Annual Report 2025

Consolidated Financial Statements

Parent Company's Draft Financial Statements

This document is an additional version of the official version compliant with Delegated Regulation (EU) 2019/815 of the European Commission (ESEF Regulation – European Single Electronic Format) published on the website at group.intesasanpaolo.com.

This is an English translation of the original Italian document "Bilanci 2025". In cases of conflict between the English language document and the Italian document, the interpretation of the Italian language document prevails. The Italian original is available on group.intesasanpaolo.com.

This document contains certain forward-looking statements, projections, objectives, estimates and forecasts reflecting the Intesa Sanpaolo management's current views with respect to certain future events. Forward-looking statements, projections, objectives, estimates and forecasts are generally identifiable by the use of the words "may," "will," "should," "plan," "expect," "anticipate," "estimate," "believe," "intend," "project," "goal" or "target" or the negative of these words or other variations on these words or comparable terminology. These forward-looking statements include, but are not limited to, all statements other than statements of historical facts, including, without limitation, those regarding Intesa Sanpaolo's future financial position and results of operations, strategy, plans, objectives, goals and targets and future developments in the markets where Intesa Sanpaolo participates or is seeking to participate.

Due to such uncertainties and risks, readers are cautioned not to place undue reliance on such forward-looking statements as a prediction of actual results. The Intesa Sanpaolo Group's ability to achieve its projected objectives or results is dependent on many factors which are outside management's control. Actual results may differ materially from (and be more negative than) those projected or implied in the forward-looking statements. Such forward-looking information involves risks and uncertainties that could significantly affect expected results and is based on certain key assumptions.

All forward-looking statements included herein are based on information available to Intesa Sanpaolo as of the date of approval of this document. Intesa Sanpaolo undertakes no obligation to update publicly or revise any forward-looking statement, whether as a result of new information, future events or otherwise, except as may be required by applicable law. All subsequent written and oral forward-looking statements attributable to Intesa Sanpaolo or persons acting on its behalf are expressly qualified in their entirety by these cautionary statements.

Letter from the Chair

Distinguished Shareholders,

The year 2025 was marked by significant transformations in the international landscape, both from a geopolitical and a geo-economic perspective. Policies adopted by the US administration have triggered notable shifts in global dynamics, contributing to a gradual reshaping of the international order.

During the past year, robust consumer demand in the United States, the resilience of the euro area economy and China's manufacturing sector, together with a gradual easing of inflation, reduced international trade tensions towards the end of 2025, and interest rate cuts by major central banks, supported economic activity worldwide. As a result, global growth slightly exceeded expectations, although with a slowdown compared with 2024.

Against this backdrop, the Italian economy continued to expand in 2025, supported by a moderate easing of monetary policy and continued implementation of the National Recovery and Resilience Plan (NRRP). GDP growth reached 0.7% for the year, surprising on the upside at the year end. A prudent fiscal policy aimed at strengthening public finances contributed to a significant narrowing of the spread between long-term Italian and German government bonds, from 116 basis points at the end of 2024 to 61 basis points at the end of January 2026. This trend was viewed positively by rating agencies, whose assessments supported confidence in Italy's public debt and created the conditions for a reduction in future interest expenditure. The lower cost of capital should also benefit investments aimed at boosting productivity growth.

The beginning of 2026 has been marked by renewed geopolitical tensions and persistent sources of instability, which continue to weigh on the global economic outlook. The conflict between Russia and Ukraine remains unresolved, the ceasefire between Israel and Palestine remains fragile, and new tensions have emerged involving Iran. Alongside well-known geopolitical risks – such as China's claims over Taiwan – additional points of friction have emerged, from Venezuela to Greenland, largely reflecting a shift in the international stance of the United States. For the year ahead, analysts expect a modest acceleration in Italy's economic growth during the second half of the year, with average GDP growth projected at around 0.8%. This outlook is expected to be supported by stronger intra-European trade, continued easing in prices, the effects of monetary policy easing, and more effective implementation of the NRRP.

In this environment, the Bank will continue to play an active role in supporting businesses and economic growth. We remain attentive to the challenges ahead, particularly in a context where wealth creation in both Italy and Europe remains below potential. The gap in productivity and innovation capacity compared with leading technological economies remains significant and continues to weigh on income growth and wage dynamics, particularly affecting opportunities for younger generations. Stronger productivity growth will therefore be essential to ensure that returns to labour and capital become more closely aligned with those of the most advanced economies. In this direction, Intesa Sanpaolo will implement its new Business Plan for 2026-2029, supporting customers and stakeholders while continuing to evolve the Group's organisational structure and activities.

In the post-pandemic era, the conditions have emerged for profound socio-economic change, driven by the pervasive role of technology in daily life and in the way we work. Technological innovation and artificial intelligence will play a decisive role in creating new opportunities for future generations.

At Intesa Sanpaolo, technological innovation goes hand in hand with a strong focus on people. Our objective is twofold: to simplify the work of our colleagues and to deliver ever better services to our customers. The trusted relationships we have built with households and businesses over the years are not undermined by digital tools. Instead, digital technology strengthens these relationships by enabling more flexible, efficient and secure interactions with our customers.

The Intesa Sanpaolo Group was among the first institutions in Europe to adopt the most innovative tools available and to integrate technology effectively into its business model, while continuing to invest in cybersecurity. Since 2022, we have recruited 2,430 IT specialists and invested 5.6 billion euro in the cloud-based digital platform isytech, which is progressively being extended across the entire Group. Today, 64% of our core banking applications have migrated to the cloud, enabling the development of new digital channels – Isybank and Fideuram Direct – and providing greater strategic flexibility in cost management.

During 2025, the market capitalisation of banks listed on Eurozone stock exchanges increased significantly, including in Italy, reflecting sustained investor confidence in the strength and profitability of our country's banking system. The market capitalisation of Intesa Sanpaolo rose by around 50% to exceed 100 billion euro, placing the Group among the largest banks in the Eurozone. This strong investment appeal reflects the successful execution of the ambitious 2022-2025 Business Plan, now concluded, which further strengthened and diversified the Group's earnings capacity. In particular, our wealth management hub – integrating protection and advisory services and managing substantial assets within the Italian and European markets – now generates almost half of the Group's consolidated gross income. The Group's international presence has also continued to expand. This is reflected in the performance of the International Banks Division, which generated around 12% of the Group's operating income as at December 2025, and in the activities of the IMI C&IB Division and the Banca dei Territori Division in the

United States and the Middle East. These operations support large corporate clients, financial institutions and smaller but rapidly expanding Italian companies.
The strategies we have implemented have enabled us to remain among the leading banking intermediaries even in a period of heightened uncertainty. This is reflected in the strong increase in medium- and long-term lending to Italian businesses, which grew by 30% in 2025 compared with the previous year. This performance was achieved while maintaining high credit quality, with the stock of non-performing loans continuing to decline during the course of the Plan and remaining in line with leading European banks. The new 2026-2029 Business Plan, presented at the beginning of February, will continue along the lines set by the previous plan, placing people firmly at its centre. Our strategy focuses on organic growth, structural cost reduction supported by the technological investments already made, revenue growth driven by our leadership in wealth management and protection & advisory services, international expansion – including the launch of Isywealth Europe – and disciplined risk management supported by our status as a Zero-NPL bank. The results achieved reflect not only careful and forward-looking planning but above all the commitment and professionalism of our people, who represent the Group's most important resource and a key strategic priority. We continue to invest in the development of our people, with a strong focus on reskilling, international experience and training in artificial intelligence and cloud banking. To further strengthen our people-centred approach, we renewed the Company-Level Collective Bargaining Agreement, introducing important measures to improve work-life balance and promote cohesion and solidarity across the different generations within our organisation. It is no coincidence that Intesa Sanpaolo has been recognised globally as one of the most inclusive and diversity-friendly workplaces, in the FTSE Diversity & Inclusion Index – Top 100, and also received the Top Employer Italy and Europe certification again in 2026.

For us, economic growth – while essential – cannot be separated from social and cultural responsibility. In this spirit, Intesa Sanpaolo actively engages with stakeholders operating in these areas. In 2025, we supported social initiatives through the Charity Allowance, which distributed 24.3 million euro. In a context where significant gaps in financial literacy persist, the Museo del Risparmio (Savings Museum) further expanded its role in promoting financial education, reaching more than 150,000 participants, many of them students. To support the most vulnerable groups – including young people who are not in employment, education or training – we launched the "Zero Neet" programme in collaboration with Fondazione Cariplo.
Our multi-year programme of cultural initiatives under the Progetto Cultura also continued. In 2025, around 750,000 visitors attended our four museums in Milan, Naples, Turin and Vicenza, which together form the Gallerie d'Italia museum network. Eighteen new exhibitions were organised with national and international partners, including the final exhibition of the twentieth edition of the "Restituzioni" programme, which contributed to restoring and enhancing 128 works of art from Italy's national heritage in collaboration with the Ministry of Culture.
Our commitment and achievements in environmental, social and governance matters were once again recognised internationally. Intesa Sanpaolo remains the only Italian bank included in the Dow Jones Best-in-Class World and Europe Indices.

Based on the Group's consolidated net income for 2025 of 9,321 million euro and the Parent Company's net income of 6,844 million euro, it is proposed to the Ordinary Shareholders' Meeting that a cash dividend distribution be made from 2025 net income totalling 6.5 billion euro. We will also propose the buyback of own shares for annulment, for a value not exceeding 2,300 million euro.

Gian Maria Gros-Pietro

Intesa Sanpaolo Group Report on operations and consolidated financial statements

Introduction

As set forth by Legislative Decree 38 of 28 February 2005, the Intesa Sanpaolo Group's consolidated financial statements have been prepared in compliance with the IAS/IFRS issued by the International Accounting Standards Board (IASB) and the related interpretations of the International Financial Reporting Standards - Interpretations Committee (IFRS-IC), endorsed by the European Commission, as provided for by EC Regulation 1606 of 19 July 2002.
The consolidated financial statements as at 31 December 2025 have been prepared based on the "Instructions for the preparation of the separate and consolidated financial statements of banks and financial companies, which are parent companies of banking groups" published by the Bank of Italy, in the exercise of powers set forth by Article 43 of Legislative Decree 136/2015, with Regulation of 22 December 2005 issuing Circular 262/2005 as amended. These Instructions set out compulsory financial statement formats and the related methods of compilation, as well as the content of the Notes to the consolidated financial statements.
In particular, these 2025 consolidated financial statements have been prepared according to the formats and the compilation rules contained in the 8th update of 17 November 2022, which amended Circular 262 to take account of the new IFRS 17 Insurance Contracts, which entered into force on 1 January 2023 and was applied for the first time from the financial statements as at 31 December 2023. For the preparation of the 2025 consolidated financial statements – as in 2024 – the provisions introduced by IVASS Order no. 152 of 26 November 2024 regarding insurance contracts also applied. Indeed, IVASS provisions are directly applicable pursuant to Bank of Italy Circular 262/2005 for aspects related to insurance contracts pertaining to consolidated insurance companies.

The consolidated financial statements are made up of the Balance sheet, the Income statement, the Statement of comprehensive income, the Changes in shareholders' equity, the Statement of cash flows, the Notes to the consolidated financial statements and the related comparative information. They are accompanied by the Directors' Report on operations, both at overall level and within the various sectors in which the Group operates, on the economic results achieved and on the Group's balance sheet and financial position.
The Report on operations contains financial information taken from or attributable to the consolidated financial statements, as well as other information – for example, figures on quarterly trends, and certain Alternative Performance Measures – not directly attributable to the consolidated financial statements. See the chapter "Alternative Performance Measures" of the Report for the definition and calculation of these measures, confirming that in line with the ESMA guidance, no new measures have been added, nor have any changes been made to the measures used, both with regard to the military conflict between Russia and Ukraine and any geopolitical impacts.
In view of the ongoing Russian-Ukrainian military conflict, these consolidated financial statements include a disclosure that restates and updates the information previously provided during the year. In particular, the introductory chapter of the Report on operations contains a specific paragraph outlining the risk management actions along with the Intesa Sanpaolo Group's approach regarding the main related accounting aspects. These are further discussed in the Notes to the consolidated financial statements, Part E, credit risk, where details are provided of the existing exposures and the valuation choices adopted.

In support of the comments on results for the year, the Report on operations also provides a reclassified Income statement and Balance sheet.
In the reclassified statements, the figures are normally restated, where necessary and if they are material, to enable a like-for-like comparison. In particular, the amounts are provided as consistently as possible with reference to the different periods covered, above all in relation to intervening changes in the scope of consolidation. This uniformity is achieved through "restated" figures, which include/exclude the values of the companies that entered or left the scope of consolidation.
Breakdowns of the restatements made and the reclassifications with respect to the format provided in Bank of Italy Circular 262 are presented in separate tables published in the attachments, as also required by Consob in its Communication 6064293 of 28 July 2006.

In accordance with Legislative Decree 125 of 6 September 2024, which implemented the Directive 2022/2464/EU on corporate sustainability reporting in Italy, starting from the financial year beginning on 1 January 2024, Intesa Sanpaolo is required to prepare the "Consolidated Sustainability Statement" as it is a public-interest entity and the parent company of a large group with an average number of employees during the financial year exceeding five hundred. In accordance with this regulation – like last year – the "Statement" has been included in a specific section of the Report on operations of the Consolidated financial statements and contains information necessary to understand the company's impact on sustainability matters and how sustainability matters affect the company's development, performance and position.

The information regarding the Corporate governance and ownership structures required by Article 123-bis of the Consolidated Law on Finance is included, as permitted, in a separate report approved by the Board of Directors and published together with these Financial statements, available at the Governance/Company Documents section of Intesa Sanpaolo Group's website, at group.intesasanpaolo.com. A summary of this information is also provided in the Report on operations, in the chapter "Corporate Governance and remuneration policies".

The Report on remuneration policy and compensation paid, required by Article 123-ter of the Consolidated Law on Finance, and the Basel 3 Pillar 3 Disclosure are also published and made available on the website, based on their respective approval processes.

Report on operations

Overview of 2025

Income statement figures and Alternative Performance Measures(°)

Consolidated income statement figures (millions of euro)			Changes	
			amount	%
Net interest income	14,796	15,718	-922	-5.9

Overview of 2025

Economic trends

In 2025, the global macroeconomic scenario was strongly influenced by the introduction of high import tariffs by the United States. The high tariff levels, their sectoral scope, and the uncertainty about their duration weighed on investment decisions and expectations. Nevertheless, the risks of a slowdown in global economic activity and a contraction in trade flows did not materialise. The partial suspension of measures against China and the year-end trade truce helped ease tensions, although they did not completely eliminate uncertainty.

In the United States, GDP growth slowed on an annual average basis compared with 2024, but remained robust in the third quarter. Domestic demand – particularly investments related to the development of artificial intelligence – continued to provide strong support to economic activity. Imports declined overall. The inflationary impact of the protectionist measures was significant but lower than expected. In this context, the Federal Reserve resumed monetary easing from September 2025, lowering the key interest rate to the range of 3.50–3.75% in November.

In the euro area, 2025 recorded modest but better-than-expected growth. After a relatively favourable start to the year, also due to the frontloading of US orders, activity weakened in the middle quarters. GDP growth remained moderate (according to the preliminary estimate: 1.3% year-on-year in the fourth quarter and an annual average of 1.5%). Business confidence, initially affected by trade tensions, was supported during the year by the announcement of a long-term fiscal stimulus plan in Germany. Inflation continued to slow, returning close to 2% towards the end of the year. In this context, the European Central Bank cut official rates four times in the first half, bringing the deposit rate to 2%, and kept them unchanged during the second half.

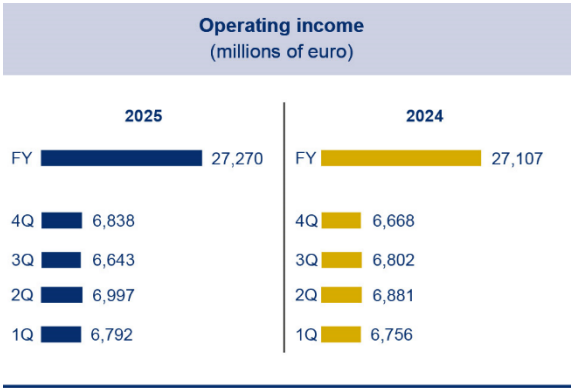
In Italy, 2025 recorded GDP growth of 0.8% in the fourth quarter and averaging 0.7% over the year. After a positive start to the year, the economic activity was stagnant in the second quarter, to then resume growth in the second half of the year. The weak growth reflected the slowdown in foreign demand and the continued modest contribution of consumption. Non-residential investment was still the most dynamic component of domestic demand, while construction showed signs of slowing. After a sharp contraction in the summer months, industrial production stabilised towards the end of the year. Labour market continued to show resilience, with the unemployment rate remaining at historic lows of around 6%. The rise in collectively agreed wages, which outpaced inflation, allowed a partial recovery in household purchasing power, although propensity to save remained high.

On the financial front, 2025 was characterised by an easing of monetary conditions, accompanied by a moderate increase in long-term euro yields, particularly in the second half. The ten-year BTP-Bund spread narrowed, after a temporary widening in April coinciding with tensions over US tariffs, and closed 2025 down by 51 basis points compared to the end of 2024. In the foreign exchange markets, the US dollar weakened significantly against the euro.

In the Italian banking sector, 2025 was a year of two phases for lending and deposit rates: up to the summer months, the transmission of the ECB's official rate cuts continued, while the final part of the year saw a stabilisation of bank interest rates. The spread between lending and funding rates narrowed in the first half and remained broadly unchanged at year-end. As an annual average it fell by about 40 basis points compared with 2024. Favourable lending conditions and a recovery in credit demand supported a rebound in loans to non-financial companies, which returned to growth from June, after almost two years of decline. A key factor was the resumption of medium/long-term lending, due to investment in capital goods. The recovery in loans to households strengthened, driven by mortgage loans for home purchases, which increased by 3.4% in December. Deposits experienced solid growth. Current accounts represented the lion's share, with significant inflows and an average stock growth of 4.6% in the second half. The trend in total funding from customers was in line with deposits. Direct investments by savers in debt securities remained significant but were lower than in the previous two years. The asset management industry achieved satisfactory net inflows and positive performance, thanks to favourable market conditions. Net inflows to mutual funds were driven by bond and money market funds. Net flows to life insurance were positive in the first three quarters and improved compared with the same period of 2024.

Consolidated results of Intesa Sanpaolo

The consolidated income statement for 2025 closed with *net income* of 9,321 million euro, up by 7.6% (+655 million euro) compared to 8,666 million euro recorded in 2024. The year benefited from the improvement in the operating margin, albeit in a situation of significant decline in market interest rates[1], lower charges for integration and charges concerning the banking and insurance industry, as well as several positive tax components, and despite the management actions in the fourth quarter to favour the de-risking and strengthening of the consolidated balance sheet.



Operating income totalled 27,270 million euro, compared to 27,107 million euro in 2024 (+163 million euro; +0.6%). The resilience of revenues, which benefited from the diversification of the business model and their integrated management aimed at creating value, was ensured by the positive performance of net fee and commission income and income from insurance business – which together increased by 6.1% and represented over 43% of the Group's operating income, one of the highest levels in Europe – as well as the improvement in profits (losses) on financial assets and liabilities at fair value.

In a scenario that saw four official rate cuts in the first half, *net interest income* decreased by 5.9% to 14,796 million euro. The dynamic brings together opposing trends among its various components. On one side, decreases were seen in (i) customer dealing (-13.2%), mainly in relation to medium/long-term loans, despite the benefit from lower interest expense on securities issued; (ii) relations with banks (-50%), due to the lower contribution of interest income on liquidity deposited with the ECB, and (iii) other net interest income (-15.3%). On the other hand, net interest income on financial assets and liabilities increased (+12.1%), also due to the higher stock of investments, while the contribution of the differentials on hedging derivatives became positive at 202 million euro (negative for 142 million euro in 2024).

Net fee and commission income grew by 6.3% to 9,980 million euro. This positive performance was driven by the management, dealing and consultancy activities segment (+10% to 6,306 million euro) – specifically dealing and placement of securities, portfolio management schemes, distribution of insurance products and consulting – and by other net fee and commission income (+7.6% to 1,092 million euro), mainly related to lending activities, against a decline for commercial banking activities (-2.2% to 2,582 million euro) across all its main components.

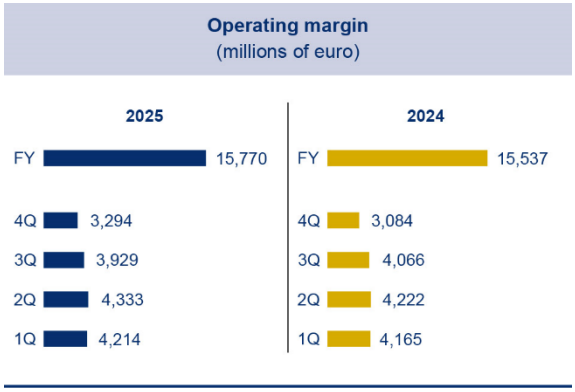
Income from insurance business also improved by 4.6% to 1,815 million euro, due to growth in both the non-life business (+9.4% to 570 million euro) and the life business (+2.6% to 1,245 million euro). Compared with 2024, total premiums written increased by 9.6%, driven by insurance products (+9.5%), in both the life business (+9.3%) and the non-life business (+8.5%). The performance for premiums from investment contracts was also positive (+9.9%).

Profits (losses) on financial assets and liabilities at fair value more than doubled to 691 million euro, from 256 million euro in 2024. The improvement was mainly due to "Profits (losses) on trading and on financial instruments under fair value option", which reduced its negative balance by 305 million euro, benefiting in particular from the impact of the decline in market interest rates on the management of financial risks connected with transactions in certificates (financial instruments measured at fair value). There was also an increase in the positive contributions from Profits (losses) on assets mandatorily measured at fair value through profit or loss (+82 million euro) and from the Profits (losses) from disposal/repurchase of financial assets/liabilities (+58 million euro).

Lastly, *other operating income (expenses)*, which includes profits on investments carried at equity and other operating income (expenses) from continuing operations, showed a net balance of -12 million euro, compared to a positive balance of 12 million euro in the previous year. This performance was driven by higher profits on investments carried at equity, which rose from 57 million euro to 67 million euro, more than offset by an increase in other net operating expenses.

Operating costs, totalling 11,500 million euro, were slightly down on the 11,570 million euro in 2024 (-70 million euro; -0.6%). Within the operating costs, *personnel expenses* decreased by 2.3% to 7,019 million euro, reflecting the reduction in the average workforce (-3,231 staff; -3.4%) only partially offset by the contractual and operational developments. In contrast, *administrative expenses* increased by 1.6% to 3,028 million euro, having incorporated several one-off expenditure items (for example, for the Winter Olympic Games and for transformation initiatives in preparation for the new Business Plan). This trend involved almost all the cost categories, with the only exceptions being property management, as a result of the ongoing scaling-back measures, and legal and professional fees. As a result of the significant investments in technology made to date, *amortisation and depreciation* grew by 3.3% to 1,453 million euro, with an increase almost entirely attributable to intangible assets.

[1] In 2025, the average 1-month Euribor was 2.12%, compared to 3.56% in 2024.



As a result of these trends in revenues and costs, the *operating margin* amounted to 15,770 million euro, up on 15,537 million euro recorded in 2024 (+233 million euro; +1.5%). Consequently, the cost/income ratio decreased to 42.2%, down from 42.7%, confirming the Group's best-in-class position in Europe.

Net adjustments to loans totalled 1,745 million euro, compared to 1,274 million euro for the previous year (+471 million euro; +37%). The annual change for this caption reflected adjustments made in the fourth quarter, also in relation to the de-risking initiatives implemented and launched. The increase was essentially due to the adjustments to Stage 3 non-performing loans (which rose to 1,835 million euro from 1,385 million euro in 2024), with net inflows from performing loans remaining limited. Performing loans (Stage 1 and Stage 2) recorded total recoveries of 191 million euro, although down from the previous 219 million euro, while provisions for credit risk associated with commitments and financial guarantees given decreased by 9 million euro to 71 million euro. The cost of risk, represented as the ratio of net adjustments to net loans, thus stood at 41 basis points compared to 30 basis points for the full year 2024, an increase almost entirely due to the de-risking actions mentioned above.

Other net provisions and net impairment losses on other assets decreased significantly to 392 million euro from 680 million euro in 2024 (-288 million euro; -42.4%). The caption was made up of the following:

– other net provisions of 178 million euro, including 82 million euro relating to disputes of mainly legal nature. In 2024, other net provisions amounted to 505 million euro and included 91 million euro for legal and tax disputes and 263 million euro to write off the equity contribution of the Russian investee to the consolidated financial statements, against the net income accrued in that year[2];
– net impairment losses on securities and other assets of 214 million euro (of which 116 million euro on securities and 98 million euro on other assets), which compares to net impairment losses of 175 million euro (of which 44 million euro on securities and 131 million euro on other assets) in 2024.

Other income (expenses), which include realised gains and losses on investments, equity investments and financial assets measured at amortised cost other than loans, as well as income/expenses not strictly related to operations, recorded a negative contribution of -171 million euro, due to the valuation effects in the fourth quarter relating to several investments. In 2024, this caption made a positive contribution of 153 million euro, having included, among others, income related to commercial agreements entered into by the Group in the first and fourth quarters.

As a result of the accounting entries described above, *gross income* fell to 13,462 million euro from 13,736 million euro in 2024 (-274 million euro; -2%).

Taxes on income for the year amounted to 3,579 million euro, compared to 4,048 million euro in 2024 (-469 million euro; -11.6%), with a tax rate consequently falling from 29.5% to 26.6%. In addition to the changes in the taxable base, the trend was determined by some tax benefits recognised in the fourth quarter totalling 669 million euro relating to: i) new deferred tax assets (DTAs) relating to the extremely conservative estimate of the tax value recognised for the intangible assets of Eurizon Capital S.A., a Luxembourg company merged into Eurizon Capital SGR; ii) adjustment of the DTAs to reflect the increase in the IRAP (regional production tax) rate for credit institutions and insurance companies introduced by the 2026 Budget Act (Law no. 199 of 30 December 2025); and iii) the amount of IRAP requested for refund following the reduction from 50% to 5% of the relevance for IRAP purposes of the dividends received by Italian banks and insurance companies on equity investments in companies resident in the EU or the European Economic Area.

After tax, *charges for integration and exit incentives* of 353 million euro were recognised, including 58 million euro (86 million euro before tax) related to the trade union agreement of December 2025 (587 million euro expensed in 2024, which included 295 million euro, 439 million euro before tax, relating to the trade union agreement signed in October of that year) as well as negative *effect of purchase price allocation* of 76 million euro (-94 million euro in 2024).

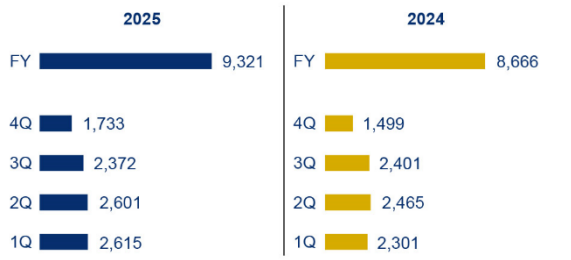
Levies and other charges concerning the banking and insurance industry, net of tax, recorded a significant decrease (-235 million euro; -67.5%). In 2025 they amounted to 113 million euro (154 million euro before tax) mainly attributable to: (i) 59 million euro (86 million euro before tax[3]) for the 2025 contribution to the Life Insurance Guarantee Fund by the Group's insurance companies and distribution companies; (ii) 18 million euro (27 million euro gross) for the 2025 contribution to the Deposit Guarantee Scheme by the Group's Italian banks, for the replenishment of the Fund's financial endowment in order to maintain the target level established by its Statute; and (iii) almost all the remainder consisting of charges attributable to the Group's international banks. In 2024, the figure recorded was 348 million euro (508 million euro before tax) which included: (i) 234 million euro (349 million euro gross) for the 2024 contribution to the Deposit Guarantee Scheme for the Group's Italian banks; (ii) 57 million euro (83 million euro gross) for the 2024 contribution to the Life Insurance Guarantee Fund; (iii) 31 million

[2] As set out in the section below on the highlights for the year, the orderly progress of the process for the reduction of business volumes (based on specific indications from the Regulator) led to a sharp reduction in the risk profile of Banca Intesa Russia, whose assets are now increasingly concentrated in on-demand deposits at the Russian Central Bank. In light of this and of the company's income forecasts which, although progressively declining, are still at positive levels, in 2025 it was decided to review the valuation of the investment in Banca Intesa Russia in the consolidated financial statements, maintaining the net income achieved by the investee from the first quarter of 2025 in the consolidated results, without making any provisions to write off its equity contribution upon consolidation, as was the case up to 31 December 2024.

[3] 69 million euro borne by the insurance companies and 17 million euro borne by the distribution companies of the Group.

euro (46 million euro gross) for the write-down of the Atlante Fund; and (iv) the remainder consisting of charges attributable to the Group's international banks.

Net income (loss)
(millions of euro)



After the allocation of the net income to minority interests of 20 million euro (7 million euro loss in 2024), the consolidated income statement for 2025 closed, as already stated, with a net income of 9,321 million euro, up by 7.6%.

The *consolidated income statement in the fourth quarter of 2025* recorded net income of 1,733 million euro, down from the 2,372 million euro in the third quarter (-639 million euro; -26.9%) mainly due to certain non-recurring expense items recognised during the period, together with the effects of the above-mentioned measures, in terms of adjustments and provisions, aimed at supporting the de-risking and strengthening of the balance sheet.
Operating income increased to 6,838 million euro (+195 million euro; +2.9%). The Group's revenue performance was driven by net fee and commission income (+8.5%), mainly in the management, dealing and consultancy activities segment, also thanks to the over-performance fees recorded in the period, with equally strong growth in the commercial banking activities segment and other net fee and commission income, particularly in relation to lending activities.
Net interest income remained substantially stable (+0.1%), with positive changes in customer dealing, net interest income on financial assets and liabilities in the portfolio and other net interest income, offset by negative changes in net interest on relations with banks and in differentials on hedging derivatives.
Income from insurance business recorded a modest decrease (-1.6%), entirely attributable to the life business.
Profits (losses) on financial assets and liabilities at fair value also decreased (-28.4%), due to the higher negative contribution from "Profits (losses) on trading and on financial instruments under fair value option", essentially related to transactions in certificates, and to the lower contribution from the profits (losses) from disposal/repurchase of financial assets/liabilities, despite the positive performance of the other captions.
Operating costs rose to 3,544 million euro (+830 million euro; +30.6%). Personnel expenses (+29.9%) included a non-recurring variable component linked to the results, in the context of a stable average workforce (15 fewer staff compared to the third quarter). Administrative expenses (+43.6%) reflected the usual year-end peak in invoicing, due to the completion of ongoing projects, and the already mentioned one-off costs incurred during the period, with the increases involving all the categories of expenditure, although to varying extents. Amortisation and depreciation (+8.7%) reflected the entry into use of new technological investments.
The revenue and cost trends described above affected the operating margin, which fell to 3,294 million euro (-635 million euro; -16.2%), with a cost/income ratio of 51.8% (40.9% in the third quarter).
Net adjustments to loans rose from 278 million euro to 962 million euro (+684 million euro). The change was mainly attributable to adjustments to non-performing loans in Stage 3 (+670 million euro), also in relation to the de-risking initiatives implemented and launched in the period, as well as provisions for credit risk associated with commitments and financial guarantees given (+70 million euro), only partly offset by higher recoveries on Stage 1 and Stage 2 performing loans (+85 million euro).
Other net provisions and net impairment losses on other assets totalling 250 million euro were also recorded, compared to 35 million euro in the third quarter. The increase (+215 million euro) was the result of: (i) +92 million euro from other net provisions, which rose to 105 million euro (of which 41 million euro relating to disputes of mainly legal nature) compared to the previous 13 million euro (of which 12 million euro related to disputes of mainly legal nature); and (ii) +123 million euro from higher net impairment losses on securities (+41 million euro) and other assets, also due to impairment of software due to be replaced (+82 million euro).
Other income (expenses), which includes realised gains and losses on investments and income/expenses not strictly related to operations, made a negative contribution of -190 million euro, incorporating the already mentioned valuation effects on several investments. In the previous quarter, the contribution of this caption was -2 million euro.
As a result, gross income amounted to 1,892 million euro from 3,614 million euro in the third quarter (-1,722 million euro; -47.6%).
Taxes on income for the period were positive at 77 million euro, compared with -1,152 million euro in the third quarter. In addition to reflecting the change in the taxable base, this caption benefited from the recognition of tax benefits of 669 million euro.
The consolidated income statement for the fourth quarter also recorded the following, net of tax: charges for integration and exit incentives of 164 million euro (64 million euro in the previous three months), including the already mentioned 58 million euro relating to the trade union agreement of 10 December 2025; negative effects of purchase price allocation of 14 million euro (-17 million euro in the third quarter) and charges aimed at maintaining the stability of the banking and insurance industry of 60 million euro (84 million euro before tax), consisting of the 2025 contribution to the Life Insurance Guarantee Fund (30 million euro, 43 million euro gross) and the replenishment of the financial endowment of the Deposit Guarantee Scheme of the Group's Italian banks (18 million euro, 27 million euro gross), with the remainder almost entirely consisting of charges attributable to the Group's international banks. In the third quarter, these industry charges totalled 3 million euro, with no tax impact.
Lastly, a loss of 2 million euro was allocated to third parties compared to profits of 6 million euro in the previous three months.

Loans to customers
(millions of euro)

With regard to the main balance sheet aggregates, as at 31 December 2025, *loans to customers* amounted to 425 billion euro and included 1.2 billion euro relating to an institutional customer previously classified under amounts due from banks[4]. The aggregate recorded modest growth compared both with December 2024 (+3.5 billion euro; +0.8%) and September 2025 (+4 billion euro; +0.9%), as a result of contrasting trends across the various components.
Commercial banking loans, amounting to 390.4 billion euro, showed a slightly negative trend year-on-year (-1.9 billion euro; -0.5%), although with a recovery in the fourth quarter (+4.2 billion euro; +1.1%). Within this category, medium/long-term loans remained broadly stable at 214.3 billion euro thanks to new disbursements, which increased in Italy by around 30%. In the shorter-term segment, current accounts, only marginally affected by the above-mentioned reclassification, rose to 21.2 billion euro (+0.3% year-on-year, +1.7% in the last three months), while advances and other loans, at 154.9 billion euro, maintained a decrease year-on-year (-0.8%), despite a rise in the fourth quarter (+3.9 billion euro; +2.6%), partly due to the above-mentioned reclassification (1.1 billion euro).
The trend described above was offset by the increase to 22 billion euro for repurchase agreements, used by the Parent Company in overall treasury management (+4 billion euro from December 2024, +0.8 billion euro in the fourth quarter), and to 8.7 billion euro for loans represented by securities, as a result of new subscriptions of corporate issuances, mainly by the Parent Company, in the first half of the year (+2.4 billion euro year-on-year).
Non-performing loans fell to 3.9 billion euro, from 4.9 billion euro at the end of 2024, also due to the de-risking measures launched and implemented in the fourth quarter. As a result, the NPL to total loan ratio decreased to 1.8% gross and 0.9% net (2.3% and 1.2% respectively in December 2024)[5].
The coverage ratio for non-performing loans amounted to 48.6%, one of the highest in Europe (49.5% at the end of 2024), while the coverage ratio on performing loans stood at 0.47% (0.53% at the end of 2024), reflecting the trend in Stage 2 loans. The latter decreased as a proportion of the total portfolio to 7.6% (7.9% at December 2024) and showed a coverage ratio of 4.20% (4.60% at the end of 2024), reflecting the transfer to non-performing status of exposures with higher coverage ratios than the category average and net inflows from Stage 1 characterised, on average, by lower risk.

Direct deposits from banking business
(millions of euro)

On the funding side, at the end of 2025 *direct deposits from banking business* totalled 600.2 billion euro – including 19 billion euro relating to an institutional customer previously classified under amounts due to banks – up both from December 2024 (+15.7 billion euro; +2.7%) and compared with September 2025 (+27 billion euro; +4.7%).
Current accounts and deposits, only marginally affected by the reclassification mentioned above, remained stable at 408.7 billion euro as a result of a partial shift from time deposits to current accounts. Instead, in the fourth quarter, they experienced an increase (+7.8 billion euro; +1.9%), which involved both forms of funding, although to varying extents. The ratio of current accounts and deposits to total direct deposits from banking business, equal to 68.1%, continues to represent a key strength of the Group's liquidity position.
Bonds decreased progressively over the twelve months to 68.1 billion euro (-12.3 billion euro; -15.3%). This trend, linked to the pre-funding carried out in 2024, involved covered bonds (-3.8 billion euro), senior preferred securities (-7.9 billion euro) and senior non-preferred securities (-0.6 billion euro). By contrast, they were accompanied by the growth in subordinated liabilities to 12.2 billion euro from 11.8 billion euro at the end of 2024, reflecting issuances and maturities during the year.
Other deposits also increased steadily, reaching 76.7 billion euro from 65 billion euro in December 2024, with an increase of 11.7 billion euro year-on-year attributable to (i) 4.2 billion euro from the growth in the component measured at fair value, almost entirely consisting of investment certificates, which rose to 36.7 billion euro (32.5 billion euro at the end of 2024), and (ii) 6.3 billion euro from the above-mentioned reclassification of the operations of an institutional counterparty. This reclassification affected in particular (12.5 billion euro) financial funding in the form of repurchase agreements and securities lending, used by the Parent Company in its treasury management, which amounted to 31.1 billion euro at the end of 2025, compared with 15.6 billion euro at the end of 2024 and 18.6 billion euro in September 2025.
Lastly, certificates of deposit – a form of funding concentrated in the Parent Company's international branches – despite increasing to 3.4 billion euro from 2.6 billion euro in December 2024, represented a residual component of the Group's total direct deposits from banking business.

As a result of the different trends in the two aggregates, the loan to deposit ratio fell to 70.8% from 72.1% in December 2024.

[4] This relates to a leading institutional customer operating as a Central Counterparty Clearing House which, in light of the new measures introduced by the ECB regarding access to overnight credit lines, returned its banking licence for deposit and lending activities on 28 October 2025, as this was no longer required under the new operational framework. Consequently, the counterparty's Bank of Italy Economic Sector (SAE) classification for supervisory reporting purposes was amended.

[5] Based on the EBA definition, as at 31 December 2025 the NPL ratio was down at 1.5% gross and 0.8% net (2% and 1%, respectively, at the end of 2024).

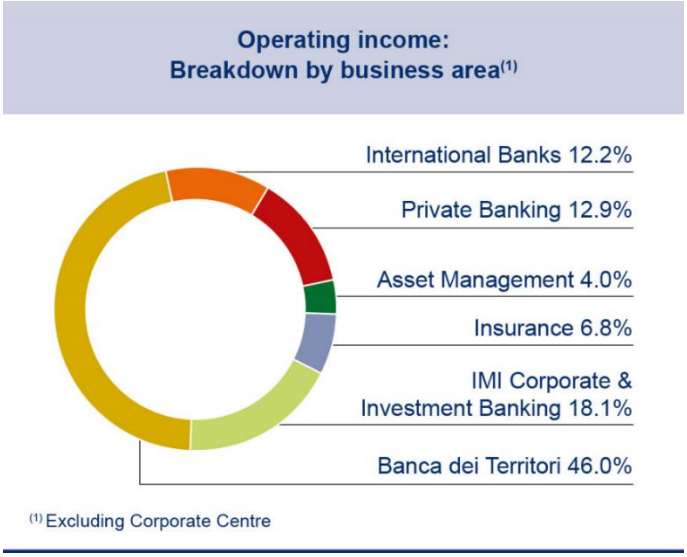
Direct deposits from insurance business
(millions of euro)

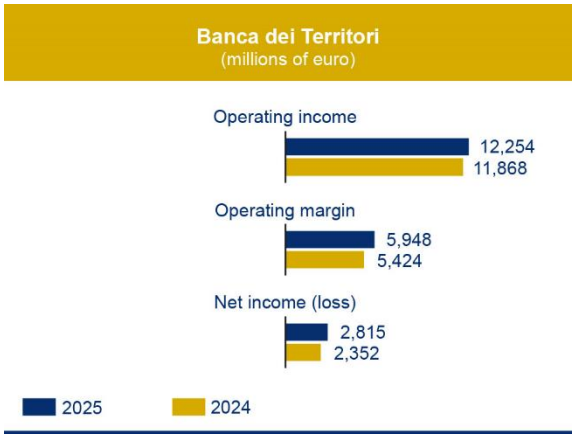
As at 31 December 2025, *direct deposits from insurance business* amounted to 182.9 billion euro, up by 5.4 billion euro (+3.1%) on the end of 2024, of which 3.9 billion euro in the fourth quarter (+2.2%).
The annual change was driven by insurance liabilities, which rose to 132.5 billion euro (+6.4 billion euro; +5.1% year-on-year; +2.9 billion euro; +2.2% over the three months), essentially attributable to the life business, which recorded a 9.3% increase in collected premiums. As a result, the share of insurance liabilities in the total aggregate rose to 72.5%.
Affected also by the market volatility, financial liabilities – consisting entirely of unit-linked investment contracts included under Financial liabilities designated at fair value pertaining to insurance companies in the Reclassified consolidated balance sheet – decreased to 49.2 billion euro (-1.5 billion euro; -2.9% from the end of 2024), despite the increase in the last quarter (+1 billion euro, +2.2%) and an annual increase of 9.9% in collected premiums. The weight of this caption consequently decreased to 26.9%.
The other insurance deposits – included among Financial liabilities at amortised cost pertaining to insurance companies in the Reclassified consolidated balance sheet and which also include the subordinated liabilities – amounted to 1.2 billion euro (+0.5 billion euro; +64.9% from December 2024), with a remaining weight of 0.6%. The growth was related to a Tier 2 subordinated issue of nominal 500 million euro, with 10-year maturity, placed on the institutional market by Intesa Sanpaolo Assicurazioni at the beginning of March.

Indirect customer deposits, measured at market prices, amounted to 844.6 billion euro at the end of 2025, increasing both year-on-year (+56.2 billion euro; +7.1%) and over the last three months (+18.4 billion euro; +2.2%), thanks to the favourable performance of both the main components, driven by positive net inflows and a positive performance effect linked to the reduction in interest rates.
Fuelled by net inflows of 15 billion euro (of which 3.8 billion euro in the fourth quarter), assets under management rose to 562 billion euro, corresponding to 66.5% of total indirect customer deposits, compared to 535.5 billion euro in December 2024 (+26.5 billion euro; +5%) and 553.3 billion euro in September 2025 (+8.8 billion euro; +1.6%). All the technical forms contributed to this trend, although to varying degrees, and in particular mutual funds.
Assets under administration reached 282.6 billion euro, representing 33.5% of total indirect customer deposits, from 252.9 billion euro at the end of 2024 (+29.7 billion euro; +11.7%) and 273 billion euro in September 2025 (+9.6 billion euro; +3.5%). This component also recorded overall positive net inflows of 13.3 billion euro, of which 5.7 billion euro in the fourth quarter.

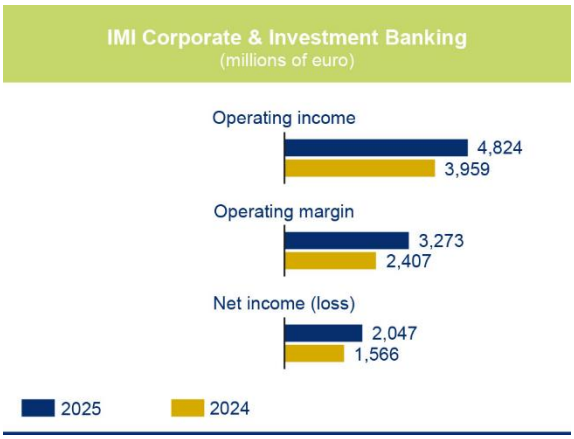
Results of the Business Areas

The Intesa Sanpaolo Group organisational structure is based on six business areas: Banca dei Territori, IMI Corporate & Investment Banking, International Banks, Asset Management, Private Banking and Insurance. In addition, there is the Corporate Centre, which is responsible for guidance, coordination and control of the entire Group, as well as for the Treasury, Funding and ALM operations.
As can be seen in the chart, the share of operating income attributable to each business area (excluding the Corporate Centre) confirmed that commercial banking activities in Italy continue to account for the majority (46.0% of the operating income of the business areas), although significant contributions were also provided by corporate and investment banking (18.1%), private banking (12.9%), commercial banking activity abroad (12.2%), insurance business (6.8%) and asset management (4.0%).
Where necessary and material, divisional figures are restated to reflect the changes in scope of the business areas to enable a like-for-like comparison.



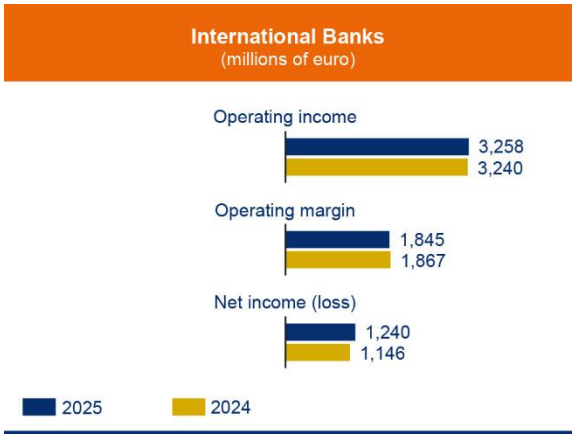


During 2025, the operating income of the Banca dei Territori Division – which oversees the traditional lending and deposit collecting activities in Italy and the related financial services – rose by 3.3% to 12,254 million euro. This performance was mainly driven by net fee and commission income (+5.7%), specifically in the wealth management, advisory and non-life insurance segments, while net interest income (+0.5%) was essentially stable. Operating costs, on the other hand, fell by 2.1% to 6,306 million euro, thanks to savings on personnel and administrative expenses. As a result, the operating margin rose by 9.7% to 5,948 million euro.
Gross income also improved (+3.7% to 4,404 million euro), despite the recognition of higher net adjustments to loans (+41.5%), including adjustments to support the de-risking. Banca dei Territori ended the year with net income up by 19.7% to 2,815 million euro.
As at 31 December 2025, the Division's balance sheet figures showed substantially stable total intermediated volumes of loans and deposits compared to the end of December 2024 (+0.1%). In detail, loans to customers, amounting to 219,992 million euro, decreased slightly (-0.6%, or -1.2 billion euro), reflecting the declining trend in loans to businesses, partly offset by the positive evolution of loans to retail customers. Direct deposits from banking business, amounting to 260,614 million euro, grew slightly compared to the end of 2024 (+0.7%, or +1.8 billion euro) mainly due to an increase in amounts due to retail customers.



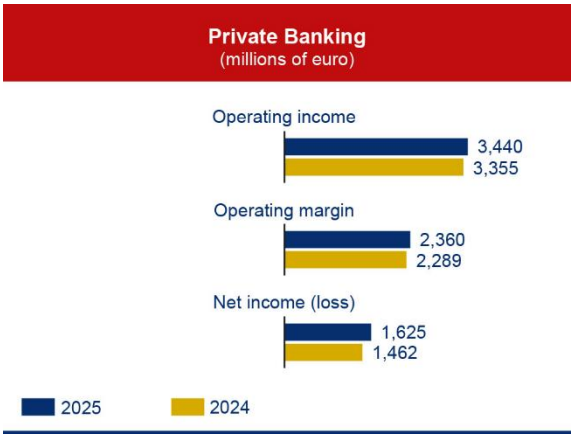
The IMI Corporate & Investment Banking Division – which oversees corporate and transaction banking, investment banking, public finance and capital markets activities, in Italy and abroad – made net operating income of 4,824 million euro, up by 21.8% from 2024. There were increases both in net fee and commission income (+2.5% to 1,318 million euro), essentially due to the performance of the structured lending and investment banking segments, and especially in the profits (losses) from financial assets and liabilities at fair value (with an increase of +846 million euro to 444 million euro), attributable to the results of the Global Markets operations, also in relation to the decrease in market interest rates. Operating costs remained stable at 1,551 million euro, while the operating margin improved by 36% to 3,273 million euro. The performance for gross income was similar (+30% to 3,035 million euro) despite the recognition of higher net adjustments to loans and net provisions and net impairment losses on other assets, including provisions and write-downs to support the de-risking. The year ended with net income of 2,047 million euro, an increase of 30.7%.

The total intermediated volumes of the Division were essentially stable compared to the end of 2024 (+0.1%). In detail, loans to customers, amounting to 124,132 million euro, decreased (-1.5%, or -1.9 billion euro), due to the declining trend in Global Corporate and in institutional customers, partially offset by the positive performance of Global Markets. In contrast, direct deposits from banking business, amounting to 127,337 million euro, were up (+1.7%, or +2.1 billion euro), mainly due to the growth in operations in certificates, partially offset by the reduction in securities issued by the Luxembourg subsidiary and within Global Markets.



In 2025, the operating income of the International Banks Division – which is responsible for the Group's operations on international markets through commercial banking subsidiaries and associates that mainly carry out retail banking activities – amounted to 3,258 million euro, up slightly on the previous year (+0.6%; +2.7% at constant exchange rates). The revenue items that provided positive contributions were net fee and commission income (+13.9% to 738 million euro) and profits (losses) on financial assets and liabilities at fair value (+11.2% to 149 million euro), against a decrease in net interest income (-3.4% to 2,439 million euro). Operating costs, amounting to 1,413 million euro, were up (+2.9%; +4.4% at constant exchange rates) essentially due to personnel and administrative expenses. As a result of the combined performance of the two aggregates, the operating margin was down slightly at 1,845 million euro (-1.2%). Gross income showed an improvement (+5.9%) to 1,787 million euro, thanks to lower adjustments and provisions. The Division ended the year with net income up at 1,240 million euro (+8.2%).

As at 31 December 2025, the total intermediated volumes were up (+7%) compared to the end of 2024, attributable to the increase in both loans to customers (+8.2%) and direct deposits from banking business (+6.2%). The performance of loans was mainly due to the development of the subsidiaries operating in Croatia, Serbia, Hungary and Slovakia, while the trend in deposits was mainly related to the increase recorded in Hungary, Croatia and Slovakia.

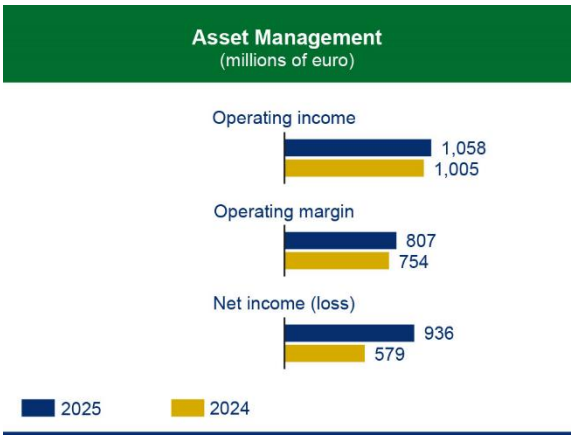


The Private Banking Division – which serves the top customer segment (Private and High Net Worth Individuals), creating value by offering top products and services – posted operating income up 2.5% to 3,440 million euro. The performance was supported by net fee and commission income (+7.3% to 2,247 million euro) – both recurring commissions, due to the growth in average assets under management, and up front commissions, due to the higher contribution from the placement of bonds, certificates, mutual funds and the receipt and transmission of orders – against a decline in net interest income (-6.9% to 1,100 million euro), linked to the lowering market interest rates.

Operating costs increased by 1.3% to 1,080 million euro and this performance was driven by administrative expenses, amortisation for software and rights of use on leased assets, and personnel expenses. Given the performance described, the operating margin improved by 3.1% to 2,360 million euro. Benefiting from lower adjustments and provisions, gross income rose by 3.1% to 2,311 million euro. The year ended with net income of 1,625 million euro, an increase of 11.1%.

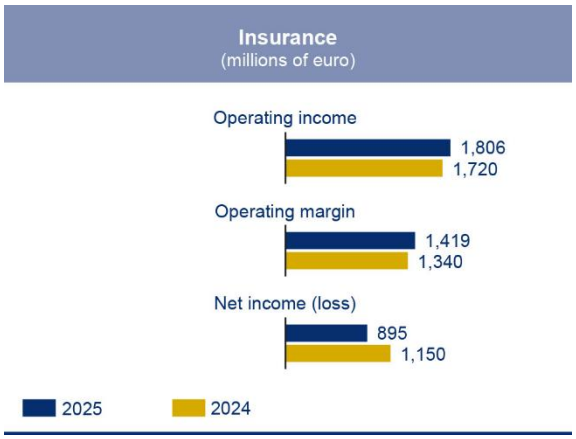
At the end of 2025, assets under management and administration, which also include the contribution of the trust mandates for SIREF Fiduciaria, amounted to 369.1 billion euro (+34.2 billion euro from the end of 2024). This trend was due to both the

market performance, which had a favourable impact on assets, and positive net inflows. The assets under management component amounted to 248.8 billion euro (+17 billion euro).



