicts of interest, *i.e.* any situation in which the independent, fair, impartial, and objective performance of a person's functions is likely to be influenced by another public or private interest distinct from the interest he or she must defend in his or her functions;
- a precise definition of related parties and the obligation to declare them;
- sources of conflicts of interest and ways to identify, prevent and manage them;
- the controls carried out by the operational departments and, in particular, controls of loans and other transactions, of declared mandates, of "good credit history" for the members of the Supervisory Board, and of negative media coverage.

To the company's knowledge:

- there are no potential conflicts of interest between the duties of the members of the Supervisory Board with regard to the issuer and other private duties or interests. If required, the Supervisory Board's internal rules and the Ethics and Compliance Charter, along with the conflict of interest prevention and management policy, govern the conflicts of interest of any member of the Supervisory Board;
- there is no arrangement or agreement with an individual shareholder, customer, supplier, or other, under which any of the Supervisory Board's members has been selected;
- there are no family ties between the members of the Supervisory Board;
- no restriction, other than legal, is accepted by any of the members of the Supervisory Board regarding the disposal of their equity interest in the company.

In addition, specific conflicts of interest may arise from financial ties that may exist between the Group in which an external independent member holds executive office and BPCE.

In application of the Afep-Medef Code and the EBA guidelines, financial ties are only an obstacle to the qualification of independence if they are significant.

The balanced and immaterial nature of the business relationship is assessed according to cumulative criteria relating to:

- the weight of the debts and receivables of the Group in which the independent member exercises his main activity *vis-à-vis* Groupe BPCE, in relation to its liabilities or its revenue;
- the dependence of the company in which the independent member exercises executive functions on a Groupe BPCE entity with regard to its financing.

The Appointments Committee reviews business relationships on an annual basis. In 2025, it did not identify any significant business relationships during the fiscal year.

Disclosure of conviction

To the company's knowledge, to date, no member of the Supervisory Board of BPCE has been convicted of fraud in the last five years. To the company's knowledge, to date, no member of the Supervisory Board of BPCE has been declared bankrupt or in liquidation, or had assets placed in receivership, in the last five years.

4.6.2 Members of the Management Board

Independence and integrity

Pursuant to Article L. 511-98 of the French Monetary and Financial Code, the integrity and expertise of all newly appointed members are subject to review by the Appointments Committee.

Members of the Management Board may hold other offices subject to laws and regulations in force. A member of the Management Board may not perform duties similar to those of Chief Executive Officer or Deputy Chief Executive Officer or sole Chief Executive Officer at a Caisse d'Epargne or a Banque Populaire.

Conflicts of interest

The conflict of interest prevention and management policy adopted by the Supervisory Board at its meeting of February 7, 2024, and amended at its meeting of December 11, 2025, also applies to the members of the Management Board.

To the company's knowledge:

- there are no conflicts of interest between any duties of members of the Management Board with respect to the issuing entity and their private interests or other duties;
- there are no family ties between members of the Management Board.

At the filing date of this document, no member of the Management Board was linked to BPCE or any of its subsidiaries by a service agreement offering benefits.

Disclosure of conviction

To the company's knowledge, to date, no member of the Management Board has, for at least the previous five years, been convicted of fraud, associated with bankruptcies, receiverships or liquidations, convicted of a crime or subject to an official public sanction handed down by statutory or regulatory authorities, or disqualified by a court from acting as a member of the administrative, management or supervisory bodies of an issuer or from participating in the management or conduct of the affairs of any issuer.

5.1 Foreword

The financial data for the fiscal year ended December 31, 2025 and the comparative data for 2024 were prepared by applying the accounting policies under IFRS as adopted by the European Union and applicable at that date, excluding some provisions of IAS 39 on hedge accounting. This management report discusses the results of Groupe BPCE and BPCE (formerly BPCE SA group), built around the central institution, BPCE, which was established on July 31, 2009 following the merger of the Banque Populaire and Caisse d'Epargne groups.

BPCE's results are summarized because the activities and results of the two groups are closely related. The main differences in scope relative to Groupe BPCE concern the exclusion of the contributions of the Banques Populaires and the Caisses d'Epargne.

5.2 Economic and financial environment

2025: A resilient French economy

In 2025, global activity remained on an apparently unshakeable trend of more than 3.0% per year, slowing slightly compared to 2024. It benefited from a general control of inflation, especially in the Eurozone, the acceleration of technological investment (AI), and the rebuilding of inventories in the first half of the year, anticipating the increase in the price of US imports (increase in tariff barriers), and rather expansionary fiscal and monetary policies. However, the year was profoundly marked by a recurrence of often dangerous tremors, a phenomenon fueled by the strengthening of sovereignty issues. In addition to geopolitical risks (Ukraine, Middle East, Taiwan, etc.), the main uncertainty was due to the unpredictability of Donald Trump's policies in the United States. The sharp and successive increases in US tariffs from April 2 ("Liberation day"), followed by pauses and downward reversals, and then a relative lull, have led to a real questioning of free trade. These levels, not seen since the Second World War, have increased the fragmentation of world trade, supplies and production chains. The drift in public and private debt, particularly the "headlong rush" of public spending, has also been a major source of political and economic concerns, specifically in France.

Inflation has improved substantially in most parts of the world, despite the shock of higher tariffs, which had a lower impact than originally expected. Despite the geopolitical tensions in the Middle East, oil prices fell by 14.2% ($69.1 per barrel of Brent, after $80.5/barrel in 2024), due to the anticipation of weakened oil demand, especially in China, the trade war, the OPEC+ production increase and the absence of supply problems. This "disinflation" therefore supported activity, by strengthening the purchasing power of private agents and by allowing most central banks to ease their monetary policy, with the exception of Japan.

These trade tensions, while creating a prolonged climate of uncertainty, entailed economic volatility and strategies to circumvent tariffs or diversify markets. World trade even soared at the beginning of the year, as this return to protectionism was expected, particularly by China. The United States, beyond the quarterly fluctuations, saw its growth slow (albeit at +2.2%) and employment cool, after the remarkable dynamism of the economy in 2024 (+2.8%). Paradoxically, Chinese growth, still suffering from deflationary pressures and slowing in the second half of the year, reached the official target of +5.0% for the whole of 2025. Growth in the Eurozone (+1.4%), although moderate and disparate depending on the country, was resilient, despite greater technological vulnerability, the appreciation of the euro, tough competition from Chinese manufacturers, the decline in price competitiveness and, in the second half of the year, the obstacle to European exports that the trade agreement between the European Union and the United States may have constituted. However, the signing of a trade agreement with the European Commission on July 27 reduced uncertainty on both sides of the Atlantic, with the decision to impose 15% tariffs on the majority of US imports of goods from the EU. European countries posted mixed performance in 2025. Spain, which has become the locomotive of Europe, recorded sustained solid growth (+2.9%), mainly supported by internal demand factors, linked to the dynamism of employment and European funds. Italy (+0.6%) and Germany (+0.2%), which are more dependent on trade with the United States, saw their activity accelerate in the first quarter of the year, then decline sharply in the second quarter, and then become almost flat in the second half of the year.

In France, the year was marked by the resignation of two Prime Ministers. Paradoxically, however, activity has weathered increasing uncertainty due to customs tensions, geopolitical fragmentation of trade and political and fiscal paralysis rather well, especially after the fall of the government on September 8. Uncertainty, which fuels anxiety and then a wait-and-see attitude, often perceived as a powerful brake on the development of domestic demand, ultimately had a more limited impact than feared. Growth, which admittedly ran counter to the European economy in the first half of the year, reached +0.9% in 2025, after +1.1% in 2024. Inflation continued to fall, reaching an annual average of +0.9%, after +2.0% in 2024, driven by lower regulated energy prices, slower wage growth and increased competition in the telecommunications sector. As a result, the unemployment rate rose slightly, reaching 7.7% in the fourth quarter, after being 7.3% at the end of 2024.

The French economy, like its European neighbors, was unable to take advantage of the temporary trade rush to the United States in the first quarter, resulting in much weaker growth over the year. Above all, it has not managed to extricate itself from a gloomy atmosphere, with the increase in spending by private agents remaining sluggish since 2022. In particular, before falling slightly, the household savings rate reached a 45-year high (excluding the Covid period) of 18.7% in the second quarter. However, purchasing power was better preserved than elsewhere in Europe, due to greater disinflation. But household consumption has not picked up. Similarly, household investment recovered only slightly, after two years of sharp contraction, reflecting increased caution in the face of uncertainty and growing tax pressures. Investments by non-financial corporations stagnated, largely due to corporate debt, fragile cash flows, the loss of market share and the past rise in financing costs. Growth was therefore mainly supported by a significant movement to rebuild inventories, after two years of decline, and by a few branches which were able to keep activity afloat, such as the gradual recovery of the aeronautics sector, exempt from the new US tariffs.

A degradation of French interest rates in the European hierarchy

In 2025, the monetary policies on both sides of the Atlantic alternated unusually between the first and second half of the year. Before a first monetary easing in September, the Fed maintained the *status quo*, keeping its key rates at the last level set on December 18, 2024, despite the intimidation exerted by President Trump against Jerome Powell. The resilience of the US labor market and the absence of a lasting decision on the level of customs tariffs, their increase inducing *a priori* inflationary effects, explained this wait-and-see attitude until the summer. The Fed then repeated its 25 basis points (bps) reduction in September twice in October and December (range between 3.5% and 3.75%), due to the slowdown in the labor market, the downward revision of the inflationary risk, and even political pressure from the White House. The ECB, unlike the Fed, continued its monetary easing process until June, before adopting a cautious wait-and-see stance. It therefore lowered the deposit facility rate by 25 basis points four times, from 3.0% on December 18, 2024 to 2.0% on June 11, due to an oscillation in inflation around the 2.0% target since the summer of 2024, the gradual decline in core inflation, the sharp slowdown in leading wage indicators, the decline in oil prices, and the appreciation of the euro.

Ten-year yields remained at fairly high levels on both sides of the Atlantic, despite the downward trend in inflation, supported by sluggish oil prices, and the monetary easing process, albeit reversed over time between the Fed and the ECB. The reduction in the size of central banks' balance sheets and the abundance of public debt also limited the transmission of monetary easing to long-term rates. They even spiked upwards during episodes of concern such as the announcement of the German mega-stimulus plan in early March. Despite two peaks of around 3.60%, the 10-year OAT reached an annual average of 3.37% in 2025, after 2.97% in 2024. Its spread with the German 10-year yield averaged 74 basis points, compared with an average spread of 35 basis points over the 2015-2019 period. Another remarkable fact has been the trend towards a narrowing gap between the 10-year rate in France and Italy. This phenomenon can implicitly be attributed to a form of gradual downgrading of sovereign yields to the detriment of France in the European interest rate hierarchy, due to a risk of budgetary unsustainability. Indeed, France's sovereign rating was downgraded by Fitch on September 12 to A+, followed by Standard & Poor's on October 17, after the announcement of the suspension of the pension reform until the 2027 presidential election. Moreover, the fiscal consolidation efforts undertaken have still been very limited, since the French public deficit is expected to reach 5.4% of GDP in 2025, after 5.8% of GDP in 2024. Another key event was the steepening of the yield curve over the course of the year.

Gold rose by +66.1% to $4,386 an ounce as of December 31. It has continued to exceed historical records, alongside the continued depreciation of the dollar, the unstable geopolitical context and fears about the valuation of stock markets, especially tech stocks. Bitcoin's dramatic rise to October 7, before a pullback below the year-to-date level, was also one of the notable movements of the year. The euro appreciated by nearly 13% over the year, reaching $1.17 on December 31. Lastly, thanks to the resilience of the economic indicators, the CAC 40 rose by 10.4% to 8,149.5 points in 2025, despite the temporary crash resulting from the surprise of the "Liberation day" announcements, with a low point of 6,863 points on April 9.

5.3 Significant events of the fiscal year

See Section 1.4 "The Group's business lines".

5.4 Groupe BPCE financial data

5.4.1 Groupe BPCE results

Groupe BPCE reported revenue of €25.7 billion, up by 10.3% compared to 2024, and net income of €4.1 billion, up by 15.4% compared to 2024.

Net banking income

Groupe BPCE's net banking income (NBI) reached €25.7 billion in 2025, an increase of +10.3% compared to 2024.

Retail Banking and Insurance (RB&I) revenues increased by +13.7% compared to 2024, with solid performances in the Banque Populaire and Caisses d'Epargne networks, where the NBI grew by +12.7%. This performance was driven by the +3.3% growth in fees and commissions. The net interest margin (NIM) increased by +23.6% compared to 2024, with the increase in customer margin rates (+45 basis points *vs.* 2024), thus benefiting from a significant -34 basis points reduction in the cost of resources. Within RB&I, the other divisions continued their development: Financial Solutions & Expertise (+32.8%), which, from March, included BPCE Equipment Solutions, Insurance (+11.7%), the Digital and Payments division (+7.2%), and Banque Palatine (+7.5%).

Loan outstandings grew by +1% year-on-year, reaching €732 billion at the end of December 2025, driven in particular by equipment loans and consumer loans, and with new home loans picking up again.

At the end of December 2025, the savings deposits on the balance sheet stood at €707 billion, an increase of +€14 billion year-on-year (+2%).

The dynamic activity of the FSE businesses with the retail networks continued, notably driven by Leasing (+8% year-on-year) and Consumer loans (+7% year-on-year) business lines.

In life insurance, the outstandings amounted to €115 billion at the end of December 2025 (excluding the reinsurance treaty with CNP Assurances), up by 12% since the beginning of the year thanks to significant positive net inflows in unit-linked products and euro funds. The non-life insurance of customers of the Banques Populaires and Caisses d'Epargne networks continued to grow, by nearly 34% in 2025.

The activity for the Digital & Payments division saw the increase in the number of card transactions of +5% year-on-year with +54% year-on-year for mobile payments. Oney's revenues were up by +12% in 2025 year-on-year, reflecting the subsidiary's recovery.

The net banking income of the Global Financial Services (GFS) division increased by +5.2% at current exchange rates, reaching €8.4 billion. The growth in the revenues of the GFS division was driven by the contribution of Corporate & Investment Banking (+8.6%), with the Asset & Wealth Management division showing more moderate growth (+1.0%).

Lastly, the NBI of the Corporate center amounted to -€137 billion for the year 2025.

Operating expenses

Groupe BPCE's operating expenses amounted to -€17.3 billion, up by +5.5% compared to 2024. Excluding the impact of acquisitions, Groupe BPCE's expenses would have increased by +2.6% compared to 2024. This increase in expenses reflects the support provided for the activity of the business lines and their development projects.

Groupe BPCE's transformation costs, related to synergy-creating transactions such as technological transformation and in particular IT platform migrations, are included in the operating expenses. After restating these items, the operating expenses increased by +4.5% compared to 2024.

The operating expenses of Retail Banking and Insurance, including transformation costs, increased by +5.5%.

The operating expenses of the Global Financial Services division amounted to -€5,950 million, up by +5.4% at current exchange rates. This increase was driven by Corporate & Investment Banking (+10.4%), in line with its business growth, while the operating expenses of the Asset & Wealth Management division were stable at current exchange rates.

At December 31, 2025, Groupe BPCE had 105,210 employees, up by +3.9% compared to the end of 2024. This increase includes the impact of acquisitions.

Groupe BPCE's gross operating income amounted to over €8.4 billion in 2025, up by +21.6% compared to 2024.

The cost/income ratio stood at 67.2% in 2025, an improvement of -3.1 points compared to 2024. Excluding exceptional items, it reached 65.6%, an improvement of -3.8 points compared to 2024.

Income before tax

Groupe BPCE's cost of risk amounted to -€2.5 billion, up by +19.6% compared to 2024, mainly in the Stage 3 segment, reflecting the deterioration of the economic environment.

As a percentage of customer loan outstandings, Groupe BPCE's average annual cost of risk was 28 basis points in 2025 compared to 24 basis points in 2024.

The rate of non-performing loans to gross loan outstandings was 2.7% at December 31, 2025, a slight increase in relation to 2024 (2.5%). The coverage rate for non-performing loans, including collateral on impaired loan outstandings, came to 62.7% at December 31, 2025 *versus* 68.0% at December 31, 2024.

In retail banking, the cost of risk relative to the outstandings of the Banque Populaire and Caisses d'Epargne networks was up compared to 2024 (at 29 basis points compared to 24 basis points). This ratio decreased for Corporate & Investment Banking: 30 basis points in 2025 compared to 40 basis points in 2024.

The share in income of equity-accounted associates amounted to +€73 million in 2025 compared to +€57 million in 2024.

The gains or losses on other assets amounted to -€2 million in 2025 compared to +€28 million in 2024.

The change in the value of goodwill was +€13 million in 2025 *versus* zero in 2024.

Groupe BPCE's pre-tax income was €6.1 billion in 2025, up +22.1% compared to 2024, driven by both Retail Banking and Insurance (+30.0%), and by the Global Financial Services division (+7.6%).

Net income attributable to equity holders of the parent

Groupe BPCE's income tax expense amounted to -€1,904 million in 2025, up by +40.3% compared to 2024. It includes the impact of the exceptional tax contribution of large companies in France, for -€177 million in 2025.

Groupe BPCE's net income attributable to equity holders of the parent amounted to €4,061 million in 2025, up by +15.4% compared to 2024.

Capital adequacy

The Common Equity Tier-1 ratio amounted to 16.5% at December 31, 2025, up by +0.3% compared to December 31, 2024.

The change in the Common Equity Tier-1 ratio in 2025 was mainly due to:

- the growth in Common Equity Tier-1, driven in particular by retained earnings (+73 basis points) and to a lesser extent by the collection of cooperative shares (+2 basis points), offset by the change in recyclable equity, including conversion reserves (-5 basis points), by the increase in the deduction for insufficient provisioning of non-performing loans (-2 basis points) and by prudent assessment (-1 basis point);
- the increase in risk-weighted assets (-39 basis points), corresponding to the organic change related to operating activities, with the acquisitions of BPCE Equipment Solutions (-36 basis points) and Nagelmackers (-7 basis points), offset by model effects (+32 basis points) and the implementation of CRR3 (+10 basis points).

At December 31, 2025, the Tier-1 ratio amounted to 16.5% and the total capital ratio to 19.2%, compared to 16.2% and 18.8%, respectively, at December 31, 2024. These ratio levels remain well above the regulatory requirements defined by the European Central Bank (ECB) during the Supervisory Review and Evaluation Process (SREP) in 2026.

The total loss absorbing capacity (TLAC) amounted to €123.6 billion at the end of December 2025. The TLAC ratio remained stable at 26.7% at December 31, 2025, as the increase in TLAC-eligible capital offset the increase in risk-weighted assets. The TLAC ratio remains significantly above the target of 25.5% defined in the strategic plan.

The leverage ratio was stable at 5.1% at December 31, 2025, the change in equity being offset by the increase in balance sheet and off-balance sheet exposures. This ratio is well above the regulatory threshold of 3.5%.

Liquidity

Groupe BPCE's total liquidity reserves amounted to €305 billion at December 31, 2025, including €128 billion in available assets eligible for central bank funding, €77 billion in LCR-eligible assets, and €100 billion in liquid assets placed with central banks.

The short-term funding amounted to €121 billion at December 31, 2025, compared to €138 billion at December 31, 2024.

The liquidity coverage ratio (LCR) was well above the regulatory requirements of 100%, standing at 138% on the basis of the average end-of-month LCRs in the fourth quarter of 2025.

5.4.2 The Group's business lines

Groupe BPCE has two core business lines:

Retail Banking and Insurance, which is central to the transformation, includes:

- the Banque Populaire network, comprising the 14 Banques Populaires and their subsidiaries, Crédit Maritime Mutuel and the mutual guarantee companies;
- the Caisse d'Epargne network, consisting of the 15 Caisses d'Epargne;
- the Financial Solutions & Expertise (FSE) division, encompassing the specialized financing activities: factoring, leasing in France, BPCE Equipment Solutions, consumer loans, sureties & financial guarantees, and the "retail securities" business, in addition to Socfim, BPCE Solutions immobilières and Pramex;
- Insurance, serving the Groupe BPCE networks and their customers through three core business lines: Personal insurance (life insurance, personal protection and borrower insurance), Non-life insurance (mainly vehicles, multi-risk home insurance [MRH], personal accident insurance, legal protection and health), and Sureties & guarantees (CEGC);
- the Digital & Payments division, which brings together the payments activities and the activities of Oney, in order to support the digitization of retail and strengthen the quality of service from end to end of the payment chain;
- the Other Networks, including Banque Palatine, the bank for mid-sized companies and their managers, and private banking, support their customers through long-term relationships based on close relationships, a wealth of expertise and tailor-made solutions.

Global Financial Services, comprising the two divisions of Natixis:

- Asset & Wealth Management:
  - Asset Management, present on the various international markets, brings together the expertise of management and distribution companies as well as employee savings ("Natixis Interépargne", the leading player in employee savings account management in France,
  - Wealth Management, with Natixis Wealth Management, which offers wealth management and financing solutions for large private investors;
- Corporate & Investment Banking:
  - Corporate & Investment Banking advises and supports corporates, institutional investors, insurance companies, banks, public sector entities and film and audiovisual financing.

The Corporate center, which primarily includes:

- the Group's central institution and holding companies,
- run-off activities of Crédit Foncier and BPCE International,
- cross-business activities.

The Retail Banking and Insurance division's income before tax was up by +30.0% compared to 2024.

The operating expenses, including transformation costs, were up by +5.5% compared to 2024, with the growth in activity of the business lines and the acquisitions. The cost of risk increased compared to 2024, reaching, relative to the outstandings, an annual average of 29 basis points in 2025 compared to 24 points in 2024.

The Banque Populaire and Caisse d'Epargne networks accounted for 68% of the Retail Banking and Insurance division's income before tax in 2025.

1 Fees on centralized savings have been restated from net interest margin and included in fee and commission income.

Banques Populaires

In an uncertain and changing economic and geopolitical context marked by a decline in the level of inflation and short-term interest rates, the Banques Populaires recorded +23.5% growth in new loans to €45.2 billion in 2025 (excluding short-term loans and State-guaranteed loans). With contrasting customer acquisition in the retail and professional markets (respectively +0.7% and -1.6%), the base of principal active customers increased by +1.1% year-on-year, while that of active professional customers decreased by -0.5% compared to 2024. Lastly, despite dynamic new relationships (+3.3%), the base of active corporate clients was almost stable at -0.2% year-on-year.

Increase in on-balance sheet[1] deposits (excluding centralized savings) of +1.4%

Despite a context of declining short-term interest rates, the Banques Populaires posted an increase in on-balance sheet deposits and savings of +2.0% (+€6.0 billion) to €303.1 billion. Excluding centralized savings, the increase represented +1.4% (+€3.8 billion), at €275.2 billion.

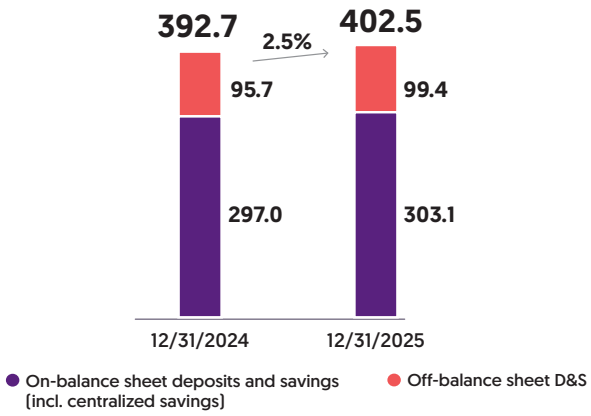
The on-balance sheet savings deposits for individual clients increased by +2.5% (+€3.4 billion) to €141.8 billion, although with substantial differences. The passbook savings accounts outstandings increased, by +3.3% (+€2.2 billion) to €70.8 billion, driven by the *Livret A* and the *Livret de Développement Durable et Solidaire* (LDDS) passbook savings accounts, which benefited from a fixed rate of return of 2.16% throughout 2025. Their outstandings increased by +8.6% (+€2.1 billion) to €26.5 billion, and by +6.2% (or +€789 million) to €13.5 billion, respectively. Despite a decrease in its rate of return in 2025, the *Livret* d'Epargne Populaire passbook savings account saw an increase of +6.0% (+€293 million) in outstandings to €5.1 billion. Network loans increased by +36.3% (+€1.3 billion) to €5.0 billion, due to the bond issues to customers in 2025, as well as other balance sheet income increasing by +18.2% (+€433 million) to €2.8 billion. Term accounts posted an increase in their outstandings of +1.8% (+€169 million) to €9.7 billion at the end of December 2025. However, outstandings on demand deposits declined by -0.5% (-€180 million) to €37.5 billion, and regulated home purchase schemes outstandings decreased by -3.5% (-€583 million) to €16.1 billion. The outstandings of the *Livret Jeune* and Ordinary passbook savings accounts contracted by -3.3% (-€770 million) to €22.5 billion.

Professional, corporate and institutional customers posted an increase in on-balance sheet savings deposits of +1.7% (+€2.6 billion), reaching €161.2 billion. This increase was mainly driven by sight deposits, which increased by +2.1% (+€1.7 billion) to €85.7 billion, and other deposits, which increased by +15.4% (+€2.2 billion) to €16.2 billion, notably with BRED. However, term account outstandings decreased by -2.2% (-€1.1 billion) to €50.3 billion due to the continued decline in short-term interest rates over 2025.

Financial savings deposits stood at €99.4 billion at the end of 2025, up by +€3.8 billion (+3.9%), driven mainly by life insurance (+€4.1 billion, +6.3%) and employee savings schemes (+€520 million, +8.6%). Securities outstandings decreased by -€834 million (-13.0%).

Lastly, deposits including financial savings rose by +3.2% in the individual customer market and by +1.7% in the professional, corporate, and institutional customer markets.

Savings deposits *(in billions of euros)*



Limited increase in loan outstandings[1] of +0.2%, penalized by the decrease in outstanding real estate loans

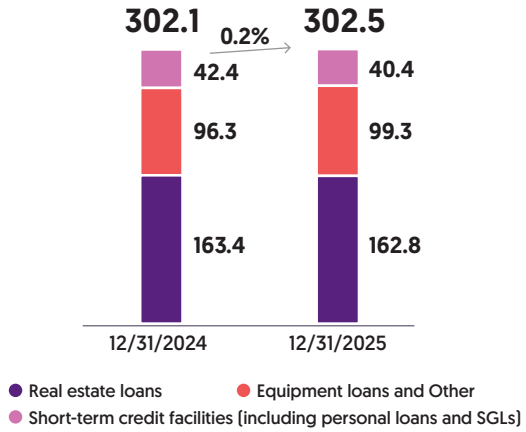
The Banques Populaires posted a moderate annual increase in their customer loan outstandings of +0.2% (+€477 million), to €302.5 billion at the end of December 2025.

In the retail market, the loan outstandings decreased by -0.5% (-€770 million), to €156.5 billion at the end of December 2025. This decline was mainly due to the decrease in outstanding home loans of -0.6% (-€875 million) to €141.4 billion, despite a +23.5% recovery in new loans in 2025. In contrast, outstanding personal loans increased by +2.8% (+€399 million) to €14.8 billion at the end of 2025.

In the professional, corporate and institutional markets, the growth in outstandings was +0.9% (+€1.2 billion) to €146.1 billion at the end of December 2025, supported mainly by the growth in equipment and other loans of +3.7% (+€3.4 billion) to €94.5 billion and in accounts receivable of +8.6% (+€450 million) to €5.7 billion. Short-term loans decreased by -11.2% (-€2.6 billion) to €20.3 billion due to the repayment of State-guaranteed loans.

1 Average annual outstandings

Loan outstandings *(in billions of euros)*



Financial performance

In 2025, the scope of the Banque Populaire network expanded, with the acquisition of 70% of Société Générale Madagasikara by BRED Banque Populaire.

The Banque Populaire network's net banking income totaled €6.8 billion in 2025, an increase of +11.5% (or +€702 million) compared to 2024 (+11.0% excluding the change in the provision for home-purchase savings schemes).

The net interest margin[1] increased by 18.4% (+€599 million) to €3.8 billion (+17.5% excluding the provision for home-purchase savings schemes). In 2025, it was boosted in particular by the decrease in the cost of customer inflows, in a context of declining interest rates, particularly for regulated savings, sight deposits and term accounts. At the same time, the increase in interest income from the loan activity picked up during 2025.

However, financial activity was down, with a negative contribution from hedging and interbank transactions penalized by the decline in short-term rates.

The fees and commissions increased by +3.0% (+€85 million) to €2.9 billion, driven in particular by loans (+5.0%), life insurance (+8.8%), insurance risk (+9.6%) and payment services (+2.2%). Account management was stable year-on-year.

The income and expenses from other activities improved by +€12 million to -€71 million, driven by an increase in provision reversals for operational risk.

The net income from insurance activities was driven by the contribution of BRED's *Prépar Vie* and *Prépar IARD* subsidiaries and increased by +€6 million (+8.5%) compared to 2024, reaching €80 million.

The operating expenses increased by +4.8% (-€193 million) to -€4.2 billion, with personnel costs up by +5.5% (-€150 million) to -€2.9 billion. The other operating expenses increased by +3.2% (-€42 million) to -€1.4 billion.

As a result, the gross operating income stood at €2.6 billion, up by +24.8% (+€509 million). The cost/income ratio improved compared to 2024 at 62.3% (a decrease of -4.0 points).

The cost of risk deteriorated by +19.2% (-€156 million) to -€971 million, due to the increase in defaults, particularly in the professional real estate, automotive, retail, industrial, transport and healthcare sectors. In the end, the cost of risk reached 14.3% of the net banking income (NBI) *(vs.* 13.4% in 2024). In relation to the customer loan outstandings, it amounted to 31 basis points at the end of December 2025, up by +5 basis points compared to its level in December 2024.

The Banques Populaires contributed €1.6 billion to the Retail Banking and Insurance division's income before tax, up by +26.9% (+€346 million) compared to 2024.

1 Fees on centralized savings have been restated from net interest margin and included in fee and commission income.

Caisses d'Epargne

In 2025, in an uncertain economic and geopolitical context marked by a decline in the levels of inflation and short-term interest rates, the Caisses d'Epargne recorded growth of €55.6 billion in new loans (excluding short-term loans and State-guaranteed loans), an increase of +17.8% compared to 2024. With contrasting customer acquisition in the retail and professional markets (respectively -6.0% and +1.1%), the base of principal active clients increased by a modest +0.5% year-on-year, while that of active professional clients increased by +1.4% compared to 2024 *(vs.* changes of +1.2% and +2.3%, respectively, in 2024). Lastly, the base of active corporate clients posted growth of +3.4% year-on-year (compared to a change of +4.5% in 2024) despite decline in new relationships (-3.1%).

Growth in on-balance sheet[1] deposits excluding centralized savings (+1.8%)

Customer investments were mainly directed towards passbook savings accounts (+3.7%), demand deposits (+5.8%) and network loans (+55.7%), to the detriment of demand deposits (-2.8%) and home purchase savings schemes (-7.6%). As a result, the balance sheet outstandings excluding centralized savings for the Caisses d'Epargne increased by +1.8% (+€5.5 billion), reaching €313.6 billion.

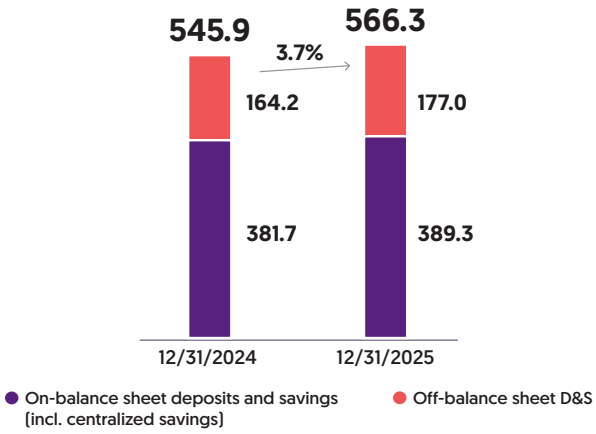
The economic environment favored precautionary savings in 2025 by directing investments on the retail market towards on-balance sheet savings, in particular regulated savings accounts and network loans, and more marginally towards term accounts. Balance sheet savings increased by +2.4% to €270.1 billion (+€6.4 billion), under the combined effect of the growth in the outstandings of passbook savings accounts to €143.5 billion (+2.6% or +€3.7 billion), network loans to €13.7 billion (+57.5% or +€5.0 billion), and term accounts to €8.6 billion (+18.6% or +€1.3 billion). the *Livret A* passbook savings accounts increased their outstandings (+2.0% or +€1.8 billion), as did the *Livret de Développement Durable et Solidaire* (LDDS) passbook savings accounts (+6.9% or +€1.3 billion). The *Livret* d'Epargne Populaire (LEP) posted growth in outstandings (+4.3% or +€633 million). Demand deposits posted a slight decrease (-0.6% or -€299 million) to €52.5 billion. Lastly, regulated home savings plans saw a significant outflow of -7.7% (-€3.7 billion), thus declining to €44.5 billion.

The balance sheet savings of professional, corporate and institutional customers increased to a lesser extent. Outstandings in these markets amounted to €119.2 billion at the end of 2025 (+0.9% or +€1.1 billion). However, this customer base saw a significant outflow from sight deposits (-5.2% or -€2.7 billion for a level of outstandings of €48.8 billion) in favor of term accounts (+3.4% or +€1.4 billion to €41.5 billion) and passbook savings accounts (+24.1% or +€2.3 billion to €11.9 billion) in this context of declining interest rates.

Financial savings deposits increased to €177.0 billion in 2025 (+7.8%), mainly due to the change in life insurance outstandings (+5.8% or +€8.5 billion to €154.3 billion) and outstanding CIUs (+72.1% or +€4.1 billion to €9.8 billion).

Lastly, deposits including financial savings rose by +4.4% in the individual customer market and +1.7% in the professional, corporate and institutional customer markets.

Savings deposits *(in billions of euros)*



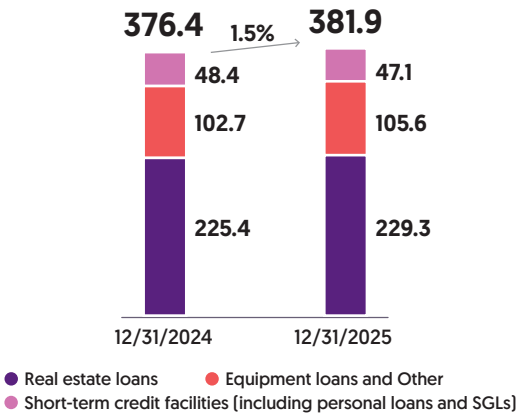
2025 marked by a recovery in loan activities (+1.5%)

A more favorable interest rate environment for borrowers led growth of +1.5% in the Caisse d'Epargne network loan outstandings (+€5.5 billion) to €381.9 billion at the end of 2025. Thus, once again this year, the Caisse d'Epargne network confirmed its support for financing the economy and the regions.

In the retail market, loan outstandings grew by +0.9% compared to 2024 to €215.2 billion, in particular on home loans (+0.7% or +€1.3 billion), with outstandings of €188.5 billion in 2025. Consumer loan outstandings posted growth of +2.1% (+€430 million) to €20.9 billion at the end of 2025.

In the professional, corporate and institutional markets, outstandings increased by +2.2% (+€3.6 billion), bringing them to €166.8 billion at the end of 2025. This change was jointly due to the strong growth in home loans (+6.8% or +€2.6 billion) to €40.7 billion, and in equipment loans (+2.7% or +€2.7 billion) to €101.1 billion.

Loan outstandings *(in billions of euros)*



1 Average annual outstandings

Financial performance

On April 1, 2025, the scope of the Caisse d'Epargne network expanded, with the acquisition of Bank Nagelmackers (Belgium) by Caisse d'Epargne Hauts de France.

The Caisse d'Epargne network's net banking income totaled €6.9 billion, an increase of +13.8% (or +€838 million) compared to 2024 (+12.3% excluding the change in the provision for home-purchase savings schemes).

The net interest margin[1] increased by +29.7% (+€804 million) to €3.5 billion (+26.7% excluding the change in the provision for home-purchase savings schemes). The net interest margin (NIM) on the customer activity recovered, boosted by a decrease in the cost of regulated and short-rate liabilities (+40 basis points), with outstandings up (+1.7%) and the continued rise in customer loan yields (+5 basis points) as well as the growth in outstandings (+1.5%). However, this context penalized the financial NIM on hedges and interbank assets.

Fees and commissions increased by +3.6% (+€121 million) to €3.5 billion, driven mainly by account management (+4.5%), means of payment (+4.2%), life insurance (+11.2%), loans (+2.9%) and centralization fees and commissions (+2.8%).

Income and expenses from other activities came to -€121 million (-€87 million), due to lower capital gains on investment property and a 2024 base effect concerning significant reversals of provisions for operational risk.

The operating expenses increased by 2.4% (-€100 million) to -€4.3 billion, due to the increase in payroll expenses (+3.9%). The other costs declined (-0.7%).

As a result, gross operating income stood at €2.6 billion for the 2025 fiscal year, up by +40.2% (+€738 million) compared to 2024. The cost/income ratio improved significantly to 62.6% (-7.0 points).

The Caisses d'Epargne's cost of risk, at -€837 million, increased by +30.9% (-€198 million), due to the increase in defaults, particularly in the retail, real estate, agri-food, healthcare, transport and automotive sectors. In the end, it reached 12.2% of the NBI *(vs.* 10.6% in 2024) and relative to loan outstandings it stood at 22 basis points at the end of 2025 (+5 basis points compared to 2024).

The Caisses d'Epargne contributed €1.8 billion to the Retail Banking and Insurance division's income before tax in 2025, up by +45.8% (+€550 million) compared to 2024.

Financial Solutions & Expertise (FSE)

As part of the VISION 2030 strategic plan, the Financial Solutions & Expertise division underwent a major transformation in 2025 with the strengthening of its international presence, illustrated by the integration of BPCE Equipment Solutions following the acquisition of Société Générale Equipment Finance (closing on February 28, 2025), which enabled Groupe BPCE to become the European leader in capital goods leasing. The FSE division also launched the new Housing and Real Estate business line, which aims to make BPCE the leading banking group throughout the real estate value chain.

At the same time, on January 1, 2025, the Sureties & Guarantees business line was transferred to the Insurance division.

In a still deteriorating economic environment, particularly in the real estate market, and with an increase in risks, the FSE division confirmed the resilience of its model with good commercial and financial performance in both Retail Banking and Corporate Services.

After a very good year in 2024, consumer loans maintained a high level of activity, particularly in revolving loans, which saw record production in 2025, up by +4% year-on-year. The Group consolidated its position as the leading banking player in France in consumer loans, with outstandings of almost €38 billion, up by +2% year-on-year.

Driven by the very high volatility of the domestic and international stock markets, in line with the unstable geopolitical context, the Securities business line supported the significant increase in the activity of the Group's individual investor clients, leading to a sharp increase in the volume of transactions (+8% *vs.* 2024) and the opening of securities accounts with Banques Populaires and Caisses d'Epargne.

The FSE division continued to support companies in France and abroad with +82% growth in total outstandings in Leasing, including +7% organic growth at BPCE Lease driven by equipment leasing (+10%). BPCE Lease recorded record production in 2025, driven by its international activities (Italy and Spain) and in the French Overseas Territories, while property leasing posted a -7% decline year-on-year, affected by a persistently sluggish commercial real estate environment. BPCE Equipment Solutions also recorded a very good level of production, with an acceleration towards the end of the year, resulting in an increase of +15% *vs.* 2024 (period from March to December post closing), mainly in Germany, the United States and Italy.

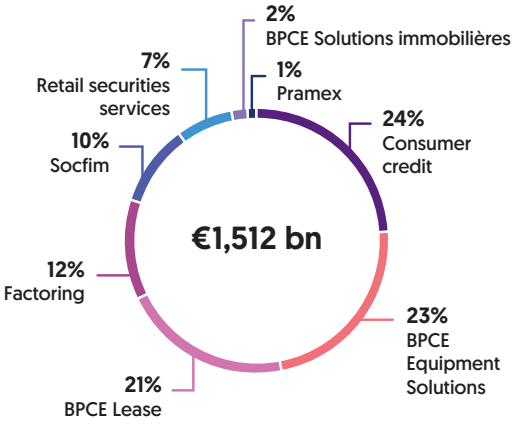
With 12 million invoices handled, BPCE Factor supported the changing working capital requirements of companies, both in their day-to-day business and as they grow. While factoring revenue was down slightly, commercial momentum remained good with an acceleration in the acquisition of new customers (+17% *vs.* 2024).

1 Fees and commissions on centralized savings have been restated for the NIM and included in fees and commissions.

Pramex, although penalized by the wait-and-see attitude of the market (uncertainty about French Direct Investments abroad), increased its fees (+5% *vs.* 2024), driven by its two activities of subsidiary management and mergers and acquisitions.

In a context of a real estate market still in crisis and in the midst of reconstruction, the FSE business lines concerned are adapting with resilience. As a result, Socfim's production increased by +7%, driven by the strong growth in the medium-to-long-term (+54% *vs.* 2024). BPCE Solutions Immobilières posted an increase in overall revenue of +2% *vs.* 2024, thanks to a positive dynamic in the Expertise and Tertiary activities.

Breakdown of revenues by FSE business line in 2025



The net banking income of the Financial Solutions & Expertise division, which amounted to €1.5 billion in 2025, was up +33% *vs.* 2024. Growth was driven by a scope effect linked to the consolidation of BPCE Equipment Solutions on March 1, but also by positive volume and price effects for the consumer loans (+12%) and leasing (+7%) businesses.

The operating expenses, impacted by the scope effect linked to the integration of BPCE Equipment Solutions, increased by +38%. However, they remain well under control (+1% *vs.* 2024 excluding scope effect). The cost/income ratio stood at 54.8%, an improvement of 2.1 points compared to 2024.

These good results led to an increase in gross operating income of 27%.

The +65% year-on-year increase in the cost of risk was mainly due to a scope effect on BPCE Equipment Solutions and an increase in risk related to the real estate crisis.

The net income attributable to equity holders of the parent amounted to €369 million at the end of 2025, up by 17% compared to 2024.

Insurance division

On January 1, 2025, the real estate surety and insurance expert Compagnie Européenne de Garanties et Cautions (CEGC) was integrated into Groupe BPCE's specialized insurance division. Previously, the sureties and guarantees business was part of the Financial Solutions & Expertise (FSE) division.

BPCE Assurances reached a major milestone in its development with the successful public issue of subordinated debt for a total of €680 million in October 2025 and has been awarded an A+ rating by Fitch Ratings.

In 2025, the solid commercial performance of the Insurance division made it possible to accelerate the implementation of the strategic plan. Revenue is thus one year ahead of the objectives set as part of the ambition to become the fourth largest insurer in France by 2030. This dynamic is illustrated by an 8% increase in premiums to €21 billion (+€1.5 billion), driven by the activity of the Banque Populaire and Caisse d'Epargne networks in all insurance business lines.

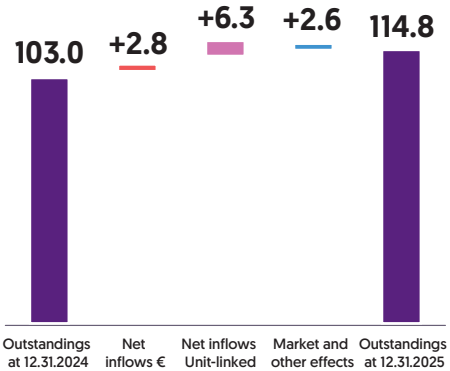
Life Insurance[1] posted revenue growth of 7%, amounting to €16.3 billion in 2025. This performance was mainly due to the success of the unit-linked (UL) offerings, as well as the positive impact of the subsidized interest rate transactions on the euro fund.

The Group has considerably strengthened its presence in individual retirement, with nearly one in six Individual Retirement Savings Plans opened in France opened with Banque Populaire or Caisse d'Epargne, to reach 1 billion in gross inflows by the end of 2025.

Launch in April 2025 of the Future Climate Savings Plan, enabling Banques Populaires and Caisses d'Epargne to offer young people a new medium-to-long-term savings product aimed at financing the ecological transition through SRI-labeled funds.

With growth of 11%, direct business life insurance outstandings reached a record level of €115 billion. This performance was driven by dynamic net inflows in both unit-linked products (+€6.3 billion) and euro funds (+€2.8 billion), thanks to the success of the marketing campaigns. As a result, the share of unit-linked products in outstandings rose by 2.9 points to 40.3%.

Change in direct business life insurance outstandings[1] *(in billions of euros)*



1 Excluding the reinsurance treaty with CNP Assurances

The revenue from borrower insurance amounted to €1.1 billion in 2025. The premiums for individual protection increased by 9% to €393 million, driven by both networks (Banque Populaire +5% / Caisse d'Epargne +14%) thanks to the Key Person offer for professionals and Family/Funeral products for individuals.

The Non-life Insurance business saw growth of 11% (+€236 million) to €2.5 billion across both networks, with significant increases of 11% in motor insurance and 15% in multi-risk home insurance. Across these two product ranges, the new offers, launched as part of the Innovate 2020 program, have found their customers and crossed the 2.5 million contracts mark. Similarly, digital sales for these two offerings represented 22%, one year ahead of the 2026 targets.

In addition, the Non-life Insurance business confirms its commitment concerning environmental footprints through its insurance offer with the introduction of the energy and climate transition discount, a progressive pricing system applied to multi-risk home insurance contracts, in order to reward policyholders' commitment to eco-responsibility.

In 2025, CEGC's revenue grew by a sustained 29%, reaching €495 million. This change was mainly attributable to individual loan guarantees (+40%), thanks to the recovery in the home loan activity.

The Insurance division's net banking income for the full year 2025 reached €959 million, up by 12% compared to 2024, due in particular to the strong contribution of non-life insurance thanks to price increases and a milder year in terms of climatic events, in contrast to the record rainfall observed last year.

The non-attributable expenses (IFRS 17) amounted to -€182 million, almost stable year-on-year (+1.5%).

The gross operating income rose sharply to €777 million.

Digital and Payments

In a 2025 economic environment marked by the slowdown in household consumption and a context of interest rates more favorable to refinancing, the Digital & Payments division confirmed the resilience of its model by achieving good performance in a more competitive market, by leading many projects as part of its new "VISION 2030" strategic plan. 2025 was a year full of major events, including:

- The continuation of the structuring and development work on Estreem, a future industrial electronic payment processor with the highest market standards, in partnership with BNP Paribas.
- The continued transformation of Oney in accordance with its roadmap, based on the development of its international activity (+10% compared to 2024), its business to consumer activity (+20% compared to 2024) as well as the overhaul of its digital customer pathways.
- The development and ramp-up of new payment offers (examples: the "Wero" offer[1] with 7.5 million transactions in December 2025, the "VoP"[2] offer, the real-time offers for electronic payment transactions, etc.).

The division's net banking income, which amounted to €936 million, increased by 7% compared to 2024. This increase was driven by volume growth, good margins and the launch of new payment offers. All activities pursued their development strategy, in synergy with the BPCE and Natixis networks.

At -€661 million, the operating expenses increased by only +2% compared to 2024, thanks to the implementation of efficiency plans deployed, while making the necessary investments to execute the Groupe BPCE strategic plan.

These good results led to a significant increase in gross operating income of +21%.

At -€134 million, the cost of risk increased with the growth in Oney's loan outstandings.

The income before tax amounted to €135 million, up by +€38 million compared to 2024.

Other networks

Banque Palatine

Banque Palatine contributed €136 million to the Retail Banking and Insurance division's income before tax, up by 31.8% (+€33 million) compared to 2024, driven by the increase of the net interest margin and a lower cost of risk. The net banking income increased by +7.5% (+€28 million), partially offset by the +5.1% increase in operating expenses (-€11 million).

1 Wero is a European mobile payment system intended to replace Giropay in Germany, Paylib in France, Payconiq in Belgium and Luxembourg, and iDEAL in the Netherlands. The service was launched on July 2, 2024 by the European Payments Initiative.
2 VoP (Verification of Payee): obligation to verify the bank details of any beneficiary of a transfer.

Income before tax	**775**	**759**	**17**	**2.2%**

The revenues of the Asset & Wealth Management division, reaching €3.5 billion, increasing by +3.3% compared to 2024 at constant exchange rates (+1.0% at current exchange rates).

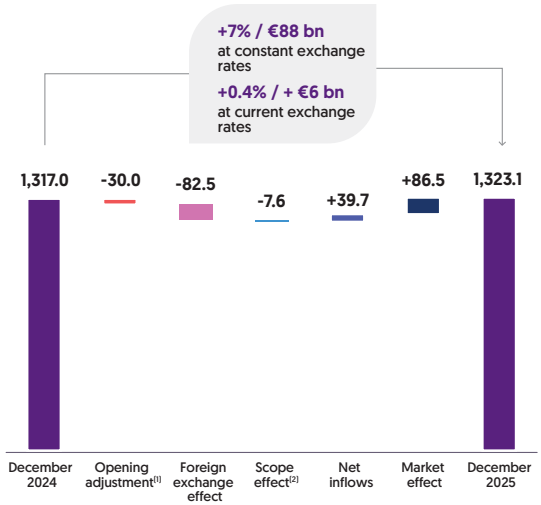
The operating expenses increased by +2.3% at constant exchange rates (stable at current exchange rates) and amounted to -€2.8 billion.

The gross operating income increased by 7.3% at constant exchange rates (+4.3% at current exchange rates) to €776 million.

Asset Management

The assets under management at the end of December 2025 amounted to €1,322.6 billion, up by +€5.6 billion or +0.4% at current exchange rates (+7.2% at constant exchange rates) compared to December 31, 2024, mainly due to very sustained inflows (+€39.7 billion), a favorable market effect (+€86.5 billion), offset by a negative currency effect (-€82.5 billion) and a methodological adjustment of the opening scope (-€30.5 billion).

Year-on-year change in assets under management
(in billions of euros)[1] [2]



The business line recorded net inflows of +€39.7 billion over 2025, mainly due to bond products:

- Active Fundamental recorded net inflows of +€26 billion. This was mainly due to strong inflows on bond products at Loomis and DNCA.
- Solutions reported net inflows of +€12.7 billion, mainly in diversified products and equities at Solutions US.
- Ostrum Asset Management posted net outflows of +€1.8 billion mainly in life insurance products (+€1.6 billion).
- Private Assets posted inflows of -€1 billion, mainly in real estate products at AEW CM.

The average outstandings at €1,183.2 billion at December 31, 2025 were up (+8%) compared to 2024 in constant euros. Excluding Ostrum Asset Management, the average outstandings amounted to €802.6 billion, up by +9.5% compared to 2024.

The rate of return on outstandings including Ostrum Asset Management reached 24.8 basis points in 2025, down by -1.2 basis points compared to 2024. Excluding Ostrum Asset Management, the rate of return on outstandings reached 34.6 basis points, down -2.1 basis points compared to 2024.

In 2025, the NBI from Asset Management amounted to €3,414 million, up by +€107 million (+3.2%) compared to 2024 at constant exchange rates.

This increase was driven by strong growth in fees and commissions on outstandings (+€82 million), mainly at Loomis, Distribution and DNCA, and in outperformance fees (+€29 million), mainly at DNCA and AEW CM, partially offset by lower financial revenues with an unfavorable currency effect and lower revenues from seed (on Private Equity).

The operating expenses amounted to -€2,638 million, up by -53 million (+2.0%) compared to 2024 at constant exchange rates.

This controlled growth in expenses was driven by personnel costs, which increased due to the growth in personnel and revenues, partially offset by savings on operating expenses.

1 Opening adjustment: methodological adjustment of the opening limit with no impact on revenues reflecting NIM's new AuM reporting policy.
2 Asset management scope effect: Exit of AUM following the disposal of MV Credit, transfer of Dorval to Wealth Management, acquisition of Belmont and disposal of the Overlay business to Edward Jones.

Wealth management

In 2025, the NBI from Wealth Management amounted to €127 million, up by +6.7% (+€8 million) compared to 2024, with an increase in management fees and commissions (+€12 million), partially offset by a decrease in outperformance fees and commissions (-€1 million) and net interest income (-€3 million).

The operating expenses amounted to -€126 million, up by +6.8% (-€8 million) compared to 2024, including a -€4 million effect on the Dorval scope and -€3 million on other operating expenses.

5.4.6 Corporate & Investment Banking (CIB)

In 2025, the net banking income of Corporate & Investment Banking amounted to €4,817 million, up by 10.1% compared to 2024 at constant exchange rates, driven by the commercial dynamism of Global Markets activities and market volatility in the first half of 2025.

Global Markets revenues totaled €2,352 million in 2025, an increase of +15.3% compared with 2024 at constant exchange rates.

At €1,641 million in 2025, the revenues from Interest rate, Foreign exchange, Loan, Commodities and Short-term credit facilities activities increased by 15.1% compared to 2024 at constant exchange rates. By segment, we note the following changes:

- the Macro activities (Interest rate, Foreign exchange and Commodities) increased by 10.6% at constant exchange rates, benefiting from strong commercial activity;
- the revenues of Credit Markets activities increased by 3.8% at constant exchange rates, driven by all sub-activities;
- lastly, driven by commercial activity, the revenues from Global Securities Financing (notably Repo), split 50/50 between Fixed Income and Equity, increased by 39.7% at constant exchange rates.

With revenues of €689 million, the Equity activities were up by nearly 15.3% at constant exchange rates. The growth was mainly driven by Global Securities Financing. The revenues from Equity Derivatives and activities in partnership with Investment Banking relating to Strategic Equity Capital Markets were stable year-on-year.

With €644 million in revenues, Investment Banking and M&A posted an increase of 4.9% at constant exchange rates in 2025. In a global M&A market that recovered slightly in the fourth quarter, mainly internationally for large transactions, the M&A activity increased by 4.8% at constant exchange rates. Acquisition & Strategic Finance posted revenue growth of 2.8% at constant exchange rates, driven by momentum in primary activities, particularly in the Acquisition Finance business line. The Strategic Equity Capital Markets activity generated revenues up 1.0% at constant exchange rates, driven by the Strategic Equity Transaction activity. The Debt Capital Markets activity saw significant revenue growth of 15.5% at constant exchange rates compared to 2024.

The revenues of the Financing activities increased by +2.7% compared to 2024 at constant exchange rates, reaching €1,785 million. Revenues from Real Asset origination and syndication activities were up by +26.3% compared to 2024, driven by the recovery in the real estate sector and the dynamism of infrastructure and energy financing and Aviation activities. In 2025, the revenues from the financing portfolio, impacted by 2024 base effects, decreased by 2.6% at constant exchange rates. The revenues of the Global Trade activity were up by +1.0% at constant exchange rates, driven by the structured solutions activities and the client account management activity, as well as by a good performance in Trade Finance.

In 2025, the operating expenses of Corporate & Investment Banking amounted to -€3,186 million, up by +12.1% at constant exchange rates compared to 2024, impacted by IT investments to support growth.

Gross operating income totaled €1,630 million, up +6.4% compared with 2024 at constant exchange rates. The cost/income ratio stood at 66.2% in 2025, a +1.1 point increase compared to 2024.

At -€228 million, the cost of risk was improved by +€54 million (-18.2%) compared to 2024, mainly impacted by individual provisions (S3).

The income before tax amounted to €1,430 million, up by +12.1% compared to 2024 at constant exchange rates, impacted by the increase in revenues and the decrease in the cost of risk.

5.4.7 Corporate center

	Corporate center			
			Chg. 2025/2024 pf	
in millions of euros	**2025**	**2024 pf**	*€m*	*%*
Net banking income	(137)	(23)	(114)	ns
Operating expenses	(889)	(834)	(55)	6.6%

The Corporate center generated income before tax of -€1,104 million in 2025 *(versus* -€902 million in 2024). In 2025, the Corporate center included the following activities:

- the contribution of the Crédit Foncier group increased by +€12.9 million year-on-year. The amortization of the portfolio related to the discontinuation of activities is continuing. Expenses fell and the cost of risk remained under control;
- the contribution of BPCE International decreased by -€22.6 million year-on-year. This decrease in revenues was mainly due to interest rate and volume effects on its activities;
- investment activities (for the portion not reallocated to the pools) posted a decrease in income before tax: at -€17 million in 2025 compared to -€10 million in 2024.

Lastly, this division includes the contribution of Groupe BPCE's central institution, the non-core Natixis division, companies providing resources and real estate operating companies.

At December 31, 2025, the consolidated balance sheet of Groupe BPCE totaled €1,645.7 billion, up +3.9% compared with December 31, 2024.

Changes in significant consolidated balance sheet items

The main asset items are loans and advances to customers (53.4% of total assets at December 31, 2025) and banks (7.4%), financial assets at fair value through profit or loss (14.6%), cash and net balance of accounts with central banks (8.1%), and insurance activities investments (7.9%). Taken together, these items accounted for nearly 91.4% of the Group's assets.

Cash and amounts due from central banks

Cash and amounts due from central banks amounted to €133.9 billion at December 31, 2025, up by +0.6% compared to December 31, 2024 (€133.2 billion).

Financial assets at fair value through profit or loss

These financial assets include negotiated transactions for trading. Total financial instruments measured at fair value through profit or loss increased by +€9.1 billion compared to December 31, 2024. This change reflects a disparity between:

- the increase in debt securities (+€12.1 billion), equity instruments (+€0.7 billion) and security deposits paid (+€1 billion);
- to the detriment of loans and trading derivatives (-€4.6 billion).

Loans and advances to banks

Loans and advances to banks (net of provisions) amounted to €122.4 billion at December 31, 2025, up by +€6.5 billion compared to December 31, 2024. They are divided between CDC centralization accounts (+€2.9 billion), term repurchase agreements (+€1.9 billion), and security deposits (+€1.4 billion). Non-performing loan outstandings and recognized impairments were relatively stable over the period.

Loans and advances to customers

The net outstanding loans and advances due from customers amounted to €879.4 billion in 2025, up by +€27.6 billion over the fiscal year (+3.2%), driven by the entry of BPCE Equipment Solutions and Nagelmackers for +€16.6 billion. The main changes concerned equipment loans (+€14.6 billion), finance leases (+€8.6 billion) and home loans (+€3.1 billion).

Insurance activities investments

These financial assets consist of financial investments at fair value through profit or loss and at fair value through other comprehensive income, investment property, and loans and advances at amortized cost. This portfolio totaled €129.6 billion on December 31, 2025 *versus* €115.6 billion in fiscal year 2024. The change in financial assets from insurance activities was mainly due to the financial investments in unit-linked products for +€8.1 billion. This increase was also due to the rise in non-standard debt instruments for +€5.1 billion.

Changes in significant consolidated balance sheet liability items

Financial liabilities at fair value through profit or loss

On the liabilities side, this portfolio consists of debt instruments carried at fair value at the reporting date, with an offsetting entry on the income statement. At December 31, 2025, it represented €233.8 billion, up compared to December 31, 2024 (€219 billion). This change was due to an increase in debt securities recognized as non-subordinated debt securities (+€11.1 billion) and short sales (+€3.9 billion), offset by a decrease in repurchase agreements (-€2.3 billion).

Amounts due to banks

Amounts due to banks consist mainly of term borrowings and to a lesser extent current accounts. They amounted to €90.9 billion, an increase of €21 billion over the fiscal year (+30%). This change includes the increase in loans and term accounts with banks (+€14.1 billion) and on repurchase agreements (+€6 billion).

Amounts due to customers

Amounts due to customers mainly comprise regulated savings accounts, current accounts in credit, and customer accounts. They amounted to €757.3 billion at December 31, 2025, an increase of +€34.2 billion compared to December 31, 2024. This increase can mainly be broken down as follows:

- an increase in investments in special account products (+€2 billion), driven by an increase of +€1.1 billion in the *Livret A* passbook savings accounts and +€4.9 billion in the *Livret de Développement Durable* (LDD) and Epargne Populaire passbook savings accounts, offsetting a -€4 billion decline in inflows into regulated home savings plans and accounts;
- an increase in other customer accounts (+€12.9 billion). They are divided between demand loans and term loans. The change mainly relates to term accounts in credit, which increased by +€13.6 billion compared to December 31, 2024;
- an increase in current accounts of +€19 billion.

Debt Securities

This category mainly includes bonds, certificates of deposit, treasury notes and commercial paper, senior non-preferred debt as well as negotiable debt securities (TCN) and interbank market securities (TMI). These debts amounted to €283 billion at December 31, 2025, down by -€21.9 billion compared to the 2024 fiscal year. This change includes a decrease in the portion of bonds (-€5.9 billion), a decrease in treasury notes and commercial paper (-€15.9 billion), a decrease in certificates of deposit (-€4.7 billion), an increase in non-preferred senior debt (+€3.8 billion), and an increase in negotiable debt securities and interbank market securities (+€1 billion).

Liabilities related to insurance policies

This category includes technical liabilities relating to insurance contracts issued. These debts amounted to €130.1 billion on December 31, 2025, an increase of +€12.4 billion. This change is due to +€11.8 billion from insurance contracts with direct participation features, primarily in life insurance, accounted for under the VFA model. Insurance liabilities, as well as insurance financial investments, include IFRS 17 technical provisions, whose value is correlated with that of financial assets, driven by strong inflows on participating policies as well as by the revaluation of unit-linked products.

Shareholders' equity

Shareholders' equity totaled €90.3 billion on December 31, 2025 compared to €87.8 billion on December 31, 2024. This increase of +€2.5 billion includes in particular:

- the net income for the period: +€4.1 billion;
- the distribution of dividends for -€0.8 billion (of which -€0.3 billion from the Banques Populaires network and -€0.4 billion from the Caisse d'Epargne network);
- the issuance of perpetual deeply subordinated notes and preference shares: +€0.3 billion;
- the changes in gains and losses recognized directly in other comprehensive income: -€1.1 billion.

5.5 BPCE financial data

5.5.1 BPCE results

BPCE's income is calculated after restating the contribution of non-consolidated entities.

In 2025, the transition from Groupe BPCE's net income attributable to equity holders of the parent to BPCE can be broken down as follows:

in millions of euros	**2025**
Net income attributable to equity holders of Groupe BPCE	**4,061**
Non-consolidated entities or consolidated under a different method[1]	(2,308)
Other items	81
Net income, BPCE share	**1,834**

(1) Including the Banques Populaires, Caisses d'Epargne and their consolidated subsidiaries.

BPCE posted net income up by +7.1% to €1,834 million in 2025.

Non-controlling interests	0.7	0.4	0.3	88.2%
Total Liabilities	**981.4**	**940.8**	**40.6**	**4.3%**

At December 31, 2025, the consolidated balance sheet of BPCE totaled €981.4 billion, up +4.3% compared with December 31, 2024.

The change in the balance sheet reflects the increase in assets at amortized cost (+€33.5 billion of which €15.5 billion related to the acquisition of BPCE ES) and the financial investments of the insurance activities (+€13.8 billion), partially offset by the decrease of cash and amounts due from central banks (-€13.4 billion).

Shareholders' equity amounted to €29.8 billion at December 31, 2025 compared to €29.7 billion at December 31, 2024. This +€0.1 billion change was primarily due to:

- net income for the period: +€1.9 billion;
- a capital increase: +€1.3 billion;
- dividends paid: -€1.2 billion;
- the issuance and redemption of perpetual deeply subordinated notes and preference shares: -€0.4 billion;
- interest paid on perpetual deeply subordinated notes and preferred shares: -€0.2 billion;
- changes in gains and losses recognized directly in other comprehensive income: -€1.3 billion.

5.6 Investments

5.6.1 In 2025

After signing the Memorandum of Understanding on June 12, 2025, Groupe BPCE signed an agreement with Lone Star Funds on August 1, 2025 for the acquisition of 75% of the shares of novobanco.

On October 29, 2025, the Portuguese State and the Portuguese Banks Resolution Fund joined the acquisition agreement, so that the transaction now concerns the acquisition of the entire share capital of novobanco.

The project is expected to be completed in the second quarter of 2026, subject to regulatory approvals.

5.6.2 In 2024

On April 11, 2024, Groupe BPCE announced the signing of a memorandum of understanding with Société Générale to acquire the activities of Société Générale Equipment Finance (excluding the activities of SGEF in the Czech Republic and Slovakia).

Following approval from the competent regulatory and competition authorities, on February 28, 2025, BPCE SA acquired all activities of Société Générale Equipment Finance, now BPCE Equipment Solutions.

5.6.3 In 2023

Groupe BPCE made no material investments (*i.e.* investments of more than €1 billion requiring the approval of the qualified majority of the Supervisory Board) during the fiscal year.

5.7 Post-balance sheet events

See Notes 1.3 "Significant events" and 1.4 "Events after the reporting period" to the consolidated financial statements of Groupe BPCE.

5.8 2026 economic outlook

Growth still limited in France

The year 2026 began with a radical geopolitical break with the US military intervention in Venezuela. This military intervention appears to be the United States' clear manifestation of its desire to strategically protect the Western Hemisphere under its tutelage, against China and Russia's influence zones. The geopolitical uncertainty is thus far from dissipating, whether it is the war in Ukraine, the risk of Taiwan being annexed by China, Sino-Japanese tensions, US expansionist designs on Greenland.

The growing instability of the situation in the Middle East turned into an American-Israeli military operation in Iran on February 28. This operation has already had a significant impact, notably on Brent crude oil and gas prices. A week after the start of the conflict, the latter have risen by nearly $15 and over 50% respectively. The markets are mainly pricing in a suddenly heightened uncertainty, with stock market indices plummeting (-5% for the Stoxx600, -6% for the CAC 40 and -2% for the DJ). However, it is too early to talk about a possible supply shock due to alternative production and stock levels. The economic impact will depend on the duration and intensity of the conflict. The macroeconomic risk is very real, with the seeds of a stagflationary scenario combining rising prices and falling activity. By way of illustration, a $10 rise in the price of oil causes inflation to rise by 0.3 points and GDP to fall by 0.1 points in France in the first year[1]. The shape and outcome of the conflict leaves a wide universe of possibilities. The latter depends, on the one hand, on the Iranian regime's ability to continue to carry out significant strikes on the oil and gas infrastructures of the countries bordering the Persian Gulf, and to make the Strait of Hormuz impassable in the long term and, secondly, the ability of Israel and the United States to quickly neutralize Iran's long-range strike capabilities and bring down the current regime. To date, Iran's strategy of regionalizing the conflict has not achieved the expected effects.

However, trade tensions linked to the strengthening of protectionism have gradually eased since the second half of 2025, leading to a normalization of supply chains. Global growth is expected to remain resilient, albeit slower. It is expected to go from 3.2% in 2025 to 2.9% in 2026 according to the OECD, due in particular to the cyclical momentum already established.

Subject to a short conflict in the Middle East, lasting no more than a few weeks, the economic outlook for 2026 is supported by continued fairly favorable monetary conditions on both sides of the Atlantic. Lower disinflation than expected due to higher oil prices would be accompanied by an activity to be supported. Another supporting factor is the widespread use of debt, particularly public debt, in response to increased efforts in the field of defense, as shown in Europe by the impact of the German stimulus on defense and infrastructure investment.

More specifically, the United States is expected to see its pace of activity slow down (at +1.8%). Activity is also expected to slow in China (+4.8%, after +5.0%) and the Eurozone (+1.2%, after +1.5%), with this being driven more by Germany (+1.3%, after +0.3%) than by Spain (+2.2%, after +2.9%) and Ireland. The emerging countries are likely to remain on the same path as in 2025 (+4.2%). US growth is expected to continue to benefit from the surge in investment in AI and the support provided by the preponderant consumption of the wealthiest households, despite the sharp slowdown in employment. China will continue to place its economic trajectory within the framework defined fifteenth Five-Year Plan (2026-2030), which reaffirms the objectives of strategic autonomy, strengthening of the domestic market, and industrial modernization, especially through innovation and AI. However, it is expected to benefit a little less from its desire for increasing import substitution and the hyper-competitiveness of its exports, due to the growing difficulty in circumventing customs tariffs, even though they have risen less than announced. Excluding the impact of Ireland's specific performance, activity in the Eurozone is expected to improve in 2026, to a level close to potential growth (+1.2%), in a context where inflation should remain anchored slightly below the 2.0% target. Growth is expected to be more supported by the gradual resuscitation of domestic demand and a slightly positive fiscal stimulus, with the contribution of foreign trade remaining negative, as in 2025.

In 2026, France is likely to resist, as in the previous year, the continued political and budgetary uncertainty. GDP is expected to grow moderately by +1.0%, after +0.9% in 2025. Inflation, which was defeated by central banks without causing a recession, is expected to be below the Eurozone average throughout the year. It is expected to rise slightly on an annual average of +1.3% after +0.9% in 2025, due to the modest economic recovery and now much more limited wage increases. Growth is expected to benefit from global and European economic momentum, weak inflation and energy prices, the impact of the German stimulus on defense and infrastructure investment, and the delayed effects of monetary easing. However, domestic demand will still be structurally hampered by the need to better control the drift in public accounts, which are increasingly constrained by the rise in the debt burden and by the introduction of a European excessive deficit procedure, even if this adjustment seemed very incomplete. The public deficit is likely to remain very high in 2026, around 5.2% of GDP. In addition, a fiscal shock, already perceptible in 2025, could shake activity and employment.

However, the savings rate of French households is likely to decline very gradually, although from an extremely high level in 2025. After 18.3%, it is expected to decline moderately to 18.1% in 2026. This trajectory is believed to be motivated by fears of a foreseeable rise in unemployment and taxes. Indeed, the rise in specific concerns such as political uncertainty or concern about budgetary imbalances has in part replaced the feeling of deterioration in purchasing power, particularly of financial assets, with the past surge in inflation. The recovery in household consumption is therefore likely to be limited, growing slightly more than in 2025, in the absence of a significant increase in wage incomes. In particular, household purchasing power is expected to increase slightly less than in 2025, due to the rebuilding of productivity and margins by companies and higher growth in taxes than in incomes. Similarly, the wait-and-see attitude linked to renewed uncertainty about public policy, the continued high long-term rates and the lack of strength in demand is likely to push non-financial corporations to dampen the expected rebound in investment in 2026, after its virtual stagnation the previous year. As a result of a carry over effect and of the lower increase in imports, foreign trade is expected to further contribute to the increase in activity. The unemployment rate could reach 7.9%, after 7.% in 2025, due to the mechanical recovery in productivity in the market branches.

1 Working document no. 2017/04 - "The Mésange macroeconometric model: re-estimation and new features"

French long-term rates still at risk

The global situation in terms of prices and activity, both in many emerging market economies and most advanced economies is likely to perpetuate monetary easing policies, with the exception of Japan. The less intense than expected inflationary impact of the tariff war and concerns about business due to the conflict in the Middle East would be the main explanations. The Fed is likely to choose to resolve the dilemma of its dual mandate (inflation and employment) by reducing its key rates by 75 basis points, in increments of 25 basis points, in the face of sluggish employment and rising unemployment. Considering the rise in prices from customs tariffs to be temporary, it is expected to seek to steer key rates towards a monetary neutrality floor, *i.e.* the 2.75%-3.00% range, despite a foreseeable peak in inflation around mid-2026, at the same time as the change of central bank president. Unless there is a further sharp depreciation of the dollar against the euro, the ECB will probably maintain its deposit facility rate at 2.0%, located in the middle of the monetary neutrality range (1.75%-2.25%), close to the inflation target.

The slope of the interest rate curve is expected to continue to reform. Long-term rates are likely to show greater downward inertia, especially in France, due to an increase in the risk premium linked to the drift in public spending, the scale of debt and the political difficulty of carrying out structural reforms. Indeed, the general demand for public and private capital is expected to increase, due to a coming period of strong debt issuance (increased competition from debtors) and, more specifically in Europe, an increased need for German financing. Thus, in the United States, 10-year yields could average 4.32% per year, due to the Fed's continued monetary easing. Conversely, the 10-year OAT is expected to rise, due to the ECB's status quo and a risk of further deterioration in French public debt. The 10-year OAT is likely to be around an annual average of 3.73%, after 3.37% in 2025, with a spread of more than 76 basis points with the German Bund.

As usual, this economic and financial outlook is subject to uncertainties. As we enter 2026, and in light of recent events, they are primarily concerned with developments in the conflict in the Middle East. Based on the information available on March 6, they build on the assumption that the conflict will be short-lived, lasting no more than a few weeks, with no escalation due to a chain of alliances. Under this assumption, inflation forecasts would be revised only slightly upwards and, as a corollary, growth forecasts very slightly downwards.

Outlook for the Group and its business lines

In 2026, the Group will continue to execute the first phase of its VISION 2030 strategic project, launched in June 2024, with commercial, financial and non-financial objectives for the end of 2026 [Complete document available on the website Groupe BPCE's strategic project: VISION 2030]. This plan is resolutely focused on growth and the diversification of our activities in three major circles in France, Europe and the world. Against a backdrop of accelerating environmental, technological, demographic and geopolitical transitions that are transforming society, the project outlines the three main strategic priorities of the Group and its business lines:

- Forging our growth for the long-term;
- Giving our clients trust in their future;
- Expressing our cooperative values in all territories.

The announcement in 2025 of transformative projects for the Group is an illustration of the movement initiated:

- Launch of a joint technological platform project for the Banques Populaires and the Caisses d'Epargne. This project provides an ambitious response to new technological challenges and makes it possible to take full advantage of economies of scale. It will accelerate investments, optimize the service offered to 35 million customers, and enrich the day-to-day lives of the Group's employees, thus supporting the development of retail banking in France. This project will respect the identity of the two banking networks, Banque Populaire and Caisse d'Epargne.
- After announcing their strategic partnership project in the payments sector in June 2024, BNP Paribas and BPCE finalized their agreement in February 2025, in line with the planned schedule, thus creating Estreem, the new French leader in payment processing. The ambition is to place Estreem among the Top 3 processors in Europe.
- With the creation in March 2025 of BPCE Equipment Solutions, as a result of the acquisition of Société Générale Equipment Finance (SGEF), BPCE became the European leader in capital goods leasing and a leading global player with operations in 24 countries.
- The launch in March 2025 of a new Housing & Real Estate business line. This initiative aims to make BPCE the leading banking group in the entire real estate value chain, for everyone and for all needs. The business line will develop three strategic priorities: "Offering more housing in all regions"; "Promoting access to housing for the French and the enhancement of their wealth"; and "Supporting households in the renovation and adaptation of their home".
- The proposed acquisition of novobanco with the signing on August 1, 2025 of a Sale and Purchase Agreement to acquire 75% of novobanco's share capital from Lone Star Funds, and on October 29, 2025 of an agreement with the Portuguese State and the Portuguese Banks Resolution Fund to acquire their minority stakes (11.5% and 13.5%, respectively). With this project, BPCE would become the sole shareholder of Portugal's fourth largest bank and make Portugal the Group's second largest domestic retail banking market.

These projects, combined with an overall development dynamic, will contribute in 2026 to the growth of the Group and its business lines as well as to the achievement of its financial and non-financial trajectory.

5.9 Alternative performance indicators Article 223-1 of the AMF General Regulation

Notes on methodology

Alternative Performance Indicators	Definition	Rationale for use
Underlying net banking income	Net banking income restated for exceptional items. Details of exceptional items are provided in the table below.	Measurement of Groupe BPCE's net banking income excluding items that do not reflect operating performance or significant non-recurring items.
Underlying operating expenses	Operating expenses restated for exceptional items. Details of exceptional items are provided in the table below.	Measurement of the level of operating expenses.
Underlying cost/ income ratio	Ratio calculated based on net banking income and operating expenses excluding exceptional items.	Measurement of the Group's operating efficiency.
Cost of risk	"Cost of credit risk" item in the reportable consolidated income statement.	Measurement of the level of risk.
Exceptional items	Non-recurring items of a significant amount or items that do not reflect operating performance, in particular transformation and restructuring costs. Details of exceptional items are provided in the table below.	
Underlying net income attributable to equity holders of the parent	Net income attributable to equity holders of the parent restated for exceptional items.	Measurement of Groupe BPCE's income excluding non-recurring items of a significant amount or items that do not reflect operating performance.

2025 and 2024 results: reconciliation of reported data to alternative performance measures

in millions of euros		Net banking income	Operating expenses	Cost of risk	Share in net income of associates	Gains or losses on other assets	Income before tax	Net income attributable to equity holders of the parent

6 Financial Report

Groupe BPCE and BPCE scopes of consolidation 608

6.1 IFRS consolidated financial statements of Groupe BPCE as at December 31, 2025 *609*
6.1.1 Consolidated income statement 609
6.1.2 Other comprehensive income 610
6.1.3 Consolidated balance sheet 611
6.1.4 Statement of changes in equity 612
6.1.5 Consolidated cash flow statement 614
6.1.6 Notes to the financial statements of Groupe BPCE 615

6.2 Statutory auditors' report on the consolidated financial statements *789*

6.3 IFRS Consolidated financial statements of BPCE at December 31, 2025 *797*
6.3.1 Consolidated income statement 797
6.3.2 Other comprehensive income 798
6.3.3 Consolidated balance sheet 799
6.3.4 Statement of changes in equity 800
6.3.5 Consolidated cash flow statement 802
6.3.6 Notes to the BPCE financial statements 803

6.4 Statutory auditors' report on the consolidated financial statements *955*

6.5 BPCE management report *963*
6.5.1 Significant events of 2025 963
6.5.2 Company position and activity in 2025 966

6.6 BPCE individual financial statements *972*
6.6.1 Balance sheet and off-balance sheet items 973
6.6.2 Notes to the individual annual financial statements 975

6.7 Statutory auditor's report on the financial statements *1018*

6.8 Controls of accounting and financial reporting quality *1022*
6.8.1 Roles and responsibilities in preparing and processing accounting and financial information 1022
6.8.2 Production processes for accounting and financial data 1024
6.8.3 Accounting and financial data control process 1025

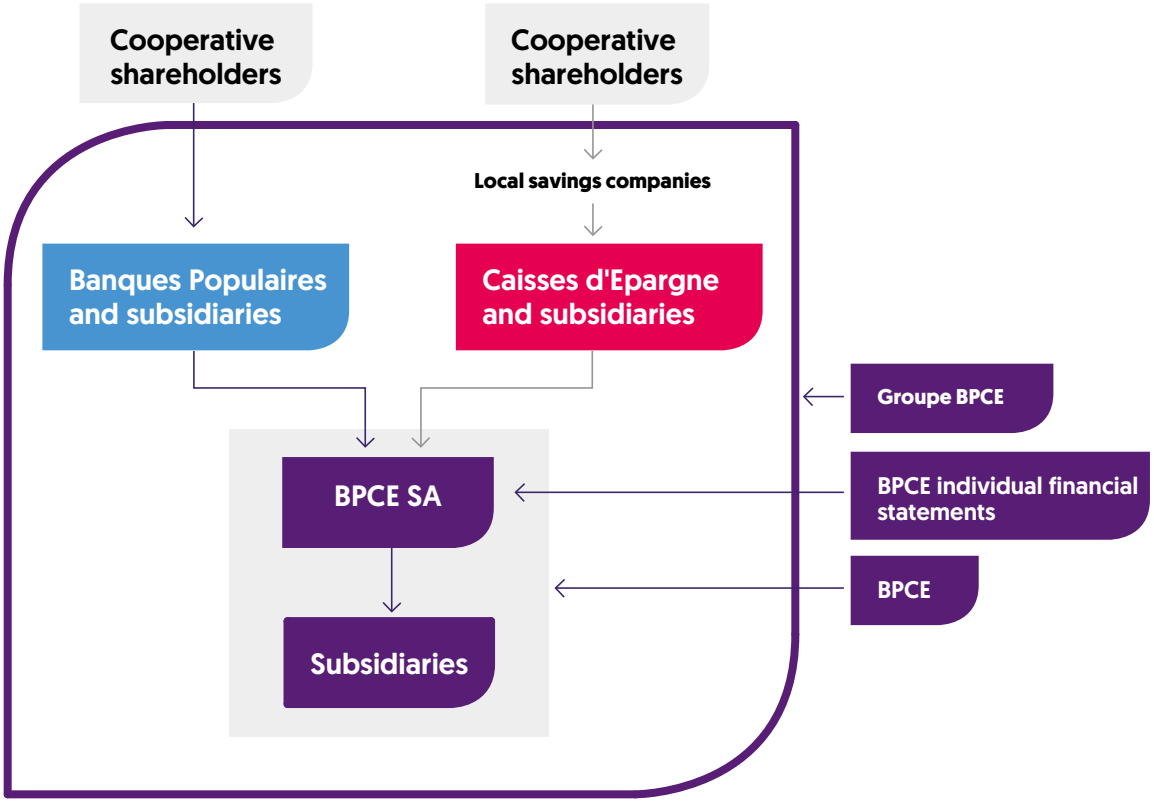
6.9 Persons responsible for auditing the financial statements *1028*
6.9.1 Statutory audit system 1028
6.9.2 Statutory Auditors of Groupe BPCE 1029

Groupe BPCE and BPCE scopes of consolidation

The scope of consolidation of both groups, organized around the central institution, is presented in the diagram below.

In addition to BPCE, Groupe BPCE includes the Banques Populaires, the Caisses d'Epargne and their respective subsidiaries.

BPCE includes BPCE SA and its subsidiaries. The main difference in terms of consolidation perimeter stems from the contributions of the parent companies, which do not contribute to BPCE's net income.



6.1 IFRS consolidated financial statements of Groupe BPCE as at December 31, 2025

6.1.1 Consolidated income statement

in millions of euros	*Notes*	2025 fiscal year	2024 fiscal year
Interest and similar income	*4.1*	50,697	56,997

(1) Including changes (excluding cash flows) in insurance and reinsurance assets and liabilities.

(2) Net income (loss) from financing activities include interest paid on subordinated debt for +€720 million (+€767 million in 2024). From the 2024 fiscal year, the interest paid on the subordinated debt has been isolated on the "Net income (loss) from financing activities" line.

(3) The net increase (decrease) arising from transactions with shareholders include:
- Net changes in capital and associated reserves of the Banques Populaires and Caisses d'Epargne amounting to +€64 million (+€90 million in 2024);
- Impact of dividend payouts of -€813 million (-€916 million in 2024);
- The issue by BPCE Assurance of one subordinated external debt (nominal +€280 million less issuance costs of -€2 million) in 2025.
- Interest paid on deeply subordinated notes issued by BPCE Assurance for -€3 million.

(4) Other cash flow increases (decreases) generated by financing activities mainly include the redemptions of subordinated notes for -€2,333 million (-€2,534 million in 2024), the issue of new debt for +€2,427 million (+€1,601 million in 2024) and the payment of interest on the subordinated debt for -€720 million.

(5) The current accounts with overdrafts do not include Livret A, LDD and LEP savings accounts centralized with Caisse des Dépôts et Consignations.

Note 1 General framework

1.1. Groupe BPCE

Groupe BPCE comprises the Banque Populaire network, the Caisse d'Epargne network, the BPCE central institution and their subsidiaries.

Two banking networks: the Banques Populaires and the Caisses d'Epargne

Groupe BPCE is a cooperative group whose cooperative shareholders own the two retail banking networks: the 14 Banques Populaires and the 15 Caisses d'Epargne. Each of the two networks owns an equal share in BPCE, the Group's central institution.

The Banque Populaire network consists of the Banques Populaires and the mutual guarantee companies which grant them the exclusive benefit of their guarantees.

The Caisse d'Epargne network consists of the Caisses d'Epargne and the local savings companies (LSCs).

The Banques Populaires are wholly-owned by their cooperative shareholders.

The capital of the Caisses d'Epargne is wholly-owned by the LSCs. Local savings companies are cooperative structures with open-ended share capital owned by cooperative shareholders. The LSCs are tasked with coordinating the cooperative shareholder base, in line with the general objectives defined by the individual Caisse d'Epargne with which they are affiliated, and cannot perform banking transactions.

BPCE

BPCE, a central institution as defined by the French Banking Law and a credit institution licensed to operate as a bank, was created pursuant to act No. 2009-715 of June 18, 2009. BPCE was incorporated as a French limited liability company governed by a Management Board and a Supervisory Board, whose share capital is owned jointly and equally by the 14 Banques Populaires and the 15 Caisses d'Epargne.

BPCE's corporate mission embodies the continuity of the cooperative principles underlying the Banques Populaires and the Caisses d'Epargne.

Specifically, BPCE represents the interests of its various affiliates in dealings with the supervisory authorities, defines the range of products and services offered by them, organizes depositor protection, approves key appointments of company directors and oversees the smooth operation of the Group's institutions.

As a holding company, BPCE is the head entity of the Group and holds the joint ventures between the two networks in Retail Banking and Insurance, corporate banking and financial services, and their production units. It defines the Group's corporate strategy and growth and expansion policies.

The network and BPCE's main subsidiaries are organized around two core business lines:

- Retail Banking and Insurance, which includes the Banque Populaire network, the Caisse d'Epargne network, the Financial Solutions & Expertise division (including factoring, consumer loans, leasing, sureties & financial guarantees, and the "retail securities" business), the Digital & Payments (integrating the payments subsidiaries and the Oney group), Insurance (now including sureties and financial guarantees) divisions, and the Other networks;
- Global Financial Services combining Asset & Wealth Management (Natixis Investment Managers and Natixis Wealth Management) and Corporate & Investment Banking (Natixis Corporate & Investment Banking).

In respect of the Group's financial functions, BPCE is responsible, in particular, for the centralized management of surplus funds, for the execution of any financial transactions required to develop and fund the Group, and for choosing the most appropriate counterparty for these transactions in the broader interests of the Group. BPCE also provides banking services to the other Group entities.

1.2. Guarantee mechanism

The purpose of the guarantee and solidarity system is, in accordance with Articles L. 511-31, L. 512-107-5 and L. 512-107-6 of the French Monetary and Financial Code, to guarantee the liquidity and solvency of the Group and its associates, as well as to organize financial support within the Group.

BPCE is responsible for taking all necessary measures to ensure the solvency of the Group and each of the networks and to organize financial solidarity within the Group. This financial solidarity is based on legislative provisions establishing a legal principle of solidarity obliging the central institution to restore the liquidity or solvency of affiliates in difficulty and/or all affiliates of the Group. By virtue of the unlimited nature of the principle of solidarity, BPCE is entitled at any time to ask any one or several or all of the affiliates to contribute to the financial efforts that may be necessary to restore the situation, and may, if necessary, mobilize all the cash and equity capital of the affiliates in the event of difficulty for one or more of them.

In the event of difficulties, BPCE will have to do everything necessary to restore the financial position and may in particular make unlimited use of the resources of any, several or all affiliates, or implement the appropriate mechanisms of internal solidarity of the Group and by calling on the guarantee fund common to the two networks of which it determines the rules of operation, the triggering conditions, in addition to the funds of the two networks as well as the contributions of the affiliated institutions for its endowment and reconstitution.

BPCE manages the Banque Populaire Network Fund, the Caisse d'Epargne Network Fund and the Mutual Guarantee Fund.

The Banque Populaire Network Fund was formed by a deposit made by the Banques Populaires of €450 million that was booked by BPCE in the form of a 10-year term account which is indefinitely renewable.

The deposit made to **the Caisse d'Epargne Network Fund** by the Caisses d'Epargne of €450 million was booked by BPCE in the form of a 10-year term account which is indefinitely renewable.

The Mutual Guarantee Fund was formed by deposits made by the Banques Populaires and the Caisses d'Epargne. These deposits were booked by BPCE in the form of 10-year term accounts which are indefinitely renewable. The amount of the deposits by network was €211 million at December 31, 2025.

The total amount of deposits made to BPCE in respect of the Banque Populaire Network Fund, the Caisse d'Epargne Network Fund and the Mutual Guarantee Fund may not be less than 0.15% and may not exceed 0.3% of the Group's total risk-weighted assets.

The booking of deposits in the institutions' individual accounts under the guarantee and solidarity system results in the recording of an item of an equivalent amount under a dedicated capital heading.

Mutual guarantee companies granting the exclusivity of their guarantees to a Banque Populaire benefit from a liquidity and capital adequacy guarantee in their capacity as affiliates of the central institution.

The liquidity and capital adequacy of the local savings companies are secured, firstly, at the level of each individual local savings company by the Caisse d'Epargne of which the local savings company in question is a shareholder.

The Management Board of BPCE holds all the requisite powers to mobilize the resources of the various contributors without delay and in accordance with the agreed order.

1.3. Significant events

ACQUISITION OF SOCIÉTÉ GÉNÉRALE EQUIPMENT FINANCE (SGEF)

Following approval from the competent regulatory and competition authorities, on February 28, 2025, BPCE SA acquired all activities of Société Générale Equipment Finance, now BPCE Equipment Solutions, for a total price of €1.1 billion.

At the same time as this acquisition, BPCE SA replaced Société Générale for the financing of all the subsidiaries concerned for a total amount of approximately €8 billion.

ACQUISITION OF BANK NAGELMACKERS

Following approval from the competent regulatory and competition authorities, Caisse d'Epargne Hauts-de-France acquired 100% of the share capital of Bank Nagelmackers from Dajia Insurance Group on March 10, 2025, for an amount of €434 million.

This transaction resulted in a negative goodwill of €12 million, recognized under "Value adjustments on goodwill".

PROPOSED MERGER OF MANAGEMENT ACTIVITIES WITH GENERALI

On January 21, 2025 Assicurazioni, Generali S.p.A. (Generali) and BPCE signed a non-binding Memorandum of Understanding (MoU) aimed at bringing together, in a joint venture, the asset management activities of Generali Investments Holding (GIH) and Natixis Investment Managers (NIM).

In a joint press release dated December 11, 2025, BPCE and Generali announced that they were ending their negotiations, considering that the conditions to finalize an agreement have not been met.

PROPOSED ACQUISITION OF NOVOBANCO

On June 12, 2025, Groupe BPCE signed a Memorandum of Understanding initiating exclusive negotiations for the acquisition of the 75% stake in novobanco, Portugal's fourth largest bank, currently held by the investment fund Lone Star Funds.

This transaction, which would represent an amount of around €6.4 billion (for 100% of the securities), is the largest cross-border banking acquisition in the Eurozone in more than 10 years.

Following the transaction, Groupe BPCE's CET1 capital ratio would remain above 15%.

After the Memorandum of Understanding signed on June 12, 2025, an acquisition agreement for the shares was signed on August 1, 2025 with Lone Star Funds.

On October 29, 2025, the Portuguese State and the Portuguese Banks Resolution Fund joined the acquisition agreement signed with Lone Star Funds, so that the transaction now concerns the acquisition of the entire share capital of novobanco.

The project is expected to be completed in the second quarter of 2026, subject to regulatory approvals.

1.4. Events after the reporting period

No events after the reporting period have been identified.

Note 2 Applicable accounting standards and comparability

2.1. Regulatory framework

The consolidated financial statements of Groupe BPCE were prepared under International Financial Reporting Standards (IFRS) as adopted by the European Union and applicable at the reporting date, excluding certain provisions of IAS 39 relating to hedge accounting.

2.2. Accounting standards

The standards and interpretations used and detailed in the annual financial statements at December 31, 2024 were complemented by standards, amendments and interpretations whose application is mandatory for reporting periods starting from January 1, 2025.

Groupe BPCE used the option available in IFRS 9 not to apply the provisions of the standard relative to hedge accounting, and to continue to apply IAS 39 as adopted by the European Union for the recognition of these transactions, *i.e.* excluding certain provisions relating to macro-hedging.

The standards, amendments and interpretations adopted by the European Union and applicable for the first time to this fiscal year did not have a material impact on the Group's financial statements.

New standards published and not yet applicable

IFRS 18

IFRS 18 "Presentation and Disclosures in Financial Statements" will replace IAS 1 "Presentation of Financial Statements". It was published by the IASB on April 9, 2024. Subject to its adoption by the European Commission, IFRS 18 will be applicable as of January 1, 2027, with comparative data at January 1, 2026. Early application is authorized. Groupe BPCE does not foresee any early application of IFRS 18. The impact assessment is ongoing.

Amendment to IFRS 9

On May 30, 2024, the IASB published the amendments to IFRS 9 "Classification and Measurement of Financial Instruments" applicable from January 1, 2026. These amendments were adopted by Regulation (EU) 2025/1047 of the European Commission of May 27, 2025 amending Regulation (EU) 2023/1803 as regards International Financial Reporting Standards IFRS 9 and IFRS 7. These amendments provide details on the basic nature of loans, the classification of non-recourse loans and contractually linked instruments. The amendment to IFRS 9 clarifies the treatment of impact loans whose remuneration is indexed to compliance with ESG criteria. This amendment adds an analysis step if it is not possible to demonstrate the existence of a direct link between the contingent event and the risks and costs associated with the basic loan. Such an instrument may qualify as SPPI if, in all contractually possible scenarios, the contractual cash flows of the instrument are not significantly different to those of an instrument with similar contractual clauses but not having this contingent clause. This amendment will not have a material impact on the Group's financial statements. However, more detailed information will be provided in the annex.

2.3. Use of estimates and judgments

Preparation of the financial statements requires making estimates and assumptions in certain areas with regard to uncertain future events.

These estimates are based on the judgment of the individuals preparing these financial statements and the information available at the reporting date.

Actual future results may differ from these estimates.

With respect to the financial statements for the period ended December 31, 2025, in particular, accounting estimates requiring assumptions were mainly used for:

- the fair value of financial instruments determined on the basis of valuation models (Note 10);
- the amount of expected credit losses on financial instruments as well as on loan and guarantee commitments (Note 7.1);
- the results of hedge effectiveness tests, notably related to macro-hedging (Note 5.3);
- provisions recorded under liabilities in the balance sheet and more specifically the provision for regulated home purchase savings products (Note 5.13);
- insurance assets and liabilities (Note 9);
- calculations related to the cost of pensions and future employee benefits (Note 8.2);
- uncertainties relating to the tax treatment of income tax (Note 11);
- deferred taxes (Note 11);
- goodwill impairment tests (Note 3.5);
- the lease term to be used for the recognition of rights-of-use and lease liabilities (Note 12.2.2).

Judgment must also be exercised to assess the business model and the basic characteristics of a financial instrument. The procedures are described in the relevant paragraphs (Note 2.5.1).

Estimates and judgments are also used in the Group's activities to estimate climate and environmental risks. Governance and commitments regarding these risks are presented in Chapter 2 "Sustainability report". Information on the effect and consideration of climate risks on credit risk management (Note 7) is presented in Chapter 7.16 "Environmental, social and governance risks". The accounting treatment of the main green financial instruments is presented in Notes 2.5, 5.5, 5.10, 5.11.2.

Climate and environmental risks

Climate and environmental risks are likely to affect Groupe BPCE's main risks (credit and counterparty risk, market risk, operational risks, structural balance sheet risks, risks related to insurance activities, strategic risk, legal and compliance risks, reputational risk).

Climate and environmental risks include physical risks and transition risks, as defined in Section 7.16.1 "Definition and reference framework".

The consequences of climate and environmental risk factors for Groupe BPCE are subject to an annual materiality analysis. This analysis and Groupe BPCE's risk management system are described in Section 7.16.4 "Environmental, social and governance risk management framework".

In particular, Groupe BPCE takes physical risk into account in the internal assessment of its capital requirements (ICAAP process) by applying adverse scenarios to drought (impacting various economic sectors such as agriculture and construction) and flooding (on the real estate portfolio). The transition risk is also assessed by quantifying the impact of an orderly transition scenario limiting global warming. Lastly, models have been developed to quantify the impact of extreme flood physical risk and transition risk in line with the ICAAP 2025 EPC regulation on individual customer real estate portfolios in quantifying economic capital, supplemented by an add-on for portfolios that do not have a specific economic valuation model at this stage.

In addition, some Groupe BPCE institutions recognize impairments for the effects of physical and transition risks on credit risk. These impairments were defined by the institutions according to the specific characteristics of their credit exposure portfolio, from a geographical and sectoral point of view, when the risk was assessed locally as material. Discussions are also underway at Groupe BPCE level to harmonize the consideration of climate and environmental risks in the provisioning policy.

The inclusion of climate and environmental risks in Groupe BPCE's financial statements will benefit from the gradual improvement of the ESG risk supervision system.

2.4. Presentation of the consolidated financial statements and reporting date

As no specific format is required under IFRS, the presentation used by the Group for summarized statements follows Recommendation No. 2022-01 issued by the *Autorité des normes comptable* (ANC), the French national accounting standards authority on April 8, 2022.

The consolidated financial statements are based on the accounts at December 31, 2024. The Group's consolidated financial statements at December 31, 2025 were approved by the Management Board on February 2, 2026. They will be presented to the General Meeting on May 21, 2026.

The amounts presented in the financial statements and in the notes are shown in millions of euros, unless otherwise indicated. Rounding may lead to differences between the amounts shown in the financial statements and those referred to in the notes.

2.5. General accounting principles and valuation methods

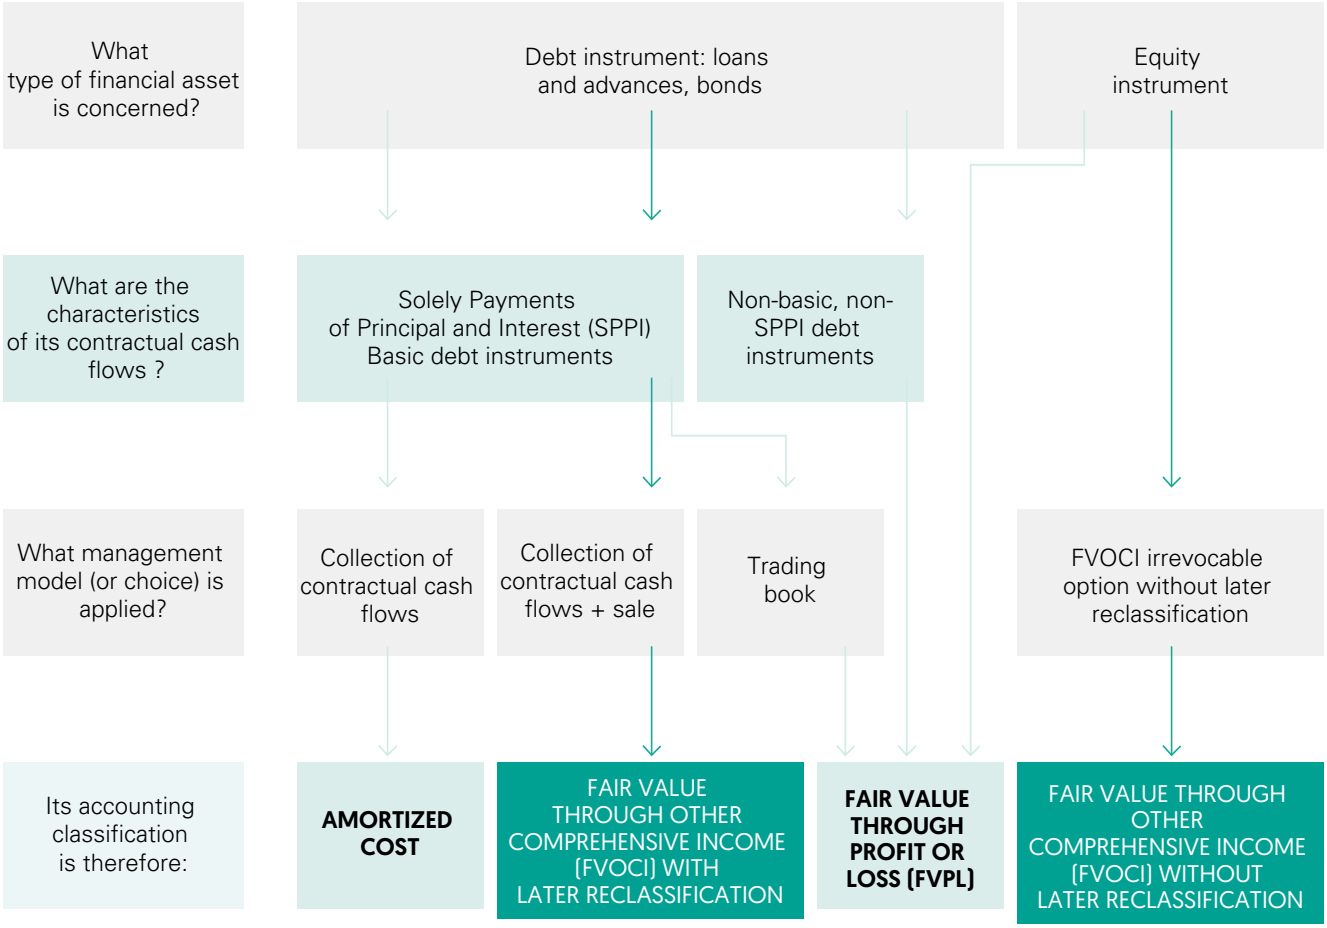
The general accounting principles set out below apply to the main items of the financial statements. Specific accounting principles are presented in the Notes to which they refer.

2.5.1. Classification and measurement of financial assets and liabilities

IFRS 9 is applicable to Groupe BPCE.

Financial assets

On initial recognition, financial assets are classified at amortized cost, at fair value through other comprehensive income, or at fair value through profit or loss, according to the type of instrument (debt or equity), the characteristics of their contractual cash flows and how the entity manages its financial instruments (its business model).



Business model

The entity's business model represents the way in which it manages its financial assets to produce cash flow. Judgment is exercised to ascertain the business model.

The choice of business model must take into account all information regarding the manner in which cash flows were generated in the past, along with all other relevant information.

For example:

- the way in which the performance of financial asTypes of contractual cash flows: the SPPI ***(Solely Payments of Principal and Interest)*** testsets is assessed and presented to the main company directors;
- risks having an impact on the business model's performance, in particular the way in which these risks are managed;
- the way in which directors are paid (for example, if pay is based on the fair value of assets under management or on the contractual cash flows received);
- the frequency of, volume of and reason for sales.

Moreover, the choice of business model must be made at a level which reflects the way in which groups of financial assets are managed collectively with a view to achieving a given economic objective. The business model is therefore not decided on an instrument by instrument basis, but rather at a higher level of aggregation, by portfolio.

The standard provides for three business models:

- a business model whose objective is to hold financial assets in order to receive contractual cash flows ("hold to collect model"). This model, under which the concept of "holding" is relatively similar to holding to maturity, remains valid if disposals occur under the following conditions:
  - the disposals are due to an increase in credit risk,
  - the disposals occur just before maturity and at a price that reflects the contractual cash flows that are still owed,
  - other disposals may also be compatible with the "hold to collect" model's objectives if they are infrequent (even if their value is significant) or if their value is insignificant when considered both individually and overall (even if they are frequent).

For Groupe BPCE, the "hold to collect" model applies to financing activities (excluding the loan syndication activity) carried out by Retail Banking, Corporate & Investment Banking and Financial Solutions & Expertise;

- a mixed business model under which assets are managed with the objective of both receiving contractual cash flows and disposing of financial assets ("hold to collect and sell model").

Groupe BPCE applies the "hold to collect and sell" model primarily to the portion of portfolio management activities for securities in the liquidity reserve that is not managed solely under a "hold to collect" model;

- a model intended for other financial assets, especially those held for trading, for which the collection of contractual cash flows is incidental. This business model applies to the loan syndication activity (for the portion of outstandings to be sold that was identified at the outset) and to the capital market activities carried out primarily by Corporate & Investment Banking.

Types of contractual cash flows: the SPPI *(Solely Payments of Principal and Interest)* test

A financial asset is classified as generating solely payments of principal and interest if, on specific dates, it gives rise to cash flows that are solely payments of principal and interest on the outstanding amount due. The SPPI test should be performed for each financial asset on initial recognition.

The principal amount is defined as the financial asset's fair value at its acquisition date. Interest is the consideration for the time value of money and the credit risk incurred on the principal amount, as well as other risks such as liquidity risk, administrative costs and the profit margin.

The instrument's contractual terms must be taken into account to assess whether contractual cash flows are solely payments of principal and interest. All elements that may cast doubt as to whether only the time value of money and credit risk are represented must therefore be analyzed. For example:

- events that would change the amount and date of the cash flows. Any contractual option that creates risk exposure or cash flow volatility that is not consistent with a basic lending arrangement, such as exposure to fluctuations in the price of stocks or of a market index, or the introduction of leverage, would make it impossible to categorize contractual cash flows as SPPI;
- the applicable interest rate features (for example, consistency between the rate resetting period and the interest calculation period). If a clear determination cannot be made through qualitative analysis, a quantitative analysis (a benchmark test) is carried out. This test involves comparing the contractual cash flows for the asset in question with the contractual cash flows of a benchmark asset;
- early redemption and extension conditions. For the borrower or lender, a contractual option permitting prepayment of financial instruments does not violate the SPPI test for contractual cash flows if the prepayment amount mainly represents the unpaid amounts of principal and interest and, if applicable, a reasonable additional remuneration for the early termination of the contract.

Furthermore, although they do not strictly meet the criteria for remuneration of the time value of money, certain assets with a regulated interest rate are classified SPPI if this regulated rate provides consideration that corresponds substantially to the passage of time and presents no exposure to a risk that would be inconsistent with a basic lending arrangement. This is the case in particular for financial assets representing the portion of Livret A passbook savings account inflows that is centralized with Caisse des Dépôts et Consignations.

Financial assets that generate SPPI are debt instruments such as fixed-rate loans, floating-rate loans without an interest rate tenor mismatch or that are not linked to a security or to a market index, and fixed-rate or floating-rate debt securities.

Non-SPPI financial assets include UCITS units, debt instruments convertible or redeemable into a fixed number of shares and structured loans.

To qualify as SPPI assets, the securities held in a securitization vehicle must meet specific conditions. The contractual terms of the tranche must meet the SPPI criterion. The pool of underlying assets must meet the SPPI conditions. The risk inherent in the tranche must be lower than or equal to the exposure to the vehicle's underlying assets.

A non-recourse loan (*e.g.* infrastructure financing-type project financing) is a loan secured only by physical collateral. If there is no possible recourse to the borrower, the structure of other possible recourses or protection mechanisms for the lender in the event of default must be examined in order to categorize these loans as SPPI assets: acquisition of the underlying asset, collateral provided (security deposits, margin call, etc.), enhancements provided.

Accounting categories

Debt instruments (loans, receivables or debt securities) may be measured at amortized cost, at fair value through other comprehensive income recyclable to profit or loss or at fair value through profit or loss.

A debt instrument is valued at amortized cost if it meets the following two conditions:

- the asset is held under a hold to collect business model; and
- the contractual terms of the financial asset define it as generating SPPI within the meaning of the standard.

A debt instrument is valued at fair value through other comprehensive income if it meets the following two conditions:

- the asset is held under a hold to collect and sell business model; and
- the contractual terms of the financial asset define it as generating SPPI within the meaning of the standard.

Equity instruments are, by default, recorded at fair value through profit or loss unless they qualify for an irrevocable option for valuation at fair value through other comprehensive income not recyclable to profit or loss (provided they are not held for trading purposes and accordingly classified as financial assets at fair value through profit or loss), without subsequently being reclassified through profit or loss. If opting for the latter category, dividends continue to be recognized in income.

Financing through the issuance of green financial products or investments in such products are accounted for at amortized cost unless they are held as part of a short-term disposal activity.

All other financial assets are recorded at fair value through profit or loss. These financial assets include financial assets held for trading, financial assets at fair value through profit or loss and non-SPPI assets. Financial assets may only be designated at fair value through profit or loss in order to eliminate or significantly reduce an accounting mismatch. This option enables the elimination of accounting mismatches stemming from the application of different valuation rules to instruments managed under a single strategy.

Financial liabilities

The general rule is the measurement of financial liabilities at amortized cost, except for liabilities incurred for trading purposes (trading liabilities) and financial liabilities that the entity chooses to measure at fair value under the fair value option.

At the date of initial recognition, the accounting principles described for financial assets apply identically to financial liabilities, as follows:

- financial liabilities subsequently classified as measured at amortized cost are recognized at fair value less or increased by transaction costs;
- financial liabilities at fair value through profit or loss are recognized at fair value and the associated transaction costs will be recognized directly in the income statement.

If a financial liability is designated as being measured at fair value through profit or loss then:

- the amount of the change in fair value attributable to changes in the credit risk of the liability (*i.e.* the issuer spread) is to be presented in shareholders' equity unless this recognition would have the effect of creating or increasing an accounting mismatch in income (this mismatch is determined at the initial recognition and is not subsequently revised). The amounts recorded in equity are not subsequently recycled in profit or loss;
- the remainder of the change in the fair value of the financial liability is presented in profit or loss.

For the treatment modifications of liabilities recognized at amortized cost, if the modification does not result in derecognition: the profit or loss resulting from the difference between the original cash flows and the modified cash flows discounted at the original effective interest rate must be recognized in profit or loss.

2.5.2. Foreign currency transactions

The method used to account for assets and liabilities relating to foreign currency transactions entered into by the Group depends upon whether the asset or liability in question is classified as a monetary or a non-monetary item.

Monetary assets and liabilities denominated in foreign currencies are translated into the functional currency of the Group entity on whose balance sheet they are recognized, at the closing rates prevailing at the closing date. All resulting currency exchange differences are recognized in income. However, there are two exceptions to this rule:

- only the portion of the currency exchange differences calculated based on the amortized cost of financial assets at fair value through other comprehensive income is recognized in income, with any additional gains and losses being recognized in "Gains and losses recognized directly in other comprehensive income";
- currency exchange differences arising on monetary items designated as cash flow hedges or as part of a net investment in a foreign operation are recognized in "Gains and losses recognized directly in other comprehensive income".

Non-monetary assets carried at historic cost are translated using the exchange rate prevailing at the transaction date. Non-monetary assets carried at fair value are translated using the exchange rate in effect at the date on which the fair value was determined. Currency exchange differences on non-monetary items are recognized in profit or loss if gains and losses relating to the items are recorded in profit or loss, and in "Gains and losses recognized directly in other comprehensive income" if gains and losses relating to the items are recorded in "Gains and losses recognized directly in other comprehensive income".

IAS 29 "Financial Reporting in Hyperinflationary Economies" sets out a number of quantitative and qualitative criteria for assessing whether an economy is hyperinflationary, including a three-year cumulative inflation rate approaching or exceeding 100%. Laos is considered a hyperinflationary economies as of June 30, 2025. Nevertheless, this country has since emerged from hyperinflation. The impact of the restatements recommended by IAS 29 in this respect was not material at December 31, 2025.

Note 3 Consolidation

3.1. Consolidating entity

Due to the Group's structure as described in Note 1, Groupe BPCE's consolidating entity includes:

- Banques Populaires, namely the 12 Banque Populaire regional banks, CASDEN Banque Populaire and Crédit Coopératif;
- the 15 Caisses d'Epargne;
- the Mutual Guarantee Companies (*sociétés de caution mutuelle*) collectively affiliated with the Banques Populaires to which they are linked;
- the Group's central institution, BPCE.

In addition, the Group comprises:

- the subsidiaries of the Banques Populaires;
- the subsidiaries of the Caisses d'Epargne;
- the subsidiaries held by the central institution, including Natixis, Crédit Foncier, Banque Palatine, the entities of the Financial Solutions & Expertise division, the entities of the Insurance division and the entities of the Digital and Payments division (including the payment subsidiaries and Oney).

3.2. Scope of consolidation – consolidation and valuation methods

The Group's financial statements include the financial statements of all the entities over which it exercises control or significant influence, whose consolidation had a material impact on the aforementioned financial statements.

The scope of entities consolidated by Groupe BPCE is described in Note 13 – Detail of the scope of consolidation.

3.2.1. Entities controlled by the Group

The subsidiaries controlled by Groupe BPCE are fully consolidated.

Definition of control

Control exists when the Group has the power to govern an entity's relevant activities, when it is exposed to or is entitled to variable returns due to its links with the entity and has the ability to exercise its power over the entity to influence the amount of returns it obtains.

The existence and effect of potential voting rights that are currently exercisable or convertible are considered when assessing the control exercised. These potential voting rights may result, for example, from share call options traded on the market, debt or equity instruments that are convertible into ordinary shares, or equity warrants attached to other financial instruments. However, potential voting rights are not taken into account to calculate the percentage of ownership.

Exclusive control is presumed to exist when the Group holds directly or indirectly either the majority of the subsidiary's voting rights, or at least half of an entity's voting rights and a majority within the management bodies, or is in a position to exercise significant influence.

Special case: structured entities

Entities described as structured entities are those organized in such a way that voting rights are not a key criterion when determining who has control. This is the case in particular when voting rights only apply to administrative duties and relevant activities are managed through contractual agreements.

A structured entity frequently exhibits some or all of the following characteristics:

(a) well-defined activities;

(b) a specific and well-defined aim, for example: implementing a lease eligible for specific tax treatment, carrying out research and development, providing an entity with a source of capital or funding, or providing investors with investment options by transferring associated risk and advantages to the structured entity's assets;

(c) insufficient equity for the structured entity to finance its activities without subordinated financial support;

(d) financing through the issuance, to investors, of multiple instruments inter-related by contract and which create concentrations of credit risk or other risks ("tranches").

The Group therefore considers, among others, collective investment undertakings within the meaning of the French Monetary and Financial Code and equivalent bodies governed by foreign law as structured entities.

Full consolidation method

The full consolidation of a subsidiary in the Group's consolidated financial statements begins at the date on which the Group takes control and ends on the day on which the Group loses control of this entity.

The portion of interest which is not directly or indirectly attributable to the Group corresponds to a non-controlling interest.

Income and all components of other comprehensive income (gains and losses recognized directly in other comprehensive income) are divided between the Group and non-controlling interests. The other comprehensive income of subsidiaries is divided between the Group and non-controlling interests, including when this division results in the allocation of a loss to non-controlling interests.

Changes to the percentage interest in subsidiaries that do not lead to a change in control are recognized as transactions affecting equity.

The effects of these transactions are recognized in equity at their after-tax amount and therefore do not impact consolidated income attributable to equity holders of the parent.

Detail of the scope of consolidation

Non-material controlled entities are excluded from the scope in accordance with the principle set out in Note 13.5.

Employee pension funds and supplementary health insurance plans are excluded from the scope of consolidation insofar as IFRS 10 does not apply to either post-employment benefit funds or other long-term employee benefit plans, to which IAS 19 "Employee Benefits" applies.

Likewise, interests acquired with a view to their subsequent short-term disposal are recorded as available for sale and recognized in accordance with the provisions of IFRS 5 "Non-Current Assets Held for Sale and Discontinued Operations".

3.2.2. Investments in associates and joint ventures

Definition

An associate is an entity over which the Group has significant influence. Significant influence is the power to participate in the financial and operating policy decisions of an entity, without exercising control or joint control over those policies. It is presumed to exist if the Group holds, directly or indirectly, 20% or more of the voting rights of an entity.

A joint venture is a partnership in which the parties which exercise joint control over the entity have rights over its net assets.

Joint control is the contractually agreed sharing of control over a company, which exists only when the strategic decisions require the unanimous consent of the parties sharing control.

Equity method

Income, assets, and liabilities of investments in associates and joint ventures are accounted for in the Group's consolidated financial statements using the equity method.

An investment in an associate or a joint venture is initially recognized at its acquisition cost and subsequently adjusted for the Group share in the income and other comprehensive income of the associate or joint venture.

The equity method is applied from the date on which the entity becomes an associate or a joint venture. On the acquisition of an associate or a joint venture, the difference between the cost of investment and the Group's share in the net fair value of the entity's identifiable assets and liabilities is recognized in goodwill. When the net fair value of the entity's identifiable assets and liabilities is higher than the cost of investment, the difference is recognized in income.

The share of net income of entities accounted for under the equity method is included in the Group's consolidated income.

When a group entity carries out a transaction with a group joint venture or associate, the profit or loss resulting from this transaction is recognized in interests held by third parties in the associate or joint venture.

The net investment in an associate or joint venture is subject to impairment testing if there is objective evidence of impairment arising from one or more events occurring after the initial recognition of the net investment and if the events have an impact on estimated cash flows, provided this impact can be reliably calculated.

In such cases, the total carrying amount of the investment (including goodwill) is subject to impairment testing in accordance with the provisions of IAS 36 "Impairment of assets".

Exception to the equity method

When the investment is held by a venture capital organization, an investment fund, an investment company with variable share capital or a similar entity such as an Insurance asset investment fund, the investor may choose not to recognize the investment using the equity method. In this case, revised IAS 28 "Investments in Associates and Joint Ventures" authorizes the investor to recognize the investment at its fair value (with changes in fair value recognized in income) in accordance with IFRS 9.

These investments are therefore recognized as "Financial assets at fair value through profit or loss".

The Global Financial Services division's private equity subsidiaries have chosen to measure their investments in this way, considering that this valuation method provides more relevant information.

3.2.3. Investments in joint activities

Definition

A joint activity is a partnership where parties that have joint control over an entity have direct rights over the entity's assets, and obligations for its liabilities.

Accounting treatment of joint activities

An investment in a joint enterprise is accounted for by integrating all interests held in the joint activity, *i.e.* the entitled share in each asset and liability and item of income. These interests are allocated by nature to the various lines of the consolidated balance sheet, consolidated income statement and the statement of net income and gains and losses recognized directly in other comprehensive income.

3.3. Consolidation rules

The consolidated financial statements are prepared using uniform accounting policies for reporting similar transactions in comparable circumstances. Where material, consolidation adjustments are made to ensure the consistency of the measurement methods applied by consolidated entities.

3.3.1. Foreign currency translation

The consolidated financial statements are expressed in euros.

Balance sheet items of foreign subsidiaries and branches whose functional currency is not the euro are translated using the exchange rate in force at the reporting date. Income and expense items are translated at the average exchange rate for the period, which is the approximate value of the transaction price if there are no significant fluctuations.

Foreign exchange rate adjustments arise from a difference in:

- net income for the period translated at the average rate and at the closing rate;
- equity (excluding net income for the period) translated at the historic exchange rate and at the closing rate.

The portion attributable to equity holders of the parent is recorded in equity under "Foreign exchange rate adjustments" and the portion attributable to minority shareholders under "Non-controlling interests".

3.3.2. Elimination of intra-group transactions

The impact of intercompany transactions on the consolidated balance sheet and consolidated income statement is eliminated. Dividends, as well as gains and losses on intercompany asset disposals, are also eliminated. Where appropriate, capital losses from asset disposals resulting in impairment are maintained.

By way of exception, the IFRS 17 amendments to IFRS 9 and IAS 32 allow intra-group assets to be retained on the balance sheet if they are held as underlying items of insurance contracts with direct participation features. These assets are then valued at market value through profit or loss. These include financial liabilities issued by a Group entity (amendment to IFRS 9). The application of this exception is assessed instrument by instrument. The provisions of these amendments have been applied since the 2023 fiscal year for significant transactions.

3.3.3. Business combinations

In accordance with revised IFRS 3 "Business Combinations" and IAS 27 "Consolidated and Separate Financial Statements":

- combinations between mutual insurers are included within the scope of IFRS 3;
- costs directly linked to business combinations are recognized in net income for the period;
- contingent considerations payable are included in the cost of the business combination at their fair value at the date of acquisition of a controlling interest in an entity, even if they are only potential. Depending on the settlement method, transferred considerations are recognized against:
  - capital and later price revisions will not be booked,
  - or debts and later adjustments are recognized against income (financial debts) or according to the appropriate standards (other debts outside the scope of IFRS 9);
- on an entity's acquisition date, non-controlling interests may be valued:
  - either at fair value (method resulting in the allocation of a share of the goodwill to non-controlling interests),
  - or at the share in the fair value of the identifiable assets and liabilities of the entity acquired (method similar to that applicable to transactions prior to December 31, 2009).

The choice between these two methods must be made for each business combination.

Whatever method is chosen when the acquisition is made, increases in the percentage of interest in an entity already controlled are systematically recognized in capital:

- when an entity is acquired, any share previously held by the Group must be revalued at fair value through profit or loss. Consequently, in the event of a step acquisition, goodwill is determined by referring to the fair value at the date of control;
- when the Group loses control of a consolidated company, any share previously held by the Group must be revalued at fair value through profit or loss.

3.3.4. Purchase commitments granted to minority shareholders of fully consolidated subsidiaries

The Group has entered into commitments with minority shareholders of certain fully consolidated group subsidiaries to buy out their shares. These buyback commitments are optional commitments (sales of put options). The exercise price for these options may be an amount fixed contractually, or may be established according to a calculation formula defined upon the acquisition of the subsidiary's securities and taking into account its future activity, or may be set as the fair value of the subsidiary's securities on the day on which the options are exercised.

For accounting purposes, these commitments are treated as follows:

- pursuant to the provisions of IAS 32, the Group recognizes a financial liability with respect to the put options sold to minority shareholders in fully-consolidated entities. This liability is initially recognized at the discounted value of the put option exercise price under "Other liabilities";
- the obligation to record a liability even though the put options are not exercised means, for purposes of consistency, that the same accounting treatment as that for transactions related to non-controlling interests must be applied. As a result, the corresponding entry for this liability is deducted from "Non-controlling interests" underlying the options and the balance is deducted from "Consolidated reserves attributable to equity holders of the parent";
- subsequent changes in this liability relating to any change in the estimated exercise price of the options and the carrying amount of "Non-controlling interests" are fully recognized as "Consolidated reserves attributable to equity holders of the parent";
- in the event of a buyback, the liability is settled by the cash payment related to the acquisition of minority shareholders' stakes in the subsidiary in question. However, when the commitment expires, if the buyback does not take place, the liability is written off against "Non-controlling interests" and "Consolidated reserves attributable to equity holders of the parent" according to their respective amounts;
- as long as the options have not been exercised, results from non-controlling interests subject to put options are included in the consolidated income statement as "Non-controlling interests".

3.3.5. Fiscal year reporting date of consolidated entities

The entities included in the scope of consolidation close their accounts on December 31.

3.4. Changes in the scope of consolidation during the 2025 fiscal year

The main changes in the scope of consolidation in the 2025 fiscal year are presented below:

Changes in the percentage of ownership interest in subsidiaries (with no impact on control)

- decrease in the ownership of SWILE following a capital increase subscribed by non-group shareholders in the first, third and fourth quarters,
- increase in the ownership of BANQUE DE NOUVELLE-CALÉDONIE following the buyback of shares from non-controlling interests in the first, third and fourth quarters,
- increase in the ownership of BANQUE DE TAHITI following the buyback of shares from non-controlling interests in the first and third quarters;
- decrease in the ownership of LOOMIS SAYLES SAKORUM LONG SHORT GROWTH EQUITY following the buyback of shares by non-group shareholders in the first, second and third quarters,
- decrease in the ownership of LOOMIS SAYLES GLOBAL ALLOCATION following the buyback of shares by non-group shareholders in the first, third and fourth quarters,
- decrease in the ownership of BTP CAPITAL INVESTISSEMENT following a capital increase subscribed by non-group shareholders in the second quarter,
- decrease in the ownership of BANQUE BCP SAS following a capital increase subscribed by non-group shareholders in the second quarter,
- increase in the ownership of COZYNERGY HOLDING following a capital increase subscribed by BPCE in the second quarter,
- increase in the ownership of BIC BRED following the buyback of shares from non-controlling interests in the second quarter,
- increase in the ownership of SOLOMON PARTNERS LP following the exercise of the put option on non-controlling interests in the second quarter;
- increase in the ownership of SOLOMON PARTNERS SECURITIES COMPANY LLC following the exercise of the put option on non-controlling interests in the second quarter;
- increase in the ownership of EURO CAPITAL following the buyback of shares from non-controlling interests in the third quarter,
- increase in the ownership of BRETAGNE PARTICIPATIONS SCR following the buyback of shares from non-controlling interests in the third quarter,
- increase in the ownership of BPCE SOLUTIONS CLIENTS following a capital increase subscribed by BANQUE POPULAIRE GRAND OUEST and BANQUE POPULAIRE MÉDITERRANÉE in the third quarter,
- increase in the ownership of INVESTORS MUTUAL LIMITED following the buyback of shares from non-controlling interests in the third quarter,
- increase in the ownership of AZURE CAPITAL HOLDINGS PTY LTD following the buyback of shares from non-controlling interests in the third quarter,
- increase in the ownership of BTP CAPITAL INVESTISSEMENT following the buyback of shares from non-controlling interests in the fourth quarter,
- increase in the ownership of SODERO PARTICIPATIONS following a capital increase majority-subscribed by CE BRETAGNE PAYS DE LOIRE in the fourth quarter,
- decrease in the ownership of MIROVA US LLC, MIROVA US HOLDINGS LLC, MIROVA AFRICA INC, MIROVA, MIROVA UK LIMITED, MIROVA KENYA LIMITED, MIROVA SWEDEN SUBSIDIARY following the buyback of shares by non-controlling interests in the fourth quarter,
- increase in the ownership of THEMATICS ASSET MANAGEMENT following the buyback of shares from non-controlling interests in the fourth quarter,

Other changes in scope

Newly consolidated entities

During the first quarter of 2025

- acquisition from Société Générale and full consolidation of the following entities: BPCE Equipment Solutions SA; GEFA Bank GmbH; BPCE Equipment Solutions BENELUX BV; BPCE Equipment Solutions BRASIL SA ARRENDAMENTO; BPCE Equipment Solutions CHINA CO. LTD; BPCE Equipment Solutions HUNGARY LTD; BPCE Equipment Solutions MAGYARORSZAG KFT; BPCE Equipment Solutions Iberia; E.F.C., SA; BPCE Equipment Finance Italia S.P.A; FRAER Leasing SPA; BPCE Equipment Solutions Italia S.P.A; BPCE Equipment Solutions Polska Sp.zO.O.; BPCE Equipment Solutions Schweiz AG; BPCE Equipment Solutions UK Ltd; BPCE Equipment Solutions USA Corp; Philips Medical Capital France; Philips Medical Capital GmbH and consolidation through the equity method of GEFA VERSICHERUNGSDIENT GMBH,
- full consolidation, following the crossing of thresholds, of BPCE GERMANY HOLDING GMBH,
- full consolidation, following crossing above the thresholds, of BPCE Equipment Solutions SA (formerly Milla),
- acquisition and full consolidation of NAGELMACKERS, opaque tier with B-ARENA NV and UNIMO NV,
- full consolidation, following the crossing of thresholds, of PORTDALON,
- full consolidation, following the crossing of thresholds, of SOCFIM INVESTISSEMENT,
- consolidation by the equity method, following the crossing of thresholds, of ESTREEM,
- acquisition and consolidation by the equity method of FINANCIÈRE DE COURCELLES
- full consolidation, following the crossing of thresholds, of DNCA QUADRO,
- creation and full consolidation of AEW TAPT GP LLC,
- creation and full consolidation of AEW EHF LUX GP SARL,

During the second quarter of 2025

- full consolidation, following the crossing of thresholds, of MIROVA FUNDS – MIROVA EUROPE SUSTAINABLE EQUITY FUND,
- full consolidation, following the crossing of thresholds, of VEGA COURT TERME DYNAMIQUE,
- creation and full consolidation of BPCE DEMETER PANTA FCT,
- full consolidation, following the crossing of thresholds, of DNCA STRATEGIC RESOURCES,

During the third quarter of 2025

- creation and full consolidation of MAISON BLEUE BP NORD,
- acquisition and full consolidation of SRL MONTECO,
- full consolidation of CAISSE D'EPARGNE HAUTS DE FRANCE – NETHERLANDS BRANCH,
- full consolidation, following the crossing of thresholds, of FRPS, opaque tier with FONCIÈRE HEROUVILLE SAS, FRP VI SAS, FRP VII SAS, SCI HEROUVILLE 14, FRP II SAS, FRP V SAS,
- full consolidation, following the crossing of thresholds, of THEMATICS META FUND,
- creation and full consolidation of NATIXIS GIFT CITY BRANCH,

During the fourth quarter of 2025

- acquisition of 50% and full consolidation of BAY DVPT LTD in an opaque bundle at Foncière Vanuatu,
- creation and full consolidation of Olympia Master Home Loans,
- creation and full consolidation of GAIA MASTER CONSUMER LOANS FCT,
- creation and full consolidation of ORAMA MASTER FCT,
- full consolidation, following the crossing of thresholds, of FLEXSTONE PRIVATE EQUITY OPPORTUNITIES FCP,
- creation and full consolidation of DNCA FINANCE SPAIN BRANCH,
- creation and full consolidation of MIROVA UK BRANCH,

Deconsolidated entities

During the first quarter of 2025

- disposal of MV CREDIT LIMITED, MV CREDIT LPP, MV CREDIT EURO CLO III, MV CREDIT SARL, MV CREDIT CLO EQUITY SARL, MV CREDIT SARL France Branch,
- liquidation of NATIXIS STRUCTURED PRODUCTS LTD,
- deconsolidation of the entity SAS FINANCIÈRE DE LA BANQUE POPULAIRE OCCITANE following the crossing below the thresholds,
- deconsolidation of the entity PHILAE following the crossing below the thresholds,

During the second quarter of 2025

- liquidation of ONEY MAGYARORSZAG PENZUGYI SZOLGALTATO ZARTKORUEN MUKODO RESZVENYTARSASAG,
- deconsolidation, following the crossing below the thresholds, of the entity THEMATICS AI AND ROBOTICS FUND,
- deconsolidation of the entity NATIXIS TRUST following the crossing below the thresholds,

During the third quarter of 2025

- deconsolidation of the entity FCT TULIP following the crossing below the thresholds,

During the fourth quarter of 2025

- disposal of ARIES ASSURANCES,
- disposal of DNCA STRATEGIC RESOURCES,
- liquidation of EPI SO SLP LLC,
- closure of the OSTRUM ASSET MANAGEMENT ITALIA branch,

Mergers and universal asset transfers

- merger and acquisition of SGEF SA by Milla, followed by a change of name of Milla to BPCE Equipment Solution SA in the first quarter,
- merger and acquisition of BTP CAPITAL CONSEIL by BTP BANQUE in the first quarter,
- merger and acquisition of HSBC ÉPARGNE ENTREPRISE by NATIXIS INTERÉPARGNE in the first quarter,
- merger and acquisition of SOCAMI BOURGOGNE FRANCHE COMTÉ and SOPROLIB BOURGOGNE FRANCHE-COMTÉ ET PAYS DE L'AIN by SOCAMA BOURGOGNE FRANCHE COMTÉ in the second quarter,
- the entity SERVICE DE GESTION IMMOBILIÈRE LORAINE was integrated into BANQUE POPULAIRE ALSACE LORRAINE CHAMPAGNE in the third quarter,
- merger and acquisition of BRETAGNE PARTICIPATIONS SCR by SODERO PARTICIPATIONS in the fourth quarter.

3.5. Goodwill

3.5.1. Value of goodwill

in millions of euros	12/31/2025	12/31/2024
Opening net value	**4,312**	**4,224**
Acquisitions[1]	74	58
Disposals	1	0
Foreign exchange rate adjustments	(205)	102
Other changes[2]	(159)	(72)
CLOSING NET VALUE	**4,023**	**4,312**

(1) Acquisition in the first quarter of 2025 of the SGEF entities (+€46 million in goodwill) and the assets of Belmont Capital Group (+€27 million in goodwill).
(2) Corresponds to the adjustment of goodwill of BRED Madagasikara (-€24 million) and the reclassification on the assets held for sale line of goodwill of the entity Vauban Infrastructure Partners in the Asset Management division (-€135 million) taking into account the ongoing disposal.

At December 31, 2025, the gross value of goodwill amounted to €4,712 million, while the total of impairment losses was -€689 million.

Certain goodwill items recognized in the United States give rise to tax amortization over 15 years, leading to a difference between the carrying amount of the goodwill and its tax base. This difference in treatment generated a deferred tax liability of €315 million at December 31, 2025, compared with €367 million at December 31, 2024.

Breakdown of goodwill

	Net carrying amount	
in millions of euros	12/31/2025	12/31/2024

TOTAL GOODWILL	**4,023**	**4,312**

(1) Regional Banks: Banque de Savoie, goodwill carried by Banque Populaire du Sud (transfer of Banque Dupuy, de Parseval's and Banque Marze's goodwill, post-merger), goodwill carried by Banque Populaire Aquitaine Centre Atlantique (transfer of CCSO – Pelletier's goodwill, post-merger) and goodwill carried by Banque Populaire Méditerranée (transfer of Banque Chaix's goodwill, post-merger).
(2) Of which -€24 million in goodwill adjustment for Bred Madagasikara.
(3) Of which +€46 million recognized on the acquisition of the SGEF entities.
(4) Reclassification of the CEGC entity from the Financial Solutions & Expertise CGU to the Insurance CGU for €12 million.
(5) Of which +€27 million recognized on the acquisition of the assets of Belmont Capital Group, -€191 million in conversion impact and -€135 million in reclassification on the assets held for sale line of the goodwill of the entity Vauban Infrastructure Partners.

3.5.2. Goodwill impairment tests

All items of goodwill are impaired, based on the value in use of the cash-generating units (CGUs) to which they have been allocated.

At December 31, 2025, the Regional Banks CGU represented the sum of the CGUs of the following banks: BP Aquitaine Centre Atlantique, Banque Populaire Sud, Retail Groupe Banque Populaire Auvergne Rhône Alpes CGU, Banque Populaire Méditerranée and BRED. Goodwill is allocated to groups of CGUs (and non-CGUs) and the financial assumptions presented for each group are averages of the assumptions for their component CGUs.

Key assumptions used to calculate recoverable value

Value in use was primarily calculated based on the discounting of the estimate of each CGU's future cash flows (*i.e.* the discounted cash flow (DCF) method) as they result from the business lines' latest results forecasts.

For CIB, the valuation exercise was carried out on the M&A scope, *i.e.* the only scope bearing goodwill, while enriching the valuation methods used (multi-criteria approach including a DCF approach as well as valuation methods using stock market multiples and comparable transactions) in continuity with the previous exercise. These tests did not lead to the recognition of any impairment at December 31, 2025.

The following assumptions were used:

	Discount rate	Long-term growth rate
Retail Banking and Insurance		
Regional Banks	9.5% - 11.0%	2.0%
Insurance	10.0%	2.0%
Financial Solutions & Expertise	10.5%	2.0%
Asset & Wealth Management	**10.3%**	**2.0%**
Digital & Payments	**8.7%**	**2.0%**
Corporate & Investment Banking	**10.7%**	**2.0%**

Future cash flows are based on forecast data from the latest multi-year profit trajectory forecasts for the business lines.

The discount rates were determined by taking into account:

- for the Regional Banks, Insurance, FSE, and Digital & Payments CGUs, based on a risk-free rate (10-year OAT) based on a 12-month average of the daily rates of the French State bond, to which is added a risk premium calculated on the basis of a sample of companies representative of each CGU;
- for the Asset & Wealth Management and Corporate & Investment Banking CGUs, the 10-year OAT (60%) and the 10-year US Treasury (40%) are averaged over a one-year period. This is then increased by a risk premium based on a sample of representative companies in the CGU, averaged over one year.

Sensitivity of recoverable values

A 50 bps increase in discount rates (assumption based on the historical annual variability observed over one year using 2013-2025 historical data) combined with a 50 bps reduction in perpetual growth rates would reduce the value in use of CGUs by:

- -7.8% for the Regional Banks CGU;
- -4.0% for the Insurance CGU;
- -5.2% for the Financial Solutions & Expertise CGU;
- -6.0% for the Asset & Wealth Management CGU;
- -9.9% for the Corporate & Investment Banking CGU (M&A activity);

and would not lead to the recognition of any impairment losses for these CGUs.

Similarly, the sensitivity of these CGUs' future cash flows, as forecast in the business plan, to changes in the main assumptions would not significantly affect their recoverable value:

- for the Regional Banks, the sensitivity of future business plan flows to a 5% decline in recurring net income combined with a 25 basis point increase in the target prudential ratio would have a negative impact on the value of the CGU of -4.2% and no impact in terms of impairment;
- for BPCE Assurances, the sensitivity of future cash flows, as forecast in the business plan, to a 5% point fall in recurring net income combined with an increase in the capital adequacy ratio of 5 bps would have a negative impact on the CGU's value of -3.4% and would have no impact in terms of impairment;
- for Financial Solutions & Expertise, the sensitivity of future cash flows, as forecast in the business plan, to a 5% point fall in recurring net income combined with an increase in the target prudential ratio of 25 basis points would have a negative impact on the CGU's value of -5.0% and would have no impact in terms of impairment;
- for Asset & Wealth Management, the main sensitivity driver is the evolution of the equity market. The negative impact of the decline in shares on the recoverable amount of the CGU would be around 7% (for a uniform decrease of 10% in the indices over all years from 2026) and would not lead to the recognition of an impairment. The second source of sensitivity for Asset & Wealth Management comes from changes in interest rates (short-term €ster rates and long-term 10-year rates), but with an insignificant impact on the recoverable amount of the CGU;
- for Corporate & Investment Banking, sensitivity to the dollar would have an insignificant impact on the recoverable amount and would not result in the recognition of impairment.

Note 4 Notes to the income statement

Key points

Net banking income (NBI) includes:

- interest income and expenses;
- fees and commissions;
- net gains (losses) on financial instruments at fair value through profit or loss;
- net gains (losses) on financial instruments at fair value through other comprehensive income;
- net gains (losses) arising from derecognition of financial assets measured at amortized cost;
- net income from insurance activities;
- income and expenses from other activities.

4.1. Interest and similar income and expenses

Accounting principles

Interest income and expenses are recognized in the income statement for all financial instruments measured at amortized cost using the effective interest method, which includes interbank and customer loans and borrowing, the portfolio of securities at amortized cost, debt securities, subordinated debt and lease liabilities. This item also includes interest receivable on fixed income securities classified as financial assets at fair value through other comprehensive income and hedging derivatives, it being specified that accrued interest on cash flow hedging derivatives is taken to income in the same manner and period as the accrued interest on the hedged item.

Interest income also consists of interest on non-SPPI debt instruments not held under a trading model as well as interest on the related economic hedges (classified by default as instruments at fair value through profit or loss).

The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument to the net carrying amount of the financial asset or financial liability.

The effective interest rate calculation takes account of all transaction fees paid or received as well as premiums and discounts. Transaction fees paid or received that are an integral part of the effective interest rate of the contract, such as loan set-up fees and commissions paid to financial partners, are treated as additional interest.

Negative interest is presented as follows:

- a negative interest on an asset is presented as interest expense in NBI;
- a negative interest on a liability is presented as interest income in NBI.

	2025 fiscal year			2024 fiscal year		
in millions of euros	Interest income	Interest expenses	Net	Interest income	Interest expenses	Net

TOTAL INTEREST INCOME AND EXPENSES	**50,697**	**(40,983)**	**9,715**	**56,997**	**(49,413)**	**7,584**

(1) Interest income on loans and advances with banks includes €2,579 million (€3,301 million in 2024 fiscal year) in respect of the remuneration of Livret A, LDD and LEP savings accounts centralized at the Caisse des Dépôts and Consignations.

(2) Interest income from financial assets with a known credit risk (S3) amounted to €850 million in 2025, including €850 million of financial assets at amortized cost (€801 million in 2024).

4.2. Fee and commission income and expenses

Accounting principles

Under IFRS 15 "Revenue from Contracts with Customers", recognition of revenue from ordinary activities reflects the transfer of control of goods and services promised to customers in an amount corresponding to the consideration that the entity expects to receive in exchange for these goods and services. The recognition of this revenue calls for a five-step approach:

- identification of contracts with customers;
- identification of specific performance obligations (or items) to be recognized separately from one another;
- determination of the overall transaction price;
- allocation of the transaction price to the various specific performance obligations;
- recognition of revenue when performance obligations are met.

This approach applies to contracts entered into by an entity with its customers, with the exception of leases (covered by IFRS 16), insurance contracts (covered by IFRS 17) and financial instruments (covered by IFRS 9). If specific stipulations relating to revenue or contract costs are given under a different standard, these will first be applied.

This method primarily applies to the following Group activities:

- commission income, notably that relating to banking services when this income is not included in the effective interest rate, or that relating to asset management or financial engineering services;
- income from other activities (see Note 4.6), particularly in the case of services included in leases.

As a result, fees and commissions are recorded based on the type of service rendered and on the method of accounting for the financial instruments to which the service relates.

This line includes mainly fees and commissions receivable or payable on recurring services (payment processing, custody fees, etc.) and occasional services (fund transfers, late payment penalties, etc.), fees and commissions receivable or payable on execution of significant transactions, and fees and commissions receivable or payable on trust assets held or managed on behalf of the Group's customers.

However, fees and commissions that form an integral part of the effective yield on a contract are recorded under "Net interest income".

Commissions on services

Commissions on services are analyzed to separately identify their different items (or performance obligations) and to assign the appropriate share of revenues to each item. Each item is then recorded in the income statement by type of service provided and according to the method used to recognize the associated financial instrument:

- fees and commissions payable or receivable on recurring services are deferred over the period in which the service is provided (payment processing, custody fees, etc.);
- fees and commissions payable or receivable on occasional services are recognized in full in income when the service is provided (fund transfers, payment penalties, etc.);
- commissions payable or receivable on execution of a significant transaction are recognized in full in income on completion of the transaction.

When there is some uncertainty about the amount of a commission (incentive fees in asset management, variable financial engineering fees and commissions, etc.), only the amount that the Group is already certain to receive, given the information available at the closing date, is recognized.

Fees and commissions that form an integral part of the effective yield on an instrument, such as fees on loan commitments given or loan set-up fees, are recognized and amortized as an adjustment to the effective interest rate over the estimated term of the applicable loan. These fees and commissions are recognized as "Interest income" rather than "Commission income".

Fiduciary and similar fees and commissions are those that result in assets being held or invested on behalf of individual customers, pension schemes or other institutions. Trust-management services mainly cover asset management business and custody services on behalf of third parties.

4.3. Gains (losses) on financial instruments at fair value through profit or loss

Accounting principles

"Gains (losses) on financial instruments at fair value through profit or loss" includes gains and losses (including the related interest) from financial assets and liabilities classified as held for trading or designated at fair value through profit or loss.

"Gains and losses on hedging transactions" include gains and losses arising from the revaluation of derivatives used as fair value hedges, as well as gains and losses from the revaluation of the hedged item in the same manner, the revaluation at fair value of the macro-hedged portfolio and the ineffective portion of cash flow hedges.

in millions of euros	**2025 fiscal year**	**2024 fiscal year**

Changes in fair value hedges	*2,513*	*(1,105)*
Changes in hedged items	*(2,565)*	*1,104*
Gains and losses on foreign exchange transactions	**454**	**439**
TOTAL GAINS (LOSSES) ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS	**2,849**	**2,976**

(1) In the 2025 fiscal year, "Gains and losses on financial instruments mandatorily recognized at fair value through profit or loss" included:
- at December 31, 2025, a valuation adjustment recorded on the liability valuation of derivatives in respect of own credit risk (DVA) of +€4 million (income) compared to an expense of -€57 million at December 31, 2024;
- in addition, the value adjustment concerning the valuation of the counterparty risk (CVA) of financial assets was +€48 million (income) at December 31, 2025 compared to an expense of -€35 million at December 31, 2024;
- the Funding Valuation Adjustment (FVA) included in the valuation of non-collateralized or imperfectly collateralized derivatives is also recorded on this line for an amount of +€58 million (income) at December 31, 2025, compared to -€68 million (expense) at December 31, 2024.

4.4. Net gains (losses) on financial instruments at fair value through other comprehensive income

Accounting principles

Financial assets at fair value through other comprehensive income include:

- SPPI debt instruments managed under a hold to collect and sell business model at fair value through other comprehensive income recyclable to profit or loss. If they are sold, changes in fair value are taken to income;
- equity instruments at fair value through other comprehensive income not recyclable to profit or loss. In the event of disposal, changes in fair value are not transferred to profit or loss but are taken directly to consolidated reserves. Only dividends affect income when they correspond to a return on investment.

Changes in the value of SPPI debt instruments managed under a hold to collect and sell business model recognized at fair value through other comprehensive income recyclable to profit or loss include:

- income and expenses recognized in net interest income;
- net gains or losses on derecognized debt financial assets at fair value through other comprehensive income;
- impairment/reversals recognized in "Cost of risk";
- gains and losses recognized directly in other comprehensive income.

in millions of euros	2025 fiscal year	2024 fiscal year

4.6. Income and expenses from other activities

Accounting principles

Income and expenses from other activities mainly include:

- income and expenses on investment property (rental income and expense, gains and losses on disposals, depreciation, amortization and impairment);
- income and expenses on operating leases;
- income and expenses on real estate development activities (revenues, purchases used).

	2025 fiscal year			2024 fiscal year

TOTAL INCOME AND EXPENSES FROM OTHER ACTIVITIES	**1,583**	**(1,307)**	**276**	**1,294**	**(979)**	**315**

Income and expenses from insurance activities are presented in Note 9.2.

4.7. Operating expenses

Accounting principles

Operating expenses include mainly payroll costs (wages and salaries net of rebilled amounts), social security charges, and employee benefit expenses such as pension costs. Operating expenses also include the full amount of administrative costs and external service costs.

Contributions to banking resolution mechanisms

The terms and conditions governing the establishment of the Deposit Guarantee Fund (FGDR) were amended by the Ministerial Order of October 27, 2015. For the Deposit Guarantee Fund, the cumulative amount of contributions made to the fund by the Group for deposit, collateral and securities guarantee mechanisms amounts to €1,646 million. Cumulative contributions (which are non-refundable in the event of a voluntary withdrawal of approval to operate) represent €336 million. Contributions paid in the form of partner or association certificates and cash security deposits recognized as assets on the balance sheet total €1,309 million at December 31, 2025.

European directive 2014/59/EU, known as the BRRD (the Bank Recovery and Resolution Directive), which sets out a framework for the recovery and resolution of banks and investment firms, and European Regulation No. 806/2014 (the Single Resolution Mechanism (SRM) Regulation) set up a resolution fund from 2015. In 2016, this fund became a Single Resolution Fund (SRF) between the Member States participating in the Single Supervisory Mechanism (SSM). The SRF is a resolution funding mechanism at the disposal of the resolution authority (Single Resolution Board). The latter may draw on this fund in the context of the implementation of the resolution procedures.

The Single Resolution Board set the level of contributions to the Single Resolution Fund for 2025 in accordance with Delegated Regulation 2015/63 and Implementing Regulation 2015/81 supplementing the BRRD on *ex-ante* contributions to bank resolution financing mechanisms. The target in terms of the funds to be collected for the resolution fund was achieved at December 31, 2023. The amount of the contributions paid by the Group was zero in 2024 and 2025 for both the portion recognized as an expense and the portion in the form of an irrevocable payment commitment (IPC) guaranteed by cash deposits entered as assets on the balance sheet. However, contributions may be called in the future depending, in particular, on the evolution of the covered deposits and the possible use of the funds. The share of the IPCs corresponded to 15% of the calls for funds until 2022 and 22.5% for the 2023 contribution. These deposits are remunerated at the rate applicable to the market players concerned, *i.e.* €ster -20 bps since May 1, 2023. The cumulative amount of guarantee collateral recognized as assets on the balance sheet totaled €647 million at December 31, 2025. It is recognized at amortized cost on the asset side of the balance sheet under "Accrued income and other assets" and was not subject to impairment at December 31, 2025. Commitments in respect of IPCs are not subject to a provision in liabilities. In effect, the conditions for using the SRF resources, and therefore for calling on irrevocable payment commitments, are strictly governed by regulations. These resources may only be called up in the event of a withdrawal of authorization or a resolution procedure by an institution and after intervention of at least 8% of total liabilities by shareholders and holders of relevant capital instruments and other commitments usable for bail-in purposes. In addition, the SRF contribution must not exceed 5% of the total liabilities of the institution subject to a resolution procedure. Groupe BPCE does not expect a resolution measure requiring a call for contributions for the Group to occur in the Eurozone, nor does it expect a loss or withdrawal of its banking license.

Note 5 Notes to the balance sheet

5.1. Cash and amounts due from central banks

Accounting principles

This item mainly includes cash and assets held with central banks at amortized cost.

in millions of euros	12/31/2025	12/31/2024
Cash	2,832	2,908
Central banks	131,106	130,278
TOTAL CASH AND AMOUNTS DUE FROM CENTRAL BANKS	**133,938**	**133,186**

5.2. Financial assets and liabilities at fair value through profit or loss

Accounting principles

Financial assets and liabilities at fair value through profit or loss comprise instruments held for trading, including derivatives; certain assets and liabilities that the Group chose to recognize at fair value at their date of acquisition or issue using the fair value option available under IFRS 9; and non-SPPI assets.

The criteria for classification as financial assets are described in Note 2.5.1.

Date of recognition

Securities are recorded in the balance sheet on the settlement-delivery date.

Temporary sales of securities are also recorded on the settlement-delivery date.

When such transactions are recorded under "Assets and liabilities at fair value through profit or loss", the commitment is recorded as an interest rate derivative.

The first-in, first-out (FIFO) method is applied to any partial disposals of securities, except in special cases.

5.2.1. Financial assets at fair value through profit or loss

Accounting principles

Financial assets at fair value through profit or loss are:

- financial assets held for trading, *i.e.* securities acquired or issued principally for the purpose of selling them in the near term;
- financial assets that the Group has chosen to recognize at fair value through profit or loss at inception using the fair value option available under IFRS 9. The qualifying criteria used when applying this option are described above;
- non-SPPI debt instruments;
- equity instruments measured by default at fair value through profit or loss (which are not held for trading purposes).

These assets are measured at fair value at the date of initial recognition and at each closing date. Changes in fair value over the period, interest, dividends, and gains or losses on disposals on these instruments are recognized in "Gains (losses) on financial instruments at fair value through profit or loss", with the exception of non-SPPI debt financial assets whose interest is recorded in "Interest income".

Financial assets in the trading book mainly include proprietary securities transactions, repurchase agreements and derivatives contracted by the Group to manage its risk exposure.

Assets designated at fair value through profit or loss

IFRS 9 allows entities to designate financial assets at fair value through profit or loss on initial recognition. However, an entity's decision to do so may not be reversed.

Compliance with the criteria stipulated by the standard must be verified prior to any recognition of an instrument using the fair value option.

This option may only be applied to eliminate or significantly reduce an accounting mismatch. Applying the option eliminates accounting mismatches stemming from the application of different valuation rules to instruments managed under a single strategy.

Financial assets in the trading book mainly include proprietary securities transactions, repurchase agreements and derivatives contracted by the Group to manage its risk exposure.

(1) Consisting of non-SPPI assets that fall outside the scope of a trading activity including units of UCITS and private equity investment funds (FCPR) presented in bonds and other debt securities (€6,053 million at December 31, 2025, *versus* €6,010 million at December 31, 2024). Loans to customers include, among others, certain non-SPPI loans. This category also includes equity instruments the Group decided not to recognize through other comprehensive income for a total of €2,729 million at December 31, 2025 compared to €2,892 million at December 31, 2024.

(2) The criteria used by Groupe BPCE to categorize financial assets at fair value through profit or loss if they do not meet the SPPI criterion are provided in Note 2.5.1.

(3) Only in the case of an "accounting mismatch".

(4) This information is presented after netting effects, in accordance with IAS 32 (see Note 5.18.1).

5.2.2. Financial liabilities at fair value through profit or loss

Accounting principles

These are financial liabilities held for trading or classified in this category on a voluntary basis at initial recognition using the fair value option available under IFRS 9. The trading book includes liabilities arising from short-selling transactions, repurchase agreements and derivatives. The qualifying criteria used when applying this option are described above.

These liabilities are measured at fair value at the date of initial recognition and at each closing date.

The changes in fair value over the period, interest, and gains or losses related to these instruments are booked as "Gains (losses) on financial instruments at fair value through profit or loss", with the exception of changes in fair value attributable to own credit risk associated with financial liabilities designated at fair value through profit or loss, which have been booked, since January 1, 2016, in "Revaluation of own credit risk on financial liabilities designated at fair value through profit or loss" within "Gains and losses recognized directly in other comprehensive income". If the liability is derecognized before its maturity (early redemption, for example), fair value gains or losses attributable to own credit risk are directly transferred to consolidated reserves.

Financial liabilities designated at fair value through profit or loss

IFRS 9 allows entities to designate financial liabilities at fair value through profit or loss on initial recognition. However, an entity's decision to do so may not be reversed.

Compliance with the criteria stipulated by the standard must be verified prior to any recognition of an instrument using the fair value option.

In practice, this option may be applied only under the specific circumstances described below:

Elimination of or significant reduction in an accounting mismatch

Applying the option eliminates accounting mismatches stemming from the application of different valuation rules to instruments managed under a single strategy.

Harmonization of accounting treatment for management and performance measurement

The option applies for liabilities managed and measured at fair value, provided that such management is based on a formally documented risk management policy or investment strategy, and that internal monitoring also relies on a fair value measurement.

Hybrid financial instruments containing one or more embedded derivatives

An embedded derivative is a component of a financial or non-financial hybrid (combined) instrument that qualifies as a derivative. It must be separated from the host contract and accounted for as a derivative if the hybrid instrument is not measured at fair value through profit or loss, and if the economic characteristics and risks associated with the derivative are not closely related to those of the host contract.

The fair value option may be applied to a financial liability when the embedded derivative substantially modifies the cash flows of the host contract and when the separate recognition of the embedded derivative is not specifically prohibited by IFRS 9 (*e.g.* an early redemption option embedded in a debt instrument). The option allows the entire instrument to be measured at fair value and therefore avoids the need to extract, recognize or separately measure the embedded derivative.

This accounting treatment applies in particular to some structured debt issues containing material embedded derivatives.

Financial liabilities in the trading book include liabilities arising from short-selling transactions, repurchase agreements and derivatives.

(1) This information is presented after netting effects, in accordance with IAS 32 (see Note 5.18.2).

These liabilities are measured at fair value on the closing date with changes in value, including coupon, recorded in the "Gains (losses) on financial instruments at fair value through profit or loss" line on the income statement, with the exception of changes in fair value attributable to own credit risk associated with financial liabilities designated at fair value through profit or loss, which are recognized in "Revaluation of own credit risk on financial liabilities designated at fair value through profit or loss" in accordance with IFRS 9.

Conditions for designating financial liabilities at fair value through profit or loss

At Group level, financial liabilities designated at fair value through profit or loss are mostly held by the Global Financial Services division. They mainly comprise issues originated and structured for customers and for which the risks and hedges are managed collectively. These issues include significant embedded derivatives for which changes in value are offset by those of the derivative instruments hedging them.

Financial liabilities designated at fair value through profit or loss, excluding Global Financial Services, also include some structured debt issues and structured deposits containing embedded derivatives (*e.g.* structured BMTNs and equities for personal savings plans).

The cumulative amount of changes in fair value reclassified in the "Consolidated reserves" component during the period concerns the repayments of "Debt securities" classified as "Financial liabilities designated at fair value" and amounted to €0 million at December 31, 2024 and December 31, 2025.

The amount contractually due on loans at maturity comprises the outstanding principal amount at the reporting date plus accrued interest not yet due. In the case of securities, the redemption value is generally used.

Total debt revaluations attributable to own credit risk were €920 million at December 31, 2025, compared to -€315 million at December 31, 2024. The change is recorded in non-recyclable gains and losses recognized directly in other comprehensive income.

This change mainly reflects the methodological refinement of the calculation of the issuer spread (see Note 10).

5.2.3. Trading derivatives

Accounting principles

A derivative is a financial instrument or other contract with all three of the following characteristics:

- its value changes in response to the change in a specific interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided that, in the case of a non-financial variable, this variable may not be specific to one of the parties to the contract;
- it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors;
- it is settled at a future date.

All derivatives are recognized on the balance sheet at the trade date and are measured at fair value at inception. They are remeasured at their fair value at each reporting period regardless of whether they were acquired for trading or hedging purposes.

Trading derivatives are recognized on the balance sheet under "Financial assets at fair value through profit or loss" and "Financial liabilities at fair value through profit or loss". Realized and unrealized gains and losses are taken to income on the "Gains (losses) on financial instruments at fair value through profit or loss" line.

The notional amounts of financial instruments are merely an indication of the volume of the Group's business and do not reflect the market risks associated with such instruments. Positive or negative fair values represent the replacement value of these instruments. These values may vary significantly depending on changes in market parameters.

(1) The positive fair value of trading derivatives included €208 million at December 31, 2025 (*vs.* €7 million at December 31, 2024) for the insurance business. It is presented on the assets side of the balance sheet under "Insurance activities financial investments" (see Note 9.2.4).

5.3. Hedging derivatives

Accounting principles

A derivative is a financial instrument or other contract with all three of the following characteristics:

- its value changes in response to the change in a specific interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided that, in the case of a non-financial variable, this variable may not be specific to one of the parties to the contract;
- it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors;
- it is settled at a future date.

All derivatives are recognized on the balance sheet at the trade date and are measured at fair value at inception. They are remeasured at their fair value at each reporting period regardless of whether they were acquired for trading or hedging purposes.

Changes in the fair value of derivatives are recognized in net income for the period, except for derivatives qualifying as cash flow hedges or as hedges of net investments in foreign operations for accounting purposes.

Derivatives may only be designated as hedges if they meet the criteria set out in IAS 39 at inception and throughout the term of the hedge. These criteria include formal documentation that the hedging relationship between the derivatives and the hedged items is both prospectively and retrospectively effective.

Fair value hedges mainly consist of interest rate swaps that protect fixed-rate financial instruments against changes in fair value attributable to changes in market interest rates. They transform fixed-rate assets or liabilities into floating-rate instruments. Fair value hedges include, in particular, hedges of loans, securities, deposits and fixed-rate subordinated debt.

Fair value hedging is also used to manage the overall interest rate risk position.

Cash flow hedges fix or control the variability of cash flows arising from floating-rate instruments. Cash flow hedging is also used to manage the overall interest rate risk position.

The notional amounts of financial instruments are merely an indication of the volume of the Group's business and do not reflect the market risks associated with such instruments.

The hedging relationship qualifies for hedge accounting if, at the inception of the hedge, there is formal documentation of the hedging relationship identifying the hedging strategy, the type of risk hedged, the designation and characteristics of the hedged item and the hedging instrument. In addition, the effectiveness of the hedge must be demonstrated at inception and subsequently verified.

Derivatives contracted as part of a hedging relationship are designated according to the purpose of the hedge.

Groupe BPCE chose the option available in IFRS 9 not to apply the provisions of the standard relative to hedge accounting, and to continue to apply IAS 39, as adopted by the European Union, for the recognition of these transactions, *i.e.* excluding certain provisions relating to macro-hedging.