The Asset Management Division – which pursues the mission of developing the best asset management solutions aimed at the Group's customers and its presence on the open market segment through Eurizon Capital SGR and its subsidiaries – posted operating income of 1,058 million euro in 2025, up 5.3%. The growth in revenues was entirely attributable to the performance of net fee and commission income (+7.9% to 966 million euro), which benefited from an increase in incentive fees, the growth in up-front fees for mutual funds and recurring fee and commission income, against a reduction in net interest income (-31.1% to 42 million euro), which reflected the decline in market interest rates. In the presence of stable operating costs of 251 million euro, the operating margin rose to 807 million euro, with an increase of 7%. There were also significant improvements for gross income (+3.6% to 810 million euro) and, to a greater extent, for net income (+61.7% to 936 million euro), due to the recognition of deferred tax assets and other tax items.

As at 31 December 2025, the assets under management of the Asset Management Division totalled 352.8 billion euro, up by 19.7 billion euro (+5.9%) compared to the end of 2024, thanks to the revaluation of the assets under management, linked to the positive performance of the markets and net inflows (+2.6 billion euro), and included the effects of the changes in scope due to the reorganisation operations (described below) for a total amount of around 4 billion euro.



The Insurance Division – whose mission is to synergically develop the insurance product mix targeting Group customers – generated operating income up by 5.0% to 1,806 million euro in 2025, almost completely composed of income from insurance business (+5.4% to 1,808 million euro), driven by the non-life business, which benefited mainly from the positive performance of the technical margin, as well as the life business, particularly in the net investment result component. Against a moderate increase in operating costs (+1.8% to 387 million euro), the operating margin improved by 5.9% to 1,419 million euro. Gross income amounted to 1,377 million euro (+2.8%). The income statement for the year of the Insurance Division closed with net income down by 22.2% to 895 million euro, after the allocation of: (i) taxes of 425 million euro, up on the 108 million euro in 2024 which had benefited from the recognition of deferred tax assets of 293 million euro; (ii) charges for integration and exit incentives of 23 million euro; (iii) the positive effects of purchase price allocation of 14 million euro; and (iv) levies and other charges concerning the banking and insurance industry of 48 million euro.

The performance of the direct deposits from insurance business was described in the paragraph above containing the commentary on the Group's results.

The Structures of the Corporate Centre generated an operating margin of 118 million euro in 2025, compared to 1,456 million euro in 2024. This performance was especially attributable to the reduction in operating income, mainly due to the performance of net interest income, which was impacted by the declining trend in market interest rates, and profits (losses) on financial assets and liabilities at fair value, which were negatively affected by the performance of foreign exchange transactions. Operating costs increased slightly due to lower charge backs by the Corporate Centre to the business units and higher amortisation of intangible assets correlated with technological investments, largely offset by the decrease in personnel expenses. Gross income amounted to -262 million euro compared to 1,105 million euro in 2024.

The net result for 2025 was -237 million euro, compared to a positive figure of 411 million euro in 2024.

Highlights

The military conflict between Russia and Ukraine

The ISP subsidiaries in Russia and Ukraine

The Group is present in Russia and Ukraine through two subsidiaries:
– *Joint-Stock Company Banca Intesa (Banca Intesa Russia)*, 47% owned by Intesa Sanpaolo and 53% by Intesa Sanpaolo Holding International (Luxembourg). This is a Moscow-based corporate bank, which operates with 16 branches and 672 staff. The Group's presence in Russia dates back around 50 years (initially as a Representative Office, closed in August 2023). The bank has participated in the financing of large national and international Russian projects, also offering a full range of banking services for small and medium-sized enterprises, retail customers and companies;
– *Pravex Bank Joint-Stock Company*, 100%-owned by Intesa Sanpaolo. This is a small commercial bank based in Kyiv, part of the International Banks Division, which operates with 39 branches mainly in the Kyiv region and employs 530 people. Intesa Sanpaolo acquired the bank in 2008 and has been operating in the country continuously since that date.

The observations made concerning Intesa Sanpaolo's continued control over the two entities, as reported in Section 5 – Other Aspects of Part A of the Notes to the consolidated financial statements, still apply.
Despite the objective constraints imposed by the current situation, particularly for Pravex, the two subsidiaries are continuing to operate with the support of the Parent Company structures, while the overall exposure to and operations with the Russian Federation have decreased significantly over the past three years, as required by the European regulators and the ECB requirements/recommendations, the latest of which was issued in December 2024 (in this regard see also the already mentioned Section 5 - Other aspects of Part A of the Notes to the consolidated financial statements).

Risk management

In light of the continuing military conflict between Russia and Ukraine, the Group has not relaxed the safeguards put in place and described in the previous disclosures. The situation continues to be monitored both at Parent Company level and in all the Group banks directly involved in the conflict or close to it, where direct and continuous contacts are being maintained.
Appropriate information is also always prepared for the Board Committees and the Board of Directors.

The Risk Management and Control Task Force
With regard to credit risk control, there were no significant changes to report.
In light of the progressive tightening of the already severe sanctions imposed on Russia by Western countries, particularly within Europe, in order to ensure regulatory compliance, during the year under review the close supervision continued through a specific dashboard at Group level, aimed at monitoring the changes in the lists of sanctioned persons and entities at European and international level, identifying sanctioned persons and entities for the purpose of blocking positions and payments, complying with the specific ban on accepting deposits based on the restrictions established by the European regulations, and identifying and blocking financial instruments subject to sanctions. As at 31 December 2025, the exposure to Russian counterparties included in the OFAC (Office of Foreign Assets Control) SDN and/or EU asset freeze lists amounted to 276.2 million euro, compared to 219.5 million euro at the end of 2024.
Despite several repayments relating to existing exposures, the aggregate still showed an increase in the number of individual exposures during the year, due to the addition of new sanctioned persons and entities as a result of the application of the OFAC measures and the new packages decided by the European Union[6].
As described in greater detail in the Part E - Information on risks and relative hedging policies, chapter "Scope of risks", in corporate risk management, particular attention is given to the geopolitical context, the issues arising from it and their developments, in order to identify the main phenomena that could have an international impact and significantly alter the Group's risk profile and influence its operations. Specific scenario and stress analyses are therefore conducted, also in relation to the Russia-Ukraine conflict, to assess the potential impacts in terms of profitability and capital adequacy.

The Operational Resilience Task Force
With regard to business continuity in Ukraine, during the year operations were continually ensured thanks to all the solutions gradually adopted to guarantee normal functioning in the event of interruptions to essential services. Specifically: i) to overcome electricity supply issues, power banks were provided to head offices and personnel with critical and strategic roles, while branches were equipped with inverter generators, which can be easily and promptly used by branch personnel; and ii) data connection was ensured through the installation of satellite devices. These measures continue to ensure the provision of services without significant interruptions despite ongoing blackouts, also thanks to the increase in the number of inverter generators installed at the branches. The repeated attacks suffered by the country did not cause any problems to the Bank's buildings, except for one branch, which suffered slight damage but nevertheless remained operational. In 2025, the number of branches open daily stabilised at the total number of available branches. The decision-making process regarding the operations of the individual branches continues to be based on a risk assessment methodology agreed with the Parent Company, which involves the use of specific indicators, while always taking staff safety into account.
From the third quarter, in response to the intensification of the conflict, continuous monitoring of the evolution of the geopolitical situation was implemented and analysis began of new initiatives to be adopted in the event of a further deterioration of the situation.
At Banca Intesa Russia, on the other hand, the systems have continually functioned without any operational problems since the beginning of the conflict.
The review is also continuing of the operations of Banca Comerciala Eximbank, the Group's Moldovan subsidiary, which still has no operational problems to report, despite the temporary worsening of the conflict in the area.

[6] The sixteenth package on 24 February 2025, the seventeenth on 20 May 2025, the eighteenth on 18 July 2025 and the nineteenth on 23 October 2025.

In terms of cybersecurity, the monitoring and threat intelligence activities continued, alongside the continued strengthening of the cybersecurity controls throughout the Intesa Sanpaolo Group.
Within the threat intelligence activities aimed at preventing possible cyber threats to Pravex, the containment measures have so far enabled the management of the attacks, ensuring service delivery with minimal disruption. Specific educational initiatives on cyber risks, through training courses and in-depth studies on specific topics, are regularly implemented to continually raise awareness among all the Group's staff.
As usual, the additional costs incurred for business continuity and any losses resulting from physical damage to premises/branches located in the conflict zone form part of the monitoring of the exposure to operational risk, including that relating to the Risk Appetite Framework.

The main accounting aspects and the approach adopted by the Intesa Sanpaolo Group

This paragraph summarises main accounting issues arising from the ongoing conflict between the Russian Federation and Ukraine and the Intesa Sanpaolo Group's approach to addressing them. The situation of the Russian/Ukrainian crisis has been the subject of close attention since the outbreak of hostilities at the end of February 2022. The Group had significant cross-border exposures to counterparties resident in the Russian Federation, as well as, as already mentioned, two subsidiaries operating in the warring countries, which were therefore particularly exposed to the consequences of the conflict: Pravex Bank and Banca Intesa Russia.

At the beginning of 2022, loans to Russian customers represented around 1% (almost 5 billion euro) of the Intesa Sanpaolo Group's total loans to customers (net of the exposures backed by Export Credit Agency - ECA guarantees). The de-risking activities have therefore focused on reducing these exposures, and this activity has continued in 2025. In particular, the business conducted in the Russian Federation has been decreasing for many years now, as also requested by the European regulators.
Total gross exposures (customers, banks and securities) as at 31 December 2025 to counterparties resident in Russia and Ukraine amounted to just 792 million euro (546 million euro after adjustments), a decrease of 833 million euro or -51% (-875 million euro in net values, -62%) compared with 31 December 2024, when the gross exposure stood at 1,625 million euro (1,421 million euro in net values). The decrease mainly relates to the reduction in amounts due from banks of Banca Intesa Russia (-708 million euro in gross values) and, in particular, to term deposits with the Russian Central Bank, which were converted into cash and cash equivalents (amounting to 1,049 million euro as at 31 December 2025, up 756 million euro compared to December 2024). More specifically, as at 31 December 2025, the remaining exposures to customers amounted, in terms of gross values, to 71 million euro (16 million euro net) for Banca Intesa Russia, with its non-performing component fully written down as of 31 March 2025, and 335 million euro (198 million euro net) for cross-border exposures to customers resident in Russia (net of ECA guarantees). These amounts are in addition to the gross exposures to Russian banks totalling 51 million euro (48 million euro net) after the above-mentioned decrease in Banca Intesa Russia's term deposits with central banks. There are no longer any exposures in securities (1 million euro gross value and nil net value at the end of 2024)[7]. The amounts of the gross exposures to customers resident in Ukraine are small (as in previous years). Specifically, they amounted to 148 million euro (103 million euro net), of which 44 million euro (zero book value in net terms) related to the subsidiary Pravex (figures as at 30 September 2025, as described below)[8], in addition to exposures to banks and short-term government bonds totalling 187 million euro gross (181 million euro net).
That said, the situation as at 31 December 2025 is essentially the same as that described in the Annual Report as at 31 December 2024 and the interim reports of 2025. In particular, the Intesa Sanpaolo Group continued to exercise control over the two banks, which operated on the basis of the Parent Company's instructions in their respective environments. For Banca Intesa Russia, in line with the guidelines issued by Intesa Sanpaolo, the gradual and orderly implementation of the wind-down plan requested by the ECB is under way, aimed at further reducing the bank's operations.
Consequently, the main methodological choices – both in terms of consolidation of the two subsidiaries and valuation of the credit exposures – are essentially the same as those used in the 2024 Annual Report.

Before outlining the valuation issues regarding the two subsidiaries and the aspects related to the valuation of the cross-border exposures, it is necessary to provide some preliminary information about how Pravex and Banca Intesa Russia contributed to the consolidated financial statements as at 31 December 2025. More specifically, while it was possible to consolidate an accounting situation aligned to that of the Parent Company for Banca Intesa Russia (therefore, consolidated with reference to the results as at 31 December 2025), for Pravex, the specific situation in the city of Kyiv (where the bank is based) led to the conclusion that – in order to contain the "operational" risk – it was considered more appropriate to consolidate the figures of the Ukrainian bank using an accounting situation as at 30 September 2025, translated at the exchange rate of 31 December 2025. The accounting figures[9] of Pravex have therefore been incorporated by means of the line-by-line consolidation of a consolidation package prepared in accordance with the IAS/IFRS for the previous quarter, in keeping with the approach already adopted for the 2022, 2023 and 2024 Annual Reports. However, it is worth recalling here that the balances of the Ukrainian subsidiary are substantially immaterial in the context of those of the Intesa Sanpaolo Group. The above method of consolidation is also supported by the fact that the balance sheet management data as at 31 December 2025 do not show any significant differences – in the total aggregates – compared to those at the end of September.

[7] There were also 5 million euro (gross and net) in gross off-balance sheet exposures to customers at Banca Intesa Russia and 21 million euro (9 million euro net) in cross-border off-balance sheet exposures to customers resident in Russia (net of ECA). Lastly, there were 20 million euro (gross and net values) of cross-border positions with Russian resident banks.

[8] The cross-border exposures to customers resident in Ukraine are, for the corporate part, backed by guarantees provided by European persons, while, for the household part, these mainly relate to exposures disbursed by the subsidiary VUB to Ukrainian families with permanent residence in Slovakia.

[9] The consolidation of Pravex concerned the balance sheet figures as at 30 September 2025 and the income statement figures for the first nine months of 2025.

With regard to the valuation choices, the absolutely serious situation in all of Ukraine resulted in the definition, for the purpose of measuring Pravex's loan portfolio, of a specific approach, significantly based on prudent rationales, in light of the continuation of the conflict and the consequent repercussions on the Ukrainian economy. As at 31 December 2025, as in the 2024 Consolidated financial statements, it was again considered appropriate to maintain the full write-down of Pravex's on-balance sheet loans to customers, with consequent classification to Stage 3. As a result of that choice, for the purposes of the Group's consolidated financial statements, the equity of the subsidiary has essentially been reduced to zero.
For Banca Intesa Russia, the classification and measurement approach for performing loans used in previous years was maintained. Therefore, as was already the case in the 2024 Annual Report, the assessments carried out as at 31 December 2025 on the loans of the subsidiary included a centrally determined prudent factor that takes account of the worsening of the domestic economic situation in light of the continuation of the conflict and the increased isolation of the Russian economy. As a result of these valuations, the total coverage of performing loans of the Russian subsidiary amounted to around 60% of their gross value, up on 36% in December 2024. In addition, as already mentioned, the remaining non-performing loans of Banca Intesa Russia were fully written down already as of 31 March 2025.
In addition, the orderly progress of the wind-down process (based on specific indications from the Regulator) led to a sharp reduction in the risk profile of Banca Intesa Russia, whose assets are now increasingly concentrated in on-demand deposits at the Russian Central Bank. Consequently, as a result of the change in the subsidiary's risk profile and income forecasts which, although progressively declining, are still at positive levels, it was decided in 2025 to review the valuation of the investment in Banca Intesa Russia in the consolidated financial statements, maintaining the subsidiary's 2025 net income of 139 million euro in the consolidated results. Given the assumption, as at 31 December 2025, of a positive value for Banca Intesa Russia in terms of contribution to Intesa Sanpaolo's consolidated financial statements, it was necessary to subject this value to an impairment test, which was carried out on the basis of a specific appraisal commissioned from an independent advisor, the results of which confirmed the valuation adopted.
The Allowance for Risks and Charges (amounting to 438 million euro at the end of 2025), funded up to 31 December 2024 and aimed at fully writing down the equity value of Banca Intesa Russia at that date, remained substantially unchanged.

The significant adjustments on the credit exposures of Banca Intesa Russia and Pravex, made on a prudential basis, reflect the evolution of the conflict up to 31 December 2025, which requires careful consideration of the above-mentioned country risk for Russia and Ukraine, with appropriate measurement of the risk that the capital invested abroad is exposed to, connected to the possibility that political or economic circumstances may result in non-repayment of the loan (irrespective of the specific credit risk of the individual counterparty).

For the remaining cross-border positions, the Group continued to adopt the measurement approach guided by the emergence of the so-called "transfer" risk (an approach applied both for the determination of the SICR and the related classification to Stage 2, and for the calculation of the ECL through the application of managerial adjustments) in order to better incorporate provisions related to the risk associated with the current conflict that would otherwise not be properly captured by the risk measurement systems normally used. At the same time, the ratings for the highest risk class already assigned to the most significant counterparties exposed to conflict-related risk have been maintained.

With regard to the profit and loss impacts, as at 31 December 2025 the Group did not record any significant overall profit and loss impacts in relation to the exposures to Russian and Ukrainian counterparties, apart from the already mentioned 139 million euro contribution to the 2025 consolidated result from Banca Intesa Russia. For the full year 2024, the Group had recorded a negative profit and loss impact, before tax, of 273 million euro, mainly related to the inclusion, amounting to 263 million, of the provision made upon consolidation of Banca Intesa Russia, aimed at writing off its equity contribution to the consolidated financial statements (inclusion for 2024 corresponding to the income recorded by the bank). The other effects relating to collections and valuations of other positions with Russian or Ukrainian counterparties substantially offset each other, resulting in a total of -10 million euro.

Other highlights

The other significant events that occurred in 2025, as well as some updates since the end of the year, are described below.

On 28 January 2025, Intesa Sanpaolo announced the signing of an industrial partnership in the operational leasing of capital goods with Grenke AG, a company listed on the Frankfurt Stock Exchange and a market leader in Italy through its subsidiary Grenke Locazione S.r.l. This type of product strategically complements the traditional financial offering by allowing companies (i) to renew their operating equipment without weighing on their financial structure and (ii) the total tax deductibility of expenses incurred.
The partnership, approved by the Board of Directors of Intesa Sanpaolo on 17 January 2025 and signed by the parties on 28 January 2025, is aimed at strengthening the Intesa Sanpaolo Group's strategic positioning in operational leasing through the creation of a new market-leading player, leveraging the branch network and customer base of Intesa Sanpaolo together with Grenke's strong competitive positioning.
With legal and accounting effect from 1 June 2025, Intesa Sanpaolo contributed its entire holding (equal to 100% of the share capital) in Intesa Sanpaolo Rent Foryou S.p.A., previously recapitalised in the amount of 12 million euro, to Grenke Locazione, with a subsequent merger by incorporation envisaged[10]. Following the contribution, Intesa Sanpaolo acquired a 17% interest in Grenke Locazione S.r.l., which, from 1 June 2025, was converted into a joint-stock company and changed its name to Grenke Italia S.p.A.. The remaining 83% of the company's share capital remained with Grenke AG. The fairness of the values transacted was certified by a specific fairness opinion issued by an independent third party.
In accordance with the specific governance provisions set out in the agreements signed by the parties, the investment in Grenke Italia has been classified under interests subject to significant influence in accordance with IAS 28.

[10] The merger took place on 30 September 2025.

In 2025, a project was substantially completed for the evolution of Wealth Management, aimed at optimising the operations of the product factories through the reorganisation and restructuring of collective and asset management activities. The ultimate goal is the simplification of the Group's corporate and organisational structure, increased specialisation of the product factories by creating specialist centres of excellence, and improved coordination between the factories and distribution networks.
This project included the following:

– on 19 February 2025, the deed was executed for the *merger by incorporation of Epsilon SGR S.p.A. into its parent company Eurizon Capital SGR S.p.A.*, in turn wholly owned by Intesa Sanpaolo. The transaction, which took statutory effect from 1 March 2025, with accounting and tax effects from 1 January 2025, was authorised by the Bank of Italy by order dated 27 January 2025, which also approved the amendments to the rules of the funds managed by Epsilon SGR. As a merger involving a wholly owned company, it was carried out in the simplified manner provided for in Article 2505 of the Italian Civil Code.
  The merger was carried out on the basis of a merger plan filed by the two companies on 27 January 2025 and registered with the Company Register, Milan Monza Brianza Lodi office, on 28 and 29 January. The resolution approving the transaction by the Extraordinary Shareholders' Meetings of the two companies was passed on 29 January, with registration in the above-mentioned Register on 31 January 2025;
– through orders dated 24 January 2025 and 5 March 2025, respectively from the European Central Bank and the Bank of Italy, the following corporate transactions were authorised:
  - the *total demerger of Fideuram Asset Management SGR S.p.A.*, wholly owned by Fideuram - Intesa Sanpaolo Private Banking S.p.A., in favour of Eurizon Capital SGR (business line organised for collective asset management – UCITS and AIFs) and Fideuram - Intesa Sanpaolo Private Banking (set of assets, liabilities, rights, and legal and economic relationships not pertaining to collective asset management, and therefore not assigned to Eurizon Capital SGR);
  - the *partial demerger of Eurizon Capital SGR* in favour of Fideuram - Intesa Sanpaolo Private Banking of the business line comprising the portfolio management schemes distributed by the Private Banking Division;
  - the approval of the amendments to the rules of the funds managed by Fideuram Asset Management SGR.

  On 16 June 2025, in execution of the shareholders' meeting resolutions of 15 May 2025, the deed was signed for the total demerger of Fideuram Asset Management SGR, which took statutory, accounting and tax effects from 1 July 2025. Following the demerger, which concerned the entire scope of operations of the company, Fideuram Asset Management SGR was dissolved.
  To service the total demerger, on 1 July 2025 Eurizon Capital SGR increased its share capital by an amount equal to the net value of the business line assigned from Fideuram Asset Management SGR, issuing new shares allocated to Fideuram - Intesa Sanpaolo Private Banking, as sole shareholder of the demerged company. On 7 July, these shares were purchased by Intesa Sanpaolo at a market-consistent price determined with the aid of an independent expert, in order to restore full control over Eurizon Capital SGR.
  On 17 September 2025, the deed was signed for the partial demerger of Eurizon Capital SGR in favour of Fideuram - Intesa Sanpaolo Private Banking of the business line comprising the portfolio management schemes distributed by the Private Banking Division. The partial demerger of Eurizon Capital SGR took statutory, accounting and tax effects on 1 October 2025.

Additionally, under the above project, in 2025 the streamlining was initiated of the English registered companies within the Wealth Management Division, which led, in November, to the transfer of the entire business of Fideuram Asset Management UK Ltd to Eurizon Slj Capital Ltd. The liquidity required to complete the transaction was provided to Eurizon Slj Capital by its 65% parent company, Eurizon Capital SGR, through the subscription and payment of a share capital increase with the issuance and allocation of new shares and the consequent increase to 85% of the investment held. The streamlining will be completed in 2026 with the liquidation of Fideuram Asset Management UK.

At the meeting held on 27 March 2025, the Board of Directors of Intesa Sanpaolo gave its approval to the following corporate transactions:

– the *merger by incorporation of First Bank S.A.*, the Romanian bank acquired in 2024 and 99.98% owned by Intesa Sanpaolo, into Banca Comerciala Intesa Sanpaolo Romania S.A. (Intesa Sanpaolo Bank Romania), the subsidiary through which the Group has operated in Romania since 2001, and which is 99.73% owned by Intesa Sanpaolo and 0.27% by Intesa Sanpaolo Holding International S.A. (Luxembourg). On 28 March, the Boards of Directors of the two banks approved the merger plan, which was registered with the Company Register in the days that followed.
  After the period granted by law for any creditor opposition had expired, the Shareholders' Meetings of the two banks approved the merger plan on 12 May 2025. On 16 June, the request was submitted to the National Bank of Romania, which notified its authorisation on 13 October. The transaction became legally effective on 31 October 2025, following the official registration in the Trade Register, and the accounting and tax effects commenced on the same date. First Bank was consequently dissolved without liquidation and was removed from the Trade Register and the Register of Banks at the Central Bank of Romania. Intesa Sanpaolo Bank Romania carried out a capital increase through the issuance of new shares allocated to Intesa Sanpaolo and the minority shareholders of First Bank. Following the merger, the share capital of the absorbing company is held 99.84% by Intesa Sanpaolo, 0.15% by Intesa Sanpaolo Holding International and 0.01% by minority shareholders.
  The merger will enable the implementation of a unified business strategy based on multi-channelling, the streamlining of the branch network, and the achievement of significant cost synergies, also through the simplification of governance;
– the *cross-border merger of Intesa Sanpaolo Bank Ireland Plc* (wholly owned by Intesa Sanpaolo) into Intesa Sanpaolo Bank Luxembourg S.A. (wholly owned by Intesa Sanpaolo Holding International). On 15 May 2025, the Boards of Directors of both banks approved the merger plan. The extraordinary shareholders' meetings approving the merger plan were held on 30 June 2025 for Intesa Sanpaolo Bank Ireland and on 26 September 2025 for Intesa Sanpaolo Bank Luxembourg. The merger took legal effect from 17 November 2025, upon publication in the Luxembourg Company Register. The accounting effects of the transaction began on 1 January 2025, while the tax effects commenced on 17 November 2025. Because both banks were wholly owned by the Parent Company, it was possible to use a simplified merger procedure, as envisaged by both legal systems, which allowed the transaction to be completed without the need for a dedicated capital increase by the absorbing company. The merger will simplify the international network of the IMI Corporate & Investment

Banking Division, strengthening the Bank's role in Luxembourg, which will centralise the activities previously carried out by the Irish subsidiary, also generating cost synergies.

With regard to the *22.5% stake in Cronos Vita Assicurazioni* – acquired by Intesa Sanpaolo Assicurazioni (formerly Intesa Sanpaolo Vita) within the industry-wide transaction carried out in 2023 to protect policyholders of Eurovita and involving the five main Italian insurance companies – from December 2023 this stake was classified under assets held for sale given the shareholder companies' clear intention from the outset to hold the investment for a limited period.
Between late March and early April of 2025, the five shareholder companies, together with Cronos Vita Assicurazioni, approved, for matters within their competence, the total non-proportional demerger plan for the company, with statutory, accounting and tax effects from the same date, set as 1 October 2025, following completion of the legal procedures. On 7 April 2025, the same parties submitted their application to IVASS, which granted the necessary authorisations by order no. 0098642 of 14 May 2025. The deed of demerger was consequently signed on 26 September and, as stated above, became effective on 1 October 2025, on which date Cronos Vita Assicurazioni was dissolved without liquidation.
With regard to the Intesa Sanpaolo Group, on 27 March 2025, the Board of Directors of Intesa Sanpaolo granted prior approval of the plan, designating Fideuram Vita as the beneficiary of the demerger, in view of the nature of the portfolio transferred to the Intesa Sanpaolo Group, mainly consisting of policies no longer being distributed, entered into with customers of Fideuram - Intesa Sanpaolo Private Banking. On the basis of the above-mentioned prior approval, on 31 March 2025 and 3 April 2025, respectively, the Boards of Directors of Intesa Sanpaolo Assicurazioni and Fideuram Vita approved, for matters within their competence, the Demerger Plan which included, inter alia, a capital increase by Fideuram Vita to service the demerger for an amount equal to the carrying amount of the investment in Cronos Vita Assicurazioni, with the issuance of new shares in favour of Intesa Sanpaolo Assicurazioni and the related amendment to the company's Articles of Association (authorised by IVASS under the above-mentioned order of 14 May 2025). The shareholders' meeting of Fideuram Vita on 20 June 2025 approved the Demerger Plan and the related capital increase, as well as the amendment to the articles of association. The capital increase was completed on 1 October 2025, changing the shareholding structure of Fideuram Vita, which is now 77.5% held by Intesa Sanpaolo, 19.4% by Fideuram - Intesa Sanpaolo Private Banking, and the remaining 3.1% by Intesa Sanpaolo Assicurazioni.
Because Fideuram Vita acquired control of a specific business unit (consisting of an insurance portfolio and additional legal relationships, assets and liabilities), the demerger qualified as a business combination in accordance with IFRS 3, with the consequent line-by-line consolidation of the acquired unit from the acquisition date and the simultaneous derecognition of the equity investment in Cronos Vita Assicurazioni. The Purchase Price Allocation (PPA) process was finally completed in the fourth quarter.

The *Shareholders' Meeting of Intesa Sanpaolo* was held on 29 April 2025. The Meeting was validly constituted, on single call, to pass resolutions as those in attendance through the appointed representative (in accordance with Article 106, paragraph 4, of Decree Law no. 18 dated 17 March 2020 converted by Law no. 27 dated 24 April 2020, the effects of which were extended by Law no. 15 dated 21 February 2025) counted 4,356 holders of voting rights attached to 10,867,347,981 ordinary shares without nominal value representing 61.03993% of the share capital. The Shareholders' Meeting voted in favour of all the items on the agenda (see the press release published on the Group's official website, for details of the individual resolutions and the respective majorities of votes).
In the ordinary part, the resolutions concerned:

– *the approval of the 2024 financial statements of the Parent Company Intesa Sanpaolo and the allocation of the net income for the year with the distribution to shareholders of a dividend and part of the Share premium reserve.* The cash distribution to shareholders of a remaining amount of 3,044,427,655.67 euro (corresponding to 17.10 euro cents for each of the 17,803,670,501 ordinary shares) was approved, of which 2,252,164,318.38 euro as dividends from the net income for the year (corresponding to 12.65 euro cents per share) and 792,263,337.29 euro as assignment of reserves drawn on the Share premium reserve (corresponding to 4.45 euro cents per share). The dividend distribution took place from 21 May 2025 (with coupon presentation on 19 May and record date on 20 May). The remaining dividend paid amounted to 3,042,652,586.92 euro, net of 1,775,068.75 euro, relating to the 10,380,519 own shares held by the Bank at the record date, which was allocated to the Extraordinary Reserve. Also taking into account the interim dividend paid in November 2024, amounting to 3,022,396,312.63 euro[11], corresponding to 17 euro cents per share, the total interim and remaining dividends distributed for the year 2024 amounted to 6,065,048,899.55 euro, corresponding to a 70% payout of the consolidated net income;
– *the determination of the number of Board Directors for the financial years 2025/2026/2027, the appointment of Board Directors and members of the Management Control Committee for the financial years 2025/2026/2027, on the basis of slates of candidates submitted by shareholders, and the election of the Chair and one or more Deputy Chairs of the Board of Directors for the financial years 2025/2026/2027.* The Shareholders' Meeting set the number of Board Directors at 19, appointing them based on the votes received from the two slates presented and in compliance with regulatory provisions concerning gender balance, and appointed Gian Maria Gros-Pietro as Chair and Paola Tagliavini as Deputy Chair;
– *the remuneration policies and incentive plans*. In particular, the Shareholders' Meeting (i) approved the remuneration policies in respect of Board Directors in accordance with the terms described in Section I, point 2 of the Report on remuneration policy and compensation paid; (ii) set the gross annual remuneration of Board Directors for the entire term of office, pursuant to Articles 16.2 and 16.3 of the Articles of Association; (iii) approved the remuneration and incentive policies for 2025, and the procedures used to adopt and implement them, as described respectively in chapters 4 and 1 of Section I of the above-mentioned Report; (iv) passed a resolution agreeing on the disclosure on compensation paid in the financial year 2024, as described in Section II of the same Report; and (v) approved the 2025 Annual Incentive Plan, which involves the use of Intesa Sanpaolo ordinary shares to be purchased on the market;
– *authorisation to purchase own shares for annulment with no reduction of the share capital.* More specifically, the Shareholders' Meeting authorised: (i) the purchase, even partially and/or in tranches, of Intesa Sanpaolo shares for a maximum overall outlay of 2 billion euro and not exceeding 1,000,000,000 shares – in line with the authorisation in this

[11] Interim dividends are considered net of the portion not distributed to the 24,868,662 own shares held by the Bank at the record date, amounting to 4,227,672.54 euro.

regard received from the European Central Bank – with execution by 24 October 2025; (ii) the Board of Directors to carry out the purchases at a price to be identified from time to time, subject to the condition that the purchase price may not be more than 10% below or above the reference price of the Intesa Sanpaolo shares registered on the regulated market Euronext Milan managed by Borsa Italiana S.p.A. the day before the execution of each individual purchase, through transactions to be carried out in line with the provisions of Article 132 of the Consolidated Law on Finance, Article 144-bis, paragraph 1, letter b) of the Issuers' Regulation and with any other legislative and regulatory provisions (including the regulations and other rules of the European Union) applicable and in force from time to time; and (iii) the Board of Directors, which may delegate this power to the Managing Director and CEO, to carry out the purchases using the Extraordinary Reserve and/or the Share Premium Reserve;

– *the authorisation to purchase and dispose of own shares to serve the incentive plans and for trading purposes.*

In the extraordinary part, the Shareholders' Meeting approved the proposal to annul Intesa Sanpaolo's own shares purchased and held by the Company by virtue of the authorisation from the Shareholders' Meeting in the ordinary part, delegating the Board of Directors – with the option of sub-delegating the Chair and the Managing Director and CEO, jointly or severally – to execute the annulment, in one or more tranches, by 24 October 2025 and to update Article 5 of the Articles of Association accordingly. With regard to the statutory changes approved by the Shareholders' Meeting, the required authorisation was issued on 5 March 2025 by the Supervisory Authority.

At its first meeting held on 29 April, the new Board of Directors of Intesa Sanpaolo unanimously appointed Carlo Messina as Managing Director and CEO, conferring on him the powers necessary and appropriate to ensure consistent management of the Company.
On 6 May 2025 the Board, with a unanimous resolution – without the participation of the members involved – established the Nomination Committee, the Remuneration Committee, the Risks and Sustainability Committee, the Committee for Transactions with Related Parties, and the Governance Committee as internal committees, whose powers and responsibilities are in accordance with the provisions of the Articles of Association and supervisory regulations in force. The names of the members and the related information are available in the Governance section, Committees of the Board of Directors, of the Group's website.

During the second quarter, the programme of purchase of own shares for annulment (buyback), approved by the above-described Shareholders' Meeting of Intesa Sanpaolo of 29 April 2025, was launched and subsequently completed.
The programme, which had started on 2 June, ended on 17 October 2025[12]. During the period, a total of 390,280,888 shares were purchased, equal to around 2.19% of the share capital, at an average purchase price of 5.1245 euro per share, for a total amount of 1,999,999,997.95 euro.
The transactions took place on the regulated market Euronext Milan managed by Borsa Italiana through the third-party intermediary appointed to execute the programme, in full independence and without any involvement of the Intesa Sanpaolo Group, in accordance with the terms and conditions approved by the Shareholders' Meeting of 29 April 2025.
The annulment of the shares took place on 22 October 2025. While the share capital remained unchanged at 10,368,870,930.08 euro, the number of ordinary shares without nominal value decreased from 17,803,670,501 to 17,413,389,613.
The Articles of Association amended to reflect said annulment were respectively filed and recorded in the Turin Company Register on 27 and 29 October 2025.

In the days from 8 September to 15 September 2025 an *Intesa Sanpaolo ordinary share buyback programme was also implemented to service plans for the assignment of shares, free of charge, to the employees and the Financial Advisors of the Group*, in relation to (i) mainly, the Intesa Sanpaolo Group share-based incentive system for 2024 and to a lesser extent, the incentive systems of certain subsidiaries (Intesa Sanpaolo Private Banking, for the network in Italy, and Fideuram - Intesa Sanpaolo Private Banking Group for the Relationship Managers of the international commercial networks and non-employee Financial Advisors), also relating to 2024; and (ii) for a smaller proportion, the completion of the implementation of the 2023 Incentive Plans of the Intesa Sanpaolo Group and its subsidiaries mentioned above.
These incentive systems are reserved for Risk Takers who accrue a bonus in excess of the so called "materiality threshold"[13], for those who are paid a "particularly high" amount[14] and for those who, among Middle Managers or Professionals that are not Risk Takers, accrue a bonus exceeding both the so called "materiality threshold"[15] and 100% of the fixed remuneration. In addition, the programme was implemented in order to grant, when certain conditions occur, severance payments upon early termination of employment.
Intesa Sanpaolo carried out the purchases according to the methods and within the terms authorised by the Shareholders' Meeting of 29 April 2025, also on behalf of the subsidiaries that had approved similar programmes on the ordinary shares of the Parent Company. In the six days during which the programme was executed, a total of 23,800,000 Intesa Sanpaolo ordinary shares (of which 17,400,000 shares to service the 2024 Plans as well as any severance payments due, and 6,400,000 shares to service the 2023 Plans), representing around 0.13% of the share capital, were purchased through the IMI Corporate & Investment Banking Division, tasked with executing the programme, at an average price of 5.4349 euro per share, for a total amount of 129,350,330.52 euro. The Parent Company purchased 16,545,236 shares at an average price of 5.4347 euro per share, for a total amount of 89,918,725.76 euro.

[12] The purchases were suspended during the days (from 8 to 15 September 2025) of execution of the share buyback programme relating to plans of assignment, free of charge, of Intesa Sanpaolo ordinary shares to the employees and the financial advisors of the Group.

[13] Equal to 50 thousand euro or one third of the total remuneration (unless otherwise provided for by specific local regulations).

[14] Pursuant to the Group Remuneration and Incentive Policies, for the three-year period 2022-2024 a variable remuneration exceeding 400 thousand euro constitutes a "particularly high" amount.

[15] Pursuant to the Group Remuneration and Incentive Policies, for Middle Managers and Professionals who are not Risk Takers, the materiality threshold is generally equal to 80 thousand euro (unless otherwise provided for by specific local regulations). This threshold is increased to 150 thousand euro in order to significantly reduce the potential competitive disadvantage in the attraction and the retention of the best staff members in countries other than the Group's domestic market and in businesses in which there is a high competitive pressure on the staff (i.e. high cost of living, intense compensation dynamics and high resignation rate) and, outside the EU, in which the regulatory framework concerning the materiality threshold is less strict (or absent).

The transactions were executed in compliance with provisions included in Articles 2357 et seq., and 2359-bis et seq. of the Italian Civil Code, within the limits set in the resolutions passed by the competent corporate bodies.
Pursuant to Article 132 of the Consolidated Law on Finance and Article 144-bis, paragraph 1, letter b) of the Issuers' Regulation and subsequent amendments, purchases were executed on the regulated market Euronext Milan managed by Borsa Italiana in accordance with trading methods laid down in the market rules for these transactions.
The execution procedures also complied with the conditions and restrictions under Article 5 of the Regulation (EU) No. 596/2014 of the European Parliament and of the Council of 16 April 2014, and Articles 2, 3 and 4 of the Commission Delegated Regulation (EU) 2016/1052 of 8 March 2016, and subsequent amendments pursuant to Regulation (EU) 2024/2809 of the European Parliament and of the Council of 23 October 2024.
The number of shares purchased daily did not exceed 25% of the daily average volume of the Intesa Sanpaolo ordinary shares traded in August 2025, which was equal to 53.7 million shares, as well as the additional limit, to the above-mentioned regulatory conditions and restrictions, of 15% of the volume traded on the Euronext Milan market on each of the days when purchases were executed.
Note that, pursuant to Article 2357-ter of the Italian Civil Code, the Intesa Sanpaolo Shareholders' Meeting authorised the disposal on the regulated market of own ordinary shares exceeding the actual requirement, under the same conditions as those applied to the purchases, and at a price of no less than the reference price recorded by the share in the stock market session on the day prior to each single disposal transaction, less 10%. Alternatively, these shares may be retained for any different incentive plans and/or remuneration payable upon early termination of employment relationship (Severance).

Following an assessment process launched in 2024, aimed at optimising the business providing integrated solutions for the custody, administration and management of financial assets (Custody) for institutional investors – both third-party or Group companies – on 31 October 2025, effective from 1 November, *Intesa Sanpaolo completed the disposal to State Street Bank International GmbH*, already a long-standing strategic partner of the Intesa Sanpaolo Group in securities services, of an IT business line supporting the custody operations, including the dedicated applications and IT resources. The sale had been approved by the Parent Company's Board of Directors on 27 March 2025, with the signing of the binding agreements on 11 May. At the same time as the disposal, an outsourcing contract was signed for a maximum term of 15 years, for the provision by the purchaser of IT and back-office services supporting Intesa Sanpaolo's custody operations.

On 31 October 2025, Intesa Sanpaolo also announced that it had received notification of the ECB's final decision concerning the *capital requirement that the Bank has to meet, on a consolidated basis, as of 1 January 2026*, following the results of the Supervisory Review and Evaluation Process (SREP). The overall capital requirement to be met in terms of Common Equity Tier 1 ratio is 9.97%. This is the result of:

– a SREP requirement in terms of Total Capital ratio of 9.65% comprising a minimum Pillar 1 capital requirement of 8%, of which 4.5% is Common Equity Tier 1 ratio, and an additional Pillar 2 capital requirement of 1.65%, of which 0.93% is Common Equity Tier 1 ratio applying the regulatory amendment introduced by the ECB and effective from 12 March 2020;
– additional requirements, entirely in terms of Common Equity Tier 1 ratio, relating to:
  - a Capital Conservation Buffer of 2.5%,
  - an O-SII Buffer (Other Systemically Important Institutions Buffer) of 1.25%,
  - a Countercyclical Capital Buffer of 0.36%[16],
  - Systemic Risk Buffer of 0.43%[17].

On 26 November 2025 (with coupon presentation on 24 November and record date on 25 November), interim dividends were paid out from 2025 results, as resolved by the Intesa Sanpaolo Board of Directors on 31 October 2025, in compliance with the provisions set out in Article 2433-bis, paragraph 4 of the Italian Civil Code. The interim dividend of 18.60 euro cents per share was paid on the 17,386,262,670 ordinary shares outstanding on the record date for a total of 3,233,844,856.62 euro (net of an undistributed amount of 5,045,611.40 euro relating to 27,126,943 own shares held at the record date).

The merger by *incorporation of the Luxembourg-based management company Eurizon Capital S.A. into its wholly owned parent company Eurizon Capital SGR,* in accordance with the deed signed on 20 November 2025, became legally effective on 1 December 2025, with accounting and tax effects starting on the same date. The merger was approved by the extraordinary shareholders' meetings of Eurizon Capital SGR on 3 November 2025[18] and of Eurizon Capital S.A. on the same day. The merger, which received the non-objection notification from the Commission de Surveillance du Secteur Financier (CSSF) on 18 September and the authorisation from the Bank of Italy on 29 September 2025, had previously been approved by the Board of Directors of Intesa Sanpaolo on 22 May, adding to the Group's corporate streamlining operations already authorised by the Parent Company at its meeting of 27 March.
The combination led to the closure of the branches of the merged company and the simultaneous opening of new branches by the absorbing company in Luxembourg, Paris, Madrid and Frankfurt to ensure continuity in the management of customer relations, products and employees. The combination is expected to generate benefits in terms of (i) simplification of the corporate and organisational structure of the Asset Management Division, (ii) unified operational control and direct management by Eurizon Capital SGR of the risk profile of the Luxembourg-based operations, and (iii) cost synergies.

On 16 December 2025, the Board of Directors of Intesa Sanpaolo, after receiving the favourable opinion of the Committee for transactions with related parties, granted approval to Fideuram - Intesa Sanpaolo Private Banking to *purchase the shares of*

[16] Calculated taking into account the exposure as at 31 December 2025 in the various countries where the Group has a presence, as well as the respective requirements set by the competent national authorities and relating to 2027, where available, or the most recent update of the reference period (requirement was set at zero per cent in Italy for 2025 and for the first quarter of 2026).

[17] Calculated taking into account the exposure as at 31 December 2025 to residents in Italy.

[18] In addition, and unrelated to the merger, the above-mentioned Shareholders' Meeting of Eurizon Capital SGR resolved to amend Article 3 of its Articles of Association to extend the company's duration until 2100, aligning it with that of the Parent Company. This amendment took effect from 1 January 2026.

Reyl & Cie S.A. held by the minority shareholders (24%), with the aim of achieving total control of the Swiss bank and further accelerating the Group's expansion in Switzerland.
Following the approval on 18 December 2025 by the Board of Directors of Fideuram - Intesa Sanpaolo Private Banking, with the favourable opinion of its Committee for transactions with related parties, and the authorisation by FINMA (the Swiss regulator) on 30 December 2025, the purchase of 21% of the Reyl & Cie S.A. shares held by Reyl Holding S.A. was completed on 16 January 2026. The purchase of the remaining 3% held by three private shareholders took place on 30 January 2026. As a result, the direct holding of Fideuram - Intesa Sanpaolo Private Banking increased from 46% to 70%, in addition to the 30% indirect holding through the wholly-owned subsidiary RB Participations S.A.

With regard to the *restructuring transaction for Banca Progetto,* on 28 January 2026, Intesa Sanpaolo, together with the National Interbank Deposit Guarantee Fund, Banca Monte dei Paschi di Siena, Banco BPM, BPER Banca, UniCredit and Banca Progetto under extraordinary administration, executed a new binding term sheet for the completion of the transaction. The transaction, qualifying as a preventive measure pursuant to Article 35 of the Statute of the National Interbank Deposit Guarantee Fund, consists of the following main steps: i) participation by the Fund and the five banks in the de-risking of Banca Progetto's assets, with the provision of guarantees by the Fund; ii) recapitalisation of Banca Progetto by the Fund for a total of 750 million euro, partly as an advance for a future capital increase; and iii) subsequent sale by the Fund to the five banks (through a company equally owned by them) of the capital stake in Banca Progetto subscribed by the Fund, with an investment of 40 million euro, with the Fund retaining a stake not exceeding 9.9%. The resources for the recapitalisation of Banca Progetto and for the potential activation of guarantees will be drawn from the Fund's financial resources established through the contributions of the member banks.

With regard to the changes introduced by Law No. 199 of 30 December 2025 (2026 Budget Act) to the rules governing the "*One-off tax calculated on the increase in net interest income" established by Article 26 of Decree Law No. 104 of 10 August 2023, converted, with amendments, by Law No. 136 of 9 October 2023*, the following is noted.
This provision had introduced a tax on the increase in net interest income recorded by banks in 2023 compared with 2021, granting the option, instead of paying the tax, of allocating an amount to a specific non-distributable reserve of not less than two and a half times the tax due. In exercising this option, the banks of the Intesa Sanpaolo Group subject to this legislation resolved – at the time of approval of the 2023 Financial statements and allocation of the net income for that year – to allocate a total of 2,068.8 million euro to the above-mentioned non-distributable reserve (of which 1,991.4 million euro related to the Parent Company), equal to 2.5 times the total tax of 827.5 million euro.
In summary, the 2026 Budget Act established:

- that, irrespective of the resolution of the shareholders' meeting, distributions of dividends or reserves by Italian banks starting from the financial year beginning after 1 January 2028 (therefore from 1 January 2029) shall be deemed to be made prioritising the use of the above-mentioned reserve, resulting in the obligation to pay the tax at a rate of 40%, plus interest calculated from 30 June 2024;
- the option, until 31 December 2028, to make the reserve subject to a one-off levy at the following rates:
  - 27.5% for the existing reserve in the financial statements as at 31 December 2025;
  - 33% for the existing reserve in the financial statements as at 31 December 2026.

From an accounting perspective, the provisions of the 2026 Budget Act represent a new liability, separate from the previous one, which was extinguished through the establishment of the reserve. The liability introduced by the 2026 Budget Act must therefore be understood as a new and separate liability from the previous one, the purpose of which is considered to be aimed at providing for the payment of an equity contribution resulting from future distributions of dividends or reserves starting from the year 2029. In the absence of specific provisions under the IAS/IFRS[19], in accordance with the guidance in IAS 8, the Group decided to refer to IAS 12 which, in paragraph 61A, requires that taxation be recognised consistently with the item on which the tax is calculated.
Based on the above, at its meeting held on 2 February 2026, the Board of Directors of Intesa Sanpaolo resolved (i) to exercise the option to pay the one-off levy at a rate of 27.5% of the "Net income reserve pursuant to Law 136 of 9/10/2023", by allocating the corresponding amount of 547.6 million euro to the Share premium reserve, with an offsetting entry in "Current tax liabilities" in the Financial statements as at 31 December 2025, and (ii) to propose to the Shareholders' Meeting approving the 2025 Financial statements the approval of that allocation to the Share premium reserve, together with the allocation – effective from the payment of the aforementioned levy in the income tax return for the tax period in relation to which it is applied – of the entire amount recorded in the "Net income reserve pursuant to Law 136 of 9/10/2023" to the Extraordinary reserve, with consequent elimination of the "Net income reserve pursuant to Law 136 of 9/10/2023", because it is freed from any obligations.
Under instruction from the Parent Company, similar resolutions regarding the exercise of the option to pay the one-off levy were also adopted by the Boards of Directors of the subsidiary banks concerned by the measure: Fideuram - Intesa Sanpaolo Private Banking, Intesa Sanpaolo Private Banking and Isybank, for a total one-off Group levy of around 570 million euro.

On 2 February 2026, at the meeting held for the approval of the Parent company and consolidated results as at 31 December 2025, the Board of Directors of Intesa Sanpaolo:

- resolved to submit a proposal to the Ordinary Shareholders' Meeting of 30 April 2026 for a *purchase of own shares for annulment (buyback)* for 2.3 billion euro, already authorised by the ECB, to be launched in July 2026, subject to approval of the Shareholders' Meeting;
- approved the *2026-2029 Business Plan*, which was presented to the financial community on the same day. The Plan is briefly described in a specific section below and the related documents (press release and presentation) are available on the Group's website, in the Investor Relations section;
- in order to enhance the Group employees' role as key enablers in the achievement of the Plan's objectives, also resolved to propose at the Shareholders' Meeting of 30 April 2026 (i) capital increases to serve two *2026-2029 long-term incentive*

[19] This case is not considered to fall within:
– the scope of IFRIC 21 "Levies", since payment of the charge within the year 2028 would result from an autonomous decision of the bank, taken within its own powers, and would therefore not constitute a levy imposed by the general government; or
– the scope of IAS 12 "Income Taxes", as it does not represent a tax on income.

plans, based on financial instruments of Intesa Sanpaolo S.p.A. and reserved for all Group employees, as well as (ii) an update of the maximum number of shares as provided in the delegation of powers granted to the Board of Directors on 29 April 2022 by the Extraordinary Shareholders' Meeting to carry out a share capital increase without payment to serve the *2022-2025 Performance Share Plan* long-term incentive plan based on financial instruments.
The following long-term incentive plans were approved:

- the 2026-2029 Performance Share Plan, reserved for Risk Takers and Middle Managers, which provides for the assignment of Performance Shares, that is Intesa Sanpaolo ordinary shares subject to the achievement of specific performance conditions over the period of the Plan. The shares, up to a maximum of 62,000,000, will be issued against a share capital increase without payment;
- the *2026-2029 Leveraged Employee Co-Investment Plan (2026-2029 LECOIP),* reserved for all the other Group employees in Italy, which provides for (i) the assignment of newly issued ordinary shares of Intesa Sanpaolo deriving from a share capital increase without payment, and (ii) the opportunity to subscribe to an Investment Plan in a certain proportion to the number of shares received free of charge. This plan is based on newly issued Intesa Sanpaolo ordinary shares deriving from a capital increase reserved for employees, at a discounted issue price compared with market value. Assuming all employees subscribe to the 2026-2029 LECOIP, the maximum number of ordinary shares to be issued in the share capital increase without payment and in the share capital increase with payment is equal to 246,000,000 (76,000,000 and 170,000,000, respectively).

With regard to the 2022-2025 Performance Share Plan, the update of the maximum number of ordinary shares to be issued in the share capital increase without payment to serve the 2022-2025 Plan results in the issuance of maximum 40,000,000 shares, in addition to the amount resolved by the Extraordinary Shareholders' Meeting in 2022.
The share capital increases to serve the incentive plans are subject to the authorisations being received from the competent authorities.

For completeness of disclosure, the following should also be noted.

On 1 August 2025, the results of the 2025 EU-Wide Stress Test were announced. The test was conducted by the European Banking Authority (EBA), in cooperation with the Single Supervisory Mechanism (SSM), the Bank of Italy, the European Central Bank (ECB) and the European Systemic Risk Board (ESRB) and involved also Intesa Sanpaolo for the scope of consolidation. The reference scenario covered a three-year horizon (2025-2027). The stress test was carried out applying a static balance sheet assumption as of December 2024 and therefore did not take into account future business strategies and management actions. It is not a forecast of the Intesa Sanpaolo Group's profits.
The Intesa Sanpaolo Group fully loaded CET1 ratio resulting from the stress test for 2027, the final year considered in the exercise, stood at 13.95% under the baseline scenario and 11.78% under the adverse scenario, compared to 12.40% restated consistently for CRR3 (former effective 13.26%) on 31 December 2024. These results highlight that Intesa Sanpaolo is able to confirm its solidity even in complex scenarios, thanks to its well-diversified and resilient business model.
On 4 December 2025, Intesa Sanpaolo noted the announcements made by the European Banking Authority regarding the information of the 2025 EU-wide Transparency Exercise, conducted annually on the basis of the decision of the EBA Board of Supervisors and published along with the Risk Assessment Report (RAR). The exercise, based solely on COREP/FINREP data, involved 119 banks from 25 countries of the European Union and the European Economic Area. The templates were centrally filled in by the EBA and sent afterwards for verification by banks and supervisors. Banks had the chance to correct any errors detected and to resubmit correct data through the regular supervisory reporting channels, and to add specific information as required to further clarify individual data.