Fair value hedges

Fair value hedges are intended to reduce exposure to changes in the fair value of an asset or liability carried on the balance sheet, or of a firm commitment, in particular the interest rate risk on fixed-rate assets and liabilities.

The gain or loss on the revaluation of hedging instruments attributable to the risk being hedged is recognized in income in the same manner as the gain or loss on the hedged item. The ineffective portion of the hedge, if any, is recorded in the income statement under "Gains (losses) on financial instruments at fair value through profit or loss".

Accrued interest on the hedging instrument is taken to income in the same manner as the accrued interest on the hedged item.

Where identified assets or liabilities are hedged, the revaluation of the hedged component is recognized on the same line of the balance sheet as the hedged item.

The ineffective portion relating to the dual-curve valuation of collateralized derivatives is taken into account when calculating the effectiveness of a hedge.

If a hedging relationship ceases (investment decision, failure to fulfill effectiveness criteria, or because the hedged item is sold before maturity), the hedging instrument is transferred to the trading book. The revaluation difference recorded in the balance sheet in respect of the hedged item is amortized over the residual life of the initial hedge. If the hedged item is sold before maturity or redeemed early, the cumulative amount of the revaluation gain or loss is recognized in net income for the period.

Cash flow hedges

The purpose of cash flow hedges is to hedge the exposure to the variability of cash flow that is attributable to a particular risk associated with a recognized asset or liability or with a future transaction (hedge of interest rate risk on floating-rate assets or liabilities, hedge of conditions relating to future transactions such as future fixed interest rates, future prices, exchange rates, etc.).

The portion of the gain or loss on the hedging instrument that is deemed to be an effective hedge is recognized on a separate line of "Gains and losses recognized directly in other comprehensive income". The ineffective portion of the gain or loss on the hedging instrument is recorded in the income statement under "Gains (losses) on financial instruments at fair value through profit or loss".

Accrued interest on the hedging instrument is taken to income under interest income in the same manner as the accrued interest on the hedged item.

The hedged items are accounted for using the treatment applicable to their specific asset category.

If a hedging relationship ceases (because the hedge no longer meets the effectiveness criteria, the derivative is sold or the hedged item ceases to exist), the cumulative amounts recognized in other comprehensive income are transferred to the income statement as and when the hedged item impacts profit or loss, or immediately if the hedged item ceases to exist.

Special case: portfolio hedging (macro-hedging)

Documentation as cash flow hedges

Some Group institutions document their macro-hedging of interest rate risk as cash flow hedges (hedging of portfolios of loans or borrowings).

In this case, the portfolios of assets or liabilities that may be hedged are, for each maturity band:

- floating-rate assets and liabilities; the entity incurs a risk of variability in future cash flows from floating-rate assets or liabilities insofar as future interest rate levels are not known in advance;
- future transactions deemed to be highly probable (forecasts): assuming total outstandings remain constant, the entity is exposed to the risk of variability in future cash flows on future fixed-rate loans insofar as the interest rate at which the loan will be granted is not yet known. Similarly, the Group may be exposed to the risk of variability in future cash flows on the funding that it will need to raise in the market.

IAS 39 does not permit the designation of a net position by maturity band. The hedged item is therefore deemed to be equivalent to a share of one or more portfolios of identified floating-rate instruments (portion of deposit outstandings or floating-rate loans); the effectiveness of the hedges is measured by creating a hypothetical instrument for each maturity band and comparing its changes in fair value from inception to those for the documented hedging derivatives.

The characteristics of this instrument model those of the hedged item. Effectiveness is then assessed by comparing the changes in value of the hypothetical instrument with the actual hedging instrument. This method requires the preparation of a maturity schedule.

The effectiveness of the hedge must be shown prospectively and retrospectively.

The hedge is effective prospectively if, for each target maturity band, the nominal amount of items to be hedged is higher than the notional amount of the hedging instruments.

The retrospective test calculates the retrospective effectiveness of a hedge initiated at various balance sheet dates.

At each balance sheet date, changes in the fair value of hedging instruments, excluding accrued interest, are compared with those of hypothetical instruments. The ratio of their respective changes should be between 80% and 125%.

If the hedged item is sold or the future transaction is no longer highly probable, the cumulative unrealized gain or loss recognized in other comprehensive income is transferred immediately to profit or loss.

When the hedging relationship ceases, if the hedged item is still shown on the balance sheet, or if it is still highly probable, unrealized cumulative gains and loss in comprehensive income are amortized on a straight-line basis. If the derivative has not been canceled, it is reclassified as a trading derivative, and subsequent changes in its fair value are recognized in income.

Documentation as fair value hedges

Some of the Group's institutions document their macro-hedging of interest rate risk as fair value hedges by applying the carve-out arrangements under IAS 39 as adopted by the European Union.

The version of IAS 39 adopted for use by the European Union does not include certain hedge accounting provisions that appear incompatible with the strategies implemented by European banks to reduce their overall exposure to interest rate risk. In particular, this carve-out allows the Group to make use of hedge accounting for interbank interest rate risk on customer transactions at fixed rates (loans, savings accounts and demand deposits). The macro-hedging instruments used by the Group are mainly plain vanilla interest rate swaps designated at inception as fair value hedges of fixed-rate deposits or loans.

Macro-hedging derivatives are accounted for in the same manner as derivatives used to hedge the fair value of specific transactions (micro-hedging).

In a macro-hedging relationship, gains and losses on the revaluation of the hedged item are recorded in "Revaluation differences on interest rate risk-hedged portfolios", under balance sheet assets for hedges of a portfolio of financial assets and under balance sheet liabilities for hedges of a portfolio of financial liabilities.

The hedges are deemed effective if the derivatives offset the interest rate risk on the underlying fixed-rate portfolio. The ineffective portion relating to the dual-curve valuation of collateralized derivatives is taken into account.

Effectiveness is tested in two ways:

- asset-based testing: for plain vanilla swaps designated as hedging instruments at inception, the Group verifies that no over-hedging exists both prospectively at the date the hedging relationship is designated and retrospectively at each balance sheet date;
- quantitative testing: for other swaps, the change in the fair value of the actual swap must offset the changes in the fair value of a hypothetical instrument that exactly reflects the underlying hedged item. These tests are conducted prospectively at the date the instrument is designated as a hedge and retrospectively at each balance sheet date.

If a hedging relationship ceases, the revaluation adjustment is amortized on a straight-line basis over the remaining term of the initial hedge, if the hedged item has not been derecognized. It is taken directly to income if the hedged item is no longer recorded in the balance sheet. In particular, derivatives used for macro-hedging may be disqualified for hedge accounting purposes when the nominal amount of the hedged items falls below the notional amount of the hedging instruments, for example in the case of the prepayment of loans or the withdrawal of deposits observed and modeled.

Hedges of net investments in foreign operations

A net investment in a foreign operation is the amount of the investment held by the consolidating entity in the net assets of the operation.

The purpose of a hedge of a net investment in a foreign operation is to minimize the foreign exchange effect for a consolidating entity of an investment in an entity whose functional currency is different from the presentation currency of the consolidating entity's financial statements. Net investment hedges are accounted for in the same manner as cash flow hedges.

Unrealized gains and losses initially recognized in other comprehensive income are taken to income when the net investment is sold in full or in part (or when partially sold with loss of control).

Fair value hedges mainly consist of interest rate swaps that protect fixed-rate financial instruments against changes in fair value attributable to changes in market interest rates. They transform fixed-rate assets or liabilities into floating-rate instruments.

Fair value macro-hedges are used to manage the overall interest rate risk position, in particular to hedge:

- fixed-rate loan portfolios;
- demand deposits;
- PEL home purchase savings deposits;
- the inflation component of the Livret A or Livret d'Epargne Populaire (LEP) savings accounts.

In the Ministerial Order of July 28, 2023, the government decided to set the rate of the Livret A savings account at 3%, until January 31, 2025 by way of an exception to the regulatory calculation formula. The absence of an inflation component during this period was taken into account by the Group as a source of ineffectiveness (or, where applicable, disqualification) of the hedges of the inflation component of the Livret A savings account, with no significant impact on income.

Fair value micro-hedges are notably used to hedge:

- fixed-rate liabilities;
- fixed-rate liquidity reserve securities and inflation-indexed securities.

Cash flow hedges fix or control the variability of cash flows arising from floating-rate instruments. Cash flow hedging is also used to manage the overall interest rate risk position.

Cash flow hedges are mainly used to:

- hedge floating-rate liabilities;
- hedge the risk of changes in value of future cash flows on liabilities;
- provide macro-hedging of floating-rate assets.

The main causes of ineffective hedging are related to:

- inefficiency due to dual-curve valuations: the value of collateralized derivatives (with margin calls yielding €STR) is based on the €STR discount curve, while the fair value of the hedged component of the item hedged is calculated using a EURIBOR discount curve;
- the time value of options;
- over-hedging for asset-based testing of macro-hedges (notional amounts of hedging derivatives higher than the nominal amount of the hedged items, in particular where prepayments on the hedged items were higher than expected);
- credit value adjustments and debit value adjustments linked to credit risk and own credit risk on derivatives;
- differences in interest rate fixing dates between the hedged item and the hedge.

The notional amounts of financial instruments are merely an indication of the volume of the Group's business and do not reflect the market risks associated with such instruments.

(1) The positive fair value of hedging derivatives includes €111 million at December 31, 2025 (€82 million at December 31, 2024) for the insurance business. It is presented on the assets side of the balance sheet under "Insurance activities financial investments" (see Note 9.2.1).

All hedging derivatives are included in "Hedging derivatives" in balance sheet assets and liabilities.

Currency swaps are documented both as interest rate fair value hedges and as currency cash flow hedges. Total fair value is nevertheless recorded under currency derivatives. These derivatives were mainly recorded under currency fair value hedges and are recorded under currency cash flow hedges in order to better reflect the weight of the currency component (associated with the cash flow hedge) in total fair value.

Total	**403**	**(98)**	**(38)**	**7**	**274**

5.4. Financial assets at fair value through other comprehensive income

Accounting principles

Financial assets at fair value through other comprehensive income are initially recognized at fair value, plus any transaction costs.

Debt instruments measured at fair value through other comprehensive income recyclable to profit or loss

For each reporting period, these instruments are carried at their fair value and changes in fair value (excluding accrued interest) are recorded under "Gains and losses recognized directly in other comprehensive income recyclable to profit or loss" (as the foreign currency assets are monetary assets, changes in the fair value of the foreign currency component affect income). The principles used to determine fair value are described in Note 10.

These instruments are subject to IFRS 9 impairment requirements. Information about credit risk is provided in Note 7.1. If they are sold, these changes in fair value are taken to income.

Interest income accrued or received on debt instruments is recorded under "Interest and similar income" based on the effective interest method. This method is described in Note 5.5 "Assets at amortized cost".

Equity instruments measured at fair value through other comprehensive income not recyclable to profit or loss

For each reporting period, these instruments are carried at their fair value and changes in fair value are recorded under "Gains and losses recognized directly in other comprehensive income not recyclable to profit or loss" (as the foreign currency assets are not monetary assets, changes in the fair value of the foreign currency component do not affect income). The principles used to determine fair value are described in Note 10.

The designation at fair value through other comprehensive income not recyclable to profit or loss is an irrevocable option that is applied on an instrument-by-instrument basis only to equity instruments not held for trading purposes. Realized and unrealized losses continue to be recorded in other comprehensive income with no impact on income. These financial assets are not impaired.

In the event of disposal, changes in fair value are not transferred to profit or loss but are taken directly to consolidated reserves.

Only dividends affect income when they correspond to a return on investment. They are recorded in "Net gains (losses) on financial instruments at fair value through other comprehensive income" (Note 4.4).

in millions of euros	12/31/2025	12/31/2024
Loans and advances	21	119
Debt securities	59,210	52,479
Shares and other equity securities[1]	4,740	4,568
FINANCIAL ASSETS AT FAIR VALUE THROUGH OTHER COMPREHENSIVE INCOME	**63,971**	**57,166**
Of which impairment for expected credit losses[2]	(27)	(34)
Of which gains and losses recognized directly in other comprehensive income on financial assets at fair value through other comprehensive income (before tax)[3]	67	(518)
• *Debt instruments*	*(416)*	*(864)*
• *Equity instruments*	*483*	*346*

(1) Shares and other equity securities include strategic equity interests and certain long-term private equity securities. As these securities are not held for sale, their classification as equity instruments designated at fair value through other comprehensive income is appropriate.
(2) Details presented in Note 7.1.2.2.
(3) Including the portion attributable to non-controlling interests (€2 million at December 31, 2025, compared with -€2 million at December 31, 2024).

Equity instruments designated at fair value through other comprehensive income

Accounting principles

Equity instruments designated at fair value through other comprehensive income can include:

- investments in associates;
- shares and other equity securities.

On initial recognition, equity instruments designated at fair value through other comprehensive income are carried at fair value plus any transaction costs.

On subsequent closing dates, changes in the fair value of the instrument are recognized in other comprehensive income (OCI).

These changes in fair value that accrue to other comprehensive income will not be reclassified to profit or loss in subsequent years (other comprehensive income not recyclable to profit or loss).

Dividends are only taken to income when they meet the required conditions.

	12/31/2025				12/31/2024			
		Dividends recognized over the period	Derecognition over the period			Dividends recognized over the period	Derecognition over the period	
in millions of euros	Fair value	Equity instruments held at the end of the period	Fair value at the disposal date	Total profit or loss at the disposal date	Fair value	Equity instruments held at the end of the period	Fair value at the disposal date	Total profit or loss at the disposal date
Investments in associates	3,770	161	72	(1)	3,565	169	124	(28)
Shares and other equity securities	970	8	182	0	1,003	8	0	(0)
TOTAL	**4,740**	**169**	**254**	**(1)**	**4,568**	**177**	**124**	**(28)**

Investments in associates include strategic investments, "tool" entities (IT for example) and certain long-term private equity securities. As these equity investments are not held for sale, their classification as equity instruments designated at fair value through other comprehensive income is appropriate.

The cumulative amount of changes in fair value reclassified to the "Consolidated reserves" component during the period mainly concerns the liquidation of non-consolidated securities and amounts to -€1 million at December 31, 2025, compared to -€28 million at December 31, 2024.

5.5. Assets at amortized cost

Accounting principles

Assets at amortized cost are SPPI financial assets managed under a hold to collect business model. Most loans originated by the Group are classified in this category. Information about credit risk is provided in Note 7.1.

Financial assets at amortized cost include loans and advances to banks and customers as well as securities at amortized cost such as treasury bills and bonds.

Loans and advances are initially recorded at fair value plus any costs and less any income directly related to the arrangement of the loan or to the issue.

When loans are extended under conditions that are less favorable than market conditions, a discount corresponding to the difference between the nominal value of the loan and the sum of future cash flows discounted at the market interest rate is deducted from the nominal value of the loan. The market interest rate is the rate applied by the vast majority of local financial institutions at a given time for instruments and counterparties with similar characteristics.

On subsequent closing dates, these financial assets are measured at amortized cost using the effective interest method.

The effective interest rate is the rate that exactly discounts estimated future cash flows to the carrying amount of the loan at inception. This rate includes any discounts recorded in respect of loans granted at below-market rates, as well as any external transaction income or costs directly related to the implementation of the loans, which are treated as an adjustment to the effective yield on the loan. No internal cost is included in the calculation of amortized cost.

State-guaranteed loans

The State-guaranteed loan (SGL) is a support scheme set up under Article 6 of the amended French Finance act No. 2020-289 of March 23, 2020, and the ministerial order issued by the Minister of the Economy and Finance on March 23, 2020, establishing a State guarantee for credit institutions and financing companies from March 16, 2020, to meet the cash flow requirements of companies impacted by the Covid-19 health crisis. The SGL is subject to common eligibility criteria applicable by all institutions issuing the loan, as set out by law. The scheme ended on June 30, 2022.

The SGL is a one-year loan with capital repayments deferred for this period. The beneficiary companies may decide, at the end of the first year, to repay the SGLs over one to five additional years or to start repaying the capital only from the second year of the repayment period, paying only the interest and the cost of the State guarantee in the meantime.

For eligible companies, the amount of the SGL is generally capped at 25% of the company's revenues (excluding innovative and recently created companies, and excluding the Seasonal SGL for customers in the Tourism/Hotels/Catering sector, for example). The State provides a guarantee covering between 70% and 90% of the loan, depending on the size of the company. The issuing bank incurs the residual risk. The State guarantee covers a portion of the total amount due on the loan (principal, interest and incidental expenses) until it becomes due. The State guarantee may be enforced before the loan is due if a credit event should occur.

The prepayment penalty is set in the contract, at a reasonable level (2% of the principal amount outstanding during the initial loan period, then 3%-6% of the principal amount outstanding during the repayment period). The terms and conditions for extending the loan are not set in advance but are established two to three months before the extension option expires, in line with market conditions.

The SGLs may not be covered by another collateral security or guarantee besides the State guarantee, with the exception of those granted pursuant to a ministerial order by the Minister of the Economy and Finance. The self-employed professional or business leader may request or be offered loan repayment Insurance, but such Insurance is not mandatory.

In view of these features, the SGLs meet the criteria of a basic lending arrangement (see Note 2.5.1). These loans are therefore recognized at amortized cost, because they are managed in a hold-to-collect business model (see Note 2.5.1). On subsequent closing dates, they will be measured at amortized cost using the effective interest method.

The State guarantee is considered to be an integral part of the terms of the loan and is taken into account when calculating impairment for expected credit losses. The guarantee fee paid to the government by Groupe BPCE on granting the loan is recorded in income over the initial term of the SGL, using the effective interest method. The impact is recognized in net interest income.

A State-guaranteed loan granted to a borrower considered to be non-performing on inception (Stage 3) is classified as a POCI (Purchased or Originated Credit-Impaired) asset.

However, the grant of a State-guaranteed loan to a given counterparty is not in itself evidence of deterioration in risk, requiring a downgrade to Stage 2 or 3 of the other outstandings of this counterparty.

The Resilience SGL, opened on April 6, 2022, is an additional SGL for companies impacted by the consequences of the conflict in Ukraine (in particular for companies that are at – or close to – the 25% ceiling of the SGL). The authorized ceiling is 15% of the average revenue over the last three fiscal years, or the last two fiscal years if they have only two fiscal years or the last fiscal year if they only have one fiscal year, or calculated as annualized revenue using a straight-line projection based on revenue achieved to date if they have no closed fiscal year. Except for its amount, subject to the new ceiling of 15% of revenue, the additional SGL takes the same form as the SGLs introduced at the beginning of the health crisis: same maximum duration (up to six years), same minimum repayment-free period (12 months), same guaranteed portion and guarantee premium. The Resilience SGL could be fully combined with any SGLs already obtained until June 30, 2022. This scheme ended on December 31, 2023.

Loan renegotiations and restructuring

When contracts are modified, IFRS 9 requires the identification of financial assets that are renegotiated, restructured or otherwise modified (whether or not as a result of financial hardship), but not subsequently derecognized. Any profit or loss arising from the modification of a contract is recognized in income. The gross carrying amount of the financial asset must be recalculated so it is equal to the present value of the renegotiated or amended contractual cash flows at the initial effective interest rate. The materiality of the modifications is, however, analyzed on a case by case basis.

"Restructured" amounts correspond to loans where an arrangement has been reached that represents a concession to debtors in financial hardship or in danger of being so. "Restructured" amounts therefore require a combination of two elements: a concession and financial difficulties.

To qualify as a "restructuring", an arrangement must result in a more favorable situation for the debtor (*e.g.* suspended payments of interest or principle, extension of maturities, etc.) and take the form of additional clauses to an existing contract or the full or partial refinancing of an existing loan.

Financial difficulty is measured by a number of criteria, such as payments more than 30 days past due or an at-risk classification. The arrangement of a restructuring does not necessarily mean the counterparty in question is classed as in default by Basel standards. Whether they are classed as in default depends on the viability test carried out during the counterparty's restructuring.

In the event of restructuring following a proven credit loss event, the loan is considered as an impaired loan (in Stage 3) and is subject to a discount equal to the difference between the present value of the initially expected contractual cash flows and the discounting of the future expected capital and interest flows following the restructuring. The discount rate used is the initial effective interest rate. This discount is expensed to "Cost of credit risk" in the income statement and offset against the corresponding item on the balance sheet. It is written back to net interest income in the income statement over the life of the loan using an actuarial method. If the discount is immaterial, the effective interest rate on the restructured loan is adjusted and no discount is recognized.

The restructured loan is reclassified as performing (not impaired, Stage 1 or Stage 2) when no uncertainty remains as to the borrower's capacity to honor the commitment.

For substantially restructured loans (for example, the conversion of all or part of a loan into an equity instrument), the new instruments are booked at fair value. The difference between the carrying amount of the derecognized loan (or portion of the loan) and the fair value of the assets received in exchange is taken to income under "Cost of credit risk". Any previously established impairment loss on the loan is adjusted. It is fully reversed in the event of full conversion of the loan into new assets.

The widespread moratoria granted to business customers in response to temporary cash flow difficulties arising from the Covid-19 crisis modified these loans' repayment schedules without substantially modifying their features. These loans were therefore amended without being derecognized. In addition, the granting of the moratorium is not in itself an indication of financial distress for the companies in question.

Fees and commissions

Costs directly attributable to the arrangement of loans are external costs which consist primarily of commissions paid to third parties such as business provider fees.

Income directly attributable to the issuance of new loans principally comprises set-up fees charged to customers, rebilled costs and loan commitment fees (if it is more probable than improbable that the loan will be drawn down). Loan commitment fees received that will not result in any drawdowns are apportioned on a straight-line basis over the life of the commitment.

Expenses and income arising on loans with a term of less than one year at inception are deferred on a *pro rata* basis with no recalculation of the effective interest rate. For floating or adjustable rate loans, the effective interest rate is adjusted at each rate resetting date.

Date of recognition

Loans and securities are recorded in the balance sheet on the settlement-delivery date.

Temporary sales of securities are also recorded on the settlement-delivery date.

The first-in, first-out (FIFO) method is applied to any partial disposals of securities, except in special cases.

For repurchase transactions, a loan commitment given is recorded between the transaction date and the settlement-delivery date.

5.5.1. Securities at amortized cost

in millions of euros	12/31/2025	12/31/2024
Treasury bills and equivalent	16,055	15,967

Other accounts receivable	8,556	7,615
Other assets	**8,588**	**7,818**
TOTAL ACCRUED INCOME AND OTHER ASSETS	**14,932**	**16,444**

5.7. Non-current assets held for sale and associated liabilities

Accounting principles

Where a decision is made to sell non-current assets and it is highly probable that the sale will occur within 12 months, these assets are shown separately on the balance sheet on the "Non-current assets held for sale" line. Any liabilities associated with these assets are also shown separately on the balance sheet on the "Liabilities associated with non-current assets held for sale" line.

Once classified in this category, non-current assets are no longer depreciated/amortized and are measured at the lowest of their carrying amount or fair value less sales costs. Financial instruments continue to be measured in accordance with IFRS 9.

A non-current asset (or group of assets) is held for sale when its carrying amount is recovered by its sale. The asset (or group of assets) must be immediately available for sale and it must be highly likely that the sale will be completed within the next 12 months.

Disposal of MV CREDIT

On January 31, 2025, Natixis Investment Managers sold its subsidiary "MV Credit" to the US investment company Clearlake Capital Group.

At December 31, 2024, Natixis, through Natixis Investment Managers, had maintained the full consolidation of the subsidiary and presented, in accordance with the provisions of IFRS 5 "Non-Current Assets Held for Sale and Discontinued Operations", assets and liabilities of this entity in two separate balance sheet items.

Disposal of Vauban Infrastructure Partners ("Vauban")

Natixis Investment Managers has reached an agreement to sell 24.99% of the share capital of Vauban Infrastructure Partners ("Vauban") to Investcorp Strategic Capital Group, a global platform specializing in equity investments in asset management companies. After this disposal, Natixis Investment Managers will no longer control Vauban, but will continue to hold 24.99% of this entity, which it will then consolidate using the equity method. At December 31, 2025, Natixis, through Natixis Investment Managers, had maintained the full consolidation of "Vauban" and presented, in accordance with the provisions of IFRS 5 "Non-Current Assets Held for Sale and Discontinued Operations", assets and liabilities of this entity in two separate balance sheet items: "Non-current assets held for sale" and "Liabilities associated with non-current assets held for sale".

Figures relating to the entities held for sale are shown below:

in millions of euros	12/31/2025	12/31/2024
Financial assets at fair value through profit or loss	29	0
Financial assets at fair value through other comprehensive income	0	322
Loans and advances to banks and similar at amortized cost	0	18
Loans and advances to customers at amortized cost	0	1

Deferred tax assets	1	1
Accrued income and other assets	22	12
Property, plant and equipment	6	2
Intangible assets	(0)	10
Goodwill	135	72
NON-CURRENT ASSETS HELD FOR SALE	**197**	**438**
Debt securities	0	297
Amounts due to banks and similar	0	1
Current tax liabilities	(2)	(1)
Deferred tax liabilities	0	1
Accrued expenses and other liabilities	22	13
Provisions	1	0
LIABILITIES ASSOCIATED WITH NON-CURRENT ASSETS HELD FOR SALE	**21**	**312**

5.8. Investment property

Accounting principles

In accordance with IAS 40, investment property is property held to earn rent and for capital appreciation.

The accounting treatment for investment property is identical to that used for property, plant and equipment for all Group entities except for certain Insurance entities, which recognize the property they hold as Insurance investments at fair value, with any adjustment to fair value recorded in income. Fair value is calculated using a multi-criteria approach, by capitalizing rent at market rates and through comparisons with market transactions.

The fair value of the Group's investment property is based on regular expert valuations, except in special cases significantly affecting the value of the relevant asset.

Investment property leased under an operating lease may have a residual value that will reduce the depreciable amount of the asset.

Gains or losses on the disposal of investment property are recognized in income on the "Net income or expenses on other activities" line, with the exception of insurance activities, which are recognized in "Revenue from insurance activities".

	12/31/2025			12/31/2024		
in millions of euros	**Gross amount**	**Accumulated depreciation and impairment**	**Net amount**	**Gross amount**	**Accumulated depreciation and impairment**	**Net amount**
Property recognized at historic cost	1,656	(672)	984	1,347	(614)	733
TOTAL INVESTMENT PROPERTY			**984**			**733**

Investment property held by the insurance subsidiaries is reported with insurance investments (see note 9).

The fair value of investment property came to €1,325 million at December 31, 2025 (€1,218 million at December 31, 2024).

The fair value of investment property is classified in Level 3 of the fair value hierarchy in accordance with IFRS 13.

5.9. Property, plant and equipment and intangible assets

Accounting principles

This item includes property owned and used in the business, movable assets acquired under operating leases, property acquired under finance leases and temporarily unleased assets held under finance leases. Interests in non-trading real estate companies (SCIs) are accounted for as property, plant and equipment.

In accordance with IAS 16 and IAS 38, property, plant and equipment and intangible assets are recognized as assets only if they meet the following conditions:

- it is probable that the company will enjoy future economic benefits associated with the asset;
- the cost of the asset can be measured reliably.

Property, plant and equipment and intangible assets used in operations are initially recognized at cost plus any directly attributable acquisition costs. Software developed internally that fulfills the criteria for recognition as a non-current asset is recognized at its production cost, which includes external charges and the payroll costs of employees directly assigned to the project.

The component-based approach is applied to all buildings.

Internally created software is recognized as an asset in the balance sheet under "Intangible assets" for its direct development cost when the criteria for recognition of an asset as set out in IAS 38 are met.

After initial recognition, property, plant and equipment and intangible assets are measured at cost less any accumulated depreciation, amortization or impairment. The depreciable amount of the asset takes account of its residual value where this is material and can be measured reliably.

Property, plant and equipment and intangible assets are depreciated or amortized in order to reflect the pattern in which the asset's future economic benefits are expected to be consumed by the entity, which generally corresponds to the asset's useful life. Where an asset consists of a number of components that have different uses or economic benefit patterns, each component is recognized separately and depreciated over a period that reflects the useful life of that component.

The depreciation and amortization periods used by the Group are as follows:

- buildings: 20 to 60 years;
- internal fixtures and fittings: 5 to 20 years;
- furniture and special equipment: 4 to 10 years;
- IT equipment: 3 to 5 years;
- software: not more than 5 years.

Other items of property, plant and equipment and intangible assets are depreciated over their estimated useful life, which generally ranges from 5 to 10 years.

Property, plant and equipment and intangible assets are tested for impairment whenever there is any evidence that they may be impaired at the balance sheet date. If this is the case, the revised recoverable amount of the asset is compared to its net carrying amount. If the revised recoverable amount of the asset is lower than its carrying amount, an impairment loss is recognized in income.

This loss is reversed in the event of a change in the estimated recoverable amount or if there is no longer any evidence of impairment.

Equipment leased under operating leases (group as lessor) is recognized as an asset on the balance sheet under property, plant and equipment.

	12/31/2025			12/31/2024		
in millions of euros	Gross amount	Accumulated depreciation and impairment	Net amount	Gross amount	Accumulated depreciation and impairment	Net amount

TOTAL INTANGIBLE ASSETS	**4,850**	**(3,522)**	**1,328**	**4,284**	**(3,137)**	**1,147**

5.10. Debt securities

Accounting principles

Issues of debt securities not classified as financial liabilities at fair value through profit or loss or through other comprehensive income are initially recognized at fair value less any transaction costs. They are subsequently measured at amortized cost at each reporting date using the effective interest method.

These instruments are recognized on the balance sheet under "Amounts due to banks", "Amounts due to customers" or "Debt securities".

Debt securities are classified based on the nature of the underlying, with the exception of subordinated notes presented under "Subordinated debt".

Securities are recorded in the balance sheet on the settlement-delivery date.

The first-in, first-out (FIFO) method is applied to any partial disposals of securities, except in special cases.

A new category of liabilities eligible for the numerator of the Total Loss Absorbing Capacity (TLAC) calculation has been introduced by French law and is commonly referred to as "Senior non-preferred debt". These liabilities rank between own funds and "Other senior preferred debt".

in millions of euros	12/31/2025	12/31/2024
Bonds	151,882	158,093
Interbank market instruments and negotiable debt securities	88,991	108,198
Other debt securities that are neither preferred nor subordinated	14	362
Senior non-preferred debt	38,636	34,925
Total	**279,523**	**301,579**
Accrued interest	3,512	3,378
TOTAL DEBT SECURITIES	**283,035**	**304,957**

Green bond issues are detailed in Chapter 2 "Sustainability report" (Part 3 - Social information).

The fair value of debt securities is presented in Note 10.

5.11. Amounts due to banks and similar and customers

Accounting principles

Debts, which are not classified as financial liabilities measured at fair value through profit or loss or as equity, are recorded in the balance sheet under "Amounts due to banks" or "Amounts due to customers".

These debts issued are initially recognized at their fair value less transaction costs and are measured at the reporting date according to the amortized cost method using the effective interest method.

These instruments are recognized on the balance sheet under "Amounts due to banks", "Amounts due to customers" or "Debt securities" (see Note 5.10).

Temporary sales of securities are recorded on the settlement-delivery date.

For repurchase transactions, a loan commitment received is recorded between the transaction date and the settlement-delivery date when such transactions are recorded as "Liabilities".

The long-term refinancing operations (TLTRO 3) with the ECB were repaid in full at the end of March 2024.

5.11.1. Amounts due to banks and similar

in millions of euros	12/31/2025	12/31/2024
Demand deposits	12,171	11,211
Repurchase agreements	1,160	1,241
Accrued interest	14	15
Amounts due to banks and similar – repayable on demand	**13,345**	**12,467**
Term deposits and loans[1]	56,647	42,507
Repurchase agreements	18,678	12,702
Accrued interest	378	424
Amounts due to banks and similar – repayable at agreed maturity dates	**75,703**	**55,633**
Guarantee deposits received	**1,891**	**1,853**
TOTAL AMOUNTS DUE TO BANKS AND SIMILAR	**90,939**	**69,953**

(1) The impact of the entry of the BPCE Equipment Solutions entities amounted to €3,326 million.

The fair value of amounts due to banks and similar is presented in Note 10.

5.11.2. Amounts due to customers

in millions of euros	12/31/2025	12/31/2024
Current accounts[1][2]	**281,186**	**262,148**
Livret A savings accounts	127,160	126,089

Settlement accounts in credit on securities transactions	745	714
Other accounts payable	7,995	7,434
Lease liabilities	1,473	1,303
Other liabilities	**10,213**	**9,451**
TOTAL ACCRUED EXPENSES AND OTHER LIABILITIES	**20,527**	**20,892**

5.13. Provisions

Accounting principles

Provisions other than those relating to employee benefits and similar, regulated home purchase savings products, off-balance sheet commitments, and insurance contracts mainly consist of provisions for restructuring, claims and litigation, fines and penalties, and tax risks (excluding income tax).

The provisions are liabilities of uncertain timing or amount. A provision must be recognized when there is a present obligation (legal or implicit) resulting from past events, the settlement of which is likely to require an outflow of resources, and the amount of which can be reliably estimated.

The amount recognized in provisions is the best estimate of the expense required to extinguish the present commitment at the reporting date.

Provisions are discounted when the impact of discounting is material.

Changes in provisions are recognized in the income statement on the lines corresponding to the nature of the future expenditure.

Provisions on regulated home purchase savings products

Regulated home purchase savings accounts (*Comptes Épargne Logement* – CEL) and regulated home purchase savings plans (*Plans Épargne Logement* – PEL) are retail products marketed in France governed by the 1965 act on home purchase savings schemes and subsequent implementing decrees.

Regulated home purchase savings schemes generate two types of commitments for establishments selling them:

- a commitment to provide a loan to the customer in the future at a rate set on inception of the contract (for PEL products) or at a rate contingent upon the savings phase (for CEL products);
- a commitment to pay interest on the savings in the future at a rate set on inception of the contract for an indefinite period (for PEL products) or at a rate set on a half-yearly basis according to an indexing formula regulated by law (for CEL products).

Commitments with potentially unfavorable consequences are measured for each generation of regulated home purchase savings plans and for all regulated home purchase savings accounts.

A provision is recognized for the associated risks by discounting future potential earnings from at-risk outstandings:

- at-risk savings deposits correspond to the uncertain future level of savings for plans in existence at the date the provision is calculated. This is estimated on a statistical basis for each future period taking account of historical investor behavior patterns, and corresponds to the difference between the probable savings deposits and the minimum expected savings deposits;
- at-risk loan outstandings correspond to the loan outstandings granted but not yet due at the calculation date plus statistically probable loan outstandings based on historical customer behavior patterns as well as earned and future rights relating to regulated home purchase savings accounts and plans.

The commitments are estimated using the Monte Carlo method in order to reflect the uncertainty of future interest rate trends and their impact on customer behavior models and at-risk outstandings. On this basis, a provision is recorded for a given generation of contracts in the event of a situation liable to be detrimental for the Group, with no netting between generations.

The provision is recognized under liabilities in the balance sheet and changes are recorded in net interest income and expenses.

5.13.1. Summary of provisions

in millions of euros	12/31/2024	Increase	Used	Reversals unused	Other changes[1]	12/31/2025
Provisions for employee benefits[2]	1,265	340	(152)	(81)	(19)	1,353
Provisions for restructuring costs[3]	111	2	(5)	(16)	0	93

TOTAL PROVISIONS	**4,748**	**1,379**	**(230)**	**(1,217)**	**(67)**	**4,613**

(1) The other changes include in particular the change in the scope of the entities BPCE Equipment Solutions (+€136 million), the change in revaluation surplus of post-employment defined-benefit plans (-€130 million before tax) and the foreign exchange rate adjustments (-€73 million).
(2) Of which €1,158 million for post-employment defined-benefit plans and other long-term employee benefits.
(3) At December 31, 2025, provisions for restructuring notably included €65 million for the voluntary departure plan at Crédit Foncier (the same as at December 31, 2024).
(4) The provisions for legal and tax risks included €306 million for the net exposure on the Madoff case (compared to €348 million at December 31, 2024).
(5) The provisions for loan and guarantee commitments are detailed in Note 7.1.2.

Information on main risks and management procedures to which Groupe BPCE is exposed, including legal risks, is presented in Chapter 7.10 "Risk factors and risk management - Legal risks".

5.13.2. Commitments on regulated home purchase savings contracts

5.13.2.1. Deposits collected for regulated home purchase savings schemes

in millions of euros	12/31/2025	12/31/2024
Deposits collected for regulated home purchase savings plans (PEL)		
• plans less than 4 years old	15,996	11,269
• plans more than 4 years but less than 10 years old	9,058	10,821
• plans more than 10 years old	32,057	39,213
Deposits collected for regulated home purchase savings plans (PEL)	**57,111**	**61,303**
Deposits collected for regulated home purchase savings accounts (CEL)	**7,517**	**7,304**
TOTAL DEPOSITS COLLECTED FOR REGULATED HOME PURCHASE SAVINGS SCHEMES	**64,628**	**68,607**

5.13.2.2. Loan outstandings granted on regulated home purchase savings schemes

in millions of euros	12/31/2025	12/31/2024
Loan outstandings granted on regulated home purchase savings plans (PEL)	163	113
Loan outstandings granted on regulated home purchase savings accounts (CEL)	44	35

5.13.2.3. Provisions for regulated home purchase savings schemes

in millions of euros	12/31/2025	12/31/2024
Provisions for regulated home purchase savings plans (PEL)		
• plans less than 4 years old		
• plans more than 4 years but less than 10 years old		
• plans more than 10 years old	193	358
Provisions for regulated home purchase savings plans (PEL)	**193**	**358**
Provisions for regulated home purchase savings accounts (CEL)	**9**	**123**
Provisions for regulated home purchase savings plan (PEL) loans	1	1
Provisions for regulated home purchase savings account (CEL) loans		
Provisions for regulated home purchase savings loans	**1**	**1**
TOTAL PROVISIONS FOR REGULATED HOME PURCHASE SAVINGS SCHEMES	**204**	**482**

5.14. Subordinated debt

Accounting principles

Subordinated debt differs from other debt and bonds in that it will be repaid only after all the senior and unsecured creditors, but before the repayment of participating loans and securities and deeply subordinated notes.

Subordinated debt which the issuer is obliged to repay is classified as debt and initially recognized at fair value less any transaction costs. It is subsequently measured at amortized cost at each reporting date using the effective interest method.

in millions of euros	12/31/2025	12/31/2024
Term subordinated debt	17,839	18,338
Perpetual subordinated debt	35	286
Mutual guarantee deposits	83	91
Subordinated debt and similar	**17,957**	**18,715**
Accrued interest	743	696
Revaluation of the hedged component	(688)	(1,009)
SUBORDINATED DEBT AT AMORTIZED COST	**18,012**	**18,401**
TOTAL SUBORDINATED DEBT[1]	**18,012**	**18,401**

(1) Of which €401 million for the insurance entities at December 31, 2025.

The fair value of subordinated debt is presented in Note 10.

Changes in subordinated debt[1] and similar during the fiscal year

in millions of euros	12/31/2024	Issue[2]	Redemption[3]	Changes in scope[5]	Other changes[4]	12/31/2025
Term subordinated debt[5]	17,329	2,417	(1,964)	0	(631)	17,151
Perpetual subordinated debt	286		(251)	0		35
Mutual guarantee deposits	91	10	(18)	0		83
TOTAL	**17,705**	**2,427**	**(2,233)**	**0**	**(631)**	**17,269**

(1) Excluding accrued interest.
(2) In its dual role as an issuer on the bond market (to refinance the excess of the Group's financing needs over its clients' deposits and to provide the Group with additional capital and capacity to absorb losses), and as the organizer/manager of the Group's internal capital management transactions as a central institution, BPCE SA issued €2 billion of Tier-2 bonds on the market in 2025 (compared to €1.6 billion at December 31, 2024).
(3) The redemptions of subordinated loans and notes were due to the maturing of such borrowings or the exercising of a call.
(4) The other changes mainly concern the revaluation of hedged debt and exchange rate fluctuations.
(5) Including the revaluation of the hedged component.

Deeply subordinated notes qualifying as equity instruments are presented in Note 5.15.2.

5.15. Ordinary shares and equity instruments issued

Accounting principles

Financial instruments issued by the Group qualify as debt or equity instruments depending on whether or not the issuer has a contractual obligation to deliver cash or another financial asset to the holder of the instrument, or to exchange the instrument under conditions that are potentially unfavorable to the Group. This obligation must arise from specific contractual terms and conditions, not merely economic constraints.

In addition, when an instrument qualifies as equity:

- its remuneration impacts equity. However, in accordance with the amendment to IAS 12 of December 2017, which applies from January 1, 2019, the tax consequences of dividend payments can be recognized in consolidated reserves, gains and losses recognized directly in other comprehensive income, or in profit or loss, depending on the source of the amounts paid. Accordingly, when the payment corresponds to the notion of a dividend within the meaning of IFRS 9, the tax consequence is taken to income. This rule applies to interest on perpetual deeply subordinated notes, which is treated as a dividend for accounting purposes;
- it cannot be an underlying instrument eligible for hedge accounting;
- if the issue is in a foreign currency, the instrument is fixed at its historical value resulting from its conversion to euros at its initial date of transfer to equity.

Finally, when these instruments are issued by a subsidiary, they are included in "Non-controlling interests". When their remuneration is of a cumulative nature, it is charged to "Income attributable to equity holders of the parent" and increases the income of "Non-controlling interests". However, when their remuneration is not of a cumulative nature, it is drawn from consolidated reserves attributable to equity holders of the parent.

5.15.1. Cooperative shares

Accounting principles

IFRIC 2 "Members' Shares in Cooperative Entities and Similar Instruments" clarifies the provisions of IAS 32. In particular, it stipulates that the contractual right of the holder of cooperative shares in cooperative entities to request redemption does not, in itself, automatically give rise to an obligation for the issuer. Rather, the entity must consider all of the terms and conditions of the financial instrument in determining its classification as a debt or equity.

Based on this interpretation, cooperative shares are classified as equity if the entity has an unconditional right to refuse redemption of the cooperative shares or if local laws, regulations or the entity's articles of association unconditionally prohibit or curtail the redemption of cooperative shares.

Based on the existing provisions of the Group's articles of association relating to minimum capital requirements, cooperative shares issued by the Group are classified as equity.

As the local savings companies (LSCs) are considered to be fully consolidated structured entities, their consolidation impacts consolidated reserves.

At December 31, 2025, the share capital was broken down as follows:

- €13,076 million in cooperative shares fully subscribed by the cooperative shareholders of the Banques Populaires (€12,964 million at December 31, 2024);
- €12,553 million in cooperative shares fully subscribed by the cooperative shareholders of the Caisses d'Epargne (€12,553 million at December 31, 2024).

Since January 1, 2025, the Banques Populaires have carried out capital increases of €112 million (an increase of €169 million in 2024), resulting in an increase in the "Share capital" item. The shareholders' equity of the local savings companies is also included in "Consolidated reserves" after the elimination of the Caisses d'Epargne cooperative shares held. Issues of cooperative shares by local savings companies since January 1, 2025, resulted in a decrease in reserves of €34 million (decrease of €79 million in 2024).

At December 31, 2025, additional paid-in capital is broken down as follows:

- €947 million linked to cooperative shares subscribed for by the cooperative shareholders of the Banques Populaires;
- €2,885 million linked to cooperative shares subscribed by the cooperative shareholders of the Caisses d'Epargne.

5.15.2. Perpetual deeply subordinated notes classified as equity

At December 31, 2025, Groupe BPCE had issued no perpetual deeply subordinated notes classified as equity.

5.16. Non-controlling interests

5.16.1. Material non-controlling interests

At December 31, 2025, the material non-controlling interests with regard to the Group's shareholders' equity are broken down as follows:

in millions of euros		2025 fiscal year						
		Non-controlling interests			Financial information summarized at 100%[1]			
Entity name	**Percentage ownership of non–controlling interests**	**Income attributed to holders of non–controlling interests during the period**	**Amount of non-controlling interests in the subsidiary**	**Dividends paid to holders of non–controlling interests**	**Assets**	**Liabilities**	**Net income attributable to equity holders of the parent**	**Other comprehensive income attributable to equity holders of the parent**
Oney Bank[1]	49.90%	6	295		4,943	4,343	2	2

5.17. Changes in gains and losses recognized directly in other comprehensive income

Accounting principles

In the event of disposal of equity financial assets recognized in other comprehensive income, changes in fair value are not transferred to profit or loss. These items are described as being not recyclable to profit or loss.

5.18. Offsetting of financial assets and financial liabilities

Accounting principles

Financial assets and liabilities were offset on the balance sheet in accordance with IAS 32. Under this standard, a financial asset and financial liability are offset and a net balance is recorded in the balance sheet if and only if:

- the Group has the legally enforceable right to offset the recorded amounts; and
- it has the intention either to settle the net amount or to simultaneously realize the asset and settle the liability.

Within Groupe BPCE, most offset amounts are the result of repurchase agreements and derivatives transactions largely carried out by the GFS division with clearing houses, which meet the requirements of IAS 32:

- for listed derivatives, the positions recorded under the respective asset and liability items for:
  - index options and futures options are offset by maturity and by currency,
  - equity options are offset by ISIN code and maturity date;
- for OTC derivatives, this comprises the netting, by currency, of the asset valuations and liability valuations of the derivatives;
- for repurchase agreements, the amount recorded in the balance sheet corresponds to the net value of repurchase and reverse repurchase agreements:
  - entered into with the same counterparty and which,
  - have the same maturity date,
  - are operated *via* the same custodian or settlement-delivery platform,
  - are denominated in the same currency.

Since December 31, 2020, the OTC derivatives traded by the GFS division with the clearing houses LCH Clearnet Ltd, Eurex Clearing AG and CME Clearing are not subject to netting within the meaning of IAS 32, but are settled daily (application of the Settlement to Market principle as provided for by these three clearing houses, which treats margin calls as daily settlement for derivatives instead of as collateral).

Financial assets and liabilities under netting agreements may only be offset if they meet the restrictive netting criteria set by IAS 32.

Offsetting may not be performed for derivatives or OTC repurchase agreements subject to master agreements that do not meet the net settlement criteria or where the realization of a simultaneous settlement of the asset and liability cannot be demonstrated or for which the offsetting right can only be exercised in the event of default, insolvency or bankruptcy by one of the parties to the agreement. However, the impact of such agreements in terms of reducing the exposure is presented in the second table.

For these instruments, the "Related financial assets and financial instruments received as collateral" and "Related financial liabilities and financial instruments pledged as collateral" columns include in particular:

- for repurchase agreements:
  - loans or borrowings resulting from reverse repurchase agreements with the same counterparty, and securities pledged or received as collateral (for the fair value of said securities),
  - margin calls in the form of securities (for the fair value of said securities);
- for derivatives, the fair values of reverse transactions with the same counterparty, as well as margin calls in the form of securities.

Margin calls received or paid in cash are shown in "Margin calls received (cash collateral)" and "Margin calls paid (cash collateral)".

5.18.1. Financial assets

Impact of offsetting on financial assets under netting agreements in the balance sheet

(1) Including collateral received in the form of securities.

The net exposure does not reflect the accounting position, because it takes into account the reduced exposure arising from agreements that do not meet the restrictive netting criteria set by IAS 32.

5.19. Financial assets pledged as collateral for liabilities, transferred financial assets and assets received as collateral that can be sold or repledged

Accounting principles

A financial asset (or group of similar financial assets) is derecognized when the contractual rights to the asset's future cash flows have expired or when such rights are transferred to a third party, together with substantially all of the risks and rewards associated with ownership of the asset. In such case, rights and obligations created or retained as a result of the transfer are recorded in a separate line under financial assets and liabilities.

When a financial asset is derecognized, a gain or loss on disposal is recorded in the income statement reflecting the difference between the carrying amount of the asset and the consideration received.

In the event that the Group has neither transferred nor retained substantially all of the risks and rewards, but has retained control of the asset, the asset continues to be recognized on the balance sheet to the extent of the Group's continuing involvement.

In the event that the Group has neither transferred nor retained substantially all of the risks and rewards and has not retained control of the asset, the asset is derecognized and all of the rights and obligations created or retained as a result of the transfer are recorded in a separate line under financial assets and liabilities.

If all the conditions for derecognizing a financial asset are not met, the Group keeps the asset in the balance sheet and records a liability representing the obligations arising when the asset is transferred.

The Group derecognizes a financial liability (or a part of a financial liability) only when it is extinguished, i.e. when the obligation specified in the contract is discharged, terminated or expires.

Repurchase agreements

Securities sold under repurchase agreements are not derecognized in the vendor's accounts. A liability representing the commitment to return the funds received is identified and recognized under "Securities sold under repurchase agreements". This debt is a financial liability recorded at amortized cost or at fair value through profit or loss when this liability is considered part of a trading business model.

The assets received are not recognized in the purchaser's books, but a receivable is recorded with respect to the vendor representing the funds loaned. The amount disbursed in respect of the asset is recognized under "Securities purchased under resale agreements". On subsequent balance sheet dates, the securities continue to be accounted for by the vendor in accordance with the rules applicable to the category in which they were initially classified. The receivable is valued according to methods specific to its category: at amortized cost when classified in "Loans and advances", or at fair value through profit or loss when it is considered part of a trading business model.

Outright securities lending

Securities loaned under outright securities lending transactions are not derecognized in the vendor's accounts. They continue to be recognized in their original accounting category and are valued accordingly. For the borrower, the securities borrowed are not recognized.

Transactions leading to substantial changes in financial assets

When an asset is subject to substantial changes (in particular following renegotiation or remodeling due to financial hardship) there is derecognition, since the rights to the initial cash flows have essentially expired. The Group considers that this is the case for:

- changes leading to a change of counterparty, especially if the new counterparty has a very different credit quality than the previous counterparty;
- changes intended to move from a very structured to basic indexing, as the two assets are not exposed to the same risks.

Transactions leading to substantial changes in financial liabilities

A substantial change to the terms of a lending instrument must be recorded as the extinguishment of the existing debt and its replacement with a new debt. The amendment to IFRS 9 of October 12, 2017 clarified the treatment under IFRS 9 of modifications of liabilities recognized at amortized cost if the modification does not result in derecognition: the profit or loss resulting from the difference between the original cash flows and the modified cash flows discounted at the original effective interest rate must be recognized in profit or loss. To assess the substantial nature of the change, IFRS 9 includes a threshold of 10% based on discounted cash flows, integrating potential costs and fees: when the difference is greater than or equal to 10%, all of the costs or fees incurred are recognized as profit or loss on debt extinguishment.

The Group may consider other changes to be substantial, such as a change of issuer (even within the same group) or a change in currency.

5.19.1. Financial assets pledged as collateral for liabilities

in millions of euros	12/31/2025	12/31/2024
Financial assets at fair value through profit or loss – Held for trading	25	
Financial assets at fair value through profit or loss – Non-SPPI	4	5
Financial assets at fair value through other comprehensive income	24	
Financial assets at amortized cost	23,014	17,175
TOTAL	**23,067**	**17,179**

Includes notably:

- the carrying amount of underlying assets sold to reconsolidated vehicles in the context of Covered Bond issues (excluding the securitization framework presented below in Section 5.19.2.1 consolidated securitizations). Moreover, in accordance with French law, the intrinsic guarantees attached to issues of covered bonds are not recognized under guarantee commitments given. The covered bonds issued by BPCE SFH and Compagnie de Financement Foncier benefit from a legal privilege comprised of eligible assets.
- the carrying amount of financial instruments (securities and receivables) provided as collateral but not transferred and which are generally pledged as collateral (Articles L. 211-38). The main mechanisms involved are the CRH (Caisse de Refinancement de l'Habitat), the ESNI marketplace refinancing mechanism and securities pledged as collateral for European Central Bank (ECB) refinancing operations.

Note that:

- financial assets pledged as collateral for liabilities relating to repurchase agreements as well as financial instruments (securities and receivables) that the Group transfers in full ownership as security (Articles L. 211-38 or L. 313-23 *et seq.* of the French Monetary and Financial Code) as part of guaranteed refinancing, are presented with table 5.19.2.1 Transferred financial assets not fully derecognized.
- financial assets pledged as collateral for liabilities of securitization transactions with actual disposal of the asset (transferred assets not derecognized) are presented separately in the securitization table below.

5.19.2. Transferred financial assets

5.19.2.1. Transferred financial assets not fully derecognized

Securities lending – Repurchase agreements – Other transactions

(1) Other transactions mainly include:
- Of which +€74,223 million in securities borrowed by BPCE SA from institutions and contributed to the ECB's POOL 3G refinancing (+€82,346 million in 2024);
- Of which +€17,118 million in receivables transferred as collateral by the institutions to the Banque de France under the EMCS system (+€21,288 million in 2024);
- +€6,866 million in receivables transferred as collateral as part of the issues carried out in connection with the Demeter transaction (+€5,106 million in 2024).

Transferred financial assets that are not derecognized are essentially composed of the following instruments: repurchase agreements; securities lending collateralized by the delivery of cash; outright securities loans. The other transactions column mainly consists of assets that Groupe BPCE transfers to the counterparty as security (Dailly sale or Articles L. 211-38 or L. 313-23 *et seq.* of the French Monetary and Financial Code) as part of guaranteed refinancing.

Securities repurchasing and lending

Groupe BPCE repurchases and loans securities.

Under the terms of the agreements, the securities may be sold on by the purchaser throughout the duration of the repurchase or lending agreement. The purchaser must nevertheless return them to the vendor at the end of the agreement. Cash flows generated by the securities are also transferred to the vendor.

The Group believes that it retains almost all of the risks and benefits of securities under repurchase or loan agreements. They are therefore not derecognized. Financing has been recorded in liabilities for the repurchasing or lending of financed securities.

Assignment of debt under Dailly or Articles L. 211-38 (or L. 313-23) with transfer of ownership

Groupe BPCE sells receivables as security (Articles L. 211-38 or L. 313-23 *et seq.* of the French Monetary and Financial Code) under guaranteed refinancing operations, notably with the central bank. The Group also transfers receivables as collateral in connection with issues carried out by securitization vehicles (Demeter transactions). These instruments continue to be disclosed in the consolidated balance sheet in accordance with their original classification. This type of assignment by way of guarantee involves the legal transfer of the contractual rights. The Group nevertheless remains exposed to virtually all the risks and benefits, and as such the receivables are maintained on the balance sheet.

The assets pledged as collateral for securitization transactions with real sale of assets known as "true sale" are presented separately in the securitization table below.

Securitization assets for which the counterparties to the associated debts have recourse only to the transferred assets

	12/31/2025					12/31/2024

Securitizations with true sale of assets to a reconsolidated vehicle

Securitizations with external investors that are achieved with a true sale of the assets to the consolidated vehicle constitute an asset transfer within the meaning of IFRS 7.

The Group has an indirect contractual obligation to transfer to outside investors the cash flow from assets transferred to the securitization fund (although these assets are included in the Group's balance sheet through the consolidation of the fund). Securitizations consolidated with outside investors constitute an asset transfer according to the amendment to IFRS 7.

The Group has an indirect contractual obligation to transfer to outside investors the cash flow from assets transferred to the securitization fund (although these assets are included in the Group's balance sheet through the consolidation of the fund). In the interest of transparency, for consolidated securitization transactions:

- the share of receivables sold attributable to external investors is considered to be pledged as collateral to third parties;
- the share of receivables sold attributable to units and bonds subscribed for by the Group, and eliminated on consolidation, is not considered to be pledged as collateral unless these securities were brought to Groupe BPCE's single treasury and central bank collateral management pool and used as part of a refinancing mechanism.

The securitization transactions performed by BPCE in 2014 (BPCE Master Home Loans), 2016 (BPCE Consumer Loans 2016_5) and 2017 (BPCE Home Loans 2017_5) and Mercure Master SME FCT were fully subscribed for by the Group, while the senior tranches of the BPCE Home Loans FCT 2021, BPCE Consumer Loans FCT 2022, BPCE Home Loans FCT 2023, BPCE Home Loans FCT 2024, Olympia Master Home Loans FCT, BPCE Consumer Loans FCT 2024, Ophelia Master SME FCT and BPCE Financement Purple Master Credit Cards securitizations were subscribed for by external investors (Note 13.1).

5.19.2.2. Fully derecognized transferred financial assets for which the Group retains an ongoing commitment

Fully derecognized transferred financial assets for which the Group retains an ongoing commitment consist of asset transfers to a deconsolidated securitization vehicle in which Groupe BPCE has an interest or an obligation, although this does not call into question the transfer of almost all of the benefits and risks relating to the assets transferred.

Ongoing commitments retained by the Group in relation to securitization vehicles were not significant on December 31, 2025.

5.19.3. Financial assets received as collateral that can be sold or repledged

This heading covers financial assets received as security under financial guarantee agreements with the right to reuse the assets in the absence of any default on the part of the owner of the guarantee.

The fair value of the financial assets received as collateral that Groupe BPCE may sell or repledge amounted to €283 billion at December 31, 2025, compared to €277 billion at December 31, 2024.

The fair value of the financial assets received as collateral that were actually sold or repledged amounted to €205 billion at December 31, 2025, compared with €215 billion at December 31, 2024.

Note 6 Commitments

Accounting principles

Commitments are materialized by the existence of a contractual obligation and are binding.

It must not be possible for commitments included in this item to be deemed financial instruments falling within the scope of IFRS 9 for classification and measurement purposes. However, loan and guarantee commitments given are covered by IFRS 9 impairment rules, as set out in Note 7.

The effects of the rights and obligations covered by such commitments must be subject to the occurrence of conditions or subsequent transactions. Commitments are broken down into:

- loan commitments (confirmed credit facilities or refinancing agreements);
- guarantee commitments (off-balance sheet commitments or assets received as collateral).

The amounts shown correspond to the nominal value of commitments given.

6.1. Loan commitments

in millions of euros	12/31/2025	12/31/2024
Loan commitments given to:		
• banks	851	1,163
• customers	162,315	154,527
Credit facilities granted	149,150	145,104
Other commitments[1]	13,165	9,422
TOTAL LOAN COMMITMENTS GIVEN	**163,167**	**155,689**
Loan commitments received from:		
• banks[2]	84,687	92,896
• customers	798	1,182
TOTAL LOAN COMMITMENTS RECEIVED	**85,486**	**94,078**

(1) Including the contribution of insurance entities for €93 million.
(2) The decrease mainly relates to loan commitments received from the Banque de France for -€9 billion.

6.2. Guarantee commitments

in millions of euros	12/31/2025	12/31/2024
Guarantee commitments given to:		
• banks	7,166	8,439
• customers[1]	51,074	52,586
TOTAL GUARANTEE COMMITMENTS GIVEN	**58,240**	**61,025**
Guarantee commitments received from:		
• banks	25,351	26,947
• customers[2]	192,568	197,223
TOTAL GUARANTEE COMMITMENTS RECEIVED	**217,919**	**224,170**

(1) The guarantees given by CEGC in connection with its activity are treated as insurance contracts for accounting purposes, in accordance with IFRS 17 "Insurance Contracts". They are recorded on the liabilities side of the balance sheet and are not included in guarantees given to customers shown in the table above.
(2) Including guarantees received under State-guaranteed loans.

Guarantee commitments are off-balance sheet commitments.

Specific case of guarantees given to UCITS by the Global Financial Services division

The capital and/or yield on the units of certain UCITS are subject to a guarantee granted by the Global Financial Services division. The guarantees are only enforced if, on the maturity date, the net asset value of each unit is below the guaranteed net asset value.

The capital and/or performance guarantees to certain UCITS are recognized as derivatives and are subject to measurement at fair value in accordance with the provisions of IFRS 13.

Note 7 Exposures to risks

The credit risk management disclosures required by IFRS 7 are presented in Chapter 7 "Risk factors and risk management".

Exposures to risks are discussed below by type of risk: credit, market, overall interest rate, foreign exchange and liquidity risk.

Information relating to capital management and regulatory ratios is presented in the "Risk factors and risk management" section.

Information on adjustments on account of financial difficulties is provided in Chapter 7.5 "Risk factors and risk management – Credit risk".

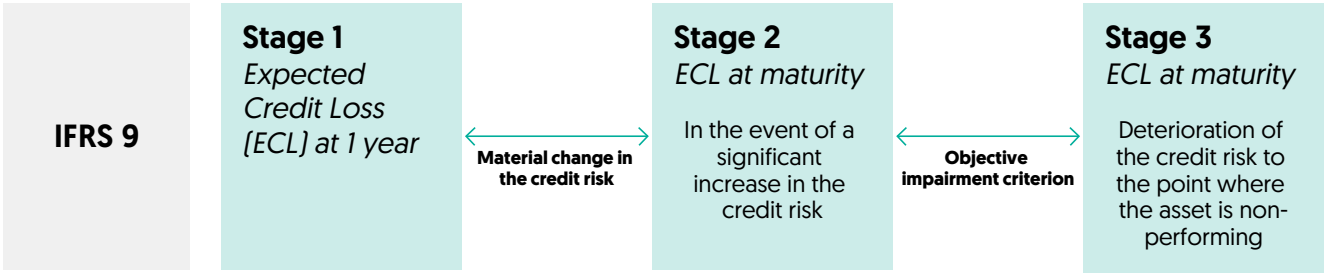
Information on the effect and consideration of climate risks on credit risk management is presented in Chapter 7.16 "Risk factors and risk management – Environmental, social and governance risks".

Information on liquidity risk (analysis of financial assets and liabilities and commitments by contractual maturity date) is provided in Chapter 7.9 "Risk factors and risk management – Liquidity, interest rate and exchange rate risks".

7.1. Credit risk

Key points

Credit risk is the risk that one party to a financial transaction fails to fulfill its obligations, causing the other party to incur a financial loss.



Certain disclosures relating to risk management required by IFRS 7 are also provided in the risk management report. They include:

- the breakdown of gross exposures by category and approach (separation of credit and counterparty risk);
- the breakdown of gross exposure by geographic area;
- the concentration of credit risk by borrower (BPCE14);
- the credit quality of the renegotiated exposures (CQ1);
- the performing and non-performing exposures and the corresponding provisions (CR1);
- the quality of the performing and non-performing exposures by number of days past due (CQ3);
- the quality of the exposures by geographic area (CQ4);
- the credit quality of loans and advances by industry (CQ5);
- the breakdown of the guarantees received by type on the financial instruments (CR3);
- the credit risk exposures by portfolio and by default probability range (CR6).

This information forms an integral part of the financial statements certified by the Statutory Auditors.

7.1.1. Cost of credit risk

Accounting principles

Cost of risk applies to debt instruments classified as financial assets at amortized cost or at fair value through other comprehensive income recyclable to profit or loss as well as to loan commitments and financial guarantees given that are not recognized at fair value through profit or loss. It also applies to receivables relating to leasing contracts, business loans and contract assets.

This item therefore covers net impairment and provision charges for credit risk.

Credit losses related to other types of instruments (derivatives or securities designated at fair value) recorded as a result of credit institution counterparty default are also included under this item.

Irrecoverable loans not covered by provisions for impairment are loans that have acquired the character of permanent loss before being provisioned in Stage 3.

7.1.1.1. Cost of credit risk for the period

in millions of euros	2025 fiscal year	2024 fiscal year
Net charge to provisions and provisions for impairment	(2,275)	(1,989)
Recoveries of bad debts written off	89	89
Irrecoverable loans not covered by provisions for impairment	(277)	(185)
Impact of guarantees not taken into account in impairment	(2)	23
TOTAL COST OF CREDIT RISK [1]	**(2,465)**	**(2,061)**

(1) This item also records impairments recognized on doubtful debts, resulting from the derecognition, following the counterparty's default, of financial instruments recognized at fair value through profit or loss as financial assets, for an amount of 22 million euros as of December 31, 2025 (nil as of December 31, 2024).

7.1.1.2. Cost of credit risk for the period by type of asset and stage

in millions of euros	2025 fiscal year	2024 fiscal year
Financial assets at fair value through profit or loss [1]	22	(0)
Financial assets at fair value through other comprehensive income	(5)	(27)
Financial assets at amortized cost	(2,389)	(1,954)
of which loans and advances	*(2,366)*	*(1,805)*
of which debt securities	*(23)*	*(149)*
Other assets	(79)	(44)
Loan and guarantee commitments	(12)	(59)
Impact of guarantees not taken into account in impairment	(2)	23
TOTAL COST OF CREDIT RISK	**(2,465)**	**(2,061)**
of which Stage 1	*(79)*	*283*
of which Stage 2	*141*	*(106)*
of which Stage 3	*(2,527)*	*(2,238)*

(1) This item also records impairments recognized on doubtful debts, resulting from the derecognition, following the counterparty's default, of financial instruments recognized at fair value through profit or loss as financial assets, for an amount of 22 million euros as of December 31, 2025 (nil as of December 31, 2024).

7.1.2. Change in gross carrying amounts and expected credit losses on financial assets and commitments

Accounting principles

General principles

Expected credit losses are represented by impairments of assets classified at amortized cost and at fair value through other comprehensive income recyclable to profit or loss, and by provisions for loan and guarantee commitments.

The financial instruments concerned (see Note 7.1.1) are impaired or covered by a provision for expected credit losses (ECL) at the date of initial recognition.

When the financial instruments do not individually show objective evidence of loss, impairment, or provisions for expected credit losses are measured based on past losses and reasonable and justifiable discounted future cash flow forecasts.

Financial instruments are divided into three categories (Stages) depending on the increase in credit risk observed since initial recognition. A specific credit risk measurement method applies to each category of instrument:

Stage 1 (S1)

- performing loans for which there has been no significant increase in credit risk since the initial recognition of the financial instrument or certain assets for which the standard makes it possible to presume that they have a low credit risk at the reporting date;
- the impairment or the provision for credit risk corresponds to 12-month expected credit losses;
- interest income is recognized in income using the effective interest method applied to the gross carrying amount of the instrument before impairment.

Stage 2 (S2)

- performing loans for which credit risk has increased materially since the initial recognition of the financial instrument are transferred to this category;
- the impairment or the provision for credit risk is determined on the basis of the financial instrument's lifetime expected credit losses;
- interest income is recognized in income, as for Stage 1 assets, using the effective interest method applied to the gross carrying amount of the instrument before impairment.

Stage 3 (S3)

- these are loans for which there is objective evidence of impairment loss due to an event which represents a known credit risk occurring after the initial recognition of the instrument in question. This category covers receivables for which a default event has been identified, as defined in Article 178 of European Regulation No. 575/2013 of June 26, 2013, on prudential requirements for credit institutions. Default situations are now more tightly identified for outstandings with significant amounts past due (introduction of relative and an absolute threshold for past due payments) and the criteria for a return to non-defaulted status have been clarified with the introduction of a probation period and of explicit criteria for a classification as default of restructured loans;
- the impairment or the provision for credit risk is calculated based on the financial instrument's lifetime expected credit losses (expected credit losses at maturity) on the basis of the recoverable amount of the receivable, *i.e.* the present value of estimated recoverable future cash flows;
- interest income is recognized through profit or loss using the effective interest method applied to the net carrying amount of the instrument after impairment;

Purchased or originated credit-impaired (POCI) financial instruments are assets that show objective indicators of impairment at initial recognition. They correspond to the assets for which the entity does not expect to recover all of the contractual cash flows. Due to their low materiality and the way in which they are tracked, they are reported with Stage 3 or Stage 2 assets in the event of an improvement in their credit risk. The impairment or the provision for credit risk associated with these instruments is determined on the basis of the financial instrument's lifetime expected credit losses (expected credit losses at maturity).

In accordance with IAS 37, the guarantees received and recognized separately from the hedged instrument give rise to the recognition of a repayment asset under "Accrued income and other assets" in the balance sheet. The carrying amount of this asset represents the amount of expected credit losses, recorded as asset impairments, for which the Group is virtually certain to receive compensation. The changes in the carrying amount of this asset are recorded under "Cost of risk" in the income statement.

For operating or finance lease receivables (which fall within the scope of IFRS 16) the Group has elected not to make use of the option of applying the simplified approach as set out in IFRS 9 paragraph 5.5.15.

The methodological changes carried out over the period and presented below constitute a change in estimates which translates into an impact on net income.

Method for measuring the increase in credit risk and expected credit losses

The principles for measuring the increase in credit risk and expected credit losses applicable to most of the Group's exposures are described below. Only a few portfolios held by Group entities – representing a limited volume of exposures – cannot be treated according to the methods described below and are subject to specific valuation techniques.

Significant increase in credit risk

A significant increase in credit risk is measured on an individual basis for each instrument by taking into account all reasonable and supportable information and by comparing the default risk on the financial instrument at the reporting date with the default risk on the financial instrument at the date of initial recognition.

What's more, in addition to this assessment carried out in the Group's central model, institutions can, in order to take into account the specific risks of their portfolios, estimate the significant increase in credit risk on the basis of a given portfolio by tightening ratings assigned to the latter on a geographic or sectoral basis. This severity may lead to a downgrading from Stage 1 to Stage 2, while downgrading to Stage 3 remains based on an individual analysis.

In accordance with IFRS 9, a counterparty with a significant deterioration in credit risk (Stage 2) that has just been originated will be classified as Stage 1.

Assessment of increases in credit risk involves comparing the ratings on the initial recognition date with those applicable at the reporting date. The same principles as those used to classify an exposure in Stage 2 are applied in case of a decline in the material deterioration in credit risk.

In most cases, a measurement showing an increase in risk leads to the asset's transfer to Stage 2 before it is individually impaired (Stage 3).

However, prior to the above analysis, the following general analysis criteria are applied:

The standard provides that the credit risk of a financial instrument has not increased significantly since its initial recognition if this risk is considered to be low at the reporting date. This provision is applied to certain investment-grade debt securities that are managed as part of Groupe BPCE's liquidity reserve, as required by Basel III regulations, as well as debt securities classified as insurance activities financial investments. Investment grade ratings are those equal to or above BBB- or its equivalent by Standard & Poor's, Moody's or Fitch. In this case, these assets remain classified as Stage 1.

A counterparty approach for a Stage 2 classification (with application of the contagion principle to all outstandings existing on the counterparty in question) is applied in particular with regard to the High Credit Risk qualitative criterion derived from the Group's internal rating engines. This criterion includes the counterparties placed on the watchlist, with a sensitive rating (particularly in cases where the notion of watchlist is not used), in a situation of restructuring or in the presence of financial difficulties if the criteria for downgrading to Stage 3 are not met.

The standard also includes a rebuttable presumption that the credit risk has significantly increased since the initial recognition if the contractual payments are more than 30 days past due.

Lastly, an unfavorable change in country risk is a criterion for classifying all of the outstandings concerned as Stage 2.

Assessment of a material increase in credit risk is made at the level of each instrument, based on indicators and thresholds that vary according to the type of exposure and counterparty.

For the Individual customers, Professional customers, SMEs, Public Sector and Social Housing portfolios:

The significant increase in credit risk is assessed on the basis of the following levels of rating downgrades since inception:

Score at origin	Individual customers	Professional customers	SME, Public sector, Social housing
3 to 11 (AA to BB+)	3 notches		
12 (BB)	2 notches	3 notches	3 notches
13 (BB-)			2 notches
14 to 15 (B+ to B)	1 notch	2 notches	1 notch
16 (B-)		1 notch	
17 (CCC to C)			Sensitive notches classified as S2

Moreover, additional qualitative criteria are used to classify as Stage 2 all contracts with payments more than 30 days past due (unless the 30-day presumption of non-payment is rebutted), rated at-risk or undergoing adjustments or financial hardship if the downgrade to Stage 3 criteria are not met.

For the Large Corporates, Banks and Sovereigns portfolios, the quantitative criterion is generally based on the rating changes since initial recognition. The same qualitative criteria apply as for Individual customers, Professional customers and SMEs, as well as for contracts placed on the watchlist, along with additional criteria based on the level of country risk.

However, for **the portfolios of Large Corporates and Banks**, the degradation is now evaluated between the PD class upon origination and upon closing. A PD class represents a set of rating. Therefore, the degradation thresholds selected for these portfolios are as follows :

PD class at origin	Significant degradation
Large Corporates	
1 to 2 (AAA to A-)	4 notches
3 to 4 (BBB+ to BBB-)	3 notches
5 (BB+ to BB-)	2 notches
6 to 8 (B+ to C)	1 notch
Financial Institutions	
1 (AAA)	4 notches
2 to 4 (AA+ to BBB-)	3 notches
5 (BB+ to BB-)	2 notches
6 to 8 (B+ to C)	1 notch
Project Finance	
1 to 2 (AAA+ to BBB)	3 notches
3 (BBB- to BB+)	2 notches
4 to 7 (BB to C)	1 notch
Real Estate & Hospitality Finance	
1 to 2 (AAA+ to BBB)	3 notches
3 (BBB- to BB+)	2 notches
4 to 7 (BB to C)	1 notch

The downgrade thresholds **on the portfolios of Banks** are the following:

PD class at origin	Significant degradation
1 (AAA)	4 notches
2 to 4 (AA+ to BBB-)	3 notches
5 (BB+ to BB-)	2 notches
6 to 8 (B+ to C)	1 notch

The downgrade thresholds **on Project Finance and Real Estate & Hospitality Finance** are the following:

PD class at origin	Significant degradation
1 to 2 (AAA+ to BBB)	3 notches
3 (BBB- to BB+)	2 notches
4 to 7 (BB to C)	1 notch

For Sovereigns, the downgrade thresholds on the eight-point rating scale are as follows:

Score at origin	Significant degradation
1	6 notches
2	5 notches
3	4 notches
4	3 notches
5	2 notches
6	1 notch
7	S2 directly (unless newly originated contract)
8	S2 directly (unless newly originated contract)

For Specialized Financing, the criteria applied vary according to the characteristics of the exposures and the related rating system. The exposures noted under the engine dedicated to large exposures are treated in the same way as Large Corporates; other exposures are treated in the same way as SMEs.

For all these portfolios, the ratings used to measure risk deterioration correspond to ratings from internal systems where available, as well as external ratings, particularly in the absence of internal ratings.

In accordance with IFRS 9, the recognition of guarantees and collateral does not influence the assessment of a material increase in credit risk, which depends on changes in credit risk relating to the debtor without taking into account such guarantees.

In order to assess the material increase in credit risk, the Group provides for a process based on two levels of analysis:

- a first level based on rules and criteria defined by the Group that are binding on the Group's institutions (known as the "central model");
- a second level linked to an expert assessment of the risk carried by each institution on its portfolios, which may lead to an adjustment of the criteria defined by the Group for downgrading to Stage 2 (portfolio or sub-portfolio switch to ECL at maturity). These criteria are adapted for each closing to the current macro-economic context.

Measurement of expected credit losses

Expected credit losses are defined as being an estimate of credit losses (*i.e.* the present value of cash flow shortfalls) weighted by the probability of occurrence of these losses over the expected lifetime of the financial instrument in question. They are calculated individually for each exposure.

In practice, for Stage 1 and Stage 2 financial instruments, expected credit losses are calculated as the product of a number of inputs:

- cash flows expected over the lifetime of the financial instrument, discounted at the valuation date – these flows are determined according to the characteristics of the contract, its effective interest rate and, for real estate loans, the level of prepayment expected on the contract;
- Loss Given Default (LGD);
- the probability of default (PD) over the coming year for Stage 1 financial instruments and to maturity for Stage 2 financial instruments.

The Group's methodology draws on existing concepts and mechanisms to define these inputs, and in particular on internal models developed to calculate regulatory capital requirements (Basel framework) and projection models used in the stress test system. Certain adjustments are made to comply with the specifics of IFRS 9:

- IFRS 9 inputs aim to provide an accurate estimate of expected credit losses for accounting provision purposes, whereas prudential inputs are more cautious for regulatory framework purposes. Several of the safety buffers applied to prudential inputs are therefore restated;
- IFRS 9 inputs must allow expected credit losses to be estimated until the contract's maturity, whereas prudential inputs are defined to estimate 12-month expected losses. 12-month inputs are thus projected over long periods;
- IFRS 9 inputs must be forward-looking and take into account the expected economic environment over the projection period, whereas prudential inputs correspond to mid-cycle estimates (for PD) or bottom-of-the-cycle estimates (for LGD and the cash flows expected over the lifetime of the financial instrument). Prudential PD and LGD inputs are therefore also adjusted to reflect forecasts of future economic conditions.

Expected credit loss calculations take into account assets pledged as collateral and other credit enhancements that form an integral part of the instrument's contractual conditions and that the entity does not recognize separately. The estimate of expected cash flow shortfalls on secured financial instruments reflects the amount and the timing for enforcing the collateral, if such collateral is considered to be part of the contractual terms of the secured instrument.

The IFRS 9 model validation process is fully aligned with the Group's existing model validation process. Models are reviewed by an independent unit responsible for internal validation and the unit's conclusions are then examined by the Group Models Committee. Subsequent recommendations are monitored up by the validation unit.

Recognition of forward-looking information

Forward-looking macro-economic data are taken into account in a methodological framework applicable at two levels:

- at the Group level, in the determination of a shared framework for taking the forward looking into account in the projection of PD and LGD inputs over the amortization horizon of operations within the central model;
- at the level of each entity, with regard to its own portfolios.

The amount of expected credit losses is calculated using an average ECL by scenario, weighted by probability of occurrence, taking into consideration past events, current circumstances and reasonable and justifiable forecasts of the economic environment.

Groupe BPCE uses forward-looking data to estimate any significant increase in credit risk and to measure expected credit losses. To do this, Groupe BPCE uses the projections of macro-economic variables used to define its budget process, considered as the most probable, framed by optimistic and pessimistic scenarios in order to define alternative trajectories.

To determine a significant increase in credit risk, as well as applying rules based on the comparison of risk parameters between the initial recognition date and the reporting date, the calculation is supplemented by forward-looking information such as sector or geographical macro-economic scenarios.

To measure expected credit losses, the Group has chosen three macro-economic scenarios, which are detailed in the following paragraph.

Methodology for calculating expected losses in the central model

The parameters used to measure expected credit losses are adjusted to economic conditions by defining three economic scenarios (central/pessimist/optimist) over a three-year period.

The definition and review of these scenarios follows the same organization and governance as that defined for the budget process, with a quarterly review of their relevance since the Covid-19 crisis, which may lead to a revision of macro-economic projections in the event of a significant deviation in the situation observed on the basis of proposals from economic research and validation by the Executive Management Committee.

The probability of occurrence of the Baseline scenario and the optimistic and pessimistic scenarios is reviewed on a quarterly basis by the Group Watchlist and Provisions Committee. The inputs thus defined allow expected credit losses for all exposures to be valued, regardless of whether they belong to a scope approved using an internal method or are processed using the standardized method for the calculation of risk-weighted assets.

The variables defined in each of these scenarios allow for the distortion of the PD and LGD inputs and the calculation of an expected credit loss for each economic scenario. Projections of inputs for periods longer than three years are based on the mean reversion principle. The economic scenarios are associated with probabilities of occurrence, making it possible to calculate the average probable loss, which is used as the amount of the IFRS 9 expected credit loss.

For December 31, 2025 closing:

After the COVID episodes in 2020 and the war in Ukraine in 2022, which had a lasting impact on the global macro-economic situation, the implementation of the 2026 budget scenarios takes place this time in an uncertain global and European geopolitical context but also in a French domestic political context that is far from being clarified, following the dissolution of the National Assembly (NA) in June 2024. The re-election of Donald Trump as President of the United States has revived a number of fears in terms of international relations. Since his inauguration on January 20, 2025, Donald Trump and his administration have issued numerous statements and taken several initiatives reviving tensions in international relations and more particularly in Euro-Atlantic relations:

- Questioning the sovereignty of certain countries such as Canada or Greenland, questioning the sovereignty over the Panama Canal, ...
- Announcements of the implementation of customs barriers with China and also with its historical allies and trading partners (Europe, Canada and Mexico),
- Questioning or even stopping both political and military support for Ukraine, raising fears of a complete disengagement of the USA from the conflict, or even simply from the European continent,
- Rapprochement between the United States and Russia, raising fears of a major change in American strategy towards Europe.

With regard to the situation in France, the resignation of successive governments since June 2024 raises fears of continued political instability in France in the coming months or even years, with possible major consequences for the expected structural reforms and a possible downgrade of France's sovereign rating.

Finally, in the Middle East and the rest of the world, tensions remain high, the situation remains uncertain in some areas, and American-Iranian relations remain tense, raising fears of an escalation in the region and its potential impact on global oil supplies.

The Group's budget scenario is based on the following structuring assumptions:

- Worsening of the trade war with measures put in place by all countries to counter the increase in customs duties in the United States: US growth slowing significantly, from 2.8% to 1% in 2025 and remaining moderate at 1.3% in 2026. Inflation is expected to rise to 3.6% on average in 2025 and 3.4% in 2026;
- Growth is also expected to slow in the Eurozone with an estimated impact of -0.3 points of GDP. Growth should thus be 0.7% in 2025. It should be noted, however, that the German spending plan should provide support at the very end of the year, but especially in 2026. European growth is expected to recover to 1.1% in 2026. The impact on inflation will be limited: the first retaliatory measures implemented by the EU will be mitigated by the appreciation of the euro and the fall in energy prices. Inflation is expected to average 2.3% in 2025 and 1.9% in 2026;
- France would be less affected by customs duties than the Eurozone as a whole, with an impact of -0.2 points on growth in 2025, at 0.5% then 0.9% in 2026. French inflation will remain very moderate at 1.5% in 2025 and 1.7% in 2026;

- The return to the inflation target in the Eurozone from 2027 (with, however, inflation in Germany above 2% at 2.2% in 2028 and 2029) combined with growth in the Eurozone slightly above potential will result in a resumption of rate hikes by the ECB from 2027 (2 x 25 bps in 2027 and 1 x 25 bps in 2028);
- The ECB will lower its rates to 2% by June 2025 and leave them unchanged from 2028 over the rest of the projection horizon;
- The Federal Reserve will start lowering fed funds rates in September 2025 to 3% in June 2026;
- The 10-year OAT rate should reach an equilibrium level around 3% at the end of 2025 and then stabilize at around 3.65% over the rest of the projection horizon;
- The 10-year UST rate is expected to reach 4.15% at the end of 2025 and then stabilize around 4.50%;
- The EUR/USD exchange rate is expected to reach a level of 1.18 at the end of 2025 and 2026 and then stabilize at around 1.20.

The scenario was validated by the Group ALM Committee on June 24, 2025.

Given the evolution and macro-economic and geopolitical uncertainties since December 31, 2024, Groupe BPCE has had to revise the pessimistic limits used as well as the associated weightings.

This review led to a narrowing of the corridor between the two pessimistic and optimistic limits and a rebalancing of the weightings between the three scenarios. Indeed, the Group believes that with the development of discussions between States and the absence of the implementation of all the customs duties presented by the US administration last April, the magnitude of the pessimistic scenario has become less significant.

The pessimistic scenario is a less severe version of the ICAAP "Trade Wars and Protectionism" scenario. In this case, the impacts on growth, unemployment and inflation are reduced by about 33%. This makes it possible to have a gap of nearly 1% in French GDP growth between the baseline scenario and this pessimistic scenario from 2026. For 2025, the differences are less significant. Thus, for French GDP, the pessimistic scenario for 2025 shows a decrease of -0.2% compared to a forecast of 0.6%.

The rationale of the scenario remains more or less unchanged. The pessimistic scenario is based on lower-than-expected US customs tariffs overall, which limits the risks of a major stall in world trade. As a result of a mechanical effect and in the absence of material tension between China and Taiwan this year, the impact on the US economy is weaker, with zero growth in 2025 in this new pessimistic scenario.

Europe continues to suffer due to the implementation of trade barriers and trade retaliation put in place by the EU with respect to third countries, with growth falling to 0% in 2025 and -0.1% in 2026.

The loss of GDP compared to the baseline scenario for France is approaching 0.7% in 2025, pushing growth into negative territory at nearly -0.2%. Growth then remains sluggish, close to 0%, over the years 2026 and 2027 (-0.1% and 0.2% respectively). As a result of the retaliation mentioned above, French inflation is rising and returning to 2% in 2025 and 2026. As the scale of the trade war is smaller than in the adverse ICAAP, risky assets correct to a lesser extent.

The Eurostoxx 50 loses 13% in 2025 and continues to fall until it reaches nearly 4,600 points in 2027, *i.e.* a level 20% below the baseline. European inflation, which remains above 2% over the entire projection horizon, is forcing the ECB to raise its deposit rate to 2.75%. This is reflected in a flattening of the curves, with long-term rates benefiting in particular from their status as safe havens. The German 10-year rate falls back to 2.50% in this scenario.

The optimistic scenario is still based on a statistical deviation from the central scenario, which leads to a gradual return of inflation to low levels and a more vigorous recovery in activity.

During 2025, the following methodological changes were implemented:

- Specific calibrations for Specialized Real Estate Financing have been put into production to better take into account their specific behavior. They were previously grouped together within the "Specific Populations", which now only include SPLS (Public Sector and Social Housing) and Associations and Insurance companies. The PDs and LGDs concerned have also been recalibrated to take these changes into account;
- An extension of the Small Business models to Foreign Companies was put into production;
- An evolution to meet a number of specifications and recommendations on the scope of SMEs has been put into production.

These changes generated a reversal of €83 million recorded in cost of risk.

In addition, Groupe BPCE has extended and adapted this approach by adjusting for a number of factors specific to certain scopes or significant markets. Each scenario is therefore weighted based on how close it is to the consensus forecast for the main economic variables in each scope or significant market of the Group.

For Retail Banking, the projections are calculated using the main macro-economic variables such as GDP, the unemployment rate, interest rates on 10-year French sovereign debt and real estate. For Corporate & Investment Banking, which is more geographically diversified, the macro-economic variables used relate to the international economy. In addition to macro-economic variables for the France zone, the Eurozone and US GDP variables are also used.

For Retail Banking and Corporate & Investment Banking, the macro-economic variables in France are as follows:

At December 31, 2025

	Pessimistic 2025			
	GDP	Unempl.	RRE	10Y yld
2025	(0.20%)	7.90%	0.50%	3.12%
2026	(0.06%)	8.00%	0.00%	3.28%
2027	0.24%	8.10%	0.00%	3.28%

	Central 2025			
	GDP	Unempl.	RRE	10Y yld
2025	0.60%	7.60%	1.50%	3.40%
2026	1.00%	7.70%	1.20%	3.65%
2027	1.30%	7.80%	1.50%	3.65%

	Optimistic 2025			
	GDP	Unempl.	RRE	10Y yld
2025	1.13%	7.30%	2.50%	3.68%
2026	1.70%	7.40%	2.50%	4.03%
2027	2.00%	7.50%	3.00%	4.03%

At December 31, 2024

	Pessimistic 2024			
	GDP	Unempl.	RRE	Rate 10A
2024	(0.42%)	8.07%	(8.15%)	4.04%
2025	(3.00%)	9.12%	(8.00%)	5.25%
2026	0.50%	9.05%	(6.00%)	4.60%

	Central 2024			
	GDP	Unempl.	RRE	10Y yld
2024	1.10%	7.50%	(6.00%)	2.85%
2025	1.40%	7.64%	(1.50%)	2.9%
2026	1.57%	7.40%	0.00%	2.70%

	Optimistic 2024			
	GDP	Unempl.	RRE	10Y yld
2024	1.86%	7.22%	(4.93%)	2.63%

For Retail Banking, the post-model adjustments that reflected the positive impact of the various measures to support the economy were eliminated due to the reduction in the benefits provided by the moratoria and SGLs as well as the evolution of the economic situation since the implementation of these adjustments.

Weighting of scenarios at December 31, 2025

In order to take into account the geographical diversity of its exposures, particularly for Corporate & Investment Banking, Groupe BPCE has had to distinguish the weightings of its economic scenarios according to the geographic area in question.

The expected credit losses are calculated by assigning to each of the scenarios a weighting determined according to the proximity of the consensus of the forecasters with each of the baseline, pessimistic and optimistic scenarios on the GDP growth variable.

Thus, the weightings used for the France zone are as follows:

- central scenario: 35% at December 31, 2025 compared to 80% at December 31, 2024;
- pessimistic scenario: 30% at December 31, 2025 compared to 15% at December 31, 2024;
- optimistic scenario: 35% at December 31, 2025 compared to 5% at December 31, 2024.

It should be noted that the change in weightings at December 31, 2025 compared to December 31, 2024 is mainly driven by a change in the scenario used for this closing.

For exposures in the Eurozone (excluding France) and the US, mainly in Corporate & Investment Banking, the weightings are as follows:

- in the Eurozone (excluding France): 21% pessimistic, 25% central and 54% optimistic *versus* 13% pessimistic, 78% central and 9% optimistic at December 31, 2024;
- in the US zone: 11% pessimistic, 32% central and 57% optimistic *versus* 10% pessimistic, 65% central and 25% optimistic at December 31, 2024.

Environmental risks are not taken into account in the central models at this stage. However, they are recorded at the institution level (see below).

Expected credit losses built up in addition to the central model

Additional provisions have been recorded by the Group's institutions to cover the specific risks of their portfolios, in addition to the provisions described above and calculated by the Group's tools. These provisions were mainly established in 2020 and 2021 for the consequences of the Covid-19 crisis.

In recent years, they were supplemented by additional documented provisions for the sectors likely to be most affected by a worsening macro-economic context (rising inflation, soaring energy prices, shortages, trade policies, etc.). The outstandings concerned may be downgraded to Stage 2, where appropriate.

During 2025, these additional provisions are limited and mainly concern the Retail-Commerce and Automotive sectors. In addition, several sectors have been subjected to provisions reversals such as the real estate industry, tourism-hotel-catering industry and the construction industry.

In this context, the Group continued to strengthen the identification and monitoring of the most affected sectors. The sectoral monitoring approach is reflected in (i) a classification according to their level of risk of economic sectors and sub-sectors established centrally by Groupe BPCE's Risk division, updated regularly and communicated to all Group institutions, (ii) a tightening of LGD rates on a geographical or sectoral basis.

To a lesser extent and only for a limited number of institutions, expected credit losses due to climate risks were constituted by certain institutions. They are constituted in accordance with the general principles defined by the Group and mainly concern transition climate risk. These provisions are made in anticipation of direct losses, by sector or by geographic area, caused by extreme or chronic weather events resulting in an increased risk of default following a cessation or reduction in activity. They are not created individually because they cover an overall risk in certain sectors of the economy and on a local, regional or national scope, depending on the institution. Transition risks are also taken into account in these expected credit losses. They correspond to the economic and financial consequences of a societal transition to a low-carbon economy, aimed at limiting greenhouse gas emissions (regulations, market, technology, reputation), to which a business sector cannot align itself.

Climate risk is taken into account by applying a stress on the counterparty's rating level, or an overall provisioning rate depending on the customer segment according to its vulnerability to climate risks.

ECL sensitivity analysis

Sensitivity analyses are carried out on the impairment outstandings on all instruments classified as Stage 1 and Stage 2 in the Group's central model. These analyses are based on a weighting of 100% of each of the scenarios used without impacting the status of these outstandings or any adjustments applied to the model.

A weighting of the pessimistic scenario at 100% would lead to a 6% increase in expected credit losses for instruments classified in S1 and S2. Conversely, a weighting of the optimistic scenario at 100% would lead to a decrease of 5% in ECL. Lastly, a weighting of the central scenario at 100% would lead to a decrease of 1% in ECL.

Method for measuring assets classified as Stage 3

Financial assets for which there is objective evidence of impairment loss due to an event representing a counterparty risk and occurring after initial recognition are classified as Stage 3. The criteria for identifying assets are in line with the definition of default under Article 178 of European Regulation No. 575/2013 of June 26, 2013, on prudential requirements for credit institutions, consistent with EBA guidelines (EBA/GL/2016/07) on the application of the definition of default, and Delegated Regulation (EU) 2018/1845 of the European Central Bank on the threshold for assessing the materiality of credit obligations past due.

Loans and advances are considered as impaired and are classified as Stage 3 if the following two conditions are met:

- there is objective evidence of impairment on an individual or portfolio basis: there are "triggering events" or "loss events" identifying counterparty risk occurring after the initial recognition of the loans in question. Objective evidence of impairment includes:
  - the occurrence of a payment past due for at least three consecutive months, the amount of which exceeds the absolute thresholds (of €100 for a retail exposure, otherwise €500) and the relative threshold of 1% of the counterparty's exposures,
  - or the restructuring of loans if certain criteria are met, or regardless of whether any payment has been missed, the observation of financial hardship experienced by the counterparty leading to the expectation that some or all of the amounts owed may not be recovered. Restructured loans are classed as Stage 3 when the loss is greater than 1% of the difference between the net present value before restructuring and the net present value after restructuring;
- these events are liable to lead to the recognition of incurred credit losses, *i.e.* expected credit losses for which the probability of occurrence has become certain.

The **Stage 3** classification **is maintained for a probationary period of three months** after the disappearance of all the above-mentioned default indicators. The probationary period in Stage 3 is extended to **one year** for **restructured contracts that have been subject to a Stage 3 transfer**.

When moving out of Stage 3, Groupe BPCE does not apply an additional probationary period of Stage 2 classification prior to any transfer to Stage 1 (if the asset concerned meets the conditions for such classification).

Debt securities such as bonds or securitized transactions (ABS, CMBS, RMBS, cash CDOs) are considered impaired and are classified as Stage 3 when there is a known counterparty risk.

The Group uses the same impairment indicators for Stage 3 debt securities as those used for individually assessing the impairment risk on loans and advances, irrespective of the portfolio to which the debt securities are ultimately designated. For perpetual deeply subordinated notes (TSSDI) that meet the definition of debt instruments within the meaning of IAS 32, particular attention is also paid if, under certain conditions, the issuer may be unable to pay the coupon or extend the issue beyond the scheduled redemption date.

Impairment for expected credit losses on Stage 3 financial assets is determined as the difference between the amortized cost and the recoverable amount of the receivable, *i.e.* the present value of estimated recoverable future cash flows, whether these cash flows come from the counterparty's activity or from the potential activation of guarantees (if these guarantees are considered as being part of the contractual terms and conditions of the guaranteed instrument). For short-term assets (maturity of less than one year), there is no discounting of future cash flows. Impairment is determined globally, without distinguishing between interest and principal. Expected credit losses arising from Stage 3 off-balance sheet commitments are taken into account through provisions recognized on the liability side of the balance sheet. They are calculated on the basis of the maturity schedules determined based on historic recoveries for each category of receivable.

For the purposes of measuring expected credit losses, pledged assets and other credit enhancements that form an integral part of the contractual conditions of the instrument and that the entity does not recognize separately are taken into account in the estimate of expected cash flow shortfalls.

The write-offs are based on individual analyses, taking into account the specific nature of each situation. In addition to the factors clearly attesting that all or part of the receivable will not be recovered (*e.g.* cessation of recovery actions, receipt of the certificate of non-recoverability), other groups of indicators are also likely to be taken into account (entry into liquidation procedure, disappearance or insufficiency of residual assets and/or absence of collateral, absence of manifest desire of executives to respect their commitments and absence of shareholder support, chances of recovery based exclusively on legal recovery actions brought against third parties combined with a very low probability of success of these actions).

These factors must be considered as part of an overall analysis and do not constitute an automatic indicator of a write-off. When, in view of the situation of the case, it is reasonably certain that all or part of the receivable will not be recovered, the amount to be recognized as losses is determined on the basis of the most objective possible external and internal elements.

Subsequent recoveries of receivables already recorded as losses are also recognized in the cost of credit risk item.

Recognition of impairment of assets classified at amortized cost and at fair value through other comprehensive income, and of provisions for loan and guarantee commitments

For debt instruments recognized on the balance sheet in the financial assets at amortized cost category, impairment is recorded against the line on which the asset was initially shown for its net amount (regardless of whether the asset is S1, S2, S3 or POCI). Impairment charges and reversals are recognized in the income statement under "Cost of credit risk".

For debt instruments recognized as financial assets at fair value through other comprehensive income on the balance sheet, impairment is carried on the liabilities side of the balance sheet at the level of other comprehensive income recyclable to profit or loss, with a corresponding entry on the income statement under "Cost of credit risk" (regardless of whether the asset is classified S1, S2, S3 or POCI).

For loan and financial guarantee commitments given, provisions are recorded on the liabilities side of the balance sheet under "Provisions" (irrespective of whether the commitment given is classified S1, S2, S3 or POCI). Additions to/reversals from provisions are recognized in the income statement under "Cost of credit risk".

7.1.2.1. Change in S1/S2 credit losses

At December 31, 2025, the total expected S1 and S2 credit losses amounted to €5,577 million and can be broken down as follows:

in millions of euros	2025 fiscal year	2024 fiscal year
Model	3,805	3,622
Complements to the model	1,548	1,807
Other	224	161
TOTAL EXPECTED CREDIT LOSSES S1/S2	**5,577**	**5,590**

7.1.2.2. Change in the gross carrying amount and credit losses on financial assets through other comprehensive income

	Stage 1		Stage 2		Stage 3		TOTAL	
in millions of euros	Gross carrying amount	Impairment for expected credit losses	Gross carrying amount	Impairment for expected credit losses	Gross carrying amount	Impairment for expected credit losses	Gross carrying amount	Impairment for expected credit losses

(1) Other changes include the amortization of receivables, the change in credit risk parameters and changes in exchange rates. In the 2025 fiscal year, other changes in the gross carrying amount included the impact of the addition to the scope of consolidation of BPCE Equipment Solutions (+€59 million) and Bank Nagelmackers (+€8 million).

7.1.3. Measurement and management of credit risk

Credit risk arises whenever a counterparty is unable to meet its payment obligations and may result from a reduction in credit quality or default by the counterparty.

Commitments exposed to credit risk consist of existing or potential receivables and particularly loans, debt securities, equities, performance swaps, performance bonds, or confirmed or undrawn facilities.

Credit risk management procedures and assessment methods, risk concentration, the quality of performing financial assets, and the analysis and breakdown of outstandings are described in the risk management report.

7.1.4. Guarantees received on IFRS 9 impaired instruments

The statement below shows the credit and counterparty risk exposure for all Groupe BPCE's financial assets. This exposure to credit risk (determined without taking into account the impact of any unrecognized netting or collateral agreements) and to counterparty risk is based on the net carrying amount of the financial assets.

in millions of euros	Maximum risk exposure	Impairment	Maximum exposure net of impairment	Guarantees
Debt securities at amortized cost	270	(239)	31	3
Loans and advances to banks at amortized cost	26	(25)	1	2
Loans and advances to customers at amortized cost	27,326	(10,723)	16,603	13,408
Debt securities – Fair value through other comprehensive income recyclable to profit or loss	4	(4)	0	0
Customer loans and advances - FVOCI R	1	(1)	0	0
Loan commitments	356	(71)	285	86
Guarantee commitments	735	(250)	485	202
TOTAL IMPAIRED FINANCIAL INSTRUMENTS (S3)	**28,717**	**(11,313)**	**17,404**	**13,700**

7.1.5. Credit risk mitigation mechanisms: assets obtained by taking possession of collateral

The policy followed by Groupe BPCE entities is to sell assets obtained by taking possession of collateral as soon as possible. The amount of these assets was non-material at December 31, 2025.

7.2. Market risk

Market risk refers to the possibility of financial loss due to market trends, such as:

- interest rates: interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate due to changes in market rates of interest;
- exchange rates;
- prices: market price risk is the risk of a potential loss resulting from changes in market prices, whether they are caused by factors specific to the instrument or its issuer, or by factors affecting all market traded instruments. Variable-income securities, equity derivatives and commodity derivatives are exposed to this type of risk; and
- and more generally, any market parameter involved in the valuation of portfolios.

Systems for the measurement and monitoring of market risks are presented in the risk management report.

The information provided in the risk management report required under IFRS 7 and relating to the management of market risk comprises:

- VaR for Groupe BPCE's scope;
- the conclusions of the global stress tests.

7.3. Overall interest rate risk and exchange rate risk

Interest rate risk is the risk that unfavorable changes in interest rates will adversely impact the Group's annual results and net worth. Foreign exchange risk is the risk of losses resulting from changes in exchange rates.

The Group's approach to the management of overall interest rate risk and foreign exchange risk is discussed in Chapter 7.9 "Risk factors and risk management – Liquidity, interest rate and exchange rate risks".

7.4. Liquidity risk

Liquidity risk is the risk that the bank will not be able to meet its commitments or maturities at any given time.

The funding procedures and liquidity risk management arrangements are disclosed in the risk management report.

Disclosures relating to the management of liquidity risk required by IFRS 7 are provided in Chapter 7.9 "Risk factors and risk management – Liquidity, interest rate and exchange rate risks".

Note 8 Employee benefits and similar

Accounting principles

There are four categories of employee benefits:

- **short-term employee benefits** such as wages, salaries, paid annual leave, bonuses, and profit sharing and incentive schemes which are expected to be paid within 12 months of the end of the period in which the employee renders the service are recognized in expenses.
- **post-employment benefits** paid to retired staff break down into two categories: defined-contribution plans and defined-benefit plans.

Defined-contribution plans such as French national plans are those for which Groupe BPCE's obligation is limited to payment of a contribution; there is no obligation for the employer regarding a certain level of benefits. Contributions paid into these plans are recognized as an expense for the period.

Defined-benefit plans are those for which Groupe BPCE has undertaken to provide a given amount or level of benefits.

Defined-benefit plans are subject to provisions calculated based on an actuarial assessment of the amount of the obligation, taking into account demographic and financial assumptions. When these plans are funded by external funds meeting the definition of plan assets, the amount of the provision is reduced by the fair value of these assets.

The cost of defined-benefit plans recorded in expenses for the period includes: the service cost (representing the rights acquired by beneficiaries over the period), the past service cost (revaluation differences on actuarial liabilities following an amendment or reduction in the plan), the net financial cost (effect of unwinding the discount on the net obligation for interest income generated by plan assets) and the effect of pension drawdowns.

Revaluation differences on actuarial liabilities caused by changes in demographic and financial assumptions and past-experience effects are recorded in gains and losses recognized directly in other comprehensive income not recyclable to net income:

- **other long-term employee benefits** include awards accruing to current employees and payable 12 months or more after the end of the period in which the employee renders the related service. They mainly include long-service awards and deferred variable remuneration payable in cash.

These benefits are calculated using the same actuarial method as that applied for defined-benefit pension plans. The accounting method differs in terms of revaluation differences on actuarial liabilities, which are recorded under expenses;

- **termination benefits** are granted to employees on termination of their employment contract before the normal retirement date in the event of dismissal for acceptance of termination for compensation. They are covered by a provision. Termination benefits that are not expected to be paid within the 12 months following the balance sheet date are discounted to present value.

Share-based payments include payments in equity instruments or cash, the amount of which depends on the change in the value of the equity instruments or a valuation formula.

A payroll cost is systematically recorded for an amount equal to the fair value of the instruments awarded, spread over the period over which the rights are acquired.

8.1. Payroll costs

Payroll costs include all personnel expenses and the associated social security charges and payroll-based taxes.

They include expenses for employee benefits and share-based payments.

Information on employees by category is presented in Chapter 2, "Sustainability report" (Part 3 - Social information).

in millions of euros	2025 fiscal year	2024 fiscal year
Wages and salaries	(7,584)	(7,244)
Expenses for defined-benefit and defined-contribution pension plans and other long-term employee benefits	(888)	(789)
Other social security charges and payroll-based taxes	(3,068)	(2,911)
Profit sharing and incentive schemes	(820)	(688)
TOTAL PAYROLL COSTS[1]	**(12,360)**	**(11,632)**

(1) Including all overheads by nature of all Group activities, including all overheads of the insurance activities presented in Note 9.1.8.

8.2. Employee benefits

Groupe BPCE grants its staff a variety of employee benefits.

The Banques Populaires private supplementary pension plan, managed by Caisse Autonome de Retraite des Banques Populaires (CAR-BP), covers the pension benefits deriving from the closure of the Banques Populaires banking pension scheme at December 31, 1993.

The pension plans managed by CAR-BP are partially covered by Insurance for annuities paid to beneficiaries over a certain age, and for obligations in respect of beneficiaries below this age.

The annuities paid to beneficiaries over the reference age are managed under the insurer's (CNP) general pension plan. The assets in this general plan are reserved for the insurer's pension obligations and their composition is adjusted in line with foreseeable payment trends. They mostly comprise fixed income instruments so as to enable the insurer to apply the capital guarantee that it is obliged to provide for this type of assets. The insurer is responsible for the fund's Asset/Liability management.

Other obligations are managed in a diversified fund managed as a unit-linked policy and are not covered by any particular guarantee from the insurer. The management of these obligations is based on a target strategic allocation that mostly invests in interest rate products (60%, over 95% of which are government bonds), but which also includes equity investments (40%, with 20% invested in the Eurozone). The allocation is adjusted to optimize the portfolio's expected performance, subject to a risk constraint comprising many criteria. The corresponding asset/liability reviews are performed each year and are presented to the CAR-BP Technical, Financial and Risk Committee and to the Groupe BPCE Employee Benefits Monitoring Committee for information. The relatively aggressive asset allocation is made possible by the long-term investment horizon and by the regulation mechanisms integrated in the plan's financial management system.

The Caisses d'Epargne's former private supplementary pension plan (a retained-benefit plan), previously managed by Caisse Générale de Retraite des Caisses d'Epargne (CGRCE), is now incorporated within Caisse Générale de Prévoyance des Caisses d'Epargne (CGP). Beneficiaries' rights were crystallized on the date of the plan's closure, on December 31, 1999. The strategic guidelines for the management of the Caisses d'Epargne retained-benefit plan are set by the CGP Board of Directors based on asset/liability reviews submitted first to a Joint Investment Committee. The Groupe BPCE Employee Benefits Monitoring Committee also receives the reviews for information purposes.

The bond allocation is a decisive component of the plan's assets. To manage interest rate risk, the CGP is obliged to replicate expected payouts with equivalent assets *via* a matching process. Liability constraints require the holding of long-term assets to ensure the duration is as close as possible to the duration of liabilities. The wish to be able to review annuities on an annual basis, which is decided by the CGP Board of Directors, means the portfolio holds a large portion of inflation-indexed bonds.

The CAR-BP and CGP plans are presented under "Supplementary pensions and other plans".

Other employee benefits include:

- pensions and other post-employment benefits such as end-of-career awards and other benefits granted to retirees;
- other benefits such as long-service awards and other long-term employee benefits.

8.2.1. Analysis of employee-related assets and liabilities recorded in the balance sheet

	Post-employment defined-benefit plans		Other long-term employee benefits			
in millions of euros	**Supplementary pensions and other plans**	**End-of-career awards**	**Long-service awards**	**Other benefits**	**12/31/2025**	**12/31/2024**
Actuarial liabilities	5,202	750	225	616	6,793	7,000
Fair value of plan assets	(6,698)	(709)	(12)		(7,419)	(7,490)
Fair value of reimbursement rights		(33)			(33)	(31)
Effect of ceiling on plan assets	1,710	3			1,713	1,464
Net amount reported on balance sheet	**214**	**11**	**213**	**616**	**1,054**	**942**
Passive employee benefits	214	156	213	616	1,199	1,071
Active employee benefits[1]		145			145	129

(1) Mostly shown as assets on the balance sheet under "Accrued income and other assets".

Actuarial liabilities represent the Group's obligation in respect of beneficiaries. They are calculated by independent actuaries using the projected unit credit method based on demographic and financial assumptions that are reviewed on a regular basis and at least once a year.

When these plans are funded by assets meeting the definition of plan assets, the amount of the provision corresponds to actuarial liabilities less the fair value of these assets.

Hedging assets no longer meeting the definition of plan assets are recorded under assets.

8.2.2. Changes in amounts recognized on the balance sheet

Changes in actuarial liabilities

	Post-employment defined-benefit plans		Other long-term employee benefits			
in millions of euros	Supplementary pensions and other plans	End-of-career awards	Long-service awards	Other benefits	2025 fiscal year	2024 fiscal year
Actuarial liabilities at start of year	**5,587**	**720**	**221**	**471**	**7,000**	**7,049**

Changes in scope	105	3		5	113	4
Other changes	(4)	25	1	18	40	30
ACTUARIAL LIABILITIES AT END OF YEAR	**5,202**	**750**	**225**	**616**	**6,793**	**7,000**

Change in plan assets

	Post-employment defined-benefit plans		Other long-term employee benefits		
in millions of euros	Supplementary pensions and other plans	End-of-career awards	Long-service awards	2025 fiscal year	2024 fiscal year
Fair value of assets at start of year	**6,812**	**698**	**11**	**7,521**	**7,710**
Interest income	236	24		260	252
Plan participant contributions	13	3		16	10
Benefits paid	(218)	(9)		(227)	(218)
Other items recorded in income	(3)	1		(2)	2
Changes recorded in income	**28**	**19**		**47**	**46**
Revaluation adjustments – Return on plan assets	(111)			(111)	(278)
Changes recognized directly in other comprehensive income not recyclable to profit or loss	**(111)**			**(111)**	**(278)**
Foreign exchange rate adjustments	(26)			(26)	14
Other changes	(5)	25	1	21	29
FAIR VALUE OF ASSETS AT END OF YEAR[1]	**6,698**	**742**	**12**	**7,452**	**7,521**

(1) Of which €33 million in reimbursement rights included in end-of-career awards (*versus* €31 million on December 31, 2024).

Amounts paid in cash to beneficiaries reduce the amount of provisions recorded to this end by an equivalent amount. A total of €227 million was charged against pension plan assets.

Intererest income on plan assets is calculated by applying the same discount rate as that used to discount commitments. The difference between the actual return at the balance sheet date and this interest income is a revaluation difference recorded in equity not recyclable to profit or loss for post-employment benefits.

8.2.3. Expenses for defined-benefit pension plans and other long-term employee benefits

Expenses for defined-benefit pension plans and other long-term employee benefits

The various components of the expense recognized for defined-benefit plans and other long-term employee benefits are included under "Payroll costs".

in millions of euros	Post-employment defined-benefit plans	Other long-term employee benefits	2025 fiscal year	2024 fiscal year
Service cost	(53)	(206)	(259)	(214)
Net interest cost	39	(9)	30	28
Other (of which asset ceiling by result)	(61)	(6)	(67)	(52)
EXPENSES FOR THE PERIOD	**(75)**	**(221)**	**(296)**	**(238)**

Gains and losses on defined-benefit plans recognized directly in other comprehensive income

8.3. Share-based payments and equivalent

Accounting principles

Share-based payments are those based on shares issued by the Group, regardless of whether the transactions are settled in the form of equity or cash indexed to the share price or on a valuation formula.

In accordance with IFRS 2 on "Share-based payments", grants of bonus shares to employees gives rise to the recognition of an expense representing the fair value of the goods or services received at the grant date. The fair value of the services received is determined by reference to the fair value of the shares at the grant date, less the discounted amount of dividends not received by employees over the vesting period and taking into account any attendance conditions.

The expense is spread on a straight-line basis over the vesting period. The expense is adjusted over the vesting period to reflect the loss of rights.

The corresponding adjustment for the expense recorded under equity-settled plans is an increase in equity.

For cash-settled plans for which the Group has a liability, the expense corresponds to the fair value of that liability. This amount is expensed over the vesting period when its payment is subject to a presence condition, by the counterpart of a liability account. It is then remeasured at fair value through profit or loss at each closing date until it is settled. The revaluation of the debt at the closing date takes into account not only the fulfillment of the performance and/or presence condition but also the change in value of the underlying shares.

Where deferred variable remuneration plans provide for a cash payment based on a formula that is not representative of the fair value of the share, these plans fall within the scope of IAS 19. The principles applicable under IAS 19 to this type of plan are similar to those under IFRS 2 for cash-settled plans.

Deferred variable compensation plans

Since 2010 and until 2020, Natixis has granted each year to certain categories of its employees plans whose payment was based on Natixis shares.

Following the delisting of the Natixis share on July 21, 2021, plans settled in cash indexed to the Natixis share price (for their non-vested components) have been modified. Since then, their payment is now indexed to a formula based in particular on the price of the simplified public tender offer for Natixis shares (*i.e.* €4) and the change in net income attributable to equity holders of Groupe BPCE.

In June 2021, BPCE entered into a liquidity agreement with each beneficiary of bonus shares, consisting of a promise to sell that may be exercised by the beneficiary within 60 calendar days from the date of availability of the shares, followed by a promise to buy granted by BPCE to each beneficiary for the benefit of BPCE, that may be exercised by BPCE during 60 calendar days from the end of the exercise period for the promise to sell. The implementation of these contracts had the effect of reclassifying, within the BPCE Group, plans settled in shares granted by Natixis into plans settled in cash based on a valuation formula. All shares covered by the liquidity contracts were acquired during the 2025 financial year.

The plans granted in 2021 did not need to be modified as their conditions had already been adapted upon their creation for the scenario of Natixis shares being delisted.Deferred variable remuneration plans granted since 2022 are payable either in cash indexed to the evolution of Groupe BPCE's net profit attributable to the Group for plans granted up to 2024, or partly in cash indexed to the evolution of Groupe BPCE's net profit attributable to the Group and partly in non-indexed cash, for plans granted from 2025 onwards.

With regard to the 2026 plan, as the grants were not formally made at the closing date, the cost assessment was made on the basis of the best possible estimate at December 31, 2025. In addition, this plan will be settled partly in non-indexed cash and partly in cash indexed to a valuation formula that has changed this year (the cash will be indexed to the change in BPCE's net income attributable to equity holders of the parent as well as to the change in BPCE's net income).

Natixis' subsidiaries may also establish their own share-based payment plans. The impact relating to these plans at December 31, 2025, was -€33.8 million (expense) compared to -€23.7 million (expense) in 2024.

The characteristics of Natixis' deferred variable remuneration plans are detailed in the paragraphs below.

Long-term cash-settled payment plans indexed on a valuation formula

Payments under these plans are subject to presence and performance criteria for the categories of regulated personnel within the meaning of the CRD.

Years the plan was granted	Grant date	Number of units granted at inception/Cash indexed in euros	Vesting date	Number of units vested by beneficiaries/ Cash indexed in euros	Fair value of indexed cash unit at valuation date in euros
2022 plan	03/17/2022	67,306,358	March 2023	20,446,331	1.016
			March 2024	18,746,629	1.111
			March 2025	16,309,220	1.062
			March 2026		1.106

Valuation parameters used for the cost estimate for these plans

	12/31/2025	12/31/2024
Fair value of the indexed cash unit[1]	[0.932; 1.538]	[0.893; 1.299]
Risk-free interest rates	2.10%	2.57%
Loss of rights rate	5.17%	5.32%

(1) Corresponds to the range of fair values of indexed cash units, which as of 2021 are differentiated by plan and by year.

Deferred variable remuneration plans settled in cash

Some employees are awarded deferred cash-settled loyalty and performance bonus benefits. These bonuses are subject to presence and performance conditions. In terms of accounting treatment, they are accounted for under "Other long-term employee benefits". The estimated expense takes into account an actuarial estimate of these conditions being met. It is spread over the rights vesting period. The amount recognized in respect of the 2025 fiscal year was:

Years the plan was granted	Grant date	Vesting date	2025 fiscal year *(in millions of euros)*	2024 fiscal year *(in millions of euros)*
2025 plan	03/06/2025	March 2025 March 2028 March 2029 March 2030 March 2031 March 2032	(13)	
2026 plan	03/10/2026	March 2026 March 2029 March 2030	(7)	
TOTAL			**(20)**	

Note 9 Insurance activities

General principles

Insurance activities cover personal insurance and non-life insurance activities. In Groupe BPCE these activities are performed by dedicated subsidiaries subject to the specific regulations applicable to the Insurance sector.

The entities concerned by these measures are mainly CEGC, BPCE Assurances, NA, BPCE Vie and its consolidated funds, BPCE Life, BPCE Assurances IARD, BPCE IARD, Surassur, Oney Insurance, Oney Life, Prépar Vie and Prépar IARD.

Financial assets and liabilities of insurance companies are therefore recognized in accordance with the provisions of IFRS 9. They are classified in the categories defined by this standard and follow its measurement rules (Note 2.5.1).

Insurance assets and liabilities are measured and presented in accordance with IFRS 17.

Scope of application

IFRS 17 applies to:

- issued insurance contracts (including issued reinsurance treaties);
- held reinsurance treaties;
- investment contracts issued with discretionary participation features, provided that the entity also issues insurance contracts.

Groupe BPCE has these three types of contracts.

However, the financial guarantees given by entities in the banking sector within Groupe BPCE, although meeting the accounting definition of an insurance contract, are still treated under IFRS 9 on financial instruments.

Measurement models

In accordance with IFRS 17, insurance assets and liabilities are recognized at present value.

Insurance assets and liabilities are measured using a building blocks approach (general approach), applicable by default to all contracts falling within the scope of IFRS 17, with an adaptation for insurance contracts with direct participation features (see below). This approach requires the measurement of technical provisions comprising the following three blocks:

- a first block equal to the present value of the estimate of future cash flows – Best Estimate (BE);
- a risk adjustment for non-financial risk, to take into account the uncertainty of these estimates of future cash flows (Risk Adjustment – RA);
- a Contractual Service Margin (CSM).

In Groupe BPCE, the general approach is used in direct business, in particular for payment protection insurance, multi-year personal protection contracts (excluding funeral) and for the guarantee activity. It is also used for the main reinsurance treaties issued for investment and pension activities (with certain adjustments to take into account the participating nature of the contracts, mainly under the disaggregation option or OCI option – see Note 9.2).

The Best Estimate corresponds to the present value, measured at each balance sheet date, of the estimate of future cash flows (receivable and payable, including future premiums on current contracts and acquisition cash flows) allocated to fulfilling contracts within the timeframe defined in accordance with IFRS 17 requirements, weighted by their probability of occurrence. Only the flows from current contracts are subject to measurement (a group of contracts may nevertheless be recognized in advance when facts and circumstances indicate that it is onerous (see below)). These flows are discounted using the discount rate described below.

The carrying amount of the Best Estimate is broken down into a liability (or asset) for remaining coverage (materializing the commitment for insurance services not yet provided) and a liability (or asset) for incurred claims (materializing the commitment for incurred claims that have not yet been paid in full). When options and guarantees are granted to policyholders, the Best Estimate includes an assessment of their cost. Lastly, receivables and payables arising from insurance or reinsurance operations issued are now included in the value of the Best Estimate.

The risk adjustment for non-financial risk corresponds to the consideration of the uncertainty of the estimates of future cash flows included in the Best Estimate measurement. It is also measured at the end of each reporting period. The level of the risk adjustment for non-financial risk is not standardized. Groupe BPCE has defined its risk adjustment for non-financial risk methodologies according to the types of insurance liabilities that pose different risks. The risk adjustment for non-financial risk of the liabilities for remaining coverage is mainly based on a VaR (Value at Risk)-type confidence level methodology, capitalizing on the prudential requirements and based on a multi-year vision of risk with an ultimate corresponding to the extinction of the risk. Intra-entity diversification is also taken into account. The risk adjustment for non-financial risk in respect of liabilities for incurred claims is mainly based on Groupe BPCE's level of risk appetite and corresponds to a level of confidence determined using actuarial calculation methods.

The CSM represents, when the contracts were issued, the expected profit on contracts, not yet earned, measured for each group of insurance contracts. This is measured at the contract inception date and then adjusted over time, notably to take into account any changes in future assumptions of non-financial origin (at each reporting date, changes in future assumptions impact the measurement of the Best Estimate and Risk Adjustment, with a corresponding adjustment to the CSM when they are of non-financial origin, and to income or OCI when they are of financial origin). It is recognized on the balance sheet and then in income in line with the services provided to policyholders, over the duration of the remaining coverage of the contracts. If a loss is expected at inception or during the coverage period (onerous contracts, representing an expected net cash outflow for the entity), this is not subject to a negative CSM, but is immediately recognized in income. The share of CSM representative of the service rendered over the period is allocated to profit or loss through coverage units, which represent the duration of coverage of the contracts, the quantity of services provided and the service rendered by the Groupe BPCE entities to the policyholders. When applying the general approach to payment protection insurance and guarantee activities, the coverage units are defined on the basis of the outstanding principal.

The discount rates applied to the estimate of future cash flows must reflect the time value of money, the cash flow characteristics, and the liquidity characteristics of the insurance contracts, and be consistent with observable current market prices. Under the general approach, the Best Estimate and the risk adjustment for non-financial risk are measured on the basis of current rates (at the reporting date) while the CSM remains adjusted on the basis of the discount rates determined at the date of initial recognition of the group of contracts. Groupe BPCE adopts a bottom-up approach to determine these discount rates, by using a risk-free rate curve (based on interbank swap rates) to which is added an illiquidity premium, depending on the characteristics and liquidity of the insurance contracts concerned. The risk-free rate curve used is adapted from the applicable rate curve in the context of prudential requirements (adjustments mainly concern liquid parameters and extrapolation beyond the last liquidity point).

A Variable fee approach (VFA) model, adapted from the general approach, is mandatory for insurance contracts with direct participation features, which meet the following three criteria:

- the contractual terms specify that the policyholder participates in a share of a clearly identified pool of underlying items;
- the insurer expects to pay to the insured an amount equal to a substantial share of the fair value returns on the identified pool of underlying items;
- a substantial proportion of the benefits that the entity expects to pay to the policyholder must vary with the fair value of the identified pool of underlying items.

In Groupe BPCE, this model is used in direct business to measure investment and pension contracts as well as funeral contracts.

In the case of insurance contracts with direct participation features, the service provided to the policyholder corresponds mainly to the financial management of the underlying items. The cash flows of these contracts vary depending on the performance of the underlying items. An increase in the value of the underlying items entails an increase in the value of the contracts. Conversely, a decrease in the value of the underlying items entails a decrease in the value of the contracts. Changes in the underlying items adjust the CSM for the insurer's share and impact the Best Estimate for the policyholder's share. The CSM in the VFA approach also takes into account changes in future financial assumptions and the effects on the Best Estimate and the risk adjustment for non-financial risk of the accretion.

Underlying items include, in particular, items allocated to policyholders as part of the profit-sharing feature (including, in particular, the share of financial assets and investment property representing with-profits savings commitments) and unit-linked products.

In Groupe BPCE, the majority of the financial assets underlying VFA contracts are measured at fair value through profit or loss or through other comprehensive income under IFRS 9. Investment property is also measured at fair value through profit or loss as permitted by IAS 40.

In the VFA approach, the Best Estimate includes the valuation of the cost of options and guarantees granted to policyholders. Insurance liabilities also reflect the pooling of contracts portfolios for flow of insurance contracts with direct participation features backed by the general fund. Future flexible premiums under current contracts are included in the Best Estimate measurement.

Adaptations to the methodologies of the general model have been made concerning the coverage units and the rate curve for contracts eligible for the VFA model. Thus, the coverage units used in the VFA model are based on changes in policyholders' savings contracts outstandings and are adjusted to correct for a "bow-wave" effect. This is generated by two effects recognized in CSM, in respect of the period just ended: the difference between the rate of return on assets attributable to contracts (in the real world) and that assessed by actuarial models (in risk-neutral measurement), and the release of the time value of options and guarantees (TVOG). Coverage units that take account of the bow-wave effect enable CSM amortization to be recorded in the income statement, more accurately reflecting the investment service provided to policyholders over the past period. In addition, the rate curve is based on the same methodology as that applicable under the general model, with the illiquidity premium determined according to the nature of the financial assets underlying the contracts eligible for this model.

Finally, the general approach is supplemented by a simpler optional model based on the allocation of premiums ("Premium allocation approach" – PAA). It applies to:

- all insurance contracts except contracts with direct participation features, insofar as this method leads to a result close to the general approach;
- contracts with short coverage periods (*i.e.* over a period of less than 12 months).

In Groupe BPCE, this model is used in direct business for annual personal protection contracts and for all non-life insurance contracts (fire, accidents and miscellaneous risks).

The initial liability for remaining coverage recognized is equal to the premiums received (*i.e.* no CSM is recognized). The premiums are then spread out and recognized in the income statement as time passes. Acquisition costs incurred may be recognized immediately as expenses when they occur or over the coverage period. The liabilities for incurred claims not yet disbursed and for groups of onerous contracts nevertheless remain measured according to the provisions of the general model. Insurance liabilities are only discounted if the effect of the passage of time is significant, particularly with regard to provisions for incurred claims (Best Estimate and Risk adjustment for non-financial risk). The provisions concerning the measurement of the risk adjustment for liabilities for incurred claims are similar to those applicable under the general model.

Contract boundaries (horizon)

Under IFRS 17, cash flows lie within the boundary of an insurance contract if they arise from substantive rights and obligations that exist during the reporting period in which the entity can compel the policyholder to pay the premiums or in which the entity has a substantive obligation to provide the policyholder with services. A substantive obligation to provide services set out in an insurance contract ceases notably when the entity has the practical ability to reassess the insured risks and can therefore set a price or a level of services that fully reflects these risks.

Groupe BPCE analyzed in depth the characteristics of its contracts in order to compute the cash flows included in the scope of its insurance contracts and thus to determine the horizon or "boundary" of these contracts. In this respect, based on the requirements of IFRS 17, the Group includes, in particular, within the boundary of investment contracts, future flexible premiums in respect of contracts in force at the reporting date.

Contract recognition and derecognition dates

A group of issued insurance contracts must be recognized at the first of the following dates:

- The start-date of the coverage period for the group of contracts;
- The date at which the first payment by a policyholder becomes due or, in the absence of a due date, the date at which the first payment is received; and
- In the event of a group of onerous contracts, the date at which the group becomes onerous.

Only contracts that satisfy individually the above recognition criteria at the end of the reporting period are included in the group of contracts. If this is not the case, the contracts are included in the group of contracts during later accounting periods.

An insurance contract is derecognized in the following cases:

- When it is extinguished, *i.e.* when the obligation specified in it expires, or when it is discharged or canceled;
- When it is subject to an outgoing transfer (transfer to a third party);
- When the conditions of a contract are substantially modified, triggering a change in the recognition of the contract if these new conditions had always existed (different classification, different valuation model, etc.). In this case, a new contract based on the modified conditions is then recognized as a replacement for the initial contract (which is then derecognized).

The first of the three cases mentioned above is the one that most commonly occurs within the framework of the activities of Groupe BPCE's insurance entities. In this case, derecognition of the insurance contract entails eliminating the Best Estimate and the risk adjustment for non-financial risk, as a counterpart to the CSM of the group of contracts, without having any direct and immediate effect on income.

Level of aggregation of contracts

The standard defines the level of aggregation of « contract groups » to be used to assess insurance contract liabilities and their CSM.

The first step is to identify the portfolios of insurance contracts, *i.e.* contracts subject to similar risks and managed together.

Each portfolio is then divided into three parts according to their profitability profile:

- contracts that are onerous at initial recognition;
- contracts which, at initial recognition, have no significant possibility of becoming onerous;
- the remaining contracts in the portfolio.

In addition, the standard as published by the IASB introduces the principle of "annual cohorts" prohibiting the inclusion in the same group of contracts issued more than one year apart.

A group of contracts is therefore a grouping of contracts from the same portfolio, the same profitability profile and the same cohort.

Nevertheless, the standard as adopted by the European Union provides for an optional exemption from the application of this rule for the following contracts:

- groups of insurance contracts with direct participation features and groups of investment contracts with discretionary participation features whose cash flows affect or are affected by cash flows to policyholders of other contracts;
- groups of insurance contracts which are managed across generations of contracts and meet certain conditions and for which the application of the matching adjustment has been approved by the supervisory authorities.

This exemption will be reviewed before the end of 2027, based on the results of the IASB's post implementation review of IFRS 17.

Groupe BPCE applies the option to exempt the application of annual cohorts to investment/pension contracts and funeral contracts.

Groupe BPCE's classification by portfolio was carried out in accordance with the requirements of IFRS 17 as well as with internal segmentation and the way in which contracts are managed. Groupe BPCE uses the contract as an elementary level under IFRS 17. Thus, no disaggregation for the various guarantees included in a contract has been made. Grouping by homogeneous profitability levels was completed following studies carried out on the basis of information and criteria available internally, such as products, contracts and policyholders.

Specific provisions for held reinsurance treaties

IFRS 17 requires a separate analysis, measurement and accounting of direct insurance contracts (and issued reinsurance treaties) from held reinsurance treaties. These requirements entail the assessment of a Best Estimate, a risk adjustment for non-financial risk and a CSM specific to held reinsurance treaties.

The assumptions used to assess the Best Estimate of held reinsurance treaties must be consistent with those used to assess the Best Estimate of the underlying groups of direct insurance contracts. The latter must also reflect the effect of the risk of non-performance by the issuer of reinsurance contracts held, relating mainly to the reinsurer's credit risk and litigation risk.

The risk adjustment for non-financial risk must correspond to the amount of risk transferred by the held reinsurance treaty policyholder to the issuer of the latter.

Under held reinsurance treaties, the CSM may represent a reinsurance loss or gain (thus, the provisions relating to onerous contracts do not apply in the case of held reinsurance treaties). However, when the contracts underlying the reinsurance treaties are onerous, an income is recognized in the income statement in respect of the reinsurance contracts held (referred to as the "loss recovery component"), representing the reinsurer's participation in the losses. CSM held (whether representing a reinsurance cost or gain) is recognized in the income statement over the term of the held reinsurance treaties (and not over the term of the underlying contracts) and on the basis of coverage units which must reflect the services received.

As the VFA model is not applicable to reinsurance treaties, only the general model and the PAA model can be applied. The accounting models applicable to held reinsurance treaties may differ from those used for the underlying direct insurance contracts. The provisions relating to the level of aggregation of contracts remain identical to those applicable to direct insurance contracts, however references made to onerous contracts (in respect of direct insurance contracts) are replaced by references to contracts on which there is a net gain on initial recognition.

IFRS 17 provides for the entity to recognize a group of reinsurance contracts held according to the following rules:

- The general case in which initial recognition date is the start of the coverage period for the group of reinsurance contracts held;
- For proportionate treaties, initial recognition date is deferred until recognition date for the underlying contracts if this date is later than the start of the coverage period for the group of reinsurance contracts held;
- Lastly, if the underlying insurance contracts are onerous, initial recognition date is the recognition date for the loss component, provided that the held reinsurance contract is signed by this date.

Lastly, payables and receivables arising from reinsurance operations held (including debts for cash deposits and reinsurance current accounts) are now included in the value of the Best Estimate.

Groupe BPCE's reinsurance treaties were measured using the general model (in particular the main treaty for investment and pension activities) or the PAA model, depending on their time horizon determined in accordance with IFRS 17. Under the main held reinsurance treaty, the coverage units are based on changes in the outstandings of held contracts.

Key assumptions and judgments

For the purposes of applying IFRS 17, insurance liabilities are measured using estimation techniques, judgments and assumptions (notably claims and mortality laws, generally based on historical data, and assumptions concerning expenses and fees and commissions). More specifically, for the valuation of investment and pension contracts, lapse and future flexible premiums laws are also taken into account.

IFRS 17 does not prescribe the coverage units to be applied. Judgment and estimates must be used to best reflect the service provided during the period. Certain criteria must nevertheless be taken into account when determining coverage units: the probable duration of coverage for each contract, the quantity of services measured in relation to the service provided from the insured's point of view, and the service provided, which is defined as the insurer's readiness to cover an insured event.

The assumptions and judgments applied in calculating the risk adjustment for non-financial risk result in a confidence level for Groupe BPCE of 80% at December 31, 2025, identical to that at December 31, 2024.

In terms of discount rates, the risk-free rate curve used by Groupe BPCE to discount insurance contract cash flows is presented in the table below:

	12/31/2025				
Currency	**1 year**	**5 years**	**10 years**	**20 years**	**30 years**
Euro	2.07%	2.48%	2.86%	3.21%	3.24%

	12/31/2024				
Currency	**1 year**	**5 years**	**10 years**	**20 years**	**30 years**
Euro	2.23%	2.15%	2.27%	2.26%	2.26%

The illiquidity premium for insurance contracts with direct participation features measured under the VFA approach was between 0.70% and 0.96% at December 31, 2025, and between 0.94% and 1.25% at December 31, 2024, depending on the insurance subsidiaries.

The restatement of margins between banking entities distributing insurance products and insurance entities (see below) also involves estimates.

Transition valuation methods

IFRS 17 is applied retrospectively. Current insurance contracts have been remeasured on the transition date according to the three methods below:

- Full Retrospective Approach (FRA)

The Full Retrospective Approach (FRA) provides for the definition, recognition and measurement of each of the groups of insurance contracts as if IFRS 17 had always been applied since the inception of the contracts.

Groupe BPCE has adopted this approach mainly for portfolios of contracts and reinsurance treaties eligible for the PAA approach, and for the most recent years for portfolios of payment protection insurance and guarantee contracts.

If it is not possible to apply this method based on the available data, the following two methods can be used:

- Modified Retrospective Approach (MRA)

The Modified Retrospective Approach (MRA) is a retrospective method that aims to obtain a result as close as possible to that obtained by the FRA approach, based on the use of reasonable and justifiable information obtained without excessive cost or effort. The MRA approach allows the following calculation simplifications:

- measurement of groups of contracts on initial recognition: in particular, IFRS 17 make it possible to dispense with the annual cohorts to define the level of aggregation of groups of contracts in stock at the transition date. Groupe BPCE has adopted this simplification for portfolios of contracts for which the MRA approach has been adopted;
- measurement of the CSM at the transition date for contracts measured under the general approach: a CSM at the date of initial recognition is first valued on the basis of estimated future cash flows at transition, adjusted for actual cash flows between the date of initial recognition and transition. The CSM at the transition date results from the CSM at the date of initial recognition, amortized using coverage units between the date of initial recognition and the transition date. Discount rates at the initial recognition date may be determined based on an observable yield curve for at least three years prior to the transition date, or based on an average spread between an observable yield curve and an estimated curve. Finally, the risk adjustment for non-financial risk at the date of initial recognition must be determined by adjusting the risk adjustment for non-financial risk at the transition date with the release of risk expected prior to the transition date. Groupe BPCE has retained these simplifications for portfolios of contracts eligible for the general approach for which the MRA approach in transition has been adopted. The provisions concerning coverage units and have been applied consistently to current contracts at the transition date and those post-transition;
- measurement of the CSM at the transition date for contracts measured under the VFA approach: a CSM at the date of initial recognition is first measured on the basis of the fair value of the items underlying the contracts at transition, net of the estimated future cash flows at transition, adjusted for fees and levies and the change in the risk adjustment for non-financial risk relating to the period between the date of initial recognition and transition. The CSM at the transition date results from the CSM at the date of initial recognition, amortized using coverage units between the date of initial recognition and the transition date. Groupe BPCE has adopted this simplification for portfolios of contracts eligible for the VFA approach for which the MRA approach in transition has been adopted. The provisions concerning coverage units and mutualization have been applied consistently to contracts in force at the transition date and those post-transition;
- measurement of insurance finance income or expenses: the MRA approach simplifies the task of determining discount rates for groups of contracts and calculating other comprehensive income (OCI), where a breakdown of finance income or expenses is used. As permitted by IFRS 17, Groupe BPCE has mainly retained an OCI equivalent to that of the underlying items for investment and pension contract portfolios and zero for other portfolios valued using the MRA approach in transition.

In particular, Groupe BPCE has adopted this approach for its investment, pension, payment protection insurance portfolios (with the exception of the most recent years for certain portfolios) and for its main issued reinsurance treaty.

- Fair Value Approach (FVA)

The Fair Value Approach (FVA) is based only on the data available at the transition date without taking into account past financial flows.

In the Fair Value Approach, the contractual service margin is measured at the transition date as the difference between the fair value of the group of insurance contracts at that date and the fulfilment cash flows measured at that same date.

Groupe BPCE has adopted this approach for certain multi-year personal protection and non-significant payment protection insurance portfolios as well as for one of its main held reinsurance treaties.

Groupe BPCE has mainly applied the modified retrospective (MRA) and fair value (FVA) approaches to measure insurance and held reinsurance liabilities at the transition date, given operational constraints (*e.g.* historical data availability).

Presentation of the financial statements

The requirements of IFRS 17 in terms of presentation of the financial statements are detailed in (Notes 9.2 and 9.3).

Groupe BPCE applies ANC recommendation No. 2022-01 of April 8, 2022, on the format of consolidated financial statements of banking sector institutions prepared in accordance with international accounting standards.

Internal margins between banking entities distributing insurance products and insurance entities are restated. This is reflected on the balance sheet by a reclassification between the CSM and BE aggregates within the insurance contracts issued item. In the income statement, fees and commissions income from banks is eliminated against fees and commissions expense from insurers, and overheads attributable to insurance contracts (non-margined) are reclassified to insurance expenses, presented as a deduction from NBI. The effect of these restatements is presented for the segment reporting in the retail banking networks concerned, mainly the Banques Populaires and Caisses d'Epargne sub-divisions of the Retail Banking and Insurance business line.

Groupe BPCE has chosen to review the calculations related to insurance contracts on an annual basis without taking into account the results of the calculations at the interim closing date (within the meaning of IAS 34) as permitted by IFRS 17.

9.1. Notes to the income statement for the insurance activities

Accounting principles

IFRS 17 introduces the distinction between insurance service result and insurance finance income and expenses.

The standard also requires a separate presentation of these aggregates under held reinsurance treaties.

Expenses directly attributable to insurance contracts are presented in NBI.

IFRS 17 requires the distinction between cash flows directly attributable to the fulfillment of contracts and non-attributable cash flows. Only cash flows attributable to the fulfillment of contracts are included in the measurement of liabilities and presented in the aggregates required by IFRS 17. The problem of distinguishing between attributable and non-attributable cash flows mainly concerns overheads. As the attributable nature of overheads is not defined in IFRS 17, it has been determined on the basis of an allocation of expenses according to a systematic and rational method. A portion of the attributable costs is classified as acquisition costs under IFRS 17.

The investment component (which corresponds to the amounts that the entity is required to repay to the policyholder under an insurance contract in all circumstances, whether or not the insured event occurs) is excluded from the income statement. The investment component mainly concerns contracts measured under VFA in Groupe BPCE.

The standard offers the option of breaking down insurance finance income or expenses for the period between finance income or expenses and equity (disaggregation option or OCI option), in order to ensure greater consistency in the income statement between the impact of financial assets and insurance liabilities. For contracts valued according to the general approach or the PAA approach, this means that undiscounting accretion at the original rate (or on the basis of the effective interest rate for participating contracts and participating reinsurance treaties not eligible for the VFA model) is presented in income statement, and changes in current discount rates are presented in equity. For insurance contracts with direct participation features (VFA), this means that an amount equal to but opposite to the finance income amount of the underlying items of the contracts can be recorded under insurance financial expenses. The remaining financial expense is recognized directly in other comprehensive income. This option applies by portfolio.

For insurance contracts issued, Groupe BPCE applies this option systematically under the VFA approach and mainly under the general approach and PAA approach. It also applies it to certain held reinsurance treaties.

For insurance contracts with direct participation features measured using the VFA approach, the standard allows on option (risk mitigation option) to:

- reduce mismatches between the valuation of derivatives and non-derivative financial instruments measured at fair value through profit or loss used as hedging instruments and the valuation of hedged financial items that would be allocated to the CSM if this option did not exist; or
- reduce mismatches between changes of financial origin affecting held reinsurance treaties which impact income statement or OCI (impossibility of applying the VFA approach to reinsurance), while changes of financial origin affecting VFA contracts covered are allocated to CSM.

Groupe BPCE activates this option on savings scope as part of the hedging provided by the main held reinsurance treaties.

Groupe BPCE has chosen to split the change in the risk adjustment for non-financial risk between insurance service result and finance income or expenses from insurance as permitted by IFRS 17.

ANC recommendation No. 2022-01 of April 8, 2022 on the format of the consolidated financial statements of banking sector institutions prepared in accordance with international accounting standards allows optionally to present insurance activities financial investments on a separate asset line in the balance sheet subject to also presenting the net investment income from insurance activities as a separate item on the income statement. Groupe BPCE has adopted this presentation, which is in line with its previous presentation.

ANC recommendation No. 2022-01 of April 8, 2022, also calls for the cost of credit risk on insurance activities financial investments to be isolated on a separate line and presented after the items "Finance income or expenses from insurance contracts issued" and "Finance income or expenses from reinsurance contracts held", in order to reflect the financial performance of insurance activities within a financial conglomerate with separate banking and insurance activities.

9.1.1. Revenue from insurance contracts issued

Accounting principles

Revenue from insurance contracts issued (including reinsurance treaties issued) reflect the provision of insurance and investment services during the year. As a result, with the exception of the PAA approach, premiums no longer appear in the income statement.

This aggregate includes, for contracts measured according to the general approach and the VFA approach,

- the release of estimated benefits and expenses for the period (excluding investment components);
- reversal of the risk adjustment for non-financial risk;
- the amortization of the contractual service margin in respect of current services provided over the period;
- amortization of acquisition cash flows;
- other income items, including in particular experience adjustments on premium receipts relating to current and past services.

The aggregate includes, for contracts valued according to the PAA approach, the amount of expected premiums allocated to the period.

in millions of euros	2025 fiscal year	2024 fiscal year
Release of estimated benefits and expenses for the period	1,332	1,250
Reversal of the risk adjustment for non-financial risk	177	168
Amortization of the contractual service margin	1,120	1,064
Amortization of acquisition cash flows	99	158
Other income items	63	41
Revenue from insurance contracts issued (excluding PAA)	**2,791**	**2,680**
Revenue from insurance contracts issued – PAA	2,593	2,381
TOTAL REVENUE FROM INSURANCE CONTRACTS ISSUED	**5,384**	**5,061**

9.1.2. Service expenses from insurance contracts issued

Accounting principles

Service expenses from insurance contracts issued (including reinsurance treaties issued) include:

- services and expenses incurred (excluding repayments of investment components). They include in particular claims expenses, attributable management fees and commissions, the portion attributable to insurance contracts issued of operating expenses or depreciation, amortization and impairment, which are presented in NBI under IFRS 17;
- recognition and reversal of onerous components, *i.e.* losses on onerous groups of contracts and reversals of such losses;
- amortization of acquisition costs and experience adjustments (difference between estimated and actual amounts) on current and past service acquisition costs.

in millions of euros	2025 fiscal year	2024 fiscal year
Services and expenses incurred	(3,427)	(3,308)
Recognition and recovery of onerous components	35	15
Acquisition costs	(500)	(493)
TOTAL SERVICE EXPENSES FROM INSURANCE CONTRACTS ISSUED	**(3,893)**	**(3,785)**

9.1.3. Income and expenses from reinsurance contracts held

Accounting principles

IFRS 17 requires that the aggregates in respect of held reinsurance treaties be presented separately from the income and expenses from insurance contracts issued.

Income and expenses from reinsurance contracts held therefore includes:

- on the one hand, cession expenses (cost of reinsurance);
- on the other hand, cession income (amounts recoverable from reinsurers).

in millions of euros	2025 fiscal year	2024 fiscal year
Cession expenses	(2,609)	(1,337)
Cession income	2,436	1,162
TOTAL INCOME OR EXPENSES FROM REINSURANCE CONTRACTS HELD	**(173)**	**(175)**

9.1.4. Net investment income from insurance activities

Accounting principles

The item includes net income from insurance financial investments valued in accordance with IFRS 9 and net income from insurance investment property valued in accordance with IAS 40.

The accounting principles applicable under IFRS 9 are presented in Note 2.5.1 for general accounting principles and in Note 4 for specific accounting principles.

Insurance investment property covered by IAS 40 is measured at historical cost or at fair value with the change recognized in profit or loss in the case of properties underlying insurance contracts with direct participation features.

in millions of euros	2025 fiscal year	2024 fiscal year
Interest and similar income	1,371	1,131
Interest and similar expenses	(112)	(40)
Gains (losses) on financial instruments at fair value through profit or loss	2,993	2,577
Net gains (losses) on financial instruments at fair value through other comprehensive income	3	(19)
Net income from investment property	34	(7)
TOTAL NET INVESTMENT INCOME FROM INSURANCE ACTIVITIES	**4,290**	**3,643**

9.1.5. Finance income or expenses from insurance contracts issued

Accounting principles

Finance income or expenses from insurance contracts issued recognized in net income include:

- the accretion effect, which corresponds to the unwinding of the discount on contracts at the current rate at the beginning of the period for contracts measured using the general approach and the PAA approach;
- the effect of the change in the current discount rate and the economic environment for contracts measured using the general approach and the PAA approach;
- finance income or expenses from insurance contracts with direct participation features (VFA), which correspond to the change in fair value of the underlying items;
- the effect of the risk mitigation option (see Note 9.2 Accounting principles), which under VFA results in the recognition in income of an item that would otherwise be allocated to CSM;
- reclassifications of items recognized in net income to equity in respect of the application of the disaggregation option or OCI option (see Note 9.2 Accounting principles).

Finance income or expenses from insurance contracts issued and recognized in equity reflect the application of the disaggregation option.

in millions of euros	2025 fiscal year	2024 fiscal year
Accretion effect	(58)	(30)
Change in interest rates and economic environment recognized in net income	96	(55)
Finance income or expenses from insurance contracts with direct participation features	(4,056)	(3,838)
Effect of risk mitigation option	55	24
Reclassification of items recognized in net income to equity[1]	(299)	312
FINANCE INCOME OR EXPENSES FROM INSURANCE CONTRACTS ISSUED RECOGNIZED IN NET INCOME	**(4,262)**	**(3,588)**
Finance income or expenses from insurance contracts issued recognized in equity[2]	302	(342)
TOTAL FINANCE INCOME OR EXPENSES FROM INSURANCE CONTRACTS ISSUED RECOGNIZED IN EQUITY AND NET INCOME	**(3,960)**	**(3,929)**

(1) Including reclassification of risk mitigation to equity.
(2) Mainly includes the disaggregation option and other movements relating to investments in associates and joint ventures.

9.1.6. Finance income or expenses from reinsurance contracts held

Accounting principles

This item includes, for held reinsurance treaties, aggregates identical to those appearing in finance income or expenses from insurance contracts issued, except for those concerning the VFA approach, which is not applicable to reinsurance.

in millions of euros	2025 fiscal year	2024 fiscal year
Accretion effect	3	3
Change in interest rates and economic environment recognized in net income	122	84
Reclassification of items recognized in net income to equity	3	(5)
FINANCE INCOME OR EXPENSES FROM REINSURANCE CONTRACTS HELD RECOGNIZED IN NET INCOME	**128**	**82**
Finance income or expenses from reinsurance contracts held recognized in equity[1]	(3)	5
TOTAL FINANCE INCOME OR EXPENSES FROM REINSURANCE CONTRACTS HELD RECOGNIZED IN EQUITY AND NET INCOME	**124**	**87**

(1) Mainly includes the disaggregation option and other movements relating to investments in associates and joint ventures.

9.1.7. Cost of credit risk on insurance activities financial investments

Accounting principles

The cost of risk relates to debt instruments classified as financial assets at amortized cost or financial assets at fair value through other comprehensive income recyclable to profit or loss.

This item therefore covers net impairment and provision charges for credit risk.

Irrecoverable loans not covered by provisions for impairment are loans that have acquired the character of permanent loss before being provisioned in Stage 3.

in millions of euros	2025 fiscal year	2024 fiscal year
Net allocations/reversals to provisions and to provisions for impairment	7	9
COST OF CREDIT RISK ON INSURANCE ACTIVITIES FINANCIAL INVESTMENTS[1]	**7**	**9**

(1) Investments at amortized cost and at fair value through other comprehensive income.

9.1.8. Overheads from insurance activities by nature and function

Accounting principles

IFRS 17 requires expenses directly attributable to insurance contracts to be presented within NBI. Non-attributable overheads are as operating expenses or as depreciation, amortization and impairment.

Overheads attributable to acquisition costs are spread over the life of the contracts according to criteria that reflect the passage of time. In Groupe BPCE, acquisition costs are mainly amortized at the same rate as the CSM, *i.e.* using the same coverage units.

in millions of euros	2025 fiscal year	2024 fiscal year
BREAKDOWN OF OVERHEADS BY NATURE		
Payroll costs	**(355)**	**(334)**
Taxes other than on income	(47)	(39)
External services and other operating expenses	(280)	(282)
Other administrative costs	**(327)**	**(321)**
TOTAL OPERATING EXPENSES	**(683)**	**(655)**
Depreciation, amortization and impairment for property, plant and equipment and intangible assets	(31)	(42)
Amounts attributed to acquisition costs net of amortization	9	12
TOTAL INSURANCE ACTIVITIES OVERHEADS BY NATURE	**(705)**	**(685)**
BREAKDOWN OF OVERHEADS BY DESTINATION[1]		
Attributable acquisition costs	(131)	(112)
Attributable claims management expenses	(168)	(162)
Attributable administrative costs	(159)	(155)
Attributable financial management expenses	(21)	(23)
Other attributable overheads	(58)	(57)
Non-attributable overheads	(168)	(176)
TOTAL INSURANCE ACTIVITIES OVERHEADS BY DESTINATION	**(705)**	**(685)**

(1) Overheads of insurance entities relating to insurance contracts, excluding fees and commissions.

9.2. Notes to the balance sheet for the insurance activities

Accounting principles

On the balance sheet, commitments relating to IFRS 17 contracts are presented according to the asset or liability position of the carrying amount of IFRS 17 portfolios and the type of contract (separate presentation of the carrying amount of IFRS 17 portfolios of direct insurance contracts and issued reinsurance from that of held reinsurance treaties).

The carrying amount of commitments relating to IFRS 17 contracts also includes amounts of receivables and payables relating to insurance operations and reinsurance operations held.

Groupe BPCE applies the option of presenting insurance activities financial investments as a separate item on the assets side of the balance sheet, with the corollary of presenting net investment income from insurance activities on a separate line of the income statement, as authorized by ANC recommendation No. 2022-01 of April 8, 2022 (Note 9.2).

The accounting principles applicable to insurance financial investments (other than investment property) are governed by IFRS 9 and are presented in Note 2.5.1 for general accounting principles and in Note 5 for specific accounting principles.

The accounting principles applicable to insurance investment property, which are covered by IAS 40, are described in Note 9.2.4.

9.2.1. Insurance activities financial investments

in millions of euros	12/31/2025	12/31/2024
Financial assets at fair value through profit or loss	82,677	68,815
Hedging derivatives	111	82

(1) The criteria used by BPCE to categorize financial assets at fair value through profit or loss if they do not meet the SPPI criterion are provided in Note 2.5.1.
(2) Financial instruments mandatorily measured at fair value through profit or loss include basic (non-SPPI) debt instruments for €30,742 million as well as equity instruments for which it has not been chosen to measure them through equity.
(3) Financial instruments measured at fair value through profit or loss considered part of a trading activity and similar mainly include investments on unit-linked contracts.
(4) Only in the case of an "accounting mismatch".

At December 31, 2025, financial assets classified at fair value through profit or loss mainly comprise investments in unit-linked funds (UCITS or FCPR) and non-standard UCITS.

Non-basic assets (non-SPPI) are essentially non-standard UCITS.

Financial assets designated at fair value under option through profit or loss and credit risk

The maximum credit risk exposure for debt instruments in the form of securities amounted to €6 million at December 31, 2025, compared to €12 million at December 31, 2024.

9.2.5. Assets at amortized cost

Accounting principles: See Note 5.5

Reinsurance contracts held – Liabilities	230	(2)	(2)	(2)	(2)	(16)	207

(1) This table presents, for all insurance contracts issued and reinsurance contracts held, which are liabilities, the projected maturity of the present value of future cash flows (Best Estimate).

	12/31/2024[1]						
in millions of euros	< 1 year	From 1 year to 2 years	From 2 years to 3 years	From 3 years to 4 years	From 4 years to 5 years	> 5 years	TOTAL
Insurance contracts issued – Liabilities	5,847	5,515	5,191	5,044	4,889	82,203	108,688
Reinsurance contracts held – Liabilities	258	(1)	3	4	4	(107)	161

(1) This table presents, for all insurance contracts issued and reinsurance contracts held, which are liabilities, the projected maturity of the present value of future cash flows (Best Estimate).

The amounts payable on demand correspond to the total outstandings of insurance contracts, in the build up phase, for which policyholders have a surrender option or which are transferable to a third-party insurer, as well as the value of receivables and liabilities arising from these contracts. The contracts concerned correspond to investment pension contracts and funeral contracts. At December 31, 2025, the amounts payable on demand under these contracts amounted to €134,634 million compared to €121,857 million at December 31, 2024. The IFRS carrying amount of the contracts to which these amounts payable on demand relate was €124,067 million on December 31, 2025, compared to €111,992 million at December 31, 2024.

9.3.5. Insurance risk

Sensitivities of insurance contracts to insurance risks

The scope of insurance contracts studied covers insurance contracts in direct business (for the gross portion of reinsurance held), mainly for investment pension, payment protection insurance, non-life insurance and guarantee activities for the main insurance entities.

The main assumptions used in the valuation of insurance contracts for the closing of the financial statements at December 31, 2025 are presented in Note 9 General principles. These include mortality, surrender and claims assumptions.

The information is presented net of deferred taxes.

At December 31, 2025

		Impact on net income		Impact on equity[1]	
in millions of euros	Change in assumptions	Gross of reinsurance held	Net of reinsurance held	Gross of reinsurance held	Net of reinsurance held
LIFE, SAVINGS, RETIREMENT AND PERSONAL PROTECTION INSURANCE ACTIVITIES					
Surrender	+10%	(13)	(14)	(21)	(21)
Surrender	(10%)	15	15	23	22
Mortality	+10%	(24)	(25)	(25)	(24)
Mortality	(10%)	24	25	26	24
PROPERTY DAMAGE ACTIVITIES[2]					
Ultimate claims costs	+5%	(47)	(46)	(47)	(47)
Ultimate claims costs	(5%)	47	46	47	47

(1) The impact on equity includes the impact on net income.
(2) Including probability of default at ultimate net of recourse for the guarantee activity.

At December 31, 2024

		Impact on net income		Impact on equity[1]	
in millions of euros	Change in assumptions	Gross of reinsurance held	Net of reinsurance held	Gross of reinsurance held	Net of reinsurance held
LIFE, SAVINGS, RETIREMENT AND PERSONAL PROTECTION INSURANCE ACTIVITIES					
Surrender	10%	(7)	(7)	(12)	(12)
Surrender	(10%)	6	6	11	11
Mortality	10%	(20)	(21)	(23)	(22)
Mortality	(10%)	18	19	21	20
PROPERTY DAMAGE ACTIVITIES[2]					
Ultimate claims costs	5%	(43)	(43)	(43)	(43)
Ultimate claims costs	(5%)	(43)	(43)	(43)	(43)

(1) The impact on equity includes the impact on net income.
(2) Including probability of default at ultimate net of recourse for the guarantee activity.

9.3.6. Concentration risks

It should be noted that Groupe BPCE has a very low concentration due to the geographical dispersion of its policyholders, inherent in the distribution of contracts mainly in the retail banking networks established throughout France. The reinsurance program also limits the concentration of risks.

Note 10 Fair value of financial assets and liabilities

Key points

This section sets out the principles for measuring the fair value of financial instruments as defined in IFRS 13 "Fair Value Measurement" and the methods used by Groupe BPCE entities to measure the value of their financial instruments.

Financial assets and liabilities are recorded in the balance sheet either at fair value or at amortized cost. An indication of the fair value of items measured at amortized cost is provided in the notes.

For instruments traded on an active market with a quoted price, the fair value is equal to the quoted price, corresponding to Level 1 in the fair value hierarchy.

The fair value of other financial instruments not traded on an active market, including in particular loans, borrowings and derivatives traded over the counter, is calculated using valuation techniques that rely on widely used models and observable data, corresponding to Level 2 in the fair value hierarchy. When internal data or proprietary models are used (Level 3 in the fair value hierarchy), independent controls are used to validate the value obtained.

Determination of fair value

General principles

The fair value of an instrument is the price that would be received to sell an asset or paid to transfer a liability in a standard arm's length transaction between market participants at the valuation date.

Fair value is therefore based on the exit price.

On first recognition, fair value is usually the transaction price and is thus the price paid to purchase the asset or the price received to assume the liability.

In subsequent measurements, the estimated fair value of assets and liabilities must be based primarily on observable market data, while ensuring that all inputs used in the fair value calculation are consistent with the price that market participants would use in a transaction.

In this case, fair value consists of a mid-market price and additional valuation adjustments determined according to the instruments in question and the associated risks.

The mid-market price is obtained based on:

- the instrument's quoted price if the instrument is quoted on an active market. A financial instrument is regarded as quoted on an active market if quoted prices are readily and regularly available from a Stock Exchange, dealer, broker, industry group, pricing service or regulatory agency, and these prices represent actual and regularly occurring transactions on the principal market or, failing that, on the most favorable market, on an arm's length basis;
- if the market for a financial instrument is not active, fair value is established using valuation techniques. The techniques used must maximize the use of relevant observable entry data and minimize the use of non-observable entry data. They may refer to observable data from recent transactions, the fair value of similar instruments, discounted cash flow analysis and option pricing models, proprietary models in the case of hybrid instruments or non-observable data when no pricing or market data are available.

Additional valuation adjustments include factors related to valuation uncertainties, such as market and credit risk premiums, in order to recognize the costs incurred by a divestment transaction on the principal market.

The main additional adjustments are as follows:

Bid/ask adjustment – Liquidity risk

This adjustment is the difference between the bid price and the ask price corresponding to the selling costs. It reflects the cost requested by a market player in respect of the risk of acquiring a position or of selling at a price proposed by another market player.

Model uncertainty adjustment

This adjustment takes into account imperfections in the valuation techniques used, and in particular risk factors not considered even though observable market inputs are available. This is the case when the risks inherent in the instruments differ from those incurred by the observable inputs used to determine their valuation.

Input uncertainty adjustment

Observing certain prices or inputs used in valuation techniques may be difficult or the price or input may not be available on a sufficiently regular basis to determine the exit price. Under these circumstances, an adjustment may be necessary to reflect the probability of different values being used by market participants for the same inputs when measuring the fair value of the financial instrument in question.

Adjustment for counterparty risk (Credit Valuation Adjustment - CVA)

This adjustment applies to valuations that do not account for the counterparty's credit quality. It corresponds to the assessment of the loss linked to the risk of default by a counterparty and aims to take into account the fact that the Group may not recover the full market value of the transactions. The method for determining the CVA is primarily based on the use of market inputs in connection with professional market practices, for all segments of counterparties subject to this calculation. In the absence of liquid market inputs, proxies by type of counterparty, rating and geographic area are used.