With regard to the situation affecting the *Milan real estate sector* following investigations initiated by the Public Prosecutor's Office of the Court of Milan, as reported by the national press in late July, in September the Court of Review annulled the interim measures against the main suspects. Intesa Sanpaolo is monitoring developments, also in order to assess possible implications for commercial relations with the sector.

The *voluntary exits plan* in accordance with the Trade Union Agreement of 23 October 2024 was initiated on 1 January 2025[20]. During the year, the voluntary exits totalled 2,534 (76 in the fourth quarter, 492 in the third quarter, of which 454 effective from 1 July, 67 in the second quarter, and 1,899 in the first quarter, of which 966 effective from 1 January), against the 4,000 planned by the end of 2027. A further 375 exits took place with effect from 1 January 2026.
In 2025, the hires connected to the provisions of that agreement totalled 1,290 (of which 740 as Global Advisors for the Network commercial activities), with a target of 3,500 (of which 1,500 Global Advisors) by the first half of 2028.
With regard to the actions on natural turnover also announced to the market on 23 October 2024, at the end of 2025 there had been around 850 exits in Italy (3,000 envisaged by 2027, of which 1,000 by 2025) and around 800 net exits for the head office structures of the international banks (2,000 net exits envisaged by 2027, of which 500 by 2025).
The following were provided for through an additional Agreement with the Trade Unions, signed on 10 December 2025:

- for around 450 employees still in service who had joined the 2024 Agreement, voluntary exit through access to the Solidarity Fund on 31 January 2026, or 28 February 2026 for part-time employees, with a total of 378 voluntary exits already completed by the end of January 2026;
- the willingness to allow new incentivised retirements for employees who had already met the eligibility requirements at the date of the Agreement or who will become eligible by 31 December 2026 and who had not joined the 2024 Agreement, with exits starting from 28 February 2026. Around 140 employees have signed up. In relation to the exits due to new retirements, new hires will be made with the same care and in the same proportions established by the Agreement of 23 October 2024, with particular attention to women victims of violence included in the "protection programmes" under Article 1 of the National Protocol for the Banking Industry of 24 November 2025.

[20] The remaining exits and hires of the plan established with the Trade Union Agreement of 16 November 2021 were also completed on 31 March 2025, while the plan for hires and exits resulting from the 2020 Agreement had been completed in 2024.

On 24 December 2025, Intesa Sanpaolo and the Group Trade Union Delegations reached an agreement on certain aspects of the *Group Second-Level Collective Agreement*, identifying the regulatory framework that will apply to the Group's employees from 1 January 2026 to 31 December 2029.
While maintaining the structured system of measures already implemented over time for the Group's employees and their families, significant new initiatives have been introduced aimed at supporting work-life balance – with particular attention to the needs of parents and caregivers, and with the goal of fostering cohesion and solidarity among generations within the company – as well as regarding supplementary pension schemes and meal vouchers. The remaining aspects that make up the Second-Level Collective Agreement will be discussed by the first half of 2026.

With regard to the *Next Way of Working project* – aimed at implementing a new working model based on strengthening individual responsibility and improving work-life balance – in this last year of the 2022-2025 Business Plan, further real estate and technological interventions were completed, aimed at constructing new workspaces designed to enhance the moments of presence in the office.
In 2025, the work was completed at the Cuneo office in Via Teatro Toselli, which was initiated in the first quarter, and at the Florence, Forlì, and Venice-Mestre offices, which were initiated in July. In the last three months of the year, the improvements in Via del Corso in Rome were also completed, finishing the redesign of the workspaces at that site as part of the Next Way of Working initiative. As always, the extension of the model was accompanied by the implementation of technological tools (release of the space booking function in the planning and reservation tool), together with specific targeted communication campaigns.
Under the Next Way of Working initiative, the implementation continued of the plan to expand alternative workspaces to the main office (Flexible Working HUB), with new bookable workstations being progressively made available to staff in the Network and governance structures authorised for flexible work. At the end of 2025, the number of these workstations had risen to over 1,400 (from around 1,200 at the beginning of the year), strengthening their presence across all the Italian regions.
At the end of the 2022-2025 Business Plan, the Next Way of Working project can be considered completed, having achieved the goals set. The model introduced is now firmly embedded and represents the guiding framework for the organisation of work and the development of company spaces, integrated into the ordinary real estate planning and management processes.

Lastly, as part of the Energy Management strategies, and in particular as part of the initiatives aimed at improving ESG performance, during August 2025 and the Christmas period (24 December 2025 - 5 January 2026), continuing on from the successful trials in previous years, several head offices were temporarily closed, with other company spaces in nearby areas made available, by reservation, to ensure the possibility of working on-site during the closure period, as an alternative to voluntary remote working.

The 2022-2025 Business Plan and the new 2026-2029 Plan

The 2022-2025 Business Plan

The 2022-2025 Business Plan set out a strategy based on four fundamental pillars of the Plan and implemented thanks to the quality of the Bank's People:
– massive upfront de-risking, slashing cost of risk;
– structural cost reduction enabled by technology;
– growth in commissions, driven by Wealth Management, Protection & Advisory;
– significant ESG commitment, with world-class positioning in social impact and strong focus on climate.

The targets set in the Business Plan have been achieved, and in some cases exceeded, confirming the Intesa Sanpaolo Group's ability to generate sustainable profitability even in complex environments.
In relation to the Group's strong commitment to ESG, the following information is provided in line with previous years, some of which is also presented in the Consolidated Sustainability Statement, included in this Report, where further details can be found.

Massive upfront de-risking, slashing Cost of risk
In the first half of the year, the Intesa Sanpaolo Group achieved a further improvement in asset quality, both through credit risk transfers and capital efficiency initiatives, leading to a reduction of 7.7 billion euro in the stock of gross non-performing loans since the start of the Plan, with gross and net NPL ratios, calculated according to the EBA methodology, of 1.5% and 0.8% respectively in 2025.
During the year, the Balance Sheet Optimisation (BSO) unit has continued to expand its credit risk coverage schemes for optimising capital absorption, reporting an outstanding volume of synthetic securitisations included in the GARC (Gestione Attiva Rischio di Credito – Active Credit Risk Management) Programme of around 35 billion euro. Several new synthetic securitisations were completed during the year, details of which are provided in the Notes to the Consolidated Financial Statements, Part E – Information on risks and relative hedging policies, Credit risk, Securitisations.
The capital efficiency initiatives were also further strengthened and the scope of application of the lending strategy was extended to ESG criteria, by directing 31 billion euro of new loans from the beginning of 2025 to more sustainable economic sectors with the best risk/return profile.
The introduction of a Sectoral Framework, which assesses the forward-looking profile of each economic sector on a quarterly basis across different countries, has allowed the Group to enhance its credit assessment capabilities, with the aim of evolving the main credit processes (granting and proactive management) by adding sectoral information. The effectiveness of the credit decisions and action plans is enhanced by the approval of a sectoral view by a specialised managerial committee, which feeds into all the credit processes.
With regard to the proactive management of other risks, anti-fraud cybersecurity protection has been extended to new products and services for retail customers, also through the use of Artificial Intelligence solutions. Open Source Intelligence solutions have also been adopted to enhance the ability to respond to cyber threats and increase the protection from cyber attacks (in relation to detection and recovery) and internal awareness of threats of this kind, such as phishing. Under the EBA Clearing "Fraud Pattern and Anomaly Detection" (FPAD) project, Intesa Sanpaolo is one of the first European banks to incorporate the risk score established by the EBA into its anti-fraud system for corporate transactions (bank transfers and instant payments).
Significant attention has also been given to improving security in "identity and access management" both for employees and customers. Employees have been provided increased protection both for remote access to applications and for on-site company workstations, through the implementation of multi-factor authentication, while customers have benefited from an improved level of security in digital services, aided by the adoption of advanced solutions and technologies for the remote biometric recognition of users, which has also enhanced the user experience.
In 2022, the Bank established the Anti-Financial Crime Digital Hub (AFC Digital Hub), a national and international centre also open to other financial institutions and intermediaries in the industry, aimed at combating money laundering and terrorism by means of increasingly advanced technologies. The aim of the centre is to use new technologies and Artificial Intelligence to create a public-private collaboration model which promotes the introduction of innovation in business processes through applied research.
The compliance control framework for Artificial Intelligence systems has been developed to ensure ethical usage and compliance with the European Regulations (AI Act). Intesa Sanpaolo was also recognised as the best bank in the "European Issuer of the Year" category at the 2025 Structured Credit Investors (SCI) Risk Sharing Awards, confirming its leading role in active credit portfolio management.
In 2025, a Memorandum of Understanding was signed between the Carabinieri Police and Intesa Sanpaolo aimed at promoting the prevention and combatting of financial fraud. The goal of the collaboration is to implement initiatives to increase the security of branch staff, in addition to preventing and combatting financial fraud affecting the elderly and individuals in situations of hardship, fragility and vulnerability, and organising targeted training and information programmes. The synergy with the Carabinieri Police further strengthens the Group's commitment to the security of its customers across online and physical channels.

With regard to the credit de-risking initiatives, the true sale was completed on 24 March 2025 of a portfolio of bad loans of Intesa Sanpaolo with a GBV (Gross Book Value) of 0.3 billion euro, which had been classified under assets held for sale in December 2024.
During the second quarter, new projects were initiated involving loan portfolios of Intesa Sanpaolo amounting to a total of 0.2 billion euro gross. The first of these projects, consisting of the true sale of a portfolio of personal loans and consumer credit classified as bad loans and UTP (Unlikely To Pay) with a GBV of 0.1 billion euro, was completed on 28 July 2025. Instead, the second, involving the transfer to a fund of a portfolio of Corporate/SME loans, mainly UTP, with a GBV of 0.1 billion euro, was completed on 20 October 2025.

On 15 December, the true sale was completed of two Intesa Sanpaolo portfolios for a total GBV of 0.5 billion euro, of which 0.1 billion euro consisting of unlikely-to-pay loans and 0.4 billion euro relating to mixed exposures classified as bad loans and unlikely-to-pay loans.
New projects were also undertaken during the last quarter, with completion expected in 2026. One of these consists of the true sale of a portfolio of bad loans of Intesa Sanpaolo with a GBV of over 0.4 billion euro, while another concerns a more complex de-risking measure to be completed through the structuring of specific transactions involving non-performing loans for the Parent Company classified as bad loans and unlikely-to-pay loans, for a total GBV of 1.5 billion euro. Since the conditions of IFRS 5 had been met, at the end of 2025 these portfolios were reclassified as assets held for sale.
Lastly, during 2025, sales of single name non-performing exposures of Intesa Sanpaolo were carried out for a total GBV of around 0.3 billion euro in addition to sales of non-performing loans of the international banks for a GBV of 0.1 billion euro.

Structural Cost reduction, enabled by technology

Over the years, Intesa Sanpaolo has undergone a profound digital transformation, driven by continuous strategic investments in technology, with a strong focus on customer relationship management, which has enabled the streamlining of the retail network and the real estate in Italy. Since the fourth quarter of 2021, a total of 1,502 retail branches have been closed (of which 312 in 2025) and around 866,000 square metres of owned or leased property have been released (of which around 153,000 in 2025), while 242 owned properties have been sold since the beginning of the Plan for a value of around 171 million euro.
The Group's new digital bank, Isybank, was launched in 2023 and plays a key role in Intesa Sanpaolo's customer service model and digital development strategy. Its creation is aimed at further strengthening the Group's competitive advantage in cost management and achieving leadership in Europe in operational efficiency and customer service innovation. In 2025, the release of the new omnichannel products was completed to increase Isybank's digital offering in respect of loans, protection and investments.
The development of isytech, the new cloud-native digital platform and technology infrastructure of Isybank, which is being extended to the entire Group, is also continuing. At the end of 2025, the progress of the isytech adoption at the Parent Company was in line with the plan, which targets completion in 2026, both for the areas being redesigned in the cloud (i.e. Apps, Loans, Current Accounts, Payments, Investments and Data) and for the necessary adjustments to the remaining applications. New products dedicated to Intesa Sanpaolo customers have also been launched on the isytech platform.
Artificial Intelligence has now clearly established its self as a strategic enabler and provides the foundation for Intesa Sanpaolo's strategy for improving risk management, enhancing operational efficiency, and creating new business opportunities through targeted investments. In particular:

- AIxeleration programme, which, by the end of 2025, had developed 153 use cases (49 in 2025) supporting the business and governance areas (exceeding the target of 150 use cases over the Plan period) and involves approximately 300 staff dedicated to the development of AI use cases supporting Business, Planning and Control, Compliance, Risk Management, and HR processes;
- adoption of a conscious approach to AI ("Responsible AI") through the definition of risk-based rules and operational processes which will enable the Group to adopt AI solutions safely and responsibly, including those that address Fairness, Explainability, Data Quality and Human Oversight;
- full operational launch of the AI Lab in Turin;
- advancement of the digitisation strategy for E2E (End-to-End) processes using both Process Intelligent Automation (e.g. with Artificial Intelligence and/or Robotic Process Automation) and traditional re-engineering methods, with the release of new digital solutions for customer onboarding processes;
- digitisation projects in Artificial Intelligence and Digital Ledger Technology initiated by Eurizon.

The numerous other technological initiatives pursued by the Group since the beginning of the Plan include the:

- hiring of around 2,430 people in the technology area;
- establishment of the new digital platform for analytical cost management, which uses integrated advanced analytics and benchmarking techniques and has led to the identification of 50 cost efficiency initiatives;
- modernisation of technology solutions in the International Branches, in particular with regard to the improvement of the customer experience and the Originate to Share and data management solutions;
- start, in line with the SkyRocket plan (a cloud solution enabled by the partnership with Google Cloud and TIM), of the operations of the new Cloud Region in Turin, adding to the one in Milan. In 2025, the Plan target for the migration of the cloud ready applications to the SkyRocket Cloud infrastructure in Turin and Milan was achieved and exceeded;
- launch of the new core banking system in Egypt, with the alignment of the digital channels, and gradual release of applications for the target platform in all the countries of the International Banks Division;
- progress according to plan of the technological integration under the merger by incorporation of First Bank into Intesa Sanpaolo Bank Romania.

Lastly, the reduction in staff due to voluntary exits, amounting to around 8,750 people since 2022 (relating to the agreements already signed with the trade unions), continues to be supported and offset, for the portion not covered by new hires, by the ongoing digital transformation strategy.

Growth in Commissions, driven by Wealth Management, Protection & Advisory

The expansion continues of "Valore Insieme", the advanced advisory service for Affluent and Exclusive customers of Banca dei Territori, with new insurance and asset management products. At the end of 2025, Valore Insieme's stock of financial assets amounted to over 102 billion euro, with around 79 thousand new contracts signed and 23.8 billion euro of new financial asset flows gathered since the beginning of the year.
In Private Banking, We Add, the new advanced advisory service for the Intesa Sanpaolo Private Banking network, is operational, and the Aladdin Robo4advisory features have been added to support the advisory activities for the Fideuram network. New features are available for the advisory tools dedicated to UHNWI (Ultra High Net Worth Individual) customers and the service model for family offices has been strengthened. In addition, the new SEI (Advanced Advisory Services) agreement for Fideuram was launched, which allows for the inclusion of assets under administration into its scope.
The strengthening is continuing of Fideuram Direct (Fideuram's digital wealth management service for investing in managed products and trading in over 50 cash and derivatives markets, with advanced services). Direct Advisory, the new remote

advisory service, allows customers to open accounts and subscribe to asset management products themselves, in addition to building investment portfolios with the help of direct bankers operating remotely. Cash deposits have also been added to the catalogue, to complement wealth management product solutions, and the range of advanced trading services offered by Fideuram Direct has been expanded. In addition, the Direct Advisory services have been extended to customers of traditional networks, based on their preferences and operational characteristics.
The offering of Alpian, Switzerland's first digital private bank with a mobile-only platform, including multi-currency, wealth management and financial advisory services with experienced consultants, was further strengthened through the introduction of the in-self configurable mandates and the Apple Pay service, in addition to the ETF Saving Plan. Over 25,000 active customers were reached in 2025.
Reyl & Cie, the Swiss hub of the Private Banking Division, continues to contribute to the growth in fees and commissions generated internationally, together with Intesa Sanpaolo Wealth Management in Luxembourg. The implementation of the Reyl's growth strategy is continuing through synergies with the Italian Private Banking networks and the other Group companies and the launch of a project to implement a distribution model for selected Reyl banking products within the Italian networks and the streamlining of several legal entities controlled by Reyl.
In November 2024, a new strategic initiative was announced, designed to accelerate the growth of the Digital Wealth Management offering in Europe (Belgian and Luxembourg markets) in collaboration with BlackRock. A new platform (Fideuram Direct) has been launched within Intesa Sanpaolo Wealth Management to provide fully digital in-app investment services, aiming to expand the customer base at the European level across multiple geographical areas through an efficient, scalable model. In 2025, the pilot phase of Fideuram Direct was launched with selected customers and the commercial roll-out was completed for the new App for ETF saving plans and investments.
The strategic partnership is now fully operational with Man Group in Asteria Investment Managers, with funds exceeding 2.8 billion euro in assets under management at the end of 2025, and a focus on creating a broad range of alternative and strictly long-term investment strategies using cutting-edge technology, with the aim of generating innovative investment opportunities for Fideuram - Intesa Sanpaolo Private Banking customers.
The expansion continues of Eurizon's offering for captive and third-party distributors through the progressive enhancement of the ESG product offering for asset management and insurance, which has brought their penetration to over 76% of Eurizon's total assets under management. Eurizon's continues its commitment to financial education, ESG training (towards distributors and academics) and stewardship. The merger by incorporation of Epsilon SGR into Eurizon Capital SGR was completed in March 2025. Eurizon launched the "YourIndexSicav" ETF range, with 19 index funds spanning the main bond and equity asset classes, and including listed classes (UCITS-ETF) and traditional classes (retail and institutional).
The business partnership with Eurobank Asset Management, a management company wholly owned by Eurobank, has been progressively consolidated; it involves the distribution of Eurizon funds by Eurobank and the support from Eurizon for growth in asset management. A Memorandum of Understanding was subsequently signed, which allowed Eurizon to enter the Greek market.
InSalute Servizi, a company of the Insurance Division of Intesa Sanpaolo, became the TPA (Third Party Administrator) of the Intesa Sanpaolo Group's Health Fund. The company, which also manages the Banca dei Territori customers with Intesa Sanpaolo Protezione health policies, is currently the fourth-largest TPA in the Italian market, handling over 1.5 million cases per year. Thanks to partnerships with leading healthcare facilities, new online booking services for medical treatments have been released, with the possibility of receiving reports directly on the App, which are currently aimed at the Group's individual customers.
The Group has dedicated numerous initiatives to businesses and financial institutions, including the:

- launch of IncentNow, a digital platform able to provide information to Italian companies and institutions on the opportunities offered by the public tenders related to the National Recovery and Resilience Plan;
- commercial initiatives to support customers in different sectors to optimise the incorporation of European and Italian post-pandemic recovery plans;
- digital strengthening of the Global Transaction Banking platform initiated by the IMI Corporate & Investment Banking Division, in collaboration with isytech at Group level (Isybiz Programme), through new releases (for example advanced cash management products) and partnerships (for example to extend coverage of over one hundred currencies). IMI C&IB's capital light toolkit is also being expanded, with the introduction of new instruments, such as credit risk insurance and portfolio hedging, and commercial enablers, such as support for funding;
- development of initiatives in the area of digital assets (such as custody services), in line with the Group's overall strategy;
- origination and distribution activities, both in Italy and abroad, also through the enhancement of the Originate-to-Share model, with the introduction of additional risk-sharing instruments and the strengthening of relationships with institutional customers;
- ESG advisory services to corporates to steer the energy transition through a scalable approach, with a focus on energy, infrastructure and the automotive & industrial sectors, also through supply chain agreements with specialised partners, and integrating working capital funding solutions;
- enhancement of the digital platforms serving Corporate customers, with the introduction of new products and customer interaction methods, also through the launch of Cardea, an innovative and digital platform for financial institutions.

At international level:

- the launch of a synergy project between the International Banks (IBD) and Banca dei Territori Divisions, for the strengthening of the Advisory model in the International Banks Division through the evolution of the dedicated digital platform, leveraging Group best practices;
- the completion of the Certificates issuance programme planned for 2025, with four issuances in Croatia, two in Slovakia, and one in Hungary;
- the development of the synergies between the IMI Corporate & Investment Banking Division and the Group's main international banks through (i) the ESG value proposition initiative, dedicated to the priority sectors of the commercial strategy, for the Corporate and SME customer segments of the Group banks in Slovakia, Hungary, Croatia, Serbia and Egypt; and (ii) the business partnership with a leading insurance group for the distribution of bancassurance products in Slovakia, Croatia, Hungary, Serbia and Slovenia;

– the launch of a synergy project between the International Banks (IBD) and Banca dei Territori Divisions, which will further enhance the cross-border business opportunities for mid-corporates operating in markets where the international subsidiaries are present;
– the launch of initiatives for the development of synergies – in Global Market, Structured Finance and Investment Banking – between IMI C&IB and the Group's main international banks with a significant increase in business since the start of the Business Plan;
– the launch of the confirming factoring product in nine markets, with several deals already closed. With regard to the New Factoring Digital Platform, the project involved the Prague branch of VUB as the pilot Bank, with a gradual extension to other Banks within the Division;
– the start of the placement of Minibonds, with 20 issuances carried out, focused on the SME segment in Croatia, Serbia, Slovenia, the Czech Republic and Slovakia.

Intesa Sanpaolo, through its IMI Corporate & Investment Banking Division, received the awards for Best Investment Bank and Best Bank for Corporates in Italy from Euromoney, together with the Group's subsidiary in Slovakia, which received the award as best local bank in 2025.

Significant ESG commitment, with a world-class position in Social Impact and strong focus on climate

As a financial conglomerate, Intesa Sanpaolo is aware that it has a considerable impact on the social and environmental context in which it carries out its business and chooses to act not only on the basis of profit, but also with the aim of creating long-term value for the Bank and the community, in the knowledge that it can contribute to reducing the impact of phenomena such as climate change and social inequalities.

The Group's commitment to ESG issues is ensured by the numerous initiatives it is pursuing for each of the main strategic drivers it has decided to adopt:

– support to address social needs;
– focus on financial inclusion;
– commitment to culture;
– promoting innovation;
– accelerating on commitment to Net-Zero;
– supporting clients through the ESG/climate Transition.

In 2025, Intesa Sanpaolo continued to expand the "Food and shelter for the needy" programme to combat poverty by providing concrete aid throughout Italy and abroad, with over 68.2 million interventions completed since the start of 2022, including food assistance, shelters and beds, clothing items, and medication prescriptions. The strengthening of the Group's ongoing social housing initiatives through the promotion of housing units and identification of new partnerships with leading operators in the sector, enabled the promotion of around 7,000 units of social housing and student beds during the period 2022-2025.

In the area of employability, the "Giovani e Lavoro" programme continued, aimed at training and introducing more than 3,000 young people to the Italian labour market over the 2022-2025 Business Plan horizon (around 5,600 young people trained or in training since 2019, of which over 700 in 2025), together with "Digital Restart" programme, focused on training and reintegrating unemployed people aged between 40 and 50 into the labour market, by funding a Master's degree in Data Analysis to develop new digital skills and re-enter the workforce (the fifth edition, which ended in February 2025, involved the participation of 50 people).

In 2025, the Group's educational inclusion initiative strengthened its partnerships with top Italian universities and schools, maintaining its commitment to merit and social mobility (around 8,000 schools involved since 2022, including over 4,000 in 2025). Additionally, since the beginning of the Plan, the Group has launched "Futura" – a new programme promoted by Save the Children, Forum Disuguaglianze e Diversità and Yolk, with the collaboration of Intesa Sanpaolo, to combat female educational poverty, educational failure and early school leaving (350 training courses activated, of which 50 aimed at young mothers) – as well as "In Action ESG NEET", a social impact initiative launched by the Insurance Division dedicated to the promotion and inclusion of NEET - Not (engaged) in Education, Employment or Training youths and other vulnerable categories in the world of work (since its inception, the project has provided free training and skills development to 295 people in the regions of Tuscany, Campania, Lazio and Puglia, with a total of over 6,900 hours of classroom and on-the-job training, and each participant has completed a curricular internship in social-healthcare or educational facilities).

Intesa Sanpaolo's focus on financial inclusion during the year was supported by the disbursement of around 6.3 billion euro in social lending and urban regeneration (26.7 billion euro since 2022) and 345 million euro in lending to non-profit entities (1.2 billion euro since 2022), in addition to the "Fund for Impact" programme (in 2025, a total of 127 million euro provided through dedicated initiatives to meet the needs of individuals and families, to ensure wider and more sustainable access to credit) and the urban regeneration programme (in 2025, a total of 34 million euro of commitments made for new investments for initiatives in housing, services, and sustainable infrastructure, in addition to the most important urban regeneration initiatives underway in Italy; 1.5 billion euro since 2022). The promotion of art and culture is a core part of the Group's identity in its role as a key player in Italy's social and cultural development and contributes to making the Bank a recognised leader in the Italian and European cultural landscape. More details on the Group's numerous initiatives in this area are provided in the following section.

Intesa Sanpaolo recognises that promoting innovation is a strategic factor in becoming the driving force for a more aware, inclusive, and sustainable economy. The continued commitment to the growth of start-ups and the development of innovation ecosystems is reflected in the activities carried out during the year and since the beginning of the Plan.

In 2025, ISPIC – Intesa Sanpaolo Innovation Center launched 258 innovation projects, bringing the total to 904 since 2022. Numerous initiatives have fostered startup growth and the development of the innovation ecosystem, with around 450 startups promoted and supported since 2022. Multidisciplinary applied research has also advanced, with 24 research projects underway at the end of 2025 and a total of 40 commenced since 2022. The results from three research projects have been incorporated into Group processes and policies (with 13 new projects launched in 2025), and three patents have been obtained.

The key activities included the business transformation initiatives, with around 135 companies engaged in open innovation programmes since 2022 and the implementation of more than 30 programmes for the circular transformation programmes of companies and institutions, and for the advancement of an innovation mindset and culture, with the organisation of over

30 positioning and match-making events[21] in 2025, with over 19,000 participants (140 events and around 60,000 participants since 2022), the release from the start of the year of 19 reports and publications focusing on technology innovation (over 65 since 2022), and lastly over 80 million euro of investments made by Neva SGR in support of startups in 2025 (around 199 million euro since 2022) in Italy and abroad.

The Group has chosen to pursue the Net-Zero target by 2050, also setting intermediate targets to 2030 for its own direct emissions as well as the indirect emissions associated with the main business lines[22]. Specifically, the Plan envisaged a 53% reduction in absolute Scope 1 and Scope 2 emissions by 2030 compared to the 2019 baseline, and also set the goal of becoming carbon neutral at the same time, mitigating residual emissions through the purchase of carbon credits. In this context, the Group has set itself the target, where possible, of 100% electricity from renewable sources purchased directly for its operations.

The first four targets for the Oil & Gas, Power Generation, Automotive and Coal Mining sectors were also published in the 2022-2025 Business Plan. In 2023, emission reduction targets were also set for the Iron & Steel and Commercial Real Estate sectors, and in 2024 targets were introduced for the Cement, Aluminium, Residential Real Estate and Agriculture – Primary Farming sectors. Since 2021, the Group has been a member of the Net-Zero Asset Managers Initiative (NZAMI)[23], through Eurizon Capital SGR, Fideuram Asset Management SGR[24] and Fideuram Asset Management Ireland, and through Intesa Sanpaolo Assicurazioni the Net-Zero Asset Owner Alliance (NZAOA). In 2024 Intesa Sanpaolo Assicurazioni also joined the Forum for Insurance Transition to Net-Zero (FIT)[25].

In terms of "ongoing active engagement", the Intesa Sanpaolo Group participates in the European Coalition for Energy Efficiency Financing (promoted by the European Commission and aimed at creating a favourable market environment for energy efficiency investments) and is a signatory of the "Finance Leadership Statement on Plastic Pollution", together with a further 160 financial institutions, joining an ambitious environmental agreement to end plastic pollution.

Another noteworthy initiative was the launch of "CO2 mitigation solution", a product designed for companies wanting to commit to reducing their own emissions through actions within their value chain, supporting them in measuring their carbon footprint and promoting climate mitigation by purchasing carbon credit certificates.

The main activities carried out by the Group to support its customers in the ESG/climate transition included:

– the disbursement since 2021 of around 89.4 billion euro out of the 76 billion euro in new lending available for the green economy, circular economy and green transition envisaged in the 2022-2025 Business Plan;
– the disbursement of around 6.3 billion euro of Green Mortgages in 2025 (15.2 billion euro since 2022), out of the 12 billion euro of new Green lending to individuals envisaged in the Plan;
– in the circular economy, in addition to the 8 billion euro of dedicated credit lines announced in the Business Plan, since the beginning of the year Intesa Sanpaolo, a Strategic Partner of the Ellen MacArthur Foundation since 2015, has assessed and validated 300 projects for a total of around 19.5 billion euro, granted around 9.4 billion euro in 188 transactions (of which around 5.2 billion euro related to green criteria), and disbursed 3.3 billion euro taking into account previously granted projects (of which 1.6 billion euro related to green criteria). Overall, since 2022, around 1,400 projects have been assessed and validated for a value of over 53.4 billion euro, with over 29.7 billion euro granted in 830 transactions (of which around 17 billion euro related to green criteria), with around 15.9 billion euro disbursed taking into account previously granted projects (of which 10.7 billion euro related to green criteria). The strategic partnership with EMF and the three-year collaboration between Intesa Sanpaolo, ISPIC, Fondazione Cariplo and Cariplo Factory regarding issues relating to the circular economy, through the action of the Circular Economy Lab, were also renewed. In addition, in 2025, ISPIC coordinated the activities of the Italian Alliance for the Circular Economy, highlighting the central role of innovation, with a focus on the circular economy in promoting the sustainability and competitiveness of Italy and its enterprises;
– activation in Italy of 16 ESG Laboratories, physical and virtual meeting points to support enterprises in approaching sustainability, and evolution of the advisory services offered by partners;
– streamlining of the S-Loan offering, from six to three lines in 2024 (S-Loan ESG, S-Loan CER and S-Loan Diversity), and the disbursement of 4.3 billion euro in 2025 (11.1 billion euro since the launch of the product line in 2020);
– ESG advisory services to corporates to steer the energy transition through a scalable approach, with a focus on energy, infrastructure and the automotive & industrial sectors;
– significant development of the ESG value proposition for the Corporate, SME and Retail customer segments in all the banks of the International Banks Division (excluding Moldova and Ukraine) with the expansion of the Retail product catalogue and the progressive extension to the PBZ Hub (Croatia and Slovenia) of the S-Loan offering, already active in VUB Banka (Slovakia), CIB Bank (Hungary) and BIB (Serbia);
– the expansion of the scope of decarbonisation technologies, supported by credit incentives for IMI C&IB Division customers;
– strengthening of the ESG investment products for asset management, with a penetration of 76% of the total AuM (Assets under Management), continued expansion of the Insurance Based Investment Products (IBIPs) catalogue, and the continued maintenance and increase in investment options (Articles 8 and 9 SFDR) with underlying insurance products for customers (81% as at 31 December 2025);
– strong commitment to Stewardship, with Eurizon Capital SGR taking part in 1,641 shareholder meetings (of which 90% involving international listed issuers) and 763 engagements (of which 35% on ESG issues) from the beginning of the year;

[21] In a positioning event, a key player discusses innovation issues, while a matchmaking event facilitates the matching of supply and demand in innovation.

[22] For details and the results as at the end of 2025 for the decarbonisation targets, see the Chapter ESRS E1 – Climate Change within the Group's Consolidated Sustainability Statement.

[23] On 13 January 2025, NZAMI launched a review of the initiative to ensure its appropriateness for the new global context, temporarily suspending the monitoring and reporting of the signatories. On 29 October 2025, the review was concluded with the relaunch of the initiative and the adoption of an updated framework introducing greater flexibility in setting targets, while maintaining the commitment to transparency and annual reporting. The Group renewed its commitments following the relaunch of the NZAMI.

[24] The full demerger of Fideuram Asset Management SGR in favour of Fideuram - Intesa Sanpaolo Private Banking and Eurizon Capital SGR took effect from 1 July 2025.

[25] The Forum was announced by the United Nations Environment Programme (UNEP FI) following the notification of the termination of the Net-Zero Insurance Alliance on 25 April 2024.

during the same period, the subsidiaries Eurizon Capital S.A. and Epsilon SGR[26] took part in 3,628 (of which 97% involving internationally listed issuers) and 21 (of which 90% involving internationally listed issuers) shareholder meetings respectively, while Fideuram - Intesa Sanpaolo Private Banking took part in 61 shareholder meetings and 123 engagements (of which 89% on ESG issues);
– establishment of the "ESG Ambassador" role in the Private Banking Division, with the aim of promoting a culture of sustainability in their local areas, promoting sustainable behaviour and providing a listening point for the needs of customers and Private Bankers.

The Group's People as its most important asset

Intesa Sanpaolo continues its commitment to investing in strengthening its human capital through a range of initiatives aimed at its People, for their growth, development, and satisfaction. Creating a unique ecosystem of skills aligned with the Bank's evolution is one of the primary goals for the Group, which actively focuses on talent and the promotion of diversity and inclusion, because it recognises that People are the most important resource for achieving the Plan objectives and the enablers for future success.

The hiring of professionals and the reskilling and training of internal staff was completed, aimed at promoting generational change and the development and maintenance of suitable skills, in order to support the Group's growth and best meet the challenges of the coming years. The targets for permanent hires (around 4,600 hires) and people upskilled/reskilled towards priority and strategic initiatives (around 8,000 people) over the course of the Plan were met and exceeded, with around 5,900 professionals hired since 2021 (of which around 1,300 recruited in 2025) and around 9,325 people involved since 2022 (of which around 2,425 in 2025). In addition, the engagement of the Group's People in achieving the Plan's objectives is pursued through long-term incentive plans.

The staff training strategy, a key aspect for the Group, is being implemented through the new leading education player in Italy, created through the combination between Intesa Sanpaolo Formazione and Digit'Ed (a Nextalia Fund company). Today's environment requires the ongoing development of skills and flexibility, and in 2025 the Bank exceeded the target of 50 million hours envisaged over the Plan period, delivering around 56 million hours of training (since 2022)[27].

As further evidence of the key role in the Group's strategy of promoting the well-being and work-life balance of its People and responding to their requirements for flexibility, Intesa Sanpaolo has established an organisational framework that provides greater flexibility in terms of daily work schedule and the possibility of remote working and a four-day working week on a voluntary basis with no change in remuneration. In addition, a dedicated platform is available, to support of the physical, emotional, psychological and social well-being of the Group's employees, which offers video content, podcasts, articles, tools and apps, accompanied by events and initiatives organised both in-person and digitally.

Intesa Sanpaolo pursues the objective of fostering an inclusive working environment, promoting the respect and value of diversity and enhancing the multicultural heritage, experiences and characteristics of the Group's People. It is also committed to promoting people management and development policies based on fairness, meritocracy and nurturing each person's talent without discrimination of any kind. To this end, the project "Parole di tutto rispetto" has been developed, dedicated to the reinforcement of inclusive and accessible communication. All the staff in Italy who hold managerial roles have been involved in creating an inclusive leadership culture, participating in workshops on disability and mental health (over 6,500 people involved), and the initiative will gradually be extended internationally.

In addition to the Group's presence in important sustainability indexes and rankings, the attention paid to our People is also reflected in the numerous awards received:
– Top Employer Europe 2026 and Top Employer Italy respectively for the second and fifth year running (awarded to the bank by the Top Employers Institute, a global authority on HR best practices) and top company in the Banking & Finance sector in the LinkedIn Top Companies 2025 in Italy in which to develop one's career and grow professionally. The Banks in Albania, Croatia, Serbia, Slovakia and Romania were also recognised as Top Employer 2026;
– among the 100 most inclusive and diversity-conscious workplaces: Intesa Sanpaolo was included in the 2025 FTSE Diversity & Inclusion Index;
– "Prassi di Riferimento (PDR) 125:2022" certification for gender equality envisaged by the National Recovery and Resilience Plan (NRRP) (first major Italian banking Group to obtain it), renewed in 2025;
– included in the Equileap Top Ranking 2025 among the top 100 companies in the world for gender equality.

The new 2026-2029 Business Plan

In recent years, the Intesa Sanpaolo Group has demonstrated its ability to generate sustainable value for stakeholders, delivering excellent results, despite a complex macroeconomic environment, marked by geopolitical tensions and inflationary pressures.

This has allowed Intesa Sanpaolo to consolidate its status as a leader in the European banking sector and strengthen its resilience through a process supported by a growing focus on fees and an ever broader, personalised and innovative range of products and services.

Thanks to the results achieved and the capital strength, the Intesa Sanpaolo Group is well-placed to effectively seize opportunities and face future challenges, while maintaining sector-leading sustainable profitability and its Zero-NPL Bank status, through a strategy underpinned by fees and technology.

With the new Business Plan, Intesa Sanpaolo aims to further strengthen its leadership in Wealth Management, Protection and Advisory, through three key pillars:
1. structural Cost reduction, benefitting from strong tech investments already deployed;
2. Revenue growth, fuelled by Wealth Management, Protection and Advisory leadership;
3. low Cost of risk, thanks to the Zero-NPL Bank status and high-quality origination.

[26] The two subsidiaries were merged into Eurizon Capital SGR with effect from 1 December and 1 March 2025, respectively.

[27] In October 2025, Academy4Future was launched as the Group's new training centre aimed at enhancing professional growth and continuously updating our People's skills on specific topics to support the Group's development.

This process will be achieved through the contribution from our People, who have always been the Group's most important asset.

The *pillar 1* will enable Intesa Sanpaolo to achieve a structural Cost reduction, delivering a 1.8% saving in 2029 compared to 2025, benefiting from the investments already made since 2018. The Plan provides for:
– extension of the cloud-native digital platform isytech, enabling Cost reduction and process streamlining;
– Artificial Intelligence (AI/GenAI and Agentic AI) evolution for end-to-end process redesign and to improve productivity, commercial efficiency and risk control;
– acceleration of generational change, enabled by technological transformation and the recruitment of young talent to support growth and innovation (e.g., Global Advisors);
– strategic insourcing at scale and internalisation of key skills to deliver external cost savings;
– proactive management of administrative Costs, also through a Total Cost of Ownership approach to support cost control in Procurement and IT with advanced digital tools and the rationalisation of real estate and legal entities.

The *pillar 2* will enable Revenue growth with a CAGR of +3.0% from 2025 to 2029, driven by strong growth in fees and customer financial assets, through targeted plan initiatives, including:
– scaling up the Global Advisor network, targeting around 4,200 Global Advisors by 2029 (from 1,850 as at 31 December 2025), unlocking the full potential of Banca dei Territori's Exclusive customers;
– strengthening of Private Banking leadership, through continuous development of the domestic commercial offering, enhancing the Lifecycle and Longevity solutions to meet new customer needs, and expanding international operations;
– enhancing the Asset Management and Insurance product factories, by improving the product range and service model, while broadening the Protection range for Banca dei Territori Individual customers, Private Banking and Corporate/SMEs;
– driving growth with Corporate and Institutional customers by scaling up dedicated platforms, strengthening the offering in high-growth value chains (e.g., Space and Defence, Data Centres, Health, Climate Transition, Blue Economy and seabed), expanding international operations, developing the Global Markets platform, strengthening transaction banking, and launching the Private Markets platform;
– evolving the Italian SME service model to address emerging needs, further strengthening the value proposition by leveraging IMI C&IB synergies;
– strengthening Consumer Credit, with enhancement of the offering of personal loans and salary-backed solutions, building on the Group's distinctive capabilities including unrivalled customer knowledge, the leading credit agent network for salary-backed solutions (i.e., Prestitalia), and an omnichannel offering enabled by the isytech platform;
– launching isybank 2.0, with a target of acquiring 1 million new customers, maximising their full potential, improving the product offering with high value-added solutions (e.g., securities trading, savings plans), and strengthening the customer acquisition engine;
– expanding the International Banks Division operations by evolving the business model, leveraging Group best practices and creating a new "Fideuram-style" network of financial agents, strengthening advisory capabilities, boosting digital competencies and launching a next-generation customer acquisition platform;
– launching isywealth Europe and expanding in the major European markets already covered (France, Germany and Spain), leveraging the leadership in Wealth Management, prior technology investments and significant international presence to develop integrated international Hubs and serve diverse customer segments through a mix of innovative and traditional channels.

The *pillar 3* aims to consolidate the leadership in credit management and the Bank's Zero-NPL status, with a net NPL ratio below 1.0% and cost of risk at 25-30 basis points over the Plan period, by:
– leveraging benefits from the elimination of bad loans, through the de-risking actions defined in the fourth quarter of 2025, to reinforce future profitability;
– active loan portfolio management, with improved management practices, broader portfolio clusters covered by underwriting guidelines, and strengthened credit governance, also through data analytics solutions (e.g., systematic portfolio scanning) to optimise the risk-return profile;
– applying a forward-looking approach to underwriting and credit management (e.g., improved rating analysis with forward-looking outlooks by sector), with full data analytics integration to simplify credit processes and develop thematic expertise for deeper knowledge of sectors and counterparties;
– holistic management of all risks, with further reinforcement of the risk control and management framework (e.g., isycontrols powered by isytech), focus on emerging risks (e.g., geopolitical risk, cybersecurity), and a strong security culture.

Our *People* will continue to be the most important asset for success in the new Business Plan and the Group is committed to investing in its talent by:
– strengthening the skills development engine through the expansion of the Group Corporate Academy, the launch of new Graduate programmes and next-generation training programmes, the development of AI skills supported by collaborations with top universities, business partnerships and professional development initiatives;
– enhancing integration and connectivity within the Group, by expanding the Global Career programme (including the new career website), and integrating global HR models and processes to ensure alignment and disseminate best practices;
– strengthening the Group culture, by further enhancing managerial role modelling, introducing new incentive schemes and promoting a Group Culture Code to ensure complete alignment of internal processes with Group values;
– focusing on strengthening Group-level welfare, with further improvement of work-life balance through innovative work organisation solutions and extension of the CareLab Ecosystem platform to all geographical areas.

The Plan confirms the Group's position as a global leader in social impact, supporting customers along the sustainable transition and continuing to invest in strategic priorities through dedicated initiatives, including:
– the contribution of around 1 billion euro between 2026 and 2029 to fight poverty, reduce inequalities and promote financial inclusion;
– supporting customers in the sustainable transition, targeting around 112 billion euro in new sustainable lending, representing around 30% of new medium/long-term loans;
– reaffirming the decarbonisation commitment and 2030 targets for financed emissions, asset management, insurance and own emissions;
– continued commitment to culture (e.g., further technology enhancements at the Gallerie d'Italia) and innovation (e.g., strengthening services for startups and scaleups).

Based on the 2026-2029 Business Plan guidelines and strategic pillars, Intesa Sanpaolo's targets for 2029 include:
– net income above 11.5 billion euro (27% ROTE);
– operating income of 30.7 billion euro;
– sector-leading cost/income of 36.8%;
– cost of credit at 25-30 basis points;
– net NPL ratio below 1%;
– highly solid capital position, with CET1 ratio above 12.5% and leverage ratio of 5.6%;
– distribution for each year of the Plan of 95% of consolidated net income, of which 75% through cash dividends and 20% through share buybacks.

Over the 2026-2029 Plan period, Intesa Sanpaolo will continue to deliver value for all stakeholders and in particular for:
– shareholders, with around 50 billion euro distributed from 2025 to 2029 (annual payout ratio of 95% for 2026-2029 period: 75% through cash dividends and 20% through share buybacks);
– employees, with renewal of the commitment to around 90 thousand families (around 28 billion euro in Personnel expenses over the Plan period);
– the nation as a whole, with an ongoing commitment of the Group to generating value for the economy and society through around 374 billion euro (of which around 260 billion euro in Italy) of new credit granted to the real economy for households and businesses, around 17 billion euro of purchases and investments with Intesa Sanpaolo suppliers, around 26 billion euro to the public sector, 30% of the new medium/long-term loans dedicated to sustainable lending and a contribution of around 1 billion euro to fighting poverty and reducing inequalities.

Information on crucial intangible resources

The Group's strategy outlined in the new 2026-2029 Business Plan, as in the now concluded 2022-2025 Plan, recognises that: (i) intellectual capital, comprising organisational capital and the value of knowledge; (ii) human capital, representing the collective skills, abilities, experiences, and innovation drive of our people; and (iii) social and relational capital, which includes our interactions with diverse stakeholders and information exchange capabilities, are unique intangible resources that are crucial to achieving the goals set.
These resources are described in this Report on operations and in particular in the Consolidated Sustainability Statement to highlight their fundamental contribution to the corporate strategies and their ability to serve as a source of value creation for the business.

Progetto Cultura

Progetto Cultura is the multi-year programme of initiatives through which Intesa Sanpaolo actively expresses its commitment to promoting art and culture, providing a direct and tangible contribution to Italy's cultural and social growth. The activities are conceived and implemented by the Art, Culture and Heritage structure in dialogue with public and private, national and international organisations and institutions.

For a full discussion of the topic discussed below, see also the Consolidated Sustainability Statement, and in particular the section Social information, ESRS S3 Affected communities.

Gallerie d'Italia

Gallerie d'Italia is the Bank's museum network with four venues, in Milan, Naples, Turin and Vicenza, developed from the transformation of historic buildings owned by the Bank, which now serve as public museums that offer access to art collections, exhibitions and cultural and social programmes.
In 2025, the Gallerie d'Italia and the *Restituzioni* exhibition in Rome received a total of around 750,000 visitors, with free admission for under 18s and school groups (around 143,000 children and young people).

Exhibition Projects
The Gallerie d'Italia host selections of artworks from Group's collections in permanent itineraries, which are regularly updated: in 2025, a new display was introduced in Naples for the room dedicated to the *Martirio di sant'Orsola*, to showcase Caravaggio's masterpiece following the conservation work carried out this year; in Vicenza, a new display featuring 14 sculptures by Arturo Martini and the reinstallation of 18th century Venetian paintings; and in Turin, the renewal of the bookshop with a section dedicated to the Allemandi publications.
Eighteen major temporary exhibitions were inaugurated, produced in collaboration with leading curators and national and international partners, and featuring loans from around 160 museums and collections:

- in-depth studies on periods and key figures of Italian art, with a particular focus on the history of the regions hosting the Gallerie d'Italia: in Milan, *Eterno e visione. Roma e Milano capitali del Neoclassicismo*, curated by Francesco Leone, Elena Lissoni and Fernando Mazzocca, in collaboration with the Bibliothèque nationale de France (a major exhibition on the Napoleonic era in Milan and Rome, the two capitals of neoclassical art in Europe); in Naples, *Donne nella Napoli spagnola. Un altro Seicento*, curated by Antonio Ernesto Denunzio, Raffaella Morselli, Giuseppe Porzio and Eve Straussman-Pflanzer, in collaboration with the "L'Orientale" University of Naples and under the patronage of the Embassy of Spain in Italy (an unprecedented exhibition on the female contribution to seventeenth-century Neapolitan art, featuring both renowned and previously overlooked female artists);
- promotion of selections of artworks from the corporate collection: in Milan, *Una collezione inattesa. La Nuova Arte degli Anni Sessanta e un Omaggio a Robert Rauschenberg*, curated by Luca Massimo Barbero, in partnership with the Robert Rauschenberg Foundation (2nd installation of the project dedicated to the Group's collections of modern and contemporary art, with particular focus on the Luigi and Peppino Agrati Collection) and *Tutti pazzi per i Beatles. Il concerto del 1965 a Milano nelle fotografie di Publifoto* (with images from the Intesa Sanpaolo Publifoto Archive); in Vicenza, *Ceramiche e nuvole. Cosa le antiche ceramiche greche raccontano di noi*, curated by Francesco Poroli, in collaboration with Associazione Illustri (an interplay between vases from the Bank's archaeological collection and contemporary illustration); the Intesa Sanpaolo Skyscraper in Turin-Gallerie d'Italia *"off", Andy Warhol. Triple Elvis* (the most iconic work of the Agrati Collection on the occasion of the tenth anniversary of the Skyscraper);
- 16th and 17th editions of the "L'Ospite illustre" series: in Naples, *Raffaello. La Dama col liocorno*, in collaboration with Galleria Borghese in Rome (a masterpiece of Italian Renaissance painting from a prestigious Italian museum; the exhibition was accompanied by a major international conference); *Federico Barocci. La Madonna delle ciliegie*, in collaboration with the Vatican Museums (a precious 16th century painting from Urbino loaned by one of the world's most important museums);
- photography exploring the themes of our times: in Turin, *Carrie Mae Weems. The Heart of the Matter*, curated by Sarah Meister, in collaboration with Aperture (artworks by the renowned African-American photographer dedicated to the struggle for racial and gender equality, including the installation "Preach" commissioned by the Bank), *Jeff Wall. Photographs*, curated by David Campany (a reflection on contemporary society in the images of the Canadian artist, one of the most influential living photographers) and *Olivo Barbieri. Spazi Altri,* curated by Corrado Benigni (a journey through China's urban transformations, 4th chapter in the "La Grande Fotografia Italiana" series); in Naples, *JR. Chronicles. Chi sei Napoli?* (project by the French photographer JR, internationally renowned for his social engagement and public and participatory art, with a large-scale mural installed on the façade of the city's cathedral); in Vicenza, *Cristina Mittermeier. La grande saggezza*, curated by Lauren Johnston, in collaboration with National Geographic (photographs from around the world by the Mexican artist and activist, to reflect on the beauty and defence of the Planet); in Milan, *Jess Dugan. Look at me like you love me*, curated by Renata Ferri, exhibition held in collaboration with Diversity, Equity & Inclusion and ISPROUD, Intesa Sanpaolo's LGBTQ+ Community (the artist's photographic account of queer and non-binary identities);
- other photographic exhibitions: in Milan, *Enzo Sellerio. Piccola antologia siciliana*, curated by Monica Maffioli and Roberta Valtorta, in collaboration with Archivio Sellerio (for the centenary of the birth of the Sicilian publisher and photographer); in Naples, *Daniele Ratti. Due cuori e una capanna*, curated by Benedetta Donato; in Turin, *Riccardo Ghilardi. Piano sequenza la Mole*, curated by Domenico De Gaetano, in collaboration with the National Cinema Museum of Turin (for the 25th anniversary of the Museo alla Mole);
- the closing exhibition of the 20th edition of Restituzioni in Rome (see the Restituzioni paragraph).

The "special" projects included the immersive digital exhibitions at the Gallerie di Torino from *Erik Kessels. Un'immagine* (with photographs from the Publifoto Archive) to the commissioned project *Cronache d'acqua*. *Immagini dal Centro Italia* (third episode of a photographic narrative on the climate emergency in Italy), and, in the spacious atrium of the Gallerie di Napoli, first

the display of the sculpture *David* by Jago, followed by the installation *Natura naturans* in collaboration with Aboca, on the relationship between man and nature.
Exhibitions produced by Gallerie d'Italia were also hosted in other venues in Italy and internationally, both as touring presentations of photographic exhibitions already shown at the Gallerie (*Cristina Mittermeier* at the Galleria d'Arte Moderna in Palermo; *Maria Callas* at the Italian Cultural Institute in Paris; *Non ha l'età. Il Festival di Sanremo in bianco e nero* at the Teatro Ariston in Sanremo, *Due cuori e una capanna*, at the Istituto di Candiolo in Turin), as well as new productions (*Robert Rauschenberg. Blue Exit* in the spaces of the Miart fair in Milan, one of the masterpieces of the Agrati Collection marking the centenary of the artist's birth; *Anastasia Samoylova. Image Cities*, images of urban landscapes by the American photographer hosted in the spaces of the Artissima fair in Turin).
Other notable initiatives included the co-production of exhibitions, resulting from ongoing collaborations with other institutions: with Fondazione CR Firenze, *David Doubilet. Oceani*, in collaboration with National Geographic (first chapter of a renewed three-year series of photographic exhibitions hosted at the Foundation's exhibition space at Villa Bardini in Florence); with Fondazione CR Cuneo, *La Galleria Borghese. Da Raffaello a Bernini. Storia di una collezione*, in collaboration with the Galleria Borghese in Rome (fourth edition in the series of exhibitions held at the Complesso di San Francesco in Cuneo); with Fondazione Costruiamo il Futuro, *L'ultimo Tiziano. Venere che benda Amore*, in collaboration with the Galleria Borghese in Rome (at Villa Cusani Confalonieri in Carate Brianza, third edition of the series "*La grande arte in Brianza*"). These were accompanied by the joint organisation of the traditional Christmas exhibitions with the City of Milan (*Il Polittico di Monte San Martino di Carlo* and *Vittore Crivelli* at the city hall in Palazzo Marino) and with the City of Vicenza, together with the Communications and Corporate Image Department (*Olimpichetto*. *Il ritorno di un ambasciatore* in Basilica Palladiana).