Adjustment for liquidity risk (Funding Valuation Adjustment - FVA)

The FVA is intended to take into account the liquidity cost associated with uncollateralized or imperfectly collateralized OTC derivatives. It is generated by the need to fund or refinance margin calls to be paid or received in the future, associated with hedging derivatives which are collateralized. Measuring a future financing/refinancing requirement (*i.e.* until the maturity of the exposures); it is based on expected future exposures concerning non-collateralized derivatives and a liquidity spread curve.

Adjustment for own credit risk (Debit Valuation Adjustment - DVA)

The DVA is symmetrical to the CVA and represents the assessment of the loss, from the counterparty's perspective, on liability valuations of derivatives. It reflects the impact of the Group's credit quality on the valuation of these instruments. This adjustment is based on the observation of the zero coupon spread of a sample of comparable institutions, taking into account the level of liquidity of the BPCE zero coupon spread during the period. The DVA adjustment is established after taking into account the funding valuation adjustment (FVA).

Own Credit Adjustment (OCA) for own credit risk of structured issues assessed at fair value

At December 31, 2024, the methodology for valuing "issuer credit risk", considered as observable, was based on the method of discounting future cash flows using parameters such as the yield curve and revaluation spreads. For each issue, this valuation represents the sum of the notional amount outstanding and its sensitivity, taking into account the existence of calls and the difference between the revaluation spread (based on the BPCE cash reoffer curve) and the average issue spread.

As of December 31, 2025, the estimate for "issuer credit risk" was changed. Now considered unobservable, the valuation is based on a difference of two valuations, one using the current spread at the valuation date and the other using the initial spread at the issue date. The issuer credit spread curves used are specific to each issue and take into account the currency and interest rate index referenced in the issue.

Changes in issuer spread are generally not material for issues with an initial maturity of less than one year.

Determination of an active market

The following criteria are used to determine whether or not a market is active:

- the level of activity and trend of the market (including the level of activity on the primary market);
- the length of historical data on prices observed in similar market transactions;
- scarcity of prices recovered by a service provider;
- wide bid-ask price spread; and
- steep price volatility over time or between different market participants.

The valuation control system is presented in Section 8 "Market risks".

Fair value hierarchy

For financial reporting purposes, IFRS 13 requires that the fair value of financial and non-financial instruments be broken down into a fair value hierarchy that reflects the level of observability of the models and inputs used to perform the valuations. The fair value hierarchy is presented in the following three fair value levels:

- Level 1: market values are determined directly using prices quoted on active markets for identical assets or liabilities;
- Level 2: market values are determined using valuation techniques whose significant parameters are observable on the markets, either directly or indirectly;
- Level 3: market values are determined using valuation models that are not recognized and/or are based on unobservable inputs on the market, insofar as these are likely to have a significant impact on valuation.

For derivatives and structured issues, the fair values are broken down according to the dominant risk factor, namely interest rate risk, foreign exchange risk, credit risk and equity risk.

Level 1: Valuation using prices quoted on a liquid market

Level 1 comprises instruments whose fair value is determined based on directly usable prices quoted on active markets.

Level 1 mainly includes securities listed on a Stock Exchange or traded continuously on other active markets, derivatives traded on organized markets (futures, options, etc.) whose liquidity can be demonstrated, and units of UCITS that calculate and report their net asset value on a daily basis.

Level 2: Valuation using observable market models and inputs

Level 2 fair value comprises instruments other than those mentioned in Level 1 fair value and instruments measured using a valuation technique incorporating inputs that are either directly observable (prices) or indirectly observable (derived from prices) through to the instrument's maturity. This mainly includes:

Simple instruments:

Most over-the-counter derivatives, swaps, credit derivatives, forward rate agreements, caps, floors and plain vanilla options are traded in active markets, *i.e.* liquid markets in which trades occur regularly.

These instruments are valued using generally accepted models (discounted future cash flow method, Black & Scholes model, interpolation techniques), and on the basis of directly observable inputs.

For these instruments, the extent to which models are used and the observability of inputs has been documented.

Instruments measured using Level 2 inputs also include:

- securities that are less liquid than those classified as Level 1, whose fair value is determined based on external prices put forward by a reasonable number of active market makers and which are regularly observable without necessarily being directly executable (prices mainly taken from contribution and consensus databases); where these criteria are not met, the securities are classified as Level 3 fair value;
- securities not quoted on an active market whose fair value is determined based on observable market data (for example, using market data for listed peers or the earnings multiple method based on techniques widely used in the market);
- shares of UCITS that do not calculate and report their net asset value on a daily basis but which are subject to regular reporting or which offer observable data from recent transactions;
- issued debt instruments designated at fair value are classified as Level 2 when the underlying parameters are observable.

Complex instruments:

Certain hybrid and/or long-maturity financial instruments are measured using a recognized model on the basis of market inputs derived from observable data such as yield curves, implied volatility layers of options, market consensus data or active over-the-counter markets.

The main models for determining the fair value of these instruments are described below by type of product:

- **equity products**: equity products generally have specific characteristics which justify the choice of model.

The main models used for equity products are local volatility, local volatility combined with Hull & White one factor (H&W1F) and Local Stochastic Volatility ("LSV") and may be available in a single or multi-underlying framework.

The local volatility model treats volatility as a function of time and the price of the underlying. Its main property is that it considers the implied volatility of the option (derived from market data) relative to its exercise price.

The local volatility hybrid model, paired with the H&W1F, consists in pairing the local volatility model described above with a Hull & White one-factor type fixed income model, described below (see fixed-income products).

The LSV model is based on the joint diffusion of the underlying asset and its volatility (two factors in total), with a local volatility function (known as a decorator), to ensure consistency with all vanilla options.

- **fixed income products**: fixed income products generally have specific characteristics which justify the choice of model.

The main models used to value and manage fixed income products are the Hull & White one-factor (H&W1F), two-factor (H&W2F) and one-factor stochastic volatility (H&W1FVS) models.

The H&W1F model is used to model the yield curve with a single Gaussian factor, calibrated on vanilla interest rate options.

The H&W2F model is used to model the yield curve with two factors, calibrated on vanilla interest rate options and spread-option type instruments.

The H&W1VS model is used to model both the Gaussian factor representing the yield curve and its volatility (like the LSV model for equities).

- **foreign exchange products**: foreign exchange products generally have specific characteristics which justify the choice of model.

The main models used to value and manage foreign exchange products are local and stochastic volatility models (like the LSV model for Equity), as well as hybrid models, which combine modeling of the underlying foreign exchange transaction with two Hull & White one-factor models to understand the yield curves of domestic and foreign economies.

- **credit products**: the credit derivatives generally have specific characteristics which justify the choice of model.

The main models used to value and manage credit products are the Hull & White one credit factor model (H&W1F Credit) and the hybrid Bi-Hull & White Rate/Credit model (Bi-H&W Rate/Credit).

The H&W1F Credit model allows the diffusion of the credit curve (CDS curve) with a Gaussian factor.

The Bi-H&W Rate/Credit model allows for the joint diffusion of the yield curve and the credit curve, each with a Gaussian factor correlated between them.

- **commodity products**: commodity products generally have specific characteristics which justify the choice of model.

The main models used to value and manage commodity products are the Black & Scholes models, with local volatility and local volatility combined with the Hull & White one factor (H&W1F), a version extended for all these models to a multi-underlying framework to manage all the futures of the commodity family.

The Black & Scholes model is based on lognormal dynamics of the underlying asset and a deterministic volatility assumption.

The local volatility model treats volatility as a function of time and the price of the underlying. Its main property is that it considers the implied volatility of the option (derived from market data) relative to its exercise price.

The H&W1F model consists of coupling the local volatility model described above with a Hull & White one-factor fixed income model described above (see fixed-income products).

The inputs relating to all Level 2 instruments were demonstrated to be observable and documented. From a methodology perspective, observability is based on four inseparable criteria:

- inputs are derived from external sources (primarily a recognized contributor, for example);
- they are updated periodically;
- they are representative of recent transactions;
- their characteristics parameters are identical to the characteristics of the transaction. If necessary, a proxy may be used, provided that the relevance of such an arrangement is demonstrated and documented.

The fair value of instruments obtained using valuation models is adjusted to take account of liquidity risk (bid-ask), counterparty risk, the risk relating to the cost of financing uncollateralized or partially collateralized derivatives, own credit risk (measurement of liability derivative positions), and modeling and input risk.

Level 3: Valuation using unobservable market inputs

This level comprises instruments measured using unrecognized models and/or models based on unobservable inputs, where they are liable to materially impact the valuation. This mainly includes:

- unlisted shares whose fair value could not be determined using observable inputs;
- private equity securities not listed on an active market, measured at fair value with models commonly used by market participants, in accordance with International Private Equity Valuation (IPEV) standards, but which are sensitive to market fluctuations and whose fair value determination necessarily involves a judgment call;
- hybrid equity, interest rate, currency derivatives and credit derivatives that are not classified in Level 2;
- loans to be syndicated for which there is no secondary market price;
- loans in the securitization process for which fair value is determined based on an expert appraisal;
- loan trading activity for which the market is illiquid;
- investment property whose fair value is calculated using a multi-criteria approach, by capitalizing rent at market rates and through comparisons with market transactions;
- instruments with a deferred day one margin;
- units of UCITS for which the fund has not published a recent NAV at the valuation date, or for which there is a lock-up period or any other constraint calling for a significant adjustment to available market prices (NAV, etc.) in respect of the low liquidity observed for such shares;
- issued debt instruments designated at fair value are classified as Level 3 when the underlying parameters are unobservable;
- CDS contracted with credit enhancers (monoline insurers), for which the valuation model used to measure write downs is similar to the Credit Valuation Adjustment (CVA) used for counterparty risk. The model also takes into account the expected amortization of exposures and the counterparty spread implicit in market data;
- plain vanilla derivatives are also classified as Level 3 fair value when the exposure is beyond the liquidity horizon determined by underlying currencies or by volatility ranges (*e.g.* certain foreign currency options and volatility caps/floors).

In accordance with amended European Regulation 575/2013 of June 26, 2013 (CRR) relating to Pillar III requirements, for each of the models used, a description of the stress tests applied and the *ex-post* control system (validation of the accuracy and consistency of the internal models and modeling procedures) is provided in Chapter 7 "Risk factors and risk management".

Under IFRS 9, day one profit should be recognized only if it is generated by a change in the factors that market participants would consider in setting a price, *i.e.* only if the model and parameters input into the valuation are observable.

If the selected valuation model is not recognized by current market practices, or if one of the inputs significantly affecting the instrument's valuation is not observable, the trading profit on the trade date cannot be recognized immediately in the income statement. It is taken to income on a straight-line basis over the life of the transaction or until the date the inputs become observable. Any losses incurred at the trade date are immediately recognized in income statement.

ESTIMATES OF THE MAIN UNOBSERVABLE INPUTS

The table below provides, for Level 3 instruments, the value ranges of the main unobservable inputs by major instrument class.

Main types of products	Valuation techniques used	Main unobservable data	Unobservable data ranges min - max (Dec. 2025)
Callable Spread Options and Corridor Callable Spread Options	Multi-factor model of the interest rate curve	Mean-reversion spread Mean reversion parameter	[0%; 25%]
Bermuda Accreting	Multi-factor model of the interest rate curve	Accreting factor	[62%; 97%]
Cap/Floor	Interest rate options valuation models	Interest rate volatility	[5 bps; 72 bps]
Callable Reverse Floater	Multi-factor model of the yield curve	Mean reversion parameters	[(3%); 0%]
Swaptions	Swap rate options valuation models	Swap rate volatility	[55 bps; 98 bps]
Simple and complex equity, equity basket or fund derivatives	Different valuation models for equity, equity basket or fund options	Equity volatility	[0%; 123%]
		Fund volatility	[5%; 8%]
		Stock/stock correlation	[(20%); 100%]
		Repo	[(4%); 5%]
AutoCalls	LSV model (local stochastic volatility model)	kappa	[0.708; 5]
		rho	[(1); 0.195]
		nu	[0.2; 4.13]
Vanilla exchange rate derivatives	Exchange rate option valuation models	Currency volatility	[2.27%; 17.3%]
TARN	Hybrid exchange rate/interest rate options valuation model	Correlation between exchange rates and interest rates as well as long-term volatility levels	[(40%); 60%]
			[2.27%; 17.3%]
Strip of options, Strip of quanto options, Strip of digital currency options	Exchange rate option valuation models	Correlation between exchange rates	[34.44%; 70.87%]
CDO	The default rates are based on the market prices of the underlying PFI bonds, and the recovery rates are based on historical ratings agency data	Correlation between the asset base spread between the cash asset and derivative asset, recovery rate	50.00%
Securitization swaps	Discounted expected cash flows based on early redemption assumptions on the underlying portfolio	Prepayment rate	[0%; 100%]
Inflation cap/floor	Inflation options valuation models	Inflation rate volatility	[0.0%; 8.728%]
Swaps and commodities derivatives	Valuation model for swaps and commodity derivatives	Volatility	[20%; 79%]
Hybrid equity/interest rate/currency derivatives	Hybrid models coupled with equity, exchange rate and interest rate diffusion	Equity-Exchange rate correlations	[(96%); 96%]
		Equity-Interest rate correlations	[4.25%; 29.75%]
		Interest Rate-Exchange rate correlations	[(33.22%); 0.4%]

Group policy on fair value transfers

Transfers between fair value levels are reviewed and validated by the Valuation Committee, which includes the Finance and Risk Management functions and the business lines. To do so, the Committee relies on observability studies of the valuation models and/or inputs that are carried out periodically.

These transfers of fair value levels are also presented to the apex valuation committee.

The Fair Value Levels Committee validated two methodological refinements over 2025, a methodological refinement of the materiality process of valuation models and/or unobservable inputs that has led to a reclassification to Level 3 of the fair value of certain OTC derivatives and structured issues. As a reminder, no significant events were identified during the 2024 fiscal year.

Instruments not carried at fair value on the balance sheet

IFRS 13 requires disclosure in the notes to the financial statements of the fair value, and the associated fair value levels, of all financial instruments carried at amortized cost, including loans. These fair values represent an estimate of the fair value of the instruments measured at amortized cost as at December 31, 2025. They may fluctuate from day to day due to changes in several parameters, including interest rates and the quality of counterparties' loans. They may, therefore, be significantly different from the amounts actually received or paid on the maturity date of these instruments. In the majority of cases, these fair values are not intended to be immediately realized and they do not represent the effective fair value of the instruments from a going concern perspective. The valuation methods used to determine the fair value disclosed in the notes to the financial statements are described below.

Assets and liabilities of the GFS business lines, the BPCE cash management pool, and the Banques Populaires and Caisses d'Epargne financial portfolios

Credit and loans recognized at amortized cost and amounts payable under finance leases

The fair value of these instruments is determined by discounting future cash flows. The discount rate applied for a given loan is the rate at which the Group would grant a loan with similar characteristics to a similar counterparty at the closing date. The interest rate and counterparty risk components are reassessed.

The fair value of repurchase agreements is calculated by discounting expected cash flows at the market rate on the reporting date and adding a liquidity spread.

If there is a quoted price that meets the criteria of IFRS 13, the quoted price is used.

The fair value of loans with an initial term of less than one year is considered to be their carrying amount. This is also generally the case for financial assets with a term of one year or less and current accounts. The corresponding receivables are classified in Level 2 of the fair value hierarchy. Loans and advances granted to affiliates are also classified in Level 2.

Borrowings and savings

Within the GFS division, the assessment of the fair value of securities borrowings and debts is based on the method of discounting future cash flows using inputs on the closing date such as the interest rate curve of the underlying and the spread at which this division lends or borrows.

The fair value of debts maturing in less than one year is considered to be the carrying amount. These liabilities are classified in Level 2 of the fair value hierarchy, as are debts payable to affiliates.

The fair value of other amounts due to banks and customers with a term of over one year is deemed to be equal to the present value of future cash flows discounted at the interest rate observed at the reporting date, plus the own credit risk of Groupe BPCE.

Investment property recognized at cost

The fair value of investment property (excluding investment property held by insurance companies) is determined using the rent capitalization method, which is widely used by real estate professionals. The capitalization rate applied to the property depends on a number of factors such as location, the quality and type of building, use, type of ownership, quality of lessee and characteristics of the lease, the interest rate and competition in the real estate market.

Financial instruments of the Retail Banking business lines

For financial instruments not measured at fair value on the balance sheet, fair value calculations are provided for information purposes and must only be interpreted as estimates.

In most cases, the values indicated are not liable to be realized and generally may not be realized in practice.

These fair values are thus only provided for information purposes in the notes to the financial statements. They are not indicators used in order to monitor retail banking activities, for which the business model is mainly based on the collection of contractual cash flows.

Consequently, the following simplified assumptions were used:

The carrying amount of the assets and liabilities is deemed to be their fair value in certain cases.

These notably include:

- short-term financial assets and liabilities (whose initial term is one year or less) provided that sensitivity to interest-rate risk and credit risk is not material during the period;
- demand liabilities;
- floating-rate loans and borrowings;
- transactions in a regulated market (particularly regulated savings products), whose prices are set by the public authorities.

Fair value of the loan portfolio

The fair value of loans is measured using internal valuation models that discount future payments of recoverable capital and interest over the remaining loan term. The "interest rate" component is thus revalued. Except when the data used by the managers are available, the "credit risk" component is established at the outset and not subsequently remeasured. Prepayment options are factored into the model *via* an adjustment to loan repayment schedules.

Fair value of debts

The fair value of fixed-rate debt owed to banks and customers with a term of over one year is deemed to be equal to the present value of future cash flows discounted at the interest rate observed at the reporting date. Own credit risk is not generally taken into account.

10.1. Fair value of financial assets and liabilities

10.1.1. Fair value hierarchy of financial assets and liabilities

The following statement provides a breakdown of financial instruments by type of price and valuation model:

	12/31/2025			
in millions of euros	**Level 1**	**Level 2**	**Level 3**	**Total**
FINANCIAL ASSETS				
Debt instruments	**41,446**	**78,728**	**8,314**	**128,488**
Loans to banks and customers[1]	12,255	75,902	7,854	96,011
Debt securities	29,191	2,826	460	32,477
Equity instruments	**45,817**	**246**	**15**	**46,079**
Shares and other equity securities	45,817	246	15	46,079
Derivatives	**1,468**	**47,475**	**2,539**	**51,482**
Interest rate derivatives		16,639	569	17,208
Equity derivatives	824	3,849	1,433	6,105
Currency derivatives	2	20,582	316	20,901
Credit derivatives		4,085	112	4,197
Other derivatives	642	2,319	109	3,071
Financial assets at fair value through profit or loss – Held for trading[2]	**88,732**	**126,449**	**10,868**	**226,049**
Derivatives		**602**	**636**	**1,237**
Interest rate derivatives		510	627	1,138
Equity derivatives			2	2
Currency derivatives		91	7	98
Financial assets at fair value through profit or loss – Economic hedges		**602**	**636**	**1,237**
Debt instruments	**1,879**	**418**	**7,333**	**9,630**
Loans to banks and customers		380	2,771	3,152
Debt securities	1,879	38	4,562	6,479
Financial assets at fair value through profit or loss – Non-standard	**1,879**	**418**	**7,333**	**9,630**
Equity instruments	**276**	**45**	**2,407**	**2,729**
Shares and other equity securities	276	45	2,407	2,729
Financial assets at fair value through profit or loss – Excluding assets held for trading	**276**	**45**	**2,407**	**2,729**
Debt instruments	**53,940**	**4,865**	**427**	**59,232**
Loans to banks and customers			21	21
Debt securities	53,940	4,865	406	59,211
Equity instruments	**327**	**957**	**3,456**	**4,740**
Shares and other equity securities	327	957	3,456	4,740
Financial assets at fair value through other comprehensive income	**54,266**	**5,822**	**3,882**	**63,971**
Interest rate derivatives		5,879	10	5,889
Currency derivatives		510		510
Hedging derivatives		**6,389**	**10**	**6,398**
TOTAL FINANCIAL ASSETS AT FAIR VALUE	**145,154**	**139,725**	**25,136**	**310,015**

(1) Level 1 corresponds to guarantee deposits paid.
(2) Excluding economic hedges.

Transfers from Level 1 to Level 2 mainly concern debt securities on the asset side measured at fair value through other comprehensive income. No significant transfers from Level 1 to Level 3. Transfers from Level 2 to Level 1 mainly concern debt securities on the assets side held for trading. Transfers from Level 3 to Level 2 mainly concern debt securities designated at fair value through profit or loss.

(3) The other changes mainly include the impact of changes in the consolidation scope and currency exchange differences.
(4) Excluding economic hedges.

10.1.3. Sensitivity of Level 3 assets and liabilities to changes in the principal assumptions

At December 31, 2025, the Group assessed the sensitivity of the fair value of the instruments of the GFS division measured using the main unobservable inputs. This sensitivity is intended to illustrate the uncertainty inherent in the use of judgment required to estimate the main unobservable inputs at the valuation date. It does not represent a measure of market risk on Level 3 instruments. The estimate is based on the valuation adjustment policy. For equities and debt securities, the estimate is based on a shock of +/-1%.

The potential impact ranges between -€88 million and €144 million in the income statement.

10.1.4. Restatement of the deferred margin on financial instruments (Day One Profit)

The deferred margin concerns financial instruments measured on the basis of one or more unobservable market parameters. This margin is deferred over time to be recognized, depending on the case, at the maturity of the instrument, at the time of sale or transfer, as time passes or when market parameters become observable.

Natixis' policy on recognition of the margin on financial instruments

Under IFRS 9, day one profit should be recognized only if it is generated by a change in the factors that market participants would consider in setting a price, *i.e.* only if the model and parameters input into the valuation are observable.

If the selected valuation model is not recognized by current market practices, or if one of the inputs significantly affecting the instrument's valuation is not observable, the trading profit on the trade date cannot be recognized immediately in the income statement. It is taken to income on a straight-line basis over the life of the transaction or until the date the inputs become observable. This mainly impacts financial instruments classified at Level 3 fair value and marginally certain financial instruments classified at Level 2 fair value.

Any losses incurred at the trade date are immediately recognized in income statement.

At December 31, 2025, the scope of instruments for which the recognition of day one profit/loss has been deferred mainly included:

- multi-underlying structured equity and index products;
- mono-underlying structured products indexed to sponsored indexes;
- synthetic loans;
- options on funds (multi-assets and mutual funds);
- structured fixed income products;
- securitization swaps.

The table below shows, in particular, the amount remaining to be recognized in the income statement, as well as the deferred margin of new transactions for the fiscal year.

in millions of euros	2025 fiscal year	2024 fiscal year
Day one profit at the start of the year	243	199
Deferred profit on new transactions	759	426
Profit recognized in income during the year	(586)	(382)
DAY ONE PROFIT AT YEAR-END	**412**	**243**

10.2. Fair value of financial assets and liabilities at amortized cost

For financial instruments not measured at fair value on the balance sheet, fair value calculations are provided for information purposes and must only be interpreted as estimates.

In most cases, the values indicated are not liable to be realized and generally may not be realized in practice.

These fair values are thus only provided for information purposes in the notes to the financial statements. They are not indicators used for management purposes in Retail Banking, whose business model is based on the collection of expected cash flows.

The simplified assumptions used to measure the fair value of instruments at amortized costs are presented in Note 10.1.

	12/31/2025

(1) Opening correction on Level 3 made to ensure a compliant presentation of fair value entries, with no impact on the income for the period.

Note 11 Income taxes

11.1. Income tax

Accounting principles

Income taxes include all domestic and foreign taxes payable on the basis of taxable profits. Income taxes also include taxes, such as withholding taxes, which are payable by a subsidiary, an associate or a joint arrangement on distributions of dividends to the entity that draws up financial statements. The CVAE (Business Added Value Tax) is not considered as an income tax.

Income taxes include:

- current taxes, which comprise the amount of income taxes payable on taxable profit or recoverable on a tax loss over a given period. They are calculated on the taxable income for the period for each fiscal entity in the tax consolidation scope by applying the applicable tax rates and rules set by the tax authorities and on the basis of which tax shall be paid (received);
- and deferred taxes (see Note 11.2).

Where it is probable that one of the Group's tax positions will not be accepted by the tax authorities, this situation is reflected in the financial statements when calculating current tax (due or recoverable) and deferred tax (asset or liability).

IAS 12 "Income Taxes" gave no particular details on how to account for uncertainties in income taxes, and was clarified by IFRIC 23 "Uncertainty over Income Tax Treatments", which was adopted by the European Commission on October 23, 2018 with effect from January 1, 2019.

This interpretation clarifies how to apply the deferred income tax recognition and measurement requirements when there is uncertainty over income tax treatments. If there is doubt as to the acceptability of the income tax treatment by the tax authority under tax law, then this tax treatment is an uncertain tax treatment. Assuming it is likely that the tax authority will not accept the income tax treatment used, IFRIC 23 states that the amount of the uncertainty to be reflected in the financial statements shall be estimated using the method that will better predict the resolution of the uncertainty. To determine this amount, two approaches may be used: the most likely amount or the expected value of the tax treatment (that is, the weighted average of the different scenarios possible). Furthermore, IFRIC 23 requires the measurement of tax uncertainties to be reassessed if facts and circumstances change or new information arises.

The Group reflects uncertainties regarding its tax treatment for income tax in its financial statements when it deems it probable that the tax authority will not accept its treatment. To ascertain whether a tax position is uncertain and to assess its effect on the amount of tax, the Group assumes that the tax authority will examine all amounts reported and have full knowledge of all related information. It bases its judgment on administrative policy, case-law and on the existence of any corrections made by the administration relating to similar tax uncertainties. The Group revises the estimate of the amount it expects to pay or recover from the tax authority due to tax uncertainties in the event of changes in the associated facts and circumstances, as these changes may result from (including, but not limited to) changes in tax law, the expiry of a statutory limitation period, or the outcome of audits and measures conducted by the tax authorities.

When it is likely that the competent tax authorities will question the treatment adopted, these uncertainties are reflected in tax income and expenses by a provision for tax risks presented under tax liabilities.

Groupe BPCE is audited for prior years. Where the Group disagrees with the rectification, it will state its reasons for doing so and, in accordance with the above, a provision will be recorded in the amount of the estimated risk.

Tax uncertainties are reported as assets or liabilities and according to whether they relate to a current or deferred tax under the balance sheet headings "Deferred tax assets", "Current tax assets", "Deferred tax liabilities" and "Current tax liabilities".

The French Finance act for 2025 introduced an Exceptional Contribution on the Profits of Large Companies (corporate tax surcharge), the base of which corresponds to the average of the income tax due for the 2025 and 2024 fiscal years. The contribution calculated on the basis of 2024 income tax was recognized in its entirety during the first half of 2025. The Exceptional Contribution, the basis of which is made up of the income tax for 2024, and disconnected from the income for tax purposes in 2025, was assimilated to a one-off event within the meaning of IAS 34. As the French Finance act for 2026 had not been adopted as of December 31, 2025, only the contributions introduced by the French Finance act for 2025 were recognized as part of this closing.

(1) The permanent differences mainly include the impact of the add-backs of the share of costs and expenses on the dividends received.
(2) Including -€177 million in respect of the corporate tax surcharge.

11.2. Deferred taxes

Accounting principles

Deferred tax assets and liabilities are recognized when temporary differences arise between the carrying amount of assets and liabilities on the balance sheet and their tax base, irrespective of when the tax is expected to be recovered or settled.

The tax rate and tax rules used to calculate deferred taxes are those resulting from current tax legislation, and which will be applicable when the tax becomes payable or recoverable.

Deferred tax liabilities and assets are offset at the level of each tax entity. The tax entity may either be a single entity or a tax consolidation group. Deferred tax assets are recognized only to the extent that it is probable that the entity will be able to recover them in the foreseeable future.

Deferred tax assets and liabilities are recognized as tax income or expense in the income statement, except for those related to:

- revaluation differences on post-employment benefits;
- unrealized gains and losses on financial assets at fair value through other comprehensive income; and
- changes in the fair value of derivatives used as cash flow hedges;

for which the corresponding deferred tax assets and liabilities are recognized as unrealized gains and losses directly in other comprehensive income.

Deferred tax assets and liabilities are not discounted to their present value.

On May 23, 2023, the International Accounting Standards Board (IASB), in charge of preparing IFRS, published the final version of the amendment to IAS 12 on tax accounting. It specifically deals with the expected accounting impacts of the application of the entry into force of the OECD's so-called "Pillar II" tax rules aimed at implementing a set minimum global corporate tax rate at 15%. The proposed amendments to the standard seek an exemption from the recognition of deferred taxes associated with this additional tax with, in return, information to be provided in the notes to the financial statements.

Groupe BPCE has set up a project structure to monitor the various associated regulations as well as compliance with Pillar II rules and the additional information requirements introduced by these amendments to IAS 12. At this stage of the project, it appears that the number of jurisdictions that would be affected by the application of a top-up-tax should be limited and the financial stakes not significant. Given the insignificant nature of its potential exposure, the Group will not publish data on exposure to this additional tax in the context of this closing.

Deferred tax assets and liabilities on temporary differences arise from the recognition of the items listed in the statement below (positive figures indicate deferred tax assets, while negative figures in brackets represent deferred tax liabilities):

in millions of euros	2025 fiscal year	2024 fiscal year
Deferred taxes resulting from accounting-tax timing differences	**3,991**	**4,234**
Provisions for employee-related liabilities	202	177

Unrecognized deferred tax assets and liabilities	(4)	(3)
Deferred income taxes[3]	**(1,118)**	**(1,165)**
NET DEFERRED TAX ASSETS AND LIABILITIES	**2,801**	**2,837**
Recognized		
As assets in the balance sheet	4,292	4,160
As liabilities in the balance sheet	(1,491)	(1,323)

(1) The amount of deferred tax on losses recognized is €730 million, of which €378 million is capitalized on the loss from Natixis SA and its previous tax consolidation. The tax loss base capitalized by GFS in France is €1,462 million out of a total of €1,776 million of tax loss carryforwards. At December 31, 2025, Natixis performed tests to measure the potential impact on its deferred tax assets of the assumptions made to prepare tax business plans. These tests, which measure in particular the impact of a +/-10% variation in NBI growth assumptions, confirm the probability for Natixis of being able to offset its tax losses against future taxable profits, which are taken into account for the purposes of capitalizing deferred taxes.

(2) Deferred taxes associated with these instruments are presented net of deferred taxes corresponding to the cancellation of provisions for impairment under French GAAP.

(3) Of which a deferred tax liability relating to the tax amortization of goodwill by GFS in the United States.

Deferred tax assets are only recognized at the reporting date if it is probable that the tax entity concerned will recover the tax savings over a specified period. Groupe BPCE applies the following principles:

- the tax business plans are based on the strategic plan (four years) with a longer-term projection;
- as a precaution, the maximum timeframe used to capitalize a net deferred tax asset is 10 years.

These savings will be realized by deducting tax differences and losses carried forward against profits estimated future taxable liabilities within this horizon.

At December 31, 2025, deductible temporary differences, tax losses and unused tax credits for which no deferred tax asset has been recorded in the balance sheet amounted to €954 million.

Note 12 Other information

12.1. Segment reporting

Groupe BPCE has two core business lines:

Retail Banking and Insurance, which is central to the transformation, includes:

- the Banque Populaire network, comprising the 14 Banques Populaires and their subsidiaries, Crédit Maritime Mutuel and the mutual guarantee companies;
- the Caisse d'Epargne network, consisting of the 15 Caisses d'Epargne;
- the Financial Solutions & Expertise (FSE) division, encompassing the specialized financing activities: factoring, leasing in France, BPCE Equipment Solutions, consumer loans, sureties & financial guarantees, and the "retail securities" business, in addition to Socfim, BPCE Solutions immobilières and Pramex;
- Insurance, serving the Groupe BPCE networks and their clients through three core business lines: Personal Insurance (life insurance, personal and payment protection insurance), and non-life insurance (mainly vehicles, multi-risk home insurance, personal accident insurance, legal protection and health) and sureties & financial guarantees business (CEGC);
- the Digital & Payments division, which brings together the payments activities and the activities of Oney, in order to support the digitization of retail and strengthen the quality of service from end to end of the payment chain;
- the Other Networks, including Banque Palatine, the bank for mid-sized companies and their managers, and private banking, support their clients through long-term relationships based on close relationships, a wealth of expertise and tailor-made solutions.

Global Financial Services, comprising the two divisions of Natixis:

- Asset & Wealth Management:
  - Asset Management, present on the various international markets, brings together the expertise of management and distribution companies as well as employee savings ("Natixis Interépargne", the leading player in employee savings account management in France);
  - Wealth Management, with Natixis Wealth Management, which offers wealth management and financing solutions for large private investors;
- Corporate & Investment Banking:

Corporate & Investment Banking advises and supports corporates, institutional investors, insurance companies, banks, public sector entities and film and audiovisual financing.

- The Corporate center, which primarily includes:
  - the Group's central institution and holding companies;
  - run-off activities of Crédit Foncier and BPCE International;
  - cross-business activities.

Accounting principles

Leases are analyzed to determine whether in substance and economic reality they are operating leases or finance leases.

Finance leases

A finance lease is a lease that transfers to the lessee most of the risks and rewards incidental to ownership of an asset.

IFRS 16 standard for leases gives in particular five examples of situations that, individually or collectively, permit to distinguish finance lease to operating lease:

- the lease transfers ownership of the asset to the lessee at the end of the lease term;
- the lease provides the lessee with the option to purchase the asset at a price that is expected to be sufficiently below the fair value at the date the option becomes exercisable for it to be reasonably certain, at the inception of the lease, that the option will be exercised;
- the lease term covers most of the economic life of the asset even if there is no transfer of ownership;
- at the inception of the lease, the present value of lease payments amounts to at least virtually all of the fair value of the leased asset;
- the leased assets are of such a specialized nature that only the lessee can use them without major modifications.

IFRS 16 also describes three indicators that may also individually or collectively lead to a lease being classified as a finance lease:

- if the lessee can cancel the lease, the lessor's losses associated with the cancellation are borne by the lessee;
- gains or losses from the change in the fair value of the residual value accrue to the lessee;
- the lessee has the ability to extend the lease at a rent that is significantly lower than the market rent.

At the start of the contract, assets under finance leases are recorded in the lessor's balance sheet in the form of a receivable amount equal to the net investment in the lease. The net investment corresponds to the amount of lease payments receivable from the lessee, discounted at the interest rate implicit in the lease plus any unguaranteed residual value of the asset accruing to the lessor. More specifically, the lease payments used to calculate the net investment include fixed payments less any lease incentives payable and variable payments that depend on an index or rate.

IFRS 16 requires unguaranteed residual values to be reviewed on a regular basis. A reduction in the estimated unguaranteed residual value modifies the income allocation over the lease term. In this case, a new payment schedule is drawn up and a charge is recorded to adjust the amount of financial income already recorded.

Any impairment recorded for counterparty risk on receivables in respect of finance leases is calculated in accordance with IFRS 9 using the same method as for financial assets at amortized cost (Note 5.5). This impairment is recorded on the income statement under "Cost of credit risk".

Finance lease income is considered to be financial income and is recognized in the income statement under "Interest and similar income". This financial income is recognized using the interest rate implicit in the lease, which reflects a constant periodic rate of return on the lessor's net investment. The rate of return implicit in the lease is the discount rate that makes the following two items equal:

- the net investment;
- and the initial value of the asset (the fair value at the inception of the lease, plus any initial direct costs comprising expenses incurred specifically by the lessor to set up the lease).

Operating leases

A lease which is not considered to be a finance lease is classified as an operating lease.

Assets provided under operating leases are shown in the balance sheet under property, plant and equipment or intangible assets in the case of equipment leases, and investment property in the case of property leases. Lease income from operating leases is recognized in the income statement on a straight-line basis over the lease term, under "Income and expenses from other activities".

Schedule of finance lease receivables

in millions of euros	12/31/2025	12/31/2024
FINANCE LEASES		
Non-discounted lease payments (amount of gross investments)	**35,185**	**23,578**
• < 1 year	8,860	5,868
• 1-5 years	19,761	12,709
• > 5 years	6,564	5,001
Discounted lease payments (amount of net investments)	**30,245**	**20,182**
• < 1 year	8,053	5,417
• 1-5 years	17,190	11,108
• > 5 years	5,002	3,657
Financial income not received	**4,941**	**3,396**
OPERATING LEASES	**726**	**688**
• < 1 year	150	158
• 1-5 years	420	410
• > 5 years	156	120

12.2.2. Leases as lessee

Accounting principles

IFRS 16 applies to contracts that, irrespective of their legal form, meet the definition of a lease as laid down by the standard. The standard requires the identification of an asset, and that the lessee controls the right to use this asset for a period of time. Control is established if the lessee holds the following two rights throughout the period of use:

- the right to obtain almost all of the economic benefits arising from use of the asset;
- the right to decide how the asset is used.

The existence of an identified asset requires that the lessor has no substantive rights to substitute alternative assets, with this requirement being assessed according to facts and circumstances in place at the start of the contract. If the lessor can freely substitute the leased asset, the contract becomes a non-lease contract whose purpose is to provide capacity rather than an asset.

The asset can be comprised of a portion of a larger asset, such as a floor within a building. However, a portion of an asset that is not physically distinct within a grouping without a pre-determined location is not an identified asset.

With certain exceptions, lessees are required under IFRS 16 to record leases in the balance sheet as a right-of-use asset under "Property, plant and equipment" or "Investment property", and as lease liabilities under "Other liabilities".

On the date of initial recognition, no deferred tax is reported if the value of the asset is equal to the value of the liability. Deferred tax is recorded for subsequent net temporary differences arising from changes in amounts recognized as right-of-use assets and lease liabilities.

At the commencement date, the lessee measures the lease liability at the present value of the lease payments that are not paid at that date.

These payments include fixed lease payments and in-substance fixed lease payments, variable lease payments based on an index or a rate calculated using the latest index or rate in force, any residual value guarantees and, where appropriate, any amount to be paid to the lessor under options that are reasonably certain to be exercised.

Lease payments used to determine the lease liability exclude variable payments that are not based on an index or a rate, taxes such as VAT, whether recoverable or not, and the housing tax.

Right-of-use is recognized as an asset on the commencement date of the lease for an amount equal to the lease liability on that date, adjusted for any payments made to the lessor at or before that date and not taken into account for the measurement of the lease liability, less any lease incentives received. If appropriate, this amount is adjusted for initial direct costs incurred by the lessee and an estimate of costs to be incurred in dismantling or restoring the asset if required by the terms and conditions of the lease, as long as the outflow of cash is probable and can be determined in a reliable manner.

The right-of-use asset is amortized on a straight-line basis and the lease liability is calculated on an actuarial basis over the term of the lease using the lessees' incremental borrowing rate mid-way through the contract.

The amount of lease liabilities is subsequently readjusted to take into account variations in the indices or rates to which the leases are indexed. As this adjustment reflects the right of use, it has no impact on the income statement.

For entities that are part of the financial solidarity mechanism that centralize their funding with the Group Treasury, the rate is calculated at Group level and adjusted, as applicable, to the currency applicable to the lessee.

The lease term is the non-cancellable period for which a lessee has the right to use an underlying asset, together with the periods covered by an option to extend the lease if the lessee is reasonably certain to exercise that option; and the periods covered by an option to terminate the lease if the lessee is reasonably certain not to exercise that option.

For French "3/6/9" commercial leases, the term used is usually nine years. The reasonable certainty of whether the options relating to the lease term will be exercised is assessed by considering Group entities' real estate management strategy.

At the end of the lease, the contract is no longer enforceable and the lessee and the lessor each has the right to terminate the lease without permission from the other party with no more than an insignificant penalty.

The term of leases that are not extended or canceled at the end of the term (leases with automatic renewal) is determined by expert appraisal and, in the absence of specific information, assigned *a* reasonable term of three years.

For leases recognized in the balance sheet, the expense relating to the lease liability is reported as an interest expense under net banking income while the depreciation expense on the right-of-use asset is recognized as a depreciation expense under gross operating income.

Leases not recognized in the balance sheet and variable payments that are excluded from lease liabilities are recorded as an expense for the period under operating expenses.

Impact of leases on the income statement – lessee

in millions of euros	12/31/2025	12/31/2024
EXPENSES FROM LEASE TRANSACTIONS	**(542)**	**(506)**
Interest expenses on lease liabilities	(38)	(31)
Depreciation of right-of-use assets	(403)	(387)
Variable lease expenses not included in measurement of lease liabilities	(38)	(36)
Expenses on short-term leases[1]	(47)	(38)
Expenses on underlying assets of low value	(17)	(16)
INCOME FROM SUB-LEASING/OPERATING LEASES	**0**	**1**

(1) Related to leases not recognized in the balance sheet.

Income from such leases is presented using the same approach as lessors: as income from other activities for operating leases and as interest income for finance leases.

Schedule of lease liabilities

in millions of euros	12/31/2025	12/31/2024
AMOUNTS OF NON-DISCOUNTED FUTURE PAYMENTS	**1,295**	**1,174**
< 1 year	273	232
1-5 years	684	620
> 5 years	338	322

Commitments on leases not yet recognized in the balance sheet

In accordance with IFRS 16, future minimum payments relating to leases to which the Group is committed but whose underlying assets have not yet been made available are not recognized on the balance sheet prior to their commencement date. As of December 31, 2025, there were no commitments.

12.3. Related party transactions

For Groupe BPCE, related parties are considered to be all consolidated companies, including companies carried under the equity method, and the Group's key management personnel.

The Social Housing Companies in which the Group is the sole major shareholder are also covered.

12.3.1. Transactions with consolidated companies

All intercompany transactions carried out during the period and balances outstanding at the end of the period with fully consolidated companies are eliminated in full on consolidation without exception (see 3.3.2).

The statement below only provides data on intercompany transactions concerning:

- entities over which the Group exercises joint control (joint operations) in respect of the non-eliminated portion: no significant transactions were identified in this category;
- entities over which the Group exercises significant influence and which are equity-accounted (associates). No significant transaction was identified in this respect.

A list of fully consolidated subsidiaries is presented in Note 13 "Scope of consolidation".

12.3.2. Transactions with company directors

The Group's company directors are the members of the Management Board and Supervisory Board of BPCE. The short-term employee benefits, post-employment benefits, long-term employee benefits and termination benefits of BPCE's company directors are described in the "Rules and principles governing the determination of remuneration and benefits" section in Chapter 4 "Corporate governance report".

Short-term employee benefits

Short-term employee benefits paid out to the Group's company directors amounted to €6 million in 2025 and €5 million in 2024.

These include remuneration, directors' attendance fees and benefits paid to members of the Management Board and Supervisory Board.

Post-employment benefits, long-term employee benefits and termination benefits

Post-employment benefits, long-term employee benefits, and termination benefits of BPCE's company directors are described in the "Rules and principles governing the determination of remuneration and benefits" section in Chapter 4 "Corporate governance report". The amount provisioned by BPCE in respect of retirement benefits came to €3 million at December 31, 2025 (€1 million at December 31, 2024).

12.3.3. Relations with social housing companies

Groupe BPCE is a longstanding partner in the HLM social housing movement in France and a key player in the social housing production process. The Group acts as an operator (the leading privately-owned bank involved in the construction of social housing which it finances in particular through Livret A passbook savings account deposits) and is one of the main distributors of subsidized loans and intermediary rental loans for the construction of rental housing for low-income families. The Group is also the sole major shareholder in certain social housing companies.

In view of the economic substance of the Group's dealings with the social housing sector, where organizations are subject to specific regulations, some social housing companies have been classified as related parties.

Banking transactions with social housing companies

12.5. Interests in non-consolidated structured entities

12.5.1. Nature of interests in non-consolidated structured entities

A non-consolidated structured entity is a structured entity that is not controlled and is therefore not accounted for using the full consolidation method. As a result, the interests held in a joint venture or associate which is classed as a structured entity falls within the scope of this note.

The same is true of controlled structured entities that are not consolidated due to holding threshold reasons.

This includes all structured entities in which Groupe BPCE holds an interest and acts in one or more of the following capacities:

- originator/structurer/arranger;
- placement agent;
- manager; or
- in any other capacity that has a major impact on the structuring or management of the transaction (*e.g.* provision of financing, guarantees or structuring derivatives, tax investor, major investor, etc.).

An interest in an entity corresponds to all types of relationships, contractual or not, that expose Groupe BPCE to a risk of fluctuations in returns relating to the entity's performance. Interests in another entity may be evidenced by, among others, the holding of equity instruments or debt securities, as well as, by other types of relationships, such as financing, short-term credit facilities, credit enhancement, the provision of guarantees or structured derivatives.

As a result, the following are not included in the scope of this note:

- structured entities which are associated with Groupe BPCE through a current transaction alone. This corresponds to an unstructured financial instrument which generally does not have a material impact on the variability of the structured entity's returns and which could be concluded by Groupe BPCE with structured entities or classically governed entities alike. The main kinds of current transactions are:
  - plain vanilla fixed income, foreign exchange, and other underlying derivatives, as well as securities lending/borrowing and repurchase transactions,
  - plain vanilla guarantees and financing granted to family non-trading real estate companies (SCI) or to certain holdings;
- external structured entities in which Groupe BPCE simply acts as an investor.

These are:

- investments in external UCITS that the Group does not manage, except for those in which the Group owns almost all the shares;
- a limited scope of interests held in securitization vehicles (exposures on these funds are included in the information published on securitization in Chapter 7.7 "Risk factors and risk management – Securitization transactions");
- interests held in external real estate funds or private equity funds in which Groupe BPCE acts as a simple minority investor.

The structured entities with which the Group has a relationship can be divided into four categories: entities involved in asset management, securitization vehicles, entities created for structured financing purposes, and entities created for other types of transactions.

Asset Management

Financial asset management (also known as portfolio management) consists of managing equity or funds entrusted by investors by investing in equities, bonds, mutual funds or hedge funds, etc.

The Asset Management line of business which uses structured entities is represented by collective investment management or fund management. More specifically, it encompasses collective investment vehicles within the meaning of the French Monetary and Financial Code (other than securitization structures) as well as equivalent bodies governed by foreign law. These notably include entities such as UCITS, real estate funds and private equity funds.

Securitization

Securitization transactions are generally established as structured entities in which assets or derivatives representing credit risk are isolated.

These entities serve to diversify the underlying credit risks and to split them into various levels of subordination (tranches) with a view, generally, to sell them to investors seeking a certain level of return, according to the degree of risk accepted.

These vehicles' assets and the liabilities that they issue are rated by the rating agencies, which monitor that the level of risk associated with each tranche of risk sold is commensurate with the attributed rating.

The kind of securitization transactions used and which require the intervention of structured entities are as follows:

- transactions where the Group (or a subsidiary) sells on its own behalf to a dedicated vehicle, in cash or synthetic form, the credit risk associated with one of its asset portfolios;
- securitization transactions performed on behalf of third parties. These transactions consist of housing in a dedicated structure (generally a Special Purpose Entity (SPE)) the assets belonging to another company. The SPE issues shares that can, in certain cases, be subscribed for directly by investors, or subscribed for by a multi-seller conduit which refinances the acquisition of these shares through the issue of "short-term notes" (commercial papers).

Structured financing (of assets)

Structured financing covers the range of activities and products set up to provide financing to economic players while reducing risks through the use of complex structures. These include the financing of movable assets (pertaining to aeronautic, marine or terrestrial transport, telecommunications, etc.), real estate assets and the acquisition of targeted companies (LBO financing).

The Group may need to create a structured entity that houses a specific financing transaction on behalf of a client. This is a contractual and structural organization. The particularities of these types of financing are related to risk management, with the use of notions such as limited recourse or waivers of recourse, standard and/or structural subordination and the use of dedicated legal vehicles used in particular to carry a single-contract finance lease representing the financing granted.

Other activities

This comprises all remaining activities.

12.5.2. Nature of risks associated with interests held in non-consolidated structured entities

Assets and liabilities recognized in the Group's various balance sheet accounts relating to interests in non-consolidated structured entities contribute to determining the risks associated with these entities. The values recorded under the balance sheet assets, along with loan and guarantee commitments given less guarantee commitments received and provisions recorded in liabilities, are used to assess the maximum loss exposure. It should be noted that the maximum loss exposure does not take into account financial liabilities at fair value through profit or loss. This exposure is limited, in the specific case of optional derivatives, to the sale of options.

The "Notional amounts" line corresponds to the notional amount of options sold to structured entities.

The data are presented below, aggregated based on their activity classification.

At December 31, 2025

Excluding insurance activities investments *in millions of euros*	**Securitization**	**Asset Management**	**Structured Financing**	**Other activities**

SIZE OF STRUCTURED ENTITIES	**159,029**	**1,240,467**	**70,863**	**12,465**

At December 31, 2024

in millions of euros	**Securitization**	**Asset Management**	**Structured Financing**	**Other activities**
SIZE OF STRUCTURED ENTITIES	**148,474**	**1,161,147**	**54,830**	**9,765**

Securitization transactions in which Groupe BPCE is simply an investor are listed in Chapter 7.7 "Risk factors and risk management – Securitization transactions".

The size criterion used varies according to the types of structured entities:

- securitization: the total amount of issues recorded in the entities' liabilities;
- asset management: the net assets of collective investment vehicles (other than securitization);
- structured financing: the total amount of financing outstandings remaining due by the entities to all banks;
- other activities: total assets.

12.5.3. Income and carrying amount of assets transferred to sponsored non-consolidated structured entities

A structured entity is sponsored by a group entity when the following two indicators are both satisfied:

- it is involved in the creation and structuring of the structured entity;
- it contributes to the success of the entity by transferring assets to it or by managing relevant activities.

When the Group entity's role is limited to one of advisor, arranger, custodian or placement agent, the structured entity is not considered to be sponsored.

Groupe BPCE plays the role of sponsor for:

- UCITS initiated by an investment management company belonging to Groupe BPCE and in which Groupe BPCE holds no investment or any other interest. Reported income includes management and incentive fees charged by Groupe BPCE entities, as well as profit or loss from ordinary business with these funds;
- a US activity involving the origination and disposal of portfolios of home loans to securitization vehicles created by the GFS division with third parties and in which Groupe BPCE holds no interests. Reported income includes structuring fees as well as gains or losses on the disposal of receivables.

For the non-consolidated structured entities that the Group sponsors without holding any interests, the impact on the financial statements is presented below:

2025 fiscal year

in millions of euros	Securitization	Asset Management
Income from entities	**2**	**2024**
Net interest income	0	0
Net fee and commission income	1	2,008
Gains (losses) on financial instruments at fair value through profit or loss	0	16
CARRYING AMOUNT OF ASSETS TRANSFERRED TO THE ENTITY DURING THE FISCAL YEAR	**998**	**0**

2024 fiscal year

in millions of euros	Securitization	Asset Management
Income from entities	**15**	**1,419**
Net interest income	0	0
Net fee and commission income	3	1,407
Gains (losses) on financial instruments at fair value through profit or loss	12	12
CARRYING AMOUNT OF ASSETS TRANSFERRED TO THE ENTITY DURING THE FISCAL YEAR	**279**	**0**

12.6. Locations by country

of which fees paid to commissioned Statutory Auditor for services other than financial statement certification of consolidating entities [4]	*1,106*	*2,327*			*651*	*2,330*			*1,099*	*1,579*			*380*	397	*189*	*37*	3,425	6,670
% **Change**	**2%**				**(11%)**				**12%**				**(11%)**		**27%**		**0%**	

(1) Amounts relating to services provided appear on the income statement for the fiscal year, notably including unrecoverable VAT.

(2) For the KPMG audit network, amounts include fees paid to the network when it signs the financial statements of shareholder institutions (and their subsidiaries) or direct subsidiaries of BPCE SA. Consequently, they do not take into account fees paid by BPCE SA of €7.9 million for services other than financial statement certification.

(3) In 2025, "services other than financial statement certification" mainly concerned to assignments carried out at the request of BPCE (€6 million), in particular for services rendered during the acquisition of entities, letters of comfort relating to issues and findings resulting from specific controls as well as on assignments performed out at the request of Natixis SA and its subsidiaries (€5 million), in particular support missions on regulatory changes, tax missions and technical assistance missions.

(4) In 2024, the data were restated to correct a classification error between fees paid to statutory auditors and those paid to members of their network. This reclassification has no impact on the total fees or on the consolidated accounts

Note 13 Detail of the scope of consolidation

13.1. Securitization transactions

Accounting principles

Securitization is a financial engineering technique that aims to enhance balance sheet liquidity. From a technical perspective, assets to be securitized are grouped according to the quality of the associated collateral or guarantees and sold to special purpose entities that finance their acquisition by issuing securities underwritten by investors.

Entities created specifically for this purpose are consolidated if the Group exercises control over them. Control is assessed according to the criteria provided in IFRS 10.

The following statement lists the securitization transactions carried out by the Retail Banking and Insurance entities without (full or partial) derecognition:

in millions of euros	Type of assets	Inception date	Expected maturity	Nominal at inception	12/31/2025
Elide 2017-1	Residential home loans	02/02/2017	December 2037	1,842	250
Elide 2017-2	Residential home loans	04/27/2017	October 2041	1,051	215
Elide 2018	Residential home loans	05/29/2018	September 2046	1,390	420
Elide 2021	Residential home loans	03/25/2021	March 2049	2,920	1,585
Elide 2022	Residential home loans	11/24/2022	November 2050	2,500	1,722
Elide 2024	Residential home loans	05/23/2024	January 2052	2,000	1,703
Elide 2025	Residential home loans	07/23/2025	March 2053	1,850	1,754

Other sub-total				**118,092**	**128,254**
TOTAL				**131,645**	**135,903**

Groupe BPCE securitization transaction

The other securitization operations of the Groupe BPCE mainly include: BPCE DEMETER UNO FCT; BPCE DEMETER DUO FCT; BPCE DEMETER TRIA FCT; BPCE EOLIOS I FCT; BPCE DEMETER TETRA FCT; BPCE DEMETER PENTA FCT; GAÏA MASTER Consumer Loans.

At December 31, 2025, a new special purpose entity (Securitization Mutual Funds – *fonds communs de titrisation* or "FCT") was consolidated within Groupe BPCE:

- on October 13, 2025, a securitization transaction resulted in the sale of residential real estate loans (€0.696 billion) to FCT Olympia MHL and a subscription by external investors of the senior notes issued by the FCT (€0.650 billion) as well as the subscription by the institutions of subordinated notes, thus ensuring the over-collateralization of the operation and residual units allowing for the recovery of interest flows on the securitized receivables.

Despite their placement in the market, these transactions are not deconsolidated since the entities that transferred the loans subscribed for subordinated securities and residual shares. They therefore retain control within the meaning of IFRS 10. They follow the previous securitization transactions: BPCE Master Home Loans, BPCE Consumer Loans 2016, 2022 and 2024 (securitization of personal loans), BPCE Home Loans FCT 2017, 2021, 2023 and 2024 (securitization of home loans) and Mercure Master SME 2023 and BPCE Ophelia Master SME FCT for equipment loans.

13.2. Guaranteed UCITS

Guaranteed UCITS are funds designed to reach a specific amount at the end of a given period, determined by applying a predefined calculation formula based on financial market indicators and, where appropriate, to distribute revenues derived from the investments as determined using the same methods. The portfolio management targets of these funds are guaranteed by a credit institution.

Based on an analysis of the substance of these funds in accordance with IFRS 10, the Group does not control relevant activities (as management flexibility is limited) and is not exposed to variable returns (as a solid risk monitoring system has been implemented) and therefore does not consolidate these structures.

13.3. Other interests in consolidated subsidiaries and structured entities

Major restrictions

The Group has not been faced with any major restrictions relating to stakes held in its structured or non-structured subsidiaries.

Support of consolidated structured entities

The Group did not grant any financial support to consolidated structured entities.

13.4. Scope of consolidation at December 31, 2025

Only those entities providing a material contribution are consolidated. For entities meeting the definition of financial sector entities given in Regulation (EU) N° 575/2013 of the European Parliament and of the Council of June 26, 2013 (the CRR), the accounting consolidation thresholds have been aligned, since December 31, 2017, with those applied for the prudential scope of consolidation. Article 19 of the CRR sets a threshold of €10 million in total balance sheet and off-balance sheet assets. For non-financial sector entities, materiality is assessed at the level of the consolidated entities. Based on the principle of ascending materiality, any entity included at a sub-consolidation level is included at all higher consolidation levels, even if it is not material at those levels.

The percentage interest is specified for each entity in the scope of consolidation. The percentage of interest describes the share of equity held by the Group, either directly or indirectly, in companies within the scope. The percentage of interest can be used to determine the share attributable to equity holders of the parent in the net assets of the company held.

13.5. Non-consolidated companies at December 31, 2025

The Regulation of the *Autorité des normes comptable* (ANC), the French national accounting standards authority No. 2016-09 of December 2, 2016 requires companies that prepare their consolidated financial statements in accordance with international standards as adopted by the European Union to publish additional information relating to companies not included in their scope of consolidation as well as significant equity interests.

Non-consolidated companies include:

- significant interests that do not fall within the scope of consolidation; and
- companies excluded from the scope of consolidation owing to their non-material nature.

(1) Amount of shareholders' equity and income for the last fiscal year known at the reporting date and based on applicable accounting standards according to the country of location.

Information on companies excluded from the scope of consolidation due to their non-material nature is available on Groupe BPCE's website at the following address: https://www.groupebpce.com/en/investors/results-and-publications/reference-documents/

6.2 Statutory auditors' report on the consolidated financial statements

Year ended December 31, 2025

This is a translation into English of the statutory auditors' report on the financial statements of the Company issued in French and it is provided solely for the convenience of English-speaking users. This statutory auditors' report includes information required by French law, such as information about the appointment of the statutory auditors or verification of the management report and other documents provided to shareholders. This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

To the Annual General Shareholders' Meetings,

BPCE

7 promenade Germaine Sablon

75013 Paris

I. Opinion

In compliance with the engagement entrusted to us by your Annual General Meeting, we have audited the accompanying consolidated financial statements of Groupe BPCE for the year ended December 31, 2025.

In our opinion, the consolidated financial statements give a true and fair view of the assets and liabilities and of the financial position of the Group as at December 31, 2025 and of the results of its operations for the year then ended in accordance with International Financial Reporting Standards as adopted by the European Union.

The audit opinion expressed above is consistent with our report to the Audit Committee.

II. Basis for the opinion

Audit Framework

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the Statutory Auditors' Responsibilities for the Audit of the Consolidated Financial Statements section of our report.

Independence

We conducted our audit engagement in compliance with independence requirements of the French Commercial Code (code de commerce) and the French Code of Ethics (code de déontologie) for statutory auditors, for the period from January 1st, 2025 to the date of our report, and specifically we did not provide any prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No 537/2014.

III. Rationale for Assessments - Key Audit Matters

Pursuant to the provisions of Articles L.821-53 and R.821-180 of the French Commercial Code relating to the justification of our assessments, we inform you of the key audit matters relating to risks of material misstatement that, in our professional judgment, were of most significance in our audit of the consolidated financial statements of the current period, as well as how we addressed those risks.

These matters were addressed in the context of our audit of the consolidated financial statements as a whole, approved in the conditions mentioned above, and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the consolidated financial statements.

Impairment of loans and receivables (statuses 1, 2, and 3)

Identified risk and key judgments

Groupe BPCE is exposed to credit risks. These risks, resulting from the inability of its clients or counterparties to meet their financial commitments, particularly affect its customer lending activities.

In accordance with the 'impairment' component of IFRS 9 standard, your Group establishes impairments and provisions intended to cover the risks of expected losses (outstandings in statuses 1 and 2) or incurred losses (outstandings in status 3).

The impairment rules for expected loss risks require the establishment of a first impairment status representing an expected loss at 1 year from the origination of a new financial asset classified at amortized cost or fair value through equity and on off-balance sheet commitments; and a second status representing an expected loss at maturity, in case of a significant deterioration in credit risk. These impairments for expected losses (statuses 1 and 2) are determined mainly based on models incorporating various parameters (default probabilities, loss given default, exposures, ...) and including forward-looking information.

As specified in note 7.1.2 of the appendix, the margins for uncertainty temporarily established during the first application of IFRS 9, associated with the modeling of the probabilities of default applicable to Retail and Non-Retail portfolios, were removed during the 2023 fiscal year.

These impairments for expected losses are, where necessary, supplemented by sector-based allocations in consideration of local specificities.

Outstandings of credits bearing a proven counterparty risk (status 3) are subject to impairments determined essentially on an individual basis. These impairments are assessed by management based on recoverable future cash flows considering the estimated available guarantees for each of the credits concerned.

We considered the identification and evaluation of credit risk to be a key point of the audit given that the induced provisions constitute a significant estimate for the preparation of the accounts, and call upon management's judgment both in the attachment of credit outstandings to the different statuses and in the determination of the parameters and calculation modalities of the impairments for outstandings in statuses 1 and 2, as well as in the assessment of the level of individual provisioning of credit outstandings in status 3.

The stock of impairments for credit losses on outstanding loans and similar to customers and credit institutions amounted to €15,697 million, of which €1,189 million under status 1, €3,760 million under status 2 and €10,748 million under status 3.

The cost of credit risk for the 2025 financial year amounted to €2,465 million (compared to €2,061 million for the 2024 financial year).

For more details on accounting policies and exposures, refer to notes 5.4.2 and 7.1 to the notes.

Our response

Impairment of credit outstandings in statuses 1 and 2

Our work mainly consisted of:

- verifying the existence of an internal control system allowing an appropriate frequency update of the ratings of the different counterparties;
- verifying the existence of governance reviewing at an appropriate frequency the adequacy of impairment models, the parameters used for the calculation of impairments, and analyzing the developments of impairments with respect to IFRS 9;
- Assessing the appropriateness of the models, parameters, and macroeconomic assumptions used for the impairment calculations, particularly regarding the removal of margins for uncertainty related to Retail and Non-Retail PDs during the fiscal year;
- Performing counter-calculations on the main types of credit exposures;
- Conducting controls on the overall computer system implemented by Groupe BPCE, including a review of general computer controls, interfaces, and embedded controls for specific data aimed at processing information related to IFRS 9;
- Conducting controls on the tool used to evaluate the impact on expected credit losses of the application of sectoral downgrades.
- Verifying the proper documentation and justification of the sectoral provisions recorded in the group. In this regard, we (i) assessed the criteria for identifying by the group the business sectors considered to be more sensitive to the impacts of the current economic context, (ii) assessed the appropriate level of the provisions thus estimated.

Impairment of credit outstandings in status 3

In the context of our audit procedures, we have, in general, examined the control system related to the census of exposures classified in status 3, the monitoring of credit and counterparty risks, the assessment of non-recovery risks, and the determination of impairments and provisions on an individual basis.

Our work consisted of assessing the quality of the monitoring system for sensitive, dubious, and litigious counterparties, as well as the credit review process. Furthermore, based on a sample of files selected on materiality and risk criteria, we have carried out contradictory analyses of the amounts of impairments and provisions.

We also appreciated the detailed information required by IFRS 9 standard under the 'Impairments' component as of December 31, 2025.

Level 2 and Level 3 financial instruments as defined in IFRS 13

Identified risk and key judgments

Groupe BPCE holds financial instruments measured at fair value that are broken down into three levels defined by IFRS 13 "*Fair Value Measurement*" according to the fair value determination methods used. Fair value is determined using different approaches depending on the nature of the instruments:

- by observing quoted prices (instruments classified as Level 1 in the fair value hierarchy),
- through the use of valuation models based on parameters that are mostly observable on the market (instruments classified as level 2), or
- through the use of valuation models based on parameters that are mostly unobservable on the market (instruments classified as level 3).

For Level 2 and Level 3 financial instruments, these approaches may therefore involve a significant amount of judgement taking into account:

- the use of internal valuation models;
- the use of valuation parameters that are not observable on the market;
- additional valuation adjustments to take account of certain market, counterparty or liquidity risks.

We considered the measurement of Level 2 and Level 3 fair value financial instruments to be a key focus of the audit due to the materiality of the exposures and the use of judgment in the determination of fair value.

As of December 31, 2025, Level 2 and Level 3 financial assets at fair value were valued at €139,725 million and €25,136 million respectively.

At the same date, Level 2 and Level 3 financial liabilities at fair value were valued at €188,161 million and €16,105 million respectively.

For further details on accounting policies and fair value levels, refer to notes 10 and 10.1 to the notes to the consolidated financial statements.

Our response

We have reviewed the internal control mechanisms related to the identification, valuation, recording, and classification of complex derivative financial instruments, especially those classified at fair value levels 2 and 3.

We have communicated with the Risk, Compliance, and Permanent Controls Management (DRCCP) and have examined the reports and minutes of the committees originating from this management.

We tested the key controls that we deemed relevant to our audit, particularly those related to:

- the validation and periodic review, by the risk management, of the valuation models,
- the independent verification of the valuation parameters,
- the determination of the main valuation adjustments,
- the validation and periodic review of the observability criteria considered to classify complex financial instruments in the fair value hierarchy.

We performed these procedures with the assistance of our valuation experts, with whom we also carried out independent valuation work consisting of examining, based on samples, the assumptions, methodologies, and market parameters feeding the valuation models used to estimate the main valuation adjustments as of December 31, 2025.

We also examined, based on samples, any existing margin call discrepancies with market counterparties, to assess the appropriateness of the valuations.

Finally, we reviewed the information related to the valuation of financial instruments published in the appendix.

Valuation of insurance contract liabilities in the "Retirement Savings" classes

Identified risk and key judgments

Groupe BPCE records liabilities associated with direct participating contracts in its "Retirement Savings" insurance activities.

These liabilities are measured using a *Variable Fee Approach* ("VFA") model, which requires the measurement of actuarial liabilities based on significant judgments regarding the data used, assumptions about future periods, and resulting from estimation techniques.

- The estimate of the present value of future cash flow estimates, including the assessment of the cost of options and guarantees granted to policyholders (*BE)* relating to these long-term contracts, is based on technical and financial assumptions and significant judgments;
- The assessment of the *risk adjustment (RA)* is based on assumptions about the group's level of confidence in the risk factors associated with the technical liabilities, and on a VaR (*Value at Risk*) approach, which is the maximum potential loss within a defined confidence interval;
- Finally, the amortisation of the *Contractual Service Margin (CSM),* representing the investment service rendered over the year, is determined through the units of hedging. These hedging units are adjusted to take into account the expected return of the underlying items resulting from so-called "real world" assumptions.

In addition, the internal margins between the banking entities distributing insurance products and the insurance entities are restated.

Due to the sensitivity of the valuation of these liabilities to these key judgments and assumptions, we considered the valuation of the liabilities related to the direct participating contracts of the "Savings and Retirement" classes as a key point of the audit.

As of December 31, 2025, liabilities related to insurance contracts issued measured according to the Variable Fee Approach (VFA) model, including direct participation contracts in the "Retirement Savings" classes, amounted to €124,971 million.

For further details on the accounting principles and valuation of these contracts, refer to notes 9 and 9.2.7 to the notes to the consolidated financial statements.

Our response

In order to cover the risk of valuation of these liabilities related to direct equity contracts in the "Savings and Retirement" branches, we have implemented the following audit procedures with the assistance of our actuarial specialists:

- We assessed the methodology for evaluating the BE, RA and CSM related to these contracts and checked their compliance with the accounting standards in force;
- We assessed the internal control environment of the information systems involved in the processing of technical data, calculations and their transfer to accounting;
- We assessed the design and tested the operating effectiveness of the key controls put in place by the group. In particular, we assessed:
  - The control system relating to the validation of the future cash flow projection model;
  - Documentation and controls relating to key judgments and assumptions made by the finance department;
- We tested the calculation models used to estimate future cash flows, the non-financial risk adjustment and contractual service margin adjustment on a sample basis and based on our risk assessment, as well as any material changes to the calculation models;
- We tested the reliability of the data used as a basis for the estimates by means of a sample;
- We tested the hedging units and the main so-called "real-world" assumptions used to recognise the contractual service margin in profit or loss by means of a sample;

Finally, we assessed the appropriateness of the information disclosed in the notes to the notes to the consolidated financial statements.

Valuation of goodwill and indefinite-life brands

Identified risk and key judgments

Groupe BPCE recognizes goodwill in its consolidated accounts. Indeed, the external growth operations carried out by Groupe BPCE led it to (i) assess the control modalities exercised over the acquired entities in accordance with IFRS 10 'Consolidated Financial Statements' and (ii) perform an acquisition price allocation exercise in accordance with IFRS 3 'Business Combinations'. Following this allocation exercise, the 'excess' unallocated corresponding to the residual identifiable net asset was recognized as goodwill.

This goodwill and acquired intangible assets with an indefinite life are subject to impairment tests at least annually, based on the assessment of the recoverable value of the cash-generating units (CGU) to which they are attached or as soon as indicators of impairment loss appear. The determination of recoverable value is based on the discounting of future cash flows estimated from the CGU as they result from the medium-term plans established by the concerned entities and assessed by the group.

We considered the impairment tests of goodwill and indefinite-life intangible assets to be a key audit matter, by their very nature as they require the exercise of judgment especially for the determination of discount rates, economic scenarios, or financial projections.

As of 31 December 2025, gross goodwill amounts to €4,712 million and cumulative impairment losses amount to €689 million. For further details on accounting policies, the allocation of goodwill to CGUs, the procedures for performing impairment tests and the sensitivity of recoverable amounts to key assumptions, please refer to notes 3.3 and 3.5 to the notes to the consolidated financial statements.

Our response

With the help of our valuation experts, we evaluated the process put in place by Groupe BPCE to identify the indicators of possible impairment loss and carried out a critical examination of the methods of implementing impairment tests.

We performed the following tasks:

- comparison of assumptions and parameters with external sources;
- a review of the reasonableness of the medium-term plans selected for each CGU concerned, involving:
  - the comparison with the group's strategic plan approved by the management bodies (supervisory board or board of directors);
  - the assessment of the coherence and reliability of the main assumptions used to construct them, in particular with regard to the financial trajectories drawn up during past years and actually implemented;
  - analysis of sensitivity to different valuation parameters.
- verification of the consistency of the information published on the results of these impairment tests.

Finally, we assessed the appropriateness of the information disclosed in the notes to the notes to the consolidated financial statements.

Provisions for legal and non-compliance risks

Identified risk and key judgments

Groupe BPCE is subject to litigation in judicial instances, investigations, and requests for information from regulatory and tax authorities in various jurisdictions.

The assessment of legal and non-compliance risks (including tax) that result from this is based on management's estimate at the reporting date.

The recognition of a provision, the determination of its amount, and the information disclosed in the notes to the financial statements inherently require judgment, particularly due to the difficulty in estimating the likelihood of the risk occurring as well as the outcome and financial consequences of ongoing procedures.

Consequently, we considered the estimation of provisions for legal risks and non-compliance to be a key audit matter given the sensitivity of these provisions to the assumptions and options chosen by management.

Refer to notes 2.3, 5.12 and 11.1 of the notes to the consolidated financial statements for more details.

Our response

We have reviewed the process of identifying, evaluating, and provisioning for legal risks and non-compliance.

We have been informed of the status of ongoing procedures and the main risks identified by the Group, particularly through regular exchanges with management (and specifically the group's legal, compliance, and tax departments) as well as the review of documentation made available to us.

Our work also involved assessing the reasonableness of the assumptions and data used by management for estimating the amount of provisions recognized at the reporting date. We specifically involved tax law specialists to critically review the group's identified tax risk analyses and related provisions.

Furthermore, we conducted confirmation procedures on ongoing litigations with the group's legal counsel.

Finally, we verified the correct accounting recording of the provisions evaluated and the information provided in this regard in the notes to the consolidated financial statements.

IV. Specific Verifications

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations of the information pertaining to the Group presented in the management report of the Board of Directors.

We have no matters to report as to its fair presentation and its consistency with the consolidated financial statements.

V. Other Legal and Regulatory Verifications or Information

Format for the presentation of the consolidated financial statements to be included in the annual financial report

We have also proceeded, in accordance with the professional practice standard on the auditor's due diligence relating to annual and consolidated accounts presented in the European Single Electronic Format (ESEF), to verify compliance with this format defined by the European delegated regulation No. 2019/815 of December 17, 2018, in the presentation of the consolidated accounts included in the annual financial report mentioned in Article L.451-1-2 of the Monetary and Financial Code, prepared under the responsibility of the Chairman of the Management Board. As for consolidated accounts, our due diligence includes verifying the compliance of the tagging of these accounts with the format defined by the aforementioned regulation.

Based on our work, we conclude that the presentation of the consolidated financial statements intended to be included in the annual financial report complies, in all material respects, with the European single electronic reporting format.

It is not our responsibility to verify that the annual financial statements that will actually be included by your company in the annual financial report filed with the AMF correspond to those on which we have performed our work.

Appointment of statutory auditors

Forvis Mazars SA was appointed as Statutory Auditors in the initial statutes dated December 19, 2006, of GCE Nao (which became BPCE in July 2009), at its formation. The firms PricewaterhouseCoopers Audit and Deloitte & Associés were appointed as statutory auditors of BPCE by the general assembly, respectively, on July 2, 2009, and May 22, 2015.

As of December 31, 2025, Mazars was in the 19th year of its mission without interruption, including 17 years since the company became a public interest entity, PricewaterhouseCoopers Audit was in the 17th year of its mission without interruption, and Deloitte & Associés was in the 11th year of its mission without interruption.

VI. Responsibilities of Management and Those Charged with Governance for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards as adopted by the European Union, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The Audit Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risks management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The consolidated financial statements were approved by the Board of Directors.

VII. Statutory Auditors' Responsibilities for the Audit of the Consolidated Financial Statements

Objectives and audit approach

Our role is to issue a report on the consolidated financial statements. Our objective is to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As specified in Article L.821-55 of the French Commercial Code (code de commerce), our statutory audit does not include assurance on the viability of the Company or the quality of management of the affairs of the Company.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- Identifies and assesses the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control.
- Evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management in the consolidated financial statements.
- Assesses the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of his audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the consolidated financial statements or, if such disclosures are not provided or inadequate, to modify the opinion expressed therein.
- Evaluates the overall presentation of the consolidated financial statements and assesses whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtains sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. The statutory auditor is responsible for the direction, supervision and performance of the audit of the consolidated financial statements and for the opinion expressed on these consolidated financial statements.

Report to Audit Committee

We submit a report to the Audit Committee which includes in particular a description of the scope of the audit and the audit program implemented, as well as the results of our audit. We also report, if any, significant deficiencies in internal control regarding the accounting and financial reporting procedures that we have identified.

Our report to the Audit Committee includes the risks of material misstatement that, in our professional judgment, were of most significance in the audit of the consolidated financial statements of the current period and which are therefore the key audit matters, that we are required to describe in this report.

We also provide the Audit Committee with the declaration provided for in Article 6 of Regulation (EU) N° 537/2014, confirming our independence within the meaning of the rules applicable in France such as they are set in particular by Articles L.821-27 to L.821-34 of the French Commercial Code (code de commerce) and in the French Code of Ethics (code de déontologie) for statutory auditors. Where appropriate, we discuss with the Audit Committee the risks that may reasonably be thought to bear on our independence, and the related safeguards.

(1) Including changes (excluding cash flows) in insurance and reinsurance assets and liabilities.

(2) Net income (loss) from financing activities include interest paid on subordinated debt for €720 million (€767 million in 2024). From the 2024 fiscal year, the interest paid on the subordinated debt has been isolated on the "Net income (loss) from financing activities" line.

(3) The net increase (decrease) arising from transactions with shareholders include:

- net changes in BPCE SA's share capital and additional paid-in capital for €1,300 million in 2025 (+€841 million in 2024);
- dividend payouts of -€1,167 million (-€891 million in 2024);
- the remuneration of deeply subordinated notes recorded in equity for -€223 million (-€276 million in 2024);
- the redemption of perpetual deeply subordinated notes for -€700 million in the first half of 2025;
- the issue by BPCE Assurance of subordinated external debt (nominal +€280 million less issuance costs of -€2 million) in 2025;
- remuneration linked to the deeply subordinated notes issued by BPCE Assurance for -€3 million.

(4) Other increases (decreases) generated by financing activities mainly include the impact of repayments for -€2,215 million (-€2,534 million in 2024), the issue of new debt for +€2,417 million (+1,601 million in 2024) and the payment of interest on the subordinated debt for -€720 million.

(5) The current accounts with overdrafts do not include Livret A, LDD and LEP savings accounts centralized with Caisse des Dépôts et Consignations.

6.1 Loan commitments 855
6.2 Guarantee commitments 855

Note 7 Exposures to risks *856*
7.1 Credit risk 856
7.2 Market risk 869
7.3 Overall interest rate risk and exchange rate risk 869
7.4 Liquidity risk 869

Note 8 Employee benefits and similar *870*
8.1 Payroll costs 870
8.2 Employee benefits 871
8.3 Share-based payments and equivalent 874

Note 9 **Insurance activities** *877*
9.1 Notes to the income statement for the insurance activities 882
9.2 Notes to the balance sheet for the insurance activities 886
9.3 Exposures to risks 909

Note 10 **Fair value of financial assets and liabilities** *914*
10.1 Fair value of financial assets and liabilities 920
10.2 Fair value of financial assets and liabilities at amortized cost 929

Note 11 **Income taxes** *930*
11.1 Income tax 930
11.2 Deferred taxes 931

Note 12 **Other information** *933*
12.1 Segment reporting 933
12.2 Information on leases 935
12.3 Related party transactions 937
12.4 Partnerships and associates 938
12.5 Interests in non-consolidated structured entities 939
12.6 Statutory Auditors' fees 944

Note 13 **Detail of the scope of consolidation** *945*
13.1 Securitization transactions 945
13.2 Guaranteed UCITS 945
13.3 Other interests in consolidated subsidiaries and structured entities 945
13.4 Scope of consolidation at December 31, 2025 945
13.5 Non-consolidated companies at December 31, 2025 954

Note 1 General framework

1.1. Groupe BPCE

Groupe BPCE comprises the Banque Populaire network, the Caisse d'Epargne network, the BPCE central institution and their subsidiaries.

Two banking networks: the Banques Populaires and the Caisses d'Epargne

Groupe BPCE is a cooperative group whose cooperative shareholders own the two retail banking networks: the 14 Banques Populaires and the 15 Caisses d'Epargne. Each of the two networks owns an equal share in BPCE, the Group's central institution.

The Banque Populaire network consists of the Banques Populaires and the mutual guarantee companies which grant them the exclusive benefit of their guarantees.

The Caisse d'Epargne network consists of the Caisses d'Epargne and the local savings companies (LSCs).

The Banques Populaires are wholly-owned by their cooperative shareholders.

The capital of the Caisses d'Epargne is wholly-owned by the LSCs. Local savings companies are cooperative structures with open-ended share capital owned by cooperative shareholders. The LSCs are tasked with coordinating the cooperative shareholder base, in line with the general objectives defined by the individual Caisse d'Epargne with which they are affiliated, and cannot perform banking transactions.

BPCE

BPCE, a central institution as defined by the French Banking Law and a credit institution licensed to operate as a bank, was created pursuant to act No. 2009-715 of June 18, 2009. BPCE was incorporated as a French limited liability company governed by a Management Board and a Supervisory Board, whose share capital is owned jointly and equally by the 14 Banques Populaires and the 15 Caisses d'Epargne.

BPCE's corporate mission embodies the continuity of the cooperative principles underlying the Banques Populaires and the Caisses d'Epargne.

Specifically, BPCE represents the interests of its various affiliates in dealings with the supervisory authorities, defines the range of products and services offered by them, organizes depositor protection, approves key appointments of company directors and oversees the smooth operation of the Group's institutions.

As a holding company, BPCE is the head entity of the Group and holds the joint ventures between the two networks in Retail Banking and Insurance, corporate banking and financial services, and their production units. It defines the Group's corporate strategy and growth and expansion policies.

The network and BPCE's main subsidiaries are organized around two core business lines:

- Retail Banking and Insurance, which includes the Banque Populaire network, the Caisse d'Epargne network, the Financial Solutions & Expertise division (including factoring, consumer loans, leasing, sureties & financial guarantees, and the "retail securities" business), the Digital & Payments (integrating the Payments subsidiaries and the Oney group), Insurance (now including sureties and financial guarantees) divisions and the Other networks;
- Global Financial Services combining Asset & Wealth Management (Natixis Investment Managers and Natixis Wealth Management) and Corporate & Investment Banking (Natixis Corporate & Investment Banking).

In respect of the Group's financial functions, BPCE is responsible, in particular, for the centralized management of surplus funds, for the execution of any financial transactions required to develop and fund the Group, and for choosing the most appropriate counterparty for these transactions in the broader interests of the Group. BPCE also provides banking services to the other Group entities.

1.2. Guarantee mechanism

The purpose of the guarantee and solidarity system is, in accordance with Articles L. 511-31, L. 512-107-5 and L. 512-107-6 of the French Monetary and Financial Code, to guarantee the liquidity and solvency of the Group and its associates, as well as to organize financial support within the Group.

BPCE is responsible for taking all necessary measures to ensure the solvency of the Group and each of the networks and to organize financial solidarity within the Group. This financial solidarity is based on legislative provisions establishing a legal principle of solidarity obliging the central institution to restore the liquidity or solvency of affiliates in difficulty and/or all affiliates of the Group. By virtue of the unlimited nature of the principle of solidarity, BPCE is entitled at any time to ask any one or several or all of the affiliates to contribute to the financial efforts that may be necessary to restore the situation, and may, if necessary, mobilize all the cash and equity capital of the affiliates in the event of difficulty for one or more of them.

In the event of difficulties, BPCE will have to do everything necessary to restore the financial position and may in particular make unlimited use of the resources of any, several or all affiliates, or implement the appropriate mechanisms of internal solidarity of the Group and by calling on the guarantee fund common to the two networks of which it determines the rules of operation, the triggering conditions, in addition to the funds of the two networks as well as the contributions of the affiliated institutions for its endowment and reconstitution.

BPCE manages the Banque Populaire Network Fund, the Caisse d'Epargne Network Fund and the Mutual Guarantee Fund.

The **Banque Populaire Network Fund** was formed by a deposit made by the Banques Populaires of €450 million that was booked by BPCE in the form of a 10-year term account which is indefinitely renewable.

The deposit made to the **Caisse d'Epargne Network Fund** by the Caisses d'Epargne of €450 million was booked by BPCE in the form of a 10-year term account which is indefinitely renewable.

The **Mutual Guarantee Fund** was formed by deposits made by the Banques Populaires and the Caisses d'Epargne. These deposits were booked by BPCE in the form of 10-year term accounts which are indefinitely renewable. The amount of the deposits by network was €211 million at December 31, 2025.

The total amount of deposits made to BPCE in respect of the Banque Populaire Network Fund, the Caisse d'Epargne Network Fund and the Mutual Guarantee Fund may not be less than 0.15% and may not exceed 0.3% of the Group's total risk-weighted assets.

The booking of deposits in the institutions' individual accounts under the guarantee and solidarity system results in the recording of an item of an equivalent amount under a dedicated capital heading.

Mutual guarantee companies granting the exclusivity of their guarantees to a Banque Populaire benefit from a liquidity and capital adequacy guarantee in their capacity as affiliates of the central institution.

The liquidity and capital adequacy of the local savings companies are secured, firstly, at the level of each individual local savings company by the Caisse d'Epargne of which the local savings company in question is a shareholder.

The Management Board of BPCE holds all the requisite powers to mobilize the resources of the various contributors without delay and in accordance with the agreed order.

1.3. Significant events

ACQUISITION OF SOCIÉTÉ GÉNÉRALE EQUIPMENT FINANCE (SGEF)

Following approval from the competent regulatory and competition authorities, on February 28, 2025, BPCE SA acquired all activities of Société Générale Equipment Finance, now BPCE Equipment Solutions, for a total price of €1.1 billion.

At the same time as this acquisition, BPCE SA replaced Société Générale for the financing of all the subsidiaries concerned for a total amount of approximately €8 billion.

BPCE SA CAPITAL INCREASE OF €1.3 BILLION AND REDEMPTION OF AN ADDITIONAL Tier-1 INSTRUMENT OF €0.7 BILLION

Following the authorization granted by the General Meeting of December 18, 2024, the Management Board decided to carry out the first drawdown of BPCE SA's capital increase on February 19, 2025, for €1.3 billion to finance the acquisition of Société Générale Equipment Finance (see above).

In addition, on February 28, 2025, an additional Tier-1 instrument issued by BPCE and subscribed by the Banques Populaires and Caisses d'Epargne was repaid.

PROPOSED MERGER OF MANAGEMENT ACTIVITIES WITH GENERALI

On January 21, 2025 Assicurazioni, Generali S.p.A. (Generali) and BPCE signed a non-binding Memorandum of Understanding (MoU) aimed at bringing together, in a joint venture, the asset management activities of Generali Investments Holding (GIH) and Natixis Investment Managers (NIM).

In a joint press release dated December 11, 2025, BPCE and Generali announced that they were ending their negotiations, considering that the conditions to finalize an agreement have not been met.

PROPOSED ACQUISITION OF NOVOBANCO

On June 12, 2025, Groupe BPCE signed a Memorandum of Understanding initiating exclusive negotiations for the acquisition of the 75% stake in novobanco, Portugal's fourth largest bank, currently held by the investment fund Lone Star Funds.

This transaction, which would represent an amount of around €6.4 billion (for 100% of the securities), is the largest cross-border banking acquisition in the Eurozone in more than 10 years.

Following the transaction, Groupe BPCE's CET1 capital ratio would remain above 15%.

After the Memorandum of Understanding signed on June 12, 2025, an acquisition agreement for the shares was signed on August 1, 2025 with Lone Star Funds.

On October 29, 2025, the Portuguese State and the Portuguese Banks Resolution Fund joined the acquisition agreement signed with Lone Star Funds, so that the transaction now concerns the acquisition of the entire share capital of novobanco.

The project is expected to be completed in the second quarter of 2026, subject to regulatory approvals.

1.4. Events after the reporting period

BPCE SA CAPITAL INCREASES

Pursuant to the first and second resolutions of the BPCE Extraordinary Shareholders' Meeting of March 5, 2026, the General Meeting delegated to the Management Board its authority to decide, with the prior authorization of the Supervisory Board, one or several increases in BPCE's share capital by issuing category A shares reserved for category A shareholders (Caisses d'Epargne), on the one hand, and category B shares reserved for category B shareholders (Banques Populaires), on the other, for a period of 18 months. The maximum total amount of share capital increases (including additional paid-in capital) that may be carried out under these delegations may not exceed €2.5 billion.

On March 9, 2026, the Management Board decided to carry out:

- the drawdown of the balance of the €4 billion capital increase delegations decided by the General Meeting of December 18, 2024, for an amount of €2.7 billion,
- the first drawdown of the €2.5 billion capital increase delegations decided by the General Meeting of March 5, 2026, for an amount of €2 billion.

The two share capital increases were carried out on March 17, 2026, resulting in a nominal increase in the share capital of €34.9 million and additional paid-in capital of €4,665,1 million.

Note 2 Applicable accounting standards and comparability

2.1. Regulatory framework

The consolidated financial statements of BPCE were prepared under International Financial Reporting Standards (IFRS) as adopted by the European Union and applicable at the reporting date, excluding certain provisions of IAS 39 relating to hedge accounting.

2.2. Accounting standards

The standards and interpretations used and detailed in the annual financial statements at December 31, 2024 were complemented by standards, amendments and interpretations whose application is mandatory for reporting periods starting from January 1, 2025.

BPCE chose the option available in IFRS 9 not to apply the provisions of the standard relative to hedge accounting, and to continue to apply IAS 39, as adopted by the European Union, for the recognition of these transactions, *i.e.* excluding certain provisions relating to macro-hedging.

The standards, amendments and interpretations adopted by the European Union and applicable for the first time to this fiscal year did not have a material impact on the Group's financial statements.

New standards published and not yet applicable

IFRS 18

IFRS 18 "Presentation and Disclosures in Financial Statements" will replace IAS 1 "Presentation of Financial Statements". It was published by the IASB on April 9, 2024. Subject to its adoption by the European Commission, IFRS 18 will be applicable as of January 1, 2027, with comparative data at January 1, 2026. Early application is authorized. BPCE does not foresee any early application of IFRS 18. The impact assessment is ongoing.

Amendment to IFRS 9

On May 30, 2024, the IASB published the amendments to IFRS 9 "Classification and Measurement of Financial Instruments" applicable from January 1, 2026. These amendments were adopted by Regulation (EU) 2025/1047 of the European Commission of May 27, 2025 amending Regulation (EU) 2023/1803 as regards International Financial Reporting Standards IFRS 9 and IFRS 7. These amendments provide details on the basic nature of loans, the classification of non-recourse loans and contractually linked instruments. The amendment to IFRS 9 clarifies the treatment of instruments with contractual terms that may modify the timing or amount of cash flows, such as impact loans whose remuneration is indexed to compliance with ESG criteria. This amendment adds an analysis step if it is not possible to demonstrate the existence of a direct link between the contingent event and the risks and costs associated with the basic loan. Such an instrument may qualify as SPPI if, in all contractually possible scenarios, the contractual cash flows of the instrument are not significantly different to those of an instrument with similar contractual clauses but not having this contingent clause. This amendment will not have a material impact on the Group's financial statements. However, more detailed information will be provided in the annex.

2.3. Use of estimates and judgments

Preparation of the financial statements requires making estimates and assumptions in certain areas with regard to uncertain future events.

These estimates are based on the judgment of the individuals preparing these financial statements and the information available at the reporting date.

Actual future results may differ from these estimates.

With respect to the financial statements for the period ended December 31, 2025, in particular, accounting estimates requiring assumptions were mainly used for:

- the fair value of financial instruments determined on the basis of valuation models (Note 10);
- the amount of expected credit losses on financial instruments as well as on loan and guarantee commitments (Note 7.1);
- the results of hedge effectiveness tests, notably related to macro-hedging (Note 5.3);
- provisions recognized as liabilities in the balance sheet (Note 5.13);
- insurance assets and liabilities (Note 9);
- calculations related to the cost of pensions and future employee benefits (Note 8.2);
- uncertainties relating to the tax treatment of income tax (Note 11);
- deferred taxes (Note 11);
- goodwill impairment tests (Note 3.4.2);
- the lease term to be used for the recognition of rights-of-use and lease liabilities (Note 12.2.2).

Judgment must also be exercised to assess the business model and the basic characteristics of a financial instrument. The procedures are described in the relevant paragraphs (Note 2.5.1).

Estimates and judgments are also used in the Group's activities to estimate climate and environmental risks. Governance and commitments regarding these risks are presented in Chapter 2 "Sustainability report". Information on the effect and consideration of climate risks on credit risk management (Note 7) is presented in Chapter 7.16 "Risk factors and risk management – Environmental, social and governance risks". The accounting treatment of the main green financial instruments is presented in Notes 2.5, 5.5, 5.10, 5.11.2.

Climate and environmental risks

Risks related to the climate and the environment are risk factors likely to affect the main risks borne by BPCE (credit and counterparty risk, market risk, operational risks, structural balance sheet risks, risks related to the Group's activities, insurance, strategic risk, legal and compliance risks, reputation risk).

Climate and environmental risks include physical risks and transition risks, as defined in Section 7.16.1 "Definition and reference framework".

The consequences of climate and environmental risk factors for BPCE are subject to an annual materiality analysis. This analysis and BPCE's risk management system are described in Section 7.16.4 "Environmental, social and governance risk management framework".

In particular, BPCE takes physical risk into account in the internal assessment of its capital requirements (ICAAP process) by applying adverse scenarios to drought (impacting various economic sectors such as agriculture and construction) and flooding (on the real estate portfolio). The transition risk is also assessed by quantifying the impact of an orderly transition scenario limiting global warming. Lastly, models have been developed to quantify the impact of extreme flood physical risk and transition risk in line with the ICAAP 2025 EPC regulation on individual customer real estate portfolios in quantifying economic capital, supplemented by an add-on for portfolios that do not have a specific economic valuation model at this stage.

In addition, some BPCE institutions recognize impairments for the effects of physical and transition risks on credit risk. These impairments were defined by the institutions according to the specific characteristics of their credit exposure portfolio, from a geographical and sectoral point of view, when the risk was assessed locally as material. Discussions are also underway at BPCE level to harmonize the consideration of climate and environmental risks in the provisioning policy.

The inclusion of climate and environmental risks in BPCE's financial statements will benefit from the gradual improvement of the ESG risk supervision system.

2.4. Presentation of the consolidated financial statements and reporting date

As no specific format is required under IFRS, the presentation used by the Group for summarized statements follows Recommendation No. 2022-01 issued by the *Autorité des normes comptable* (ANC), the French national accounting standards authority on April 8, 2022.

The consolidated financial statements are based on the accounts at December 31, 2024. The Group's consolidated financial statements at December 31, 2025 were approved by the Management Board on February 2, 2026. They will be presented to the General Meeting on May 21, 2026.

The amounts presented in the financial statements and in the Notes are shown in millions of euros, unless otherwise indicated. Rounding may lead to differences between the amounts shown in the financial statements and those referred to in the Notes.

2.5. General accounting principles and valuation methods

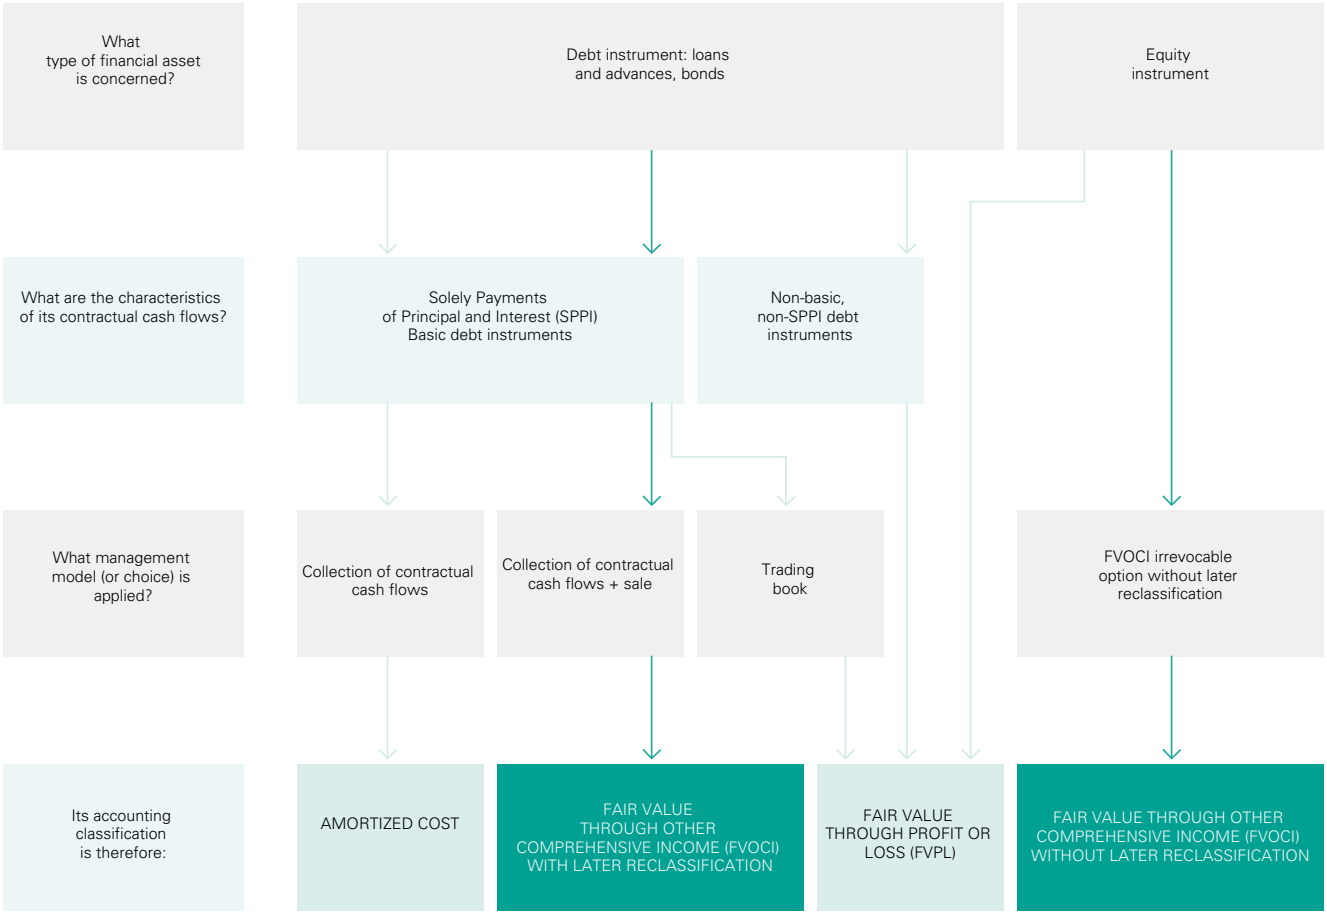
The general accounting principles set out below apply to the main items of the financial statements. Specific accounting principles are presented in the Notes to which they refer.

2.5.1. Classification and measurement of financial assets and liabilities

IFRS 9 is applicable to BPCE.

Financial assets

On initial recognition, financial assets are classified at amortized cost, at fair value through other comprehensive income, or at fair value through profit or loss, according to the type of instrument (debt or equity), the characteristics of their contractual cash flows and how the entity manages its financial instruments (its business model).



Business model

The entity's business model represents the way in which it manages its financial assets to produce cash flow. Judgment is exercised to ascertain the business model.

The choice of business model must take into account all information regarding the manner in which cash flows were generated in the past, along with all other relevant information.

For example:

- the way in which the performance of financial assets is assessed and presented to the main company directors;
- risks having an impact on the business model's performance, in particular the way in which these risks are managed;
- the way in which directors are paid (for example, if pay is based on the fair value of assets under management or on the contractual cash flows received);
- the frequency of, volume of and reason for sales.

Moreover, the choice of business model must be made at a level which reflects the way in which groups of financial assets are managed collectively with a view to achieving a given economic objective. The business model is therefore not decided on an instrument by instrument basis, but rather at a higher level of aggregation, by portfolio.

The standard provides for three business models:

- a business model whose objective is to hold financial assets in order to receive contractual cash flows ("hold to collect model"). This model, under which the concept of "holding" is relatively similar to holding to maturity, remains valid if disposals occur under the following conditions:
  - the disposals are due to an increase in credit risk,
  - the disposals occur just before maturity and at a price that reflects the contractual cash flows that are still owed,
  - other disposals may also be compatible with the "hold to collect" model's objectives if they are infrequent (even if their value is significant) or if their value is insignificant when considered both individually and overall (even if they are frequent).

For BPCE, the "hold to collect" model applies to financing activities (excluding the loan syndication activity) carried out by Retail Banking, Corporate & Investment Banking and Financial Solutions & Expertise;

- a mixed business model under which assets are managed with the objective of both receiving contractual cash flows and disposing of financial assets ("hold to collect and sell model").

BPCE applies the "hold to collect and sell" model primarily to the portion of portfolio management activities for securities in the liquidity reserve that is not managed solely under a "hold to collect" model;

- a model intended for other financial assets, especially those held for trading, for which the collection of contractual cash flows is incidental. This business model applies to the loan syndication activity (for the portion of outstandings to be sold that was identified at the outset) and to the capital market activities carried out primarily by Corporate & Investment Banking.

Types of contractual cash flows: the SPPI (Solely Payments of Principal and Interest) test

A financial asset is classified as generating solely payments of principal and interest if, on specific dates, it gives rise to cash flows that are solely payments of principal and interest on the outstanding amount due. The SPPI test should be performed for each financial asset on initial recognition.

The principal amount is defined as the financial asset's fair value at its acquisition date. Interest is the consideration for the time value of money and the credit risk incurred on the principal amount, as well as other risks such as liquidity risk, administrative costs and the profit margin.

The instrument's contractual terms must be taken into account to assess whether contractual cash flows are solely payments of principal and interest. All elements that may cast doubt as to whether only the time value of money and credit risk are represented must therefore be analyzed. For example:

- events that would change the amount and date of the cash flows. Any contractual option that creates risk exposure or cash flow volatility that is not consistent with a basic lending arrangement, such as exposure to fluctuations in the price of stocks or of a market index, or the introduction of leverage, would make it impossible to categorize contractual cash flows as SPPI;
- the applicable interest rate features (for example, consistency between the rate resetting period and the interest calculation period). If a clear determination cannot be made through qualitative analysis, a quantitative analysis (a benchmark test) is carried out. This test involves comparing the contractual cash flows for the asset in question with the contractual cash flows of a benchmark asset;
- early redemption and extension conditions. For the borrower or lender, a contractual option permitting prepayment of financial instruments does not violate the SPPI test for contractual cash flows if the prepayment amount mainly represents the unpaid amounts of principal and interest and, if applicable, a reasonable additional remuneration for the early termination of the contract.

Furthermore, although they do not strictly meet the criteria for remuneration of the time value of money, certain assets with a regulated interest rate are classified SPPI if this regulated rate provides consideration that corresponds substantially to the passage of time and presents no exposure to a risk that would be inconsistent with a basic lending arrangement. This is the case in particular for financial assets representing the portion of Livret A passbook savings account inflows that is centralized with Caisse des Dépôts et Consignations.

Financial assets that generate SPPI are debt instruments such as fixed-rate loans, floating-rate loans without an interest rate tenor mismatch or that are not linked to a security or to a market index, and fixed-rate or floating-rate debt securities.

Non-SPPI financial assets include UCITS units, debt instruments convertible or redeemable into a fixed number of shares and structured loans.

To qualify as SPPI assets, the securities held in a securitization vehicle must meet specific conditions. The contractual terms of the tranche must meet the SPPI criterion. The pool of underlying assets must meet the SPPI conditions. The risk inherent in the tranche must be lower than or equal to the exposure to the vehicle's underlying assets.

A non-recourse loan (*e.g.* infrastructure financing-type project financing) is a loan secured only by physical collateral. If there is no possible recourse to the borrower, the structure of other possible recourses or protection mechanisms for the lender in the event of default must be examined in order to categorize these loans as SPPI assets: acquisition of the underlying asset, collateral provided (security deposits, margin call, etc.), enhancements provided.

Accounting categories

Debt instruments (loans, receivables or debt securities) may be measured at amortized cost, at fair value through other comprehensive income recyclable to profit or loss or at fair value through profit or loss.

A debt instrument is valued at amortized cost if it meets the following two conditions:

- the asset is held under a hold to collect business model; and
- the contractual terms of the financial asset define it as generating SPPI within the meaning of the standard.

A debt instrument is valued at fair value through other comprehensive income if it meets the following two conditions:

- the asset is held under a hold to collect and sell business model; and
- the contractual terms of the financial asset define it as generating SPPI within the meaning of the standard.

Equity instruments are, by default, recorded at fair value through profit or loss unless they qualify for an irrevocable option for valuation at fair value through other comprehensive income not recyclable to profit or loss (provided they are not held for trading purposes and accordingly classified as financial assets at fair value through profit or loss), without subsequently being reclassified through profit or loss. If opting for the latter category, dividends continue to be recognized in income.

Financing through the issuance of green financial products or investments in such products are accounted for at amortized cost unless they are held as part of a short-term disposal activity.

All other financial assets are recorded at fair value through profit or loss. These financial assets include financial assets held for trading, financial assets at fair value through profit or loss and non-SPPI assets. Financial assets may only be designated at fair value through profit or loss in order to eliminate or significantly reduce an accounting mismatch. This option enables the elimination of accounting mismatches stemming from the application of different valuation rules to instruments managed under a single strategy.

Financial liabilities

The general rule is the measurement of financial liabilities at amortized cost, except for liabilities incurred for trading purposes (trading liabilities) and financial liabilities that the entity chooses to measure at fair value under the fair value option.

At the date of initial recognition, the accounting principles described for financial assets apply identically to financial liabilities, as follows:

- financial liabilities subsequently classified as measured at amortized cost are recognized at fair value less or increased by transaction costs;
- financial liabilities at fair value through profit or loss are recognized at fair value and the associated transaction costs will be recognized directly in the income statement.

If a financial liability is designated as being measured at fair value through profit or loss then:

- the amount of the change in fair value attributable to changes in the credit risk of the liability (*i.e.* the issuer spread) is to be presented in shareholders' equity unless this recognition would have the effect of creating or increasing an accounting mismatch in income (this mismatch is determined at the initial recognition and is not subsequently revised). The amounts recorded in equity are not subsequently recycled in profit or loss;
- the remainder of the change in the fair value of the financial liability is presented in profit or loss.

For the treatment of modifications of liabilities recognized at amortized cost, if the modification does not result in derecognition, the profit or loss resulting from the difference between the original cash flows and the modified cash flows discounted at the original effective interest rate must be recognized in profit or loss.

2.5.2. Foreign currency transactions

The method used to account for assets and liabilities relating to foreign currency transactions entered into by the Group depends upon whether the asset or liability in question is classified as a monetary or a non-monetary item.

Monetary assets and liabilities denominated in foreign currencies are translated into the functional currency of the Group entity on whose balance sheet they are recognized, at the closing rates prevailing at the closing date. All resulting currency exchange differences are recognized in income. However, there are two exceptions to this rule:

- only the portion of the currency exchange differences calculated based on the amortized cost of financial assets at fair value through other comprehensive income is recognized in income, with any additional gains and losses being recognized in "Gains and losses recognized directly in other comprehensive income";
- currency exchange differences arising on monetary items designated as cash flow hedges or as part of a net investment in a foreign operation are recognized in "Gains and losses recognized directly in other comprehensive income".

Non-monetary assets carried at historic cost are translated using the exchange rate prevailing at the transaction date. Non-monetary assets carried at fair value are translated using the exchange rate in effect at the date on which the fair value was determined. Currency exchange differences on non-monetary items are recognized in profit or loss if gains and losses relating to the items are recorded in profit or loss, and in "Gains and losses recognized directly in other comprehensive income" if gains and losses relating to the items are recorded in "Gains and losses recognized directly in other comprehensive income".

Note 3 Consolidation

3.1. Scope of consolidation – consolidation and valuation methods

The Group's financial statements include the financial statements of all the entities over which it exercises control or significant influence, whose consolidation had a material impact on the aforementioned financial statements.

The scope of entities consolidated by BPCE is described in Note 13 – Detail of the scope of consolidation.

3.1.1. Entities controlled by the Group

The subsidiaries controlled by BPCE are fully consolidated.

Definition of control

Control exists when the Group has the power to govern an entity's relevant activities, when it is exposed to or is entitled to variable returns due to its links with the entity and has the ability to exercise its power over the entity to influence the amount of returns it obtains.

The existence and effect of potential voting rights that are currently exercisable or convertible are considered when assessing the control exercised. These potential voting rights may result, for example, from share call options traded on the market, debt or equity instruments that are convertible into ordinary shares, or equity warrants attached to other financial instruments. However, potential voting rights are not taken into account to calculate the percentage of ownership.

Exclusive control is presumed to exist when the Group holds directly or indirectly either the majority of the subsidiary's voting rights, or at least half of an entity's voting rights and a majority within the management bodies, or is in a position to exercise significant influence.

Special case: structured entities

Entities described as structured entities are those organized in such a way that voting rights are not a key criterion when determining who has control. This is the case in particular when voting rights only apply to administrative duties and relevant activities are managed through contractual agreements.

A structured entity frequently exhibits some or all of the following characteristics:

(a) well-defined activities;

(b) a specific and well-defined aim, for example: implementing a lease eligible for specific tax treatment, carrying out research and development, providing an entity with a source of capital or funding, or providing investors with investment options by transferring associated risk and advantages to the structured entity's assets;

(c) insufficient equity for the structured entity to finance its activities without subordinated financial support; and

(d) financing through the issuance, to investors, of multiple instruments inter-related by contract and which create concentrations of credit risk or other risks ("tranches").

The Group therefore considers, among others, collective investment undertakings within the meaning of the French Monetary and Financial Code and equivalent bodies governed by foreign law as structured entities.

Full consolidation method

The full consolidation of a subsidiary in the Group's consolidated financial statements begins at the date on which the Group takes control and ends on the day on which the Group loses control of this entity.

The portion of interest which is not directly or indirectly attributable to the Group corresponds to a non-controlling interest.

Income and all components of other comprehensive income (gains and losses recognized directly in other comprehensive income) are divided between the Group and non-controlling interests. The other comprehensive income of subsidiaries is divided between the Group and non-controlling interests, including when this division results in the allocation of a loss to non-controlling interests.

Changes to the percentage interest in subsidiaries that do not lead to a change in control are recognized as transactions affecting equity.

The effects of these transactions are recognized in equity at their after-tax amount and therefore do not impact consolidated income attributable to equity holders of the parent.

Detail of the scope of consolidation

Non-material controlled entities are excluded from the scope in accordance with the principle set out in Note 13.5.

Employee pension funds and supplementary health insurance plans are excluded from the scope of consolidation insofar as IFRS 10 does not apply to either post-employment benefit funds or other long-term employee benefit plans, to which IAS 19, "Employee Benefits", applies.

Likewise, interests acquired with a view to their subsequent short-term disposal are recorded as available for sale and recognized in accordance with the provisions of IFRS 5 "Non-Current Assets Held for Sale and Discontinued Operations".

3.1.2. Investments in associates and joint ventures

Definition

An associate is an entity over which the Group has significant influence. Significant influence is the power to participate in the financial and operating policy decisions of an entity, without exercising control or joint control over those policies. It is presumed to exist if the Group holds, directly or indirectly, 20% or more of the voting rights of an entity.

A joint venture is a partnership in which the parties which exercise joint control over the entity have rights over its net assets.

Joint control is the contractually agreed sharing of control over a company, which exists only when the strategic decisions require the unanimous consent of the parties sharing control.

Equity method

Income, assets, and liabilities of investments in associates and joint ventures are accounted for in the Group's consolidated financial statements using the equity method.

An investment in an associate or a joint venture is initially recognized at its acquisition cost and subsequently adjusted for the Group share in the income and other comprehensive income of the associate or joint venture.

The equity method is applied from the date on which the entity becomes an associate or a joint venture. On the acquisition of an associate or a joint venture, the difference between the cost of investment and the Group's share in the net fair value of the entity's identifiable assets and liabilities is recognized in goodwill. When the net fair value of the entity's identifiable assets and liabilities is higher than the cost of investment, the difference is recognized in income.

The share of net income of entities accounted for under the equity method is included in the Group's consolidated income.

When a group entity carries out a transaction with a group joint venture or associate, the profit or loss resulting from this transaction is recognized in interests held by third parties in the associate or joint venture.

The net investment in an associate or joint venture is subject to impairment testing if there is objective evidence of impairment arising from one or more events occurring after the initial recognition of the net investment and if the events have an impact on estimated cash flows, provided this impact can be reliably calculated.

In such cases, the total carrying amount of the investment (including goodwill) is subject to impairment testing in accordance with the provisions of IAS 36 "Impairment of Assets".

Exception to the equity method

When the investment is held by a venture capital organization, an investment fund, an investment company with variable share capital or a similar entity such as an Insurance asset investment fund, the investor may choose not to recognize the investment using the equity method. In this case, revised IAS 28 "Investments in Associates and Joint Ventures" authorizes the investor to recognize the investment at its fair value (with changes in fair value recognized in income) in accordance with IFRS 9.

These investments are therefore recognized as "Financial assets at fair value through profit or loss".

The Global Financial Services division's private equity subsidiaries have chosen to measure their investments in this way, considering that this valuation method provides more relevant information.

3.1.3. Investments in joint activities

Definition

A joint activity is a partnership where parties that have joint control over an entity have direct rights over the entity's assets, and obligations for its liabilities.

Accounting treatment of joint activities

An investment in a joint enterprise is accounted for by integrating all interests held in the joint activity, *i.e.* the entitled share in each asset and liability and item of income. These interests are allocated by nature to the various lines of the consolidated balance sheet, consolidated income statement and the statement of net income and gains and losses recognized directly in other comprehensive income.

3.2. Consolidation rules

The consolidated financial statements are prepared using uniform accounting policies for reporting similar transactions in comparable circumstances. Where material, consolidation adjustments are made to ensure the consistency of the measurement methods applied by consolidated entities.

3.2.1. Foreign currency translation

The consolidated financial statements are expressed in euros.

Balance sheet items of foreign subsidiaries and branches whose functional currency is not the euro are translated using the exchange rate in force at the reporting date. Income and expense items are translated at the average exchange rate for the period, which is the approximate value of the transaction price if there are no significant fluctuations.

Foreign exchange rate adjustments arise from a difference in:

- net income for the period translated at the average rate and at the closing rate;
- equity (excluding net income for the period) translated at the historic exchange rate and at the closing rate.

The portion attributable to equity holders of the parent is recorded in equity under "Foreign exchange rate adjustments" and the portion attributable to minority shareholders under "Non-controlling interests".

3.2.2. Elimination of intra-group transactions

The impact of intercompany transactions on the consolidated balance sheet and consolidated income statement is eliminated. Dividends, as well as gains and losses on intercompany asset disposals, are also eliminated. Where appropriate, capital losses from asset disposals resulting in impairment are maintained.

By way of exception, IFRS 17 amendments to IFRS 9 and IAS 32 allow intra-group assets to be retained on the balance sheet if they are held as underlying items of insurance contracts with direct participation features. These assets are then valued at market value through profit or loss. These include financial liabilities issued by a Group entity (amendment to IFRS 9). The application of this exception is assessed instrument by instrument. The provisions of these amendments have been applied since the 2023 fiscal year for significant transactions.

3.2.3. Business combinations

In accordance with revised IFRS 3 "Business Combinations" and IAS 27 "Consolidated and Separate Financial Statements":

- combinations between mutual insurers are included within the scope of IFRS 3;
- costs directly linked to business combinations are recognized in net income for the period;
- contingent considerations payable are included in the cost of the business combination at their fair value at the date of acquisition of a controlling interest in an entity, even if they are only potential. Depending on the settlement method, transferred considerations are recognized against:
  - capital and later price revisions will not be booked,
  - or debts and later adjustments are recognized against income (financial debts) or according to the appropriate standards (other debts outside the scope of IFRS 9);
- on an entity's acquisition date, non-controlling interests may be valued:
  - either at fair value (method resulting in the allocation of a share of the goodwill to non-controlling interests),
  - or at the share in the fair value of the identifiable assets and liabilities of the entity acquired (method similar to that applicable to transactions prior to December 31, 2009).

The choice between these two methods must be made for each business combination.

Whatever method is chosen when the acquisition is made, increases in the percentage of interest in an entity already controlled are systematically recognized in capital:

- when an entity is acquired, any share previously held by the Group must be revalued at fair value through profit or loss. Consequently, in the event of a step acquisition, goodwill is determined by referring to the fair value at the acquisition date; and
- when the Group loses control of a consolidated company, any share previously held by the Group must be revalued at fair value through profit or loss.

3.2.4. Purchase commitments granted to minority shareholders of fully consolidated subsidiaries

The Group has entered into commitments with minority shareholders of certain fully consolidated group subsidiaries to buy out their shares. These buyback commitments are optional commitments (sales of put options). The exercise price for these options may be an amount fixed contractually, or may be established according to a calculation formula defined upon the acquisition of the subsidiary's securities and taking into account its future activity, or may be set as the fair value of the subsidiary's securities on the day on which the options are exercised.

For accounting purposes, these commitments are treated as follows:

- pursuant to the provisions of IAS 32, the Group recognizes a financial liability with respect to the put options sold to minority shareholders in fully-consolidated entities. This liability is initially recognized at the discounted value of the put option exercise price under "Other liabilities";
- the obligation to record a liability even though the put options are not exercised means, for purposes of consistency, that the same accounting treatment as that for transactions related to non-controlling interests must be applied. As a result, the corresponding entry for this liability is deducted from "Non-controlling interests" underlying the options and the balance is deducted from "Consolidated reserves attributable to equity holders of the parent";
- subsequent changes in this liability relating to any change in the estimated exercise price of the options and the carrying amount of "Non-controlling interests" are fully recognized as "Consolidated reserves attributable to equity holders of the parent";
- in the event of a buyback, the liability is settled by the cash payment related to the acquisition of minority shareholders' stakes in the subsidiary in question. However, when the commitment expires, if the buyback does not take place, the liability is written off against non-controlling interests and "Consolidated reserves attributable to equity holders of the parent" according to their respective amounts;
- as long as the options have not been exercised, results from non-controlling interests subject to put options are included in the consolidated income statement as "Non-controlling interests".

3.2.5. Fiscal year reporting date of consolidated entities

The entities included in the scope of consolidation close their accounts on December 31.

3.3. Changes in the scope of consolidation during the 2025 fiscal year

The main changes in the scope of consolidation in the 2025 fiscal year are presented below:

CHANGES IN THE PERCENTAGE OF OWNERSHIP INTEREST IN SUBSIDIARIES (WITH NO IMPACT ON CONTROL)

- decrease in the ownership of SWILE following a capital increase subscribed by non-group shareholders in the first, third and fourth quarters,
- decrease in the ownership of LOOMIS SAYLES SAKORUM LONG SHORT GROWTH EQUITY following the buyback of shares by non-group shareholders in the first, second and third quarters,
- decrease in the ownership of LOOMIS SAYLES GLOBAL ALLOCATION following the buyback of shares by non-group shareholders in the first, third and fourth quarters,
- increase in the ownership of SOLOMON PARTNERS LP following the exercise of the put option on non-controlling interests in the second quarter,
- increase in the ownership of SOLOMON PARTNERS SECURITIES COMPANY LLC following the exercise of the put option on non-controlling interests in the second quarter,
- increase in the ownership of INVESTORS MUTUAL LIMITED following the buyback of shares from non-controlling interests in the third quarter,
- increase in the ownership of AZURE CAPITAL HOLDINGS PTY LTD following the buyback of shares from non-controlling interests in the third quarter,
- decrease in the ownership of BPCE SOLUTIONS CLIENTS following a capital increase subscribed by BANQUE POPULAIRE GRAND OUEST and BANQUE POPULAIRE MÉDITERRANÉE in the third quarter,
- decrease in the ownership of MIROVA US LLC, MIROVA US HOLDINGS LLC, MIROVA AFRICA INC., MIROVA, MIROVA UK LIMITED, MIROVA KENYA LIMITED, MIROVA SWEDEN SUBSIDIARY following the buyback of shares by non-controlling interests in the fourth quarter,
- Increase in the ownership of THEMATICS ASSET MANAGEMENT following the buyback of shares from non-controlling interests in the fourth quarter,

Other changes in scope

Newly consolidated entities

During the first quarter of 2025

- acquisition from Société Générale and full consolidation of the following entities: BPCE Equipment Solutions SA; GEFA Bank GmbH; BPCE Equipment Solutions BENELUX BV; BPCE Equipment Solutions BRASIL SA ARRENDAMENTO; BPCE Equipment Solutions CHINA CO. LTD; BPCE Equipment Solutions HUNGARY LTD; BPCE Equipment Solutions MAGYARORSZAG KFT; BPCE Equipment Solutions Iberia E.F.C., SA; BPCE Equipment Finance Italia S.p.A; FRAER Leasing SPA; BPCE Equipment Solutions Italia S.p.A; BPCE Equipment Solutions Polska Sp.zO.O.; BPCE Equipment Solutions Schweiz AG; BPCE Equipment Solutions UK Ltd; BPCE Equipment Solutions USA Corp; Philips Medical Capital France; Philips Medical Capital GmbH and consolidation through the equity method of GEFA VERSICHERUNGSDIENT GMBH,
- full consolidation, following the crossing of thresholds, of BPCE GERMANY HOLDING GMBH,
- full consolidation, following crossing above the thresholds, of BPCE Equipment Solutions SA (formerly Milla),
- full consolidation, following the crossing of thresholds, of PORTDALON,
- full consolidation, following the crossing of thresholds, of SOCFIM INVESTISSEMENT,
- consolidation by the equity method, following the crossing of thresholds, of ESTREEM,
- acquisition and consolidation by the equity method of FINANCIERE DE COURCELLES,
- full consolidation, following the crossing of thresholds, of DNCA QUADRO,
- creation and full consolidation of AEW TAPT GP LLC,
- creation and full consolidation of AEW EHF LUX GP SARL,

During the second quarter of 2025

- full consolidation, following the crossing of thresholds, of MIROVA FUNDS – MIROVA EUROPE SUSTAINABLE EQUITY FUND,
- full consolidation, following the crossing of thresholds, of VEGA COURT TERME DYNAMIQUE,
- creation and full consolidation of BPCE DEMETER PANTA FCT,
- full consolidation, following the crossing of thresholds, of DNCA STRATEGIC RESOURCES,
- consolidation, following a capital increase fully subscribed by BPCE, by the equity method of COZYNERGY HOLDING,

During the third quarter of 2025

- full consolidation, following the crossing of thresholds, of THEMATICS META FUND,
- creation and full consolidation of NATIXIS GIFT CITY BRANCH,

During the fourth quarter of 2025

- full consolidation, following the crossing of thresholds, of FLEXSTONE PRIVATE EQUITY OPPORTUNITIES FCPR,
- creation and full consolidation of DNCA FINANCE SPAIN BRANCH,
- creation and full consolidation of MIROVA UK BRANCH,

Deconsolidated entities

During the first quarter of 2025

- disposal of MV CREDIT LIMITED, MV CREDIT LPP, MV CREDIT EURO CLO III, MV CREDIT SARL, MV CREDIT CLO EQUITY SARL, MV CREDIT SARL France Branch,
- liquidation of NATIXIS STRUCTURED PRODUCTS LTD,

During the second quarter of 2025

- liquidation of ONEY MAGYARORSZAG PENZUGYI SZOLGALTATO ZARTKORUEN MUKODO RESZVENYTARSASAG,
- deconsolidation, following the crossing below the thresholds, of the entity THEMATICS AI AND ROBOTICS FUND,
- deconsolidation of the entity NATIXIS TRUST following the crossing below the thresholds,

During the third quarter of 2025

- deconsolidation of the entity FCT TULIP following the crossing below the thresholds,

During the fourth quarter of 2025

- disposal of ARIES ASSURANCES,
- disposal of DNCA STRATEGIC RESOURCES,
- liquidation of EPI SO SLP LLC,
- closure of the OSTRUM ASSET MANAGEMENT ITALIA branch.

Mergers and universal asset transfers

- merger and acquisition of SGEF SA by Milla, followed by a change of name of Milla to BPCE Equipment Solution SA in the first quarter,
- merger and acquisition of HSBC ÉPARGNE ENTREPRISE by NATIXIS INTERÉPARGNE in the first quarter.

3.4. Goodwill

3.4.1. Value of goodwill

in millions of euros	12/31/2025	12/31/2024
Opening net value	**3,656**	**3,626**
Acquisitions[1]	73	1
Disposals	1	
Foreign exchange rate adjustments	(205)	102
Other changes[2]	(135)	(72)
CLOSING NET VALUE	**3,390**	**3,656**

(1) Acquisition in the first quarter of 2025 of the SGEF entities (+€46 million in goodwill) and the assets of Belmont Capital Group (+€27 million in goodwill).
(2) Corresponds to the reclassification to the asset held for sale line of the goodwill of the Vauban Infrastructure Partners entity in the Asset Management division (-€135 million) taking into account the ongoing disposal.

At December 31, 2025, the gross value of goodwill amounted to €3,920 million, while the total of impairment losses was -€530 million.

Certain goodwill items recognized in the United States give rise to tax amortization over 15 years, leading to a difference between the carrying amount of the goodwill and its tax base. This difference in treatment generated a deferred tax liability of €315 million at December 31, 2025, compared with €367 million at December 31, 2024.

Breakdown of goodwill

	Net carrying amount	
in millions of euros	12/31/2025	12/31/2024
Financial Solutions & Expertise[1][2]	***123***	***89***
Insurance[2]	***105***	***93***
Retail Banking and Insurance	**228**	**182**
Asset & Wealth Management[3]	**3,023**	**3,325**
Corporate & Investment Banking	**140**	**151**
TOTAL GOODWILL	**3,390**	**3,656**

(1) Of which +€46 million recognized on the acquisition of the SGEF entities.
(2) Reclassification of the CEGC entity from the Financial Solutions & Expertise CGU to the Insurance CGU for +€12 million.
(3) Of which +€27 million recognized on the acquisition of the assets of Belmont Capital Group, -€191 million in conversion impact and -€135 million in reclassification on the assets held for sale line of the goodwill of the entity Vauban Infrastructure Partners.

3.4.2. Goodwill impairment tests

All items of goodwill are impaired, based on the value in use of the cash-generating units (CGUs) to which they have been allocated.

Key assumptions used to calculate recoverable value

The determination of values in use was based mainly on the updating of the estimate of future flows of CGUs (*i.e.* discounted cash flows (DCF) method, as determined by the latest earnings forecasts for the business lines.

For CIB, the valuation exercise was carried out on the M&A scope, *i.e.* the only scope bearing goodwill, while enriching the valuation methods used (multi-criteria approach including a DCF approach as well as valuation methods using stock market multiples and comparable transactions) in continuity with the previous exercise. These tests did not lead to the recognition of any impairment at December 31, 2025.

The following assumptions were used:

	Discount rate	Long-term growth rate
RETAIL BANKING AND INSURANCE		
Insurance	10.0%	2.0%
Financial Solutions & Expertise	10.5%	2.0%
Asset & Wealth Management	**10.3%**	**2.0%**
Digital & Payments	**8.7%**	**2.0%**
Corporate & Investment Banking	**10.7%**	**2.0%**

Future cash flows are based on forecast data from the latest multi-year profit trajectory forecasts for the business lines.

The discount rates were determined by taking into account:

- for the Insurance, FSE, and Digital & Payments CGUs, based on a risk-free rate (10-year OAT) based on a 12-month average of the daily rates of French government bonds, plus a premium risk calculated on the basis of a sample of companies representative of each CGU;
- for the Asset & Wealth Management and Corporate & Investment Banking CGUs, the 10-year OAT (60%) and the 10-year US Treasury (40%) are averaged over a one-year period. This is then increased by a risk premium based on a sample of representative companies in the CGU, averaged over one year.

Sensitivity of recoverable values

A 50 bps increase in discount rates (assumption based on the historical annual variability observed over one year using 2013-2024 historical data) combined with a 50 bps reduction in perpetual growth rates would reduce the value in use of CGUs by: 4.0% for the Insurance CGU;

- -5.2% for the Financial Solutions & Expertise CGU;
- -6.0% for the Asset & Wealth Management CGU;
- -9.9% for the Corporate & Investment Banking CGU (M&A activity);

and would not lead to the recognition of any impairment losses for these CGUs.

Similarly, the sensitivity of these CGUs' future cash flows, as forecast in the business plan, to changes in the main assumptions would not significantly affect their recoverable value:

- for BPCE Assurances, the sensitivity of future cash flows, as forecast in the business plan, to a 5% point fall in recurring net income combined with an increase in the capital adequacy ratio of 5 bps would have a negative impact on the CGU's value of -3.4% and would have no impact in terms of impairment;
- for Financial Solutions & Expertise, the sensitivity of future cash flows, as forecast in the business plan, to a 5% point fall in recurring net income combined with an increase in the target prudential ratio of 25 basis points would have a negative impact on the CGU's value of -5.0% and would have no impact in terms of impairment;
- for Asset & Wealth Management, the main sensitivity driver is the evolution of the equity market. The negative impact of the decline in shares on the recoverable amount of the CGU would be around 7% (for a uniform decrease of 10% in the indices over all years from 2026) and would not lead to the recognition of an impairment. The second source of sensitivity for Asset & Wealth Management comes from changes in interest rates (short-term €ster rates and long-term 10-year rates), but with an insignificant impact on the recoverable amount of the CGU;
- for Corporate & Investment Banking, sensitivity to the dollar would have an insignificant impact on the recoverable amount and would not result in the recognition of impairment.

Note 4 Notes to the income statement

Key points

Net banking income (NBI) includes:

- interest income and expenses;
- fees and commissions;
- gains (losses) on financial instruments at fair value through profit or loss;
- net gains (losses) on financial instruments at fair value through other comprehensive income;
- gains (losses) arising from derecognition of financial assets measured at amortized cost;
- net income from insurance activities;
- income and expenses from other activities.

4.1. Interest and similar income and expenses

Accounting principles

Interest income and expenses are recognized in the income statement for all financial instruments measured at amortized cost using the effective interest method, which includes interbank and customer items, the portfolio of securities at amortized cost, debt securities, subordinated debt and lease liabilities. This item also includes interest receivable on fixed income securities classified as financial assets at fair value through other comprehensive income and hedging derivatives, it being specified that accrued interest on cash flow hedging derivatives is taken to income in the same manner and period as the accrued interest on the hedged item.

Interest income also consists of interest on non-SPPI debt instruments not held under a trading model as well as interest on the related economic hedges (classified by default as instruments at fair value through profit or loss).

The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument to the net carrying amount of the financial asset or financial liability.

The effective interest rate calculation takes account of all transaction fees paid or received as well as premiums and discounts. Transaction fees paid or received that are an integral part of the effective interest rate of the contract, such as loan set-up fees and commissions paid to financial partners, are treated as additional interest.

Negative interest is presented as follows:

- a negative interest on an asset is presented as interest expense in NBI;
- a negative interest on a liability is presented as interest income in NBI.

	2025 fiscal year			2024 fiscal year		
in millions of euros	**Interest income**	**Interest expenses**	**Net**	**Interest income**	**Interest expenses**	**Net**
Loans to/borrowings from banks	9,797	(5,082)	4,716	13,409	(7,135)	6,274

Total interest income and expenses	**30,952**	**(28,181)**	**2,770**	**37,651**	**(35,360)**	**2,291**

(1) Interest income from financial assets with a known credit risk (S3) amounted to €234 million in 2025, all from financial assets at amortized cost, compared to €223 million in 2024.

4.2. Fee and commission income and expenses

Accounting principles

Under IFRS 15 "Revenue from Contracts with Customers", recognition of revenue from ordinary activities reflects the transfer of control of goods and services promised to customers in an amount corresponding to the consideration that the entity expects to receive in exchange for these goods and services. The recognition of this revenue calls for a five-step approach:

- identification of contracts with customers;
- identification of specific performance obligations (or items) to be recognized separately from one another;
- determination of the overall transaction price;
- allocation of the transaction price to the various specific performance obligations;
- recognition of revenue when performance obligations are met.

This approach applies to contracts entered into by an entity with its customers, with the exception of leases (covered by IFRS 16), insurance contracts (covered by IFRS 17) and financial instruments (covered by IFRS 9). If specific stipulations relating to revenue or contract costs are given under a different standard, these will first be applied.

This method primarily applies to the following Group activities:

- commission income, notably that relating to banking services when this income is not included in the effective interest rate, or that relating to asset management or financial engineering services;
- income from other activities (see Note 4.6), in particular in the case of services included in leases.

As a result, fees and commissions are recorded based on the type of service rendered and on the method of accounting for the financial instruments to which the service relates.

This line includes mainly fees and commissions receivable or payable on recurring services (payment processing, custody fees, etc.) and occasional services (fund transfers, late payment penalties, etc.), fees and commissions receivable or payable on execution of significant transactions, and fees and commissions receivable or payable on trust assets held or managed on behalf of the Group's customers.

However, fees and commissions that form an integral part of the effective yield on a contract are recorded under "Net interest income".

Commissions on services

Commissions on services are analyzed to separately identify their different items (or performance obligations) and to assign the appropriate share of revenues to each item. Each item is then recorded in the income statement by type of service provided and according to the method used to recognize the associated financial instrument:

- fees and commissions payable or receivable on recurring services are deferred over the period in which the service is provided (payment processing, custody fees, etc.);
- fees and commissions payable or receivable on occasional services are recognized in full in income when the service is provided (fund transfers, payment penalties, etc.);
- commissions payable or receivable on execution of a significant transaction are recognized in full in income on completion of the transaction.

When there is some uncertainty about the amount of a commission (incentive fees in asset management, variable financial engineering fees and commissions, etc.), only the amount that the Group is already certain to receive, given the information available at the closing date, is recognized.

Fees and commissions that form an integral part of the effective yield on an instrument, such as fees on loan commitments given or loan set-up fees, are recognized and amortized as an adjustment to the effective interest rate over the estimated term of the applicable loan. These fees and commissions are recognized as "Interest income" rather than "Commission income".

Fiduciary and similar fees and commissions are those that result in assets being held or invested on behalf of individual customers, pension schemes or other institutions. Trust-management services mainly cover asset management business and custody services on behalf of third parties.

	2025 fiscal year			2024 fiscal year		
in millions of euros	**Income**	**Expense**	**Net**	**Income**	**Expense**	**Net**
Cash and interbank transactions	69	(114)	(45)	68	(118)	(50)

(1) Of which performance fees of €108 million (€76 million for Europe) in 2025, compared with €77 million (€55 million for Europe) in 2024.

4.3. Gains (losses) on financial instruments at fair value through profit or loss

Accounting principles

"Gains (losses) on financial instruments at fair value through profit or loss" includes gains and losses (including the related interest) from financial assets and liabilities classified as held for trading or designated at fair value through profit or loss.

"Gains and losses on hedging transactions" include gains and losses arising from the revaluation of derivatives used as fair value hedges, as well as gains and losses from the revaluation of the hedged item in the same manner, the revaluation at fair value of the macro-hedged portfolio and the ineffective portion of cash flow hedges.

in millions of euros	2025 fiscal year	2024 fiscal year
Gains and losses on financial instruments mandatorily recognized at fair value through profit or loss[1]	**5,410**	**2,511**
Gains and losses on financial instruments designated at fair value through profit or loss	**(3,494)**	**(775)**
Gains and losses on hedging transactions	**39**	**24**
• Ineffective portion of cash flow hedges (CFH)	(3)	(12)
• Ineffective portion of fair value hedges (FVH)	43	36
Changes in fair value hedges	*1,618*	*610*
Changes in hedged items	*(1,575)*	*(574)*
Gains and losses on foreign exchange transactions	**215**	**320**
TOTAL GAINS (LOSSES) ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS	**2,170**	**2,080**

(1) In 2025, "Gains and losses on financial instruments mandatorily recognized at fair value through profit or loss" included:
- at December 31, 2025, a valuation adjustment recorded on the liability valuation of derivatives in respect of own credit risk (DVA) of +€2 million (expense) compared to an expense of -€41 million at December 31, 2024;
- in addition, the value adjustment concerning the valuation of the counterparty risk (CVA) of financial assets was +€44 million (income) at December 31, 2025 compared to an expense of -€32 million at December 31, 2024;
- the Funding Valuation Adjustment (FVA) included in the valuation of non-collateralized or imperfectly collateralized derivatives is also recorded on this line for an amount of +€55 million (income) at December 31, 2025, compared to -€79 million (expense) at December 31, 2024.

4.4. Net gains (losses) on financial instruments at fair value through other comprehensive income

Accounting principles

Financial assets at fair value through other comprehensive income include:

- SPPI debt instruments managed under a hold to collect and sell business model at fair value through other comprehensive income recyclable to profit or loss. If they are sold, changes in fair value are taken to income;
- equity instruments at fair value through other comprehensive income not recyclable to profit or loss. In the event of disposal, changes in fair value are not transferred to profit or loss but are taken directly to consolidated reserves. Only dividends affect income when they correspond to a return on investment.

Changes in the value of SPPI debt instruments managed under a hold to collect and sell business model recognized at fair value through other comprehensive income recyclable to profit or loss include:

- income and expenses recognized in net interest income.
- net gains or losses on derecognized debt financial assets at fair value through other comprehensive income;
- impairment/reversals recognized in "Cost of risk";
- gains and losses recognized directly in other comprehensive income.

in millions of euros	2025 fiscal year	2024 fiscal year

4.6. Income and expenses from other activities

Accounting principles

Income and expenses from other activities mainly include:

- income and expenses on investment property (rental income and expense, gains and losses on disposals, depreciation, amortization and impairment);
- income and expenses on operating leases;
- income and expenses on real estate development activities (revenues, purchases used).

	2025 fiscal year			2024 fiscal year

Income and expenses from insurance activities are presented in Note 9.2.

4.7. Operating expenses

Accounting principles

Operating expenses include mainly payroll costs (wages and salaries net of rebilled amounts), social security charges, and employee benefit expenses such as pension costs. Operating expenses also include the full amount of administrative costs and external service costs.

Contributions to banking resolution mechanisms

The terms and conditions governing the establishment of the Deposit Guarantee Fund (FGDR) were amended by the Ministerial Order of October 27, 2015. For the Deposit Guarantee Fund, the cumulative amount of contributions made to the fund by the Group for deposit, collateral and securities guarantee mechanisms amounts to €44 million. Cumulative contributions (which are non-refundable in the event of a voluntary withdrawal of approval to operate) represent €8 million. Contributions paid in the form of partner or association certificates and cash security deposits recognized as assets on the balance sheet total €36 million at December 31, 2025.

European directive 2014/59/EU, known as the BRRD (the Bank Recovery and Resolution Directive), which sets out a framework for the recovery and resolution of banks and investment firms, and European Regulation 806/2014 (the Single Resolution Mechanism (SRM) Regulation) set up a resolution fund from 2015. In 2016, this fund became a Single Resolution Fund (SRF) between the Member States participating in the Single Supervisory Mechanism (SSM). The SRF is a resolution funding mechanism at the disposal of the resolution authority (Single Resolution Board). The latter may draw on this fund in the context of the implementation of the resolution procedures.

The Single Resolution Board set the level of contributions to the Single Resolution Fund for 2025 in accordance with Delegated Regulation 2015/63 and Implementing Regulation 2015/81 supplementing the BRRD on *ex-ante* contributions to bank resolution financing mechanisms. The target in terms of the funds to be collected for the resolution fund was achieved at December 31, 2023. The amount of the contributions paid by the Group was zero in 2024 and 2025 for both the portion recognized as an expense and the portion in the form of an irrevocable payment commitment (IPC) guaranteed by cash deposits entered as assets on the balance sheet. However, contributions may be called in the future depending, in particular, on the evolution of the covered deposits and the possible use of the funds. The share of the IPCs corresponded to 15% of the calls for funds until 2022 and 22.5% for the 2023 contribution. These deposits are remunerated at the rate applicable to the market players concerned, *i.e.* €ster -20 bps since May 1, 2023. The cumulative amount of guarantee collateral recognized as assets on the balance sheet totaled €647 million at December 31, 2025. It is recognized at amortized cost on the asset side of the balance sheet under "Accrued income and other assets" and was not subject to impairment at December 31, 2025. Commitments in respect of IPCs are not subject to a provision in liabilities. In effect, the conditions for using the SRF resources, and therefore for calling on irrevocable payment commitments, are strictly governed by regulations. These resources may only be called up in the event of a withdrawal of authorization or a resolution procedure by an institution and after intervention of at least 8% of total liabilities by shareholders and holders of relevant capital instruments and other commitments usable for bail-in purposes. In addition, the SRF contribution must not exceed 5% of the total liabilities of the institution subject to a resolution procedure. Groupe BPCE does not expect a resolution measure requiring a call for contributions for the Group to occur in the Eurozone, nor does it expect a loss or withdrawal of its banking license.

Cash	23	32
Central banks	105,505	118,929
TOTAL CASH AND AMOUNTS DUE FROM CENTRAL BANKS	**105,528**	**118,961**

5.2. Financial assets and liabilities at fair value through profit or loss

Accounting principles

Financial assets and liabilities at fair value through profit or loss comprise instruments held for trading, including derivatives; certain assets and liabilities that the Group chose to recognize at fair value at their date of acquisition or issue using the fair value option available under IFRS 9; and non-SPPI assets.

The criteria for classification as financial assets are described in Note 2.5.1.

Date of recognition

Securities are recorded in the balance sheet on the settlement-delivery date.

Temporary sales of securities are also recorded on the settlement-delivery date.

When such transactions are recorded under "Assets and liabilities at fair value through profit or loss", the commitment is recorded as an interest rate derivative.

The first-in, first-out (FIFO) method is applied to any partial disposals of securities, except in special cases.

5.2.1. Financial assets at fair value through profit or loss

Accounting principles

Financial assets at fair value through profit or loss are: financial assets held for trading, *i.e.* securities acquired or issued principally for the purpose of selling them in the near term;

- financial assets held for trading, *i.e.* securities acquired or issued principally for the purpose of selling them in the near term;
- financial assets that the Group has chosen to recognize at fair value through profit or loss at inception using the fair value option available under IFRS 9. The qualifying criteria used when applying this option are described above;
- non-SPPI debt instruments;
- equity instruments measured by default at fair value through profit or loss (which are not held for trading purposes).

These assets are measured at fair value at the date of initial recognition and at each closing date. Changes in fair value over the period, interest, dividends, and gains or losses on disposals on these instruments are recognized in "Gains (losses) on financial instruments at fair value through profit or loss", with the exception of non-SPPI debt financial assets whose interest is recorded in "Interest income".

Financial assets in the trading book mainly include proprietary securities transactions, repurchase agreements and derivatives contracted by the Group to manage its risk exposure.

Assets designated at fair value through profit or loss

IFRS 9 allows entities to designate financial assets at fair value through profit or loss on initial recognition. However, an entity's decision to do so may not be reversed.

Compliance with the criteria stipulated by the standard must be verified prior to any recognition of an instrument using the fair value option.

This option may only be applied to eliminate or significantly reduce an accounting mismatch. Applying the option eliminates accounting mismatches stemming from the application of different valuation rules to instruments managed under a single strategy.

Financial assets in the trading book mainly include proprietary securities transactions, repurchase agreements and derivatives contracted by the Group to manage its risk exposure.

(1) Consisting of non-SPPI assets that fall outside the scope of a trading activity including units of UCITS and private equity investment funds (FCPR) presented in bonds and other debt securities for €2,628 million at December 31, 2025, compared to €2,931 million at December 31, 2024. Loans to customers include, among others, certain non-SPPI loans. This category also includes equity instruments the Group decided not to recognize through other comprehensive income for a total of €1,066 million at December 31, 2025 compared to €1,012 million at December 31, 2024.

(2) The criteria used by the Group to categorize financial assets at fair value through profit or loss if they do not meet the SPPI criterion are provided in Note 2.5.1.

(3) Only in the case of an "accounting mismatch".

(4) This information is presented after netting effects, in accordance with IAS 32 (see Note 5.18.1).

5.2.2. Financial liabilities at fair value through profit or loss

Accounting principles

These are financial liabilities held for trading or classified in this category on a voluntary basis at initial recognition using the fair value option available under IFRS 9. The trading book includes liabilities arising from short-selling transactions, repurchase agreements and derivatives. The qualifying criteria used when applying this option are described above.

These liabilities are measured at fair value at the date of initial recognition and at each closing date.

The changes in fair value over the period, interest, and gains or losses related to these instruments are booked as "Gains (losses) on financial instruments at fair value through profit or loss", with the exception of changes in fair value attributable to own credit risk associated with financial liabilities designated at fair value through profit or loss, which have been booked, since January 1, 2016, in "Revaluation of own credit risk on financial liabilities designated at fair value through profit or loss" within "Gains and losses recognized directly in other comprehensive income". If the liability is derecognized before its maturity (early redemption, for example), fair value gains or losses attributable to own credit risk are directly transferred to consolidated reserves.

Financial liabilities designated at fair value through profit or loss

IFRS 9 allows entities to designate financial liabilities at fair value through profit or loss on initial recognition. However, an entity's decision to do so may not be reversed.

Compliance with the criteria stipulated by the standard must be verified prior to any recognition of an instrument using the fair value option.

In practice, this option may be applied only under the specific circumstances described below:

Elimination of or significant reduction in an accounting mismatch

Applying the option eliminates accounting mismatches stemming from the application of different valuation rules to instruments managed under a single strategy.

Harmonization of accounting treatment for management and performance measurement

The option applies for liabilities managed and measured at fair value, provided that such management is based on a formally documented risk management policy or investment strategy, and that internal monitoring also relies on a fair value measurement.

Hybrid financial instruments containing one or more embedded derivatives

An embedded derivative is a component of a financial or non-financial hybrid (combined) instrument that qualifies as a derivative. It must be separated from the host contract and accounted for as a derivative if the hybrid instrument is not measured at fair value through profit or loss, and if the economic characteristics and risks associated with the derivative are not closely related to those of the host contract.

The fair value option may be applied to a financial liability when the embedded derivative substantially modifies the cash flows of the host contract and when the separate recognition of the embedded derivative is not specifically prohibited by IFRS 9 (*e.g.* an early redemption option embedded in a debt instrument). The option allows the entire instrument to be measured at fair value and therefore avoids the need to extract, recognize or separately measure the embedded derivative.

This accounting treatment applies in particular to some structured debt issues containing material embedded derivatives.

Financial liabilities in the trading book include liabilities arising from short-selling transactions, repurchase agreements and derivatives.

(1) This information is presented after netting effects, in accordance with IAS 32 (see Note 5.18.2).

These liabilities are measured at fair value on the closing date with changes in value, including coupon, recorded in the "Gains (losses) on financial instruments at fair value through profit or loss" line on the income statement, with the exception of changes in fair value attributable to own credit risk associated with financial liabilities designated at fair value through profit or loss, which are recognized in "Revaluation of own credit risk on financial liabilities designated at fair value through profit or loss" in accordance with IFRS 9.

Conditions for designating financial liabilities at fair value through profit or loss

At Group level, financial liabilities designated at fair value through profit or loss are mostly held by the Global Financial Services division. They mainly comprise issues originated and structured for customers and for which the risks and hedges are managed collectively. These issues include significant embedded derivatives for which changes in value are offset by those of the derivative instruments hedging them.

Financial liabilities designated at fair value through profit or loss, excluding Global Financial Services, also include some structured debt issues and structured deposits containing embedded derivatives (*e.g.* structured BMTNs and equities for personal savings plans).

The cumulative amount of changes in fair value reclassified in the "Consolidated reserves" component during the period concerns the repayments of "Debt securities" classified as "Financial liabilities designated at fair value" and amounted to €0 million at December 31, 2025.

The amount contractually due on loans at maturity comprises the outstanding principal amount at the reporting date plus accrued interest not yet due. In the case of securities, the redemption value is generally used.

Total debt revaluations attributable to own credit risk were €920 million at December 31, 2025, compared to -€315 million at December 31, 2024. The change is recorded in non-recyclable gains and losses recognized directly in other comprehensive income.

This change mainly reflects the methodological refinement of the calculation of the issuer spread (see Note 10).

5.2.3. Trading derivatives

Accounting principles

A derivative is a financial instrument or other contract with all three of the following characteristics:

- its value changes in response to the change in a specific interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided that, in the case of a non-financial variable, this variable may not be specific to one of the parties to the contract;
- it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors;
- it is settled at a future date.

All derivatives are recognized on the balance sheet at the trade date and are measured at fair value at inception. They are remeasured at their fair value at each reporting period regardless of whether they were acquired for trading or hedging purposes.

Trading derivatives are recognized on the balance sheet under "Financial assets at fair value through profit or loss" and "Financial liabilities at fair value through profit or loss". Realized and unrealized gains and losses are taken to income on the "Gains (losses) on financial instruments at fair value through profit or loss" line.

The notional amounts of financial instruments are merely an indication of the volume of the Group's business and do not reflect the market risks associated with such instruments. Positive or negative fair values represent the replacement value of these instruments. These values may vary significantly depending on changes in market parameters.

	12/31/2025			12/31/2024

(1) The positive fair value of trading derivatives included €208 million at December 31, 2025 (*vs.* €7 million at December 31, 2024) for the insurance business. It is presented on the assets side of the balance sheet under "Insurance activities financial investments" (see Note 9.2.4).

5.3. Hedging derivatives

Accounting principles

A derivative is a financial instrument or other contract with all three of the following characteristics:

- its value changes in response to the change in a specific interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided that, in the case of a non-financial variable, this variable may not be specific to one of the parties to the contract;
- it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors;
- it is settled at a future date.

All derivatives are recognized on the balance sheet at the trade date and are measured at fair value at inception. They are remeasured at their fair value at each reporting period regardless of whether they were acquired for trading or hedging purposes.

Changes in the fair value of derivatives are recognized in net income for the period, except for derivatives qualifying as cash flow hedges or as hedges of net investments in foreign operations for accounting purposes.

Derivatives may only be designated as hedges if they meet the criteria set out in IAS 39 at inception and throughout the term of the hedge. These criteria include formal documentation that the hedging relationship between the derivatives and the hedged items is both prospectively and retrospectively effective.

Fair value hedges mainly consist of interest rate swaps that protect fixed-rate financial instruments against changes in fair value attributable to changes in market interest rates. They transform fixed-rate assets or liabilities into floating-rate instruments. Fair value hedges include, in particular, hedges of loans, securities, deposits and fixed-rate subordinated debt.

Fair value hedging is also used to manage the overall interest rate risk position.

Cash flow hedges fix or control the variability of cash flows arising from floating-rate instruments. Cash flow hedging is also used to manage the overall interest rate risk position.

The notional amounts of financial instruments are merely an indication of the volume of the Group's business and do not reflect the market risks associated with such instruments.

The hedging relationship qualifies for hedge accounting if, at the inception of the hedge, there is formal documentation of the hedging relationship identifying the hedging strategy, the type of risk hedged, the designation and characteristics of the hedged item and the hedging instrument. In addition, the effectiveness of the hedge must be demonstrated at inception and subsequently verified.

Derivatives contracted as part of a hedging relationship are designated according to the purpose of the hedge.

BPCE chose the option available in IFRS 9 not to apply the provisions of the standard relative to hedge accounting, and to continue to apply IAS 39, as adopted by the European Union, for the recognition of these transactions, *i.e.* excluding certain provisions relating to macro-hedging.

Fair value hedges

Fair value hedges are intended to reduce exposure to changes in the fair value of an asset or liability carried on the balance sheet, or of a firm commitment, in particular the interest rate risk on fixed-rate assets and liabilities.

The gain or loss on the revaluation of hedging instruments attributable to the risk being hedged is recognized in income in the same manner as the gain or loss on the hedged item. The ineffective portion of the hedge, if any, is recorded in the income statement under "Gains (losses) on financial instruments at fair value through profit or loss".

Accrued interest on the hedging instrument is taken to income in the same manner as the accrued interest on the hedged item.

Where identified assets or liabilities are hedged, the revaluation of the hedged component is recognized on the same line of the balance sheet as the hedged item.

The ineffective portion relating to the dual-curve valuation of collateralized derivatives is taken into account when calculating the effectiveness of a hedge.

If a hedging relationship ceases (investment decision, failure to fulfill effectiveness criteria, or because the hedged item is sold before maturity), the hedging instrument is transferred to the trading book. The revaluation difference recorded in the balance sheet in respect of the hedged item is amortized over the residual life of the initial hedge. If the hedged item is sold before maturity or redeemed early, the cumulative amount of the revaluation gain or loss is recognized in net income for the period.

Cash flow hedges

The purpose of cash flow hedges is to hedge the exposure to the variability of cash flow that is attributable to a particular risk associated with a recognized asset or liability or with a future transaction (hedge of interest rate risk on floating-rate assets or liabilities, hedge of conditions relating to future transactions such as future fixed interest rates, future prices, exchange rates, etc.).

The portion of the gain or loss on the hedging instrument that is deemed to be an effective hedge is recognized on a separate line of "Gains and losses recognized directly in equity". The ineffective portion of the gain or loss on the hedging instrument is recorded in the income statement under "Gains (losses) on financial instruments at fair value through profit or loss".

Accrued interest on the hedging instrument is taken to income under interest income in the same manner as the accrued interest on the hedged item.

The hedged items are accounted for using the treatment applicable to their specific asset category.

If a hedging relationship ceases (because the hedge no longer meets the effectiveness criteria, the derivative is sold or the hedged item ceases to exist), the cumulative amounts recognized in other comprehensive income are transferred to the income statement as and when the hedged item impacts profit or loss, or immediately if the hedged item ceases to exist.

Special case: portfolio hedging (macro-hedging)

Documentation as cash flow hedges

Some Group institutions document their macro-hedging of interest rate risk as cash flow hedges (hedging of portfolios of loans or borrowings).

In this case, the portfolios of assets or liabilities that may be hedged are, for each maturity band:

- floating-rate assets and liabilities; the entity incurs a risk of variability in future cash flows from floating-rate assets or liabilities insofar as future interest rate levels are not known in advance;
- future transactions deemed to be highly probable (forecasts): assuming total outstandings remain constant, the entity is exposed to the risk of variability in future cash flows on future fixed-rate loans insofar as the interest rate at which the loan will be granted is not yet known. Similarly, the Group may be exposed to the risk of variability in future cash flows on the funding that it will need to raise in the market.

IAS 39 does not permit the designation of a net position by maturity band. The hedged item is therefore deemed to be equivalent to a share of one or more portfolios of identified floating-rate instruments (portion of deposit outstandings or floating-rate loans); the effectiveness of the hedges is measured by creating a hypothetical instrument for each maturity band and comparing its changes in fair value from inception to those for the documented hedging derivatives.

The characteristics of this instrument model those of the hedged item. Effectiveness is then assessed by comparing the changes in value of the hypothetical instrument with the actual hedging instrument. This method requires the preparation of a maturity schedule.

The effectiveness of the hedge must be shown prospectively and retrospectively.

The hedge is effective prospectively if, for each target maturity band, the nominal amount of items to be hedged is higher than the notional amount of the hedging instruments.

The retrospective test calculates the retrospective effectiveness of a hedge initiated at various balance sheet dates.

At each balance sheet date, changes in the fair value of hedging instruments, excluding accrued interest, are compared with those of hypothetical instruments. The ratio of their respective changes should be between 80% and 125%.

If the hedged item is sold or the future transaction is no longer highly probable, the cumulative unrealized gain or loss recognized in other comprehensive income is transferred immediately to profit or loss.

When the hedging relationship ceases, if the hedged item is still shown on the balance sheet, or if it is still highly probable, unrealized cumulative gains and loss in comprehensive income are amortized on a straight-line basis. If the derivative has not been canceled, it is reclassified as a trading derivative, and subsequent changes in its fair value are recognized in income.

Documentation as fair value hedges

Some of the Group's institutions document their macro-hedging of interest rate risk as fair value hedges by applying the carve-out arrangements under IAS 39 as adopted by the European Union.

The version of IAS 39 adopted for use by the European Union does not include certain hedge accounting provisions that appear incompatible with the strategies implemented by European banks to reduce their overall exposure to interest rate risk. In particular, this carve-out allows the Group to make use of hedge accounting for interbank interest rate risk on customer transactions at fixed rates (loans, savings accounts and demand deposits). The macro-hedging instruments used by the Group are mainly plain vanilla interest rate swaps designated at inception as fair value hedges of fixed-rate deposits or loans.

Macro-hedging derivatives are accounted for in the same manner as derivatives used to hedge the fair value of specific transactions (micro-hedging).

In a macro-hedging relationship, gains and losses on the revaluation of the hedged item are recorded in "Revaluation differences on interest rate risk-hedged portfolios", under balance sheet assets for hedges of a portfolio of financial assets and under balance sheet liabilities for hedges of a portfolio of financial liabilities.

The hedges are deemed effective if the derivatives offset the interest rate risk on the underlying fixed-rate portfolio. The ineffective portion relating to the dual-curve valuation of collateralized derivatives is taken into account.

Effectiveness is tested in two ways:

- asset-based testing: for plain vanilla swaps designated as hedging instruments at inception, the Group verifies that no over-hedging exists both prospectively at the date the hedging relationship is designated and retrospectively at each balance sheet date;
- quantitative testing: for other swaps, the change in the fair value of the actual swap must offset the changes in the fair value of a hypothetical instrument that exactly reflects the underlying hedged item. These tests are conducted prospectively at the date the instrument is designated as a hedge and retrospectively at each balance sheet date.

If a hedging relationship ceases, the revaluation adjustment is amortized on a straight-line basis over the remaining term of the initial hedge, if the hedged item has not been derecognized. It is taken directly to income if the hedged item is no longer recorded in the balance sheet. In particular, derivatives used for macro-hedging may be disqualified for hedge accounting purposes when the nominal amount of the hedged items falls below the notional amount of the hedging instruments, for example in the case of the prepayment of loans or the withdrawal of deposits observed and modeled.

Hedges of net investments in foreign operations

A net investment in a foreign operation is the amount of the investment held by the consolidating entity in the net assets of the operation.

The purpose of a hedge of a net investment in a foreign operation is to minimize the foreign exchange effect for a consolidating entity of an investment in an entity whose functional currency is different from the presentation currency of the consolidating entity's financial statements. Net investment hedges are accounted for in the same manner as cash flow hedges.

Unrealized gains and losses initially recognized in other comprehensive income are taken to income when the net investment is sold in full or in part (or when partially sold with loss of control).

Fair value hedges mainly consist of interest rate swaps that protect fixed-rate financial instruments against changes in fair value attributable to changes in market interest rates. They transform fixed-rate assets or liabilities into floating-rate instruments.

Fair value macro-hedges are used to manage the overall interest rate risk position, in particular to hedge:

- fixed-rate loan portfolios;
- demand deposits;
- PEL home purchase savings deposits;
- the inflation component of the Livret A or Livret d'Epargne Populaire (LEP) savings accounts.

In the Ministerial Order of July 28, 2023, the government decided to set the rate of the Livret A savings account at 3%, until January 31, 2025 by way of an exception to the regulatory calculation formula. The absence of an inflation component during this period was taken into account by the Group as a source of ineffectiveness (or, where applicable, disqualification) of the hedges of the inflation component of the Livret A savings account, with no significant impact on income.

Fair value micro-hedges are notably used to hedge:

- fixed-rate liabilities;
- fixed-rate liquidity reserve securities and inflation-indexed securities.

Cash flow hedges fix or control the variability of cash flows arising from floating-rate instruments. Cash flow hedging is also used to manage the overall interest rate risk position.

Cash flow hedges are mainly used to:

- hedge floating-rate liabilities;
- hedge the risk of changes in value of future cash flows on liabilities; and
- provide macro-hedging of floating-rate assets.

The main causes of ineffective hedging are related to:

- inefficiency due to dual-curve valuations: the value of collateralized derivatives (with margin calls yielding €STR) is based on the €STR discount curve, while the fair value of the hedged component of the item hedged is calculated using a EURIBOR discount curve;
- the time value of options;
- over-hedging for asset-based testing of macro-hedges (notional amounts of hedging derivatives higher than the nominal amount of the hedged items, in particular where prepayments on the hedged items were higher than expected);
- credit value adjustments and debit value adjustments linked to credit risk and own credit risk on derivatives;
- differences in interest rate fixing dates between the hedged item and the hedge.

The notional amounts of financial instruments are merely an indication of the volume of the Group's business and do not reflect the market risks associated with such instruments.