Workshops with schools, social inclusion activities, and cultural initiatives and events
The Gallerie offer a variety of activities and initiatives for the public to promote participation, growth, accessibility and inclusion. In 2025, around 5,000 workshops and visits for schools were organised, involving around 109,000 students. Around 750 itineraries were designed for audiences with disabilities or in situations of vulnerability, involving around 9,700 participants. All educational and inclusive initiatives are free of charge. Around 840 activities and visits were also organised for adults and families, with around 13,700 participants recorded. The Gallerie hosted around 510 initiatives and cultural events (study days, meetings, talks, courses, book presentations, press conferences, and musical events), with around 36,100 participants. Highlights included 60 sessions of the public programme #Inside (in-depth sessions on exhibition themes open to the public) and over 70 concerts from the *È aperto a tutti quanti* cycle with students from the Conservatory of Music in Naples (as part of the Sound project). The museum venues also host events in support of the Bank's other structures.

Lastly, Progetto Cultura also includes the coordination of the activities of the Palazzo degli Alberti Gallery in Prato and the Casa Museo of the Fondazione Ivan Bruschi in Arezzo.

Focus on the 2025 Jubilee

Intesa Sanpaolo contributed to some of the most significant cultural projects hosted in Rome during the Jubilee year. As main partner and lender of artworks from the corporate collection, Intesa Sanpaolo participated in: the major exhibition *Caravaggio 2025* together with the Gallerie Nazionali di Arte Antica-Palazzo Barberini, which saw the loan of the *Martirio di sant'Orsola* by Merisi, a masterpiece of the Group's art collections (for the occasion, a documentary focusing on *Sant'Orsola* was produced by Sky Arte in collaboration with the Bank, and a docufilm by 3D Produzioni on the relationship between Merisi and the Jubilee of 1600, premiered at the Vatican Film Library); the exhibition *En route* together with the Vatican Apostolic Library (in partnership with the Communications and Corporate Image Department), which also featured the *Mappa* by Alighiero Boetti; and the Rome Art Quadriennale at the Palazzo delle Esposizioni (again in partnership with the Communications and Corporate Image Department), accompanied by an exhibition dedicated to the 1956 Quadriennale featuring the sculpture *Acrobata* by Giovanni Romagnoli.
Alongside the Quadriennale, we organised the *Restituzioni 2025* exhibition at the Palaexpo under the High Patronage of the President of the Republic, bringing to the capital for the first time, in this special Jubilee year, an exhibition dedicated to the restoration of our national artistic heritage (see the section *Restituzioni*).
Lastly, alongside the Dicastero per la Cultura e l'Educazione of the Holy See, the Bank was the main partner of the Vatican Pavilion at the Venice Biennale of Architecture (the *Opera Aperta* work-in-progress project for the regeneration of the former church of Santa Maria Ausiliatrice in Venice, supported by the Communications and Corporate Image Department).

Restituzioni

Restituzioni – described as "the most extensive project dedicated to Italy's cultural beauty" – is the three-year restoration programme dedicated to safeguarding and enhancing the national artistic and architectural heritage, supported and curated by Intesa Sanpaolo since 1989 in collaboration with the regional bodies of the Ministry of Culture.
In 2025, the closing exhibition of the 20th edition of the programme was held at the Palazzo delle Esposizioni in Rome, which, over the last three years, has seen 128 artworks restored from 67 museums, churches and archaeological sites across all Italian regions, in partnership with 51 protection entities (Inspectorates, Regional Museum Directorates and Autonomous Museums). The artworks were restored and studied thanks to the efforts of 60 restoration laboratories and the involvement of hundreds of diagnostic experts, art historians, archaeologists and archivists. The selection of artworks fully reflects the diversity of Italian heritage, both in chronological terms and in the variety of materials and techniques, bringing together famous masterpieces (such as the imposing *Cavallo colossale* by Antonio Canova, reassembled thanks to a complex restoration) and lesser-known artworks, provided they are significant for the cultural roots and identity of their communities of origin. The programme has maintained its international and European focus, with the restoration of a Flemish altarpiece in collaboration with the Institut Royal du Patrimoine Artistique in Brussels. The exhibition in Rome, curated by Giorgio Bonsanti, Carla Di Francesco and Carlo

Bertelli as curator emeritus, and organised in collaboration with Azienda Speciale Palaexpo, provided the opportunity to bring the restored artworks together in the capital and present them to the public before their "restitution" to their places of origin. The venue underlines the national significance of the project as an exemplary model of public-private cooperation.
Lastly, within the *Restituzioni monumentali* programme, this year saw the completion of the work on the precious mediaeval frescoes in the apse of the church of Santa Maria *foris portas*, in the Castelseprio Archaeological Park (Varese).

Art Assets

Intesa Sanpaolo's art collections contain around 40,000 artworks, ranging from archaeology to contemporary art (including management of the Agrati Collection, as well as the collections of Fondazione Cariplo and Banca Popolare di Vicenza in compulsory administrative liquidation). Due to its completeness and quality, it is considered one of the most important corporate collections in Europe. The assets are constantly subject to study, protection, and promotion activities, aimed at increasing their accessibility to the public, mainly at the Gallerie d'Italia venues.
The main activities carried out during the year are described below:

– the Diogene Project (a programme for verifying the placement, conservation status and classification of artworks spread across the Bank's various offices) continued with the activities related to the artworks included in the "other assets of historical and decorative interest" asset class;
– 257 conservation projects, carried out in close cooperation with expert restorers, restoration laboratories and centres of excellence in the sector (such as Fondazione Centro Conservazione e Restauro "La Venaria Reale"); these included the significant conservation restoration project for the *Martirio di sant'Orsola* by Caravaggio, on the occasion of the loan for *Caravaggio 2025* in Rome, under the supervision of the Inspectorate: the painting was cleaned, improving its legibility and revealing new details, enhanced with a period frame, and fitted with a state-of-the-art conservation system to guarantee the highest levels of protection and security;
– 178 logistical operations (ranging from outfitting of bank sites to the reorganisation of storage facilities) involving the movement of around 2,060 artworks;
– the promotion of the Bank's collections is ensured not only by the exhibition projects at the Gallerie d'Italia mentioned above, but also through loans to national institutions, loans for exhibitions in Italy and abroad, and the joint organisation of initiatives dedicated to collectors' groups, especially in areas of strategic importance for the Group, both in Italy (in particular where the Bank Foundations are present) and internationally (in particular where the Group has its international banks):
  - loans for use to 4 entities (for a total of 88 artworks made available for public display): 16 paintings from the Marche region dating from the 15th to the 18th centuries to the Ministry of Culture – Regional Museum Directorate in Marche region – Galleria Nazionale delle Marche (Urbino); 57 artworks from the 17th-18th centuries in the Emilia region to Fondazione Cassa di Risparmio di Mirandola (Mirandola, Modena); 6 paintings by Teofilo Patini to the Municipality of Castel di Sangro (L'Aquila) – Pinacoteca Patiniana; renewal of the loan for use of 9 items (Brussels tapestries and 17th and 18th century Piedmontese paintings) to Consorzio delle Residenze Reali Sabaude – Reggia di Venaria Reale;
  - loan of a total of 336 artworks for 65 temporary exhibitions hosted in Italy and abroad:
    in addition to the prestigious projects in the capital (see *Focus on the 2025 Jubilee* section), the artworks featured in exhibitions in numerous Italian museums (including Mart – Museum of Modern and Contemporary Art of Trento and Rovereto; La Grande Brera – Palazzo Citterio, Milan; ADI Design Museum Compasso d'Oro, Milan; Castello Visconteo, Pavia; GAM – Civic Gallery of Modern and Contemporary Art, Turin; Guggenheim, Venice; Ca' Pesaro – Galleria Nazionale d'Arte Moderna, Venice; Padua, Palazzo del Monte di Pietà; Palazzo Ducale, Genoa; Museo Giovanni Fattori, Livorno; Palazzo Pepoli, Bologna; Musei di San Domenico, Forlì; Palazzo Ducale, Urbino; GNAMC – Gallery of Modern and Contemporary Art, Rome; MUST – Museo Storico della Città di Lecce; Reggia di Caserta; and MACC – Museo d'Arte Contemporanea del Carmine in Scicli, Ragusa).
    The initiatives at the international venues (such as Centre de la Vieille Charité, Marseille; Musée de Grenoble; Kunstmuseum Ravensburg; and Diözesanmuseum Freising) included two exhibitions dedicated exclusively to the Bank's collections: 46 artworks for the exhibition *Viaggio in Italia* at Villa Vauban in the City of Luxembourg, in partnership with Intesa Sanpaolo Bank Luxembourg and the Italian Embassy; 36 artworks for the exhibition *Il fascino dell'antico* at the Dacia-Romania Palace in Bucharest, on the occasion of the merger of First Bank into Intesa Sanpaolo Bank Romania, with the involvement of the Italian Embassy and the Italian Cultural Institute in Bucharest. These were accompanied by 4 loans for an exhibition at the Manly Art Gallery & Museum in Sydney, promoted in collaboration with the Italian Cultural Institute and the Consulate General of Italy, with the participation of Intesa Sanpaolo - IMI Corporate & Investment Banking Division - Sydney Branch;
  - the dialogue continues with Fondazione Cassa di Risparmio di Pistoia e Pescia, Fondazione Cassa di Risparmio di Jesi, and Fondazione Bruschi in Arezzo, regarding the promotion of the Group's collections with strong identity value for the various local communities;
– Fair value and art advisory: following the 2023 update of the carrying value of all the valuable art assets, this year the three-year process of fair value measurement of the assets will involve monitoring of the top lots (corresponding, as per practice, to 75% of the value of valuable assets) through two scenario analyses, for the first and second half of the year, considering market trends in the reference period. The process is managed with the Administration, Regulatory Reporting & Tax Affairs Coordination Area and with the support of Art Defender, a company specialised in art valuation. The Art Advisory activities continued for collections owned by Intesa Sanpaolo, by companies or foundations of the Intesa Sanpaolo Group or significant customers of the Banca dei Territori or Private Banking (such as support for customers visiting the galleries at Miart, Artissima fairs – for which a talk specifically focused on young Italian artists was organised in collaboration with the Osservatorio Arte Contemporanea and Intesa Sanpaolo Private Banking – and Luxembourg Art Week). During the year, 63 acquisition proposals and 15 donation proposals for individual artworks or entire collections were also managed.

Historical archive

The Group's Historical Archive is one of the first and most important bank archives in Europe. It holds 20 linear kilometres of papers, spanning from the 1360s to the 2000s, from the banks merged into the Group, and manages the Publifoto Archive consisting of 7 million photographs kept at the Gallerie d'Italia in Turin. The archive assets are subject to extensive activities for their conservation, restoration, digitalisation, inventorying, cataloguing, and promotion, with particular attention to improving public access through the most advanced digital technologies available (such as the publication of the data in the innovative LOD-Linked Open Data format).
Group Archives: the core activities continued, including the digitisation of around 80,000 pages of paper documentation (over one million pages digitised to date, part of which are available online, including the minutes of the Board of Directors meetings of the Group Banks since 1960); cataloguing of historical documents (projects such as *Carte dei Vertici, Fondi del Personale, Patrimonio IMI*) with the processing of over 20,000 new record cards (tens of thousands of inventory and catalogue files are now available to the public); projects for the publication of data in LOD format (relating to the *EGELI Project,* the *Publifoto Archive* and *Archivi che imprese!*); the *Carte dell'arte* project for reorganisation and research on documents relating to artworks from the Group's art collections; activities for the recovery, recording and conservation of personnel files for staff who left the Group's banks more than 10 years ago; the *Archivi Digitali* Project (saving of 8,170 digitally native documents produced by the bank); increased use of the Archive's websites (188,104 users and 633,688 page views in 2025); support for study and research: 318 research requests, 22 theses in progress, 646 days of consultation in reading rooms (Milan, Rome and Turin; Bergamo and Venice); continued commitment to educational outreach to promote access to the Archive and its documents by university and other students; numerous research and promotion projects undertaken in collaboration with the Archives, universities, network partners and other institutions (including Fondazione 1563, Università degli Studi di Milano, Turin Polytechnic, the Italian Banking Association, Milan City Council, Museimpresa, and Rete Fotografia, Rete degli archivi per non dimenticare, as well as digitally native documents produced by the bank); and lastly, the Archive's materials have been promoted through exhibitions, conferences and special visits.
Publifoto Archive: the activities carried out included the restoration of 6,049 photographs; the digitisation of 6,288 photographs (around 65,000 photographs have now been digitised, around 35,000 of which are available online); cataloguing of 6,200 record cards (photographs, photo shoots, and authority record cards); the project in collaboration with ICCD-Istituto Centrale per il Catalogo e la Documentazione, which led to the addition, in LOD format, of an initial collection of 35,000 photographs from the Publifoto Archive to the Ministry of Culture's Photography Collections portal (this marks the entry of the first private partner in the ministerial portal); other promotion projects: exhibitions featuring images from the Archive (see the Gallerie d'Italia exhibitions), educational activities and dedicated visits; among the special projects, the *Prints Project* continues (a further 17,611 historical original prints catalogued and an additional 750 photographer names identified) as well as the *Eva Barret Project* (examination of the previously unstudied archive of the British photographer held in Publifoto Archive).

The Group's cultural assets are also promoted to foster employee engagement, through the multi-year ***Art & People*** project initiatives aimed at staff and implemented with various internal stakeholders, also during this year, focusing on topics such as inclusion, gender equality, personal individuality, and accessibility (over 2,100 Group employees reached to date, in addition to 1,000 participants in the initiatives organised with ISPROUD during the *Jess Dugan* exhibition at the Gallerie in Milan). In addition, the *Arte e Cultura* Tribe, launched in June 2024, has now been joined over 3,200.

Partnerships, sponsorships and donations

Progetto Cultura, in particular through the Gallerie d'Italia, builds and nurtures partnerships with public and private entities, both national and international, using a network approach that reinforces the common goal of promoting Italy's cultural heritage, with a preference for forms of collaboration where the Bank's contribution consists of support and also co-design and the sharing of content, collections, spaces, and relationships.
In addition to the important partnerships mentioned in *Focus on the 2025 Jubilee* section and the co-productions of exhibition projects mentioned in the *Gallerie d'Italia – Exhibition Projects* section, the following were of note in 2025:

- ongoing relations with the bank foundations, including Fondazione Compagnia di San Paolo, Fondazione Cariplo, Fondazione Cariparo, Fondazione Cassa di Risparmio di Firenze, Fondazione Cassa di Risparmio di Cuneo, Fondazione Cassa dei Risparmi di Forlì, and Fondazione Cassa di Risparmio di Pistoia e Pescia;
- Art Bonus donations in support of public cultural heritage: reconstruction of the Amatrice church destroyed by the earthquake; establishment of the new site of the Galleria d'Arte Moderna e Contemporanea in Bergamo; renewal of the internal courtyard of the Palazzo del Collegio dei Nobili at the Egyptian Museum of Turin; restoration of the Teatro Alessandro Manzoni in Pistoia; restoration of the Regina 17 building in Cernobbio for the creation of a Training Campus for the International Academy of Tourism and Hospitality Lake Como; refurbishment of spaces in the Biblioteca Palatina in the Monumental Complex of the Pilotta in Parma; maintenance of the buildings hosting the Fondazione Polo del '900 in Turin; restoration of the majestic and precious Antegnati Organ in the church of San Giuseppe in Brescia; support for activities or specific projects of museums and cultural venues including Castello di Rivoli, La Grande Brera in Milan, Palazzo Ducale and National Museums of Genoa, Palazzo Strozzi in Florence, Fortezza del Girifalco in Cortona, Galleria Borghese and Gallerie Nazionali d'Arte Antica in Rome, Historical Museum of Lecce, and Galleria Nazionale in Cosenza;
- main partnership in the leading international art fairs in Italy, also featuring the Bank's own exhibition initiatives: *Miart*, modern and contemporary art fair in Milan (with the Private Banking Division and the IMI Corporate & Investment Banking Division) and *Artissima*, contemporary art fair in Turin;
- promotion of books and reading: main partnership in the *Salone Internazionale del Libro di Torino* (also bringing to the fair a Gallerie d'Italia project by photographer Carrie Mae Weems in collaboration with the Polaroid Foundation; the partnership also includes the Fair's initiatives *Un libro tante scuole* and *Portici di carta*);
- partnerships with museums in Italy, supporting projects and implementing joint initiatives, including: Castello di Rivoli; Reggia di Venaria; Museo Nazionale del Risorgimento Italiano, Turin; Fondazione Torino Musei-Palazzo Madama; La

Grande Brera (Pinacoteca di Brera, Palazzo Citterio), Milan; Museo Poldi Pezzoli, Milan; Veneranda Biblioteca Ambrosiana, Milan; Museo Egizio, Turin; Gallerie dell'Accademia in Venice; Musei Civici di Bassano del Grappa; Fondazione Palazzo Strozzi, Florence; Fondazione Ivan Bruschi, Arezzo; and GNAMC-Galleria Nazionale di Arte Moderna e Contemporanea in Rome;

- promotion of photography: main partnership in the *International Festival of Photography Cortona On The Move* (also contributing with our own exhibition content); and institutional partnership of *Exposed-Torino Foto Festival* and CAMERA-Centro Italiano per la Fotografia in Turin;
- promotion of archive assets: main partnership with *Archivissima*, Turin; support for the activities of Museimpresa, Rete Fotografia, and EABH-European Association for Banking and Financial History, Fondazione 1563 per l'arte e la cultura (historical archive of the Compagnia di San Paolo);
- promotion of music: sponsorships of *Festival Milano Musica, Palazzo Marino in Musica, Società del Quartetto* in Milan, *Stresa Festival*, and the training initiatives *Esperienza Orchestra* with the Orchestra Filarmonica del Teatro Regio di Torino and *MusiCasanova* with Associazione Scarlatti in Naples;
- main partnership in *Buonissima*, the gastronomic festival in Turin which combines art, culture and haute cuisine;
- contribution to cultural organisations such as CIRCI-Associazione Centro Internazionale di Ricerca della Cultura dell'Infanzia, Centro Studi Piemontesi, Osservatorio Arte Contemporanea, and Study Center Vasily Grossman, Turin;
- support for research projects by the Accademia di Belle Arti di Brera and "L'Orientale" University of Naples;
- collaborations in training projects (see the section below);
- ongoing collaboration with the Ministry of the Interior-Department for Civil Liberties and Immigration-Fund for Religious Buildings, for which the Bank, drawing on its experience in managing art assets, has developed a model for the fair value measurement of art assets, applicable to the assets of the Fund for places of worship (in cooperation with the Chief Institutional Affairs and External Communication Officer);
- ongoing collaborations in research and innovation projects with internal and external stakeholders (Cultural Heritage Hub; projects with the Università degli Studi di Torino and with Intesa Sanpaolo for Social Impact dedicated to measuring the social impact of museums);
- international partnerships: lead exhibition sponsor of the major exhibition *Siena* at the National Gallery, London (partnership shared with the Communications and Corporate Image Department), in addition to the partnership with Villa Vauban (Luxembourg) during the *Viaggio in Italia* exhibition featuring artworks from the corporate collection.

Training and skill development projects in the arts and culture

Training and skill development projects in the arts and culture are offered in collaboration with higher education institutions and schools, with a particular focus on young people. The projects carried out in 2025 included:

- *Gallerie d'Italia Academy*: the 5th edition of the Advanced Training Course in the *Management of Artistic and Cultural Heritage and Corporate Collections* took place, a project in partnership with Compagnia di San Paolo, Fondazione Cariplo, Ministry of Culture - Fondazione Scuola Nazionale del Patrimonio e delle Attività Culturali, Fondazione 1563, and Digit'Ed, aimed at consolidating the knowledge of professionals in the cultural sector, based on the expertise built over the years through Progetto Cultura. This year, the Course recorded 130 applications, 30 participants, 14 scholarships for under-35s, over 50 teachers, 162 hours of lessons, and job shadowing at the partners.
  The first *RenAIssance* masterclass on the potential of Artificial Intelligence in the cultural sector was also launched in collaboration with Talent Garden and was attended free of charge by 30 professionals from the "Gallerie d'Italia Academy Alumni" community (currently comprising around 180 former students of the Courses);
- projects by the Gallerie d'Italia in Turin with academic bodies in the visual arts sector, in particular with students from the IED-Istituto Europeo di Design in Turin, Milan, Rome and Florence (launch of the three-year photography and training project *Ti vorrei dire* with the conclusion of the first stage entitled *The Dreamers*).

Digital promotion and enhancement

The promotion of the Gallerie d'Italia activities and the Bank's art and archive assets and of the partnership projects is also continuing through the production and dissemination of content on the digital and social channels of Gallerie d'Italia and the Group, which are generating strong results in terms of views and interactions. Activities aimed at adhering to SEO (Search Engine Optimisation) best practices continued, improving the visibility and positioning of the Gallerie d'Italia website in organic search engine results. A separate working group focused on activities aimed at strengthening the authoritativeness of the website following the introduction of AI Overview (a Google feature using artificial intelligence to provide a synthesis of information directly within the results page, aggregating content from various authoritative sources) [28]. The promotion of these initiatives also involves support from the press, radio and digital media through specific agreements (notably with Il Giornale dell'Arte)[29] in collaboration with the Communications and Corporate Image Department. In parallel, the work continued on the company intranet aimed at encouraging staff engagement[30]. Lastly, the Gallerie d'Italia App, a digital guide that offers an enhanced and interactive visit experience in the four museum venues, has recorded 95,304 downloads to date, and the *Archivio Vivo* ledwall

[28] This includes, for example, the millions of impressions generated by digital, organic social and advertising content relating to the main exhibitions opened in 2025 (6 million for *Eterno e visione*, 14 million for *JR. Chi sei Napoli?*, 12.4 million for *Jeff Wall*, and 5.8 million for *Cristina Mittermeier*; data provided by the Communications and Corporate Image Department). The trend in organic traffic is positive, as confirmed by the following Google visibility indicators (2025 vs 2024): 3.8 million impressions (+23%), 135,000 visits (+3%), 19,000 keywords associated with our activities recorded on Google, and 7% of keywords on the first page of Google search. In Google's AI Overview section, the keyword "martirio di sant'orsola" entered by users was viewed 880 times, in 4th place among the AI-generated text results (data from Google Search Console).

[29] In terms of media visibility, in 2025 the Gallerie d'Italia, including citations, recorded 5,148 appearances in newspaper articles and 218 on radio and TV (data from Media & Associations Relations).

[30] 238 news items, 15 articles on Mosaic, and 37 clips/podcasts.

at the Gallerie di Torino, which allows visitors to download photos from the Publifoto Archive through the App, has so far recorded 33,086 downloads.

Publishing partnership with Allemandi

The Società Editrice Allemandi, acquired in December 2024 by Intesa Sanpaolo together with Fondazione 1563, an operative arm of Compagnia di San Paolo, and Fondazione CRC, is the publishing partner of Gallerie d'Italia, producing its publications. Within Progetto Cultura, 15 volumes were published in 2025 (the exhibition catalogues for our museum venues and for the 20th edition of *Restituzioni*, books dedicated to the Bank's art collections, the Agrati Collection and the Historical Archive), in addition to several volumes resulting from Group partnerships (such as the catalogue of the exhibition *Tesori dei faraoni* at the Scuderie del Quirinale, the photographic book by Ray Giubilo marking the ATP Finals in Turin, the book for the 25th anniversary of the Cinema Museum, the catalogue of the Pavilion of the Holy See at the Venice Biennale and the publication *Nessuno Escluso*, recounting some of Intesa Sanpaolo's most significant social initiatives).

Main risks and uncertainties

The information on the main risks and uncertainties to which the Intesa Sanpaolo Group is exposed is described in the Report on operations and in the Notes to the consolidated financial statements.

As usual, the introductory part of this chapter provides a summary of the background scenario, which is discussed in more detail in the chapter "The macroeconomic context and the banking system" and supplemented, in the chapter "Forecast for 2026", with theforward-looking information also regarding the associated risks.

Moreover, this chapter includes an update of the disclosure on the management of the main risk aspects for the Intesa Sanpaolo Group linked to the military conflict between Russia and Ukraine. Further information in this regard is provided in the Notes to the consolidated financial statements: (i) in Part A - Accounting policies, Section 5 - Other Aspects, which examines certain aspects of the risks and uncertainties related to the war; and (ii) Part E - Information on risks and relative hedging policies, in the section on credit risk, where details are provided of the exposures to Russia and Ukraine and the related valuation aspects.

General information on risks, and in particular on financial risks (credit risks and market risks), liquidity and operational risks, sovereign risk and risks related to certain types of financial products/instruments, as well as the risks of the insurance companies and the other companies, is as usual contained in Part E of the Notes to the consolidated financial statements.

In relation to ESG (Environmental, Social and Governance) risks and climate risk, Part A, Section 5 – Other Aspects, of the Notes to the consolidated financial statements describes the characteristics and risk aspects of the financial instruments within the Group's green financing activities. Information is also provided on how the Intesa Sanpaolo Group identifies and monitors climate-related issues, to be read together with Part E, Scope of risks, which discusses the integration into the risk management framework of ESG risks and climate risk in particular.
Additional information can also be found in the Consolidated Sustainability Statement, contained in the Report on operations.

With regard to capital strength, the Report on operations includes, as usual, the disclosure on own funds and capital ratios, supplemented by Part F of the Notes to the consolidated financial statements.

As usual, further details on the risks to which the Group is exposed are provided in the update of the Basel 3 Pillar 3 Disclosure.

Lastly, with regard to the going concern assumption, the Directors of Intesa Sanpaolo re-affirm that they have a reasonable certainty that the Company and the Group will continue in operational existence in the foreseeable future and consequently the Financial statements as at 31 December 2025 have been prepared on a going concern basis. The Directors have not detected any uncertainties in the consolidated balance sheet and financial structure or in the operating performance of the Group that question the going concern assumption.

The macroeconomic context and the banking system

The macroeconomic context and the banking system

The macroeconomic context

The economy and the financial and foreign exchange markets

In 2025, the global macroeconomic scenario was strongly influenced by the introduction of high import tariffs by the United States, following a process that was neither linear nor organised. The high average level of the tariffs, their extension to numerous sectors, and the uncertainty regarding their duration continued to weigh on investment decisions and market participants' expectations. Despite this, the risk of a sharp slowdown in global economic activity and a decrease in trade flows did not materialise. The partial suspension of measures against China and the subsequent year-end trade truce helped ease financial tensions, although they did not completely eliminate uncertainty. In contrast, the breakout of a brief conflict between Iran, Israel and the United States had no significant repercussions on the global economy.

In the United States, the average annual growth of the GPD slowed compared to 2024, but the growth rate was robust in the third quarter (+1.1% on the previous period). Final domestic demand – particularly investments related to the development of artificial intelligence – continued to provide strong support to economic activity. Net exports provided a volatile contribution, reflecting strategies of front-loading and reorganisation of supply chains by businesses. However, imports fell overall. The inflationary impact of the protectionist measures was significant but lower than expected: the easing of pressure on services thus cooled off the trend in the general price index. In this context, following a pause in the first half of the year, the Federal Reserve resumed easing from September 2025, lowering the key interest rate to the range of 3.50–3.75% in November. Monetary policy is now taking a cautious approach, while political pressure to cut interest rates further has increased.

In 2025, euro area economic growth was modest, but better than expected overall. After a relatively favourable start to the year, also due to the front-loading of US orders, activity weakened in the middle quarters. GDP growth remained moderate (according to the preliminary estimate: 1.3% year-on-year in the fourth quarter 2025 and an annual average of 1.5%), with a more favourable trend in Southern European countries compared to the main core countries. Business confidence, initially penalised by trade tensions, was supported during the year by the announcement of an extensive long-term fiscal stimulus plan in Germany, whose direct macroeconomic effects, however, are limited in the short-term. Inflation continued to slow during 2025, returning close to 2% towards the end of the year. In this context, the European Central Bank cut official rates four times in the first half of the year, bringing the deposit rate to 2.00%, and kept them unchanged during the second half. The Eurosystem's balance sheet continued to shrink in an orderly manner, through the non-reinvestment of maturing securities, without generating significant tensions on the monetary markets. The reduction in excess reserves has not yet translated into higher demand for liquidity in refinancing operations.

In Italy, 2025 ended with weak, but positive economic growth, estimated at 0.8% in the fourth quarter, with an annual average of 0.7%. After a good start to the year, activity was stagnant in the second quarter, but recovered in the second half. The slight growth reflects the slowdown in foreign demand and the continued modest contribution of consumption. Non-residential investment was still the most dynamic component of domestic demand, while the construction sector showed signs of slowing. After a phase of sharp contraction in the summer months, industrial production stabilised towards the end of the year. The labour market continued to show resilience: employment grew year-on-year, with the unemployment rate remaining close to historic lows of around 6%. The rise in collectively agreed wages, which outpaced inflation, allowed a partial recovery in household purchasing power, although propensity to save remained high.

On the financial front, 2025 was characterised by a gradual easing of short-term monetary conditions, accompanied by a moderate increase in long-term euro yields, particularly in the second half of the year. Ten-year swap rates in the euro area were 50 basis points higher at the end of 2025 than at the beginning of the year, reflecting more resilient growth expectations and an increase in the net supply of debt securities. The ten-year BTP-Bund spread gradually narrowed over the year, after a temporary widening in April coinciding with tensions over US tariffs, ending 2025 at levels a good 51 basis points lower than those at the end of 2024. The foreign exchange markets were characterised by high volatility in the first half: the US dollar weakened on the Euro, which closed the year at levels much higher than at the beginning of the year, thought below the peaks reached in the summer period. Nonetheless, there were minimum repercussions on US government bonds: 10-year yields on federal bonds actually dropped compared to the end of 2024. The Japanese Yen also saw large fluctuations, partly linked to the asynchrony of the monetary policy cycles and partly to political developments.

In 2025, the euro area stock markets had largely positive performance, continuing the bullish trend of the previous year, though with phases of extreme volatility in the period, reflecting the evolution of the international geopolitical scenario.

European stock indices rose in the initial months of the year, driven by decreasing energy costs, the announcement of fiscal stimulus plans in Germany, and a rotation of investors' portfolios from US tech stocks to the European markets. On the Italian stock market, the continuation of the consolidation phase in the banking sector contributed to the improvement of the index.

After reaching their relative peak in March, indices suffered a sharp correction at the beginning of April, following the announcement of reciprocal tariffs between the US and the EU by the Trump administration, eliminating the progress from the start of the year, and bottoming out on 9 April. The announcement of a 90-day suspension of the reciprocal tariffs then triggered a strong recovery in stock prices, which reached new peaks around mid-May.

Following a short phase of correction due to the tensions in the Middle-East, stock indices recovered, with a strong bullish trend continuing until mid-November, also supported by corporate results in the 2nd and 3rd quarters, which showed improving profitability in the financial sectors, and resilience of margins for non-financial sectors.

In the last few weeks of the year, a new phase of sectoral rotation away from US technology stocks and a more prudent approach by investors resulted in consolidation of the levels reached.
The Euro Stoxx index ended the year up 21.2%. The CAC 40 underperformed (+10.4%), as a reflection of political uncertainties, while the DAX showed a positive performance (+23.0%). The IBEX 35 significantly outperformed (+49.3% in the period). Outside the euro area, the Swiss SMI index closed 2025 at +14.4%, while the FTSE 100 index in the UK rose by +21.5%.
The US equity market recorded positive performance: the S&P 500 index ended the period at +16.4%, while the NASDAQ 100 technology stocks index recorded a rise of 20.2%. The main stock markets in Asia showed significant increases: the NIKKEI 225 index closed the year at +26.2% and the Chinese SSE Composite index at +18.4%.
The Italian equity market showed largely positive performance for the third consecutive year: the FTSE MIB index closed 2025 at +31.5% and the FTSE Italia All Share index at +31.0%. Mid-cap stocks (FTSE Italia STAR) underperformed, recording a rise of +10.2%.
The European corporate bond market reported a positive performance in 2025, with risk premiums (measured as asset swap spreads - ASW) tightening.
After a favourable start to the year, at the end of March spreads gradually widened, with sharp acceleration starting on 2 April ("Liberation Day"). The risk-off phase continued until 9 April, when spreads reached their peaks for the period. The announcement of a 90-day suspension of the application of the tariffs then triggered a phase of strong recovery, which continued to mid-May. In the second half of the year, spreads continued to tighten, though with several short phases of volatility.
Volumes on the primary market were strong, also due to the positive combination of favourable lending conditions (in terms of spreads) for issuers, and the search for returns by investors. In this regard, it is important to note increasing volumes of issues of subordinated instruments by non-financial companies (+20%). ESG issues recorded a slight decline, with green bonds confirming their role as the greatest contributor (around 80% of the total).
In terms of performance, Investment Grade securities ended 2025 at 76 basis points compared to 99 at the beginning of the year, and the 120 reached on 9 April. The trends by sector were similar: financial -25% and non-financial -22%. The results for High Yield securities were partially different – at 267 basis points compared to 292 at the beginning of the year and 399 at the beginning of April – with performance diverging between financial and non-financial bonds (+5 basis points to 297, and -30 basis points to 263, respectively). The performance of CDS indices (iTraxx) was also positive.

The economies and markets of the countries where the Intesa Sanpaolo Group has a presence

In the main countries where Intesa Sanpaolo has a presence, the GDP of Central Eastern Europe (CEE) rose by 2.5% year-on-year in the first nine months of 2025, slightly less than the trend seen in the fourth quarter of 2024 (2.9%). Economic expansion was quite lively in the Czech Republic (2.6%), while there were more modest trends in Slovakia, Slovenia and Hungary, where GDP growth was less than 1.0%. In South-Eastern Europe (SEE), GDP growth reached 1.7% (substantially in line with 1.6% in the fourth quarter of 2024), once again driven by the strong performances of Croatia (+3.1%) and Serbia (+1.9%), which offset the relative weakness shown by the Romanian economy (+1.4%). In the same period, in Eastern Europe (EE), GDP recovered in Moldova in the second quarter (year-on-year changes from the first to the third quarter were -0.9%, +1.1% and +5.5%) and also grew in Ukraine (+0.9%, +0.7% and +2.1%). Finally, Egypt's growth accelerated to 5.3% year-on-year in the third quarter, from +4.8% in the first quarter and +5.0% in the second quarter.
In line with the global scenario, inflation slowed down in 2025. In December, the year-on-year change in the harmonised consumer price index was 2.6% in the CEE area and 3.3% in the SEE area, though excluding Romania where, instead, due to internal economic policy (easing of restrictions on administered prices) and a strong trend in wages, inflation came to 8.6%. In Eastern Europe (EE), due to the significant weight of the figure for Russia, inflation in December amounted to 6.8%. Lastly, in Egypt the year-on-year increase of the consumer price index decelerated to 12.3% at year-end.
With regard to monetary policy, the picture is mixed, reflecting the different levels of inflation. In the CEE and SEE countries where Intesa Sanpaolo has a presence, the monetary easing cycle has paused, and for some countries it has ended. Central banks have kept key interest rates unchanged in their last meetings in the Czech Republic (at 3.5%) and in Hungary (at 6.5%), while in the SEE countries at 2.5%, 6.5% and 5.75% respectively in Albania, Romania and Serbia. In Russia, the policy rate has been cut by 5 percentage points during the year to 16.0% due to the easing of inflationary pressures. Vice versa, in Ukraine the Central bank hiked interest rates from 13.5% to 15.5% in the first half of 2025 due to the persistent inflationary pressures. In Moldova the Central bank increased interest rates up to 6.50%, and in August began an easing of monetary policy, bringing the policy rate to 5.0%. Lastly, in Egypt, the key interest rate continued to decrease during 2025, dropping from 28.5% at the beginning of the year to 21.0%.
Turning to financial markets, in 2025 the MSCI Emerging Markets Equity Index, denominated in US dollars, rose (+30.6%). Among the countries where Intesa Sanpaolo has a presence in the CEE/SEE area, some of the local currency stock indices recorded double-digit gains, with the biggest rises seen in the Czech Republic, Slovenia, Romania and Hungary. Increases in Bosnia Herzegovina, Croatia and Serbia were more moderate. Following the losses recorded in the third quarter, the stock market in Slovakia showed an overall recovery in prices at year-end, which returned to the values of one year before. Stock markets in Russia and Ukraine continued to be affected by operational difficulties due to the ongoing war. In the Middle East and North Africa (MENA) region, the Egyptian stock exchange ended the year well into positive territory.
In the foreign exchange markets, in relation to the US Dollar (USD/local currency), there was a widespread strengthening of the main currencies of the CEE/SEE/EE countries where Intesa Sanpaolo subsidiaries operate. In the MENA area, the Egyptian pound appreciated. In relation to the Euro, worthy of note among the CEE/SEE countries were the greater gains of the rouble, the Hungarian forint and the Czech koruna. The positive performances of the Polish zloty and Albanian lek were less strong. Losses were reported by the Ukraine hryvnia, but also, to a lesser extent, by the Romanian and Moldovan leu.
In 2025, there was a narrowing of yield spreads year-on-year between emerging market and US government bonds (EMBI Plus -93 basis points) and a reduction in the cost of credit risk protection (CDS -49 basis points).

The Italian banking system

Interest rates and spreads

In general, 2025 was a year of two phases for banking rates: an initial phase, up to around the summer months, in which the transmission of the ECB's official rate cuts on loans and deposits continued until June, and the final part of the year marked by substantial stabilisation. For new lending transactions to non-financial companies, the average interest rate decreased until August, losing one percentage point compared to the end of 2024, to then show signs of rising in the last quarter. The average interest rate on disbursements of mortgage loans to households showed a different trend, stopping its decrease at the beginning of 2025, reporting a subsequent rise due to the increase in the fixed rate benchmark – the 10-year IRS. Since August, the interest rate on new mortgages has stood at around 3.3%. Gradually, the average rate on the stock of loans to households and businesses decreased up to August, to then stabilise slightly under 4.0%, down by around 50 basis points compared to twelve months earlier.

Also for deposit rates, the decreases in 2025 were concentrated in the first eight months, followed by stability for rates on the stock of deposits and a slight increase in those on new time deposits. The stickiness of overnight rates and the high proportion of current accounts in total deposits have influenced the trend in the average deposit rate, which has fallen only slightly. The overall cost of funding from customers reflected the trend in deposit rates, given that the bond interest rate was substantially unchanged.

The spread between lending and funding rates narrowed by almost one-fourth of a point in the first half, ending the year essentially unchanged. On average, in 2025 it dropped by around 40 basis points compared to 2024, to 3.1%. The mark-down on on-demand deposits continued to decrease up to the summer months, to then stabilise at 1.62% throughout the second half. The annual average came to 1.81%, a decrease of 1.2 percentage points on 2024. Conversely, the mark-up on short-term lending rates expanded slightly.

Loans

During 2025, loans to businesses recovered significantly, supported by favourable lending conditions and an improvement in the demand for loans, driven by investments in capital goods and less use of self-financing. In June, loans to non-financial companies returned to growth, after almost two years of decline. The positive trend continued in the second half, gradually accelerating. The resumption of medium/long-term loans was key, with disbursements for investments in capital goods increasing by double digits, also reflecting the incentives set out in the Transition 4.0 and 5.0 plans. As a result, in July, the stock of medium/long-term loans began to grow again, exiting from a negative cycle that had lasted over three years. Short-term loans, which recovered in the last part of 2024, increased throughout 2025, showing a moderate slowdown in the trend in the second half. Growth in loans to households gradually gained strength over the year, rising from +0.4% in January to +2.5% in December. The trend was driven by the acceleration in mortgage loans for house purchase, along with the continued robust growth in consumer credit (annual average of 4.5%). Due to the drop in interest rates on new transactions, launched in 2024 for the fixed rate, which also involved the floating rate in 2025, new disbursements of mortgage loans reported double digit growth also in the second half of the year. The stock of mortgage loans reached a growth rate of 3.4% in December. That trend reflected the positive performance of the real estate market, which, in the first three quarters, confirmed the increase in residential property purchases, and steady growth in house prices.

Credit quality showed substantial stability or slight improvements. The default rate in terms of annualised flow of non-performing loans to total performing loans changed slightly, to 1.25% in the third quarter, compared to 1.33% in the last quarter of 2024. A similar trend was seen in the default rate of loans to businesses, while the indicator of loans to households showed a gradual decline. For significant banks, the stock of non-performing loans as a percentage of total loans decreased to 2.2% in September, gross of adjustments, from 2.4% twelve months earlier and 2.3% at the end of 2024.

Funding from customers

In 2025 deposits showed a good growth rate, with an annual average of 2.3%, slightly more robust in the second half. The positive trend regarded both household deposits and those of non-financial companies. The cumulative figures from January to December summarise the dynamics recorded over the last year in household deposits, which increased by 31 billion euro, compared to around 18 billion euro in 2024. Liquidity of 9.6 billion euro was allocated to non-financial company deposits, a moderately lower amount than that deposited in 2024. Current accounts represented the lion's share, with significant inflows for households and businesses, and average total stock growth of 4.6% in the second half. Differently, following the shift towards time deposits seen in the two previous years, time deposits have decreased significantly since March 2025, due to the drop in interest rates offered on such accounts.
For bonds, a first half still slowing down was followed by the return to moderate growth in the second half. On the whole, the trend of total funding from customers was in line with deposits. More robust growth was seen in total funding: this figure includes ECB refinancing and deposits from non-residents, and benefited from double-digit growth in the latter, as well as a smaller decline in liabilities to the Eurosystem.

Indirect deposits and asset management

With regard to assets under administration, during 2025, direct investments by savers in securities remained significant but were lower overall than in the two previous years. From January to December 2025, debt securities of households in custody at banks increased by 39 billion euro, an amount lower than the increase of 46 billion euro reported in 2024 and the 149 billion euro in 2023, confirming that the shift of investments towards government bonds can be considered essentially achieved. As further evidence of the continuing positive situation of business liquidity, their debt securities in custody at banks recorded a sharp increase of almost 18 billion euro from January to December, higher than the 16 billion euro in 2024.
In 2025, the asset management industry achieved satisfying results in terms of net inflows and positive performance, due to the favourable trend in the markets, despite a first quarter that was negatively impacted by the corrections on stock indices. Net flows to open-ended investment funds were supported by the inflows to bond and monetary funds, which more than offset outflows from the equity, balanced and flexible segments. Portfolio management schemes also recorded net inflows, after two years of negative figures, with contributions from both institutional mandates and retail portfolios.
For life insurance, the balance between gross premiums and incurred claims was positive in the first three quarters, clearly improving on the same period of 2024, driven by traditional policies, which, in the nine months, recorded an increase in gross premiums and a drop in charges. For unit-linked policies, gross premiums in the first three quarters showed double digit growth, against decreasing charges after two consecutive years of increase. In terms of new business, the comparison between the cumulative figure up to December and 2024 shows a double digit increase for policies with significant financial content, while traditional policies grew slightly, indicating the segment settling down.

Economic results and balance sheet aggregates

Economic results

General aspects

A condensed reclassified consolidated income statement has been prepared to give a more immediate understanding of results. In addition to the amounts referring to 2025, the format adopted shows the comparative figures for 2024 and their quarterly development.
To ensure comparison on a like-for-like basis, the income statement data of the previous periods are normally restated, where necessary and material, to make them as consistent as possible with the different periods presented, particularly in relation to any changes in the scope of consolidation.

In this Report on operations, the reclassified consolidated income statement figures for the first two quarters of 2024 were restated to take account of the following changes in the scope of consolidation, with the conventional attribution of the net economic effect to the caption Minority interests:

- the inclusion of the Romanian bank First Bank S.A.[31], acquired on 31 May 2024, whose income statement figures were consolidated from the third quarter of 2024;
- the inclusion of Alpian S.A., previously consolidated using the equity method, following the capital increase finalised in the third quarter of 2024, which brought the percentage of the Group's stake in the company to 61.599%, of which 51.141% held by Fideuram - Intesa Sanpaolo Private Banking and 10.458% by Reyl & Cie (in this regard, see the information disclosed in the Highlights section of the 2024 Annual Report)[32]. On consolidating the income statement of Alpian for the quarters indicated on a line-by-line basis, the contribution of the company in terms of dividends and profits (losses) on investments carried at equity, included among Other operating income (expenses) of the reclassified consolidated income statement, was derecognised.

Certain aggregations and reclassifications have been made with respect to the format envisaged in Circular 262 of the Bank of Italy. Breakdowns of restatements, aggregations and reclassifications are provided in separate tables included in the attachments to this report, as also required by Consob in its Communication 6064293 of 28 July 2006.

The aggregations and reclassifications of captions in the Reclassified consolidated income statement refer to:

- dividends relating to shares or units in the portfolio held by the banking segment and dividends collected or paid within the framework of securities lending, which have been classified to Profits (losses) on financial assets and liabilities at fair value;
- portions of Net interest income, Dividends, Profits (losses) on trading, Profits (losses) on disposal or repurchase of financial assets/liabilities, Profits (Losses) on other financial assets and liabilities measured at fair value through profit or loss, Net losses/recoveries for credit risk associated with financial assets measured at amortised cost and with financial assets measured at fair value through other comprehensive income pertaining to insurance companies, which are posted, along with the Insurance service result and the Balance of financial income and expenses related to insurance operations, in the specific caption Income from insurance business. The Insurance service result is considered excluding the related operating costs (personnel expenses, administrative expenses and amortisation/depreciation) and the fees and commissions paid to financial advisors of the Private Banking Division for placing and managing insurance products which, in line with the representation of costs by the nature of the expense, are attributed to the specific captions;
- differentials on derivatives, classified to the trading book and contracted to hedge transactions in foreign currencies, which have been allocated among Net interest income owing to the close correlation;
- net fee and commission income, which includes the above-mentioned fees and commissions paid to financial advisors of the Private Banking Division for placing and managing insurance products, in line with the representation of costs by the nature of the expense;
- Profits (losses) on trading, Fair value adjustments in hedge accounting, Profits (losses) on other financial assets and liabilities measured at fair value through profit or loss, Profits (losses) on disposal or repurchase of financial assets measured at fair value through other comprehensive income and on disposal or repurchase of financial liabilities – for the portion contributed by the banking segment – which have been reclassified to the single caption Profits (losses) on financial assets and liabilities at fair value, except for any amounts relating to adjustments to portions of loans mandatorily measured at fair value which, as they relate to the measurements of credit positions, are reclassified to the caption Net adjustments to loans in order to permit unitary representation of the adjustments relating to the same position;
- the share of the premium on the issue of the certificates paid to the networks for their placement, which is reclassified from Profits (losses) on trading and Profits (losses) on other financial assets and liabilities measured at fair value through profit or loss to Net fee and commission income;
- the return components of the insurance policies taken out to cover contractual indemnities and retention plans for financial advisors, which are deducted directly from Profits (Losses) on financial assets and liabilities at fair value, in accordance with the valuation effect of the assets in question, rather than being presented – as attributable to the advisors – among

[31] With legal effect from 31 October 2025, First Bank S.A. was merged into Banca Comerciala Intesa Sanpaolo Romania S.A. (Intesa Sanpaolo Bank Romania).

[32] Following the finalisation of: (i) the first tranche of CHF 25 million of a new capital increase of Alpian in June 2025, and (ii) the second tranche of CHF 15 million in November 2025, both fully subscribed by Fideuram - Intesa Sanpaolo Private Banking, including the portion of unsubscribed shares attributable to Reyl & Cie and other shareholders, the Group's direct percentage stake in the company as at 31 December 2025 rose to 70.828%, of which 62.884% held by Fideuram - Intesa Sanpaolo Private Banking and 7.944% by Reyl & Cie.

Other net provisions and net impairment losses on other assets (for valuation effects) or among Net fee and commission income or Other operating income (expenses), depending on the type of insurance policy used (for effects from realisation);

- the operating income and costs of entities operating in sectors entirely distinct from banking and finance, synthetically classified to Other operating income (expenses), including those of the entities not subject to management and coordination within the framework of the Group (Risanamento and its subsidiaries);
- the costs of several incentive systems for employees of the Group's distribution networks, where funded by fee and commission income generated by the networks in question on the basis of deterministic quantification criteria correlated to the revenues concerned, which are reclassified from Personnel expenses to Fee and commission expense by analogy to the accounting treatment of incentive systems for non-employee financial advisors;
- the recoveries of expenses and indirect taxes, which are deducted from Administrative expenses, rather than being included under Other operating income (expenses), as well as the amounts relating to certain taxes of some international subsidiary banks, which – due to their nature – have been reclassified from Administrative expenses to Taxes on income;
- operating costs, which include the above operating costs relating to the Insurance service result attributed to the specific captions (personnel expenses, administrative expenses and amortisation/depreciation), in line with the representation of costs by the nature of the expense;
- profits and losses on disposal or repurchase of financial assets measured at amortised cost (loans and debt securities representing loans) held by the banking segment, which have been allocated to Net adjustments to loans;
- the portion of net losses/recoveries for credit risk associated with financial assets measured at amortised cost (loans and debt securities representing loans) and financial assets measured at fair value through other comprehensive income contributed by the banking segment, the effects on the income statement of the changes in contracts without derecognition as well as the net provisions for risks and charges for credit risk relating to commitments and guarantees given, attributed to the single caption Net adjustments to loans. The caption also includes any amounts relating to credit risk adjustments to portions of loans mandatorily measured at fair value, which, as they relate to the measurement of credit positions, are reclassified to the caption Net adjustments to loans to permit unitary representation of the adjustments relating to the same position;
- the reversal in the time value of Employee termination indemnities and Allowances for risks and charges, which has been included among Net interest income, as a phenomenon deriving directly from the application of the amortised cost criterion, in the absence of changes in projected future cash flows, in keeping with the treatment of the time value of financial assets measured at amortised cost;
- Net losses for credit risk associated with financial assets measured at amortised cost other than loans and net impairment losses on equity investments, as well as property and equipment and intangible assets (including property and other assets, also those resulting from the enforcement of guarantees or purchase at auction and intended for sale on the market in the near future), which have been reclassified to Other net provisions and net impairment losses on other assets. This last caption consequently includes – in addition to the provisions for risks and charges other than those relating to commitments and guarantees – the valuation effects of the assets other than loans, with the sole exception of impairment losses on intangible assets that are reclassified to Impairment (net of tax) of goodwill and other intangible assets;
- realised profits (losses) on financial assets measured at amortised cost other than loans, on equity investments and on other investments, which have been reclassified to Other income (expenses). Accordingly, in addition to the income and expenses not strictly related to operations, this caption represents the summary of the effects from the disposal of assets other than loans. Profits (Losses) realised on debt securities represent an exception; in view of their business model, which involves management closely correlated with the other financial instruments, they are classified to Profits (Losses) on financial assets and liabilities at fair value;
- the amount paid by Intesa Sanpaolo to the National Resolution Fund under the settlement agreement signed by Intesa Sanpaolo (as the absorbing company of the former UBI Banca) and the Bank of Italy (as the managing entity of the National Resolution Fund) in May 2024 – aimed at regulating an aspect of the contract signed on 18 January 2017 between UBI Banca and the National Resolution Fund for the transfer from the Fund to UBI Banca of the entire share capital of Nuova Banca delle Marche S.p.A., Nuova Banca dell'Etruria e del Lazio S.p.A. and Nuova Cassa di Risparmio di Chieti S.p.A. – which was reclassified from Other operating expenses (income) to Taxes on income;
- Charges (net of tax) for integration and exit incentives, which are reclassified from Personnel expenses, Administrative expenses and other captions of the income statement to a separate caption;
- the Effect of purchase price allocation, net of tax, which is indicated in a specific caption. It normally represents adjustments to and any impairment losses on financial assets and liabilities as well as property, equipment and intangible assets which are measured at fair value as provided for by IFRS 3;
- Levies and other charges concerning the banking and insurance industry, with the latter relating to the Group's contribution to the Life Insurance Guarantee Fund, which have been reclassified, net of tax, to the specific caption;
- Impairment of goodwill and other intangible assets, which – where present – is shown net of tax in this specific caption, as stated above.

Operating income

In an economic environment featuring continuing uncertainty at international level, in 2025, the Intesa Sanpaolo Group achieved excellent results in terms of profitability, liquidity and capital strength, which translated into the best performance in terms of operating income, operating margin and net income since 2007, the year the Group was established. Operating income amounted to 27,270 million euro in 2025, slightly up by 0.6% on the figure in 2024 (27,107 million euro). That trend was essentially due to the increase in net fee and commission income, profits (losses) on financial assets and liabilities at fair value and income deriving from insurance business, largely offset by the decrease in net interest income, which in 2024 had benefited from higher interest rates.

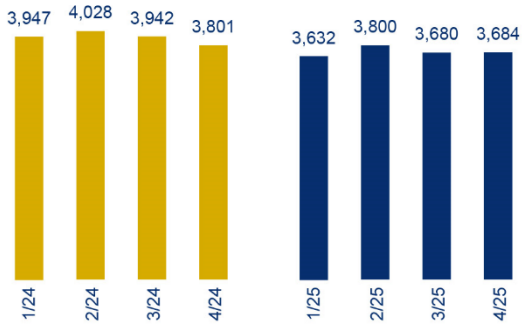
Quarterly development
Net interest income
(millions of euro)



Net interest income was 14,796 million euro, down by 5.9% on 2024. Specifically, a lower contribution came from customer dealing (-13.2%, or -1,233 million euro), due to the decrease in interest on relations with customers following the ECB's reduction of interest rates, partly attenuated by lower interest expense on securities issued. Conversely, financial assets and liabilities increased (+12.1%, or +528 million euro) thanks to the positive performance of all the components: other financial assets measured at fair value through other comprehensive income (+339 million euro) and other financial assets and liabilities at fair value through profit and loss (+120 million euro) and instruments measured at amortised cost which do not constitute loans (+69 million euro).

Differentials on hedging derivatives showed a favourable trend, reaching positive levels (202 million euro compared to -142 million euro in 2024).

Net interest income on relations with banks decreased by 50% (-324 million euro), impacted by operations with the ECB.

It must be noted that the trend in relations with banks also incorporates the effects of the evolution of operations with the ECB, in terms of both stocks and interest rates applied. During 2025, those relations only concerned on-demand deposits of available liquidity, as the funds previously obtained through the TLTRO operations were gradually repaid during the first three quarters of 2024.

More in detail, in 2025, operations with the ECB generated interest income of 411 million euro. Instead, in 2024, the following was recorded: (i) interest income of 1,792 million euro, reflecting average deposited balances 2.5 times higher than those in 2025 and an average weighted interest rate applied - the Deposit Facility Rate - of 3.8%, compared to 2.3% in 2025, against (ii) interest expense on TLTRO III loans of 526 million euro.

Finally, other net interest income, inclusive of the income accrued on non-performing assets and other transactions with customers, amounted to 1,312 million euro (-237 million euro).

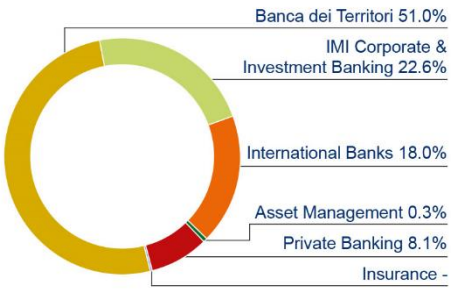
Business areas
Net interest income



The Banca dei Territori Division, which accounts for 51% of the operating business areas' results, showed substantial stability in net interest income in 2025 (+0.5%). The IMI Corporate & Investment Banking Division reported net interest income at levels similar to those of 2024 (-0.4%).
The other business units saw a decrease in net interest income: the International Banks Division (-3.4%, or -86 million euro), mainly due to the trend of subsidiaries operating in Croatia, Hungary, Serbia and Romania, partly offset by the increase recognised by the Slovak subsidiary, the Private Banking Division (-6.9%, or -81 million euro), and the Asset Management Division (-31.1%, or -19 million euro).
The Corporate Centre's net interest income decreased sharply (-759 million euro), due to the drop in market interest rates.

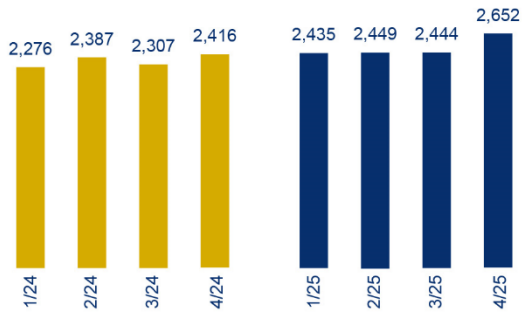
Quarterly development
Net fee and commission income
(millions of euro)



The net fee and commission income earned in 2025 amounted to 9,980 million euro, up by 6.3% from the 9,386 million euro recorded in 2024.
This result was essentially driven by the increase in fees and commissions on management, dealing and consultancy activities (+10%, or +574 million euro). In detail, there was an increase in the contribution from dealing and placement of securities (+34.5%, or +362 million euro), supported by new placements of mutual funds and certificates, portfolio management schemes (+86 million euro), specifically collective schemes, commission from the distribution of insurance products (+77 million euro) and other management and dealing commissions (+48 million euro), in particular related to advisory activities.
In contrast, fees and commissions on commercial banking activities decreased (-2.2%, or -57 million euro) on all components.
Lastly, other net fee and commission income increased (+77 million euro), mainly in relation to higher fee and commission income on loans.

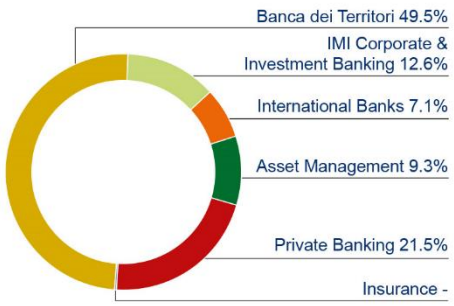
Business areas
Net fee and commission income



With regard to the business areas, the Banca dei Territori Division, which accounts for 49.5% of the business units' results, recorded growth in fee and commission income in 2025 (+5.7%, or +280 million euro), attributable to the assets under management and assets under administration segments, supported by placement levels higher than in 2024, a greater contribution from advisory and the non-life insurance segment. The other Divisions also posted an increase in fee and commission income, specifically: Private Banking (+7.3%, or +153 million euro), mainly driven by recurring component related to the increase in average assets under management, International Banks (+13.9%, or +90 million euro), mainly thanks to the positive contribution of the subsidiaries operating in Slovakia, Croatia, Serbia and Hungary, Asset Management (+7.9%, or +71 million euro), in relation to the growth in incentive fees, placement fees on mutual funds and recurring fees, and the IMI Corporate & Investment Banking Division (+2.5%, or +32 million euro), essentially due to the performance of structured lending and investment banking.

For the Corporate Centre, the negative balance of the net fee and commission income increased.

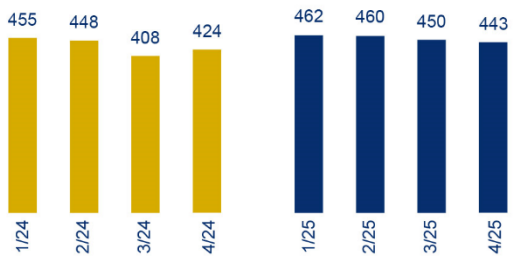
Quarterly development
Income from insurance business
(millions of euro)



Income from insurance business includes the cost and revenue captions of the insurance business, including the reinsurance component, of the Group's life and non-life companies. In 2025, this income came to 1,815 million euro, up on 2024 (+4.6%, or +80 million euro). The trend is attributable both to the non-life business, which specifically benefited from the positive trend in the technical margin, attributable to higher insurance income relating to claims, and the life business, specifically regarding the net investment result, mainly supported by greater valuation gains and lower financial costs.

Total business	**21,333**	***19,772***	**19,471**

Figures restated, where necessary and material, considering the changes in the scope of consolidation.

In 2025 total business in the insurance segment amounted to 21.3 billion euro, higher than the business recorded in 2024 (19.5 billion euro). That trend was mainly the result of the increase in unit-linked premiums, specifically those of a mainly insurance nature (+2.3 billion euro), and in pension funds (+1.1 billion euro), which benefited from the acquisition of collective pension agreements, partially offset by the decrease in premiums on traditional products (-2 billion euro). Class III unit-linked policies of a mainly financial nature showed a positive trend (+0.3 billion euro). The non-life business showed an increase (+129 million euro), driven by the positive trend in the non-motor segment, including CPI – Credit Protection Insurance.
New business totalled 19.8 billion euro, accounting for over 90% of the total collected premiums of the Group's insurance companies.

Profits (losses) on financial assets and liabilities at fair value

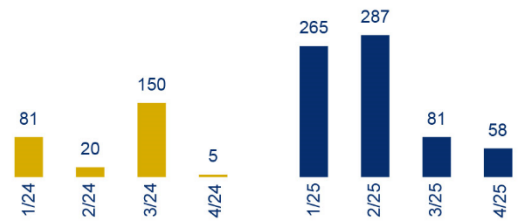
Figures restated, where necessary and material, considering the changes in the scope of consolidation.

Quarterly development
Profits (Losses) on financial assets and liabilities at fair value
(millions of euro)



In 2025, profits (losses) on financial assets and liabilities at fair value, equal to 691 million euro, increased sharply on the amount of 256 million euro recorded in 2024.
The growth was mainly attributable to the improvement in profits (losses) on trading and on financial instruments under fair value option, which reduced the negative value from -591 million euro in 2024 to -286 million euro, specifically benefiting from the management of financial risks linked to operations in certificates measured at fair value, in relation to the decrease in market interest rates. Profits (losses) on dividends and on disposal of assets measured at fair value through other comprehensive income and disposal of assets at amortised cost also showed a favourable trend (+134 million euro), primarily due to the greater contribution of the disposal of HTC securities, mainly government securities, as well as net income from assets measured at fair value through profit or loss (+82 million euro), primarily attributable to the positive trend recorded in equity instruments.
Conversely, negative changes came from profits (losses) on the repurchase of financial liabilities, which increased from -4 million euro in 2024 to -80 million euro, largely attributable to repurchases of own securities on the secondary market, and profits (losses) on hedges under hedge accounting (-10 million euro).

(millions of euro)

	2025				Changes%		
	Fourth quarter (a)	Third quarter (b)	Second quarter (c)	First quarter (d)	(a/b)	(b/c)	(c/d)
Profits (losses) on trading and on financial instruments under fair value option	-226	-125	74	-9	80.8		
Profits (losses) on hedges under hedge accounting	13	-2	-	-14		-	
Profits (losses) on assets mandatorily measured at fair value through profit or loss	220	57	12	159			-92.5
Profits (losses) on dividends and on disposal of assets measured at fair value through other comprehensive income and disposal of assets at amortised cost	64	171	216	161	-62.6	-20.8	34.2
Profits (losses) on the buyback of financial liabilities	-13	-20	-15	-32	-35.0	33.3	-53.1
Profits (Losses) on financial assets and liabilities at fair value	**58**	**81**	**287**	**265**	**-28.4**	**-71.8**	**8.3**

Figures restated, where necessary and material, considering the changes in the scope of consolidation.

The result for the fourth quarter of 2025 was lower than in previous quarters. The trend in relation to the third quarter is mainly attributable to profits (losses) on trading and on financial instruments under fair value option and to profits (losses) on dividends and on disposal of assets measured at fair value through other comprehensive income and disposal of assets at amortised cost, the latter mainly attributable to HTC debt securities. Conversely, net income on assets measured at fair value through profit or loss improved, specifically on equity instruments.

Other operating income (expenses)

In 2025 other operating expenses were -12 million euro, compared with income of 12 million euro recorded in 2024. This caption includes both operating income and expenses – including those of subsidiaries not subject to management and coordination and operating in sectors completely distinct from banking and finance – and profits on equity investments carried at equity. The trend in this caption derives from an increase in other operating expenses (+34 million euro), only partially offset by the higher contribution from dividends and profits on investments carried at equity (+10 million euro).

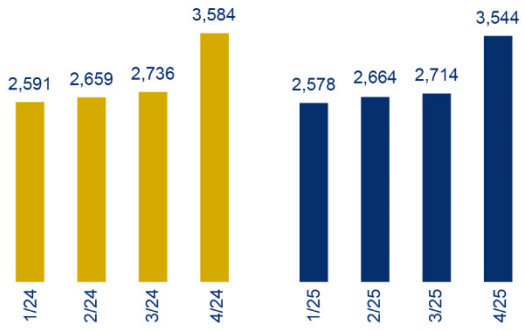
Quarterly development
Operating costs
(millions of euro)



In 2025, operating costs amounted to 11,500 million euro, down slightly (-0.6%) compared to the figure recorded in 2024.
Personnel expenses, equal to 7,019 million euro, were down (-2.3%, or -166 million euro): savings on the decrease in the workforce, also due to negotiated exits, and the trend in the variable portion more than offset the contractual and operational increases in the period.
Administrative expenses amounted to 3,028 million euro, up by 1.6%, and incorporate several one-off components, including those pertaining to the Winter Olympic Games and those for transformation initiatives in preparation of the new Business Plan. The main increases were recorded in general structure costs (+17 million euro), information technology expenses (+12 million euro), advertising and promotional expenses (+12 million euro) and other expenses (+24 million euro), the latter partially related to higher costs for other services.
Adjustments to property, equipment and intangible assets, which in accordance with IFRS 16 also include the share relating to rights of use acquired under operating leases, increased (+3.3%) on 2024, due to the intangible assets, driven by technology investments focused on software which continue the process of development already reported in the previous year. Despite the significant technology investments, in 2025 the cost/income ratio amounted to 42.2%, improving on the 42.7% of 2024, placing at the top of the segment in the European banking industry.

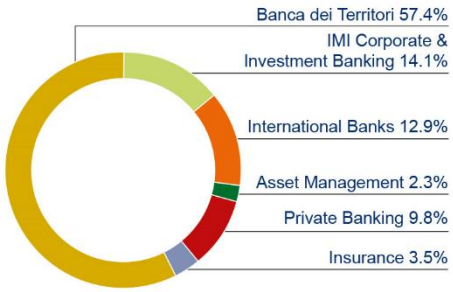
Business areas
Operating costs



At the level of operating costs, the Banca dei Territori Division, which accounts for 57.4% of the costs of the operating business areas, reported a decrease (-2.1%, or -138 million euro), due to savings on personnel and administrative expenses. The costs of the IMI Corporate & Investment Banking Division (-0.1%) and Asset Management Division were substantially stable. Conversely, there were increases for International Banks Division (+2.9%, or +40 million euro), attributable to personnel and administrative expenses, for the Private Banking Division (+1.3%, or +14 million euro), related to all expense components, and for Insurance Division (+1.8%, +7 million euro), specifically attributable to personnel expenses.
Lastly, operating costs of the Corporate Centre increased slightly (+1.6%, or +8 million euro), due to lower charge backs to the business units and higher amortisation and depreciation, largely offset by the decrease in personnel expenses.

Operating margin

The operating margin amounted to 15,770 million euro, up by 1.5% on the amount recorded in the previous year, as a result of the favourable trend in revenues and the focused management of operating costs.

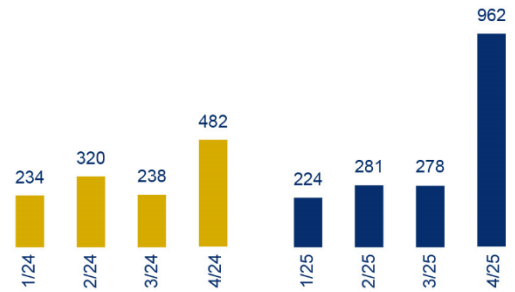
Quarterly development
Net adjustments to loans
(millions of euro)



Net adjustments to loans amounted to 1,745 million euro (including provisions to favour de-risking and strengthen the balance sheet) and compare to a value of 1,274 million euro in adjustments recorded in 2024.
The movement in the caption was attributable to an increase in adjustments to Stage 3 non-performing loans (+450 million euro) and, to a minimum extent, the trend in Stage 1 and 2 performing loans, which showed lower recoveries overall (-28 million euro). Conversely, net provisions relating to commitments and guarantees given decreased (-9 million euro). The change in Stage 3 loans amounted to: +351 million euro in adjustments to bad loans, 197 million euro on unlikely-to-pay loans and -98 million euro on past due loans.
In December 2025, the gross NPL to total loan ratio stood at 1.8%, lower than December 2024 (2.3%).
In 2025, the cost of credit, expressed by the ratio of net adjustments to net loans, came to 41 basis points, up on the figure in 2024 (30 basis points) due to the afore-mentioned provisions to favour de-risking, with stable prudential provisions (overlays) in the presence of low inflows from performing loans to non-performing loans (2.6 billion euro in 2025, net of outflows from non-performing loans to performing loans).
The coverage ratio of non-performing loans in December 2025 amounted to 48.6%, compared to 49.5% at the end of 2024. In detail, bad loans required net adjustments of 597 million euro, compared with 246 million euro in 2024, with a coverage ratio of 67.3%. Net adjustments to unlikely-to-pay loans, totalling 992 million euro, were up (24.8%) from 795 million euro recorded in 2024; the coverage ratio for these exposures amounted to 40.8%. Adjustments to past-due loans decreased to 246 million euro from 344 million euro in the previous year, and their coverage ratio was 28.8%. The coverage ratio for forborne positions within the non-performing loan category was 41.4%. Finally, the coverage ratio of performing loans was 0.5% and incorporated the physiological risk inherent in the loan portfolio.

Figures restated, where necessary and material, considering the changes in the scope of consolidation.

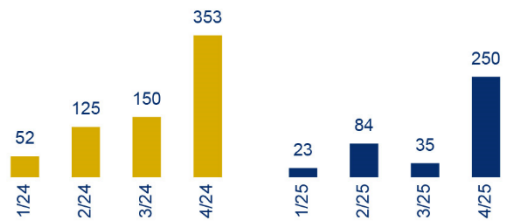
Quarterly development
Other net provisions and net impairment losses on other assets
(millions of euro)



Within the layout of the reclassified income statement, this caption consists of other net provisions for risks and charges and net impairment losses on other assets and on securities measured at amortised cost and at fair value. In 2025, other net provisions and net impairment losses on other assets amounted to 392 million euro, compared with the 680 million euro recognised in 2024. This positive trend should be viewed in relation to other net provisions, which decreased to 178 million euro compared to 505 million euro in 2024, which included 263 million euro in adjustments relating to write-off of the net income of the subsidiary Banca Intesa Russia to write off its net book value.
In contrast, net impairment losses on securities measured at amortised cost and securities measured at fair value through other comprehensive income reported negative performance, amounting to 116 million euro, mainly referring to the component of securities at amortised cost, compared to 44 million euro in 2024.
Lastly, net impairment losses on other assets decreased (-33 million euro).

(millions of euro)

	2025				Changes %		
	Fourth quarter (a)	Third quarter (b)	Second quarter (c)	First quarter (d)	(a/b)	(b/c)	(c/d)

Net impairment losses on instruments measured at amortised cost and on instruments measured at fair value through other comprehensive income	-58	-17	-17	-24		-	-29.2
Net impairment losses on other assets	-87	-5	-5	-1		-	
Other net provisions and net impairment losses on other assets	**-250**	**-35**	**-84**	**-23**		**-58.3**	

Figures restated, where necessary and material, considering the changes in the scope of consolidation.

In terms of economic performance, the provisions in the fourth quarter of 2025 were significantly higher than in the previous quarters, showing increases in all captions.

Other income (expenses)

In 2025, other income (expenses), which include realised gains and losses on investments, equity investments and financial assets measured at amortised cost other than loans, as well as income/expenses not strictly related to operations, amounted to -171 million euro in expenses, mainly attributable to write-downs to strengthen the balance sheet, compared to 153 million euro in income recognised in 2024, which had benefited from income relating to commercial agreements finalised by the Group.

Gross income (loss)

In 2025, income before tax from continuing operations came to 13,462 million euro, down by 2% compared with 13,736 million euro for 2024.

Taxes on income

Current and deferred taxes came to 3,579 million euro (including a benefit of 669 million euro arising from the recognition of deferred tax assets and other tax components), corresponding to a 26.6% tax rate, lower than that recorded in 2024 (29.5%).

Charges (net of tax) for integration and exit incentives

In 2025, this caption decreased to 353 million euro from the 587 million euro recorded in the previous year, due to lower charges for exit incentives. In 2025, those charges amounted to 58 million euro based on the agreement in December, and in 2024 amounted to 295 million euro based on agreement in October.

Effect of purchase price allocation (net of tax)

This caption comprises the income statement effects (adjustments and/or impairment losses) attributable to the revaluations of loans, debts, real estate and the recognition of new intangible assets, in application of IFRS 3, upon recognition of acquisition of equity investments and/or aggregate assets. In 2025 this caption amounted to -76 million euro, compared to the -94 million euro recorded in 2024.

Levies and other charges concerning the banking and insurance industry (net of tax)

The caption includes the levies imposed by legislative provisions and/or aimed at maintaining the stability of the banking and insurance industry and consequently outside the company management. In 2025, those charges came to 113 million euro, compared to the 348 million euro recorded in 2024, which included 236 million euro relating to deposit guarantee schemes.
The levies recognised during the reporting period include 2 million euro attributable to the European Resolution Fund, 29 million euro to the deposit guarantee schemes, 24 million euro to levies recognised by the international banks and 59 million euro to the life insurance guarantee fund (48 million euro relating to the insurance segment and 11 million euro to the banking segment), as well as a positive 1 million euro deriving from the revaluation of the Atlante Fund.

Minority interests

In 2025, this caption showed net income of 20 million euro attributable to minority interests relating to companies subject to line-by-line scope of consolidation, compared with a figure of 7 million euro in net losses in 2024.

Net income (loss)

The Intesa Sanpaolo Group closed the 2025 with a net income of 9,321 million euro, up by 7.6% on 2024. This result represents the best performance since 2007, underscoring a diversified and resilient business model, with leadership in Wealth Management, Protection & Advisory. The increase benefited from the positive performance of revenues, driven by the strong trends in fees and commissions and the profits on trading, and the focused management of operating costs, even in the presence of significant technological investments.

Balance sheet aggregates

General aspects

A reclassified consolidated balance sheet has been prepared to permit a more immediate understanding of the Group's assets and liabilities.
In addition to the amounts as at 31 December 2025, the format adopted shows the comparative figures as at 31 December 2024 and their quarterly development. To enable a like-for-like comparison, the figures from the previous periods are normally restated, where necessary and material, to make them as consistent as possible, particularly in relation to any changes in the scope of consolidation.
In this Report on operations, the reclassified consolidated balance sheets for the first two quarters of 2024 have been restated to take account of the following changes in the scope of consolidation, with the conventional attribution of the equity of the companies being restated to the caption Minority interests:

- the inclusion of the Romanian bank First Bank S.A.[33], acquired on 31 May 2024, whose balance sheet figures were consolidated from the end of June 2024;
- the inclusion of Alpian S.A., previously consolidated using the equity method, following the capital increase finalised in the third quarter of 2024, which brought the percentage of the Group's stake in the company to 61.599%, of which 51.141% held by Fideuram - Intesa Sanpaolo Private Banking and 10.458% by Reyl & Cie (in this regard, see the information disclosed in the Highlights section of the 2024 Annual Report)[34].

Certain aggregations and reclassifications have been made with respect to the format provided for in Circular 262 of the Bank of Italy. Breakdowns of restatements, aggregations and reclassifications are provided in separate tables included in the attachments to these Consolidated financial statements, as also required by Consob in its Communication 6064293 of 28 July 2006.

Aggregations and reclassifications of captions in the Reclassified consolidated balance sheet refer to:

- the separate presentation of financial assets of the banking segment constituting Due from banks and Loans to customers, regardless of the accounting portfolios to which they have been allocated;
- the separate presentation of financial assets of the banking segment not constituting loans, divided into financial assets measured at amortised cost, financial assets measured at fair value through profit or loss and financial assets measured at fair value through other comprehensive income, net of the amounts reclassified to Due from banks and Loans to customers;
- the separate presentation of financial assets and liabilities of the insurance segment, grouped based on the valuation method adopted for the purposes of IFRS 9 (fair value or amortised cost);
- the aggregation in one single caption of Property, equipment and intangible assets, broken down into the sub-captions Assets owned and Rights of use acquired under leases;
- the inclusion of Hedging derivatives of the banking segment and Fair value change of financial assets/liabilities in hedged portfolios under Other assets/Other liabilities;
- the inclusion of Insurance assets in Other assets;
- the separate presentation of Due to banks at amortised cost of the banking segment;
- the aggregation of Due to customers at amortised cost and Securities issued of the banking segment into one caption;
- the aggregation in one single caption (Allowances for risks and charges) of allowances for specific purposes (Employee termination indemnities and Allowances for risks and charges regarding: commitments and guarantees given, post-employment benefits and other allowances for risks and charges);
- the reclassification of Lease payables to a specific sub-caption of Other liabilities;
- the presentation of Reserves as an aggregate and net of any own shares.

[33] With legal effect from 31 October 2025, First Bank S.A. was merged into Banca Comerciala Intesa Sanpaolo Romania S.A. (Intesa Sanpaolo Bank Romania).
[34] Following the finalisation of: (i) the first tranche of CHF 25 million of a new capital increase of Alpian in June 2025, and (ii) the second tranche of CHF 15 million in November 2025, both fully subscribed by Fideuram - Intesa Sanpaolo Private Banking, including the portion of unsubscribed shares attributable to Reyl & Cie and other shareholders, the Group's direct percentage stake in the company as at 31 December 2025 rose to 70.828%, of which 62.884% held by Fideuram - Intesa Sanpaolo Private Banking and 7.944% by Reyl & Cie.

As at 31 December 2025, loans to customers of the Group amounted to 425 billion euro[35], up (+0.8%, or +3.5 billion euro) compared to the end of 2024. The trend is attributable to an increase in repurchase agreements (+22.3%, or +4 billion euro) and loans represented by securities (+38.2%, or +2.4 billion euro), mainly due to the Parent Company's subscription of securities from corporate issuers, only partially offset by the slight decrease in commercial banking loans (-0.5%, or -1.9 billion euro) and the reduction in non-performing loans (-20.9%, or -1 billion euro), also due to de-risking initiatives finalised during the year.
The trend in commercial banking loans, which comprise over 90% of the total aggregate, is the result of a decrease in advances and loans (-0.8%, or -1.2 billion euro), while current accounts were substantially stable (+0.3%). As regards medium/long-term commercial operations, mortgage loans showed resilience (-0.3%), against growth in disbursements, which more or less offset repayments.
As at 31 December 2025, the Intesa Sanpaolo Group's share of the Italian domestic market was estimated at 17.5% for total loans to customers. This estimate was based on the sample deriving from the ten-day report of the Bank of Italy for December, as the global banking system figures were not yet available.

In 2025, the Group made total medium/long-term disbursements of 86.1 billion euro, consisting of 56.3 billion euro for Italy and 29.8 billion euro for the international operations.
In the domestic market, the Banca dei Territori recorded loans of 38.9 billion euro, of which 21.1 billion euro to households (retail and exclusive segments), 14.3 billion euro to SMEs (companies with a turnover of up to 350 million euro), 2.7 billion euro to agribusiness, and 0.8 billion euro to the non-profit sector, third party networks, Prestitalia and Isybank. In addition, disbursements of the IMI Corporate & Investment Banking Division amounted to 17 billion euro, including Originate to Share (OTS) operations, and OTS operations for non-corporate customers amounting to 0.4 billion euro.
For the international operations, instead, loans include the International Banks Division for 14.3 billion euro and IMI C&IB international, including OTS operations, equal to 15.5 billion euro.

With regard to the specific measures to support the production system, established in response to the COVID-19 pandemic, Intesa Sanpaolo was the first Bank in Italy to sign the collaboration protocol with SACE. Overall, Intesa Sanpaolo provided a plafond of 50 billion euro dedicated to loans in favour of companies under which, also through the SME Fund, a total of 49 billion euro[36] in loans backed by government guarantee were disbursed from the start of the pandemic (in application of the "*Liquidità*" Decree Law no. 23 of 8 April 2020): 13.4 billion euro backed by SACE guarantee and around 35.6 billion euro backed by SME Fund guarantee. The data regarding the monitoring of the guarantees from the "Fondo Centrale di Garanzia" (Central Guarantee Fund), despite showing higher impairment rates than the rest of the loans, do not identify significant risks, thanks to the focused and timely management.
At consolidated level, also considering the operations in the other countries where the Group has a presence, as at the end of 2025 the residual debt of exposures for loans under government guarantee schemes totalled 8.2 billion euro (of which 8 billion

[35] As at 31 December 2025, the aggregate includes 1.2 billion euro referring to an institutional customer previously classified under due from banks, of which 0.1 billion euro on current accounts and 1.1 billion euro on advances and loans.
[36] Including the former UBI Banca Group and considering the sale of branches carried out in the first half of 2021.

euro relating to Italy), compared to 15.4 billion euro (of which 15 billion euro in Italy) outstanding in December 2024. This gradual reduction, essentially attributable to the Parent Company, relates to the repayments and partial settlements during 2025.

Under the Bank's initiatives related to the measures established by the "Rilancio" Decree (Decree Law 34/2020) for the relaunch of the construction sector, Intesa Sanpaolo – through the Banca dei Territori and IMI Corporate & Investment Banking Divisions – purchased tax credits of 38.4 billion euro (37.5 billion euro as at 31 December 2024), from the start of the operations through to 31 December 2025. An additional 1 billion euro is to be added to this amount, relating to signed contracts and received applications.
Net of the overall decreases of around 22.6 billion euro (attributable to offsetting carried out during the year, resales carried out, deferrals recognised and fair value adjustments, where required by the business model of reference), at the end of 2025, tax credits of 15.8 billion euro (22.5 billion euro in December 2024) were recognised in the financial statements under caption 130 Other assets of the Consolidated balance sheet, which in the Reclassified consolidated balance sheet converge in the caption Other assets.

Business areas
Loans to customers

In the analysis of operations by sector, the Banca dei Territori Division, which represents 53.9% of the aggregate attributable to the Group's operating business areas, showed a slight decrease since the end of 2024 (-0.6%, or -1.2 billion euro), which reflects the declining trend in loans to businesses, partially offset by the development of loans to individuals. Loans of the IMI Corporate & Investment Banking Division also decreased (-1.5%, or -1.9 billion euro), in relation to the evolution of the Global Corporate segment and of institutional customers, partly attenuated by the positive trend in Global Markets. In contrast, the growth in the International Banks Division (+8.2%, or +3.7 billion euro) is mainly attributable to the greater contribution from subsidiaries operating in Croatia, Serbia, Hungary and Slovakia; the Private Banking Division also grew (+4.7%, or +0.7 billion euro), with its loans consisting primarily of short-term credit facilities.
The loans of the Asset Management Division, which are relatively modest in scope owing to its line of business, increased by 38.2%.
Lastly, loans on central assets of the Corporate Centre increased by 15.2% (+2.2 billion euro), in relation to repurchase agreements.

Figures restated, where necessary and material, considering the changes in the scope of consolidation and discontinued operations.

As at 31 December 2025, the Group's net non-performing loans amounted to 3,892 million euro, lower than the figure recorded as at 31 December 2024 (4,920 million euro), also due to the de-risking initiatives finalised during the year, consistent with Bank's Zero-NPL (non-performing loans) status declared in the 2022-2025 Business Plan. The ratio of non-performing loans to total net loans to customers came to 0.9% (0.8% according to the EBA definition) with the coverage ratio for non-performing loans of 48.6% (49.5% at the end of 2024).
In further detail, in December 2025 bad loans amounted to 790 million euro (-29.5% from 31 December 2024), net of adjustments, representing 0.2% of total net loans with a coverage ratio of 67.3%. Loans included in the unlikely-to-pay category amounted to 2,780 million euro, down by 19.1%, accounting for 0.6% of total net loans to customers, with a coverage ratio of 40.8%. Past due loans amounted to 322 million euro (-11% from the end of 2024), with a coverage ratio of 28.8%. Within the non-performing loan category, forborne exposures, generated by forbearance measures for borrowers experiencing difficulty in meeting their financial obligations, amounted to 1,226 million euro, with a coverage ratio of 41.4%. Forborne exposures in the performing loan category amounted to 4,062 million euro.

At the end of December 2025, net performing loans amounted to 412.4 billion euro, up by 2.2 billion euro (+0.5%) on the end of 2024, with an overall coverage ratio of 0.47% of which 4.20% (from 4.60% at the end of 2024) for Stage 2 loans and 0.14% (0.15% at the end of December 2024) for Stage 1 loans. In terms of stock, net loans in Stage 1 increased by 0.9% to 379.3 billion euro, while those in Stage 2 amounted to 32.1 billion euro, down by 3.9% compared to the figure at the end of 2024.

Loans to customers classified as non-current assets held for sale	**1,890**	**-1,394**	**496**	**330**	**-291**	**39**	**457**

Figures restated, where necessary and material, considering the changes in the scope of consolidation and discontinued operations.

As at 31 December 2025, Group gross non-performing loans amounted to 7.6 billion euro, down (-22.3%, or -2.2 billion euro) compared to December 2024. This trend was due to bad loans (-31.1%, or -1.1 billion euro), unlikely-to-pay loans (-17.8%, or -1 billion euro) and, to a lesser extent, past-due loans (-12.4%, or -64 million euro).
That result was marked by the de-risking initiatives finalised during the year and a small amount of new inflows from performing loans, due to the performance recorded by prevention activities. As a result of the de-risking initiatives, in 2025 a number of extraordinary disposals were carried out on portfolios amounting to 1.1 billion euro (gross), of which 0.3 billion euro had already been reclassified to IFRS 5 in December 2024. Added to these is around 0.3 billion euro (gross) from sales of single name loans. Moreover, in the last quarter of 2025, portfolios of loans classified as ready to be sold were accounted under Non-current assets held for sale and discontinued operations, having met the conditions for applicability based on IFRS 5.
The NPL ratio amounted to 1.8% gross of adjustments and 0.9% net (1.5% and 0.8%, respectively, gross and net according to the EBA methodology).
In 2025, gross inflows amounted to 3.2 billion euro (1.5 billion euro in the first half and 1.7 billion euro in the second half year), lower than the figure recorded in 2024 (3.5 billion euro). In net terms, that is, net of outflows to performing loans, inflows came to 2.6 billion euro (1.3 billion euro in the first six months and 1.3 billion euro in the second half), compared with a figure of 2.9 billion euro recorded in 2024.

(*) The amount of the item does not include certificates which are included in the direct deposits from banking business table.

The table above shows the breakdown of other financial assets and liabilities, excluding those pertaining to insurance companies. Financial liabilities held for trading do not include certificates, which are included in the direct deposits from banking business aggregates.
The Intesa Sanpaolo Group's other financial assets amounted to 207.8 billion euro, up by 22.8 billion euro compared to the end of the year (+12.3%). Financial liabilities held for trading decreased by 10.8% to 30.2 billion euro.

The increase in total financial assets was essentially due to the performance of debt securities (+23.3 billion euro), mainly government securities and, to a lesser extent, derivatives (+1.4 billion euro), only partially offset by the decrease in equity instruments (-1.8 billion euro).

Financial assets measured at fair value through profit or loss amounted to 50.7 billion euro, up by 5 billion euro from the end of 2024. The change was attributable to an increase in debt securities (+5.5 billion euro), specifically those issued by governments, and in derivatives (+1.4 billion euro), partially offset by the drop in equity instruments (-1.9 billion euro).

Instruments measured at amortised cost which do not constitute loans amounted to 69.6 billion euro, up by 10.5%, due to the performance of government debt securities (+5.8 billion euro) and, to a lesser extent, other debt securities (+0.8 billion euro). Debt securities at amortised cost have primarily been classified to Stage 1 (96.1%).

Financial assets at fair value through other comprehensive income, which reached 87.5 billion euro, also grew from the end of 2024 (+14.6%), due to the performance of debt securities. Debt securities measured at fair value through other comprehensive income were almost fully classified in Stage 1 (98.8%).

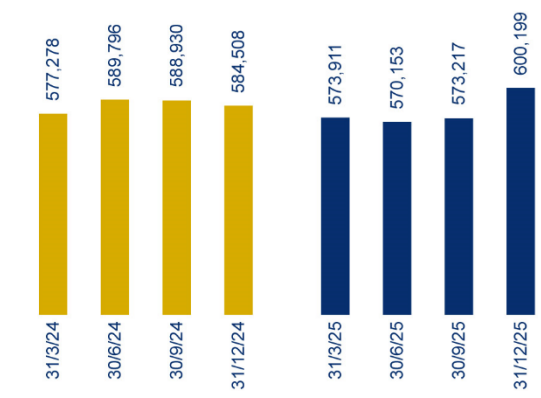
(*) Figures relating to investment certificates and other forms of funding included in the Balance sheet under "Financial liabilities held for trading" and "Financial liabilities designated at fair value". Specifically:
- as at 31 December 2025, this caption consisted of 9,484 million euro of certificates classified under "Financial liabilities held for trading" and 27,196 million euro of certificates (27,190 million euro) and other forms of funding (6 million euro) classified under "Financial liabilities designated at fair value";
- as at 31 December 2024, this caption consisted of 9,042 million euro of certificates classified under "Financial liabilities held for trading" and 23,437 million euro of certificates (23,432 million euro) and other forms of funding (5 million euro) classified under "Financial liabilities designated at fair value".

Bearer instruments issued are conventionally fully attributed to funding from customers.

[37] As at 31 December 2025, the aggregate included 19 billion euro referring to an institutional customers previously classified as due to banks.

Quarterly development
Direct deposits from banking business
(millions of euro)



Group direct deposits from banking business exceeded 600 billion euro, including 19 billion euro relating to an institutional customer previously classified as due to banks, up on the end of 2024 (+2.7%, or +15.7 billion euro).
Specifically, there was an increase in repurchase agreements and securities lending (+15.5 billion euro), attributable to 12.5 billion euro from the above reclassification, and in other deposits (+18%, or +11.7 billion euro), thanks to the performance of certificates (+4.2 billion euro), incorporating the positive impact of the reclassification (+6.3 billion euro).
Conversely, bonds decreased (-15.3%, or -12.3 billion euro), linked to the pre-funding carried out in 2024, involving covered bonds (-3.8 billion euro), senior preferred securities (-7.9 billion euro) and senior non-preferred securities (-0.6 billion euro). Current accounts and deposits, only marginally affected by the reclassification, remained substantially stable as a result of a shift from time deposits to current accounts.
Among other forms of funding, which comprise a marginal percentage of the total aggregate, certificates of deposit increased (+29.6%, or +0.8 billion euro), due to the international branches, as well as subordinated liabilities (+3.4%, or +0.4 billion euro).
As at 31 December 2025, the Intesa Sanpaolo Group's direct deposits (deposits and bonds) represented a share of the domestic market of 20.5%. As described above with reference to loans, this estimate is based on the sample deriving from the ten-day report produced by the Bank of Italy.

(millions of euro)

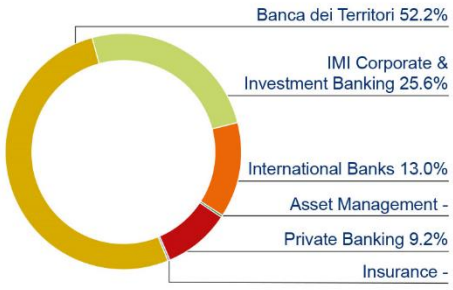
Business areas
Direct deposits from banking business



In the analysis of funding by sector, the Banca dei Territori Division, which accounts for 52.2% of the aggregate attributable to the Group's operating business areas, reported growth on the levels of the previous year (+0.7%, or +1.8 billion euro), mainly due to an increase in amounts due to retail customers.
The IMI Corporate & Investment Banking Division also grew (+1.7%, or +2.1 billion euro), essentially due to the development of operations in certificates, partially offset by the decrease in securities issued by the Luxembourg subsidiary and in Global Markets. The International Banks Division reported growth (+6.2%, or +3.8 billion euro), mainly related to the positive trend recorded in subsidiaries operating in Hungary, Croatia and Slovakia. Conversely, deposits of the Private Banking Division decreased (-4.7%, or -2.2 billion euro), especially in relation to the decrease in time deposits, partially offset by the growth in current account deposits.
The increase in funding of the Corporate Centre (+10.2 billion euro) is the result of an increase in the repurchase agreement component of amounts due to customers, which incorporate the above-mentioned reclassification of an institutional customer, and a decline in transactions in wholesale securities.

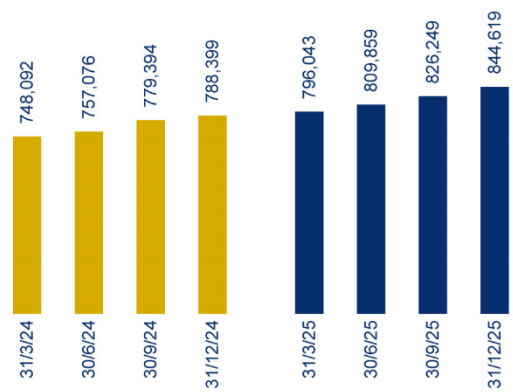
Figures restated, where necessary and material, considering the changes in the scope of consolidation and discontinued operations.

(a) This caption does not include funds held by Group insurance companies and managed by the Group's asset management companies, whose values are included in the insurance liabilities and insurance financial liabilities.

Starting from December 2025, assets under management also include mutual funds established by third parties, portfolio management of third-party companies and insurance policies issued by companies not belonging to the Group that were previously classified as assets under administration and in custody as not attributable to the Group's product factories. The figures for 31 December 2024 have been restated accordingly.
The restated data relating to the end-of-quarter figures for 2025 and 2024 are published on the Group's website (group.intesasanpaolo.com), in the Investor Relations section, Key figures database, Customer financial assets and assets under management.

Quarterly development
Indirect customer deposits
(millions of euro)



As at 31 December 2025, indirect customer deposits reached around 845 billion euro, up sharply (+7.1%, or +56.2 billion euro) compared to the end of 2024, driven by the positive trend in both assets under administration and assets under management.
Assets under administration, amounting to 282.6 billion euro, increased sharply (+11.7%, or +29.7 billion euro), concentrated in securities and third-party products in custody, to which investors have transferred part of their liquidity in order to benefit from higher yields.
Assets under management, which, totalling 562 billion euro, comprises 66.5% of the total aggregate, increased (+5%, or +26.5 billion euro), attributable to all components: mutual funds (+13 billion euro), portfolio management schemes (+5 billion euro), relations with institutional customers (+3.4 billion euro), open pension funds and individual pension policies (+3.3 billion euro) and insurance liabilities and insurance financial liabilities (+1.8 billion euro). In 2025, the new life business of the insurance companies of the Intesa Sanpaolo Group, including pension products and those of a predominantly financial nature, amounted to 19.5 billion euro.

NET INTERBANK POSITION	**18,741**	**27,697**	**-8,956**	**-32.3**

Figures restated, where necessary and material, considering the changes in the scope of consolidation and discontinued operations.

(*) Of which with European Central Bank: 23,286 million euro as at 31 December 2025 and 26,496 million euro as at 31 December 2024.

(**) Of which with European Central Bank: 4,070 million euro as at 31 December 2025 and 4,018 million euro as at 31 December 2024.

It should be noted that the figures as at 31 December 2025 shown in the table exclude the amounts relating to an institutional customer, reclassified from “banks” to “customers”, which comprised liabilities of 19 billion euro, specifically the components of repurchase agreements (12.5 billion euro) and other liabilities (6.3 billion euro), and assets of 1.2 billion euro, concentrated on other loans, and marginally on current accounts and on-demand deposits with other banks.
As at 31 December 2025, the Group’s net interbank position – calculated considering all the on-demand liquidity, both at Central Banks and at other banks, recognised under “Cash and cash equivalents”, – presented a positive imbalance of 18.7 billion euro, down from 27.7 billion euro at the end of 2024.
This evolution reflects the growth in liabilities (+25.8%, or +11.6 billion euro), essentially attributable to operations in repurchase agreements supporting the purchase of financial assets during 2025.
On the side of assets held at banks, there was an increase (+3.7%, or +2.7 billion euro): the rise in amounts due from banks (+15.2%, or +5.5 billion euro), specifically in repurchase agreements, was only partially offset by the drop in liquidity in on-demand deposits held at Central Banks and other banks, specifically with the ECB (-3.2 billion euro).

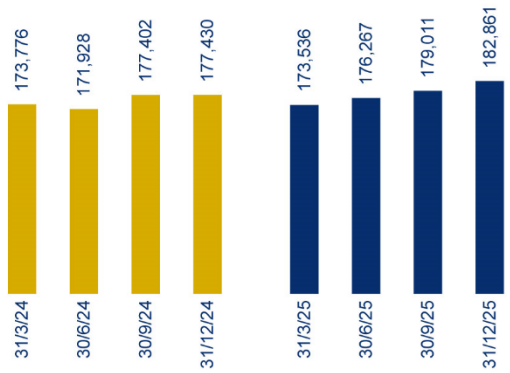
Quarterly development
Direct deposits from insurance business
(millions of euro)



Direct deposits from insurance business stood at 182.9 billion euro as at 31 December 2025, up (+3.1%, or +5.4 billion euro) on the end of 2024. The change was attributable to the increase in insurance liabilities (+5.1%, or +6.4 billion euro), referring to liabilities for remaining coverage, only partially offset by the decrease in financial liabilities of the life business (-2.9%, or -1.5 billion euro), comprised of unit-linked products. Other insurance deposits, which represent a marginal component of the total aggregate and include subordinated liabilities, increased by 0.5 billion euro compared to December 2024, essentially relating to a Tier 2 issue placed on the institutional market by Intesa Sanpaolo Assicurazioni at the beginning of March.

NON-CURRENT ASSETS HELD FOR SALE AND DISCONTINUED OPERATIONS AND ASSOCIATED LIABILITIES

This caption contains assets and associated liabilities which no longer refer to continuing operations as they are being disposed of.

As at 31 December 2025, assets held for sale amounted to 1,065 million euro, mainly comprised of: (i) properties, including those subject to transfer under the agreement between Intesa Sanpaolo and COIMA, for a total value of around 0.5 billion euro, due to be completed in 2026; and (ii) non-performing loans of 1.9 billion euro gross, due to be disposed as part of de-risking initiatives.

At the end of 2025, associated liabilities amounted to 45 million euro.

As at 31 December 2024, assets held for sale amounted to 667 million euro, represented by: (i) the investment in Cronos Vita Assicurazioni, which was subject to total, non-proportional demerger with effect on 1 October 2025; (ii) properties, including those subject to the above-mentioned agreement with COIMA, and (iii) non-performing loans with a total gross value of 0.3 billion euro, whose sale was finalised during the first quarter of 2025. Associated liabilities amounted to 5 million euro.

SHAREHOLDERS' EQUITY

As at 31 December 2025, the Group's shareholders' equity amounted to 65,226 million euro compared to the 65,176 million euro as at 31 December 2024.

Shareholders' equity at the end of 2025 incorporated the income accrued during the year (9,321 million euro) and was impacted by the distribution of the remaining dividend on 2024 income in May 2025 (-3,043 million euro) and the interim dividend on 2025 income paid in November 2025 (-3,234 million euro).

The Shareholders' equity as at 31 December 2025 also reflected: (i) the decrease in reserves of 2 billion euro relating to the programme of purchase of own shares for annulment (buyback) which was executed in the manner and within the terms approved by the Shareholders' Meeting of Intesa Sanpaolo on 29 April 2025, from 2 June to 17 October 2025; (ii) the movements in AT1 capital instruments (new issues and early redemptions) resulting in an overall change of around -1 billion euro; and (iii) the recognition of the one-off levy of around 570 million euro in accordance with Article 1, paragraphs 69-71 of Law No. 199 of 30 December 2025, equivalent to 27.5% of the Net income reserve pursuant to Law 136 of 9/10/2023 of 2,069 million euro. The Shareholders' Meetings of Intesa Sanpaolo and of the subsidiaries to which the 2025 Financial Statements are submitted for approval are called upon to decide on the approval of the allocation of the one-off levy to the specific Shareholders' Equity reserves identified by their respective Boards of Directors.

Valuation reserves

(millions of euro)

	Reserve 31.12.2024	Change of the period	Reserve 31.12.2025
Financial assets measured at fair value through other comprehensive income (debt instruments)	-1,972	889	-1,083
Financial assets measured at fair value through other comprehensive income (equities)	-270	62	-208

Legally-required revaluations	312	-	312
Valuation reserves (excluding valuation reserves pertaining to insurance companies)	**-2,035**	**897**	**-1,138**
Valuation reserves pertaining to insurance companies	**-297**	**-77**	**-374**

Bank valuation reserves (excluding those pertaining to insurance companies) were negative (-1,138 million euro), improving by 897 million euro compared to 31 December 2024 (-2,035 million euro), mainly due to the trend in reserves on debt securities and equity instruments. The valuation reserves of the insurance companies, amounting to -374 million euro, worsened by 77 million euro compared to the figure at the end of 2024.

Tier 1 capital ratio	15.6%	15.8%
Total capital ratio	18.7%	19.0%

(a) The caption includes all other elements not contemplated in the foregoing captions that are considered when calculating total capital requirements.

Own Funds, risk-weighted assets and the capital ratios as at 31 December 2025 were calculated according to the harmonised rules and regulations for banks and investment firms contained in Directive 2013/36/EU (CRD) and in Regulation (EU) 575/2013 (CRR) as amended, which transpose into the European Union the standards defined by the Basel Committee on Banking Supervision (the Basel Framework), and on the basis of the related Bank of Italy Circulars.
It should be noted that Regulation (EU) 2024/1623 (CRR3), which transposes the principles of Basel 4 into European law, is applicable from 1 January 2025. The first-time adoption of Basel 4 generated an impact of slightly more than 40 basis points on the CET 1 ratio.

Own funds
As at 31 December 2025, Own funds amounted to 58,041 million euro.
Even if the transitional period of IFRS 9 has ended, own funds take account of the provisions of the 2019 Budget Act (as amended), which temporarily called for - currently up to 2029 - the adjustments upon first-time adoption of the Standard to be applied in instalments for tax purposes, with the recognition of the resulting DTAs. These DTAs were fully included in the calculation of the thresholds established in Article 48 CRR, over the same time period. As at 31 December 2025, those IFRS 9 DTAs did not generate any deduction from Own funds, and are included among risk-weighted assets.
Own Funds also take into account the applicable amount, object of deduction from CET1, related to the minimum coverage of losses on non-performing exposures, known as Minimum Loss Coverage, based on the provisions of Regulation (EU) 630/2019 of 17 April 2019.

Moreover, in compliance with Article 3 of the CRR ("Application of stricter requirements by institutions"), the calculation of the own funds as at 31 December 2025 included the voluntary deduction of around 23 basis points from the CET 1 of the calendar provisioning[38] on exposures within the scope of Pillar 2.
Since 30 June 2023, the Intesa Sanpaolo Group has been complying with EBA Q&A 2021_6211, which clarifies that the amount of goodwill to deduct from an institution's CET 1 must be that relating to directly controlled insurance companies, recognised at the date of acquisition of the significant investment in those companies, without considering the goodwill referring to subsequent acquisitions made. The latter amount was included in the calculation of risk-weighted assets (RWA), thus falling under the ordinary treatment that the Group reserves for equity investments in insurance companies.
For the purposes of calculating own funds as at 31 December 2025 the net income for 2025 was considered, less the related dividend and other foreseeable charges[39]. It should be noted that these foreseeable charges also take into account the amount of 2.3 billion euro authorised by the ECB, for the purchase of own shares for annulment (share buyback), as approved by the Board of Directors on 2 February 2026, to be initiated in July 2026, subject to approval by the Shareholders' Meeting.

Risk-weighted assets
As at 31 December 2025, risk-weighted assets came to 310,201 million euro, resulting primarily from credit and counterparty risk and, to a lesser extent, operational and market risks.
Common Equity Tier 1 Capital and risk-weighted assets as at 31 December 2025 take account of the impact of the application of the "Danish Compromise" (Art. 49.1 of Regulation (EU) 575/2013), as per the specific authorisation received from the ECB in 2019, according to which insurance investments are treated as risk-weighted assets[40] instead of being deducted from capital.

Capital ratios
On the basis of the foregoing, capital ratios as at 31 December 2025 amounted to the following: Common Equity ratio of 13.2% (including the previously-mentioned impact of the first-time adoption of CRR3/Basel 4, equal to slightly more than 40 basis points), Tier 1 ratio of 15.6% and Total capital ratio of 18.7%.
Finally, on 10 December 2024, Intesa Sanpaolo announced that it had received notification of the ECB's final decision concerning the capital requirement that the Bank has to meet, on a consolidated basis, as of 1 January 2025, following the results of the Supervisory Review and Evaluation Process (SREP).
The overall requirement to be met in terms of Common Equity Tier 1 ratio is currently 9.88%, inclusive of the Capital Conservation Buffer, O-SII Buffer and Countercyclical Capital Buffer[41] and Systemic Risk Buffer[42] requirements.
Instead, the ECB's final decision of 31 October 2025, concerning the capital requirement to be met as of 1 January 2026, set the current requirement at 9.97%.

[38] The addendum to ECB Guidance on non-performing loans of 2018 contemplates the possibility that banks "deduce" on their own initiative specific amounts from CET 1, to anticipate supervisory requests, in the event of divergence between the prudential framework, which expects adjustments not based on credit risk measurement criteria, and the accounting framework.
[39] Coupons accrued on Additional Tier 1 issues (402 million euro) and proposed assignment to the Allowance for charitable, social and cultural contributions (30 million euro).
[40] From the first-time adoption of the new Basel 4 framework, the risk weight of 250% provided for equity exposures has been applied to those exposures, in place of the 370% previously applied up to 31 December 2024.
[41] The Countercyclical Capital Buffer is calculated taking into account the exposure as at 31 December 2025 in the various countries where the Group has a presence, as well as the respective requirements set by the competent national authorities and relating to 2027, where available, or the most recent update of the reference period (requirement was set at zero per cent in Italy for 2025 and for the first quarter of 2026).
[42] The Systemic Risk Buffer is calculated taking into account the exposure as at 31 December 2025 to residents in Italy.