(1) The positive fair value of hedging derivatives includes €111 million at December 31, 2025 (*vs.* €82 million at December 31, 2024) for the insurance business. It is presented on the assets side of the balance sheet under "Insurance activities financial investments" (see Note 9.2.1).

All hedging derivatives are included in "Hedging derivatives" in balance sheet assets and liabilities.

Currency swaps are documented both as interest rate fair value hedges and as currency cash flow hedges. Total fair value is nevertheless recorded under currency derivatives. These derivatives were mainly recorded under currency fair value hedges and are recorded under currency cash flow hedges in order to better reflect the weight of the currency component (associated with the cash flow hedge) in total fair value.

5.4. Financial assets at fair value through other comprehensive income

Accounting principles

Financial assets at fair value through other comprehensive income are initially recognized at fair value, plus any transaction costs.

Debt instruments measured at fair value through other comprehensive income recyclable to profit or loss

For each reporting period, these instruments are carried at their fair value and changes in fair value (excluding accrued interest) are recorded under "Gains and losses recognized directly in other comprehensive income recyclable to profit or loss" (as the foreign currency assets are monetary assets, changes in the fair value of the foreign currency component affect income). The principles used to determine fair value are described in Note 10.

These instruments are subject to IFRS 9 impairment requirements. Information about credit risk is provided in Note 7.1. If they are sold, these changes in fair value are taken to income.

Interest income accrued or received on debt instruments is recorded under "Interest and similar income" based on the effective interest method. This method is described in Note 5.5 – Assets at amortized cost.

Equity instruments measured at fair value through other comprehensive income not recyclable to profit or loss

For each reporting period, these instruments are carried at their fair value and changes in fair value are recorded under "Gains and losses recognized directly in other comprehensive income not recyclable to profit or loss" (as the foreign currency assets are not monetary assets, changes in the fair value of the foreign currency component do not affect income). The principles used to determine fair value are described in Note 10.

The designation at fair value through other comprehensive income not recyclable to profit or loss is an irrevocable option that is applied on an instrument-by-instrument basis only to equity instruments not held for trading purposes. Realized and unrealized losses continue to be recorded in other comprehensive income with no impact on income. These financial assets are not impaired.

In the event of disposal, changes in fair value are not transferred to profit or loss but are taken directly to consolidated reserves.

Only dividends affect income when they correspond to a return on investment. They are recorded in "Net gains (losses) on financial instruments at fair value through other comprehensive income" (Note 4.4).

in millions of euros	12/31/2025	12/31/2024
Loans and advances	21	119

Of which impairment for expected credit losses[2]	(11)	(21)
Of which gains and losses recognized directly in other comprehensive income on financial assets at fair value through other comprehensive income (before tax)	262	(40)
• *Debt instruments*	*(14)*	*(141)*
• *Equity instruments*	*276*	*101*

(1) Shares and other equity securities include strategic equity interests and certain long-term private equity securities. As these securities are not held for sale, their classification as equity instruments designated at fair value through other comprehensive income is appropriate.
(2) Details presented in Note 7.1.2.2.

Equity instruments designated at fair value through other comprehensive income

Accounting principles

Equity instruments designated at fair value through other comprehensive income can include:

- investments in associates;
- shares and other equity securities.

On initial recognition, equity instruments designated at fair value through other comprehensive income are carried at fair value plus any transaction costs.

On subsequent closing dates, changes in the fair value of the instrument are recognized in other comprehensive income (OCI).

These changes in fair value that accrue to other comprehensive income will not be reclassified to profit or loss in subsequent years (other comprehensive income not recyclable to profit or loss).

Dividends are only taken to income when they meet the required conditions.

	12/31/2025				12/31/2024			
		Dividends recognized over the period	Derecognition over the period			Dividends recognized over the period	Derecognition over the period	
in millions of euros	Fair value	Equity instruments held at the end of the period	Fair value at the disposal date	Total profit or loss at the disposal date	Fair value	Equity instruments held at the end of the period	Fair value at the disposal date	Total profit or loss at the disposal date
Investments in associates	2,133	103	5	(4)	1,974	96	11	(19)
Shares and other equity securities	83	3	3		108	1	0	
TOTAL	**2,216**	**106**	**8**	**(4)**	**2,082**	**97**	**11**	**(19)**

Investments in associates include strategic investments, "tool" entities (IT for example) and certain long-term private equity securities. As these equity investments are not held for sale, their classification as equity instruments designated at fair value through other comprehensive income is appropriate.

The cumulative amount of changes in fair value reclassified to the "Consolidated reserves" component during the period mainly concerns the liquidation of non-consolidated securities and was -€4 million at December 31, 2025, compared to -€19 million at December 31, 2024.

5.5. Assets at amortized cost

Accounting principles

Assets at amortized cost are SPPI financial assets managed under a hold to collect business model. Most loans originated by the Group are classified in this category. Information about credit risk is provided in Note 7.1.

Financial assets at amortized cost include loans and advances to banks and customers as well as securities at amortized cost such as treasury bills and bonds.

Loans and advances are initially recorded at fair value plus any costs and less any income directly related to the arrangement of the loan or to the issue.

When loans are extended under conditions that are less favorable than market conditions, a discount corresponding to the difference between the nominal value of the loan and the sum of future cash flows discounted at the market interest rate is deducted from the nominal value of the loan. The market interest rate is the rate applied by the vast majority of local financial institutions at a given time for instruments and counterparties with similar characteristics.

On subsequent closing dates, these financial assets are measured at amortized cost using the effective interest method.

The effective interest rate is the rate that exactly discounts estimated future cash flows to the carrying amount of the loan at inception. This rate includes any discounts recorded in respect of loans granted at below-market rates, as well as any external transaction income or costs directly related to the implementation of the loans, which are treated as an adjustment to the effective yield on the loan. No internal cost is included in the calculation of amortized cost.

State-guaranteed loans

The State-guaranteed loan (SGL) is a support scheme set up under Article 6 of the amended French Finance act No. 2020-289 of March 23, 2020, and the ministerial order issued by the Minister of the Economy and Finance on March 23, 2020, establishing a State guarantee for credit institutions and financing companies from March 16, 2020, to meet the cash flow requirements of companies impacted by the Covid-19 health crisis. The SGL is subject to common eligibility criteria applicable by all institutions issuing the loan, as set out by law. The scheme ended on June 30, 2022.

The SGL is a one-year loan with capital repayments deferred for this period. The beneficiary companies may decide, at the end of the first year, to repay the SGLs over one to five additional years or to start repaying the capital only from the second year of the repayment period, paying only the interest and the cost of the State guarantee in the meantime.

For eligible companies, the amount of the SGL is generally capped at 25% of the company's revenues (excluding innovative and recently created companies, and excluding the Seasonal SGL for customers in the Tourism/Hotels/Catering sector, for example). The State provides a guarantee covering between 70% and 90% of the loan, depending on the size of the company. The issuing bank incurs the residual risk. The State guarantee covers a portion of the total amount due on the loan (principal, interest and incidental expenses) until it becomes due. The State guarantee may be enforced before the loan is due if a credit event should occur.

The prepayment penalty is set in the contract, at a reasonable level (2% of the principal amount outstanding during the initial loan period, then 3%-6% of the principal amount outstanding during the repayment period). The terms and conditions for extending the loan are not set in advance but are established two to three months before the extension option expires, in line with market conditions.

The SGLs may not be covered by another collateral security or guarantee besides the State guarantee, with the exception of those granted pursuant to a ministerial order by the Minister of the Economy and Finance. The self-employed professional or business leader may request or be offered loan repayment Insurance, but such Insurance is not mandatory.

In view of these features, the SGLs meet the criteria of a basic lending arrangement (see Note 2.5.1). These loans are therefore recognized at amortized cost, because they are managed in a hold-to-collect business model (see Note 2.5.1). On subsequent closing dates, they will be measured at amortized cost using the effective interest method.

The State guarantee is considered to be an integral part of the terms of the loan and is taken into account when calculating impairment for expected credit losses. The guarantee fee paid to the government by BPCE on granting the loan is recorded in income over the initial term of the SGL, using the Effective Interest method. The impact is recognized in net interest income.

A State-guaranteed loan granted to a borrower considered to be non-performing on inception (Stage 3) is classified as a POCI (Purchased or Originated Credit-Impaired) asset.

However, the grant of a State-guaranteed loan to a given counterparty is not in itself evidence of deterioration in risk, requiring a downgrade to Stage 2 or 3 of the other outstandings of this counterparty.

The Resilience SGL, opened on April 6, 2022, is an additional SGL for companies impacted by the consequences of the conflict in Ukraine (in particular for companies that are at – or close to – the 25% ceiling of the SGL). The authorized ceiling is 15% of the average revenue over the last three fiscal years, or the last two fiscal years if they have only two fiscal years or the last fiscal year if they only have one fiscal year, or calculated as annualized revenue using a straight-line projection based on revenue achieved to date if they have no closed fiscal year. Except for its amount, subject to the new ceiling of 15% of revenue, the additional Resilience SGL takes the same form as the SGLs introduced at the beginning of the health crisis: same maximum duration (up to six years), same minimum repayment-free period (12 months), same guaranteed portion and guarantee premium. The Resilience SGL could be fully combined with any SGLs already obtained until June 30, 2022. This scheme ended on December 31, 2023.

Loan renegotiations and restructuring

When contracts are modified, IFRS 9 requires the identification of financial assets that are renegotiated, restructured or otherwise modified (whether or not as a result of financial hardship), but not subsequently derecognized. Any profit or loss arising from the modification of a contract is recognized in income. The gross carrying amount of the financial asset must be recalculated so it is equal to the present value of the renegotiated or amended contractual cash flows at the initial effective interest rate. The materiality of the modifications is, however, analyzed on a case by case basis.

"Restructured" amounts correspond to loans where an arrangement has been reached that represents a concession to debtors in financial hardship or in danger of being so. "Restructured" amounts therefore require a combination of two elements: a concession and financial difficulties.

To qualify as a "restructuring", an arrangement must result in a more favorable situation for the debtor (*e.g.* suspended payments of interest or principle, extension of maturities, etc.) and take the form of additional clauses to an existing contract or the full or partial refinancing of an existing loan.

Financial difficulty is measured by a number of criteria, such as payments more than 30 days past due or an at-risk classification. The arrangement of a restructuring does not necessarily mean the counterparty in question is classed as in default by Basel standards. Whether they are classed as in default depends on the viability test carried out during the counterparty's restructuring.

In the event of restructuring following a proven credit loss event, the loan is considered as an impaired loan (in Stage 3) and is subject to a discount equal to the difference between the present value of the initially expected contractual cash flows and the discounting of the future expected capital and interest flows following the restructuring. The discount rate used is the initial effective interest rate. This discount is expensed to "Cost of credit risk" in the income statement and offset against the corresponding item on the balance sheet. It is written back to net interest income in the income statement over the life of the loan using an actuarial method. If the discount is immaterial, the effective interest rate on the restructured loan is adjusted and no discount is recognized.

The restructured loan is reclassified as performing (not impaired, Stage 1 or Stage 2) when no uncertainty remains as to the borrower's capacity to honor the commitment.

For substantially restructured loans (for example, the conversion of all or part of a loan into an equity instrument), the new instruments are booked at fair value. The difference between the carrying amount of the derecognized loan (or portion of the loan) and the fair value of the assets received in exchange is taken to income under "Cost of credit risk". Any previously established impairment loss on the loan is adjusted. It is fully reversed in the event of full conversion of the loan into new assets.

The widespread moratoria granted to business customers in response to temporary cash flow difficulties arising from the Covid-19 crisis modified these loans' repayment schedules without substantially modifying their features. These loans were therefore amended without being derecognized. In addition, the granting of the moratorium is not in itself an indication of financial distress for the companies in question.

Fees and commissions

Costs directly attributable to the arrangement of loans are external costs which consist primarily of commissions paid to third parties such as business provider fees.

Income directly attributable to the issuance of new loans principally comprises set-up fees charged to customers, rebilled costs and loan commitment fees (if it is more probable than improbable that the loan will be drawn down). Loan commitment fees received that will not result in any drawdowns are apportioned on a straight-line basis over the life of the commitment.

Expenses and income arising on loans with a term of less than one year at inception are deferred on a *pro rata* basis with no recalculation of the effective interest rate. For floating or adjustable rate loans, the effective interest rate is adjusted at each rate resetting date.

Date of recognition

Loans and securities are recorded in the balance sheet on the settlement-delivery date.

Temporary sales of securities are also recorded on the settlement-delivery date.

The first-in, first-out (FIFO) method is applied to any partial disposals of securities, except in special cases.

For repurchase transactions, a loan commitment given is recorded between the transaction date and the settlement-delivery date.

5.5.1. Securities at amortized cost

in millions of euros	12/31/2025	12/31/2024
Treasury bills and equivalent	3,518	3,708
Bonds and other debt securities	6,847	7,005
Impairment for expected credit losses	(247)	(245)
TOTAL SECURITIES AT AMORTIZED COST	**10,118**	**10,468**

The fair value of securities at amortized cost is presented in Note 10.

The classification of outstanding loans and impairment for credit losses by stage is detailed in Note 7.1.

5.5.2. Loans and advances to banks and similar at amortized cost

in millions of euros	12/31/2025	12/31/2024
Current accounts with overdrafts[1]	5,694	5,121
Repurchase agreements	2,570	397
Accounts and loans[2]	262,420	247,944
Other loans or advances to banks and similar	155	148
Security deposits paid	3,360	1,927
Impairment for expected credit losses	(28)	(27)
TOTAL LOANS AND ADVANCES TO BANKS[3]	**274,171**	**255,510**

(1) The impact of the entry of the BPCE Equipment Solutions entities amounted to €614 million.
(2) Livret A, LDD and LEP savings accounts centralized with Caisse des Dépôts et Consignations and recorded under "Accounts and loans" amounted to €664 million at December 31, 2025 *versus* €630 million at December 31, 2024.
(3) Receivables arising from transactions with the network amounted to €260,802 million at December 31, 2025 (€245,303 million at December 31, 2024).

Green financing outstandings are detailed in Chapter 2 "Sustainability report" (Part 2 - Environmental information).

The fair value of loans and advances due to banks and similar is presented in Note 10.

The classification of outstanding loans and impairment for credit losses by stage is detailed in Note 7.1.

5.5.3. Loans and advances to customers at amortized cost

in millions of euros	12/31/2025	12/31/2024
Current accounts with overdrafts	**2,137**	**2,137**
Other facilities granted to customers	**185,381**	**169,539**
Loans to financial sector customers	22,510	21,453
Credit facilities[1]	54,014	53,935
Equipment loans[2]	37,694	30,362
Home loans	30,455	33,139
Export loans	3,466	2,642
Repurchase agreements	1,508	1,504
Finance leases[2]	26,879	18,068
Subordinated loans	(25)	(31)
Other loans	8,881	8,467
Other loans or advances to customers	**5,576**	**5,902**
Security deposits paid	**749**	**848**
Gross loans and advances to customers	**193,843**	**178,426**
Impairment for expected credit losses	(3,037)	(2,835)
TOTAL LOANS AND ADVANCES TO CUSTOMERS	**190,807**	**175,591**

(1) The State-guaranteed loans (SGL) are included in short-term credit facilities and totaled €1 billion just like at December 31, 2024.
(2) The impact of the entry of the BPCE Equipment Solutions entities amounted to €5,769 million on equipment loans and €7,874 million on finance leases.

The fair value of loans and advances to customers is presented in Note 10.

The classification of outstanding loans and impairment for credit losses by stage is detailed in Note 7.1.

5.6. Accrued income and other assets

in millions of euros	12/31/2025	12/31/2024
Collection accounts	381	397
Prepaid expenses	538	524
Accrued income	341	366
Other accrued income	1,697	4,009
Accrued income – assets	**2,957**	**5,296**
Settlement accounts in debit on securities transactions	17	194
Other accounts receivable	5,020	4,437
Other assets	**5,037**	**4,631**
TOTAL ACCRUED INCOME AND OTHER ASSETS	**7,993**	**9,927**

5.7. Non-current assets held for sale and associated liabilities

Accounting principles

Where a decision is made to sell non-current assets and it is highly probable that the sale will occur within 12 months, these assets are shown separately on the balance sheet on the "Non-current assets held for sale" line. Any liabilities associated with these assets are also shown separately on the balance sheet on the "Liabilities associated with non-current assets held for sale" line.

Once classified in this category, non-current assets are no longer depreciated/amortized and are measured at the lowest of their carrying amount or fair value less sales costs. Financial instruments continue to be measured in accordance with IFRS 9.

A non-current asset (or group of assets) is held for sale when its carrying amount is recovered by its sale. The asset (or group of assets) must be immediately available for sale and it must be highly likely that the sale will be completed within the next 12 months.

Disposal of MV CREDIT

On January 31, 2025, Natixis Investment Managers sold its subsidiary "MV Credit" to the US investment company Clearlake Capital Group.

At December 31, 2024, Natixis, through Natixis Investment Managers, had maintained the full consolidation of the subsidiary and presented, in accordance with the provisions of IFRS 5 "Non-Current Assets Held for Sale and Discontinued Operations", assets and liabilities of this entity in two separate balance sheet items.

Disposal of Vauban Infrastructure Partners ("Vauban")

Natixis Investment Managers has reached an agreement to sell 24.99% of the share capital of Vauban Infrastructure Partners ("Vauban") to Investcorp Strategic Capital Group, a global platform specializing in equity investments in asset management companies. After this disposal, Natixis Investment Managers will no longer control Vauban, but will continue to hold 24.99% of this entity, which it will then consolidate using the equity method. At December 31, 2025, Natixis, through Natixis Investment Managers, had maintained the full consolidation of "Vauban" and presented, in accordance with the provisions of IFRS 5 "Non-Current Assets Held for Sale and Discontinued Operations", assets and liabilities of this entity in two separate balance sheet items: "Non-current assets held for sale" and "Liabilities associated with non-current assets held for sale".

Figures relating to the entities held for sale are shown below:

in millions of euros	12/31/2025	12/31/2024
Financial assets at fair value through profit or loss	29	0
Financial assets at fair value through other comprehensive income	0	322
Loans and advances to banks and similar at amortized cost	0	18
Loans and advances to customers at amortized cost	0	1
Current tax assets	3	0
Deferred tax assets	1	1
Accrued income and other assets	22	12
Property, plant and equipment	6	2
Intangible assets	(0)	10
Goodwill	135	72
NON-CURRENT ASSETS HELD FOR SALE	**197**	**438**
Debt securities	0	297
Amounts due to banks and similar	0	1
Current tax liabilities	(2)	(1)
Deferred tax liabilities	0	1
Accrued expenses and other liabilities	22	13
Provisions	1	0
LIABILITIES ASSOCIATED WITH NON-CURRENT ASSETS HELD FOR SALE	**21**	**312**

5.8. Investment property

Accounting principles

In accordance with IAS 40, investment property is property held to earn rent and for capital appreciation.

The accounting treatment for investment property is identical to that used for property, plant and equipment for all Group entities except for certain Insurance entities, which recognize the property they hold as Insurance investments at fair value, with any adjustment to fair value recorded in income. Fair value is calculated using a multi-criteria approach, by capitalizing rent at market rates and through comparisons with market transactions.

The fair value of the Group's investment property is based on regular expert valuations, except in special cases significantly affecting the value of the relevant asset.

Investment property leased under an operating lease may have a residual value that will reduce the depreciable amount of the asset.

Gains or losses on the disposal of investment property are recognized in income on the "Net income or expenses on other activities" line, with the exception of insurance activities, which are recognized in "Revenue from insurance activities".

	12/31/2025			12/31/2024		
in millions of euros	**Gross amount**	**Accumulated depreciation and impairment**	**Net amount**	**Gross amount**	**Accumulated depreciation and impairment**	**Net amount**
Property recognized at historic cost	157	(98)	60	78	(58)	20
TOTAL INVESTMENT PROPERTY			**60**			**20**

Investment property held by the insurance subsidiaries is reported with insurance investments (see Note 9).

The fair value of investment property came to €58 million at December 31, 2025 (€33 million at December 31, 2024).

The fair value of investment property is classified in Level 3 of the fair value hierarchy in accordance with IFRS 13.

5.9. Property, plant and equipment and intangible assets

Accounting principles

This item includes property owned and used in the business, movable assets acquired under operating leases, property acquired under finance leases and temporarily unleased assets held under finance leases. Interests in non-trading real estate companies (SCIs) are accounted for as property, plant and equipment.

In accordance with IAS 16 and IAS 38, property, plant and equipment and intangible assets are recognized as assets only if they meet the following conditions:

- it is probable that the company will enjoy future economic benefits associated with the asset;
- the cost of the asset can be measured reliably.

Property, plant and equipment and intangible assets used in operations are initially recognized at cost plus any directly attributable acquisition costs. Software developed internally that fulfills the criteria for recognition as a non-current asset is recognized at its production cost, which includes external charges and the payroll costs of employees directly assigned to the project.

The component-based approach is applied to all buildings.

Internally created software is recognized as an asset in the balance sheet under "Intangible assets" for its direct development cost when the criteria for recognition of an asset as set out in IAS 38 are met.

After initial recognition, property, plant and equipment and intangible assets are measured at cost less any accumulated depreciation, amortization or impairment. The depreciable amount of the asset takes account of its residual value where this is material and can be measured reliably.

Property, plant and equipment and intangible assets are depreciated or amortized in order to reflect the pattern in which the asset's future economic benefits are expected to be consumed by the entity, which generally corresponds to the asset's useful life. Where an asset consists of a number of components that have different uses or economic benefit patterns, each component is recognized separately and depreciated over a period that reflects the useful life of that component.

The depreciation and amortization periods used by the Group are as follows:

- buildings: 20 to 60 years;
- internal fixtures and fittings: 5 to 20 years;
- furniture and special equipment: 4 to 10 years;
- IT equipment: 3 to 5 years;
- software: not more than 5 years.

Other items of property, plant and equipment and intangible assets are depreciated over their estimated useful life, which generally ranges from 5 to 10 years.

Property, plant and equipment and intangible assets are tested for impairment whenever there is any evidence that they may be impaired at the balance sheet date. If this is the case, the revised recoverable amount of the asset is compared to its net carrying amount. If the revised recoverable amount of the asset is lower than its carrying amount, an impairment loss is recognized in income.

This loss is reversed in the event of a change in the estimated recoverable amount or if there is no longer any evidence of impairment.

Equipment leased under operating leases (group as lessor) is recognized as an asset on the balance sheet under property, plant and equipment.

	12/31/2025			12/31/2024		
in millions of euros	**Gross amount**	**Accumulated depreciation and impairment**	**Net amount**	**Gross amount**	**Accumulated depreciation and impairment**	**Net amount**

TOTAL INTANGIBLE ASSETS	**3,883**	**(2,876)**	**1,007**	**3,565**	**(2,555)**	**1,010**

5.10. Debt securities

Accounting principles

Issues of debt securities not classified as financial liabilities at fair value through profit or loss or through other comprehensive income are initially recognized at fair value less any transaction costs. They are subsequently measured at amortized cost at each reporting date using the effective interest method.

These instruments are recognized on the balance sheet under "Amounts due to banks", "Amounts due to customers" or "Debt securities".

Debt securities are classified based on the nature of the underlying, with the exception of subordinated notes presented under "Subordinated debt".

Securities are recorded in the balance sheet on the settlement-delivery date.

The first-in, first-out (FIFO) method is applied to any partial buyback of securities, except in special cases.

A new category of liabilities eligible for the numerator of the Total Loss Absorbing Capacity (TLAC) calculation has been introduced by French law and is commonly referred to as "Senior non-preferred debt". These liabilities rank between own funds and "Other senior preferred debt".

in millions of euros	12/31/2025	12/31/2024
Bonds	147,409	152,805
Interbank market instruments and negotiable debt securities	73,375	94,080
Other debt securities that are neither preferred nor subordinated	3	352
Senior non-preferred debt	38,636	34,925
Total	**259,424**	**282,161**
Accrued interest	3,417	3,238
TOTAL DEBT SECURITIES	**262,841**	**285,399**

Green bond issues are detailed in Chapter 2 "Sustainability report" (Part 2 - Environmental information).

The fair value of debt securities is presented in Note 10.

5.11. Amounts due to banks and similar and customers

Accounting principles

Debts, which are not classified as financial liabilities measured at fair value through profit or loss or as equity, are recorded in the balance sheet under "Amounts due to banks" or "Amounts due to customers".

These debts issued are initially recognized at their fair value less transaction costs and are measured at the reporting date according to the amortized cost method using the effective interest method.

These instruments are recognized on the balance sheet under "Amounts due to banks", "Amounts due to customers" or "Debt securities" (see Note 5.10).

Temporary sales of securities are recorded on the settlement-delivery date.

For repurchase transactions, a loan commitment received is recorded between the transaction date and the settlement-delivery date when such transactions are recorded as "Liabilities".

The long-term refinancing operations (TLTRO 3) with the ECB were repaid in full at the end of March 2024.

5.11.1. Amounts due to banks and similar

in millions of euros	12/31/2025	12/31/2024
Demand deposits	37,819	38,265
Repurchase agreements	1,160	1,241
Accrued interest	12	99
Amounts due to banks and similar – repayable on demand	**38,991**	**39,605**
Term deposits and loans[1]	144,921	129,260
Repurchase agreements	12,143	7,118
Accrued interest	310	389
Amounts due to banks and similar – repayable at agreed maturity dates[2]	**157,374**	**136,766**
Guarantee deposits received	**710**	**645**
TOTAL AMOUNTS DUE TO BANKS AND SIMILAR	**197,075**	**177,016**

(1) The impact of the entry of BPCE Equipment Solutions amounted to €3,326 million.
(2) Payables arising from transactions with the network amounted to €134,717 million at December 31, 2025 (€129,928 million at December 31, 2024).

The fair value of amounts due to banks and similar is presented in Note 10.

5.11.2. Amounts due to customers

in millions of euros	12/31/2025	12/31/2024
Current accounts[1]	**45,664**	**36,261**
Livret A savings accounts	923	826
Regulated home purchase savings plans and accounts	127	141
Other regulated savings accounts	1,025	949

Regulated savings accounts	**2,080**	**1,922**
Demand deposits and loans	2,066	3,188
Term accounts and loans[1]	33,731	24,304
Accrued interest	210	221
Other customer accounts	**36,007**	**27,713**
Repurchase agreements	**1,379**	**840**
Other amounts due to customers	**214**	**196**
Guarantee deposits received	**80**	**47**
TOTAL AMOUNTS DUE TO CUSTOMERS	**85,423**	**66,979**

(1) The impact of the entry of the BPCE Equipment Solutions entities is €878 million on current accounts and €1,090 million on term deposits and loans.

The details of the green passbook savings accounts are presented in Chapter 2 "Sustainability report" (Part 2 - Environmental information).
The fair value of amounts due to customers is presented in Note 10.

5.12. Accrued expenses and other liabilities

in millions of euros	12/31/2025	12/31/2024
Collection accounts	444	1,160
Prepaid income	476	430
Accounts payable	1,856	1,647
Other accrued expenses	1,987	2,631
Accrued expenses – liabilities	**4,763**	**5,868**
Settlement accounts in credit on securities transactions	53	53
Other accounts payable	5,050	4,643
Lease liabilities	941	963
Other liabilities	**6,044**	**5,659**
TOTAL ACCRUED EXPENSES AND OTHER LIABILITIES	**10,809**	**11,527**

5.13. Provisions

Accounting principles

Provisions other than those relating to employee benefits and similar, regulated home purchase savings products, off-balance sheet commitments, and insurance contracts mainly consist of provisions for restructuring, claims and litigation, fines and penalties, and tax risks (excluding income tax).

The provisions are liabilities of uncertain timing or amount. A provision must be recognized when there is a present obligation (legal or implicit) resulting from past events, the settlement of which is likely to require an outflow of resources, and the amount of which can be reliably estimated.

The amount recognized in provisions is the best estimate of the expense required to extinguish the present commitment at the reporting date.

Provisions are discounted when the impact of discounting is material.

Changes in provisions are recognized in the income statement on the lines corresponding to the nature of the future expenditure.

Provisions on regulated home purchase savings products

Regulated home purchase savings accounts (*Comptes Épargne Logement* – CEL) and regulated home purchase savings plans (*Plans Épargne Logement* – PEL) are retail products marketed in France governed by the 1965 act on home purchase savings schemes, and subsequent implementing decrees.

Regulated home purchase savings schemes generate two types of commitments for establishments selling them:

- a commitment to provide a loan to the customer in the future at a rate set on inception of the contract (for PEL products) or at a rate contingent upon the savings phase (for CEL products);
- a commitment to pay interest on the savings in the future at a rate set on inception of the contract for an indefinite period (for PEL products) or at a rate set on a half-yearly basis according to an indexing formula regulated by law (for CEL products).

Commitments with potentially unfavorable consequences are measured for each generation of regulated home purchase savings plans and for all regulated home purchase savings accounts.

A provision is recognized for the associated risks by discounting future potential earnings from at-risk outstandings:

- at-risk savings deposits correspond to the uncertain future level of savings for plans in existence at the date the provision is calculated. This is estimated on a statistical basis for each future period taking account of historical investor behavior patterns, and corresponds to the difference between the probable savings deposits and the minimum expected savings deposits;
- at-risk loan outstandings correspond to the loan outstandings granted but not yet due at the calculation date plus statistically probable loan outstandings based on historical customer behavior patterns as well as earned and future rights relating to regulated home purchase savings accounts and plans.

The commitments are estimated using the Monte Carlo method in order to reflect the uncertainty of future interest rate trends and their impact on customer behavior models and at-risk outstandings. On this basis, a provision is recorded for a given generation of contracts in the event of a situation liable to be detrimental for the Group, with no netting between generations.

The provision is recognized under liabilities in the balance sheet and changes are recorded in net interest income and expenses.

5.13.1. Summary of provisions

in millions of euros	12/31/2024	Increase	Used	Reversals unused	Other changes[1]	12/31/2025
Provisions for employee benefits[2]	726	263	(142)	(18)	73	902
Provisions for restructuring costs[3]	108	2	(5)	(14)	0	92
Legal and tax risks[4]	541	20	(12)	(23)	(41)	485
Loan and guarantee commitments[5]	457	363	0	(348)	(0)	472
Provisions for regulated home savings products	3	0	0	(2)	0	2
Other operating provisions	381	129	(13)	(23)	(11)	463
TOTAL PROVISIONS	**2,218**	**777**	**(172)**	**(428)**	**21**	**2,416**

(1) The other changes include in particular the entry into the scope of the BPCE Equipment Solutions entities (+€136 million), the change in the revaluation surplus of post-employment defined-benefit plans (-€28 million before tax) and the foreign exchange rate adjustments (-€72 million).
(2) Of which €842 million for post-employment defined-benefit plans and other long-term employee benefits.
(3) At December 31, 2025, the provision for restructuring notably included €65 million for the voluntary departure plan at Crédit Foncier (the same as at December 31, 2024).
(4) The provisions for legal and tax risks included €306 million for the net exposure on the Madoff case (compared to €348 million at December 31, 2024).
(5) The provisions for loan and guarantee commitments are detailed in Note 7.1.2.

Information on main risks and management procedures to which BPCE is exposed, including legal risks, is presented in Chapter 7.10 "Risk factors and risk management - Legal risks".

5.14. Subordinated debt

Accounting principles

Subordinated debt differs from other debt and bonds in that it will be repaid only after all the senior and unsecured creditors, but before the repayment of participating loans and securities and deeply subordinated notes.

Subordinated debt which the issuer is obliged to repay is classified as debt and initially recognized at fair value less any transaction costs. It is subsequently measured at amortized cost at each reporting date using the effective interest method.

in millions of euros	12/31/2025	12/31/2024
Term subordinated debt	17,842	18,340
Perpetual subordinated debt	35	286
Subordinated debt and similar	**17,877**	**18,626**
Accrued interest	743	696
Revaluation of the hedged component	(688)	(1,009)
SUBORDINATED DEBT AT AMORTIZED COST	17,932	18,312
TOTAL SUBORDINATED DEBT[1]	**17,932**	**18,312**

(1) The fair value of subordinated debt is presented in Note 10.

Changes in subordinated debt[1] and similar during the fiscal year

in millions of euros	12/31/2024	Issue[2]	Redemption[3]	Other changes[4]	12/31/2025
Term subordinated debt[5]	17,331	2,417	(1,964)	(631)	17,154
Perpetual subordinated debt	286		(251)		35
TOTAL	**17,617**	**2,417**	**(2,215)**	**(631)**	**17,189**

(1) Excluding accrued interest.
(2) In its dual role as an issuer on the bond market (to refinance the excess of the Group's financing needs over its customers' deposits and to provide the Group with additional capital and capacity to absorb losses), and as the organizer/manager of the Group's internal capital management transactions as a central institution, BPCE SA issued €2 billion of Tier-2 bonds on the market in 2025 (compared to €1.6 billion on December 31, 2024).
(3) The redemptions of subordinated loans and notes were due to the maturing of such borrowings or the exercising of a call.
(4) The other changes mainly concern the revaluation of hedged debt and exchange rate fluctuations.
(5) Including the revaluation of the hedged component.

Deeply subordinated notes qualifying as equity instruments are presented in Note 5.15.2.

5.15. Ordinary shares and equity instruments issued

Accounting principles

Financial instruments issued by the Group qualify as debt or equity instruments depending on whether or not the issuer has a contractual obligation to deliver cash or another financial asset to the holder of the instrument, or to exchange the instrument under conditions that are potentially unfavorable to the Group. This obligation must arise from specific contractual terms and conditions, not merely economic constraints.

In addition, when an instrument qualifies as equity:

- its remuneration impacts equity. However, in accordance with the amendment to IAS 12 of December 2017, which applies from January 1, 2019, the tax consequences of dividend payments can be recognized in consolidated reserves, gains and losses recognized directly in equity, or in profit or loss, depending on the source of the amounts paid. Accordingly, when the payment corresponds to the notion of a dividend within the meaning of IFRS 9, the tax consequence is taken to income. This rule applies to interest on perpetual deeply subordinated notes, which is treated as a dividend for accounting purposes;
- it cannot be an underlying instrument eligible for hedge accounting;
- if the issue is in a foreign currency, the instrument is fixed at its historical value resulting from its conversion to euros at its initial date of transfer to equity.

Finally, when these instruments are issued by a subsidiary, they are included in "Non-controlling interests". When their remuneration is of a cumulative nature, it is charged to "Income attributable to equity holders of the parent" and increases the income of "Non-controlling interests". However, when their remuneration is not of a cumulative nature, it is drawn from consolidated reserves attributable to equity holders of the parent.

5.15.1. Share capital

BPCE's share capital amounted to €208 million at December 31, 2025 (compared with €198 million at December 31, 2024), *i.e.* 41,520,606 shares with a par value of €5 per share, which breaks down as follows:

- 20,760,303 ordinary shares held by the Banques Populaires for €104 million;
- 20,760,303 ordinary shares held by the Caisses d'Epargne for €104 million.

At December 31, 2025, additional paid-in capital amounted to €18,048 million (€16,758 million at December 31, 2024).

5.15.2. Perpetual deeply subordinated notes classified as equity

Issuing entity	Issue date	Currency	Amount *(in original currency)*	Call date	Interest step-up date[1]	Rate	Nominal *in millions of euros* 12/31/2025	12/31/2024
BPCE	11/30/2018	EUR	700 million	02/28/2025	11/30/2023	7.95%		700
BPCE	09/28/2021	EUR	2,690 million	09/28/2026	09/28/2026	3.00%	2,690	2,690
BPCE	06/28/2022	EUR	1,800 million	06/28/2027	06/28/2027	7.38%	1,800	1,800
TOTAL							**4,490**	**5,190**

(1) Interest step-up date or date of transition from fixed to variable rate:
- either an increased interest rate of EURIBOR 3 months +5.04% after November 30, 2023 dedicated to the November 30, 2018 issue;
- or an increased interest rate of EURIBOR 3 months +3.25% after September 28, 2026 dedicated to the September 28, 2021 issue;
- or an increased interest rate of EURIBOR 3 months +5.04% after June 28, 2027 dedicated to the June 28, 2022 issue.

Issues of perpetual deeply subordinated notes are recognized in equity due to the discretionary nature of their remuneration.

5.16. Non-controlling interests

5.16.1. Material non-controlling interests

At December 31, 2025, the material non-controlling interests with regard to the Group's shareholders' equity are broken down as follows:

in millions of euros		2025 fiscal year						
		Non-controlling interests			Financial information summarized at 100%			
Entity name	**Percentage ownership of non-controlling interests**	**Income attributed to holders of non-controlling interests during the period**	**Amount of non-controlling interests in the subsidiary**	**Dividends paid to holders of non-controlling interests**	**Assets**	**Liabilities**	**Net income attributable to equity holders of the parent**	**Other comprehensive income (attributable to equity holders of the parent)**

Non-controlling interests			*3*			*1*

5.18. Offsetting of financial assets and financial liabilities

Accounting principles

Financial assets and liabilities were offset on the balance sheet in accordance with IAS 32. Under this standard, a financial asset and financial liability are offset and a net balance is recorded in the balance sheet if and only if:

- the Group has the legally enforceable right to offset the recorded amounts; and
- it has the intention either to settle the net amount or to simultaneously realize the asset and settle the liability.

Within BPCE, most offset amounts are the result of repurchase agreements and derivatives transactions largely carried out by the GFS division with clearing houses, which meet the requirements of IAS 32:

- for listed derivatives, the positions recorded under the respective asset and liability items for:
  - index options and futures options are offset by maturity and by currency,
  - equity options are offset by ISIN code and maturity date;
- for OTC derivatives, this comprises the netting, by currency, of the asset valuations and liability valuations of the derivatives;
- for repurchase agreements, the amount recorded in the balance sheet corresponds to the net value of repurchase and reverse repurchase agreements:
  - entered into with the same counterparty and which,
  - have the same maturity date,
  - are operated via the same custodian or settlement-delivery platform,
  - are denominated in the same currency.

Since December 31, 2020, the OTC derivatives traded by the GFS division with the clearing houses LCH Clearnet Ltd, Eurex Clearing AG and CME Clearing are not subject to netting within the meaning of IAS 32, but are settled daily (application of the Settlement to Market principle as provided for by these three clearing houses, which treats margin calls as daily settlement for derivatives instead of as collateral).

Financial assets and liabilities under netting agreements may only be offset if they meet the restrictive netting criteria set by IAS 32.

Offsetting may not be performed for derivatives or OTC repurchase agreements subject to master agreements that do not meet the net settlement criteria or where the realization of a simultaneous settlement of the asset and liability cannot be demonstrated or for which the offsetting right can only be exercised in the event of default, insolvency or bankruptcy by one of the parties to the agreement. However, the impact of such agreements in terms of reducing the exposure is presented in the second table.

For these instruments, the "Related financial assets and financial instruments received as collateral" and "Related financial liabilities and financial instruments pledged as collateral" columns include in particular:

- for repurchase agreements:
  - loans or borrowings resulting from reverse repurchase agreements with the same counterparty, and securities pledged or received as collateral (for the fair value of said securities),
  - margin calls in the form of securities (for the fair value of said securities);
- for derivatives, the fair values of reverse transactions with the same counterparty, as well as margin calls in the form of securities.

Margin calls received or paid in cash are shown in "Margin calls received (cash collateral)" and "Margin calls paid (cash collateral)".

5.18.1. Financial assets

Impact of offsetting on financial assets under netting agreements in the balance sheet

	12/31/2025			12/31/2024		
in millions of euros	Gross amount of financial assets[1]	Gross amount of financial liabilities offset in the balance sheet	Net amount of financial assets recognized in the balance sheet	Gross amount of financial assets	Gross amount of financial liabilities offset in the balance sheet	Net amount of financial assets recognized in the balance sheet
Derivatives (trading and hedging)	67,499	5,741	61,759	68,880	4,980	63,900
Repurchase agreements	112,892	34,746	78,146	114,414	30,638	83,776
Financial assets at fair value	**180,391**	**40,487**	**139,905**	**183,294**	**35,618**	**147,676**

TOTAL	**214,740**	**44,212**	**170,528**	**206,359**	**37,819**	**168,540**

(1) Includes the gross amount of financial liabilities subject to netting or an enforceable master netting agreement or similar and financial liabilities not subject to any agreement.

Impact of netting agreements on financial liabilities not recognized in the financial statements

	12/31/2025				12/31/2024			
in millions of euros	Net amount of financial liabilities recognized in the balance sheet	Related financial assets and financial instruments pledged as collateral[1]	Margin calls paid (cash collateral)	Net exposure	Net amount of financial liabilities recognized in the balance sheet	Related financial assets and financial instruments pledged as collateral	Margin calls paid (cash collateral)	Net exposure
Derivatives (trading and hedging)	57,850	34,191	6,481	17,178	58,882	30,903	6,591	21,388
Repurchase agreements	112,678	112,461	55	162	109,658	108,752	15	891
TOTAL	**170,528**	**146,652**	**6,536**	**17,340**	**168,540**	**139,655**	**6,606**	**22,279**

(1) Including collateral received in the form of securities.

The net exposure does not reflect the accounting position, because it takes into account the reduced exposure arising from agreements that do not meet the restrictive netting criteria set by IAS 32.

5.19. Transferred financial assets, other financial assets pledged as collateral and assets received as collateral that can be sold or repledged

Accounting principles

A financial asset (or group of similar financial assets) is derecognized when the contractual rights to the asset's future cash flows have expired or when such rights are transferred to a third party, together with substantially all of the risks and rewards associated with ownership of the asset. In such case, rights and obligations created or retained as a result of the transfer are recorded in a separate line under financial assets and liabilities.

When a financial asset is derecognized, a gain or loss on disposal is recorded in the income statement reflecting the difference between the carrying amount of the asset and the consideration received.

In the event that the Group has neither transferred nor retained substantially all of the risks and rewards, but has retained control of the asset, the asset continues to be recognized on the balance sheet to the extent of the Group's continuing involvement.

In the event that the Group has neither transferred nor retained substantially all of the risks and rewards and has not retained control of the asset, the asset is derecognized and all of the rights and obligations created or retained as a result of the transfer are recorded in a separate line under financial assets and liabilities.

If all the conditions for derecognizing a financial asset are not met, the Group keeps the asset in the balance sheet and records a liability representing the obligations arising when the asset is transferred.

The Group derecognizes a financial liability (or a part of a financial liability) only when it is extinguished, *i.e.* when the obligation specified in the contract is discharged, terminated or expires.

Repurchase agreements

Securities sold under repurchase agreements are not derecognized in the vendor's accounts. A liability representing the commitment to return the funds received is identified and recognized under "Securities sold under repurchase agreements". This debt is a financial liability recorded at amortized cost or at fair value through profit or loss when this liability is considered part of a trading business model.

The assets received are not recognized in the purchaser's books, but a receivable is recorded with respect to the vendor representing the funds loaned. The amount disbursed in respect of the asset is recognized under "Securities purchased under resale agreements". On subsequent balance sheet dates, the securities continue to be accounted for by the vendor in accordance with the rules applicable to the category in which they were initially classified. The receivable is valued according to methods specific to its category: at amortized cost when classified in "Loans and advances", or at fair value through profit or loss when it is considered part of a trading business model.

Outright securities lending

Securities loaned under outright securities lending transactions are not derecognized in the vendor's accounts. They continue to be recognized in their original accounting category and are valued accordingly. For the borrower, the securities borrowed are not recognized.

Transactions leading to substantial changes in financial assets

When an asset is subject to substantial changes (in particular following renegotiation or remodeling due to financial hardship) there is derecognition, since the rights to the initial cash flows have essentially expired. The Group considers that this is the case for:

- changes leading to a change of counterparty, especially if the new counterparty has a very different credit quality than the previous counterparty;
- changes intended to move from a very structured to basic indexing, as the two assets are not exposed to the same risks.

Transactions leading to substantial changes in financial liabilities

A substantial change to the terms of a lending instrument must be recorded as the extinguishment of the existing debt and its replacement with a new debt. The amendment to IFRS 9 of October 12, 2017 clarified the treatment under IFRS 9 of modifications of liabilities recognized at amortized cost if the modification does not result in derecognition: the profit or loss resulting from the difference between the original cash flows and the modified cash flows discounted at the original effective interest rate must be recognized in profit or loss. To assess the substantial nature of the change, IFRS 9 includes a threshold of 10% based on discounted cash flows, integrating potential costs and fees: when the difference is greater than or equal to 10%, all of the costs or fees incurred are recognized as profit or loss on debt extinguishment.

The Group may consider other changes to be substantial, such as a change of issuer (even within the same group) or a change in currency.

5.19.1. Financial assets pledged as collateral for liabilities

in millions of euros	12/31/2025	12/31/2024
Financial assets at fair value through profit or loss – Non-SPPI	3	5
Financial assets at amortized cost	11,088	8,623
TOTAL	**11,091**	**8,628**

Includes notably:

- the carrying amount of underlying assets sold to reconsolidated vehicles as part of covered bond issues (excluding the securitization framework presented below in 5.20.2.1 consolidated securitizations). Moreover, in accordance with French law, the intrinsic guarantees attached to issues of covered bonds are not recognized under guarantee commitments given.
- the carrying amount of financial instruments (securities and receivables) provided as collateral but not transferred and which are generally pledged as collateral (Articles L. 211-38). The main mechanisms involved are the CRH (Caisse de Refinancement de l'Habitat), the ESNI marketplace refinancing mechanism and securities pledged as collateral for European Central Bank (ECB) refinancing operations.

Note that:

- financial assets pledged as collateral for liabilities relating to repurchase agreements as well as financial instruments (securities and receivables) that the Group transfers in full ownership as security (Articles L. 211-38 or L. 313-23 *et seq.* of the French Monetary and Financial Code) as part of guaranteed refinancing, are presented with table 5.19.2.1 Transferred financial assets not fully derecognized.
- financial assets provided as collateral for liabilities of securitization transactions with actual disposal of the asset (transferred assets that are not derecognized) are presented separately in the securitization table below.

5.19.2. Transferred financial assets

5.19.2.1. Transferred financial assets not fully derecognized

Transferred financial assets that are not derecognized are essentially composed of the following instruments: repurchase agreements; securities lending collateralized by the delivery of cash; outright securities loans. The other transactions column mainly consists of assets that BPCE transfers to the counterparty as security (Dailly sale or Articles L. 211-38 or L. 313-23 *et seq.* of the French Monetary and Financial Code) as part of guaranteed refinancing.

Securities repurchasing and lending

BPCE repurchases and loans securities.

Under the terms of the agreements, the securities may be sold on by the purchaser throughout the duration of the repurchase or lending agreement. The purchaser must nevertheless return them to the vendor at the end of the agreement. Cash flows generated by the securities are also transferred to the vendor.

The Group believes that it retains almost all of the risks and benefits of securities under repurchase or loan agreements. They are therefore not derecognized. Financing has been recorded in liabilities for the repurchasing or lending of financed securities.

Assignment of debt under Dailly or Articles L. 211-38 (or L. 313-23) with transfer of ownership

BPCE assigns receivables as collateral (Articles L. 211-38 or L. 313-23 *et seq.* of the French Monetary and Financial Code) in the context of guaranteed refinancing, in particular with the central bank. The Group also transfers receivables as collateral in connection with issues carried out by securitization vehicles (Demeter transactions). These instruments continue to be disclosed in the consolidated balance sheet in accordance with their original classification. This type of assignment by way of guarantee involves the legal transfer of the contractual rights. The Group nevertheless remains exposed to virtually all the risks and benefits, and as such the receivables are maintained on the balance sheet.

The assets pledged as collateral for securitization transactions with real sale of assets known as "true sale" are presented separately in the securitization table below.

Securitization assets for which the counterparties to the associated debts have recourse only to the transferred assets

Securitizations with true sale of assets to a reconsolidated vehicle

Securitizations consolidated with outside investors constitute an asset transfer according to the amendment to IFRS 7.

The Group has an indirect contractual obligation to transfer to outside investors the cash flow from assets transferred to the securitization fund (although these assets are included in the Group's balance sheet through the consolidation of the fund).

In the interest of transparency, for consolidated securitization transactions:

- the share of receivables sold attributable to external investors is considered to be pledged as collateral to third parties;
- the share of receivables sold attributable to units and bonds subscribed for by the Group, and eliminated on consolidation, is not considered to be pledged as collateral unless these securities were brought to BPCE's single treasury and central bank collateral management pool and used as part of a refinancing mechanism.

The senior units of the BPCE Financement Purple Master Credit Cards securitization transactions are subscribed by external investors.

5.19.2.2. Fully derecognized transferred financial assets for which the Group retains an ongoing commitment

Fully derecognized transferred financial assets for which the Group retains an ongoing commitment mainly consist of asset transfers to a deconsolidated securitization vehicle in which BPCE has an interest or an obligation, although this does not call into question the transfer of almost all of the benefits and risks relating to the assets transferred.

Ongoing commitments retained by the Group in relation to securitization vehicles were not significant on December 31, 2025.

5.19.3. Financial assets received as collateral that can be sold or repledged

This heading covers financial assets received as security under financial guarantee agreements with the right to reuse the assets in the absence of any default on the part of the owner of the guarantee.

The fair value of the financial assets received as collateral that BPCE may sell or repledge amounted to €256 billion at December 31, 2025, compared to €254 billion at December 31, 2024.

The fair value of the financial assets received as collateral that were actually sold or repledged amounted to €198 billion at December 31, 2025, compared with €209 billion at December 31, 2024.

Note 6 Commitments

Accounting principles

Commitments are materialized by the existence of a contractual obligation and are binding.

It must not be possible for commitments included in this item to be deemed financial instruments falling within the scope of IFRS 9 for classification and measurement purposes. However, loan and guarantee commitments given are covered by IFRS 9 impairment rules, as set out in Note 7.

The effects of the rights and obligations covered by such commitments must be subject to the occurrence of conditions or subsequent transactions. Commitments are broken down into:

- loan commitments (confirmed credit facilities or refinancing agreements);
- guarantee commitments (off-balance sheet commitments or assets received as collateral).

The amounts shown correspond to the nominal value of commitments given.

6.1. Loan commitments

in millions of euros	12/31/2025	12/31/2024
Loan commitments given to:		
• banks	4,802	2,281
• customers	98,363	93,183
Credit facilities granted	*86,603*	*84,937*
Other commitments[1]	*11,760*	*8,246*
TOTAL LOAN COMMITMENTS GIVEN	**103,165**	**95,464**
Loan commitments received from:		
• banks[2]	78,877	88,633
• customers	0	53
TOTAL LOAN COMMITMENTS RECEIVED	**78,877**	**88,686**

(1) Including the contribution of insurance entities for €93 million.
(2) The decrease mainly relates to loan commitments received from the Banque de France for -€9 billion.

6.2. Guarantee commitments

in millions of euros	12/31/2025	12/31/2024
Guarantee commitments given to:		
• banks	6,614	7,804
• customers[1]	39,082	38,384
TOTAL GUARANTEE COMMITMENTS GIVEN	**45,696**	**46,188**
Guarantee commitments received from:		
• banks	23,837	23,280
• customers[2]	107,966	113,164
TOTAL GUARANTEE COMMITMENTS RECEIVED	**131,803**	**136,444**

(1) The guarantees given by CEGC in connection with its activity are treated as insurance contracts for accounting purposes, in accordance with IFRS 17 "Insurance contracts". They are recorded on the liabilities side of the balance sheet and are not included in guarantees given to customers shown in the table above.
(2) Including guarantees received under State-guaranteed loans.

Guarantee commitments are off-balance sheet commitments.

SPECIFIC CASE OF GUARANTEES GIVEN TO UCITS BY THE GLOBAL FINANCIAL SERVICES DIVISION

The capital and/or yield on the units of certain UCITS are subject to a guarantee granted by the Global Financial Services division. The guarantees are only enforced if, on the maturity date, the net asset value of each unit is below the guaranteed net asset value.

The capital and/or performance guarantees to certain UCITS are recognized as derivatives and are subject to measurement at fair value in accordance with the provisions of IFRS 13.

Note 7 Exposures to risks

The credit risk management disclosures required by IFRS 7 are presented in Chapter 7 "Risk factors and risk management".

Exposures to risks are discussed below by type of risk: credit, market, overall interest rate, foreign exchange and liquidity risk.

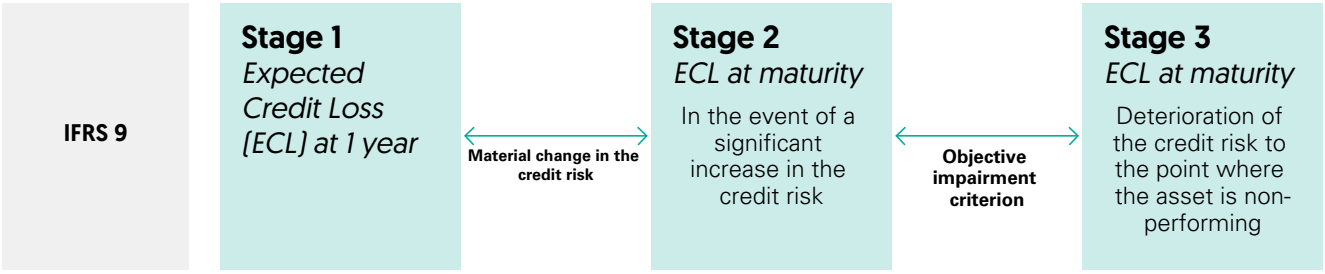
Information relating to capital management and regulatory ratios is presented in Chapter 7 "Risk factors and risk management".

Information on the effect and consideration of climate risks on credit risk management is presented in Chapter 7.16 "Risk factors and risk management – Environmental, social and governance risks".

7.1. Credit risk

Key points

Credit risk is the risk that one party to a financial transaction fails to fulfill its obligations, causing the other party to incur a financial loss.



Certain disclosures relating to risk management required by IFRS 7 are also provided in the risk management report. They include:

- the breakdown of gross exposures by category and approach (separation of credit and counterparty risk);
- the breakdown of gross exposure by geographic area;
- the concentration of credit risk by borrower (BPCE14);
- the credit quality of the renegotiated exposures (CQ1);
- the performing and non-performing exposures and the corresponding provisions (CR1);
- the quality of the performing and non-performing exposures by number of days past due (CQ3);
- the quality of the exposures by geographic area (CQ4);
- the credit quality of loans and advances by industry (CQ5);
- the breakdown of the guarantees received by type on the financial instruments (CR3).

This information forms an integral part of the financial statements certified by the Statutory Auditors.

7.1.1. Cost of credit risk

Accounting principles

Cost of risk applies to debt instruments classified as financial assets at amortized cost or at fair value through other comprehensive income recyclable to profit or loss as well as to loan commitments and financial guarantees given that are not recognized at fair value through profit or loss. It also applies to receivables relating to leasing contracts, business loans and contract assets.

This item therefore covers net impairment and provision charges for credit risk.

Credit losses related to other types of instruments (derivatives or securities designated at fair value) recorded as a result of credit institution counterparty default are also included under this item.

Irrecoverable loans not covered by provisions for impairment are loans that have acquired the character of permanent loss before being provisioned in Stage 3.

7.1.1.1. Cost of credit risk for the period

in millions of euros	2025 fiscal year	2024 fiscal year
Net charge to provisions and provisions for impairment	(600)	(632)
Recoveries of bad debts written off	63	50
Irrecoverable loans not covered by provisions for impairment	(98)	(48)
Impact of guarantees not taken into account in impairment	(2)	23
TOTAL COST OF CREDIT RISK [1]	**(637)**	**(607)**

(1) This item also records impairments recognized on doubtful debts, resulting from the derecognition, following the counterparty's default, of financial instruments recognized at fair value through profit or loss as financial assets, for an amount of 22 million euros as of December 31, 2025 (nil as of December 31, 2024).

7.1.1.2. Cost of credit risk for the period by type of asset and stage

in millions of euros	2025 fiscal year	2024 fiscal year
Financial assets at fair value through profit or loss [1]	22	0
Financial assets at fair value through other comprehensive income	(4)	(4)
Financial assets at amortized cost	(551)	(560)
of which loans and advances	*(527)*	*(424)*
of which debt securities	*(24)*	*(136)*
Other assets	(62)	(33)
Loan and guarantee commitments	(40)	(33)
Impact of guarantees not taken into account in impairment	(2)	23
TOTAL COST OF CREDIT RISK	**(637)**	**(607)**
of which Stage 1	*(17)*	*88*
of which Stage 2	*(33)*	*(39)*
of which Stage 3	*(587)*	*(655)*

(1) This item also records impairments recognized on doubtful debts, resulting from the derecognition, following the counterparty's default, of financial instruments recognized at fair value through profit or loss as financial assets, for an amount of 22 million euros as of December 31, 2025 (nil as of December 31, 2024).

7.1.2. Change in gross carrying amounts and expected credit losses on financial assets and commitments

Accounting principles

General principles

Expected credit losses are represented by impairments of assets classified at amortized cost and at fair value through other comprehensive income recyclable to profit or loss, and by provisions for loan and guarantee commitments.

The financial instruments concerned (see Note 7.1.1) are impaired or covered by a provision for expected credit losses (ECL) at the date of initial recognition.

When the financial instruments do not individually show objective evidence of loss, impairment, or provisions for expected credit losses are measured based on past losses and reasonable and justifiable discounted future cash flow forecasts.

Financial instruments are divided into three categories (Stages) depending on the increase in credit risk observed since initial recognition. A specific credit risk measurement method applies to each category of instrument:

Stage 1 (S1)

- performing loans for which there has been no significant increase in credit risk since the initial recognition of the financial instrument or certain assets for which the standard makes it possible to presume that they have a low credit risk at the reporting date;
- the impairment or the provision for credit risk corresponds to 12-month expected credit losses;
- interest income is recognized in income using the effective interest method applied to the gross carrying amount of the instrument before impairment.

Stage 2 (S2)

- performing loans for which credit risk has increased materially since the initial recognition of the financial instrument are transferred to this category;
- the impairment or the provision for credit risk is determined on the basis of the financial instrument's lifetime expected credit losses;
- interest income is recognized in income, as for Stage 1 assets, using the effective interest method applied to the gross carrying amount of the instrument before impairment.

Stage 3 (S3)

- these are loans for which there is objective evidence of impairment loss due to an event which represents a known credit risk occurring after the initial recognition of the instrument in question. This category covers receivables for which a default event has been identified, as defined in Article 178 of European Regulation No. 575/2013 of June 26, 2013, on prudential requirements for credit institutions. Default situations are now more tightly identified for outstandings with significant amounts past due (introduction of relative and an absolute threshold for past due payments) and the criteria for a return to non-defaulted status have been clarified with the introduction of a probation period and of explicit criteria for a classification as default of restructured loans;
- the impairment or the provision for credit risk is calculated based on the financial instrument's lifetime expected credit losses (expected credit losses at maturity) on the basis of the recoverable amount of the receivable, *i.e.* the present value of estimated recoverable future cash flows;
- interest income is recognized through profit or loss using the effective interest method applied to the net carrying amount of the instrument after impairment;

Purchased or originated credit-impaired (POCI) financial instruments are assets that show objective indicators of impairment at initial recognition. They correspond to the assets for which the entity does not expect to recover all of the contractual cash flows. Due to their low materiality and the way they are tracked, they are presented with Stage 3 or Stage 2 assets in the event of an improvement in their credit risks. The impairment or the provision for credit risk associated with these instruments is determined on the basis of the financial instrument's lifetime expected credit losses (expected credit losses at maturity).

In accordance with IAS 37, the guarantees received and recognized separately from the hedged instrument give rise to the recognition of a repayment asset under "Accrued income and other assets" in the balance sheet. The carrying amount of this asset represents the amount of expected credit losses, recorded as asset impairments, for which the Group is virtually certain to receive compensation. The changes in the carrying amount of this asset are recorded under "Cost of risk" in the income statement.

For operating or finance lease receivables (which fall within the scope of IFRS 16) the Group has elected not to make use of the option of applying the simplified approach as set out in IFRS 9 paragraph 5.5.15.

The methodological changes carried out over the period and presented below constitute a change in estimates which translates into an impact on net income.

Method for measuring the increase in credit risk and expected credit losses

The principles for measuring the increase in credit risk and expected credit losses applicable to most of the Group's exposures are described below. Only a few portfolios held by Group entities – representing a limited volume of exposures – cannot be treated according to the methods described below and are subject to specific valuation techniques.

Significant increase in credit risk

A significant increase in credit risk is measured on an individual basis for each instrument by taking into account all reasonable and supportable information and by comparing the default risk on the financial instrument at the reporting date with the default risk on the financial instrument at the date of initial recognition.

What's more, in addition to this assessment carried out in the Group's central model, institutions can, in order to take into account the specific risks of their portfolios, estimate the significant increase in credit risk on the basis of a given portfolio by tightening ratings assigned to the latter on a geographic or sectoral basis. This severity may lead to a downgrading from Stage 1 to Stage 2, while downgrading to Stage 3 remains based on an individual analysis.

In accordance with IFRS 9, a counterparty with a significant deterioration in credit risk (Stage 2) that has just been originated will be classified as Stage 1.

Assessment of increases in credit risk involves comparing the ratings on the initial recognition date with those applicable at the reporting date. The same principles as those used to classify an exposure in Stage 2 are applied in case of a decline in the material deterioration in credit risk.

In most cases, a measurement showing an increase in risk leads to the asset's transfer to Stage 2 before it is individually impaired (Stage 3).

However, prior to the above analysis, the following general analysis criteria are applied:

The standard provides that the credit risk of a financial instrument has not increased significantly since its initial recognition if this risk is considered to be low at the reporting date. This provision is applied to certain investment-grade debt securities that are managed as part of BPCE's liquidity reserve, as required by Basel III regulations, as well as debt securities classified as insurance activities financial investments. Investment grade ratings are those equal to or above BBB- or its equivalent by Standard & Poor's, Moody's or Fitch. In this case, these assets remain classified as Stage 1.

A counterparty approach for a Stage 2 classification (with application of the contagion principle to all outstandings existing on the counterparty in question) is applied in particular with regard to the High Credit Risk qualitative criterion derived from the Group's internal rating engines. This criterion includes the counterparties placed on the watchlist, with a sensitive rating (particularly in cases where the notion of watchlist is not used), in a situation of restructuring or in the presence of financial difficulties if the criteria for downgrading to Stage 3 are not met.

The standard also includes a rebuttable presumption that the credit risk has significantly increased since the initial recognition if the contractual payments are more than 30 days past due.

Lastly, an unfavorable change in country risk is a criterion for classifying all of the outstandings concerned as Stage 2.

Assessment of a material increase in credit risk is made at the level of each instrument, based on indicators and thresholds that vary according to the type of exposure and counterparty.

For the Individual customers, Professional customers, SMEs, Public Sector and Social Housing portfolios:

The significant increase in credit risk is assessed on the basis of the following levels of rating downgrades since inception:

Score at origin	Individual customers	Professional customers	SME, Public sector, Social housing
3 to 11 (AA to BB+)	3 notches	3 notches	3 notches
12 (BB)	2 notches		
13 (BB-)			2 notches
14 to 15 (B+ to B)	1 notch	2 notches	1 notch
16 (B-)		1 notch	
17 (CCC to C)			Sensitive notches classified as S2

Moreover, additional qualitative criteria are used to classify as Stage 2 all contracts with payments more than 30 days past due (unless the 30-day presumption of non-payment is rebutted), rated at-risk or undergoing adjustments or financial hardship if the downgrade to Stage 3 criteria are not met.

For the Large Corporates, Banks and Sovereigns portfolios, the quantitative criterion is generally based on the rating changes since initial recognition. The same qualitative criteria apply as for Individual customers, Professional customers and SMEs, as well as for contracts placed on the watchlist, along with additional criteria based on the level of country risk.

However, for **the portfolios of Large Corporates and Banks**, the degradation is now evaluated between the PD class upon origination and upon closing. A PD class represents a set of rating. Therefore, the degradation thresholds selected for these portfolios are as follows:

PD class at origin	Significant degradation
1 to 2 (AAA to A-)	4 notches
3 to 4 (BBB+ to BBB-)	3 notches
5 (BB+ to BB-)	2 notches
6 to 8 (B+ to C)	1 notch
Financial Institutions	
1 (AAA)	4 notches
2 to 4 (AA+ to BBB-)	3 notches
5 (BB+ to BB-)	2 notches
6 to 8 (B+ to C)	1 notch
Project Finance	
1 to 2 (AAA+ to BBB)	3 notches
3 (BBB- to BB+)	2 notches
4 to 7 (BB to C)	1 notch
Real Estate & Hospitality Finance	
1 to 2 (AAA+ to BBB)	3 notches
3 (BBB- to BB+)	2 notches
4 to 7 (BB to C)	1 notch

The downgrade thresholds **on the portfolios of Banks** are the following:

PD class at origin	Significant degradation
1 (AAA)	4 notches
2 to 4 (AA+ to BBB-)	3 notches
5 (BB+ to BB-)	2 notches
6 to 8 (B+ to C)	1 notch

The downgrade thresholds **on Project Finance and Real Estate & Hospitality Finance** are the following:

PD class at origin	Significant degradation
1 to 2 (AAA+ to BBB)	3 notches
3 (BBB- to BB+)	2 notches
4 to 7 (BB to C)	1 notch

For Sovereigns, the downgrade thresholds on the eight-point rating scale are as follows:

Score at origin	Significant degradation
1	6 notches
2	5 notches
3	4 notches
4	3 notches
5	2 notches
6	1 notch
7	S2 directly (unless newly originated contract)
8	S2 directly (unless newly originated contract)

For Specialized Financing, the criteria applied vary according to the characteristics of the exposures and the related rating system. The exposures noted under the engine dedicated to large exposures are treated in the same way as Large Corporates; other exposures are treated in the same way as SMEs.

For all these portfolios, the ratings used to measure risk deterioration correspond to ratings from internal systems where available, as well as external ratings, particularly in the absence of internal ratings.

In accordance with IFRS 9, the recognition of guarantees and collateral does not influence the assessment of a material increase in credit risk, which depends on changes in credit risk relating to the debtor without taking into account such guarantees.

In order to assess the material increase in credit risk, the Group provides for a process based on two levels of analysis:

- a first level based on rules and criteria defined by the Group that are binding on the Group's institutions (known as the "central model");
- a second level linked to an expert assessment of the risk carried by each institution on its portfolios, which may lead to an adjustment of the criteria defined by the Group for downgrading to Stage 2 (portfolio or sub-portfolio switch to ECL at maturity). These criteria are adapted for each closing to the current macro-economic context.

Measurement of expected credit losses

Expected credit losses are defined as being an estimate of credit losses (*i.e.* the present value of cash flow shortfalls) weighted by the probability of occurrence of these losses over the expected lifetime of the financial instrument in question. They are calculated individually for each exposure.

In practice, for Stage 1 and Stage 2 financial instruments, expected credit losses are calculated as the product of a number of inputs:

- cash flows expected over the lifetime of the financial instrument, discounted at the valuation date – these flows are determined according to the characteristics of the contract, its effective interest rate and, for real estate loans, the level of prepayment expected on the contract;
- Loss Given Default (LGD);
- the probability of default (PD) over the coming year for Stage 1 financial instruments and to maturity for Stage 2 financial instruments.

The Group's methodology draws on existing concepts and mechanisms to define these inputs, and in particular on internal models developed to calculate regulatory capital requirements (Basel framework) and projection models used in the stress test system. Certain adjustments are made to comply with the specifics of IFRS 9:

- IFRS 9 inputs aim to provide an accurate estimate of expected credit losses for accounting provision purposes, whereas prudential inputs are more cautious for regulatory framework purposes. Several of the safety buffers applied to prudential inputs are therefore restated;
- IFRS 9 inputs must allow expected credit losses to be estimated until the contract's maturity, whereas prudential inputs are defined to estimate 12-month expected losses. 12-month inputs are thus projected over long periods;
- IFRS 9 inputs must be forward-looking and take into account the expected economic environment over the projection period, whereas prudential inputs correspond to mid-cycle estimates (for PD) or bottom-of-the-cycle estimates (for LGD and the cash flows expected over the lifetime of the financial instrument). Prudential PD and LGD inputs are therefore also adjusted to reflect forecasts of future economic conditions.

Expected credit loss calculations take into account assets pledged as collateral and other credit enhancements that form an integral part of the instrument's contractual conditions and that the entity does not recognize separately. The estimate of expected cash flow shortfalls on secured financial instruments reflects the amount and the timing for enforcing the collateral, if such collateral is considered to be part of the contractual terms of the secured instrument.

The IFRS 9 model validation process is fully aligned with the Group's existing model validation process. Models are reviewed by an independent unit responsible for internal validation and the unit's conclusions are then examined by the Group Models Committee. Subsequent recommendations are monitored up by the validation unit.

Recognition of forward-looking information

Forward-looking macro-economic data are taken into account in a methodological framework applicable at two levels:

- at the Group level, in the determination of a shared framework for taking the forward looking into account in the projection of PD and LGD inputs over the amortization horizon of operations within the central model;

- at the level of each entity, with regard to its own portfolios.

The amount of expected credit losses is calculated using an average ECL by scenario, weighted by probability of occurrence, taking into consideration past events, current circumstances and reasonable and justifiable forecasts of the economic environment.

BPCE uses forward-looking data to estimate any significant increase in credit risk and to measure expected credit losses. To do this, BPCE uses the projections of macro-economic variables used to define its budget process, considered as the most probable, framed by optimistic and pessimistic scenarios in order to define alternative trajectories.

To determine a significant increase in credit risk, as well as applying rules based on the comparison of risk parameters between the initial recognition date and the reporting date, the calculation is supplemented by forward-looking information such as sector or geographical macro-economic scenarios.

To measure expected credit losses, the Group has chosen three macro-economic scenarios, which are detailed in the following paragraph.

Methodology for calculating expected losses in the central model

The parameters used to measure expected credit losses are adjusted to economic conditions *by* defining three economic scenarios (central/pessimist/optimist) over a three-year period.

The definition and review of these scenarios follows the same organization and governance as that defined for the budget process, with a quarterly review of their relevance since the Covid-19 crisis, which may lead to a revision of macro-economic projections in the event of a significant deviation in the situation observed on the basis of proposals from economic research and validation by the Executive Management Committee.

The probability of occurrence of the Baseline scenario and the optimistic and pessimistic scenarios is reviewed on a quarterly basis by the Group Watchlist and Provisions Committee. The inputs thus defined allow expected credit losses for all exposures to be valued, regardless of whether they belong to a scope approved using an internal method or are processed using the standardized method for the calculation of risk-weighted assets.

The variables defined in each of these scenarios allow for the distortion of the PD and LGD inputs and the calculation of an expected credit loss for each economic scenario. Projections of inputs for periods longer than three years are based on the mean reversion principle. The economic scenarios are associated with probabilities of occurrence, making it possible to calculate the average probable loss, which is used as the amount of the IFRS 9 expected credit loss.

For December 31, 2025 closing:

After the COVID episodes in 2020 and the war in Ukraine in 2022, which had a lasting impact on the global macro-economic situation, the implementation of the 2026 budget scenarios takes place this time in an uncertain global and European geopolitical context but also in a French domestic political context that is far from being clarified, following the dissolution of the National Assembly (NA) in June 2024. The re-election of Donald Trump as President of the United States has revived a number of fears in terms of international relations.

Since his inauguration on January 20, 2025, Donald Trump and his administration have issued numerous statements and taken several initiatives reviving tensions in international relations and more particularly in Euro-Atlantic relations:

- Questioning the sovereignty of certain countries such as Canada or Greenland, questioning the sovereignty over the Panama Canal, ...
- Announcements of the implementation of customs barriers with China and also with its historical allies and trading partners (Europe, Canada and Mexico),
- Questioning or even stopping both political and military support for Ukraine, raising fears of a complete disengagement of the USA from the conflict, or even simply from the European continent,
- Rapprochement between the United States and Russia, raising fears of a major change in American strategy towards Europe.

With regard to the situation in France, the resignation of successive governments since June 2024 raises fears of continued political instability in France in the coming months or even years, with possible major consequences for the expected structural reforms and a possible downgrade of France's sovereign rating.

Finally, in the Middle East and the rest of the world, tensions remain high, the situation remains uncertain in some areas, and US-Iranian relations remain tense, raising fears of an escalation in the region and its potential impact on global oil supplies.

The Group's budget scenario, prepared in the summer of 2025, is based on the following structuring assumptions:

- Worsening of the trade war with measures put in place by all countries to counter the increase in customs duties in the United States: US growth slowing significantly, from 2.8% to 1% in 2025 and remaining moderate at 1.3% in 2026. Inflation is expected to rise to 3.6% on average in 2025 and 3.4% in 2026;
- Growth is also expected to slow in the Eurozone with an estimated impact of -0.3 points of GDP. Growth should thus be 0.7% in 2025. It should be noted, however, that the German spending plan should provide support at the very end of the year, but especially in 2026. European growth is expected to recover to 1.1% in 2026. The impact on inflation will be limited: the first retaliatory measures implemented by the EU will be mitigated by the appreciation of the euro and the fall in energy prices. Inflation is expected to average 2.3% in 2025 and 1.9% in 2026;
- France would be less affected by customs duties than the Eurozone as a whole, with an impact of -0.2 points on growth in 2025, at 0.5% then 0.9% in 2026. French inflation will remain very moderate at 1.5% in 2025 and 1.7% in 2026;
- The return to the inflation target in the Eurozone from 2027 (with, however, inflation in Germany above 2% at 2.2% in 2028 and 2029) combined with growth in the Eurozone slightly above potential will result in a resumption of rate hikes by the ECB from 2027 (2 x 25 bps in 2027 and 1 x 25 bps in 2028);
- The ECB will lower its rates to 2% by June 2025 and leave them unchanged from 2028 over the rest of the projection horizon;

- The Federal Reserve will start lowering fed funds rates in September 2025 to 3% in June 2026;
- The 10-year OAT rate should reach an equilibrium level around 3% at the end of 2025 and then stabilize at around 3.65% over the rest of the projection horizon;
- The 10-year UST rate is expected to reach 4.15% at the end of 2025 and then stabilize around 4.50%;
- The EUR/USD exchange rate is expected to reach a level of 1.18 at the end of 2025 and 2026 and then stabilize at around 1.20.

The scenario was validated by the Group ALM Committee on June 24, 2025.

Given the evolution and macro-economic and geopolitical uncertainties since December 31, 2024, BPCE has had to revise the pessimistic limits used as well as the associated weightings.

This review led to a narrowing of the corridor between the two pessimistic and optimistic limits and a rebalancing of the weightings between the three scenarios. Indeed, the Group believes that with the development of discussions between States and the absence of the implementation of all the customs duties presented by the US administration last April, the magnitude of the pessimistic scenario has become less significant.

The pessimistic scenario is a less severe version of the ICAAP "Trade Wars and Protectionism" scenario. In this case, the impacts on growth, unemployment and inflation are reduced by about 33%. This makes it possible to have a gap of nearly 1% in French GDP growth between the baseline scenario and this pessimistic scenario from 2026. For 2025, the differences are less significant. Thus, for French GDP, the pessimistic scenario for 2025 shows a decrease of -0.2% compared to a forecast of 0.6%.

The rationale of the scenario remains more or less unchanged. The pessimistic scenario is based on lower-than-expected US customs tariffs overall, which limits the risks of a major stall in world trade. As a result of a mechanical effect and in the absence of material tension between China and Taiwan this year, the impact on the US economy is weaker, with zero growth in 2025 in this new pessimistic scenario.

Europe continues to suffer due to the implementation of trade barriers and trade retaliation put in place by the EU with respect to third countries, with growth falling to 0% in 2025 and -0.1% in 2026.

The loss of GDP compared to the baseline scenario for France is approaching 0.7% in 2025, pushing growth into negative territory at nearly -0.2%. Growth then remains sluggish, close to 0%, over the years 2026 and 2027 (-0.1% and 0.2% respectively). As a result of the retaliation mentioned above, French inflation is rising and returning to 2% in 2025 and 2026. As the scale of the trade war is smaller than in the adverse ICAAP, risky assets correct to a lesser extent. The Eurostoxx 50 loses 13% in 2025 and continues to fall until it reaches nearly 4,600 points in 2027, *i.e.* a level 20% below the baseline. European inflation, which remains above 2% over the entire projection horizon, is forcing the ECB to raise its deposit rate to 2.75%. This is reflected in a flattening of the curves, with long-term rates benefiting in particular from their status as safe havens. The German 10-year rate falls back to 2.50% in this scenario.

The optimistic scenario is still based on a statistical deviation from the central scenario, which leads to a gradual return of inflation to low levels and a more vigorous recovery in activity.

During 2025, the following methodological changes were implemented:

- Specific calibrations for Specialized Real Estate Financing have been put into production to better take into account their specific behavior. They were previously grouped together within the "Specific Populations", which now only include SPLS (Public Sector and Social Housing) and Associations and Insurance companies. The PDs and LGDs concerned have also been recalibrated to take these changes into account;
- An extension of the Small Business models to Foreign Companies was put into production;
- An evolution to meet a number of specifications and recommendations on the scope of SMEs has been put into production.

In addition, BPCE has extended and adapted this approach by adjusting for a number of factors specific to certain scopes or significant markets. Each scenario is therefore weighted based on how close it is to the consensus forecast for the main economic variables in each scope or significant market of the Group.

For Retail Banking, the projections are calculated using the main macro-economic variables such as GDP, the unemployment rate, interest rates on 10-year French sovereign debt and real estate. For Corporate & Investment Banking, which is more geographically diversified, the macro-economic variables used relate to the international economy. In addition to macro-economic variables for the France zone, the Eurozone and US GDP variables are also used.

For Retail Banking and Corporate & Investment Banking, the macro-economic variables in France are as follows:

At December 31, 2025:

	Pessimistic 2025			
	GDP	Unempl.	RRE	10Y yld
2025	(0.20%)	7.90%	0.50%	3.12%
2026	(0.06%)	8.00%	0.00%	3.28%
2027	0.24%	8.10%	0.00%	3.28%

	Central 2025			
	GDP	Unempl.	RRE	10Y yld
2025	0.60%	7.60%	1.50%	3.40%
2026	1.00%	7.70%	1.20%	3.65%
2027	1.30%	7.80%	1.50%	3.65%

	Optimistic 2025			
	GDP	Unempl.	RRE	10Y yld
2025	1.13%	7.30%	2.50%	3.68%
2026	1.70%	7.40%	2.50%	4.03%
2027	2.00%	7.50%	3.00%	4.03%

At December 31, 2024:

	Pessimistic 2024			
	GDP	Unempl.	RRE	10Y yld
2024	(0.42%)	8.07%	(8.15%)	4.04%
2025	(3.00%)	9.12%	(8.00%)	5.25%
2026	0.50%	9.05%	(6.00%)	4.60%

	Central 2024			
	GDP	Unempl.	RRE	10Y yld
2024	1.10%	7.50%	(6.00%)	2.85%
2025	1.40%	7.64%	(1.50%)	2.9%
2026	1.57%	7.40%	0.00%	2.70%

	Optimistic 2024			
	GDP	Unempl.	RRE	10Y yld
2024	1.86%	7.22%	(4.93%)	2.63%
2025	3.90%	6.54%	1.75%	2.10%
2026	2.64%	6.23%	3.00%	2.20%

For Corporate & Investment Banking, the 2025 macro-economic scenarios for the Euro and US zones used to determine the weightings for these zones are as follows:

	Pessimistic 2025		Central 2025		Optimistic 2025	
	Eurozone GDP	US GDP	Eurozone GDP	US GDP	Eurozone GDP	US GDP
2025	(0.05%)	0.00%	0.80%	1.10%	1.36%	2.20%
2026	(0.12%)	(0.25%)	1.00%	1.20%	1.74%	2.16%
2027	0.44%	1.11%	1.50%	2.10%	2.20%	2.75%

	Pessimistic			Central			Optimistic		
	2025	2026	2027	2025	2026	2027	2025	2026	2027
US GDP	(1.04%)	0.03%	1.60%	1.00%	1.30%	2.10%	2.38%	2.24%	2.60%
Eurozone GDP	(0.80%)	0.28%	1.35%	0.70%	1.10%	1.50%	1.59%	2.13%	1.82%
Eurostoxx	4,419	4,366	4,550	5,100	5,355	5,623	5,765	6,344	6,696
CAC 40	6,563	6,449	6,716	7,500	7,875	8,269	8,438	9,301	9,821
USD Exchange Rate	1.133	1.210	1.177	1.085	1.126	1.148	1.061	1.084	1.134

As a reminder, the scenarios used for these zones in 2024:

	Pessimistic 2024		Central 2024		Optimistic 2024	
	Eurozone GDP	US GDP	Eurozone GDP	US GDP	Eurozone GDP	US GDP
2024	(1.05%)	1.01%	0.70%	2.10%	1.57%	2.64%
2025	(3.90%)	(1.50%)	1.40%	1.80%	4.05%	4.20%
2026	1.20%	1.50%	1.45%	2.03%	3.26%	2.29%

	Pessimistic			Central			Optimistic		
	2024	2025	2026	2024	2025	2026	2024	2025	2026
S&P 500	4,687	4,203	3,783	5,254	5,359	5,466	5,962	6,515	7,150
SLS	17.2	43.5	10.5	4.6	5.1	2.6	(1.8)	(14.1)	(1.4)
VIX	24.0	36.0	25.0	17.5	16.3	15.0	11.0	11.3	10.0
Fed. Ref. Rate	6.1%	6.5%	6.5%	5.0%	3.3%	3.3%	4.5%	1.6%	1.6%
Spread SONIA 6-12M	0.1%	0.1%	(0.2%)	0.1%	0.1%	0.0%	0.1%	0.0%	0.5%

For Retail Banking, the post-model adjustments that reflected the positive impact of the various measures to support the economy were eliminated due to the reduction in the benefits provided by the moratoria and SGLs as well as the evolution of the economic situation since the implementation of these adjustments.

Weighting of scenarios at December 31, 2025

In order to take into account the geographical diversity of its exposures, particularly for Corporate & Investment Banking, BPCE has had to distinguish the weightings of its economic scenarios according to the geographic area in question.

The expected credit losses are calculated by assigning to each of the scenarios a weighting determined according to the proximity of the consensus of the forecasters with each of the baseline, pessimistic and optimistic scenarios on the GDP growth variable.

Thus, the weightings used for the France zone are as follows:

- central scenario: 35% at December 31, 2025 compared to 80% at December 31, 2024;
- pessimistic scenario: 30% at December 31, 2025 compared to 15% at December 31, 2024;
- optimistic scenario: 35% at December 31, 2025 compared to 5% at December 31, 2024.

It should be noted that the change in weightings at December 31, 2025 compared to December 31, 2024 is mainly driven by a change in the scenario used for this closing.

For exposures in the Eurozone (excluding France) and the US, mainly in Corporate & Investment Banking, the weightings are as follows:

- in the Eurozone (excluding France): 21% pessimistic, 25% central and 54% optimistic *versus* 13% pessimistic, 78% central and 9% optimistic at December 31, 2024;
- in the US zone: 11% pessimistic, 32% central and 57% optimistic *versus* 10% pessimistic, 65% central and 25% optimistic at December 31, 2024.

Environmental risks are not taken into account in the central models at this stage. However, they are recorded at the institution level (see below).

Expected credit losses built up in addition to the central model

Additional provisions have been recorded by the Group's institutions to cover the specific risks of their portfolios, in addition to the provisions described above and calculated by the Group's tools. These provisions were mainly allocated in 2020 and 2021 for the consequences of the Covid-19 crisis. In recent years, they were supplemented by additional documented provisions for the sectors likely to be most affected by a worsening macro-economic context (rising inflation, soaring energy prices, shortages, trade policies, etc.). The outstandings concerned may be downgraded to Stage 2, where appropriate.

During 2025, these provisions mainly concerned the hotel, office real estate, construction site risks on renewable energies and transport sectors.

In this context, the Group continued to strengthen the identification and monitoring of the most affected sectors. The sectoral monitoring approach is reflected in (i) a classification according to their level of risk of economic sectors and sub-sectors established centrally by BPCE's Risk division, updated regularly and communicated to all Group institutions, (ii) a tightening of LGD rates on a geographical or sectoral basis.

ECL sensitivity analysis

Sensitivity analyses are carried out on the impairment outstandings on all instruments classified as Stage 1 and Stage 2 in the Group's central model. These analyses are based on a weighting of 100% of each of the scenarios used without impacting the status of these outstandings or any adjustments applied to the model.

A weighting of the pessimistic scenario at 100% would lead to a 4% increase in expected credit losses for instruments classified in S1 and S2. Conversely, a weighting of the optimistic scenario at 100% would lead to a decrease of 2% in ECL. Lastly, a weighting of the central scenario at 100% would lead to a decrease of 0% in ECL.

Method for measuring assets classified as Stage 3

Financial assets for which there is objective evidence of impairment loss due to an event representing a counterparty risk and occurring after initial recognition are classified as Stage 3. The criteria for identifying assets are in line with the definition of default under Article 178 of European Regulation No. 575/2013 of June 26, 2013, on prudential requirements for credit institutions, consistent with EBA guidelines (EBA/GL/2016/07) on the application of the definition of default, and Delegated Regulation (EU) 2018/1845 of the European Central Bank on the threshold for assessing the materiality of credit obligations past due.

Loans and advances are considered as impaired and are classified as Stage 3 if the following two conditions are met:

- there is objective evidence of impairment on an individual or portfolio basis: there are "triggering events" or "loss events" identifying counterparty risk occurring after the initial recognition of the loans in question. Objective evidence of impairment includes:
  - the occurrence of a payment past due for at least three consecutive months, the amount of which exceeds the absolute thresholds (of €100 for a retail exposure, otherwise €500) and the relative threshold of 1% of the counterparty's exposures,
  - the restructuring of loans if certain criteria are met, or regardless of whether any payment has been missed, the observation of financial hardship experienced by the counterparty leading to the expectation that some or all of the amounts owed may not be recovered. Restructured loans are classed as Stage 3 when the loss is greater than 1% of the difference between the net present value before restructuring and the net present value after restructuring;
- these events are liable to lead to the recognition of incurred credit losses, *i.e.* expected credit losses for which the probability of occurrence has become certain.

The **Stage 3** classification **is maintained for a probationary period of three months** after the disappearance of all the above-mentioned default indicators. The probationary period in Stage 3 is extended to **one year** for **restructured contracts that have been subject to a Stage 3 transfer**.

When moving out of Stage 3, BPCE does not apply an additional probationary period of Stage 2 classification prior to any transfer to Stage 1 (if the asset concerned meets the conditions for such classification).

Debt securities such as bonds or securitized transactions (ABS, CMBS, RMBS, cash CDOs) are considered impaired and are classified as Stage 3 when there is a known counterparty risk.

The Group uses the same impairment indicators for Stage 3 debt securities as those used for individually assessing the impairment risk on loans and advances, irrespective of the portfolio to which the debt securities are ultimately designated. For perpetual deeply subordinated notes (TSSDI) that meet the definition of debt instruments within the meaning of IAS 32, particular attention is also paid if, under certain conditions, the issuer may be unable to pay the coupon or extend the issue beyond the scheduled redemption date.

Impairment for expected credit losses on Stage 3 financial assets is determined as the difference between the amortized cost and the recoverable amount of the receivable, *i.e.* the present value of estimated recoverable future cash flows, whether these cash flows come from the counterparty's activity or from the potential activation of guarantees (if these guarantees are considered as being part of the contractual terms and conditions of the guaranteed instrument). For short-term assets (maturity of less than one year), there is no discounting of future cash flows. Impairment is determined globally, without distinguishing between interest and principal. Expected credit losses arising from Stage 3 off-balance sheet commitments are taken into account through provisions recognized on the liability side of the balance sheet. They are calculated on the basis of the maturity schedules determined based on historic recoveries for each category of receivable.

For the purposes of measuring expected credit losses, pledged assets and other credit enhancements that form an integral part of the contractual conditions of the instrument and that the entity does not recognize separately are taken into account in the estimate of expected cash flow shortfalls.

The write-offs are based on individual analyses, taking into account the specific nature of each situation. In addition to the factors clearly attesting that all or part of the receivable will not be recovered (*e.g.* cessation of recovery actions, receipt of the certificate of non-recoverability), other groups of indicators are also likely to be taken into account (entry into liquidation procedure, disappearance or insufficiency of residual assets and/or absence of collateral, absence of manifest desire of executives to respect their commitments and absence of shareholder support, chances of recovery based exclusively on legal recovery actions brought against third parties combined with a very low probability of success of these actions).

These factors must be considered as part of an overall analysis and do not constitute an automatic indicator of a write-off. When, in view of the situation of the case, it is reasonably certain that all or part of the receivable will not be recovered, the amount to be recognized as losses is determined on the basis of the most objective possible external and internal elements.

Subsequent recoveries of receivables already recorded as losses are also recognized in the cost of credit risk item.

Recognition of impairment of assets classified at amortized cost and at fair value through other comprehensive income, and of provisions for loan and guarantee commitments

For debt instruments recognized on the balance sheet in the financial assets at amortized cost category, impairment is recorded against the line on which the asset was initially shown for its net amount (regardless of whether the asset is S1, S2, S3 or POCI). Impairment charges and reversals are recognized in the income statement under "Cost of credit risk".

For debt instruments recognized as financial assets at fair value through other comprehensive income on the balance sheet, impairment is carried on the liabilities side of the balance sheet at the level of other comprehensive income recyclable to profit or loss, with a corresponding entry on the income statement under "Cost of credit risk" (regardless of whether the asset is classified S1, S2, S3 or POCI).

For loan and financial guarantee commitments given, provisions are recorded on the liabilities side of the balance sheet under "Provisions" (irrespective of whether the commitment given is classified S1, S2, S3 or POCI). Additions to/reversals from provisions are recognized in the income statement under "Cost of credit risk".

7.1.2.1. Change in S1/S2 credit losses

At December 31, 2025, the total expected S1 and S2 credit losses amounted to €1,054 million and can be broken down as follows:

in millions of euros	2025 fiscal year	2024 fiscal year
Model	806	730
Complements to the model	44	75
Other	204	161
TOTAL EXPECTED CREDIT LOSSES S1/S2	**1,054**	

7.1.2.2. Change in the gross carrying amount and credit losses on financial assets through other comprehensive income

	Stage 1		Stage 2		Stage 3		TOTAL	
in millions of euros	Gross carrying amount	Impairment for expected credit losses	Gross carrying amount	Impairment for expected credit losses	Gross carrying amount	Impairment for expected credit losses	Gross carrying amount	Impairment for expected credit losses

BALANCE AT 12/31/2025	**40,112**	**(18)**	**1,383**	**(21)**	**415**	**(124)**	**41,909**	**(163)**

(1) Other changes include the amortization of receivables, the change in credit risk parameters and changes in exchange rates. In the 2025 fiscal year, other changes in the gross carrying amount include the impact of the addition of BPCE Equipment Solutions (+€59 million).

7.1.3. Measurement and management of credit risk

Credit risk arises whenever a counterparty is unable to meet its payment obligations and may result from a reduction in credit quality or default by the counterparty.

Commitments exposed to credit risk consist of existing or potential receivables and particularly loans, debt securities, equities, performance swaps, performance bonds, or confirmed or undrawn facilities.

Credit risk management procedures and assessment methods, risk concentration, the quality of performing financial assets, and the analysis and breakdown of outstandings are described in the risk management report.

7.1.4. Guarantees received on IFRS 9 impaired instruments

The statement below shows the credit and counterparty risk exposure for all BPCE's financial assets. This exposure to credit risk (determined without taking into account the impact of any unrecognized netting or collateral agreements) and to counterparty risk is based on the net carrying amount of the financial assets.

in millions of euros	Maximum risk exposure	Impairment	Maximum exposure net of impairment	Guarantees
Debt securities at amortized cost	271	(238)	33	3.07
Loans and advances to banks at amortized cost	26	(24)	2	-
Loans and advances to customers at amortized cost	6,897	(2,279)	4,618	1,873
Customer loans and advances - FVOCI R	3	1	2	0
Loan commitments	138	(31)	107	27
Guarantee commitments	388	(125)	263	97
TOTAL IMPAIRED FINANCIAL INSTRUMENTS (S3)	**7,723**	**(2,696)**	**5,027**	**2,000**

7.1.5. Credit risk mitigation mechanisms: assets obtained by taking possession of collateral

The policy followed by BPCE entities is to sell assets obtained by taking possession of collateral as soon as possible. The amount of these assets was non-material at December 31, 2025.

7.2. Market risk

Market risk refers to the possibility of financial loss due to market trends, such as:

- interest rates: interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate due to changes in market rates of interest;
- exchange rates;
- prices: market price risk is the risk of a potential loss resulting from changes in market prices, whether they are caused by factors specific to the instrument or its issuer, or by factors affecting all market traded instruments. Variable-income securities, equity derivatives and commodity derivatives are exposed to this type of risk; and
- more generally, any market parameter involved in the valuation of portfolios.

Systems for the measurement and monitoring of market risks are presented in the risk management report.

The information provided in the risk management report required under IFRS 7 and relating to the management of market risk comprises:

- VaR for Groupe BPCE's scope;
- the conclusions of the global stress tests.

7.3. Overall interest rate risk and exchange rate risk

Interest rate risk is the risk that unfavorable changes in interest rates will adversely impact the Group's annual results and net worth. Foreign exchange risk is the risk of losses resulting from changes in exchange rates.

The Group's approach to the management of overall interest rate risk and foreign exchange risk is discussed in Chapter 7.9 "Risk factors and risk management – Liquidity, interest rate and exchange rate risks".

7.4. Liquidity risk

Liquidity risk is the risk that the bank will not be able to meet its commitments or maturities at any given time.

The funding procedures and liquidity risk management arrangements are disclosed in the risk management report.

Note 8 Employee benefits and similar

Accounting principles

There are four categories of employee benefits:

- short-term employee benefits such as wages, salaries, paid annual leave, bonuses, and profit sharing and incentive schemes which are expected to be paid within 12 months of the end of the period in which the employee renders the service are recognized in expenses.
- post-employment benefits paid to retired staff break down into two categories: defined-contribution plans and defined-benefit plans.

Defined-contribution plans such as French national plans are those for which BPCE's obligation is limited to payment of a contribution; there is no obligation for the employer regarding a certain level of benefits. Contributions paid into these plans are recognized as an expense for the period.

Defined-benefit plans are those for which BPCE has undertaken to provide a given amount or level of benefits.

Defined-benefit plans are subject to provisions calculated based on an actuarial assessment of the amount of the obligation, taking into account demographic and financial assumptions. When these plans are funded by external funds meeting the definition of plan assets, the amount of the provision is reduced by the fair value of these assets.

The cost of defined-benefit plans recorded in expenses for the period includes: the service cost (representing the rights acquired by beneficiaries over the period), the past service cost (revaluation differences on actuarial liabilities following an amendment or reduction in the plan), the net financial cost (effect of unwinding the discount on the net obligation for interest income generated by plan assets) and the effect of pension drawdowns.

Revaluation differences on actuarial liabilities caused by changes in demographic and financial assumptions and past-experience effects are recorded in gains and losses recognized directly in other comprehensive income not recyclable to net income:

- **other long-term employee benefits** include awards accruing to current employees and payable 12 months or more after the end of the period in which the employee renders the related service. They mainly include long-service awards and deferred variable remuneration payable in cash.
  These benefits are calculated using the same actuarial method as that applied for defined-benefit pension plans. The accounting method differs in terms of revaluation differences on actuarial liabilities, which are recorded under expenses;
- **termination benefits** are granted to employees on termination of their employment contract before the normal retirement date in the event of dismissal for acceptance of termination for compensation. They are covered by a provision. Termination benefits that are not expected to be paid within the 12 months following the balance sheet date are discounted to present value.

Share-based payments include payments in equity instruments or cash, the amount of which depends on the change in the value of the equity instruments or a valuation formula.

A payroll cost is systematically recorded for an amount equal to the fair value of the instruments awarded, spread over the period over which the rights are acquired.

8.1. Payroll costs

Payroll costs include all personnel expenses and the associated social security charges and payroll-based taxes.

They include expenses for employee benefits and share-based payments.

Information on employees by category is presented in Chapter 2, "Sustainability report" (Part 3 - Social information).

in millions of euros	2025 fiscal year	2024 fiscal year
Wages and salaries	(4,140)	(3,890)
Expenses for defined-benefit and defined-contribution pension plans and other long-term employee benefits	(309)	(242)
Other social security charges and payroll-based taxes	(1,415)	(1,329)
Profit sharing and incentive schemes	(306)	(259)
TOTAL PAYROLL COSTS	**(6,169)**	**(5,720)**

(1) Including all overheads by nature of all Group activities, including all overheads of the insurance activities presented in Note 9.1.8.

8.2. Employee benefits

BPCE grants its staff a variety of employee benefits:

- pensions and other post-employment benefits such as end-of-career awards and other benefits granted to retirees;
- other benefits such as long-service awards and other long-term employee benefits.

8.2.1. Analysis of employee-related assets and liabilities recorded in the balance sheet

	Post-employment defined benefit plans	Other long-term employee benefits				
in millions of euros	Supplementary pensions and other plans	End-of-career awards	Long-service awards	Other benefits	12/31/2025	12/31/2024
Actuarial liabilities	782	268	69	570	1,689	1,483
Fair value of plan assets	(708)	(195)			(903)	(890)
Fair value of reimbursement rights		(33)			(33)	(31)
Effect of ceiling on plan assets	76	3			79	52
Net amount reported on balance sheet	**150**	**43**	**69**	**570**	**832**	**614**
Passive employee benefits	150	94	69	570	883	668
Active employee benefits[1]		51			51	51

(1) Mostly shown as assets on the balance sheet under "Accrued income and other assets".

Actuarial liabilities represent the Group's obligation in respect of beneficiaries. They are calculated by independent actuaries using the projected unit credit method based on demographic and financial assumptions that are reviewed on a regular basis and at least once a year.

When these plans are funded by assets meeting the definition of plan assets, the amount of the provision corresponds to actuarial liabilities less the fair value of these assets.

Hedging assets no longer meeting the definition of plan assets are recorded under assets.

8.2.2. Changes in amounts recognized on the balance sheet

Changes in actuarial liabilities

		Other long-term employee benefits				
in millions of euros	Supplementary pensions and other plans	End-of-career awards	Long-service awards	Other benefits	2025 fiscal year	2024 fiscal year
ACTUARIAL LIABILITIES AT THE START OF THE YEAR	**743**	**238**	**68**	**434**	**1,483**	**1,446**

Changes in scope	105	3		5	113	
Other changes	(3)	24		16	37	3
ACTUARIAL LIABILITIES AT END OF YEAR	**782**	**268**	**69**	**570**	**1,689**	**1,483**

Change in plan assets

in millions of euros	Post-employment defined-benefit plans: Supplementary pensions and other plans	Post-employment defined-benefit plans: End-of-career awards	2025 fiscal year	2024 fiscal year
FAIR VALUE OF ASSETS AT THE START OF THE YEAR	**722**	**199**	**921**	**928**
Interest income	26	7	33	27
Plan participant contributions	8	1	9	5
Benefits paid	(31)	(3)	(34)	(35)
Other items recorded in income	(2)		(2)	2
Changes recorded in income	**1**	**5**	**6**	**(1)**
Revaluation adjustments – Return on plan assets	15		15	(20)
Changes recognized directly in other comprehensive income not recyclable to profit or loss	**15**		**15**	**(20)**
Foreign exchange rate adjustments	(26)		(26)	13
Changes in scope				
Other changes	(4)	24	20	1
FAIR VALUE OF ASSETS AT END OF YEAR[1]	**708**	**228**	**936**	**921**

(1) Of which €33 million in reimbursement rights included in end-of-career awards (*versus* €31 million on December 31, 2024).

Amounts paid in cash to beneficiaries reduce the amount of provisions recorded to this end by an equivalent amount. A total of €34 million was charged against pension plan assets.

Interest income on plan assets is calculated by applying the same discount rate as that used to discount commitments. The difference between the actual return at the balance sheet date and this interest income is a revaluation difference recorded in equity not recyclable to profit or loss for post-employment benefits.

8.2.3. Expenses for defined-benefit pension plans and other long-term employee benefits

Expenses for defined-benefit pension plans and other long-term employee benefits

The various components of the expense recognized for defined-benefit plans and other long-term employee benefits are included under "Payroll costs".

in millions of euros	Post-employment defined-benefit plans	Other long-term employee benefits	2025 fiscal year	2024 fiscal year
Service cost	(16)	(196)	(212)	(164)

8.3. Share-based payments and equivalent

Accounting principles

Share-based payments are those based on shares issued by the Group, regardless of whether the transactions are settled in the form of equity or cash indexed to the share price or on a valuation formula.

In accordance with IFRS 2 on "Share-based payments", grants of bonus shares to employees gives rise to the recognition of an expense representing the fair value of the goods or services received at the grant date. The fair value of the services received is determined by reference to the fair value of the shares at the grant date, less the discounted amount of dividends not received by employees over the vesting period and taking into account any attendance conditions.

The expense is spread on a straight-line basis over the vesting period. The expense is adjusted over the vesting period to reflect the loss of rights.

The corresponding adjustment for the expense recorded under equity-settled plans is an increase in equity.

For cash-settled plans for which the Group has a liability, the expense corresponds to the fair value of that liability. This amount is expensed over the vesting period when its payment is subject to a presence condition, by the counterpart of a liability account. It is then remeasured at fair value through profit or loss at each closing date until it is settled. The revaluation of the debt at the closing date takes into account not only the fulfillment of the performance and/or presence condition but also the change in value of the underlying shares.

Where deferred variable remuneration plans provide for a cash payment based on a formula that is not representative of the fair value of the share, these plans fall within the scope of IAS 19. The principles applicable under IAS 19 to this type of plan are similar to those under IFRS 2 for cash-settled plans.

Deferred variable remuneration plans

Since 2010 and until 2020, Natixis has granted each year to certain categories of its employees plans whose payment was based on Natixis shares.

Following the delisting of the Natixis share on July 21, 2021, plans settled in cash indexed to the Natixis share price (for their non-vested components) have been modified. Since then, their payment is now indexed to a formula based in particular on the price of the simplified public tender offer for Natixis shares (*i.e.* €4) and the change in net income attributable to equity holders of Groupe BPCE.

In June 2021, BPCE entered into a liquidity agreement with each beneficiary of bonus shares, consisting of a promise to sell that may be exercised by the beneficiary within 60 calendar days from the date of availability of the shares, followed by a promise to buy granted by BPCE to each beneficiary for the benefit of BPCE, that may be exercised by BPCE during 60 calendar days from the end of the exercise period for the promise to sell. The implementation of these contracts had the effect of reclassifying, within the BPCE Group, plans settled in shares granted by Natixis into plans settled in cash based on a valuation formula. All shares covered by the liquidity contracts were acquired during the 2025 financial year.

The plans granted in 2021 did not need to be modified as their conditions had already been adapted upon their creation for the scenario of Natixis shares being delisted.Deferred variable remuneration plans granted since 2022 are payable either in cash indexed to the evolution of Groupe BPCE's net profit attributable to the Group for plans granted up to 2024, or partly in cash indexed to the evolution of Groupe BPCE's net profit attributable to the Group and partly in non-indexed cash, for plans granted from 2025 onwards.

With regard to the 2026 plan, as the grants were not formally made at the closing date, the cost assessment was made on the basis of the best possible estimate at December 31, 2025. In addition, this plan will be settled partly in non-indexed cash and partly in cash indexed to a valuation formula that has changed this year (the cash will be indexed to the change in BPCE's net income attributable to equity holders of the parent as well as to the change in BPCE's net income).

Natixis' subsidiaries may also establish their own share-based payment plans. The impact relating to these plans at December 31, 2025, was -€33.8 million (expense) compared to -€23.7 million (expense) in 2024.

The characteristics of Natixis' deferred variable remuneration plans are detailed in the paragraphs below.

Long-term cash-settled payment plans indexed on a valuation formula

Payments under these plans are subject to presence and performance criteria for the categories of regulated personnel within the meaning of the CRD.

Years the plan was granted	Grant date	Number of units granted at inception/ Cash indexed *in euros*	Vesting date	Number of units vested by beneficiaries/ Cash indexed *in euros*	Fair value of indexed cash unit at valuation date *in euros*
2022 plan	03/17/2022	67,306,358	March 2023	20,446,331	1.016

Valuation parameters used for the cost estimate for these plans

	12/31/2025	**12/31/2024**
Fair value of the indexed cash unit[1]	[0.932; 1.538]	[0.893; 1.299]
Risk-free interest rates	2.10%	2.57%
Loss of rights rate	5.17%	5.32%

(1) Corresponds to the range of fair values of indexed cash units, which as of 2021 are differentiated by plan and by year.

Deferred variable remuneration plans settled in cash

Some employees are awarded deferred cash-settled loyalty and performance bonus benefits. These bonuses are subject to presence and performance conditions. In terms of accounting treatment, they are accounted for under "Other long-term employee benefits". The estimated expense takes into account an actuarial estimate of these conditions being met. It is spread over the rights vesting period. The amount recognized in respect of the 2024 fiscal year was:

Years the plan was granted	**Grant date**	**Vesting date**	**2025 fiscal year** *(in millions of euros)*	**2024 fiscal year** *(in millions of euros)*

TOTAL			**(20)**	

Note 9 Insurance activities

General principles

Insurance activities cover personal insurance and non-life insurance activities. In BPCE these activities are performed by dedicated subsidiaries subject to the specific regulations applicable to the Insurance sector.

The entities concerned by this measure are mainly CEGC, BPCE Assurances, NA, BPCE Vie and its consolidated funds, BPCE Life, BPCE Assurances IARD, BPCE IARD, Surassur, Oney Insurance, Oney Life.

Financial assets and liabilities of insurance companies are therefore recognized in accordance with the provisions of IFRS 9. They are classified in the categories defined by this standard and follow its measurement rules (Note 2.5.1).

Insurance assets and liabilities are measured and presented in accordance with IFRS 17.

Scope of application

IFRS 17 applies to:

- issued insurance contracts (including issued reinsurance treaties);
- held reinsurance treaties;
- investment contracts issued with discretionary participation features, provided that the entity also issues insurance contracts.

BPCE has these three types of contracts.

However, the financial guarantees given by entities in the banking sector within BPCE, although meeting the accounting definition of an insurance contract, are still treated under IFRS 9 on financial instruments.

Measurement models

In accordance with IFRS 17, insurance assets and liabilities are recognized at present value.

Insurance assets and liabilities are measured using a building blocks approach (general approach), applicable by default to all contracts falling within the scope of IFRS 17, with an adaptation for insurance contracts with direct participation features (see below). This approach requires the measurement of technical provisions comprising the following three blocks:

- a first block equal to the present value of the estimate of future cash flows – Best Estimate (BE);
- a risk adjustment for non-financial risk, to take into account the uncertainty of these estimates of future cash flows (Risk Adjustment – RA);
- a Contractual Service Margin (CSM).

For BPCE, the general approach is used in direct business, in particular for payment protection insurance, multi-year personal protection contracts (excluding funerals) and for the guarantee activity. It is also used for the main reinsurance treaties issued for investment and pension activities (with certain adjustments to take into account the participating nature of the contracts, mainly under the disaggregation option or OCI option - see Note 9.2).

The Best Estimate corresponds to the present value, measured at each balance sheet date, of the estimate of future cash flows (receivable and payable, including future premiums on current contracts and acquisition cash flows) allocated to fulfilling contracts within the timeframe defined in accordance with IFRS 17 requirements, weighted by their probability of occurrence. Only the flows from current contracts are subject to measurement (a group of contracts may nevertheless be recognized in advance when facts and circumstances indicate that it is onerous (see below)). These flows are discounted using the discount rate described below. The carrying amount of the Best Estimate is broken down into a liability (or asset) for remaining coverage (materializing the commitment for insurance services not yet provided) and a liability (or asset) for incurred claims (materializing the commitment for incurred claims that have not yet been paid in full). When options and guarantees are granted to policyholders, the Best Estimate includes an assessment of their cost. Lastly, receivables and payables arising from insurance or reinsurance operations issued are now included in the value of the Best Estimate.

The risk adjustment for non-financial risk corresponds to the consideration of the uncertainty of the estimates of future cash flows included in the Best Estimate measurement. It is also measured at the end of each reporting period. The level of the risk adjustment for non-financial risk is not standardized. BPCE has defined its risk adjustment for non-financial risk methodologies according to the types of insurance liabilities that pose different risks. The risk adjustment for non-financial risk of the liabilities for remaining coverage is mainly based on a VaR (Value at Risk)-type confidence level methodology, capitalizing on the prudential requirements and based on a multi-year vision of risk with an ultimate corresponding to the extinction of the risk. Intra-entity diversification is also taken into account. The risk adjustment for non-financial risk in respect of liabilities for incurred claims is mainly based on BPCE's level of risk appetite and corresponds to a level of confidence determined using actuarial calculation methods.

The CSM represents, when the contracts were issued, the expected profit on contracts, not yet earned, measured for each group of insurance contracts. This is measured at the contract inception date and then adjusted over time, notably to take into account any changes in future assumptions of non-financial origin (at each reporting date, changes in future assumptions impact the measurement of the Best Estimate and Risk Adjustment, with a corresponding adjustment to the CSM when they are of non-financial origin, and to income or OCI when they are of financial origin). It is recognized on the balance sheet and then in income in line with the services provided to policyholders, over the duration of the remaining coverage of the contracts. If a loss is expected at inception or during the coverage period (onerous contracts, representing an expected net cash outflow for the entity), this is not subject to a negative CSM, but is immediately recognized in income. The share of CSM representative of the service rendered over the period is allocated to profit or loss through coverage units, which represent the duration of coverage of the contracts, the quantity of services provided and the service rendered by the BPCE entities to the policyholders. When applying the general approach to payment protection insurance and guarantee activities, the coverage units are defined on the basis of the outstanding principal.

The discount rates applied to the estimate of future cash flows must reflect the time value of money, the cash flow characteristics, and the liquidity characteristics of the insurance contracts, and be consistent with observable current market prices. Under the general approach, the Best Estimate and the risk adjustment for non-financial risk are measured on the basis of current rates (at the reporting date) while the CSM remains adjusted on the basis of the discount rates determined at the date of initial recognition of the group of contracts. BPCE adopts a bottom-up approach to determine these discount rates, by using a risk-free rate curve (based on interbank swap rates) to which is added an illiquidity premium, depending on the characteristics and liquidity of the insurance contracts concerned. The risk-free rate curve used is adapted from the applicable rate curve in the context of prudential requirements (adjustments mainly concern liquid parameters and extrapolation beyond the last liquidity point).

A Variable fee approach (VFA) model, adapted from the general approach, is mandatory for insurance contracts with direct participation features, which meet the following three criteria:

- the contractual terms specify that the policyholder participates in a share of a clearly identified pool of underlying items;
- the insurer expects to pay to the insured an amount equal to a substantial share of the fair value returns on the identified pool of underlying items;
- a substantial proportion of the benefits that the entity expects to pay to the policyholder must vary with the fair value of the identified pool of underlying items.

In BPCE, this model is used in direct business to measure investment and pension contracts as well as funeral contracts.

In the case of insurance contracts with direct participation features, the service provided to the policyholder corresponds mainly to the financial management of the underlying items. The cash flows of these contracts vary depending on the performance of the underlying items. An increase in the value of the underlying items entails an increase in the value of the contracts. Conversely, a decrease in the value of the underlying items entails a decrease in the value of the contracts. Changes in the underlying items adjust the CSM for the insurer's share and impact the Best Estimate for the policyholder's share. The CSM in the VFA approach also takes into account changes in future financial assumptions and the effects on the Best Estimate and the risk adjustment for non-financial risk of the accretion.

Underlying items include, in particular, items allocated to policyholders as part of the profit-sharing feature (including, in particular, the share of financial assets and investment property representing with-profits savings commitments) and unit-linked products.

For BPCE, the majority of the financial assets underlying VFA contracts are measured at fair value through profit or loss or through other comprehensive income under IFRS 9. Investment property is also measured at fair value through profit or loss as permitted by IAS 40.

In the VFA approach, the Best Estimate includes the valuation of the cost of options and guarantees granted to policyholders. Insurance liabilities also reflect the pooling of contracts portfolios for flow of insurance contracts with direct participation features backed by the general fund. Future flexible premiums under current contracts are included in the Best Estimate measurement.

Adaptations to the methodologies of the general model have been made concerning the coverage units and the rate curve for contracts eligible for the VFA model. Thus, the coverage units used in the VFA model are based on changes in policyholders' savings contracts outstandings and are adjusted to correct for a "bow-wave" effect. This is generated by two effects recognized in CSM, in respect of the period just ended: the difference between the rate of return on assets attributable to contracts (in the real world) and that assessed by actuarial models (in risk-neutral measurement), and the release of the time value of options and guarantees (TVOG). Coverage units that take account of the bow-wave effect enable CSM amortization to be recorded in the income statement, more accurately reflecting the investment service provided to policyholders over the past period. In addition, the rate curve is based on the same methodology as that applicable under the general model, with the illiquidity premium determined according to the nature of the financial assets underlying the contracts eligible for this model.

Finally, the general approach is supplemented by a simpler optional model based on the allocation of premiums ("Premium allocation approach" – PAA). It applies to:

- all insurance contracts except contracts with direct participation features, insofar as this method leads to a result close to the general approach;
- contracts with short coverage periods (*i.e.* over a period of less than 12 months).

For BPCE, this model is used in direct business for annual personal protection contracts and for all non-life insurance policies (fire, accidents and miscellaneous risks).

The initial liability for remaining coverage recognized is equal to the premiums received (*i.e.* no CSM is recognized). The premiums are then spread out and recognized in the income statement as time passes. Acquisition costs incurred may be recognized immediately as expenses when they occur or over the coverage period. The liabilities for incurred claims not yet disbursed and for groups of onerous contracts nevertheless remain measured according to the provisions of the general model. Insurance liabilities are only discounted if the effect of the passage of time is significant, particularly with regard to provisions for incurred claims (Best Estimate and Risk adjustment for non-financial risk). The provisions concerning the measurement of the risk adjustment for liabilities for incurred claims are similar to those applicable under the general model.

Contract boundaries (horizon)

Under IFRS 17, cash flows lie within the boundary of an insurance contract if they arise from substantive rights and obligations that exist during the reporting period in which the entity can compel the policyholder to pay the premiums or in which the entity has a substantive obligation to provide the policyholder with services. A substantive obligation to provide services set out in an insurance contract ceases notably when the entity has the practical ability to reassess the insured risks and can therefore set a price or a level of services that fully reflects these risks.

BPCE analyzed in depth the characteristics of its contracts in order to compute the cash flows included in the scope of its insurance contracts and thus to determine the horizon or "boundary" of these contracts. In this respect, based on the requirements of IFRS 17, the Group includes in particular within the boundary of investment contracts future flexible premiums in respect of contracts in force at the reporting date.

Contract recognition and derecognition dates

A group of issued insurance contracts must be recognized at the first of the following dates:

- The start-date of the coverage period for the group of contracts;
- The date at which the first payment by a policyholder becomes due or, in the absence of a due date, the date at which the first payment is received; and
- In the event of a group of onerous contracts, the date at which the group becomes onerous.

Only contracts that satisfy individually the above recognition criteria at the end of the reporting period are included in the group of contracts. If this is not the case, the contracts are included in the group of contracts during later accounting periods.

An insurance contract is derecognized in the following cases:

- When it is extinguished, *i.e.* when the obligation specified in it expires, or when it is discharged or canceled;
- When it is subject to an outgoing transfer (transfer to a third party);
- When the conditions of a contract are substantially modified, triggering a change in the recognition of the contract if these new conditions had always existed (different classification, different valuation model, etc.). In this case, a new contract based on the modified conditions is then recognized as a replacement for the initial contract (which is then derecognized).

The first of the three cases mentioned above is the one that most commonly occurs within the framework of the activities of BPCE's insurance entities. In this case, derecognition of the insurance contract entails eliminating the Best Estimate and the risk adjustment for non-financial risk, as a counterpart to the CSM of the group of contracts, without having any direct and immediate effect on income.

Level of aggregation of contracts

The standard defines the level of aggregation of « contract groups » to be used to assess insurance contract liabilities and their CSM.

The first step is to identify the portfolios of insurance contracts, *i.e.* contracts subject to similar risks and managed together.

Each portfolio is then divided into three parts according to their profitability profile:

- contracts that are onerous at initial recognition;
- contracts which, at initial recognition, have no significant possibility of becoming onerous;
- the remaining contracts in the portfolio.

In addition, the standard as published by the IASB introduces the principle of "annual cohorts" prohibiting the inclusion in the same group of contracts issued more than one year apart.

A group of contracts is therefore a grouping of contracts from the same portfolio, the same profitability profile and the same cohort.

Nevertheless, the standard as adopted by the European Union provides for an optional exemption from the application of this rule for the following contracts:

- groups of insurance contracts with direct participation features and groups of investment contracts with discretionary participation features whose cash flows affect or are affected by cash flows to policyholders of other contracts;
- groups of insurance contracts which are managed across generations of contracts and meet certain conditions and for which the application of the matching adjustment has been approved by the supervisory authorities.

This exemption will be reviewed before the end of 2027, based on the results of the IASB's post implementation review of IFRS 17.

BPCE applies the option to exempt the application of annual cohorts to investment/pension contracts and funeral contracts.

BPCE's classification by portfolio was carried out in accordance with the requirements of IFRS 17 as well as with internal segmentation and the way in which contracts are managed. BPCE uses the contract as an elementary level under IFRS 17. Thus, no disaggregation for the various guarantees included in a contract has been made. Grouping by homogeneous profitability levels was completed following studies carried out on the basis of information and criteria available internally, such as products, contracts and policyholders.

Specific Provisions for held reinsurance treaties

IFRS 17 requires a separate analysis, measurement and accounting of direct insurance contracts (and issued reinsurance treaties) from held reinsurance treaties. These requirements entail the assessment of a Best Estimate, a risk adjustment for non-financial risk and a CSM specific to held reinsurance treaties.

The assumptions used to assess the Best Estimate of held reinsurance treaties must be consistent with those used to assess the Best Estimate of the underlying groups of direct insurance contracts. The latter must also reflect the effect of the risk of non-performance by the issuer of reinsurance contracts held, relating mainly to the reinsurer's credit risk and litigation risk.

The risk adjustment for non-financial risk must correspond to the amount of risk transferred by the held reinsurance treaty policyholder to the issuer of the latter.

Under held reinsurance treaties, the CSM may represent a reinsurance loss or gain (thus, the provisions relating to onerous contracts do not apply in the case of held reinsurance treaties). However, when the contracts underlying the reinsurance treaties are onerous, an income is recognized in the income statement in respect of the reinsurance contracts held (referred to as the "loss recovery component"), representing the reinsurer's participation in the losses. CSM held (whether representing a reinsurance cost or gain) is recognized in the income statement over the term of the held reinsurance treaties (and not over the term of the underlying contracts) and on the basis of coverage units which must reflect the services received.

As the VFA model is not applicable to reinsurance treaties, only the general model and the PAA model can be applied. The accounting models applicable to held reinsurance treaties may differ from those used for the underlying direct insurance contracts. The provisions relating to the level of aggregation of contracts remain identical to those applicable to direct insurance contracts, however references made to onerous contracts (in respect of direct insurance contracts) are replaced by references to contracts on which there is a net gain on initial recognition.

IFRS 17 provides for the entity to recognize a group of reinsurance contracts held according to the following rules:

- The general case in which initial recognition date is the start of the coverage period for the group of reinsurance contracts held;
- For proportionate treaties, initial recognition date is deferred until recognition date for the underlying contracts if this date is later than the start of the coverage period for the group of reinsurance contracts held;
- Lastly, if the underlying insurance contracts are onerous, initial recognition date is the recognition date for the loss component, provided that the held reinsurance contract is signed by this date.

Lastly, payables and receivables arising from reinsurance operations held (including debts for cash deposits and reinsurance current accounts) are now included in the value of the Best Estimate.

BPCE's reinsurance treaties were measured using the general model (in particular the main treaty for investment and pension activities) or the PAA model, depending on their time horizon determined in accordance with IFRS 17. Under the main held reinsurance treaty, the coverage units are based on changes in the outstandings of held contracts.

Key assumptions and judgments

For the purposes of applying IFRS 17, insurance liabilities are measured using estimation techniques, judgments and assumptions (notably claims and mortality laws, generally based on historical data, and assumptions concerning expenses and fees and commissions). More specifically, for the valuation of investment and pension contracts, lapse and future flexible premiums laws are also taken into account.

IFRS 17 does not prescribe the coverage units to be applied. Judgment and estimates must be used to best reflect the service provided during the period. Certain criteria must nevertheless be taken into account when determining coverage units: the probable duration of coverage for each contract, the quantity of services measured in relation to the service provided from the insured's point of view, and the service provided, which is defined as the insurer's readiness to cover an insured event.

The assumptions and judgments applied in calculating the risk adjustment for non-financial risk result in a confidence level for BPCE of 80% at December 31, 2025, identical to that at December 31, 2024.

In terms of discount rates, the risk-free rate curve used by BPCE to discount insurance contract cash flows is presented in the table below:

	12/31/2025				
Currency	**1 year**	**5 years**	**10 years**	**20 years**	**30 years**
Euro	2.07%	2.48%	2.86%	3.21%	3.24%

	12/31/2024				
Currency	**1 year**	**5 years**	**10 years**	**20 years**	**30 years**
Euro	2.23%	2.15%	2.27%	2.26%	2.26%

The illiquidity premium for insurance contracts with direct participation features measured under the VFA approach is between 0.70% at December 31, 2025, and 0.94% at December 31, 2024.

Transition valuation methods

IFRS 17 is applied retrospectively. Current insurance contracts have been remeasured on the transition date according to the three methods below:

- Full Retrospective Approach (FRA)

The Full Retrospective Approach (FRA) provides for the definition, recognition and measurement of each of the groups of insurance contracts as if IFRS 17 had always been applied since the inception of the contracts.

BPCE has adopted this approach mainly for portfolios of contracts and reinsurance treaties eligible for the PAA approach, and for the most recent years for portfolios of payment protection insurance and guarantee contracts.

If it is not possible to apply this method based on the available data, the following two methods can be used:

- Modified Retrospective Approach (MRA)

The Modified Retrospective Approach (MRA) is a retrospective method that aims to obtain a result as close as possible to that obtained by the FRA approach, based on the use of reasonable and justifiable information obtained without excessive cost or effort. The MRA approach allows the following calculation simplifications:

- Measurement of groups of contracts on initial recognition: in particular, IFRS 17 make it possible to dispense with the annual cohorts to define the level of aggregation of groups of contracts in stock at the transition date. BPCE has adopted this simplification for portfolios of contracts for which the MRA approach has been adopted;
- Measurement of the CSM at the transition date for contracts measured under the general approach: a CSM at the date of initial recognition is first valued on the basis of estimated future cash flows at transition, adjusted for actual cash flows between the date of initial recognition and transition. The CSM at the transition date results from the CSM at the date of initial recognition, amortized using coverage units between the date of initial recognition and the transition date. Discount rates at the initial recognition date may be determined based on an observable yield curve for at least three years prior to the transition date, or based on an average spread between an observable yield curve and an estimated curve. Finally, the risk adjustment for non-financial risk at the date of initial recognition must be determined by adjusting the risk adjustment for non-financial risk at the transition date with the release of risk expected prior to the transition date. BPCE has retained these simplifications for portfolios of contracts eligible for the general approach for which the MRA approach in transition has been adopted. The provisions concerning coverage units and have been applied consistently to current contracts at the transition date and those post-transition;
- Measurement of the CSM at the transition date for contracts measured under the VFA approach: a CSM at the date of initial recognition is first measured on the basis of the fair value of the items underlying the contracts at transition, net of the estimated future cash flows at transition, adjusted for fees and levies and the change in the risk adjustment for non-financial risk relating to the period between the date of initial recognition and transition. The CSM at the transition date results from the CSM at the date of initial recognition, amortized using coverage units between the date of initial recognition and the transition date. BPCE has adopted this simplification for portfolios of contracts eligible for the VFA approach for which the MRA approach in transition has been adopted. The provisions concerning coverage units and mutualization have been applied consistently to contracts in force at the transition date and those post-transition;
- Measurement of insurance finance income or expenses: the MRA approach simplifies the task of determining discount rates for groups of contracts and calculating other comprehensive income (OCI), where a breakdown of finance income or expenses is used. As permitted by IFRS 17, BPCE has mainly retained an OCI equivalent to that of the underlying items for investment and pension contract portfolios and zero for other portfolios valued using the MRA approach in transition.

In particular, BPCE has adopted this approach for its investment/pension, payment protection insurance portfolios (with the exception of the most recent years for certain portfolios) and for its main issued reinsurance treaty.

- Fair Value Approach (FVA)

The Fair Value Approach (FVA) is based only on the data available at the transition date without taking into account past financial flows.

In the Fair Value Approach, the contractual service margin is measured at the transition date as the difference between the fair value of the group of insurance contracts at that date and the fulfilment cash flows measured at that same date.

BPCE has adopted this approach for certain multi-year personal protection and non-significant payment protection insurance portfolios as well as for one of its main held reinsurance treaties.

BPCE has mainly applied the modified retrospective (MRA) and fair value (FVA) approaches to measure insurance and held reinsurance liabilities at the transition date, given operational constraints (*e.g.* historical data availability).

Presentation of the financial statements

The requirements of IFRS 17 in terms of presentation of the financial statements are detailed in (Notes 9.2 and 9.3).

BPCE applies ANC recommendation No. 2022-01 of April 8, 2022, on the format of consolidated financial statements of banking sector institutions prepared in accordance with international accounting standards.

9.1. Notes to the income statement for the insurance activities

Accounting principles

IFRS 17 introduces the distinction between insurance service result and insurance finance income and expenses.

The standard also requires a separate presentation of these aggregates under held reinsurance treaties.

Expenses directly attributable to insurance contracts are presented in NBI.

IFRS 17 requires the distinction between cash flows directly attributable to the fulfillment of contracts and non-attributable cash flows. Only cash flows attributable to the fulfillment of contracts are included in the measurement of liabilities and presented in the aggregates required by IFRS 17. The problem of distinguishing between attributable and non-attributable cash flows mainly concerns overheads. As the attributable nature of overheads is not defined in IFRS 17, it has been determined on the basis of an allocation of expenses according to a systematic and rational method. A portion of the attributable costs is classified as acquisition costs under IFRS 17.

The investment component (which corresponds to the amounts that the entity is required to repay to the policyholder under an insurance contract in all circumstances, whether or not the insured event occurs) is excluded from the income statement. The investment component mainly concerns contracts measured under VFA in BPCE.

The standard offers the option of breaking down insurance finance income or expenses for the period between finance income or expenses and equity (disaggregation option or OCI option), in order to ensure greater consistency in the income statement between the impact of financial assets and insurance liabilities. For contracts valued according to the general approach or the PAA approach, this means that undiscounting accretion at the original rate (or on the basis of the effective interest rate for participating contracts and participating reinsurance treaties not eligible for the VFA model) is presented in income statement, and changes in current discount rates are presented in equity. For insurance contracts with direct participation features (VFA), this means that an amount equal to but opposite to the finance income amount of the underlying items of the contracts can be recorded under insurance financial expenses. The remaining financial expense is recognized directly in other comprehensive income. This option applies by portfolio.

For insurance contracts issued, BPCE applies this option systematically under the VFA approach and mainly under the general approach and PAA approach. It also applies it to certain held reinsurance treaties.

For insurance contracts with direct participation features measured using the VFA approach, the standard allows on option (risk mitigation option) to:

- reduce mismatches between the valuation of derivatives and non-derivative financial instruments measured at fair value through profit or loss used as hedging instruments and the valuation of hedged financial items that would be allocated to the CSM if this option did not exist; or
- reduce mismatches between changes of financial origin affecting held reinsurance treaties which impact income statement or OCI (impossibility of applying the VFA approach to reinsurance), while changes of financial origin affecting VFA contracts covered are allocated to CSM.

BPCE activates this option on savings scope as part of the hedging provided by the main held reinsurance treaties.

BPCE has chosen to split the change in the risk adjustment for non-financial risk between insurance service result and finance income or expenses from insurance as permitted by IFRS 17.

ANC recommendation No. 2022-01 of April 8, 2022 on the format of the consolidated financial statements of banking sector institutions prepared in accordance with international accounting standards allows optionally to present insurance activities financial investments on a separate asset line in the balance sheet subject to also presenting the net investment income from insurance activities as a separate item on the income statement. BPCE has adopted this presentation, which is in line with its previous presentation.

ANC recommendation No. 2022-01 of April 8, 2022, also calls for the cost of credit risk on insurance activities financial investments to be isolated on a separate line and presented after the items "Finance income or expenses from insurance contracts issued" and "Finance income or expenses from reinsurance contracts held", in order to reflect the financial performance of insurance activities within a financial conglomerate with separate banking and insurance activities.

9.1.1. Revenue from insurance contracts issued

Accounting principles

Revenue from insurance contracts issued (including reinsurance treaties issued) reflect the provision of insurance and investment services during the year. As a result, with the exception of the PAA approach, premiums no longer appear in the income statement.

This aggregate includes, for contracts measured according to the general approach and the VFA approach,

- the release of estimated benefits and expenses for the period (excluding investment components);
- reversal of the risk adjustment for non-financial risk;
- the amortization of the contractual service margin in respect of current services provided over the period;
- amortization of acquisition cash flows;
- other income items, including in particular experience adjustments on premium receipts relating to current and past services.

The aggregate includes, for contracts valued according to the PAA approach, the amount of expected premiums allocated to the period.

in millions of euros	2025 fiscal year	2024 fiscal year
Release of estimated benefits and expenses for the period	1,553	1,450
Reversal of the risk adjustment for non-financial risk	160	151
Amortization of the contractual service margin	705	748
Amortization of acquisition cash flows	187	184
Other income items	63	38
Revenue from insurance contracts issued (excluding PAA)	**2,668**	**2,571**
Revenue from insurance contracts issued – PAA	2,359	2,147
TOTAL REVENUE FROM INSURANCE CONTRACTS ISSUED	**5,027**	**4,718**

9.1.2. Service expenses from insurance contracts issued

Accounting principles

Service expenses from insurance contracts issued (including reinsurance treaties issued) include:

- services and expenses incurred (excluding repayments of investment components). They include in particular claims expenses, attributable management fees and commissions, the portion attributable to insurance contracts issued of operating expenses or depreciation, amortization and impairment, which are presented in NBI under IFRS 17;
- recognition and reversal of onerous components, *i.e.* losses on onerous groups of contracts and reversals of such losses;
- amortization of acquisition costs and experience adjustments (difference between estimated and actual amounts) on current and past service acquisition costs.

in millions of euros	2025 fiscal year	2024 fiscal year
Services and expenses incurred	(3,526)	(3,393)
Recognition and recovery of onerous components	34	16
Acquisition costs	(615)	(539)
TOTAL SERVICE EXPENSES FROM INSURANCE CONTRACTS ISSUED	**(4,107)**	**(3,915)**

9.1.3. Income and expenses from reinsurance contracts held

Accounting principles

IFRS 17 requires that the aggregates in respect of held reinsurance treaties be presented separately from the income and expenses from insurance contracts issued.

Income and expenses from reinsurance contracts held therefore includes:

- on the one hand, cession expenses (cost of reinsurance);
- on the other hand, cession income (amounts recoverable from reinsurers).

in millions of euros	2025 fiscal year	2024 fiscal year
Cession expenses	(2,410)	(1,142)
Cession income	2,253	989
TOTAL INCOME OR EXPENSES FROM REINSURANCE CONTRACTS HELD	**(157)**	**(153)**

9.1.4. Net investment income from insurance activities

Accounting principles

The item includes net income from insurance financial investments valued in accordance with IFRS 9 and net income from insurance investment property valued in accordance with IAS 40.

The accounting principles applicable under IFRS 9 are presented in Note 2.5.1 for general accounting principles and in Note 4 for specific accounting principles.

Insurance investment property covered by IAS 40 is measured at historical cost or at fair value with the change recognized in profit or loss in the case of properties underlying insurance contracts with direct participation features.

in millions of euros	2025 fiscal year	2024 fiscal year
Interest and similar income	1,372	1,121
Interest and similar expenses	(107)	(39)
Gains (losses) on financial instruments at fair value through profit or loss	2,486	2,243
Net gains (losses) on financial instruments at fair value through other comprehensive income	3	(19)
Net income from investment property	35	(12)
TOTAL NET INVESTMENT INCOME FROM INSURANCE ACTIVITIES	**3,790**	**3,295**

9.1.5. Finance income or expenses from insurance contracts issued

Accounting principles

Finance income or expenses from insurance contracts issued recognized in net income include:

- the accretion effect, which corresponds to the unwinding of the discount on contracts at the current rate at the beginning of the period for contracts measured using the general approach and the PAA approach;
- the effect of the change in the current discount rate and the economic environment for contracts measured using the general approach and the PAA approach;
- finance income or expenses from insurance contracts with direct participation features (VFA), which correspond to the change in fair value of the underlying items;
- the effect of the risk mitigation option (see Note 9.2 Accounting principles), which under VFA results in the recognition in income of an item that would otherwise be allocated to CSM;
- reclassifications of items recognized in net income to equity in respect of the application of the disaggregation option or OCI option (see Note 9.2 Accounting principles).

Finance income or expenses from insurance contracts issued and recognized in equity reflect the application of the disaggregation option.

in millions of euros	2025 fiscal year	2024 fiscal year
Accretion effect	(58)	(30)
Change in interest rates and economic environment recognized in net income	95	(54)
Finance income or expenses from insurance contracts with direct participation features	(3,581)	(3,457)
Effect of risk mitigation option	55	24
Reclassification of items recognized in net income to equity[1]	(292)	261
Finance income or expenses from insurance contracts issued recognized in net income	(3,780)	(3,257)
Finance income or expenses from insurance contracts issued recognized in equity[2]	292	(263)
TOTAL FINANCE INCOME OR EXPENSES FROM INSURANCE CONTRACTS ISSUED RECOGNIZED IN EQUITY AND NET INCOME	(3,488)	(3,520)

(1) Including reclassification of risk mitigation to equity.
(2) Mainly includes the disaggregation option and other movements relating to investments in associates and joint ventures.

9.1.6. Finance income or expenses from reinsurance contracts held

Accounting principles

This item includes, for held reinsurance treaties, aggregates identical to those appearing in finance income or expenses from insurance contracts issued, except for those concerning the VFA approach, which is not applicable to reinsurance.

in millions of euros	2025 fiscal year	2024 fiscal year
Accretion effect	2	3
Change in interest rates and economic environment recognized in net income	123	83
Reclassification of items recognized in net income to equity	3	(5)
FINANCE INCOME OR EXPENSES FROM REINSURANCE CONTRACTS HELD RECOGNIZED IN NET INCOME	**128**	**81**
Finance income or expenses from reinsurance contracts held recognized in equity[1]	(3)	5
TOTAL FINANCE INCOME OR EXPENSES FROM REINSURANCE CONTRACTS HELD RECOGNIZED IN EQUITY AND NET INCOME	**126**	**86**

(1) Mainly includes the disaggregation option and other movements relating to investments in associates and joint ventures.

9.1.7. Cost of credit risk on insurance activities financial investments

Accounting principles

The cost of risk relates to debt instruments classified as financial assets at amortized cost or financial assets at fair value through other comprehensive income recyclable to profit or loss.

This item therefore covers net impairment and provision charges for credit risk.

Irrecoverable loans not covered by provisions for impairment are loans that have acquired the character of permanent loss before being provisioned in Stage 3.

in millions of euros	2025 fiscal year	2024 fiscal year
Net allocation/reversals to provisions and to provisions for impairment	6	5
COST OF CREDIT RISK ON INSURANCE ACTIVITIES FINANCIAL INVESTMENTS[1]	**6**	**5**

(1) Investments at amortized cost and at fair value through other comprehensive income.

9.1.8. Overheads from insurance activities by nature and function

Accounting principles

IFRS 17 requires expenses directly attributable to insurance contracts to be presented within NBI. Non-attributable overheads are as operating expenses or as depreciation, amortization and impairment.

Overheads attributable to acquisition costs are spread over the life of the contracts according to criteria that reflect the passage of time. For BPCE, acquisition costs are mainly amortized at the same rate as the CSM, *i.e.* using the same coverage units.

in millions of euros	2025 fiscal year	2024 fiscal year
BREAKDOWN OF OVERHEADS BY NATURE		
Payroll costs	**(316)**	**(296)**
Taxes other than on income	(42)	(35)
External services and other operating expenses	(291)	(286)
Other administrative costs	**(333)**	**(321)**
TOTAL OPERATING EXPENSES	**(649)**	**(618)**
Depreciation, amortization and impairment for property, plant and equipment and intangible assets	(29)	(38)
Amounts attributed to acquisition costs net of amortization	10	13
TOTAL INSURANCE ACTIVITIES OVERHEADS BY NATURE	**(668)**	**(643)**
BREAKDOWN OF OVERHEADS BY DESTINATION(1)		
Attributable acquisition costs	(128)	(111)
Attributable claims management expenses	(164)	(157)
Attributable administrative costs	(149)	(145)
Attributable financial management expenses	(16)	(17)
Other attributable overheads	(38)	(38)
Non-attributable overheads	(172)	(176)
TOTAL INSURANCE ACTIVITIES OVERHEADS BY DESTINATION	**(668)**	**(643)**

(1) Overheads of insurance entities relating to insurance contracts, excluding fees and commissions.

9.2. Notes to the balance sheet for the insurance activities

Accounting principles

On the balance sheet, commitments relating to IFRS 17 contracts are presented according to the asset or liability position of the carrying amount of IFRS 17 portfolios and the type of contract (separate presentation of the carrying amount of IFRS 17 portfolios of direct insurance contracts and issued reinsurance from that of held reinsurance treaties).

The carrying amount of commitments relating to IFRS 17 contracts also includes amounts of receivables and payables relating to insurance operations and reinsurance operations held.

BPCE applies the option of presenting insurance activities financial investments as a separate item on the assets side of the balance sheet, with the corollary of presenting net investment income from insurance activities on a separate line of the income statement, as authorized by ANC recommendation No. 2022-01 of April 8, 2022 (Note 9.2).

The accounting principles applicable to insurance financial investments (other than investment property) are governed by IFRS 9 and are presented in Note 2.5.1 for general accounting principles and in Note 5 for specific accounting principles.

The accounting principles applicable to insurance investment property, which are covered by IAS 40, are described in Note 9.2.4.

9.2.1. Insurance activities financial investments

in millions of euros	12/31/2025	12/31/2024
Financial assets at fair value through profit or loss	78,009	63,947
Hedging derivatives	111	82
Financial assets at fair value through other comprehensive income	41,472	41,331
Investment property	1,472	1,392
Loans and advances at amortized cost	181	742
TOTAL INSURANCE ACTIVITIES FINANCIAL INVESTMENTS	**121,244**	**107,493**

The tables below show the maturities of the insurance activities financial investments.

in millions of euros	Less than 1 month	From 1 month to 3 months	From 3 months to 1 year	From 1 year to 5 years	More than 5 years	Not determined	12/31/2025
Financial assets at fair value through profit or loss						78,008	78,009
Hedging derivatives					111		111
Financial assets at fair value through other comprehensive income	92	242	2,247	14,473	23,851	567	41,472
Loans and advances at amortized cost			10	36		135	181

Equity instruments		3,642	3,642		2,976	2,976
Non-hedging derivatives	**208**		**208**	**7**		**7**
TOTAL	**44,131**	**33,877**	**78,009**	**35,879**	**28,068**	**63,947**

(1) The criteria used by BPCE to categorize financial assets at fair value through profit or loss if they do not meet the SPPI criterion are provided in Note 2.5.1.
(2) Financial instruments mandatorily measured at fair value through profit or loss include basic (non-SPPI) debt instruments for €30,236 million as well as equity instruments for which it has not been chosen to measure them through equity.
(3) Financial instruments measured at fair value through profit or loss considered part of a trading activity and similar mainly include investments on unit-linked contracts.

At December 31, 2025, financial assets classified at fair value through profit or loss mainly comprise investments in unit-linked funds (UCITS or FCPR) and non-standard UCITS.

Non-basic assets (non-SPPI) are essentially non-standard UCITS.

9.2.5. Assets at amortized cost

Accounting principles: See Note 5.5

in millions of euros	**12/31/2025**	**12/31/2024**

9.3.3. Market risk

Sensitivity of financial assets and insurance liabilities to equity market risks

The sensitivity analysis consisted in measuring the impact of a 10% change in the equity market in respect of financial assets and insurance contracts. This information is presented net of deferred taxes.

The scope of financial assets studied includes equities, UCITS carrying an equity risk, structured products and convertible bonds held by the main insurance entities. The scope of insurance contracts studied covers direct business insurance contracts, mainly relating to the investment pension business of the main insurance entities.

At December 31, 2025

	Impact on net income			Impact on equity[1]

9.3.4. Liquidity risk

Maturity of cash flows from liabilities related to insurance and reinsurance contracts held

	12/31/2025(1)						
in millions of euros	< 1 year	From 1 year to 2 years	From 2 years to 3 years	From 3 years to 4 years	From 4 years to 5 years	> 5 years	TOTAL
Insurance contracts issued – Liabilities	5,715	5,025	4,668	4,534	4,412	86,941	111,295
Reinsurance contracts held – Liabilities	179	0	0	0	0	0	179

(1) This table presents, for all insurance contracts issued and reinsurance contracts held, which are liabilities, the projected maturity of the present value of future cash flows (Best Estimate).

	12/31/2024(1)						
in millions of euros	< 1 year	From 1 year to 2 years	From 2 years to 3 years	From 3 years to 4 years	From 4 years to 5 years	> 5 years	TOTAL
Insurance contracts issued – Liabilities	5,786	5,115	4,796	4,658	4,528	76,373	101,254
Reinsurance contracts held – Liabilities	200	5	8	9	8	(101)	129

(1) This table presents, for all insurance contracts issued and reinsurance contracts held, which are liabilities, the projected maturity of the present value of future cash flows (Best Estimate).

The amounts payable on demand correspond to the total outstandings of insurance contracts, in the build up phase, for which policyholders have a surrender option or which are transferable to a third-party insurer, as well as the value of receivables and liabilities arising from these contracts. The contracts concerned correspond to investment pension contracts and funeral contracts. At December 31, 2025, the amounts payable on demand under these contracts amounted to €125,734 million compared to €113,544 million at December 31, 2024. The IFRS carrying amount of the contracts to which these amounts payable on demand relate was €115,107 million on December 31, 2025, compared to €103,514 million at December 31, 2024.

9.3.5. Insurance risk

Sensitivities of insurance contracts to insurance risks

The scope of insurance contracts studied covers insurance contracts in direct business (for the gross portion of reinsurance held), mainly for investment pension, payment protection insurance, non-life insurance and guarantee activities for the main insurance entities.

The main assumptions used in the valuation of insurance contracts for the closing of the financial statements at December 31, 2025 are presented in Note 9 General principles. These include mortality, surrender and claims assumptions.

The information is presented net of deferred taxes.

At December 31, 2025

in millions of euros	Change in assumptions	Impact on net income		Impact on equity[1]	
		Gross of reinsurance held	Net of reinsurance held	Gross of reinsurance held	Net of reinsurance held
INVESTMENT PENSIONS AND PAYMENT PROTECTION ACTIVITIES					
Surrender	+10%	(12)	(12)	(16)	(16)
Surrender	(10%)	14	14	17	17
Mortality	+10%	(22)	(22)	(11)	(11)

PROPERTY DAMAGE ACTIVITIES[2]					
Ultimate claims costs	+5%	(47)	(46)	(47)	(47)
Ultimate claims costs	(5%)	47	46	47	47

(1) The impact on equity includes the impact on net income.
(2) Including probability of default at ultimate net of recourse for the guarantee activity.

At December 31, 2024

in millions of euros	Change in assumptions	Impact on net income		Impact on equity[1]	
		Gross of reinsurance held	Net of reinsurance held	Gross of reinsurance held	Net of reinsurance held
INVESTMENT PENSIONS AND PAYMENT PROTECTION ACTIVITIES					
Surrender	10%	(6)	(6)	(8)	(8)
Surrender	(10%)	7	7	9	9
Mortality	10%	(20)	(20)	(12)	(12)
Mortality	(10%)	20	20	12	12
PROPERTY DAMAGE ACTIVITIES[2]					
Ultimate claims costs	5%	(43)	(43)	(43)	(43)
Ultimate claims costs	(5%)	43	43	43	43

(1) The impact on equity includes the impact on net income.
(2) Including probability of default at ultimate net of recourse for the guarantee activity.

9.3.6. Concentration risks

It should be noted that BPCE has a very low concentration due to the geographical dispersion of its policyholders, inherent in the distribution of contracts mainly in the retail banking networks established throughout France. The reinsurance program also limits the concentration of risks.

Note 10 Fair value of financial assets and liabilities

Key points

This section sets out the principles for measuring the fair value of financial instruments as defined in IFRS 13 "Fair Value Measurement" and the methods used by BPCE entities to measure the value of their financial instruments.

Financial assets and liabilities are recorded in the balance sheet either at fair value or at amortized cost. An indication of the fair value of items measured at amortized cost is provided in the notes.

For instruments traded on an active market with a quoted price, the fair value is equal to the quoted price, corresponding to Level 1 in the fair value hierarchy.

The fair value of other financial instruments not traded on an active market, including in particular loans, borrowings and derivatives traded over the counter, is calculated using valuation techniques that rely on widely used models and observable data, corresponding to Level 2 in the fair value hierarchy. When internal data or proprietary models are used (Level 3 in the fair value hierarchy), independent controls are used to validate the value obtained.

Determination of fair value

General principles

The fair value of an instrument is the price that would be received to sell an asset or paid to transfer a liability in a standard arm's length transaction between market participants at the valuation date.

Fair value is therefore based on the exit price.

On first recognition, fair value is usually the transaction price and is thus the price paid to purchase the asset or the price received to assume the liability.

In subsequent measurements, the estimated fair value of assets and liabilities must be based primarily on observable market data, while ensuring that all inputs used in the fair value calculation are consistent with the price that market participants would use in a transaction.

In this case, fair value consists of a mid-market price and additional valuation adjustments determined according to the instruments in question and the associated risks.

The mid-market price is obtained based on:

- the instrument's quoted price if the instrument is quoted on an active market. A financial instrument is regarded as quoted on an active market if quoted prices are readily and regularly available from a Stock Exchange, dealer, broker, industry group, pricing service or regulatory agency, and these prices represent actual and regularly occurring transactions on the principal market or, failing that, on the most favorable market, on an arm's length basis;
- if the market for a financial instrument is not active, fair value is established using valuation techniques. The techniques used must maximize the use of relevant observable entry data and minimize the use of non-observable entry data. They may refer to observable data from recent transactions, the fair value of similar instruments, discounted cash flow analysis and option pricing models, proprietary models in the case of hybrid instruments or non-observable data when no pricing or market data are available.

Additional valuation adjustments include factors related to valuation uncertainties, such as market and credit risk premiums, in order to recognize the costs incurred by a divestment transaction on the principal market.

The main additional adjustments are as follows:

Bid/ask adjustment – Liquidity risk

This adjustment is the difference between the bid price and the ask price corresponding to the selling costs. It reflects the cost requested by a market player in respect of the risk of acquiring a position or of selling at a price proposed by another market player.

Model uncertainty adjustment

This adjustment takes into account imperfections in the valuation techniques used, and in particular risk factors not considered even though observable market inputs are available. This is the case when the risks inherent in the instruments differ from those incurred by the observable inputs used to determine their valuation.

Input uncertainty adjustment

Observing certain prices or inputs used in valuation techniques may be difficult or the price or input may not be available on a sufficiently regular basis to determine the exit price. Under these circumstances, an adjustment may be necessary to reflect the probability of different values being used by market participants for the same inputs when measuring the fair value of the financial instrument in question.

Adjustment for counterparty risk (Credit Valuation Adjustment - CVA)

This adjustment applies to valuations that do not account for the counterparty's credit quality. It corresponds to the assessment of the loss linked to the risk of default by a counterparty and aims to take into account the fact that the Group may not recover the full market value of the transactions.

The method for determining the CVA is primarily based on the use of market inputs in connection with professional market practices, for all segments of counterparties subject to this calculation. In the absence of liquid market inputs, proxies by type of counterparty, rating and geographic area are used.

Adjustment for liquidity risk (Funding Valuation Adjustment - FVA)

The FVA is intended to take into account the liquidity cost associated with uncollateralized or imperfectly collateralized OTC derivatives. It is generated by the need to fund or refinance margin calls to be paid or received in the future, associated with hedging derivatives which are collateralized. Measuring a future financing/refinancing requirement (*i.e.* until the maturity of the exposures), it is based on expected future exposures concerning non-collateralized derivatives and a liquidity spread curve.

Adjustment for own credit risk (Debit Valuation Adjustment - DVA)

The DVA is symmetrical to the CVA and represents the assessment of the loss, from the counterparty's perspective, on liability valuations of derivatives. It reflects the impact of the Group's credit quality on the valuation of these instruments. This adjustment is based on the observation of the zero coupon spread of a sample of comparable institutions, taking into account the level of liquidity of the BPCE zero coupon spread during the period. The DVA adjustment is established after taking into account the funding valuation adjustment (FVA).

Own Credit Adjustment (OCA) for own credit risk of structured issues assessed at fair value

At December 31, 2024, the methodology for valuing "issuer credit risk", considered as observable, was based on the method of discounting future cash flows using parameters such as the yield curve and revaluation spreads. For each issue, this valuation represents the sum of the notional amount outstanding and its sensitivity, taking into account the existence of calls and the difference between the revaluation spread (based on the BPCE cash reoffer curve) and the average issue spread.

As of December 31, 2025, the estimate for "issuer credit risk" was changed. Now considered unobservable, the valuation is based on a difference of two valuations, one using the current spread at the valuation date and the other using the initial spread at the issue date. The issuer credit spread curves used are specific to each issue and take into account the currency and interest rate index referenced in the issue.

Changes in issuer spread are generally not material for issues with an initial maturity of less than one year.

Determination of an active market

The following criteria are used to determine whether or not a market is active:

- the level of activity and trend of the market (including the level of activity on the primary market);
- the length of historical data on prices observed in similar market transactions;
- scarcity of prices recovered by a service provider;
- wide bid-ask price spread; and
- steep price volatility over time or between different market participants.

The valuation control system is presented in Section 6.8 "Market risks".

Fair value hierarchy

For financial reporting purposes, IFRS 13 requires that the fair value of financial and non-financial instruments be broken down into a fair value hierarchy that reflects the level of observability of the models and inputs used to perform the valuations. The fair value hierarchy is presented in the following three fair value levels:

- Level 1: market values are determined directly using prices quoted on active markets for identical assets or liabilities;
- Level 2: market values are determined using valuation techniques whose significant parameters are observable on the markets, either directly or indirectly;
- Level 3: market values are determined using valuation models that are not recognized and/or are based on unobservable inputs on the market, insofar as these are likely to have a significant impact on valuation.

For derivatives and structured issues, the fair values are broken down according to the dominant risk factor, namely interest rate risk, foreign exchange risk, credit risk and equity risk.

Level 1: Valuation using prices quoted on a liquid market

Level 1 comprises instruments whose fair value is determined based on directly usable prices quoted on active markets.

Level 1 mainly includes securities listed on a Stock Exchange or traded continuously on other active markets, derivatives traded on organized markets (futures, options, etc.) whose liquidity can be demonstrated, and units of UCITS that calculate and report their net asset value on a daily basis.

Level 2: Valuation using observable market models and inputs

Level 2 fair value comprises instruments other than those mentioned in Level 1 fair value and instruments measured using a valuation technique incorporating inputs that are either directly observable (prices) or indirectly observable (derived from prices) through to the instrument's maturity. This mainly includes:

Simple instruments:

Most over-the-counter derivatives, swaps, credit derivatives, forward rate agreements, caps, floors and plain vanilla options are traded in active markets, *i.e.* liquid markets in which trades occur regularly.

These instruments are valued using generally accepted models (discounted future cash flow method, Black & Scholes model, interpolation techniques), and on the basis of directly observable inputs.

For these instruments, the extent to which models are used and the observability of inputs has been documented.

Instruments measured using Level 2 inputs also include:

- securities that are less liquid than those classified as Level 1, whose fair value is determined based on external prices put forward by a reasonable number of active market makers and which are regularly observable without necessarily being directly executable (prices mainly taken from contribution and consensus databases); where these criteria are not met, the securities are classified as Level 3 fair value;

- securities not quoted on an active market whose fair value is determined based on observable market data (for example, using market data for listed peers or the earnings multiple method based on techniques widely used in the market);
- shares of UCITS that do not calculate and report their net asset value on a daily basis but which are subject to regular reporting or which offer observable data from recent transactions;
- issued debt instruments designated at fair value are classified as Level 2 when the underlying parameters are observable;

Complex instruments:

Certain hybrid and/or long-maturity financial instruments are measured using a recognized model on the basis of market inputs derived from observable data such as yield curves, implied volatility layers of options, market consensus data or active over-the-counter markets.

The main models for determining the fair value of these instruments are described below by type of product:

- **equity products:** equity products generally have specific characteristics which justify the choice of model.

The main models used for equity products are local volatility, local volatility combined with Hull & White one factor (H&W1F) and Local Stochastic Volatility ("LSV") and may be available in a single or multi-underlying framework.

The local volatility model treats volatility as a function of time and the price of the underlying. Its main property is that it considers the implied volatility of the option (derived from market data) relative to its exercise price.

The local volatility hybrid model, paired with the H&W1F, consists in pairing the local volatility model described above with a Hull & White one-factor type fixed income model, described below (see fixed-income products).

The LSV model is based on the joint diffusion of the underlying asset and its volatility (two factors in total), with a local volatility function (known as a decorator), to ensure consistency with all vanilla options;

- **fixed income products:** fixed income products generally have specific characteristics which justify the choice of model.

The main models used to value and manage fixed income products are the Hull & White one-factor (H&W1F), two-factor (H&W2F) and one-factor stochastic volatility (H&W1FVS) models.

The H&W1F model is used to model the yield curve with a single Gaussian factor, calibrated on vanilla interest rate options.

The H&W2F model is used to model the yield curve with two factors, calibrated on vanilla interest rate options and spread-option type instruments.

The H&W1VS model is used to model both the Gaussian factor representing the yield curve and its volatility (like the LSV model for equities).

- **foreign exchange products:** foreign exchange products generally have specific characteristics which justify the choice of model.

The main models used to value and manage foreign exchange products are local and stochastic volatility models (like the LSV model for equities) as well as hybrid models, which combine modeling of the underlying foreign exchange transaction with two Hull & White one-factor models to understand the yield curves of domestic and foreign economies;

- **credit products:** the credit derivatives generally have specific characteristics which justify the choice of model.

The main models used to value and manage credit products are the Hull & White one credit factor model (H&W1F Credit) and the hybrid Bi-Hull & White Rate/Credit model (Bi-H&W Rate/Credit).

The H&W1F Credit model allows the diffusion of the credit curve (CDS curve) with a Gaussian factor.

The Bi-H&W Rate/Credit model allows for the joint diffusion of the yield curve and the credit curve, each with a Gaussian factor correlated between them.

- **commodity products:** commodity products generally have specific characteristics which justify the choice of model.

The main models used to value and manage commodity products are the Black & Scholes models, with local volatility and local volatility combined with the Hull & White one factor (H&W1F), a version extended for all these models to a multi-underlying framework to manage all the futures of the commodity family.

The Black & Scholes model is based on lognormal dynamics of the underlying asset and a deterministic volatility assumption.

The local volatility model treats volatility as a function of time and the price of the underlying. Its main property is that it considers the implied volatility of the option (derived from market data) relative to its exercise price.

The H&W1F model consists of coupling the local volatility model described above with a Hull & White one-factor fixed income model described above (see fixed-income products).

The inputs relating to all Level 2 instruments were demonstrated to be observable and documented. From a methodology perspective, observability is based on four inseparable criteria:

- inputs are derived from external sources (primarily a recognized contributor, for example);
- they are updated periodically;
- they are representative of recent transactions;
- their characteristics parameters are identical to the characteristics of the transaction. If necessary, a proxy may be used, provided that the relevance of such an arrangement is demonstrated and documented.

The fair value of instruments obtained using valuation models is adjusted to take account of liquidity risk (bid-ask), counterparty risk, the risk relating to the cost of financing uncollateralized or partially collateralized derivatives, own credit risk (measurement of liability derivative positions), and modeling and input risk.

Level 3: Valuation using unobservable market inputs

Level 3 comprises instruments measured using unrecognized models and/or models based on unobservable inputs, where they are liable to materially impact the valuation. This mainly includes:

- unlisted shares whose fair value could not be determined using observable inputs;
- private equity securities not listed on an active market, measured at fair value with models commonly used by market participants, in accordance with International Private Equity Valuation (IPEV) standards, but which are sensitive to market fluctuations and whose fair value determination necessarily involves a judgment call;
- hybrid equity, interest rate, currency derivatives and credit derivatives that are not classified in Level 2;
- loans to be syndicated for which there is no secondary market price;
- loans in the securitization process for which fair value is determined based on an expert appraisal;
- loan trading activity for which the market is illiquid;
- investment property whose fair value is calculated using a multi-criteria approach, by capitalizing rent at market rates and through comparisons with market transactions;
- instruments with a deferred day one margin;
- units of UCITS for which the fund has not published a recent NAV at the valuation date, or for which there is a lock-up period or any other constraint calling for a significant adjustment to available market prices (NAV, etc.) in respect of the low liquidity observed for such shares;
- issued debt instruments designated at fair value are classified as Level 3 when the underlying parameters are unobservable;
- CDS contracted with credit enhancers (monoline insurers), for which the valuation model used to measure write downs is similar to the Credit Valuation Adjustment (CVA) used for counterparty risk. The model also takes into account the expected amortization of exposures and the counterparty spread implicit in market data;
- plain vanilla derivatives are also classified as Level 3 fair value when the exposure is beyond the liquidity horizon determined by underlying currencies or by volatility ranges (*e.g.* certain foreign currency options and volatility caps/floors).

In accordance with amended European Regulation 575/2013 of June 26, 2013 (CRR) relating to Pillar III requirements, for each of the models used, a description of the stress tests applied and the ex-post control system (validation of the accuracy and consistency of the internal models and modeling procedures) is provided in Chapter 7 "Risk factors and risk management".

Under IFRS 9, day one profit should be recognized only if it is generated by a change in the factors that market participants would consider in setting a price, *i.e.* only if the model and parameters input into the valuation are observable.

If the selected valuation model is not recognized by current market practices, or if one of the inputs significantly affecting the instrument's valuation is not observable, the trading profit on the trade date cannot be recognized immediately in the income statement. It is taken to income on a straight-line basis over the life of the transaction or until the date the inputs become observable. Any losses incurred at the trade date are immediately recognized in income statement.

ESTIMATES OF THE MAIN UNOBSERVABLE INPUTS

The table below provides, for Level 3 instruments, the value ranges of the main unobservable inputs by major instrument class.

Main types of products	Valuation techniques used	Main unobservable data	Unobservable data ranges min - max (Dec. 2025)
Callable Spread Options and Corridor Callable Spread Options	Multi-factor model of the interest rate curve	Mean-reversion spread Mean reversion parameter	[0%; 25%]
Bermuda Accreting	Multi-factor model of the interest rate curve	Accreting factor	[62%; 97%]
Cap/Floor	Interest rate options valuation models	Interest rate volatility	[5 bps; 72 bps]
Callable Reverse Floater	Multi-factor model of the yield curve	Mean reversion parameters	[(3%); 0%]
Swaptions	Swap rate options valuation models	Swap rate volatility	[55 bps; 98 bps]
Simple and complex equity, equity basket or fund derivatives	Different valuation models for equity, equity basket or fund options	Equity volatility	[0%; 123%]
		Fund volatility	[5%; 8%]
		Stock/stock correlation	[(20%); 100%]
		Repo	[(4%); 5%]
AutoCalls	LSV model (local stochastic volatility model)	kappa	[0.708; 5]
		rho	[(1); 0.195]
		nu	[0.2; 4.13]
Vanilla exchange rate derivatives	Exchange rate option valuation models	Currency volatility	[2.27%; 17.3%]
TARN	Hybrid exchange rate/interest rate options valuation model	Correlation between exchange rates and interest rates as well as long-term volatility levels	[(40%); 60%]
			[2.27%; 17.3%]
Strip of options, Strip of quanto options, Strip of digital currency options	Exchange rate option valuation models	Correlation between exchange rates	[34.44%; 70.87%]
CDO	The default rates are based on the market prices of the underlying PFI bonds, and the recovery rates are based on historical ratings agency data	Correlation between the asset base spread between the cash asset and derivative asset, recovery rate	50.00%
Securitization swaps	Discounted expected cash flows based on early redemption assumptions on the underlying portfolio	Prepayment rate	[0%; 100%]
Inflation cap/floor	Inflation options valuation models	Inflation rate volatility	[0.0%; 8.728%]
Swaps and commodities derivatives	Valuation model for swaps and commodity derivatives	Volatility	[20%; 79%]
Hybrid equity/interest rate/currency derivatives	Hybrid models coupled with equity, exchange rate and interest rate diffusion	Equity-Exchange rate correlations	[(96%); 96%]
		Equity-Interest rate correlations	[4.25%; 29.75%]
		Interest Rate-Exchange rate correlations	[(33.22%); 0.4%]

Group policy on fair value transfers

Transfers between fair value levels are reviewed and validated by the Valuation Committee, which includes the Finance and Risk Management functions and the business lines. To do so, the Committee relies on observability studies of the valuation models and/or inputs that are carried out periodically.

These transfers of fair value levels are also presented to the apex valuation committee. The Fair Value Levels Committee validated two methodological refinements over 2025, a methodological refinement of the materiality process of valuation models and/or unobservable inputs that has led to a reclassification to Level 3 of the fair value of certain OTC derivatives and structured issues. As a reminder, no significant events have been identified during the 2025 fiscal year.

Instruments not carried at fair value on the balance sheet

IFRS 13 requires disclosure in the notes to the financial statements of the fair value, and the associated fair value levels, of all financial instruments carried at amortized cost, including loans. These fair values represent an estimate of the fair value of the instruments measured at amortized cost as at December 31, 2025. They may fluctuate from day to day due to changes in several parameters, including interest rates and the quality of counterparties' loans. They may, therefore, be significantly different from the amounts actually received or paid on the maturity date of these instruments. In the majority of cases, these fair values are not intended to be immediately realized and they do not represent the effective fair value of the instruments from a going concern perspective. The valuation methods used to determine the fair value disclosed in the notes to the financial statements are described below.

Assets and liabilities of the GFS business line and the BPCE cash management pool

Credit and loans recognized at amortized cost and amounts payable under finance leases

The fair value of these instruments is determined by discounting future cash flows. The discount rate applied for a given loan is the rate at which the Group would grant a loan with similar characteristics to a similar counterparty at the closing date. The interest rate and counterparty risk components are reassessed.

The fair value of repurchase agreements is calculated by discounting expected cash flows at the market rate on the reporting date and adding a liquidity spread.

If there is a quoted price that meets the criteria of IFRS 13, the quoted price is used.

The fair value of loans with an initial term of less than one year is generally considered to be their carrying amount. This is also the case for financial assets with a term of one year or less and current accounts. The corresponding receivables are classified in Level 2 of the fair value hierarchy. Loans and advances granted to affiliates are also classified in Level 2.

Borrowings and savings

Within the GFS division, the assessment of the fair value of securities borrowings and debts is based on the method of discounting future cash flows using inputs on the closing date such as the interest rate curve of the underlying and the spread at which this division lends or borrows.

The fair value of debts maturing in less than one year is considered to be the carrying amount. In this case, the debts are classified in Level 2 of the fair value hierarchy, as are debts payable to affiliates.

The fair value of other amounts due to banks and customers with a term of over one year is deemed to be equal to the present value of future cash flows discounted at the interest rate observed at the reporting date, plus the own credit risk of BPCE.

Investment property recognized at cost

The fair value of investment property (excluding investment property held by insurance companies) is determined using the rent capitalization method, which is widely used by real estate professionals. The capitalization rate applied to the property depends on a number of factors such as location, the quality and type of building, use, type of ownership, quality of lessee and characteristics of the lease, the interest rate and competition in the real estate market.

Financial instruments of the Retail Banking business lines

For financial instruments not measured at fair value on the balance sheet, fair value calculations are provided for information purposes and must only be interpreted as estimates.

In most cases, the values indicated are not liable to be realized and generally may not be realized in practice.

These fair values are thus only provided for information purposes in the notes to the financial statements. They are not indicators used in order to monitor retail banking activities, for which the business model is mainly based on the collection of contractual cash flows.

Consequently, the following simplified assumptions were used:

The carrying amount of the assets and liabilities is deemed to be their fair value in certain cases.

These notably include:

- short-term financial assets and liabilities (whose initial term is one year or less) provided that sensitivity to interest-rate risk and credit risk is not material during the period;
- demand liabilities;
- floating-rate loans and borrowings;
- transactions in a regulated market (particularly regulated savings products), whose prices are set by the public authorities.

Fair value of the loan portfolio

The fair value of loans is measured using internal valuation models that discount future payments of recoverable capital and interest over the remaining loan term. The "interest rate" component is thus revalued. Except when the data used by the managers are available, the "credit risk" component is established at the outset and not subsequently remeasured. Prepayment options are factored into the model *via* an adjustment to loan repayment schedules.

Fair value of debts

The fair value of fixed-rate debt owed to banks and customers with a term of over one year is deemed to be equal to the present value of future cash flows discounted at the interest rate observed at the reporting date. Own credit risk is not generally taken into account.

10.1. Fair value of financial assets and liabilities

10.1.1. Fair value hierarchy of financial assets and liabilities

The following statement provides a breakdown of financial instruments by type of price and valuation model:

	12/31/2025

(1) The main impacts recognized in the income statement are mentioned in Note 4.3.
(2) The main transfers from and to Level 3 are described in Note 10.1.3.
(3) The other changes mainly include the impact of changes in the consolidation scope and currency exchange differences.
(4) Excluding economic hedges.

10.1.3. Sensitivity of Level 3 assets and liabilities to changes in the principal assumptions

At December 31, 2025, the Group assessed the sensitivity of the fair value of the instruments of the Global Financial Services division measured using the main unobservable inputs. This sensitivity is intended to illustrate the uncertainty inherent in the use of judgment required to estimate the main unobservable inputs at the valuation date. It does not represent a measure of market risk on Level 3 instruments. The estimate is based on the valuation adjustment policy. For equities and debt securities, the estimate is based on a shock of +/-1%.

The potential impact ranges between -€88 million and +€144 million in the income statement.

10.1.4. Restatement of the deferred margin on financial instruments (Day One Profit)

The deferred margin concerns financial instruments measured on the basis of one or more unobservable market parameters. This margin is deferred over time to be recognized, depending on the case, at the maturity of the instrument, at the time of sale or transfer, as time passes or when market parameters become observable.

Natixis' policy on recognition of the margin on financial instruments

Under IFRS 9, day one profit should be recognized only if it is generated by a change in the factors that market participants would consider in setting a price, *i.e.* only if the model and parameters input into the valuation are observable.

If the selected valuation model is not recognized by current market practices, or if one of the inputs significantly affecting the instrument's valuation is not observable, the trading profit on the trade date cannot be recognized immediately in the income statement. It is taken to income on a straight-line basis over the life of the transaction or until the date the inputs become observable. This mainly impacts financial instruments classified at Level 3 fair value and marginally certain financial instruments classified at Level 2 fair value.

Any losses incurred at the trade date are immediately recognized in income statement.

At December 31, 2025, the scope of instruments for which the recognition of day one profit/loss has been deferred mainly included:

- multi-underlying structured equity and index products;
- mono-underlying structured products indexed to sponsored indexes;
- synthetic loans;
- options on funds (multi-assets and mutual funds);
- structured fixed income products;
- securitization swaps.

The table below shows, in particular, the amount remaining to be recognized in the income statement, as well as the deferred margin of new transactions for the fiscal year.

in millions of euros	2025 fiscal year	2024 fiscal year
Day one profit at the start of the year	243	199
Deferred profit on new transactions	759	426
Profit recognized in income during the year	(586)	(382)
DAY ONE PROFIT AT YEAR-END	**412**	**243**

10.2. Fair value of financial assets and liabilities at amortized cost

For financial instruments not measured at fair value on the balance sheet, fair value calculations are provided for information purposes and must only be interpreted as estimates.

In most cases, the values indicated are not liable to be realized and generally may not be realized in practice.

These fair values are thus only provided for information purposes in the notes to the financial statements. They are not indicators used for management purposes in retail banking, whose business model is based on the collection of expected cash flows.

The simplified assumptions used to measure the fair value of instruments at amortized costs are presented in Note 10.

	12/31/2025

(1) Opening correction on Level 3 made to ensure a compliant presentation of fair value entries, with no impact on the income for the period.

Note 11 Income taxes

11.1. Income tax

Accounting principles

Income taxes include all domestic and foreign taxes payable on the basis of taxable profits. Income tax also includes taxes, such as withholding taxes, which are payable by a subsidiary, an associate or a joint arrangement on distributions of dividends to the entity that draws up financial statements. The CVAE (Business Added Value Tax) is not considered as an income tax.

Income taxes include:

- current taxes, which comprise the amount of income taxes payable on taxable profit or recoverable on a tax loss over a given period. They are calculated on the taxable income for the period for each fiscal entity in the tax consolidation scope by applying the applicable tax rates and rules set by the tax authorities and on the basis of which tax shall be paid (received);
- deferred taxes (see Note 11.2).

Where it is probable that one of the Group's tax positions will not be accepted by the tax authorities, this situation is reflected in the financial statements when calculating current tax (due or recoverable) and deferred tax (asset or liability).

IAS 12 "Income Taxes" gave no particular details on how to account for uncertainties in income taxes, and was clarified by IFRIC 23 "Uncertainty over Income Tax Treatments", which was adopted by the European Commission on October 23, 2018 with effect from January 1, 2019.

This interpretation clarifies how to apply the deferred income tax recognition and measurement requirements when there is uncertainty over income tax treatments. If there is doubt as to the acceptability of the income tax treatment by the tax authority under tax law, then this tax treatment is an uncertain tax treatment. Assuming it is likely that the tax authority will not accept the income tax treatment used, IFRIC 23 states that the amount of the uncertainty to be reflected in the financial statements shall be estimated using the method that will better predict the resolution of the uncertainty. To determine this amount, two approaches may be used: the most likely amount or the expected value of the tax treatment (that is, the weighted average of the different scenarios possible). Furthermore, IFRIC 23 requires the measurement of tax uncertainties to be reassessed if facts and circumstances change or new information arises.

The Group reflects uncertainties regarding its tax treatment for income tax in its financial statements when it deems it probable that the tax authority will not accept its treatment. To ascertain whether a tax position is uncertain and to assess its effect on the amount of tax, the Group assumes that the tax authority will examine all amounts reported and have full knowledge of all related information. It bases its judgment on administrative policy, case-law and on the existence of any corrections made by the administration relating to similar tax uncertainties. The Group revises the estimate of the amount it expects to pay or recover from the tax authority due to tax uncertainties in the event of changes in the associated facts and circumstances, as these changes may result from (including, but not limited to) changes in tax law, the expiry of a statutory limitation period, or the outcome of audits and measures conducted by the tax authorities.

When it is likely that the competent tax authorities will question the treatment adopted, these uncertainties are reflected in tax income and expenses by a provision for tax risks presented under tax liabilities.

The Group is audited for prior years. Where the Group disagrees with the rectification, it will state its reasons for doing so and, in accordance with the above, a provision will be recorded in the amount of the estimated risk.

Tax uncertainties are reported as assets or liabilities and according to whether they relate to a current or deferred tax under the balance sheet headings "Deferred tax assets", "Current tax assets", "Deferred tax liabilities" and "Current tax liabilities".

The French Finance act for 2025 introduced an Exceptional Contribution on the Profits of Large Companies (corporate tax surcharge), the base of which corresponds to the average of the income tax due for the 2025 and 2024 fiscal years. The Contribution calculated on the basis of 2024 income tax was recognized in its entirety during the first half of 2025. The Exceptional Contribution, the basis of which is made up of the income tax for 2024, and disconnected from the income for tax purposes in 2025, was assimilated to a one-off event within the meaning of IAS 34. As the French Finance act for 2026 had not been adopted as of December 31, 2025, only the contributions introduced by the French Finance act for 2025 were recognized as part of this closing.

(1) The permanent differences mainly include the impact of the add-backs of the share of costs and expenses on the dividends received.
(2) Including -€75 million in respect of the corporate tax surcharge.

11.2. Deferred taxes

Accounting principles

Deferred tax assets and liabilities are recognized when temporary differences arise between the carrying amount of assets and liabilities on the balance sheet and their tax base, irrespective of when the tax is expected to be recovered or settled.

The tax rate and tax rules used to calculate deferred taxes are those resulting from current tax legislation, and which will be applicable when the tax becomes payable or recoverable.

Deferred tax liabilities and assets are offset at the level of each tax entity. The tax entity may either be a single entity or a tax consolidation group. Deferred tax assets are recognized only to the extent that it is probable that the entity will be able to recover them in the foreseeable future.

Deferred tax assets and liabilities are recognized as tax income or expense in the income statement, except for those related to:

- revaluation differences on post-employment benefits;
- unrealized gains and losses on financial assets at fair value through other comprehensive income; and
- changes in the fair value of derivatives used as cash flow hedges;

for which the corresponding deferred tax assets and liabilities are recognized as unrealized gains and losses directly in other comprehensive income.

Deferred tax assets and liabilities are not discounted to their present value.

On May 23, 2023, the International Accounting Standards Board (IASB), in charge of preparing IFRS, published the final version of the amendment to IAS 12 on tax accounting. It specifically deals with the expected accounting impacts of the application of the entry into force of the OECD's so-called "Pillar II" tax rules aimed at implementing a set minimum global corporate tax rate at 15%. The proposed amendments to the standard seek an exemption from the recognition of deferred taxes associated with this additional tax with, in return, information to be provided in the notes to the financial statements.

BPCE has set up a project structure to monitor the various associated regulations as well as compliance with Pillar II rules and the additional information requirements introduced by these amendments to IAS 12. At this stage of the project, it appears that the number of jurisdictions that would be affected by the application of a top-up-tax should be limited and the financial stakes not significant. Given the insignificant nature of its potential exposure, the Group will not publish data on exposure to this additional tax in the context of this closing.

Deferred tax assets and liabilities on temporary differences arise from the recognition of the items listed in the statement below (positive figures indicate deferred tax assets, while negative figures in brackets represent deferred tax liabilities):

in millions of euros	2025 fiscal year	2024 fiscal year

NET DEFERRED TAX ASSETS AND LIABILITIES	**751**	**620**
Recognized		
- As assets in the balance sheet	2,122	1,835
- As liabilities in the balance sheet	(1,371)	(1,215)

(1) The amount of deferred tax on losses recognized is €705 million, of which €378 million is capitalized on the loss from Natixis SA and its previous tax consolidation. The tax loss base capitalized by GFS in France is €1,462 million out of a total of €1,776 million of tax loss carryforwards. At December 31, 2025, Natixis performed tests to measure the potential impact on its deferred tax assets of the assumptions made to prepare tax business plans. These tests, which measure in particular the impact of a +/-10% variation in NBI growth assumptions, confirm the probability for Natixis of being able to offset its tax losses against future taxable profits, which are taken into account for the purposes of capitalizing deferred taxes.

(2) Deferred taxes associated with these instruments are presented net of deferred taxes corresponding to the cancellation of provisions for impairment under French GAAP.

(3) Of which a deferred tax liability relating to the tax amortization of goodwill by GFS in the United States.

Deferred tax assets are only recognized at the reporting date if it is probable that the tax entity concerned will recover the tax savings over a specified period. BPCE applies the following principles:

- the tax business plans are based on the strategic plan (four years) with a longer-term projection;
- as a precaution, the maximum timeframe used to capitalize a net deferred tax asset is 10 years.

These savings will be realized by deducting tax differences and losses carried forward against profits estimated future taxable liabilities within this horizon.

At December 31, 2025, deductible temporary differences, tax losses and unused tax credits for which no deferred tax asset has been recorded in the balance sheet amounted to €907 million.

Note 12 Other information

12.1. Segment reporting

BPCE has two core business lines:

Retail Banking and Insurance, which is central to the transformation, includes:

- the Financial Solutions & Expertise (FSE) division, encompassing the specialized financing activities: factoring, leasing in France, BPCE Equipment Solutions, consumer loans, sureties & financial guarantees, and the "retail securities" business, in addition to Socfim, BPCE Solutions immobilières and Pramex;
- Insurance, serving the Groupe BPCE networks and their clients through three core business lines: Personal Insurance (life insurance, personal and payment protection insurance), and non-life insurance (mainly vehicles, multi-risk home insurance, personal accident insurance, legal protection and health) and sureties & financial guarantees business (CEGC);
- the Digital & Payments division, which brings together the Payments activities and the activities of Oney, in order to support the digitization of retail and strengthen the quality of service from end to end of the payment chain;
- the Other Networks, including Banque Palatine, the bank for mid-sized companies and their managers, and private banking, support their clients through long-term relationships based on close relationships, a wealth of expertise and tailor-made solutions.

Global Financial Services, comprising the two divisions of Natixis:

- Asset & Wealth Management: Asset Management, present on the various international markets, brings together the expertise of management and distribution companies as well as employee savings ("Natixis Interépargne", the leading player in employee savings account management in France);
  - Wealth Management, with Natixis Wealth Management, which offers wealth management and financing solutions for large private investors.
- Corporate & Investment Banking:
  Corporate & Investment Banking advises and supports corporates, institutional investors, Insurance companies, banks, public sector entities and film and audiovisual financing.
- The Corporate center, which primarily includes:
  - the Group's central institution and holding companies;
  - run-off activities of Crédit Foncier and BPCE International;
  - cross-business activities.

12.2. Information on leases

12.2.1. Leases as lessor

Accounting principles

Leases are analyzed to determine whether in substance and economic reality they are operating leases or finance leases.

Finance leases

A finance lease is a lease that transfers to the lessee most of the risks and rewards incidental to ownership of an asset.

IFRS 16 standard for leases gives in particular five examples of situations that, individually or collectively, permit to distinguish finance lease to operating lease:

- the lease transfers ownership of the asset to the lessee at the end of the lease term;
- the lease provides the lessee with the option to purchase the asset at a price that is expected to be sufficiently below the fair value at the date the option becomes exercisable for it to be reasonably certain, at the inception of the lease, that the option will be exercised;
- the lease term covers most of the economic life of the asset even if there is no transfer of ownership;
- at the inception of the lease, the present value of lease payments amounts to at least virtually all of the fair value of the leased asset;
- the leased assets are of such a specialized nature that only the lessee can use them without major modifications.

IFRS 16 also describes three indicators that may also individually or collectively lead to a lease being classified as a finance lease:

- if the lessee can cancel the lease, the lessor's losses associated with the cancellation are borne by the lessee;
- gains or losses from the change in the fair value of the residual value accrue to the lessee;
- the lessee has the ability to extend the lease at a rent that is significantly lower than the market rent.

At the start of the contract, assets under finance leases are recorded in the lessor's balance sheet in the form of a receivable amount equal to the net investment in the lease.

The net investment corresponds to the amount of lease payments receivable from the lessee, discounted at the interest rate implicit in the lease plus any unguaranteed residual value of the asset accruing to the lessor.

More specifically, the lease payments used to calculate the net investment include fixed payments less any lease incentives payable and variable payments that depend on an index or rate.

IFRS 16 requires unguaranteed residual values to be reviewed on a regular basis. A reduction in the estimated unguaranteed residual value modifies the income allocation over the lease term. In this case, a new payment schedule is drawn up and a charge is recorded to adjust the amount of financial income already recorded.

Any impairment recorded for counterparty risk on receivables in respect of finance leases is calculated in accordance with IFRS 9 using the same method as for financial assets at amortized cost (Note 5.5). This impairment is recorded on the income statement under "Cost of credit risk".

Finance lease income is considered to be financial income and is recognized in the income statement under "Interest and similar income". This financial income is recognized using the interest rate implicit in the lease, which reflects a constant periodic rate of return on the lessor's net investment. The rate of return implicit in the lease is the discount rate that makes the following two items equal:

- the net investment; and
- the initial value of the asset (the fair value at the inception of the lease, plus any initial direct costs comprising expenses incurred specifically by the lessor to set up the lease).

Operating leases

A lease which is not considered to be a finance lease is classified as an operating lease.

Assets provided under operating leases are shown in the balance sheet under property, plant and equipment or intangible assets in the case of equipment leases, and investment property in the case of property leases. Lease income from operating leases is recognized in the income statement on a straight-line basis over the lease term, under "Income and expenses from other activities".

• > 5 years	138	108

12.2.2. Leases as lessee

Accounting principles

IFRS 16 applies to contracts that, irrespective of their legal form, meet the definition of a lease as laid down by the standard. The standard requires the identification of an asset, and that the lessee controls the right to use this asset for a period of time. Control is established if the lessee holds the following two rights throughout the period of use:

- the right to obtain almost all of the economic benefits arising from use of the asset;
- the right to decide how the asset is used.

The existence of an identified asset requires that the lessor has no substantive rights to substitute alternative assets, with this requirement being assessed according to facts and circumstances in place at the start of the contract. If the lessor can freely substitute the leased asset, the contract becomes a non-lease contract whose purpose is to provide capacity rather than an asset.

The asset can be comprised of a portion of a larger asset, such as a floor within a building. However, a portion of an asset that is not physically distinct within a grouping without a pre-determined location is not an identified asset.

With certain exceptions, lessees are required under IFRS 16 to record leases in the balance sheet as a right-of-use asset under "Property, plant and equipment" or "Investment property", and as lease liabilities under "Other liabilities".

On the date of initial recognition, no deferred tax is reported if the value of the asset is equal to the value of the liability. Deferred tax is recorded for subsequent net temporary differences arising from changes in amounts recognized as right-of-use assets and lease liabilities.

At the commencement date, the lessee measures the lease liability at the present value of the lease payments that are not paid at that date.

These payments include fixed lease payments and in-substance fixed lease payments, variable lease payments based on an index or a rate calculated using the latest index or rate in force, any residual value guarantees and, where appropriate, any amount to be paid to the lessor under options that are reasonably certain to be exercised.

Lease payments used to determine the lease liability exclude variable payments that are not based on an index or a rate, taxes such as VAT, whether recoverable or not, and the housing tax.

Right-of-use is recognized as an asset on the commencement date of the lease for an amount equal to the lease liability on that date, adjusted for any payments made to the lessor at or before that date and not taken into account for the measurement of the lease liability, less any lease incentives received. If appropriate, this amount is adjusted for initial direct costs incurred by the lessee and an estimate of costs to be incurred in dismantling or restoring the asset if required by the terms and conditions of the lease, as long as the outflow of cash is probable and can be determined in a reliable manner.

The right-of-use asset is amortized on a straight-line basis and the lease liability is calculated on an actuarial basis over the term of the lease using the lessees' incremental borrowing rate mid-way through the contract.

The amount of lease liabilities is subsequently readjusted to take into account variations in the indices or rates to which the leases are indexed. As this adjustment reflects the right of use, it has no impact on the income statement.

For entities that are part of the financial solidarity mechanism that centralize their funding with the Group Treasury, the rate is calculated at Group level and adjusted, as applicable, to the currency applicable to the lessee.

The lease term is the non-cancellable period for which a lessee has the right to use an underlying asset, together with the periods covered by an option to extend the lease if the lessee is reasonably certain to exercise that option; and the periods covered by an option to terminate the lease if the lessee is reasonably certain not to exercise that option.

For French "3/6/9" commercial leases, the term used is usually nine years. The reasonable certainty of whether the options relating to the lease term will be exercised is assessed by considering Group entities' real estate management strategy.

At the end of the lease, the contract is no longer enforceable and the lessee and the lessor each has the right to terminate the lease without permission from the other party with no more than an insignificant penalty.

The term of leases that are not extended or canceled at the end of the term (leases with automatic renewal) is determined by expert appraisal and, in the absence of specific information, assigned a reasonable term of three years.

For leases recognized in the balance sheet, the expense relating to the lease liability is reported as an interest expense under net banking income while the depreciation expense on the right-of-use asset is recognized as a depreciation expense under gross operating income.

Leases not recognized in the balance sheet and variable payments that are excluded from lease liabilities are recorded as an expense for the period under operating expenses.

Impact of leases on the lessee income statement

in millions of euros	12/31/2025	12/31/2024
EXPENSES FROM LEASE TRANSACTIONS	**(245)**	**(253)**
Interest expenses on lease liabilities	(24)	(21)
Depreciation of right-of-use assets	(217)	(228)
Variable lease expenses not included in measurement of lease liabilities	(1)	(2)
Expenses on short-term leases[1]	(1)	(0)
Expenses on underlying assets of low value	(2)	(1)
INCOME FROM SUB-LEASING/OPERATING LEASES	**0**	**1**

(1) Related to leases not recognized in the balance sheet.

When the Group sub-lets all or part of an asset it leases, the sub-letting contract is analyzed in substance using the same approach as that applied by lessors who distinguish between operating and finance leases.

Income from such leases is presented using the same approach as lessors: as income from other activities for operating leases and as interest income for finance leases.

Schedule of lease liabilities

in millions of euros	12/31/2025	12/31/2024
AMOUNTS OF NON-DISCOUNTED FUTURE PAYMENTS	**783**	**802**
< 1 year	128	133
1-5 years	396	410
> 5 years	259	259

12.3. Related party transactions

For BPCE, related parties are considered to be all consolidated companies, including companies carried under the equity method, and the Group's key management personnel.

The Social Housing Companies in which the Group is the sole major shareholder are also covered.

12.3.1. Transactions with consolidated companies

All intercompany transactions carried out during the period and balances outstanding at the end of the period with fully consolidated companies are eliminated in full on consolidation without exception (see 3.3.2).

The statement below only provides data on intercompany transactions concerning:

- entities over which the Group exercises joint control (joint operations) in respect of the non-eliminated portion: no significant transactions were identified in this category;
- entities over which the Group exercises significant influence and which are equity-accounted (associates). No significant transaction was identified in this respect.
- BPCE's parent entities, namely the Caisses d'Epargne and the Banque Populaires.

A list of fully consolidated subsidiaries is presented in Note 13 "Scope of consolidation".

12.3.2. Transactions with company directors

The Group's company directors are the members of the Management Board and Supervisory Board of BPCE. The short-term employee benefits, post-employment benefits, long-term employee benefits and termination benefits of BPCE's company directors are described in the "Rules and principles governing the determination of remuneration and benefits" section in Chapter 4 "Corporate governance report".

Short-term employee benefits

Short-term employee benefits paid out to the Group's company directors amounted to €6 million in 2025 and €5 million in 2024.

These include remuneration, directors' attendance fees and benefits paid to members of the Management Board and Supervisory Board.

Post-employment benefits, long-term employee benefits and termination benefits

Post-employment benefits, long-term employee benefits and termination benefits of the Group's company directors are described in the "Rules and principles governing the determination of remuneration and benefits" section in Chapter 4 "Corporate governance report". The amount provisioned by BPCE in respect of retirement benefits came to €3 million at December 31, 2025 (€1 million at December 31, 2024).

12.4. Partnerships and associates

12.4.1. Investments accounted for using equity method

12.4.1.1. Partnerships and other associates

The Group's main equity-accounted investments are the following joint ventures and associates:

in millions of euros	12/31/2025	12/31/2024

Non-financial companies	**0**	**5**
SHARE IN NET INCOME OF EQUITY-ACCOUNTED ASSOCIATES	**42**	**48**

12.5. Interests in non-consolidated structured entities

12.5.1. Nature of interests in non-consolidated structured entities

A non-consolidated structured entity is a structured entity that is not controlled and is therefore not accounted for using the full consolidation method. As a result, the interests held in a joint venture or associate which is classed as a structured entity falls within the scope of this note.

The same is true of controlled structured entities that are not consolidated due to holding threshold reasons.

This includes all structured entities in which BPCE holds an interest and acts in one or more of the following capacities:

- originator/structurer/arranger;
- placement agent;
- manager; or
- in any other capacity that has a major impact on the structuring or management of the transaction (*e.g.* provision of financing, guarantees or structuring derivatives, tax investor, major investor, etc.).

An interest in an entity corresponds to all types of relationships, contractual or not, that expose BPCE to a risk of fluctuations in returns relating to the entity's performance. Interests in another entity may be evidenced by, among others, the holding of equity instruments or debt securities, as well as, by other types of relationships, such as financing, short-term credit facilities, credit enhancement, the provision of guarantees or structured derivatives.

As a result, the following are not included in the scope of this note:

- structured entities which are associated with BPCE through a current transaction alone. This corresponds to an unstructured financial instrument which generally does not have a material impact on the variability of the structured entity's returns and which could be concluded by BPCE with structured entities or classically governed entities alike. The main kinds of current transactions are:
  - plain vanilla fixed income, foreign exchange, and other underlying derivatives, as well as securities lending/borrowing and repurchase transactions,
  - plain vanilla guarantees and financing granted to family non-trading real estate companies (SCI) or to certain holdings;
- external structured entities in which BPCE simply acts as an investor.

These are:

- investments in external UCITS that the Group does not manage, except for those in which the Group owns almost all the shares;
- a limited scope of interests held in securitization vehicles (exposures on these funds are included in the information published in Chapter 7.7 "Risk factors and risk management – Securitizations"); and
- interests held in external real estate funds or private equity funds in which BPCE acts as a simple minority investor.

The structured entities with which the Group has a relationship can be divided into four categories: entities involved in asset management, securitization vehicles, entities created for structured financing purposes, and entities created for other types of transactions.

Asset Management

Financial asset management (also known as portfolio management) consists of managing equity or funds entrusted by investors by investing in equities, bonds, mutual funds or hedge funds, etc.

The Asset Management line of business which uses structured entities is represented by collective investment management or fund management. More specifically, it encompasses collective investment vehicles within the meaning of the French Monetary and Financial Code (other than securitization structures) as well as equivalent bodies governed by foreign law. These notably include entities such as UCITS, real estate funds and private equity funds.

Securitization

Securitization transactions are generally established as structured entities in which assets or derivatives representing credit risk are isolated.

These entities serve to diversify the underlying credit risks and to split them into various levels of subordination (tranches) with a view, generally, to sell them to investors seeking a certain level of return, according to the degree of risk accepted.

These vehicles' assets and the liabilities that they issue are rated by the rating agencies, which monitor that the level of risk associated with each tranche of risk sold is commensurate with the attributed rating.

The kind of securitization transactions used and which require the intervention of structured entities are as follows:

- transactions where the Group (or a subsidiary) sells on its own behalf to a dedicated vehicle, in cash or synthetic form, the credit risk associated with one of its asset portfolios;
- securitization transactions performed on behalf of third parties. These transactions consist of housing in a dedicated structure (generally a Special Purpose Entity (SPE)) the assets belonging to another company. The SPE issues shares that can, in certain cases, be subscribed for directly by investors, or subscribed for by a multi-seller conduit which refinances the acquisition of these shares through the issue of short-term notes (commercial paper).

Structured financing (of assets)

Structured financing covers the range of activities and products set up to provide financing to economic players while reducing risks through the use of complex structures. These include the financing of movable assets (pertaining to aeronautic, marine or terrestrial transport, telecommunications, etc.), real estate assets and the acquisition of targeted companies (LBO financing).

The Group may need to create a structured entity that houses a specific financing transaction on behalf of a client. This is a contractual and structural organization. The particularities of these types of financing are related to risk management, with the use of notions such as limited recourse or waivers of recourse, standard and/or structural subordination and the use of dedicated legal vehicles used in particular to carry a single-contract finance lease representing the financing granted.

Other activities

This comprises all remaining activities.

12.5.2. Nature of risks associated with interests held in non-consolidated structured entities

Assets and liabilities recognized in the Group's various balance sheet accounts relating to interests in non-consolidated structured entities contribute to determining the risks associated with these entities.

The values recorded under the balance sheet assets, along with loan and guarantee commitments given less guarantee commitments received and provisions recorded in liabilities, are used to assess the maximum loss exposure. It should be noted that the maximum loss exposure does not take into account financial liabilities at fair value through profit or loss. This exposure is limited, in the specific case of optional derivatives, to the sale of options.

The "notional amounts" line corresponds to the notional amount of options sold to structured entities.

The data are presented below, aggregated based on their activity classification.

At December 31, 2025

Excluding insurance activities investments *in millions of euros*	Securitization	Asset Management	Structured Financing	Other activities

SIZE OF STRUCTURED ENTITIES	**159,006**	**1,057,121**	**64,365**	**1,446**

At December 31, 2024

in millions of euros	Securitization	Asset Management	Structured Financing	Other activities
SIZE OF STRUCTURED ENTITIES	**148,355**	**912,467**	**50,692**	**1,384**

Securitization transactions in which BPCE is simply an investor are listed in Chapter 7.7 "Risk factors and risk management – Securitization transactions".

The size criterion used varies according to the types of structured entities:

- securitization: the total amount of issues recorded in the entities' liabilities;
- asset management: the net assets of collective investment vehicles (other than securitization);
- structured financing: the total amount of financing outstandings remaining due by the entities to all banks;
- other activities: total assets.

12.5.3. Income and carrying amount of assets transferred to sponsored non-consolidated structured entities

A structured entity is sponsored by a group entity when the following two indicators are both satisfied:

- it is involved in the creation and structuring of the structured entity;
- it contributes to the success of the entity by transferring assets to it or by managing relevant activities.

When the Group entity's role is limited to one of advisor, arranger, custodian or placement agent, the structured entity is not considered to be sponsored.

BPCE plays the role of sponsor for:

- UCITS initiated by an investment management company belonging to BPCE and in which BPCE holds no investment or any other interest. Reported income includes management and incentive fees charged by BPCE entities, as well as profit or loss from ordinary business with these funds;
- a US activity involving the origination and disposal of portfolios of home loans to securitization vehicles created by the GFS division with third parties and in which the Group holds no interests. Reported income includes structuring fees as well as gains or losses on the disposal of receivables.

For the non-consolidated structured entities that the Group sponsors without holding any interests, the impact on the financial statements is presented below:

2025 fiscal year

in millions of euros	Securitization	Asset Management
Income from entities	**2**	**2,024**
Net interest income	0	0
Net fee and commission income	1	2,008
Gains (losses) on financial instruments at fair value through profit or loss	0	16
CARRYING AMOUNT OF ASSETS TRANSFERRED TO THE ENTITY DURING THE FISCAL YEAR	998	0

2024 fiscal year

in millions of euros	Securitization	Asset Management
Income from entities	**15**	**1,426**
Net interest income	0	0
Net fee and commission income	3	1,414
Gains (losses) on financial instruments at fair value through profit or loss	12	12
CARRYING AMOUNT OF ASSETS TRANSFERRED TO THE ENTITY DURING THE FISCAL YEAR	279	

12.6. Statutory Auditors' fees

Fees in respect of duties carried out by the Statutory Auditors, and by their networks, responsible for auditing BPCE's financial statements in respect of the 2024 and 2025 fiscal years were as follows:

	PwC				Forvis Mazars				Deloitte				TOTAL			
	Amount		*%*		*Amount*		*%*		*Amount*		*%*		*Amount*		*%*	
in thousands of euros[1]	**2025**	**2024**	**2025**	**2024**	**2025**	**2024**	**2025**	**2024**	**2025**	**2024**	**2025**	**2024**	**2025**	**2024**	**2025**	**2024**

of which fees paid to commissioned Statutory Auditor for services other than financial statement certification of consolidating entities[3]	*967*	*1,841*			*318*	*881*			*588*	*1,094*			*1,873*	*3,816*		
% Change		**1%**				**(13%)**				**9%**				**(4%)**		

(1) Amounts relating to services provided appear on the income statement for the fiscal year, notably including unrecoverable VAT.

(2) In 2025, "services other than financial statement certification" mainly related to assignments carried out at the request of BPCE SA (€6 million), in particular for services rendered during the acquisition of entities, for comfort letters relating to issues and findings resulting from specific controls as well as on assignments carried out at the request of Natixis SA and its subsidiaries (€5 million), in particular support missions on regulatory changes, tax missions and technical assistance missions.

(3) In 2024, the data were restated to correct a classification error between fees paid to statutory auditors and those paid to members of their network. This reclassification has no impact on the total fees or on the consolidated accounts

Note 13 Detail of the scope of consolidation

13.1. Securitization transactions

Accounting principles

Securitization is a financial engineering technique that aims to enhance balance sheet liquidity. From a technical perspective, assets to be securitized are grouped according to the quality of the associated collateral or guarantees and sold to special purpose entities that finance their acquisition by issuing securities underwritten by investors.

Entities created specifically for this purpose are consolidated if the Group exercises control over them. Control is assessed according to the criteria provided in IFRS 10.

BPCE's internal securitization transaction

The securitization operations of BPCE mainly include:

AVAL Master FCT and FCT PURPLE MASTER CREDIT CARDS

13.2. Guaranteed UCITS

Guaranteed UCITS are funds designed to reach a specific amount at the end of a given period, determined by applying a predefined calculation formula based on financial market indicators and, where appropriate, to distribute revenues derived from the investments as determined using the same methods. The portfolio management targets of these funds are guaranteed by a credit institution.

Based on an analysis of the substance of these funds in accordance with IFRS 10, the Group does not control relevant activities (as management flexibility is limited) and is not exposed to variable returns (as a solid risk monitoring system has been implemented) and therefore does not consolidate these structures.

13.3. Other interests in consolidated subsidiaries and structured entities

Major restrictions

The Group has not been faced with any major restrictions relating to stakes held in its structured or non-structured subsidiaries.

Support of consolidated structured entities

The Group did not grant any financial support to consolidated structured entities.

13.4. Scope of consolidation at December 31, 2025

Only those entities providing a material contribution are consolidated. For entities meeting the definition of financial sector entities given in Regulation (EU) No. 575/2013 of the European Parliament and of the Council of June 26, 2013 (the CRR), the accounting consolidation thresholds have been aligned, since December 31, 2017, with those applied for the prudential scope of consolidation. Article 19 of the CRR sets a threshold of €10 million in total balance sheet and off-balance sheet assets. For non-financial sector entities, materiality is assessed at the level of the consolidated entities. Based on the principle of ascending materiality, any entity included at a sub-consolidation level is included at all higher consolidation levels, even if it is not material at those levels.

The percentage interest is specified for each entity in the scope of consolidation. The percentage of interest describes the share of equity held by the Group, either directly or indirectly, in companies within the scope. The percentage of interest can be used to determine the share attributable to equity holders of the parent in the net assets of the company held.

(3) Entity treated as a "discontinued operation" at December 31, 2025.

13.5. Non-consolidated companies at December 31, 2025

The Regulation of the *Autorité des normes comptable* (ANC), the French national accounting standards authority No. 2016-09 of December 2, 2016 requires companies that prepare their consolidated financial statements in accordance with international standards as adopted by the European Union to publish additional information relating to companies not included in their scope of consolidation as well as significant equity interests.

Non-consolidated companies include:

- significant interests that do not fall within the scope of consolidation; and
- companies excluded from the scope of consolidation owing to their non-material nature.

The main significant interests that do not fall within the scope of consolidation, and details of the share of equity held either directly or indirectly by the Group, are as follows:

Company	Location	Share of equity held	Reason for non-consolidation	Equity amount[1]	Amount of income
				in millions of euros	*in millions of euros*
SYSTEME TECHNOLOGIQUE ECHGE ET TRAIT	FRANCE	15,.04%	Holding in an entity not consolidated because the Group does not exercise control, joint control or significant influence (including tax optimization structures)	168	43
CAISSE DE REFINACEMENT DE L'HABITAT	FRANCE	18.05%	Holding in an entity not consolidated because the Group does not exercise control, joint control or significant influence (including tax optimization structures)	612	10

(1) Amount of shareholders' equity and income for the last fiscal year known at the reporting date and based on applicable accounting standards according to the country of location.

Information on companies excluded from the scope of consolidation due to their non-material nature is available on Groupe BPCE's website at the following address: https://www.groupebpce.com/en/investors/results-and-publications/reference-documents.

6.4 Statutory auditors' report on the consolidated financial statements

Year ended December 31, 2025

This is a translation into English of the statutory auditors' report on the financial statements of the Company issued in French and it is provided solely for the convenience of English-speaking users. This statutory auditors' report includes information required by French law, such as information about the appointment of the statutory auditors or verification of the management report and other documents provided to shareholders. This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

To the Annual General Shareholders' Meetings,

BPCE

7 promenade Germaine Sablon

75013 Paris

I. Opinion

In compliance with the engagement entrusted to us by your Annual General Meeting, we have audited the accompanying consolidated financial statements of Groupe BPCE for the year ended December 31, 2025.

In our opinion, the consolidated financial statements give a true and fair view of the assets and liabilities and of the financial position of the Group as at December 31, 2025 and of the results of its operations for the year then ended in accordance with International Financial Reporting Standards as adopted by the European Union.

The audit opinion expressed above is consistent with our report to the Audit Committee.

II. Basis of Opinion

Audit Framework

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the Statutory Auditors' Responsibilities for the Audit of the Consolidated Financial Statements section of our report.

Independence

We conducted our audit engagement in compliance with independence requirements of the French Commercial Code (code de commerce) and the French Code of Ethics (code de déontologie) for statutory auditors, for the period from January 1st, 2025 to the date of our report, and specifically we did not provide any prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No 537/2014.

III. Justification of Assessments – Key Audit Matters

In accordance with the requirements of Articles L. 821-53 and R.821-180 of the French Commercial Code (code de commerce) relating to the justification of our assessments, we inform you of the key audit matters relating to risks of material misstatement that, in our professional judgment, were of most significance in our audit of the consolidated financial statements of the current period, as well as how we addressed those risks.

These matters were addressed in the context of our audit of the consolidated financial statements as a whole, approved in the conditions mentioned above, and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the consolidated financial statements.

Impairment of loans and receivables (statuses 1, 2, and 3)

Identified risk and key judgments

BPCE is exposed to credit risks. These risks, resulting from the inability of its clients or counterparties to meet their financial commitments, particularly affect its customer lending activities.

In accordance with the 'impairment' component of IFRS 9 standard, your Group establishes impairments and provisions intended to cover the risks of expected losses (outstandings in statuses 1 and 2) or incurred losses (outstandings in status 3).

The impairment rules for expected loss risks require the establishment of a first impairment status representing an expected loss at 1 year from the origination of a new financial asset classified at amortized cost or fair value through equity and on off-balance sheet commitments; and a second status representing an expected loss at maturity, in case of a significant deterioration in credit risk. These impairments for expected losses (statuses 1 and 2) are determined mainly based on models incorporating various parameters (default probabilities, loss given default, exposures, ...) and including forward-looking information.

As specified in note 7.1.2 of the appendix, the margins for uncertainty temporarily established during the first application of IFRS 9, associated with the modeling of the probabilities of default applicable to Retail and Non-Retail portfolios, were removed during the 2023 fiscal year.

These impairments for expected losses are, where necessary, supplemented by sector-based allocations in consideration of local specificities.

Outstandings of credits bearing a proven counterparty risk (status 3) are subject to impairments determined essentially on an individual basis. These impairments are assessed by management based on recoverable future cash flows considering the estimated available guarantees for each of the credits concerned.

We considered the identification and evaluation of credit risk to be a key point of the audit given that the induced provisions constitute a significant estimate for the preparation of the accounts, and call upon management's judgment both in the attachment of credit outstandings to the different statuses and in the determination of the parameters and calculation modalities of the impairments for outstandings in statuses 1 and 2, as well as in the assessment of the level of individual provisioning of credit outstandings in status 3.

The stock of impairments for credit losses on outstanding loans and similar to customers and credit institutions amounted to €3,065 million, of which €324 million under status 1, €366 million under status 2 and €2,374 million under status 3.

The cost of credit risk for the 2025 financial year amounted to €637 million (compared with €607 million for the 2024 financial year).

For further details on accounting policies and exposures, refer to notes 5.4 and 7.1 to the notes.

Our response

Impairment of credit outstandings in statuses 1 and 2

Our work mainly consisted of:

- verifying the existence of an internal control system allowing an appropriate frequency update of the ratings of the different counterparties;
- verifying the existence of governance reviewing at an appropriate frequency the adequacy of impairment models, the parameters used for the calculation of impairments, and analyzing the developments of impairments with respect to IFRS 9;
- Assessing the appropriateness of the models, parameters, and macroeconomic assumptions used for the impairment calculations, particularly regarding the removal of margins for uncertainty related to Retail and Non-Retail PDs during the fiscal year;
- Performing counter-calculations on the main types of credit exposures;
- Conducting controls on the overall computer system implemented by Groupe BPCE, including a review of general computer controls, interfaces, and embedded controls for specific data aimed at processing information related to IFRS 9;
- Conducting controls on the tool used to evaluate the impact on expected credit losses of the application of sectoral downgrades.
- Verifying the proper documentation and justification of the sectoral provisions recorded in the group. In this regard, we (i) assessed the criteria for identifying by the group the business sectors considered to be more sensitive to the impacts of the current economic context, (ii) assessed the appropriate level of the provisions thus estimated.

Impairment of credit outstandings in status 3

In the context of our audit procedures, we have, in general, examined the control system related to the census of exposures classified in status 3, the monitoring of credit and counterparty risks, the assessment of non-recovery risks, and the determination of impairments and provisions on an individual basis.

Our work consisted of assessing the quality of the monitoring system for sensitive, dubious, and litigious counterparties, as well as the credit review process. Furthermore, based on a sample of files selected on materiality and risk criteria, we have carried out contradictory analyses of the amounts of impairments and provisions.

We also appreciated the detailed information required by IFRS 9 standard under the 'Impairments' component as of December 31, 2025.

Level 2 and 3 financial instruments as per IFRS 13

Identified risk and key judgments

BPCE holds financial instruments measured at fair value which are broken down into three levels defined by IFRS 13 "*Fair Value Measurement*" according to the fair value determination methods used.

Fair value is determined using different approaches depending on the nature of the instruments:

- by observing quoted prices (instruments classified as Level 1 in the fair value hierarchy),
- through the use of valuation models based on parameters that are mostly observable on the market (instruments classified as level 2), or
- through the use of valuation models based on parameters that are mostly unobservable on the market (instruments classified as level 3).

For Level 2 and Level 3 financial instruments, these approaches may therefore involve a significant amount of judgement taking into account:

- the use of internal valuation models;
- the use of valuation parameters that are not observable on the market;
- additional valuation adjustments to take account of certain market, counterparty or liquidity risks.

We considered the measurement of Level 2 and Level 3 fair value financial instruments to be a key focus of the audit due to the materiality of the exposures and the use of judgment in the determination of fair value.

As of December 31, 2025, Level 2 and Level 3 financial assets at fair value were valued at €139,095 million and €17,185 million respectively.

At the same date, level 2 and level 3 financial liabilities at fair value were valued at €190,238 million and €15,769 million respectively.

For further details on accounting policies and fair value levels, refer to notes 10 and 10.1 to the notes to the consolidated financial statements.

Our response

We have reviewed the internal control mechanisms related to the identification, valuation, recording, and classification of complex derivative financial instruments, especially those classified at fair value levels 2 and 3.

We have communicated with the Risk, Compliance, and Permanent Controls Management (DRCCP) and have examined the reports and minutes of the committees originating from this management.

We tested the key controls that we deemed relevant to our audit, particularly those related to:

- the validation and periodic review, by the risk management, of the valuation models,
- the independent verification of the valuation parameters,
- the determination of the main valuation adjustments,
- the validation and periodic review of the observability criteria considered to classify complex financial instruments in the fair value hierarchy.

We performed these procedures with the assistance of our valuation experts, with whom we also carried out independent valuation work consisting of examining, based on samples, the assumptions, methodologies, and market parameters feeding the valuation models used to estimate the main valuation adjustments as of December 31, 2025.

We also examined, based on samples, any existing margin call discrepancies with market counterparties, to assess the appropriateness of the valuations.

Finally, we reviewed the information related to the valuation of financial instruments published in the appendix.

Valuation of insurance contract liabilities in the "Retirement Savings" classes

Identified risk and key judgments

BPCE recognizes liabilities associated with direct equity contracts in its "Retirement Savings" insurance activities.

These liabilities are measured using a *Variable Fee Approach* ("VFA") model, which requires the measurement of actuarial liabilities based on significant judgments regarding the data used, assumptions about future periods, and resulting from estimation techniques.

- The estimate of the present value of the estimates of future cash flows, including the assessment of the cost of options and guarantees granted to policyholders (*BE)* relating to these long-term contracts, is based on technical and financial assumptions and significant judgments
- The assessment of the risk *adjustment (RA)* is based on assumptions about the group's level of confidence in the risk factors associated with the technical liabilities, and on a Value at Risk (VaR) approach, which is the maximum potential loss within a defined confidence interval.
- Finally, the amortisation of the *Contractual Service Margin (CSM),* representing the investment service rendered over the year, is determined through the units of hedging. These hedging units are adjusted to take into account the expected return of the underlying items resulting from so-called "real world" assumptions.

In addition, the internal margins between the banking entities distributing insurance products and the insurance entities are restated.

Due to the sensitivity of the valuation of these liabilities to these key judgments and assumptions, we considered the valuation of the liabilities related to the direct participating contracts of the "Savings and Retirement" classes as a key point of the audit.

As of December 31, 2025, liabilities related to insurance contracts issued measured according to the Variable Fee Approach (VFA) model, including direct participation contracts in the "Retirement Savings" classes, amounted to €115,589 million

For further details on the accounting principles and valuation of these contracts, refer to notes 9 and 9.2.7 to the notes to the consolidated financial statements.

Our response

In order to cover the risk of valuation of these liabilities related to direct participation contracts of the "Retirement Savings" branches, we have implemented the following audit procedures with the assistance of our actuarial specialists:

- We assessed the methodology for evaluating the BE, RA and CSM related to these contracts and checked their compliance with the accounting standards in force;
- We assessed the internal control environment of the information systems involved in the processing of technical data, calculations and their transfer to accounting;
- We assessed the design and tested the operating effectiveness of the key controls put in place by the group. In particular, we assessed:
  - The control system relating to the validation of the future cash flow projection model;
  - Documentation and controls relating to key judgments and assumptions made by the finance department;
- We tested the calculation models used to estimate future cash flows, the non-financial risk adjustment and contractual service margin adjustment on a sample basis and based on our risk assessment, as well as any material changes to the calculation models;
- We tested the reliability of the data used as a basis for the estimates by means of a sample;
- We tested the hedging units and the main so-called "real-world" assumptions used to recognise the contractual service margin in profit or loss by means of a sample;

Finally, we assessed the appropriateness of the information disclosed in the notes to the notes to the consolidated financial statements.

Valuation of goodwill and indefinite-life brands

Identified risk and key judgments

BPCE notes goodwill in its consolidated financial statements. Indeed, the external growth operations carried out by the group have led it to (i) assess the control arrangements exercised over the acquired entities in accordance with IFRS 10 *"Consolidated Financial Statements"* and (ii) carry out a purchase price allocation exercise in accordance with IFRS 3 *"Business Combinations"*. Following this allocation exercise, the unallocated 'surplus' corresponding to the residual identifiable net asset was accounted for in goodwill.

These goodwill and acquired intangible assets with an indefinite life are subject to impairment tests as soon as impairment losses are identified and at least annually, based on the assessment of the recoverable amount of the cash-generating units ("CGUs") to which they are attached or as soon as impairment losses are identified. The determination of the recoverable amount is based on the discounting of the estimated future cash flows of the CGU as they result from the medium-term plans drawn up by the entities concerned and assessed by the group.

We considered that the valuation of goodwill and intangible assets with an indefinite life was a key point of the audit, by their very nature, as it requires the exercise of judgment, in particular for the determination of discount rates, economic scenarios or financial projections used in the context of the impairment tests implemented by the Group.

As of 31 December 2025, gross goodwill amounts to €3,920 million and cumulative impairment losses amount to €530 million. For further details on accounting policies, the allocation of goodwill to CGUs, the procedures for performing impairment tests and the sensitivity of recoverable amounts to key assumptions, please refer to notes 3.2 and 3.4 to the notes to the consolidated financial statements.

Our response

With the help of our valuation experts, we evaluated the process put in place by BPCE to identify the indicators of possible impairment losses and carried out a critical examination of the methods of implementing impairment tests.

In particular, we carried out:

- comparison of assumptions and parameters with external sources
- a review of the reasonableness of the medium-term plans selected for each CGU concerned, involving:
  - the comparison with the group's strategic plan approved by the management bodies (supervisory board or board of directors);
  - the assessment of the coherence and reliability of the main assumptions used to construct them, in particular with regard to the financial trajectories drawn up during past years and actually implemented;
  - analysis of sensitivity to different valuation parameters.
- verification of the consistency of the information published on the results of these impairment tests.

Finally, we assessed the appropriateness of the information disclosed in the notes to the notes to the consolidated financial statements.

Provisions for legal and non-compliance risks

Identified risk and key judgments

BPCE is subject to litigation in judicial instances, investigations, and requests for information from regulatory and tax authorities in various jurisdictions.

The assessment of legal and non-compliance risks (including tax) that result from this is based on management's estimate at the reporting date.

The recognition of a provision, the determination of its amount, and the information disclosed in the notes to the financial statements inherently require judgment, particularly due to the difficulty in estimating the likelihood of the risk occurring as well as the outcome and financial consequences of ongoing procedures.

Consequently, we considered the estimation of provisions for legal risks and non-compliance to be a key audit matter given the sensitivity of these provisions to the assumptions and options chosen by management.

Refer to notes 2.3, 5.13, and 11.1 of the appendix to the consolidated financial statements for more details.

Our response

We have reviewed the process of identifying, evaluating, and provisioning for legal risks and non-compliance.

We have been informed of the status of ongoing procedures and the main risks identified by the Group, particularly through regular exchanges with management (and specifically the group's legal, compliance, and tax departments) as well as the review of documentation made available to us.

Our work also involved assessing the reasonableness of the assumptions and data used by management for estimating the amount of provisions recognized at the reporting date. We specifically involved tax law specialists to critically review the group's identified tax risk analyses and related provisions.

Furthermore, we conducted confirmation procedures on ongoing litigations with the group's legal counsel.

Finally, we verified the correct accounting recording of the provisions evaluated and the information provided in this regard in the notes to the consolidated financial statements.

IV. Specific Verifications

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations of the information pertaining to the Group presented in the management report of the Board of Directors.

We have no matters to report as to its fair presentation and its consistency with the consolidated financial statements.

V. Other Legal and Regulatory Verifications or Information

Format of presentation of the consolidated financial statements intended to be included in the annual financial report

We have also proceeded, in accordance with the professional practice standard on the auditor's due diligence relating to annual and consolidated accounts presented in the European Single Electronic Format (ESEF), to verify compliance with this format defined by the European delegated regulation No. 2019/815 of December 17, 2018, in the presentation of the consolidated accounts included in the annual financial report mentioned in Article L.451-1-2 of the Monetary and Financial Code, prepared under the responsibility of the Chairman of the Management Board. As for consolidated accounts, our due diligence includes verifying the compliance of the tagging of these accounts with the format defined by the aforementioned regulation.

Tagging in accordance with the European single electronic reporting format has been carried out on the Group BPCE consolidated financial statements intended to be included in the annual financial report.

We are consequently unable to conclude on the compliance, in the presentation of BPCE's consolidated financial statements intended to be included in the annual financial report, with the European single electronic reporting format.

Appointment of statutory auditors

Forvis Mazars SA was appointed as Statutory Auditors in the initial statutes dated December 19, 2006, of GCE Nao (which became BPCE in July 2009), at its formation. The firms PricewaterhouseCoopers Audit and Deloitte & Associés were appointed as statutory auditors of BPCE by the general assembly, respectively, on July 2, 2009, and May 22, 2015.

As of December 31, 2025, Mazars was in the 19th year of its mission without interruption, including 17 years since the company became a public interest entity, PricewaterhouseCoopers Audit was in the 17th year of its mission without interruption, and Deloitte & Associés was in the 11th year of its mission without interruption.

VI. Responsibilities of Management and Those Charged with Governance for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards as adopted by the European Union, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The Audit Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risks management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The consolidated financial statements were approved by the Board of Directors.

VII. Responsibilities of Management and Those Charged with Governance for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards as adopted by the European Union, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The Audit Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risks management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The consolidated financial statements were approved by the Board of Directors.

We also provide the Audit Committee with the declaration provided for in Article 6 of Regulation (EU) N° 537/2014, confirming our independence within the meaning of the rules applicable in France such as they are set in particular by Articles L.821-27 to L.821-34 of the French Commercial Code (code de commerce) and in the French Code of Ethics (code de déontologie) for statutory auditors. Where appropriate, we discuss with the Audit Committee the risks that may reasonably be thought to bear on our independence, and the related safeguards.

6.5 BPCE management report

6.5.1 Significant events of 2025

6.5.1.1 Economic and financial environment

2025: A resilient French economy

In 2025, global activity remained on an apparently unshakeable trend of more than 3.0% per year, slowing slightly compared to 2024. It benefited from a general control of inflation, especially in the Eurozone, the acceleration of technological investment (AI), and the rebuilding of inventories in the first half of the year, anticipating the increase in the price of US imports (increase in tariff barriers), and rather expansionary fiscal and monetary policies. However, the year was profoundly marked by a recurrence of often dangerous tremors, a phenomenon fueled by the strengthening of sovereignty issues. In addition to geopolitical risks (Ukraine, Middle East, Taiwan, etc.), the main uncertainty was due to the unpredictability of Donald Trump's policies in the United States. The sharp and successive increases in US tariffs from April 2 ("Liberation day"), followed by pauses and downward reversals, and then a relative lull, have led to a real questioning of free trade. These levels, not seen since the Second World War, have increased the fragmentation of world trade, supplies and production chains. The drift in public and private debt, particularly the "headlong rush" of public spending, has also been a major source of political and economic concerns, specifically in France.

Inflation has improved substantially in most parts of the world, despite the shock of higher tariffs, which had a lower impact than originally expected. Despite the geopolitical tensions in the Middle East, oil prices fell by 14.2% ($69.1 per barrel of Brent, after $80.5/barrel in 2024), due to the anticipation of weakened oil demand, especially in China, the trade war, the OPEC+ production increase and the absence of supply problems. This "disinflation" therefore supported activity, by strengthening the purchasing power of private agents and by allowing most central banks to ease their monetary policy, with the exception of Japan.

These trade tensions, while creating a prolonged climate of uncertainty, entailed economic volatility and strategies to circumvent tariffs or diversify markets. World trade even soared at the beginning of the year, as this return to protectionism was expected, particularly by China. The United States, beyond the quarterly fluctuations, saw its growth slow (albeit at +2.2%) and employment cool, after the remarkable dynamism of the economy in 2024 (+2.8%). Paradoxically, Chinese growth, still suffering from deflationary pressures and slowing in the second half of the year, reached the official target of +5.0% for the whole of 2025. Growth in the Eurozone (+1.4%), although moderate and disparate depending on the country, was resilient, despite greater technological vulnerability, the appreciation of the euro, tough competition from Chinese manufacturers, the decline in price competitiveness and, in the second half of the year, the obstacle to European exports that the trade agreement between the European Union and the United States may have constituted.

However, the signing of a trade agreement with the European Commission on July 27 reduced uncertainty on both sides of the Atlantic, with the decision to impose 15% tariffs on the majority of US imports of goods from the EU. European countries posted mixed performance in 2025. Spain, which has become the locomotive of Europe, recorded sustained solid growth (+2.9%), mainly supported by internal demand factors, linked to the dynamism of employment and European funds. Italy (+0.6%) and Germany (+0.2%), which are more dependent on trade with the United States, saw their activity accelerate in the first quarter of the year, then decline sharply in the second quarter, and then become almost flat in the second half of the year.

In France, the year was marked by the resignation of two Prime Ministers. Paradoxically, however, activity has weathered

increasing uncertainty due to customs tensions, geopolitical fragmentation of trade and political and fiscal paralysis rather well, especially after the fall of the government on September 8. Uncertainty, which fuels anxiety and then a wait-and-see attitude, often perceived as a powerful brake on the development of domestic demand, ultimately had a more limited impact than feared. Growth, which admittedly ran counter to the European economy in the first half of the year, reached +0.9% in 2025, after +1.1% in 2024. Inflation continued to decline reaching an annual average of +0.9%, after +2.0% in 2024, driven by lower regulated energy prices, slower wage growth and increased competition in the telecommunications sector. As a result, the unemployment rate rose slightly, reaching 7.7% in the fourth quarter, after being 7.3% at the end of 2024.

The French economy, like its European neighbors, was unable to take advantage of the temporary trade rush to the United States in the first quarter, resulting in much weaker growth over the year. Above all, it has not managed to extricate itself from a gloomy atmosphere, with the increase in spending by private agents remaining sluggish since 2022. In particular, before falling slightly, the household savings rate reached a 45-year high (excluding the Covid period) of 18.7% in the second quarter. However, purchasing power was better preserved than elsewhere in Europe, due to greater disinflation. But household consumption has not picked up. Similarly, household investment recovered only slightly, after two years of sharp contraction, reflecting increased caution in the face of uncertainty and growing tax pressures. Investments by non-financial corporations stagnated, largely due to corporate debt, fragile cash flows, the loss of market share and the past rise in financing costs. Growth was, therefore, mainly supported by a significant movement to rebuild inventories, after two years of decline, and by a few branches, which were able to keep activity afloat, such as the gradual recovery of the aeronautics sector, exempt from the new US tariffs.

A degradation of French interest rates in the European hierarchy

In 2025, the monetary policies on both sides of the Atlantic alternated unusually between the first and second half of the year. Before a first monetary easing in September, the Fed maintained the *status quo*, keeping its key rates at the last level set on December 18, 2024, despite the intimidation exerted by President Trump against Jerome Powell. The resilience of the US labor market and the absence of a lasting decision on the level of customs tariffs, their increase inducing a priori inflationary effects, explained this wait-and-see attitude until the summer. The Fed then repeated its 25 basis points (bps) reduction in September twice in October and December (range between 3.5% and 3.75%), due to the slowdown in the labor market, the downward revision of the inflationary risk, and even political pressure from the White House. The ECB, unlike the Fed, continued its monetary easing process until June, before adopting a cautious wait-and-see stance. It therefore lowered the deposit facility rate by 25 basis points four times, from 3.0% on December 18, 2024 to 2.0% on June 11, due to an oscillation in inflation around the 2.0% target since the summer of 2024, the gradual decline in core inflation, the sharp slowdown in leading wage indicators, the decline in oil prices, and the appreciation of the euro.

10-year yields remained at fairly high levels on both sides of the Atlantic, despite the downward trend in inflation, supported by sluggish oil prices, and the monetary easing process, albeit reversed over time, between the Fed and the ECB. The reduction in the size of central banks' balance sheets and the abundance of public debt also limited the transmission of monetary easing to long-term rates. They even spiked upwards during episodes of concern such as the announcement of the German mega-stimulus plan in early March. Despite two peaks of around 3.60%, the 10-year OAT reached an annual average of 3.37% in 2025, after 2.97% in 2024. Its spread with the German 10-year yield averaged 74 basis points; compared with an average spread of 35 basis points over the 2015-2019 period. Another remarkable fact has been the trend towards a narrowing gap between the 10-year rate in France and Italy. This phenomenon can implicitly be attributed to a form of gradual downgrading of sovereign yields to the detriment of France in the European interest rate hierarchy, due to a risk of budgetary unsustainability. Indeed, France's sovereign rating was downgraded by Fitch on September 12 to A+, followed by Standard & Poor's on October 17, after the announcement of the suspension of the pension reform until the 2027 presidential election. Moreover, the fiscal consolidation efforts undertaken have still been very limited, since the French public deficit is expected to reach 5.4% of GDP in 2025, after 5.8% of GDP in 2024. Another key event was the steepening of the yield curve over the course of the year.

Gold rose +66.1% to $4,386 an ounce as of December 31. It has continued to exceed historical records, alongside the continued depreciation of the dollar, the unstable geopolitical context and fears about the valuation of stock markets, especially tech stocks. Bitcoin's dramatic rise to October 7, before a pullback below the year-to-date level, was also one of the notable movements of the year. The euro appreciated by nearly 13% over the year, reaching $1.17 on December 31. Lastly, thanks to the resilience of the economic indicators, the CAC 40 rose by 10.4% to 8,149.5 points in 2025, despite the temporary crash resulting from the surprise of the "Liberation day" announcements, with a low point of 6,863 points on April 9.

6.5.1.2 Significant events of the fiscal year

Acquisition of Société Générale Equipment Finance (SGEF)

Following approval from the competent regulatory and competition authorities, on February 28, 2025, BPCE SA acquired all activities of Société Générale Equipment Finance, now BPCE Equipment Solutions, for a total price of €1.1 billion. The acquisition price allocation work resulted in the recognition of goodwill of €46 million. This amount may be adjusted until February 28, 2026.

At the same time as this acquisition, BPCE SA replaced Société Générale for the financing of all the subsidiaries concerned for a total amount of approximately €8 billion.

Holding company activity

As a holding company, BPCE SA subscribed to the following capital increases and acquisitions:

- Natixis SA for €852 million;
- BPCE Germany Holding GmbH for €760 million;
- BPCE Equipment Solutions for €212 million;
- BPCE Equipment Solutions Brazil for €47 million;
- Caisse de Refinancement de l'Habitat for €9 million, as part of the annual capital adjustment of this entity reflecting the change in the share of refinancing borrowed by each shareholder;
- EtreProprio for €8 million;
- Cozynergy Holding for €7 million.

BPCE SA capital increase of €1.3 billion and redemption of an additional Tier-1 instrument of €0.7 billion

Following the authorization of the General Meeting of December 18, 2024, the Management Board decided to carry out the first drawdown of BPCE SA's capital increase on February 19, 2025, for €1.3 billion to finance the acquisition of Société Générale Equipment Finance (see above).

In addition, on February 28, 2025, an additional Tier-1 instrument issued by BPCE for €0.7 billion and subscribed by the Banques Populaires and the Caisses d'Epargne was repaid.

Proposed merger of asset management activities with Generali

On January 21, 2025 Assicurazioni, Generali S.p.A. (Generali) and BPCE signed a non-binding Memorandum of Understanding (MoU) aimed at bringing together, in a joint venture, the asset management activities of Generali Investments Holding (GIH) and Natixis Investment Managers (NIM).

In a joint press release dated December 11, 2025, BPCE and Generali announced that they were ending their negotiations, considering that the conditions to finalize an agreement have not been met.

Proposed acquisition of NOVOBANCO

On June 12, 2025, Groupe BPCE signed a Memorandum of Understanding initiating exclusive negotiations for the acquisition of the 75% stake in novobanco, Portugal's fourth largest bank, currently held by the investment fund Lone Star Funds.

This transaction, which would amount to an amount of around €6.4 billion (for 100% of the securities), is the largest cross-border banking acquisition in the Eurozone in more than 10 years.

Following the transaction, Groupe BPCE's CET1 capital ratio would remain above 15%.

After the Memorandum of Understanding signed on June 12, 2025, an acquisition agreement for the shares was signed on August 1, 2025 with Lone Star Funds.

On October 29, 2025, the Portuguese State and the Portuguese Banks Resolution Fund joined the acquisition agreement signed with Lone Star Funds, so that the transaction now concerns the acquisition of the entire share capital of novobanco.

The project is expected to be completed in the second quarter of 2026, subject to regulatory approvals.

Refinancing and capital circulation activities

In its dual role (i) as an issuer on the bond market (to refinance the excess of the Group's financing needs over its customers' deposits and to provide the Group with additional share capital and capacity to absorb losses), and (ii) as the organizer/manager of the Group's internal capital management operations as a central institution, in 2025, BPCE SA issued on the market:

- €1.9 billion of Tier-2 bonds,
- €9 billion in senior non-preferred bonds; these issuances helping to strengthen Groupe BPCE's capital and TLAC (Total Loss-Absorbing Capacity) and MREL (Minimum Requirement for own funds and Eligible Liabilities) ratios.

BPCE SA also subscribed the following major transactions internally:

- Subscription of €0.8 billion of additional Tier-1 deeply subordinated loan,
- Subscription of €0.6 billion in Tier-2 instruments issued,
- Perpetual subordinated notes of €0.2 billion of additional Tier-1 instruments.

6.5.2 Company position and activity in 2025

Changes in the BPCE balance sheet

			Change 2025/2024	
in billions of euros	**12/31/2025**	**12/31/2024**	*in billions of euros*	**%**
Amounts due from banks	401.0	413.2	(12.2)	(3%)
Amounts due from customers	10.4	2.9	+7.5	+259%
Securities transactions	6.6	6.3	+0.3	+5%
Associates, equity interests and long-term investments	30.5	28.5	+2.0	+7%
Other assets	12.5	10.3	+2.2	+21%
TOTAL ASSETS	**461.0**	**461.2**	**(0.2)**	**(0%)**
Amounts due to banks	286.6	270.7	+15.9	+6%
Customer deposits	7.3	5.4	+1.9	+35%
Debt securities and subordinated debt	138.5	160.1	(21.6)	(13%)
Other liabilities	7.3	4.8	+2.5	+52%
Shareholders' equity and fund for general banking risks	21.3	20.2	+1.1	+5%
TOTAL LIABILITIES	**461.0**	**461.2**	**(0.2)**	**(0%)**

The total balance sheet of BPCE SA under French GAAP amounted to €461.0 billion at December 31, 2025, a very slight decrease of -€0.2 billion compared with December 31, 2024.

Under assets, the decrease of -€12.2 billion in the "Amounts due from banks" item is mainly due to a decrease in the balance of the Central Bank account, offset by an increase in term intra-group receivables. This change in receivables from Group entities is the result of the new methods for circulating long-term liquidity within the Group.

"Amounts due from customers" increased by +€7.5 billion compared to December 31, 2024, mainly due to the takeover of refinancing of Société Générale Equipment Finance.

"Securities transactions" were up by +€0.3 billion. This change is due to the purchase of securities in the liquidity reserve.

The item "Investments in affiliates and other long-term investments" increased by +€2.0 billion mainly due to the following changes:

- subscription of BPCE SA to the capital increase of Natixis SA for +€852 million;
- acquisition and capital increases for +€1.0 billion of BPCE Equipment Solutions entities (BPCE Germany Holding GmbH for +€760 million, BPCE Equipment Solutions for +€212 million and BPCE Equipment Solutions Brazil for +€47 million);
- additional provisions for impairment and reversals of provisions, including an increase in the valuation of Banque Palatine..

Under liabilities, the +€15.9 billion increase in "Amounts due to banks" is explained by the increase in deposits by Group institutions and the circulation of long-term liquidity within the Group.

The item "Debt securities and subordinated debt" decreased by -€21.6 billion, mainly due to the net decrease in interbank market securities and negotiable debt securities for -€16 billion and by the decrease of -€7.6 billion in senior bonds, partly offset by the net increase of +€3.3 billion in senior non-preferred bonds.

The increase in shareholders' equity is mainly related to 2025 net income for +€948 million, regulated provisions for +€12 million, the completion in 2025 of a share capital increase of +€10 million and an increase in the associated additional paid-in capital of +€1.3 billion. BPCE SA will pay a dividend of €1.1 billion for 2024.

BPCE SA Income statement

			Change 2025/2024	
in millions of euros	**2025**	**2024**	*in millions of euros*	*%*
Net banking income	1,375	1,068	+307	+29%

Cost of risk	(9)	(20)	+11	(55%)
Net gains or losses on long-term investments	7	790	(783)	NA
INCOME BEFORE TAX	**731**	**1,208**	**(477)**	**(39%)**
Income tax	229	262	(33)	(13%)
Funding/reversal of fund for general banking risks and regulated provisions	(12)	(15)	+3	(20%)
NET INCOME	**948**	**1,455**	**(507)**	**(35%)**

BPCE SA's 2025 result stands at €948 million, down -€507 million compared to 2024, notably in connection with significant reversals of provisions in 2024 following impairment tests on investments and an increase in dividends received. Gross operating income amounted to €733 million, gains on fixed assets to €7 million, charges to regulated provisions to -€12 million and income tax to €229 million.

Net banking income

			Change 2025/2024	
in millions of euros	**2025**	**2024**	*in millions of euros*	*%*
Financial Management	(503)	(485)	(18)	+4%
Eurotitres	99	97	+2	+2%
Holding	1,527	1,185	+342	+29%
Central institution	252	272	(20)	(7%)
NET BANKING INCOME	**1,375**	**1,068**	**+307**	**+29%**

In 2025, BPCE SA's net banking income totaled €1,375 million, up +€307 million compared with 2024.

BPCE SA is responsible for ensuring the Group's liquidity and capital adequacy by guaranteeing that the regulatory ratios are met. These activities are part of the Financial Management business line, which delivered net banking income of -€503 million in 2024, a decrease of -€18 million compared with 2024.

Eurotitres' net banking income amounted to €99 million in 2025 slightly up by +€2 million compared to 2024.

Net banking income from the Holding activity was up by +€342 million, mainly due to the +€272 million increase in dividends received over the year.

The net banking income of the central institution business line amounted to +€252 million in 2025. This represents the rebilling of "central institution" activities (listed in the French Monetary and Financial Code), presented as net banking income.

Operating expenses

			Change 2025/2024	
in millions of euros	**2025**	**2024**	*in millions of euros*	*%*
Payroll costs	(620)	(564)	(56)	+10%
Other expenses	(543)	(503)	(41)	+8%
GROSS OPERATING EXPENSES	**(1,163)**	**(1,067)**	**(96)**	**+9%**
REBILLED EXPENSES	**521**	**437**	**+84**	**+19%**
NET OPERATING EXPENSES	**(642)**	**(630)**	**(12)**	**+2%**
Charges from exceptional projects	0	0	+0	
OPERATING EXPENSES	**(642)**	**(630)**	**(12)**	**+2%**

BPCE SA's operating expenses amounted to -€642 million in 2025, an increase of €12 million compared to 2024, mainly due to costs incurred for strategic projects.

Cost of risk

BPCE SA's cost of risk amounted to -€9 million in 2025, a change of +€11 million, mainly due to the provision for guarantee commitments.

Net gains or losses on long-term investments

Net gains or losses on long-term investments amounted to +€7 million in 2025. They consist of impairment charges and reversals on equity interests, shares in related companies and other long-term securities, following the annual exercise of impairment tests, in particular an increase in the valuation of Banque Palatine.

Income tax

In 2025, income taxes totaled €229 million, representing -€33 million compared with 2024.

Fund for general banking risks, regulated provisions and net income

No movement was made to the fund for general banking risks.

Concerning regulated provisions, an allowance of -€12 million was recognized for accelerated amortization of the acquisition costs of equity interests.

Net income amounted to €948 million in 2025 down by -€507 million compared to 2024.

Non-tax deductible expenses

Disclosure of luxury expenditures

In accordance with the provisions of Article 223 *quater* and *quinquies* of the French General Tax Code, the financial statements for the past fiscal year included €463,019 in non-deductible expenses pursuant to Article 39.4 of said Code. The additional tax due in this respect is €119,598.

No other luxury non-tax deductible expenses were incurred.

Proposed allocation of net income

It is proposed to the General Meeting:

- to allocate the net income of +€947,643,862.88 to "Retained earnings". As a result of this allocation, the balance of the "Retained earnings" item is €2,978,604,653.45;
- to distribute a dividend of €1,190,611,611.90 to shareholders, by deduction from the "Retained earnings" item. As a result of this allocation, the balance of the "Retained earnings" item is €1,787,993,041.55. The dividend per share is €24.55.

In accordance with the provisions of Article L. 243 *bis* of the French General Tax Code, the following dividends were distributed in respect of the previous three years:

Reporting date		Dividend per share	Portion of dividend eligible for the 40% allowance	Portion of dividend not eligible for the 40% allowance
12/31/2022	Category "A" and "B" shares	€22.4100	€808,903,606.14	/
12/31/2023	Category "A" and "B" shares	€22.2500	€840,750,648.50	/
12/31/2024	Category "A" and "B" shares	€26.4800	€1,099,465,646.88	/

Information on subsidiaries, equity investments and branches

Activity and results of the main subsidiaries

The activity and results of the main subsidiaries are described in Chapter 1 of this document. A list of subsidiaries and equity investments is available in Chapter 6 "BPCE individual financial statements".

Investments and controlling interests

The year 2025 was mainly marked by the following changes:

- subscription to the capital increase of Natixis SA for €852 million;
- subscription to the capital increase of Caisse de Refinancement de l'Habitat for €9 million following the reallocation of share capital among the shareholders;
- subscription to the capital increase of Scope SE & Co. KGaA for €4 million;
- acquisition of BPCE Germany Holding GmbH for €760 million;
- acquisition of BPCE Equipment Solutions for €212 million;
- acquisition of BPCE Equipment Solutions Brazil for €47 million;
- acquisition of EtreProprio for €8 million;
- acquisition of Cozyznery Holdings for €7 million;
- acquisition of Finances & Territoires for €4 million.

Branches

BPCE SA owns no branches.

Employee profit-sharing scheme

Information concerning employee profit-sharing is provided in Chapter 8.

Information concerning corporate officers

Information concerning corporate officers is provided in Chapter 4.

List of directorships and offices

Information concerning the list of directorships and offices of corporate officers is provided in Chapter 4.

Remuneration and benefits

Information concerning remuneration and benefits granted by BPCE SA to corporate officers is provided in Chapter 4.

Related-party agreements

Information concerning commitments and related-party agreements is provided in Chapter 8.

Information regarding ownership of share capital

Information concerning the ownership of the share capital is provided in Chapter 8.

Trading by BPCE in its own shares

In 2025, BPCE SA did not trade in its own shares.

Information on inactive accounts (Articles L. 312-19, L. 312-20 and R. 312-21-21 of the French Monetary and Financial Code)

As BPCE SA holds no individual current accounts, it is not affected by these articles.

Transfers and sales of shares

In 2025, BPCE SA did not sell any shares.

Research & Development activities

BPCE SA's research and development activities chiefly focus on modeling credit risks.

Management of financial risks

Information relating to the management of financial risks is provided in Chapter 7.

Main risks

Information relating to the main risks and uncertainties facing BPCE SA is provided in Chapter 7.

Hardships

BPCE SA did not encounter any particular difficulties during the 2025 fiscal year. The economic and financial environment is also described in Section 5.2 of Chapter 5.

Social, environmental and societal information

Information on controls of accounting and financial reporting quality

This information is provided in Section 6.8.

Recent developments and outlook

The outlook for the economic environment and recent and forthcoming regulatory changes are described in Section 5.8 of Chapter 5.

Events after the reporting period

Pursuant to the first and second resolutions of the BPCE Extraordinary Shareholders' Meeting of March 5, 2026, the General Meeting delegated to the Management Board its authority to decide, with the prior authorization of the Supervisory Board, one or several increases in BPCE's share capital by issuing category A shares reserved for category A shareholders (Caisses d'Epargne), on the one hand, and category B shares reserved for category B shareholders (Banques Populaires), on the other, for a period of 18 months. The maximum total amount of share capital increases (including additional paid-in capital) that may be carried out under these delegations may not exceed €2.5 billion.

On March 9, 2026, the Management Board decided to carry out:

- the drawdown of the balance of the €4 billion capital increase delegations decided by the General Meeting of December 18, 2024, for an amount of €2.7 billion,
- the first drawdown of the €2.5 billion capital increase delegations decided by the General Meeting of March 5, 2026, for an amount of €2 billion.

The two capital increases were carried out on March 17, 2026, resulting in a nominal increase in the share capital of €34.9 million and additional paid-in capital of €4,665.1 million.

Note 1 General framework

1.1. Groupe BPCE

Groupe BPCE comprises the Banque Populaire network, the Caisse d'Epargne network, the BPCE central institution and its subsidiaries.

Two banking networks: the Banques Populaires and the Caisses d'Epargne

Groupe BPCE is a cooperative group whose cooperative shareholders own the two retail banking networks: the 14 Banques Populaires and the 15 Caisses d'Epargne. Each of the two networks owns an equal share in BPCE, the Group's central institution.

The Banque Populaire network consists of the Banques Populaires and the mutual guarantee companies which grant them the exclusive benefit of their guarantees.

The Caisse d'Epargne network consists of the Caisses d'Epargne and the local savings companies (LSCs).

The Banques Populaires are wholly-owned by their cooperative shareholders.

The capital of the Caisses d'Epargne is wholly-owned by the LSCs. Local savings companies are cooperative structures with open-ended share capital owned by cooperative shareholders. The LSCs are tasked with coordinating the cooperative shareholder base, in line with the general objectives defined by the individual Caisse d'Epargne with which they are affiliated, and cannot perform banking transactions.

BPCE

BPCE, a central institution as defined by the French Banking Law and a credit institution licensed to operate as a bank, was created pursuant to act No. 2009-715 of June 18, 2009. BPCE was incorporated as a French limited liability company *(société anonyme)* governed by a Management Board and a Supervisory Board, whose share capital is owned jointly and equally by the 14 Banques Populaires and the 15 Caisses d'Epargne.

BPCE's corporate mission embodies the continuity of the cooperative principles underlying the Banques Populaires and the Caisses d'Epargne.

Specifically, BPCE represents the interests of its various affiliates in dealings with the supervisory authorities, defines the range of products and services offered by them, organizes depositor protection, approves key appointments of company directors and oversees the smooth operation of the Group's institutions.

As a holding company, BPCE is the head entity of the Group and holds the joint ventures between the two networks in Retail Banking and Insurance, corporate banking and financial services, and their production units. It defines the Group's corporate strategy and growth and expansion policies.

BPCE's main subsidiaries are organized around two major business lines:

- Retail Banking and Insurance, which includes the Banque Populaire network, the Caisse d'Epargne network, the Financial Solutions & Expertise division (including factoring, consumer loans, leasing, sureties & financial guarantees, and the "retail securities" business), the Digital & Payments (integrating the Payments subsidiaries and the Oney group) and Insurance divisions, and Other networks;
- Global Financial Services combining Asset & Wealth Management (Natixis Investment Managers and Natixis Wealth Management) and Corporate & Investment Banking (Natixis Corporate & Investment Banking).

In respect of the Group's financial functions, BPCE is responsible, in particular, for the centralized management of surplus funds, for the execution of any financial transactions required to develop and fund the Group, and for choosing the most appropriate counterparty for these transactions in the broader interests of the Group. BPCE also provides banking services to the other Group entities.

1.2. Guarantee mechanism

The purpose of the guarantee and solidarity system is, in accordance with Articles L. 511-31, L. 512-107-5 and L. 512-107-6 of the French Monetary and Financial Code, ensure the liquidity and capital adequacy of the Group and its associates, and organize financial support within the Group.

BPCE is responsible for taking all necessary measures to ensure the solvency of the Group and each of the networks and to organize financial solidarity within the Group. This financial solidarity is based on legislative provisions establishing a legal principle of solidarity obliging the central institution to restore the liquidity or solvency of affiliates in difficulty and/or all affiliates of the Group. By virtue of the unlimited nature of the principle of solidarity, BPCE is entitled at any time to ask any one or several or all of the affiliates to contribute to the financial efforts that may be necessary to restore the situation, and may, if necessary, mobilize all the cash and equity capital of the affiliates in the event of difficulty for one or more of them.

In the event of difficulties, BPCE will have to do everything necessary to restore the financial position and may in particular make unlimited use of the resources of any, several or all affiliates, or implement the appropriate mechanisms of internal solidarity of the Group and by calling on the guarantee fund common to the two networks of which it determines the rules of operation, the triggering conditions, in addition to the funds of the two networks as well as the contributions of the affiliated institutions for its endowment and reconstitution.

BPCE manages the Banque Populaire Network Fund, the Caisse d'Epargne Network Fund and the Mutual Guarantee Fund.

The Banque Populaire Network Fund was formed by a deposit made by the Banques Populaires of €450 million that was booked by BPCE in the form of a 10-year term account which is indefinitely renewable.

The deposit made to the Caisse d'Epargne Network Fund by the Caisses d'Epargne of €450 million was booked by BPCE in the form of a 10-year term account which is indefinitely renewable.

The Mutual Guarantee Fund was formed by deposits made by the Banques Populaires and the Caisses d'Epargne. These deposits were booked by BPCE in the form of 10-year term accounts which are indefinitely renewable. The amount of the deposits by network was €211 million at December 31, 2025.

The total amount of deposits made to BPCE in respect of the Banque Populaire Network Fund, the Caisse d'Epargne Network Fund and the Mutual Guarantee Fund may not be less than 0.15% and may not exceed 0.3% of the Group's total risk-weighted assets.

The booking of deposits in the institutions' individual accounts under the guarantee and solidarity system results in the recording of an item of an equivalent amount under a dedicated capital heading.

Mutual guarantee companies granting the exclusivity of their guarantees to a Banque Populaire benefit from a liquidity and capital adequacy guarantee in their capacity as affiliates of the central institution.

The liquidity and capital adequacy of the local savings companies are secured, firstly, at the level of each individual local savings company by the Caisse d'Epargne of which the local savings company in question is a shareholder.

The Management Board of BPCE holds all the requisite powers to mobilize the resources of the various contributors without delay and in accordance with the agreed order.

1.3. Significant events

Acquisition of Société Générale Equipment Finance (SGEF)

Following approval from the competent regulatory and competition authorities, on February 28, 2025, BPCE SA acquired all activities of Société Générale Equipment Finance, now BPCE Equipment Solutions, for a total price of €1.1 billion.

At the same time as this acquisition, BPCE SA replaced Société Générale for the financing of all the subsidiaries concerned for a total amount of approximately €8 billion.

Holding company activity

As a holding company, BPCE SA subscribed to the following capital increases and acquisitions:

- Natixis for €852 million;
- BPCE Germany Holding GmbH for €760 million;
- BPCE Equipment Solutions for €212 million;
- BPCE Equipment Solutions Brazil for €47 million;
- Caisse de Refinancement de l'Habitat for €9 million, as part of the annual capital adjustment of this entity reflecting the change in the share of refinancing borrowed by each shareholder;
- EtreProprio for €8 million;
- Cozynergy Holding for €7 million.

BPCE SA capital increase of €1.3 billion and redemption of an additional Tier-1 instrument of €0.7 billion

Following the authorization of the General Meeting of December 18, 2024, the Management Board decided to carry out the first drawdown of BPCE SA's capital increase on February 19, 2025, for €1.3 billion to finance the acquisition of Société Générale Equipment Finance (see above).

In addition, on February 28, 2025, an additional Tier-1 instrument issued by BPCE for €0.7 billion and subscribed by the Banques Populaires and the Caisses d'Epargne was repaid.

Proposed merger of asset management activities with Generali

On January 21, 2025 Assicurazioni, Generali S.p.A. (Generali) and BPCE signed a non-binding Memorandum of Understanding (MoU) aimed at bringing together, in a joint venture, the asset management activities of Generali Investments Holding (GIH) and Natixis Investment Managers (NIM).

In a joint press release dated December 11, 2025, BPCE and Generali announced that they were ending their negotiations, considering that the conditions to finalize an agreement have not been met.

Proposed acquisition of novobanco

On June 12, 2025, Groupe BPCE signed a Memorandum of Understanding initiating exclusive negotiations for the acquisition of the 75% stake in novobanco, Portugal's fourth largest bank, currently held by the investment fund Lone Star Funds.

This transaction, which would represent an amount of around €6.4 billion (for 100% of the securities), is the largest cross-border banking acquisition in the Eurozone in more than 10 years.

Following the transaction, Groupe BPCE's CET1 capital ratio would remain above 15%.

After the Memorandum of Understanding signed on June 12, 2025, an acquisition agreement for the shares was signed on August 1, 2025 with Lone Star Funds.

On October 29, 2025, the Portuguese State and the Portuguese Banks Resolution Fund joined the acquisition agreement signed with Lone Star Funds, so that the transaction now concerns the acquisition of the entire share capital of novobanco.

The project is expected to be completed in the second quarter of 2026, subject to regulatory approvals.

Refinancing and capital circulation activities

In its dual role (i) as an issuer on the bond market (to refinance the excess of the Group's financing needs over its customers' deposits and to provide the Group with additional share capital and capacity to absorb losses), and (ii) as the organizer/manager of the Group's internal capital management operations as a central institution, in 2025, BPCE SA issued on the market:

- €1.9 billion of Tier-2 bonds,
- €9 billion in senior non-preferred bonds.

These issuances help strengthen Groupe BPCE's capital and TLAC (Total Loss-Absorbing Capacity) and MREL (Minimum Requirement for own funds and Eligible Liabilities) ratios.

BPCE SA also subscribed the following major transactions internally:

- subscription of €0.8 billion of additional Tier-1 deeply subordinated loan,
- subscription of €0.6 billion in Tier-2 instruments issued,
- Perpetual subordinated notes of €0.2 billion of additional Tier-1 instruments.

1.4. Events after the reporting period

BPCE SA capital increases

Pursuant to the first and second resolutions of the BPCE Extraordinary Shareholders' Meeting of March 5, 2026, the General Meeting delegated to the Management Board its authority to decide, with the prior authorization of the Supervisory Board, one or several increases in BPCE's share capital by issuing category A shares reserved for category A shareholders (Caisses d'Epargne), on the one hand, and category B shares reserved for category B shareholders (Banques Populaires), on the other, for a period of 18 months. The maximum total amount of share capital increases (including additional paid-in capital) that may be carried out under these delegations may not exceed €2.5 billion.

On March 9, 2026, the Management Board decided to carry out:

- the drawdown of the balance of the €4 billion capital increase delegations decided by the General Meeting of December 18, 2024, for an amount of €2.7 billion,
- the first drawdown of the €2.5 billion capital increase delegations decided by the General Meeting of March 5, 2026, for an amount of €2 billion.

The two share capital increases were carried out on March 17, 2026, resulting in a nominal increase in the share capital of €34.9 million and additional paid-in capital of €4,665.1 million.

Note 2 Accounting policies

2.1. Valuation methods, presentation of individual financial statements and reporting date

The format of the summary statements used complies with the format proposed by Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority.

The individual annual financial statements for the fiscal year ended on December 31, 2025, were approved by the Management Board on February 2, 2026. They will be presented to the General Meeting on May 21, 2026.

The amounts presented in the financial statements and in the Notes are shown in millions of euros, unless otherwise indicated. Rounding may lead to differences between the amounts shown in the financial statements and those referred to in the Notes.

2.2. Changes in accounting methods

ANC Regulation No. 2023-03 of July 7, 2023 amending ANC Regulation No. 2014-07 of November 26, 2014 on the financial statements of companies in the banking sector removed the notion of expense transfer. This removal had no impact on the bank's individual financial statements.

The other texts adopted by the *Autorité des normes comptable* (ANC), the French national accounting standards authority that had mandatory application in 2025 did not have a significant impact on the bank's individual financial statements.

Unless otherwise stated, BPCE did not elect to apply in advance the texts adopted by the *Autorité des normes comptable* (ANC), the French national accounting standards authority for which application is optional.

2.3. Accounting policies and valuation methods

The financial statements for the fiscal year are presented in identical format to those for the previous fiscal year. Generally accepted accounting principles have been applied in compliance with the principle of prudence based on the following principles:

- the going-concern principle;
- consistency of accounting methods from one period to the next;
- independence of fiscal years;

and observance of the general rules governing the preparation and presentation of annual financial statements.

The basic method for valuing accounting entries is the historical cost method and all balance sheet items are presented, as appropriate, net of amortization, provisions, and allowances for impairment.

Specific accounting principles are presented in the Notes to which they refer.

2.4. Principles applicable to banking resolution mechanisms

The terms and conditions governing the establishment of the deposit and resolution guarantee fund (FGDR) are governed by the Ministerial Order of October 27, 2015.

For the Guarantee Fund in respect of cash, collateral and securities deposits, the cumulative amount of contributions made by BPCE represented a non-material amount. Cumulative contributions (which are non-refundable in the event of a voluntary withdrawal of authorization) had no material impact on BPCE's financial statements. Contributions paid in the form of partner or association certificates and cash security deposits recognized as assets in the balance sheet were not material.

The resolution fund was set up in 2015 in accordance with European directive No. 2014/59/EU known as BRRD (Bank Recovery and Resolution Directive), which established a framework for the recovery and resolution of banks and investment firms, *i.e.* European Regulation 806/2014 (Single Resolution Mechanism (SRM) Regulation). In 2016, it became the Single Resolution Fund (SRF), formed by the Member States participating in the Single Supervisory Mechanism (SSM). The SRF is a financing mechanism available to the resolution authority (Single Resolution Board) for the implementation of resolution procedures.

The Single Resolution Board set the level of contributions to the Single Resolution Fund for 2025 in accordance with Delegated Regulation 2015/63 and Implementing Regulation 2015/81 supplementing the BRRD on *ex-ante* contributions to bank resolution financing mechanisms. The target in terms of the funds to be collected for the resolution fund was achieved at December 31, 2023. The amount of contributions paid by Groupe BPCE was zero in 2024 and 2025 for both the portion recognized as an expense and the portion in the form of irrevocable payment commitments (IPC) guaranteed by cash deposits recorded as assets on the balance sheet. However, contributions may be called in the future depending, in particular, on the evolution of the covered deposits and the possible use of the funds. The share of the IPCs corresponded to 15% of the calls for funds until 2022 and 22.5% for the 2023 contribution. These deposits are remunerated at the rate applicable to the market players concerned, *i.e.* Ester - 20 basis points since May 1, 2023. The cumulative amount of guarantee collateral recognized as assets on the balance sheet totaled €106 million at December 31, 2025. It is recognized on the asset side of the balance sheet under "Other assets" and was not subject to impairment at December 31, 2025. Commitments in respect of IPCs are not subject to a provision in liabilities. In effect, the conditions for using the SRF resources, and therefore for calling on irrevocable payment commitments, are strictly governed by regulations. These resources may only be called up in the event of a withdrawal of authorization or a resolution procedure by an institution and after intervention of at least 8% of total liabilities by shareholders and holders of relevant capital instruments and other commitments usable for bail-in purposes. In addition, the SRF contribution must not exceed 5% of the total liabilities of the institution subject to a resolution procedure. Groupe BPCE does not expect a resolution measure requiring a call for contributions for the Group to occur in the Eurozone, nor does it expect a loss or withdrawal of its banking license.

Note 3 Information on the income statement

3.1. Interest and similar income and expenses

Accounting principles

Interest and similar commission income is recognized on a *pro rata* basis.

Negative interest is presented as follows:

- a negative interest on an asset is presented as interest expense in NBI;
- a negative interest on a liability is presented as interest income in NBI.

Commissions and fees related to granting or acquiring a loan are treated as additional interest amortized over the effective life of the loan, on a *pro rata* basis according to the outstanding amount due.

The portion of income received during the year from bonds or negotiable debt securities is also recognized. The same applies to perpetual deeply subordinated notes that meet the definition of a Tier-1 regulatory capital instrument. The Group considers that these revenues are effectively similar in nature to interest.

	2025 fiscal year			2024 fiscal year		
in millions of euros	**Income**	**Expense**	**Net**	**Income**	**Expense**	**Net**
Transactions with banks	13,008	(8,675)	4,333	18,515	(11,740)	6,775
Customer transactions	447	(315)	132	67	(154)	(87)
Bonds and other fixed-income securities	1,022	(5,408)	(4,386)	1,151	(6,953)	(5,802)

TOTAL	**14,896**	**(15,652)**	**(756)**	**20,261**	**(21,059)**	**(798)**

* Macro-hedging transactions are presented net.

3.2. Income from variable-income securities

Accounting principles

Income from variable-income securities includes dividends and other income from equities and other variable-income securities, equity interests, other long-term investments, and investments in affiliates.

Dividends are recognized when the right to receive payment has been decided by the competent body.

in millions of euros	2025 fiscal year	2024 fiscal year
Equities and other variable-income securities	0	0
Equity interests and other long-term investments	17	17
Investments in affiliates	1,682	1,409
TOTAL	**1,699**	**1,426**

3.3. Commissions

Accounting principles

Commissions that are similar in nature to interest are recognized under "Interest and similar income and expenses" (see Note 3.1).

Other commission income is recognized according to the type of service provided as follows:

- commissions received for an *ad hoc* service are recognized on completion of the service;
- commissions received for an ongoing or discontinued service paid for in several installments are recognized over the period in which the service is provided.

	2025 fiscal year			2024 fiscal year		
in millions of euros	**Income**	**Expense**	**Net**	**Income**	**Expense**	**Net**
Cash and interbank transactions	3	(2)	1	4	(3)	1

* Mainly concerns the securities custody business and, since 2023, the activity of the Financial Solutions division carried out on behalf of the Group.

3.4. Net gains or losses on trading book transactions

Accounting principles

Net gains or losses on trading book transactions include:

- net gains or losses on balance sheet and off-balance sheet securities transactions;
- net gains or losses on outright forward currency exchange transactions, arising from currency purchases and sales and the periodic valuation of foreign currency and precious metal transactions;
- net gains or losses arising from transactions in forward financial instruments, in particular interest rate, currency exchange and stock market index futures, whether firm or conditional, including those used to hedge trading book transactions.

in millions of euros	**2025 fiscal year**	**2024 fiscal year**
Trading securities	0	0
Foreign exchange transactions	7	(8)
Forward transactions	0	0
TOTAL	**7**	**(8)**

3.5. Net gains or losses on available-for-sale securities and equivalent

Accounting principles

This item comprises the net gains or losses on available-for-sale securities arising from the difference between provision reversals and capital gains on disposals and provision charges and losses on disposals.

in millions of euros	2025 fiscal year Available-for-sale securities	2024 fiscal year Available-for-sale securities
Impairment		
Charges	(4)	(11)
Reversals	28	28
Net gain/(loss) on disposal	(1)	11
Other items	0	0
TOTAL	**23**	**28**

3.6. Other banking income and expenses

Accounting principles

Other banking income and expenses cover primarily the share in joint operations, the rebilling of banking income and expenses, income and expenses from real estate business and IT services.

Since 2025, following the abolition of the expense transfer technique by ANC Regulation No. 2023-03 amending ANC Regulation No. 2014-07 of November 26, 2014 on the financial statements of companies in the banking sector, previously transferred expenses are presented directly as a deduction from the original expenses.

	2025 fiscal year			2024 fiscal year		
in millions of euros	Income	Expense	Net	Income	Expense	Net
Share in joint operations	0	0	0	0	0	0
Rebilling of banking income and expenses*	301	0	301	320	0	320

Custody	7	0	7	9	0	9
IT services	0	0	0	0	0	0
Other activities	3	(3)	0	1	(3)	(2)
Other related income and expenses	0	0	0	0	0	0
TOTAL	**311**	**(30)**	**281**	**331**	**(34)**	**297**

* Rebilling of "central institution" activities (listed in the French Monetary and Financial Code), are presented in NBI.

3.7. Operating expenses

Accounting principles

Operating expenses include payroll costs (wages and salaries), employee profit-sharing and incentive schemes, social security charges and payroll taxes. Other administrative costs are also recorded, including other taxes and fees paid for external services.

Since 2025, following the abolition of the expense transfer technique by ANC Regulation No. 2023-03 amending ANC Regulation No. 2014-07 of November 26, 2014 on the financial statements of companies in the banking sector, previously transferred expenses are presented directly as a deduction from the original expenses.

in millions of euros	2025 fiscal year	2024 fiscal year
Wages and salaries	(343)	(328)
Pension costs and similar obligations*	(40)	(42)
Other social security charges	(135)	(126)
Employee incentive scheme	(51)	(30)
Employee profit-sharing scheme	0	0
Payroll taxes	(65)	(61)
Total payroll costs	**(634)**	**(587)**
Taxes other than on income	(29)	8
Other operating expenses	(794)	(761)
Rebilled expenses	825	720
Total other operating expenses	**2**	**(33)**
TOTAL	**(632)**	**(620)**

* Including charges, utilizations, and reversals of provisions for employee benefits (see Note 4.9.3).

The average number of employees in service during the year, broken down by professional category, is as follows in 2025: 3,237 managers and 396 non-managers, *i.e.* a total of 3,633 employees, compared with 3,169 managers and 424 non-managers, *i.e.* a total of 3,593 employees in 2024.

3.8. Cost of risk

Accounting principles

"Cost of risk" includes only the cost related to credit risk (or counterparty risk). Credit risk is the existence of a potential loss related to the possibility of the counterparty defaulting on its obligations. The term "counterparty" refers to any legal entity that receives a loan or an off-balance sheet commitment, is party to a forward financial instrument or is the issuer of a debt security.

Cost of credit risk is calculated when the loan is classified as non-performing, *i.e.* when it is probable that the Group will not collect all or part of the sums owed under the terms of the commitments made by the counterparty in accordance with the initial contractual provisions, notwithstanding any guarantees or collateral.

The credit risk is also measured when a credit risk is identified on performing loans showing a significant increase in credit risk since their initial recognition (see Notes 4.1, 4.2.1 and 4.3.1).

Cost of credit risk therefore consists of all the impairment charges and reversals related to loans and advances to customers and banks, fixed-income held-to-maturity securities (if there is known to be a risk of default by the issuer), provisions for off-balance sheet commitments (excluding off-balance sheet financial instruments) as well as losses on irrecoverable loans and recoveries of bad debts written off.

However, charges to and reversals of provisions, losses on irrecoverable loans or recoveries of impaired loans relating to interest on non-performing loans for which provisioning is mandatory are classified under "Interest and similar income" and "Other banking income" in the income statement. For trading securities, available-for-sale securities, equity securities available for sale in the medium term and forward financial instruments, cost of counterparty risk is recognized directly in the items recording the gains and losses on these portfolios, except where there is a known risk of default by the counterparty that may effectively be isolated and where changes in counterparty risk provisions are therefore recorded in "Cost of risk".

The majority of receivables on BPCE SA's balance sheet relate to institutions benefiting from the guarantee and solidarity system presented in Note 1.2.

	2025 fiscal year					2024 fiscal year				
in millions of euros	Charges	Reversals and uses	Losses	Recoveries of bad debts written off	Total	Charges	Reversals and uses	Losses	Recoveries of bad debts written off	Total

Other					0					0
TOTAL	**(10)**	**1**	**0**	**0**	**(9)**	**(20)**	**0**	**0**	**0**	**(20)**

3.9. Gains or losses on long-term investments

Accounting principles

Gains or losses on long-term investments include:

- gains or losses on disposals of property, plant and equipment and intangible assets used for the bank's operations, arising from the difference between capital gains and losses on disposals, and charges to and reversals of provisions;
- gains or losses on investments in associates, other long-term investments, equity interests, affiliates, and held-to-maturity securities, arising from the difference between provision reversals and capital gains on disposals, and provision charges and losses on disposals.

	2025 fiscal year				2024 fiscal year			
in millions of euros	Equity interests and other long-term investments	Held-to-maturity securities	Property, plant and equipment and intangible assets	Total	Equity interests and other long-term investments	Held-to-maturity securities	Property, plant and equipment and intangible assets	Total
Impairment								
Charges	(403)	0	0	(403)	(99)	0	0	(99)
Reversals	407	0	0	407	899	0	0	899
Net gain/(loss) on disposal	3	0	0	3	(10)	0	0	(10)
TOTAL	**7**	**0**	**0**	**7**	**790**	**0**	**0**	**790**

Gains or losses on investments in associates, equity interests, affiliates and other long-term investments included specifically:

- provisions for impairment of investments in associates:
  - BPCE Payments (€205 million),
  - SOCFIM (€135 million),
  - BPCE International (€37 million);
- reversals of provisions for impairment on investments in associates:
  - Banque Palatine (€233 million),
  - Oney Bank (€72 million),
  - Crédit Foncier (€63 million),
  - Natixis (€26 million),
  - BPCE Solutions Immobilières (€7 million).

The valuation of equity interests carried out in 2025 is described in Note 4.4.

3.10. Non-recurring income

Accounting principles

This item only includes income and expenses before tax, which are generated or occur on a non-recurring basis and are not related to the Group's regular activities.

No non-recurring income was recorded in the 2025 and 2024 fiscal years.

3.11. Income tax

Accounting principles

As of 2010, BPCE opted to apply the provisions of Article 91 of the amended French Finance act for 2008 which extended the tax consolidation regime to networks of mutual banks. This option is modeled on the tax consolidation for mutual insurers and takes into account consolidation criteria not based on ownership interest (the scheme is usually available if at least 95% of the share capital of a subsidiary is owned by a parent company).

As head of the Group, BPCE signed a tax consolidation agreement with members of its group (including the 14 Banques Populaires, the 15 Caisses d'Epargne, and BPCE subsidiaries, including BPCE International, Crédit Foncier, Banque Palatine, Natixis, BPCE Assurances, BPCE Payments, BPCE SFH and BPCE Equipment Solutions).

In accordance with the terms of this agreement, BPCE recognizes a receivable for the tax to be paid to it by the other members of the tax consolidation group along with a payable corresponding to the tax to be paid to the tax authorities on behalf of the consolidation group.

The rules of the OECD Pillar II aiming at the implementation of a minimum global corporate tax rate of 15%, transposed into French law by the French Finance act for 2024, are now applicable to fiscal years beginning from January 1, 2024. In view of the legal and conventional provisions to date, BPCE, as the ultimate parent entity of the entire Groupe BPCE, will be the entity liable for this additional tax. However, this additional tax only concerns a very limited number of jurisdictions. This first estimate of the tax expense is made on the basis of data available to date.

Note, however, the specific cases of jurisdictions where Groupe BPCE entities are established where local tax regulations provide for the payment to the tax authorities of any top-up tax due in respect of that jurisdiction. In such a case, the relevant Groupe BPCE entity could be required to pay and therefore recognize, the additional tax in respect of that jurisdiction.

The French Finance act for 2025 introduced an Exceptional Contribution on the Profits of Large Companies (corporate tax surcharge), the base of which corresponds to the average of the income tax due for the 2025 and 2024 fiscal years. The Contribution calculated on the basis of 2024 income tax was recognized in its entirety during the first half of 2025. The Exceptional Contribution, the basis of which is made up of the income tax for 2024, and disconnected from the income for tax purposes in 2025, was assimilated to a one-off event within the meaning of IAS 34. As the French Finance act for 2026 had not been adopted as of December 31, 2025, only the contributions introduced by the French Finance act for 2025 were recognized as part of this closing.

The income tax expense for the period corresponds to the tax expense of BPCE in respect of 2025, corrected to reflect the impact of tax consolidation within the Group.

3.11.1. Income tax for 2025

Income tax is determined at the level of the BPCE tax consolidation group. BPCE SA's contribution breaks down as follows:

in millions of euros	2025 fiscal year		
Taxable bases at the following rates:	**25%**	**19%**	**15%**
Tax on current income[1]	2,068		
Tax on non-recurring income	0		
Taxable bases	**2,068**	**0**	**0**
Applicable tax	(517)		
+3.3% supplementary corporate tax	(17)		
+ Extraordinary contributions[3]	(177)		
- Deductions in respect of tax credits	103		
Reported income tax[1]	**(608)**	**0**	**0**
Tax consolidation effect[2]	865		
Adjustments to previous period	30		
Impact of tax reassessments	(9)		
Provisions for the return to profitability of subsidiaries	(38)		
Other	(11)		
TOTAL	**229**	**0**	**0**

(1) For the BPCE tax consolidation group.
(2) Contributions to be received from members of the BPCE tax consolidation group.
(3) Corresponds to the tax in respect of the 2025 surcharge.

The various activities are detailed in the management report (Section 6.5).

Note 4 Balance sheet information

Unless otherwise indicated, explanatory notes for balance sheet items are presented net of depreciation, amortization, impairment, and provisions.

Certain information relating to credit risk required by Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority is presented in the risk management report.

4.1. Interbank transactions

Accounting principles

Loans and advances to banks cover all loans and advances made in connection with banking transactions with the exception of those represented by a security. They also include securities purchased under resale agreements, regardless of the type of underlying asset, and loans and advances relating to securities under repurchase agreements. They are broken down between demand loans and advances and term loans and advances. Loans and advances to banks are recorded in the balance sheet at their nominal value, with the exception of buybacks of customer loans which are recorded at acquisition cost, plus accrued interest and net of any impairment charges recognized for credit risk.

Amounts due to banks are presented according to their term (demand deposits and current accounts or term deposits and borrowings) and amounts due to customers are classified according to their nature (regulated savings accounts and other deposits for customers). Depending on the counterparty involved, these items include securities and other assets sold under repurchase agreements. Accrued interest is recorded under related payables.

Guarantees received are booked as off-balance sheet items. They are remeasured on a regular basis. The total carrying amount of all guarantees received for a single loan is limited to the principal amount outstanding on the loan.

Restructured loans

Within the meaning of Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority, restructured loans are non-performing loans whose initial characteristics (term, interest rate) are modified to allow the counterparties to repay the amounts due.

A discount is taken on restructured loans to reflect the difference between the present value of the contractual cash flows at inception and the present value of expected principal and interest repayments after restructuring. The discount rate used for fixed-rate loans is the initial effective interest rate and the discount rate used for variable-rate loans is the most recent effective interest rate prior to the restructuring date. The effective rate is the contractual rate. This discount is expensed to "Cost of risk" in income and offset against the corresponding outstanding in the balance sheet. It is written back to net interest income in the income statement over the life of the loan using an actuarial method.

A restructured loan may be reclassified as performing when the new repayment dates are observed. When a loan that has been reclassified becomes overdue, regardless of the restructuring terms agreed, the loan is downgraded to non-performing.

Non-performing loans

Non-performing loans consist of all outstanding amounts (whether or not they are due, guaranteed or other), where at least one commitment made by the obligor has involved a known credit risk, classified as such on an individual basis. Loans are considered "at risk" when it is probable that the Group will not collect all or part of the sums due under the terms of the commitments made by the counterparty, notwithstanding any guarantees or collateral.

Non-performing loans are identified in compliance with Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority, particularly in the case of loans with payments more than three months past due (more than six months past due for real estate loans and more than nine months past due for loans to local authorities).

Non-performing loans are considered to be irrecoverable when full or partial collection is deemed to be highly unlikely, and a write-off is considered. Loans and advances whose terms have lapsed, terminated lease financing arrangements and perpetual loans which have been rescinded, are considered as irrecoverable. The existence of guarantees covering nearly all risks, along with the conditions for classification as non-performing loans, shall be taken into consideration in order to qualify a non-performing loan as irrecoverable and to assess the associated impairment provision. A debt that has been classified as non-performing for more than one year is assumed to be irrecoverable, unless a write-off is not foreseen. Reclassification of a debt from non-performing to irrecoverable does not automatically entail the reclassification of the counterparty's other non-performing loans and commitments to irrecoverable.

For non-performing loans, accrued interest or interest due but not yet received is recognized in banking income and impaired accordingly. For irrecoverable loans and advances, accrued interest due but not yet received is not recognized.

Non-performing loans are reclassified as performing once the obligor resumes regular payments in accordance with the original repayment schedule, provided that the counterparty is no longer considered to be at risk of default.

Repurchase agreements

Securities repurchase agreements are recognized in accordance with Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority, supplemented by FBF Instruction No. 94-07, as amended.

The assets sold continue to be recorded in the vendor's balance sheet, with a corresponding entry for the amount collected, representing its debt to the purchaser, under liabilities. The buyer records the amount paid under assets, representing the amount owed to the vendor. At each balance sheet date, the assets, as well as the liability towards the buyer or the amount owed to the vendor, are measured in accordance with the rules specific to these transactions.

Impairment

Loans for which recovery is uncertain result in the recognition of an impairment loss on the asset to cover the risk of loss. Impairment losses are calculated on a case-by-case basis, taking into account the present value of guarantees received. They are determined at least quarterly and are calculated in reference to available guarantees and a risk analysis. At a minimum, impairment losses cover the interest not received on non-performing loans.

Impairment for probable losses includes all impairment charges, calculated as the difference between the principal amount outstanding and the projected cash flows discounted at the initial effective interest rate. Projected cash flows are determined by category of receivables, based on past losses and/or expert analysis, and are positioned over time using debt schedules based on past collection records.

Impairment charges and reversals recognized for non-recovery risk are recorded under "Cost of risk" except for the impairment of interest on non-performing loans, which is recorded as impaired interest under "Interest and similar income".

The reversal of the impairment related to the passage of time alone is recorded under "Cost of risk".

Irrecoverable loans and advances are written off as losses and the corresponding impairment allowances are reversed.

Loans and advances to banks

in millions of euros	12/31/2025	12/31/2024
Current accounts	4,377	3,895
Overnight loans	1,337	895

Impairment of interbank loans and advances	**0**	**0**
of which impairment of irrecoverable non-performing loans	*0*	*0*
TOTAL	**349,032**	**347,573**

* Subordinated loans and participating loans concern undated deeply subordinated loans granted to institutions that meet the definition of additional Tier-1 capital or Tier-2 subordinated loans.

At December 31, 2025, receivables to networks can be broken down into €4,580 million in demand accounts, and €318,941 million in term accounts. At December 31, 2024, receivables to networks can be broken down into €4,614 million in demand accounts and €320,530 million in term accounts.

Loans and advances to banks, therefore, mainly relate to institutions benefiting from the guarantee and solidarity system presented in Note 1.2, which explains the absence of impairment.

The item "Term accounts and loans" is mainly due to long-term liquidity operations within Groupe BPCE.

Amounts due to banks

in millions of euros	12/31/2025	12/31/2024
Current accounts	35,028	35,764
Overnight deposits	1,255	1,228
Securities sold under demand repurchase agreements	0	0
Other amounts due	3	4
Accrued interest on demand accounts	59	98
Demand accounts	**36,345**	**37,094**
Term accounts and loans	238,634	222,385
Securities sold under term repurchase agreements	10,975	10,196

Term accounts	**250,289**	**233,623**
TOTAL	**286,634**	**270,717**

At December 31, 2025, amounts payable to networks can be broken down into €35,245 million in demand accounts, and €222,490 million in term accounts. At December 31, 2024, amounts payable to networks can be broken down into €36,070 million in demand accounts and €215,715 million in term accounts.

At December 31, 2025, the €16,249 million increase in the "Term accounts and loans" item is mainly due to long-term liquidity transactions within the Group.

4.2. Customer transactions

Accounting principles

Loans and advances to customers include loans to entities other than banks, with the exception of debt securities issued by customers, assets purchased under resale agreements, and receivables corresponding to securities sold under repurchase agreements. They are broken down between business loans, current accounts with overdrafts and other facilities granted to customers. Loans granted to customers are recorded in the balance sheet at their nominal value, with the exception of repurchases of customer loans which are recorded at acquisition cost, plus accrued interest and net of any impairment charges recognized for credit risk. Fees and marginal transaction costs are added to the amount of loan outstandings in question.

Guarantees received are booked as off-balance sheet items. They are remeasured on a regular basis. The total carrying amount of all guarantees received for a single loan is limited to the principal amount outstanding on the loan.

Restructured loans

Within the meaning of Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority, restructured loans are non-performing loans whose initial characteristics (term, interest rate) are modified to allow the counterparties to repay the amounts due.

A discount is taken on restructured loans to reflect the difference between the present value of the contractual cash flows at inception and the present value of expected principal and interest repayments after restructuring. The discount rate used for fixed-rate loans is the initial effective interest rate and the discount rate used for variable-rate loans is the most recent effective interest rate prior to the restructuring date. The effective rate is the contractual rate. This discount is expensed to "Cost of risk" in income and offset against the corresponding outstanding in the balance sheet. It is written back to net interest income in the income statement over the life of the loan using an actuarial method.

A restructured loan may be reclassified as performing when the new repayment dates are observed. When a loan that has been reclassified becomes overdue, regardless of the restructuring terms agreed, the loan is downgraded to non-performing.

Non-performing loans

Non-performing loans consist of all outstanding amounts (whether or not they are due, guaranteed or other), where at least one commitment made by the obligor has involved a known credit risk, classified as such on an individual basis. Loans are considered "at risk" when it is probable that the Group will not collect all or part of the sums due under the terms of the commitments made by the counterparty, notwithstanding any guarantees or collateral.

Non-performing loans are identified in compliance with Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority, particularly in the case of loans with payments more than three months past due (more than six months past due for real estate loans and more than nine months past due for loans to local authorities).

Non-performing loans are considered to be irrecoverable when full or partial collection is deemed to be highly unlikely, and a write-off is considered. Loans and advances whose terms have lapsed, terminated lease financing arrangements and perpetual loans which have been rescinded, are considered as irrecoverable. The existence of guarantees covering nearly all risks, along with the conditions for classification as non-performing loans, shall be taken into consideration in order to qualify a non-performing loan as irrecoverable and to assess the associated impairment provision. A debt that has been classified as non-performing for more than one year is assumed to be irrecoverable, unless a write-off is not foreseen. Reclassification of a debt from non-performing to irrecoverable does not automatically entail the reclassification of the counterparty's other non-performing loans and commitments to irrecoverable.

For non-performing loans, accrued interest or interest due but not yet received is recognized in banking income and impaired accordingly. For irrecoverable loans and advances, accrued interest due but not yet received is not recognized.

Non-performing loans are reclassified as performing once the obligor resumes regular payments in accordance with the original repayment schedule, provided that the counterparty is no longer considered to be at risk of default.

Repurchase agreements

Securities repurchase agreements are recognized in accordance with Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority, supplemented by FBF Instruction No. 94-07, as amended.

The assets sold continue to be recorded in the vendor's balance sheet, with a corresponding entry for the amount collected, representing its debt to the purchaser, under liabilities. The buyer records the amount paid under assets, representing the amount owed to the vendor. At each balance sheet date, the assets, as well as the liability towards the buyer or the amount owed to the vendor, are measured in accordance with the rules specific to these transactions.

Impairment

Loans for which recovery is uncertain result in the recognition of an impairment loss on the asset to cover the risk of loss. Impairment losses are calculated on a case-by-case basis, taking into account the present value of guarantees received and the costs of taking possession and selling the collateral. They are determined at least quarterly and are calculated in reference to available guarantees and a risk analysis. At a minimum, impairment losses cover the interest not received on non-performing loans.

Impairment for probable losses includes all impairment charges, calculated as the difference between the principal amount outstanding and the projected cash flows discounted at the initial effective interest rate. Projected cash flows are determined by category of receivables, based on past losses and/or expert analysis, and are positioned over time using debt schedules based on past collection records.

Impairment charges and reversals recognized for non-recovery risk are recorded under "Cost of risk" except for the impairment of interest on non-performing loans, which is recorded as impaired interest under "Interest and similar income".

The reversal of the impairment related to the passage of time alone is recorded under "Cost of risk".

Irrecoverable loans and advances are written off as losses and the corresponding impairment allowances are reversed.

* The "Other" item mainly includes loans granted as part of the refinancing of BPCE Equipment Solutions subsidiaries following the acquisition of Société Générale Equipment Finance activities.

4.3. Treasury bills, bonds, equities and other fixed/variable-income securities

Accounting principles

The term "securities" covers interbank market securities, treasury bills and other negotiable debt securities, bonds and other fixed-income instruments (*i.e.* whose returns do not change), equities and other variable-income instruments.

For accounting purposes, securities transactions are governed by Regulation No 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority, which sets out the general accounting and measurement rules applicable to securities and the rules governing specific transactions such as temporary sales of securities.

Securities are classified in the following categories: investments in associates and affiliates, other long-term investments, held-to-maturity securities, equity securities available for sale in the medium term, available-for-sale securities, and trading securities.

With respect to trading securities, available-for-sale securities, held-to-maturity securities, and equity securities available for sale in the medium term, provisions for counterparties with known default risks whose impact can be separately identified are recognized in the form of impairments. Changes in impairment are recorded under "Cost of risk".

In the event of a securities lending transaction, the securities loaned cease to appear on the balance sheet and a receivable representing the carrying amount of the securities loaned is recognized as an asset.

In the case of a securities borrowed transaction, the borrowed securities are recorded in the trading securities category with a corresponding liability to the securities debt to the lender for an amount equal to the market price of the securities borrowed on the date of borrowing. Securities borrowed are presented in the balance sheet as a deduction from the debt representing the value of the securities borrowed.

Trading securities

These are securities acquired or sold with the intention to resell or repurchase them after a short holding period. In order to be eligible for this category, the securities must be tradable on an active market at the date of their initial recognition and their market prices must be accessible, representing actual transactions regularly occurring in the market under normal trading conditions. They may be either fixed- or variable-income instruments.

Trading securities are recorded in the accounts at cost on their acquisition date, less transaction costs and including accrued interest, where applicable. In the event of short selling, the debt is recorded under liabilities in the amount of the selling price of the securities, less transaction costs.

They are marked to market at the end of the fiscal year based on the market price on the most recent trading day. The overall balance of differences resulting from fluctuations in prices is taken to the income statement. For UCITS and investment funds, market value corresponds to net asset values reflecting available market information at the balance sheet date.

Securities classified as trading securities may not be transferred to another accounting category (except in exceptional market situations requiring a change of strategy or in the absence of an active market for fixed-income securities), and the rules for their presentation and measurement continue to apply until they are sold, redeemed in full or written off.

Available-for-sale securities

Securities that do not qualify for recognition in any other category are considered as available-for-sale securities.

Available-for-sale securities are recorded in the accounts at cost on their acquisition date, less transaction costs.

Where applicable, for fixed-income securities, accrued interest is recognized as a balancing entry in the income statement under "Interest and similar income".

Any difference between the acquisition price and the redemption value (premium or discount) for fixed-income instruments is recorded in the income statement over the remaining term of the security using the actuarial method.

Available-for-sale securities are measured at the lower of acquisition cost or market price. For UCITS and investment funds, market value corresponds to net asset values reflecting available market information at the balance sheet date.

Unrealized capital losses are subject to an impairment charge that can be estimated for each group of similar securities, with no offsetting against capital gains recorded on other categories of securities.

Gains generated by hedging instruments, if any, as defined by Article 2514-1 of Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority, are taken into account for the calculation of impairment. Unrealized capital gains are not recognized.

Gains and losses on disposal of available-for-sale securities, as well as impairment charges and reversals are recorded under "Net gains or losses on available-for-sale securities and equivalent".

Held-to--5maturity securities

These include fixed-income securities with fixed maturity that were acquired or have been reclassified from "Trading securities" or "Available-for-sale securities" and which the company intends and is able to hold to maturity. The securities should not be subject to an existing restriction, legal or otherwise, liable to have an adverse effect on the company's intention to hold the securities to maturity. Classification as held-to-maturity securities is not incompatible with their designation as items hedged against interest rate risk.

Held-to-maturity securities are recorded in the accounts at cost as of their acquisition date, less transaction costs. When previously classified as available for sale, they are recorded at cost and the previously recognized impairment charges are reversed over the residual life of the relevant securities.

The difference between the acquisition cost and the redemption value of the securities, and the corresponding interest, are recognized in accordance with the same rules as those applicable to fixed-income available-for-sale securities.

An impairment loss may be recognized if there is a strong probability that the institution will not hold the securities to maturity due to new circumstances or if there is a risk of default by the issuer. Unrealized capital gains are not recognized.

Held-to-maturity securities cannot be sold or transferred to another category of securities, with certain exceptions.

However, pursuant to the provisions of Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority, fixed-income trading or available-for-sale securities reclassified to the category of held-to-maturity securities as a result of market illiquidity may be sold when the market on which they are traded becomes active again.

4.3.1. Securities portfolio

in millions of euros	12/31/2025 Trading securities	Available-for-sale securities	Held-to-maturity securities	Total	12/31/2024 Trading securities	Available-for-sale securities	Held-to-maturity securities	Total

Other changes in available-for-sale and held-to-maturity securities

The €773 million increase in the portfolio of investment securities is mainly attributable to acquisitions of sovereign debt securities for €281 million and acquisitions of bonds and other fixed-income securities for €492 million.

The change in bonds and other fixed-income securities classified as held-to-maturity securities mainly reflects the amortization of shares in the portfolio of mortgage loan or public asset securitizations for a nominal amount of €153 million, and the redemption of the Natixis "Senior Non-Preferred" issue following the call, for a nominal amount of US$300 million.

The change in variable-income securities, classified as available-for-sale securities, is mainly due to the acquisition of Visa Inc. class A preference shares for €67 million following the conversion of Visa Inc. class C preference shares (classified as other long-term investments at December 31, 2024, Note 4.4.1).

The market value of held-to-maturity securities stood at €1,513 million.

At December 31, 2025, unrealized capital gains in the securities portfolio totaled €211 million, and capital losses €430 million.

Unlisted securities		91	91		82	82
Accrued interest			0			0
TOTAL	**0**	**1,369**	**1,369**	**0**	**1,295**	**1,295**

The change in variable-income securities, classified as available-for-sale securities, is mainly due to the acquisition of Visa Inc. class A preference shares for €67 million following the conversion of Visa Inc. class C preference shares (classified as other long-term investments at December 31, 2024, Note 4.4.1).

At December 31, 2025, equities and other variable-income securities included €1,294 million in UCITS, with accumulation funds accounting for €1,213 million of that total (compared with €1,295 million in UCITS at December 31, 2024, including €1,213 million in accumulation funds).

Unrealized losses on impaired available-for-sale securities totaled €304 million at December 31, 2025. At December 31, 2024, unrealized losses subject to impairment amounted to €319 million.

Unrealized gains on available-for-sale securities totaled €182 million at December 31, 2025. At December 31, 2024, unrealized gains on available-for-sale securities amounted to €137 million.

4.3.2. Changes in held-to-maturity securities

in millions of euros	12/31/2024	Purchases	Disposals and Redemptions	Transfer of category	Conversion	Discount/ premium	Other changes	12/31/2025
Bonds and other fixed-income securities	1,981	0	(411)	0	(96)	12	(5)	1,481
TOTAL	**1,981**	**0**	**(411)**	**0**	**(96)**	**12**	**(5)**	**1,481**

The changes are explained by the amortization of securities in the mortgage and public asset securitization portfolio for a nominal amount of €153 million, and the repayment of the Natixis "Senior Non-Preferred" issue following the call, for a nominal amount of US$300 million.

4.3.3. Reclassification of assets

Accounting principles

In the interest of harmonizing accounting practices and ensuring consistency with IFRS, Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority reiterates the provisions of opinion No. 2008-19 of December 8, 2008 on the reclassification of securities out of the "Trading securities" and "Available-for-sale securities" categories.

Reclassification from the "Trading securities" category to the "Available-for-sale securities" and "Held-to-maturity securities" categories is now possible in the following two cases:

- under exceptional market circumstances calling for a change of strategy;
- where fixed-income securities are no longer, after their acquisition, tradable on active markets, and provided that the company has the intention and ability to hold them in the foreseeable future or until they reach maturity.

Reclassifications from the "Available-for-sale securities" category to the "Held-to-maturity securities" category are effective as from the reclassification date in either of the following conditions:

- under exceptional market circumstances calling for a change of strategy;
- where fixed-income securities are no longer tradable on an active market.

The regulation authorizes institutions to sell all or part of the securities reclassified as "Held-to-maturity securities" provided that the following two conditions are met:

- the reclassification was motivated by an exceptional situation requiring a change in strategy;
- the market has become active again for these securities.

Furthermore, reclassification from the available-for-sale securities portfolio to the held-to-maturity securities portfolio remains possible, without exception, through a simple change of intention if, at the transfer date, all the criteria for a held-to-maturity portfolio are met. In this case, the sale of these securities is only authorized in very limited cases.

Reclassification due to a change of intention (provisions of CRB Regulation No. 90-01 prior to CRC Regulation No. 2008-17, replaced by ANC Regulation No. 2014-07)

BPCE has not reclassified any assets in the last two fiscal years.

In the 2025 fiscal year, the amortization of held-to-maturity securities reclassified in 2015 as available-for-sale securities represented a nominal amount of €46 million.

4.4. Equity interests, affiliates and other long-term investments

Accounting principles

Investments in associates and affiliates

Securities falling into this category are securities which, if held over the long term, are deemed useful for the company's operations, mainly by allowing the company to exercise significant influence or control over the administrative bodies of the issuing companies.

Investments in associates and affiliates are recorded at cost, including transaction costs, if the amounts are significant.

They are individually measured at the balance sheet date at the lower of acquisition cost or value in use. Value in use is determined, in particular, on the basis of criteria such as the strategic nature of the investment, the intention to support the business or retain the investment, share price performance and recent transactions, net carrying amounts, restated net assets and forecasts. Impairment is recognized for any unrealized capital losses, calculated for each line of securities, and is not offset with unrealized capital gains. Unrealized capital gains are not recognized.

Securities recorded under investments in associates and affiliates cannot be transferred to any other accounting category.

Other long-term investments

Other long-term investments are securities acquired with the intention of promoting the development of lasting business relationships, by creating special ties with the issuer, without taking an active part in its management due to the small percentage of voting rights that the investment represents.

Other long-term investments are recognized at acquisition cost, less transaction costs.

They are included in the balance sheet at the lower of historical cost or value in use. Value in use is determined for listed and unlisted securities based on the amount the company would agree to pay to obtain the securities, given its investment objective, if it were to acquire them. An impairment charge is recognized for any unrealized capital losses. Unrealized capital gains are not recognized.

Securities classified as other long-term investments may not be transferred to any other accounting category.

4.4.1. Change in equity interests, investments in affiliates and other long-term investments

in millions of euros	12/31/2024	Increase	Decrease	Conversion	Other changes	12/31/2025

Investments in affiliates	(5,458)	(377)	404	0	0	(5,431)
of which current account advances & perpetual deeply subordinated notes	*(2)*	*(2)*	*0*	*0*	*0*	*(4)*
Impairment	**(5,916)**	**(402)**	**408**	**0**	**60**	**(5,850)**
TOTAL	**28,579**	**1,630**	**391**	**(57)**	**0**	**30,543**

Equity interests and other long-term investments

Other long-term securities include shareholder and partnership certificates for the deposit guarantee fund (non-material amount) and perpetual deeply subordinated notes (meeting the definition of additional Tier-1 capital purchased) from group institutions.

The main acquisitions and disposals of equity interests the in 2025, at gross value, were as follows:

- subscription to the capital increase of Epi Interim Company SE (€14 million);
- subscription to the capital increase of Caisse de Refinancement de l'Habitat following the reallocation of share capital among the shareholders (€9 million);
- subscription to the capital increase of Scope SE & Co. KGaA (€4 million);
- acquisition of EtrePropre (€8 million);
- acquisition of Finance & Territoire (€4 million).

The main reductions in securities carried out in 2025 were linked to the conversion of 57.15% of Visa Inc. class C shares into Visa Inc. class A preferred shares (€15 million).

Shares in real estate companies are non-material.

Investments in affiliates

On February 28, 2025, BPCE acquired all of Société Générale Equipment Finance's activities from Société Générale:

- directly for activities in Brazil (€18 million);
- *via* the subsidiary BPCE Germany Holding GmbH for activities in Germany (€650 million);
- *via* the subsidiary BPCE Equipment Solutions SAS (formerly Milla) for activities in other countries (€212 million).

These acquisitions were followed by a capital increase of BPCE Equipment Solutions Brazil for €29 million and contributions to the share capital of BPCE Germany Holding GmbH for €110 million.

In addition, the other main changes relate to:

- subscription to the capital increase of Natixis (€852 million);
- subscription to the capital increase of BPCE Payments (€101 million);
- acquisition of Cozynergy Holding (€7 million).

Valuation of investments in affiliates as of December 31, 2025

BPCE's main banking subsidiaries are measured on the basis of discounted multi-year forecasts of expected dividend flows (Dividend Discount Model). The forecasts of expected dividend flows are based on the medium-term financial projections prepared by the entities concerned as part of the annual budgeting process and established for the Group's management purposes.

These valuations are based on the concept of value in use. As a result, they take into account the specific situation of BPCE, the fact that these investments belong to Groupe BPCE and their integration within the financial solidarity mechanism, their strategic interest for BPCE and the fact that they are held with a long-term objective.

These valuations are therefore not transaction prices. In particular, they are based on technical parameters based on a long-term vision of ownership and group affiliation and not on valuation parameters at their limits. In particular:

- discount rate:
  - the discount rates at December 31, 2025, for all entities are based on a 12 month average of daily French government bond rates of 3.3% (identical to the long-term average of 2.9% last year) and an equity risk premium assumption of 7.1% corresponding to the average of 12 month values from Bloomberg and FactSet (compared with a historical long-term premium of 7.1% last year),
  - these changes reflect the rise in interest rates and a market correction of the risk premium,
  - the discount rate used for Natixis is 11.50%, which reflects the fact that it is part of Groupe BPCE and is therefore lower than the rate used by the market for other listed banks;
- prudential requirements:
  - the valuation work carried out by DDM is based on the capital requirements (CET1 capital) applicable to the various entities concerned, reflecting their affiliation with the BPCE SA central institution. These are below the levels observed or targeted on the market in a context where banking players operate, at their level, with a capital buffer compared to the requirements set by the European Central Bank (ECB).

The valuation work carried out in connection with the closing of the financial statements for 2025 mainly resulted in the recognition of the following changes:

- a reversal of €233 million on Banque Palatine shares, increasing the net carrying amount to €1,163 million at December 31, 2025;
- a reversal of €72 million on Oney Bank shares, increasing the net carrying amount to €364 million at December 31, 2025;
- a reversal of €63 million on Crédit Foncier shares, increasing the net carrying amount to €2,306 million at December 31, 2025;
- a reversal of €26 million on Natixis shares, increasing the net carrying amount to €12,140 million at December 31, 2025;
- a reversal of €7 million on BPCE Solutions Immobilières shares, increasing the net carrying amount to €7 million at December 31, 2025;
- an impairment of €205 million on BPCE Payments shares, thus reducing the net carrying amount to €1,342 million at December 31, 2025;
- an impairment of €135 million on SOCFIM shares, thus reducing the net carrying amount to zero at December 31, 2025;
- an impairment of €37 million on BPCE International shares, thus reducing the net carrying amount to €579 million at December 31, 2025.

A sensitivity analysis based on a 25 basis points decrease in the discount rate was performed and would increase the fair value of investments in affiliates by 2.5%.

A sensitivity analysis based on a 25 basis points increase in the discount rate was performed as well and would reduce the fair value of investments in affiliates by 2.3%.

4.5. Property, plant and equipment and intangible assets

The rules for recognizing fixed assets are defined by Regulation No. 2014-03 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority on IT solutions, amended in particular by ANC Regulation No. 2023-05 on November 10, 2023.

4.5.1. Intangible assets

Accounting principles

An intangible asset is an identifiable non-monetary asset without physical substance. Intangible assets are recorded at acquisition cost (purchase price including costs). These assets are amortized over their estimated useful lives.

IT solutions developed internally are recognized as an asset in the balance sheet at their direct development cost, which includes external expenses and personnel costs directly attributable to their production and preparation when they meet the capitalization criteria.

Acquired IT solutions are amortized over a maximum period of five years.

Internally developed IT solutions are amortized over their useful life, which may not exceed 15 years.

Goodwill is not amortized but is subject, as appropriate, to impairment testing.

Leasehold rights are amortized on a straight-line basis over the residual term of the lease and, if necessary, are tested for impairment relative to market value.

4.5.2. Property, plant and equipment

Accounting principles

Property, plant and equipment consist of tangible assets held for use in the production or supply of goods and services, for lease to third parties or for administrative purposes and which are expected to be used during more than one fiscal year.

Insofar as buildings are assets consisting of a number of components that have different uses at the outset, each component is recognized separately at cost and a depreciation schedule specific to each component is used.

The depreciable amount is the gross value less the residual value where the latter is material, lasting and can be measured reliably.

Other property, plant and equipment is recorded at acquisition cost, production cost or restated cost. The cost of fixed assets denominated in foreign currencies is translated into euros at the exchange rate prevailing on the transaction date. These assets are depreciated according to the period over which the asset's future economic benefits are expected to be consumed by the entity, which generally corresponds to the asset's useful life.

Where applicable, assets may be subject to impairment.

Investment property consists of non-operating assets.

4.6. Debt securities

Accounting principles

Debt securities are presented according to the type of underlying: retail certificates of deposit, interbank and negotiable debt securities, bonds, and other debt securities, apart from subordinated notes, which is recorded separately under liabilities.

A new category of liabilities eligible for the numerator in the TLAC (Total Loss Absorbing Capacity) calculation has been introduced by French law and is commonly referred to as "Senior non-preferred debt". These liabilities rank between own funds and "Other senior preferred debt".

Accrued interest on these instruments is disclosed separately as a related payable, as a balancing entry to the income statement entry.

Issue premiums are recognized in full during the period or are recognized on a straight-line basis over the life of the debt. Issue and redemption premiums are spread over the life of the loan *via* a deferred expenses account.

For structured debt, applying the principle of conservatism, only the certain portion of remuneration or principal is recognized. Unrealized gains are not recorded. Unrealized losses are subject to a provision.

in millions of euros	12/31/2025	12/31/2024
Certificates of deposit and savings bonds	0	0
Interbank market instruments and negotiable debt securities	33,632	49,611
Bonds	40,872	48,664
Senior non-preferred debt	39,164	35,825
Other debt securities	0	0
Accrued interest	1,980	1,789
TOTAL	**115,648**	**135,889**

The amount of additional paid-in capital and redemption premiums remaining to be amortized totaled €188 million.

The unamortized balance is the difference between the amount initially received and the redemption price for debt securities.

4.7. Other assets and other liabilities

	12/31/2025		12/31/2024	
in millions of euros	Assets	Liabilities	Assets	Liabilities
Remaining payments due on investments in associates	0	34	0	40

* Including €2,444 million in accrued interest receivable on interest rate swaps and €1,830 million in accrued interest payable on interest rate swaps.

4.9. Provisions

Accounting principles

This item covers provisions intended to cover risks and expenses directly or unrelated to banking transactions within the meaning of Article L. 311-1 of the French Monetary and Financial Code and related transactions defined in Article L. 311-2 of the same Code, clearly specified as to their purpose, and whose amount or timing cannot be precisely determined. Unless covered by a specific text or relating to banking or related operations, such provisions may only be recognized if the company has an obligation to a third party at the end of the fiscal year and no equivalent consideration is expected in return, in accordance with Regulation No. 2014-03 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority.

In particular, this item includes a provision for employee benefits and a provision for counterparty risk on guarantee and loan commitments given.

Employee benefits

Employee benefits are accounted for in accordance with recommendation No. 2013-R-02 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority. They are classified into four categories:

Short-term employee benefits

Short-term employee benefits mainly include wages, paid annual leave, incentive schemes, profit-sharing, and bonuses payable within 12 months of the end of the period in which the employee renders the service. They are recognized as an expense for the period, including amounts remaining due at the balance sheet date.

Long-term employee benefits

Long-term employee benefits are generally linked to seniority accruing to current employees and payable 12 months or more after the end of the period in which the employee renders the related service. These consist mainly of long-service awards. A provision is set aside for the amount of these obligations at the balance sheet date.

The obligations are valued using an actuarial method that takes account of demographic and financial assumptions such as age, length of service, the likelihood of the employee being employed by the Group at retirement and the discount rate. The valuation also allocates costs over the working life of each employee (projected unit credit method).

Termination benefits

Termination benefits are granted to employees on termination of their employment contract before the normal retirement date, either as a result of a decision by the Group to terminate a contract or a decision by an employee to accept voluntary redundancy. A provision is set aside for termination benefits. Termination benefits payable more than 12 months after the reporting date are discounted to present value.

Post-employment benefits

Post-employment benefits include lump-sum retirement bonuses, pensions and other post-employment benefits.

These benefits can be broken down into two categories: defined-contribution plans, which do not give rise to an obligation for the Group, and defined-benefit plans, which give rise to an obligation for the Group and are therefore measured and recognized by means of a provision.

The Group records a provision in liabilities for employee benefits obligations that are not funded by contributions charged to income and paid out to pension funds or insurance companies.

Post-employment benefits are measured in the same way as long-term employee benefits.

The measurement of these obligations takes into consideration the value of plan assets as well as unrecognized actuarial gains and losses.

Actuarial gains and losses on post-employment benefits, arising from changes in actuarial assumptions (early retirement, discount rate, etc.) or experience adjustments (return on plan assets, etc.), are amortized under the corridor method, *i.e.* for the portion exceeding a variation of +/-10% of the defined-benefit obligation or the fair value of plan assets.

The annual expense recognized in respect of defined-benefit plans includes the current service cost, net financial cost (the effect of discounting the obligation) less plan assets, and the amortization of any unrecognized items that are actuarial gains or losses.

TOTAL	**21**	**10**	**(1)**	**0**	**0**	**30**

4.9.3. Provisions for employee benefits

Post-employment benefits related to defined-contribution plans

Defined-contribution plans refer to mandatory social security pension plans, as well as those managed by the pension funds AGIRC and ARRCO, and the supplementary pension plans to which the Banques Populaires and the Caisses d'Epargne belong. BPCE's obligations under these plans are limited to the payment of contributions (€46 million in 2025).

Post-employment benefits related to defined-benefit plans and long-term employee benefits

BPCE's obligations in this regard relate to the following plans:

- the Banque Populaire private supplementary pension plan, managed by Caisse Autonome de Retraite des Banques Populaires (CARBP), covers the pension benefits deriving from the closure of the former banking pension plan at December 31, 1993;
- the Caisse d'Epargne private supplementary pension plan, previously managed by Caisse Générale de Retraite des Caisses d'Epargne (CGRCE), but now incorporated within Caisse Générale de Prévoyance des Caisses d'Epargne (CGPCE), which is a retained-benefit plan. The plan was closed on December 31, 1999, and beneficiary entitlements were crystallized at this date. The retained-benefits plan is considered as a fund providing long-term employee benefits;
- pensions and other post-employment benefits such as end-of-career awards and other benefits granted to retirees;
- other benefits such as long-service awards and other long-term employee benefits.

These commitments are calculated in accordance with the provisions of recommendation No. 2013-R-02 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority as amended on November 5, 2021.

At December 31, 2025, plan assets for pension plans were allocated as follows:

- for Banque Populaires CARBP pension plan: 49.8% in bonds, 35.9% in equities, 5.7% in money-market assets, 8.6% in investment funds.

  In 2025, of the total -€1.2 million in actuarial gains and losses generated on CARBP's actuarial liabilities, -€0.7 million can be attributed to differences related to updated financial assumptions, and -€0.5 million to experience adjustments;

- for Caisses d'Epargne CGPCE pension plan: 82.1% in bonds, 14.1% in equities, 1.6% in real estate assets and 2.2% in money-market assets.

  In 2025, of the total -€2.9 million of actuarial gains and losses generated on the CGPCE actuarial liability, -€2.1 million come from gains and losses related to the updating of financial assumptions and -€0.8 million from experience adjustments.

Stock option purchase plans

Since the formation of BPCE, company directors have neither received share subscription or purchase options, nor been awarded bonus shares.

4.10. Subordinated debt

Accounting principles

Subordinated debt comprises proceeds from issues of both term and perpetual subordinated notes or loans, and mutual guarantee deposits. In the event of the obligor's liquidation, the repayment of subordinated debt is only possible after all other creditors have been satisfied.

Accrued interest payable on subordinated debt is disclosed separately as a related payable, as a balancing entry to the income statement entry.

in millions of euros	12/31/2025	12/31/2024
Term subordinated debt	17,399	18,300
Perpetual subordinated debt	0	0
Perpetual deeply subordinated debt	4,490	5,190
Perpetual subordinated notes	170	0
Accrued interest	833	786
TOTAL	**22,892**	**24,276**

At December 31, 2025, the amount of additional paid-in capital and redemption premiums remaining to be amortized totaled €58 million.

On February 28, 2025, BPCE repaid a €700 million issue of deeply subordinated notes, fully subscribed in 2018 by the Banques Populaires and the Caisses d'Epargne.

Perpetual deeply subordinated debt has the following characteristics:

Currency	Issue date	Outstandings as of 12/31/2025 *in millions of euros*	Amount (in original currency)	Rate	Interest rate after initial redemption option date	Interest rate after step-up date	Next redemption option date	Interest step-update

Note 5 Information on off-balance sheet and similar transactions

5.1. Commitments given and received

Accounting principles

Loan commitments

Loan commitments given to banks and similar entities include in particular funding agreements, agreements to pay or commitments to pay, documentary credit confirmations and other commitments given to banks and similar institutions.

Loan commitments granted to customers include credit facilities granted, back-up credit lines for commercial paper, commitments on securities issuance and other commitments to customers other than banks and similar entities.

Loan commitments received mostly include funding agreements and other commitments received from banks and similar entities.

Guarantee commitments

Guarantee commitments to banks mostly include sureties and financial guarantees issued to banks and similar entities.

Guarantee commitments to customers mostly include sureties and financial guarantees issued to customers other than banks and similar entities.

Guarantee commitments received mostly include sureties and financial guarantees received from banks and similar entities.

5.1.1. Loan commitments

in millions of euros	12/31/2025	12/31/2024

* Other guarantees given to banks" mainly concerns guarantees given to Group institutions.

5.1.3. Other commitments not recognized off-balance sheet

	12/31/2025		12/31/2024	
in millions of euros	**Commitments given**	**Commitments received**	**Commitments given**	**Commitments received**
Other securities pledged as collateral provided to banks	84,042	9,435	93,174	10,301
Other securities pledged as collateral received from customers	0	0	0	0
TOTAL	**84,042**	**9,435**	**93,174**	**10,301**

At December 31, 2025, receivables pledged as collateral under funding arrangements included in particular:

- €74,235 million in negotiable debt securities pledged to the Banque de France under the TRICP system, compared with €83,346 million at December 31, 2024;
- €6,124 million in loans pledged as collateral for funding received from the European Investment Bank (EIB) compared with €5,767 million at December 31, 2024.

No other major commitments were given by BPCE as collateral for its own commitments or for those of third parties.

BPCE did not receive a significant amount of assets as collateral from customers.

5.2. Forward financial instruments

Accounting principles

Trading and hedging transactions in interest rate, currency or equity forward financial instruments are recognized in accordance with the provisions of Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority.

Commitments on these instruments are recorded as off-balance sheet items at the nominal value of the contracts. The amount recognized for these commitments represents the volume of unwound forward transactions at the reporting date.

The accounting policies applied vary depending on the type of instrument and the original purpose of the transaction.

Forward transactions

Interest rate swaps and similar contracts (forward rate agreements, collars, etc.) are classified as follows according to their initial purpose:

- micro-hedging (assigned hedges);
- macro-hedging (overall asset/liability management);
- speculative positions/isolated open positions;
- for use with a trading book.

Amounts received or paid in respect of the first two categories are recognized in income on a *pro rata* basis.

Income and expenses related to instruments used for hedging an asset or a group of similar assets are recognized in income symmetrically with the income and expenses on the hedged item. Gains and losses on hedging instruments are recognized on the same line as the income and expenses on the hedged item, under "Interest and similar income" and "Interest and similar expenses". The "Net gains or losses on trading book transactions" line is used when the hedged items are in the trading book.

In the event of overhedging, a provision may be made for the hedging instrument, in the amount of the overhedged portion, if the instrument shows an unrealized loss. In such case, the charge to provisions will affect "Net gains or losses on trading book transactions".

Income and expenses related to forward financial instruments used for hedging purposes or for managing overall interest rate risk are recognized in the income statement on a *pro rata* basis under "Interest and similar income" and "Interest and similar expenses". Unrealized gains and losses are not recognized.

Income and expense related to certain contracts, qualifying as isolated open positions, are recorded in the income statement either when the contracts are settled or on a *pro rata* basis, depending on the type of instrument.

Recognition of unrealized gains or losses is determined based on the type of market involved (organized, other markets considered as organized, or over the counter).

On over-the-counter markets (including transactions processed by a clearing house), a provision is recorded for any unrealized losses relative to the instrument's mark-to-market under "Provisions" in liabilities. Unrealized capital gains are not recognized.

Instruments traded on organized markets or other markets considered as organized are continuously quoted and liquid enough to justify being marked to market. The cost of liquidity and counterparty risk will be taken into account in the valuation of isolated open positions.

Contracts classified as specialized asset management contracts are measured after applying a discount to reflect counterparty risk and cost and taking into account the net present value of future management costs if these valuation adjustments are material. Derivatives traded with a counterparty that is a member of the Groupe BPCE solidarity mechanism (see Note 1.2) are not subject to these valuation adjustments except where applicable for the cost of liquidity. Changes in value from one accounting period to another are recognized immediately in the income statement under "Net gains or losses on trading book transactions".

5.2.1. Financial instruments and foreign exchange futures

	12/31/2025				12/31/2024

TOTAL	**461,067**	**461,067**	**461,229**	**461,229**

The breakdown of the balance sheet by currency is carried out before taking into account the effects of foreign exchange derivatives.

5.4. Foreign currency transactions

Accounting principles

Gains and losses on foreign currency transactions are determined in accordance with Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority.

Receivables, liabilities, and off-balance sheet commitments denominated in foreign currencies are measured at the exchange rate prevailing at the balance sheet date. Realized and unrealized foreign exchange gains and losses are recognized in the income statement. Income and expenses paid or received in foreign currencies are recognized at the exchange rate prevailing at the transaction date.

Fixed assets and investments in associates denominated in foreign currencies but financed in euros are recognized at acquisition cost.

Non-settled spot foreign exchange transactions are measured at the closing rates prevailing at the balance sheet date.

Discounts or premiums on foreign exchange forward contracts used for hedging purposes are recognized in the income statement on a *pro rata* basis. Other foreign exchange contracts and forward instruments denominated in foreign currencies are marked to market. Outright foreign exchange forward contracts, and those hedged by forward instruments, are restated over the remaining term. Foreign exchange swaps are recognized as pairs of spot purchase/forward sale transactions.

in millions of euros	12/31/2025	12/31/2024
Spot foreign exchange transactions		
Currencies receivable not received	13	114
Currencies deliverable not delivered	13	114

Note 6 Other information

6.1. Consolidation

In reference to Article 4111-1 of Regulation No. 2014-07 of the *Autorité des normes comptable* (ANC), the French national accounting standards authority, and in accordance with Article 111-1 of ANC Regulation No. 2020-01 of the Accounting Regulations Committee, BPCE prepares its consolidated financial statements under international accounting standards.

Its individual financial statements are incorporated in the consolidated financial statements of Groupe BPCE and BPCE.

6.2. Remuneration, receivables, loans and commitments

Total remuneration paid in 2025 to members of the Management Board amounted to €4.8 million and €1 million was paid to members of the Supervisory Board.

Provisions for retirement bonuses at the end of 2025 amounted to €3 million for members of the Management Board.

6.3. Operations in non-cooperative countries

Article L. 511-45 of the French Monetary and Financial Code and the Ministerial Order of October 6, 2009, issued by the French Economy Minister, require credit institutions to disclose, in the notes to their annual financial statements, information on their presence and activities in countries and territories that have not entered into an administrative assistance agreement with France for the exchange of information with the aim of combating tax fraud and tax evasion.

These obligations are part of the broader worldwide goal of combating non-cooperative tax havens, which were defined at OECD meetings and summits, and are also designed to prevent money laundering and terrorist financing.

Since its foundation, Groupe BPCE has adopted a prudent approach. It ensures that entities belonging to its networks are regularly informed about updates to the OECD list of territories that are considered as non-cooperative when it comes to exchanging information for tax purposes, and about the potential consequences of maintaining operations in non-cooperative territories. In addition, lists of non-cooperative territories have been integrated, in part, into software packages used to prevent money laundering with the objective of ensuring appropriate due diligence for transactions with non-cooperative countries and territories (implementation of Ministerial Decree No. 2009-874 of July 16, 2009). A central inventory of the Group's locations and activities in non-cooperative territories has been drawn up for the information of executive bodies.

This statement is based on the list of countries given in the Ministerial Order of April 18, 2025, taken in accordance with Article 238-0-A of the French General Tax Code.

At December 31, 2025, BPCE had no offices or activities in non-cooperative tax havens.

6.7 Statutory auditor's report on the financial statements

Year ended December 31, 2025

To the Annual General Shareholders' Meetings,

BPCE

7 promenade Germaine Sablon

75013 Paris

I. Opinion

In compliance with the engagement entrusted to us by your annual general meeting, we have audited the accompanying financial statements of BPCE for the year ended December 31, 2025.

In our opinion, the financial statements give a true and fair view of the assets and liabilities and of the financial position of the company as at December 31, 2025 and of the results of its operations for the year then ended in accordance with French accounting principles.

The audit opinion expressed above is consistent with our report to the audit committee.

II. Basis for the opinion

Audit Framework

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the Statutory Auditors' Responsibilities for the Audit of the Financial Statements section of our report.

Independence

We conducted our audit engagement in compliance with independence requirements of the French Commercial Code (code de commerce) and the French Code of Ethics (*code de déontologie*) for statutory auditors, for the period from January 1st, 2025 to the date of our report and specifically we did not provide any prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No 537/2014.

III. Observation

Without qualifying the opinion expressed above, we draw your attention to the change in accounting method described in note 2.2 "Change in accounting methods" to the notes to the financial statements, which sets out the impact of the first-time application of ANC Regulation 2023-03 amending various ANC regulations in coordination with ANC Regulation 2022-06 on the modernization of the financial statements.

IV. Justification of Assessments - Key Audit Matters

In accordance with the requirements of Articles L. 821-53 and R. 821-180 of the French Commercial Code (code de commerce) relating to the justification of our assessments, we inform you of the key audit matters relating to risks of material misstatement that, in our professional judgment, were of most significance in our audit of the consolidated financial statements of the current period, as well as how we addressed those risks.

These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the financial statements.

Valuation of equity securities, shares in affiliated enterprises and other securities held on a long-term basis and accounting treatment of structural transactions for the year

Identified risk and key judgments

Associates, equity interests and long-term investments recognized are recognized at their acquisition cost and impaired on the basis of their value in use.

BPCE's main banking subsidiaries are measured on the basis of discounted multi-year forecasts of expected dividend flows (Dividend Discount Model). The forecasts of expected dividend flows are based on the medium-term financial projections prepared by the entities concerned as part of Groupe BPCE's annual budgeting process and established for the Group's management purposes.

We deemed the correct measurement of equity interests, shares in related companies and other long-term equity holdings to be a key audit matter, given the areas of judgment inherent to structuring assumptions used, in particular for determining financial forecasts and valuation parameters, especially in the actual economic context.

As at 31 December 2025, the net carrying value of equity securities, shares in affiliated companies and other securities held over the long term was set out in BPCE's annual financial statements at

€30,543 million, including €5,850 million in impairments.

The impairment of equity securities, shares in affiliated companies and other securities held over the long term was subject to a net reversal of €66 million in 2025.

For further details on accounting policies and exposures, refer to note 4.4 of the notes to the annual accounts.

Our response

To assess the reasonableness of the estimated value in use of equity interests, shares in related companies and other long-term equity holdings with the guidance of our experts we verified that the estimated values determined by management were based on reasonable assumptions and an appropriate measurement method applied to correctly documented quantified data.

Depending on the securities in question, our audit work consisted in:

- analyzing the relevance of the retained valuation methods
- examining the assumptions and inputs used based on the profile of each entity by comparing them to external sources;
- performing an arithmetic calculation of the values of the main subsidiaries and examining the reasonableness of the medium-term business plans used for each entity in question, which entailed:
- comparing with the business and strategic plans approved by the governance bodies (Supervisory Board or Board of Directors),
- evaluating the relevance and reliability of the main assumptions used to develop the plans, particularly with regard to past years' financial projections and actual past performance,
- analyzing sensitivity to different valuation inputs (shareholders' equity, discount rates, etc.).

V. Specific Verifications

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations.

Information given in the management report and in the other documents with respect to the financial position and the financial statements provided to the shareholders

We have no matters to report as to the fair presentation and the consistency with the financial statements of the information given in the management report of the management board and in the other documents with respect to the financial position and the financial statements provided to the shareholders, besides the following point:

With respect to the fair presentation and the consistency with the financial statements of the information relating to the payment terms required by Article D.441-6 of the French Commercial Code, we have the following observation : as indicated in the management report, the information does not include banking operations and related operations, as the Company considers these are not within the scope of the information to be produced.

Report on corporate governance

We attest that the Supervisory Board's report on corporate governance sets out the information required by Articles L. 225-37-3 and L. 22-10-10 of the French Commercial Code.

Regarding the information relating to the items that your company has considered likely to have an impact in the event of a public tender or exchange offer, provided pursuant to the provisions of Article L.22-10-11 of the French Commercial Code, we have verified their consistency with the documents from which they are derived and which were made available to us. Based on this work, we have no comments to make on this information.