Reconciliation of Shareholders' equity and Common Equity Tier 1 capital

(millions of euro)

	31.12.2025	31.12.2024
Group Shareholders' equity	65,226	65,176
Minority interests	152	145
Shareholders' equity as per the Balance Sheet	**65,378**	**65,321**
Interim dividend (a)	3,234	3,022
Adjustments for instruments eligible for inclusion in AT1 or T2 and net income for the period		
- Other equity instruments eligible for inclusion in AT1	-7,668	-7,551
- Minority interests eligible for inclusion in AT1	-	-
- Minority interests eligible for inclusion in T2	-	-
- Ineligible minority interests on full phase-in	-152	-145
- Ineligible net income for the period (b)	-6,683	-6,217
- Own shares included under regulatory adjustments (c)	2,555	2,176
- Buyback of own shares (d)	-2,300	-2,000
- Other ineligible components on full phase-in (e)	-105	-1,247
Common Equity Tier 1 capital (CET1) before regulatory adjustments	**54,259**	**53,359**
Regulatory adjustments (f)	**-13,405**	**-14,052**
Common Equity Tier 1 capital (CET1) net of regulatory adjustments	**40,854**	**39,307**

(a) As at 31 December 2025 and 31 December 2024 the Shareholders' equity as per the Balance Sheet did not include the interim dividend, of 3,234 and 3,022 million euro respectively (net of the undistributed portion in respect of the own shares held at the record date).

(b) Common Equity Tier 1 capital as at 31 December 2025 includes the net income as at that date, less the related dividend, the accrued coupon on Additional Tier 1 instruments net of tax effects and charity allowance.

(c) The amount includes, in addition to the book value of own shares, the unused portion of the ceiling for which the Bank has received the buyback authorisations.

(d) As at 31 December 2025, the amount refers to the total value of the programme of purchase of own shares for annulment (buyback), amounting to 2.3 billion euro, as the related authorisation from the Supervisory Authority was received, subject to the approval of the Shareholders' Meeting.

(e) As at 31 December 2024, the amount included a deduction of 1,150 million euro following the authorisation - received during the fourth quarter - for the repurchase of two AT1 instruments.

(f) The regulatory adjustments as at 31 December 2025 no longer include the impact of the application of the IFRS 9 transitional filter - the applicability of which ended in 2022 - conversely, they include 717 million euro of Article 3 CRR additional deduction (for the calendar provisioning on exposures included within the scope of Pillar 2).

Changes in risk-weighted assets

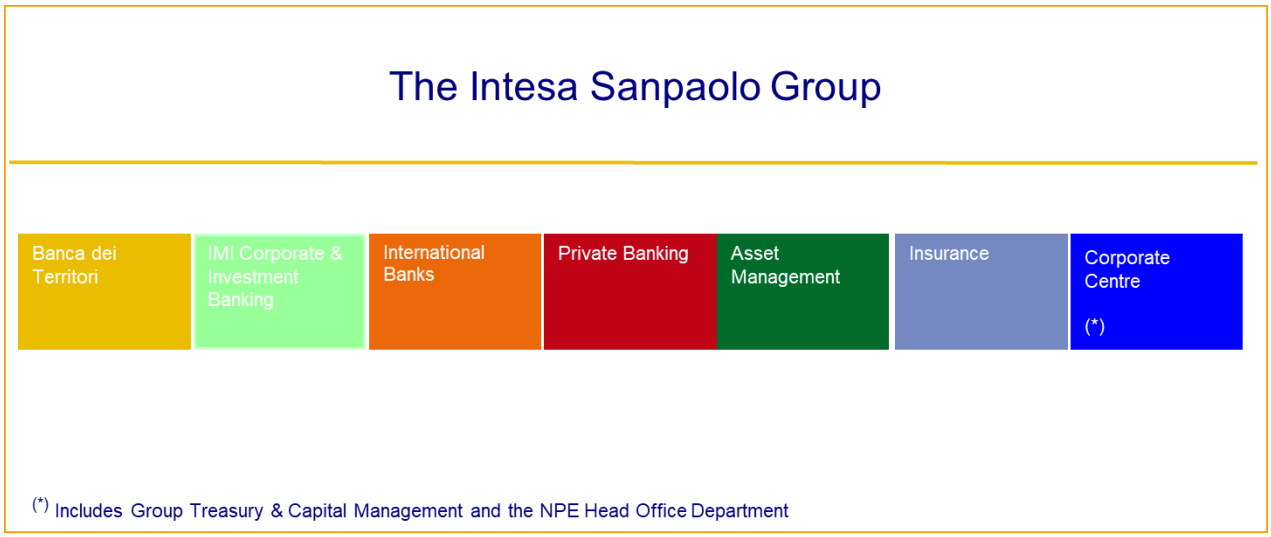
(millions of euro)

Risk-weighted assets as at 31.12.2024	**296,366**
Credit and counterparty risk	-11,086
Market and settlement risk	2,290
Operational risks	22,553
Other specific risks	78
Risk-weighted assets as at 31.12.2025	**310,201**

During 2025, risk-weighted assets for credit and counterparty risk decreased by around 11.1 billion euro, mainly due to the introduction of Basel 4 regulations (primarily due to the standardised treatment of the equity scope and the change in weighting of insurance counterparties), the trend in the loan portfolio (especially due to the endorsement of the authorisation linked to the Large Corporate Model Change) and the finalisation of several synthetic securitisations.
The increase in risk-weighted assets for market risks (+2.3 billion euro) is mainly attributable to the increase in trading volumes compared to 2024, partially offset by a reduction in capital absorption of the Parent Company's securitisations and tax credits.
The increase in risk-weighted assets for operational risks (around +22.6 billion euro) is attributable to the introduction of the new Basel 4 regulations, with the resulting application of the standardised approach to calculate the capital requirement.
Other specific risk-weighted assets were essentially stable.

Breakdown of consolidated results by business area and geographical area

Breakdown of consolidated results by business area and geographical area



The Intesa Sanpaolo Group's segment reporting is based on the elements that management uses to make its own operating decisions (the "management approach") and is therefore consistent with the disclosure requirements of IFRS 8.
In addition to reflecting the operating responsibilities assigned in accordance with the Group's organisational structure, the business areas are an aggregation of business lines similar in the type of products and services they sell.

The table below shows the main data summarising the trend of the business areas of the Intesa Sanpaolo Group in 2025 compared to the like-for-like comparison data.

The following itemised analysis of the business areas contains a description of the products and services offered, the type of customers served and the initiatives carried out in the year; it also illustrates income statement figures and the main balance sheet aggregates. Finally, for each business area, the capital absorbed based on Risk Weighted Assets (RWAs) was also calculated. RWAs were determined in accordance with the provisions in force (Circular 285) issued by the Bank of Italy following the implementation of Directive 2013/36/EU (CRD) and Regulation (EU) 575/2013 (CRR) of 26 June 2013, amended by Regulation (EU) 876/2019 of 20 May 2019, known as CRR 2, which transpose the banking supervision standards defined by the Basel Committee (the Basel 3 Framework) to European Union laws. Moreover, on 19 June 2024, Regulation (EU) 2024/1623 (also known as CRR3) which, in transposing the principles of Basel IV into European law, amending Regulation (EU) 575/2013 as regards requirements for credit risk, credit valuation adjustment risk, operational risk, market risk and the output floor was published in the Official Journal of the European Union. The most significant amendments introduced by the new regulatory framework came into effect from 1 January 2025. Absorbed capital also takes account of the regulatory changes introduced by the ECB with effect from 12 March 2020, allowing the Pillar 2 requirement to be met partially using equity instruments not classified as Common Equity Tier 1. For each Division, the absorbed capital is supplemented, where necessary, with management data on "economic" capital to take into account the risks not covered by the regulatory metric.

Division figures for the comparative periods have been restated to reflect the changes in scope of the business areas, where necessary and if they are material. In particular:
– the entry into the scope of consolidation of the Romanian bank First Bank S.A.[43](International Banks Division), acquired on 31 May 2024;
– the line-by-line scope of consolidation of Alpian S.A. (Private Banking Division), previously consolidated using the equity method, following the capital increase finalised in the third quarter of 2024, which brought the percentage of the Group's stake in the company to 61.599% (of which 51.141% held by Fideuram - Intesa Sanpaolo Private Banking and 10.458% by Reyl & Cie)[44].

[43] With legal effect on 31 October 2025, First Bank S.A. was merged into Banca Comerciala Intesa Sanpaolo Romania S.A. (Intesa Sanpaolo Bank Romania).
[44] Following the finalisation of: (i) the first tranche of CHF 25 million of a new capital increase of Alpian in June 2025, and (ii) the second tranche of CHF 15 million in November 2025, both fully subscribed by Fideuram - Intesa Sanpaolo Private Banking, including the portion of unsubscribed shares attributable to Reyl & Cie and other shareholders, the Group's direct percentage stake in the company as at 31 December 2025 rose to 70.828%, of which 62.884% held by Fideuram - Intesa Sanpaolo Private Banking and 7.944% by Reyl & Cie.

Lastly, during the year, several corporate operations that involved the perimeter of the Asset Management Division and the Private Banking Division took effect, as part of the strategic evolution of the Group's asset management product factories. In that regard, it is specified that the comparison data were not restated, given the immateriality of the impacts.
In particular:

– the full demerger of Fideuram – Intesa Sanpaolo Private Banking Asset Management SGR (Private Banking Division) in favour of Eurizon Capital SGR (Asset Management Division) took effect on 1 July 2025, for the business line organised for collective asset management, and of Fideuram - Intesa Sanpaolo Private Banking (Private Banking Division), for the set of assets not pertaining to that business.
– the partial demerger of Eurizon Capital SGR (Asset Management Division) in favour of Fideuram - Intesa Sanpaolo Private Banking (Private Banking Division) involving the business line consisting of selected individual portfolios of Eurizon Capital SGR distributed by the networks of the Private Banking Division took effect on 1 October;
– Fideuram Asset Management UK (Private Banking Division) transferred its business to Eurizon SLJ Capital (Asset Management Division) on 17 November, starting the liquidation process of the company.

The **Banca dei Territori Division** oversees the traditional lending and deposit collection operations in Italy and associated financial services, targeted to Retail, Exclusive and SMEs, including Agribusiness and non-profits.
This Division also includes leasing, factoring and subsidised finance activities, as well as the digital bank Isybank (which also operates in instant banking through Mooney, in partnership with Enel X) and Prestitalia (operating in the consumer credit segment).

Banca dei Territori's operating income was 12,254 million euro in 2025, amounting to around 45% of the Group's consolidated revenues, showing growth (+3.3%) on the previous year.
In detail, net fee and commission income increased (+5.7%), driven by the wealth management segment, bolstered by higher placement levels than in 2024, especially in funds and certificates, by the higher contribution from advisory services and the non-life insurance segment, within the commercial banking fees, fees and commissions on cards and other payment and electronic services decreased. Net interest income was substantially stable (+0.5%) compared to the previous year. Among the other revenue components, which provide a marginal contribution to the Division's operating income, the profits (losses) on financial assets and liabilities at fair value came to 201 million euro (+81 million euro) and other net operating income amounted

to 2 million euro (13 million euro in 2024). Operating costs, amounting to 6,306 million euro, fell by 2.1%, thanks to savings on personnel and administrative expenses. As a result of the above, the operating margin rose to 5,948 million euro, compared to 5,424 million euro in the previous year (+9.7%). Following the allocation of higher net adjustments to loans (+41.5%), including allocations to favour de-risking, gross income amounted to 4,404 million euro, up by 3.7%. Lastly, after allocation to the Division of taxes of 1,406 million euro, charges for integration of 145 million euro, the economic effects of purchase price allocation of 15 million euro and levies and other charges concerning the banking and insurance industry of 23 million euro, net income came to 2,815 million euro compared to 2,352 million euro in 2024, which included levies and other charges concerning the banking and insurance industry of 190 million euro, including the deposit guarantee component.

In quarterly terms, the operating margin decreased on the third quarter of 2025, attributable to an increase in operating costs, typical of the year-end, only partially offset by the increase in revenues. That trend is also reflected on the gross income and net income, impacted by higher net adjustments to loans.

The balance sheet figures at the end of December 2025 showed substantial stability in total intermediated volumes of funding and deposits from the end of December 2024 (+0.1%). In detail, loans to customers, amounting to 219,992 million euro, decreased slightly (-0.6%, or -1.2 billion euro), reflecting the declining trend in loans to businesses, partly offset by the positive evolution of loans to retail customers. Direct deposits from banking business, amounting to 260,614 million euro, grew slightly compared to the end of 2024 (+0.7%, or +1.8 billion euro) mainly due to an increase in amounts due to retail customers.

Business	Traditional lending and deposit collection operations in Italy and associated financial services.
Mission	To serve Retail, Exclusive, and Small and Medium Enterprise customers, including Agribusiness and non-profits, creating value through: – widespread local coverage; – focus on the characteristics of local markets, and the needs of customer segments serviced; – development of service levels to customers using different channels in order to improve the efficiency of the commercial offering; – development and management of products and services for the target customers, as well as of leasing, factoring and subsidised finance products for the Group in Italy; – the centrality of the roles of the officers responsible for the Regional Governance Centres, Area Governance Centres and branches as points of reference for the Group at local level.
Organisational structure	
Wealth Management & Protection Sales & Marketing; Digital Retail Sales & Marketing and SME Sales & Marketing Departments	Overseeing the Retail sector, which consists of the segments Individuals, Affluent and Retail Companies, the Exclusive sector (retail customers with high asset and wealth standing and complex financial needs) and the SME area (small businesses, businesses and top businesses with high complexity and potential for growth).
Agribusiness Department	Serving agriculture and agribusiness.
Impact Department	Aimed at developing the initiatives of Impact Bank and serving non-profit organisations.
Isybank	The Group's digital bank developed for customers that primarily use on-line channels, who can carry out operations that meet their needs autonomously and remotely, using the app and with the support of the Digital Branch.
Product companies	Prestitalia: a financial intermediary operating in the Italian market of consumer credit, specialising in the salary-backed loans segment.
Distribution structure	Approximately 2,400 Branches, including Retail, Exclusive and Business branches, distributed broadly throughout Italy, the Agribusiness branches dedicated to companies operating in agribusiness, and Impact branches dedicated to the non-profit sector. The territorial structure is divided into 14 Governance Centres: Agribusiness, Impact and 12 Regional Governance Centres, with around 310 commercial areas. In order to favour the commercial focus and guarantee a better control of the service level, there are three Commercial Managers, specialised by "commercial territory" (Retail, Exclusive and Businesses) that report directly to the Regional Manager. These were joined by the Digital Channels Bdt structure, as part of the strategic initiatives to develop the digital bank, and the Digital Branch Department, to oversee commercial relations with customers via the telephone channel and other related channels (chat, video calls) and the remote offering. Alongside the account manager, who is the point of reference in relations with customers, a fundamental role is played also by specialists dedicated to specific operating issues, to offer an increasingly comprehensive, tailor-made service. Moreover, to support the Network, Global Advisors, located throughout the entire country, are one of the strengths to consolidate the oversight of relations with high value private customers, also thanks to the off-site offering.

Wealth Management & Protection Sales & Marketing, Digital Retail Sales & Marketing and SME Sales & Marketing Departments

Investment and Pension Funds

The advanced advisory paid service "Valore Insieme", launched in 2017, proposes a global advisory model over all of the customer's assets, including real estate, also assisting customers in planning the transfer of wealth to their loved ones. New content has been available for customers who subscribe to the service since March 2025. The main changes in the "Asset Analysis Report" regard the inclusion in the chapter "Evolution of Your Portfolio over Time" of two new sections: the calendar of coupons, dividends and income from products held in the portfolio and the calendar of maturing products in the portfolio. In the chapter "Pension Analysis", the "Pension Position" section was added, which, in addition to the amount already paid, also reports the total payments planned for the current year and the details of those previously made. This information provides the customer with more evidence of any additional areas for tax deductions. The offering of portfolios in Best Expertise funds, dedicated to holders of the Valore Insieme advisory contract was expanded with two new balanced funds, Eurizon Global Cautious Allocation and Eurizon Global Allocation, and one equity fund, Eurizon Fund Global Equity, which joined the recommended portfolios. Moreover, in the second half, access to the Eurizon Multimanager Trend range, previously called Eurizon Exclusive Multimanager Trend and reserved to holders of the Exclusive package, was extended to all customers who subscribed to the Valore Insieme advisory service.

Also regarding asset management products, the offering was further expanded, promoting solutions aligned to the pursuit of medium- to long-term growth objectives, in addition to capital-protected solutions. The range of protected funds was expanded with the new funds Eurizon Soluzione Protetta Riserva, Eurizon Orizzonte Protetto 5 anni, Eurizon Soluzione Top Trend Protetta 5 anni and Eurizon Soluzione Protetta Imprese 1 anno, a restyling of the Epsilon Imprese Protezione 1 anno fund, targeted to legal persons. With regard to the offering aimed at portfolio diversification and capital growth, an offering of funds providing gradual entry into the stock market was implemented with the Eurizon Bilanciato 75 fund, which provides a nine-month phase of gradual entry into the stock market. Consistently, the gradual accumulation period of the new windows of Eurizon Bilanciato 25 and Eurizon Bilanciato 50 were increased from six to nine months. New bond funds which invest with a Buy&Watch approach were also launched: Eurizon Opportunità Obbligazionaria Valore, Eurizon Strategia Credito 3 Anni, Eurizon Strategia Obbligazionaria 5 anni, Eurizon Strategia Obbligazionaria High Yield 5 anni and Eurizon Obbligazioni Finanziarie 5 Anni. In the second half the multimanager offering of funds was also expanded, with the new range of 3 Eurizon Market Selection funds of funds, which invest in ETFs issued by Eurizon and by leading asset management companies. The new Eurizon Fund Aggregate Green Bonds Short Term thematic fund was also launched, specialising in investing in short-term global green bonds issued by governments and corporate issuers.

For insurance investment products, we continued to promote the Class I policies of Intesa Sanpaolo Assicurazioni with additional insurance coverage (accidental death or permanent loss of self-sufficiency) placed since October 2024, accompanied by the Class I offering without accessory insurance coverage, for customers that do not demonstrate this need. Specifically, in the first half, the placement of the new Class I policy, "Patrimonio Garanzia", was launched. This product is a whole-life Class I policy without insurance coverage, which invests in two segregated funds, which provides the guarantee of return of the amount invested in the event of redemption or claims by the Insurance Company. As regards Class III (unit-linked) insurance investment products, from January to April, the following were made available: Base Protetta 100 Blue Horizon, the internal protected on maturity fund of the Prospettiva Dublin Branch and Patrimonio Pro Dublin Branch policies and previous versions of the Prospettiva family, Valore Pro Insurance and Patrimonio Pro Insurance. In March, "Opportunità Dublin Branch" was made available. This is the new "single strategy" policy that allows customers to invest in a single thematic fund in line with the opportunities offered by the markets and to obtain protection on maturity. The internal fund, available up to 13 June, was called Trend Artificial Intelligence (TAI), with a focus on companies linked to the issue of Artificial Intelligence. From 16 June to 3 October, the internal fund Trend Infrastrutture Globali was available, with a focus on large international companies investing in infrastructure, while from 6 October 2025 to 23 January 2026 the Trend Aerospace and Defense fund was made available, with a focus on primarily European companies that develop and produce cutting-edge technology for the aerospace and defence industries. Intesa Sanpaolo Assicurazioni Dublin Branch may make new internal funds available over time and interested customers can subscribe a new contract, or ask to transfer the units held, completely switching over to the new fund.

The placement of certificates continued during the year, with a diversified offering, differentiated by structure, level of protection and duration. The offering prioritised products with fully protected capital on maturity, accompanied, as always, by products with conditionally protected capital. During the year, product durations were modulated based on the variable evolution of the market, with specific appreciation expressed for 4- and 5-year products.

Lastly, the offering of savings certificates has been maintained, also in combination with the subscription of asset management products.

Regarding the Robo4Advisor, the percentage of consultancy carried out by relationship managers with the support of this tool continued to grow significantly.

Mortgages

In 2025, Intesa Sanpaolo introduced new offerings for customers aimed at further enhancing its catalogue, with a particular focus on "Green", "Youth", "Consap", and "Subrogations".

For under-36s applying for a loan for the purchase of their first home, the offering of the dedicated fixed-rate mortgage loans continued, also with high LTV (over 80%) and a duration of up to 40 years. The favourable economic terms for under-36s were also extended to the target of customers from 36 to 45 years of age. The discounts, applicable to all durations and LTV levels, have also been maintained, which include the waiver of instalment collection fees and payment due or receipt notice fees, and the activation of flexibility options, while for applications for fixed-rate mortgages with a duration of 35 or 40 years and LTV of less than 80%, a discount of 50% was applied on processing fees.

The fixed-rate offering dedicated to customers that underwrite mortgage loans backed by the primary residence guarantee – Consap continued, only for mortgage loans with LTV exceeding 80%, which provided a discount of 115 basis points in addition to eliminating processing fees, instalment collection fees and payment due notices, plus additional options.

The trend in interest rates in the money markets has provided the opportunity to subrogate considerable volumes disbursed, also recently, by other banks. Intesa Sanpaolo continued its Subrogation Promotion, offering a discount of 30 basis points for LTV up to 80% on fixed-rate subrogations exceeding 100 thousand euro.
The offering of Green mortgage loans, which consider the energy consumption of the property expressed in Kwh/m^2 (PED) of the year of construction (pre- or post-2020) its location in one of the six climate zones of Italy, continued. This made it possible to ensure the utmost transparency to customers, giving them the option to subscribe a product in line with regulations set out in the European Taxonomy. During the first half, favourable terms improved, with a reduction of 50 basis points in the interest rate (compared to the previous 35 basis points) and the cancellation of processing fees. As an additional element of value of this promotion, please remember that this Green discount can be combined with the Youth, Consap or Subrogations promotions.
After loans and transactional products, mortgage loans were also impacted by the isytech process: specifically, during the first half, the pilot project of XME Mutuo was launched, which was then extended to all the Regional Governance Centres of the Banca dei Territori Division. With the new loan, customers can obtain 100% of the value of the property, also for second homes, with a duration of up to 40 years (also for subrogation) for under 40s, and flexible durations with annual steps. Releases continued in the second half, achieving omni-channel development brand (branch, off-site offering, remote and in-self offerings), granting customers the option to choose how and where to interact with the bank, always with the human support of their advisor.

Personal loans

The offering on multiple-channel personal loans continued, with a particular focus on digital sales supported by various commercial initiatives. Specifically, thanks to XME Prestito Diretto, the fully digital special-purpose loan of the Bank, customers can finance the purchase of partner products directly online from their home banking, both using the mobile app and internet banking. The online catalogue is rich in some of the most exclusive brands and products on the high-tech market. which, in mid-December, it was enriched due to a commercial agreement with EssilorLuxottica, among leading groups in manufacturing and selling glasses.
As part of the digital evolution of the Bank, which is based on principles of using multiple channels and simplifying products, the release of the new product XME Prestito which replaced XME Prestito Facile concluded in February. The instalment line of credit XME Spensierata was also involved in the bank's digital transformation, and was replaced by the new product SpensieRata. Moreover, with a view to streamlining the product range, XME Facile Monorata was ported to the isytech platform, as part of XME Prestito. Thus, for applications for personal loans to consolidate outstanding loans with Intesa Sanpaolo and/or other banks, customers can use XME Prestito, selecting the new "Macrobisogno Rata Unica". Intesa Sanpaolo also continued the activity of directing customers towards Prestitalia, a Group company specialised in the sale of salary-backed loans, for the XME Prestito Cessione del Quinto (CQS), XME Prestito Pensionati INPS (CQP) and XME Anticipo TFS (Trattamento di Fine Servizio) products for public sector pensioners.

Protection and Welfare

In the area of Healthcare coverage, several promotional initiatives continued up to March: one targeting retail customers that subscribed XME Protezione (the flexible multi-guarantee insurance solution that allowed customers to purchase coverage in the various areas they need, such a Healthcare, Home and Family) and one for business customers that subscribed collective healthcare policies. The first initiative, "XME Protezione Salute e Infortuni", protected the health of customers and their family members, with a discount of 20% on the premium for Infortuni+ coverage for those purchasing a Healthcare module and an Accident module. The second initiative, "Salute Protetta", dedicated to all Business customers who already subscribed a Healthcare product (Piano Sanitario Rimborso Spese Mediche or the Collettiva Malattie Gravi policy) provided a discount of 20% on the premium for the first year of the second product purchased between the two.
An additional two initiatives were activated from 14 June to 31 December. The "XME Protezione + Valore" promotion, dedicated to new subscribers of XME Protezione, which increased the value in the discount brackets if the customer purchases one or more modules, choosing from Casa Fabbricato+, Infortuni+, Ricoveri e Interventi and Malattie Gravi+. For the Infortuni+ and Ricoveri e Interventi modules, the value is increased further if the insured is a minor. The second promotion, dedicated to retail businesses, SME or agribusiness companies, is on the "Collettiva Malattie Gravi" policy and provides a discount of 20% for customers on the first year's premium, with the goal of supporting companies that assign value to protecting their employees.
Also in the Healthcare area, customers that signed up for the Salute XME Protezione modules subscribed from January 2021 to November 2024 can tacitly renew the contract without the maximum limit of 4 annual renewals anymore, and without the new to fill out a new health questionnaire, guaranteeing insurance continuity for them. In October, an upgrade of the Claims Tracking was made available for retail customers, with a multi-channel approach, adding information and functionalities through the review and introduction of new progress statuses for claims, and the extension of the Document Upload function.
The process of technological evolution of protection products continued. Thanks to the isytech project, both when finalising an XME Mutuo and in the repayment phase, protection policies can be proposed on the underlying asset and the loan: Incendio Mutui, which maintains the features of the current product, and ProteggiMutuo Smart, customisable and flexible in the event of several joint mortgage holders of the same mortgage loan.
Protection is a key element, also in managing company assets. For this reason, Intesa Sanpaolo decided to assist businesses with "Proteggi Business", protection solutions designed to deal with unforeseen events and support companies in interruptions of business due to damages or unexpected events. The following policies are part of the Proteggi Business initiative: Tutela Business - Commercio and Tutela Business - Manifattura, Cyber Protection Business and RC Ambientale. On 17 May, these policies were joined by the new Protezione Catastrofi Naturali Business policy, to meet the requirements of the Ministry of the Economy and Finance Ministerial Decree no. 18/2025, which introduced the obligation for Italian businesses to have insurance against damages from natural disasters and catastrophic events. The new policy Protezione Catastrofi Naturali Business provides both mandatory coverage (according to those set out in the Ministry of the Economy and Finance Ministerial Decree no. 18/2025) and optional supplementary coverage.
In the context of welfare, from the second half of 2025, employees of companies that are customers of the Welfare Hub platform can activate a new account agreement. In December a prize contest was activated, which allows them to receive a 50 euro Amazon gift card if they subscribe a new XME Protezione policy with at least 4 modules, of which at least one in the Healthcare area.

Young people

In addition to the initiatives relating to mortgages mentioned above, Intesa Sanpaolo continued to bring young people closer to the banking world through personalised solutions, such as "XME Conto UP!", a current account for children under the age of 18. The prize contest SwatchPAY! 2025 was activated for them from 4 June to 31 October, which provided a 90 euro voucher to purchase a SwatchPAY watch.
Up to 26 April 2026, under 35s can open an account using the isyPrime Plan on Isybank, the most complete promotion of the range, with zero monthly fee and stamp duty paid by the Bank until the customer turns 35. Isybank also participates in the Carta Giovani Nazionale (CGN) project, an initiative promoted by the President of the Council of Ministers - Department of Youth Policies and Universal Civil Service, targeted to young Italians and Europeans resident in Italy, aged 18 to 35 (until they reach their 36th birthday) which provides them with subsidised access to goods, services, experiences and opportunities. Up to 31 December, holders of the Giovani Nazionale card had the option to open an account with a Piano isyPrime plan by taking advantage of the free fee and stamp duty until they reach age 40.
The "Giovani e Lavoro" programme continued, aimed at supporting the employment of young people aged 18 to 29, which offers targeted training, free of charge, both for young people and for the participating businesses, favouring the effective matching of labour demand and supply, in addition to the Generation4Universities, which helps young university students start a career that offers opportunities for professional and personal growth, and involves universities throughout the country.

Transactional products and digital payments

During the year, important changes were made in transactional products. Since April, it is now possible to add an Intesa Sanpaolo debit card issued on the PagoBANCOMAT® network to Google Pay wallets, to pay using Android or Google Wear OS devices. As part of the Bank's digital transformation, in April the roll-out of the new range of payment cards begun, then available for the entire network since June. Replacing the previous cards, the new XME Debit Card, XME Credit Card and XME Credit Icon were created. All the cards are available to customers instantaneously and in digital format, with the option to also request the physical card, made of recycled PVC. The blind notch, a small, arch shaped notch on the side of the card that allows blind customers to recognise the card, is also on the XME Debit Card. The XME Credit Icon card, available on both the Visa and Mastercard networks, is reserved to customers who want higher credit limits, dedicated services and personalisation of the layout. XME Credit Card Icon Visa cards provide access to the my Visa platform to benefit from discounts and use additional services. To recognise and increase the loyalty of customers that hold the Exclusive Credit Card, in December the Exclusive Club was created, a new loyalty programme through which, by using their cards, customers can rack up points to reach prestigious gifts.
Since the end of October, Intesa Sanpaolo has expanded the range of payment solutions available by launching the payment service via the SkiTap26, the new wearable contactless wristband developed in collaboration with Visa, Snowit and Tapster, created for the Milano Cortina 2026 Olympic and Paralympic Games. The device include two distinct functions, due to two different chips place on opposite sides of the wristband: an NFC chip for contactless payments and an RFID chip to load your ski pass and access the Snowit-enabled lift facilities.
As regards current accounts, in the first half, numerous promotions on the XME Conto were provided. On 23 June this account was replaced by a new range of accounts with incentive plans. There were three solutions to choose from: XME Conto Silver, the most economical, providing essential services for customers that carry out limited transactions and have simple needs; XME Conto Gold, for customers with high levels of transactions and more complex needs, such as using an XME Credit Card for themselves or their family and access to discounts on the main operations; XME Conto Platinum, suited to customers requiring free transactions, who have more complex needs, including high-level needs (such as the XME Credit Icon card). Joint accounts with incentive plans can be applied for also at the branch, via app, and through remote offerings, and always include a free debit card and an administered deposit. The monthly fee for the account can be reduced to zero, for example, by direct deposit of salary or holding protection or Valore Insieme products.
Moving on to the business area, from 2 May to 31 July 2025, the new offering "Prima Prova, poi Scegli" was available for Retail Businesses and Agribusiness Customers (Retail Businesses) that do not yet hold Commercial Cards or POS from Intesa Sanpaolo. Customers could test out the Carta Debit Plus, Carta Credit and SmartPOS Mini with a printer with zero fees for two months. Within this term they could decide whether to continue to use these products or return them with no additional costs. Moreover, in July the Visa Smart Delay service was activated, to allow holders of Visa or Mastercard Credit Commercial cards to access partner airport lounges in the event of flight delays of 60 minutes or more. The promotional offers for POS terminals continued, including the Micropayments initiative, which enables small business owners to obtain refunds of the commissions charged on transactions of amounts up to 10 euro. Additionally, for the second year in a row, SoftPOS, the solution that transforms smartphones into POS, won the prestigious honour of "Product of the Year" in the "POS Financial Services" category.

Multichannel Project

During 2025, the development of multi-channel and digital banking activities continued, in line with the Group's ESG targets, with the introduction of new customer journeys, innovative sales processes that make it possible to interact with customers at any time using digital channels and formalise contracts in a fully digital, dematerialised manner, even remotely, as well as the enhancement of the available customer journeys. With the goal of supporting customers' operating autonomy on the channels, the new Anticipo Transato POS Customer Journey was released. With this journey, customers can forward requests for drawdowns from the Anticipo Transato POS credit line and manage any credit balance by themselves, directly from their Inbiz or My Key Business platform, guaranteeing simplification of the entire operational process. For business customers, thanks to intuitive tools and advanced functionality, since last year, all newly activated business customers now access Confirming through the Inbiz portal. In January 2025 a gradual migration plan to Inbiz was begun for customers that already operated using Confirming on the old portals. Due to the integration of Confirming into Inbiz, companies can manage all their financial assets through one single entry point, benefiting from a simplified digital experience that improves their overall operations. Lastly, to further enhance the ability to exchange documents between customers and the Bank, the possibility to use Scambio documentale was also extended to subscribers of the My Key Business account.
As part of the Group's digital transformation, the "isytech" project, implemented by adopting cloud native technological structure and processes, continued. In addition to simplifying the activities required by the Network, this new system enables the move from a multichannel approach to an omnichannel approach, where the user's experience is the same between the branch

manager and the customer, irrespective of the channel used to purchase the product (App, website or branch). The programme includes a series of gradual releases of products and services, first tested on the pilot branches and then gradually extended to all Regional Governance Centres. As mentioned in the previous paragraphs, in the first quarter, the release of the products SpensieRata and XME Prestito was completed, along with the loan protection policies. During the second quarter, the roll-out of new accounts with incentive plans and new cards was carried out, a process which was extended to the entire network by the end of June. XME Salvadanaio also joined in the Group's digital evolution process and the new version is now available for the entire network. In the second half, the isytech process also involved mortgage loans, combined policies and investments, while at the end of November, the pilot phase of the new app to manage accounts and cards as well as customers' investments in an integrated, simple manner, was launched.

Agreements

The partnership between Intesa Sanpaolo and Confindustria continued: the new four-year agreement for growth of Italian companies makes available 200 billion euro up to 2028 to provide new momentum to the Italian production system and capture the opportunities of instruments such as Transition 5.0 and A.I., thus supplementing the resources already allocated by the Bank for the achievement of the NRRP objectives. The agreement with Confcommercio was also renewed. The joint objective is to facilitate access to credit for its members, also due to a dedicated credit line of 5 billion euro made available by the Bank, and to strengthen subsidised conditions in transactional banking, firstly by refunding fees on micropayments of up to 10 euro for all of 2025. Also in 2025, Intesa Sanpaolo has renewed its commitment to tourism, due to its collaboration launched with the main sector trade associations, including Federalberghi. The new partnership agreement is part of the wider CresciBusiness Programme, which assists Retail Companies and freelance professionals in a process of digital growth and sustainable transition. Federalberghi members are offered solutions that aim to facilitate transactions relating to collections and payments, as well as tools to facilitate their access to credit, due to the new dematerialised and digitised process. Moreover, in September an agreement was signed with Confindustria Alberghi, Federturismo and Federterme to relaunch Italian tourism companies, which makes 10 billion euro available to them, as part of the 200 billion provided by the Four-Year National Agreement with Confindustria. The agreement provides for growth and competitivity initiatives through dedicated financial solutions and services.
To develop and promote new possible initiatives to support the internationalisation of Italian companies, the agreement with ICE-Agenzia was renewed and two new agreements with SIMEST were signed. Also with the same goal, in March, Intesa Sanpaolo renewed its partnership with Innovit, Italian Innovation and Culture Hub in San Francisco, an initiative promoted by the Ministry of Foreign Affairs and ITA, in collaboration with the Italian Embassy in Washington D.C. and the Consulate General of Italy in San Francisco. During the first half, to strengthen the sector of capital goods operational leases, with a view to development that focuses on addressing SMEs' needs, including non-financial ones, a strategic partnership between Intesa Sanpaolo and Grenke was activated. Operational since June, Grenke Italia will make available to SMEs resources of around 2 billion euro over the next 3 years to realise projects of operational leases of capital goods and services. The operation took shape through the Bank's contribution of its entire stake in Rent Foryou to Grenke. With regard to the Intesa Sanpaolo-Federalberghi agreement signed in May, member companies were provided the option to access a dedicated lease offering by Grenke Italia.

Loans

In 2024, Intesa Sanpaolo has launched the programme "Your Future is Our Business", which also continued in 2025, designed to aid the recovery and future growth of Italian SMEs, with a range of services that can assist businesses of all sizes and across different industries. The Bank is committed to offering a credit plafond of 120 billion euro for the period 2024-2026 to accelerate the sustainable and innovative recovery of investments. The priority areas of intervention are: investments to enhance business competitiveness by capitalising on opportunities linked to Transition 5.0 and other initiatives such as the Renewable Energy Communities (RECs) and self-consumption; research and access to new markets for the growth of Italian businesses; promotion of digitalisation and protection against cyber risks; and concentration on particular industries in Italy, with a particular focus agribusiness and tourism. The Transition Plan 5.0 is one of the most important measures in the National Recovery and Resilience Plan, to guide the transformation and competitiveness of the Italian business system. The 2025 Budget Law introduced important changes to facilitate its use by businesses, and Intesa Sanpaolo is the first bank to support companies in availing of this subsidy, working in collaboration with an extensive network of partners. Intesa Sanpaolo confirms it roles as the reference partner for SMEs in key sectors of Italy, to support investments and guide businesses towards sound, sustainable growth. To support businesses in achieving transactions of strategic importance, the new product "Finanziamento MLT con garanzia SACE Growth" was created, which businesses can use to implement their projects planned as part of the agreement signed with SACE. The agreement provides four modules for actions, each with distinct beneficiaries and different purposes, including the pursuit of environmental objectives, and is an update to the SACE Futuro agreement, which took on a new form in April, incorporating the SACE Green agreement. In November, SACE modified the terms of the General Conditions of the SACE Growth Agreement, imposing new clauses with a strong operational impact. Following the subsequent round tables at ABI, SACE ordered the revocation of the SACE Growth agreement, effective from 2 January 2026. Therefore, this can no longer be used by banks. In any event, SACE continues to support Italian companies through public guarantees issued outside the agreement. For businesses that do not benefit from public guarantees, in pursuing investments targeted to ecological transition, digitalisation and internationalisation, the Plus initiative was renewed, which provides a benefit for new loans, also applicable in addition to discounts normally granted by agreements. The European Investment Fund (EIF), which in 2022 granted Intesa Sanpaolo two guarantee credit lines under the InvestEU programme, following the positive feedback on the loans for "Innovation and Digitalisation", granted the Bank an increase in the credit line of an additional 150 million euro in guarantees, bringing the total amount of the guarantee credit line to 250 million euro. This initiative is added to the previous increase in the credit line dedicated to Environmental Sustainability, bringing the available funds for guarantees to a total of 400 million euro.
Intesa Sanpaolo has developed a wide range of ESG products and services, including promoting RES - Renewable Energy Sources already supported by specific Ministerial Decrees that ensure incentives for generating renewable energy. The offering includes: medium/long-term solutions to support investments to reduce energy dependence; short-term support in managing and mitigating the increase in costs of commodities; consulting and advisory services to access tenders and implement complex

projects; Transition Plan 5.0, which specifically provides for investments to incentivise the adoption of clean sources; and dedicated guarantees, including those of the new SACE Project Finance Guarantee, to support renewable energy projects. This offering also includes Renewable Energy Communities, configurations that can contribute to the achievement of energy and ecological transition targets: from the S-Loan CER and S-Loan Progetti Green solutions to the CER Offering for non-profit partnerships and entities, in addition to the consultancy of qualified partners such as Enel X, Regalgrid and Deloitte. Also regarding ESG, in June, CO_2 Mitigation Solutions was made available. This is the new program in which Intesa Sanpaolo, in partnership with Carbonsink, makes available to businesses a tool to measure their CO_2 emissions generated, to define objectives and reduction actions by intervening on business processes, on the one hand, and on the other, gives customer companies access to certified carbon credits for residual emissions, financing projects with a high-quality environmental impact.
Intesa Sanpaolo is also engaged in supporting employment in Italy. To that end, in the second half, the new offering Solution-Loan Lavoro was created to incentivise investment projects capable to creating jobs, represented a discount on the reference price that can be combined with the S-Loan Progetti Green and Crescita Impresa loans. The companies are now required to sign a "Declaration of Commitment" relating to the creation of new jobs. This formal commitment is the prerequisite for obtaining the subsidy on the reference rate of the loan.
Intesa Sanpaolo's commitment also extend to creating businesses throughout the country. To that end, in the second half it signed the agreement promoted by the Ministry of Labour and Social Policies, the Italian Banking Association (ABI) and Invitalia, which made available two new public incentives dedicated to young people under 35 (unemployed, job seekers or working poor) who intend to start a business, work as independent professionals or freelancers: "Resto al Sud 2.0" and "Autoimpiego Centro Nord". With a credit line of 576 million euro, these incentives offer subsidies in the form of vouchers and non-repayable grants valid in all economic sectors, except for agriculture, fishing and aquaculture. To support young business owners, Intesa Sanpaolo provides a restricted account, into which incentive payments will be credited, with free account and management fees, for the entire duration of the initiative, in addition to an ordinary bank loan to cover the portion not covered by the subsidy as a grant.

Sviluppo Filiere

The Sviluppo Filiere programme is designed to support businesses of all sectors and sizes by facilitating access to credit and focusing on the relationship between the lead companies and their network of direct and indirect suppliers and/or their reseller network, enabling a better understanding of the financial needs of the individual sectors. Intesa Sanpaolo is continuing to develop, along with the support of its partner companies, the offering of the programme in response to the growing need for oversight of cyber risks and the introduction of artificial intelligence in companies' production processes.

Agribusiness Department

The Agribusiness Department is the Intesa Sanpaolo Group's national network dedicated to the agri-food sector, which acts as a strategic partner to support the sector, contributing to the growth, innovation and competitiveness of companies that represent one of Italy's most important production sectors. The Department has 247 branches located throughout Italy, with specialist professionals serving around 80 thousand customers. The Agribusiness Department positions itself as the main qualified interlocutor to assist operators in all phases of development, supporting their investments and promoting new business projects, with specific attention to the criteria of sustainability and the circular economy.
In June, Agri-Talk was launched, a cycle of meetings created to promote the Group's integrated offering, which involves institutional players and businesses that are symbols of agro-food made in Italy. At the first event, dedicated to the wine industry, the Bank took the opportunity to announce the new allocation of credit worth 10 billion euro to support the agri-food supply chains, of which 1.5 billion euro for the wine supply chain. At the second event, dedicated to the milk and dairy supply chain, the Bank announced the allocation of a credit line of 1.5 billion euro for this segment. The goal is to assist these businesses in their growth, market diversification, and in building value for the country by consolidating their role as world-recognised excellences.

Impact Department

The Impact Department is dedicated to managing non-profit customers and coordinating the activation and management of social impact funds created to foster the financial inclusion of individuals, households and non-profit organisations. Specifically, the "Fund for Impact", with a value of 300 million euro, makes it possible to disburse new loans of up to 1.5 billion euro, targeted to categories of persons who have difficulty in accessing credit, for the purpose of carrying out their projects, such as, for example: university students, working mothers, families involved in their children's study and growth processes, unemployed people near retirement, caregivers providing assistance to non-self-sufficient family members and young workers who have just finished their Universal Civil Service. In April, a new online platform was made available, that can be accessed from the Intesa Sanpaolo website, to facilitate access to credit and allows the interested parties to automatically apply for activation of Intesa Sanpaolo's social impact products, without having to go to a physical branch. The "Fund for Impact" is accompanied by the "Solidarity and Development Fund", with a value of over 50 million euro, which enables loans to non-profit organisations with important projects, which would otherwise be excluded from ordinary credit.
The Department's commitment to supporting the social economy in the strategic and organisational development of the non-profit sector took the shape of financial support, including subsidies and promotion of the managerial development of workers in the non-profit sector. In September, the second session was launched of the Three-Year Executive Master's Degree in Management dedicated to workers in the non-profit sector, codesigned with the 24ore Business School and Intesa Sanpaolo for Social Impact. The support to and assistance of projects of organisations in the Italian non-profit sector also takes the form of specific initiatives, such as the "Premio Innovazione Sociale" award, launched by Fondazione Cassa Depositi e Prestiti in collaboration with the Intesa Sanpaolo Group, and "Welfare che Impresa", supported in collaboration with Fondazione Italia Accenture, for the purpose of managerial growth, which provide subsidised services and tools for the awardees. The Department

also supports Italian philanthropy, contributing to the development of Osservatorio della Filantropia and CSR, permanent independent initiatives which conduct analyses every year of more than 400 entities, including foundations, philanthropic organisations and companies engaged in corporate social responsibility actions and the related financing opportunities for the non-profit sector, to generate new knowledge and promote innovation through synergies using a multi-stakeholder approach.
The "For Funding" platform strengthened its leadership in Italian crowdfunding also in 2025, enabling, from 2017 to the end of 2025 over 550 projects with high social value in the areas of regenerating the local environment, healthcare, social inclusion, the fight against poverty, environmental protection and many other social and solidarity areas.

Isybank

Isybank, established in June 2023, is the digital bank of Intesa Sanpaolo, based on state-of-the-art technology, which targets both Intesa Sanpaolo customers who do not use the physical branches as they are mainly digital users of banking services and oriented to mobile banking, and to new customers, to whom it offers a comprehensive experience via App and the website, with support from the Digital Branch. During 2025, Isybank further strengthened its offering by expanding its product catalogue, services, and features. Specifically, in January, the Bank made the new "Investments" section available, with which customers can subscribe Eurizon Capital mutual funds: Epsilon Obbligazionario Breve Termine classe isy; Eurizon Obbligazionario Etico classe Isy or Eurizon Soluzione ESG 40 classe isy, and from 13 May, also the funds Eurizon Azioni Europa and Eurizon Azioni Internazionali, reserved to Isybank. Its operations entail only subscriptions and redemptions and it is under the appropriateness regime, with a customer journey with simplified access. Instead, in transactional products, since the end of October, it is now possible to register Isybank cards using physical media (debit, credit and prepaid cards) on the main payment wearables: Tapster, Swatch and Garmin. Once registered, the cards can be used to make quick, simple and secure contactless payments, just by tapping the wearable device on the POS, without needing to use your smartphone or physical card.
In mid-December the range of loans offered on the Isybank app was also expanded: offering the insurance product ProteggiPrestito from Intesa Sanpaolo Assicurazioni and Intesa Sanpaolo Protezione and the option of jointly holding the loan, which makes it possible to meet customers' needs.
As mentioned above, Isybank has a specific focus on young people, who can take advantage of a promotion, for people under 35, that eliminates the fee of the isyPrime account - the most complete plan - and provides payment of stamp duty by the bank.

Product companies

Prestitalia is the "product company" of the Intesa Sanpaolo Group for salary-backed loans and advances on employee termination indemnities.
A financial company that operates in the consumer credit market, highly specialised in salary-backed loans, it is one of the leading operators in the sector, with an average stock of around 3.1 billion euro.
As at 31 December 2025, with around 57 thousand completed applications, it had disbursed loans totalling 1.2 billion euro, through three main channels: Intesa Sanpaolo branch network supported by "light" agents (tied agents that are natural persons), third-party agencies, and online channel. In November 2025, the new distribution channel through the Poste Italiane was activated, which will become fully operational during 2026.
The range of offerings includes "Cessione del Quinto per Pensionati", "Anticipo TFS" (a product reserved for former public employees who want to access all or part of their severance pay without waiting for the periods set by the Public Administration), and "Cessione del Quinto per dipendenti pubblici e privati" and, since the end of 2025, "Prestito Delega" (personal loan paid through withholdings on salary for employees of private and para-public companies).
In addition, the agents supporting Intesa Sanpaolo branches may propose POS terminals to customers.

The **IMI Corporate & Investment Banking Division** oversees corporate and transaction banking, investment banking, public finance and capital markets activities, in Italy and abroad.

In 2025, the Division recorded operating income of 4,824 million euro (representing around 18% of the Group's consolidated total), up 21.8% compared to the previous year.
In detail, net interest income, amounting to 3,062 million euro, was substantially stable on 2024 (-0.4%). Net fee and commission income, amounting to 1,318 million euro, increased by 2.5%, essentially due to the trend in the structured lending and investment banking segments. The profits (losses) on financial assets and liabilities at fair value, which amounted to profit of 444 million euro, showed a sharp increase compared to the loss of -402 million euro in 2024, attributable to the results of the Global Markets area. Specifically, the segment was positively impacted by the management of financial risks connected with transactions in certificates measured at fair value, also in relation to the decrease in market interest rates.
Operating costs amounted to 1,551 million euro, showing substantial stability (-0.1%): the increase in personnel expenses was offset by the decrease in administrative expenses and depreciation and amortisation. As a result of the above revenue and cost trends, the operating margin came to 3,273 million euro, up 36% compared to the value recorded last year. The performance for gross income was similar, amounting to 3,035 million euro (+30%) despite the recognition of higher net adjustments to loans

and provisions and net impairment losses on other assets, including provisions and write-downs to support the de-risking. Lastly, net income reached 2,047 million euro, above the 1,566 million euro realised in 2024 (+30.7%).

In the fourth quarter of 2025, the IMI Corporate & Investment Banking Division reported a reduction in the operating margin compared to the third quarter, attributable to the increase in operating costs and, to a lesser extent, the decrease in revenues. Gross income and net income also decreased, impacted by higher net adjustments to loans and provisions recorded during the quarter.

The Division's intermediated volumes were substantially stable compared to the end of 2024 (+0.1%). In detail, loans to customers, amounting to 124,132 million euro, decreased (-1.5%, or -1.9 billion euro), due to the declining trend in Global Corporate and in institutional customers, partially offset by the positive performance of Global Markets. In contrast, direct deposits from banking business, amounting to 127,337 million euro, were up (+1.7%, or 2.1 billion euro), mainly due to the growth in operations in certificates, partially offset by the reduction in securities issued by the Luxembourg subsidiary and within Global Markets.

Business	Corporate and transaction banking, investment banking, public finance and capital markets, in Italy and abroad.
Mission	To act as a strategic, global partner in supporting companies and financial institutions in achieving balanced, sustainable growth, including at the international level, through a specialised network of hubs, branches, representation offices and subsidiaries that engage in corporate banking operations. To foster collaboration between the public and private sectors with the aim of supporting the creation of infrastructure and sustainable investments, including by pursuing international growth opportunities in countries of strategic interest to the Group. To provide all customers of the Intesa Sanpaolo Group with specialised skills in the areas of Investment Banking, Structured Finance, Capital Markets and Transaction Banking.
Organisational structure	
Client Coverage & Advisory Coordination Area	This structure develops and handles relations with Italian and international Global Corporate customers, availing, at central level, of the commercial action of the Industry units (Automotive & Industrials; Basic Materials & Healthcare; Energy; Food & Beverage and Distribution; Infrastructure; Real Estate; Retail and Luxury; Telecom, Media and Technology) and at local level of the Italian and international network of the Distribution Platform & GTB Coordination Area. The Department is responsible for commercial relationships with financial institutions on domestic and international markets, with a dedicated service model organised by customer segment (i.e., Banks, Insurance Companies, Asset Managers, Financial Sponsors, Sovereign Funds and Governments). The Department guarantees the oversight and development of origination and advisory activities for customers, including M&A, Debt and ESG issues, also through specifically dedicated units, pursuing the cross-selling of products and services with an Originate to Share approach, maximising the synergies between corporate, institutional investor and product desk relations.
Distribution Platform & Global Transaction Banking Coordination Area	The structure oversees the development of the Italian and international network of the Division, ensuring the correct handling of operating and commercial activities for its major customers, through a specialised network of local structures in Italy and abroad. It guarantees the oversight, for the entire Group, of a wide range of transactional services, such as cash management, trade & export finance and securities services, also through Inbiz, the Corporate Internet Banking platform. It contributes to identifying and distributing loans and marketable assets through a single hub which mobilises and optimises the Division's credit balance sheet, in line with the Originate to Share process.
Global Banking & Markets Coordination Area	The scope of this structure includes capital markets, structured finance and primary markets (equity and debt capital markets) supporting all Group customers, including medium-sized enterprises. Moreover, portfolio management and ownership risk are monitored through direct or indirect access to the markets.
Distribution structure	In Italy, the IMI Corporate & Investment Banking Division has a total of 6 geographical areas dedicated to corporate customers and public customers. At the international level, it operates in 23 countries in support of the cross-border operations of its customers through a specialised network of hubs, branches, representative offices and subsidiaries that engage in corporate banking activity.

Client Coverage & Advisory Coordination Area

In a market environment that is marked by geopolitical uncertainties and trade tensions, with a cautious approach to risk by investors, the structures of the Client Coverage & Advisory Coordination Area continued to assist their customers in complex and strategic financial transactions, confirming its leadership on the market and positive performance in terms of the results achieved in recent years. Specifically, the Customer Relations, Global Corporate and Institutional Clients worked in constant synergy with the Corporate Finance & Advisory structure and product desk, pursuing the goal of favouring and consolidating dialogue with its target customers, making it possible to identify and develop numerous business opportunities.