Other information

In accordance with French law, we have verified that the required information concerning the purchase of investments and controlling has been properly disclosed in the management report.

VI. Other Legal and Regulatory Information

Format of presentation of the financial statements included in the annual financial report

We have also verified, in accordance with the professional standard applicable in France relating to the procedures performed by the statutory auditor relating to the annual and consolidated financial statements presented in the European single electronic format, that the presentation of the financial statements intended to be included in the annual financial report mentioned in Article L. 451-1-2, I of the French Monetary and Financial Code (*code monétaire et financier*), prepared under the responsibility of the president of the management board, complies with the single electronic format defined in the European Delegated Regulation No 2019/815 of 17 December 2018.

Based on the work we have performed, we conclude that the presentation of the financial statements intended to be included in the annual financial report complies, in all material respects, with the European single electronic format.

Appointment of the Statutory Auditors

Forvis Mazars SA was appointed as statutory auditors in the first statutes dated December 19, 2006 of GCE Nao (whose corporate name became BPCE S.A. in July 2009), throughout its inception.

We were appointed as statutory auditors of BPCE S.A. by the annual general meetings of BPCE S.A. held on May 22, 2015 for Deloitte & Associés and on July 2, 2009 for PricewaterhouseCoopers Audit.

As at December 31, 2025, Mazars was in the nineteenth year of total uninterrupted engagement, including 17 years since the company became a public-interest entity, Deloitte & Associés was in the eleventh year of total uninterrupted engagement, PricewaterhouseCoopers Audit in the seventeenth.

VII. Responsibilities of Management and Those Charged with Governance for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with French accounting principles and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The audit committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risks management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The financial statements were approved by the management board.

VIII. Statutory Auditors' Responsibilities for the Audit of the Financial Statements

Objectives and audit approach

Our role is to issue a report on the financial statements. Our objective is to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As specified in Article L.821-55 of the French Commercial Code (*code de commerce*), our statutory audit does not include assurance on the viability of the Company or the quality of management of the affairs of the Company.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- Identifies and assesses the risks of material misstatement of the financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control.
- Evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management in the financial statements.
- Assesses the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of his audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the financial statements or, if such disclosures are not provided or inadequate, to modify the opinion expressed therein.
- Evaluates the overall presentation of the financial statements and assesses whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.

Report to the audit committee

We submit to the audit committee a report which includes in particular a description of the scope of the audit and the audit program implemented, as well as the results of our audit. We also report, if any, significant deficiencies in internal control regarding the accounting and financial reporting procedures that we have identified.

Our report to the audit committee includes the risks of material misstatement that, in our professional judgment, were of most significance in the audit of the financial statements of the current period and which are therefore the key audit matters that we are required to describe in this report.

We also provide the audit committee with the declaration provided for in Article 6 of Regulation (EU) N° 537/2014, confirming our independence within the meaning of the rules applicable in France such as they are set in particular by Articles L.821-27 to L.821-34 of the French Commercial Code (*code de commerce*) and in the French Code of Ethics *(code de déontologie)* for statutory auditors. Where appropriate, we discuss with the audit committee the risks that may reasonably be thought to bear on our independence, and the related safeguards.

Done in Paris La Défense, Levallois-Perret and Neuilly-sur-Seine on 19 March 2026

6.8 Controls of accounting and financial reporting quality

6.8.1 Roles and responsibilities in preparing and processing accounting and financial information

General principles of responsibility within the Group

The production of accounting and financial information and verifications to ensure its accuracy are performed by the Finance functions of the entities included in the Group's scope of consolidation.

Each entity has the resources to ensure the quality of accounting and financial data, in particular by seeing that current regulations and Group standards are being properly implemented, and reconciling accounting and operating results, where applicable.

Each entity prepares, on a monthly or quarterly basis, financial statements and regulatory information required at the local level, along with reporting documents for the Finance division.

- Within the Group, the preparation and processing of financial and accounting information falls under the responsibility of the Finance function. This responsibility is carried out within the central institution, mainly by four departments of the division:
- The Financial Management department;
- The Performance Oversight department;
- The Regulatory Steering and Prudential Management department (including the Accounting department);
- The Architecture and Reporting department.

In addition to these four departments, the Finance division also includes the Monitoring and Foresight Studies department.

The Finance division collects the accounting and financial data produced by the entities within the Group's scope of consolidation. It is also responsible for consolidating and verifying these data for use in Group oversight and communication to third parties (auditors, investors, etc.).

In addition to consolidating accounting and financial information, the Finance division has broad control duties:

- It coordinates Asset/liability management by defining the Group's Asset/liability management rules and standards and ensuring they are properly applied;
- It manages and checks the Group's balance sheet ratios and structural risks;
- It defines accounting standards and principles applicable to the Group and ensures they are properly applied;
- It coordinates the steering and reporting of the Group's financial performance in accordance with strategic plan objectives;
- It manages the Pillar II approach and related matters within the Group;
- It monitors the financial planning of Group entities and capital transactions;
- It ensures the reliability of accounting and financial information shared outside the Group;
- It manages emergency financial plans in the event of idiosyncratic or systemic crises and coordinates the resolution plan.

Main functions, within the central institution, involved in preparing and publishing accounting and financial information and their responsibilities

Within the Group, the main functions involved in preparing and publishing accounting and financial information are accounting, finance control, reporting, investor relations and financial management.

Within the central institution, these functions are carried out mainly by four departments reporting to the Chief Financial Officer: the Regulatory Steering and Prudential Management department, the Performance Oversight department, the Financial Management department and the Architecture and Reporting department.

The Regulatory Steering and Prudential Management department

Within this department, the main unit contributing to the preparation of accounting and financial information is the Accounting department, which is responsible for preparing the individual and consolidated financial statements (Groupe BPCE and BPCE) and the associated regulatory reports (in particular COREP and FINREP). Its main duties are:

- Preparing the consolidated financial statements of Groupe BPCE and BPCE and individual financial statements of BPCE SA, calculating the regulatory ratios and preparing the corresponding reports;
- Coordinating the accounting process within the Group;
- Providing a regulatory watch on French and IFRS accounting standards applied by the Group in coordination with shareholder institutions, BPCE subsidiaries and the Statutory Auditors;
- Acting as the interface between the supervisory authorities (European Central Bank and the Autorité de contrôle prudentiel et de résolution (ACPR), the French prudential supervisory authority for the banking and insurance sector) and affiliated institutions in accordance with Article L. 512-107 of the French Monetary and Financial Code;
- Representing the Group in its dealings with industry bodies (*Autorité des normes comptable* (ANC), the French national accounting standards authority, European Banking Federation, etc.);
- Producing accounting and regulatory statements (including tax) for BPCE SA and the entities under its authority.

Within the Group, the Group Accounting department relies on the accounting functions of each entity, which are responsible for the publication of the individual financial statements and, where applicable, the consolidated financial statements, regulatory reports and disclosures to the central institution.

The other units of this department are **Capital Management and Financial Strategy** (in charge of managing solvency issues and the Pillar II approach within the Group and coordinating and monitoring the management of scarce resources within the Group), **Taxation** and **Financial Resilience**.

The Performance Oversight department;

The Performance Oversight department is responsible for producing management information. Its main duties are:

- Coordinating the BPCE SA Investment Committee;
- Coordinating oversight of the financial planning, budget and multi-year rolling forecast process;
- Coordinating oversight of business performance in support of the Retail Banking and Insurance division;
- Analyzing the performance of the Group, its business lines and entities, especially for the publication of each quarter's results;
- Steering and challenging the subsidiaries' financial performances to safeguard the Group's financial ratios;
- Coordinating and steering approaches for the analysis of the Group's operating costs;
- Helping prepare the Group's strategic and financial plans;
- Managing the expenses and NBI of the central institution;
- Coordinating the finance control process within the Group.

The Performance Oversight department relies on the Group's Management Control functions, which are responsible for the operational management of each entity and for the production of management information for both the entity and the central institution.

The Architecture and Reporting department

The Architecture and Reporting department is responsible for securing the key IS Finance & Risk applications, ensuring the reliability of complex production processes (transformed data with the preparation of regulatory and management reports) and ensuring that these processes comply with BCBS 239 principles. Its main duties are:

- Making strategic choices regarding the design and construction of data bases as well as regulatory and management processes based on the main risk and financial calculators, in current, *ad hoc* and crisis situations, while ensuring the coordination of all related projects;
- Operating, through its technological fiber, complex production systems (Finance and Risk production, treasury systems and banking activities) and pool project efforts for other business lines;
- Guaranteeing a centralized and consistent vision across the entire IS Finance & Risk chain;
- Simplifying, harmonizing, integrating and pooling in a logic of operational efficiency and process security by relying on technological levers;
- Implementing innovative tools (simulations, proactive exercises, data analysis, etc.) and promoting an open innovation approach (Artificial Intelligence, Green Finance, etc.) directly linked to the ongoing search for operational efficiency;
- Accelerating the implementation of responses to regulatory recommendations and requirements (*e.g.* coordination of BCBS 239 into LOD1 and the ECB Data Finance/Risk dialog).

The Financial Management department

The Financial Management department is responsible for the optimal and sustainable management of liquidity and refinancing and is also in charge of financial communication. Its main duties are:

- Organizing, coordinating and supervising the refinancing of Groupe BPCE on the financial markets in order to ensure, at the best possible price, the realization of a sustainable refinancing plan over time, making it possible to finance the various activities of the Group over a duration consistent with the assets created and to allocate this liquidity to the various business lines and to control its use and evolution;
- Managing the optimization of scarce resources, collateralized refinancing, collateral management and green refinancing strategy;
- Producing regulatory ratios and ensuring compliance with them, as well as internal constraints resulting in particular from stress tests guaranteeing the sustainability of the refinancing of the Group's business model even in the event of a crisis;
- Developing the Group's interest rate and liquidity risk management system and its application to the entities;
- Coordinating and producing presentations of quarterly results, the financial structure and the development of the Group's business lines to enable third parties to form an opinion on its financial strength, profitability and outlook;
- Coordinating and preparing the presentation of extra-financial information (universal registration document and its quarterly amendments) filed with the *Autorité des marchés financiers* (AMF), the French financial markets authority, and the Pillar III report, integrating the contributions of other BPCE functions;
- Organizing relations with institutional investors, financial analysts and rating agencies by ensuring coordination with the other rated entities of the Group;
- Organizing and maintaining relationships with credit investors likely to hold and/or acquire debt instruments (short, medium or long term) issued by BPCE or Natixis.

The Financial Management department relies on the eponymous functions organized in each entity and which are responsible for communicating information relating to financial management both on behalf of the entity and for the central institution.

6.8.2 Production processes for accounting and financial data

General system and process for preparing consolidated accounting and financial data

The central institution prepares the consolidated financial statements of BPCE, Groupe BPCE and the individual financial statements of BPCE SA. It also produces and oversees BPCE and Groupe BPCE's regulatory ratios on a consolidated basis and those of affiliated institutions in the regulatory financial reports.

It also ensures the proper application by the institutions affiliated to Groupe BPCE of the accounting and prudential rules and reviews the compliance of the reports with the applicable regulatory requirements.

To ensure the reliability of the production processes, the Finance division uses:

- An appropriate body of standards distributed to all Group entities;
- A single consolidated IT system (except for the exceptions mentioned below) guarantees consistent treatment and analysis;
- A comprehensive body of documents respecting regulatory requirements;
- A standardized control mechanism, the structure of which is described in Section 5.8.3 below.

Groupe BPCE institutions publishing financial statements on a consolidated basis under IFRS are all of the Banques Populaires and Caisses d'Epargne and the Group's main subsidiaries, essentially Natixis, Crédit Foncier and Banque Palatine.

Body of standards

Within the central institution, the Finance division has designed and deployed a set of standards to all Group entities to ensure the reliability of the production of accounting and financial information in compliance with accounting and prudential rules or requirements defined by intra-or supra-national regulations for the publication of regulatory reports. This body is mainly based on:

- The definition and dissemination of accounting policies (both French GAAP and international (IFRS)) and prudential policies for the Group;
- The deployment of a consolidation framework intended to ensure the reliability of the process of preparing consolidated data (whether accounting, tax or prudential).

This standard also includes the analysis and interpretation of new texts issued during a given period. These principles are periodically communicated through:

- Group instructions for institutions that set out the common rules relating to the production of accounting and tax information or regulatory reports, in particular those relating to capital adequacy and liquidity (change in the scope of consolidation, schedule of the various works to meet deadlines, any changes in information systems, reminder of regulatory changes, etc.);
- Presentations at national days on accounting, taxation, capital adequacy and liquidity (Accounting and Tax Days, Asset/Liability Management Days, etc.) with a focus on regulatory changes;
- A training and facilitation system aimed in particular at the accounting and financial information production teams within the consolidated entities.

A single consolidated information system

To ensure the production of its accounting and financial information, the Group uses market software packages or develops internal solutions in compliance with the rules defined by its IT master plan (in particular in terms of security, sustainability, quality, etc.).

As part of this plan, the Group has developed an architecture to organize a data model shared between the Risk and Finance divisions, both locally and centrally: the Standardized Exchange Zone (ZEN). This is one of the main sources of information for the central risk and finance information systems, thus ensuring the consistency of the common data used in the main central reporting systems as well as between local and central reporting (scope, production date, etc.).

To ensure the consolidation of accounting and prudential information and to produce the reports intended for the executive management, the supervisory body, the supervisory and control authorities or intended for publication, the consolidation is carried out on a quarterly basis on the basis of the financial statements of each Group entity. Data from the entities are entered into a central database where consolidation procedures are then carried out and which is based on a mixed solution in the Group's business lines:

- For the majority of Group entities and in particular the Caisses d'Epargne and Banques Populaires, information is communicated on an individual basis to ensure a more detailed view of each entity's contribution to the Group's financial statements and ratios. The system, managed by the central institution, is based on a single central consolidation tool used by all entities for the consolidation of the Group and the sub-consolidations that need to be produced. This ensures internal consistency as regards scopes, accounting treatment and analysis;
- For some entities, and in particular the Natixis sub-group, the consolidation is carried out by their own consolidation tool and then communicated to the central institution on the basis of a consolidation package representative of their financial statements and their ratios to ensure the production of the Group's financial statements and ratios. Natixis is equipped with a consolidation tool enabling the production of its consolidated financial statements and ratios, guaranteeing the consistency of the data and providing a transparent overview of its subsidiaries.

These consolidation tools have archiving and security procedures including the daily back-up of the consolidation database. System restoration tests are regularly carried out.

Body of documents

To ensure the reliability of the production processes for accounting and financial information, the central institution has drawn up and deployed a comprehensive body of documents in line with requirements set out in Articles 3e), 11e), 255 and 256 of the Ministerial Order of November 3, 2014 as amended on internal control.

In accordance with the requirements defined by the Group, this documentary database comprises three levels of information:

- Level 1: an inventory of deferrals. It groups deferrals listing all documents produced by all functions and transmitted "[...] to the executive management or the supervisory body [...] to the supervisory and control authorities [...]" or "[...] intended to be published [...]" within the meaning of Article 11 c) of the Ministerial Order of November 3, 2014, as amended, on internal control. This inventory, which is updated every year, includes minimum information on each of the reports in order to understand the objective and assess the associated risk (person responsible, objective, content, methods of dissemination, regulatory reference, risks covered, recipients, etc.). It distinguishes between external reports (regulatory reports) and internal reports (management reports);
- Level 2: operating methods or procedures. They formalize the sequencing of operations to implement the production, publication and control processes;
- Level 3: a description of the key processes (mainly the most complex processes). The process diagram positions the sequencing of the production and control steps, by identifying the players and tools used.

Changes in 2025

In 2025, the Group continued its efforts to standardize and streamline its working methods to ensure the production of consolidated accounting and financial data, while adapting them to internal and regulatory changes, including:

- The implementation of new prudential requirements (reform known as CRR3). These changes are rooted in the publication of June 19, 2024 of the banking package consisting of Regulation 2024/1623 amending Regulation CRR 575/2013 and Directive (EU) 2024/1619 amending Directive CRD 2013/36/EU. Most of the measures apply from January 1, 2025. However, standardization work continued in 2025, in particular with regard to the technical standards for the application of certain parts of the text, awaiting publication by the European Banking Authority;
- The continuation of the project to implement the OECD's so-called "Pillar II" tax rules aimed at establishing a minimum global corporate tax rate of 15%;
- The implementation of the online publication in xBRL.CSV and PDF format of its Pillar III reports (June 30, September 30 and December 31, 2025) *via* the P3DH platform (Pillar 3 Datahub), in accordance with the EBA deployment plan;
- The preparation of the application of IFRS 18 "*Presentation and Disclosures in Financial Statements*" which will replace IAS 1 "Presentation of Financial Statements". This standard was published by the IASB on April 9, 2024. Subject to its adoption by the European Commission, IFRS 18 will be applicable as of January 1, 2027, with comparative data at January 1, 2026;
- The continuation of operational efficiency projects aimed at pooling reports as well as the replacement of the consolidation tool by a single tool shared with all Natixis Group entities to guarantee the consistency of processing and analyses.

6.8.3 Accounting and financial data control process

General system

The Group's internal control system contributes to the management of all types of risk and enhances the quality of accounting and financial information.

It is organized in accordance with legal and regulatory requirements, including those arising from the amended Ministerial Order of November 3, 2014 on internal control and texts governing BPCE. It concerns all Group companies, which are monitored on a consolidated basis.

The system is governed by an umbrella charter addressing the organization of Group internal control, which sets out the main principles, defines the scope of application, and lists all contributors along with their role, with the aim of ensuring that the internal control system of each company and the Group works effectively. This system is supplemented by frameworks, including the framework on controls of accounting and financial information.

Deployment of the control system for accounting and financial data

The Group has defined and implemented an accounting and financial information control system designed to:

- Ensure that production processes are reliable and implemented in an environment of secure controls, making it possible to detect or prevent omissions, errors, fraud or corruption;
- Verify the quality of the accounting and financial information, whether it is intended for the executive management or the supervisory body, transmitted to the supervisory and regulatory authorities or included in the documents intended for publication in accordance with the requirements defined by the amended Ministerial Order of November 3, 2014, on internal control and in particular Article 11 c).

This system is implemented by various participants at two levels of permanent controls, ensuring a strict separation between the different lines of defense with:

- Level one controls are exercised by all persons involved in the production and publication of accounting and financial information (for accounting information, these controls are coordinated by the accounting function and for reports by the overseer (or report owner);
- Level two controls are carried out by a specialized and dedicated function (the Financial Control function), working with other level two control participants, as applicable.

Within the Group, this system is governed by rules and principles defined mainly around three guidelines updated under the coordination of the Group Corporate Secretary's Office:

- The *Framework for quality control of accounting and financial information* approved by the Group Internal Control Coordination Committee. This Framework defines the rules and principles of controls and responsibilities for accounting and related processes, as well as for the production and publication of reports intended for publication or transmission to the executive management, the supervisory body or the regulatory and control authorities;
- The *Framework for the preparation and publication of reports and management indicators approved* by the Standards and Methods, Risks, Compliance and Permanent Control Committee. This Framework defines rules and principles relating to deferrals and provides operational details to ensure the implementation of regulatory requirements relating to deferrals (including those defined by the amended Ministerial Order of November 3, 2014 on internal control and requirements derived from BCBS 239 principles);
- The *Framework for Statutory Auditor assignments at Groupe BPCE, approved* by the Supervisory Board of BPCE, which sets out the rules and principles governing statutory audits in the Group.

Within the entities

Internal control procedures are decentralized by nature owing to the Group's unique organizational structure and are adapted to the particular requirements of each consolidated entity, in compliance with the general rules and principles set by the Group.

At the central institution

Level one controls

In addition to the level one self-checking and control procedures performed in the entities responsible for preparing individual or consolidated financial statements, the quality of accounting and financial controls is subject to the Accounting department, which oversees the Group's production of accounting and financial information.

To this end, the Accounting department:

- Sets accounting and prudential standards at the Group level for the production of individual and consolidated financial statements that meet French and IFRS accounting standards, and the production of regulatory reports for national or supranational oversight and control authorities;
- Coordinates the accounting process, thereby increasing the quality of level one controls;
- Examines the reports covering accounting and regulatory data that it receives by conducting multiple controls using data contained in the consolidation packages sent by the entities in the Group's scope of consolidation for the purposes of preparing the consolidated and regulatory financial statements;
- Performs, within the framework of the missions of the central institution falling within the scope of Article L. 511-31 of the French Monetary and Financial Code, a regular review of the regulatory statements of affiliates before their transmission to the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector, and in accordance with the rules agreed with this authority (multiple analyses and consistency checks);
- Carries out controls, under the tax consolidation regime for cooperative banking groups (Article 223 A *et seq.* of the French General Tax Code), the tax consolidation packages sent to the central institution by the entities falling within the scope of this regime.

In addition, for the reports for which they are responsible, the other departments of the Finance division organize and implement the related process control system in addition to those deployed by the Accounting department, where applicable.

Level two controls

Within the Group, the system is managed by the Group Financial Control department. The Head of this department is a standing guest member of the Group Internal Control Coordination Committee and has been granted powers to set standards for the function. In conjunction with the shareholder institutions and Group subsidiaries, the department maintains functional ties between local Financial Control departments and the central institution to ensure the quality of the entire control system.

Under its groupwide duties, the department's primary activities are to:

- Draft and distribute the body of standards and documentation for the sector and ensuring its implementation;
- Facilitate the sharing of best practices within an *ad hoc* Committee (Financial Controller Committee), working groups and training courses for local permanent or periodic controllers;

- Organize the oversight and evaluation of the accounting and financial information control system within the Group by deploying reporting to the central institution for the entities that appear to be the most material, and by visiting entities, in particular those whose financial control systems are weaker than others;
- Implement accounting controls to prevent and detect fraud, corruption or influence peddling;
- Verify, on behalf of the Audit Committee, the Group's regulatory audit system and in particular services other than financial statement certification.

In addition to these sovereign missions, the department implements controls on accounting processes and internal (for management purposes) or external (regulatory) reports for the central institution or entities for which the central institution acts under mandate or delegation. This work, identified according to a risk-based approach, is carried out, where appropriate, with other second-level controllers.

Other control systems

In addition to Level one and Level two controls, controls are implemented by:

- The Group's Statutory Auditors, which work on a panel basis and base their opinions partly on the conclusions of each consolidated entity's Statutory Auditors, particularly regarding compliance with the Group's standards as laid down by BPCE and partly on the effectiveness of local internal control procedures. To make the certification process as efficient as possible, the Framework for Statutory Auditor Assignments at Groupe BPCE recommends that each Group entity has at least one representative of the Group's Statutory Auditors certifying BPCE's financial statements;
- BPCE's Group Internal Audit, which notably ensures compliance in audits of the Group's institutions and internal control procedures, including accounting and financial audits.

Changes in 2025

In 2025, the Group adapted its control system for accounting and financial information to take into account regulatory changes and continue its streamlining efforts. The main actions carried out by the central institution were as follows:

- The deployment of the new risk assessment system for accounting processes in the Group and its effective implementation within BPCE SA;
- Strengthening the supervision of actions plans in terms of Financial Control as part of the so-called "Supervision" program intended to strengthen the supervision of the Group's main entities;
- Maintaining a robust coordination and support system for the Group's entities, including the adaptation of training courses for second-level control players and the updating of the control guides made available to them to facilitate the implementation of controls on accounting processes and reports published by the Group;
- Implementation of an internal control system designed to assess the quality of sustainability reporting (in application of the requirements of the CSRD (Corporate Sustainability Reporting Directive)) published by the Group and certain entities subject to this requirement, which aims to strengthen transparency and make companies accountable for their environmental, social and governance (ESG) impacts.
- The launch of a project to strengthen the control system of BPCE Equipment Solutions and its subsidiaries, following their acquisitions in 2025, in compliance with the Group's requirements.

Bodies responsible for accounting and financial information

Once per quarter, the Management Board of BPCE finalizes the consolidated financial statements and presents them to the Supervisory Board for verification and control.

Individual financial statements are prepared once per year, in accordance with regulations in force.

The Supervisory Board of BPCE checks and controls the individual and consolidated financial statements prepared by the Management Board of BPCE and presents its observations about the financial statements for the fiscal year at the Ordinary Shareholders' Meeting. For this purpose, the Supervisory Board has set up a specialist committee in charge of preparing its decisions and formulating recommendations: the Audit Committee.

Details on this committee's duties, including oversight of the accounting and financial information production process, the statutory audit of the annual and consolidated financial statements and the Statutory Auditors' independence, are provided in the section relating to "Corporate governance report".

The Finance Committee brings together executives from each of the two networks and is tasked with examining all financial matters relating to the shareholder community. It examines these matters in accordance with the Group committees in these areas and issues an advisory opinion.

In addition, the Management Board of BPCE has tasked the Finance division with organizing the coordination, information and decision-making process on financial and accounting matters through the Finance function's supervisory committees, organized around three categories:

- Permanent committees;
- Coordination and reporting committees: these comprise key managers from the Finance function or key managers from each business line department with finance duties (financial control, accounting, cash management, Asset/liability management and tax);
- Temporary committees that manage and coordinate projects with fixed deadlines.

In order to ensure the transparency and security of the system, these committees are formally governed by regulations that define the operation, organization, composition and role of each committee, along with the rules for reporting on their discussions. The Finance division's committees systematically involve representatives.

6.9 Persons responsible for auditing the financial statements

6.9.1 Statutory audit system

Within the Group, the main rules that govern the statutory audit system and aim to guarantee Statutory Auditor independence in Groupe BPCE companies are defined in the Framework for Statutory Auditor Assignments at Groupe BPCE, updated and validated by the Supervisory Board of BPCE.

Applicable to all of the Group's companies, this Framework primarily defines:

- The rules governing the selection of Statutory Auditors for the Group and its entities;
- The rules governing the services that may be provided by Statutory Auditors (or their networks);
- The role of Audit Committees with respect to monitoring the system.

On the appointment of Group Statutory Auditors: in line with the regulations in force, the Group recommends that each group company continues to designate at least one network of Statutory Auditors that certify BPCE's consolidated and individual financial statements to ensure there is a consistent, harmonized financial audit system available across the Group. However, each company's Audit Committee retains the authority to select Statutory Auditors subject to the approval of the company's General Meeting.

On the prior approval of services other than financial statement certification: in line with the opinion provided by the Haute autorité de l'audit (H2A), the Audit Committee of BPCE introduced a prior approval procedure, for a one year period, of an exhaustive list of categories of services other than financial statement certification. These provisions, which are set out in the annexes to the Framework for Statutory Auditor Assignments, are reviewed annually by the BPCE Audit Committee and communicated to all Group entities.

In terms of system oversight, each company's Audit Committee:

- Examines the services rendered by the Statutory Auditors. Aside from the prior approval of services other than financial statement certification in compliance with provisions that have been defined in the Framework for Statutory Auditor Assignments, the committee examines the fees and types of services rendered as recorded in each company's income statement;
- Ensures compliance with the principles laid out in the Framework for Statutory Auditor Assignments, rules governing the rotation of Statutory Auditors and the rotation of signatory partners and the implementation of a Statutory Auditor selection procedure at the end of each maximum term of office;
- Relies on the permanent control system (Financial Control function) in this approach. A Group standard on the control of the independence of the Statutory Auditors, validated by the Standards and Methods Committee, specifies the role of this function in this area and the main procedures it must implement. The work carried out within this framework is presented to each company's Audit Committee and, on a consolidated basis, to the Group Audit Committee.

6.9.2 Statutory Auditors of Groupe BPCE

BPCE's Statutory Auditors are responsible for auditing the individual financial statements of BPCE SA and the consolidated financial statements of BPCE and Groupe BPCE. At December 31, 2025, the Statutory Auditors were:

PricewaterhouseCoopers Audit	Deloitte & Associés	Forvis Mazars
63, rue de Villiers	6, place de la Pyramide	45 rue Kléber
92208 Neuilly-sur-Seine Cedex	92908 Paris-La Défense Cedex	92300 Levallois-Perret

PricewaterhouseCoopers Audit (672006483 RCS Nanterre), Deloitte & Associés (572028041 RCS Nanterre) and Forvis Mazars (784824153 RCS Nanterre) are registered as Statutory Auditors, members of the Compagnie Régionale des Commissaires aux Comptes de Versailles and under the authority of the Haute autorité de l'audit (H2A).

PricewaterhouseCoopers audit

The Combined General Meeting of BPCE of May 27, 2021, voting under the conditions of quorum and majority applicable to Ordinary Shareholders' Meetings, resolved to renew the term of PricewaterhouseCoopers Audit for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting to be held in 2027, convened to approve the financial statements for the year ending December 31, 2026.

PricewaterhouseCoopers Audit is represented by Mr Laurent Tavernier and Mr Antoine Priollaud.

Substitute: Jean-Baptiste Deschryver, of 63, rue de Villiers, 92208 Neuilly-sur-Seine Cedex, appointed for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting to be held in 2027, convened to approve the financial statements for the year ending December 31, 2026.

Deloitte & Associés

The Combined General Meeting of BPCE of May 27, 2021, voting under the conditions of quorum and majority applicable to Ordinary Shareholders' Meetings, resolved to appoint Deloitte & Associés for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting to be held in 2027, convened to approve the financial statements for the year ending December 31, 2026.

Deloitte & Associés is represented by Ms Charlotte Vandeputte.

Substitute: BEAS, represented by Damien Leurent, of 6, place de la Pyramide, 92908 Paris-La Défense, appointed for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting to be held in 2027, convened to approve the financial statements for the year ending December 31, 2026.

Forvis Mazars

Following a proposal made by the Supervisory Board and the opinion of the Audit Committee, the General Meeting of BPCE of May 22, 2025, voting under the conditions of quorum and majority applicable to Ordinary Shareholders' Meetings, resolved to renew the term of Forvis Mazars for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting to be held in 2031, convened to approve the financial statements for the year ending December 31, 2030.

Forvis Mazars is represented by Mr Emmanuel Thierry and Ms. Laurence Karagulian.

Substitute: CBA, 45 rue Kléber, 92300 Levallois-Perret, appointed for a period of six fiscal years, *i.e.* until the Ordinary Shareholders' Meeting held in 2031, convened to approve the financial statements for the year ended December 31, 2030

7.1.1 Types of risk

Risk macro-categories	Definition
Credit and counterparty risk	
• Credit risk	The risk of loss from the inability of clients, issuers or other counterparties to honor their financial commitments. It includes counterparty risk related to market transactions (replacement risk) and securitization activities. It can be exacerbated by concentration risk.
• Securitization risks	Transactions for which the credit risk inherent in a set of exposures is housed in a dedicated structure (generally a mutual fund or "conduit") and then divided into tranches for acquisition by investors.
Financial risks	
• Market risks	The risk of loss of value on financial instruments resulting from changes in market inputs, from the volatility of these inputs or from the correlations between these inputs. Inputs include exchange rates, interest rates and prices of securities (equities, bonds), commodities, derivatives or any other assets, such as real estate assets.
• Liquidity risk	The risk that the Group cannot meet its cash requirements or collateral requirements when they fall due and at a reasonable cost.
• Structural interest rate risks	The risk of loss in interest income or in the value of a fixed-rate structural position in the event of changes in interest rates. Structural interest rate risks are associated with commercial activities and proprietary transactions.
• Credit spread risk	The risk associated with a decline in the creditworthiness of a specific issuer or a specific category of issuers.
• Foreign exchange risk	The risk of loss in interest income or in the value of a fixed-rate structural position in the event of changes in exchange rates. Structural interest rate and exchange rate risks are associated with commercial activities and proprietary transactions.
Non-financial risks	
• Non-compliance risk	The risk of a legal, administrative or disciplinary penalty, material financial loss or reputational risk arising from a failure to comply with the provisions specific to banking and financial activities (whether these are stipulated by directly applicable national or European laws or regulations), with professional or ethical standards, or instructions from executive management, notably issued in accordance with the policies of the supervisory body.
• Operational risk	The risk of losses arising from the inadequacy or failure of internal processes, people and systems or from external events, including legal risk. Operational risk includes risks related to events with a low probability of occurrence but a high impact, the risks of internal and external fraud defined by the regulations, and risks related to the model.
• Insurance underwriting risk	In addition to asset-liability risk management (interest rate, valuation, counterparty and exchange rate risks), these risks include pricing risk in respect of mortality risk premiums and structural risks related to life and non-life insurance activities, including pandemics, accidents and disasters (earthquakes, hurricanes, industrial accidents, terrorist acts and military conflicts).
• Model risk	Model risk is defined as the risk of adverse consequences - financial loss and/or possible damage to the Group's reputation - resulting from model-based decisions due to errors in the design, implementation or use of these models.
• Legal risk	Legal risk defined in French regulations as the risk of any dispute with a counterparty, resulting from any inaccuracy, lacunae or insufficiency that may be attributable to the company in respect of its operations.
• Reputational risk	Reputational risk is defined as the risk of damage to the trust of the company, its clients , counterparties, suppliers, employees, shareholders, supervisors or any other third party whose trust, in any capacity whatsoever, is a necessary condition for the normal continuation of the activity.
Strategic business and ecosystem risks	
• Solvency risk	The risk that the company will be unable to honor its long-term commitments and/or ensure the continuity of its ordinary operations in the future.
• ESG risks	Environmental, social and governance risks: direct and indirect risks (*i.e. via* assets/liabilities held) arising from extreme or chronic physical risk events related to climate and the environment (loss of biodiversity, pollution, *etc.*), risks related to the transition to a low-carbon economy with lower environmental impact (regulatory, technological or stakeholder behavior changes), risks related to social issues (rights, well-being, interests of people and stakeholders) or corporate governance issues (ethics and culture, supplier relations, business conduct). These risks are expressed through the main risk categories to which Groupe BPCE is exposed.

7.1.2 Regulatory changes

Progress of the banking union

The new banking package (CRR3 regulation and CRD6 directive) was published on June 19, 2024, in the Official Journal of the European Union.

This banking package implements the final component of the Basel III regulatory reform. Most provisions of the CRR3 regulation are applicable from January 1, 2025. However, the rules concerning market risks have been postponed by one year to January 1, 2027, in order to maintain a consistent global regulatory framework.

The governance of financial institutions is at the heart of the provisions of the CRD6 directive, the transposition of which is still ongoing despite the deadline of January 10, 2026.

CRR3 introduces significant technical modifications that directly influence risk management in banks. These adjustments primarily concern the methods for calculating credit risks, market risks, and credit valuation adjustments (CVA). Furthermore, CRR3 imposes more rigorous reporting and data collection standards to enhance the transparency and comparability of financial information.

Among the key issues, the introduction of the output floor (which establishes that capital requirements calculated using internal models cannot fall below 72.5% of the requirements set out by the standardized approach) is of major importance.

The European authorities are considering simplifying the prudential regulations. The Commission intends to address this issue through the report to be published in 2026, which will focus in particular on the functioning of the Banking Union, the contribution of the latest reforms for financial stability and the implementation of the output floor.

With regard to the resolution framework, the Commission, Parliament and Council managed to reach a trilateral political agreement on June 25, 2025 on the revision of the crisis management and deposit insurance framework (CMDI). In France, Article 2-I of the DDADUE 2025 law transposes various provisions of the 2024/1174 directive "Daisy Chains II".

A sustained regulatory agenda

The regulatory agenda remains robust for banks, and Groupe BPCE is closely monitoring the issues, whether they pertain to the banking sector or the broader economic environment and its cooperative banking model.

The Digital Operational Resilience Act (DORA) came into effect on January 17, 2025. The requirements of this regulation relate to the management of risks associated with information technology and aim to mitigate cyberattacks and other risks linked to information systems. It includes provisions on the governance of financial entities, risk management, and the reporting of ICT (Information and Communication Technologies) related incidents, and introduces resilience testing every three years. On January 17, 2025, the European Supervisory Authorities published a report studying the feasibility of strengthening the centralization of major ICT-related incident reporting, and, in July 2025, they presented a guide for the monitoring of critical third-party providers. On July 16, 2025, the ECB published a guide on the outsourcing of cloud services, which complements the DORA regulation.

Directive (EU) 2023/2225 on consumer credit contracts was published in the Official Journal of the European Union on October 30, 2023. The transposition order was published on September 3, 2025, and the new regime will be fully applicable from November 20, 2026. The main developments concern the scope (a new definition of the credit contract concluded between a lender and a consumer, which effectively excludes the GAFAM), the establishment of a mandatory creditworthiness assessment, the enhancement of pre-contractual information, as well as the modalities for conducting activities for providers not falling under sectoral regulation.

The 2002/65 directive concerning the distance marketing of financial services to consumers, known as the Distance Marketing in Financial Services Directive (DMFSD), has finally been repealed and replaced by the 2023/2673 directive, set to apply from June 19, 2026. The changes concern, in particular, pre-contractual information and the facilitation of the right of withdrawal, through the introduction of a "withdrawal function" accessible *via* the service provider's interface. The transposition texts for this directive were published on January 6, 2026.

The European Commission published a set of measures on May 24, 2023, known as the "Retail Investment Package," aimed at enhancing the protection of retail clients in terms of investment in financial products. While the formal prohibition of inducements is now excluded, the Council's position of June 12, 2024, introducing an "inducement test," which could effectively become a de facto prohibition, calls for heightened vigilance regarding the ongoing discussions. The completion of simplification work on these texts is expected for the first quarter 2026.

The proposal to revise the Payment Services Directive (PSD3) presented by the European Commission on June 28, 2023, was amended by the European Parliament during its plenary session on April 23, 2024. This proposal also contributes to the development of open banking (access to banking and financial data). Impact assessments are ongoing. An agreement was reached in trilogue on November 26, 2025. The final text should be published in the first quarter of 2026, for an entry into application in late 2027.

It should also be noted that Articles 2 V and VI of the DDADUE 2025 law participate in the implementation of Regulation 2024/886 concerning instant payments, applicable since January 9, 2025.

On June 28, 2023, the European Commission published its proposal for a regulatory framework for financial data access (Framework for Financial Data Access - FIDA), previously referred to as "open finance." This initiative is part of the European Commission's digital finance strategy, which aims to establish a European financial data space. The trilogues began in 2025. The regulation known as the AI act, dated June 13, 2024, establishes the first legal framework for artificial intelligence in Europe. This regulation will come into effect on August 2, 2026, but some measures will be implemented starting February 2, 2025 (prohibiting high-risk AI). However, the publication of the draft "Digital Omnibus" regulation on November 21, 2025 by the European Commission, as well as its subsequent developments, will be closely followed by the banking sector due to the major changes expected concerning, among other matters, the AI Act.

Ordinance 2023-1142 of December 7, 2023, transposing Directive 2022/2464 regarding the publication of sustainability information by companies, known as CSRD, applies to reports published in 2025. It is set to be amended within the framework of Articles 7 to 12 of the DDADUE 2025 law adopted on February 17, 2025. Two proposals for directives known as Omnibus I were published on February 26, 2025, aimed specifically at postponing and modifying the CSRD, the CS3D and the Taxonomy Regulation. A second Omnibus Directive, adopted on December 16, 2025, modified the thresholds for being subject to the CSRD.

The legislative package presented by the European Commission in July 2021 completely overhauls the European framework regarding AML-CTF, particularly by strengthening the harmonization of the rules applicable to customer due diligence and vigilance, redefining the compliance functions, and establishing a new authority, the AMLA, which is based in Frankfurt. The two draft regulations AMLAR and AMLR, as well as the draft directive AMLD, were published in the Official Journal of the European Union on June 19, 2024 and most of their provisions will enter into force on July 10, 2027.

7.2 Risk factors

The banking and financial environment in which Groupe BPCE operates is exposed to numerous risks and requires the implementation of an increasingly demanding and strict policy to control and manage these risks. Some of the risks to which Groupe BPCE is exposed are set out below. However, this is not a comprehensive list of all of the risks incurred by Groupe BPCE in the course of conducting its business or given the environment in which it operates. The risks presented below are those identified to date as significant and specific to Groupe BPCE, and liable to have a material adverse impact on its business, financial position and/or results. For each of the risk sub-classes listed below, the risk factor considered to date by Groupe BPCE as the most significant is listed first. The risks presented below are those identified to date as liable to have an adverse impact on the businesses of BPCE SA. The risk factors described below are presented as of the date of this document and the situation described may change, even significantly, at any time.

Credit and counterparty risk

Groupe BPCE is exposed to credit and counterparty risks that could have a material adverse effect on the Group's business, financial position and income.

Groupe BPCE remains significantly exposed to credit and counterparty risk through its financing or market activities. Despite vigilance aimed at limiting concentrations, particularly unit concentrations, defaults may occur within the same sector or the same geographic area due to the interdependencies between counterparties. In the event of default by one or more counterparties, or if the collateral does not fully cover the exposure, the Group could incur losses affecting its cost of risk, results and financial position.

At December 31, 2025, gross exposure to credit risk amounted to €1,552 billion, with the following breakdown: 37% from retail customers, 31% from corporates, 15% from central banks and sovereign exposures, 6% in the public sector and similar. The credit risk-weighted assets amounted to €391 billion (including counterparty risk). For the non-financial corporations portfolio, the main sectors are Real Estate (37% of gross exposures), Wholesale and Retail Trade (11%), Finance/Insurance (10%) and Professional, scientific and technical activities (7%).

Groupe BPCE's activity is mainly concentrated in France, with a gross exposure of €1,186 billion, or 80% of the total. Exposures excluding France are mainly split between the United States (6%) and other countries (14%).

For further information, please see Sections 7.5 "Credit risk" and 7.6 "Counterparty risk" in this document.

A substantial increase in impairments or provisions for expected credit losses recognized in Groupe BPCE's accounts could have a material adverse effect on its results and financial position.

The Group regularly recognizes impairment expenses to reflect actual or potential losses related to its loans and advances, its fixed-income securities (amortized cost or fair value through equity) and its commitments given. These impairments are booked in the income statement under "cost of risk". The overall level of expenses depends on past losses on loans, volumes and types of loans, loans in payment arrears, economic conditions, other collection factors and applicable standards. Despite the Group's efforts to maintain an adequate level of provisions, a deterioration of non-performing assets or unfavorable market conditions, in particular in certain countries, may lead to an increase in expenses for losses on loans. This substantial increase in expenses, due to a significant revision of the estimated risk of loss inherent in the loan portfolio, or a loss on loans in excess of historical provisions could have a material adverse impact on Groupe BPCE's results and financial position.

For information, the cost of risk amounted to -€2,465 million in 2025 compared to -€2,061 million in 2024, with credit risks accounting for 84% of the Group's risk-weighted assets. On the basis of gross exposures, 37% relate to retail customers and 31% to corporate customers (of which 65% of exposures are located in France).

Thus, the risk associated with a substantial increase in impairment expenses on the loans and advances portfolio remains significant in terms of both impact and probability, and is monitored carefully. In addition, prudential requirements supplement these provisioning mechanisms *via* the prudential backstop process, which provides for a deduction in equity of non-performing loans beyond a certain threshold in line with the quality of the guarantees and according to a regulatory timetable defined by regulatory texts.

A decline in the financial strength and performance of other financial institutions and market players may have an unfavorable impact on Groupe BPCE.

The interconnection of markets, particularly in trading, clearing, counterparty and financing, can amplify the effects of a liquidity crunch or sector default. A default by a significant sector player (systemic risk), or rumors that accentuate the risk, may lead to liquidity tensions and, in turn, additional losses or defaults for Groupe BPCE.

Groupe BPCE is directly or indirectly exposed to various financial counterparties – investment service providers, banks, clearing houses and central counterparties, mutual funds and hedge funds, as well as other institutional clients – for which any failure could adversely affect its financial position. In addition, the emergence of players with little or no regulation and of new products (in particular crowdfunding or trading platforms) constitutes an additional risk, aggravated if the assets held as collateral cannot be sold or do not cover the exposure in respect of defaulted loans or derivatives, or in the event of fraud, misappropriation of funds or another wrongdoing by financial sector players in general to which Groupe BPCE is exposed or another failure of a major market player, such as a central counterparty.

In addition, the distribution risk in the event of a difficult market or an unfavorable economic environment may also generate losses in a severe scenario.

The exposures to the "financial institutions" asset class represented 4% of Groupe BPCE's total gross exposures, i.e. €62 billion at December 31, 2025, with 66% of the exposures in France.

Financial risks

Significant changes in interest rates may have a material adverse impact on Groupe BPCE's net banking income and profitability.

The net interest margin constitutes a major portion of revenues and its evolution strongly influences results for the period. Resource costs and asset yields, particularly for new production, are sensitive to external factors and may cause temporary or lasting fluctuations, even if a rise in interest rates may be globally favorable in the medium/long term.

The recent environment has been marked by a sharp rise in interest rates until 2023, followed by the start of a loosening of monetary policy in 2024 in the Eurozone.

To offset this, the Group has passed on the high resource costs on new fixed-rate loans and has strengthened interest rate hedging notably *via* swaps (macro-hedging) in order to protect the balance sheet value and the future net interest margin.

Thus, although the high interest rate environment may be favorable in the long term, the changes observed can have significant and lasting repercussions. Groupe BPCE's interest rate risk indicators reflect this exposure.

The sensitivity of the net present value of Groupe BPCE's balance sheet to a +/-200 bps variation in interest rates remained lower than the 15% Tier-1 limit. At December 31, 2025, Groupe BPCE's sensitivity to Tier-1 interest rate increases stood at -11.29% compared to -9.62% at December 31, 2024. This indicator, calculated according to a static approach (contractual or conventional flow of all balance sheet items) and in a stress scenario (immediate and significant interest rate shock), makes it possible to highlight the distortion of the balance sheet over a long horizon.

To better control the Group's exposure to interest rate risk, this approach must be supplemented by a dynamic approach (including new production forecasts). Following regulatory changes and modifications of its management framework, since 2023 Groupe BPCE has deployed an internal revenue sensitivity indicator on the commercial banking networks and the Supervisory Outlier Test (SOT) Net Interest Margin (NIM) regulatory indicator at Group level, in addition to its internal indicators. The introduction of the SOT NIM supplements the information communicated as part of the interest rate risk management framework by a margin view over a one-year horizon, and must be published in the financial statements, even if it will not directly generate a Pillar I expense. At December 31, 2025, the most penalizing scenario for the Group in terms of the SOT NIM was the downside scenario. The indicator stands at -1.27% and remains below the 5% limit compared to Tier 1.

The dynamic approach in terms of sensitivity of future revenues is reinforced by a multi-scenario vision allowing a broader approach by taking into account the uncertainties related to business forecasts (new activity and changes in customer behavior), possible changes in commercial margin, *etc.* This is achieved through the sensitivity of the Group's revenues by measuring the change in the Group's forecast net interest margin at one year according to four scenarios (rise in rates, decline in rates, steepening of the yield curve, flattening of the yield curve) compared to the core scenario. This revenue sensitivity indicator covers all commercial banking activities and aims to estimate the sensitivity of the institutions' results to interest rate fluctuations.

Groupe BPCE is dependent on its access to funding and other sources of liquidity, which may be limited for reasons outside its control, thus potentially having a material adverse impact on its results.

Access to short-term and long-term funding is critical for the conduct of Groupe BPCE's business. Non-collateralized sources of funding for Groupe BPCE include deposits, issues of long-term debt and short/medium-term negotiable debt securities, banks loans and credit lines. Groupe BPCE also uses secured funding, notably through repurchase agreements and the issuance of covered bonds or securitization *via* dedicated vehicles or conduits. Geopolitical instabilities in the world with variable rate tranches can have an impact on arrears and default rates as well as on final legal maturities. If Groupe BPCE were unable to access the secured and/or unsecured debt market at conditions deemed acceptable, or incurred an unexpected outflow of cash or collateral, including a significant decline in customer deposits, its liquidity may be negatively affected. Furthermore, if Groupe BPCE were unable to maintain a satisfactory level of customer deposits (*e.g.* in the event its competitors offer higher rates of return on deposits), it may be forced to obtain funding at higher rates, which would reduce its net interest margin and results.

Liquidity could also be impacted by events beyond its control or unforeseeable, such as geopolitical or health crises, a resurgence of financial crises, operational difficulties of third parties, negative perceptions of financial services, rating changes or negative opinions about the state of the Group or the sector. Similarly, access to long-term funding and funding costs depend on credit spreads on the bond and credit derivatives markets, and remain liable to adversely affect its business, its financial position, its results and its ability to meet its obligations to its counterparties. Changes in monetary policy, particularly those of the ECB, may also affect Groupe BPCE's financial position.

To deal with these risks, the Group has significant liquidity reserves made up of cash deposits with central banks and available securities and receivables eligible for central bank refinancing mechanisms.

At December 31, 2025, the liquidity reserve stood at 197% of the short-term funding outstandings and the short-term maturities of the medium- and long-term loans, compared to 177% in 2024. The average 12-month liquidity coverage ratio (LCR) was 145% as of December 31, 2025 (versus 149% in 2024).

Given the importance of these risks for Groupe BPCE in terms of impact and probability, these risks are monitored proactively and closely, with Groupe BPCE also pursuing a very active policy of diversifying its investor base.

Downgraded credit ratings could have an adverse impact on BPCE's funding cost, profitability and the continuity of some businesses.

At December 31, 2025, the long-term ratings were A+ (Fitch and S&P), A1 (Moody's) and A+ (R&I). A downward revision of these ratings could limit market access, increase borrowing costs, affect the liquidity and competitiveness of the Group, and impact profitability and trigger obligations under certain bilateral contracts for certain trading activities, derivatives and collateralized financing. The cost of unsecured long-term funding is directly related to the credit spread, which in turn is determined by rating and market conditions with sometimes unpredictable and very volatile fluctuations, and a widening spread can increase costs and weigh on profitability if the perception of creditworthiness deteriorates.

Groupe BPCE is exposed to credit spread risk at the level of its assets in a scenario of widening credit spreads, on its portfolio of securities at fair value or at amortized cost. The Group holds a significant bond portfolio eligible for the liquidity reserve, mainly composed of sovereign and corporate bonds, which makes its valuation sensitive to changes in the credit spreads of its securities.

Market fluctuations and volatility could expose Groupe BPCE, and in particular its major corporate & investment banking business lines (Natixis CIB and Natixis IM), to favorable or unfavorable fluctuations in its trading and investment activities, which could adversely affect Groupe BPCE's results of operations and financial position.

Positions in the bond, currency, commodity, equity, unlisted or unconventional asset markets may be impacted by price fluctuations and liquidity. Adverse market configurations or periods of stress may generate losses on trading and hedging instruments (swaps, futures, options, structured products) and make it difficult to sell assets, which could affect the Group's results and financial position. Similarly, prolonged market declines and/or violent crises may reduce the liquidity of certain asset classes and make it difficult to sell certain assets, therefore generating significant losses.

At end 2025, the market risk-weighted assets totaled €18 billion, i.e. around 4% of Groupe BPCE's total risk-weighted assets.

For additional details, see Note 10.1.2 to the consolidated financial statements of Groupe BPCE in the Universal Registration Document, which analyzes financial assets and liabilities classified in Level 3 of the fair value hierarchy.

Groupe BPCE's revenues from brokerage and other activities associated with fee and commission income may decrease in the event of market downturns.

A market downturn may result in lower flows of transactions and financial services, which would lead to a decrease in net banking income from these activities. In addition, the decrease in the value of portfolios or the increase in withdrawals from portfolios managed on behalf of third parties could reduce the management fees and commissions paid by clients and impact revenues from fund distribution and asset management. Even without a fall in the markets, below-market performance could lead to an increase in withdrawals or lower inflows, weighing on the revenues of the activity.

For 2025, total net fees and commissions amounted to €11,258 million, or 44% of Groupe BPCE's net banking income.

For more details on fees and commissions, see Note 4.2 "Fee and commission income and expenses" in Groupe BPCE's consolidated financial statements in the Universal Registration Document.

Changes in the fair value of Groupe BPCE's portfolios of securities and derivative products, and its own debt, are liable to have an adverse impact on the net carrying amount of these assets and liabilities, and as a result on Groupe BPCE's net income and equity.

At each financial reporting date, assets and liabilities measured at fair value are adjusted in the balance sheet, with movements passing either through the income statement or directly through equity. When these adjustments affect profit or loss without being offset by other corresponding changes, they have an impact on net banking income and ultimately on net income and prudential ratios. Fair value adjustments may also adversely affect the net carrying amount of assets and liabilities and thus equity. Recording over a period does not imply a guarantee that a new adjustment will not be necessary at a later date.

At December 31, 2025, financial assets at fair value through profit or loss stood at €240 billion (€227 billion held for trading), and liabilities at €234 billion (€177 billion held for trading).

For more information, see Notes 4.3, 4.4, 5.2, 5.3 and 5.4 to Groupe BPCE's Universal Registration Document.

Non-financial risks

In the event of non-compliance with applicable laws and regulations, Groupe BPCE could be exposed to significant fines and other administrative and criminal penalties that could have a material adverse effect on its financial position, activities and reputation.

The banking and insurance framework is subject to reinforced supervision, with a growing volume of international and national regulations (MIFID II, PRIIPS, Insurance Distribution Directive, Market Abuse Regulation, GDPR, benchmarks, *etc.*) that are profoundly changing operational processes.

The European system for combating money laundering and the financing of terrorism is being stepped up. The Anti-Money Laundering Package, adopted in 2024 and mainly applicable from 2027, will be supplemented by subsequent texts. The European AMLA is being strengthened and will ensure from 2027 the direct supervision of a group of entities and the coordination of financial intelligence units at EU level.

Non-compliance with regulations may take the form of risks of inappropriate business practices to promote products, insufficient management of conflicts of interest, disclosure of confidential information, unsatisfied due diligence on entering into relationships, insufficient detection of money laundering or terrorism-related operations, and failure to comply with or circumventing of international sanctions (embargoes, asset freezes) and extraterritorial measures.

The Compliance function coordinates the prevention and control of these risks, but the Group remains exposed to fines and civil or criminal proceedings that could significantly affect its financial position, activities and reputation. Evolving compliance risks can lead to costs and operational disruptions if external systems, processes or services do not meet regulatory requirements. Proactive monitoring remains essential to limit the potential impact on the business and results.

The legal risks to which Groupe BPCE is exposed could have a material adverse effect on its financial position and results.

Judicial, arbitral and administrative proceedings initiated or likely to be initiated against Groupe BPCE in the course of its current activities could give rise to financial penalties (fines, damages, penalties) and impact its profitability, financial strength, operational continuity and reputation. While some proceedings may not have a material impact in the short term, others, such as class actions, may require additional provisions and affect future prospects.

At December 31, 2025, the total provisions for legal and tax risks amounted to €967 million.

For detailed information on the most significant proceedings, please refer to Section 7.10 "Legal risks" of this document.

Any interruption or failure of the information systems belonging to Groupe BPCE or third parties, particularly external service providers, may generate losses (including commercial losses) and may have a material adverse impact on Groupe BPCE's results.

As is the case for its competitors, Groupe BPCE is highly dependent on information and communication systems, as a large number of increasingly complex transactions are processed in the course of its activities. Any failure, interruption or malfunction in these systems may cause errors or interruptions in the systems used to manage customer accounts, general ledgers, deposits, transactions and/or to process loans. A temporary failure in Groupe BPCE's information systems despite back-up systems and contingency plans could generate substantial information recovery and verification costs, or even a decline in its proprietary activities if, for example, such a failure were to occur during the implementation of a hedging transaction. The inability of Groupe BPCE's systems to adapt to an increasing volume of transactions may also limit its ability to develop its activities and generate losses, particularly losses in sales, and may therefore have a material adverse impact on Groupe BPCE's results. Cyber risks and the impacts of digital transformation accentuate these vulnerabilities, with an increasing exposure of intangible assets and work tools, and a multiplication of connected channels and devices (cloud, big data, *etc.*).

Malicious acts aimed at accessing or misappropriating data and systems *via* digital means, including artificial intelligence, could harm Groupe BPCE, its employees, partners and clients. Numerous processes are gradually going digital. Changing uses by employees and clients also lead to an increased use of the Internet and interconnected technological tools (tablets, smartphones, internet, *etc.*), increasing the number of channels serving as potential vectors for attacks and disruptions, and the number of devices and applications vulnerable to attacks and disruptions. Consequently, the software and hardware used by Groupe BPCE's employees and external agents are constantly and increasingly subject to cyberthreats. As a result of any such attacks, Groupe BPCE may face malfunctions or interruptions in its own systems or in third-party systems that may not be adequately resolved. Any interruption or failure of the information systems belonging to Groupe BPCE or third parties may generate losses (including commercial losses) due to the disruption of its operations and the possibility that its customers may turn to other financial institutions during and/or after any such interruptions or failures.

The risk associated with any interruption or failure of the information systems belonging to Groupe BPCE or third parties is significant for Groupe BPCE in terms of impact and probability, and is therefore carefully and proactively monitored.

Groupe BPCE is also exposed to operational risk related to malfunctions or operational failures by one of its clearing agents, foreign exchange markets, custodians or other financial intermediaries or external service providers that it uses to carry out or facilitate its securities transactions.

Lastly, it is necessary to note the risk of outsourcing, particularly in external IT services or more generally in connection with critical and important external services within the meaning of French regulations.

Reputational risks could unfavorably impact Groupe BPCE's profitability and business outlook.

As a major player in the financial system, Groupe BPCE relies on the notion of a trusted third party for the general public, its clients. Damage to reputation, particularly related to negative media coverage or claims about products, financing, partners or governance, may damage this trust and influence the Group's business relations and attractiveness. Concerns may arise around BPCE's environmental strategy and social policies or its governance.

External events, such as acts of cybercrime or cyberterrorism, internal or external fraud or misappropriation of funds, may also damage the Group's image and its ability to establish or maintain relationships with counterparties, clients or service providers. Major damage to reputation could limit access to certain financial markets, impact the attractiveness of talent and, ultimately, affect the Group's financial position and business outlook.

For more information, refer to section 7.17 "Reputation risk management framework" of this document.

Unforeseen events may interrupt Groupe BPCE's operations and cause losses and additional costs.

Unforeseen events, such as natural disasters, physical climatic risks, pandemics, attacks or other emergency situations, could cause an abrupt interruption in Groupe BPCE's activities and affect its critical business lines (liquidity, payment instruments, securities, loans to individual and corporate clients, fiduciary). These interruptions could generate material losses, particularly if they are not fully covered by insurance, and have a direct impact on net income. They could also disrupt the Group's infrastructure or that of third-party partners, generate additional costs (relocation of personnel, insurance premiums) and increase the overall level of risk if such events preclude insurance coverage.

At December 31, 2025, losses related to operational risk were mainly concentrated on the "Payment and settlement" line (29%) and, within the "Execution, delivery and process management" category (31%).

The failure or inadequacy of Groupe BPCE's risk management and hedging policies, procedures and strategies may expose it to unidentified or unexpected risks which may trigger unforeseen losses.

Groupe BPCE's risk management and hedging policies, procedures and strategies may not succeed in effectively limiting its exposure to all types of market environments or all kinds of risks, and may even prove ineffective for some risks that the Group was unable to identify or anticipate. Furthermore, the risk management techniques and strategies employed by Groupe BPCE may not effectively limit its exposure to risk and do not guarantee that overall risk will actually be lowered. These techniques and strategies may prove ineffective against certain types of risk, in particular risks that Groupe BPCE had not already identified or anticipated, given that the tools used by Groupe BPCE to develop risk management procedures are based on assessments, analyses and assumptions that may prove inaccurate or incomplete.

Groupe BPCE's risk measurement system is based in particular on the use of models. This models portfolio, covering market risks (Corporate & Investment Banking), credit risks and financial areas (ALM, markets), as well as operational risks (including compliance and climate), could fail. As a result, the Group could be exposed to unidentified or unanticipated risks that could result in significant losses.

Some of the indicators and qualitative tools used by Groupe BPCE to manage risk are based on the observation of past market performance. To measure risk exposures, the risk management department analyzes these observations, particularly statistically. These tools and indicators may not be able to predict future risk exposures leading to model risk. For example, these risk exposures may be due to factors that Groupe BPCE may not have anticipated or correctly assessed in its statistical models or due to unexpected or unprecedented shifts in the market. This would limit Groupe BPCE's risk management capability. As a result, losses incurred by Groupe BPCE may be higher than those anticipated on the basis of past measurements. Moreover, the Group's quantitative models cannot factor in all risks. While no significant problem has been identified to date in this respect, the risk management systems are subject to the risk of operational failure, which could expose Groupe BPCE to unexpected losses.

Actual results may vary compared to assumptions used to prepare Groupe BPCE's financial statements, which may expose it to unexpected losses.

In accordance with current IFRS standards and interpretations, Groupe BPCE must use certain estimates when preparing its financial statements, in particular accounting estimates relating to the determination of impairment for credit risk and provisions for employee benefits or provisions for litigation, estimates relating to the determination of the fair value of certain financial assets and liabilities, *etc.* If the values used for the estimates by Groupe BPCE prove to be materially inaccurate, in particular in the event of major and/or unexpected market trends, or if the methods used to calculate these values are modified due to future changes in IFRS standards or interpretations, Groupe BPCE may be exposed to unexpected losses.

Information on the use of estimates and judgments is provided in Note 2.3 "Use of estimates and judgments" to the consolidated financial statements of Groupe BPCE in the Universal Registration Document.

Strategic, business and ecosystem risks

Environmental, Social and Governance risks (ESG), together with their repercussions for economic players, could adversely affect Groupe BPCE's activities, results and financial position.

Environmental, Social and Governance (ESG) risks are a set of risk factors arising from the impacts of climate change, environmental issues (biodiversity, pollution, natural resources, water), social issues (respect for human rights, well-being and the interests of people and stakeholders) and governance issues (ethics and corporate culture, business practices, supplier relations). These risks are likely to materialize in the short, medium or long term. They are factors that aggravate other categories of risk to which Groupe BPCE is exposed (credit and counterparty risk, market risk, operational risk, structural balance sheet risk, risk related to insurance activities, strategic risk, legal risk, compliance risk and reputation risk). Groupe BPCE is mainly exposed to ESG risks indirectly through its clients and counterparties and its investments, either on its own behalf or on behalf of third parties. It is also directly exposed to these risks through its own business activities.

Environmental risks include physical risks and transition risks. Physical risks result from damage directly caused to people and property by events related to climate and environmental changes. These risks can be related to acute events, linked to extreme conditions circumscribed in time and space (such as heat waves, landslides, floods, late frosts, fires, storms, situations of water stress or air, water or soil pollution) or to chronic events of a more gradual and diffuse nature (such as changes in rainfall patterns, rise in sea levels and average temperatures, loss of biodiversity, the depletion of natural resources). Physical risks are likely to affect a wide variety of geographic areas and economic sectors and impact the business, assets and financial profile of the counterparties to which Groupe BPCE is exposed, particularly through its financing, investment or insurance activities. Groupe BPCE is also likely to be directly affected by climatic or environmental events that affect its operating sites, employees or suppliers. Transition risks result from adjustments made by economic players and stakeholders during the transition to a low-carbon economy that is more respectful of environmental balances. These adjustments are reflected in regulatory, technological or socio-demographic changes that may affect the business models, operating models and financial profiles of economic players as well as the value of the assets to which Groupe BPCE is exposed, particularly through its financing and investment activities. Groupe BPCE is also directly exposed to transition risks through regulatory changes and changes in stakeholder expectations, particularly with regard to its product and service offering as well as its voluntary commitments.

Social risks arise from issues related to the rights, well-being and interests of people and stakeholders (company and value chain employees, communities concerned, consumers and end-users). Through their potential impact on activities (work organization, supply chains, products, *etc.*) and the associated reputation issues, these risks are likely to affect the financial profile of the counterparties to which Groupe BPCE is exposed, particularly through its financing and investment activities. They may also lead to increased reputation risk for Groupe BPCE, either directly or through its counterparties.

Governance risks include issues related to ethics and corporate culture (governance structure, business integrity and transparency, *etc.*), supplier relationship management, influence activities and business conduct practices. Through their potential impact on activities (corporate governance standards, control systems, commercial practices, *etc.*) and the associated reputation issues, these risks are likely to affect the financial profile of the counterparties to which Groupe BPCE is exposed, in particular through its financing and investment activities. They may also lead to increased reputation risk for Groupe BPCE, either directly or through its counterparties.

Overall, Environmental, Social and Governance risks could adversely affect Groupe BPCE's business, results and financial position.

Groupe BPCE may be vulnerable to political, macro-economic and financial environments or to specific circumstances in its countries of operation.

Groupe BPCE may be exposed to risks related to the political, macro-economic and financial environments of the countries in which it operates. Some entities are exposed to country risk, which is defined as the risk that economic, financial, political or social conditions in a country affect their financial interests.

In 2025, BPCE concentrated its activities mainly in France (76% of net banking income) and North America (13%), with other regions each accounting for less than 2% of NBI. The breakdown by country and by activity is detailed in Note 12.6 to the consolidated financial statements of Groupe BPCE in the 2025 Universal Registration Document.

A significant change in the political or macro-economic environment in these areas could generate additional expenses or reduce the Group's profits. The economic outlook remains uncertain and marked by geopolitical, economic and trade risks, likely to affect global growth, asset prices and financial stability, with increased market volatility.

The year 2026 began with significant geopolitical tensions and macroeconomic developments, highlighting the complexity of the international context and the potential challenges for the Group's business and results.

Since February 28, 2026, the US-Israeli military operation in Iran has already had significant impacts on the prices of a barrel of Brent crude and gas. The macroeconomic risk is real: a $10 increase in the price of oil causes an increase in inflation of 0.3 points and a decline in GDP of 0.1 points in France in the first year. The form and outcome that the conflict could take leaves a wide universe of possibilities. The latter notably depends on the ability of the oil and gas infrastructures of the countries bordering the Persian Gulf to produce and export oil and gas *via* the Strait of Hormuz.

Moreover, a major uncertainty remains regarding changes in the international political and economic environment, in particular the trade policy of the United States and global public and private debt, which could weigh on Groupe BPCE's business and financial conditions. The downturn or fragmentation of global trade, geopolitical tensions and the budgetary outlook in Europe (particularly in France and the Eurozone) may influence demand, financing costs and the interest rate risk premium, while supporting or dampening investment and growth. In addition, changes in public deficits, the potential increase in long-term rates and the continued quantitative tightening of central banks could weigh on bond markets and Groupe BPCE's competitiveness. In France, political uncertainty surrounding the presidential election and multi-year budgetary constraints could limit spending and dampen economic momentum, with possible effects on savings, consumption and employment.

For more detailed information, see sections 5.2 "Economic and financial environment" and 5.8 "2026 economic outlook" in the 2025 Universal Registration Document.

Groupe BPCE may not achieve the objectives of its VISION 2030

Groupe BPCE's strategic project, VISION 2030 is based on three pillars: (i) forging our growth for the long term, (ii) giving our clients confidence in their future, and (iii) expressing our cooperative nature in all territories. The first pillar aims to make Groupe BPCE a leading banking group promoting diversified growth, open to partnerships, and capable of achieving high levels of performance. The second pillar aims to make the Group into a facilitator for access to housing for all, and for all types of needs, to be the go-to player for territorial competitiveness, to protect customers at every moment and stage in their lives, and to simplify client relationship models (from 100% physical to 100% digital), notably with the help of AI. The third pillar aims to give full expression to the cooperative values promoted by the Group, which draws its strength from its multifaceted activities and the range of its expertise, from its positive global impact, and from its cooperative shareholders and employees, proud and committed in their day-to-day lives. The new growth model is being implemented in three major geographical circles – France, Europe and the rest of the World – and is based on organic growth, acquisitions, and partnerships.

The success of the 2026 financial trajectory is based on a large number of initiatives currently being implemented within Groupe BPCE's various business lines. Although most of the goals defined in the strategic project are expected to be achieved, others may not be, due to changes in the economic or competitive environment or possible changes in accounting and/or tax regulations. If Groupe BPCE does not achieve these goals, the 2026 financial trajectory could be affected.

Groupe BPCE may encounter difficulties in adapting, implementing and incorporating its policy governing acquisitions or joint ventures

Groupe BPCE may consider acquisition or joint venture opportunities, but it is not always possible to fully assess these targets. Unanticipated liabilities may emerge and the results of the acquired company or joint venture may prove disappointing, or the anticipated synergies may not be fully achieved, with higher-than-expected costs. The integration of a new entity may also prove difficult, and the failure of an external growth operation or its integration may weigh on the Group's profitability and lead to the departure of key employees. To retain talent, the Group may have to offer financial benefits, which may increase certain costs and impact profitability. In the context of joint ventures, the Group is exposed to additional risks related to systems, controls and persons not directly under its control, which may give rise to liability, generate losses or affect its reputation. Conflicts or disagreements with the partners could jeopardize the expected benefits of the joint venture.

Intense competition in France, Groupe BPCE's main market, or internationally, may cause its net income and profitability to decline

Groupe BPCE's main business lines operate in a very competitive environment both in France and other parts of the world where it does substantial business.

This competition is heightened by consolidation, either through mergers and acquisitions or cooperation and arrangements. This consolidation has created a certain number of companies which, like Groupe BPCE, can offer a wide range of products and services ranging from insurance, loans and management of deposits to brokerage, investment banking and asset management. Groupe BPCE is in competition with other entities based on a certain number of factors, including the correct execution of products and services offered, innovation, reputation and price. If Groupe BPCE is unable to maintain its competitiveness in France or in its other major markets by offering a range of attractive and profitable products and services, it may lose market share in certain key business lines or incur losses in some or all of its activities.

A slowdown in the global economy or in key markets may intensify competitive pressure through lower prices and lower volumes. The entry of new, more competitive entrants subject to different or more flexible regulatory frameworks, or other prudential ratio requirements, could increase the pressure. In addition, technological advances and the development of e-commerce have facilitated access to financial solutions by non-traditional players, offering online banking and financial services, including securities services. These new entrants could put downward pressure on prices or gain market share if Groupe BPCE does not quickly adapt its strategy and offering.

Groupe BPCE's ability to attract and retain skilled employees is paramount to the success of its business and failing to do so may affect its performance

Groupe BPCE is highly dependent on its employees, considered to be its main resource. Competition to attract and retain skilled talent is fierce in the financial services industry, and the Group's performance depends on its ability to recruit and retain employees. Technological and economic transformations and the growing demands of clients demand sustained efforts to support and train staff. Failing this, the Group may miss out on certain business opportunities and see its performance deteriorate.

At December 31, 2025, the headcount comprised 105,786 employees.

For more information, please refer to Chapter 2.1, Section 3.1 of the Universal Registration Document.

Insurance risks

A deterioration in market conditions, in particular excessive fluctuations in interest rates (both upwards and downwards) and/or a deterioration in spreads or equity markets, or an increase in reinsurance costs could have a significant adverse impact on the financial position and solvency of Life and Non-Life insurance companies

The main risk to which Groupe BPCE's insurance subsidiaries are exposed is financial risk. This exposure results mainly from capital guarantees on euro funds and unrealized capital gains or losses on investments held. Interest rate risk is both structural and major, due to the predominance of bonds over liabilities. A rise in interest rates may weaken the competitiveness of euro-denominated offerings and generate flows of redemptions and arbitrages in unfavorable economic conditions, while a decrease could render the return on general funds insufficient to cover capital guarantees.

In addition, the widening of spreads and the weakness of the equity markets may weigh on the results of insurance activities *via* the valuation at fair value and provisions for impairment. The increase in claims and extreme events (particularly weather events) could also lead to an increase in reinsurance requirements, reducing the overall profitability of insurance activities.

At December 31, 2025, net banking income from Groupe BPCE's insurance activities increased by 12% to €959 million, compared to €858 million in 2024.

A mismatch between the level and cost of claims anticipated by insurers, on the one hand, and premiums and provisions on the other, could have a significant adverse impact on the results and financial position of the non-life, personal protection and surety portion of its insurance activities

Underwriting risk arises from the possible discrepancy between the claims actually incurred and the compensation paid, and the assumptions used to set the rates and determine the technical provisions. Insurers use their experience and industry data to estimate claims and actuarial parameters in order to price products and constitute provisions. However, deviations from these estimates, or unforeseen events such as pandemics or natural disasters, may result in higher-than-expected payments. Changes in climate risks are closely monitored.

If compensation amounts exceed initial assumptions or if underlying assumptions change, companies' liabilities could be higher than expected, adversely impacting the results and financial position of subsidiaries. Conversely, the actions taken in recent years — financial hedging, reinsurance, business diversification and investment management — have strengthened the resilience of the solvency of Groupe BPCE's insurance subsidiaries.

Regulatory risks

Groupe BPCE is subject to many regulations in France and in several other countries around the world where it operates; regulatory measures and changes could have a material adverse impact on Groupe BPCE's business and results

The uncertainty surrounding future regulatory changes makes it difficult to anticipate their impacts, which could be unfavorable. Faced with new requirements, the Group may have to reduce the range of activities it offers to comply and increase its costs of compliance, which could result in lower revenues and consolidated profits, or even selling or reducing asset portfolios.

The CRR III/CRD VI package, published on June 19, 2024, strengthens prudential frameworks in the EU and is largely applicable from January 1, 2025, except for the rules related to market risks, which will come into force on January 1, 2027. This reform could increase capital and liquidity requirements and impact the Group's financing costs.

In November 2025, the Financial Stability Board, in consultation with the Basel Committee on Banking Supervision and national authorities, published the 2025 list of global systemically important banks (G-SIB). Groupe BPCE is classified as a G-SIB and is also on the list of global systemically important institutions (G-SIIs) for the 2025 fiscal year. This classification reinforces the perception of the systemic importance of the Group and may influence prudential obligations, costs and supervision requirements.

BPCE may have to help entities belonging to the financial solidarity mechanism in the event they experience financial difficulties, including entities in which BPCE holds no economic interest.

As the central institution of Groupe BPCE, BPCE is responsible for ensuring the liquidity and solvency of each regional bank (Banques Populaires and Caisses d'Epargne) and the other members of the group of affiliates. The group of affiliates includes BPCE subsidiaries, such as Natixis, Crédit Foncier de France, Oney and Banque Palatine. In the case of Groupe BPCE, all the financial institutions affiliated with the central institution of Groupe BPCE benefit from a guarantee and solidarity system whose purpose, in accordance with Articles L. 511-31, L. 512-107-5 and L. 512-107-6 of the French Monetary and Financial Code, is to guarantee the liquidity and solvency of all affiliated financial institutions and to organize financial solidarity within the Group.

This financial solidarity is based on legislative provisions establishing a legal principle of solidarity, imposing a performance obligation on the central institution to restore the liquidity or solvency of affiliates in difficulty and/or all affiliates of the Group. By virtue of the unlimited nature of the principle of solidarity, BPCE is entitled at any time to ask any one or several or all of the affiliates to contribute to the financial efforts that may be necessary to restore the situation, and may, if necessary, mobilize all the cash and equity capital of the affiliates in the event of difficulty for one or more of them.

At December 31, 2025, the Banque Populaire and Caisse d'Epargne funds each contained €450 million. The mutual guarantee fund holds €211 million in deposits per network.

The three guarantee funds created to cover Groupe BPCE's liquidity and insolvency risks are described in Note 1.2 "Guarantee mechanism" to the consolidated financial statements of Groupe BPCE included in the Universal Registration Document. The regional banks are obligated to make additional contributions to the guarantee fund on their future profits.

While the guarantee fund represents a substantial source of resources to fund the solidarity mechanism, there is no guarantee these revenues will be sufficient. If the guarantee funds prove insufficient, BPCE, due to its missions as a central institution, will have to do everything necessary to restore the situation and will have the obligation to make up the deficit by implementing the internal solidarity mechanism that it has put in place, by mobilizing its own resources, and may also make unlimited use of the resources of several or all of its affiliates.

As a result of this obligation, if a member of the Group were to encounter major financial difficulties, the event underlying these financial difficulties could have a negative impact on the financial position of BPCE and that of the other affiliates thus called upon to provide support under the legal principle of financial solidarity.

Investors in BPCE's securities could suffer losses if BPCE and all of its affiliates were to be subject to liquidation or resolution procedures.

The EU regulation on the Single Resolution Mechanism No. 806/214 and the EU Directive for the recovery and resolution of banks No. 2014/59, as amended by EU Directive No. 2019/879 (the "BRRD"), as transposed into French law in Book VI of the French Monetary and Financial Code, give the resolution authorities the power to impair BPCE securities or, in the case of debt securities, to convert them to capital.

Resolution authorities may write down or convert capital instruments, such as BPCE's Tier-2 subordinated debt securities, if the issuing institution or the group to which it belongs is failing or likely to fail (and there is no reasonable prospect that another measure would avoid such failure within a reasonable time period), becomes non-viable, or requires extraordinary public support (subject to certain exceptions). They must write down or convert additional capital instruments before opening a resolution proceeding, or if doing so is necessary to maintain the viability of an institution. Any write-down of capital instruments must be effected in order of seniority, so that Common Equity Tier-1 instruments are to be written down first, then additional Tier-1 instruments are to be written down, followed by Tier-2 instruments. Additional capital instruments must be converted in order of priority, such that additional Tier-1 instruments are converted first, followed by Tier-2 instruments. If the write-down or conversion of capital instruments is not sufficient to restore the financial health of the institution, the bail-in power held by the resolution authorities may be applied to write down or convert eligible liabilities, such as BPCE's senior non-preferred and senior preferred securities.

At December 31, 2025, total Tier-1 capital amounted to €76.3 billion and Tier-2 prudential capital to €12.4 billion. Senior non-preferred debt instruments of more than one year and which are therefore eligible for TLAC and MREL amounted to €34 billion at the same date.

As a result of the complete legal solidarity, and in the extreme case of a liquidation or resolution proceeding, one or more affiliates may not find itself subject to court-ordered liquidation, or be affected by resolution measures within the meaning of the "BRRD", without all affiliates and BPCE also being affected. In accordance with Articles L. 613-29 and L. 613-55-5 of the French Monetary and Financial Code, the judicial liquidation proceedings and resolution measures are therefore brought in a coordinated manner with regard to the central institution and all of its affiliates.

Article L. 613-29 also provides that, in the event of court-ordered liquidation proceedings being brought against all affiliates, the external creditors (of the same rank or enjoying identical rights) of all affiliates would be treated equally according to the ranking of the creditors and regardless of whether they are attached to a particular affiliated entity. As a result, investors in AT1 instruments and other securities of the same rank would be more affected than holders of Tier-2 and other securities of the same rank, which in turn would be more affected than investors in external senior non-preferred debt, which in turn would be more affected than investors in external senior preferred debt. Similarly, in the event of resolution, and in accordance with Article L. 613-55-5 of the French Monetary and Financial Code, identical depreciation and/or conversion rates would be applied to debts and receivables of the same rank, regardless of their attachment to a particular affiliated entity in the order of the hierarchy recalled above.

Due to the systemic nature of Groupe BPCE and the assessment currently made by the resolution authorities, resolution measures would be more likely to be taken than the opening of judicial liquidation proceedings. A resolution procedure may be initiated against BPCE and all affiliated entities if (i) the default of BPCE and all affiliated entities is proven or foreseeable, (ii) there is no reasonable expectation that another measure could prevent this failure within a reasonable timeframe, and (iii) a resolution measure is required to achieve the objectives of the resolution: (a) guarantee the continuity of critical functions, (b) avoid material adverse impacts to financial stability, (c) protect State resources by minimizing the use of exceptional public financial support and (d) protect client funds and assets, particularly those of depositors. Failure of an institution means that it does not respect requirements for continuing authorization, it is unable to pay its debts or other liabilities when they fall due, it requires extraordinary public financial support (subject to limited exceptions), or the value of its liabilities exceeds the value of its assets.

In addition to the bail-in power, resolution authorities are provided with broad powers to implement other resolution measures with respect to failing financial institutions or, under certain circumstances, their groups, which may include (without limitation): the total or partial sale of the institution's business to a third party or a bridge institution, the separation of assets, the replacement or substitution of the institution as obligor in respect of debt instruments, modifications to the terms of debt instruments (including altering the maturity and/or the amount of interest payable and/or imposing a temporary suspension on payments), discontinuing the listing and admission to trading of financial instruments, the dismissal of managers or the appointment of a temporary administrator (*administrateur spécial*) and the issuance of new equity or own funds.

The exercise of the powers described above by resolution authorities could result in the partial or total write-down or conversion to equity of the capital instruments and the debt instruments issued by BPCE, or may substantially affect the amount of resources available to BPCE to make payments on such instruments, potentially causing BPCE investors to incur losses.

Tax legislation and its application in France and in countries where Groupe BPCE operates are likely to have an adverse impact on Groupe BPCE's results.

Tax legislation and its application in countries where Groupe BPCE operates, notably Natixis, could adversely affect the Group's results. As a multinational banking Group, BPCE is subject to numerous tax rules and structures its activity to derive value and synergies while ensuring the compliance of the products sold and their tax treatment. Certain tax positions and interpretations adopted by the Group's entities are based on the opinions of tax advisors and, where applicable, on the interpretations of the competent authorities. It is not impossible that tax authorities may challenge these interpretations, which could lead to adjustments and an adverse impact on results.

- The French Finance Law for 2026 was adopted on February 2, 2026. The main measure for companies concerns the extension of the exceptional contribution on the profits of very large companies. The exceptional contribution introduced by the French Finance Act for 2025 concerns companies with a revenues of €1 billion or more, and has been extended for an additional year. The rate of this exceptional contribution is maintained, namely:
- 20.6% when the revenues of this fiscal year or the previous fiscal year is greater than or equal to €1 billion (increased to €1.5 billion for the second fiscal year, *i.e.* 2026) and less than €3 billion;
- 41.2% when the revenues of this fiscal year or the previous fiscal year is greater than or equal to €3 billion;

i.e. an effective tax rate for Groupe BPCE of 29.9%.

7.3 Risk management framework

7.3.1 Adequacy of risk management frameworks

The Group Risk and Compliance Committee, chaired by the Chairman of the Management Board, met six times in 2025 to review, in particular, the adequacy of the risk management frameworks, and validated the annual review of the risk policies. These systems cover all risks, as described in the order of November 3, 2014 on internal control as amended by the order of February 25, 2021.

The coverage of risks was found to be adequate, consistent with the risk appetite framework validated by the BPCE Management Board and Supervisory Board, and related closely to the Group's strategy and budget oversight.

7.3.2 Risk appetite

All risks are covered by central and local risk management frameworks, in line with the Group's risk appetite and strategy.

Groupe BPCE's Supervisory Board approved the Group's risk appetite framework: quantitative indicators, resilience threshold for each indicator and associated governance. During its annual review, held on November 5 and December 11, 2025, the Supervisory Board examined and approved the Group's risk appetite.

Risk Appetite Guidelines

As a decentralized and united cooperative Group, Groupe BPCE structures its activity around share capital, held predominantly by the regional institutions, and centralized market funding, optimizing the resources allocated to the entities.

Groupe BPCE:

- through its cooperative nature, is firmly committed to generating recurring and resilient income for its cooperative shareholders and investors by offering the best service to its customers;
- must preserve the solvency, liquidity and reputation of each Group entity – a duty assumed by the central institution through the oversight of consolidated risks, a risk policy and shared tools;
- consists of regional banks, which own the Group and its subsidiaries. In addition to normal management operations, in the event of a crisis, solidarity mechanisms between Group entities ensure the circulation of capital and prevent the entities or the central institution from defaulting;
- focuses on the structural risks of its full-service banking model, with a predominant retail banking component in France, while incorporating other business lines necessary to provide quality service to all of its customers;
- diversifies its exposures by developing certain activities in line with its strategic plan:
  - development of the Corporate & Investment Banking, bancassurance and asset management activities,
  - international expansion (predominantly Corporate & Investment Banking and asset management, with a more targeted approach for retail banking customers).

Groupe BPCE's risk appetite is defined as the level of risk it is willing to accept with the goal of increasing its profitability while maintaining solvency. This risk appetite must be aligned with the institution's operating environment, strategy and business model, while making customer interests the top priority. In determining its risk appetite, Groupe BPCE aims to steer clear of any major pockets of concentration and to optimize capital allocation.

In terms of risk profile, Groupe BPCE incurs risks intrinsically associated with its retail banking and Corporate & Investment Banking activities. Changes to its business model are increasing the Group's exposure to some types of risks, particularly risks related to asset management and international businesses.

The Group does not conduct business unless it has the associated risks sufficiently under control, nor does it exercise proprietary trading activities. Activities with high risk-reward profiles are strictly controlled.

In all activities, entities and regions of operation, the Group undertakes to meet the highest standards of ethics, conduct, best execution and transaction security.

Risk appetite framework and groupwide implementation

The risk appetite framework is based on a master document providing a qualitative and quantitative description of the risks that Groupe BPCE is willing to assume, and describing the governance and operating guidelines in effect.

The implementation of the risk appetite framework is centered on four key components: (i) the definition of groupwide standards, (ii) the existence of a set of limits in line with those defined by regulations, (iii) the distribution of expertise and responsibilities between the entities and the central institution and (iv) the operation of the governance process within the Group and the different entities, enabling the efficient and resilient application of the risk appetite framework.

The Group's risk appetite framework is regularly updated (at least annually) and is centered on a series of successive limits associated with separate respective authorization levels, *i.e.*:

- an observation or tolerance threshold, which, if breached, calls for BPCE Management Board members to decide either to require the breach to be corrected or to allow the transaction to go ahead on an exceptional basis;
- a RAF limit (Risk Appetite Framework) or resilience threshold, the breach of which would pose a potential risk to the continuity and/or stability of the business. Any such breach must be reported to the Supervisory Board of BPCE and addressed by a specific action plan validated by the Board;
- an extreme limit in conjunction with the Group's resolution and recovery plan which, if breached, could jeopardize the Group's very survival. This extreme limit concerns certain indicators adopted in respect of the Group's risk appetite.

A quarterly dashboard is prepared by the Group's Risk division, for the purpose of regularly and extensively monitoring all risk indicators and reporting to the supervisory body or/and any committee thereof.

The risk appetite framework is adapted by the entities for consistent groupwide implementation.

The Group Risk division issues an annual compliance notice to the institutions in their annual review proposal, ensuring a high level of consistency between the risk appetites implemented locally and that of the Group.

Robust financial strength

Groupe BPCE enjoys high liquidity and solvency levels:

- in terms of solvency, the Group is able to absorb, if need be, the occurrence of a risk at entity or Group level;
- in terms of liquidity, the Group has a significant reserve consisting of cash and securities enabling it to meet regulatory requirements, pass stress tests and access central bank unconventional financing mechanisms. It also has a sufficient amount of high-quality liquid assets eligible for market funding mechanisms and those offered by the European Central Bank.

The Group ensures the robustness of this system by implementing global or dedicated stress tests such as those for climate risk management, which are carried out regularly. They are intended to verify the Group's resilience, particularly in the event of a serious crisis.

Summary of the Group's risk profile in 2025

The following risks are incurred by the Group because of its business model:

Credit and counterparty risk

Credit risk, generated by the Group's predominant business (*i.e.* lending to individual and corporate customers), is governed by risk policies applied to all Group entities, concentration limits defined by counterparty, country and sector, and finally extensive oversight of loan books.

€391 billion
Risk-weighted assets (-1.7% *vs.* 2024)

These exposures are predominantly based on the internal model approach (50% of risk-weighted assets)

€1,552 billion
Gross exposures (+2.7% *vs.* 2024)

The loan book has a balanced risk profile

€2.5 billion
Cost of risk (+20% *vs.* 2024)

2.7%
NPL/gross loan outstandings

28 bps
Average annual cost of risk (*vs.* 24 bps in 2024)

39.4%
Coverage of NPL by provisions

85%
% of RWAs

Structural ALM risks

Structural interest rate risk, associated in particular with fixed rate home loans and regulated liabilities, is governed by groupwide standards and individual entity limits; liquidity risk is steered centrally by allocating budget-defined liquidity to round out customer deposits raised by the entities.

In 2025, liquidity was maintained at a **high level**, providing the Group with significant coverage of **stress scenarios**.

Coverage of short-term funding by liquidity reserve:
197%

145%
12-month average LCR

Market risks

Market risk indicators are monitored and analyzed at various position aggregation levels, giving an overview of total exposure and risk consumption by risk factor.

€18 billion
Risk-weighted assets (+15.2% *vs.* 2024)

€7.3 million
VaR

VaR and stress indicators held steady at low levels throughout 2025.

73%

4%
% of RWAs

Non-financial risks

Non-financial risks are non-compliance, fraud, information system security, reputational and misconduct risks, as well as other operational risks.

€51 billion
Operational risk-weighted assets (+20.4% *vs.* 2024)

The main causes of operating losses are in the **"External fraud"** category in Basel **at 37%.**

11%
% of RWAs

Emerging risks

Groupe BPCE places great importance on anticipating and managing emerging risks in today's constantly changing environment. To this end, a prospective analysis identifying the risks that could impact the Group is carried out every six months and presented to the Risk and Compliance Committee, followed by the Board's Risk Committee. This forward-looking analysis is complemented by an expanded study of emerging and increasingly important risks, covering nascent or rapidly evolving risks whose impact could be significant in the medium or long term.

Since the previous study, the macroeconomic context has changed**. Although inflation seems to be stabilizing, uncertainties remain,** particularly regarding the political situation in France, the impacts of the US administration's political decisions, and the overall **increase in geopolitical risks** that could affect economic stability in the short term.

Credit risk, cyber risk, interest rate risk and liquidity risk are still the four main risks weighing on business.

Regarding **credit risk, the context remains deteriorated, with the level of corporate defaults continuing**. The outlook for businesses, particularly small ones, and for the commercial real estate sector remains unfavorable, while the claims ratio for individuals could be exacerbated by a rise in unemployment.

Cyber risk also remains significant. The continued digitalization of the economy and financial services is accompanied by constant vigilance by banks in the face of cyber risks. The sophistication of cyber-attacks and potential vulnerability of their IS systems are both major risks for Groupe BPCE, in conjunction with the expectations of the regulatory authority.

Climate **change is an integral part of the risk management policy**, with a risk control mechanism currently being strengthened.

Finally, in the face of a more unstable and conflictual world, **banks' vigilance regarding geopolitical risks is increasing**, and this is also accompanied by a strengthening of risk control mechanisms.

7.3.3 Risk management

Governance of risk management

Risk management is governed by two main bodies at Group level: the Supervisory Board, which is supported by the Board's Risk Committee, and the Executive Management Committee, of which the Head of Risk Management is a member.

Chaired by the Chairman of the Management Board, the Group Risk and Compliance Committee, an umbrella committee, sets the broad outlines of the risk policy and examines issues related to non-financial risks (specifically those related to banking, insurance and investment service compliance, and to financial security), annually reviews the risk appetite framework, and approves a prospective risk analysis.

Organization of risk management

The Group Risk division and Corporate Secretary's Office – in charge of compliance and permanent control – measure, monitor and manage risks, pursuant to the order of November 3, 2014 as amended by the order of February 25, 2021, on internal control.

They ensure that the risk management framework is effective, complete and consistent, and that risk-taking is consistent with the guidelines for the business (particularly the targets and resources of the Group and its institutions).

These duties are formalized in Groupe BPCE's Internal Control Charter, an umbrella charter. This charter is based on the two charters of the control functions, namely the Internal Audit Charter and the Second Line of Defense Charter, reviewed in March 2025.

The various departments of the Group Risk division are involved in all risks (credit, financial, operational, ESG, model and non-banking investments) by acting on:

- the risk policy and the resulting standards;
- permanent monitoring and control;
- coordination.

The departments of the Group's Risk division operate in three areas (Management, Monitoring and Control):

Management	Monitoring	Control
• present the Management Board and Supervisory Board with a risk appetite framework for the Group and ensure its implementation and roll-out at each major entity; • define the risk policies applicable to the Group's scope and determine the overall risk ceilings (institutions, customers, business sector), and take part in discussions on the allocation of capital and ensure that portfolio management complies with this system of limits and allocations; • define and implement standards and methods for consolidated risk measurement, risk-taking approval, risk control and reporting, and compliance with risk regulations; • oversee the risk information system, working closely with the IS departments, while defining the standards to be applied for the measurement, control, reporting and management of risks; • maintain a strong functional link with the risk and compliance functions, notably by approving the appointment or dismissal of all new Heads of Risk Management, Heads of Compliance, or Heads of Risk and Compliance; • contribute to the dissemination of the risk and compliance culture and annual training plans and to the sharing of best practices within the Group.	• carry out the macro-level risk mapping exercise, factoring in the overall risk policy, risk appetite and annual permanent control plan, which is part of the internal control system; • conduct permanent monitoring of portfolios and activities, limit breaches and their resolution, centralize risk data and prepare forward-looking risk reports on a consolidated basis; • help the Groupe BPCE Management Board to identify emerging risks, concentration of risk and other various developments, and to devise strategy and adjust risk appetite; • perform stress tests with the goal of identifying areas of risk and the Group's resilience under various predetermined shock scenarios.	• assess and control the level of risk across the Group; • conduct controls to ensure that the operations and internal procedures of Group companies comply with legal, professional, or internal standards applicable to banking, financial and insurance activities; • implement a permanent second-level Group control system for the risks of the institutions and the sensitive activities of the Group Risk division; • carry out permanent controls to ensure the correct implementation of risk policies or standards in the Group's institutions.

Specialized committees

Several committees are responsible for defining groupwide methodology standards for measuring, managing, reporting and consolidating all risks throughout the Group.

Group Risk and Compliance Committee	• This committee covers the Group's major risks and prepares issues that are reported to the Supervisory Board's Risk Committee. It examines the Group's main risk areas (all types of risks), including non-compliance, insurance and existing or potentially emerging risks (prospective vision) and validates the associated action plans. It reviews the Group risk dashboard, including the RAF indicators and the revised order of 11/03/2014, potential excesses of the indicators, and alerts on significant incidents under Article 98. • It meets on a quarterly basis.
Group Counterparty and Credit Risk Committees	• This committee covers credit, counterparty, concentration and residual risks. The Committee validates the dashboard for monitoring internal caps, group/individual limits by counterparty, by sector, by country and their breakdown between the entities, where applicable, the sectoral analyses and the analyses of consumer and home loan portfolios. • The Committee meets twice a month, on average.
Group Watch List Committee and IFRS 9 Committee	• This committee is divided into two parts, with a special Group IFRS 9 Committee, and covers the impairment of loan outstandings (individual loans for significant or shared amounts and statistical provisioning on performing loans) and market outstandings. • It meets quarterly in connection with the closing of accounts.
Group Market Risk Committees	• This committee covers market, interest rate, securitization, liquidity reserve (investment), liquidity, spread and foreign exchange risks. The committee makes decisions on the review of the ALM risk management framework and market risks, action plans and monitoring in the event of overruns, new products authorized for the institutions' own activities and new management activities, and portfolio review (Private Equity, Non-Operating Real Estate and Other Assets). • The Committee meets almost monthly.
Non-Financial Risk Committee	• This committee covers risks relating to operational, model, legal, non-compliance, and fraud and the EBCP risk management framework, personal and property security as well as Group information systems security. • It also performs consolidated supervision of losses, incidents and alerts, including reports made to the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector, under Article 98 of order A-2014-11-03 as amended by the order of February 25, 2021, for non-financial risks, and contributes to risk-mapping and monitoring the action plans for reducing non-financial risks. • It meets on a quarterly basis.
Asset/Liability Committee GAP	• The Committee's main duties are to determine the Group's general policy with regard to liquidity and transformation risks (including interest rate risk), examine the consolidated view of the structural risks of the Group and its various entities as well as changes in the balance sheet, define the limits of the structural risks of the Group and the pools and monitor them (with validation by the Risk Department), validate the allocation to liquidity pools and limits; and monitor liquidity consumption at Group and pool level, validate Groupe BPCE's overall annual MLT and ST refinancing program and carry out overall monitoring, and validate the investment and allocation criteria as well as the desired overall profile of the Group's liquidity reserve. • The Committee meets every two months.
ESG Risk Committee	• It is responsible for consolidated monitoring of Groupe BPCE's ESG risks and ensuring the implementation of the organizational and operational strategy regarding ESG risk management. It validates the main methodological choices and scenarios used within the Group in the context of ESG risk management. It reviews and validates the assessment of the materiality of ESG risks and decides on the Group's ESG risk appetite. • This Committee meets quarterly.
Model Risk Management Committee	• This committee proposes to the governance a resilient model risk management framework, making it possible to propose risk indicators and any associated thresholds to the bodies, to monitor the evolution of the portfolio of models, to ensure the proper dissemination of the model risk management framework within the Group. • It meets every two months.
Group Internal Control Coordination Committee	• This committee brings together, at a minimum, all periodic and permanent control functions (risk and compliance), the financial function responsible for accounting controls, and the Security function, including Information Systems Security. It addresses all cross-cutting actions aimed at strengthening the coherence and effectiveness of internal control. It is a decision-making committee. • It meets on a quarterly basis.

Organization of the Risk division

The Risk Governance and Control department is responsible for coordinating and animating the risk division, the second level permanent control of the Risk division within Groupe BPCE, and the activities of the Group Risk division. The Second Line of Defense Charter calls for the Group Risk division to participate, at its own initiative, in the annual performance assessment of the Heads of the Permanent Control functions, particularly as regards risk and/or compliance, in consultation with the Chairman of the Management Board or the Chief Executive Officer.

The Risk Governance and Control department deploys the entire system on a daily basis and contributes to the overall supervision of Group risks, primarily through:

- oversight and updates of key risk and Compliance function documents such as charters and standards;
- second-level permanent control of Groupe BPCE's Risk division, as well as the sensitive activities of the Group's Risk division, *via* a dedicated department;
- the performance of operational efficiency work (effective benchmark standards), work related to the risk-based approach (half-yearly risk and compliance reporting, risk appetite framework, macro-mapping of risks, *etc.*);
- the follow-up of all recommendations issued by supervisors and by the General internal audit in the area of risk management and permanent control;
- an assessment of the Risk Management functions is conducted every year and presented to the Risk Committee of the Groupe BPCE Supervisory Board.

Highlights

- Contribution to the Risk division's transformation projects.
- Implementation of permanent level 2.2 controls on credit files by the permanent risk control division.
- Control of the proper implementation of the Group's risk policies (credit risks, operational risks, reputational risks, ALM risks) in the local policies of the institutions.
- Implementation of monthly monitoring of affiliates' risk appetite indicators.
- Review of the specific headcount benchmark standard for a few institutions.
- Implementation of an induction day for new employees in the Risk division.

Risk and compliance culture

To promote and strengthen the risk and compliance culture at all levels, the Group Risk division and the Group Compliance department strive to develop risk and compliance training and awareness programs at all Group levels, establish regular communication on risk and compliance issues throughout the Group, and disseminate and measure the risk and compliance culture.

Rigorous risk management is one of the principles of Groupe BPCE, which has always prioritized a culture of risk management and control. In order to support the development of its activities, within the framework of its risk appetite, Groupe BPCE strives to promote and strengthen the risk and compliance culture at all levels.

The Risk division training system

First of all, risk training and acculturation are one of the major challenges in the development of the risk culture. All employees and managers are concerned, regardless of their level, including directors. This is why the Group Risk division has developed the Risk Academy, which offers training modules to support the development and refinement of the skills of Risk division employees in their various business lines.

Risk Academy

Training offerings

Regulatory watch:

Coordination and animation for regulatory watch is set up in order to discuss regulatory news and anticipate projects that could be rolled out. Coordination of the risk chapters is also implemented for regulatory reporting (Universal Registration Document, Pillar III, annual report on internal control, ICAAP).

Measurement of the risk culture

The Eval' CultuRisques study aims to assess the level of risk culture of Groupe BPCE institutions *via* a questionnaire based on Group standards in accordance with regulatory requirements and best practices in terms of risk culture, particularly as described by the EBA in its "internal governance" document.

Consolidated risk oversight

In addition to the risk supervision conducted both individually and by type of risk, Groupe BPCE's Risk division also performs consolidated monitoring of the Group's risks.

The Group Risk division also conducts or coordinates cross-business risk analyses and specific stress tests on the Group's main portfolios or activities and, if needed, for the entities. It has also developed half-year forward-looking risk analyses aimed at identifying economic risk factors (known and emerging; international, national and regional), circumstantial threats (regulations, *etc.*) and their potential impact on the Group. These forward-looking analyses are presented at meetings of the Group Supervisory Board's Risk Committee.

In addition, it carries out risk measurements on a portfolio basis. It reviews and validates risk models developed internally. Lastly, it contributes to efforts to define internal capital requirements as well as internal and external solvency stress tests aimed at measuring the Group's sensitivity to a series of risk factors and its resilience in the event of a severe shock, by determining impacts in terms of cost of risk and RWA.

Stress testing framework

Groupe BPCE has been developing stress tests since 2011 that can be performed using the risk modules for Group strategic analysis purposes and regulatory purposes.

There are two types of stress tests:

- internal stress tests (including reverse stress tests);
- regulatory stress test (including EBA stress test, ECB thematic stress tests, such as climate or geopolitical stress).

The governance of the Group's stress testing system is based on a comprehensive approach covering all Group entities, taking into consideration their specific characteristics, and covering the following risks:

- credit risks: change in cost of risk and risk-weighted assets;
- securitization portfolio and counterparty risk: change in impairment and risk-weighted assets;
- market risks: market shocks, change in securities portfolios and risk-weighted assets;
- revenue risks (including net interest margin and fees and commissions);
- operational risks;
- climate risks;
- insurance risk.

Risks associated with sovereign exposures are addressed according to their accounting classification in market risk or credit risk.

Models are used for each risk category to determine the impacts of scenarios on the various income statement items and capital requirements.

The methodologies used to determine the projections are based on:

- the methodology stipulated by the ECB and the EBA for regulatory stress tests;
- internal methodologies adapted to the Group's business model, as part of the budget exercise and risk management.

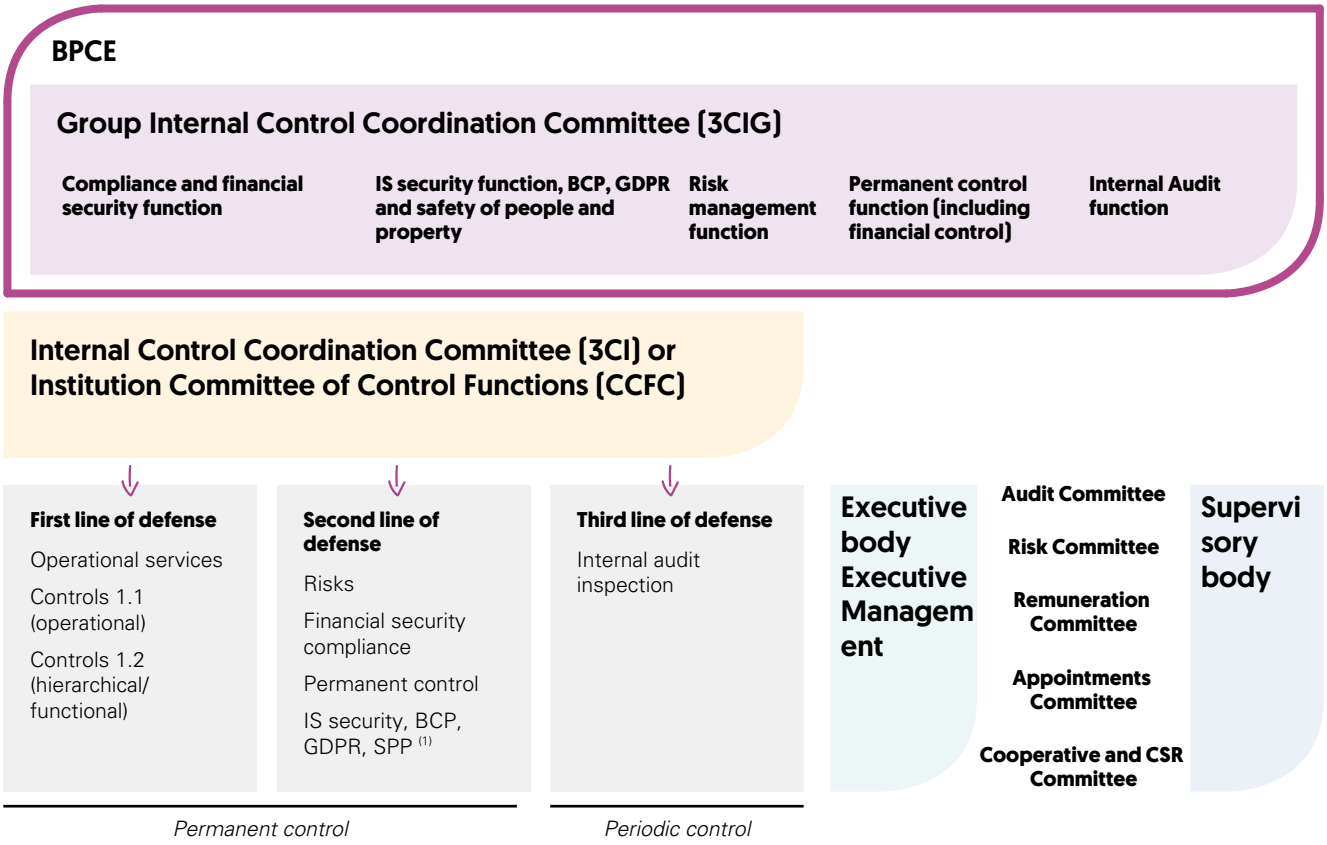
Several scenarios are tested in order to assess all impacts:

Baseline scenario	Baseline scenario comprising the budget scenario.
ICAAP adverse scenarios	Scenarios that are both severe and plausible to provide relevant information on risk and resilience under the ICAAP.
Adverse Preventive Recovery Plan scenarios	Scenarios used as part of the Preventive Recovery Plan to assess the Group's ability to recover. These scenarios are linked to those of the ICAAP (in terms of solvency) and the ILAAP (in liquidity) with possible adjustments in terms of severity.
Reverse scenarios	Unlike stress tests, reverse analyses aim to determine the plausibility of negative events for the Group's financial trajectory. They improve the Group's knowledge of its risks and ensure that stress scenarios are well suited to testing the Group's vulnerabilities.

7.3.4 Internal control

The Group control system relies on three levels of controls, in accordance with banking regulations and sound management practices (two levels of permanent controls and one level of periodic control), as well as the establishment of consolidated control processes in accordance with provisions approved by BPCE's Management Board.

Structure of Groupe BPCE's internal control system



(1) SPP: Safety of people and property.

Organization of permanent control functions in the Group's institutions

The Group's Risk division and the Corporate Secretary's Office carry out their missions within the framework of a business line approach dedicated to the management of credit risks, financial risks, operational risks, climate risks and non-compliance risks extended to business continuity functions, financial control and security of information systems, GDPR, business continuity and crisis management. They ensure that the risk policies of the affiliates and subsidiaries comply with those of Groupe BPCE.

The Risk and/or Compliance divisions of subsidiaries not subject to the banking supervision regulatory framework are functionally subordinate to the Group Risk division and the Corporate Secretary's Office.

The strong functional authority is exercised by the Head of Risk Management and by the Secretary General, both members of Groupe BPCE's Executive Management Committee. It enables risk controls to be performed objectively, as each Group entity's operational functions are independent from its risk and Compliance functions. It also promotes a risk management and compliance culture and the application of shared risk management standards, and ensures that managers are given independent, objective and detailed information on the Group's risk exposures and any possible deterioration in its risk profile.

Group institutions are responsible for defining, monitoring and managing their risk levels, as well as producing reports and data for submission to the central institution's Risk division and Corporate Secretary's Office. They ensure the quality, reliability and completeness of the data used to control and monitor risks at the company level and on a consolidated basis, in line with Group risk standards and policies.

Standard risk governance structure at a Group institution

Permanent control system

The organization of permanent control in the Group is specified in the Internal Control Charter (updated in 2025) and in the Second Line of Defense Charter (updated on March 27, 2025) in paragraphs 2 and 5 in accordance with the order of November 3, 2014 (revised on February 25, 2021).

In terms of governance, the assessment of the permanent control system is the responsibility of the Group Internal Control Coordination Committee (or 3CI or CCFC in its local implementation).

Internal Control Coordination Committee

The Chairman of the BPCE Management Board is responsible for ensuring the consistency and effectiveness of the internal control system. A Group Internal Control Coordination Committee, chaired by the Chairman of the Management Board, meets periodically.

This committee is responsible for dealing with all issues relating to the consistency and effectiveness of the Group internal control system, as well as the results of risk management and internal control work and follow-up work.

Periodic control (level 3)

Organization and role of the Group Internal Audit

As part of the responsibilities defined in Article 17 of order A-2014-11-03 amended on February 25, 2021 on internal control, the Group Internal Audit or the Internal Audit function carries out periodic controls of all activities, ensuring the quality, effectiveness, consistency and efficiency of the permanent control system and risk management. Its scope of intervention covers all the risks and all the activities of the institution, including those that are outsourced. Internal audit also extends to its subsidiaries and prudentially consolidated entities.

In fulfilling this responsibility, it relies on the findings of its department's investigations and the work of other supervisory bodies, such as the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector.

In accordance with the duties incumbent on the central institution, and pursuant to the rules of collective solidarity, the General internal audit is responsible for periodically verifying the operation of all Group institutions and providing their executive managers with reasonable assurance of their financial strength.

7.3.5 Recovery Plan

The Supervisory Board of BPCE approved the Group's Recovery Plan for 2025.

The plan is in line with European regulatory measures on the recovery and resolution of banks and investment firms, and with the provisions of the French Monetary and Financial Code.

The objective of the Recovery Plan is to identify options to restore the Group's financial stability in the event it deteriorates significantly.

The plan presents a dedicated crisis management system and analyzes the relevance and feasibility of the options for restoring capital and liquidity under different crisis scenarios in order to estimate its overall recovery capacity.

The Recovery Plan notably includes:

- a description of the Group's organizational structure and the specific implications of its cooperative status;
- the identification of the Group's critical functions and the main activities (Core Business Lines) exercised by the Group;
- capital and liquidity management systems;
- the quantification and analysis of financial crisis scenarios;
- the identification of options impacting the restoration of the Group's financial position and their impacts on the Group's business model;
- preventative oversight of leading indicators on financial and economic conditions;
- establishment of the organizational structures needed to implement the recovery.

This system is monitored and coordinated by a permanent office at BPCE.

The Recovery Plan is updated at least once a year, and approved by the Supervisory Board, aided by its Risk Committee for these purposes.

7.4 Capital management and capital adequacy

7.4.1 Regulatory framework

Credit institutions' capital is regularly monitored in accordance with regulations defined by the Basel Committee.

These regulations were reinforced following the introduction of Basel III, with an increase in the level of regulatory capital requirements and the introduction of new risk categories.

In 2025, Groupe BPCE is required to observe a minimum Common Equity Tier-1 ratio of 4.5% under Pillar I, a minimum Tier-1 capital ratio of 6% and, lastly, a minimum total capital ratio of 8%.

Alongside Pillar I minimum capital requirements, Groupe BPCE is subject to additional Tier-1 capital requirements:

- as of January 1, 2019, the Tier-1 capital conservation buffer is 2.5% of the total amount of risk exposures;
- Groupe BPCE's countercyclical buffer equals the EAD-weighted average of the buffers defined for each of the Group's countries of operation. Groupe BPCE's maximum countercyclical buffer as from January 1, 2019 is 2.5%;
- the G-SII buffer has been set at 1% for the Group;
- the systemic risk buffer is applied to all exposures located in the Member State setting this buffer and/or to sectoral exposures located in the same Member State. These buffers only apply above a certain exposure threshold. As Groupe BPCE is below these thresholds, it is not subject to them.

Credit institutions must comply with the prudential requirements, which are based on three pillars that form an indivisible whole:

Pillar I

Pillar I sets minimum requirements for capital. It aims to ensure that banking institutions hold sufficient capital to provide a minimum level of coverage for their credit risk, market risk and operational risk. The bank can use standardized or advanced methods to calculate its capital requirement.

Review of minimum capital requirements under Pillar 1

	2024	2025
Minimum regulatory capital requirements		
Common Equity Tier-1 (CET1) capital	4.5%	4.5%
Total Tier-1 capital (T1 = CET1 + AT1)	6.0%	6.0%
Regulatory capital (T1 + T2)	8.0%	8.0%
Additional requirements		
Capital conservation buffer	2.5%	2.5%
G-SII buffer applicable to Groupe BPCE [1]	1.0%	1.0%
Maximum countercyclical buffer applicable to Groupe BPCE [2]	2.5%	2.5%
Maximum total capital requirements for Groupe BPCE		
Common Equity Tier-1 (CET1) capital	10.5%	10.5%
Total Tier-1 capital (T1 = CET1 + AT1)	12.0%	12.0%
Regulatory capital (T1 + T2)	14.0%	14.0%

(1) G-SII buffer: global systemic buffer.

(2) The countercyclical buffer requirement is calculated quarterly.

Pillar II

Pillar II establishes a process of prudential supervision that complements and strengthens Pillar I.

It consists of:

- an analysis by the bank of all of its risks, including those already covered by Pillar I;
- an estimate by the bank of the capital requirement for these risks;
- a comparison by the banking supervisor of its own analysis of the bank's risk profile with the analysis conducted by the bank, in order to adapt its choice of prudential measures where applicable, which may take the form of capital requirements exceeding the minimum requirements or any other appropriate technique.

For 2025, the total capital ratio in force for Groupe BPCE under Pillar II (P2R) is 10.25%, plus a 2.50% capital conservation buffer, a 1% global systemic buffer and a 0.90% countercyclical buffer.

Pillar III

The purpose of Pillar III is to establish market discipline through a series of reporting requirements. These requirements – both qualitative and quantitative – are intended to improve financial transparency in the assessment of exposure to risks, risk assessment procedures and capital adequacy.

7.4.2 Scope of application

Regulatory scope

Groupe BPCE is required to submit consolidated regulatory reports to the European Central Bank (ECB), the supervisory authority for Eurozone banks. Pillar III is therefore prepared on a consolidated basis.

The regulatory scope of consolidation is established based on the statutory scope of consolidation. The main difference between these two scopes lies in the consolidation method for insurance companies, which are accounted for by the equity method within the regulatory scope, regardless of the statutory consolidation method.

The following insurance companies are accounted for by the equity method within the prudential scope of consolidation:

- Surassur;
- BPCE Assurances (formerly Natixis Assurances);
- Compagnie Européenne de Garanties et de Cautions;
- Prépar-Vie;
- Prépar-IARD;
- Oney Insurance;
- Oney Life.

The following insurance companies are accounted for by the equity method within both the statutory and regulatory scopes of consolidation:

- Parnasse Garanties.

In addition, since the second quarter of 2020, the Versailles entity is consolidated using the equity method. This change, which concerns only the regulatory scope, since the entity is still considered to be under control within the meaning of IFRS, follows a detailed analysis of the regulatory texts. The latter stipulate that non-financial entities that do not constitute ancillary services within the meaning of the standard are accounted for using the equity method for the purposes of reporting ratios. This decision, approved by the Group's bodies, allows for an alignment of the scopes used to calculate liquidity and solvency.

EU CC2 – Transition from accounting balance sheet to prudential balance sheet

The table below shows the transition from an accounting balance sheet to a prudential balance sheet for Groupe BPCE at December 31, 2025.

The differences between the statutory and regulatory scopes can be attributed to restatements for subsidiaries excluded from the regulatory scope (see the description of the regulatory scope below) and the reincorporation of intra-group transactions related to these subsidiaries.

		12/31/2025		
		a	b	c
		Balance sheet in the published financial statements	According to the regulatory scope of consolidation	
in millions of euros		At end of period	At end of period	Reference [1]
	ASSETS - BREAKDOWN BY ASSET CLASSES ACCORDING TO THE BALANCE SHEET IN THE PUBLISHED FINANCIAL STATEMENTS			
1	Cash and amounts due from central banks	133,938	134,049	
2	Financial assets at fair value through profit or loss	239,646	239,973	
3	– o/w debt securities	38,956	38,858	
4	– o/w equity instruments	48,808	48,808	
5	– o/w loans (excluding repurchase agreements)	9,283	9,283

7.4.3 Composition of regulatory capital

Regulatory capital

The regulatory capital is determined in accordance with Regulation (EU) 575/2013 of the European Parliament of June 26, 2013 on capital amended by Regulation (EU) 2024/1623 (CRR3).

It is divided into three categories: Common Equity Tier-1 capital, Additional Tier-1 capital and Tier-2 capital. Deductions are made from these categories.

These categories are broken down according to decreasing degrees of solidity and stability, duration and degree of subordination.

BPCE01 – Regulatory capital

in millions of euros	12/31/2025 Basel IV	12/31/2024 Basel III
Share capital and additional paid-in capital	29,461	29,349
Consolidated reserves	56,062	53,419
Net income for the period	4,061	3,520
Gains and losses recognized directly in other comprehensive income	(283)	842
CONSOLIDATED EQUITY ATTRIBUTABLE TO EQUITY HOLDERS OF THE PARENT	**89,301**	**87,130**
Perpetual deeply subordinated notes classified as other comprehensive income	-	-
CONSOLIDATED EQUITY ATTRIBUTABLE TO EQUITY HOLDERS OF THE PARENT EXCLUDING PERPETUAL DEEPLY SUBORDINATED NOTES CLASSIFIED AS OTHER COMPREHENSIVE INCOME	**89,301**	**87,130**
Non-controlling interests	221	219
– *o/w prudential filters*	-	-
Deductions	(6,309)	(6,352)
– *o/w goodwill* [1]	*(4,070)*	*(4,255)*
– *o/w intangible assets* [1]	*(984)*	*(852)*
– *o/w irrevocable payment commitments*	*(1,144)*	*(1,147)*
Prudential restatements	(6,903)	(7,150)
– *o/w shortfall of credit risk adjustments to expected losses*	*(15)*	*(210)*
– *o/w prudent valuation*	*(1,113)*	*(1,088)*
– *o/w insufficient coverage for non-performing exposures – Pillar II*	*(1,063)*	*(1,122)*
COMMON EQUITY TIER-1 CAPITAL [2]	**76,310**	**73,847**
Additional Tier-1 capital	-	-
TIER-1 CAPITAL	**76,310**	**73,847**
Tier-2 capital	12,447	12,210
TOTAL REGULATORY CAPITAL	**88,757**	**86,057**

(1) Including non-current assets and entities classified as held for sale.

(2) The Common Equity Tier-1 included €29,693 million in cooperative shares (after taking allowances into account) at December 31, 2025, and €29,581 million at December 31, 2024.

Details of debt instruments recognized as additional Tier-1 and Tier-2 capital, other instruments eligible for TLAC, as well as their characteristics, as required by Implementing Regulation 1423/2013 are published at https://groupebpce.com/en/investors/results-and-publications/pillar-iii.

Common Equity Tier-1 (CET1) capital

Core capital and deductions

Common Equity Tier-1 consists of:

- share capital;
- additional paid-in capital or merger premiums;
- reserves, including revaluation differences and gains or losses recognized directly in other comprehensive income;
- retained earnings;
- net income attributable to equity holders of the parent;
- non-controlling interests in banking or related subsidiaries for the share after CET1 eligibility caps.

The following deductions are made:

- treasury shares held and measured at their carrying amount;
- intangible assets (excluding the amount of prudently valued software, exempt from deduction) including start-up costs and goodwill;
- deferred tax assets and liabilities that rely on future profitability;
- prudential filters resulting from CRR Articles 32, 33, 34 and 35: gains or losses on cash flow hedges, gains on transactions in securitized assets, own credit risk;
- negative amounts arising from the comparison between provisions and expected losses (in this calculation, performing loans are clearly separated from loans in default);
- equity interests in eligible banking, financial and insurance institutions, according to the rules on allowances for these holding companies and the phase-in period;
- value adjustments arising from the prudent valuation of assets and liabilities measured at fair value according to a prudential method, deducting any value adjustments;
- defined benefit pension fund assets net of related deferred tax liabilities;
- insufficient hedging of non-performing exposures under Pillar I and Pillar II.

These deductions are supplemented by capital items that are not covered by CRR3.

BPCE02 – Changes in CET1 capital

in millions of euros	**CET1 capital**
12/31/2024	**73,847**
Cooperative share issues	64
Income net of proposed dividend payout	3,367
Other items	(968)
12/31/2025	**76,310**

BPCE03 – Breakdown of non-controlling interests (minority interests)

in millions of euros	**Non-controlling interests**
Carrying amount (regulatory scope) – 12/31/2025	**919**
Perpetual deeply subordinated notes classified as non-controlling interests	-
Ineligible non-controlling interests	(642)
Proposed dividend payout	-
Caps on eligible non-controlling interests	(56)
Non-controlling interests (excluding other items)	221
Other items	-
Prudential amount – 12/31/2025	**221**

Additional Tier-1 (AT1) capital

Additional Tier-1 capital includes:

- subordinated instruments issued in compliance with the restrictive eligibility criteria set forth by CRR Article 52;
- additional paid-in capital related to these instruments.

Deductions comprise equity interests in eligible banking, financial and insurance institutions, according to the rules on allowances for these holding companies.

As of December 31, 2025, the Group had no additional Tier-1 capital.

BPCE04 – Change in AT1 capital

in millions of euros	**AT1 capital**
12/31/2024	**-**
Redemptions	-
Issues	-
Foreign exchange effect	-
Other adjustments	-
12/31/2025	**-**

Tier-2 capital

Tier-2 capital consists of:

- subordinated instruments issued in compliance with the restrictive eligibility criteria set forth by CRR Article 63;
- additional paid-in capital related to Tier-2 items;
- the amount arising from provisions in excess of expected losses (in this calculation, performing loans are clearly separated from loans in default).

Deductions comprise equity interests in eligible banking, financial and insurance institutions, according to the rules on allowances for these holding companies.

BPCE05 – Changes in Tier-2 capital

in millions of euros	**Tier-2 capital**
12/31/2024	**12,210**
Redemption of subordinated notes	(129)
Prudential haircut	(798)
New subordinated note issues	1,977
Phase-in deductions and adjustments	436
Foreign exchange and interest rate hedging effect [1]	(1,248)
12/31/2025	**12,447**

(1) As of June 30, 2025, to meet an ECB requirement notified to banks, subordinated loans included in regulatory capital are now measured at their carrying amount, including any hedging effects, rather than at their nominal value. This application had an impact of -€435 million on the value of the Tier-2 assets at December 31, 2025.

7.4.4 Regulatory capital requirements and risk-weighted assets

In accordance with Regulation (EU) 2024/1623 (CRR3) of the European Parliament, as amended by Regulation (EU) 2019/876 (CRR2), credit risk exposures can be measured using two approaches:

- the "standardized" approach, based on external credit ratings and specific risk weightings according to Basel exposure classes;
- the "internal ratings based" (IRB) approach, based on the financial institution's internal ratings system, broken down into two categories:
  - the Foundation IRB approach – banks use only their probability of default estimates for this approach,
  - the Advanced IRB approach – banks use all their internal component estimates for this approach, *i.e.* probability of default, loss given default, exposure at default and maturity.

The methodology applied for IRB approaches is described in greater detail in Section 5 "Credit risk."

In addition to the requirements related to counterparty risk in market transactions, the Regulation of June 26, 2013 provides for the calculation of an additional charge to hedge against the risk of loss associated with counterparty credit risk (CCR). Capital requirements for the Credit Valuation Adjustment (CVA) are determined using the Standardized Approach.

EU OV1 – Overview of total risk exposure amounts

The table below complies with the CRR format, presenting capital requirements for credit and counterparty risks, before the CVA and after the application of risk mitigation techniques.

		Total risk exposure amounts (TREA)		Total own funds requirements
		a	b	c
in millions of euros		12/31/2025	09/30/2025	12/31/2025

7.4.5 Management of Group capital adequacy

The methods used by Groupe BPCE to calculate risk-weighted assets are described in Section 4.4 "Regulatory capital requirements and risk-weighted assets".

Regulatory capital and capital ratios

BPCE07 – Regulatory capital and Basel III phased-in capital ratios

in millions of euros	12/31/2025 Basel IV	12/31/2024 Basel III
Common Equity Tier-1 (CET1) capital	76,310	73,847
Additional Tier-1 (AT1) capital	0	0
TOTAL TIER-1 (T1) CAPITAL	**76,310**	**73,847**
Tier-2 (T2) capital	12,447	12,210
TOTAL REGULATORY CAPITAL	**88,757**	**86,057**
Credit risk exposure	390,554	397,526
Settlement/delivery risk exposure	17	0

TOTAL RISK EXPOSURE	**463,054**	**456,591**
Capital adequacy ratios		
Common Equity Tier-1 ratio	16.5%	16.2%
Tier-1 ratio	16.5%	16.2%
Total capital adequacy ratio	19.2%	18.8%

Changes in Groupe BPCE's capital adequacy in 2025

The Common Equity Tier-1 ratio was 16.5% on December 31, 2025 compared to 16.2% on December 31, 2024.

The 31 basis point change in the Common Equity Tier-1 ratio in 2025 was mainly due to the growth in Common Equity Tier 1, driven by retained earnings (+73 basis points), which offset the impact of the year's acquisitions: Société Générale Equipment Solutions and Nagelmakers (-41 basis points)

At December 31, 2025, the Tier-1 ratio stood at 16.5% and the total capital ratio at 19.2% compared to 16.2% and 18.8%, respectively, at December 31, 2024. These ratio levels remain well above the regulatory requirements defined by the European Central Bank (ECB) during the Supervisory Review and Evaluation Process (SREP) in 2025.

Groupe BPCE capital adequacy management policy

Capital and total loss absorbing capacity (TLAC) targets are determined according to Groupe BPCE's target ratings, in line with prudential constraints.

Capital adequacy management is therefore subject to a high management buffer which not only greatly exceeds prudential constraints on capital adequacy ratios, but is also well above the trigger for the Maximum Distributable Amount.

Thus, the management of own capital and loss absorbing capacity goes beyond the integration of prudential developments (*e.g.* qualification as a G-SIB) and leads the Group to build its total loss absorbing capacity mainly from CET1 and additionally from subordinated MREL-eligible and TLAC-eligible debt (mainly Tier-2 capital and eligible senior non-preferred debt). The issues of these eligible debts are carried out by BPCE.

Lastly, in addition to this capacity to absorb losses, Groupe BPCE has an MREL. The MREL capacity consists of instruments eligible for loss absorption, as well as senior preferred debt with residual maturity of more than one year.

The Group's current MREL requirement was received in March 2024 by the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector. It amounts to 27.30% of the Group's risk-weighted assets (RWA) and is respected with a margin. It does not require the Group to modify or increase its issuance program.

Groupe BPCE complies with Articles 92a (1)(a) and 494 of Regulation (EU) 575/2013 (CRR) providing since 2022 for a requirement of 18% of RWA plus solvency buffers, *i.e.* 22.4% of RWA. The subordination requirement in the leverage base has been set at 6.75% since 2022 pursuant to Article 92a (1)(b) of the CRR. This is also respected with a margin.

Capital allocation equity and solvency management

The Group implemented action plans from 2024 aimed specifically at ensuring the capital adequacy of its networks and its subsidiaries. BPCE SA thus subscribed for €475 million to a Tier 1 issue by Natixis, replacing a Tier 1 issue of $500 million repaid by the subsidiary. BPCE SA also set up a repayable Tier 2 subordinated loan of €60 million for the benefit of its subsidiary Banque Palatine and a second loan of €100 million granted to Natixis.

Leverage ratio

The entry into force of the Capital Requirements Regulation, known as CRR3, makes the leverage ratio a binding requirement as from June 28, 2021. The minimum requirement for this ratio is 3%, plus a buffer for global systemic banks of 0.5% in 2025.

The leverage ratio is not sensitive to risk factors and as such, it is considered as a measure that complements the solvency and liquidity management system, which already limits the size of the balance sheet. The leverage ratio is projected and managed at the same time as Groupe BPCE's solvency trajectory. The risk of excessive leverage is also measured in the internal stress test *via* the projection of the regulatory leverage ratio.

Groupe BPCE's leverage ratio, calculated according to the capital requirements regulation, known as CRR3, was 5.1% at December 31, 2025, based on phased-in Tier-1 capital.

EU LR1 - LRSum: Summary reconciliation of accounting assets and leverage ratio exposures

		12/31/2025	12/31/2024

12	Other adjustments	(17,190)	(7,430)
13	**Total exposure measure**	**1,489,339**	**1,435,845**

Financial conglomerate ratio

As an institution exercising banking and insurance activities, Groupe BPCE is also required to comply with a financial conglomerate ratio. This ratio is determined by comparing the financial conglomerate's total capital against all the regulatory capital requirements for its banking and insurance activities.

The financial conglomerate ratio demonstrates that the institution's prudential capital sufficiently covers the total regulatory capital requirements for its banking activities (in accordance with CRR3) and insurance sector activities, in accordance with the Solvency 2 regulation.

The calculation of surplus capital is based on the statutory scope. Insurance company capital requirements, determined for the banking capital adequacy ratio by weighting the equity-method value, are replaced with capital requirements based on the solvency margin. The capital requirements within the banking scope are determined by multiplying the risk-weighted assets by the applicable rate under Pillar II, *i.e.* 15.90% at December 31, 2025 compared to 15.75% at December 31, 2024.

At December 31, 2025, Groupe BPCE's surplus capital amounted to €16.2 billion.

Supervisory Review and Evaluation Process

SREP – ICAAP process

As the supervisory authority under Pillar II, the ECB conducts an annual assessment of banking institutions. This assessment, referred to as the Supervisory Review and Evaluation Process (SREP), is primarily based on:

- an evaluation based on information taken from prudential reports;
- documentation established by each banking institution, including in particular the Internal Capital Adequacy Assessment Process (ICAAP) and the Internal Liquidity Adequacy Assessment Process (ILAAP);
- an assessment of governance & risks, the business model, share capital and liquidity.

Based on the conclusions of the SREP carried out by the ECB in 2024, Groupe BPCE shall maintain a consolidated Common Equity Tier-1 ratio of 10.59% on January 2, 2025, including:

- 1.69% in respect of Pillar II requirements (excluding Pillar II guidance);
- 2.50% in respect of the capital conservation buffer;
- 1.00% in respect of the buffer for global systemically important banks (G-SIB buffer);
- 0.90% in respect of the countercyclical buffer.

The corresponding total capital requirement is 14.65% (excluding Pillar II guidance).

With a **Common Equity Tier-1 ratio of 16.5% at the end of December 2025**, Groupe BPCE has exceeded the specific capital requirements set by the ECB.

As regards the internal capital adequacy assessment under Pillar II, the principles defined in the ICAAP/ILAAP guidelines published by the ECB in February 2018 and supplemented by the ECB publication in February 2025, were applied in Groupe BPCE's ICAAP. The assessment is thus carried out using two different approaches:

- a "normative" approach aimed at measuring the impact of internal stress tests within three years of the initial Pillar I regulatory position;
- an "economic" approach aimed at identifying, quantifying and hedging risks using internal capital over the short term (one year) and using internal methodologies. The methodologies developed by Groupe BPCE provide a better assessment of risks that are already covered under Pillar I, and also an additional assessment of risks that are not covered by Pillar I.

The results obtained using these two approaches confirmed the Group's financial soundness and no capital buffer is necessary in addition to the existing regulatory buffers.

Outlook

The objectives of the "VISION 2030" strategic plan are, with regard to the Common Equity Tier-1 ratio, to exceed 15.5%, and with regard to the subordinated MREL ratio (*i.e.* TLAC) to exceed 25.5%.

The Group remained on the list of G-SIBs (Global Systemically Important Banks) in November 2023, with a systemic buffer to be respected on the MREL and TLAC ratios of 1%.

MREL – TLAC

In addition to capital adequacy ratios, ratios aiming at verifying the Group's capacity to carry out a bail-in in the event of default are implemented *via* the Minimum Requirement for own funds and Eligible Liabilities (MREL) and Total Loss Absorbing Capacity. This second ratio is known as TLAC, according to the terminology of the Financial Stability Board, and in Europe it is defined in the BRRD directive and the CRR regulation as subordinated MREL. Groupe BPCE has established internal monitoring of these indicators.

The TLAC ratio serves the same purpose as subordinated MREL and only applies to G-SIBs.

Groupe BPCE has established internal monitoring of these indicators.

The senior unsecured debt at more than one year and the Group's regulatory capital make up the numerator of the total MREL (minimum requirement for own funds and eligible liabilities) ratio. The Group's current MREL requirement was notified in May 2025 by the ACPR.

The updated total MREL requirement was set at 27.5% of the Group's risk-weighted assets.

The total MREL ratio reached 32.8% at December 31, 2025, compared with 34.6% at December 31, 2024.

For subordinated MREL, the numerator - in addition to the Group's regulatory capital - only includes the junior liabilities up to the senior non-preferred debt because BPCE has renounced for the time being to use a senior preferred debt allowance, its updated requirement was set at 24.7% of the Group's risk-weighted assets. **The subordinated MREL ratio was 26.7% at December 31, 2025**, stable compared to December 31, 2024.

The total loss absorbing capacity (TLAC), a ratio pursuing the same objective as subordinated MREL, is only applicable to G-SIBs. Its requirement remains set at 22.4% of the Group's risk-weighted assets (RWA), *i.e.* 18% plus the 4.4% solvency buffers.

The TLAC rose to €123.7 billion at the end of December 2025, compared with €122.07 billion at the end of December 2024.

7.5 Credit risk

Foreword

The Group's Credit Risk division strengthened its risk management framework in 2025 with the creation of two new Group Credit policies (Asset-backed financing of private equity funds and Condominium financing) and the updating of numerous Group sector policies. In addition, the Group's Consumer and Housing Credit policies have also been updated in line with the economic context and to cover the Group's new activities. Both individual and portfolio supervision have been reinforced for several asset classes with stringent frameworks. In line with the difficulties encountered by the commercial real estate sector, the reinforced monitoring implemented during 2024 was maintained in 2025 in this sector.

7.5.1 Credit risk management

7.5.1.1 Credit risk management

Credit policy

The overall credit risk policy is governed in particular by the risk appetite framework, structured around the definition of the level of risk and risk appetite indicators. The balance between the search for profitability and the level of risk accepted is reflected in Groupe BPCE's credit risk profile and in the Group's credit risk policies. Groupe BPCE refrains from engaging in activities over which it has insufficient control. Activities with high risk-reward profiles are identified and strictly controlled.

In general, Groupe BPCE's credit approval process is based first and foremost on the client's ability to repay the loan, *i.e.* future cash flows, with clearly identified sources and channels and a reasonably realistic probability of occurrence.

Rating policy

Credit risk measurement relies on internal rating systems tailored to each category of client and transaction. The Group Risk division is responsible for defining and verifying the performance of these rating systems.

An internal rating methodology common to all Groupe BPCE institutions (specific to each client segment) is applied for "individual and professional customers", as well as for "corporate customers", "real estate professionals", "project financing", "central banks and other sovereign exposures", "central governments", "public-sector and similar entities" and "financial institutions".

Credit risk governance

A dedicated governance structure is in place for the construction of all credit risk management, granting and classification systems.

Each standard, policy, system or method is the focus of workshops, organized and led by the Group Risk division teams, made up of Group representatives. The purpose of these workshops is to define the rules and expectations for each topic addressed, as it relates to the Group's risk appetite and regulatory constraints. These topics are then decided by a Group committee made up of executive managers.

Compliance with the regulatory and internal limits on the main counterparties is regularly checked by the Group Risk and Compliance Committee and the Risk Committees of the Supervisory Board. Each institution is responsible for ensuring compliance with internal limits.

The Group Risk division also defines, for all institutions, the common framework of Level 2 permanent controls (CPN2) for credit risks and contributes to the coordination of Level 1 controls.

The Risk division is organized according to the principle of subsidiarity with a strong functional link:	• each institution in Groupe BPCE has a Risk division covering credit and counterparty risks. Each institution manages its risks in accordance with Group standards and prepares a risk report every six months; • each Head of Risk is in close contact with the Group Chief Risk Officer. The latter reports to the Chairman of the Management Board of Groupe BPCE and is a member of the Executive Management Committee.
The supervision of grants and the monitoring of portfolios declined or adapted in each Group institution are supervised within a system made up of:	• credit risk policies and sector policies on credit; • Group internal caps, internal caps for institutions in the Banque Populaire and Caisse d'Epargne networks and all BPCE subsidiaries; • a set of Group internal limits covering the major categories of counterparties (a company made up of a parent and its subsidiaries) on a consolidated basis, for the main asset classes excluding retail, supplemented as needed by local limits; predominantly based on the internal rating approach, these methodologies are used to define the maximum risk that Groupe BPCE is willing to take; • at each Group institution, a pro-con analysis or counter-analysis procedure involving the Risk division which holds the right to veto decisions, calling on the higher-level Credit Committee for arbitration where necessary, or the duly authorized representative.

Highlights

The requirement was also maintained for the operational integration of the main standards, rules and policies in institutions in order to guarantee uniform implementation within the Group.

Despite the persistent geopolitical and economic uncertainties loan production recovered. The number of defaults in France stabilized at a very high level. The commercial real estate sector remains strongly impacted by the economic situation, despite a gradual easing of the price of credit for individual customers. Reinforced monitoring of this sector has been put in place by the Group Risk division.

7.5.1.2 Credit risk supervision

7.5.1.2.1. Credit risk supervision system

Concentration risk framework

The internal caps system used across the Group, which are lower than the regulatory caps, is aimed at increasing the division of risks and is applied to all Group entities.

The internal caps system used by the institutions is lower than or equal to the Group internal caps, and is applied to the Banque Populaire and Caisse d'Epargne networks and the subsidiaries.

A Group individual limits system has also been established for the major counterparties as well as for the exposure levels concerning countries and industries. These limits apply to all Group institutions. The individual limits system in place, aimed at dividing up risks and making them individually acceptable in terms of each institution's earning capacity and own funds, takes into account the gross exposure, *i.e.* without including the value of collateral, to define the maximum amount of acceptable risk for a given counterparty. The aim of this position is to neutralize the operational risk associated with the recognition of collateral and with execution in the event the institution is required to call in the collateral.

A system of limits on the asset classes deemed the most risky, such as Real Estate Professionals and Leverage Finance, has been put in place in all institutions in line with the Group's risk appetite for these asset classes. Risk monitoring is organized on a sector-by-sector basis *via* a sector watch shared with all the Group's institutions. Sector policies and limits have been established for that purpose.

On behalf of the Group Risk and Compliance Committee, the Group Risk division measures and verifies that these risk supervision mechanisms (individual and topical limits) are correctly implemented at each institution.

The Group Supervisory Board is kept informed as Group internal caps are monitored, and is notified of any possible breaches of limits defined in accordance with the risk appetite framework.

Method used to assign operational limits on internal capital

The quarterly Group risk dashboard is used to monitor consumption of risk-weighted assets in the Group's main asset classes: it compares any differentials in terms of changes between gross exposures and consumption of RWA.

By using these systems, the Group is able to accurately monitor the change in capital needed to cover risks in each asset class, while also observing any changes in the quality of the asset classes in question.

Correlation risk policy

Correlation risk is governed by a special decision-making process, where a counterparty offers its own shares as collateral. A top-up clause is systematically required on such transactions.

For wrong-way risk, usually associated with collateral swaps between credit institutions, BPCE's liquidity reserve procedure defines this criterion as follows: "the counterparty to the repo and the securities received as collateral for that repo shall not be included in the same regulatory group".

However, these transactions may be reviewed on a case-by-case basis, under a special decision-making process, where the collateral consists exclusively of retail loans serving to finance residential real estate.

7.5.1.3 Quality assessment of loan outstandings and impairment policy

System governance

From a regulatory standpoint, Article 118 of the order of November 3, 2014 as amended on internal control specifies that "at least once each quarter, supervised companies must perform an analysis of changes in the quality of their loan commitments". In particular, this review should determine, for material transactions, whether any reclassifications need to be conducted among the internal risk credit risk assessment categories and, if necessary, the appropriate allocations to non-performing loans and charges to provisions.

When a counterparty is placed on either a local Watchlist (WL) or the Group WL, supervision of the counterparty in question is enhanced (Performing WL) or the decision is made to record an appropriate provision (Default WL).

Statistical provisions for performing loans, calculated at Group level for the networks in accordance with IFRS 9 requirements, are measured using a methodology validated by Group committees (reviewed by an independent unit and validated by the Risk Model Oversight Committee). These provisions include scenarios of changes in the economic environment determined each year by the Group's Economic Research team, coupled with probabilities of occurrence reviewed quarterly by the Group Watchlist and Provisions Committee.

The allocated provisioning is calculated by taking into account the present value of the guarantees in a prudent approach.

Any defaulted exposures not covered by provisions shall be subject to enhanced justification requirements to explain why no provision has been recorded.

Netting of on-balance sheet and off-balance sheet transactions

For credit transactions, Groupe BPCE is not required to carry out netting of on-balance sheet and off-balance sheet transactions.

Recognition of provisions and impairment under IFRS 9

Groupe BPCE implements a prudent IFRS 9 provisioning policy in an uncertain economic context.

Provisioning methods

Debt instruments classified as financial assets at amortized cost or at fair value through other comprehensive income, loan commitments and financial guarantees given that are not recognized at fair value through profit or loss, as well as lease receivables and trade receivables, shall be systematically impaired or covered by a provision for expected credit losses (ECL).

Impairment is recorded, for financial assets which have not been individually subject to ECL, based on observed past losses but also on reasonable and supportable DCF forecasts.

Financial instruments are divided into three categories (Stages) depending on the increase in credit risk observed since initial recognition. A specific credit risk measurement method applies to each category of instrument:

1. Stage 1 (S1)	2. Stage 2 (S2)	3. Stage 3 (S3)
Loan outstandings for which credit risk has not increased materially since the initial recognition of the financial instrument. The impairment or the provision for credit risk corresponds to 12-month expected credit losses.	Performing loans for which credit risk has increased materially since the initial recognition of the financial instrument are transferred to this category. The impairment or the provision for credit risk is determined on the basis of the financial instrument's lifetime expected credit losses.	Impaired exposures, within the meaning of IFRS 9, for which there is objective evidence of impairment loss due to an event which represents a known credit risk (*e.g.* non-repayment of a loan at its normal term, collective proceedings), occurring after the initial recognition of the instrument concerned. This category covers receivables for which a default event has been identified, as defined in Article 178 of the European regulation of June 26, 2013 on prudential requirements for credit institutions.

A Group S3 Provisioning policy dedicated to the Corporate segment is being implemented. This policy lays the foundations for the calculation of loan impairment and defines the methodology for determining individual impairment based on expert opinion. It also specifies the concepts of credit risk measurement and the accounting principles for the impairment of customer receivables under IFRS and French GAAP. It details the data that must be included in a non-performing case file and a disputed case file, and included in a provisioning record.

Impairment under IFRS 9

Impairment for credit risk amounts to 12-month expected credit losses or lifetime expected credit losses, depending on the level of increase in credit risk since initial recognition (Stage 1 or Stage 2 asset). A set of qualitative and quantitative criteria is used to assess the increase in credit risk.

A significant increase in credit risk is measured on an individual basis by taking into account all reasonable and supportable information and by comparing the default risk on the financial instrument at the reporting date with the default risk on the financial instrument at the date of initial recognition. Any significant increase in credit risk shall be recognized before the transaction is impaired (Stage 3).

In order to assess a significant increase in credit risk, the Group implemented a process based on rules and criteria which apply to all Group entities:

- for the portfolios of individual customers, professionals and small and medium-sized companies, the quantitative criterion is based on the measurement of the difference between the counterparty's rating at the time of granting and its rating at the closing date. This difference – or denotch – is measured on a master scale common to all these counterparties. The number of denotches before downgrading to Stage 2 depends on the rating at grant;

- for the large corporate, bank and specialized financing loan books, it is based on the change in rating since initial recognition;
- these quantitative criteria are accompanied by a set of qualitative criteria, including the existence of a payment more than 30 days past due, the classification of the contract as at-risk, the identification of forbearance exposure or the inclusion of the portfolio on a Watchlist;
- exposures rated by the large corporates, banks and specialized financing software tool are also downgraded to Stage 2 depending on the sector rating and the level of country risk.

The financial assets for which there is objective evidence of impairment loss due to an event representing a counterparty risk and occurring after initial recognition will be considered as impaired and classified as Stage 3. Identification criteria for impaired assets are similar to those under IAS 39 and are aligned with the default criterion. The accounting treatment of restructuring operations due to financial hardships is similar to their treatment under IAS 39.

The expected credit losses on Stage 1 or Stage 2 financial instruments are measured as the product of several inputs:	• cash flows expected over the lifetime of the financial instrument, discounted at the valuation date – these flows are determined according to the characteristics of the contract, its effective interest rate and the level of prepayment expected on the contract; • Loss Given Default (LGD); • probabilities of default (PD), for the coming year in the case of Stage 1 financial instruments and until the contract's maturity in the case of Stage 2 financial instruments.
The Group draws on existing concepts and mechanisms to define these inputs, and in particular on internal models developed to calculate regulatory capital requirements and on projection models used in the stress test system. Certain adjustments are made to comply with the specifics of IFRS 9.	
IFRS 9 inputs:	• aim to provide an accurate estimate of expected credit losses for accounting provision purposes, whereas prudential inputs are more cautious for regulatory framework purposes. Several of the safety buffers applied to prudential inputs are therefore restated; • shall allow expected credit losses to be estimated until the contract's maturity, whereas prudential inputs are defined to estimate 12-month expected losses. 12-month inputs are thus projected over long periods; • shall be forward-looking and take into account the expected economic environment over the projection period, whereas prudential inputs correspond to through-the-cycle estimates (for PD) or downturn estimates (for LGD and the flows expected over the lifetime of the financial instrument). Prudential PD and LGD inputs are therefore also adjusted to reflect forecasts of future economic conditions.

Inputs are adjusted to economic conditions by defining three economic scenarios over a three-year period. The variables defined in each of these scenarios allow for the distortion of the PD and LGD inputs and the calculation of an expected credit loss for each economic scenario. Projections of inputs for periods longer than three years are based on the mean reversion principle. The models used to distort the PD and LGD inputs are based on those developed for the stress test system for consistency reasons. The models for calculating the various parameters used to calculate provisions (PD, LGD, segmentation, *etc.*) are regularly updated to ensure that they maintain their accuracy, meet the regulator's expectations and more generally to improve their relevance.

The economic scenarios are associated with probabilities of occurrence, making it possible to calculate the average probable loss, which is used as the IFRS 9 impairment amount.

These scenarios are defined using the same organization and governance as those defined for the budget process, requiring an annual review based on proposals from the Economic Research department. For consistency purposes, the Baseline scenario serves as the budget scenario. Two variants – an optimistic view and a pessimistic view – are also developed around this scenario. The probability of occurrence of each scenario is reviewed on a quarterly basis by the Group Watchlist and Provisions Committee. The inputs thus defined are used to measure expected credit losses for all rated exposures, whether they were subject to the IRB or the standardized approach for the calculation of risk-weighted assets. For unrated exposures (insignificant for Groupe BPCE), prudent valuation rules are applied by default.

The IFRS 9 input validation process is fully aligned with the Group's existing model validation process. The validation of the parameters follows a review process by an independent internal model validation unit, then the review of this work is presented to the Risk Models Oversight Committee. Finally, quarterly monitoring of recommendations by the Group Model Committee has replaced annual monitoring.

7.5.1.3.1. Forbearance, performing and non-performing exposures

The classification of exposures as forbearance results from the combination of a 'concession' and 'financial hardship' (probable or proven). It may concern performing or non-performing contracts. These forbearance credit restructurings are designed to help the debtor cope with financial difficulties and ultimately meet its commitments. Forbearance only applies to the exposure concerned, *i.e.* to the 'Forborne' contract. This status is not contagious to the other exposures of the same debtor.

A situation of forced restructuring, a situation of over-indebtedness proceedings or any kind of default within the meaning of the Group standard implies qualification as "forbearance/non-performing"

For the non-retail segment, the assessment of these measures is based on an expert's assessment of '*a priori*' forbearance, in particular on the analysis and assessment of the counterparty's financial difficulties.

A permanent control system covering forbearance situations completes the system.

7.5.1.4 Permanent control of credit risks

A permanent system of credit controls covers all customer segments.

7.5.2 Risk measurement and internal ratings

Current situation

** The "Sovereign" customer segment switched to the "permanent" Standard approach by the ECB decision letter of 09/19/2024.

The Oney subsidiary is approved for credit models applicable to retail customers in France. The Portugal, Spain, Russia, Hungary and Poland scopes use the standardized approach.

The BPCE Financement subsidiary is using the IRBA approach on part of its portfolio.

Groupe BPCE conducted a review of its IRB system during the 2025 fiscal year and established an overall strategy at Group level, based on objective and clearly defined criteria, to determine the choice of the most appropriate approach (IRB or standard approach) for calculating the capital requirements of a given scope, in order to ensure a better overall coherence of the system.

Rating system

Internal rating system models are developed based on historical data for observed defaults and losses. They are used to measure the credit risks to which Groupe BPCE is exposed, expressed as a one-year Probability of Default (PD), as a Loss Given Default (LGD) and as Credit Conversion Factors (CCF), depending on the characteristics of the transactions.

These internal rating systems are also applied to risk supervision, authorization systems, internal limits on counterparties, *etc.* and may also serve as a basis for other processes, such as statistical provisioning.

The resulting risk metrics are then used to calculate capital requirements once they have been validated by the supervisory authority in compliance with regulatory requirements.

Internal rating system governance

The internal governance of rating systems is centered on the development, validation, monitoring, and modification of decisions linked to the evolution of these systems.

Review of internal ratings-based models

The Groupe BPCE Risk division is responsible for reviewing the Group's internal models whenever a new model is being developed or an existing model changed. It also performs the annual review of backtests on credit, market and Asset/Liability management risk models.

Model mapping

The following table lists the internal credit models used by the Group for risk management purposes and, where authorized by the supervisor, to calculate capital requirements for the Banque Populaire and Caisse d'Epargne networks, Natixis and its subsidiaries, Crédit Foncier and Banque Palatine.

Exposure class	Portfolio	Number of probability of default (PD) and management rating models	Description/Methodology
Sovereigns, central governments and central banks	Sovereigns and affiliates	1 (NA*)	Expert criteria including quantitative and qualitative economic and descriptive variables - Portfolio with low default risk
	Multilateral development banks	1	Expert criteria - Portfolio with low default risk
Public sector	Municipalities (communes), departments, regions, social housing, hospitals, *etc.*	6 (NA*)	Expert criteria/statistical modeling (logistic regression) - Portfolio with low default risk
Institutions	OECD or non-OECD banks, multilateral development banks	2	Expert criteria - Portfolio with low default risk
Corporate customers	Large corporates (Rev. >€1 billion)	7	Expert criteria including quantitative and qualitative variables, depending on the business sector - Portfolio with low default risk
	Small and medium-sized companies (Rev. >€3 million)	10 (o/w 2 NA*)	Statistical models (logistic regression) or flat scores, on companies publishing parent company or consolidated financial statements, mainly based on balance sheet data depending on the business sector, and banking behavior/ history
	Insurance of which mutual insurance	1	Expert criteria including quantitative and qualitative variables - Portfolio with low default risk
	Associations	1	Statistical model with quantitative and qualitative variables
	Specialized financing (real estate, asset pool, aircraft, *etc.*)	6 (o/w 1 NA*)	Expert criteria based on features of the financed goods/projects - Portfolio with low default risk
	Leasing	2	Statistical models (logistic regression), mainly based on balance sheet data depending on the business sector, and banking behavior
Retail	Individual customers	7	Statistical models (logistic regression) including behavioral and socioeconomic variables, differentiated by customer profile
	Professional customers (socioeconomic category differentiated according to certain sectors)	5	Statistical models (logistic regression) including balance sheet and behavioral variables
	Leasing	2	Statistical models (logistic regression) including balance sheet and behavioral variables
	Residential real estate	3	Statistical models (logistic regression) including behavioral and socioeconomic variables, differentiated by customer profile
	Revolving loans	7	Statistical models (logistic regression) including behavioral and socioeconomic variables

Exposure class	Portfolio	Number of LGD models (loss given default)	Description/Methodology	Number of CCF/ EAD models (exposure given default)	Description/Methodology
Sovereigns, central governments and central banks	Sovereigns and affiliates	1 (NA)	Expert criteria including quantitative and qualitative variables		
Institutions	Banks	1 (NA)	Expert criteria including quantitative and qualitative variables		
Corporate customers	General case	7 (o/w 1 NA)	Models based on estimated losses, segmented by type of contract and guarantee, or expert criteria	2 (o/w 1 NA)	Conversion factors, applicable to revolving exposures
	Leasing	4	Models based on estimates of asset resale conditions, segmented by type of asset financed		
	Specialized financing (real estate, asset pool, aircraft, *etc.*)	4	Models based on estimates of asset resale conditions or future cash flows		
Retail	Residential real estate	4	Models based on estimated losses, segmented by type of contract and guarantee		
	Other individual and professional customers	4	Models based on estimated losses, segmented by type of contract and guarantee	2	Conversion factors, applicable to revolving exposures
	Leasing	4	Models based on estimates of asset resale conditions, segmented by type of asset financed		
	Revolving loans	2	Models based on estimated losses, segmented by type of contract	2	Conversion factors, applicable to revolving exposures

* NA refers to models not yet approved for the determination of capital requirements.

With the entry into force of the CRR 3 regulation on January 1, 2025, the CCF (conversion factors) models are limited to revolving exposures. Other exposures are treated with fixed values.

The models dealing with leasing exposures within the scope of BPCE Equipment Solutions have been added to this table.

Internal ratings-based approaches – retail customers

For retail customers, Groupe BPCE has established standardized internal ratings-based methods and centralized ratings applications used to assess the credit quality of its loan books for better risk supervision. For the Banque Populaire and Caisse d'Epargne networks, they are also used to determine capital requirements under the Advanced IRB method.

The probability of default of retail customers is modeled by the Risk department, based in large part on the banking behavior of the counterparties. The models are segmented by type of customer, distinguishing between individual and professional customers (with or without balance sheets) and according to products owned. The counterparties in each segment are automatically classified using statistical models (usually logistic regression models) into similar and statistically separate risk categories. Probability of default is estimated for each of these categories, based on the observation of average default rates over the longest period possible so as to obtain a period representative of the possible variability of the observed default rates. These estimates are systematically adjusted by applying margins of conservatism to cover any uncertainties. For comparison purposes, risk reconciliation is carried out between internal ratings and agency ratings.

Loss given default (LGD) is an economic loss measured by incorporating all inherent factors in a transaction as well as the costs incurred during the collection process. LGD estimation models for retail customers are applied specifically to each network. LGD values are first estimated by product, and based on whether or not any collateral has been provided. Other factors may also be considered secondarily, where they can be used to statistically distinguish between degrees of loss. The estimation method employed is based on the observation of marginal collection rates, depending on how long the customer has been in default. The advantage of this method is that it can be directly used to estimate LGD rates applied to performing loans and ELBE rates applied to loans in default. Estimates are based on internal collection histories for exposures at default over an extended period. Two margins of conservatism are then systematically added: the first to cover estimate uncertainties and the second to mitigate any economic slowdown effect.

Groupe BPCE uses two models to estimate EAD. The first estimates a Credit Conversion Factor (CCF) for off-balance sheet exposures. This model is automatically applied when off-balance sheet exposures are deemed material (*i.e.* exceeding the limits set for each type of product). The second estimates a flat increase in the balance sheet for non-material off-balance sheet exposures.

Internal ratings-based approaches – non-retail customers

Groupe BPCE has comprehensive systems for measuring non-retail customer risks, using either the Foundation IRB or Advanced IRB approach depending on the network and the customer segment. These systems can also be used to assess the credit quality of its loan books for better risk supervision.

The rating system consists in assigning a score to each counterparty. Given the Group's cooperative structure, a network of officers is responsible for determining the client's rating for the Group based on the uniqueness of the score. The score assigned to a counterparty is usually suggested by a model, then adjusted and validated by Risk division experts after they perform an individual analysis. This process is applied to the entire Non-Retail portfolio, except the new models reserved for Small Businesses, which are automatically rated (as with the Retail portfolio). The counterparty rating models are mainly structured according to the type of counterparty (corporates, financial institutions, public sector entities, *etc.*) and size of the company (measured by its annual revenues). When volumes are sufficient (SMEs, mid-sized companies, *etc.*), the models rely on statistical modeling (logistic regression methods) of client defaults, combined with qualitative questionnaires.

Failing that, grids built by experts are used. These consist of quantitative elements (financial ratios, solvency, *etc.*) derived from financial data and qualitative elements assessing the client's economic and strategic dimensions.

The rating methodologies for low-default portfolios are expert-based; qualitative and quantitative criteria (corresponding to the characteristics of the counterparty to be rated) are used to link the counterparty to a score and a rating, which is then linked to a PD. This PD is based on observation of external default data, but also on internal rating data. A PD scale cannot be quantified due to the low number of internal defaults.

With respect to country risk, the system is based on sovereign ratings and country ratings that limit the ratings that can be given to non-sovereign counterparties. The rating scale is built using past Standard & Poor's ratings to ensure the direct comparability in terms of risks with the rating agencies.

For the new Small Businesses, High Segment, SCI and NGO modules, dedicated scales per model have been defined for regulatory calculations. These scales are connected with the rating scale for internal risk management. For statistical models, the calibration of probabilities of default on the scales defined for regulatory calculations is based on the same principles as those set out for retail customers (in particular the historic representation of default rates, as well as the estimation of uncertainty margins).

LGD models (excluding retail customers) are predominantly applied by type of counterparty, type of asset, and whether or not any collateral has been provided. Similar risk categories are then defined, particularly in terms of collections, procedures and type of environment. LGD estimates are assessed on a statistical basis if the number of defaults is high enough (*e.g.* for the Corporate customers asset class). Past internal data on collections covering the longest possible period are used. If the number of defaults is not high enough, external databases and benchmarks are used to determine expert rates (*e.g.* for banks and sovereigns). Finally, some values are based on stochastic model, for loans in collection. Downturn LGD is checked and margins of conservatism are added if necessary.

Groupe BPCE uses two models to estimate EAD for corporates. The first estimates a Credit Conversion Factor (CCF) for off-balance sheet exposures. This model is automatically applied when off-balance sheet exposures are deemed material (*i.e.* exceeding the limits set for each type of product). The second estimates a flat increase in the balance sheet for non-material off-balance sheet exposures.