In 2025, Global Corporate confirmed to perform its role as strategic partner to its Italian and international customers, supporting them by organising and participating in a number of financing and investment banking transactions, thanks to its specialised expertise linked to the Industry model and the cooperation with the other structures of the Division. At domestic level, the Bank participated in syndicated loans in favour of Telecom Italia, Prysmian, Saras, CPL Concordia and the San Donato Group in the roles of MLA and Bookrunner, in syndicated loans in favour of the Arvedi Group, Marcegaglia Group and an important player in Italian large-scale retail, in the role of Global Coordinator, and in the syndicated loan for Angelini Pharma in the role of Bookrunner. The Division participated in several international syndicated loans, including those in favour of Eiffarie, APRR, the Acciona Group, Redexis, ATM Nortegas, Recurrent EnergyPPF, Canal+ and Eutelsat, in the roles of Global Coordinator, Bookrunner and MLA, and for Ternium Mexico also in the role of Underwriter. It also provided financial support in significant extraordinary transactions carried out in the period, such as the loan to Prada Group for the acquisition of Versace by Capri Holdings, in which the Bank acted as Global Coordinator, MLA and Underwriter. The Group also participated in the loan in favour of VMEDO2 for the acquisition of Daisy, in the role of MLA, in the pool loan in favour of Megamark to support acquisitions in the south of Italy and in the syndicated loan in favour of Igneo Infrastructure for the acquisition of City Green Light, in the roles of Global Coordinator and MLA.

In Sustainable Finance, the ESG Advisory desk supported customers in identifying and structuring Green, Social, Sustainability and Sustainability-linked products and instruments. This resulted in securing the role of Sustainability/Green Coordinator and ESG Framework Structurer in numerous transactions involving syndicated loans and bond issuances. Specifically, the Division acted in that role in the syndicated transactions of IGD, Bracco Imaging, FNM, Feralpi, EF Solare Italia, and Alantra Solar and, thanks to its expertise developed in ESG issuances, participated in numerous loans, including those in favour of ENEL, Mundys, Technip Energies, TRIG, RWE and Leonardo. Bilateral ESG loans specifically included those for Amplifon, Ferrovie dello Stato and Terna for the Adriatic Link project. The Bank also acted as Sustainability Coordinator in structuring the first Sustainability-Linked Financing Framework of Nextchem, and pioneered an ESG Cash Management product, supporting Boggi in structuring Sustainability-Linked Cash Pooling, confirming that the efficient management of corporate liquidity can be integrated with ambitious climate-related and environmental targets. Rating Advisory activities focused on supporting customers in liaising with the main rating agencies, in line with issuers' financial and industrial strategies. In that context, the Bank assisted, inter alia, FNM in the continuous monitoring of its rating, activities which contributed to stabilising its outlook, and guided the group's debt refinancing, and Plures in obtaining public ratings, for the first time, from two ratings agencies, contributing to strengthening its credit profile and visibility on the market. In project financing, the Division took part in numerous operations, including: at domestic level, the loan to Tangenziale Esterna, in which the Bank acted as Global Coordinator, and the loan to a portfolio of biomethane plants developed by Retina; and, at international level, the loan to the largest solar park in New York State (USA), developed by Greenbacker Renewable Energy Company, the loan to a solar park in Illinois (USA), developed by Earthrise Energy and the loan to Metlen to refinance its solar portfolio in Australia, and the development of two solar parks in Italy, the loan to Vena Energy to develop renewable projects in the Philippines, and the refinancing of Eteck (the Netherlands), one of the leading operators in supplying sustainable heating and cooling solutions for buildings. In capturing and storing CO_2 (CCS), the Bank participated in two international syndicated loans: the loan to Stockholm Exergi to build one of the largest CCS plants in the world in Sweden, and the loan to Liverpool Bay T&S, the Eni project for transport and storage of CO_2 in the United Kingdom. In addition, refinancing agreements were signed with Adapteo, a provider of modular spaces in the social infrastructure sector in Central and Northern Europe, and with Peel Port and DP World Australia, major port operators in the United Kingdom and Australia, respectively.

In the real estate sector, the Group strengthened its leadership through high-profile operations in Italy and internationally: in Italy, the Department acted as MLA, Bookrunner and Green Loan Coordinator in the loan to Fondo Ippocrate (DeA Capital RE SGR), for the purpose of refinancing debt and aligning assets to ESG criteria, and supported the repurchase of Orio Center, bringing ownership back under Italian control; internationally, the Bank participated in the hybrid subordinated issue of Aldar Properties, and, in the role of Global Coordinator, in the syndicated loan to REIT Klépierre, European leader in retail.

As regards operations in Debt Capital Markets, the Division acted as Global Coordinator and Active Bookrunner in the issuance of Carrefour, Joint Lead Arranger in the issuances of AT&T and Telefonica, Joint Lead Bookrunner in the issuance of Canal+ and in the high-yield issuance of Engineering, and Joint Bookrunner with Deutsche Telekom, TIM, EDF, CEZ, Georgia Power, Florida Power & Light and NextEra Energy Capital Holdings. The Group also acted as Active Bookrunner for the issuances of Swisscom and Cellnex Telecom, the bond issuance in Euro of Stellantis, and the high-yield issuance by Teva Pharmaceutical Industries, and participated in the bond issuance in USD by the CNH Industrial Group and the issuance of ABS by CyrusOne. The Bank managed various placements of Green and Sustainability bonds, including those carried out by Hera, ENEL, Masdar, Engie and Slovenske Elektrarne, the Green Hybrid Bond of Iberdrola and the Green Sukuk of Saudi Electricity Company, and played a leading role in the placement of several EU Green Bonds, structured in compliance with the requirements of the new Regulation (EU) 2023/2631. Among these, it supported A2A in launching the first EU Green Bond, followed by additional Italian issuers, such as Terna and Snam.

In M&A, the Group continues to be one of the leading M&A advisors in the Italian market and provided its services in various transactions, including the sale by F2i and Finavias of their stakes in 2i Rete Gas to Italgas, providing assistance to Poste Italiane in the acquisition of the equity investment in Telecom Italia held by CDP, with the concurrent sale of Poste Italiane's

entire equity investment held in Nexi also to CDP, and the sale of Lizzi, a Milan company specialising in sweet and savoury bakery products, by Sammontana and Investindustrial to the Vandemoortele Group. The Division also assisted MFE in the voluntary public takeover bid on shares not held by ProSiebenSat.1 Media, F2i in consolidating operations in the energy transition sector of Sorgenia and BayWa r.e. in selling a portfolio of renewable energy plants to Encavis.

In an equity market which, especially in the first half, saw substantial closing of IPOs as a reflection of the volatility deriving from the macroeconomic uncertainties and the complex geopolitical framework, Equity Capital Markets operations focused mainly on transactions regarding securities of listed companies. With the aim of maintaining the strong leadership position in the ECM and Equity-Linked market in Italy and continuing the successful process of international expansion, the origination operations focused on capturing the best market opportunities and proposing structured solutions to customers. In this context, the Bank acted, inter alia, as Joint Bookrunner in the placement of Ferrari shares conducted by Exor, one of the most visible transactions in the European panorama, as Advisor and as Coordinating Intermediary of the takeover bid promoted by Confindustria Servizi on the special shares of Il Sole 24 Ore, as Joint Global Coordinator in the placement of Avio shares conducted by Leonardo, as Bookrunner in the capital increase of Eutelsat and as Co-Manager in the IPO of Medline on Nasdaq, the largest IPO carried out on the US market in 2025.

With regard to customers in the banking sector, within the Institutional Clients structure, the Bank successfully carried out numerous transactions for primary market issuances, refinancing, securitisation and optimisation of liquidity profiles. At domestic level, these included, in particular, the role of Sole Lead Manager in the placement of a Tier 2 bond by Banca del Fucino. In addition, we note the role of Joint Bookrunner in the Social issuances of Istituto per il Credito Sportivo Culturale and Mediocredito Centrale, as well as the operations Banco BPM, Banco Desio, Banca Sella, CR Bolzano, ICCREA, Mediobanca and UniCredit. The Bank also acted as Global Coordinator and Facility Agent in the pool loan to Nexi and acted as Joint Bookrunner in the first investment grade bond issued by that company. Senior loans within securitisations of performing assets also continued to be provided. Numerous transactions were also carried out in the international markets, both in the United States and in Europe. Specifically, the Group, covered the role of Joint Bookrunner in several issuances by BBVA, BayernLB, Commerzbank, Erste Group, HSBC and Wells Fargo. In Central/Eastern Europe transactions were carried out with Slovenská Sporiteľňa and UniCredit Bank Czech Republic and Slovakia. Moreover, the Bank confirmed its significant presence in the countries of Southern Europe, contributing to strengthen its nearness to and partnerships build over the years with local banks. Specifically in this area, we note the involvement in the bond issuances of Banco Comercial Portugues, National Bank of Greece, Eurobank and Piraeus Bank. During 2025, operations with banks in emerging markets featured a selective approach, due to the market context, and the assumption of short-term risk, primarily supporting the commercial activities of our Italian and international customers. In this context, we also note the first role obtained in the Middle East for the placement of a bond issue by Bank of Sharjah. The development of operations in Global Markets products continued, particularly in Eastern Europe, the Middle East, and selectively in Latin America. Loans for supply chain financing continue to be of interest to the Bank, and, in this context, the strategy of gradually growing the portfolio has been consolidated, expanding the number of counterparties and financial solutions offered. Also in 2025, operations with non-banking financial institutions continued to achieve positive results. The transactions in the near-banking sector specifically included portfolio financing through the subscription of senior tranches of securitisations originated by various operators, such as the Santander Consumer Bank Group, with underlying auto loans originated in Italy, and IBL Banca, with underlying salary- or pension-backed loans. The Department also acted as Joint Bookrunner in various public securitisations of assets of Agos Ducato, IBL Banca and Compass Banca, and continued to oversee the unsecured bilateral loans market, carried out with the leading operators in the consumer credit sector. It also participated, along with a pool of international banks, in the loan to Euronext as part of an acquisition on the Dutch market, and in the issue of a new convertible bond, as well as being involved as Joint Bookrunner in the issue of a senior covered bond by DoValue.

As regards operations with domestic and international asset managers, inflows showed good volumes, both for equity and credit. There was also a notable increase in interactions and operations with the Family Office and Wealth Management segments.

With regard to the insurance industry, the Bank finalised a structured financing line to support the liquidity management of an important Italian insurance company and held the role of Joint Lead Manager in the issue of a Tier 2 subordinated bond by Assicurazioni Generali. During the second half of 2025, the activities supporting the development of Class III products were consolidated, and the development of derivative and liquidity solutions for customers continued, mainly using an ALM approach.

Operations in the public sector (governments, public entities, local authorities, and institutional investors), with particular regard to public debt management, specifically included the roles of Joint Bookrunner for the Ministry of the Economy and Finance in the placement of institutional BTP and BTP Italia issuances aimed at the retail market and, on behalf of CDP, in the placement of institutional, retail and green bond issuances. The mandates received were also worth noting, as Joint Bookrunning in the bond issuance in Euro of Western European and Middle Eastern issuers, in addition to a Sukuk issuance in USD. The Bank also confirmed its role as a strategic partner, participating in a bilateral loan in euro and a syndicated loan in USD in favour of two Middle Easter governments. Lastly, on the domestic market, it is worth noting the role of Global Coordinator in the increase in the equity investment of Città Metropolitana di Torino in Iren, through a reverse ABB, and the Green loan to the Lombard Region for the purchase of electric trains.

With regard to the operations related to private equity funds, the Group recorded a good number of both domestic and international transactions completed with its customers during the reporting period, in a market environment characterised by an improvement in liquidity, resulting in a reduction in the cost of financing structures, despite the persistent uncertainties regarding global M&A operations. On the Italian market, it is worth noting the roles of M&A Advisor for Nextalia and Diagram and Underwriter, Bookrunner and MLA in support of CDP Equity, Trilantic and BF Agricola in acquiring Diagram, a leading group in precision farming services. We also note the roles of Financial Advisor and Arranger in the SSRCF in support of the acquisition by Renaissance Partners, TPG and Intesa Holding of Sicit, a global leader in the production of biostimulants, which

transforms by-products of the tanning industry into high-value added products for sustainable agriculture. On international markets, where the Group continues to consolidate its presence, we note the roles of Joint Lead Arranger and Joint Bookrunner to support KPS Capital in the acquisition of Ineos Composites, a global leader in manufacturing unsaturated polyester resin, vinylester resin and gelcoats, Arranger and Bookrunner to support KKR in the acquisition of Spectris, a UK company that is a global leader in providing precision instruments and control solutions, and Mandated Lead Arranger and Bookrunner to support Advent International in the acquisition of the Essential Home Division of Reckitt Benckiser.

In fund financing, financing operations to the main Italian and international alternative investment funds were consolidated. Of note at domestic level were the roles of Arranger and Sole Lender in the capital call financing to support the Ambienta Small Cap, Nextalia Flexible Capital and Renaissance Partners IV funds. Extensive operations with sovereign wealth funds and pension funds continued in various areas, including direct support to sovereign funds, assistance in competitive investments, financing and corporate solutions activities for portfolio companies, keeping the focus on the sectors of TMT, Energy, and Infrastructure, prioritising ESG characteristics. To directly support the needs of sovereign funds, the Bank renewed, increased and subscribed various loan/structured financing lines and bonds to increase the investment capacity of the main SWF & PF (PIF, Mubadala, PSP, CPPIB, TWF, ADQ and EIA). As regards investment processes, the Group participated in numerous operations, taking leading roles, including providing support to GIC & Mubadala on numerous LNG initiatives (i.e. Rio Grande), to La Caisse and Omers in their respective renewable energy generation projects (including wind and solar energy and storage), and to GIC in the acquisition of a leading transmission network in Australia. Lastly, it is worth mentioning the support to AXA in acquiring a Spanish Fibre operator, and to Swiss Life in increasing the equity investment in a leading Spanish operator in motorway infrastructures. Numerous transactions were also carried out to support the portfolio companies, such as the pool financings of Olam Agri (Temasek) in the agribusiness sector, of London City Airport (Wren House), of Kellas, a UK leader in the midstream gas sector, of Boldyn Networks (CPPIB), a company operating in digital infrastructure and connectivity solutions, and of Exolum (Omers), a logistics operator in the EU.

Distribution Platform & Global Transaction Banking Coordination Area

In 2025, the Division, through its oversight of the Italian Network, consolidated its role as a strategic financial partner for Italian mid and large companies, supporting them in an evolving global economic context.
With widespread presence throughout Italy (15 Corporate Centres, over 260 dedicated professionals and a portfolio of over 2,300 customer groups) the Italian Network offered integrated financing, investment banking, cash management and trade finance solutions, also leveraging the expanded use of public guarantee instruments and the opportunities deriving from the National Recovery and Resilience Plan (NRRP). The structured dialogue with Confindustria and the system of local associations continued and was further strengthened, with the Division actively participating in local initiatives to promote industrial competitiveness, with a focus on strategic investments, innovation, digitisation, Transition 5.0, advanced technologies and solutions for residential sustainability.
Specific focus was placed on managing financial, ESG and geopolitical risks, and on assisting companies in their internationalisation processes towards non-EU markets, favouring diversification and strengthening competitiveness.
The most important initiatives for dialogue and listening include the second “Obiettivo Italia” roadshow, promoted by the Division, coordinating with the Italian Network. The 8 stages (Vicenza, Firenze, Lonato del Garda, Torino, Milan, Bologna, Naples and Rome) involved over 400 companies, offering opportunities for dialogue on the main macroeconomic and sector trends, risk management strategies and cutting-edge solutions for liquidity management. This process made it possible to obtain in-depth information on the needs of the most dynamic companies, consolidate long-term relationships and support sustainable transformation processes, digitalisation and international expansion.
Internationally, the Division completed the incorporation of Intesa Sanpaolo Bank Ireland into Intesa Sanpaolo Bank Luxembourg and, following this transaction, now operates in 23 countries, through an international network comprised of 16 wholesale branches, 8 representative offices (in addition to the Brussels office at Group level, reporting to European Regulatory & Public Affairs and in charge of managing relations with supranational regulators), 2 Corporate Banks (Intesa Sanpaolo Bank Luxembourg and Intesa Sanpaolo Brasil S.A.), and the brokerage company Intesa Sanpaolo IMI Securities Corporation, headquartered in New York. The network continued to guarantee qualified oversight to support Italian and international customers, in a context marked by continuing geopolitical tensions and regulations that are constantly being updated. The initiatives to enhance the offering of ESG products and solutions and to optimise the operating platform continued, in order to further improve the effectiveness of the service and proximity to customers.
In 2025 the Global Transaction Banking Area continued its process of growth and innovation, building on the results previously achieved. Infrastructural and compliance works were completed, including the implementation of instant credit transfers and progress in the migration to the ISO 20022 standard, with benefits in terms of speed, transparency and quality of information flows. International technological coverage was expanded, specifically on the London branch, including the implementation of Faster Payments.
The Bank continued to support international companies in liquidity management, through advanced cash pooling solutions, such as the Multi Currency Optimizer, confirming its leadership on the Italian market. In the ESG area, Intesa Sanpaolo signed on to the Principles for Sustainable Trade Finance and created a sustainability-linked cash pooling solutions for a leading corporation.
In the framework of strategic initiatives, in November 2025 the partnership with State Street Bank was expanded through the disposal of an IT branch and the outsourced provision of back-office activities supporting custody services. The Division also continued to invest in digital assets and participate in institutional projects regarding the Digital Euro, strengthening its positioning in digital financial services.
In relation to Syndication & Risk Sharing, during 2025 the capital light toolkit was gradually consolidated. This is understood as the set of tools and drivers for mobilising and optimising the credit balance sheet and marketable assets, with the goal of accelerating the distribution of assets to support the Division’s strategic priorities.
In the second half of 2025, the market of syndicated loans showed a growing trend in all asset classes, with increasing volumes specifically in North America, boosted by the re-emergence of large-scale M&A transactions and the significant growth in several

sectors in particular, such as Digital Infrastructure and LNG Financing. The Division played a guiding role in numerous big ticket significant transactions of an international scale, in all main geographical areas (Europe, North America and Asia), in favour of leading corporate counterparties and financial sponsors operating in diverse sectors. In spite of the more volatile scenario in the first half of the year, caused by the introduction of tariffs by the United States, banking and institutional liquidity remained high and formed a sound and resilient base for successful syndicated transactions, including large transactions.
In the second half, the synthetic transfer of risk grew further, both in terms of volumes and in the number of positions concerned. This activity provided essential support to the development of new origination and strategic refinancing operations, both on corporate names and on project financing, guaranteeing an efficient allocation of capital and accurate management of credit risk. In the scope considered, the risk transfer platform was further strengthened, proving to be an effective tool for protecting all commercial relationships and generating new origination capacity, due to efficient management of the balance sheet, acting as a strategic driver to support the growth of the Division.

Global Banking & Markets Coordination Area

In 2025 the gradual dissipation of concerns regarding the performance of global growth and inflationary and tax effects of various trade policies contributed to creating an environment favourable to customers' investments and operations, transversally influencing the performance of the main asset classes. The expansive monetary policies adopted by the central banks fuelled the climate of investor confidence.
Despite the decrease in interest rates, for the Division, placement of certificates recorded a significant improvement on 2024 due to a wide product mix and the prevalence of protected products. Also on the secondary market, customers showed significant interest. In the bond segment, government and credit customers preferred short- or medium-term positions. A significant contribution in this sector was provided by Market Hub, specifically in BTP retail issuances. Also in cash brokerage, Market Hub recorded highly positive results, both in the ETF segment and in equity cash, while for Listed Derivatives, there was a general downturn in the volumes traded. In the FX sector, with the gradual stabilisation of the EUR/USD exchange rate, customer flows balanced out between purchases and sales.

With regard to the investments of the Division, in the segment of domestic government bonds HTCS, after a first half focused on generating a positive carry, in the second half, operations were concentrated on stabilising the net interest income. Management of the HTC and HTCS books focused on diversification, credit quality, exposure to less cyclical sectors and attention to sustainability issues. In the Emerging Markets segment, after an initial phase of tactical, prudent management, in view of the geopolitical scenario, the expansion of diversified HTC continued, with a focus on credit quality, and a relatively high turnover in the HTCS area. On the equity segment, risk was managed in a tactical manner in the phase of the year marked by higher volatility. Management of the DVA maintained a dynamic approach, using instruments such as iTraxx indices, BTP and a portfolio of banking bonds, which made it possible to more than offset the negative impact caused by the Group's improvement in loans. In addition to guaranteeing the financing of proprietary portfolios and the management of liquidity of the Division, secured financing activities as a counterparty to customers was overseen, which continued to expand and diversify.

In market making operations, on the equity side, in the first half high volumes were recorded with customers on investment products. In the second half, the positive performance of equity markets supported customer demand on the entire equity-linked offering and, specifically, on investment products, with growing volumes on the primary and secondary markets. With regard to the scope of Credits, during the year, investors largely returned to the primary market, driven by a less uncertain macroeconomic scenario and strong inflows of liquidity. Customer activities on government bonds, though less homogeneous than the previous year, grew slightly year-on-year, even though in the second half of the year volumes decreased as a result of the policies of the various central banks. As regards the linear derivatives sector on interest rates in 2025 there was an improvement in profitability, due to a significant increase in inflows of corporate customers and their margins. In 2025 interest rate volatility products showed results in line with those of the previous year. As regards FX operations, the management of risk deriving from customer flows was particularly effective, along with positioning strategies that allowed them to benefit from the drop in volatility. In the commodities sector, the consolidated risk management ability and significant inflows from customers lead to results in line with expectations. In the Private Investments sector, in 2025, investments in Private Equity and Private Debt funds showed recovery in both areas, with a focus on funds specialising more on the low-mid market segment. In Private Equity, performance was supported by the lower cost of funding compared to the previous year, while in Private Debt, several single positions reduced the performance of the portfolio, albeit positive. In the area of Hedge Funds, investing and monitoring of the markets continued, obtaining a positive performance.

In the equity primary market, the Division focused on IPO, private placement and capital increase segments, completing the following transactions in it respective roles: intermediary assigned to coordinate the collection of subscriptions as part of the Public Takeover Bids of Intermonte, Monrif and Il Sole 24 Ore, Joint Global Co-ordinator and Joint Bookrunner in the Avio ABB, Joint Bookrunner in the ITT Inc. ABB and in the placement of the Euronext convertible bond, and financial advisor of the issuer as part of the Geox capital increase.

In the primary bond market, marked by an increase in volumes issued compared to the previous year, both in Europe and in Italy, the Division acted as Joint Bookrunner in numerous bond issuances (of which many ESG-labelled) in the corporate segment (LVMH, General Motors, Ford Motor, ENI, Volkswagen and the High Yield transactions of Carnival, La Doria, Teamsystem and Avolta), Financial Institutions segment (Banco Santander, Banco BPI, BCP, Tatra Banka and BPER) and SSA segment (BTP Più, BTP Italia and BTP Valore, Poste Italiane and Cassa Depositi e Prestiti). It is important to note activities in emerging markets, where the Division oversaw the issuances of Turkiye Wealth Fund, The State of Qatar, Majid Al Futtaim Holding and Public Investment Fund.

In 2025, the Structured Finance activities maintained the Bank's leadership on the Italian market (also for ESG/Circular/Green issuances) and continued successfully in the international market. Corporate loans granted to Italian and international customers were marked by widespread origination, which made it possible to increase the number of structured transactions, with an ever-increasing presence of the Group on foreign markets. Leverage & Acquisition Finance, following a first half of the year penalised by a reduction in Financial Sponsor activity, saw signs of recovery in operations, stronger in the foreign markets. Project Financing activities captured numerous opportunities in the energy transition and transport sectors, with considerable operations in the renewable energy sector, both to support investment plans and for M&A operations. The "originate to share" approach and the geographical diversification resulted in entering into numerous financing transactions to support Italian and international industrial operators and financial investors in various infrastructure and public utility services sectors, in line with the growth strategy of the Division, both in terms of volumes and positioning, with specific attention to ESG/Circular/Green issuances.

Securitisations carried out by the Division confirmed its leadership in Italy, both in supporting customers in managing financial risks and through innovative ESG-linked solutions, and in asset-based financing. Solutions for the Division's customers and the Group were structured, financed and distributed, aimed at streamlining funding and improving asset quality ratios and optimising economic and regulatory capital. For corporate customers, the need to streamline working capital and improve the net financial position, by deconsolidating loans, resulted in a slight recovery in operations. The Division strengthened its international presence, providing both risk management and financial support to European and non-European corporate customers and financial institutions, along with major international investors in their acquisitions of granular portfolios.
The Division also acted as a competence centre and point of reference for the Group for corporate finance transactions of customers of the Banca dei Territori Division and the banks in the International Banks Division. Regarding these activities, of note among the most significant transactions completed in 2025 were the role played in the loan to support the acquisition of Verivox Holding GmbH by Moltiply, in the sale of the majority of capital of Aquardens to Eurazeo and in the Tecno IPO on Euronext Growth Milan.

The **International Banks Division** is responsible for the Group's activities in foreign markets through commercial banking subsidiaries and associates, mainly active in retail banking.

In 2025, the Division's operating income came to 3,258 million euro, growing compared to the previous year (+0.6%; +2.7% at constant exchange rates). A detailed analysis shows that net interest income came to 2,439 million euro (-3.4%), mainly due to the performance of PBZ – including Intesa Sanpaolo Bank (Slovenia) and Intesa Sanpaolo Banka Bosna i Hercegovina (-71 million euro) –, CIB Bank (-12 million euro), Banca Intesa Beograd, including Intesa Leasing Beograd (-10 million euro), and Intesa Sanpaolo Bank Romania (-10 million euro) partly offset by the increase recorded by VUB Banka (+15 million euro). Net fee and commission income, amounting to 738 million euro, was up (+13.9%), mainly due to VUB Banka (+28 million euro), PBZ, including Intesa Sanpaolo Bank (Slovenia) and Intesa Sanpaolo Banka Bosna i Hercegovina (+28 million euro), Banca Intesa Beograd, including Intesa Leasing Beograd (+16 million euro), and CIB Bank (+13 million euro). Within the other comprehensive income, there was an increase in profits (losses) on financial assets and liabilities at fair value (+15 million euro), essentially attributable to the Egyptian subsidiary, while other operating expenses remained substantially stable. Operating costs, amounting to 1,413 million euro, were up (+2.9%; +4.4% at constant exchange rates), mainly due to personnel and administrative expenses.
As a result of the above revenue and cost trends, the operating margin amounted to 1,845 million euro, down on 2024 (-1.2%, +1.4% at constant exchange rates). Gross income, amounting to 1,787 million euro, showed growth (+5.9%) mainly due to the

lower net adjustments to loans recorded in 2025, and net income came to 1,240 million euro compared to 1,146 million euro in the previous year (+8.2%).

In the quarterly comparison, the fourth quarter 2025 showed declining trend in the operating margin compared to the third, attributable to the increase in operating costs typical of the end of the year, only partially attenuated by the increase in revenues. Gross income and net income were also lower than in the previous quarter, mainly impacted by higher net adjustments to loans.

Intermediated volumes of the Division showed a rise (+7%) at the end of December 2025 compared to the end of 2024, attributable to the increase in both loans to customers (+8.2%) and direct deposits from banking business (+6.2%). The performance of loans was mainly attributable to the development of the subsidiaries operating in Croatia, Serbia, Hungary and Slovakia, while the trend in deposits was mainly related to the increase recorded in Hungary, Croatia and Slovakia.

In 2025, the International Banks Division further strengthened its growth process, consolidating a business model focused on increasing fees and commissions in the main European banks.
Wealth Management, Protection & Advisory continued to grow significantly in the Premium, Magnifica and Private segments, with focus on three strategic lines: strengthening the Advisory model by upgrading the digital platform, leveraging Group best practices; improving the portfolio mix of customers using innovative, diversified solutions; and implementing a commercial plan focused on increasing productivity and ensuring consistent service behaviour within the Network. The evolution of the service model dedicated to customers with high added value and advanced needs is being defined in collaboration with the other Group Divisions, promoting the skills of the Banca dei Territori Division.
The evolution of the product offering to support the service model continued, gradually strengthening initiatives with higher commission value and coordinating the expansion of the presence in various markets. In that area, the development of the range of certificates continued, completing the plan of issuances in Croatia, Slovakia and Hungary, alongside new commercial initiatives in additional countries.
In line with that process, the launch and harmonisation of Bancassurance products continued, including signing a new distribution agreement for the life business in Egypt. At the same time, structured synergies, were launched with Intesa Sanpaolo Assicurazioni to expand the offering of insurance investment products, which led to the launch in Croatia of the marketing and sale of the first unit-linked product developed by the Group's insurance factory.
In the same context of adding value to the offering with high commissions, leveraging the Group's best practices, the launch of the minibond in the banks within the perimeter continued. Alongside this, the development of initiatives in synergy with the IMI Corporate & Investment Banking Division gained further strength, which contributed to the closing of numerous high added value strategic operations in the Global Markets, Structured Finance and Investment Banking sectors, confirming the trend in strong growth, with expected acceleration. The operations, launched in high priority countries are being extended to other markets.
With regard to the development and strengthening of the service model for customers shared with the Banca dei Territori Division, the commercial initiatives to develop cross-border business opportunities of customers operating in countries of the Division continued. Specifically, joint commercial actions continued on customer companies of Banca dei Territori, in all the Regional Governance Centres and Agribusiness, with foreign subsidiaries. The specific initiative for Romania was completed, while numerous dedicated operations were launched in Bosnia and Herzegovina, Albania, Serbia and Croatia.
As part of the ESG Business Positioning initiatives for the Corporate & SME segments in the Division's countries (Slovakia, Hungary, Croatia, Serbia, and Egypt) the S-Loan offering in Croatia was finalised and a cycle of webinars on the Circular Economy was completed, in collaboration with ISPIC, to support the sales network. The "Commercial Pills" initiative, previously completed in Serbia and Croatia, continued, and the Green Dedicated S-Loan was successfully launched in various countries of the Division (Slovakia, Hungary, Serbia and Croatia), also being extended to Slovenia and Bosnia and Herzegovina. A new ESG Survey was also completed on the main banks of the Division, to identify customers' ESG needs.
Within the digital banking initiatives targeted to the Corporate & SME segments, the activation of the "Confirming" product, initially launched through the Italy-Hungary interconnection and gradually extended to the main geographical areas of the Division, including Slovakia, Serbia, Romania, Slovenia, Albania and Bosnia and Herzegovina, was also expanded to the Czech Republic and Croatia.

Business	It is responsible for the Group's operations on the international markets through commercial bank subsidiaries and associates.
Mission	Guidance, coordination and support for international subsidiaries, which engage primarily in retail banking operations. The Division is responsible for setting the Group's strategic development guidelines in terms of its direct presence on international markets, involving systematic exploration and analysis of new growth opportunities on markets already served and new markets, the coordination of international subsidiary banks' operations and the management of the relationships between international subsidiary banks and the Parent Company's central units and the branches or other foreign offices of the IMI Corporate & Investment Banking Division.
Organisational structure	
South-Eastern Europe HUB (SEE HUB)	Presence in Croatia, Bosnia-Herzegovina and Slovenia.
Danube HUB (DNB HUB)	Presence in Slovakia, Romania and the Czech Republic.
Other banks	Presence in Albania, Hungary, Serbia, Egypt, Ukraine and Moldova.
Distribution structure	883 branches in 12 countries.

South-Eastern Europe Hub (SEE HUB)

In 2025, the operating income of the **Privredna Banka Zagreb** group amounted to 660 million euro, down on the previous year (-1.2%), due to the declining trend in net interest income. Operating costs of 252 million euro increased (+5.1%). As a result of the above revenue and cost trends, the operating margin amounted to 409 million euro (-4.7%). Gross income, amounting to 425 million euro, and net income, which amounted to 344 million euro, were up (+1.1% and +1.4%, respectively) on those of 2024, benefiting from reversals of impairment losses on loans recorded during the year.

Intesa Sanpaolo Banka Bosna i Hercegovina closed 2025 with an operating margin of 22 million euro (+5.3%). This evolution is attributable to the increase in operating income (+3.9%), which more than offset the increase in operating costs (+2.9%). Gross income, amounting to 19 million euro, and net income, amounting to 15 million euro, recorded growth compared to 2024 (+5.7% and +10.4%, respectively).

Intesa Sanpaolo Bank (Slovenia) generated operating income of 153 million euro, down on 2024 (-8.2%), due to the declining trend in net interest income. Operating costs increased (+1.2%) on the previous year. As a result of the above revenue and cost trends, the operating margin decreased by 13.3%. Gross income, amounting to 88 million euro, and net income, which amounted to 60 million euro, were also down, by 12.1% and 12.4%, respectively.

Danube HUB (DNB HUB)

The **VUB Banka** Group reported an operating margin of 531 million euro, up on 2024 (+6.7%) as a result of the growth in operating income (+5.5%), which more than offset the increase in operating costs (+3.2%). Gross income, amounting to 457 million euro, decreased slightly on the previous year (-0.8%), influenced by higher net adjustments to loans, while net income increased by 6.5%, amounting to 270 million euro.

On 31 October 2025 the merger by incorporation of First Bank into Intesa Sanpaolo Bank Romania took place, following which the two banks now operate as a single entity, under the brand **Intesa Sanpaolo Bank Romania**. This new bank recorded an operating margin of 28 million euro, down on 2024 (-28.4%), due to the decrease in operating income (-14%). The company closed 2025 with net income of 20 million euro, up by 19.7% on 2024, also benefiting from higher reversals of impairment losses on loans.

Other banks

Intesa Sanpaolo Bank Albania generated an operating margin of 41 million euro, down by 7.9% on 2024, due to lower revenues (-2.2%) and the increase in operating costs (+4.7%). Net income came to 29 million euro, down by 7.5% on the previous year.

The **CIB Bank** group presented an operating margin of 249 million euro, down by 1.9% on 2024, in relation to higher operating costs (+5.5%) which more than offset the growth in operating income (+0.9%). Gross income, amounting to 257 million euro, and net income, which amounted to 191 million euro, increased by 8.8% and 9.1%, respectively, also benefiting from reversals on impairment losses on loans recorded during the year.

Banca Intesa Beograd, including Intesa Leasing Beograd, achieved an operating margin of 350 million euro, substantially stable compared to 2024, due to the increase in operating costs (+6%), almost fully offset by higher operating income (+1.8%). Gross income amounted to 346 million euro (+14.7%), and net income was 270 million euro (+15.5%), also due to lower net adjustments to loans.

Bank of Alexandria, which was adversely affected by the depreciation of the Egyptian pound, reported an operating margin of 319 million euro, up by 4.3% on the previous year (+20% at constant exchange rates). Operating income of 437 million euro was up (+4.2%; +20% at constant exchange rates). Operating costs increased (+4.1%; +19.9% at constant exchange rates). Net income amounted to 188 million euro, up by 22.3% compared to 2024 (+40.8% at constant exchange rates), benefiting from lower net adjustments to loans and net provisions and net impairment losses on other assets.

Pravex. Despite the extremely serious/uncertain situation in Ukraine, Pravex was again consolidated on a line-by-line basis in December 2025. Nonetheless, in light of the obvious logistical and execution difficulties for the administrative structures of the local bank, also with regard to the IT channels, the Group decided to consolidate the results achieved up to September 2025, recording them at the exchange rate of 31 December 2025.

Eximbank recorded an operating margin of 3.5 million euro, up by 54.4% on 2024 due to the development of operating income. Net income, amounting to 2.9 million euro, showed a sharp increase compared to the value of 0.6 million euro in 2024, also supported by reversals of impairment losses on loans.

(1) Starting from December 2025, assets under management also include mutual funds established by third parties, portfolio management of third-party companies and insurance policies issued by companies not belonging to the Group that were previously classified as assets under administration and in custody as not attributable to the Group's product factories. The figures for 31 December 2024 have been restated accordingly.

Figures restated, where necessary and material, considering the changes in the scope of consolidation and in business unit constituents and discontinued operations.

The **Private Banking Division** serves the top customer segment (Private and High Net Worth Individuals), creating value by offering top products and services.
The Division coordinates the operations of Fideuram - Intesa Sanpaolo Private Banking, Intesa Sanpaolo Private Banking, SIREF Fiduciaria, Fideuram Asset Management (Ireland), the Swiss banking group Reyl (present in Switzerland, the United Kingdom and the United Arab Emirates) and Intesa Sanpaolo Wealth Management, a Luxembourg private bank with branches also in Belgium and of Alpian S.A., a Swiss digital bank in the start-up phase. Moreover, with the goal of offering a large and dedicated range of products, using digital solutions that will be expanded over time, the Fideuram Direct business line, created in 2023, meets the needs of customers that want to independently handle their investments and online trading.
During 2025, several corporate operations that involved the perimeter of the Private Banking Division and the Asset Management Division took effect, as part of the strategic evolution of the Group's asset management product factories, as illustrated in the introduction to this chapter, to which reference is made.

In 2025, the Division achieved gross income of 2,311 million euro, up by 70 million euro (+3.1%) compared to the previous year. The operating margin also showed an increase (+71 million euro), due to higher operating income (+85 million euro), against an increase in operating costs (+14 million euro). The performance of revenues is essentially attributable to the improvement in net fee and commission income, which amounted to 2,247 million euro (+153 million euro), specifically for the recurring component, mainly relating to the increase in average assets under management, and the up front component, due to the higher

contribution of placement of bonds, certificates, mutual funds and the receipt and transmission of orders. Conversely, there was a decrease in net interest income (-81 million euro), related to the declining trend in market interest rates. Among the other revenue components, profits (losses) on financial assets and liabilities at fair value grew (+20 million euro), specifically supported by the positive performance of foreign exchange transactions, while other net operating income was down (-7 million euro). For operating costs, there was an increase in administrative expenses, mainly IT expenses and services rendered by third parties, and in amortisation for software and rights-of-use on leased assets and personnel expenses. The Division closed 2025 with net income of 1,625 million euro, up by 11.1% compared to the previous year.

The values of assets under management and administration have been presented in accordance with the reporting criteria for indirect customer deposits used in the Intesa Sanpaolo Group's consolidated financial statements, specifically eliminating customer current accounts correlated with investment transactions, bonds and certificates that, despite being part of customers' assets, are already included in direct deposits.

As at 31 December 2025, assets under management and administration, which also include the contribution of the trust mandates for SIREF Fiduciaria, amounted to 369.1 billion euro (+34.2 billion euro from the end of 2024). This trend was due to both the market performance, which had a favourable impact on assets, and positive net inflows. The assets under management component amounted to 248.8 billion euro (+17 billion euro).

Business	Generating new inflows of assets and managing them, using a network of financial advisors and in-house private bankers serving a customer base with high savings potential.
Mission	Taking care of customers' well-being and protecting all of their assets through top notch advisory services. A relationship based on listening, satisfaction and trust between the customer and the private banker is what makes the business model of the Private Banking Division unique.
Organisational structure	
Fideuram-Intesa Sanpaolo Private Banking (Italy)	Dedicated to the production, management and distribution of financial products and services to high profile customers, using a network of 5,786 Fideuram, Sanpaolo Invest and IW Private Investments financial advisors and the provision of digital advisory and advanced trading through Fideuram Direct.
Intesa Sanpaolo Private Banking (Italy)	Bank dedicated to private customers (with over 1 million euro in financial assets), providing financial services which are designed to preserve and increase wealth and provide continuity, using a network of 955 in-house private bankers and 168 freelance bankers with agency contracts.
Reyl & Cie (Switzerland)	Swiss bank dedicated to developing international private customers, which operates through a group of companies specialising in wealth management and private banking. It operates using a total network of 47 private bankers.
Alpian (Switzerland)	A Swiss Wealth Tech with a banking license, that features a digital offering focused on the needs of the upper affluent/low private segment, providing banking services and portfolio management schemes supported by multichannel remote assistance.
Intesa Sanpaolo Wealth Management (Luxembourg)	Luxembourg bank with branches in Belgium, which operates using a total network of 44 private bankers.
Fideuram Asset Management (Ireland)	Company that manages Luxembourg and Italian mutual funds and products designed by the Group's insurance companies.
SIREF Fiduciaria (Italy)	Company specialised in the provision of fiduciary services.
Distribution structure	Network of 237 branches in Italy, 6 branches abroad and 7,000 financial advisors.

The **Asset Management Division** pursues the mission of developing the best asset management solutions aimed at the Group's customers and its presence on the open market segment through the subsidiary Eurizon Capital SGR and its subsidiaries.

Among the significant events during 2025 include, in addition to the corporate actions mentioned in the introduction to this chapter, to which reference is made, it is noted that the merger by incorporation of Epsilon SGR into Eurizon Capital SGR took legal effect on 1 March 2025, and the merger of Eurizon Capital S.A. into Eurizon Capital SGR was finalised on 1 December, keeping its operations in Luxembourg through the newly established local branch of the asset management company. Likewise, the operations carried out in France, Spain and Germany by Eurizon Capital S.A. continued in those countries through the newly established branches of Eurizon Capital SGR.

Operating income in 2025, amounting to 1,058 million euro, grew compared to the previous year (+5.3%) due to the increase in net fee and commission income (+71 million euro), which benefited from higher incentive fees, the growth in up-front fees on mutual funds and in recurring fees. There was a decrease in net interest income (-19 million euro), which was impacted by the declining trend in market interest rates. Within the other revenue components, the Chinese subsidiary Penghua, consolidated at equity, made a positive contribution of 48 million euro to operating income, more or less the same as the amount recorded in 2024. Operating costs remained stable, amounting to 251 million euro. As a result of the above revenue and cost trends, the operating margin came to 807 million euro, up 7% on the previous year.

The Division closed 2025 with net income of 936 million euro (+61.7%), benefiting from the recognition of deferred tax assets and other tax components.

As at 31 December 2025, assets under management of the Asset Management Division came to 352.8 billion euro, up by 19.7 billion euro (+5.9%) compared to the end of 2024. This trend was attributable to the revaluation of assets under management, correlated with the positive trend in the markets and to the positive net inflows (+2.6 billion euro), attributable to mutual funds and institutional mandates from non-captive customers, and incorporates the effects of the changes in scope deriving from the mentioned reorganisation operations for a total amount of around 4 billion euro.

As at 31 December 2025, Eurizon Capital's Italian market share of assets under management was 15.4% (gross of duplications). Excluding the closed-end funds segment, in which the company has a limited presence, the share of assets under management at the end of December rose to 15.7%.

Business	Asset management.
Mission	To provide collective (UCI) and individual asset management products to the Group's internal banking networks and develop its presence on the open market through specific distribution agreements with other networks and institutional investors.
Organisational structure	
Eurizon Capital SGR (Italy)	Specialised, through its head office in Milan, in active asset management on behalf of both retail customers (mutual funds and portfolio management schemes) and institutional customers, to which it offers a wide range of investment products and services. Located in: - Luxembourg, with a branch that provided continuity for the business conducted in that country by Eurizon Capital S.A. up to its merger by incorporation into the asset management company on 1 December 2025. The Luxembourg branch of Eurizon Capital SGR manages, administers and sells Luxembourg UCIs, specialising in particular in passive funds, smart beta, ETFs and monetary funds; - France, Germany and Spain, through branches which, following the merger, took over the marketing of Luxembourg UCIs previously carried out by the French, German and Spanish branches of Eurizon Capital S.A.
Eurizon Capital Real Asset SGR (Italy)	Specialised in alternative investments. It is controlled by Eurizon Capital SGR, which holds 51% of the voting right and 20% of the company's share capital, and an investee of Intesa Sanpaolo Assicurazioni (40% of capital) and the Poste Italiane Group (40% of the capital).
Eurizon Capital Asia Limited (Hong Kong)	A company wholly owned by Eurizon Capital SGR, mainly focused on financial consulting activities and distribution in the Asian market.
Eurizon Asset Management Slovakia (Slovakia)	A Slovak asset management company, 100%-owned by Eurizon Capital SGR, which heads up Eurizon Asset Management Hungary and Eurizon Asset Management Croatia d.o.o. (Eastern European asset management hub). It promotes and manages Slovak mutual funds targeted to the local market.
Eurizon Asset Management Croatia d.o.o. (Croatia)	A Croatian asset management company and wholly owned subsidiary of the Slovak company Eurizon Asset Management Slovakia. It promotes and manages Croatian mutual funds and offers individual portfolio management services to retail and institutional customers.
Eurizon Asset Management Hungary (Hungary)	A Hungarian asset management company and wholly owned subsidiary of the Slovak company Eurizon Asset Management Slovakia. It promotes and manages Hungarian mutual funds and offers individual portfolio management services to institutional customers.
Eurizon SLJ Capital (England)	An English company controlled by Eurizon Capital SGR through a 85% interest, which conducts research and provides investment and financial advisory services.
Penghua Fund Management Company Limited (China)	Chinese fund manager 49%-owned by Eurizon Capital SGR.

(1) Including the subordinated securities issued by the companies.

Figures restated, where necessary and material, considering the changes in the scope of consolidation and in business unit constituents and discontinued operations.

The **Insurance Division** includes Intesa Sanpaolo Assicurazioni, Fideuram Vita and Intesa Sanpaolo Protezione, with the mission of synergically developing the insurance product mix targeting Group customers. The scope of the Division also includes Intesa Sanpaolo Insurance Agency and InSalute Servizi.

In 2025, the Division reported income from insurance business of 1,808 million euro, an increase (+5.4%, or +92 million euro) compared to 2024, thanks to both the non-life business, which benefited above all from the positive trend in the technical margin, and the life business, specifically the net investment result.
Gross income, amounting to 1,377 million euro, showed an improvement (+2.8%) attributable to higher operating income (+5%) against a moderate increase in operating costs (+1.8%), specifically in personnel expenses.
The cost/income ratio, at 21.4%, remained at very good levels, lower than those recorded in the previous year.
Lastly, net income amounted to 895 million euro (-22.2%), after the allocation of: (i) taxes of 425 million euro, up on the 108 million euro in 2024, which had benefited from the recognition of deferred tax assets of 293 million euro; (ii) charges for integration and exit incentives of 23 million euro; (iii) the positive effects of purchase price allocation of 14 million euro; and (iv) levies and other charges concerning the banking and insurance industry of 48 million euro.

Direct deposits from insurance business, amounting to 182,890 million euro, were up (+3.1%, or +5.4 billion euro) on the end of 2024, attributable to insurance liabilities, which more than offset the declining trend in financial liabilities.

The Division's collected premiums for life policies (including financial products) and pension products, equal to 19.8 billion euro, increased by 9.4%% on 2024, attributable to the positive trend in pension inflows, which more than doubled, especially due to the acquisition of management of the guaranteed lines of two contractual pension funds for over 1 billion euro, and lines of unit-linked products (+46.5%). Instead, inflows on traditional products decreased (-17.9%).

Collected premiums for the protection business totalled 1.6 billion euro, up by 8.5% on 2024. Premiums in the non-motor business (excluding CPI – Credit Protection Insurance) rose by 9%, mainly driven by the Businesses, Health, Accident, Home and Family Lines of Business (LoBs). The motor component (+1%) and credit-related products (+9.7%) also increased.

Business	Life and non-life insurance.
Mission	Develop the offering of insurance products for the Group's customers.
Organisational structure	
Intesa Sanpaolo Assicurazioni	Insurance parent company specialised in offering insurance, pension and personal and asset protection services through the network of Banca dei Territori. Starting on 1 December 2024, Intesa Sanpaolo Vita took on the new name Intesa Sanpaolo Assicurazioni. At the same time, the name of the Dublin branch, established on 1 December 2023, specialising in managing unit-linked policies, was changed to Intesa Sanpaolo Assicurazioni Dublin Branch. The company holds 100% of Intesa Sanpaolo Protezione, born on 1 December 2024 from the merger of Intesa Sanpaolo RBM Salute into Intesa Sanpaolo Assicura, and of Intesa Sanpaolo Insurance Agency and 65% of InSalute Servizi. Lastly, it holds 40% of Eurizon Capital Real Asset SGR, a company operational since 31 December 2019, controlled by Eurizon Capital SGR (Asset Management Division), which holds 51% of the voting rights and 20% of the capital.
Fideuram Vita	Specialised in offering insurance, pension and personal and asset protection products in service of the Private Banking Division.
Intesa Sanpaolo Protezione	A single company for the non-life and health classes, whose identity is gaining brand awareness on the market, capable of enabling business, operational and economic synergies by developing a fully comprehensive non-life offering.
InSalute Servizi	Dedicated to managing healthcare benefits.
Intesa Sanpaolo Insurance Agency	Agency that performs insurance brokerage activities of both life and non-life products.

Corporate Centre

The Corporate Centre is responsible for guidance, coordination and control of the whole Group, as well as for the NPE Department, Treasury and Strategic ALM.

The Structures of the Corporate Centre generated an operating margin of 118 million euro in 2025, compared to 1,456 million euro in the previous year. This performance was especially attributable to the reduction in operating income, mainly due to the performance of net interest income, which was impacted by the declining trend in market interest rates, and profits (losses) on financial assets and liabilities at fair value, which were negatively affected by the performance of foreign exchange transactions. Operating costs increased slightly due to lower charge backs by the Corporate Centre to the business units and higher amortisation of intangible assets correlated with technological investments, largely offset by the decrease in personnel expenses. Gross income amounted to -262 million euro compared to 1,105 million euro in 2024. The net result for 2025 was -237 million euro, compared to a positive figure of 411 million euro in the previous year.

Treasury and Funding activities

In 2025, Intesa Sanpaolo kept its market shares in cash and securities settlement stable, confirming its role as a systemic bank and its status as a T2 Critical Participant within the European payment system. The most important objectives reached in 2025 include: the conclusion of the European Collateral Management System (ECMS) project, the new centralised system for collateral management, in June, which completed the Target Services platform developed over the last decade by the Eurosystem to settle cash and securities at centralised level; the performance - especially in the last four months of the year, of the activities to align with the new Instant Payments Regulation and the continuation of the project for the purpose of adopting securities settlement on T+1 also in Europe in 2027, as well as the initiatives for digitising the euro for retail and wholesale payments.

In Europe, in the first half of the year, the ECB lowered the three key interest rates for the Eurosystem, bringing the deposit rate to 2% in June. The Central Bank stated that it intends to keep using all available tools to guarantee the correct transmission of monetary policy, pursuing the medium-term inflation target of 2%, adopting monetary policies suitable to maintaining the target. The short-term interest rate curve gradually incorporated the cuts made in the first half of 2025, and subsequently, the low probability of an additional reduction in the second half of the year, when the level of interest rates was deemed to be in line with the risks for growth and inflation expectations.

In the United States, following the first nine months of stability in interest rates, in September the Fed decreased official rates by 25 basis points, continuing with a further two cuts of 25 basis points in the two subsequent meetings, bringing rates to 3.50-3.75% at the end of 2025, the lowest in the last three years. The US Federal Reserve deemed that the three cuts made in the last part of the year were enough to support employment and allow inflation to return towards the target of 2%. However, at the end of 2025, the short-term interest rate curve incorporated the expectation of a decrease in interest rates of an additional 60 basis points in 2026.

Intesa Sanpaolo's euro and dollar liquidity position remained very solid throughout the year, with a significant excess of liquidity. Short-term funding on the domestic and international wholesale markets proceeded regularly.

Outstanding short-term securities remained stable in 2025 compared to 2024, consolidating investors' interest.

During 2025, the total amount of the Group's medium/long-term issuances placed on the domestic market, through own networks and direct listing, came to 17,844 million euro, of which 15,914 million euro in certificates placed through its networks, 1,837 million euro through issuances dedicated to the Private Banking Division and, lastly, 93 million euro in securities traded on the MOT and/or EuroTLX markets of Borsa Italiana (direct listing).

The bonds placed through the Private Banking Division broke down as follows: 1,269 million euro of T2 bonds, with fixed rate and a 10-year term; 223 million euro of senior non-preferred fixed-rate bonds with a 5-year term; and 345 million euro of private placement senior preferred bonds with fixed and floating rates and 2- and 10-year terms. Senior non-preferred T2 bonds were reserved to professional customers and qualified counterparties.
Among the securities placed, there was a predominance of financial instruments made up of 43% of index-linked structures, 30% of equity-linked structures and 16% of interest rate- and exchange rate-linked structures, while the plain vanilla issuance component accounted for 11%. A breakdown by average maturity shows that 33% are comprised of instruments with 4-year maturities and 56% with 5- and 7-year maturities, with the remaining 11% consisting of securities with 8 to 12-year maturities.

During the year, institutional unsecured funding transactions were finalised for a total value of 2,545 million euro, of which: 500 million euro issued in February by Intesa Sanpaolo Assicurazioni in T2 subordinated financial instruments with annual coupon of 4.217% and 10-year maturity; 1,000 million euro issued in May by Intesa Sanpaolo in AT1 subordinated financial instruments, fixed rate with annual coupon of 6.375%, payable every six months, perpetual with option for early redemption to be exercised by the issuer starting from the eighth year and redetermination of the coupon if the call is not exercised, adding the margin of 403.80 basis points to the 5-year Mid Swap rate; and 1,045 million euro in bonds and certificates placed on third party networks by the IMI Corporate & Investment Banking Division.

With regard to the covered bond issue programmes, under the programme guaranteed by ISP CB Ipotecario, the 14th series matured in January for an amount of 1 billion euro, the 24th series matured in July for an amount of 1 billion euro and the 18th series matured in December for an amount of 1.25 billion euro.

During the year, five covered bond issuances were carried out: in January the 39th retained series of 1.5 billion euro, floating rate with 6-year maturity, and the 40th retained series of 1.5 billion euro, floating rate with 11-year maturity; in May the 41st retained series of 1.6 billion euro, floating rate with 7-year maturity, and the 42nd retained series of 1.5 billion euro, floating rate with 9-year maturity; lastly, in December, with the 43rd series, a private placement of 500 million euro was issued, floating rate with 6-year maturity.