Standardized approach

The "risk measurement and internal ratings" section describes the various approved models used by Groupe BPCE for the different exposures classes. Where the Group does not have an internal model authorized for use in determining capital requirements for a given exposure class, they have to be estimated based on corresponding inputs under the standardized approach. These inputs are based in particular on the credit assessments (ratings) performed by rating agencies recognized by the supervisory authority as meeting ECAI (External Credit Assessment Institutions) requirements, such as Fitch Ratings, Moody's, Standard & Poor's, and Banque de France for Groupe BPCE.

In accordance with Article 138 of Regulation (EU) 575/2013 (Capital Requirements Regulation or CRR) on capital requirements for credit institutions and investment firms, where a counterparty has been rated by several rating agencies, the counterparty's rating is determined on the basis of the second highest rating.

When an external credit rating directly applicable to a given exposure is required and exists for the issuer or for a specific issuance program, the procedures used to determine the weighting are applied in accordance with CRR Article 139.

For fixed-income securities (bonds), short-term external ratings of the bond take precedence over external ratings of the issuer. If there are no external ratings for the bond, the issuer's long-term external rating is taken into account for senior debt only, except in the specific case of exposure to institutions whose risk weight is derived from the credit rating of the sovereign country in which it is established.

Backtesting

All three credit risk inputs are subject to yearly backtesting in order to verify the performance of the rating system. More specifically, backtesting is aimed at measuring the overall performance of models used, primarily to ensure that the model's discriminating power has not declined significantly relative to the modeling period. The parameters used in EAD calculations are also backtested

Observed default rates are then compared with estimated default rates for each rating. Ratings are checked for through-the-cycle applicability. More specifically, for portfolios with low default rates (public sector and social housing, large corporates, banks, sovereigns and specialized financing), a detailed analysis is carried out using additional indicators, including more qualitative analyses, among other things.

The scope of LGD default values is consistent with the values observed, *i.e.* limited exclusively to exposures at default. Estimated values therefore cannot be directly compared with LGD values measured in the outstanding portfolio. Downturn LGDs are also verified.

Backtesting results may call for the implementation of action plans if the system is deemed not sufficiently prudent or effective. The backtesting results and the associated action plans are discussed by First Line of Defense Committees (LoD1) and then reviewed by the Second Line of Defense Committees (LoD2) (see internal rating system governance).

On the basis of these exercises, the rating system has been deemed satisfactory overall in terms of effective risk management. Moreover, the calibrations of risk parameters remain conservative on the whole, relative to actual risk observations.

Impacts on the amount of guarantees the institution is required to give in the event its credit rating is downgraded

The CRR2 and the Delegated act require institutions to report to the competent authorities any contracts the conditions of which lead to additional liquidity outflows following a material deterioration of the credit quality of the institution (*e.g.* a downgrade in its external credit assessment by three notches). The institution shall regularly review the extent of this deterioration in light of what is relevant under the contracts it has entered into and shall notify the result of its review to the competent authorities (CRR 423.2/AD 30.2).

The competent authorities decide the weighting to be assigned to contracts deemed to have a material impact.

For contracts containing early exit clauses on master agreements (framework agreements between the bank and a counterparty for OTC derivative transactions without collateral), the early termination clause allows one counterparty to terminate the contract early following the deterioration of the credit quality of the other counterparty. Accordingly, the number of early terminations generated by credit quality deterioration shall be estimated.

It was agreed that the Group would measure outflows generated by reviewing all the Group's master agreements or credit support annexes on the OTC market, in order to assess the amount of the deposit/collateral required following a downgrade of three notches in the institution's long-term credit rating by three rating agencies (Moody's, S&P, Fitch). The calculation also includes the amount of the deposit/collateral required following a downgrade of one notch in the institution's short-term credit rating, with the Group considering such a downgrade inevitable if the institution's LT credit rating is downgraded three notches.

At Groupe BPCE level, the calculation covers BPCE SA, Natixis, Crédit Foncier and their funding vehicles: BP CB, GCE CB, BPCE SFH, FCT HL, SCF and VMG. Some intragroup contracts generate outflows at the individual institution level, but are neutralized at the Groupe BPCE consolidated level.

The Group uses a conservative approach in its calculation:

- the impact for each contract is the maximum amount between the three rating agencies between a 1-notch downgrade in the ST rating and a 3-notch downgrade in the LT rating;
- the amount of ratings triggers reported is the sum of all impacts of a 1-notch downgrade in the ST rating and a 3-notch downgrade in the MLT rating;
- the assumption is made that all external ratings are downgraded simultaneously by the three agencies and for all rated entities;
- as the national competent authority has not issued a recommendation, a weighting of 100% is applied to reported outflows for the calculation of the LCR.

7.5.3 Use of credit risk mitigation techniques

Data presented under IFRS 7

Credit risk mitigation techniques are widely used within the Group and are divided into real guarantees and personal guarantees.

A distinction is made between guarantees having an actual impact on collections in the event of hardships and guarantees recognized by the supervisory authority in the weighting of exposures used to reduce capital consumption. For example, a personal and joint guarantee provided in due form by a company director who is a customer of the Group, and collected in accordance with regulations, may be effective without being eligible as a statistical risk mitigation factor.

In some cases, the Group's institutions choose, in addition to employing risk mitigation techniques, to take opportunities to sell portfolios of disputed loans, particularly when the techniques used are less effective or non-existent.

Credit derivatives are also used to reduce risks, and apply almost exclusively to the Corporate customers asset class (and mainly Natixis).

Definition of guarantees

A real guarantee involves one or more solidly measured movable or immovable assets that belong to the debtor or a third party. This guarantee consists of granting the creditor a real right to said asset (mortgage, pledge of real property, pledge of listed liquid securities, pledge of listed liquid merchandise with or without divestiture, pledge, third party guarantee, *etc.*).

The effect of this collateral is to:

- reduce the credit risk incurred on an exposure, given the rights of the institution subject to exposure, in the event of default or other specific credit events affecting the counterparty;
- obtain the transfer of ownership of certain amounts or assets.

A personal guarantee is collateral that reduces the credit risk on an exposure, due to the commitment provided by a third party to pay a set amount if the counterparty defaults or due to any other specific event.

Accounting recognition under the standardized or IRB approach

Under the standardized approach:	Under the IRB approach:	For retail customers under the IRBA approach:
Personal guarantees and real guarantees are accounted for, subject to eligibility, using an enhanced weighting of the guarantee portion of the exposure. Real guarantees such as cash or liquid collateral are deducted from the gross exposure.	Excluding retail customers, real guarantees are taken into account, subject to eligibility, by decreasing the Loss Given Default applicable to the transactions. Personal guarantees are recognized, subject to eligibility, by substituting a third party's PD with that of a guarantor. The Banque Populaire and Caisse d'Epargne networks are implementing the IRB approach, with a last production batch in January 2026 (SCI scope). It should be noted that the major corporate customers of the Caisse d'Epargne network are not yet implementing the IRB approach.	Personal and real guarantees are taken into account, subject to eligibility, by decreasing the Loss Given Default applicable to the transactions.

Conditions for the recognition of guarantees

Articles 207 to 210 of Regulation (EU) 2024/1623 of May 31, 2024, amending Regulations (EU) No. 2019/876 and No. 575/2013, set out the conditions for the recognition of guarantees, in particular:

- the credit quality of the obligor and the value of the collateral shall not have a material positive correlation. Securities issued by the obligor shall not qualify as eligible collateral;
- the institution shall properly document the collateral arrangements and have in place clear and robust procedures for the timely liquidation of collateral;
- the institution shall have in place documented policies and practices concerning the types and amounts of collateral accepted;
- the institution shall calculate the market value of the collateral, and revalue it accordingly, whenever it has reason to believe that a significant decrease in the market value of the collateral has occurred.

The division of risks is a credit risk mitigation technique. In practice, individual or topical caps and limits are defined, thus reducing the bank's sensitivity to risks deemed excessive, either individually or industry-wide, in the event of a major incident.

Risk supervision activities may be implemented to reduce exposure to a given risk if it is deemed too high. They also contribute to effective division of risks.

Division of risks

The division of risks is a credit risk mitigation technique. It is reflected in the individual or topical limit systems and helps reduce each institution's sensitivity to risks considered either individually or sectorially to be too significant to carry in the event of major incidents.

Guarantors

The Banque Populaire network has historically used professionals and mutual guarantee companies (such as SOCAMAs, which guarantee loans to craftspeople) to secure its loans, in addition to the real guarantees used.

For loans to individual customers, it also turns to CASDEN Banque Populaire (and primarily its Parnasse Garanties structure) to back loans to all civil servants, to Crédit Logement and increasingly to Compagnie Européenne de Garanties et Cautions (CEGC, a subsidiary of BPCE SA).

For home loans, the Caisse d'Epargne network mainly calls on CEGC, FGAS (*Fonds de garantie à l'accession sociale à la propriété*) and, to a lesser extent, Crédit Logement (a financial institution and a subsidiary of most of the main French banking networks). These institutions specialize in the provision of guarantees for bank loans (predominantly home loans).

FGAS offers guarantees from the French government for secured loans. Loans covered by FGAS guarantees granted before December 31, 2006 are given a 0% risk weight, and loans covered by guarantees granted after that date have a risk weight of 15%.

For their home loans, the Banque Populaire and Caisse d'Epargne networks also use several mutual insurers, such as MGEN, Mutuelle de la Gendarmerie, *etc.*

For professional and corporate customers, the entire Group still uses Banque Publique d'Investissement, while calling on the European Investment Fund or European Investment Bank for guarantee packages in order to substantially reduce credit risk.

In some cases, organizations such as Auxiga are used for the seizure of inventory and the transfer of its ownership to the bank as collateral for commitments made in the event of financial hardships.

Finally, on an occasional basis, Natixis purchases credit insurance for certain transactions and in some circumstances, from private for example (SCOR) or public (Coface, Hermes, other sovereign agencies) reinsurance companies, while also making use of Credit Default Swaps (CDS).

In light of the Covid crisis, the French government allowed its guarantee to be used within the scope of the SGLs granted. Groupe BPCE used this option.

Credit derivatives serving as currency or interest rate hedges are entrusted to approved clearing houses in Europe or the US for Natixis operations in this country.

Concentration of collateral volumes

By type of guarantor:	• for home loan exposures, most collateral takes the form of mortgages (risk diversified by definition, bank better protected by basing credit approval decisions on client income), insurance-oriented guarantees such as those provided by CEGC (a subsidiary of Groupe BPCE, subject to regular stress testing), Crédit Logement (providing guarantees to multiple banks subject to the same constraints), FGAS (controlled by the French State, considered equivalent to sovereign risk). The CASDEN guarantee, issued to government employees, currently offers solid resilience according to a model based on the robust income of this particular customer base;
	• for professional customer exposures, the most common guarantees are those provided by the Banque Publique d'Investissement (BPI), subject to strict formal constraints, and mortgages. Guarantees provided by institutions such as SOCAMAs, whose solvency depends on the credit institutions of Groupe BPCE, are also used;
	• for corporate customers, the main guarantees used are Banque Publique d'Investissement mortgages and guarantees.
By credit derivative providers:	• the regulations require the use of clearing houses for interest rate risk on the new flow. This security does not, however, cover the counterparty default risk, which is a granular risk. Volumes of collateral provided by clearing houses are gradually on the rise, generating a regulated and supervised risk;
	• the currency risk is hedged at the level of each contract with the introduction of margin calls at a frequency appropriate to the risk. These transactions are matched to interbank counterparties specializing in this type of transaction, within the framework of individual limits authorized by the Group Credit Committee and counterparties.
By credit sector:	• Groupe BPCE has established sector-specific mechanisms to guide the guarantee policy based on the business sector in question. Appropriate recommendations are issued to the institutions.
By geographic area:	• Groupe BPCE is mainly exposed to France and, *via* Natixis, to other countries to a lesser extent. As a result, most guarantees are located in France.

Valuation and management of collateral comprising real guarantees

Groupe BPCE has an automatic valuation tool for real-estate guarantees available to all its networks.

Across the Banque Populaire network, in addition to real guarantees, the valuation tool also takes into account pledges of vehicles, equipment and tools, pleasure craft, and business assets.

The Caisse d'Epargne network uses the revaluation engine for real estate guarantees in all its risk segments.

Within the Group, the guarantees from Mutual Guarantee Companies recognized as providers of sureties considered equivalent to mortgages by the supervisory body are subject to a credit insurance valuation.

An enhanced Group valuation process was established to measure real estate guarantees above certain amounts. The certification obtained by BPCE Solutions immobilières (formerly Crédit Foncier Expertise), a subsidiary of BPCE since the decision was made to place CFF under run-off management, strengthens the Group's synergies.

Guarantees other than those referred to above are assessed and validated on the basis of a systematic valuation, either according to market value where the guarantees are quoted on liquid markets (*e.g.* listed securities), or based on expert opinion demonstrating the value of the guarantee used to hedge risks (*e.g.* the value of recent transactions on aircraft or ships according to their characteristics, the value of commodity holdings, the value of a pledge given on merchandise, or the value of a business based on its location, *etc.*).

7.5.4 Quantitative information

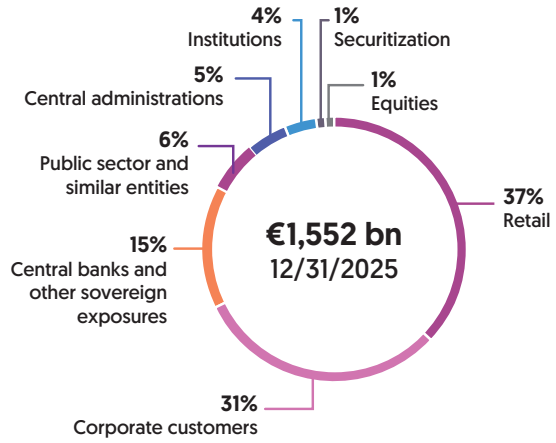
Information on credit risk within Groupe BPCE

Credit risk exposure

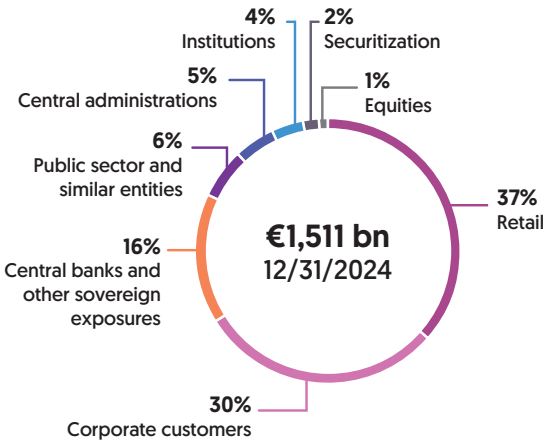
Data presented under IFRS 7

Portfolio breakdown by exposure class (excluding other assets)

12/31/2025



12/31/2024

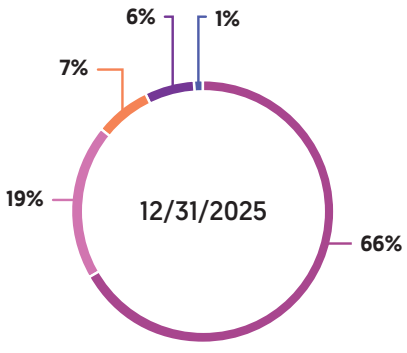


Groupe BPCE's total gross exposures amounted to more than €1,552 billion on December 31, 2025, up by €41 billion.

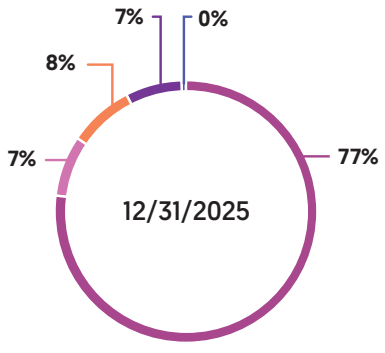
Geographic breakdown of gross exposures

12/31/2025

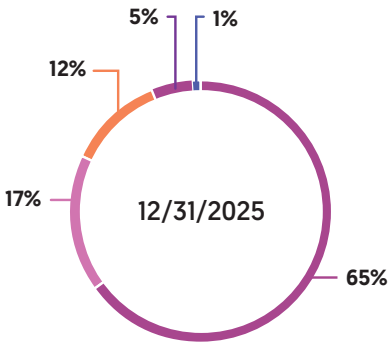
Institutions



Central administrations/Central banks and other sovereign exposures



Corporate customers



The gross exposures are very predominantly located in Europe, especially in France, for all asset classes.

France · Europe excluding France · North & South America · Asia and Oceania · Africa and the Middle East

Concentration

Data presented under IFRS 7

BPCE14 – Concentration by borrower

Concentration by borrower	12/31/2025 Distribution Gross amount/ Total major risks*	12/31/2025 Weighting in relation to capital Gross amount/ Capital**	12/31/2024 Distribution Gross amount/ Total major risks*	12/31/2024 Weighting in relation to capital Gross amount/ Capital**
No. 1 borrower	5.7%	18.3%	6.4%	21.9%
Top 10 borrowers	21.8%	69.9%	23.4%	79.2%
Top 50 borrowers	51.0%	163.6%	53.1%	180.0%
Top 100 borrowers	68.8%	220.7%	70.4%	238.6%

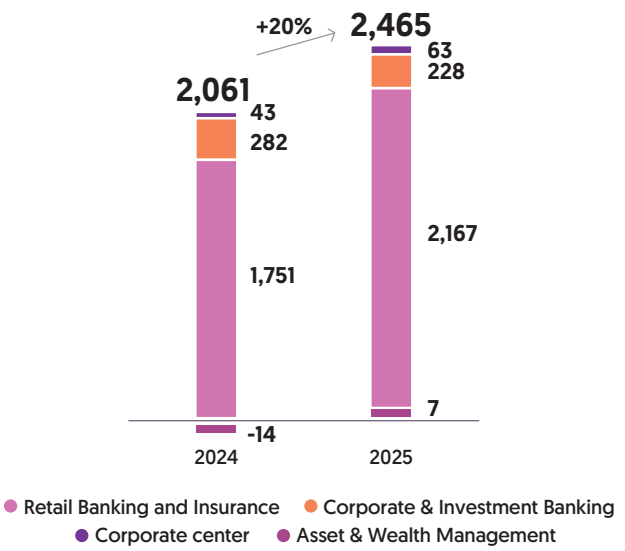
* Total large exposures excluding sovereigns for Groupe BPCE large scope (€244.8 bn at 12/31/2025).

** Regulatory capital, Groupe BPCE large scope (line 11 CA4 of Corep at 12/31/2025): €76.3 bn.

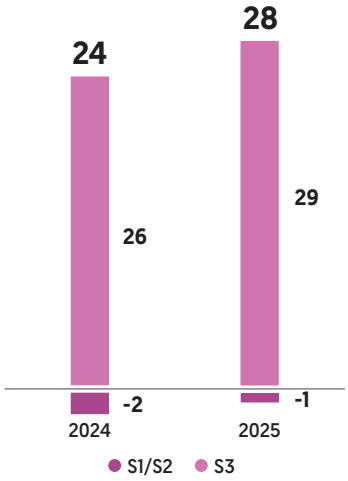
The percentage of the Top 100 borrowers was slightly up over the fiscal year and did not show any particular concentration.

Provisions and impairments

Change in Groupe BPCE's net cost of risk *(in millions of euros)*



Cost of risk in BP (Groupe BPCE)



In 2025, the cost of risk amounted to €2,465 million, up by 20% year-on-year. It can be broken down as follows:

- on performing loans classified as Stage 1 or Stage 2: €62 million reversal provision in 2025 compared with €177 million reversed in 2024;
- the provisions for performing loans classified as Stage 3 went from €2,238 million in 2024 to €2,527 million in 2025.

In 2025, Groupe BPCE's cost of risk stood at 28 bps in relation to gross customer loan outstandings (24 bps in 2024). It included a provision reversal on performing loans of 1 bp (compared with a reversal of 2 bps in 2024) and an allocation of 29 bps for proven risks (compared with an allocation of 26 bps in 2024).

The cost of risk stood at 29 bps for the Retail Banking and Insurance division (24 bps in 2024), including a provision reversal for performing loans of 2 bps (as in 2024) and an allocation of 30 bps on outstandings with proven risk (compared with a provision of 26 bps in 2024).

The Corporate & Investment Banking cost of risk amounted to 30 bps (40 bps in 2024) including a reversal of 4 bps for provisioning of performing loans (compared with a reversal of 6 bps in 2024) and a provision of 26 bps on outstandings with proven risk (compared with a provision of 46 bps in 2024).

The ratio of non-performing loans to gross loan outstandings stood at 2.7% on December 31, 2025, up by 0.2 pp from the end of December 2024.

BPCE15 – Hedging of non-performing loans

in millions of euros	12/31/2025	12/31/2024
Gross loan outstandings to customers and credit institutions	1,015,914	980,988
O/w S1/S2 outstandings	988,515	956,647
O/w S3 outstandings	27,399	24,341
Ratio of non-performing/gross loan outstandings	**2.7%**	**2.5%**
S1/S2 impairments recognized	4,962	5,047
S3 impairments recognized	10,791	9,703
Impairments recognized/non-performing loans	**39.4%**	**39.9%**
Coverage ratio (including guarantees related to impaired outstandings)	**62.9%**	**68.2%**

7.6 Counterparty risk

7.6.1 Counterparty risk management

Measuring counterparty risk

Data presented under IFRS 7

In terms of capital requirements, Groupe BPCE and its subsidiaries measure counterparty risk for derivative instruments (swaps or structured products, for instance) using the internal model method for the Natixis scope, or the mark-to-market method for the other institutions. In order to perfect the economic measurement of the current and potential risk inherent in derivatives, a tracking mechanism based on a standardized economic measurement is currently being instituted throughout Groupe BPCE.

Natixis mainly uses an internal model to calculate its counterparty risk-related capital requirements. Using Monte Carlo simulations for the main risk factors, this model measures the positions on each counterparty and for the entire lifespan of the exposure, taking netting and collateralization criteria into account.

The model thus determines the Expected Positive Exposure (EPE) profile and the Potential Future Exposure (PFE) profile, the latter being the main indicator used by Natixis for assessing counterparty risk exposure. This indicator is calculated as the 97.7% percentile of the distribution of exposures for each counterparty.

Apart from Natixis, the standard model is used to calculate the capital requirements under the CRR.

Other metrics such as the PFE and stress tests are used to manage the counterparty risk of Group entities at counterparty level. Harmonization work between Natixis and the rest of the Group is underway.

Counterparty risk mitigation techniques

Group ceilings and limits regulate counterparty risk. These are validated by the Group Credit and Counterparty Committee.

Use of clearing houses and forward financial instruments (daily margin calls under ISDA agreements, for example) govern relations with the main clients (mainly Natixis and BRED). Accordingly, the Group has implemented the EMIR requirements.

The principles of counterparty risk management are based on:	• a risk measurement determined according to the type of instrument in question, the term of the transactions, and whether or not any netting and collateralization agreements are in place; • counterparty risk limits and allocation procedures; • a value adjustment in respect of counterparty risk: the Credit Value Adjustment (CVA) represents the market value of a counterparty's default risk (see paragraph below); • incorporation of wrong-way risk: wrong-way risk refers to the risk that a given counterparty exposure is heavily correlated with the counterparty's probability of default.
From a regulatory standpoint, counterparty risk is represented by:	• specific wrong-way risk, *i.e.* the risk generated when, due to the nature of the transactions entered into with a counterparty, there is a direct link between its credit quality and the amount of the exposure; • general wrong-way risk, *i.e.* the risk generated when there is a correlation between the counterparty's credit quality and general market factors.

The goal is to enable the bank to better understand the exposure to counterparty credit risk and thus improve the management of such exposure. Specific wrong-way risk is subject to a specific capital requirement, while general wrong-way risk is assessed using the WWR stress scenarios defined for each asset class.

In the event the Bank's external credit rating is downgraded, it may be required to provide additional cash or collateral to investors under agreements that include rating triggers. In particular, in calculating the liquidity coverage ratio (LCR), the amounts of these additional cash outflows and additional collateral requirements are measured. These amounts comprise the payment the bank would have to make within 30 calendar days in the event its credit rating were downgraded by as much as three notches.

Credit valuation adjustment (CVA)

The valuation of financial instruments traded over the counter by Groupe BPCE with external counterparties in its capital markets businesses (mainly Natixis and BRED) and ALM activities includes credit valuation adjustments. The CVA is an adjustment to the valuation of the trading book aimed at factoring in counterparty credit risks. It thus reflects the expectation of loss in fair value terms on the existing exposure to a counterparty due to the potential positive value of the contract, the counterparty's probability of default and the estimated collection rate.

The level of the CVA varies according to changes in exposure to existing counterparty risk and in the counterparty's credit rating, which may trigger changes in the Credit Default Swaps (CDS) spread used to determine the probability of default.

7.7 Securitization transactions

7.7.1 Regulatory framework and accounting methods

Regulatory framework

Two European regulations aimed at facilitating the development of the securitization market, preventing risks and ensuring the stability of the financial system, were published in the Official Journal of the European Union on December 28, 2017. The aim of these two regulations is to provide a framework for securitization transactions in the European Union, and to establish a new framework for calculating prudential requirements (hierarchy of approaches for calculating RWA, STS criterion, *etc.*): Regulation (EU) 2017/2402 and Regulation (EU) 2017/240. These two regulations entered into force on January 1, 2019.

Accounting methods

Securitization transactions in which Groupe BPCE is an investor (*i.e.* the Group invests directly in some securitization positions, provides liquidity, and is a counterparty for derivatives exposures or guarantees) are recognized in accordance with the Group's accounting principles, as referred to in the notes to the consolidated financial statements, and mainly under "Securities at amortized cost" and "Financial assets at fair value through other comprehensive income"

Synthetic securitization transactions such as Credit Default Swaps are subject to the accounting recognition rules specific to trading derivatives.

7.7.2 Securitization management at Groupe BPCE

Securitization exposures of Groupe BPCE

The banking book EAD in the prudential sense (final securitization) amounted to €21.1 billion at December 31, 2025 (-€0.6 billion year-on-year). It should be noted that the banking book EAD under **initial securitization** (before taking into account guarantees) amounted to €22.1 billion at December 31, 2025.

The positions were mainly carried by **Natixis** (€16.7 billion, acting as investor, sponsor and originator), **BRED** (€3.2 billion, acting as investor) and **BPCE SA** (€1.2 billion, run-off positions arising from the transfer of a portfolio of home loan and public asset securitizations from Crédit Foncier in September 2014, acting as investor).

The trading book EAD amounted to €573 million at December 31, 2025, and were mainly carried by **Natixis** (€325 million) and **BRED** (€248 million).

The decrease in EAD of the banking book was mainly due to:

- Natixis' sustainable management activities (-€0.7 billion), particularly in origination (-€1.1 billion), sponsorship (-€0.1 billion *via* the Magenta and Versailles conduits) and investment (+€0.5 billion);
- an increase in outstandings on the BRED scope amounting to +€0.3 billion;
- the decrease in exposures on the BPCE portfolio managed in run-off for -€0.2 billion;
- the workout portfolio exposures of the Corporate & Investment Banking division (formerly GAPC) and BPCE are managed under a run-off method, whereby positions are gradually amortized but still managed (including disposals) in order to safeguard the Group's interests by actively reducing positions under acceptable pricing conditions.

The RWAs of Groupe BPCE amount to €4.2 billion (€4.0 billion in the banking book and €0.2 billion in the trading book) and are mainly calculated according to the SEC-SA approach (€2.5 billion), SEC-ERBA (€1.5 billion), then by the SEC-IRBA (€0.2 billion), NPE (€88 million) and default (€5 million) approaches.

The transactions originated by BPCE SA and BRED, as part of their liquidity management activity, are described in the dedicated section (Liquidity risk management policy).

Risk monitoring on securitization portfolios

The various relevant portfolios are specially monitored by the entities and subsidiaries, and by the central institution. Depending on the scope involved, special management or steering committees regularly review the main positions and management strategies.

At the central institution, the Group Risk division regularly reviews the securitization exposures (quarterly mapping considered an essential report and governed in accordance with BCBS 239 principles), changes in portfolio structure, risk-weighted assets and potential losses.

At the same time, special purpose surveys are conducted by the teams on potential losses and changes in risk-weighted assets through internal stress scenarios (risk-weighted assets and loss on completion).

Lastly, the Group Risk division supervises the risks associated with sensitive securitization positions by identifying rating downgrades and monitoring the evolution of exposures (valuation, detailed analysis). Major exposures are systematically submitted to the Group Watchlist and Provisions Committee, which meets quarterly to determine the appropriate level of provisioning.

7.8 Market risk

7.8.1 Market risk policy

The risk policies governing market transactions are defined by the Risk departments of the institutions with trading activities. These policies are based on a qualitative and forward-looking perspective.
In addition, for the banking book activities, investment policies are defined at Group level. The risk management framework related to this activity is defined in accordance with investment policies and is reviewed annually.

7.8.2 Market risk management

The Risk division works in the areas of risk measurement, definition and oversight of limits, and supervision of market risks. It is tasked with the following duties:

Market risk measurement methods

Data presented under IFRS 7

From a prudential standpoint, Groupe BPCE uses the standardized approach to measure market risk. The risk monitoring system relies on three types of indicators used to manage activity, on an overall basis and by similar activity, by focusing on directly observable criteria, including:

- sensitivity to variations in the underlying instrument, variations in volatility or to correlation, nominal amounts, and diversification indicators. The limits corresponding to these qualitative and quantitative operational indicators thus complement the VaR limits and stress tests;
- daily assessment of global market risk measurement through a 99% one-day VaR;
- stress tests to measure potential losses on portfolios in extreme market conditions. The Group system relies on comprehensive stress tests and specific stress tests for each activity.

Special reports on each business line are sent daily to the relevant operational staff and managers. BPCE's Group Risk division also provides a weekly report summarizing all of the Group's market risk, with a detailed breakdown for Natixis and BRED Banque Populaire.

In addition, for Natixis, global market risk reports are sent to the central institution on a daily basis. The latter produces a weekly summary of market risk indicators and results for the Group's executive management.

Finally, a global review of Groupe BPCE's consolidated market risks (covering VaR measures and hypothetical/historic stress scenarios) is presented to the Group Market Risk Committee, in addition to risk reports prepared for the entities.

In response to the Revised Pillar III Disclosure Requirements (MRB Table: Qualitative disclosures for banks using the Internal Models Approach), the main characteristics of the various models used for market risk are presented in the Natixis Registration Document.

The internal market risk and valuation models used by Natixis are validated by the Model Risk Management and Wholesale Banking Validation team of Groupe BPCE's Risk division. This independent validation of the models is part of the broader model risk management framework described in Section 7.15.

More specifically for the valuation models, the following aspects are assessed:

- theoretical and mathematical validation of the model, analysis of the assumptions and their justification in the model documentation;
- algorithmic validation and comparison with alternative models (benchmarking);
- analysis of the stability, the convergence of the numerical method, the stability of the model in the event of stressed scenarios;
- study of implicit risk factors and calibration, analysis of input data, and identification of upstream models;
- measurement of the model risk and validation of the associated reserve methodology.

Sensitivities

Each institution's Risk division monitors and verifies compliance with sensitivity limits on a daily basis. If a limit is breached, an alert procedure is triggered in order to define the measures required to return within operational limits.

VaR

Market risk is also monitored and assessed *via* synthetic VaR calculations, which determine potential losses generated by each business line at a given confidence level (99%) and over a given holding period (one day). For calculation purposes, changes in market inputs used to determine portfolio values are modeled using statistical data.

All decisions relating to risk factors using the internal calculation tool are revised regularly by committees involving all of the relevant participants (Risk division, Front Office and Results department). Quantitative and objective tools are also used to measure the relevance of risk factors.

VaR is based on numerical simulations, using a Monte-Carlo method which takes into account possible non-linear portfolio returns based on the different risk factors. It is calculated and monitored daily for all Group trading books, and a VaR limit is defined on a global level and per business line. The calculation tool generates 10,000 scenarios, which provides satisfactory precision levels. For certain complex products, which account for a minor share of the trading books, their inclusion in the VaR calculation is obtained by using sensitivities. VaR backtesting is carried out on approved scopes and confirms the overall robustness of the model used. Extreme risks, which are not included in VaR, are accounted for using stress tests throughout the Group.

This internal VaR model used by Natixis was approved by the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector, in January 2009. Natixis thus uses VaR to calculate the capital requirements for market risks in the approved scopes.

Stress tests

Stress tests are calibrated according to severity and occurrence levels, which are consistent with portfolio management objectives:

Trading book stress tests are calibrated over a 10-day period and a 10-year probability of occurrence.

They are based on:

- historical scenarios, which reproduce changes in market conditions observed during past crises, their impacts on current positions and P&Ls. They can be used to assess the exposure of the Group's activities to known scenarios. 12 historical stress tests have been in place since 2010;
- hypothetical scenarios, which involve simulating changes in market conditions in all activities based on plausible assumptions concerning the dissemination of an initial shock. These shocks are based on scenarios defined according to economic criteria (real estate crisis, economic crisis, *etc.*), geopolitical considerations (terrorist attacks in Europe, toppling of a regime in the Middle East, *etc.*) or other factors (bird flu, *etc.*). The group has had seven theoretical stress tests since 2010.

Banking book stress tests are calibrated over a longer period in line with the banking book's management periods:

- a bond stress test calibrated using a mixed hypothetical-historical approach that reproduces a stress on European sovereigns (similar to the 2011 crisis);
- a bond stress test calibrated using a mixed hypothetical-historical approach that reproduces a stress on corporates (similar to the 2008 crisis);
- an equity stress test calibrated over the 2011 historical period, applied to equity investments for the purpose of the liquidity reserve;
- a private equity and real estate stress test, calibrated over the 2008 historical period, applied to the private equity and real estate portfolios.

The different stress tests are subject to limits set by institution and for the Group. These are monitored as part of the recurring control system and through regular reporting.

Control

Independent price verification

The Group has established an organizational structure tasked with independent price verification (IPV) through:

- creation of a Group valuation team in the Market Risk division;
- Group governance to ensure compliance.

Risk monitoring

Data presented under IFRS 7

The Group Risk division is responsible for monitoring the risks associated with all Groupe BPCE capital market activities, subject to regular review by the Group Market Risk Committee.

Within the scope of the trading book, market risk is monitored daily by measuring Group Value at Risk (VaR) and performing global and historical stress tests. The proprietary VaR calculation system developed by Natixis is used by the Group. This system provides a tool for the measurement, monitoring and control of market risk at the consolidated level and for each institution, on a daily basis and taking account of correlations between the various portfolios. There are certain distinctive characteristics of Groupe BPCE that must be considered, in particular:

- for Natixis: given the size of its capital markets business, Natixis' risk management framework is specifically tailored to this entity;
- for the Banque Populaire network: only BRED Banque Populaire has a capital markets business. It monitors the financial transactions carried out by the Banque Populaire network trading floor and Finance division daily, using 99% one-day Value at Risk, sensitivity, volume and stress scenario indicators;
- for Banque Palatine: daily monitoring of trading book activities is based on the Risk division's supervision of *99%* one-day Value at Risk, stress tests and compliance with regulatory limits.

All limits (operational indicators, VaR, and stress tests) are monitored daily by each institution's Risk division. Any limit breaches must be reported and, where applicable, are subject to a Management decision concerning the position in question (close, hedge, hold, *etc.*).

These supervisory mechanisms also have operational limits and resilience thresholds that determine the Group's risk appetite for trading operations.

Banking book risk is supervised and monitored by activity: liquidity reserves, illiquid assets (private equity, non-operational real estate), securitizations and liquid assets excluding liquidity reserves. Liquidity reserves and liquid assets excluding liquidity reserves are monitored monthly, mainly *via* stress test indicators. Illiquid assets and securitizations are monitored quarterly.

The Group's single treasury and central bank collateral management pool is subject to daily monitoring of risks and economic results for all of its activities, which are mainly related to the banking book.

French Banking Separation and Regulation act (SRAB) and Volcker Rule (VOLCKER)

The Group has complied with the requirements set out in Article 2 of the order of September 9, 2014, implementing Title I of act No. 2013-672 of July 26, 2013, on the separation and regulation of banking activities (SRAB act), amended by the order of March 18, 2019.

Groupe BPCE also falls within the scope of application of the American Volcker Rule. However, only the institutions of the "Small Group" - composed of BPCE SA and its subsidiaries held at more than 25% including Natixis SA and its subsidiaries (Asset Management division and Wealth Management division), Groupe Crédit Foncier, Banque Palatine, BPCE International, the subsidiaries of the FSE division, Oney, Insurance, Payments - are affected by the requirements of the Volcker rule.

The mapping of Groupe BPCE's internal units reflects the convergence of the SRAB and Volcker compliance frameworks.

7.8.3 Quantitative information

Group VaR (Monte Carlo, 99%, for one day) amounted to €7.3 million at December 31, 2025 compared to €7.9 million at December 31, 2024.

The Group VaR RAF threshold was respected throughout the year and remained at relatively low levels, despite a maximum reached at the end of April at 49% of the threshold, after the Liberation Day announcements. The average consumption was 32%, with variations linked mainly to the equity and fixed income activities.

7.9 Liquidity, interest rate and foreign exchange risks

7.9.1 Governance and structure

Like all credit institutions, Groupe BPCE is exposed to structural liquidity, interest rate and foreign exchange risks.
These risks are closely monitored by the Group and its institutions to secure immediate and future income, balance the balance sheets and promote the Group's development.
The Audit Committee and the Supervisory Board of Groupe BPCE are consulted on the general asset/liability management policy and are informed of any major decisions taken regarding liquidity, interest rate and foreign exchange risk management. The implementation of the chosen policy is delegated to the Group Asset/Liability Management Committee.

Each year, Supervisory Board of Groupe BPCE validates the main lines of the ALM policy, *i.e.* the principles of market risk measurements and levels of risk tolerance. It also reviews the risk limit system each year.

Each quarter, the Audit Committee of Groupe BPCE is informed of the Group's position through management reports containing the main risk indicators.

The Group Asset/Liability Management Committee, chaired by the Chairman of the Management Board of BPCE, is responsible for the operational implementation of the defined policy.

7.9.2 Liquidity risk management policy

Liquidity risk is defined as the risk of the Group being unable to meet its commitments or to settle or offset a position, due to market conditions factors specific to Groupe BPCE, within a specified period and at a reasonable cost. It reflects the risk of not being able to meet net cash outflows, including those related to collateral requirements, over all time horizons, from the short term to the long term.

Liquidity risk is assessed differently over the short-, medium- and long-term:

- in the short-term, it involves assessing an institution's ability to withstand a crisis;
- in the medium-term, liquidity is measured in terms of cash requirements;
- in the long-term, it involves monitoring the institution's maturity transformation level.

Liquidity risk is likely to materialize in the event of a decline in sources of financing that could be caused by a massive withdrawal of customer deposits or by problems in executing the annual financing plan following a widespread crisis of confidence on the markets or events specific to Groupe BPCE. It could also be triggered by an increase in financing needs due to an increase in drawdowns on loan commitments, an increase in margin calls or a higher collateral requirement.

All liquidity risk factors are accurately mapped, updated annually and presented to the Group Asset/Liability Management Committee. This mapping identifies the various risks as well as their level of materiality, assessed according to various criteria shared between the Asset/Liability Management and Risk divisions.

Objectives and policies

The liquidity management policy aims mainly to refinance all of the Group's business lines in an optimal and sustainable manner.

This mandate involves the following duties:

- ensure a sustainable refinancing plan at the best possible price, making it possible to finance the Group's various activities over a period consistent with the assets created;
- distribute this liquidity between the various business lines and monitor its use and changes in liquidity levels;
- comply with regulatory ratios and internal constraints resulting in particular from stress tests guaranteeing the sustainability of the Group's business model refinancing plan, even in the event of a crisis.

To this end, the Group relies on three mechanisms:

- centralized funding management aimed primarily at supervising the use of short-term funding, spreading out the maturity dates of medium- and long-term funds and diversifying sources of liquidity;
- supervision of each business line's liquidity consumption, predominantly by maintaining a balance between growth in the credit segment and customer deposit inflows;
- the creation of liquidity reserves, both in cash and collateral, in line with future liabilities and the targets set for securing the Group's liquidity.

These systems are managed and overseen by way of a consistent set of indicators, limits and management rules are combined in a centralized framework of standards and rules for the Group's institutions, so as to ensure the measurement and consolidated management of liquidity risk.

Operational management of liquidity risk

To keep track of its liquidity risks and define appropriate management and/or corrective actions, the Group has established a reliable, comprehensive and effective internal liquidity management and oversight system including a set of associated indicators and their limits. Liquidity risk management and monitoring are carried out at the consolidated Group level and within each of its entities. The definition of these indicators, the calculation methodology and any associated limits are covered in a body of consolidated standards that is reviewed and validated by the decision-making bodies of the Group and its institutions.

Liquidity consumption of the business lines

The liquidity consumption of the Group's various business lines and within the entities is governed by an internal liquidity allocation system based, on the one hand, on the setting of a target level of short-term, medium-term and long-term market footprint for the Group and, on the other hand, on its distribution among the Group's various entities *via* a liquidity budget system. The Group's market footprint measures its overall dependence to date on bond and money market funding. The sustainability of the Group's market access is measured on a regular basis. The structure of the Group's market footprint (schedule, type of vehicles, currencies, geographic area, investor categories, *etc.*) is thus closely monitored to ensure that it is not dependent on short-term financing and that sources of funds are diversified.

Each entity is required to meet the liquidity budget allocated to it both in terms of actual liquidity consumption and in terms of the projected vision as part of the budget process and the multi-year forecast. Compliance with the liquidity budget allocated to each entity makes it possible to ensure that the market footprint target set by the Group is correctly sized and to adapt, where necessary, the business line projections. Moreover, this also makes it possible to adjust the implementation rate of the multi-year funding plan based on the needs expressed by the business lines and the Group's capacity to carry out public issues on the market.

The financing needs of the business lines are closely correlated with changes in commercial assets and liabilities (customer loans and deposits), in terms of both the liquidity gap between the average assets and liabilities and the need for liquidity reserves that can be generated through compliance with the liquidity coverage ratio (LCR).

The liquidity gap resulting from commercial activity is measured using the customer loan-to-deposit ratio (LTD) at both the consolidated and entity level. This indicator allows a relative measure of the Group's autonomy with regard to the financial markets and monitors changes in the structure of the commercial balance sheet.

Risk indicators

The liquidity risk of the Group and its entities is measured based on regulatory ratios as defined by European regulations, with the LCR (liquidity coverage ratio for short-term liquidity) and the NSFR (Net Stable Funding Ratio for long-term liquidity).

This regulatory approach is complemented by an internal "economic" approach consisting of measuring the liquidity gap over a 10-year horizon. It makes it possible to control the flow of medium and long-term debt and to anticipate the Group's refinancing needs. It is governed by Group and individual entity limits.

The liquidity gap is measured using a so-called static approach, which only takes into account on-balance sheet and off-balance sheet positions to date, and incorporates outflow assumptions for unmatured products. These assumptions are based either on internal modeling (early repayment of loans, closing and deposits on home savings plans or *PELs*, *etc.*) or on agreements established for all Group entities (notably for customer deposits with no fixed maturity date, demand deposits and passbook savings accounts). The validation of the models and agreements is based on a process shared between the Asset/Liability management function and the Risk division which ensures a cross-examination of the relevance of the assumptions used and their suitability with respect to the current limit system.

Stress simulation and liquidity reserve

Liquidity crisis simulations are regularly carried out to test the Group's ability to meet its commitments and continue its day-to-day business in a context of crisis. This stress test system is intended to become a tool to support management decisions and to assess the Group's resilience over a defined period of time, as well as the relevance of its management system.

Under normal circumstances, these simulations aim to regularly measure exposure to liquidity risks by playing out a set of different determined stress scenarios. They make it possible to ensure the correct balance between the Group's liquidity reserve and changes in the net liquidity position under stress, as well as the ability to comply with regulatory requirements.

In a crisis situation, they make it possible to simulate possible changes in the instantaneous liquidity position on the basis of tailor-made scenarios, to identify potential impacts and to define the actions to be taken in the short-term.

The stress calculation methodology is based on the projection of the Group's on-balance sheet and off-balance sheet flows with stressed assumptions defined in the context of stress scenarios and on changes in the liquidity reserve taking into account securities transactions and different valuations (Market, ECB haircuts) according to different scenarios. Thus, for example, we assume that we will only be able to partially renew all maturing refinancing operations, will have to cope with requests for early repayment of deposits or unexpected disbursements on off-balance sheet loan commitments, and will incur a loss of customer deposits or a substantial change in their structure, or a loss of liquidity in certain market assets.

Liquidity stressors are based on different scenarios: idiosyncratic (Group-specific) crisis, systemic crisis (affecting all financial institutions), and a combined crisis. Different intensity levels are also used to enable sensitivity analyses.

Liquidity risk assessment systems

The Group's consolidated indicators are produced by the Asset/Liability Management department based on indicators produced at the level of each entity. The indicators are derived from data collected in the entities' information systems in accordance with a Group organization scheme (data collection and harmonization, correction and validation process).

A first-level control is carried out by the ALM departments of the entities in conjunction with Group ALM, followed by a second-level control carried out by the Risk departments of the entities and the Group.

Contingency Funding Plan (CFP)

The Group's Contingency Funding Plan (CFP) brings together the work implemented by the Group to facilitate its management of liquidity crisis situations.

The CFP also includes an inventory and an analysis ahead of the financial and business lines that the Group can implement, including potential liquidity gains and the associated costs (loss of profitability) and possible obstacles to their implementation. These levers can be grouped into three categories:

1) liquidity collection: The Group comprises many entities, which allows it to collect liquidity on an *ad hoc* basis and in a diversified manner;

2) reduction in liquidity consumption: Given its activities, the Group could, if necessary, reduce the financing it grants to the economy, particularly on the most controllable activities of its Corporate & Investment Banking in the event of tensions on its liquidity position;

3) the monetization of liquid assets: The Group has significant collateral reserves that can be converted into cash if necessary.

The lessons learned from past crises are used to update the system in all its components, namely the early warning indicators (EWI) system, the comitology system and the related escalation process, as well as the assessment of the different levers.

Centralized funding management

The Financial Management department organizes, coordinates and supervises the funding of Groupe BPCE on the markets.

Groupe BPCE's short-term funding is operated by a joint refinancing pool. This integrated treasury team is capable of managing the Group's cash position more efficiently, particularly during a credit crunch.

The Group has access to short-term market funding through its two main issuers: BPCE and its subsidiary Natixis. In 2025, BPCE created an asset-backed commercial paper (ABCP) conduit, Portdalon, providing additional access to secured short-term liquidity.

For medium- and long-term funding requirements (more than one year), in addition to deposits from customers of the Banque Populaire and Caisse d'Epargne networks, which are the primary source of funding, the Group also issues bonds on the financial markets with BPCE as principal operator, offering the broadest range of bonds to investors:

- directly as BPCE for subordinated debt issues (Additional Tier-1 and Tier-2), senior non-preferred debt and vanilla senior preferred debt issues, in multiple currencies, with the main currencies being the euro, the United States dollar, the British pound sterling, the Japanese yen, the Australian dollar and the Singapore dollar;
- or as BPCE SFH, the Group's main issuer of covered bonds; this issuer, operated by BPCE, specializes in *obligations de financement de l'habitat* (OH), a category of secured bond guaranteed by French legislation (backed by residential home loans in France).

Groupe BPCE works with two other specialized operators to round out its MLT funding sources:

- Natixis for structured senior preferred debt issues (private placements only) under the Natixis name, and for covered bonds under German law (backed by commercial home loans) under the Natixis Pfandbriefbank AG name;
- Crédit Foncier for issues of covered bonds of the type known as *obligations foncières* (OF), under the Compagnie de Financement Foncier name (a subsidiary of Crédit Foncier). OFs are a category of covered bonds based on French legislation (backed by public sector loans and assets, in line with the new positioning decided on in 2018 for this Group issuer, because this issuer's collateral still includes residential home loan outstandings in France previously produced by Crédit Foncier).

It should be noted that BPCE also contributes to the medium- and long-term refinancing of Corporate & Investment Banking hosted by Natixis (in addition to the structured private placements mentioned above and Natixis' own customer collections), which no longer intends to be an issuer on the markets in the form of a public issue.

BPCE has short-term funding programs governed by French law (NEU CP), UK law (Euro Commercial Paper) and New York State law (US Commercial Paper), and MLT funding programs governed by French law (EMTN and Neu MTN), New York State law (US MTN), Japanese law (Samurai) and New South Wales law (AUD MTN).

Lastly, the Group is able to carry out secured refinancing operations, in particular in the form of securitization of receivables or securitization of collateralized loans structured from loans originated by the Banque Populaire and Caisse d'Epargne networks as well as the specialized subsidiaries (Financial Solutions & Expertise).

Internal liquidity pricing

The centralization of the Group's refinancing involves the implementation of liquidity circulation principles within the Group and the rules for pricing this liquidity so that liquidity can circulate in the best possible way between the Group's entities.

Centralized collateral management

In its liquidity management policy, Groupe BPCE attaches great importance to the management and optimization of its collateral. Non-negotiable debt securities (in particular loans originated by the networks) and negotiable debt securities (financial securities, *etc.*) that are eligible for a funding arrangement, whether Central Bank funding (*via* the 3G pool) or Group funding (covered bonds, securitization, *etc.*) are classified as collateral.

Three key principles are implemented:

- centralized management of the entities' collateral by the central institution in order to improve oversight and operationality of collateral management. For entities with a 3G Pool (Natixis, Compagnie de Financement Foncier, BRED), each entity is responsible for its own collateral. Nonetheless, these entities cannot directly participate in ECB refinancing operations without prior approval from the central institution;
- a definition of investment and management rules by the central institution, with the entities enjoying autonomy in their decision-making in accordance with Group standards;
- a set of indicators relating to the monitoring of collateral determined at Group level and monitored by the Group's Asset/Liability Management Committee.

Adequacy of the institution's liquidity risk management frameworks

The Group continues to focus on improving risk monitoring through a detailed mapping of liquidity risks and on optimizing the tools and procedures to manage the Group's liquidity position and its balance sheet, on a constant basis, in order to be able to cope with new crises, should they occur.

7.9.3 Quantitative information

BPCE37 – Liquidity reserves

in millions of euros	12/31/2025	12/31/2024
Cash placed with central banks	127,536	127,307
LCR securities	77,486	66,661
Assets eligible for central bank funding	100,352	108,458
Total	**305,374**	**302,426**

At December 31, 2025, the liquidity reserves covered 197% of the short-term funding and short-term maturities of MLT debt (€155 billion at December 31, 2025) compared to 177% at December 31, 2024 (ST and MLT maturities of €171 billion).

The increase in the coverage ratio is partly related to the repayments of short-term loans made mainly in April 2025 and extended until the end of the year.

The change in the liquidity reserve during 2025 reflects the Group's liquidity management policy with the desire to maintain a high level of hedging of its liquidity risk.

BPCE38 – Liquidity gap

in millions of euros	01/01/2026 to 12/31/2026	01/01/2027 to 12/31/2029	01/01/2030 to 12/31/2033
Liquidity gap	40,325	22,544	12,682

The projected liquidity position shows a structural liquidity surplus over the analysis horizon. Compared with the end of 2024, this surplus increased by €16.0 billion over one year and by €3.0 billion over two to four years, and decreased by €3.4 billion over five to eight years.

Over the short-term horizon, the increase of the liquidity surplus was mainly due to the Commercial Banking networks with an improvement in the customer gap due to the increase in term and sight resources. This beneficial effect of higher inflows was mitigated by an increase in customer loans (homes and equipment). In addition, the cash gap also improved due to an increase in specialized medium- and long-term refinancing.

Over the two-to-four year horizon, the liquidity surplus increased compared to the end of 2024. This increase is smaller than over the one-year horizon because the contribution of the networks' customer gap became neutral. The improvement in the liquidity surplus is explained in particular by the improvement in the cash gap of BPCE SA due to an increase in interbank borrowings. In the longer term, this increase in surplus disappears with the significant degradation of Natixis' cash gap due to an increase in interbank loans.

Customer loan-to-deposit ratio

At December 31, 2025, the Group's customer loan-to-deposit ratio declined to 123% compared to 128% at December 31, 2024.

BPCE39 – Sources and uses of funds by maturity

Financial instruments marked to market on the income statement and held in the trading book, variable-income available-for-sale financial assets, non-performing loans, hedging derivatives and revaluation differences on interest rate risk-hedged portfolios are placed in the "Not determined" column. These financial instruments are:

- either held for sale or redeemed prior to their contractual maturity;
- or held for sale or redeemed at an indeterminable date (particularly where they have no contractual maturity);
- or measured on the balance sheet for an amount impacted by revaluation effects.

Accrued interest not yet due is shown in the "Less than one month" column.

The amounts shown are contractual amounts excluding projected interest.

Technical provisions of insurance companies, which, for the most part are equivalent to demand deposits, are not shown in the Table above.

Funding strategy and conditions in 2025

Continuation of the MLT issuance strategy

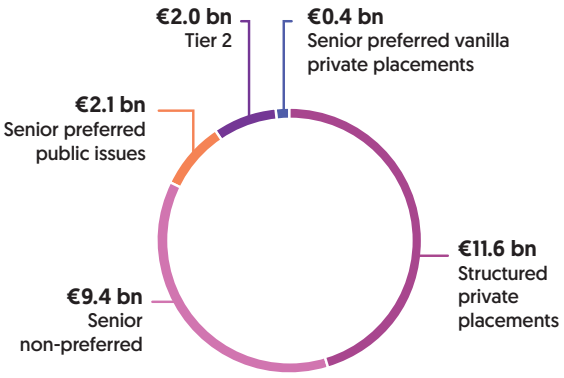
One of Groupe BPCE's ongoing priorities in terms of medium- and long-term funding in the financial markets is to ensure that sources of funding are properly diversified, in terms of types of investors, types of debt issues, geographic areas and currencies.

Under the 2025 "market" medium- and long-term refinancing program, Groupe BPCE raised a total amount of €35.5 billion in the bond market, of which €23.9 billion excluding structured private placements; the public issues represented 63% of the total amount and the private placements represented 37%.

In addition, the Group raised €8.4 billion in secured funding excluding covered bonds (ABS, collateralized refinancing, *etc.tc.*).

Unsecured bond segment

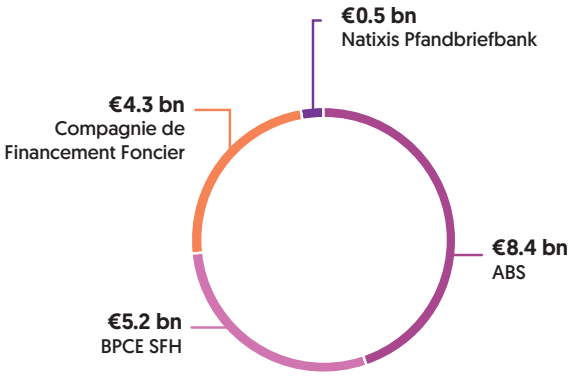
€25.5 billion



In 2025, the amount raised in the unsecured bond segment, excluding structured private placements, was €13.9 billion, of which €2 billion in Tier-2, €9.4 billion in the form of senior non-preferred debt and €2.5 billion in the form of senior preferred debt. In addition, €11.6 billion was raised in structured private placements.

Secured bond segment

€18.4 billion



In the secured funding segment excluding ABS, the amount raised was €10 billion in covered bonds. In addition, €8.4 billion were raised in the form of ABS, collateralized refinancing and repo transactions for treasury securities.

Securitization financing transactions

Since May 2014, Groupe BPCE has implemented several securitization programs for loans originated by the Caisse d'Epargne and Banque Populaire networks in order to manage and optimize two elements of Groupe BPCE:

- the Group's liquidity reserves, through "self-owned" securitization transactions;
- the Group's refinancing, through securitization transactions placed on the market or with a limited number of investors.

These self-owned securitization transactions aim to ensure the sustainability of the collateral stock eligible for the Eurosystem in the form of securities and thus contribute to the creation of the Group's liquidity reserves. In this arrangement, no securities are placed outside the Group. The Sellers are the subscribers of all the securities and therefore retain all the risks and rewards of the receivables sold.

The self-owned securitizations originated by BPCE use residential real estate receivables, equipment loans and personal loans.

They make up a large part of the Group's liquidity reserve. Some treasury shares are also subject to repo transactions with external counterparties for market funding purposes for the Group.

Drawing on its experience in treasury securitizations, the Group has also developed transactions aimed at providing refinancing. The securitizations can use residential real estate receivables, equipment loans, personal loans, *etc.* These transactions can be STS-certified, rated by agencies, reloadable or not, *etc.* The receivables/loans are contributed to the securitized mutual fund (*Fond commun de titrisation* - FCT) in two ways: either as direct sales to the FCT, or as collateralization of loans sold to the FCT. These transactions are placed on the market or with a limited number of investors.

They constitute the secured portion of the Group's funding plan, excluding covered bonds, which amounted to €8.4 billion in 2025 (including repo transactions on securitizations on treasury shares).

Summary of securitizations at 12/31/2025

BRED securitization transactions

BRED Banque Populaire regularly securitizes its advances. The securities issued are kept on the balance sheet to strengthen its mobilization capacities at the ECB. The underlying advances are generally home loans and occasionally equipment or professional loans. The stock of eligible securities depends on the rate of securitization. The objective for the bank is not to transfer credit risk but to improve its liquidity.

The control of risks related to securitization transactions is based on several principles:

- the constitution of the pool of advances is determined by the Finance division under the supervision of the project manager. A detailed analysis of the composition of the deposit is carried out;
- the pool of advances is passed through the centralized IT filter;
- the deposit is systematically analyzed in great detail by two rating agencies (S&P and Fitch Ratings in general).

The deposit is generally audited by a recognized and independent firm.

For information, in 2025 BRED Banque Populaire carried out an STS securitization transaction of a portfolio of residential real estate loans, for a value of nearly €1.85 billion:

- the shares are held in treasury and therefore have no accounting impact in the consolidated financial statements;
- the program has a dual purpose: to strengthen the purchasing power at the ECB and to generate LCR *via* securities exchanges.

At the end of 2025, BRED had seven outstanding ELIDE programs, the details of which are given below:

Summary of securitizations at 12/31/2025

						Participating institutions		Amounts subscribed by the ETB

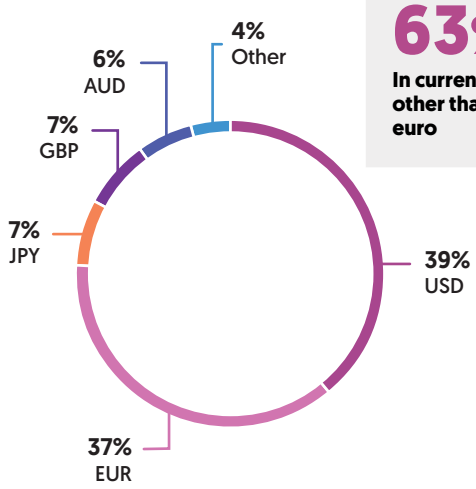
Diversification of investor base



63%
In currencies other than the euro

The breakdown by currency of unsecured issues excluding completed structured private placements is a good indicator of the diversification of the Group's medium-and long-term funding sources. In all, 63% (compared to 56% in 2024) of these issues were made in currencies other than the euro in 2025; the five largest currencies were the United States dollar (39%), the Japanese yen (7%), the British pound sterling (7%), the Australian dollar (6%) and the Swiss franc (2%).

The average maturity at issuance (including ABS) for Groupe BPCE as a whole was 6.3 years in 2025, compared with an average maturity of 6.4 years in 2024.

The vast majority of medium- and long-term funding raised in 2025 was at a fixed rate, as in previous years. In general, fixed rate is swapped into floating rate in accordance with the Group's interest rate risk management policy.

A strategy enriched by innovative solutions to meet the new priorities of investors: thematic bonds

Groupe BPCE, as a recurring and innovative issuer in the sustainable issuance market (issues complying with the green bond and social bond principles of the International Capital Market Association - ICMA), carried out four public, green and social issues in 2025 for €2,683 million:

- AU$500 million 15NC10 Tier-2 LED social Economic and Local Development;
- Green Building covered bonds issued by BPCE SFH for €1,000 million over 10 years;
- €1,000 million 8NC7 SNP social (Health);
- €400 million 10-year Tier-2 green building issued by BPCE Assurances.

In addition to these five transactions, Natixis issued €1,900 million in ESG Structured Private Placements in 2025.

Furthermore, in 2025, Groupe BPCE issued another form of thematic bond: a defense bond issued in August 2025 for the (re)financing of assets in the Defense sector for an amount of €750 million. This issue received the "Defence Bond" label from Euronext. This issue is neither green, nor social, but it borrows best practices from the ICMA principles, namely the use of funds, the asset evaluation and selection process, the traceability of funds and the compilation of reports.

Conclusion

The creation of the ESF Financial Issues and Solutions department at the end of 2023 (created to centralize all players involved in MLT Funding in the same team) took on its full meaning in 2025; it has enabled Groupe BPCE to optimize its scarce resources, such as liquidity, collateral and solvency.

7.9.4 Management of structural interest rate risk

Objectives and policies

Structural interest rate risk (or overall interest rate risk) is defined as the risk of loss in value on the balance sheet in the event of a change in interest rates due to all balance sheet and off-balance sheet transactions, except for – if applicable – transactions subject to market risks. Structural interest rate risk is an intrinsic component of the business and profitability of credit institutions.

The objective of the Group's interest rate risk management framework is to monitor each institution's maturity transformation level in order to contribute to the growth of the Group and the business lines while evening out the impact of any unfavorable interest rate changes on the value of the Group's banking books and future income.

Interest rate risk oversight and management system

Structural interest rate risk is controlled by a system of indicators and limits set by the Group Asset/Liability Management Committee. It measures structural interest rate risk on the balance sheet, excluding any kind of independent risk (trading, own accounts, *etc.*). The indicators used are divided into two approaches: a static approach that only takes into account on-balance sheet and off-balance sheet positions at a set date and a dynamic approach which includes commercial and financial forecasts. They can be classified into two sets:

- gap indicators, which compare the amount of the liability exposures against the asset exposures on the same interest rate index and over different maturities. These indicators are used to validate the main balance sheet aggregates to ensure the sustainability of the financial results achieved. Gaps are calculated on the basis of contractual maturities, the results of common behavioral models for different credit or collection products, outflow agreements for products with no maturity date, and specific agreements for regulated rates;
- sensitivity indicators, both in terms of value and revenues. The value-based indicator, known as SOT EVE (SOT: Supervisory Outlier Test; EVE: economic value of equity), measures the change in the net present value of equity under different scenarios of changes in the yield curve (parallel translation of the yield curve, flattening, steepening, *etc.*). The revenue-based indicators measure the sensitivity of the projected revenue where there are differences between the change in the market interest rate and a central scenario. They consist of a regulatory indicator, the SOT NIM, and an internal indicator. The SOT NIM, implemented in 2024, measures the change in revenues over the next twelve months in the event of a shift in the yield curves upwards or downwards relative to the forward rate under a constant balance sheet assumption. The internal indicator measures the change in the NIM over a multi-year horizon using a multi-scenario approach that takes into account business forecasts (new activity and changes in customer behavior) and uncertainties related to these forecasts and possible changes in the commercial margin.

Internal stress tests are carried out periodically to measure changes in the bank's earnings trajectory in adverse scenarios. The interest rate position of the Group's institutions is managed in compliance with the Group's standards, which formalize both the indicators monitored and the associated limits, as well as the instruments authorized for hedging interest rate risk. These are strictly "vanilla" (unstructured), option sales are excluded and accounting methods with no impact on the Group's consolidated income are preferred.

Quantitative information

The interest rate position is mainly driven by Retail Banking and Insurance, and primarily by the networks. Measured using a static approach to interest rate gaps, it shows a structural risk exposure to an increase in interest rates with a surplus of fixed-rate assets compared to fixed-rate resources. This structural surplus is due in particular to the percentage of customer deposits at regulated or similar rates (in particular the *Livret A* rate).

The interest rate gap at the end of December 2025, presented below, narrowed over one year compared to December 2024 (+€15.9 billion). This improvement in the interest rate gap was mainly due to the Commercial Banking networks, with a greater increase in fixed-rate borrower hedging swaps than in fixed-rate lending hedging swaps. It is also accentuated by the decrease in the networks' customer gap, linked to the increase in sight deposits, term resources and specialized refinancing.

It should be noted that the significant decrease in regulated passbook savings accounts due to the methodological change (decrease in the share of fixed interest rates) contributes to the deterioration of the gap, but this does not offset the overall improvement observed in the Group interest rate gap.

Beyond one year, the interest rate gap deteriorates (-€0.7 billion over two to four years and -€5.6 billion over five to eight years). The beneficial effects mentioned above disappear gradually and do not make it possible to mitigate the significant decline in Commercial Banks' passbook savings accounts. The degradation of the interest rate gap is reinforced by higher outstanding home loans due notably to a lower anticipated repurchases compared to December 2024. BPCE SA also contributed to this negative change in the interest rate gap, particularly over the two- to four-year horizon, with a degradation in the cash gap explained by an increase in fixed-rate interbank loans and a decrease in issues.

BPCE40 – Interest rate gap

in millions of euros	01/01/2026 to 12/31/2026	01/01/2027 to 12/31/2029	01/01/2030 to 12/31/2033
Interest rate gap (fixed-rate*)	(9,756)	(32,765)	(58,211)

* The indicator takes into account all asset and liability positions and floating-rate positions until the next interest rate reset date.

Sensitivity indicators

The sensitivity of the net present value of the Group's balance sheet to a +/-200 bps variation in interest rates remained lower than the 15% Tier-1 limit. At December 31, 2025, Groupe BPCE's sensitivity to interest rate increases stood at -11.29% compared to Tier-1 *versus* -9.62% at December 31, 2024. This indicator, calculated according to a static approach (contractual or conventional flow of all balance sheet items) and in a stress scenario (immediate and significant interest rate shock), makes it possible to highlight the distortion of the balance sheet over a long horizon.

To better control the Group's exposure to interest rate risk, it must be supplemented by a dynamic approach (including new production forecasts). This is achieved by measuring the change in the Group's forecast net interest margin at one year according to four scenarios (rise in rates, decline in rates, steepening of the yield curve, flattening of the yield curve) compared to the core scenario.

These net interest margin sensitivity indicators cover all commercial banking activities and aim to estimate the sensitivity of the institutions' results to interest rate fluctuations. Following regulatory changes and modifications of its management system, since 2023 Groupe BPCE has deployed an internal revenue sensitivity indicator on the commercial banking networks and the Supervisory Outlier Test (SOT) Net Interest Margin (NIM) regulatory indicator at Group level, in addition to its internal indicators. The dynamic approach in terms of the sensitivity of future revenues is reinforced by a multi-scenario vision, which allows a broader approach by taking into account the uncertainties related to business forecasts (new activity and changes in customer behavior) and possible changes in commercial margin.

At December 31, 2025, the most penalizing scenario for the Group in terms of the SOT NIM was the downside scenario. The indicator stands at -1.27% and remains below the 5% limit compared to Tier 1.

EU IRRBB1 – Interest rate risks of non-trading book activities

		a	b	c	d
		Changes of the economic value of equity		Changes of the net interest income	
Supervisory shock scenarios		12/31/2025	12/31/2024	12/31/2025	12/31/2024
1	Parallel up	(11.29%)	(9.62%)	0.19%	0.22%
2	Parallel down	(3.69%)	(5.80%)	(1.27%)	(1.19%)

4	Flattener	2.13%	0.92%		
5	Short rates up	0.39%	0.40%		
6	Short rates down	(0.40%)	(0.13%)		

7.9.5 Management of structural foreign exchange risk

Structural foreign exchange risk is defined as the risk of a realized or unrealized loss due to an unfavorable fluctuation in foreign currency exchange rates. The management system distinguishes between the structural exchange risk policy and the management of operational foreign exchange risk.

Foreign exchange risk oversight and management system

For Groupe BPCE (excluding Natixis), the foreign exchange risk is monitored using regulatory indicators (measuring the corresponding capital adequacy requirements by entity). The residual foreign exchange positions held by the Group (excluding Natixis) are not material because virtually all foreign currency assets and liabilities are match-funded in the same currency.

As regards international trade financing transactions, risk-taking is limited to counterparties in countries with freely-translatable currencies, provided that translation can be technically carried out by the technically managed by the entity's information system.

Natixis' structural exchange rate positions on net investments in foreign operations funded with currency forwards are tracked on a quarterly basis by its Asset/Liability Management Committee in terms of sensitivity as well as solvency. The resulting risk indicators are submitted to the Group Asset/Liability Management Committee on a quarterly basis.

Quantitative information

At December 31, 2025, Groupe BPCE's capital requirements for foreign exchange risk amounted to €425 million compared to €369 million at the end of 2024. The foreign exchange position is mainly carried by GFS.

7.10 Legal risks

7.10.1 Legal and arbitration proceedings

French Competition Authority

On October 9, 2015, a company operating in the meal voucher industry lodged a complaint with the French Competition Authority (*Autorité de la concurrence*) to contest industry practices with respect to the issuance and acceptance of meal vouchers. The complaint targeted several French companies operating in the meal voucher industry, including Natixis Intertitres, which became Bimpli at the end of 2022.

In its decision of December 17, 2019, the French Competition Authority ruled that Natixis Intertitres had participated in a practice covering the exchange of information and a practice designed to keep new entrants out of the meal voucher market.

Natixis Intertitres was fined €4,360,000 in its own right, along with two other fines totaling €78,962,000, jointly and severally with Natixis who was its parent company.

Since the alliance concluded between Groupe BPCE and Swile on December 14, 2022, Bimpli has been owned by a third party outside the Group.

The Paris Court of Appeal confirmed the decision of the French Competition Authority by a judgment delivered on November 16, 2023.

Bimpli and Natixis filed an appeal against this decision on December 20, 2023, along with other French companies in the meal voucher sector.

As part of the examination of this appeal, the Versailles Court of Appeal, by a judgment dated January 28, 2025, rejected the judgment of the Paris Court of Appeal of November 16, 2023. Drawing the consequences of this decision, on October 28, 2025, the Court of Cassation annulled the judgment of the Paris Court of Appeal and referred the case back to the latter with a differently constituted bench.

The proceedings are continuing before the second Court of Appeal.

Between November 2024 and July 2025, Swile (which became BIMPLI on January 1, 2024 following a merger-acquisition transaction) and Natixis were summoned – alongside other players in the meal voucher market – before the Paris Economic Activities Court, by several plaintiffs wanting to obtain compensation for the alleged damages caused by the practices sanctioned by the Competition Authority, including those of Natixis Intertitres.

At this stage, and subject to the legal appraisals requested by the plaintiffs, the total amount of the sums requested is €830,457,122, in addition to €2,475,000 for appraisal costs and €4,160,000 in respect of Article 700 of the French Code of Civil Procedure. All these proceedings are currently pending before the Paris Economic Activities Court.

Although the Group still considers that it has serious arguments to contest these decisions, a provision was made in the Group's financial statements in 2023, in the amount of the estimated risk.

Collectif Porteurs H2O

At the end of December 2023, 6,077 individuals and legal entities, members of an association called "Collectif Porteurs H2O" brought proceedings against the French company Natixis Investment Managers before the Paris Commercial Court, alongside five defendants, to obtain compensation for damage they suffered as investors in seven mutual funds (UCITS) managed by the English entity H2O AM LLP, then the French entity H2O AM Europe, between 2015 and 2021.

In March 2025, the plaintiffs served third-party notice on Natixis SA and BPCE.

Together, the plaintiffs seek a joint sanction against Natixis Investment Managers, Natixis SA, BPCE and the other defendants, including the managers, custodian and auditor of the seven funds, to compensate for their alleged damages. Given the ever-changing number of plaintiffs and the fact that plaintiffs do not update the amount of their applications, the amount claimed cannot be precisely determined to date. On the basis of the information provided by the plaintiffs, the amount of the claims can be estimated to date at approximately €600 million in respect of the financial and moral damages alleged, in addition to legal costs.

In July 2025, Natixis SA, Natixis Investment Managers and BPCE were served third-party notice to the proceedings initiated in early July 2023 by 26 holders of H_2O funds before the Paris Economic Court.

The plaintiffs seek a ruling against the defendants for an amount of approximately €13.8 million, to date and to be perfected.

BPCE, Natixis SA and Natixis Investment Managers considers that the claims made against it are unfounded and will vigorously contest them.

7.10.2 Legal and arbitration proceedings specific to Natixis

Like many banking groups, Natixis and its consolidated subsidiaries are subject to legal and tax proceedings and investigations by the supervisory authorities.

The financial consequences, assessed as of December 31, 2025, of those likely to have, or which have had in the recent past, a significant impact on the financial position of Natixis and/or Natixis and its consolidated subsidiaries taken as a whole, their profitability or activity, have been included in Natixis' consolidated financial statements.

The most significant legal and arbitration proceedings are described below, it being specified that their inclusion in the list below does not mean that these proceedings will necessarily have any impact on Natixis and/or its consolidated subsidiaries. Other proceedings, including tax proceedings, have no significant impact on the financial position or profitability of Natixis and/or Natixis and its consolidated subsidiaries taken as a whole, or are not at a sufficiently advanced stage to determine whether they are likely to have such an impact.

Legal and arbitration proceedings

Madoff fraud

The Madoff outstanding amount was estimated at €306 million in exchange value at December 31, 2025, fully provisioned at that date, compared to €347.8 million at December 31, 2024. The effective impact of this exposure will depend on both the extent of recovery that Natixis benefits from and the outcome of the measures taken by the bank, notably in terms of legal proceedings. Furthermore, in 2011 a dispute emerged over the application of the insurance policy for professional liability in this case, which had been taken out with successive insurers for a total amount of €123 million. In November 2016, the Paris Court of Appeal vindicated the Commercial Court's prior ruling that the primary insurers were liable to cover the losses incurred by Natixis due to the Madoff fraud, up to the amount for which the bank was insured. On September 19, 2018, the Court of Cassation subsequently annulled the judgment under appeal and referred the case back to the Paris Court of Appeal with a differently constituted bench. On September 24, 2019, the Court ruled against Natixis, overturning the ruling by the Paris Commercial Court. Natixis filed an appeal with the Court of Cassation in December 2019. The Court of Cassation dismissed the appeal on November 4, 2021, so that the judgment of the Paris Court of Appeals of September 24, 2019, unfavorable to Natixis, became final and irrevocable.

Irving H. Picard, the liquidator of Bernard L. Madoff Investment Securities LLC (BMIS), submitted a restitution claim concerning the liquidation of amounts received prior to the discovery of the fraud through a writ filed with the United States Bankruptcy Court for the Southern District of New York against several banking institutions, including a $400 million claim against Natixis. Natixis denies the allegations made against it and has taken the necessary steps to defend its position and protect its rights. Natixis has launched appeals, including a motion to dismiss the case on a preliminary basis, and prior to any ruling on the merits, and a motion to withdraw the reference to transfer certain matters to the Federal District Court. These proceedings have been the subject of numerous rulings and appeals and are still ongoing. A November 2016 ruling by the bankruptcy court dismissed a number of restitution claims initiated by the liquidator on the grounds of extraterritoriality. In September 2017, the Second Circuit Court granted the liquidator of BMIS and the defendants the right to appeal the bankruptcy court's ruling on the grounds of extraterritoriality directly through the Second Circuit, thereby avoiding the need to file an intermediary appeal with the District Court. In February 2019, the Second Circuit Court overturned the bankruptcy court's extraterritoriality ruling. In August 2019, Natixis joined the group of defendants having filed a request for permission to appeal the Second Circuit Court's ruling before the Supreme Court. In June 2020, the Supreme Court refused to hear the case. On August 30, 2021, the Second Circuit Court clarified the concept of "good faith" by deciding (i) that it is determined according to the standard of "inquiry notice" which is less favorable to the defendants, and (ii) that the burden of proof lies not with the liquidator of BMIS but with the defendants. These preliminary points having now been decided, the proceedings are continuing on the merits. The liquidator of BMIS has taken steps to split the restitution claim initially brought against Natixis into two separate actions, one against Natixis SA (initial action amended to include only the buybacks of Fairfield Sentry shares) and the other against Natixis Financial Products LLC (new action to be brought relating to the buybacks of Groupement Financier shares). Separate proceedings have been initiated and are ongoing. The bankruptcy court issued its decisions in November 2023, dismissing the motions to dismiss filed by Natixis SA and Natixis Financial Products LLC. In December 2023, Natixis SA filed an appeal requesting authorization to appeal the decision rejecting its request for rejection. The authorization to appeal was rejected on February 2, 2024. The case is ongoing.

Furthermore, the liquidators of Fairfield Sentry Limited and Fairfield Sigma Limited have initiated a large number of proceedings against investors having previously received payments from these funds for redemptions of shares (over 200 proceedings have been filed in New York). Some Natixis entities have been named as defendants in some of these proceedings. Natixis deems these proceedings to be entirely unfounded and is vigorously defending its position. These proceedings have been suspended for a couple of years, and in October 2016 the bankruptcy court authorized the liquidators to modify their initial claim. The defendants filed joint responses in May and June 2017. In August 2018, the bankruptcy court ruled on a motion to dismiss filed by the defendants (requesting that the case be dismissed on a preliminary basis and prior to any ruling on the merits). The judge only gave a ruling on one of the merits (that of personal jurisdiction), having found that the latter was missing from the claim made against the defendants. In December 2018, the judge ruled on the motion to dismiss, rejecting the liquidators' common law claims (unjust enrichment, money had and received, mistaken payment and constructive trust) as well as the contractual claims. However, it overturned the motion to dismiss in respect of the claims founded on British Virgin Islands' law, while reserving the right to file a plea for the application of the Section 546(e) safe harbor provision. In May 2019, the liquidators appealed the bankruptcy court's ruling before the District Court. On March 9, 2020, the defendants, including Natixis, submitted a motion to dismiss this appeal and they renewed their initial motion on March 16, 2020. The bankruptcy court asked the defendants to limit the motion to dismiss to arguments that can lead to the dismissal of all the actions of the liquidators (pursuant to the Section 546(e) safe harbor provision or the impropriety of the initial petition). In December 2020, the bankruptcy court dismissed the action brought under the law of the British Virgin Islands, considering that the defendants, including Natixis, are covered by the Section 546(e) safe harbor provision. In August 2022, the District Court upheld the bankruptcy court's decision dismissing the actions of the liquidators against all defendants, including Natixis. The liquidators unsuccessfully appealed this decision to the Second Circuit and appealed to the United States Supreme Court. The case is ongoing.

Criminal complaint coordinated by ADAM

In March 2009, the Paris public prosecutor's office (Parquet de Paris) launched a preliminary investigation into a complaint filed by Natixis minority shareholders and coordinated by the French Association for the Defense of Minority Shareholders (*Association de défense des actionnaires minoritaires* - ADAM). As the plaintiffs have initiated civil proceedings, a judicial investigation opened in 2010. On February 14, 2017, Natixis came under investigation for false and misleading information on account of two messages sent in the second half of 2007, at the beginning of the subprime crisis.

After judicial investigation, a committal for trial was ordered on June 28, 2019.

The committal concerns only one of the two messages, disseminated on November 25, 2007, explaining the risks to which Natixis was exposed at the time as a result of the subprime crisis. The second message was dismissed.

The Paris Criminal Court, in a judgment handed down on June 24, 2021, condemned Natixis, deeming insufficient the information provided by said press release of November 25, 2007, and more specifically the risks to which the bank was exposed at the time due to the subprime crisis.

It imposed a fine of €7.5 million. The civil parties were awarded total compensation of around €2 million. Natixis appealed against this judgment.

The case was appealed to the Paris Court of Appeal from January 22 to 31, 2024. On May 7, 2024, the Paris Court of Appeal issued its decision upholding the conviction of Natixis, but significantly reducing the penalty to a fine of €2 million. In respect of the civil action, the Court of Appeal upheld – in substance – the judgment and awarded the civil parties additional compensation for the costs of the proceedings in question.

Natixis, which has always considered that it has not committed any criminal offense, filed an appeal on May 7, 2024. In a decision dated February 4, 2026, the Court of Cassation dismissed this appeal.

EDA Selcodis

By two summons dated November 20, 2013, Selcodis, on the one hand, and EDA, on the other hand, brought proceedings before the Paris Commercial Court jointly against Natixis and two other banking institutions for alleged unlawful agreement, which allegedly resulted in the refusal to provide a guarantee to EDA and the termination of various loans.

Under the terms of these summons, Selcodis seeks compensation for the loss allegedly suffered as a result of the judicial liquidation of its subsidiary EDA and seeks an order that the defendants be ordered to pay damages, which it assesses at the sum of €32 million. For its part, EDA requests that the defendants be ordered to bear the total amount of the shortfall to be quantified by the court-appointed agent on liquidation.

Natixis considers all of these claims to be unfounded.

On December 6, 2018, the Paris Commercial Court, after consolidating the proceedings, noted their expiry and declared them extinguished. In January 2019 the plaintiffs appealed this judgment.

The judgment was delivered on June 22, 2020. The Court of Appeal ruled out the expiry of the current proceedings. The decision was made not to appeal to the Court of Cassation.

The rescheduling took place in March 2021 to resume the action on the merits.

By a judgment dated December 5, 2025, the Paris Commercial Court declared Selcodis' action inadmissible and dismissed all of the plaintiffs' claims.

On January 8, 2026, Selcodis appealed against this decision.

Formula funds

Following a review by the AMF in February 2015 of the compliance by Natixis Asset Management (new name Natixis IM International) with its professional obligations, and more specifically the management of its formula funds, the Sanctions Committee issued its decision on July 25, 2017, issuing a warning and a fine of €35 million. The Sanctions Committee noted several breaches concerning redemption fees paid to the funds and structuring margins.

Natixis IM International appealed this decision to the French Council of State. In its judgment of November 6, 2019, the Council of State reformed the decision of the Sanctions Commission by reducing the penalty to €20 million. The warning was maintained.

In addition, on March 5, 2018, UFC-QUE CHOISIR, in its capacity as a consumer defense association, brought proceedings against the asset management company before the Paris Court of Justice to obtain compensation for the property damage allegedly suffered by the holders of the aforementioned formula funds.

By a judgment of April 3, 2024, the Paris Court of Justice declared the action of UFC-QUE CHOISIR to be inadmissible and dismissed its claims in full. UFC-QUE CHOISIR has appealed this judgment.

On June 18, 2025, the Paris Court of Appeal dismissed the claims on the merits in their entirety, finding that there was no compensable loss suffered by the unit holders of the formula funds managed by Natixis IM International.

On August 18, 2025, UFC Que choisir filed an appeal with the Court of Cassation against the decision of the Court of Appeal.

Bucephalus Capital Limited/ Darius Capital Conseil

On June 7, 2019, Bucephalus Capital Limited (a company under UK law) brought claims against Darius Capital Partners (a company under French law, now operating under the name Darius Capital Conseil, a 70%-held subsidiary of Natixis Investment Managers) before the Paris Commercial Court, to contest the alleged breach of various contractual obligations, particularly with respect to a framework agreement dated September 5, 2013 setting out their contractual relations and various subsequent agreements. Bucephalus Capital Limited claimed a total of €178,487,500.

In the course of the proceedings, Bucephalus Capital Limited increased the amount of its claims, seeking payment of €418,492,588 or, in the alternative, €320,645,136, in addition to payment of €100,000 under Article 700 of the French Code of Civil Procedure.

By decision of March 16, 2023, the Paris Commercial Court rejected all of Bucephalus Capital Limited's claims and ordered it to pay Darius Capital Conseil's legal costs in the amount of €150,000. Bucephalus Capital Limited filed an appeal on June 28, 2023 and requested a stay of payment of the €150,000. By order of November 29, 2023, the Paris Court of Appeal rejected this request.

The case is ongoing.

European Government Bonds – Cartel Decision

On May 20, 2021, the European Commission issued an infringement decision against Natixis and found that it had breached EU competition rules by participating in a cartel on the primary and secondary European government bond market in 2008-2009.

As Natixis had left the cartel more than five years before the Commission began its investigation, it benefited from the limitation period. No fines were imposed on Natixis.

On July 30, 2021, Natixis filed an application with the General Court of the European Union to annul the Commission's decision. The appeal is based, in particular, on the argument that the Commission has the right to issue a decision of infringement only if it can demonstrate a "legitimate interest" in doing so and on the argument of the infringement of the rights of defense of Natixis.

The appeal hearing was held on June 6, 2023.

On March 26, 2025, the Court dismissed Natixis' appeal and confirmed that the European Commission's infringement decision against Natixis should be maintained.

Natixis filed an appeal with the Court of Justice of the European Union on June 10, 2025.

Other procedures

Natixis is the subject of preliminary investigations opened in France by the Parquet National Financier and in Germany by the Cologne Public Prosecutor's Office.

As part of the investigations conducted in France, and in particular the searches carried out on March 28, 2023 at the premises of various banks, including Natixis, the Parquet National Financier issued a press release stating that five preliminary investigations were opened on December 16 and 17, 2021 on charges of aggravated tax fraud and, in some cases, aggravated tax fraud relating to the taxation of dividends received by banks in connection with their securities transactions.

As part of the investigations conducted by the Cologne public prosecutor's office, searches were carried out on June 13, 2023, mainly at the premises of the Natixis Branch in Frankfurt, but also at the headquarters of Natixis Pfandbriefbank AG and Natixis Investment Managers International SA in Frankfurt and Munich.

The investigations are ongoing and are covered by the requirements of investigation secrecy. Natixis intends to cooperate with the authorities while respecting its rights, and will assert its position before the magistrates.

7.10.3 Dependency

BPCE is not dependent upon any specific patents, licenses, industrial procurement contracts, or commercial or financial agreements.

7.11 Non-compliance and financial crime risks

Foreword

In accordance with the legal and regulatory requirements, and with the professional standards and control charters governing Groupe BPCE, the functions managing compliance risk are organized as part of the internal control framework of all Groupe BPCE entities and subsidiaries as a whole.

The Group Compliance division, which reports to the Groupe BPCE Corporate Secretary's Office, performs its duties independently of the operational departments and of the other Internal Control departments with which it collaborates.

The Compliance division, "Compliance Verification function" defined by the EBA and included in the order of November 3, 2014, amended by the order of February 25, 2021, is responsible for the prevention, detection, measurement and monitoring of non-compliance risks to ensure their control.

Group Compliance Division carries out its duties with regard to Compliance sector.

It helps regulate, manage, control and guide the functions Group entities. The Compliance Chief Officers appointed within the various direct subsidiaries of BPCE SA and subject to the regulatory banking and financial supervision system, report to it through a strong functional link.

The Group Compliance division carries out all actions designed to strengthen customer protection, compliance with ethical rules, the fight against money laundering and the financing of terrorism, the fight against market abuse, the monitoring of transactions and compliance with sanctions and embargoes. Lastly, it monitors compliance risks throughout the Group. As such, it builds and revises the standards proposed for the governance of Groupe BPCE, shares best practices and coordinates working groups consisting of Compliance representatives sector.

The dissemination of the culture of non-compliance risk and consideration of the legitimate interests of clients is also reflected in the training of employees in the sector and the awareness-raising of other BPCE departments.

Accordingly, the Group Compliance division:

- draws up the Group's non-compliance risk management frameworks (risk mapping and RMS) and supervises the permanent control framework relating to non-compliance risks;
- prepares internal risk prevention reports for the Group's Risk Executive Committees and the Supervisory Body's Risk Committees;
- determines and validates, in conjunction with HR, the content of training materials intended for the Compliance function;
- coordinates the training of Directors/Heads of Compliance through a dedicated system;
- animates the Compliance function of the entities through national days that present themes relating to Customer Protection, Conduct and Ethics or Financial Crime;
- draws on the expertise of the Compliance functions of Group entities *via* theme-based working groups, in particular to develop and implement compliance standards.

In addition, BPCE SA Compliance & OR to the Group Compliance division and manages and supervises the Compliance of the entities of the Financial Services and Expertise division (FSE), the Digital & Payments division, the Insurance division, and of the other subsidiaries reporting to BPCE, including Palatine, Natixis Algérie and BPCE International.

7.11.1 Compliance

Organization

Group Compliance includes a team in charge of supervising the compliance framework of the Group's entities and areas of expertise (Conduct and Ethics, Banking Insurance Compliance, Investment Services Compliance, and Financial Crime).

Group compliance is organized as follows:

The Consolidated oversight and Ethics department

is in charge of overseeing the compliance frameworks deployed within Groupe BPCE entities. It defines the framework for this supervision and establishes a supervision control plan drawing on the expertise of the Banking & Insurance Compliance, Investment Services Compliance, Financial Crime, and Conduct and Ethics divisions. It manages the mapping of non-compliance risks for Groupe BPCE entities. It organizes the coordination of the Compliance function.

It monitors non-compliance risk indicators, oversees the reporting frameworks and also covers the centralization of relations with regulators, supervisors and the Group Internal Audit in compliance matters.

The Conduct, Ethics and Anti-Bribery Corruption ABC (attached to the Consolidated oversight and Ethics department)

covers the supervision and management of Groupe BPCE's Conduct and Ethics frameworks, including the conflicts of interest framework, employee ethics (gifts, benefits and external interests), the internal anti-fraud framework, the whistleblower framework, the anti-bribery corruption framework, and the training courses related to conduct and ethics applicable to Groupe BPCE entities.

Every six months, the Conduct and Ethics indicators and highlights are presented to the Group's Cooperative and CSR Committee.

It is responsible for implementing the regulatory texts and defining the body of standards relating to Conduct and Ethics to be implemented within Groupe BPCE's entities. A mapping of non-compliance risks relating to the regulatory frameworks on Conduct and Ethics is prepared every year by the Group's entities with a focus on the assessment of the level of risk and the control system, and is presented to the management bodies. In addition, annual checks on the Conduct and Ethics systems are carried out every year as part of permanent controls.

Banking Insurance Compliance and Investment Services Compliance departments

are responsible for preventing the risk of non-compliance with laws, regulations or professional standards, within the scope of the banking, insurance and financial savings activities.

Paying particular attention to all issues relating to compliance with customer protection rules, the main actions carried out by these two departments are as follows:

- Participation in regulatory work in the marketplace;
- Development and updating of the Group normative, control and steering framework in terms of compliance;
- Support for entities in the deployment of Group compliance standards and in external and internal audits;
- Support for the Group in terms of maintaining or achieving regulatory compliance of the entities' business practices and regulatory processes relating to customer protection;
- Support for the Sales Department of BPCE (Retail Banking and Insurance) and the networks:
  - In the deployment of commercial offers: marketing of new offers, creation or adjustment of associated marketing paths, and validation of client and advisor support materials,
  - In the marketing and monitoring of new products and new activities over time;
- Monitoring of the compliance frameworks deployed within the Group's entities.

Investment Services Compliance department also includes the oversight of investment services and the operating procedures of investment services compliance officers (*Responsables de la conformité des services d'investissement* - RCSI).

Financial Crime department

covers the supervision of the frameworks for combating money laundering and financing of terrorism (AML-CFT), and for compliance with national and international sanctions financial sanctions (embargoes, sectoral sanctions and asset freezes) (see dedicated section).

Regulatory projects carried out in 2025

The main projects concerned:

Customer protection:

Inactive accounts and inactive safes (Eckert):

Ongoing improvements to the already robust framework in place. Several IT projects were delivered to further expand the regulatory information, both annually on inactivity status and on deposits (information prior to the closing of accounts and transfer to Caisse des Dépôts et Consignations). The identification of inactive safes has also been improved, facilitating the implementation of our regulatory obligations.

Processing of payment transactions disputed by customers:

In particular, actions have been taken to:

- improve effective reimbursement and investigation times. Regular monitoring by indicators has been set up;
- ensure reimbursement of the costs incurred;
- ensure that disputes between entities are handled in a uniform manner by implementing procedures common to the entities;
- facilitate the initiation of a dispute by the client by creating the self-care dispute channel, in addition to the branch and customer relations center channels.

Payment services:

Implementation of the obligations resulting from the IP Regulation (instant transfers in euros) which came into force on October 9, 2025. This work led in particular to the roll-out of access for our clients to instant transfer, limit management and beneficiary verification services.

Bank savings:

Continued implementation of the multi-holding control measures for regulated savings products provided for by Decree No. 2021-277 of March 12, 2021 on the control of the holding of regulated savings products, which will come into force no later than January 1, 2026.

Consumer Loans:

Identification of the operational impacts resulting from the obligations of the Consumer Credit Directive 2 (CCD2), which is scheduled to come into force on November 20, 2026.

Regulatory customer knowledge (KYC):

Continuation of several major actions in 2025 with the aim of anchoring the reflexes of systematic updating of Customer Knowledge: raising awareness among networks and management through indicators allowing for enhanced and global monitoring of Customer Knowledge.

In addition, the Group's regulatory and control framework has been updated.

Financial savings

The Group has continued to improve and strengthen its frameworks for Investor Protection, Product Governance and Supervision, and Market Integrity and Transparency.

The works focused on:

- The rationalization and the review of the LOD 2 policies, guides and control sheets included in the 2025 Compliance roadmap on the Investor Protection, Product Governance and Supervision, and Market Integrity and Transparency frameworks.
  - Concerning Investor protection and product governance and supervision, ACPR recommendation 2024-R-03 on the duty to advise, AMF position 2013-10/2019-12 on GSM remediation, and the order of March 19, 2025 amending the General Regulation of *Autorité des marchés financiers* (AMF), the French financial markets authority, on product marketing monitoring have been integrated. Also, a note on the impacts of the Retail investment strategy was distributed at the end of the year to the sales and compliance functions within the entities.
  - Concerning Market integrity and transparency, the new EMIR and SFTR regulatory texts related to market transactions, in particular EMIR 3.0, have been integrated.
- As part of the supervision exercised, controls were carried out on the Investor Protection, Product Governance and Supervision, and Market Integrity and Transparency frameworks. Monitoring actions have been implemented to follow up on the remediation of identified anomalies.
- Committees continued to strengthen the monitoring of entities, as well as provide support for institutions in the context of supervisory requests/controls and monitoring of agreed Group remediation plans.
- Work to develop consolidated Group management indicators, particularly on the Market integrity and transparency frameworks, and the investor protection customer journey, has been carried out and will continue in 2026.
- Entities were monitored and supported for their declarations related to the annual report of investment services compliance officers (*Responsables de la conformité des services d'investissement* - RCSI) submitted to the *Autorité des marchés financiers* (AMF), the French financial markets authority.
- A new tool for processing market abuse alerts was rolled out.

Regarding the "Whistleblower" framework:

In the context of legislation that offers much better protection for more whistleblowers (see Act of March 21, 2022), and to meet the requirements of act No. 2017-399 on the duty of care of parent and subcontracting companies, Groupe BPCE has chosen to use the same tool for all Group entities, regardless of the country in which they operate (Europe, the United States, *etc.*) and regardless of their business line (Retail Banking, Corporate & Investment Banking, *etc.*).

This framework allows for the collection of reports on a secure online platform directly accessible by an URL link (**https://www.groupebpce.com**). The whistleblowing framework is open to all employees and third parties, who can express their concerns if they are aware of serious violations of human rights and fundamental freedoms, personal health and safety, or the environment.

The online platform offers all the guarantees in terms of data security and respects the highest standards in terms of confidentiality and respect for anonymity.

Groupe BPCE entities protect whistleblowers. Under no circumstances may they be subject to any disciplinary action or legal proceeding, provided they have acted without direct financial compensation and in good faith.

Employee training and awareness

Group employees regularly receive training on Customer protection issues to maintain the required level of customer service quality. These training sessions are aimed at promoting awareness of compliance and customer protection among new hires and/or sales team employees.

Ethics and compliance training, entitled "Fundamentals of professional ethics", has been set up for all Group employees. BPCE has also established a Code of Good Conduct and Ethics, rolled out to all Groupe BPCE entities.

Groupe BPCE has implemented a mandatory regulatory training framework that is reviewed annually.

7.11.2 Financial security

This area encompasses:

- Fight against money laundering, criminal activities (including financing of the proliferation of weapons of mass destruction) and financing of terrorism;
- Compliance with national, European and international sanctions targeting individuals, entities or countries.

The prevention of risks during the implementation of these measures is based on:

- Corporate culture;
- Appropriate organization and resources;
- Supervision of operations.

Corporate culture

This culture, spread to all hierarchical levels, and all "lines of defense" (LoD), is based on:

- customer relations principles aimed at preventing, mitigating and remedying the risks of criminal use of the products and services offered by the Group's entities. These principles are formalized in policies and procedures that are regularly updated and are regularly communicated to the employees;
- a continuous training framework for the Group's employees and specific training for the financial crime function.

Appropriate organization and resources

A/ Combating money laundering and financing of terrorism

The fight against money laundering and terrorism financing (AML-CFT) has a dual objective:

- preventing criminal activities by depriving them of funds, on the one hand;
- ensuring the soundness, integrity and stability of the economic and financial system, on the other hand.

As an AML-CFT obliged entity, Groupe BPCE is fully committed in the fight against illegal financial circuits, in addition to the action of public authorities: financial intelligence units, law enforcement agencies, and judicial authorities.

The AML-CFT framework applies to all Groupe BPCE entities (institutions of the Banques Populaires and Caisses d'Epargne networks and their subsidiaries and branches, as well as BPCE SA, its subsidiaries and branches in France and abroad), which are subject to AML-CFT requirements.

In addition to the corporate culture, this system is based on an internal organization and resources (human, IT, data), which implement a complete and consistent framework for prevention, mitigation and remediation of financial transactions likely to be linked to criminal activities. It is based on five main components:

I. **Assessment of the risks of money laundering, criminal activities and terrorist financing.** Each entity, subsidiary or branch of the Group, subject to the AML-CFT requirements, assesses its exposure to the risks described by the public authorities according to the factors provided for by the legislation, inherent to their clients, services, transactions and distribution channels, and geographic factors.

II. **KYC**, through onboarding checks, including identification of the beneficial owners for legal entities and regular updating of client information throughout the business relationship. Due Diligence on clients also includes the detection of politically exposed persons (PEP) and the application of additional vigilance measures.

III. **Ongoing monitoring of transactions, throughout the business relationship.** These vigilance efforts, adapted to the ML/FT risk, are based on human vigilance as well as on automated means of detecting unusual transactions, in strict compliance with the rules provided for by the General Data Protection Regulation (GDPR).

IV. **Processing of alerts**, in order to remove any doubt about the lawfulness of sums or atypical/unusual transactions. These analyses lead the entities to carry out a certain amount of due diligences: analysis of the operation of the account, request for supporting documents, *etc.*

V. **Reporting of "suspicions" to the Financial Intelligence Unit** (FIU; TRACFIN in France) of doubtful/suspicious amounts or transactions when there is a concern about their legality. Conversely, in the event the due diligence confirms the regular nature of the amounts or transactions, the alert is "closed" and accompanied by an audit trail of the verifications performed. Reporting time periods are monitored as part of the risk appetite policy.

Other elements supplement this framework such as, in particular, a permanent and periodic internal control system, regular training and information for employees and managers of the Group and affiliates, and regular monitoring of dedicated indicators by the governance bodies.

B/ Compliance with national, European and international financial sanctions targeting individuals, entities or countries

Compliance with national and international financial sanctions is a key element of Groupe BPCE's compliance framework, which, as a French and European entity, strictly complies with French and European Union laws and regulations and with the Resolutions of United Nations Security Council (UNSC).

Furthermore, all entities within Groupe BPCE comply with the US financial sanctions regime due to Groupe BPCE's presence in the United States and the large volume of transactions denominated in US dollars, as well as other criteria that establish US jurisdiction. In particular, the extraterritorial scope of certain US regulations on financial sanctions, including secondary sanctions that extend the extraterritoriality of US sanctions to transactions without American links.

Groupe BPCE complies with all applicable forms of financial sanctions, which may target a country or territory, an organization, an individual, a legal entity, a ship, an aircraft, certain goods or services, or certain activities, whether freezes of assets or economic resources, total embargoes, restrictions or specific embargoes on particular types of transactions or on the export or import of certain goods, services or technologies.

French, European, UN and US regulations therefore constitute a "common base" in terms of financial sanctions applicable to Groupe BPCE. The other regulations of the jurisdictions in which Groupe BPCE operates apply locally, and concurrently to the common base. The strictest provisions prevail.

Supervision of operations

In accordance with Groupe BPCE's charters, all Group entities have their own financial crime unit which, along with the front, middle and back office teams, ensures the operational implementation of these measures and plays a direct role in preventing, mitigating and remediating the risks of criminal activity. All entities have an internal control framework and provide regular reporting to Groupe BPCE's executives, governing bodies and central institution.

In addition, within the Group Compliance division, a dedicated department is responsible for adapting the legal framework to Groupe BPCE's entities, implementing policies and procedures, ensuring that money laundering and terrorist financing risks are taken into account in the approval procedure for BPCE's new products and new commercial activities, monitoring the resources implemented and the regulatory reporting to Groupe BPCE supervisors and executives, analyzing the results of the permanent controls and conducting supervisory controls, as well as designing the training content and coordinating the Compliance/Financial Crime function at Group level.

Projects to strengthen the systems

The Group has continued its work to strengthen and and to rationalize its frameworks and to improve the means of supervision carried out by the central body. Groupe BPCE has reviewed its financial crime risk appetite policy, its mapping of non-compliance risks and all the controls of the AML/CFT framework, and has equipped itself with tools for monitoring, in real time or, when relevant, at close frequencies, the activity of the Group's entities. The methodology for assessing money laundering and terrorist financing risks has been completely reviewed, allowing for an overhaul of the automated transaction monitoring system, in order to improve the relevance of the detection of suspicious transactions that must be reported to TRACFIN.

7.12 Security risks and operational resilience

7.12.1 Business continuity

Organization

The Group Business Continuity department, which reports to the Business Continuity and Crisis Management department, performs its tasks independently of the operational divisions. The Business Continuity and Crisis Management department's missions consist of:

- managing Group business continuity and coordinating the Group Business Continuity function;
- coordinating the Group's crisis management;
- managing the implementation of the Group Contingency and Business Continuity Plans (CBCPs) and keeping them operational;
- ensuring compliance with regulatory provisions governing business continuity;
- participating in the Group's internal and external bodies.

The tools associated with the crisis management system are constantly evolving to improve their ergonomics and increase the range of associated functions.

Improvement projects continued with the following in common:

- streamlining processes and strengthening systems;
- compliance with European texts on operational resilience.

The management of business interruption risks is addressed by the Group's legal entities in the form of an analysis of the risks associated with the activities carried out. This analysis makes it possible to prioritize their restart. At the same time, the identification of the various possible risk events guides the Legal Entity in the business continuity responses to be provided and the preparation of the actions to be taken in the event of the occurrence of the risk event.

7.12.2 Information System Security (ISS)

Organization

The Group Security department (DSG) is in charge of managing cyber and technological risks for the Group through the Cyber & Technology Risk Management Group (CTRMG) team.

The CTRMG team is organized into four teams:

1. **Function, Policies and Processes (FPP)** whose main missions are the definition and operational implementation of TRM governance, the associated policies and processes, the coordination of the CTRM function composed of approximately 280 members, and the contribution of CTRM expertise during project validation committees.
2. The **Computer Emergency Response Team (CERT)**, reachable 24/7, whose missions are to provide incident responses to internal or external requests, manage and deliver cyber services (in particular bug bounty, cyber rating, attack surface, *etc.*), animate the VIGIE community of more than 300 internal members, and coordinate the Group's Security Operation Centers (SOC), and make DORA declarations to *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector. CERT uses a variety of devices to control its attack surface and monitor information leaks outside the information system, both on the web and the dark web. It also relies on cyber threat intelligence tools to anticipate and track the activities of attacker groups. In addition, CERT collaborates with specialized communities, such as Intercert France and TFCSIRT, to share information on the various cyber threats.
3. The **RSSI/CTRM Delegation** team is responsible for managing BPCE SA's cyber governance and IT risks and for the delegated management of BPCE SA's direct subsidiaries.
4. **Leaders of major Cybersecurity projects** (DORA, IAM, *etc.*) under the responsibility of Program Directors reporting to the Group RSSI.

The CTRMG team defines its projects according to three areas:

1. Continued implementation of regulatory projects (including DORA);
2. Implementation of essential projects and platforms for IT Security and Resilience;
3. Study of initiatives to respond to new threats.

TRM (technology risk management) deployment

The Group Information Systems Security policy (ISSP-G), which dealt solely with the types of cybersecurity risk, has given way to the Technology Risk Management (TRM) model, which is now the Group's technology risk management framework.

The general Cyber and IT Risk Management policy (PG-TRM) covers six types, meeting EBA guidelines and the DORA regulation, and is accompanied by new policies dedicated to each of these risks:

1. Cybersecurity;
2. IT production;
3. IT developments and projects;
4. IT outsourcing;
5. IT governance and strategy;
6. IS continuity.

This TRM model is deployed in all Group entities, in accordance with the level of risk of each entity, with four main objectives:

1. Interlocutors who aware of and trained in cyber and IT risks;
2. A system equipped with Rules and Controls;
3. Cyber & IT risk mapping;
4. A committee system incorporating TRM risks.

In parallel with this deployment and the associated metrics, the strengthening of the system for managing current authorizations is also monitored, with a view to continuous improvement.

The improvement of the data leak detection system has made it possible to identify more incidents, without the severity of the damage being greater.

In addition, this deployment ensures the strengthening of third-party management (classification and definition of associated control measures) and the implementation of the audits provided for in subcontracting or service contracts. The existing contracts have also been reviewed and supplemented by the TRM appendix for better management of the security of data entrusted to third parties.

BPCE monitors its ISS maturity level with an external firm by carrying out an annual National Institute of Standards and Technology (NIST) assessment. The second line of defense (LoD2/RSSI) commissions penetration tests on the most critical applications. In addition, with the application of the DORA regulation, BPCE is subject to Threat-Led Penetration Testing (TLPT). In addition, BPCE has not only a third line of defense, composed of the Group Internal Audit, but also the audit teams in the Group's various entities. Lastly, BPCE is supervised by the ECB, which can carry out on-site inspection (OSI) missions; the latest OSI took place in 2023 and concerned IT risk management.

Raising employee and third party awareness of cybersecurity

The Group Security department presents cybersecurity and IT risks to the Supervisory Board or its Risk Committee.

Furthermore, Groupe BPCE organizes mandatory regulatory training (FRO) on cybersecurity for its employees. These mandatory regulatory training courses must be followed by all employees, including managers, in accordance with the regulatory requirements (order of February 25, 2021 and DORA regulation).

The Group proposes a new mandatory regulatory training course every year, covering the themes of data protection, password management, phishing and fraud prevention, as well as compliance with the Charter for the Use of Information and Communication Technologies.

In addition, regular awareness-raising campaigns are deployed throughout the Group (including the prevention of phishing threats).

The new "Charter for the Use of Information and Communication Technologies" is an appendix to the internal rules, and it defines:

- the general rules governing the use of IT resources;
- the security rules for these resources that users must comply with;
- the protection and control principles that may be put in place;
- the responsibilities of users and potential sanctions incurred in the event of non-compliance with the Charter.

As the use of IT tools has evolved in recent years, with, among other things, the emergence of artificial intelligence and the massive deployment of teleworking, the threats have become multifaceted and have also intensified. These developments require the Group to adapt to these new threats by adjusting certain rules for the use of IT resources, while making users aware of their central role in company security.

The Charter thus specifies the rights, duties and obligations of the user (employee or external) concerning the use of the resources made available. It applies both inside and outside the company's premises, whether when traveling or teleworking.

In addition, the awareness-raising campaigns continued, particularly aimed at the Group's top management. In addition, the Group participates in industry bodies on cybersecurity and events such as the "European Cybersecurity Month".

Groupe BPCE relies on a normative framework for the management of third parties. This framework involves:

- A prior assessment of the level of security (audit report, questionnaire of the level of maturity in terms of data protection, *etc.*);
- Contractual requirements to ensure compliance with the Group's data protection regulations and standards;
- Monitoring of the compliance level (Committees, Permanent Controls, penetration tests and vulnerability scans, *etc.*).
- Thus, in accordance with DORA, Groupe BPCE plans to implement:
  - upon entering into a relationship with an external partner (before contracting), a mandatory risk analysis questionnaire including a section of questions relating to the training and awareness of the staff involved in the provision of the service;
  - a TRM appendix to the outsourcing/subcontracting contract, in which the supplier undertakes to ensure that its staff involved in the provision of the services, or having access to the customer's information systems, benefit from regular awareness-raising efforts and training that are adequate and sufficient in terms of ICT security;
  - during the life of the contract, a permanent control, already in place in 2025, ensuring compliance annually with the training commitments on the protection and security of the employee data of external partners.

7.12.3 Personal Data Protection

Organization and management of the sector

The Group Security department (DSG) is responsible for the protection of personal data within the Group. It defines, implements and develops the Group's Personal Data Protection policies. It provides continuous and consolidated oversight of its area of safety expertise, for which it is responsible, as well as technical and regulatory watch. It initiates and coordinates Group projects aimed at reducing risks in its field of expertise. It also represents Groupe BPCE *vis-à-vis* banking industry groups and public authorities.

Groupe BPCE has established a groupwide Privacy function. It brings together the Group Data Protection Officer (DPO-G), who coordinates this area of privacy expertise, and the DPOs of all supervised companies.

The Group Security department defines, implements and develops the Group's Personal Data Protection policy.

The Group data protection function:

- ensures the management of the Group's ongoing GDPR compliance program, as well as the management and coordination of the DPO community, the coordination between the Group's institutions, and the maintenance in operational condition of the standards, guiding principles and procedural models pertaining to the GDPR;
- also coordinates the processing of data breaches and in particular the CNIL notification phase;
- intervenes in the validation circuit of new products or commercial processes that impact the Group. It also participates in the negotiation of contracts with service providers when they have a Community role;
- provides reporting on the Group's GDPR risk, defines and consolidates a permanent control system for the benefit of Groupe BPCE's governance, and carries out an annual consolidated mapping of the GDPR risk. The DPOs of the Caisses d'Epargne and Banques Populaires and more broadly all affiliated parent companies, direct subsidiaries and IT EIGs report functionally to the Group DPO. This functional link means that:
  - the Group DPO is notified of any DPO appointment and is involved in the recruitment process. Before being rolled out throughout the Group in 2027, the DPO is integrated into the recruitment process for DPOs (or their corporate relay, the Data Protection Lead (DPL), if the DPO function is centralized within the Group Data Protection department) as part of a strong functional link applied to the entities of the BPCE Collective. This functional link also includes the assessments of the DPO or DPL in conjunction with his or her superiors, as well as the preparation of budgets;
  - the Group data protection policy applies within the institutions and guides the organization and missions of the two lines of defense, LoD2 and LoD1. Although there is a possibility for local subsidiarity, it must remain limited and validated by the Group DPO or a lower level DPO (GFS, Insurance division and BRED);
  - reports on the level of compliance of the institutions with the Group data protection policy, the permanent privacy control, the main GDPR incidents, and any requests from CNIL are sent to the Group DPO.

Monitoring of Personal Data Protection risks

The GDPR risk is monitored through a system focusing on three areas:

- a first- and second-level permanent control system recorded in the DRIVE and PRISCOP tools, the latter combining the two levels of control;
- an annual GDPR risk mapping established according to the operational risk standards;
- a GDPR risk governance through the Executive Privacy Committee, which meets quarterly and receives quarterly reporting. This committee brings together LoD1 and LoD2 players and includes four members of BPCE's Executive Management Committee, present or represented, as well as four representatives of the Banques Populaires and the Caisses d'Epargne.

At Group level, this risk is monitored by the Permanent Control Committees. It is also reported to the Supervisory Board.

In addition, the Group's employees receive GDPR training every three years.

7.13 Operational risk

7.13.1 Operational risk management

Groupe BPCE has set up a system for measuring non-financial risks through the standardized use of indicators. These cover the indicators of the RAF system, the indicators resulting from the amended order of November 3, 2014, but also qualitative indicators aimed at measuring the industry's adherence to operational risk standards.
The Group's operational risk policy consists of keeping all of these indicators below the set limits, by entity and on a consolidated basis. In the event of an overrun, appropriate measures and corrective actions must be taken by the business lines owning the risks to remedy the possible failures. These measures and corrective actions must be monitored by the committee in charge of operational risks.
The operational risk policy is reviewed annually by the dedicated committee.

Organization

The Group Operational Risk division (DROG) – part of the Group Risk division – is in charge of identifying, measuring, monitoring and managing the operational risks incurred in all activities and functions undertaken by Group institutions and subsidiaries.

The operational risk system consists of:

- a central organization and a network of operational risk managers and officers, working in all activities, entities and subsidiaries of Group institutions and subsidiaries;
- a methodology based on a set of standards and an OR tool used throughout the Group.

The Operational Risk division operates:

- in all structures consolidated or controlled by the institution or the subsidiary (banking, financial, insurance, *etc.*);
- in all activities exposed to operational risks, including outsourced activities, within the meaning of Article 10 q and Article 10 r of the order of November 3, 2014 as amended, "outsourced activities and services or other critical or essential operational tasks".

Two levels of operational risk management

Operational risk oversight within the Group is coordinated at two levels:

1. At the level of each group institution

The Operational Risk Committee is responsible for adapting the operational risk management policy and ensuring the relevance and effectiveness of the operational risk management framework. Accordingly, it:

- examines major and recurring incidents, and validates the associated corrective actions;
- examines indicator breaches, decides on associated corrective actions, and tracks progress on risk mitigation initiatives;
- examines permanent controls carried out by the Operational Risk division and in particular any excessive delays in implementing corrective actions;
- helps organize and train the network of Operational Risk officers;
- determines if any changes need to be made in local insurance policies;

The frequency of meetings depends on the intensity of the institution's risks, in accordance with three operational schemes reviewed once a year by the Group Non-Financial Risk Committee (CRNFG) and communicated to the entities.

2. At Groupe BPCE level

The Group Non-Financial Risk Committee meets quarterly and is chaired by a member of the Executive Management Committee.

Its main duties are to define the OR standard, ensure that the OR system is deployed at the Group entities, and define the Group OR policy. Accordingly, it:

- examines major risks incurred by the Group and defines its tolerance level, decides on the implementation of corrective actions affecting the Group and monitors their progress;
- assesses the level of resources to be allocated;
- reviews major incidents within its remit, validates the aggregated map of operational risks at Group level, which is used for the macro-level risk mapping campaign;
- monitors major risk positions across all Group businesses, including risks relating to non-compliance, financial audits, personal and property safety, contingency and business continuity planning, financial security and information system security (ISS);
- lastly, validates Group RAF indicators related to non-financial risks as well as their thresholds.

7.13.2 Monitoring

Incident and loss data collection

Incident data are collected to build knowledge of the cost of risks, continuously improve management systems, and meet regulatory objectives.

An incident log (incident database) was created to:

- broaden risk analysis and gain the knowledge needed to adjust action plans and assess their relevance;
- produce COREP regulatory half-year operational risk statements;
- produce reports for the executive and governing bodies and for non-management personnel;
- establish a record that can be used for operational risk modeling.

Incidents are reported as they occur, as soon as they are detected, in accordance with Group procedure. A whistleblowing procedure has been set up for major incidents and internal limit breaches to round out the incident data collection system.

Operational risk oversight

Mapping

The operational risk management framework relies on a mapping process which is updated annually by all Group entities.

Mapping enables the forward-looking identification and measurement of high-risk processes. For a given scope, it allows the Group to measure its exposure to risks for the year ahead. This exposure is then assessed and validated by the relevant committees in order to launch action plans aimed at reducing exposure. The mapping scope includes emerging risks, risks related to information and communication technologies and security, including cyber-risks, risks related to service providers and risks of non-compliance.

This same mapping mechanism is used during the Group's ICAAP to identify and measure its main operational risks. The operational risk map also serves as a basis for the macro-risk mapping campaign covering the institutions, and thus for the Group overall.

Action plans and monitoring of corrective actions

Corrective actions are implemented to reduce the frequency, impact or spread of operational risks. They may be introduced following operational risk mapping, breaches of risk indicator thresholds or specific incidents.

Progress on key actions is monitored by each entity's Operational Risk Management Committee.

At Group level, progress on action plans for the principal risk areas is also specifically monitored by the Non-Financial Risk Committee.

Incident alert procedure

The alert procedure for serious incidents has been extended to the entire scope of Groupe BPCE. The aim of this system is to enhance and reinforce the system for collecting loss data across the Group.

An operational risk incident is deemed to be serious when the potential financial impact at the time of detection is over €300,000. Operational risk incidents with a material impact on the image and reputation of the Group or its subsidiaries are also deemed to be serious.

There is also a procedure in place covering material operational risks, within the meaning of Article 98 of the order of November 3, 2014, as amended by the order of February 25, 2021, for which the minimum threshold is set at 0.5% of Common Equity Tier-1.

Operational risk measurement

Groupe BPCE applies the standardized approach to calculate its capital requirements. Moreover, elements of internal control are considered in the assessment of the Group's net risk exposures.

7.13.3 Control

The permanent risk control division of the Governance and Risk Control department performs two types of Level 2 Controls on Operational Risks:

- compliance checks with standards (comprehensive and automatic):
  - Groupe BPCE checks the system when it presents any deviations from the Operational Risk Standards on the various themes of Operational Risk Management: organizational system for the management of OR, incidents, mapping, predictive risk indicators, corrective actions, *etc.*;
- data quality controls (sample and manual):
  - Groupe BPCE performs Level 2 controls of the Operational Risk division.

These controls are carried out on the basis of the control reports of the Institutions system, and therefore on the same scope as these reports: system, incidents, mapping (risk situations), predictive risk indicators, corrective actions.

The majority of these controls are carried out on the basis of data samples extracted from the operational risk management tool. The results of these Level 2 sample controls are recorded in the permanent controls management tool.

Other controls concern certain points relating to risk coverage. They are exhaustive and their results are subject to specific formalization (minutes of meetings relating to serious incidents, record of decisions, *etc.*).

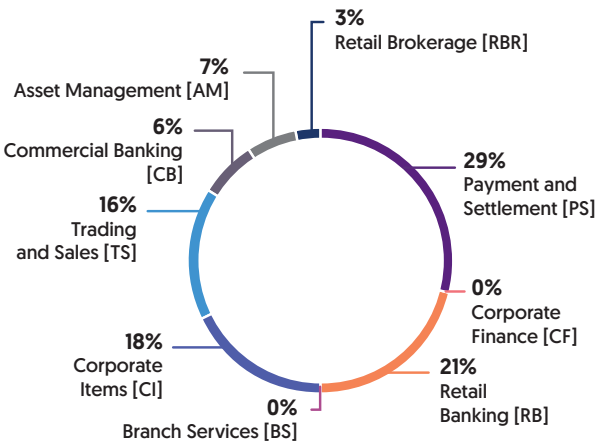
Highlights

In addition, with a view to improving our risk management, first- and second-level controls on external fraud are being implemented.

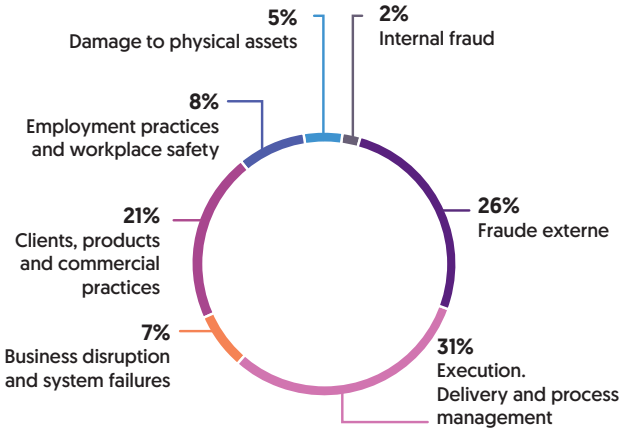
In terms of Insurance, the networks and subsidiaries benefit from coverage of their insurable operational risks under Group insurance policies contracted from leading insurance companies. In addition to this system, an internal Group reinsurance company has been set up.

Breakdown of losses at 12/31/2025

Breakdown of losses by Basel business line



Breakdown of losses by Basel loss event category



As in the previous year, the two main Basel OR causes are "Execution, Delivery and Process Management" and "External fraud".

The main incident in 2025 was an "Execution, Delivery and Process Management" Basel incident for an amount of €8 million, which explains the change in percentages.

Operational risk mitigation techniques

In terms of Insurance, the networks and subsidiaries benefit from coverage of their insurable operational risks under Group insurance policies contracted from leading insurance companies. This system is complemented by a reinsurance captive that allows the adjustment of deductible levels.

Coverage of insurable risks

At January 1, 2025, BPCE SA had subscribed, both for itself and:

- for its subsidiaries, including Natixis;
- and the Banque Populaire and Caisse d'Epargne networks, with the exception of CASDEN Banque Populaire with respect to the "Property Damage" insurance coverage for Registered Offices & Similar and their contents (including IS equipment) and consequent "losses in banking activities", described below in point E/.

The following main Insurance policies to cover its insurable operational risks and protect its balance sheet and income statement:

A/ Combined "Global Banking (Damages to Valuables and Fraud)" & "Professional Civil Liability" policy with a total maximum payout of **€217 million** per year of insurance, of which:

I. **€92.5 million** per year, combined "Global Banking/ Professional Civil Liability/Cyber-Risks/FIE" and mobilizable under the guaranteed amounts indicated in (ii) and/or (iii) and/ or (iv) and/or F/ below;

II. **€48 million** and per year (sub-limited in "Fraud" to **€35 million** per claim), dedicated to the "Global Banking" risk only;

III. **€25 million** per claim and per year, solely reserved for "Professional Civil Liability" risk;

IV. **€51.5 million** per claim and per year, combined "Global Banking/Professional Civil Liability" insurance available in addition to or after use of the amounts guaranteed set out in (ii) and/or (iii) above.

The maximum amount that can be paid out for any one claim under this arrangement is **€100 million** under "Professional Civil Liability" coverage and **€100.5 million** under "Fraud" coverage in excess of the applicable deductibles.

B/ "Regulated Intermediation Liability" (in three areas: Financial Intermediation, Insurance Intermediation and Real Estate Transactions/Management) with a total maximum payout of **€10 million** per claim and **€13 million** per year.

C/ "Operating Civil Liability" covering **€75 million** per claim, as well as a "Subsidiary Owner Civil Liability"/"Post Delivery-Reception Civil Liability" coverage extension for up to **€35 million** per claim and per year of insurance.

D/ "Company Directors Civil Liability" for up to **€150 million** per claim and per year of insurance.

E/ "Property Damage" to "Registered Offices & Similar" and to their content (including IT equipment) and the consecutive "losses in banking activities", for up to **€300 million** per claim (sub-limited to **€100 million** per claim **and €200 million** per year for consequential "losses in banking activities").

F/ "Protection of Digital Assets against Cyber-Risks" & consecutive "losses of banking activities", up to **€100 million** per claim and **€156.5 million** per policy year of which **€85 million** per year combined with the guaranteed amount indicated in (i) of A/.

This coverage extends worldwide for initial risk or umbrella risk, subject to certain exceptions, mainly in terms of "Professional Civil Liability" where the policy does not cover permanent institutions based in the United States (where coverage is obtained locally by Natixis' US operations).

All the insurance policies mentioned above were taken out with reputable, creditworthy insurance companies and in excess of the deductibles and Groupe BPCE's risk-retention capacity.

7.14 Insurance, Asset Management, Financial Conglomerate risks

Foreword

The insurance entities have a Board of Directors and an Umbrella Risk Committee.

- The Boards of Directors decide on all matters relating to the company's strategy, finance, risks and management; they are kept regularly informed of changes in the activity; they draw up the accounts, approve the budget and validate the Own Risk and Solvency Assessment (ORSA) report.
- The Risk Committee's areas of expertise include:
  - Follow-up on the recommendations of the latest assignments of the BPCE's Internal Audit, the internal audit departments of BPCE Assurances and BRED, or the ACPR;
  - Organization of the supervision and control of the entities' risks (including operational risks), compliance, internal control organization, anti-money laundering, audit plan and audit budgets;
  - Changes in the organization or governance of companies.

Risk functions

Within the Group Risk division, the Non-Banking Equity Risk department aims to provide a cross-functional view of the risks borne by the Group's non-banking investments, by identifying the interactions between the risks of the Insurance, Asset Management and Banking businesses, through contagion mechanisms in a financial conglomerate approach.

The Non-Banking Equity Risk department is based on a matrix organization and is made up of three teams:

1) Group and Financial Conglomerate Insurance Risks;
2) Asset Management and Insurance Investment Risks;
3) Stress Tests & Methodologies.

Risk management frameworks related to the entities of the insurance sector extended to the financial conglomerate

Guidelines

Insurance sector risks under Solvency II

Risk monitoring:

- Each company has set up a risk monitoring system in accordance with the Solvency II requirements;

Stress tests:

- BPCE is made up of several prudential Insurance groups within the meaning of Solvency II; each producing a 'group' ORSA report and 'solo' ORSA report;
- As part of these ORSA exercises, the companies carry out stress tests, which are coordinated by the Non-Banking Equity Risk department to ensure homogeneity;
- The Group Risk division has standardized the Group's ORSA scenarios base with those of the internal capital adequacy assessment process (ICAAP). In addition, the companies simulate scenarios for their ORSAs that reflect the specificities of their business model and risk profiles;
- The Group Risk division coordinates these exercises and analyzes the results of the simulations and presents them to the Group's Executive Management.

Insurance sector risks under Basel III

Risk monitoring:

- The quarterly Insurance Risk Monitoring Committees, set up by the Group Risk division with each of the companies, are an important forum for discussion, where the company's Chief Risk Officer presents his or her risk analysis and the highlights of the quarter to his or her banking parent company and to the central institution;
- These committees issue a quarterly report from each company to inform the Group's Executive Management within the framework of the Group Risk and Compliance Committee;
- Each quarter, at the end of the CSRA, the Group Insurance Risks function prepares a quarterly summary of insurance risks for the Group's CRO;
- In addition, every year the Group Risk division reviews, in conjunction with the non-banking business lines and their parent companies, the Group RAF indicators and the associated thresholds/limits;
- The Group Risk division is involved in the implementation and monitoring of the RAF system within the scope of each company.

Stress tests:

- A methodology for the Group's Insurance companies has been formalized and implemented. This methodology makes it possible to align Insurance with Banking within the framework of the ICAAP normative internal stress tests and the EBA regulatory stress tests;
- For the ICAAP economic approach, the Group Risk division has developed an Economic Capital model for Insurance Holdings Risk[1]

1 The methodology has been progressively enriched. In particular, Economic Capital distinguishes between the capital necessary to carry investments and the capital likely to be committed in a complementary manner (buffer for recapitalization risk, allocated to step-in risk).

Additional monitoring of the financial conglomerate

Risk monitoring:

- The Financial Conglomerate approach aims to consolidate the banking and insurance sector metrics in particular, especially the capital requirements, in order to:
  - Better establish the management of interactions between the three regulated financial sectors Banking, Insurance and Asset Management;
  - Ensure compliance with the FICO Directive 2002/87/EC, the associated Delegated Regulations, and its national transposition;
  - Perpetuate the maintenance of the "Danish Compromise" criteria thanks to the good integration of insurance companies, particularly in terms of risk management.

"Financial Conglomerate" solvency trajectories:

- In order to provide a forward-looking view of the Group's solvency through the Financial Conglomerate's analysis grid, the Capital Management function projects a trajectory of the Conglomerate surplus over several years;
- In order to understand the different solvencies of a Bancassurer, the Conglomerate excess capital is projected on the basis of homogeneous Group financial assumptions, taken from the Central and Adverse scenarios of the ICAAP and broken down into Insurance-specific shocks based on the ORSAs.

Asset management risks

Operation and objectives of the function:

Like the system adopted for the Insurance business line, the operation of this system is based on subsidiarity with the Risk departments of the management companies and parent banks; in particular, Natixis Investment Managers, which consolidates most of the Group's assets under management.

Risk monitoring:

- The Group Risk division coordinates the function and animates cross-functional projects related to the banking sector.

Stress tests:

- The Group Risk division and Natixis IM discuss the sectoral stress tests carried out by Natixis IM and its contributions to the Natixis and Group stress tests (*e.g.* IST, ICAAP);

The entire system in its various dimensions – Insurance, Asset Management, Banking and Financial Conglomerate; qualitative and quantitative risk assessments – gives rise to discussions with the joint ECB/ACPR (JST) supervision team, in meetings organized under the aegis of Regulation 2002/87/EC applicable to Financial Conglomerates..

Permanent controls of insurance entities

In addition to the work carried out within the Group Insurance Risk function, a certain number of permanent controls are carried out by the insurance entities. They focus on the following areas:

- Money laundering and terrorist financing risks;
- Non-compliance risk;
- Fight against fraud;
- Emergency and Business Continuity Plan (BPC);
- Monitoring of essential outsourced services.

Depending on the organization of the institutions, these permanent controls are carried out either by the Compliance function, the Risk division or the function dedicated to permanent control.

Three levels of control are carried out at different levels within the Group:

Level 1 permanent controls	Implemented by the operational structures (self-control and hierarchical control) of each of the companies on the basis of charters and procedures;
Second level permanent control	Carried out by the risk management and monitoring functions independent of the operational units within the companies or by a permanent control unit depending on the entity; Supplemented by the Risk functions of the banking parent companies and the central institution;
Third level periodic control	Carried out by BPCE's Internal Audit, and the internal audit departments of BPCE Assurances and BRED in their respective areas and scope.

Measurement and monitoring of investments

The organization of the management of the investments of each structure is specific to each entity.

Asset allocation rules are set by the *ad hoc* committees based on the results of asset/liability simulations performed on tools held internally or by specialized consulting firms.

Each structure has implemented a financial charter based on the risk control and supervision principles laid down by the Group or by BRED (for Prépar Vie / IARD) and by the French Insurance Code.

Commitment monitoring system

Product design and distribution

The insurance business presents operational risks, including legal, non-compliance and image risks. These risks are all present during the creation of the product, the drafting of the contractual conditions, and the presentation and sale of the products *etc.*

Risks may also arise due to changes in case law or regulations.

Underwriting risk

The partners' sales advisors or the banks' credit analysts have computer tools enabling them to record contracts and amendments. The applications include the criteria for accepting or modifying contracts. They result from the policy of controlling the technical balances of the companies concerned.

Lastly, the system is based on updated procedures for granting sureties and guarantees and for monitoring underwriting risks *(premiums, reserves, disaster)* detailed by activity.

Monitoring of non-life insurance portfolios

Portfolio monitoring actions are carried out to monitor and limit the risk of claims drift for all Group companies.

The policies for pricing, updating of scorings and provisioning are adapted to the monitoring system.

Claims management

Formal claims management and settlement procedures are applied to all companies.

The various non-life insurance companies have implemented claims management monitoring processes to ensure uniform treatment and consistent assessments.

Provisions

The technical departments of the companies are in charge of managing the technical risks of the companies. This covers, among other things, the calculation of provisions, additional claims costs and the determination of ultimate expenses.

Management tools are put in place by the companies to measure and provision for risks, then reinsure them if necessary, and regularly monitor the profitability of the portfolios.

In addition to the work on provisions, the work of the technical departments of these companies covers the creation of new products, pricing reviews, the development of technical dashboards, the processes for determining claims opening fees (for non-life insurance policies), and participation in work for the steering and management of reinsurance.

Intragroup transactions within the financial conglomerate

The following information corresponds to significant intragroup transactions carried out during the year or in inventory between Conglomerate entities with a banking or investment services activity, on the one hand, and those with an insurance activity, on the other hand, when Groupe BPCE exercises significant influence over the insurance companies.

The main intragroup transactions concern: home loan guarantees, mandates and UCITS, a guarantee on securities loans, and commissioning with the networks:

- CEGC and Parnasse Garanties guarantee a significant portion of the home loans granted by the CE and BP networks;
- The financial investments of the Group's insurance companies are mainly entrusted to Natixis IM (mandates and dedicated UCITS);
- In addition, the networks are commissioned by the companies as part of the distribution of insurance products.

Other intragroup transactions, which could become significant in the event of stress, are monitored periodically. In particular, the holding by non-banking business lines[1] of debt issued by BPCE, and securities lending/borrowing and repo operations between these business lines and the banking sector.

1 *E.g.* Ostrum AM, BPCE Assurances *etc.*

CEGC

Compagnie Européenne de Garanties et Cautions is the Group's Security and Guarantee insurance entity. It is exposed to underwriting risk, market risk, reinsurer default risk and operational risk.

In 2025, new home loans guaranteed by CEGC rebounded, and overall revenue increased by almost 30%. Claims made in 2025 remained under control at 26% of earned premiums ("claims to premiums", gross reinsurance ratio).

Under the Solvency II prudential regime, CEGC uses a partial internal model approved by the *Autorité de contrôle prudentiel et de résolution* (ACPR), the French prudential supervisory authority for the banking and insurance sector, and meets the robustness requirement applicable to home loan guarantors.

In 2025, CEGC covered the Solvency Capital Requirement, thanks to its Tier-1 and Tier-2 capital, as well as its reinsurance coverage.

Underwriting risk

Underwriting risk is the main risk incurred by CEGC. It is essentially a counterparty risk, as the commitments given by CEGC to beneficiaries of guarantees result in direct exposure to individual or corporate insured parties. These commitments are regulated and provisioned under liabilities in the balance sheet. They amounted to €3.25 billion at December 31, 2025 (+2.7% compared to the end of 2024).

BPCE41 – Amount of CEGC regulated commitments *(in millions of euros) - social standards*

CEGC activities	12/31/2025	Change 12/31/2025 *versus* 12/31/2024
Individual customers	2,893	2.5%
Single-family home builders	96	8.5%
Property administrators – Realtors	12	(7.9%)
Corporate customers	36	23.9%
Real estate developers	28	(15.9%)
Small businesses	109	0.5%
Social Economy – Social Housing	67	6.5%
Structured collateral	4	11.2%
TOTAL	**3,245**	**2.7%**

Market and credit risk

CEGC's short-term investment portfolio totaled over €3.9 billion on its balance sheet at December 31, 2025 hedging technical provisions and own funds.

Market risk associated with the short-term investment portfolio is limited by the company's investment choices.

The company's risk limits are set out in the financial management charter and the asset management agreement established with Ostrum. As an insurance company, CEGC does not require funding since insurance premiums are collected before the disbursement of claims. Nor does CEGC carry transformation risk: the investment portfolio is entirely backed by own funds and technical reserves.

BPCE42 – CEGC investment portfolio

	12/31/2025			12/31/2024		
in millions of euros	Balance sheet value, net of provision	*in %*	Mark to market	Balance sheet value, net of provision	*in %*	Mark to market

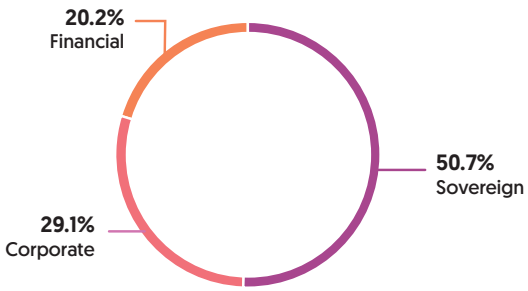
Total	**3,885**	**100%**	**3,787**	**3,852**	**100%**	**3,705**

The charts below show the composition of the bond portfolio.

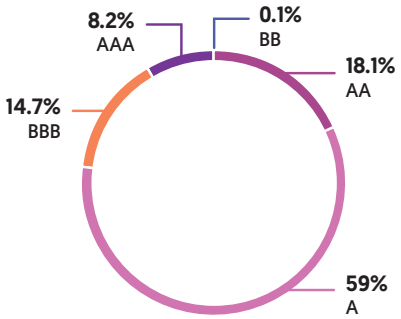
At December 31, 2025, the proportion of sovereign bonds was over 50%. The proportion of bonds with a rating above A- was 85%, in line with the company's financial management charter, and more than 99% of the securities held were classified as "Investment grade".

The average rating of the bond portfolio was A+ at December 31, 2025.

Breakdown of the bond portfolio by sector at 12/31/2025



Breakdown of the bond portfolio by rating at 12/31/2025



Reinsurance risk

CEGC hedges its liability portfolio by implementing a reinsurance program tailored to its activities.

In loan guarantees, reinsurance is used as a tool for regulatory capital management. It protects guarantee beneficiaries in the event of an economic recession leading to a loss of up to 2% of guaranteed loan outstandings.

In the other segments, reinsurance makes it possible to share risks and cover potential large claims. Reinsurer default risk is governed by counterparty concentration and rating limits. CEGC's reinsurance programs are underwritten by a broad panel of international reinsurers with a minimum rating of A on the S&P scale.

PREPAR Assurance

The PREPAR Assurance group is made up of two companies:

- PREPAR-VIE, created in 1984, a public limited company with a Management Board and a Supervisory Board;
- PREPAR-IARD, created in 1990, a public limited company with a Board of Directors.

They are wholly-owned subsidiaries of BRED Banque Populaire, of which they form the Insurance division.

At December 31, 2025, PREPAR-VIE, considered as the parent company of the PREPAR Assurance group, managed approximately 246,000 savings contracts, for a total outstanding of €8.9 billion, and 775,000 personal risk insurance contracts. PREPAR Assurances is subject to the main risks described below.

PREPAR-VIE

- Market risk: PREPAR-VIE's portfolio of assets is diversified to address the ALM management issues specific to an entity mainly marketing savings contracts. As a result, PREPAR-VIE is highly exposed to market risk and more specifically to interest rate, equity, real estate and spread sub-risks;
- Credit risk: mainly related to bond investments and their receivables;
- Life insurance underwriting risk: as a company mainly marketing savings contracts, PREPAR-VIE is subject to mortality, fee and surrender sub-risks.

PREPAR-IARD

- Non-life insurance underwriting risk: the financial loss guarantees marketed by PREPAR-IARD are subject to non-life underwriting risk, premium and provisioning risk, as well as disaster risk;
- Counterparty risk.

These risks are regularly monitored and are reported to the various Group bodies.

7.15 Model risks

7.15.1 Introduction

Groupe BPCE aims to optimize returns while operating within the risk appetite limits set by the Board of Directors by monitoring each type of risk and, in particular, the model risk as well as the associated regulatory obligations.

Models must be constantly monitored with regard to their effectiveness.

Simplification and underlying assumptions sometimes come at the expense of accuracy and structural integrity in stressed environments. Groupe BPCE is therefore exposed to a model risk.

Model risk is the risk of financial loss or damage to the Group's reputation resulting from defects in the design, implementation or use of models.

Based on the regulatory definition, Groupe BPCE distinguishes **between two types of model risk**:

- **model uncertainty risk:** this risk is inherent in the quantitative method, system or approach used to approximate or represent the observation;
- **model risk as an operational risk**: this is the risk of economic or reputational loss related to errors in the development, implementation or use of the model.

Model risk concerns both all internal models within the meaning of Directive 2013/36/EU (CRD IV) and all other models used within Groupe BPCE.

7.15.2 Organization

The Group strives to define and deploy internal standards to identify, measure and limit model risk based on fundamental principles, such as the implementation of **three independent lines of defense**:

- **a first line of defense in charge of the design**, development and use of the model and the day-to-day management of model risk through the application of controls, **mainly embodied by the Model Owner**;
- **a second line of defense, embodied in particular by the Model Risk Management (MRM) and validation functions,** responsible for the definition, maintenance and operational implementation of the model risk control framework;
- **a third line, embodied by Internal Audit**, whose role is to periodically verify the effectiveness of the management of the model risk system and the control system defined by the second line of defense.

The MRM department is responsible for the overall supervision of Groupe BPCE's model risk. It is structured around two validation teams in charge of validating models according to the type of model concerned and a governance team.

7.15.3 Governance

Groupe BPCE has established a robust model risk governance system aimed at assessing, reducing and monitoring changes in model risk throughout the model's life cycle through the definition of indicators and the implementation of dedicated dashboards distributed to Executive Management.

Its implementation is linked to an independent control based on principles in connection with the documentation, design, development, implementation, review, approval, continuous monitoring and use of models to ensure their reliability. An MRM risk management policy has been defined for this purpose. This policy must promote an informed knowledge of how each model works, how it is used, and its strengths, weaknesses and limitations. The policy is supplemented by a body of procedures defining the tools for monitoring the performance of the models, in particular, the validation review, the monitoring of remediation actions and the associated escalation processes, and the monitoring of the model portfolio through an inventory. The system is based on a specific tool used throughout Groupe BPCE for the purpose of identifying all models used within the Group and managing their life cycles. A Model Risk Management Committee, chaired by the Chairman of the Management Board of BPCE or by the Chief Executive Officer in charge of risks by delegation, is dedicated to the governance/supervision of the models and the associated risk. The role of the Model Risk Management Committee is to supervise the management of the model risk and to ensure the implementation of appropriate actions for the management of the model risk.

In addition, model risk is the subject of quarterly management reports, the aim of which is to monitor changes in model risk through the implementation of indicators, some of which are defined as part of the risk appetite framework, and which aim in particular to track changes in model performance.

The governance of the models is based on the Model Risk Management Committee (MRMC) and the Model Oversight Committee, which ensure the implementation of a robust governance framework for the model risk.

7.16 Environmental, social and governance risks

7.16.1 Definition and reference framework

7.16.1.1 Reference framework

The management of environmental, social and governance risks within Groupe BPCE is part of a double framework:

- The regulatory framework applicable to financial institutions, including in particular the Sustainable Finance Disclosure Regulation (SFDR), the Markets in Financial Instruments 2 Directive (MiFID 2) and the European Central Bank's guide on climate-related and environmental risks. This framework is complemented by non-financial transparency mechanisms, such as the European Taxonomy and the Corporate Sustainability Reporting Directive (CSRD). Groupe BPCE also considers the environmental and social laws of the jurisdictions in which it operates as parts of its reference framework. In France, this includes the Energy and Climate act, the Mobility Orientation act and the AGEC act (against waste and for a circular economy);
- The framework of standards and best market practices, which Groupe BPCE applies voluntarily and which is based on international references and standards, such as the Sustainable Development Goals (UN), the United Nations Global Compact (UN), the Equator Principles (project financing), *etc.*, as well as on market initiatives such as the Principles for Responsible Banking.

Groupe BPCE's environmental, social and governance risk management framework aims to ensure compliance with the methodological standards and constraints set by this reference framework while still reflecting Groupe BPCE's risk appetite.

7.16.1.2 Definition of ESG risks

Environmental risks

Environmental risks fall into two main categories:

- Physical risks arising from the impacts of extreme or chronic climatic or environmental events (biodiversity, pollution, water, natural resources) on the activities of Groupe BPCE or its counterparties;
- Transition risks arising from the impacts of the transition to a low-carbon economy, or one with a lower environmental impact, on Groupe BPCE or its counterparties, including regulatory changes, technological developments, and the behavior of stakeholders (including consumers).

Social risks

Social risks arise from the impacts of social factors on Groupe BPCE's counterparties, including issues related to the rights, well-being and interests of individuals and stakeholders (the company's workforce, employees of the company's value chain, communities concerned, end users and final consumers).

Governance risks

Governance risks arise from the impacts of governance factors on Groupe BPCE's counterparties, including issues related to ethics and corporate culture (governance structure, business integrity and transparency, *etc.*), management of supplier relationships, lobbying activities and business conduct practices.

7.16.1.3 Climate and environmental scenarios

As part of its strategic planning, business line steering and risk management processes, the Groupe BPCE uses climate scenarios to assess the challenges associated with short-, medium- and long-term climate risks.

These scenarios come from leading institutions in scientific research on the climate, such as the Intergovernmental Panel on Climate Change (IPCC), the Network for Greening the Financial System (NGFS) and the International Energy Agency (IEA).

The choice of scenarios selected by the Group is based on cross-disciplinary work between the main departments involved in strategic planning and risk management. They are validated at executive management level by the relevant bodies overseeing each of the various exercises in which these scenarios are used.

Scenarios used in risk management

Groupe BPCE mainly relies on the SSP2-4.5 (IPCC scenario) and Nationally Determined Contributions (NGFS scenario) scenarios to define a median trend for risk monitoring purposes.

For its risk assessment purposes in a deteriorated context, in stress test exercises for example, Groupe BPCE also relies on alternative, more extreme scenarios: SSP5-8.5 scenario (IPCC scenario) on physical risk and Net Zero 2050 and Delayed Transition scenarios (IPCC scenarios) on transition risk.

The characteristics of the main climate scenarios used by Groupe BPCE are described in the table below.

Topic	RCP 4.5	RCP 8.5	Nationally Determined Contributions	Net Zero Transition	Delayed Transition
Source	**IPCC**	**IPCC**	**NGFS**	**NGFS**	**NGFS**
Use of ESG risks	Assessment of physical risk	Assessment of physical risk	Assessment of transition risk	Assessment of transition risk	Assessment of transition risk
Demographics	Stabilized growth around 2050	Sustained growth	Moderate growth	Stabilization or slight decrease	Sustained growth
Technology	Adoption of more sustainable technologies, transition to renewable energies	Slow adoption of more sustainable technologies, continued dependence on fossil fuels	Gradual adoption of more sustainable technologies, innovations supported by adapted policies	Acceleration of innovation in more sustainable technologies, strong political and financial support	Delayed adoption of more sustainable technologies
Societal	Increased awareness of environmental issues, proactive policies	Growing inequalities, potential social struggles	Growing awareness of environmental issues, citizen engagement	Strong social mobilization in favor of the transition, supported by appropriate policies	Growing inequalities and social resistance
Economic growth	Moderate economic growth	Rapid economic growth, high energy consumption	Moderate economic growth	Sustainable economic growth	Rapid but unsustainable economic growth
Greenhouse gas emissions	Significant emission reduction from 2040	Rapidly rising emissions throughout the 21st century	Gradual emission reduction	Rapid and significant emission reduction	Continued increase in short-term emissions, with late stabilization

Scenarios used in the development of decarbonization trajectories

Groupe BPCE also draws on the scenarios developed by the International Energy Agency. These scenarios, specific to each sector, determine the technological breakthroughs necessary to achieve carbon neutrality by 2050.

In the context of defining its decarbonization objectives and trajectories, Groupe BPCE has decided to use the International Energy Agency's Net Zero Emissions 2050 reference scenario (NZE 2050 scenario), published in 2021, to define the targets for aligning its exposure portfolios with the most carbon emitting sectors. This scenario plots sector trajectories compatible with limiting global warming to +1.5°C, in accordance with the most ambitious objectives of the Paris Agreement. When this scenario is not sufficiently precise and granular to be reconciled with the composition of certain sector portfolios, the Group may have to use alternative scenarios by ensuring the quality of the organizations that produce them and their compatibility with the +1.5°C target without or with limited overshoot of the global carbon budget.

While the reference base generally used is the International Energy Agency curve, the use of scientific reference curves adapted to each sector and the geographies in which Groupe BPCE's activities are present has made it possible to take into account the specificities of the sectors considered. These scientific scenarios are usually expressed in emission intensity. They are also used by the vast majority of the customers that Groupe BPCE finances in these sectors. This shared use of a scientific reference base makes it possible to optimize the dialogue between the bank and its customers.

7.16.1.4 Industry knowledge base

Groupe BPCE has developed a knowledge base shared between the main internal stakeholders in the ESG risk management framework (in particular the Impact department and the ESG Risk department). This knowledge base is intended to serve as a reference framework within Groupe BPCE on ESG issues related to the main economic sectors and to feed into the work carried out downstream to integrate ESG risks into strategic discussions and the various Groupe BPCE risk management frameworks.

This knowledge base takes the form of sectoral factsheets bringing together the main ESG issues of the most ESG-sensitive economic sectors. They are based on the current state of scientific, technological and social knowledge gathered by Groupe BPCE's experts. This knowledge base is regularly updated and expanded in order to follow the sectoral dynamics observed.

7.16.1.5 ESG data

The acquisition, dissemination and use within Groupe BPCE of data related to the ESG characteristics of its counterparties and its own activities is a critical issue, particularly for the purposes of portfolio management and ESG risk monitoring. They also play a major role in enriching customers' non-financial knowledge, enabling the implementation of appropriate support actions depending to the customer segment.

The management of data relating to ESG issues (ESG data) falls within the general framework of Groupe BPCE's data standards and policies, in particular those relating to the BCBS239 regulations. In addition, an ESG data governance standard has been defined to clearly specify the roles and responsibilities of the various players, as well as the specific requirements for the collection, aggregation and validation of ESG data.

Depending on its needs, Groupe BPCE has several channels for acquiring ESG data on its counterparties:

- Direct collection of data from its counterparties through specific questionnaires and dedicated strategic dialogues;
- Collection of data from non-financial information published by its counterparties, for example in their CSRD report for the European companies concerned;
- Public databases (open data), made available by governmental institutions such as the French Environment and Energy Management Agency (*Agence de l'environnement et de la maîtrise de l'énergie* - ADEME) or specialist non-governmental organizations (NGOs) such as World Wildlife Fund (WWF) or Urgewald;
- Specialized external data providers such as non-financial or general rating agencies.

In the absence of counterparty-specific data, Groupe BPCE may use approximations (*e.g.* sector averages) and estimates to assess the trajectory of its portfolios and its risks. This approach is used in particular for individual, professional and small business customers, as it is more challenging to obtain their data compared to obtaining that of large companies, which are subject to publication obligations.

To meet the challenges pertaining to the collection and quality of ESG data, in 2025 Groupe BPCE defined a roadmap making it possible to cover the main needs in terms of customer data, while complying with its commitments in terms of risk and commercial standards. The orientations related to this roadmap and the monitoring of its execution are carried out by the Executive Management Committee, as part of the monitoring of the VISION 2030 strategic project, and by the Environmental Transition Strategy Committee.

7.16.2 Governance

7.16.2.1 The Supervisory Board of Groupe BPCE

Groupe BPCE's Supervisory Board oversees and puts into perspective Groupe BPCE's ESG strategy, with the support of its specialized committees:

- The Risk Committee assesses the effectiveness of the internal control and ESG risk management frameworks within Groupe BPCE;
- The Cooperative and CSR Committee oversees the sustainability reporting and non-financial communication, in conjunction with the Audit and Investment Committee and the Impact program;
- The Audit and Investment Committee oversees the non-financial communication and the inclusion of ESG risks in Groupe BPCE's financial statements, in conjunction with the Cooperative and CSR Committee (joint committee meeting once a year);
- The Remuneration Committee reviews proposals aimed at integrating ESG issues and risks into the executive remuneration policy.

Groupe BPCE's directors receive regular training on the challenges that ESG risks represent for the Group, the evolution of the scientific context, the regulatory expectations associated with these risks, and the strategy and risk management frameworks implemented in response. In 2025, four specific training sessions on ESG impact and risks were offered to Groupe BPCE's directors, enabling them to share ESG issues for financial institutions and actions relevant to supporting clients.

7.16.2.2 Executive Management Committee

The Executive Management Committee of Groupe BPCE validates the ESG strategy, ensures its implementation and oversees the Group's ESG risk management. To this end, it relies on committees dedicated to addressing these issues:

- The Environmental Transition Strategy Committee, chaired by the Chairman of the Management Board, validates the Group's Impact strategy in terms of environmental transition and steers its implementation (action plans, indicators, measurement of the Group's ambitions). This oversight includes the monitoring of ESG indicators;
- The ESG Risk Committee, chaired by Groupe BPCE's Chief Risk Officer, brings together the heads of Groupe BPCE's business divisions, the Risk and Finance functions and the Impact department, as well as two of the Group's executive managers. This decision-making and monitoring committee deals with ESG issues from a cross-functional perspective for Groupe BPCE and its various business lines. It is responsible for the consolidated monitoring of Groupe BPCE's ESG risks and for ensuring the implementation of the organizational and operational strategy regarding ESG risk management. It validates the main methodological choices and scenarios used within the Group in the context of ESG risk management. It reviews and validates the assessment of the materiality of ESG risks, gives its opinion on Groupe BPCE's ESG risk appetite and monitors the key risk indicators and associated limits.

In addition, subjects associated with ESG risks are also handled by other Executive Management level committees, which include these subjects within their remit. This concerns in particular:

- the Group Risk and Compliance Committee, which integrates ESG risks into Groupe BPCE's consolidated risk monitoring;
- the Standards and Methods Committee, which reviews and approves the changes in standards necessary for the implementation of the ESG risk management framework;
- the committees dedicated to the risk functions that integrate the relevant ESG risk factors within their area of expertise: Group Credit and Counterparty Committee, Group Non-Financial Risk Committee, Group Market Risk Committee, Group Reputation Committee;
- the Group Regulatory Watch Committee, which monitors ESG regulations and ensures that regulatory requirements are met;
- the New Products and New Activities Committee, which incorporates issues related to ESG strategy and risks and associated regulations in the assessment of new products and activities;
- the Group Asset/Liability Management Committee, which integrates the ESG strategy and risks associated with the management of Groupe BPCE's liquidity reserve.

In the context of Groupe BPCE's cooperative model, two committees support the definition and implementation of the ESG risk management strategy and framework by liaising with the managers of Groupe BPCE institutions:

- the Impact Committee, chaired by the Director of Impact, supports the work of defining and implementing the Impact strategy by ensuring the link with the managers of Groupe BPCE institutions. It provides cross-functional guidance on the Group's Impact program, prior to its deployment in the institutions;
- the Risk, Compliance and Permanent Control Committee, chaired by the Chief Risk Officer, which provides guidance on the main proposed changes to the ESG risk management framework.

At an operational level, Groupe BPCE relies on committees bringing together experts on ESG issues and risks at the level of BPCE and its main entities. In particular, the Sustainable Finance Methodologies Committee, chaired by the Chief Impact Officer, defines the reference methodological approaches in terms of Sustainable Finance and ESG risks for Groupe BPCE.

7.16.2.3 Organization

Mission and organization of the Impact Department

The Impact department, which reports directly to the Chairman of the Management Board, is responsible for Impact VISION 2030 in terms of environmental, social and governance dimensions. It develops and deploys this expertise, and works to share and disseminate the best practices identified in all Group companies, with a view to continuous improvement. It coordinates the operational implementation of the Impact program, established as part of the BPCE VISION 2030 strategic project, by mobilizing the various stakeholders. Lastly, it ensures overall coordination and supports each sector to ensure "Impact Inside" operations, while setting up the necessary synergies.

To carry out its missions, the Impact department relies on the CSR/Impact departments of Groupe BPCE's various business lines, the Fédération nationale des Banques Populaires (FNBP), the Fédération nationale des Caisses d'Epargne (FNCE) and, at a more operational level, the CSR departments of the Group's entities. An Impact function, coordinated and supported by the Impact department, manages and supports the sustainable transformation of the Group's business models and business lines to integrate ESG issues. Comprising all the Group's entities and business lines, it ensures that common guidelines are developed and implemented jointly, while taking the specificities of each business model into account. It ensures the operational execution of the Impact strategic project.

Each Group institution and business line has appointed an Impact sponsor, a function member, who drives and coordinates the Impact action plan at his or her company level and participates in the co-construction momentum.

Mission and organization of the ESG Risk Department

The ESG Risk department plays a central role in defining and implementing Groupe BPCE's ESG risk supervision framework and is responsible for:

- Defining and deploying methodologies and risk measurement tools specific to ESG risks.
- Contribute to the definition of reference climate/environmental scenarios for Groupe BPCE;
- Contribute to the definition and implementation of a stress test framework on ESG risks and contribute to cross-functional risk management processes, in particular RAF/ICAAP/ILAAP, on behalf of ESG risks;
- Steer and support projects aimed at taking ESG risks into account in risk appetite, policies, processes, risk/business methodologies in all Risk functions, entities and business lines;
- Support the operational implementation of the ESG risk framework in all entities, in particular by supervising the permanent control framework related to ESG risks;
- Define and implement consolidated ESG risk monitoring dashboards and monitor sensitive individual and sector exposures;
- Produce and disseminate consolidated analyses (*ad hoc* or recurring) on ESG risk exposure;
- Define and develop the internal training framework on ESG risks (directors, managers, employees).

To carry out these missions, the ESG Risk department relies on a network of correspondents across all Groupe BPCE entities and institutions, in charge of supporting the deployment of the ESG risk management framework within their domain.

Given the specific challenges faced by Corporate & Investment Banking's business lines, Natixis CIB has set up several hubs of expertise within its sales teams (Green & Sustainable Hub), Risk department and Strategy & Sustainability department. These teams contribute to Groupe BPCE's work, in particular on large companies and specialized financing, impact and risk assessment methodologies, and are directly involved in supporting the deployment of the framework to other entities and institutions in Groupe BPCE.

Integration into the internal control framework

The ESG risk management framework is based on the three lines of defense model in place within Groupe BPCE:

- First line of defense: the operational departments within Groupe BPCE's various business lines and functions integrate ESG risks into their processes, policies and controls. ESG risks are taken into account in the level 1.1 and 1.2 control framework according to the risks induced by each activity;
- Second line of defense:
  - The ESG Risk department, which reports directly to Groupe BPCE's Chief Risk Officer, establishes the reference framework (methodology and scenarios), structures, coordinates and supports the deployment of the ESG risk management framework within Groupe BPCE. These missions are carried out in collaboration with the Impact department, the other units of the Risk department, the other Groupe BPCE departments involved in ESG risk management and all Groupe BPCE entities and institutions;
  - The other risk and compliance functions incorporate ESG risks as a risk factor in the risk management and control framework, with the support of the ESG Risk department;
  - The departments in charge of permanent controls integrate the control points relating to ESG risks to ensure the monitoring and cross-functional control of the effective integration of the ESG risk management framework into policies and processes;
- Third line of defense: Groupe BPCE's Internal Audit and the departments in charge of the internal audit include ESG risks in their review of the internal control framework to ensure the proper application of the associated risk policies, the compliance of commercial practices with risk management, and the compliance with regulatory obligations.

7.16.2.4 Employee training and awareness

In 2025, Groupe BPCE set up the Impact Campus, a revised and updated training program based on three blocks: a common core based on general knowledge, advanced training modules on priority strategic themes, and modules specific to each business line. This framework brings together the up-to-date training courses available to build training plans by business line.

The VISION 2030 strategic project includes a target to train 100% of employees in ESG issues by December 31, 2026. In this context, in 2025, Groupe BPCE rolled out two e-learning training modules: "The fundamentals of impact" and "The fundamentals of ESG risks". Additional training specifically dedicated to ESG issues and their consideration in the analysis of business models have also been provided to the teams concerned.

7.16.2.5 Remuneration policy

The Supervisory Board, through its Remuneration Committee, is responsible for setting the method and amount of remuneration for each member of the Management Board. It ensures that ESG issues are fully integrated into the remuneration policy.

The remuneration of the Chairman of the Management Board and the members of Groupe BPCE's Executive Management Committee (excluding control functions) includes an annual variable component indexed at 40% to qualitative criteria. The allocation of this variable portion depends in part on the implementation of Groupe BPCE's strategic ambitions on ESG issues.

On February 6, 2025, on the proposal of the Remuneration Committee, Groupe BPCE's Supervisory Board decided to set the Management Board's variable-compensation targets for the 2025 fiscal year by incorporating a specific criterion related to the environment, climate and decarbonization trajectories with a weighting of 5%.

Since 2022, in order to raise the employee's awareness and involve them in the Group's commitment to the fight against global warming, BPCE SA's incentive scheme for employees has been partly indexed to an objective linked to Groupe BPCE's Impact strategy (achievement of the Group's strategic objective to reduce its direct footprint in the agreement covering the 2022-2024 fiscal years, followed by ESG training in the agreement covering 2025-2027).

In addition, certain Groupe BPCE entities use similar criteria to determine the variable remuneration of executives and employees, depending on their context and objectives.

7.16.3 VISION 2030 and Impact strategy

7.16.3.1 VISION 2030 strategic project

Groupe BPCE strategic project, VISION 2030, outlines the major priorities it has set for itself in order to build a growth project to serve its clients, in a society marked by four major transitions: environmental, demographic, technological and geopolitical.

Faced with this situation, Groupe BPCE is mobilizing its local and regional presence, its business lines and expertise, to enable its clients, cooperative shareholders and employees to assert their power to act and to trust in the future.

The cooperative nature of the Banques Populaires and the Caisses d'Epargne, coupled with their deep local roots, have made Groupe BPCE a positive impact financial player since its inception, which has been particularly committed to the decarbonization of the economy in recent years. Groupe BPCE's global business lines – Natixis Corporate & Investment Banking (Natixis CIB) and Natixis Investment Managers (Natixis IM) – are positioned as key global players in transitions.

7.16.3.2 Impact strategy

Environmental impact

Faced with the climate emergency, the Group's approach aims to rapidly implement and deploy measures to mitigate and adapt to the already tangible environmental and socio-economic impacts of climate change and the erosion of biodiversity. Making impact accessible to all means raising awareness and massively supporting all its clients in the environmental transition through expertise, consulting offers and global solutions.

Based on the scenarios defined by science, Groupe BPCE and its business lines are positioning themselves as facilitators of transition efforts, with a clear and ambitious objective: to finance a carbon-neutral economy by 2050 by taking action today.

The Group's approach aims to rapidly implement and deploy measures to mitigate and adapt to environmental and socio-economic impacts. It is based on Groupe BPCE's cooperative model, which combines local roots and commitment to society to finance the economy.

- Impact solutions:
  - For individual customers: Support energy renovation and adaptation of housing to aging and loss of autonomy by offering financing solutions and by mobilizing its role as an operator, trusted third party as well as its partnerships;
  - By offering a "Sustainable Tips and Solutions" tool in partnership with ADEME, which makes it possible to simply calculate one's carbon footprint but also to benefit from advice and support for one's energy renovation work, for decarbonized mobility or green savings;
  - By supporting energy renovation projects for individual homes and condominiums at each stage: energy assessment, search for subsidies, guarantee of completion of work, with pathways and financing adapted to each situation;
  - By increasing the number of financing for the energy renovation of buildings;
  - For BtoB customers: Support the transition of the business models of its customers, ranging from SMEs to the largest international companies. The Group is committed to a dedicated dialogue and a contribution of sector expertise to integrate ESG issues according to their size and economic sectors, particularly in energy infrastructure, transport, waste management and treatment, *etc.*; Sustainable solutions also exist for investor customers with a range of responsible investments: sustainable development savings accounts, funds with a sustainable investment objective, labeled thematic funds, *etc.*
- Support for the evolution of the energy mix: Faced with the climate emergency, the priority is to accelerate the advent of a sustainable energy system:
  - by positioning itself among the world leaders in debt project financing in the renewable energy sector;
  - by increasing its financing dedicated to the production and storage of green electricity;
  - by providing advice about capital raising processes to its customers, leaders in the infrastructure and equipment sector related to the energy transition, as well as innovative and fast-growing companies in the sector;
  - by advising its clients on energy transformation projects in their financing or capital raising processes;
  - by supporting the reindustrialization of regions and energy sovereignty;
  - by setting up teams of experts dedicated to low-carbon energies (solar, wind, electrolysis, *etc.*) and critical metals.
- Alignment of its financing and insurance portfolios with trajectories compatible with the objectives of the Paris Agreement:
  - by developing frameworks to measure carbon emissions;
  - by developing its framework for identifying and managing climate, physical and transition risks to which its clients and its own activities are subject, with a view to continuous improvement;
  - by gradually withdrawing from the most-carbon emitting activities, in particular through adapted ESG policies.
- Active and innovative issuer in sustainable finance: In its VISION 2030 strategic project, the Group has set itself the target of issuing more than five green, social or health financing instruments per year, using all the debt instruments at its disposal.

Societal impact

Groupe BPCE is a leading financier in the Social and Solidarity Economy sector and for local authorities, and is a major player in social housing, social entrepreneurship and microcredit.

- A player in the regions of the world where it operates: Groupe BPCE plays a strong role in local ecosystems that promote regional cohesion, supporting numerous initiatives to promote social inclusion and reduce inequalities:
  - The Banques Populaires and the Caisses d'Epargne are key players in the dynamics of the regions, notably by financing the construction or renovation of infrastructure and equipment necessary for education, health and mobility. They are the leading private financier of local authorities and the hospital sector;
  - Globally, Natixis Investment Managers and Natixis Corporate & Investment Banking are developing their Asset & Wealth Management and Corporate & Investment Banking business lines in more than 40 countries in compliance with international commitments, in terms of investment and financing.
- Committed to supporting local and national initiatives:
  - The impact of the sponsorship of the 14 Banques Populaires is measured every year *via* their Cooperative and Societal Footprint. This footprint identifies and values in euros the CSR and cooperative actions implemented within each bank;
  - The 15 Caisses d'Epargne deploy the utility contract in all regions of France: 100% cooperative, 100% regional and 100% useful for the economic, social and environmental development of the regions.

Transforming Groupe BPCE

In order to support the transitions of its clients, according to the highest standards, Groupe BPCE has launched an internal transformation plan "Impact Inside." To extend its impact solutions to its clients and accelerate each aspect of ESG, Groupe BPCE has undertaken a transformation of all its companies at all levels. It mobilizes its governance and employees, which it undertakes to train in ESG issues, and acts on its own activities by reducing its carbon footprint.

7.16.3.3 Objectives, targets and limits related to environmental and social risks and performance assessment

Groupe BPCE supports the economic transition to help mitigate and adapt to global warming. The growing awareness of stakeholders regarding the challenges related to climate change is also creating a positive dynamic of demand for sustainable solutions. The Group's cooperative model allows it to meet client expectations and the company's aspirations by ensuring a fair transition for each client. Its decentralized model and regional presence are real assets for supporting transitions and contributing to a fair and sustainable transformation of society.

The implementation of the VISION 2030 strategic project is monitored using key indicators corresponding to objectives to be achieved by the end of 2026. These include:

- supporting the evolution of the energy mix in the regions of the world where the Group operates by contributing to the reduction in the use of carbon-based energies through a 15% increase in new financing for renewable energy projects;
- managing the action plan to decarbonize the financing of the sectors that emit the most greenhouse gases *via* the implementation of absolute value or intensity targets for 2030: oil and gas, electricity production, automotive, air transport, steel, cement, aluminum, residential and commercial real estate and agriculture;
- supporting energy renovation by increasing the total annual amount of financing to €1 billion by 2026;
- assessing the reduction of our own carbon footprint.

More general indicators in terms of sustainability reflect the objectives relating to the support and awareness-raising actions deployed for our clients:

- 6 million unique visits to the "Advice and sustainable solutions" digital module for Banque Populaire and Caisse d'Epargne clients;
- ESG dialogues covering 100% of the active corporate customers (this dedicated exchange has been rolled out since the beginning of 2023 to corporate customers);
- the increase in financing granted to the Social Solidarity Economy (SSE), social housing and public sector sectors;
- the number of local social entrepreneurship projects supported.

Groupe BPCE has committed, over the long term, to developing a capacity to manage the evolution of its balance sheet by taking into account an assessment of the climate impact of its activities and of financed, invested or insured assets. This change is based, among other things, on the implementation of voluntary targets for the gradual alignment of financing, investment and insurance portfolios with trajectories compatible with the Paris Agreement's climate objectives.

In this approach, Groupe BPCE has relied on the methodological work of the Net Zero Banking Alliance initiative, an initiative launched in 2021 with the United Nations Environment Program (UNEP FI) to define and publish its decarbonization ambitions for the most carbon-intensive sectors. This alliance between banking institutions is a decisive step in the mobilization of the financial sector.

Similarly, BPCE Assurances relied on the work of the Net Zero Asset Owner Alliance (NZAOA). By issuing guidelines adapted to financial institutions, these alliances allow each financial institution, depending on the composition of its loan or investment portfolio, to define science-based targets to combat global warming. These methodologies have also enabled financial institutions to increase their transparency on the challenges of decarbonizing the economy.

This approach has enabled the Group to strengthen its knowledge of the challenges and action levers as well as the risks to which clients could be exposed. The definition of alignment targets requires:

- identifying the most carbon-intensive clients in their sector;
- estimating their transition commitment based, in particular, on their public documents on reducing their carbon emissions and strategic development prospects, as well as analyses of data suppliers and client knowledge;
- determining the evolution of portfolios by 2030 (starting from 2020) according to the targeted objectives of the business lines according to the geographies, technologies and prospects of the clients;
- deducing the absolute emissions or average carbon intensities of the portfolios according to the sectors and any action plans to achieve the Net Zero targets.

Since December 2022, Groupe BPCE published alignment targets for two sectors among those with the highest emissions: electricity production and the oil & gas sector. In December 2023, Groupe BPCE broadened its ambition to reduce carbon emissions by publishing new targets for 2030 for three additional sectors within the scope of Corporate & Investment Banking (Natixis CIB): automotive, steel and cement. Lastly, since June 2024, the trajectories of the real estate (residential and commercial), air transport and agriculture sectors have also been the subject of action plans aimed at reducing financed emissions.

For each sector, the carbon emission reduction targets, and the associated action plans are detailed in periodic publications.

With regard to the environment, excluding climate issues and in particular those relating to biodiversity, the Group is taking concrete steps to preserve it, specifically by adopting policies and practices to promote actions that respect biodiversity. Despite the absence of adapted scientific calculation methods and market benchmarks to assess the impact of these activities, the Group aims to adopt a proactive approach, by actively participating in local work aimed at overcoming these methodological limitations and identifying relevant action levers. To this end, in 2024, Groupe BPCE renewed the commitment previously made by Natixis by joining act4nature international, a coalition that mobilizes companies, public authorities, scientists and environmental associations committed to the protection of biodiversity. In addition, the Group has set concrete objectives in its activities as a banker, insurer and investor, structured around five areas: the integration of biodiversity issues into the strategy, the assessment of impacts and dependencies on nature, the reduction of pressure on ecosystems, the mobilization of a share of financial resources in favor of nature, and the strengthening of knowledge in terms of biodiversity.

In asset management activities, for Natixis Investment Managers, integrating ESG factors into the investment process makes it possible to make more informed decisions, better understand company risks, identify sustainable investment trends, and select companies that contribute to these trends. This approach aims to create long-term value for clients. Several affiliates have developed dedicated non-financial research capabilities and have integrated sustainability criteria into their investment decision-making models. They rely on proprietary systems and raw data to establish their own scoring models and methodologies that they can then transparently explain to clients.

Each Natixis Investment Managers management company is responsible for its investment process and is ultimately responsible for integrating environmental, social and governance factors in compliance with their fiduciary duty. European asset management companies have developed responsible investment policies that explain their overall ESG approach, provide detailed guidance on the integration of environmental factors, and explain their sectoral and/or exclusion policies. The majority of non-European affiliates have developed a global responsible investment approach that formalizes their commitment to integrate material environmental, societal and governance factors into their investment processes. They implement specific restrictions at the request of clients.

The objectives and targets associated with social issues related to the company's own workers, value chain workers, affected communities and consumers and end-users are presented in the section of Groupe BPCE's Sustainability report dedicated to social information.

7.16.4 Environmental, social and governance risk management framework

7.16.4.1 ESG risk management framework deployment program

The ESG Risk department coordinates the implementation of the ESG risk management framework at Groupe BPCE level through a dedicated program. This program is part of the VISION 2030 strategic project and defines a multi-year action plan (2024-2026) aimed at covering all regulatory requirements relating to ESG risk management. It is directly linked to the strategy and actions implemented by the Impact program. This program is monitored quarterly by Groupe BPCE's ESG Risk Committee and Supervisory Board.

7.16.4.2 ESG risk identification and assessment process

Groupe BPCE has implemented a process to identify and assess the materiality of ESG risks in order to structure its understanding of the risks to which it is exposed in the short, medium and long term and to identify priority areas for strengthening the risk management framework.

This process is coordinated by the ESG Risk department, under the supervision of Groupe BPCE's ESG Risk Committee and Supervisory Board. It is subject to an annual review to update Groupe BPCE's portfolios, scientific knowledge and underlying methodologies.

This process consists of four main steps:

- Creation of the ESG risk inventory;
- Documentation of ESG risk transmission channels to other risk categories;
- Assessment of the materiality of ESG risks in relation to other risk categories;
- Input into cross-functional risk management exercises (risk appetite framework, ICAAP, ILAAP).

The scope of risks taken into account in the process of identifying and assessing the materiality of ESG risks only covers climate and environmental risks. Social and governance risks are directly integrated into the cross-functional risk appetite framework. Methodological work to extend it to social and governance risks is underway and will be completed in 2026.

Group risk inventory

Groupe BPCE has set up an environmental risk inventory making it possible to define the specific hazards covered. This inventory is based on current scientific knowledge and reference regulatory texts (*e.g.* European taxonomy) and aims for the most exhaustive possible representation of risks.

With regard to physical risks, the inventory distinguishes between physical risks related to the climate, biodiversity and ecosystems, pollution, water and marine resources, and the use of resources and the circular economy. The climate-related hazards are divided into acute or chronic hazards related to temperature, wind, water, solid mass and environmental hazards. Environmental risks are divided into those that disrupt regulation services (protection against climate risks, support for production services, mitigation of direct impacts) and those that disrupt supply services (in terms of quality or quantity).

With regard to transition risks, the inventory distinguishes between risks related to regulatory changes, technological developments, stakeholder expectations and changes in their behavior.

A social and governance risk inventory is being developed and is expected to be implemented in the course of 2026.

Climate and environmental risks

Physical risks

Climate

Temperature
e.g. Heat waves / Fire / Temperature changes

Wind
e.g. Storms / cyclones

Water
e.g. Flood / drought / rising sea levels

Solid masses
e.g. Coastal and soil erosion, avalanches

Environment

Biodiversity
e.g. Pollination

Water and marine resources
e.g. Water flow / Fish reserves

Natural resources
e.g. Availability of commodities

Pollution
e.g. Soil, water, air quality

Transition risks

Regulatory and legal changes

Technological breakthroughs

Stakeholder behavior
(consumers, civil society, investors, *etc.*)

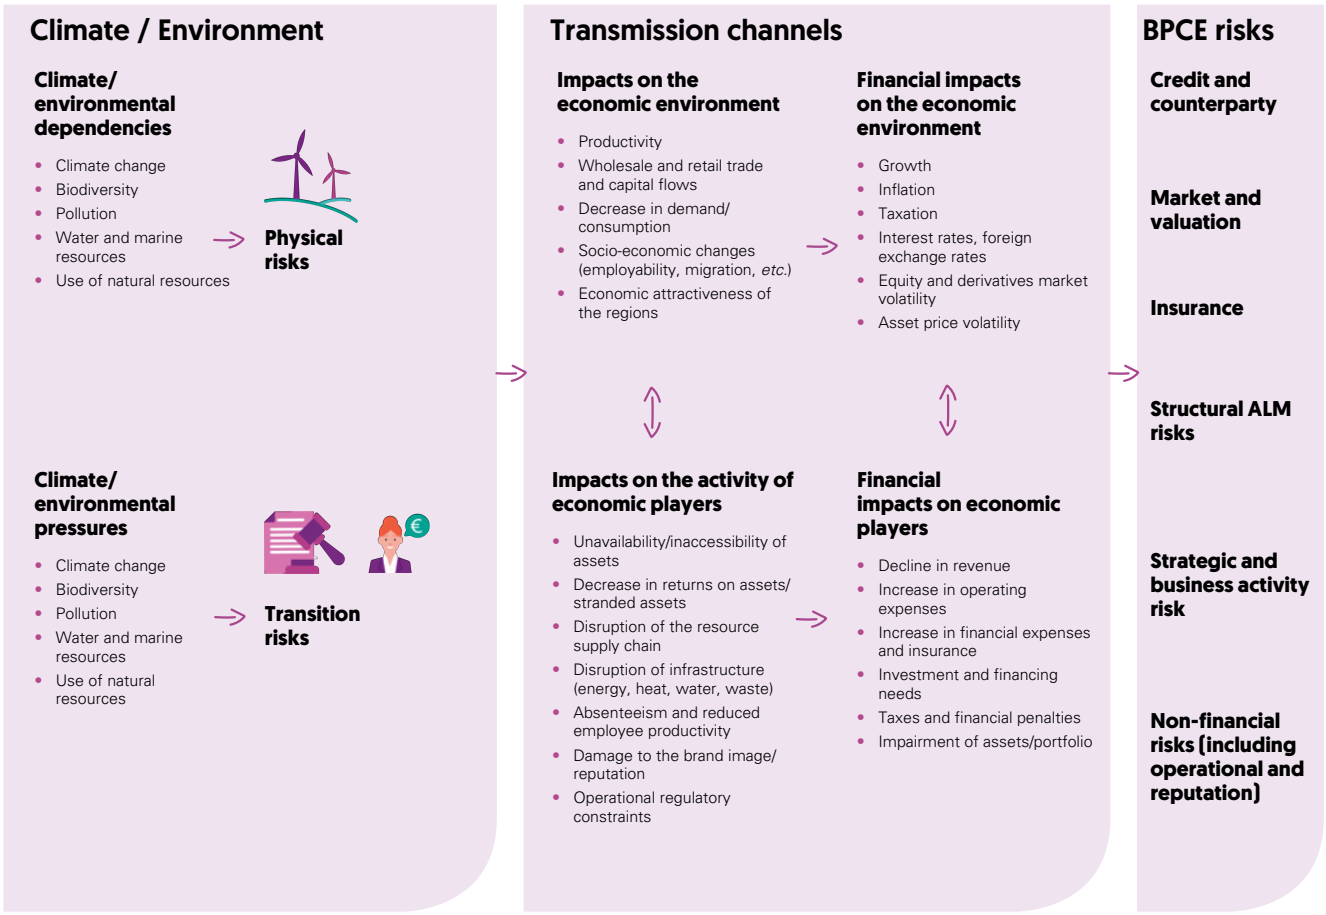
ESG risk transmission channels

ESG risks are risk factors underlying the other risk categories to which Groupe BPCE is exposed, namely credit and counterparty risks, market and valuation risks, insurance risks, structural balance sheet risks, strategic and business risks and non-financial risks (operational risks, reputational risks, non-compliance risks, *etc.*), as identified in Groupe BPCE's risk taxonomy.

Groupe BPCE has conducted work to systematically identify and describe the transmission channels linking climate and environmental risk factors to the main risk categories of Groupe BPCE's risk taxonomy. For this exercise, Groupe BPCE relied on its internal experts as well as on the impact mapping carried out by leading institutions such as the NGFS, SBTN and the OCARA methodology.

The transmission channels describe the implications of climate risks on activities and business models, which are reflected in financial variables at the macroeconomic or microeconomic level and ultimately impact Groupe BPCE's risk exposure. They may materialize directly, in connection with Groupe BPCE's own activities, or indirectly, through the counterparties to which Groupe BPCE is exposed as part of its financing or investment activities. They are summarized in the diagram below.

The definition of transmission channels related to social and governance risks is being developed and will be implemented in the course of 2026.



Assessment of the materiality of ESG risks

Based on the transmission channels identified, Groupe BPCE assesses the materiality of climate and environmental risks in relation to the main risk categories to which it is exposed. This assessment distinguishes between physical risks and transition risks. It is carried out according to three time horizons: short-term (1 to 3 years, financial planning horizon), medium-term (3 to 7 years, strategic planning horizon), and long-term (~2050).

This assessment is based on quantitative or qualitative indicators, which, when available, allows to assess the exposure to risks from a sectoral and geographical point of view, as well as on expert assessments. The internal experts involved in these assessments include the ESG Risk department, the other functions of the Risk department, as well as representatives from the other departments (Impact, Compliance, Legal) and the business lines concerned.

In 2025, the materiality analysis was carried out at the Groupe BPCE level, covering both climate and environmental risks. It was also applied at the level of the main operating entities, based on common assumptions and a shared analytical framework.

The summary of the materiality assessment of climate and environmental risks carried out in 2025 at Groupe BPCE level is presented below.

	CLIMATE AND ENVIRONMENTAL RISKS					
	Physical risks			Transition risks		
	Short term 1 to 3 years (2026)	Medium term 3 to 7 years (2030)	Long-term > 7 years (2050)	Short term 1 to 3 years (2026)	Medium term 3 to 7 years (2030)	Long-term > 7 years (2050)
Credit and counterparty risk	Low	Low	Moderate	Low	Moderate	Moderate
Market and asset valuation risk	Low	Low	Low	Low	Low	Low
Own investment risk	Low	Low	Low	Low	Low	Low
Structural ALM risks	Low	Low	Low	Low	Moderate	Low
Insurance risk - technical	Moderate	Moderate	Moderate	Low	Low	Low
Insurance risk - financial	Low	Moderate	Moderate	Low	Moderate	Moderate
Strategic business and ecosystem risks - revenue	Low	Low	Low	Low	Low	Low
Strategic business and ecosystem risks - asset management	Low	Low	Moderate	Low	Low	Moderate
Operational risk (excluding legal risk)	Low	Low	Moderate	NA	NA	NA
Legal risk	Low	Low	Low	Moderate	Moderate	Low
Reputational risk	Low	Low	Low	High	High	Moderate
Non-compliance risk	NA	NA	NA	Moderate	Moderate	Low

Integration into Groupe BPCE's risk appetite framework

The work to identify ESG risks and assess their materiality feeds into the main components of Groupe BPCE's risk appetite as part of this framework's annual review process.

Groupe BPCE's risk framework includes an "Ecosystem risk" category, which groups together environmental risks by distinguishing between physical and transition risks, social risks and governance risks

The materiality assessment of these risk categories as part of the risk appetite framework is defined by cross-referencing the materiality of the main risk categories to which Groupe BPCE is exposed (assessed as part of the annual process of defining the risk appetite) and the materiality of climate and environmental risks in relation to these risk categories (assessed according to the process described above). For social and governance risks, the assessment is carried out on an expert basis as part of the risk appetite definition process only.

In 2025, the materiality of physical and transition environmental risks was assessed at level 1 out of 3 ("significant") for Groupe BPCE, while the materiality of social and governance risks was assessed at a level of 0 out of 3 ("low").

Risk appetite management

In its risk appetite framework, Groupe BPCE has introduced indicators to manage the concentration of physical and transition risks in its financing portfolios.

A framework for the transitional risk appetite on the residential real estate portfolio was put in place in 2024. It is based on an indicator based on the share of financed properties with a deteriorated Energy Performance Assessment (class F or G) in the inventory. In 2026, a framework for transition risk on the professional, corporate and specialized financing portfolio will be added to the framework This indicator is based on internal transition risk assessment methodologies. This indicator replaces the indicator for monitoring sectors qualified as contributing significantly to greenhouse gas (GHG) emissions, previously under observation. At an operational level, indicators subject to limits are also being set up with regard to physical risks on professional loans, corporate customers and specialized financing exposures, on the one hand, and on residential real estate exposures, on the other hand.

In addition to financing portfolios, the transition risks related to liquidity and reputation risks are also controlled.

Some Group entities have also implemented additional management frameworks, aligned with their own challenges, in order to guarantee risk management adapted to their specificities.

Integration into the internal capital and liquidity adequacy assessment processes

Groupe BPCE takes physical risk into account in its internal capital adequacy assessment process (ICAAP) by applying adverse scenarios to heat waves, drought and floods. The assessment of the transition risk is based on delayed and orderly transition scenarios as well as on a specific scenario linked to the legislation on the energy performance of real estate assets in France. The assessment of the economic capital requirements includes a quantification of the impacts on the residential real estate portfolio and the corporate loan portfolio.

Groupe BPCE also takes into account physical and transition risks in its internal liquidity adequacy assessment process (ILAAP). The risk quantification is based primarily on the modeling of the impact of physical and/or transition risks on clients and investors, as well as of the impact of a negative ESG event on the Group's reputation. The impact of a regulatory change relating to the eligibility of central bank assets based on climate criteria is also integrated.

7.16.4.3 ESG risk measurement tools and methodologies

In order to strengthen its ESG risk assessment capabilities, Groupe BPCE has adopted specific methodologies to assess the ESG risks associated with its portfolios in a systematic and consistent manner. These methodologies are based on internal and external expertise and reflect the state of scientific knowledge, current technologies, regulatory environment and market practices. They are regularly reviewed, supplemented and enhanced to gradually improve the accuracy of ESG risk assessment and take into account changes in the overall context.

Environmental, social and governance risk assessment

The physical and transition risk assessment methodologies deployed by Groupe BPCE are based on quantitative data supplemented by qualitative analysis where appropriate. They are described in the paragraphs below.

In addition, work has been undertaken to update the social and governance risk assessment methodologies, which are expected to be implemented in the course of 2026.

Assessment of physical environmental risks

Geo-sectoral assessments

In order to strengthen the sensitivity and robustness of its assessments of the physical risk associated with its professional and corporate financing exposures, the Groupe BPCE developed in 2024 a methodology to assess the vulnerability of these exposures to physical risks.

This internal methodology allows to take into account the intrinsic vulnerability of a sector to physical risks and the exposure of a given geographic area to these same hazards. It is currently based on a granular sectoral level (NACE2) and a national or regional geographic grid covering the countries in which Groupe BPCE has a particular concentration of exposures (France, United States). Six physical climate risks are currently covered, which are among the most representative for Groupe BPCE, and can be simulated under different scenarios and time horizons.

This methodology was deployed in the internal risk management tools during the course of 2025. The addition of risks related to environmental themes (biodiversity, water and marine resources, pollution) will be made in 2026.

Residential real estate portfolio

Given its high exposure to residential real estate portfolio, Groupe BPCE has developed a simulation tool for the physical risks to which its financed assets are exposed. This tool takes into account the exact coordinates of the asset to assess its exposure to climate hazards, and certain characteristics to estimate its vulnerability and determine the estimated damages under different scenarios and time horizons. At this stage, this tool covers mainland France and Corsica and the two main physical risks on this portfolio (drought - shrink-swell and floods).

Assessment of transition environmental risks

Sector assessments

In order to enhance the granularity and robustness of its transition risk assessment associated with its professional and corporate financing exposures, Groupe BPCE developed in 2024 a granular analysis methodology for the sensitivity of the different economic sectors to this risk.

This internal methodology allows to assign a sectoral score reflecting the transition risk associated with a given economic sector, taking into account the carbon emissions and the main environmental impacts of the companies in the sector. It has been developed consistently with the Green Weighting Factor methodology (described below), which applies at the company or financed project level. Given the predominant share of French companies in Groupe BPCE's exposure portfolio (excluding Natixis), this methodology is focused on the parameters corresponding to the French economy.

This methodology was deployed in the internal risk management tools during the course of 2025. The specificities of other geographic areas in terms of transition risk for the main business sectors concerned will be taken into account in 2026.

Residential real estate portfolio

To assess the transition risk on its residential real estate portfolio, the Groupe BPCE relies on the Energy Performance Certificate (EPC) of the financed real estate assets. The EPC of financed assets in France is collected systematically, allowing to capture both the risk on the repayment capacity of the loan in the event of an increase in energy expenditure, or expenses related to the financing of energy performance improvement, and the risk of loss of value of the asset due to a deteriorated EPC, making it potentially unfit for rental under current regulations.

Green Weighting Factor

Groupe BPCE uses the Green Weighting Factor (GWF) methodology, developed by Natixis CIB, to assess the transition risk related to its counterparties and financed projects.

Using a seven-color rating scale ranging from dark brown to dark green, the GWF assesses the climate impact of transactions, while taking into account the risk of the most material non-climate-related environmental externalities (water, waste, biodiversity, pollution). For the Natixis CIB scope, this assessment is carried out on a granular basis for each of the financing exposures on the balance sheet for all banking products (loans, guarantees, sureties, documentary credits) regardless of their maturity, in all geographies and for all sectors of activity except the financial sector and administration. The GWF methodology is also adapted to corporate and dedicated financing.

The GWF methodology offers a vision of the challenges of transition. The GWF integrates:

- The measure of induced decarbonization (CO2 Scopes 1, 2 and 3);
- The contribution to the transition made by certain clients or active projects, with the notion of avoided emissions;
- The exposure to the most material non-climate environmental risks;
- A forward-looking view of clients' performance, enabling us to assess their transition potential;
- A set of new indicators useful for steering the decarbonization strategy of Corporate & Investment Banking and for regulatory reporting;
- The non-financial reporting needs of investor clients.

The operational management of Natixis CIB's climate trajectory is based, in particular, on data from the Green Weighting Factor (GWF). This management tool is used periodically and at several levels:

- For credit decisions at the transactional level;
- For strategic dialogue with clients;
- For strategic planning: definition of annual color targets for each business line and sub-business line;
- For commercial planning: definition of framework for assessing the individual performance of the financing origination teams;
- For capital allocation and active portfolio management;
- For risk appetite management.

To continuously improve this analysis tool, Corporate & Investment Banking carried out a major overhaul of its decision trees for the dedicated financing part, which will be deployed through a new tool. This overhaul allows for an increased coverage of the scope of analyzed financing and improves the relevance of the assessments of each transaction (based on feedback obtained from users since 2020).

Integration of ESG risks into the risk management framework

Groupe BPCE is gradually incorporating ESG risk factors into its operational decision-making processes and risk monitoring and oversight frameworks. This approach draws on the risk management frameworks in place in the bank's main risk divisions, as described in this section.

Credit risk

Credit policies

Groupe BPCE's credit risk policies include eligibility criteria or points of vigilance relating to ESG issues and associated risks when they are relevant for a given sector. These criteria are used to guide the analysis of financing applications on these aspects. They are compiled and regularly updated from the ESG sectoral knowledge base developed by Groupe BPCE (see above), in coordination with Groupe BPCE's entities and institutions as part of the regular updating of credit policies.

As part of the local implementation of credit policies, Groupe BPCE entities and subsidiaries are able to reinforce their local policy through additional criteria to take into account ESG risks specific to their operational and commercial context.

When relevant, Groupe BPCE's credit policies refer to the Group's voluntary commitments and, in particular, to the ESG sector policies. These policies require that the defined exclusion criteria set are taken into account in the credit decisions process. The ESG sector policies currently in force within Groupe BPCE are described in detail in the Group's Sustainability report.

ESG strategic dialogue with Corporate clients of the retail networks

Groupe BPCE incorporates ESG issues and related risks into its strategic dialogue with the Corporate customers of its retail banking networks. An "ESG dialogue" tool was built internally and rolled out to sales teams to address the main challenges and commitments of Corporate customers on environmental (climate and biodiversity), social and governance issues. This tool allows to enrich client knowledge from the perspective of ESG issues and associated risks and to feed the analysis of the client's risk profile, where applicable.

This approach was strengthened in 2025 in order to take into account more precisely client issues and the risk mitigation approaches implemented. In addition, a sectoral dimension has been introduced to specifically cover ESG issues and associated risks for some priority sectors for Groupe BPCE.

ESG risk rating of counterparties/ transactions

Groupe BPCE has an ESG risk rating deployed across the entire Corporate portfolio, covering SMEs/mid-sized companies and large companies. This ESG risk rating is independent of the credit rating and provides an indication of the counterparty's sensitivity to ESG risks. It is made available to credit analysts and included in the files presented to the decision-making committees. For large Corporate customers, the rating methodology is based on a detailed questionnaire covering the customer's physical and transition climate risks. The ESG risk rating of SME/mid-sized company customers is based on geo-sectoral ESG risk assessments (see above).

In addition, the Green Weighting Factor score (see above) assigned to the counterparty and the transaction (in the case of dedicated financing) is also included in the financing file. This framework is now deployed within Natixis CIB, CEGC and several subsidiaries of the FSE division.

The assets financed by the retail banking networks are also subject to a sustainability qualification in parallel with the credit granting process. The approach makes it possible to assess the compliance of the financed assets with the criteria of the European taxonomy and to provide customers with a certificate relating to the sustainability of the assets.

Analysis of non-financial risks at granting

Groupe BPCE has implemented an analysis of non-financial risks that is integrated into the credit granting process and the annual review of counterparties. The conclusions of this analysis are reported to the decision-making bodies and taken into account when assessing the counterparty's risk profile and the planned transaction.

Within the retail banking networks, the analysis of non-financial risks is integrated into all files presented to the main credit committee. It is notably based on the information collected as part of the ESG dialogue, on the ESG risk rating, as well as on the sectoral knowledge of ESG issues made available to credit analysts. It also includes a review of any controversies likely to affect the client and a review of the compliance with ESG sector policies. The analysis aims to highlight the material ESG risks that could have a significant impact on the counterparty's financial statements so that they can be taken into account in the overall assessment of the credit profile and in the granting decision.

Within Natixis Corporate & Investment Banking, the non-financial risk analysis approach is gradually being rolled out across all of Natixis CIB's main counterparties. This analysis is based on the customer on-boarding process, which includes a check on compliance with the applicable ESG sector policies and an assessment of any controversies associated with the client. During the granting process or annual review, these elements are supplemented by the climate and environmental risk assessment, which is integrated into the detailed analysis of the ESG risks to which the client is exposed. All the elements are presented through an ESG risks opinion, included in the file presented to the credit committee.

Equator Principles (Natixis CIB)

As part of the Equator Principles, Natixis CIB applies a market methodology that aims to assess the environmental and social risks of projects financed and the management of these risks by clients, regardless of their business sector. Since October 2020, Natixis CIB has applied the amended version of the Principles (EP Amendment IV), which includes more exhaustive criteria regarding respect for human rights (including the rights of indigenous communities) and requires the analysis of physical and transition climate risks.

The borrower is therefore required to: assess the physical risks associated with climate change for most projects, carry out an assessment of the climate transition risks and an analysis of less greenhouse gas intensive alternatives for projects with CO2 equivalent emissions of at least 100,000 metric tons per year in total. Depending on the risks identified and the nature of the associated impacts, mitigation measures are requested of the client. They are covered by specific clauses in the financial documentation ("covenants").

Operational risks

Business continuity risks

Groupe BPCE's incident tracking and operational risk monitoring tool makes it possible to specifically identify incidents related to climate and environmental risks, thus facilitating the continuous monitoring of their number and their financial repercussions.

As a preventive measure, as part of its business continuity framework, Groupe BPCE assesses the climate and environmental risks to which its main operating sites (head offices and administrative buildings) are exposed. These risks are taken into account as part of the business continuity plans defined at the level of Groupe BPCE and its entities. These define the procedures and resources to be implemented in the event of natural disasters in order to protect employees, assets and key activities and ensure the continuity of essential services.

Groupe BPCE's essential, critical or important service providers (PECI) are also subject to an assessment of their business continuity plan, which must take into account the climate and environmental risks to which they are exposed.

Reputational risk

The management of reputational risk arising from ESG issues is fully integrated into the overall reputational risk management framework described in the dedicated section of the Pillar III report.

ESG issues are the subject of particular attention in Groupe BPCE's main operational decision-making processes, such as credit granting or purchasing processes, in order to ensure compliance with its voluntary commitments (ESG sector policies in particular) and to identify controversies likely to involve the Group. Specific crisis management mechanisms are also in place.

Reputation events related to ESG issues are subject to specific monitoring at Groupe BPCE level, carried out jointly by the Communication department and the ESG Risk department.

Legal risks

The legal risk management framework relating to ESG issues is part of Groupe BPCE's overall legal risk management framework, as well as the operational risk management framework, which includes the management of litigation and reputation risks. These frameworks define the governance mechanisms and procedures for escalating identified or actual litigation risks within Groupe BPCE.

The management of litigation risks in connection with ESG issues, in particular climate and environmental issues, is based in particular on a monitoring framework implemented by the Legal department on litigation affecting large corporations and in particular financial institutions. Based on this monitoring, a quantification of the risk, through the definition of fictitious standard disputes to which the Group could be exposed, is carried out and integrated into the overall quantification of Groupe BPCE's legal risk.

The risk prevention and control framework is based on the existing decision-making processes and aim at reducing exposure to the risk of greenwashing and the risk of non-compliance with voluntary commitments, as well as to potential failures in the exercise of the duty of care.

ESG litigations involving Groupe BPCE is monitored quarterly by the ESG Risk Committee.

Financial and market risks

Investment risks related to the liquidity reserve

Investments in bonds for Groupe BPCE's liquidity reserve are subject to an ESG framework in order to mitigate ESG and reputational risks. This framework consists of:

- A minimum percentage of "sustainable" securities (Green, Social, or Sustainable) held in the liquidity reserve;
- Exclusion from the investment scope of issuers with a downgraded non-financial rating;
- Exclusion from the investment scope of issuers whose activity does not comply with the criteria of Groupe BPCE's ESG sector policies.

Risks related to proprietary investments

In order to identify potential sources of ESG risks in the analysis of proprietary investments in Private Equity and Non-Operating Real Estate, an ESG data collection and risk analysis process is integrated into the due diligence carried out when preparing investment files.

Market risks

Natixis CIB has set up a monitoring framework for its main market exposures by underlying asset, sector or geographic area. The exposures to market risk are monitored by a counterparty rating aimed at highlighting the potential concentration of risks. To date, no significant concentration related to ESG criteria was identified in the context of short-, medium- or long-term market risks.

Additional work on stress scenarios is underway to enhance the assessment and monitoring of ESG risks in trading books.

Risks related to insurance activities

Due to the nature of its business and its management horizons, BPCE's insurance companies attach importance to the integration of sustainability risks, particularly environmental risks, in its risk management framework.

In accordance with the regulations in force, BPCE's insurance companies incorporate environmental risks at each stage of the risk management process, from their identification to their assessment and then their mitigation.

Climate and non-climate environmental risks are integrated into a risk mapping specific to insurance, distinguishing between physical and transition risks, on the one hand, and short-, medium- and long-term horizons, on the other hand. Quantification of risks is an essential component of BPCE's insurance companies approach, which is gradually incorporating the concept of dual materiality.

Risks related to asset management activities

Natixis Investment Managers (Natixis IM) recognizes the importance of ESG risks, in particular climate risks, and their potential impact on investment portfolios.

Most affiliates have set up systems for measuring the ESG and climate risk exposure of the assets under management, allowing for greater transparency in the management of these issues.

Each Natixis Investment Managers management company is responsible for its investment process and is ultimately responsible for integrating environmental, social and governance factors in compliance with their fiduciary duty. European asset management companies have developed responsible investment policies that explain their overall ESG approach, provide detailed guidance on the integration of environmental factors, and explain their sectoral and/or exclusion policies. The majority of non-European affiliates have developed a global responsible investment approach that formalizes their commitment to integrate material environmental, societal and governance factors into their investment processes. They implement specific restrictions at the request of clients.

Several affiliates have developed dedicated non-financial research capabilities and have integrated sustainability criteria into their investment decision-making models. They rely on proprietary systems and raw data to establish their own scoring models and methodologies.

The most advanced affiliates are developing methodologies for statistical measurement (Value at Risk type) of climate risks. In this context, some asset management companies use external data providers to access these indicators for a specific asset class (*e.g.* MSCI's Real Estate Climate Value at Risk) or to access physical and transition scenarios to assess the potential impact of future events on the portfolios.

In addition, an ESG risk management policy has been implemented by Natixis Investment Managers. This policy establishes the supervision of these risks by an independent second line of defense, in particular as part of the categorization of funds and investment processes, and the definition of escalation processes within the affiliates and the Natixis Investment Managers holding company.

Natixis Investment Managers also uses data from external suppliers to calculate and monitor ESG and climate risk indicators for its portfolios on a monthly basis.

7.16.5 ESG risk monitoring and reporting framework

ESG risks are monitored on a consolidated basis at Groupe BPCE level, through a dashboard produced quarterly by the ESG Risk department and presented in the ESG Risk Committee.

The key risk indicators monitored through the ESG risk dashboard focus on the main primary risks and cover in particular the following points:

- Credit risk: indicators of sectoral concentration (corporate and professional portfolio) or assets (residential real estate portfolio) most sensitive to physical and transition risks;
- Financial risk: concentration by ESG rating of the liquidity reserve and the completed transactions;
- Liquidity risk: monitoring of the eligible assets available for the Green Building and Social refinancing schemes;
- Insurance: monitoring of indicators relating to climate claims within the Insurance Activities;
- Asset management: monitoring of fund concentration with regard to ESG criteria;
- Operational risk: monitoring of operational risk incidents related to ESG risk events;
- Reputational risk: monitoring of ESG events impacting the Group's reputation.

In addition, dashboards have also been set up to monitor the gradual deployment of the framework. In particular, the hedging of credit exposure portfolios by tools, such as the ESG dialogue, is monitored.

The relevant indicators are calculated and made available to Groupe BPCE's entities. Their integration into the management and monitoring of the entity's risks is done in an appropriate manner according to the entity's issues, business model and operational context.

This ESG risks dashboard is intended to be reviewed and enhanced as the ESG risk management framework is strengthened and quantitative measures are developed.

	V. Managing conflicts of interest	
	VI. Internal communication on critical concerns	16.4.4 Integration of ESG risks into the risk management framework

7.17 Reputational risk

7.17.1 Definition

As a major player in the financial system, Groupe BPCE relies on the notion of a trusted third party for the general public, its clients, investors and all economic players. Damage to Groupe BPCE's reputation, particularly when associated with an unfavorable media campaign, could compromise the relationship of trust between the Group and both internal and external stakeholders.

In such cases, the reputational risk may result in loss of revenue, increased operating costs, including an increase in capital requirements, as well as increased remedial costs in the event of failures in the implementation of regulatory obligations or the fulfillment of our commitments. This risk may also hamper Groupe BPCE when entering into new relationships or continuing relationships with clients or service providers. Moreover, this risk may also make it more difficult for Groupe BPCE to attract employees and candidates, increase its costs relating to refinancing and access to liquidity, or affect its image in the eyes of the marketplace and supervisors.

Groupe BPCE is exposed to reputational risks due to the diversity of its international banking, financial and insurance activities. This risk may arise following allegations concerning the promotion and marketing of its products and services, the nature of the financing and investments made, as well as the reputation of the Group's partners. In addition, concerns may arise around Groupe BPCE's environmental strategy and social policies or its governance, as discussed in Section 16. Lastly, Groupe BPCE's reputation could also be compromised by the actions of external entities, such as cybercrime or cyber-terrorism, internal or external fraud, or the misappropriation of funds.

7.17.2 Governance

Organization and committees

The reputation risk management framework is defined and implemented under the responsibility of the ESG Risk department within Groupe BPCE's Risk division. This framework relies in particular on the expertise of the Communication, Impact and Compliance departments for the design and implementation of the risk management frameworks, as well as on all business lines and functions operating as the first line of defense for its operational implementation. The framework is rolled out within Groupe BPCE's entities and operated at the local level, under the responsibility of each entity.

Groupe BPCE has set up a Group Reputation Risk Committee, which acts as the final decision-maker for matters posing a significant reputational risk to the Group.

This committee is chaired by the Chairman of the Management Board of Groupe BPCE. It brings together Groupe BPCE's Risk division, the General Secretariat (including the Legal and Compliance departments), the Impact department and the Communication department of Groupe BPCE, as well as the business lines concerned according to the projects presented. It meets on an *ad hoc* basis, depending on the requests received from internal stakeholders.

The secretariat of the committee is provided by the ESG Risk department, which also coordinates the preliminary study of the requests received.

Reputational risk policy

Groupe BPCE's reputational risk policy sets out the framework for identifying, assessing, monitoring and managing reputational risks within Groupe BPCE. It applies to all Groupe BPCE entities as well as to all new and existing Group relationships, products, activities and transactions.

All Groupe BPCE institutions and material entities have applied Groupe BPCE's reputational risk policy at their own level and have defined the applicable local governance. The local implementation of the reputational risk policy complies with the principles defined in Groupe BPCE's reputational risk policy and, in particular, with the executive-level decision-making process for all significant reputational risks identified.

7.17.3 Reputational risk management framework

Identification of reputational risk

Reputational risk is given particular attention in the main operational decision-making processes (purchasing, entering into new relationships, investment, granting of credit). As part of these processes, significant reputational risks identified by stakeholders in the decision-making chain are escalated for decision-making at the level of the management of the entity concerned or of Groupe BPCE. Similarly, cross-functional frameworks such as the new products/new activities and exceptional operations processes, or the conduct and professional ethics framework, may also lead to the identification of sensitive situations from a reputational risk point of view.

Assessment and monitoring of reputational risk

The assessment of reputational risks is based on the monitoring and permanent analysis of the various information channels (press, social media, blogs, *etc.*) covering all the main Groupe BPCE entities in France and abroad. Based on this monitoring, the impact of each media event affecting Groupe BPCE is assessed and a summary score is produced monthly.

Reputation incident management framework

The aim of the reputation incident management framework is to ensure a rapid and relevant response from Groupe BPCE in the event of an incident involving its reputation, in order to limit the impact and implications of the event on its commercial and operational activities.

In general, incidents involving the reputation of Groupe BPCE or its entities are managed within the framework of crisis management frameworks put in place and coordinated by Groupe BPCE's Communication department and its function, by involving the necessary internal stakeholders such as the Impact department and the relevant business lines.

Groupe BPCE has set up specific procedures for managing communications relating to potential or actual controversies, in particular in the context of controversies related to ESG issues.

7.17.4 Reputational risk monitoring and control framework

Integration into the risk appetite framework (RAF)

Reputational risk is included in Groupe BPCE's internal risk inventory. As part of the risk materiality assessment process, it is subject to a quantitative assessment, based on the estimation of the losses associated with the increase in refinancing costs caused by a reputational event, and to an expert-based adjustment to reflect the other potential impacts of such an event.

To date, the materiality of the reputational risk has been assessed at 2 on a scale of 0 to 3.

Reputational risk is subject to a framework under the RAF. An observation threshold and a limit are set for the monthly level of the summary indicator measuring Groupe BPCE's reputational risk, as well as for the presence of one or more events associated with a very negative reputation score.

Monitoring and reporting

Reputation risk is reported quarterly to Groupe BPCE's risk governance bodies as part of the monitoring of Groupe BPCE's risk appetite.

In addition, the ESG Risk Committee also carries out quarterly monitoring of the main reputational events related to ESG issues and relations with civil society.

Permanent control framework

Groupe BPCE's reputational risk management is based on the various operational processes and existing permanent controls. As part of the overall permanent control framework, specific control points for analyses related to reputational risk have been set up and deployed within Groupe BPCE's entities.

7.17.5 Employee training and support

An "Identifying and preventing reputational risk" training module is made available to all Groupe BPCE employees and rolled out as a priority to the risk-takers of BPCE SA and Groupe BPCE's Risk departments. This training module aims to give employees the keys for identifying reputational risk and its challenges, understanding the sources and qualifying the reputational risk in the context of their operational activities.

In addition, training specific to each business line also supports the deployment of reputational risk analyses when they are implemented in operational processes.

7.18 Remuneration policy

Information on the policies and practices on pay granted to members of the executive body and persons whose professional activities have a material impact on the corporate risk profile are available at the following address: https://www.groupebpce.com/en/investors/results-and-publications/pillar-iii/.

BPCE

7, promenade Germaine Sablon – 75013 Paris – FRANCE

Tel: +33 (0)1 58 40 41 42 – www.groupebpce.com

A French limited liability company (*société anonyme*) with a Management Board and a Supervisory Board, governed by its articles of association, the regulations applicable to commercial companies, and the French Monetary and Financial Code.

The company was incorporated on January 22, 2007, the date on which BPCE, a non-trading company, was formed to hold the assets contributed by the Banque Populaire and Caisse d'Epargne groups. The company's duration is 99 years.

Paris Trade and Companies Register Number 493455042 (this number is listed on Page 1 of BPCE's articles of association).

NAF (business activity) code: 6419Z – LEI number: 9695005MSX10YEMGDF46.

The company's fiscal year runs from January 1 to December 31.

BPCE, founded by the French act of June 18, 2009, is the central institution of Groupe BPCE, a cooperative banking group.

As such, it represents the credit institutions affiliated with it. The affiliated institutions, within the meaning of Article L. 511-31 of the French Monetary and Financial Code, are:

- the 14 Banques Populaires and their 29 mutual guarantee companies (SCM), whose sole corporate purpose is to guarantee loans issued by the Banques Populaires;
- the 15 Caisses d'Epargne, whose share capital is held by 167 Local Savings Companies (LSC);
- Natixis; Banque BCP SAS (France); Banque de Tahiti; Banque de Nouvelle-Calédonie; Banque Palatine; Crédit Foncier de France; Compagnie de Financement Foncier; Cicobail; Société Centrale pour le Financement de l'Immobilier (Socfim); BPCE International; Batimap; Batiroc Bretagne Pays de Loire; Capitole Finance-Tofinso; Comptoir Financier de Garantie; BPCE Lease Nouméa; BPCE Lease Réunion; BPCE Lease Tahiti; Sud-Ouest Bail; Oney Bank.

The company's role is to guide and promote the business and expansion of the cooperative banking group comprising the Banque Populaire network, Caisse d'Epargne network, the affiliated entities and, in general, the other entities under its control.

The purpose of the company is:

- to be the central institution for the Banque Populaire network, the Caisse d'Epargne network and the affiliated entities, as provided for by the French Monetary and Financial Code. Pursuant to Articles L. 511-31 *et seq.* and Article L. 512-107 of the French Monetary and Financial Code, it is responsible for:
  - defining the Group's policy and strategic guidelines as well as those of each of its constituent networks,
  - coordinating the sales policies of each of its networks and taking all measures necessary for the Group's development, including acquiring or holding strategic equity interests,
  - representing the Group and each of its networks to assert its shared rights and interests, including before the banking sector institutions, as well as negotiating and entering into national and international agreements,
  - representing the Group and each of its networks as an employer to assert its shared rights and interests, as well as negotiating and entering into collective industry-wide agreements,
  - taking all measures necessary to guarantee the liquidity of the Group and each of its networks and, to that end, determining rules for managing the Group's liquidity, including by defining the principles and terms and conditions of investment and management of the cash flows of its constituent entities and the conditions under which these entities may carry out transactions with other credit institutions or investment companies and carry out securitization transactions or issue financial instruments, and performing any financial transaction necessary for liquidity management purposes,
  - taking all measures necessary to guarantee the solvency of the Group and each of its networks, including implementing the appropriate Group internal financing mechanisms and setting up a Mutual Guarantee Fund shared by both networks, for which it determines the rules of operation, the terms and conditions of use in addition to the funds provided for in Articles L. 512-12 and L. 512-86-1, as well as the contributions of affiliated entities for its initial allocation and reconstitution,
  - defining the principles and conditions for organizing the internal control system of the Group and each of its networks, as well as controlling the organization, management and quality of the financial position of affiliated entities, including through on-site checks within the scope defined in paragraph 4 of Article L. 511-31,
  - defining the risk management policy and principles and the limits thereof for the Group and each of its networks, and ensuring permanent risk supervision on a consolidated basis,
  - approving the articles of association of affiliated entities and local savings companies and any changes thereto,
  - approving the persons called upon, in accordance with Article L. 511-13, to determine the business orientation of its affiliated entities,
  - calling for the financial contributions required to perform its duties as a central institution,
  - ensuring that the Caisses d'Epargne duly fulfil the duties provided for in Article L. 512-85;
- to be a credit institution, officially approved to operate as a bank. On this basis, it exercises, both in France and other countries, the prerogatives granted to banks by the French Monetary and Financial Code, and provides the investment services described in Articles L. 321-1 and L. 321-2 of said Code; it exercises the function of central bank for the networks and more generally for the Group;
- to act as an insurance intermediary, and particularly as an insurance broker, in accordance with the regulations in force;
- to act as an intermediary for real estate transactions, in accordance with the regulations in force;
- to acquire stakes, both in France and abroad, in any French or foreign companies, groups or associations with similar purposes to those listed above or with a view to the Group's expansion, and more generally, to undertake any transactions relating directly or indirectly to these purposes that are liable to facilitate the achievement of the company's purposes or its expansion.

The information presented on Groupe BPCE's institutional website is not included in the Groupe BPCE universal registration document, unless explicitly incorporated for reference purposes.

8.1.2 Appropriation of earnings

Distributable income is comprised of the income for the fiscal year, less any losses brought forward and any sums allocated to the legal reserve, plus any retained earnings.

The sums distributed are comprised of the distributable income plus any reserves available to the company.

If the full amount of a preferred dividend for a given fiscal year has not been distributed, no dividend may be paid to shareholders of category "A" or "B" shares during the incorporation period, or to any shareholders after the end of the incorporation period.

The Ordinary Shareholders' Meeting, upon a proposal by the Management Board, is entitled to deduct any sums it deems suitable to be carried forward to the following year or to be allocated to one or more extraordinary, general, or special reserve funds. Any sums decided on by the General Shareholders' Meeting upon a proposal by the Management Board may be allocated to these funds. In addition, the General Shareholders' Meeting may decide, upon a proposal by the Management Board, to pay a dividend from all or part of the sums available for distribution, under the terms and conditions set forth in the company's articles of association.

The Ordinary Shareholders' Meeting, upon a proposal by the Management Board, may opt to grant shareholders the option of receiving some or all of their dividend in cash or in shares. This option may also be offered for interim dividends.

Dividend policy

In 2025

The Ordinary Shareholders' Meeting of BPCE, which met on May 22, 2025, resolved that a dividend of €1,099,465,646.88 would be paid out in respect of the 2024 fiscal year to category A and B shareholders, equal to €26.48 per share.

In 2024

The Ordinary Shareholders' Meeting of BPCE, which met on May 23, 2024, resolved that a dividend of €840,750,648.50 would be paid out in respect of the 2023 fiscal year to category A and B shareholders, equal to €22.25 per share.

In accordance with the fifth resolution adopted by BPCE's General Meeting of May 23, 2024, deciding to grant each shareholder an option between payment of the dividend in cash or in shares for the entire dividend for the 2023 fiscal year, and granting all powers to the Management Board to record the completion of the capital increase resulting from the exercise of the dividend payment option in shares.

At its meeting of June 18, 2024, the Management Board members noted that:

- 15 category A shareholders and 14 category B shareholders opted for the payment of the balance of the 2023 dividend in shares, *i.e.* the subscription of 1,784,830 shares with a nominal value of €5;
- the amount of the capital increase resulting from the exercise of the dividend payment option in shares amounted to €8,924,150.

As a result, on June 18, 2024, BPCE's share capital was increased from €188,932,730 to €197,856,880.

In addition, transfers of 25 category B shares were also made with effect from July 31, 2024 (eight shares) and August 30, 2024 (17 shares) between category B shareholders.

In 2023

The Ordinary Shareholders' Meeting of BPCE, which met on May 25, 2023, resolved that a dividend of €808,903,606.14 would be paid out in respect of the 2022 fiscal year to category A and B shareholders, equal to €22.41 per share.

In accordance with the sixth resolution adopted by BPCE's General Meeting of May 25, 2023, deciding to grant each shareholder an option between payment of the dividend in cash or in shares for the entire dividend for the 2022 fiscal year and granting all powers to the Management Board to record the completion of the capital increase resulting from the exercise of the dividend payment option in shares.

At its meeting of June 19, 2023, the Management Board members noted that:

- 15 category A shareholders and 14 category B shareholders opted for the payment of the balance of the 2022 dividend in shares, *i.e.* the subscription of 1,690,892 shares with a nominal value of €5;
- the amount of the capital increase resulting from the exercise of the dividend payment option in shares amounts to €8,454,460.

As a result, on June 19, 2023, BPCE's share capital increased from €180,478,270 to €188,932,730.

In 2022

The Ordinary Shareholders' Meeting of BPCE, which met on May 19, 2022, resolved that a dividend of €787,968,126.82 would be paid out in respect of the 2021 fiscal year to category A and B shareholders, equal to €21.83 per share.

The classification as category A and B shares is defined in Section 8.2.2 of this document.

8.1.3 Company documents

Documents relating to the company, such as its articles of association, financial statements and the Management Board's and Statutory Auditors' reports presented at General Meetings may be viewed at the company's registered office and are also available on BPCE's website: https://groupebpce.com.

8.2 Share capital

8.2.1 Amount of share capital

8.2.1.1 Amount of share capital at December 31, 2025

At December 31, 2025, the share capital was set at €207,603,030 (two hundred and seven million six hundred and three thousand and thirty euros). It is divided into 41,520,606 fully paid-up shares with a nominal value of five euros (€5) each, divided into two categories:

- 20,760,303 category A shares;
- 20,760,303 category B shares.

Regulation (EC) No. 809/2004 requires the following disclosures for each share category:

- The 20,760,303 category A shares were authorized and fully paid up. They were issued at a nominal value of €5 each and there was no reconciliation of the number of category A shares outstanding at the beginning and end of the fiscal year;
- The 20,760,303 category B shares were authorized and fully paid up. They were issued at a nominal value of €5 each and there was no reconciliation of the number of category B shares outstanding at the beginning and end of the fiscal year.

8.2.1.2 Amount of share capital from March 17, 2026

The share capital has been set, as from 17 March 2026, at €242,487,090 (two hundred and forty-two million four hundred and eighty-seven thousand and ninety euros). It is divided into 48,497,418 shares with a par value of five euros (€5) each, fully paid up, split into two categories:

- 24,248,709 category A shares;
- 24,248,709 category B shares.

In accordance with Regulation (EC) No. 809/2004, it is noted for each share category that:

- The 24,248,709 category A shares are authorised and fully paid up, issued at a par value of five euros each, and there was no reconciliation of the number of category A shares outstanding between the opening date and the closing date of the financial year;
- The 24,248,709 category B shares are authorised and fully paid up, issued at a par value of five euros each, and there was no reconciliation of the number of category B shares outstanding between the opening date and the closing date of the financial year.

By authorization of the Supervisory Board of February 3, 2026, the Management Board decided, on March 9, 2026, to make use of the powers granted by the Combined General Meeting of December 18, 2024 and to carry out a capital increase, with cancellation of preferential subscription rights, through the issue of 2,003,978 category A shares to be subscribed by category A shareholders and 2,003,978 category B shares to be subscribed by category B shareholders, for a total amount (including share premiums) of €2,699,999,638.96, to be subscribed between March 10, 2026 and March 16, 2026 (inclusive).

The Management Board noted, on March 17, 2026, that 15 category A shareholders had subscribed for all of the 2,003,978 category A shares and 14 category B shareholders had subscribed for all of the 2,003,978 category B shares, each with a nominal value of five euros, and that the aggregate par value of the capital increase amounted to €20,039,780.

By authorisation of the Supervisory Board dated February 3, 2026, the Management Board decided, on March 9, 2026, to make use of the powers granted by the extraordinary general meeting of March 5, 2026 and to carry out a share capital increase, with cancellation of preferential subscription rights, through the issue of 1,484,428 category A shares to be subscribed by category A shareholders and 1,484,428 category B shares to be subscribed by category B shareholders, for a total amount (including share premiums) of €1,999,999,532.96, to be subscribed between March 10, 2026 and March 16, 2026 (inclusive).

The Management Board noted, on March 17, 2026, that 15 category A shareholders had subscribed for all of the 1,484,428 category A shares and 14 category B shareholders had subscribed for all of the 1,484,428 category B shares, each with a nominal value of five euros, and that the aggregate par value of the capital increase amounted to €14,844,280.

The share capital of BPCE was thus increased, as from March 17, 2026, from €207,603,030 to €242,487,090.

8.2.1.3 General principles

There are no shares not representing capital, no shares held as treasury shares by BPCE and no convertible securities, exchangeable securities or securities with warrants.

Shares in BPCE are neither listed nor traded on any market.

The company did not pledge its own shares over the course of the 2025 fiscal year and since January 1, 2026.

In the absence of a BPCE stock option plan within the meaning of Article R. 225-138 of the French Commercial Code and in the absence of any share buyback transactions referenced in Articles R. 228-90 and R. 228-91 of the French Commercial Code, the disclosures arising thereunder are not applicable to BPCE.

Likewise, since no share subscription or purchase options have been granted or any free shares allocated, the provisions of Articles L. 225-185 and L. 225-197-1 of the French Commercial Code are not applicable to BPCE.

In accordance with Regulation (EC) No. 809/2004, it should be noted that BPCE's articles of association do not have any specific provisions governing changes in share capital that are more stringent than is required by law.

8.2.2 Category A and B shares

Definition

Category A shares are shares held by category A shareholders, which are the Caisses d'Epargne, and issued by the company in accordance with Articles L. 228-11 *et seq.* of the French Commercial Code.

Category B shares are shares held by category B shareholders, which are the Banques Populaires and minority shareholders, and issued in accordance with the above-mentioned articles of the French Commercial Code.

Legal form and registration of shares

The shares issued by the company may only be held in registered form. They are recorded in a register and shareholder accounts and are held by either the company or an approved intermediary.

Rights of category A and B shares

Category A and B shares have the same rights, with the exception of the special rights attributed during the incorporation period, as set forth in the company's articles of association.

These special rights are attached to each share category and can be exercised at Ordinary Shareholders' Meetings.

The special rights expire at the end of the incorporation period. Consequently, at the end of that period, category A and B shares will be automatically converted into ordinary shares bearing equivalent rights, without any formalities required.

Each category A and B share entitles its holder to one vote at General Shareholders' Meetings.

The rights of category A shareholders and category B shareholders may not be changed without the approval of a General Shareholders' Meeting convened specifically for this purpose, in accordance with applicable laws.

Incorporation period

When BPCE was first established on July 31, 2009, two distinct share categories were created – one for former CNCE shareholders and one for former BFBP shareholders – in order to guarantee parity for the shareholders of the two companies owning BPCE during the so-called five-year incorporation period, which could be extended by a decision from the General Shareholders' Meeting. After the incorporation period, category A and B shares would be automatically converted into ordinary shares.

The BPCE General Meeting of December 20, 2012 decided to abolish the incorporation period, which was scheduled to end on the date of the Annual General Meeting in May 2015.

The General Meeting decided to preserve the equal ownership structure of BPCE's share capital and to maintain the Supervisory Board's current composition of seven members proposed by category A shareholders, seven members proposed by category B shareholders and four external members.

An equal split will also be maintained in the appointment of non-voting directors, with three appointed from candidates proposed by category A shareholders and three appointed from candidates proposed by category B shareholders, plus Natixis, which is a non-voting director by operation of the law.

The Combined General Meeting of July 11, 2013 reduced the number of non-voting directors proposed by category A and category B shareholders to two, and decided that the Chairman of the Fédération Nationale des Caisses d'Epargne and the Chairman of the Fédération Nationale des Banques Populaires, who cannot be members of the Supervisory Board, be non-voting directors as of right.

The General Meeting of December 20, 2012 also decided to introduce a 10-year period of non-transferability from July 31, 2009 to July 31, 2019. During this period, only free conveyance within the same network is possible.

The new articles of association have already defined the system for the period commencing August 1, 2019: free conveyance of shares within the same network will remain possible and transfers other than free conveyance (*i.e.* to shareholders of another category or to third parties) will also become possible.

Transfers of shares will be subject to a pre-emptive right that may be exercised by shareholders of the same category. The transfer of any shares that are not covered by the pre-emptive right will require the prior approval of the Supervisory Board deliberating with a qualified majority (12 out of 18 members). In the event approval is not obtained, the Management Board will have to find a solution.

The General Meeting also decided to shift Groupe BPCE's solidarity mechanism towards a greater pooling of resources by changing the order of priority in terms of coverage (network funds and the Mutual Guarantee Fund ahead of capacity-based contributions).

Finally, the General Meeting decided to improve the Group's solvency support mechanism by establishing a bonus and netting system that encourages shareholder institutions to contribute to the achievement of the Group target.

8.3 Ownership structure and distribution of voting rights

8.3.1 Ownership structure from March 17, 2026

(1) Percentage of the share capital corresponds to the theoretical voting rights.
(2) Percentage of voting rights takes into account the treasury shares held by BPCE and corresponds to the voting rights exercisable.

Changes in BPCE's share capital are set out under Section 8.2.1 (above).

BPCE currently has no employee share ownership agreements in place.

8.3.4 Improper control

The company is controlled as described in Section 8.3.1; however, the company believes there is no risk of said control being exercised improperly.

8.3.5 Changes of control

To BPCE's knowledge, and in accordance with European regulations, there are no agreements that could lead to a change in control of the company at a subsequent date.

In accordance with Article L. 512-106 of the French Monetary and Financial Code, "the central institution of the Caisses d'Epargne and the Banques Populaires […] is incorporated as a public limited company in which the Banques Populaires and the Caisses d'Epargne together hold the absolute majority of the share capital and voting rights."

8.4 General Meetings

8.4.1 Extraordinary Shareholders' Meeting of March 5, 2026

An Extraordinary Shareholders' Meeting of BPCE, chaired by the Chairman of the Supervisory Board, was held on March 5, 2026. The Management Board submitted four resolutions.

Shareholders and various other persons to whom the law recognizes the same right were able to exercise their right to information within the time limits and under the conditions laid down by law.

The following resolutions were submitted for deliberation:

First resolution: Delegation of authority granted to the Management Board to proceed, with cancellation of shareholders' preferential subscription rights, with one or more issues of category A shares reserved for category A Shareholders, subject to the adoption of the second resolution.

The General Meeting, voting under the conditions of quorum and majority required for Extraordinary Shareholders' Meetings, having reviewed the Management Board's report and the Statutory Auditors' report, and having noted that the Company's share capital has been fully paid up, in accordance with the provisions of Articles L. 225-129 *et seq.* of the French Commercial Code and Article L. 225-138 of the aforementioned code, and subject to the adoption of the second resolution submitted for the approval of this meeting:

1. delegates to the Management Board its authority to decide, with the prior authorization of the Supervisory Board, in the proportion and at the dates and according to the schedules that it will decide, one or more increases in the Company's share capital through the issue of category A shares reserved for category A Shareholders (as such term is defined in the Company's articles of association);
2. resolves that the maximum total amount of share capital increases that may be carried out pursuant to this delegation and the second resolution of this meeting (nominal amount and additional paid-in capital included) may not exceed two billion five hundred million euros (€2,500,000,000);
3. resolves to cancel the preferential subscription rights of the Company's shareholders to the category A shares that may be issued under this delegation, the subscription of which is reserved for category A Shareholders;
4. resolves that the subscription price of the category A shares that may be issued under this delegation will be set by the Management Board on the basis of the valuation of the Company's share on the date on which the decision to carry out the capital increase;
5. resolves that the category A shares shall be fully paid up upon subscription by payment in cash and by delivery of a subscription form; and
6. resolves that the new category A shares to be issued under this delegation will be subject to all the provisions of the Company's articles of association, will be fully assimilated to the previously issued category A shares and will enjoy the rights attached to the category A shares.

The General Meeting grants full powers to the Management Board to implement this delegation, and in particular:

- determine the characteristics, including the amount of the capital increase, the issue price as well as the amount of the additional paid-in capital that may be requested at the time of issue (within the limit of the ceilings set out above), and the terms and conditions of any issue carried out pursuant to this delegation, as well as the terms and conditions for the payment of the category A shares issued, and in particular to set the opening and closing dates of the subscription periods for category A shares;
- determine the number of category A shares issued under this delegation to which each category A Shareholder may subscribe, within the limits set above;
- close the subscription to any issue early in accordance with legal and regulatory conditions;
- receive subscription forms and deposit funds;
- use, in the order it deems appropriate, one of the options conferred by Article L. 225-134 of the French Commercial Code;
- record, at the end of the subscription period for any issue, in light of the custodian's certificate, the completion of the capital increase;
- make any corresponding amendment to the Company's articles of association;
- allocate, at its sole decision and if it deems it appropriate, the costs, duties and fees resulting from the completion of any issue to the amount of the related additional paid-in capital and to deduct from this amount the necessary sums to increase the legal reserve to one-tenth of the new share capital after each issue of category A shares;
- in general, enter into all agreements to successfully complete the planned issues, take all measures and decisions and carry out all formalities necessary for the issue and the financial servicing of the category A shares issued under this delegation and the exercise of the rights attached thereto and do whatever is necessary and/or useful for this purpose.

The General Meeting acknowledges that, in the event that the Management Board uses this delegation of authority, the Management Board will report to the General Meeting on the use that will be made of it in accordance with the legal and regulatory provisions in force and in particular those of Articles L. 225-129-5 and L. 225-138 of the French Commercial Code.

This delegation of authority is granted for a period of eighteen (18) months from the date of this General Meeting, any issue of category A shares decided under this delegation must be carried out within this period in accordance with Article L. 225-138 of the French Commercial Code.

This resolution was unanimously approved by the category B shareholders present and represented, as the category A shareholders did not take part in the vote pursuant to the provisions of Article L. 225-138 paragraph 1 of the French Commercial Code.

<u>Second resolution:</u> Delegation of authority granted to the Management Board to proceed, with cancellation of shareholders' preferential subscription rights, with one or more issues of category B shares reserved for category B Shareholders, subject to the adoption of the first resolution.

The General Meeting, voting under the conditions of *quorum* and majority required for Extraordinary Shareholders' Meetings, having reviewed the Management Board's report and the Statutory Auditors' report, and having noted that the Company's share capital has been fully paid up, in accordance with the provisions of Articles L. 225-129 *et seq.* of the French Commercial Code and Article L. 225-138 of the aforementioned code, and subject to the adoption of the first resolution submitted for the approval of this meeting:

1. delegates to the Management Board its authority to decide, with the prior authorization of the Supervisory Board, in the proportion and at the dates and according to the schedules that it will decide, one or more increases in the Company's share capital through the issue of category B shares reserved for category B Shareholders (as such term is defined in the Company's articles of association);
2. resolves that the maximum total amount of share capital increases that may be carried out pursuant to this delegation and the first resolution of this meeting (nominal amount and additional paid-in capital included) may not exceed two billion five hundred million euros (€2,500,000,000);
3. resolves to cancel the preferential subscription rights of the Company's shareholders to the category B shares that may be issued under this delegation, the subscription of which is reserved for category B Shareholders;
4. resolves that the subscription price of the category B shares that may be issued under this delegation will be set by the Management Board on the basis of the valuation of the Company's share on the date on which the decision to carry out the capital increase;
5. resolves that the category B shares shall be fully paid up upon subscription by payment in cash and by delivery of a subscription form; and
6. resolves that the new category B shares to be issued under this delegation will be subject to all the provisions of the Company's articles of association, will be fully assimilated to the previously issued category B shares and will enjoy the rights attached to the category B shares.

The General Meeting grants full powers to the Management Board to implement this delegation, and in particular:

- determine the characteristics, including the amount of the capital increase, the issue price as well as the amount of the additional paid-in capital that may be requested at the time of issue (within the limit of the ceilings set out above), and the terms and conditions of any issue carried out pursuant to this delegation, as well as the terms and conditions for the payment of the category B shares issued, and in particular to set the opening and closing dates of the subscription periods for category B shares;
- determine the number of category B shares issued under this delegation to which each category B Shareholder may subscribe, within the limits set above;
- close the subscription to any issue early in accordance with legal and regulatory conditions;
- receive subscription forms and deposit funds;
- use, in the order it deems appropriate, one of the options conferred by Article L. 225-134 of the French Commercial Code;
- record, at the end of the subscription period for any issue, in light of the custodian's certificate, the completion of the capital increase;
- make any corresponding amendment to the Company's articles of association;
- allocate, at its sole decision and if it deems it appropriate, the costs, duties and fees resulting from the completion of any issue to the amount of the related additional paid-in capital and to deduct from this amount the necessary sums to increase the legal reserve to one-tenth of the new share capital after each issue of category B shares;
- in general, enter into all agreements to successfully complete the planned issues, take all measures and decisions and carry out all formalities necessary for the issue and the financial servicing of the category B shares issued under this delegation and the exercise of the rights attached thereto and do whatever is necessary and/or useful for this purpose.

The General Meeting acknowledges that, in the event that the Management Board uses this delegation of authority, the Management Board will report to the General Meeting on the use that will be made of it in accordance with the legal and regulatory provisions in force and in particular those of Articles L. 225-129-5 and L. 225-138 of the French Commercial Code.

This delegation of authority is granted for a period of eighteen (18) months from the date of this General Meeting, any issue of category B shares decided under this delegation must be carried out within this period in accordance with Article L. 225-138 of the French Commercial Code.

This resolution was unanimously approved by the category A shareholders present and represented, as the category B shareholders did not take part in the vote pursuant to the provisions of Article L. 225-138 paragraph 1 of the French Commercial Code.

<u>Third resolution</u>: Delegation of authority granted to the Management Board to proceed, with cancellation of preferential subscription rights, with a capital increase reserved for Company employees.

The General Meeting, ruling under the conditions of quorum and majority required for Extraordinary Shareholders' Meetings, having reviewed the Management Board's report and the Statutory Auditors' special report, and ruling in accordance with the provisions of Articles L. 3332-18 *et seq.* of the French Labor Code and Articles L. 225-129, L. 225-129-2, L. 225-129-5, L. 225-129-6 and L. 225-138 *et seq.* of the French Commercial Code:

1. delegates to the Management Board its authority to decide, in the proportion and at the dates and according to the schedules that it will decide, to increase the share capital of the Company in cash, in one or more installments, under the conditions provided for in Articles L. 3332-18 *et seq.* of the French Labor Code, by issuing ordinary Company shares reserved for Company employees who are members of a company savings plan;
2. resolves that the maximum nominal amount of the capital increases that may be carried out under this delegation may not exceed one hundred and twenty-five thousand euros (€125,000);
3. resolves that the subscription price of the shares issued pursuant to this delegation will be set in accordance with the provisions of Articles L. 3332-18 *et seq.* of the French Labor Code; and
4. resolves to cancel the preferential subscription rights of the Company's shareholders to the ordinary shares that may be issued under this delegation, the subscription of which is reserved for Company employees who are members of a company savings plan.

The General Meeting grants full powers to the Management Board to implement this delegation, and in particular:

- set the terms and conditions of the capital increases and determine the dates, terms and conditions of the issues that will be carried out pursuant to this resolution;
- set the opening and closing dates of the subscription periods, the subscription price, the dividend date of the shares issued, the terms and conditions for the payment of the shares and granting deadlines for their payment;
- record the completion of the capital increases up to the amount of the shares that will be effectively subscribed and amend the articles of association accordingly;
- allocate, at its sole decision and if it deems it appropriate, the costs, duties and fees resulting from the completion of any issue to the amount of the related additional paid-in capital and to deduct from this amount the necessary sums to increase the legal reserve to one-tenth of the new share capital after each issue of shares;
- in general, enter into all agreements to successfully complete the planned issues, take all measures and decisions and carry out all formalities necessary for the issue and the financial servicing of the shares issued under this delegation and the exercise of the rights attached thereto and do whatever is necessary and/or useful for this purpose.

This delegation of authority is granted for a period of eighteen (18) months from the date of this General Meeting.

This resolution was rejected because it did not obtain the required majority.

Fourth resolution: Powers for formalities.

The General Meeting gives full powers to the bearer of an extract or copy of these draft resolutions to complete any legal formalities.

This resolution was unanimously approved by the shareholders present and represented.

8.4.2 Annual General Meeting (approval of the financial statements for the fiscal year ended December 31, 2025)

The Ordinary Shareholders' Meeting called to approve the annual financial statements for the previous fiscal year convenes within five months from the reporting date of the fiscal year.

The resolutions on the agenda of the Annual General Meeting are published as part of the first amendment to the Universal Registration Document.

8.5 Material contracts

As of the date of publication of this financial information, with the exception of the agreements referred to in Section 8.6 (related-party agreements), BPCE has not entered into any material contracts other than those entered into in the normal course of business.

8.6 Material changes

The financial statements of BPCE SA, BPCE and Groupe BPCE for the 2025 fiscal year were approved by the Management Board on February 2, 2026. Since that date, there has been no significant change in the financial or commercial situation of BPCE SA, BPCE or Groupe BPCE.

With the exception of the items mentioned in this 2025 Universal Registration Document, in Section 7.2 "Risk factors" in Chapter 7, there has been no significant change since December 31, 2025 in the financial performance of Groupe BPCE, nor in its financial and commercial position, nor since the end of the last period for which audited financial statements have been published, and in particular since the signature of the Statutory Auditors' report on the consolidated financial statements of March 19, 2026.

8.7 Other information required under Article L22-10-35 amended of the Commercial Code

8.7.1 The group's policy on combating tax evasion and its tax policy

Primarily conducting its banking operations in France through its retail banking networks, Groupe BPCE also operates abroad, notably through its subsidiary Natixis.

In this regard, the group's international presence is justified by the need to provide commercial support to its clients, which excludes any consideration of offshore establishment due to the existence of preferential tax regimes in certain jurisdictions.

In its dealings with clients, Groupe BPCE supports them by ensuring that its advice is provided in compliance with applicable tax regulations. The group does not provide tax advice to its clients.

Groupe BPCE's tax policy is determined by BPCE SA. However, the group's companies are responsible for its implementation within their respective activities.

Groupe BPCE ensures its full compliance with all tax regulations applicable to its operations. As such, Groupe BPCE endeavors to pay its fair share of taxes to public finances.

In 2025, Groupe BPCE continued to engage with the French tax authorities to secure the tax treatment of operations concerning corporate tax and VAT within the framework of the Partenariat fiscal (Fiscal Partnership) with the ministère de l'Action et des comptes publics (Ministry of Action and Public Accounts), active since 2019. This regular and transparent dialogue with the administration has covered various areas of tax law. Groupe BPCE was the first bank admitted to this program.

8.7.2 Actions aimed at promoting citizen engagement in local democracy

Groupe BPCE applies the legal provisions set out in Article L. 2123-1 et seq. of the General Code of Territorial Collectivities.

8.8 Statutory Auditors' special report on related-party agreements and commitments

To the general meeting of

BPCE

7 promenade Germaine Sablon

75013 Paris

In our capacity as Statutory Auditors of your company, we hereby present our report on related-party agreements.

It is our responsibility to inform you, on the basis of the information provided to us, of the characteristics and essential terms and conditions of the agreements of which we have been informed or which we may have discovered in the course of our work, without having to express an opinion on their usefulness or appropriateness, or on the existence of other agreements. It is your responsibility, under the terms of Article R. 225-58 of the French Commercial Code, to assess the interest involved in concluding these agreements with a view to their approval.

In addition, we are required to inform you in accordance with Article R. 225-58 of the French Commercial Code concerning the execution, during the past fiscal year, of the agreements already approved by the General Meeting.

We performed the procedures we considered necessary to comply with the Professional Code of the *Compagnie nationale des commissaires aux comptes* (France's National Association of Statutory Auditors) relating to this assignment. Our work consisted in verifying that the information provided to us is consistent with the underlying documents from which it was extracted.

For the purposes of this report:

- "BPCE" designates the central institution resulting from the combination of the networks of Caisse d'Epargne and Banque Populaire, a French limited liability company (*société anonyme*) with a Management Board and a Supervisory Board since July 31, 2009;
- "CE Participations" designates the Caisse Nationale des Caisses d'Epargne (CNCE) a French limited liability company (*société anonyme*) with a Management Board and a Supervisory Board, renamed CE Participations on July 31, 2009 with a Board of Directors, as the holding company for all of the Caisse d'Epargne network's equity interests not transferred to BPCE in 2009, and which was merged with BPCE through absorption on August 5, 2010;
- "BP Participations" designates the Banque Fédérale des Banques Populaires (BFBP), a French limited liability company (*société anonyme*) with a Board of Directors, renamed BP Participations on July 31, 2009 as the holding company for all of the Banque Populaire network's equity interests not transferred to BPCE in 2009 and which was merged with BPCE through absorption on August 5, 2010.

8.8.1 Agreements submitted for the approval of the general meeting

Agreements authorized and entered into during the past fiscal year

We hereby inform you that we have not been informed of any agreements authorized and entered into during the past fiscal year to be submitted for the approval of the General Meeting pursuant to the provisions of Article L. 225-86 of the French Commercial Code.

8.8.2 Agreements already approved by the general meeting

Agreements approved in previous fiscal years that were still being executed in the past fiscal year

In accordance with Article R. 225-57 of the French Commercial Code, we were informed that the following agreements, already approved by the General Meeting in previous fiscal years, continued the past fiscal year.

Agreements with the members of the mamangement board

Social protection schemes applicable to all employees and for certain categories of employees

Proxy holder concerned on the day of the transactions (7 February 2024): Nicolas Namias, Chairman of the Management Board of BPCE, Béatrice Lafaurie, Member of the Management Board of BPCE, Hélène Madar, Member of the Management Board of BPCE, Jérôme Terpereau, Member of the Management Board of BPCE

With regard to the supplementary pension scheme for members of the Management Board who are not potential beneficiaries of the pension scheme for Groupe BPCE's executive officers, it appeared to be in BPCE's interest to enter into a new group insurance contract of the "Article 82" type of the General Tax Code, redeemable, allowing the Group's executive officers to benefit from a pension plan in accordance with market practices and therefore to retain talent. and to benefit from more attractive financial conditions.

At its meeting on February 7, 2024, the Supervisory Board approved and authorized the conclusion by BPCE of the "Article 82" group insurance contract of the General Tax Code, which can be redeemed.

Commitments due or likely to be due by reason of the termination or change of duties or subsequent to them and relating to the members of the Executive Board

Trustee concerned on the day of the transactions (decisions of the Supervisory Board of February 2, 2023 renewing the decisions of the Supervisory Board of October 28, 2022): Nicolas Namias, Chairman of the Management Board of BPCE

Trustees concerned on the day of the transactions (February 2, 2023): Béatrice Lafaurie, member of the Management Board of BPCE, Jérôme Terpereau, member of the Management Board of BPCE, Hélène Madar, member of the Management Board of BPCE (as of April 1, 2023)

The members of BPCE's Management Board will receive a forced departure allowance and a retirement allowance under defined conditions.

In any event, this indemnity is paid after deduction of the indemnity that may be paid in respect of the termination of a possible employment contract.

The amount of the stock of provisions at the end of the 2025 fiscal year for retirement benefits amounts to 3,013,628 euros.

Social protection schemes applicable to all employees and for certain categories of employees

Trustee concerned on the day of the transactions (decisions of the Supervisory Board of February 2, 2023 renewing the decisions of the Supervisory Board of October 28, 2022): Nicolas Namias, Chairman of the Management Board of BPCE

Trustees concerned on the day of the transactions (February 2, 2023): Béatrice Lafaurie, member of the Management Board of BPCE, Jérôme Terpereau, member of the Management Board of BPCE, Hélène Madar, member of the Management Board of BPCE (as of April 1, 2023)

The members of BPCE's Management Board will be able to benefit, under the same conditions as BPCE employees, from the application of the social protection schemes set up within BPCE for all employees and for certain categories of employees (concerning supplementary pension, supplementary pension and supplementary health insurance schemes).

The members of the Management Board will be able to benefit from the compensation maintenance scheme for a period of 12 months in the event of temporary incapacity for work applicable to the executive directors of Groupe BPCE companies.

The Supervisory Board notes that the application of these measures is of real interest to BPCE since it allows it to attach itself to and retain its members of the Management Board.

Employment contracts and amendments concluded between BPCE and members of the Management Board

Trustee concerned on the date of the transaction (March 25, 2021 and February 10, 2022): Béatrice Lafaurie, member of the Management Board of BPCE

Trustee concerned on the date of the transaction (March 24, 2022 and February 2, 2023): Jérôme Terpereau, member of the Management Board of BPCE

Relevant trustee on the date of the transaction (February 2, 2023): Hélène Madar, member of the Management Board of BPCE (as of April 1, 2023)

It appeared to be in BPCE's interest to conclude employment contracts with the members of the management board (excluding the chairman) thus allowing them to carry out their duties in a relationship of subordination to BPCE, within the framework of BPCE's strategic plans, and taking into account the financial conditions attached thereto.

At its meeting on March 25, 2021, the Supervisory Board approved and authorized the conclusion by BPCE of an amendment to the employment contract with Béatrice Lafaurie.

At its meeting on February 10, 2022, the Supervisory Board approved and authorized the conclusion by BPCE of a second amendment to the employment contract with Béatrice Lafaurie.

At its meeting on March 24, 2022, the Supervisory Board approved and authorized the conclusion by BPCE of an employment contract with Jérôme Terpereau.

At its meeting on February 2, 2023, the Supervisory Board approved and authorized the conclusion by BPCE:

- a second amendment to the employment contract with Jérôme Terpereau made necessary by the change in the scope of his activities,
- an employment contract with Hélène Madar

The Supervisory Board also recalled that, in accordance with the regulations of the collective health, provident and retirement schemes (Articles 83 and 39 of the General Tax Code), the remuneration taken into account for the calculation of these collective benefits is that subject to social security contributions (i.e. received under the employment contract and the corporate mandate).

Agreement with subsidiaries

Tax consolidation agreement between BPCE and Natixis

Joint trustees on the day of the transaction : Nicolas Namias, Chairman of the Management Board of BPCE and Chairman of the Board of Directors of Natixis, Catherine Halberstadt, permanent representative of BPCE on the Board of Directors of Natixis

The acquisition of more than 95% of the share capital of Natixis SA by BPCE during the 2021 fiscal year had the effect of leading, as of December 31, 2021, to the termination of the tax consolidation group of which Natixis SA was until then the integral parent company.

At the same time, Natixis SA and the subsidiaries of its former tax group have agreed to join, as of January 1, 2022, the tax consolidation group of which BPCE is the parent company.

As the head company of the tax consolidation group, BPCE is the sole taxpayer of corporate income tax calculated on the overall tax result of the tax consolidation group vis-à-vis the Treasury. As such, it is entitled to use under certain conditions, in application of the legal mechanism known as the extended base, the tax losses carried forward to 31/12/2021 of the former tax consolidation group Natixis.

In this context, Natixis and BPCE signed a tax consolidation agreement on December 13, 2022, which determines Natixis' contribution to BPCE's tax. This provides that Natixis will pay the tax it would have paid to the Treasury, as the parent company of the tax group that it could have formed with its subsidiaries in the absence of the takeover of more than 95% of BPCE's control, withholding, if necessary, the profits of new companies integrated for tax purposes.

This expanded base is thus contractually reinforced between BPCE and Natixis SA since this agreement provides for the possibility for the latter to offset this loss carry-forward on a basis that also includes the tax profits of subsidiaries that would become members of the BPCE tax group and the Natixis SA tax sub-group as of January 1, 2022. This contractual provision, which is favourable to Natixis SA, adds to the law.

This contractual provision could lead Natixis to set off more tax losses against BPCE than BPCE itself will be able to offset against the overall result used as a basis for the payment of the tax due to the Treasury, thus allowing Natixis to benefit from a tax saving that BPCE has not yet achieved.

At its meeting on May 25, 2023, the Shareholders' Meeting approved the conclusion of this agreement on tax consolidation between BPCE and Natixis.

This agreement has no impact on BPCE's 2025 financial statements. Indeed, when the tax due to the Treasury is paid in 2026 for 2025, it is not expected that Natixis will allocate more tax losses than BPCE itself will be able to offset against the overall result.

During the annual review carried out on December 11, 2025 under Article L. 225-88 of the BPCE Commercial Code, the Supervisory Board noted that there was no longer any need to monitor this agreement due to BPCE's direct ownership of Natixis' share capital, less the minimum number of shares required to meet the requirements of Article L. 225-1 of the French Commercial Code.

Framework protocol on the maintenance and sustainability of commercial relations and agreements between the BPCE and LBP groups

Joint trustees on the day of the transaction : Laurent Mignon, Chairman of the Management Board of BPCE and Chairman of the Board of Directors of Natixis and Nicolas Namias, member of the Management Board of BPCE, Chief Executive Officer of Natixis and Chairman of the Board of Directors of Natixis Investment Managers.

This transaction is part of the completion of the acquisition of La Banque Postale's stakes in Ostrum AM and AEW Europe by Natixis Investment Managers and the extension of the industrial partnerships in asset management.

On May 12, 2022, BPCE's Supervisory Board authorized the conclusion of the Framework Protocol, considering that it was in BPCE's interest with regard to the maintenance and sustainability of the commercial relations and agreements between the BPCE and LBP groups that it organizes as part of the rationalization and simplification of the capital and industrial partnerships between the two groups.

The Framework Protocol falls within the scope of the regulated agreement procedure only in that it terminates the partnership protocol between Natixis Investment Managers, Ostrum Asset Management, Topco, LBP Asset Management, in the presence of Natixis, BPCE and La Banque Postale, authorized by the Supervisory Board on June 16, 2020.

During the annual review carried out on December 11, 2025 under Article L. 225-88 of the French Commercial Code, the Supervisory Board noted that there was no longer any need to monitor this agreement due to the direct or indirect holding by BPCE of the share capital of Natixis, Natixis Investment Managers and Ostrum Asset Management, after deduction of the minimum number of shares required to meet the requirements of Article L. 225-1 of the Commercial Code.

Re-invoicing agreement relating to the Real Estate Master Plan

Joint trustees on the day of the transaction : Laurent Mignon, Chairman of the Management Board of BPCE and Chairman of the Board of Directors of Natixis, Nicolas Namias, member of the Management Board of BPCE and Chief Executive Officer of Natixis, Catherine Halberstadt, permanent representative of BPCE on the Board of Directors of Natixis.

The purpose of this agreement is to re-invoice, within the framework of the real estate master plan, the cost of the project and future real estate services to BPCE and Natixis by Natixis Immobilier Exploitation, the real estate operator in charge of the real estate management of the premises in the Ile de France region.

BPCE's Supervisory Board considered that the conclusion of this agreement was justified in view of BPCE's interest in joining the joint programme for the transformation and management of Groupe BPCE's real estate facilities.

At its meeting on December 17, 2021, the Supervisory Board authorized the conclusion of the re-invoicing agreement relating to the Real Estate Master Plan to be concluded by Natixis, BPCE, and Natixis Immo Exploitation.

This agreement no longer has an impact on the accounts as of December 31, 2025.

During the annual review carried out on December 11, 2025 under Article L. 225-88 of the French Commercial Code, the Supervisory Board noted that there was no longer any need to monitor this agreement due to BPCE's direct holding of Natixis' share capital, less the minimum number of shares required to meet the requirements of Article L. 225-1 of the French Commercial Code. In addition, this agreement ceased to have effect on 31 December 2023 and gave rise to a final invoicing in 2024.

Memorandum of partnership between Natixis Investment Managers, Ostrum Asset Management, Topco, LBP Asset Management, in the presence of Natixis, BPCE and La Banque Postale

Joint trustees on the day of the transaction: Laurent Mignon, Chairman of the Management Board of BPCE and Chairman of the Board of Directors of Natixis, Christine Fabresse, member of the Management Board of BPCE and permanent representative of BPCE on the Board of Directors of Natixis Investment Managers, Catherine Halberstadt, member of the Management Board of BPCE and permanent representative of BPCE on the Board of Directors of Natixis, François Riahi, Member of the Management Board of BPCE, Chief Executive Officer of Natixis and Chairman of the Board of Directors of Natixis Investment Managers, Gérard Bellemon, Member of the Supervisory Board of BPCE and Member of the Board of Directors of Natixis Investment Managers and Didier Patault, Member of the Supervisory Board of BPCE and Member of the Board of Directors of Natixis Investment Managers.

The purpose of this memorandum of understanding is to formalise a partnership aimed at creating a leading European player in asset management by combining, within Ostrum Asset Management, the activities and expertise of euro and credit rate management, as well as the insurance management of Ostrum Asset Management and LBP Asset Management.

BPCE's Supervisory Board considered that the conclusion of this agreement was justified in view of BPCE's corporate interest in that it aims to implement the overall project to create a major player in insurance management between Natixis and La Banque Postale through the grouping of some of their asset management activities within a joint company.

At its meeting on June 16, 2020, the Supervisory Board authorized the implementation of the partnership project and approved the terms and conditions of the memorandum of understanding between Natixis Investment Managers, Ostrum Asset Management, Topco, LBP Asset Management, in the presence of Natixis, BPCE and La Banque Postale.

At its meeting on May 12, 2022, the Supervisory Board of BPCE authorized the conclusion of the Framework Protocol on the maintenance and sustainability of commercial relations and agreements between the BPCE and LBP groups and terminating in particular the partnership protocol between Natixis Investment Managers, Ostrum Asset Management, Topco, LBP Asset Management, in the presence of Natixis, BPCE and La Banque Postale.

This agreement has no impact on BPCE's 2025 financial statements.

Framework partnership agreement between BPCE, Natixis Assurances, BPCE Assurances, Covéa Coopérations, MAAF Assurances, Covéa Protection Juridique and BPCE IARD

Joint trustees on the day of the transaction: François Riahi, member of the Management Board of BPCE, Chief Executive Officer of Natixis and Chairman of the Board of Directors of Natixis Assurances.

This framework agreement covers the insurance of occupational risks for customers of the Caisses d'Epargne and the Banques Populaires. This agreement is concluded for 5 years from 1 January 2020, renewable for successive periods of 5 years.

BPCE's Supervisory Board considered that the conclusion of the framework partnership agreement was in BPCE's interest, taking into account, in particular, the strategic rationale of the operations envisaged therein and the financial conditions proposed. At its meeting on March 28, 2019, the Supervisory Board authorized the conclusion of the framework partnership agreement (including its annexes) between BPCE, Natixis Assurances, BPCE Assurances, Covéa Coopérations, MAAF Assurances, Covéa Protection Juridique and BPCE IARD.

This agreement has no impact on BPCE's 2025 financial statements.

Three tax consolidation agreements between BPCE and BPCE Assurances, between BPCE, BPCE Assurances and BPCE Vie and between BPCE, BPCE Assurances and BPCE Assurances IARD

Joint trustees on the day of the transaction: Jean-François Lequoy, member of the Management Board of BPCE and member of the Board of Directors of BPCE Assurances

The acquisition of more than 95% of the share capital of Natixis SA by BPCE during the 2021 fiscal year resulted in the termination of the tax consolidation group of which Natixis SA was until then the integral parent company as of December 31, 2021 in accordance with the provisions of Article 223 L 6 d of the French General Tax Code.

At the same time, Natixis SA and the subsidiaries of its former tax group have agreed to join, as of January 1, 2022, the tax consolidation group of which BPCE is the parent company.

As the head company of the tax consolidation group, BPCE is the sole taxpayer of corporate income tax calculated on the overall tax result of the tax consolidation group vis-à-vis the Treasury.

The detailed rules for the application of the specific legislation relating to prudential own funds, and more specifically Commission Delegated Regulation (EU) 2015/35 of 10 October 2014 supplementing Directive 2009/138/EC of the European Parliament and of the Council on the taking-up and pursuit of the business of Insurance and Reinsurance (Solvency II), have led BPCE and its subsidiary to adapt the tax consolidation agreement in order to allow for a better adjustment of own funds necessary for the exercise of its activities.

In this context, three tax consolidation agreements, signed on 27 October 2022 by BPCE, BPCE Assurances, BPCE ASSURANCES IARD and BPCE VIE, determine the contribution of the BPCE Assurances sub-group to BPCE's tax and provide that in the event that the overall result of this sub-group, formed by BPCE Assurances and its sub-subsidiaries, shows a net long-term deficit or capital loss, it will receive from BPCE, on a definitive basis, a sum equal to the immediate savings provided to the latter, i.e. the amount of the deficit imputed, and/or the net long-term capital loss imputed, multiplied respectively by the normal tax rate in force at the year in which this deficit is set off or by the effective tax rate applicable to the net long-term capital gain in force at the time of the year in which this net long-term capital loss is set-off.

This grant will be made by BPCE to BPCE Assurances in priority of any other payment of corporate income tax savings obtained by the latter by taking into account the net loss or loss made by another subsidiary that is a member of the tax group of which BPCE is the parent company, as well as the payment of the corporate income tax saving relating to the portion not yet compensated for the said deficit or capital loss as the and as it is set off against the BPCE tax group's subsequent overall profit results.

At its meeting on May 25, 2023, the Shareholders' Meeting approved the conclusion of these three agreements relating to tax consolidation between BPCE and BPCE Assurances, between BPCE, BPCE Assurances and BPCE Vie and between BPCE, BPCE Assurances and BPCE Assurances IARD.

This agreement has no impact on BPCE's 2025 financial statements.

During the annual review carried out on December 11, 2025 under Article L225-88 of the French Commercial Code, the Supervisory Board noted that there was no longer any need to monitor this agreement due to the direct or indirect holding by BPCE of the capital of Natixis, BPCE Assurances, BPCE Vie and BPCE Assurances IARD, after deduction of the minimum number of shares required to meet the requirements of Article L. 225-1 of the French Commercial Code.

Amendment to the agreement relating to the guarantee of the US MTN PROGRAMME of BPCE known as 3(a)(2)

Joint trustees on the day of the transaction: François Pérol, Chairman of the Management Board of BPCE and Chairman of the Board of Directors of Natixis, Daniel Karyotis, member of the Management Board of BPCE and permanent representative of BPCE, director of Natixis, Alain Condaminas, member of the Supervisory Board of BPCE and director of Natixis, Thierry Cahn, member of the Supervisory Board of BPCE and director of Natixis, Catherine Halberstadt, member of the Supervisory Board of BPCE and director of Natixis, Didier Patault, member of the Supervisory Board of BPCE and director of Natixis and Pierre Valentin, member of the Supervisory Board of BPCE and director of Natixis.

On April 9, 2013, BPCE set up a program to issue bonds or "Medium Term Notes" (the "Bonds") in the United States under a regime defined in Section 3(a)(2) of the Securities Act of 1933 (the "3(a)(2) Program"). Its maximum total nominal amount is USD 10 billion.

It was therefore proposed to amend the limits of the Warranty Agreement:

- Bond issuances under Program 3(a)(2) may not exceed an aggregate nominal amount of USD 6 billion per year;
- of which a maximum of USD 3 billion may not be lent by BPCE to Natixis (if applicable, depending on Natixis' needs, the proceeds of the issuance of the Bonds may be lent by BPCE to Natixis for maturities shorter than those of the Bonds).

In this context, on 19 February 2014, the Supervisory Board authorised the signing of an amendment to the Agreement aimed at modifying the sub-ceilings provided for in Article 4 of the Agreement. In addition, the products lent to Natixis may be made available to it by BPCE for shorter maturities than those of the bonds, depending on Natixis' needs.

This agreement results in the recognition of an expense of €33,791.88 in BPCE's 2025 financial statements.

During the annual review carried out on December 11, 2025 under Article L. 225-88 of the French Commercial Code, the Supervisory Board noted that there was no longer any need to monitor this agreement due to BPCE's direct holding of Natixis' share capital, less the minimum number of shares required to meet the requirements of Article L. 225-1 of the French Commercial Code.

Joint and several guarantee between the CNCE and Natixis

Executives concerned on the day of the transaction : Charles Milhaud, Chairman of the Board of Directors of the CNCE, Nicolas Mérindol, member of the Board of Directors of the CNCE, Anthony Orsatelli, member of the Board of Directors of the CNCE, Pierre Servant, member of the Board of Directors of the CNCE and Francis Meyer, member of the Supervisory Board of the CNCE (representing the CDC).

On 1 October 2004, the CNCE and CDC IXIS Capital Markets entered into an agreement by which the CNCE grants joint and several guarantees for CDC IXIS Capital Markets' debts vis-à-vis third parties.

This guarantee was granted for an indefinite period. The CNCE has the right to unilaterally terminate this agreement subject to the publication of the termination 6 months before the effective date.

This agreement was the subject of prior approval by the Supervisory Board at its meeting on 30 September 2004.

Following the merger of Ixis Corporate & Investment Bank by Natixis, this guarantee has been renewed in favour of Natixis.

This agreement has no impact on BPCE's 2025 financial statements.

During the annual review carried out on December 11, 2025 under Article L. 225-88 of the French Commercial Code, the Supervisory Board noted that there was no longer any need to monitor this agreement due to BPCE's direct holding of Natixis' share capital, less the minimum number of shares required to meet the requirements of Article L. 225-1 of the French Commercial Code.

Two agreements in the context of the new guarantee granted by the CNCE (which came to the rights of CDC IXIS following the Refoundation of 31 December 2004) to Natixis Structured Products for the creation of a Special Purpose Vehicle (SPV)

Executives concerned: Charles Milhaud, Chairman of the Board of Directors of the CNCE, Nicolas Mérindol, member of the Board of Directors of the CNCE, Anthony Orsatelli, member of the Board of Directors of the CNCE, Pierre Servant, member of the Board of Directors of the CNCE and Francis Meyer, member of the Supervisory Board of the CNCE (representing the CDC).

These agreements were entered into following the sale of Banque Labouchère to enable Natixis Capital Markets (formerly IXIS Corporate and Investment Bank) to carry out disposals on the secondary market, notably for Japan as part of a €10 billion EMTN program. The creation of this SPV, located in Jersey, requires a guarantee according to the following scheme:

- an amendment to the letter of commitment concluded on 28 May 2003 between the CNCE and Natixis Capital Markets in order to bring this SPV within the scope of application;
- a joint and several guarantee between the CNCE and Natixis Structured Products, which makes it possible to provide the CNCE's guarantee to Natixis Structured Products.

These agreements have no impact on BPCE's 2025 financial statements.

During the annual review carried out on December 11, 2025 under Article L. 225-88 of the French Commercial Code, the Supervisory Board noted that there was no longer any need to monitor this agreement due to BPCE's direct holding of Natixis' share capital, less the minimum number of shares required to meet the requirements of Article L. 225-1 of the French Commercial Code. In addition, this agreement ceased to have effect on 27 January 2025

Amendment to the MiFID agreement

Joint trustees on the day of the transaction : François Pérol, Chairman of the Management Board of BPCE and Chairman of the Board of Directors of Natixis, Alain Lemaire, Member of the Management Board of BPCE and member of the Board of Directors of Natixis, Yvan de la Porte du Theil, Member of the Management Board of BPCE and member of the Board of Directors of Natixis, Steve Gentili, Member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis, Francis Henry, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis, Bernard Jeannin, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis, Didier Patault, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis and Jean-Marc Carcéles, member of the Supervisory Board of CNCE and director of Crédit Foncier de France.

The "credit" activity managed in 2005 within the CNCE was sold to the various subsidiaries of the Caisse d'Epargne group. In this respect, on 18 November 2005, the CNCE sold the medium- and long-term financing activity of the local public sector to IXIS Corporate & Investment Bank, in the form of a partial sale of a business.

On December 14, 2006, the Supervisory Board authorized the signing of a memorandum of understanding between the CNCE, IXIS CIB and Crédit Foncier de France concerning the transfer to the latter of the outstanding "territorial public sector" loans carried by IXIS CIB. This agreement was concluded on 19 February 2007.

On 20 November 2009, BPCE (successor to the rights of CNCE), Natixis (successor to Ixis CIB) and Crédit Foncier de France entered into an amendment to the said agreement in order to specify, for derivatives activities, their obligations under the MiFID and concerning the categorisation of Natixis' counterparties clients and the information of their categorisation.

This agreement has no impact on BPCE's 2025 financial statements.

During the annual review carried out on December 11, 2025 under Article L. 225-88 of the French Commercial Code, the Supervisory Board noted that there was no longer any need to monitor this agreement due to BPCE's direct holding of the share capital of Natixis and Crédit Foncier de France, less the minimum number of shares required to meet the requirements of Article L. 225-1 of the French Commercial Code.

Business Introducer Agreement for Local Authorities and Institutional Clients (CIL)

Joint trustees on the day of the transaction : Alain Lemaire, member of the Executive Board of CNCE and director of Crédit Foncier de France, Guy Cotret, member of the Executive Board of CNCE and director of Crédit Foncier de France and Jean-Marc Carcéles, member of the Supervisory Board of CNCE and director of Crédit Foncier de France.

On 19 June 2008, the CNCE, Crédit Foncier and Compagnie de Financement Foncier signed a business provider agreement for local authority and institutional clients, which took effect on 1 January 2007, the main purpose of which is to define the terms and conditions for commissioning the role of business provider assumed by the Caisses d'Epargne for the Crédit Foncier group, which carries on the balance sheet the loans granted to local authority and institutional customers (CIL).

In view of the financial and banking context resulting in the general absence of a market reference for bond issues over medium and long term maturities and in order to restore an economic balance between the parties, the latter have agreed, in their respective interests, on the amounts and distribution of commissions. This derogation, which is exceptional in view of the financial context, would only be valid for the primary commission of the business introducer on new flows due for the year 2008.

An amendment was signed during the 2011 fiscal year. This agreement was renewed in the 2016 fiscal year.

This agreement has no impact on BPCE's 2025 financial statements.

During the annual review carried out on December 11, 2025 under Article L. 225-88 of the French Commercial Code, the Supervisory Board took note that there was no longer any need to monitor this agreement due to BPCE's direct holding of Crédit Foncier de France's share capital, less the minimum number of shares required to meet the requirements of Article L. 225-1 of the French Commercial Code.

Shareholder agreements

Collateral remuneration agreement between BPCE and the Caisses d'Epargne

Joint trustees on the day of the transaction : Yves Toublanc, Chairman of the Supervisory Board of the CNCE and Chairman of the Steering and Supervisory Board of the CE Rhône Alpes, Jean Arondel, member of the Supervisory Board of the CNCE and Chairman of the Steering and Supervisory Board of the CE Loire-Centre, Jean-Charles Boulanger, member of the Supervisory Board of the CNCE and Chairman of the Steering and Supervisory Board of the CE Aquitaine Poitou-Charentes, Jean-Claude Cette, member of the Supervisory Board of the CNCE and Chairman of the Steering and Supervisory Board of the Provence Alpes Corse EC, Francis Henry, member of the Supervisory Board of the CNCE and Chairman of the Steering and Supervisory Board of the Lorraine Champagne-Ardenne EC, Philippe Lamblin, member of the Supervisory Board of the CNCE and Chairman of the Steering and Supervisory Board of the Nord France Europe Steering and Supervisory Board, Pierre Mackiewicz, member of the Supervisory Board of the CNCE and Chairman of the Steering and Supervisory Board of the CE Côte d'Azur, Bernard Roux, member of the Supervisory Board of the CNCE and Chairman of the Steering and Supervisory Board of the CE Midi-Pyrénées, Pierre Valentin, member of the Supervisory Board and Chairman of the Steering and Supervisory Board of the Languedoc-Roussillon EC, Maurice Bourrigaud, member of the Supervisory Board of the CNCE and Chairman of the Management Board of the Works Council of Auvergne and Limousin, Joël Chassard, member of the Supervisory Board of the CNCE and Chairman of the Management Board of the Works Council of the Normandy Works Council, Bernard Comolet, Vice-Chairman of the Supervisory Board of the CNCE and Chairman of the Executive Board of the Works Council of the Ile-de-France Works Council, Alain Denizot, member of the Supervisory Board of the CNCE and Chairman of the Management Board of the CE Picardie, Jean-Pierre Deramecourt, member of the Supervisory Board of the CNCE and Chairman of the Management Board of the CE d'Alsace, Alain Maire, member of the Supervisory Board of the CNCE and Chairman of the Management Board of the CE Bourgogne Franche-Comté, Philippe Monéta, member of the supervisory board of the CNCE and president of the Loire Drôme Ardèche works council and Didier Patault, member of the supervisory board of the CNCE and chairman of the board of directors of the Bretagne Pays de Loire works council.

The CNCE and the Caisses d'Epargne have set up refinancing operations with the Banque de France for the GCE group providing for the direct or indirect use of assets belonging to the Caisses d'Epargne. The companies wished to define the conditions under which the Caisses d'Epargne will receive a minimum financial commission in return for the delivery by the Caisses d'Epargne of assets eligible for the European Central Bank's monetary policy operations that do not already give rise to a specific remuneration through securities lending or repurchase transactions.

The agreement is concluded for 3 years, renewable by tacit agreement for the same period of 3 years, unless prior termination is made.

At its meeting on 24 June 2009, the Supervisory Board of the CNCE authorised the signing by the CNCE with each of the Caisses d'Epargne of the agreement for the distribution of the remuneration of collateral.

This agreement results in the recognition of an expense of €20,924.42 in BPCE's 2025 financial statements.

Collateral remuneration agreement between BPCE and the Banques Populaires

Joint trustees on the day of the transaction : Gérard Bellemon, member of the Supervisory Board of BPCE and Chairman of the Board of Directors of Banque Populaire Val de France, Thierry Cahn, member of the Supervisory Board of BPCE and Chairman of the Board of Directors of Banque Populaire d'Alsace, Pierre Desvergnes, member of the Supervisory Board of BPCE and Chairman of the Board of Directors of Casden Banque Populaire, Stève Gentili, member of the Supervisory Board of BPCE and Chairman of the Board of Directors of BRED, Jean Criton, member of the Supervisory Board of BPCE and Chief Executive Officer of Banque Populaire Rives de Paris and Bernard Jeannin, member of the Supervisory Board of BPCE and Chief Executive Officer of Banque Populaire Bourgogne Franche-Comté.

BPCE and the Banques Populaires have set up Groupe BPCE refinancing operations with the Banque de France, providing for the direct or indirect use of assets belonging to the Banques Populaires. The companies wished to define the conditions under which the Banques Populaires will receive a minimum financial commission in return for the delivery by the Banques Populaires of assets eligible for the European Central Bank's monetary policy operations that do not already give rise to a specific remuneration through securities lending or repurchase transactions.

The purpose of the agreement is to determine the terms and conditions for calculating and paying the asset mobilisation fee to the Banque Populaires, in return for the direct or indirect contribution of eligible assets to the Banque de France under the European Central Bank's monetary policy operations.

At its meeting on February 24, 2010, the Supervisory Board authorized the signing by BPCE with each of the Banques Populaires of the agreement for the distribution of the remuneration of collateral.

It was concluded on July 15, 2010 with no end period.

This agreement results in the recognition of income of €25,556.80 in BPCE's 2025 financial statements.

Agreements with CNP Assurances

General framework protocol and agreements relating to new partnership agreements between the CNP and BPCE groups

At its meeting on August 6, 2013, the Supervisory Board gave François Pérol a mandate to set up an insurance division within Natixis and to enter into negotiations with CNP Assurances to bring the group's life insurance production in-house with Natixis Assurances.

Negotiations with CNP between October 2013 and July 2014 led to the establishment of the fundamental principles of the future partnership between BPCE, Natixis and CNP, which were authorised by the Supervisory Board on 31 July 2014.

Discussions with CNP continued and led first to a framework memorandum of understanding between CNP Assurances, BPCE and Natixis authorised by the Supervisory Board on 4 November 2014, followed by a general framework protocol as well as the various specific contracts referred to in the latter (the "New Partnership Agreements") authorised by the Supervisory Board on 18 February 2015 and approved by the Shareholders' Meeting of 22 May 2015.

These new partnership agreements with CNP Assurances represent a major strategic issue for BPCE and are perfectly in line with the overall plan to implement an integrated bancassurance model while preserving customer interests, the level of commissions and the quality of service during this transitional period.

General framework protocol set up by BPCE and its amendment

Joint trustees on the day of the transaction : François Pérol, Chairman of the Management Board of BPCE, Director of CNP Assurances and Chairman of the Board of Directors of Natixis, Jean-Yves Forel, Member of the Management Board of BPCE and Director of CNP Assurances, Laurent Mignon, Member of the Management Board of BPCE and Chief Executive Officer of Natixis, Pierre Valentin, Director of Natixis and member of the Supervisory Board of BPCE, Didier Patault, Director of Natixis and member of the Supervisory Board of BPCE, Thierry Cahn, Director of Natixis and member of the Supervisory Board of BPCE, Catherine Halberstadt, Director of Natixis and member of the Supervisory Board of BPCE, Alain Condaminas, Director of Natixis and member of the Supervisory Board of BPCE, and Gérard Bellemon, Director of Natixis Assurances and member of the Supervisory Board of BPCE.

The General Framework Protocol was signed between CNP Assurances, BPCE, Natixis, Natixis Assurances, ABP Vie and ABP Prévoyance.

The purpose of this Protocol was to:

- take note of the non-renewal of the Current Agreements
- define, organise and supervise the contractual set formed by the New Partnership Agreements, of which it is the umbrella agreement
- define the duration of the New Partnership Agreements, i.e. seven years from 1 January 2016. At the end of this seven-year period, BPCE may either extend the new partnership agreements for a period of 3 years from January 1, 2023, or proceed with the acquisition of the stock of CNP assets under management. BPCE will have the option of acquiring the stock of assets under management existing at 31 December 2020 and CNP will have the option, by 2020 and 2022, to indicate to BPCE its wish to initiate discussions on a possible sale of the stock of assets under management
- define and organise the functioning of the Partnership's Monitoring Committee (and any sub-committees set up by it)
- more broadly, to organize and supervise relations between the Parties within the framework of the Renewed Partnership.

An amendment to the General Framework Protocol was signed on December 30, 2015 between BPCE, CNP Assurances and Natixis in order to set a new deadline for the conclusion of certain new partnership agreements that have not been concluded before December 31, 2015. This amendment also aims to amend certain agreements due to regulatory or operational changes requiring the modification of certain annexes and provides for the postponement of the establishment of the Partnership Monitoring Committee to 1 January 2016.

The terms of the General Framework Protocol have been modified by the new agreements between CNP Assurances and Groupe BPCE authorised by the Supervisory Board at its meeting on 19 December 2019: these agreements, which entered into force on 1 January 2020, provide in particular for the postponement to 31 December 2030 of the initial expiry date of the existing agreements (previously set at 31 December 2022) with a possible renewal of these agreements at each expiry date for successive three-year periods until 2052.

This agreement has no impact on BPCE's 2025 financial statements.

Agreements between CNP Assurances, BPCE, Natixis and ABP Vie (a subsidiary of Natixis Assurances)

Joint trustees on the day of the transaction : François Pérol, Chairman of the Management Board of BPCE, Chairman of the Board of Directors of Natixis and member of the Board of Directors of CNP Assurances, Jean-Yves Forel, member of the Management Board of BPCE and member of the Board of Directors of CNP Assurances, Daniel Karyotis, member of the Management Board of BPCE and permanent representative of BPCE at Natixis, Alain Condaminas, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis, Catherine Halberstadt, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis, Didier Patault, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis, Thierry Cahn, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis, Pierre Valentin, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis and Gérard Bellemon, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis Assurances.

- Tranche 2 new business reinsurance agreement concluded between ABP Vie and CNP Assurances in the presence of BPCE and Natixis: 90% reinsurance by CNP Assurances on new business from ex-CNP customers.
- Tranche 2 reinsurance reconciliation agreement entered into between ABP Vie, CNP Assurances and BPCE in the presence of Natixis, the purpose of which is to define the terms and conditions relating to the management of events:
  - the provision by BPCE to CNP Assurances of the list of covered customers, at the frequency and in accordance with the terms and conditions set out in the agreement, from the date of the detection of a shock on the market (interest rate or behavioural shock); and
  - the implementation of the tests necessary for the proper functioning of the mechanisms for determining and exchanging information provided for in the said agreement.
- EuroCroissance reconciliation agreement entered into between CNP Assurances, BPCE and ABP Vie in the presence of Natixis to define the terms and conditions relating to the management of events (similar to the tranche 2 reinsurance reconciliation agreement).

These agreements have no impact on BPCE's 2025 financial statements.

EuroCroissance agreement concluded between CNP Assurances and ABP Vie in the presence of BPCE

Joint trustees on the day of the transaction : François Pérol, Chairman of the Management Board of BPCE, Chairman of the Board of Directors of Natixis and member of the Board of Directors of CNP Assurances, and Jean-Yves Forel, member of the Management Board of BPCE and member of the Board of Directors of CNP Assurances.

The Eurocroissance Letter Agreement is concluded between CNP Assurances, BPCE and ABP Vie, in the presence of Natixis.

The EuroCroissance agreement provides for compensation relating to technical commitments resulting from all payments made by covered clients to Euro-growth funds as of 1 January of the calendar year in which a market shock (interest rate or behavioural shock) is recorded, regardless of the date on which the corresponding contract is subscribed to ABP Vie.

This agreement has no impact on BPCE's 2025 financial statements.

Retirement Savings Agreements between CNP Assurances and BPCE

Joint trustees on the day of the transaction : François Pérol, Chairman of the Management Board of BPCE, Chairman of the Board of Directors of Natixis and member of the Board of Directors of CNP Assurances, Jean Yves Forel, member of the Management Board of BPCE and member of the Board of Directors of CNP Assurances.

- Retirement savings partnership agreement between CNP Assurances and BPCE indicating in particular the end of the distribution of CNP Assurances' life insurance and capitalisation products by the Caisses d'Epargne network as of 1 January 2016 (except for exceptions provided for in the agreement).

This agreement was concluded between CNP Assurances (acting in its own name and on behalf of itself as well as on behalf of its subsidiaries) and BPCE (acting in its own name and on its behalf and, in its capacity as central body, in the name and on behalf of the members of the Réseau des Caisses d'Epargne and Banque Palatine, Banque BCP, Banque des Antilles Françaises, Banque de la Réunion, Banque de Nouvelle Calédonie, Banque Saint Pierre et Miquelon et Banque de Tahiti).

- Implementation of a Savings Mechanism (MRE) between CNP Assurances and BPCE, which is based on two contracts: a guarantee contract to stabilise the level of outstandings for the benefit of CNP Assurances, which is triggered in the event of an increase in redemptions or a shortfall in subsequent payments compared to the anticipated amounts, and conversely, a performance remuneration contract for the benefit of BPCE, in the opposite case; these two additional contracts will apply to all CNP Assurances' life insurance and retirement savings capitalisation contracts; They would deactivate in the event of a market shock (interest rate shock or behavioral shock) and would then be renegotiated. BPCE has granted CNP Assurances a guarantee consisting of bearing the amount of the additional taxation induced by the MRE, on the understanding that the latter must be fiscally neutral for CNP Assurances.
- Amendment to the commission agreement for life insurance for retirement savings with the aim of extending the agreement for a period expiring at the end of the last of CNP Assurances' life insurance policies for retirement savings. The remuneration of distributors is based on the principle of "fate sharing" (contractual percentage applied to flows and outstandings), which may be increased if necessary by additional remuneration depending on the type of contract.

This amendment was entered into between CNP Assurances and BPCE (acting in its capacity as central body in the name and on behalf of the Réseau des Caisses d'Epargne, Banque Palatine, Banque BCP, Banque des Antilles Françaises, Banque de la Réunion, Banque de Nouvelle Calédonie, Banque de Saint Pierre et Miquelon and Banque de Tahiti).

This agreement has no impact on BPCE's 2025 financial statements.

Agreements concerning creditor insurance, provident insurance and health

Joint trustees on the day of the transaction : François Pérol, Chairman of the Management Board of BPCE, Chairman of the Board of Directors of Natixis and member of the Board of Directors of CNP Assurances, Jean Yves Forel, member of the Management Board of BPCE and member of the Board of Directors of CNP Assurances.

For individual pension plans:

- Individual pension commission agreement entered into between CNP Assurances and BPCE (acting in its own name and on its behalf, on behalf of the members of the Caisses d'Epargne Network in its capacity as the central body of the Caisses d'Epargne Network, and on behalf of the Caisses d'Epargne Network, Banque Palatine, Banque BCP, Banque des Antilles Françaises, Bank of Reunion, Bank of New Caledonia, Bank of Saint Pierre and Miquelon and Bank of Tahiti). The remuneration of distributors is based on the amounts of premiums paid by the subscribers or on the technical results of the portfolio of each distributor institution, depending on the type of contract.

For group creditor insurance:

- Exclusive seven-year partnership between CNP Assurances, BPCE, ABP Vie and ABP Prévoyance with co-insurance by CNP Assurances and two subsidiaries of Natixis Assurances (ABP Vie and ABP Prévoyance) respectively holding 66% and 34% of all contracts distributed by the Banque Populaire networks (with the exception of BRED, Crédit Coopératif and CASDEN), Caisse d'Epargne, Banque Palatine and Crédit Foncier. In the event of renewal of the agreement, co-insurance will be balanced between CNP Assurances (50%) and the two subsidiaries of Natixis Assurances (50%).
- Management and service level delegation agreement between CNP Assurances and BPCE defining the conditions under which relations are established and organised between the concession holders (Banque Populaire networks (with the exception of BRED, Crédit Coopératif and CASDEN), Caisse d'Epargne, Banque Palatine and Crédit Foncier) and the insurer (CNP Assurances) and specifies the acts carried out by each of the parties for the management of insurance membership applications, the management of requests for care or the management of financial flows. The financial conditions are defined by type of contract and by establishment.
- Remuneration agreement between BPCE, CNP Assurances (acting both in its own name and in the name and on behalf of CNP IAM), ABP Vie and ABP Prévoyance, the purpose of which is to define the conditions under which financial relations are established between the insurer and the lending institutions (Banque Populaire networks (with the exception of BRED, Crédit Coopératif and CASDEN), Caisse d'Epargne, Banque Palatine and Crédit Foncier) concerning the distribution of group borrowers' insurance contracts as of 1 January 2016 and throughout the term of this Agreement. The financial conditions are defined by type of contract and by establishment.

These agreements have no impact on BPCE's 2025 financial statements.

Conclusion of a shareholders' agreement relating to Ecureuil Vie Développement ("EVD") concluded between CNP Assurance, Natixis Assurances and BPCE in the presence of Ecureuil Vie Développement

Joint trustees on the day of the transaction: François Pérol, Chairman of the Management Board of BPCE, Chairman of the Board of Directors of Natixis and member of the Board of Directors of CNP Assurances, Jean-Yves Forel, member of the Management Board of BPCE and member of the Board of Directors of CNP Assurances and Gérard Bellemon, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis Assurances.

The shareholders' agreement relating to Ecureuil Vie Développement (EVD) was concluded between CNP Assurances, Natixis, Assurances and BPCE, in the presence of Ecureuil Vie Développement. It provides that:

EVD's mission is to act as an interface between the Caisses d'Epargne network, Natixis Assurances and CNP.

On 23 March 2015, with effect from 1 January 2016, CNP sold 2% of EVD's share capital and voting rights to Natixis Assurances, giving Natixis Assurances a 51% stake in EVD. This sale was carried out at a price of €48 per share, i.e. a total amount of €3,552 for the 74 shares representing 2% of the capital.

These agreements have no impact on BPCE's 2025 financial statements.

Agreements between CNP Assurances and Groupe BPCE

Joint trustees on the day of the transaction : Françoise Lemalle, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis, Thierry Cahn, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis, Bernard Dupouy, member of the Supervisory Board of BPCE and member of the Board of Directors of Natixis and Gérard Bellemon, member of the Supervisory Board of BPCE and member of the Board of Directors of BPCE Vie.

The purpose of these agreements is to extend the agreements concluded in 2015 between BPCE, Natixis and CNP Assurances from December 31, 2022 to December 31, 2030, and thus strengthen CNP Assurances' multi-partner model. These agreements provide in particular for the transition of the co-insurance distribution of borrowers' collective insurance to 50-50% between Natixis Assurances (BPCE Vie and BPCE Prévoyance) and CNP Assurances and the reinsurance by CNP Assurances of 34% of the individual borrowers' insurance taken out by BPCE Vie.

BPCE's Supervisory Board considered that the conclusion of these agreements was justified in the light of BPCE's corporate interest in that it is part of the overall project to implement an integrated bancassurance model while preserving the interests of customers, the level of commissions and the quality of service during the period covered by these agreements.

At its meeting on December 19, 2019, the Supervisory Board authorized the conclusion of the agreements between CNP Assurances and Groupe BPCE.

These agreements have no impact on BPCE's 2025 financial statements.

Agreements approved during the past fiscal year

We have also been informed of the implementation of the following agreements during the past fiscal year, which have already been approved by the Annual General Meeting on 22 May 2025 on the basis of a special report of the Commissioners to the financial statements of 21 March 2025.

Commitments due or likely to be due by reason of the termination or change of duties or subsequent to those duties relating to the members of the Management Board

Trustees concerned on the day of the transactions (March 19, 2025): Nicolas Namias, Chairman of the Management Board of BPCE, Béatrice Lafaurie, member of the Management Board of BPCE, Jérôme Terpereau, member of the Management Board of BPCE and Hélène Madar, member of the Management Board of BPCE.

The members and the Chairman of the Management Board of BPCE will be able to benefit from a forced departure allowance and a retirement allowance under defined conditions.

In any event, this indemnity is paid after deduction of the indemnity that may be paid in respect of the termination of a possible employment contract.

This commitment constitutes an adjustment to the commitment described in section 2.1.2 below.

The amount of the stock of provisions at the end of the 2025 fiscal year for retirement allowances amounts to €3,013,628.

9.4 Cross-reference table for the annual financial report and the management report

Cross-reference table for the annual financial report

In order to facilitate the reading of this document, the cross-reference table below makes it possible to identify, in this Universal Registration Document, the information that constitutes the annual financial report to be published by listed companies in accordance with Articles L. 451-1-2 of the French Monetary and Financial Code and 222-3 of the AMF General Regulation.

Required items		Pages
1.	Annual financial statements	972-1017
2.	Consolidated financial statements	609-788,797-954
3.	Management report (minimum information within the meaning of Article 222-3 of the AMF General Regulation)	1208-1210
4.	Declaration by the persons responsible for the annual financial report	1202
5.	Statutory Auditors' reports on the parent company and consolidated financial statements	789-796,955-962,1018-1021

Cross-reference table for the management report

To facilitate the reading of this document, the cross-reference table below shows the information to be included in the management report, in accordance with the provisions of the French Commercial Code applicable to public limited companies with a Board of Directors.

Required items		Reference texts	Pages
1. Group position and activity			
1.1	Situation of the company during the past fiscal year, and objective and thorough analysis of the evolution of the business, results, and financial position of the company and the Group, in particular its debt position, with regard to volume and business complexity	Articles L. 225-100-1, I., 1°, L. 232-1, II, L. 233-6 and L. 233-26 of the French Commercial Code	582-605,608-788,797-954,972-1017
1.2	Key financial performance indicators	Article L. 225-100-1, I., 2°	582-605,608-788,797-954,972-1017
1.3	Key non-financial performance indicators relating to the specific activity of the company and the Group, specifically information relating to environmental and personnel issues	Article L. 225-100-1, I., 2°	55-329
1.4	Significant events occurring between the reporting date of the fiscal year and the date on which the management report was prepared	Articles L. 232-1, II and L. 233-26 of the French Commercial Code	602-603,620,806,977
1.5	Identity of the main shareholders and holders of voting rights at General Meetings, and changes made during the fiscal year	Article L. 233-13 of the French Commercial Code	1184-1185
1.6	Existing branches	Article L. 232-1, II of the French Commercial Code	765-771
1.7	Significant equity investments in companies with their registered office in France	Article L. 233-6 1 of the French Commercial Code	787-788
1.8	Transfers of cross-shareholdings	Articles L. 233-29, L. 233-30 and R. 233-19 of the French Commercial Code	N/A
1.9	Foreseeable changes in the situation of the company and the Group and outlook	Articles L. 232-1, II and L. 233-26 of the French Commercial Code	602-603
1.10	Research & Development activities	Articles L. 232-1, II and L. 233-26 of the French Commercial Code	969
1.11	Table showing the company's results for each of the last five fiscal years	Article R. 225-102 of the French Commercial Code	970
1.12	Information on supplier and customer payment terms	Article D. 441-4 of the French Commercial Code	971
1.13	Impact of activities on efforts to combat tax evasion	Article L. 22-10-35, 1° of the French Commercial Code	1189
1.14	Information on initiatives to foster the connection between the Nation and its armed forces	Article L. 22-10-35, 2° of the French Commercial Code	146
1.15	Information regarding actions aimed at promoting citizen involvement in local democracy	Article L. 22-10-35, 3° of the French Commercial Code	1189
1.16	Information on essential intangible resources	ArticleL. 232-1, II, 7° of the French Commercial Code	63
1.17	Amount of inter-company loans granted and statement by the Statutory Auditor	Articles L. 511-6 and R. 511-2-1-3 of the French Monetary and Financial Code	N/A

Required items		Reference texts	Pages
2. Internal control and risk management			
2.1	Description of the main risks and uncertainties facing the company	Article L. 225-100-1, I., 3°	81-94,338,1037-1046
2.2	Information on the financial risks related to the effects of climate change, and presentation of the measures taken by the company to reduce them by implementing a low-carbon strategy in all aspects of its activity	Article L. 22-10-35, 1°	95-140,1042-1043,1155-1174
2.3	Main characteristics of the internal control and risk management procedures implemented by the company and the Group as regards preparing and processing accounting and financial information	Article L. 22-10-35, 2°	1022-1027
2.4	Information on the objectives and policy concerning the hedging of each main category of transactions and on exposure to price, credit, liquidity and cash risks, including the use of financial instruments	Article L. 225-100-1, 4° of the French Commercial Code	1032-1177
2.5	Anti-corruption system	Act No. 2016-1691 of December 9, 2016 known as "Sapin 2"	212-218,482-487,1138-1140
2.6	Due Diligence Action plan and report on its effective implementation	Article L. 225-102-4 of the French Commercial Code	476-490
3. Report on corporate governance			
Remuneration information			
3.1	Remuneration policy for corporate officers	Article L. 22-10-8, I., paragraph 2 of the French Commercial Code	554-555
3.2	Remuneration and benefits of any kind paid during the fiscal year or awarded to each corporate officer during the fiscal year	Article L. 22-10-9, I., 1° of the French Commercial Code	555-577
3.3	Relative proportion of fixed and variable pay	Article L. 22-10-9, I., 2° of the French Commercial Code	571-577
3.4	Use of the option to request the return of variable pay	Article L. 22-10-9, I., 3° of the French Commercial Code	N/A
3.5	Commitments of any kind made by the company for the benefit of its corporate officers, namely, contingent remuneration and benefits due or likely to be due as a result of the assumption, termination, or change of their duties, or subsequent to the performance of the latter	Article L. 22-10-9, I., 4° of the French Commercial Code	554-577,1190-1191
3.6	Remuneration paid or allocated by a company included in the scope of consolidation, within the meaning of Article L. 233-16 of the French Commercial Code	Article L. 22-10-9, I., 5° of the French Commercial Code	573-577
3.7	Ratios between the level of remuneration of each company director and the average and median remuneration of the company's employees	Article L. 22-10-9, I., 6° of the French Commercial Code	N/A
3.8	Annual change in remuneration, the company's performance, the average remuneration of the company's employees and the aforementioned ratios over the five most recent fiscal years	Article L. 22-10-9, I., 7° of the French Commercial Code	N/A
3.9	Explanation of how total remuneration complies with the adopted remuneration policy, including how it contributes to the company's long-term performance and how performance criteria have been applied	Article L. 22-10-9, I., 8° of the French Commercial Code	558-567
3.10	Method by which the vote of the last Ordinary Shareholders' Meeting provided for in II of Article L. 225-100 (until December 31, 2020) was taken into account, then in I of Article L. 22-10-34 (from January 1, 2021) of the French Commercial Code	Article L. 22-10-9, I., 9° of the French Commercial Code	N/A
3.11	Deviation from the procedure for implementing the remuneration policy and any exceptions	Article L. 22-10-9, I., 10° of the French Commercial Code	N/A
3.12	Application of the provisions of the second paragraph of Article L. 225-45 of the French Commercial Code (suspension of payment of Directors' remuneration in the event of noncompliance with gender balance on the Board of Directors)	Article L. 22-10-9, I., 11° of the French Commercial Code	N/A
3.13	Allocation and retention of options by corporate officers	Article L. 225-185 of the French Commercial Code	576
3.14	Allocation to, and retention of, bonus shares for company directors	Articles L. 225-197-1 and L. 22-10-59 of the French Commercial Code	577
Governance information			
3.15	List of all Directorships and offices exercised in any company by each of the corporate officers during the fiscal year	Article L. 225-37-4, 1° of the French Commercial Code	511-539
3.16	Agreements entered into between an executive officer or a significant shareholder and a subsidiary	Article L. 225-37-4, 2° of the French Commercial Code	968
3.17	Summary table of current delegations of authority granted by the General Meeting for capital increases	Article L. 225-37-4, 3° of the French Commercial Code	970
3.18	Procedures for exercising executive management	Article L. 225-37-4, 4° of the French Commercial Code	N/A
3.19	Composition of the Board, and conditions for the preparation and organization of its work	Article L. 22-10-10, 1° of the French Commercial Code	496-509,540-551
3.20	Application of the principle of balanced representation of women and men on the Board	Article L. 22-10-10, 2° of the French Commercial Code	498-499

Required items		Reference texts	Pages
3.21	Any limitations that the Board places on the powers of the Chief Executive Officer	Article L. 22-10-10, 3° of the French Commercial Code	N/A
3.22	Reference to a Corporate Governance Code and application of the "comply or explain" principle	Article L. 22-10-10, 4° of the French Commercial Code	494-495
3.23	Specific procedures for the participation of shareholders in the General Meeting	Article L. 22-10-10, 5° of the French Commercial Code	552-553
3.24	Procedure for assessing current agreements – Implementation	Article L. 22-10-10, 6° of the French Commercial Code	N/A
3.25	Information likely to have an impact in the event of a public tender offer or exchange offer: structure of the company's share capital; statutory restrictions on the exercise of voting rights and share transfers, or clauses of agreements brought to the attention of the company pursuant to Article L. 233-11; direct or indirect shareholdings in the capital of the company of which it is aware pursuant to Articles L. 233-7 and L. 233-12; list of holders of any securities with special control rights and a description of the latter – control mechanisms provided for in a possible employee shareholding system, when the control rights are not exercised by the latter; agreements between shareholders of which the company is aware and which may result in restrictions on the transfer of shares and the exercise of voting rights; rules applicable to the appointment and replacement of members of the Board of Directors and the amendment of the company's articles of association; powers of the Board of Directors, in particular with regard to the issue or buyback of shares; agreements entered into by the company which are amended or terminated in the event of a change of control of the company, unless such disclosure, except in the case of a legal obligation to disclose, would seriously harm its interests; agreements providing for compensation for the members of the Board of Directors or employees, if they resign or are dismissed without real and serious cause or if their employment is terminated due to a takeover bid or exchange offer.	Article L. 22-10-11 of the French Commercial Code	1180-1188
3.26	For public limited companies with a Supervisory Board: Observations of the Supervisory Board on the Management Board's report and the financial statements for the fiscal year	Article L. 225-68, last paragraph, of the French Commercial Code	
4. Shareholding and capital			
4.1	Structure of, and changes in, the company's share capital, and crossing of thresholds	Article L. 233-13 of the French Commercial Code	1182-1183
4.2	Acquisition and disposal by the company of its own shares	Article L. 225-211 of the French Commercial Code	969
4.3	Statement of employee participation in the share capital on the last day of the fiscal year (proportion of capital represented)	Article L. 225-102, paragraph 1 of the French Commercial Code	1184-1185
4.4	Statement of any adjustments for securities giving access to the share capital in the event of share buybacks or financial transactions	Articles R. 228-90 and R. 228-91 of the French Commercial Code	N/A
4.5	Information on transactions by executives and related persons in the company's shares	Article L. 621-18-2 of the French Monetary and Financial Code	N/A
4.6	Amounts of dividends distributed in respect of the three previous fiscal years	Article 243 *bis* of the French General Tax Code	968
5. Sustainability report			
5.1	Information on sustainability	Articles L. 232-6-3 and L. 233-28-4 of the French Commercial Code	53-472
6. Other information			
6.1	Additional tax information	Articles 223 *quater* and 223 *quinquies* of the French General Tax Code	746-749,930-932,984-985,1046
6.2	Injunctions or financial penalties for anti-competitive practices	Article L. 464-2 of the French Commercial Code	1131-1134

9.5 Glossary

Acronyms

EBA	The European Banking Authority, established by EU Regulation on November 24, 2010. It came into being on January 1, 2011 in London, superseding the Committee of European Banking Supervisors (CEBS). This new body has an expanded mandate. It is in charge of harmonizing prudential standards, ensuring coordination among the various national supervisory authorities and performing the role of mediator. The goal is to establish a Europe-wide supervision mechanism without compromising the ability of the national authorities to conduct the day-to-day supervision of credit institutions.
ABS	See securitization
ACPR	*Autorité de contrôle prudentiel et de résolution* (ACPR): the French prudential supervisory authority for the banking and insurance sector (formerly the CECEI, or *Comité des établissements de crédit et des entreprises d'investissement*/Credit Institutions and Investment Firms Committee)
AFEP-MEDEF	*Association française des entreprises privées – Mouvement des entreprises de France*/French Association of Private Sector Companies – French Business Confederation
AFS	Available For Sale
ALM	Asset/Liability management
AMF	*Autorité des marchés financiers* (AMF), the French financial markets authority
AT1	Additional Tier-1
BCBS	Basel Committee on Banking Supervision, an organization comprised of the central bank governors of the G20 countries, tasked with strengthening the global financial system and improving the efficacy of prudential supervision and cooperation among bank regulators
ECB	European Central Bank
EIB	European Investment Bank
BMTN	Negotiable medium-term notes
BRRD	Banking Recovery and Resolution Directive
CCF	Credit Conversion Factor
CDO	See securitization
CDPC	Credit Derivatives Products Company, *i.e.* a business specializing in providing protection against credit default through credit derivatives
CDS	Credit Default Swap, a credit derivative contract under which the party wishing to buy protection against a credit event (*e.g.* counterparty default) makes regular payments to a third party and receives a pre-determined payment from this third party should the credit event occur
LTD	Loan-to-Deposit ratio, *i.e.* a liquidity indicator that enables a credit institution to measure its autonomy with respect to the financial markets
CLO	See securitization
CMBS	See securitization
CEGC	*Compagnie Européenne de Garanties et de Cautions*
CET1	Common Equity Tier-1
CFP	Contingency Funding Plan
CNCE	Caisse Nationale des Caisses d'Epargne
CPM	Credit Portfolio Management
CRD	Capital Requirements Directive
CRR	Capital Requirements Regulation (European regulation)
CVA	Credit Valuation Adjustment: the expected loss related to the risk of default by a counterparty. The CVA aims to take into account the fact that the full market value of the transactions may not be recovered. The method for determining the CVA is primarily based on the use of market inputs in connection with the practices of market professionals.
CVaR	Credit Value at Risk, *i.e.* the worst loss expected to be suffered after eliminating the 1% worst-case scenarios, used to determine individual counterparty limits
DVA	Debit Valuation Adjustment (DVA), symmetrical to the CVA. Represents the expected loss, from the counterparty's perspective, on valuations of derivative liabilities. It reflects the impact of the entity's own credit quality on the valuation of these instruments.
EAD	Exposure at Default, *i.e.* the amount owed by the customer at the effective default date. It is the sum of the remaining principal, past due payments, accrued interest not yet due, fees and penalties.
OFR	Own Funds Requirements: *i.e.* 8% of risk-weighted assets (RWA)
EL	Expected Loss, *i.e.* the value of the loss likely to be incurred given the quality of the structure of the transaction and any measures taken to mitigate risk, such as collateral. It is calculated by multiplying Exposure at Risk (EAD) by Probability of Default (PD) and by Loss Given Default (LGD).
DVA	Debit Valuation Adjustment (DVA), symmetrical to the CVA. Represents the expected loss, from the counterparty's perspective, on valuations of derivative liabilities. It reflects the impact of the entity's own credit quality on the valuation of these instruments.
EURIBOR	Euro Interbank Offered Rate, the benchmark interest rate on the Euro-zone's money market
FBF	*Fédération bancaire française* (French Banking Federation), a professional body representing all banking institutions in France
FCPR	*Fonds commun de placement à risque*/Venture capital investment fund
FGAS	*Fonds de garantie à l'accession sociale*/French State guarantee fund for subsidized loans
FINREP	FINancial REPorting
SRF	Single Resolution Fund
FSB	The Financial Stability Board: whose mandate is to identify vulnerabilities in the global financial system and to implement principles for regulation and supervision in the interest of financial stability. Its members are central bank governors, finance ministers and supervisors from the G20 countries.
GAP	Asset/Liability management
G-SIBs	Global Systemically Important Banks: financial institutions whose distress or failure, because of their size, complexity and systemic inter-dependence, would cause significant disruption to the financial system and economic activity. These institutions meet the criteria established by the Basel Committee and are identified in a list published in November 2011 and updated every year. The constraints applicable to G-SIBs increase with their level of capital.
HQLA	High-Quality Liquid Assets
Non-life insurance policies (IARD)	*Incendie, accidents et risques divers*/property and casualty Insurance
IASB	International Accounting Standards Board

Acronyms

ICAAP	Internal Capital Adequacy Assessment Process: Process provided for in Pillar II of the Basel Accords to ensure that firms have sufficient capital to cover all their risks
ILAAP	Internal Liquidity Adequacy Assessment Process: Process provided for in Pillar II of the Basel Accords through which the Group ensures the adequacy of its liquidity level and its management with regard to all its liquidity risks
IFRS	International Financial Reporting Standards
IRB	Internal-Ratings Based: an approach to capital requirements based on the financial institution's internal rating systems
IRBA	Advanced IRB approach
IRBF	Foundation IRB approach
IRC	Incremental Risk Charge: the capital requirement for an issuer's credit migration and default risks, covering a period of one year for fixed income and loan instruments in the trading book (bonds and CDSs). The IRC is a 99.9% Value at Risk measurement; *i.e.* the greatest risk obtained after eliminating the 0.1% worst-case scenarios.
L&R	Loans and receivables
LCR	Liquidity Coverage Ratio (one month liquidity ratio): a measurement introduced to improve the short-term resilience of banks' liquidity risk profiles. The LCR requires banks to maintain a reserve of risk-free assets that can be converted easily into cash on the market in order to cover its cash outflows minus cash inflows over a 30-day stress period without the support of central banks.
LBO	Leveraged Buyout
AML-CTF	Anti-Money Laundering and Counter Terrorism Financing
LGD	Loss Given Default, a Basel II credit risk indicator corresponding to loss in the event of default
LOD1	First Line of Defense
LOD2	Second Line of Defense
MDA	Maximum Distributable Amount, a new provision for banks placing restrictions on their dividend, Additional Tier-1 (AT1) coupon and bonus payments (under a rule that tightens restrictions as banks deviate from their requirements), if the capital buffers are not met. As these buffers are on top of Pillars I and II, they apply immediately if the bank fails to comply with the combined requirements.
SSM	Single Supervisory Mechanism
MREL	Minimum Requirement for own funds and Eligible Liabilities
SRM	Single Resolution Mechanism
NPE	Non-Performing Exposure
NPL	Non-Performing Loan
NSFR	Net Stable Funding Ratio: this ratio is intended to strengthen the longer-term resilience of banks through additional incentives meant to encourage banks to finance their operations using more structurally stable resources. This long-term structural liquidity ratio, applicable to a one-year period, was formulated to provide a viable structure for asset and liability maturities.
OH	*Obligations de financement de l'habitat*/Housing financing bond
BCP	Business Continuity Plan
PD	Probability of Default: the likelihood that a counterparty of the bank will default within a one-year period
RMBS	See securitization
RSSI	*Responsable de la Sécurité des Systèmes d'Information*/Head of Information Systems Security
RUBA	Unified Reporting of Banks and Similar Entities
RWA	Risk-Weighted Assets (RWA): the calculation of credit risks is further refined using a more detailed risk weighting that incorporates counterparty default risk and debt default risk
S&P	Standard & Poor's
SCF	Compagnie de Financement Foncier, the Group's covered bond issuer
SEC	US Securities and Exchange Commission
SFH	Housing Finance Company
IS	Information System
SREP	Supervisory Review and Evaluation Process: methodology for assessing and measuring the risks faced by each bank. SREP gives the prudential authorities a set of harmonized tools to analyze a bank's risk profile from four different angles: business model, governance and risk management, risk to capital, and risk to liquidity and funding. The supervisor sends the bank the SREP decisions at the end of the process and sets key objectives. The bank must then "correct" these within a specific time.
SRM	Single Resolution Mechanism: an EU-level system to ensure an orderly resolution of non-viable banks with a minimal impact on taxpayers and the real economy. The SRM is one of the pillars of the European Banking Union and consists of an EU-level resolution authority (Single Resolution Board – SRB) and a common resolution fund financed by the banking sector (Single Resolution Fund – SRF).
SVaR	Stressed Value at Risk: the SVaR calculation method is identical to the VaR approach (historical or Monte Carlo method, scope – position, risk factors – choices and modeling – model approximations and numerical methods identical to those used for VaR) and involves a historical simulation (with "one-day" shocks) calculated over a one-year stressed period, at a 99% confidence level scaled up to 10 days. The goal is to assess the impacts of stressed scenarios on the portfolio and current market levels.
T1/T2	Tier-1/Tier-2
TLAC	Total Loss Absorbing Capacity: a ratio applicable to G-SIBs that aims to ensure that each G-SIB has the capacity to continue its essential operations for the economy even after a loss has consumed all of its capital. In November 2015, the FSB published the final TLAC calibration: all TLAC-eligible instruments will have to be equivalent to at least 16% of risk-weighted assets at January 1, 2019 and at least 6% of the leverage ratio denominator. TLAC will subsequently have to be equivalent to 18% of risk-weighted assets and 6.75% of the leverage ratio denominator from January 1, 2022.
TRS	Total Return Swap, *i.e.* a transaction whereby two parties exchange the income generated and any change in value on two different assets over a given time period
TSS	*Titres super subordonnés*/deeply subordinated notes, *i.e.* perpetual bonds with no contractual redemption commitment that pay interest in perpetuity. In the event of liquidation, they are repaid after other creditors (subordinated loans). These securities pay annual interest contingent on the payment of a dividend or the achievement of a specific result.
VaR	Value at Risk: a measurement of market risk on a bank's trading book expressed as a monetary value. It allows the entity performing the calculation to appraise the maximum losses liable to be incurred on its trading book. A statistical variable, VaR is always associated with a confidence interval (generally 95% or 99%) and a specific time frame (in practice, one day or 10 days, as the trading positions involved are meant to be unwound within a few days).

Key technical terms

Netting agreement	A contract whereby two parties to a forward financial instrument (financial contract, securities loan or repurchase agreement) agree to settle their reciprocal claims under these contracts through a single consolidated net payment, particularly in the event of default or contract termination. A master netting agreement extends this mechanism to different transactions through one all-encompassing contract.
Equities	An equity security issued by a corporation, representing a certificate of ownership and entitling the holder (the "shareholder") to a proportional share in the distribution of any profits or net assets, as well as a voting right at the General Meeting
Rating agency	An organization that specializes in assessing the creditworthiness of issuers of debt securities, *i.e.* their ability to honor their commitments (repayment of capital and interest within the contractual period)
Risk appetite	Level of risk, expressed through quantitative or qualitative criteria, by type of risk and business line, that the Group is prepared to accept given its strategy. The risk appetite exercise is one of the key strategic oversight tools available to the Group's management team.
Standardized approach	An approach used to determine capital requirements relative to credit risk, pursuant to Pillar I of Basel II. Under this approach, the risk weightings used when calculating capital requirements are determined by the regulator.
Basel II (the Basel Accords)	A supervisory framework aimed at better anticipating and limiting the risks borne by credit institutions. It focuses on banks' credit risk, market risk and operational risk. The terms drafted by the Basel Committee were adopted in Europe through a European directive and have been applicable in France since January 1, 2008.
Basel III (the Basel Accords)	Changes in banking prudential standards which incorporated the lessons of the financial crisis of 2007-2008. They complement the Basel II Accords by strengthening the quality and quantity of minimum own funds that institutions must hold. Basel III also establishes minimum requirements for liquidity risk management (quantitative ratios), defines measures aimed at limiting procyclicality in the financial system (capital buffers that vary according to the economic cycle) and reinforces requirements for financial institutions deemed to be systemically important.
"Bank acting as originator"	See securitization
"Bank acting as sponsor"	See securitization
"Bank acting as investor"	See securitization
CRD IV/CRR	(See Acronyms) Directive No. 2013/36/EU (CRD IV) and Regulation (EU) No. 575/2013 (CRR), which transpose Basel II in Europe. In conjunction with the EBA's (European Banking Authority) technical standards, they define European regulations for the capital, major risk, leverage and liquidity ratios.
Cost/income ratio	A ratio indicating the portion of net banking income (used to cover operating expenses (the company's operating costs). It is calculated by dividing operating costs by net banking income.
Collateral	A transferable asset or guarantee pledged to secure reimbursement on a loan in the event the borrower fails to meet its payment obligations
Haircut	The percentage by which a security's market value is reduced to reflect its value in a stressed environment (counterparty risk or market stress)
Derivative	A financial security or financial contract whose value changes based on the value of an underlying asset, which may be either financial (equities, bonds, currencies, etc.) or non-financial (commodities, agricultural products, etc.) in nature. This change may coincide with a multiplier effect (leverage effect). Derivatives can take the form of either securities (warrants, certificates, structured EMTNs, etc.) or contracts (forwards, options, swaps, etc.). Exchange-traded derivative contracts are called futures.
Credit derivative	A financial product whose underlying asset is a credit obligation or debt security (bond). The purpose of the credit derivative is to transfer credit risk without transferring the asset itself for hedging purposes. One of the most common forms of credit derivatives is the credit default swap (CDS).
Senior non-preferred debt	Senior non-preferred debt is a category of securities, advances, instruments or rights introduced by Directive (EU) No. 2017/2399 amending Directive No. 2014/59/EU (BRRD) that, in the event of the insolvency of the credit institution, rank higher than the securities, advances, instruments or rights considered as subordinated, but lower than that of the other securities, advances, instruments or rights considered as senior (including senior preferred debt).
Senior preferred debt	Senior preferred debt is a category of securities, advances, instruments or rights that, in the event of the insolvency of the credit institution, rank higher than other securities, advances, instruments or rights considered as senior and subordinated (including senior non-preferred debt).
Gross exposure	Exposure before the impact of provisions, adjustments and risk mitigation techniques
Tier-1 capital	Core capital including the financial institution's consolidated shareholders' equity minus regulatory deductions
Tier-2 capital	Supplementary capital mainly consisting of subordinated securities minus regulatory deduction
Fair value	The price that would be received to sell an asset or paid to transfer a liability in a standard arm's length transaction between market participants at the valuation date. Fair value is therefore based on the exit price.
Liquidity	In a banking context, liquidity refers to a bank's ability to cover its short-term commitments. Liquidity also refers to the degree to which an asset can be quickly bought or sold on a market without a substantial reduction in value.
Rating	An appraisal by a financial rating agency (Fitch Ratings, Moody's, Standard & Poor's) of the creditworthiness of an issuer (company, government or other public entity) or a transaction (bond issue, securitization, covered bond). The rating has a direct impact on the cost of raising capital.
Bond	A portion of a loan issued in the form of an exchangeable security. For a given issue, a bond grants the same debt claims on the issuer for the same nominal value, the issuer being a company, a public sector entity or a government.
Pillar I	Pillar I sets minimum requirements for capital. It aims to ensure that banking institutions hold sufficient capital to provide a minimum level of coverage for their credit risk, market risk and operational risk. The bank can use standardized or advanced methods to calculate its capital requirement.
Pillar II	Pillar II establishes a process of prudential supervision that complements and strengthens Pillar I. It consists of: an analysis by the bank of all of its risks, including those already covered by Pillar I; an estimate by the bank of the capital requirement for these risks; a comparison by the banking supervisor of its own analysis of the bank's risk profile with the analysis conducted by the bank, in order to adapt its choice of prudential measures where applicable, which may take the form of capital requirements exceeding the minimum requirements or any other appropriate technique.

Key technical terms

Pillar III	Pillar III is concerned with establishing market discipline through a series of reporting requirements. These requirements – both qualitative and quantitative – are intended to improve financial transparency in the assessment of exposure to risks, risk assessment procedures and capital adequacy.
Common Equity Tier-1 ratio	Ratio of Common Equity Tier-1 (CET1) capital to risk-weighted assets. The CET1 ratio is a solvency indicator used in the Basel III prudential accords.
Leverage ratio	Tier-1 capital divided by exposures, which consist of assets and off-balance sheet items, after restatements of derivatives, funding transactions and items deducted from capital. Its main goal is to serve as a supplementary risk measurement for capital requirements.
Total capital ratio	Ratio of total capital (Tier-1 and Tier-2) to risk-weighted assets (RWAs)
Re-securitization	The securitization of an exposure that is already securitized where the risk associated with an underlying pool of exposures is tranched and at least one of the underlying exposures is a securitization position
Credit and counterparty risk	The risk of loss from the inability of clients, issuers or other counterparties to honor their financial commitments. Credit risk includes counterparty risk related to market transactions and securitization.
Market risks	The risk of loss of value on financial instruments resulting from changes in market inputs, from the volatility of these inputs or from the correlations between these inputs
Operational risk	Risks of losses or penalties due in particular to failures of internal procedures and systems, human error or external events
Structural interest rate and foreign exchange risk	The risk of losses or impairment on assets arising from changes in interest rates or exchange rates. Structural interest rate and foreign exchange risks are associated with commercial activities and proprietary transactions.
Liquidity risk	The risk that a bank will be unable to honor its payment commitments as they fall due and replace funds when they are withdrawn
Swap	An agreement between two counterparties to exchange different assets, or revenues from different assets, until a given date
Securitization	A transaction whereby credit risk on loans and advances is transferred to investors by an entity through the issuance of negotiable securities. This may involve the transfer of advances (physical securitization) or the transfer of risks only (credit derivatives). Some securitization transactions are subordinated through the creation of tranches: ABS – Asset-Backed Securities, *i.e.* instruments representing a pool of financial assets (excluding mortgage loans), whose performance is linked to that of the underlying asset or pool of assets; CDO – Collateralized Debt Obligations, *i.e.* debt securities backed by a pool of assets which can be either bank loans (mortgages) or corporate bonds. Interest and principal payments may be subject to subordination (*i.e.* through the creation of tranches); CLO – Collateralized Loan Obligations, *i.e.* credit derivatives backed by a homogeneous pool of commercial loans; CMBS – Commercial Mortgage-Backed Securities; RMBS – Residential Mortgage-Backed Securities, *i.e.* debt securities backed by a pool of assets consisting of residential mortgage loans; Bank acting as originator: the securitization exposures are the retained positions, even where not eligible for the securitization framework due to the absence of significant and effective risk transfer; Bank acting as investor: investment positions purchased in third-party deals; Bank acting as sponsor: a bank is considered a "sponsor" if it, in fact or in substance, manages or advises the program, places securities into the market, or provides liquidity and/or credit enhancements. The program may include, for example, asset-backed commercial paper (ABCP) conduit programs and structured investment vehicles. The securitization exposures include exposures to ABCP conduits to which the bank provides program-wide enhancements, liquidity and other facilities.
Net value	Total gross value less allowances/impairment
Volatility	A measurement of the magnitude of an asset's price fluctuation and thus a measurement of its risk. Volatility corresponds to the standard deviation of the asset's immediate returns over a given period.

Other terms

Back office	Support or back office department, in charge of administrative functions at a financial intermediary
Backtesting	Method consisting of verifying that the actual result rarely exceeds the VaR (Value at Risk) loss
Bail-in	Tool to limit any assistance from public funds to a troubled institution that is still in operation or in the process of liquidation. The bail-in grants to the prudential supervisory authorities the power to impose on certain creditors of a credit institution that may have solvency problems, the conversion of their receivables into shares of this institution and/or the reduction of the amount of these receivables. The European agreement of June 26, 2015 provides for priority requests, in the event of insufficient equity (following losses), from creditors holding subordinated debt, then senior creditors, then unsecured deposits of large companies, then those of SMEs and finally those of individuals above €100,000. However, guaranteed deposits, covered bonds, employee remuneration, liabilities related to the institution's vital activities and interbank liabilities with a maturity of less than seven days must not be affected.
Broker	Broker
Brokerage	Brokerage
Co-lead	Co-lead
Commodities	Commodities
Corporate	Corporate
Coverage	Coverage (in the sense of customer follow-up)
Covered bonds	Covered or collateralized bond: bond for which the repayment and payment of interest are ensured by income flows from a portfolio of high-quality assets that serves as collateral, often a portfolio of mortgages, and the issuing institution is often the manager of the payment of flows to investors (*obligations foncières* in France, Pfandbriefe in Germany)
Datacenter	Datacenter
Equity (tranche)	In a securitization arrangement, refers to the tranche that bears the first losses due to defaults in the underlying portfolio
Fully-loaded	Expresses full compliance with the Basel III solvency requirements (which became mandatory in 2019)
Front office	Customer service (team of market operators)
Hedge funds	Alternative management funds: speculative investment funds that aim for an absolute return and have a great deal of freedom in their management
Holding	Parent company
Investment grade	Long-term rating provided by an external agency ranging from AAA/Aaa to BBB-/Baa3 of a counterparty or underlying issue. A rating equal to or lower than BB+/Ba1 qualifies the instrument as non-investment grade.
Joint venture	Joint venture
Loss ratio	Ratio between claims/premiums collected
Mark-to-market	A method that consists of regularly or even continuously valuing a position on the basis of its market value at the time of the valuation
Mark-to-model	A method that consists of valuing a position on the basis of a financial model and therefore assumptions made by the valuer
Monoline	Companies that provide credit enhancement to financial market participants
New Deal	Strategic plan implemented by Natixis
Phase-in	Refers to compliance with current solvency requirements, taking into account the transitional period for the implementation of Basel III