Under the Covered Bond programme guaranteed by ISP OBG, the 25th retained series matured in February for the remaining amount of 500 million euro. In March the 22nd retained series was subject to early redemption, for the total amount of 1.75 billion euro. In the same month the following were subject to partial redemption: the 33rd retained series for 185 million euro (residual amount of 1.465 billion euro), the 36th retained series for 1.3 billion euro (residual amount of 500 million euro), the 37ths retained series for 250 million euro (residual amount of 1 billion euro) and the 38th retained series for 250 million euro (residual amount of 1.5 billion euro).
In December, the 23rd retained series was subject to early redemption, for the total amount of 1.375 billion euro. In the same month the 41st retained series for 1 billion euro (residual amount of 1 billion euro) and the 42nd retained series for 625 million euro (residual amount of 1.075 billion euro) were subject to partial redemption.
During the year, two issuance of retained covered bonds were carried out: in March, the 48th series for 3 billion euro, with a fixed rate and an 8-year maturity; in December the 49th series for 3 billion euro, with a fixed rate and a 13-year maturity.
Within the covered bond programme guaranteed by UBI Finance, in the 17th series matured in February for an amount of 1 billion euro, in the 28th retained series was redeemed early in July for a remaining amount of 200 million euro, and in September the 31st series matured for an amount of 500 million euro.

In November a new issuance of retained securitisation was carried out[45]. This was the fourth Residential Mortgage Backed Security (RMBS) securitisation of the Group, called Brera Sec (SEC 4). The vehicle company Brera Sec issued two classes of securities for a total of 8.4 billion euro, fully subscribed by Intesa Sanpaolo. The single senior class, amounting to 7.63 billion, listed and with a Moody's Aa2 and a Morningstar DBRS A (High) rating, can be used as collateral for refinancing operations in the Eurosystem.

For the management of collateral, Intesa Sanpaolo also uses the A.Ba.Co. (Collateralised Bank Assets) procedure, which allows bank loans disbursed to non-financial companies to be used to secure loan transactions with the Bank of Italy: at 31 December 2025 the amount outstanding, gross of the haircuts applicable to loans lodged as pledge by the Group, amounted to 11 billion euro.

During the first quarter of the year, the markets were subject to opposing tensions: on one side, the solidity of the US economy, the persistence of several inflationary components and the surprising expansive approach taken by German fiscal policy generated a sound steepening trend in forward structures; on the other, in March, the growing concerns that harsh customs tariffs could be introduced by the US administration brought the level of interest rates into the previous year's trading range. In the second quarter, in a scenario of renewed stability of credit, Italian sovereign debt performed positively. During the third quarter, growing signs of a slowdown in the US labour market drove the Fed to make a first cut to interest rates, encouraging market expectations of new measures in the fourth quarter of 2025 and, looking forward, in the first half of 2026. The trend in US interest rates resulted in lowered yields and a further steepening of the forward structure, while in Europe interest rates remained within a narrow trading range. Despite the absence of contagion, the political instability in France remained the main risk factor for credit spreads.

On conclusion of the long phase of repricing of Core Europe bonds, specifically in France, the ratio of spread to market volatility reached the highest levels of recent years in the first half of 2025. Therefore, the exposure to those issuers was increased, while DV100 risk on the portfolio was expanded to improve diversification and potentially combat the risk of an additional adverse trend in credit spreads. Subsequently, allocation was moderately reduced, to consolidate the economic result while supporting the forward-looking net interest income of the portfolio. In August, marked by an enlargement of spreads, exposure to Italian and Spanish government bonds increased. Given the extremely compressed level of risk premiums, profits were taken on corporate bonds, offset by purchases of covered bonds. In the last part of the year, exposure to European government bonds was newly reduced following a further compression of spreads.

In the repo market, Italian government bond volumes were significantly higher than in 2024, while interest rates were slightly higher than the depo facility rate.
The spread between the rates of the core countries and Italian government bonds remained stable over 2025, the only exception being the expansion recorded at the changeover at the end of the year.

During 2025, Intesa Sanpaolo carried out new operations to collect liquidity, by implementing securities financing transactions with underlyings of retained covered bonds on different maturities, primarily short-term. At the end of the year, the outstanding operations with own issues of bonds as underlyings amounted to around 18 billion euro.

[45] The loan portfolio was sold in September.

Strategic ALM

With regard to the Group's Asset & Liability Management (ALM), operational management of the financial risks of the Group's banking book is carried out by the Group Treasury & Capital Management area under the supervision of the CRO Area. Interest rate risk is monitored and managed by examining the sensitivity of the market value of the various positions in the banking book to parallel shifts in the interest rate curve and the sensitivity of net interest income to the market views; moreover, specific scenario analysis techniques on rate developments are used, as well as behavioural scenarios for specific positions. The strategic choices on interest rate risk are made by the Group Financial Risk Committee, Asset & Liability Committee - ALCO session, within the limits established by the Board of Directors and, regarding tasks not delegated to risk takers: Group Treasury & Capital Management performs an active role in the dynamic management of interest rate risk within the limits assigned and supports the Committee's decision-making activity by formulating analyses and proposals. The structural component of liquidity risk is managed, based on the liquidity policies defined at Group level, as part of the funding plan, which is used to monitor the current and future short and long-term liquidity balances, defining the funding plan on the various channels and instruments (domestic/international, retail/corporate, secured/unsecured, preferred/non-preferred/subordinate). The funding plan optimises the various forms of funding in compliance with the liquidity indicators (LCR, NSFR and the other indicators of the Risk Appetite Framework), the rating targets, the various regulatory capital buckets and the MREL buffers, in line with the loan-deposit targets of the Business Units. The structural component of foreign exchange risk is managed, based on the related policies established at Group level, by monitoring the Group's overall position, also with a view to optimising the capital ratios.

Data, A.I. and Technology Officer Area

In line with the 2022-2025 Business Plan, the Data, A.I. and Technology Area is continuing the process of digitalisation, technological evolution and omni-channel development. Also in 2025, the Area continuously transformed to increase the effectiveness of the digitalisation process through the progressive and comprehensive overhaul of the IT platform, efficiency improvements in the operating model and transitioning to the cloud.
During 2025, the product offering for customers of Isybank was enriched further, through the activation of investment services that join the functionalities released in 2024 (e.g. prepaid card, credit card, protection products, isyPrestito and isySalvadanaio) always meeting the criteria of simplicity, accessibility, inclusivity and security, and keeping the option of a direct relationship via the Digital Branch.
The technological upgrading of the IT system also continued, gradually extending the isytech platform to the entire Group. Specifically, in 2025 the release was completed of new omnichannel products for Intesa Sanpaolo customers on the isytech platform for personal loans – Credit Protection Insurance, SpensieRata (payment in instalments) – and current accounts – Customer Journey Onboarding, Customer Journey Transformation – while the roll-out to customers of investment and mortgage products is being completed. The activities of alignment and transformation also continued, to gradually extend the isytech platform to the Private Banking Division.
Moreover, also in 2025 initiatives continued for the constant improvement of interactions with customers and of the user experience, with a focus on retail customers - both on completing the release of the above omnichannel products on the isytech platform and extending the voicebot and chatbot to all customers, including potentially interested customers who refer to the Digital Branch.
For business customers:

- the roll out of the NDCE Business platform for legal person of Fideuram – Intesa Sanpaolo Private Banking and Intesa Sanpaolo Private Banking was completed;
- in relation to the process of digitalisation of the "Nuova Concessione" processes, following the extension to the Retail SME segment in 2024 for short-term types, in 2025 operations were enabled for medium/long-term types, adopting innovative digital instruments to assess the customer portfolio, with analyses based on risk, financial sustainability, the complexity of the operation and the specific routing that could be configured based on the results and to execute checks on creditworthiness. Specifically, automated approval, introduced back in 2024 by integrating it with the Affordability – Decision-Making Risk Engines for the Retail SME segment, expanded its scope of application on medium/long-term types, and was also made available on Corporate SMEs for short and medium/long-term types, enabling its gradual activation on the Network. In parallel, the processes of review of credit facilities and validation of ratings were renewed, including dynamic frameworks, alerts and automatic input of data that make risk monitoring more efficient;
- in order to completely dematerialise processes, following the closing in 2024 of the paper-based process for managing signatures on the contractual documents generated by the Short-Term Uses Customer Journey and the POS Customer Journey, for all branches of Banca dei Territori, the evolution continued, to allow customers to autonomously submit applications to use a credit line for Anticipo Transato POS directly from their Internet Banking at any time of day or night;
- Inbiz, Intesa Sanpaolo's Corporate Banking for companies operating in Italy and abroad, was enriched with new functionalities capable of offering ever more personalised and advanced products and services: for example, the new area dedicated to consulting on liquidity accounts, the expansion of the number of currencies that can be used for international credit transfers, the extension of Inbiz Trade to priority international branches and mobile use of the Treasury service also via the Inbiz app.

In the payments area:

- applying the European Regulation on credit transfers, fees on ordinary credit transfers and instant credit transfers were aligned, the option to execute instant credit transfers through all channels already enabled for ordinary transfers (except for ATMs and Cassa Self Assist Ita) and to manage their amount limits was introduced, and the verification of the beneficiary was activated on all SEPA credit transfers in euro (ordinary and instant);
- the Group Payment Hub platform, adopted by the main European branches in order to establish a centralised payment Hub for the Group, was also released on London. New functionalities (e.g. the option to execute outgoing instant credit transfers) were made available for all branches/banks operating on the platform;

– thanks to the SCT Instant technology for payments of peer-to-peer transactions, Italian customers can exchange money with Spanish and Portuguese customers using Bancomat Pay.

In the International Banks Division, the adoption of new digital functionalities and services in Slovakia was completed, with the release of the remote offer, and the migration of the front end was finalised for the international banks in Croatia, Slovenia, Serbia and Hungary, and launched in Family & Friends (F&F) mode in Albania, consolidating the mobile and web platforms. The merger by incorporation of First Bank into Intesa Sanpaolo Bank Romania was also completed, with the technical convergence of the two banks joined by the upgrading of the (secured and unsecured) loan apps, in addition to the digital channels.

Moreover, with the goal of creating, extending and consolidating the Group's unique, comprehensive and reliable data assets, which can be the Golden Source of governance data, to create a data driven organisation and to better know our customers, also through the use of artificial intelligence, the Data, A.I. and Technology Area continued:

- the migration of information assets, according to the plan set out, which will be completed in 2026, to the Group's data platform activated in 2024 on Google Big Query;
- The AIxeleration programme, launched in 2023, to bring the Group's adoption of artificial intelligence to scale in a sustainable, responsible and standardised manner on all of the Divisions, favouring new business opportunities, increasing operating efficiency and further improving risk management. The programme is based on developing an ecosystem whose fundamentals are comprised of a consistent, shared base, the cloud, strengthening of skills, signing agreements with technological (e.g. Microsoft and Google) strategic (e.g. FAIR EU and Horizon TANGO) and academic partners (e.g. CETIF Master Responsible AI Executive Program, SDA Bocconi EMF FinTech Lab, Berkeley USA SkyLab and Bicocca Strategic Innovation for Sustainable and Smart Ecosystems), the Anti Financial Crime Digital Hub and the dissemination of the culture of AI (Artificial Intelligence) within the Group (internal AI Academy and Data & AI Community involving over 9,000 colleagues).
  Since the start of the Plan, 153 use cases were industrialised, thanks to around 300 dedicated AI Specialists, and the AI and Generative AI solutions were adopted in various areas (e.g. support to human resources, digital branch, regulatory analysis, technical support and coding). Lastly, the first Machine Learning Operations (MLOps) platform was released, enabling the development of use cases under the programme, with a specific focus on using Generative AI techniques.
  According to the 2025 Evident AI Index, the Group is now ranked third in the world for publications on Responsible AI topics and implements ethical principles of responsible adoption: rules and tech assets that guarantee the full compliance with the requirements of the AI Act[46] and the clear responsibility of business structures in decisions based on AI, and the implementation of guardrails to guarantee informed, secure use of Generative AI;
- and actions to steer the requests expressed by the Supervisor in the ECB Guide on Risk Data Aggregation and Risk Reporting issued in May 2024, update the current Data Governance Model and related tools in compliance with the Supervisor's expectations, and extend/apply the Data Governance Model to in scope Uses provided by the Guide: the priority scope was identified last year, actions were completed to improve the framework of governance and the data management process, and the preparation of the Remediation Plans of the Group and the Material Legal Entities was finalised.

To provide effective support for the IT transformation process, two programmes were completed: (i) New Group Technology, the adoption of the new IT operating model, in line with the best practices of the IT structures of digital companies on the market, structured to accelerate the development and deployment of technological solutions, with roles dedicating to developing IT professions; (ii) Falcon, which aims to re-insource IT skills, with total hiring of 2,430 people since the start of the Plan and the completion of the training process to support the growth of internal skills. In a scenario marked by a rapidly accelerating technological transformation, limited resources and a continuously expanding regulatory framework, the New Era programme was also launched, focusing on the search for innovative technological solutions that can combine speed and simplicity for IT structures dedicated to software development, security and economic sustainability, to better support business operations with suitable infrastructure and high service levels.

As part of the agreement signed with TIM and Google for the migration of a significant part of Intesa Sanpaolo's information system onto Google's cloud services, which meet the higher international standards of security and confidentiality of information, 855 applications have been migrated to the Google Cloud Platform, as per the Plan, and 237 new applications have been created directly on the cloud (64% of applications are already cloud-based).

Opening Future, operating since 2021, and developed through a partnership between Intesa Sanpaolo, Google Cloud and TIM Enterprise (the cloud company of the TIM Group), with the goal of favouring digital skills of young people and businesses, offered additional training initiatives and theme-based events, designed for teachers and students of middle schools, high schools and universities, as well as for professionals in SMEs and startups: around 5,000 SMEs, startups and fintech firms and over 23,000 young people and teachers were involved, and over 3,000 hours of training was provided.

In relation to the measures envisaged by the developments in the regulatory framework, as part of the multi-year initiative aimed at improving the structure of anti-money laundering safeguards, reducing the Bank's exposure to risks and aligning the Group's Anti Financial Crime model to international best practices, the Group's new Anti-Financial Crime target model was extended to the international banks of the International Banks Division. The application of new processes and instruments also continued, according to a gradual approach, to support due diligence activities in cases of sales of additional types of products and types of customers.

The multi-year process of further evolving and strengthening the Financial Sanctions management mechanisms also continued, through (i) the creation of a Sanctions Hub to centralise in the Parent Company the analysis of alerts relating to Name Screening and Payment Filtering checks for the 11 international branches of IMI C&IB and the 9 international banks of IBD, (ii) the implementation of new target tools (NetReveal) for Name Screening checks on the Parent Company and for Payment Filtering checks on the Madrid branch (pilot branch). In the same area of anti-money laundering, innovative solutions based on artificial intelligence were released, to increase the efficiency and effectiveness of Know Your Customer (KYC) activities.

[46] Regulation (EU) 2024/1689 of the European Parliament and of the Council of 13 June 2024 laying down harmonised rules on artificial intelligence.

Lastly, with regard to the requirements of the European Digital Operational Resilience Act (DORA)[47], which was fully implemented in January 2025, the Group ensured compliance with the Regulation by the implementation date. During 2025, it continued to adopt the technological and process controls needed not only to accurately meet regulatory requirements, such as submitting the Register of Information (ROI) to the European Central Bank, but also to ensure the constant strengthening of the Bank's digital resilience, specifically in the areas of ICT Risk Management and ICT Third-Party Management. Moreover, in March 2025, the Board of Directors of Intesa Sanpaolo approved the first Digital Operational Resilience Strategy (i.e. DOR Strategy) and the Multi-Vendor Strategy contained therein, as part of the wider review of the ICT and Security risk management framework.
During 2025 periodic meetings were also held with the Board Committees of Intesa Sanpaolo and with the competent Supervisory Authorities, to provide updates on the progress of the activities and the situation regarding regulatory compliance.

Transformation and Innovation

As part of the 2022-2025 Business Plan, the Group has decided to accelerate the transformation process necessary to capture future opportunities and, to that end, it has changed some key elements of its organisation, creating the Chief Governance, Operating & Transformation Officer Area (C-GOTO) in 2024. Among its various objectives, this Area aims to develop the Group's Transformation Plan to support the Business Plan and the Bank's transversal transformation projects.
This scenario gave rise to the first Transformation Plan 2025, consisting of over 20 projects featuring significant transversality, strategic importance for the Group's transformation and significantly innovative content, with the aim of accelerating the projects of the 2022-2025 Business Plan, representing the cornerstone of the new 2026-2029 Business Plan.

Several enabling factors were crucial to the effective implementation of the Transformation Plan, including the active involvement of all the Bank's key stakeholders and the establishment of a comprehensive monitoring system. The Transformation Plan was also used to guide the strategic priorities of the Group, also guaranteeing synergies between Governance Areas and Divisions.
In 2025, the E2E Process Transformation initiative was activated, which is part of the wider context of the Transformation Plan. The initiative aims to transform processes with an end-to-end approach, i.e. considering processes as a whole, taking a transversal overall approach across the various Group Structures and focusing on the end user, leveraging the opportunities offered by technology. This initiative continues the transformation process activated through the Digital Process Transformation Programme, whose model is being brought to scale and industrialised, leveraging the several significant deliverables from the projects in scope and the achieved benefits in terms of efficiency.
This scenario also includes the development of AIxeleration, the strategic programme dedicated to adopting Artificial Intelligence, which involves all Business Divisions and Governance Areas with the aim of assisting in technological evolution and generating value for the Group. During 2025, the AIxeleration Programme was significantly refocused on projects with a transformative impact on the Bank's priority processes. This was made possible by centralising the management of the Group's budget within the C-GOTO Area and restructuring the project portfolio based on validating business cases, with a particular focus on efficiency initiatives.
With regard to the Digital Asset market – which now includes various types of assets in addition to cryptocurrencies (e.g. stablecoins, security tokens) – and the adoption of underlying blockchain technology, actions were continued to ensure secure access for customers and compliance with current regulations, as well as a successful strategic positioning for the Group in the future. With this in mind, during 2025, Intesa Sanpaolo continued developing the infrastructure enabling access to these new markets and experimenting with blockchain technology with the aim of testing its potential in terms of increasing efficiency and fluidity of processes in the financial ecosystem, while creating new business opportunities.
In the area of Digital Accessibility[48], the project focused on setting up a framework of accessibility by design. Within that framework, operational manuals were produced, both for conducting accessibility tests and preparing accessible documentation (PDF, PowerPoint, Word, etc.), and several workshops were held to transfer know-how and specific professional skills to certain business units within the Group. In addition, in the area of digital documentation (PDF, PowerPoint, Word, etc.) dedicated to customers, the project outlined a strategy for remediation (solutions to correct existing documents) and creation of documents accessible by design. Remediation activities also continued, and in some cases were completed, on certain priority websites and apps within the Group's Italian perimeter dedicated to customers.

[47] Regulation (EU) 2022/2554 of 14 December 2022, conceived to strengthen the digital operational resilience of all operators in the European financial sector, whose main goal is to guarantee that financial entities can adapt to and withstand unexpected events, maintaining an acceptable service level for the digital services needed by essential or important business functions.

[48] Digital Accessibility ensures that websites, mobile apps and their digital content can be used by all people, regardless of their abilities, ensuring equal access to information and services and reducing digital barriers.

Cybersecurity, Antifraud & Business Continuity Management

Intesa Sanpaolo confirms the strategic importance of cybersecurity as an essential element to protect company and customer information, as well as to consolidate the overall resilience of the national economic system. As a result, in 2025, the initiatives set out in the 2022-2025 Business Plan were consolidated and finalised, with the main objectives of increasing the capacity to prevent and respond to cyber attacks and ensuring business continuity and digital resilience, thereby strengthening the confidence of customers and authorities in the Bank and the Group. The plan is based on a cybersecurity model that aims to strengthen defences against cyber threats and fraud, proactively manage vulnerabilities, improve business continuity and promote a culture of digital security.

In a context of rapid technological change and increasing digitalisation, Intesa Sanpaolo implements advanced technologies to protect the digital services provided to internal and external customers, combining them with innovative solutions that comply with best practices in the banking sector. These technologies are an integral part of a structured programme that includes initiatives in the areas of cybersecurity, anti-fraud and business continuity, such as:

– enhancing the resilience of the technological infrastructure, with transversal protection measures such as systems to mitigate distributed attacks and web vulnerabilities. This guarantees the stability and reliability of digital services, also against volumetric or sophisticated attacks;
– continuously improving anti-fraud systems that use Artificial Intelligence to identify anomalous transactions in real time, thereby reducing the impact of emerging fraud;
– adopting advanced multi-factor authentication solutions, including biometric technologies (such as facial recognition) and using non-transferable security codes, which enable the reliable verification of users' real identities, reducing the risk of identity theft and unauthorised access;
– strengthening controls to prevent insider threats using behavioural analysis systems and data loss prevention solutions that can detect anomalous activity, quickly identifying unauthorised access or operations;
– continuously monitoring the evolution of threats and, therefore, of new techniques adopted by malicious actors, using strategic and predictive intelligence activities in order to proactively adapt defence strategies;
– managing security levels of third parties and Group companies to ensure uniform protection of assets at suppliers and Group companies through rigorous risk assessment and control processes, promoting the implementation of adequate cybersecurity measures throughout the supply chain;
– constantly improving the ability to promptly identify attacks and take the necessary countermeasures. The Group has its own Global Security Operations Centre operating 24-7 and, among other solutions, introduced Advanced Network Detection & Response tools to protect its network. Automated incident response procedures have also been strengthened, with immediate recovery plans and periodic business continuity testing.

In addition, the dissemination of a solid cybersecurity culture is a key element for Intesa Sanpaolo in protecting its information and corporate assets. In this view, the Group constantly promotes internal training initiatives for its employees. Through structured professional development programmes, which include courses, practical simulations and tests, the development of the technical and behavioural skills necessary to recognise and manage IT risks is promoted. The training programme also employees to obtain specialist certifications in cybersecurity, anti-fraud and business continuity, thereby strengthening their professional skills. At the same time, the Bank is committed to raising awareness and providing training to external audiences, involving various target groups. Information campaigns and educational events have been organised in schools and communities with the aim of raising awareness of cyber risks and promoting responsible behaviour in the use of digital technologies. These initiatives aim to promote a culture of participation in security, in which everyone – customers, citizens and stakeholders – plays an active role in the IT security chain. The Group, aware of the crucial importance of working together, actively promotes strategic partnerships and participates in important national and international working groups. Those reference bodies include Europol (European Union Agency for Law Enforcement Cooperation), European Cyber Security Organisation (ECSO), CERTFin (CERT Finanziario Italiano), and the European Banking Federation (EBF), with which the Group constantly exchanges knowledge, experience and best practices, favouring collective growth in the field of cybersecurity.

Launching the 2026-2029 Business Plan, the strategy will be specifically focused on innovation and resilience, aiming for increasingly integrated and efficient processes, supported by automated controls. In a scenario of constantly evolving risks and threats, attention will remain focused on fraud prevention and the challenges arising from the increasingly widespread use of new technologies.

GEOGRAPHICAL AREAS

(millions of euro)

	Italy	Europe	Rest of the World	Total
Operating income				
2025	21,054	5,020	1,196	27,270
2024	20,463	5,485	1,159	27,107

% change	2.7	4.4	-16.4	2.7

Breakdown by geographical area is carried out with reference to the location of Group entities.

Figures restated, where necessary and material, considering the changes in the scope of consolidation and in business unit constituents and discontinued operations.

With regard to the subdivision by geographical areas of operations, carried out with regard to the location of the entities comprising the Group, activities continued to be concentrated primarily in the Italian market. Italy accounted for 77% of revenues, 77% of loans to customers and 84% of direct deposits from banking business.
With regard to operating performance in 2025, revenues increased in Italy and the Rest of the World, but decreased in Europe. Loans to customers remained substantially stable in Italy but grew in Europe and the Rest of the world, while direct deposits from banking business increased in Italy and Europe and decreased in the Rest of the World.
For details on the Group's presence in Italy and abroad, refer to the graphic representation at the beginning of this document (The Intesa Sanpaolo Group: presence in Italy - international presence).

Consolidated Sustainability Statement

Executive summary

The Intesa Sanpaolo Group has successfully achieved and exceeded the objectives of the 2022–2025 Business Plan, despite the complexity of the macroeconomic environment in recent years. It has demonstrated its ability to generate significant sustainable value for all stakeholders, achieving outstanding results.

In the social sphere, the Group has confirmed its leadership by strengthening initiatives aimed at reducing inequalities, in particular in combating poverty, providing unparalleled support to address social needs, implementing programmes to enhance youth employability, and promoting projects for educational inclusion. Concrete examples are the “Cibo e riparo per le persone in difficoltà (Food and Shelter for disadvantaged people)” and “Giovani e lavoro” programmes.
The Group has also placed a strong focus on financial inclusion, creating opportunities for access to credit through the development of products dedicated to the most vulnerable social groups.
The Group has continued its commitment to the promotion and development of culture through significant initiatives such as “Gallerie d’Italia” and the “Progetto Cultura”, aimed at enhancing its artistic and archival heritage with a view to sharing the country’s artistic and cultural wealth.

With a focus on environmental and climate commitment, the Group has set 2030 decarbonisation targets for both its own emissions and portfolio emissions. Moreover, it has continued to play a central role in the transition towards a more sustainable economy by supporting customers through the provision of sustainable financing, including Green Mortgage loans, and by making available to undertakings a dedicated credit facility for the circular economy. The offer of sustainability-conscious investment products in Asset Management was also strengthened, which also highlights a strong commitment to stewardship activities.

The results achieved under the 2022–2025 Business Plan are founded on the Group’s people, who are its most important resource and the decisive factor for success. The enhancement and development of people have remained central to the Group’s approach, which has invested in them—also through programmes dedicated to talent—as well as in the development of strategic skills for its future evolution, establishing in 2025 the Corporate Academy, focused on transformative training.

Building on the results achieved, Intesa Sanpaolo has defined the strategic guidelines of the new 2026–2029 Business Plan and is committed to continuing with determination the growth path already undertaken, in line with the expectations of all stakeholders, in order to deliver on the commitments set out with ambition and responsibility.

In the 2026–2029 period, the Group intends to maintain a leading global position in terms of social impact, reaffirming its commitment to supporting communities and contributing to the fight against poverty and the reduction of inequalities. At the same time, the Group will continue to support customers in the sustainable transition by allocating 30% of new medium- to long-term loans to sustainable finance initiatives, and it confirms its commitment to decarbonisation and the 2030 targets for financed and own emissions, asset management, and insurance activities. Intesa Sanpaolo will also maintain a strong focus on initiatives aimed at promoting Italy’s cultural heritage and innovation.

The implementation of the new 2026–2029 Plan is also founded on the Group’s people. Significant investments in the Group’s workforce are therefore planned through structured training programmes and skills development initiatives. The objective of reskilling and redeploying employees to perform new high value-added activities for the Bank has been reaffirmed and strengthened, alongside the involvement of young people in dedicated development programmes and the launch of transformative training initiatives.
It is also planned to involve all Group employees in initiatives aimed at communicating the Group’s corporate culture, which—together with a structured ESG Governance strengthened over time—forms the foundation of Intesa Sanpaolo’s identity and sustainability strategy, contributing to the creation of value for customers, shareholders, communities and the Group’s people.

The following pages describe the policies and initiatives that define the Group’s approach to sustainability, as well as the milestones achieved and the commitments undertaken under the new 2026–2029 Plan.

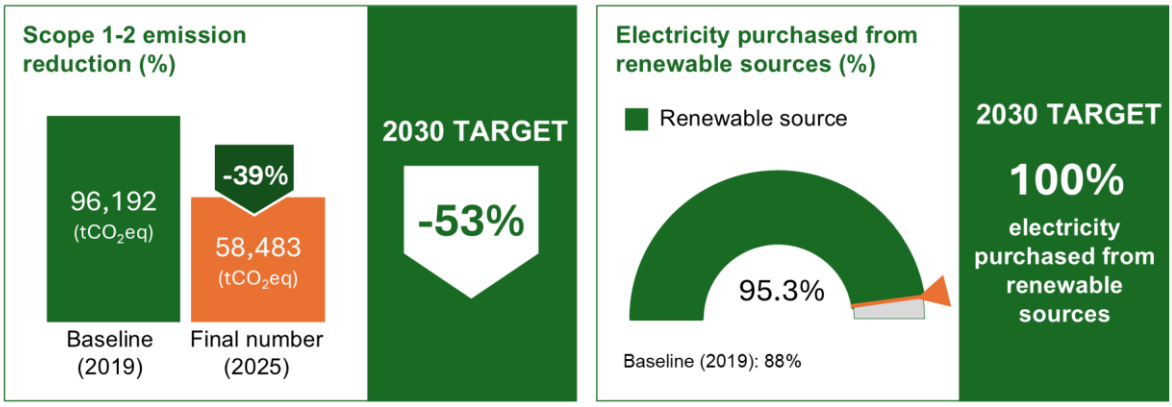
Environmental

Climate change

E1

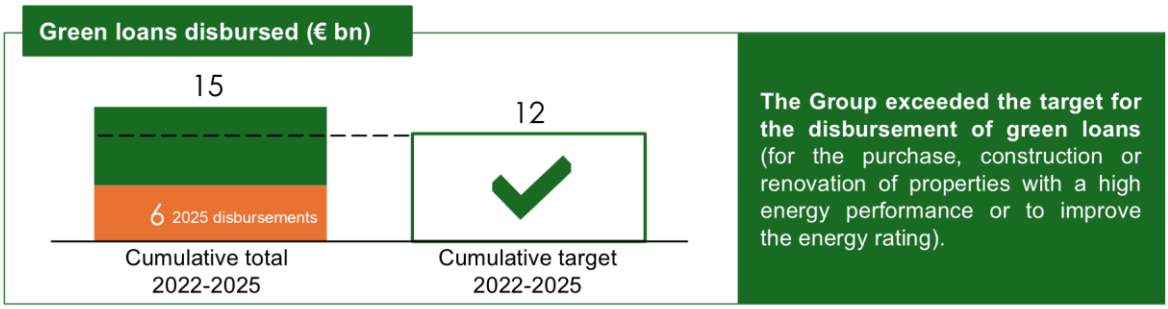
The Group supports the transition towards a sustainable economy by setting **concrete objectives** for the **reduction of its own emissions** and **financed** emissions.

Own operations:
The Group has defined a plan – **Own Emissions Plan** – for the **reduction of its own** Scope 1 and 2 **emissions**.



Financed portfolio:
The Bank is **committed to pursuing the Net-Zero target by 2050,** with **interim 2030 targets** relating **to the highest-emitting sectors.**
The Group's **Sectoral Transition Plan defines levers and strategic actions** for each sector **to achieve the set targets**.

In January 2025, Intesa Sanpaolo received **validation from the Science Based Target Initiative (SBTi)** for its own emissions targets and for the Group's financed emissions targets.



Biodiversity

E4

As of January 2025, the Group has been applying the **Biodiversity and Nature Rules** which describe the Group's approach and in particular:

- ✓ set out **specific limitation and exclusion criteria**
- ✓ refine the **risk assessment procedures**
- ✓ encourage **sustainable finance** to support biodiversity and ecosystem services

Circular economy

E5

The Group has long been strongly **committed in the field of the circular economy**, in particular:

- ✓ **Intesa Sanpaolo Innovation Center** is the Group's specific centre of expertise on the topic
- ✓ ISP is a **Strategic Partner** of the **Ellen MacArthur Foundation**
- ✓ The circular economy **principles** are **integrated into the credit process** (green and circular framework)
- ✓ A dedicated **credit facility** is made available to undertakings

Social

Own Workforce

S1

People are the Group's main resource and the enabling factor for its future success.

Men (45.3%)
Women (54.7%)

90,789 employees

People's ongoing development, growth and satisfaction are one of the main objectives to be pursued through investments, including **in talent**, with a view to developing a **unique ecosystem of competencies** suited to the Group's evolution.

People upskilled / reskilled (No.)	New appointments to senior positions by gender (%)	People enrolled in talent management programmes (No.)
2022-2025 TARGET **8,000** ✓	2022-2025 TARGET **50%** ✓	2022-2025 TARGET **~1,000** ✓
9,327 as at 31.12.25	**51%** as at 31.12.25	**986** as at 31.12.25 [2]
Developing human capital by reskilling people's competencies towards new roles and strategic activities	*New appointments of women to senior positions[1], contributing to achieving 29.4% female representation in senior leadership.*	*"Future Leaders" Programme to develop a new generation of managers and leaders with a broad perspective and international mindset*
	[1]First and second reports to the CEO	[2]A total of 1,054 people were involved in these programmes over the 2022-2025 Plan period

The **Principles on Diversity, Equity and Inclusion** were updated in 2025 to strengthen an inclusive approach towards all forms of diversity.
The **development of female talent** is encouraged through development pathways, job rotation programmes and training activities.

Adjusted gender pay gap at Group level: gender pay gap **for the same role, seniority and professional characteristics.**

1.6%

The **ISPROUD Community has been expanded**, which brings together the Group's LGBTQ+ people, **and "ARTICOLO19 – Disability & Citizenship"**, which develops content and ideas to improve the lives of people with disabilities and their families.

In December 2025, the **regulatory framework for** the Group **second-level contract was defined for the period 2026–2029**, in agreement with the trade unions.

8 Faculty

Creation in 2025 **of the Corporate Academy** with a focus on **transformative training**, considered strategic for the Group's growth**.**

Actions were implemented to improve **work-life balance**, including **new corporate welfare measures** also in support of parenthood and initiatives aimed at **more flexible planning of work activities**.

Workers in the value chain

S2

The Group recognises the **risk associated** with investment, financing and lending services to **customers in sectors** that present **higher social risks** in their operations and/or supply chains. To this end, it has:

- ✓ established **general exclusion criteria** in order to prevent the financing of **activities and/or projects with particularly significant social impacts**
- ✓ developed **Group Guidelines for the Governance of Reputational and ESG Risks**
- ✓ defined an **ESG score to also assess the social profile of corporate customers**, taking into account aspects such as labour management and standards, health and safety at work, policies for the inclusion and enhancement of diversity and human capital development

Affected communities

S3

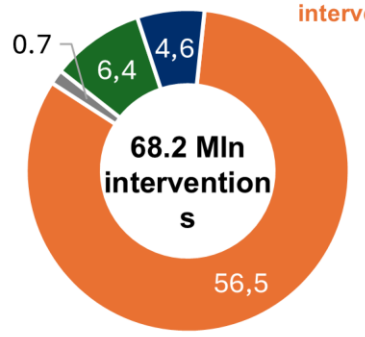
The Group actively **supports the areas and communities in which it operates** through **Social Impact** tools, initiatives and programmes, controlled by the **Chief Social Impact Officer's Governance Area** through **Intesa Sanpaolo for Social Impact.** A **portion of distributable profits** is allocated to a specific "**Charity Allowance**", which is headed by the Bank's Presidency.

The actions taken by the Group include tackling poverty, educational inclusion (including the promotion of financial literacy), **supporting youth employability** and initiatives to promote **social cohesion and inclusion** (for example, social housing for students and families).

"Giovani e Lavoro" programme aimed at **training and access** to the Italian labour **market** and active since 2019.

~5,600	~2,500	80%
students trained and in training	companies involved	placement rate

Food and shelter programme for people in need (No. of interventions)



***Cibo e Riparo per le persone in difficoltà" (Food and Shelter for disadvantaged people) programme: the biggest plan ever to be activated by a private entity in Italy**, which involves the widespread distribution of food, beds, medicines and clothing to people in need throughout national territory.*

TARGET 2022-2025

50 Mln interventions

Gallerie d'Italia

4	18
locations	main exhibitions

"Progetto Cultura": a programme of initiatives for the **protection and enhancement** of the country's and the Group's **historical, artistic and cultural heritage.** It includes **"Gallerie d'Italia", one of the most important private museums** in Europe.

Consumers and End-Users

S4

The Group considers **customer satisfaction** and the promotion of **responsible sales practices** as central, adopting a strategy that combines **service quality, transparency and listening to customers.**

Net Promoter Score (NPS[3]) to measure customers' level of satisfaction and their **likelihood of recommending the Bank's products and services,** through a score ranging from **-100 to +100.**

General disclosures

ESRS 2 – General disclosures

Basis for preparation and methodology

Reporting standards

This Consolidated Sustainability Statement (the "Statement") has been prepared on a consolidated basis by the Intesa Sanpaolo Group (the "Group" or the "ISP Group") pursuant to Legislative Decree no. 125 of 6 September 2024 which implements Directive 2022/2464/EU on corporate Sustainability Reporting in national law, and in accordance with the European Sustainability Reporting Standards (the "ESRS"), referred to in Delegated Regulation (EU) 2023/2772. The Manager responsible for preparing the Company's financial reports, in collaboration with the Managing Director and CEO, certifies, with a specific report, that the Consolidated Sustainability Statement included in the Report on operations has been prepared:

- in accordance with the above-mentioned reporting standards and Legislative Decree no. 125/2024;
- the specifications adopted pursuant to Article 8 of "Regulation (EU) 2020/852" (Taxonomy Regulation).

The 2025 Consolidated Sustainability Statement is subject to a limited assurance engagement by the independent auditors EY S.p.A., which also carry out the statutory audit of the financial statements. In accordance with Consob Regulation no. 11971/1999, as amended by Consob Resolution 23463, the independent auditors express their conclusion as to the compliance with:

- the reporting standards adopted by the European Commission in accordance with Directive (EU) 2013/34/EU (European Sustainability Reporting Standards, hereinafter also "ESRS");
- Article 8 of Regulation (EU) No. 852 of 18 June 2020 (hereinafter also referred to as the "Taxonomy Regulation") of the information contained in the section "Reporting pursuant to the EU Taxonomy (Regulation (EU) 2020/852)" of the Consolidated Sustainability Statement 2025.

Reporting boundary

In accordance with the general requirements of ESRS 1, in 2025, the Group extended the reporting boundary of the Consolidated Sustainability Statement to all wholly-owned subsidiaries in order to bring it into line with the scope of the consolidated financial statements. Consequently, all companies that are fully consolidated for financial statements purposes have been included in the reporting boundary, while subsidiaries that are consolidated using the equity method have undergone a materiality analysis to assess their materiality from an ESG perspective. This analysis identified subsidiaries that were immaterial in terms of sustainability, and these were excluded from the reporting boundary.
For more information on the undertakings included in the scope of consolidation, see the financial statements, Part A – Accounting policies, specifically Section 3 "Scope of consolidation and consolidation methods".

Pursuant to Article 7 of Legislative Decree no. 125/2024, governing the rules of exemption form the preparation of individual sustainability statements, it is noted that the subsidiaries Intesa Sanpaolo Assicurazioni S.p.A. and Vseobecna Uverova Banka A.S. (both issuers of publicly traded securities) are required to prepare sub-Consolidated Individual Sustainability Statements as they do not meet the exemption criteria.

Scope of activities subject to reporting

The Consolidated Sustainability Statement covers the following three macro-areas:

- Own operations, i.e. all operational processes of the Group as an undertaking, independent of its business. They include activities, resources and relationships that are part of the Group's own operations, such as human resources;
- Upstream value chain, i.e. all Group's operating processes relating to the supply chain and the adopted procurement practices. The disclosure about the upstream value chain focuses, in particular, on risk management methods, including the reputational risks related to suppliers without control tools over sustainability matters[49];
- Downstream value chain, i.e. all the Group's business processes and their supporting processes, including business relationships. The disclosure about the downstream value chain focuses, in particular, on impact management methods and the risks associated with undertakings including financing and investment portfolios which may contribute negatively to sustainability matters due to their business sector or country[50].

Reporting on own operations includes policies, actions, goals and metrics related to sustainability matters which are deemed relevant to the outcomes of the Group's double materiality assessment, including organisation-specific disclosures.
In addition to the disclosure requirements of the ESRS for each topic, the ISP Group has identified entity-specific information, i.e. areas that are not comprehensively covered by the ESRS, but that need specific reporting in order to complete the description of the Group's material sustainability impacts, risks. In particular, entity-specific disclosure was identified and prepared in accordance with the principles set out in Appendix A to ESRS 1. It is included in the "Content index" section of this report, in the final part of the Consolidated Sustainability Statement.

With respect to the Value chain, the disclosure provided in this Consolidated Sustainability Statement includes both qualitative information about the Group's policies, actions and targets to manage and monitor material sustainability matters, and

[49] For additional information, reference should be made to the "Materiality assessment" section and the chapters covering specific sustainability matters.
[50] For additional information, reference should be made to the "Materiality assessment" section and the chapters covering specific sustainability matters.

quantitative information about greenhouse gas emissions ("GHG emissions[51]") and portfolio entity-specific metrics (i.e. the downstream value chain).

In 2025, the Group chose to report additional entity-specific metrics relating to ESRS S1, S4 and G1[52].

Furthermore, in accordance with the transitional provisions envisaged by ESRS 1, the Group disclosed information on the policies, actions and targets of its Value chain, using information already available in-house or publicly available information.

No information on intellectual property, know-how or classified as sensitive was omitted.

Time horizons

The Consolidated Sustainability Statement includes forward-looking information for which the Group decided to adopt a time horizon that is in line with that envisaged by other disclosure and/or management requirements[53]. A short-term time horizon is the period adopted by the undertaking as the reporting period in its financial statements (one year), a medium-term time horizon[54] is a five-year time horizon and a long-term time horizon[55] ranges between five and 25 years. The definition of medium-term time horizon is in line with the Business Plan, while that of long-term time horizon matches the commitments arising from the Group's decision to adopt the 2050 Net Zero climate goals.

Use of estimates

Value chain

In preparing the Consolidated Sustainability Statement, the Intesa Sanpaolo Group used estimates and indirect sources to disclose the metrics of ESRS E1 – Climate change relating to:

- Scope 3 indirect greenhouse gas emissions[56] (disclosure requirement E1-6 related to the upstream and downstream Value chain). Scope 3 GHG emissions include the indirect greenhouse gas emissions generated along the undertaking's value chain, arising from indirectly held or controlled activities (e.g., waste disposal by third-party companies);
- the quantification of physical risk on portfolio exposure (disclosure requirement E1-9 on the Downstream value chain)[57].

The Group's ability to obtain the necessary upstream and downstream Value chain information may vary depending on various factors, such as the undertaking's contractual arrangements, the level of control that it exercises on the operations outside the consolidation scope and its buying power. Obtaining Value chain information could also be challenging in the case of counterparties that are not in the scope of the Sustainability Reporting required from time to time.
In accordance with ESRS 1, the ISP Group made every reasonable effort to collect the quantitative information concerning the Value chain. Where it was not possible to gather information about greenhouse gas emissions directly from actors in the Value chain, the Group's estimations were based on the information arising from sector-average data and other proxies.

The data sources and estimation methods used to calculate proxy values reflect the variety of cases and the counterparties involved. Generally speaking, the preparation of the above estimations is based on two main reference frameworks, i.e.:

- the GHG Protocol to calculate Scope 3 emissions on the upstream and downstream Value chain;
- the PCAF[58] to calculate Scope 3 emissions of the only category relating to financed emissions.

The method for estimating Scope 3 emissions from the Italian Banking Association's Sector guidelines were also considered.
Using nationally and internationally recognised calculation standards, as well as sector-specific approaches, limits the risk of data inaccuracy.

Finally, the Group constantly considers the possibility of increasing data accuracy, by directly engaging counterparties (companies in portfolio and suppliers) and via data providers specialised in the collection of third-party environmental data.
For additional information about calculation methodologies, estimations and the percentage share of Scope 3 emissions calculated on the basis of the official figures directly provided by the counterparty, reference should be made to the Metrics on greenhouse gas emissions section in ESRS E1 – Climate change.

The methodology used to quantify the physical risk on portfolio exposures is currently being developed within the Group and at sector level. Specifically, in order to identify the exposures subject to the climate change physical risk, the Group uses an external tool to map and measure the risks for each individual property by:

- mapping physical risks using long-term climate scenarios and subsequently allocating the climatological forecasts to high granularity grids with the calculation of hazard-specific indicators;
- calculating a high granularity synthetic physical risk indicator (SPRI) for each location based on the geo-localisation of offices and production sites for companies in portfolio, and of the building for properties provided as collateral, identifying

[51] Greenhouse gas emissions.

[52] For a complete list of the entity-specific metrics covered by the Group in this Statement, see the detailed table of entity-specific disclosures attached to the Content index.

[53] For information about the specific time horizons covered by the resilience assessment on climate risks, reference should be made to the "Resilience assessment" section of the ESRS E1 – Climate change chapter.

[54] Section 6.4 of ESRS 1 defines the medium-term time horizon from the end of the reporting period up to five years.

[55] Section 6.4 of ESRS 1 defines the long-term time horizon as more than five years.

[56] For additional information about Scope 3 emissions, reference should be made to the Metrics on greenhouse gas emissions section in E1 – Climate change.

[57] The Group applies the transitional provisions that provide for the gradual implementation of the E1-9 disclosure requirement. In this Report, it only covers equivalent information, also presented in Pillar 3 disclosure.

[58] Partnership for Carbon Accounting Financials.

and subsequently allocating the associated risk level. Following the assignment of the SPRI, the decision whether or not an exposure is subject to physical risk weather events is based on two criteria: maturity of the exposure and evolution of the severity of the estimated physical risk indicator.

Own operations

The Intesa Sanpaolo Group used estimations also to calculate other metrics, such as E1-5 (energy consumption), E1-8 (portion of emissions covered by internal carbon pricing) and S1-14 (work-related accidents). For additional information about the calculation methodologies and the estimations made, reference should be made to the Metrics on energy consumption and the Metrics on greenhouse gas emissions section of ESRS E1 – Climate change and to the Metrics related to health and safety section of ESRS S1 – Own workforce.

Finally, no metrics were subject to assurance processes in addition to those carried out by the independent auditors on the Consolidated Sustainability Statement.

Comparative information

For all metrics included in the Consolidated Sustainability Statement for the second year, the Group has provided prior year comparative information.

As disclosed in the "Reporting boundary" section, the changes in the reporting boundary of the 2025 Statement are due to the inclusion of all companies which were fully consolidated for financial statements purposes and to certain corporate transactions completed during 2025. However, it is noted that the companies included in the previous Statement accounted for 99% of Intesa Sanpaolo Group's total assets and full-time equivalent (FTE) employees. Therefore, they provide an adequate basis for comparison with 2025. Consequently, no data have been restated in this Statement.

No comparative data are provided with respect to the new entity-specific indicators introduced by the Group for 2025 as this is the first reporting year in the Consolidated Sustainability Statement.

Incorporation by reference

In 2025, the Group did not avail of the incorporation by reference option.

Statement on due diligence

The Intesa Sanpaolo Group identified due diligence processes that enable the identification and management of the negative impacts arising from own operations or from the upstream and downstream value chain. The due diligence actions carried out by the Group are embedded in the strategy and the current business model. After identifying negative impacts, the Group assesses and takes the actions necessary to manage and contain these impacts, including through its products and business relationships. The following table shows the core elements of due diligence that are reflected in this Statement, indicating for each one the section of the Statement which provides comprehensive information thereon:

Core elements of due diligence	Sections of the Consolidated Sustainability Statement
Embedding due diligence in governance, strategy and business model	General disclosures: Strategy, business model and value chain General disclosures: Materiality assessment General disclosures: Governance structure
Engaging with affected stakeholders in all key steps of the due diligence	General disclosures: Materiality assessment
Identifying and assessing adverse impacts	General disclosures: Materiality assessment
Taking actions to address those adverse impacts	E1 Climate change: Strategy to combat climate change at portfolio level E4 Biodiversity and ecosystems: Policies, targets and actions at portfolio level S2 Workers in the value chain: Manage sustainability matters related to workers of portfolio companies
Tracking the effectiveness of these efforts and communicating	E1 Climate change: Strategy to combat climate change at portfolio level

With respect to ESRS E1 - Climate change, monitoring the identified negative impacts depends on the definition of specific targets at portfolio level. For the other matters whose impacts were identified and assessed in the downstream Value chain, the Group has not yet adopted measurable quantitative targets. However, through the policies and actions adopted, as described in the following chapters of this Report, it has control tools that enable it to manage material impacts.

Strategy, business model and value chain

Strategy[59]

The Intesa Sanpaolo Group's business model combines the generation of sustainable revenues focused on increasing fee and commission and revenues from services, high efficiency and a low risk profile. This configures a distinctive and diversified

[59] The disclosure about strategy set out in this section is reflected in the "Breakdown of consolidated results by business area and geographical area" section of the Report on operations which accompanies the consolidated financial statements.

business model, both with respect to the business areas in which the Group operates and internationally. This model shows the Group as a wealth management and protection company, with a leading role in Italy and Europe.

The integration between product factories, covering portfolio management scheme, life and non-life insurance, and the Group's commercial networks, which ensure high synergies in terms of profitability and greater effectiveness and flexibility in defining the commercial offering, is another mainstay of the business model.

Furthermore, the strategy is based on the awareness that People are the Group's main resource and the enabling factor for its future success. At 31 December 2025, the Group's workforce numbered 90,789 people, of whom 68,894 based in Italy and the remaining 21,895 based abroad, with a significant share in Central/Eastern Europe. People's ongoing enhancement, growth and satisfaction are the fundamental objectives to be pursued by investing in talent, in order to create a single ecosystem of competencies that are appropriate to the evolution of the Group, in which employees are its key actors. The collection of ideas and suggestions from approximately 58,000 employees as part of the definition of the 2022-2025 Business Plan confirmed the importance of people, as well as the identification of the key value pillars of the corporate mission.

2025 was the last year of the 2022-2025 Business Plan which had defined a series of strategic initiatives grouped into four main action areas (the "pillars" of the Plan), which were pursued in accordance with the principles of integrity in corporate conduct and human rights along the entire value chain:

- structural risk reduction strategy - already launched with success in the previous Business Plan - positioning the Group among the best in Europe in terms of NPL ratios and stock (a Zero-NPL bank) and generating a sharp drop in the cost of risk;
- structural cost reduction, driven by technological innovation and various strategic initiatives aimed at improving operational efficiency, including the creation of the Isybank digital bank;
- increase in fee and commission by strengthening the Group's leadership in Wealth Management, Protection and Advisory through highly customised products and services, leveraging proprietary product factories, the international network, highly qualified specialists and dedicated technology tools and platforms;
- significant ESG commitment, with a worldwide leadership position in social impact and a strong focus on climate, reducing own emissions and supporting the energy transition in order to balance environmental and social needs.

With respect to this last point, the Group focused on the following aspects:

- support to address social needs: donations and in-kind contributions, promotion of educational inclusion and youth employability, development of locally supported infrastructure and services, development of social housing for youth in Italy, and care facilities for the elderly;
- financial inclusion: contribution and credit access opportunities through the development of products dedicated to the most vulnerable social categories and contributing to the ability of customers to meet their primary needs;
- commitment to culture: promotion and development of culture (e.g. Gallerie d'Italia and Progetto Cultura activities that manage the Bank's art assets and archive collections) to promote the local area and share Italy's artistic and cultural heritage with institutions and citizens;
- promote innovation: target actions taken within the Group and with the support of companies as part of acceleration and innovation projects and the activities promoted by Intesa Sanpaolo Innovation Center (ISPIC)60;
- accelerate on commitment to Net-Zero: pursue the Group's climate strategy in both own operations and the portfolios held. This strategy translates into the promotion of energy efficiency and the use of renewable energy within the organisation, in addition to the commitment to reducing financed emissions for the main critical sectors;
- supporting customers in ESG/climate transition: disbursement of loans and financing for the sustainable transition to individuals and undertakings, enhancement of the proposition of sustainability-conscious investment products in Asset Management and Insurance and customer assessment based on Intesa Sanpaolo proprietary ESG scoring.

The Group's commitment to sustainability goals is reflected in its offering of products and services and in the goals of reducing emissions in the credit, investment and insurance segments.
Therefore, support to the ecological transition covers all types of customers:

- in the Retail customers and SMEs/Corporates sector, by offering sustainable lending;
- in the Asset Management sector, via sustainability-conscious investments;
- in the development of dedicated ESG advisory services for Fideuram;
- in the insurance sector, by offering ESG schemes for both the life and the non-life business.

With respect to Retail customers, mortgages and loans aimed at financing the redevelopment of the existing real estate assets (green mortgages) played a particularly important role in achieving the goals identified in the Business Plan. Again with respect to the disbursement of green loans, the 2022-2025 Business Plan also focused on circular economy and supports undertakings with the dissemination and funding of this model, including in collaboration with the Ellen MacArthur Foundation.
With respect to Corporate customers, product offering included ESG solutions with a particular focus on environmental aspects, specifically sustainability-linked instruments that encourage customers to improve their sustainability performance, and loans with proceeds tied to environmental and circular economy projects, promoting decarbonisation and reuse of resources.

Supporting financial inclusion through social lending engaged categories of vulnerable undertakings and groups of people who may not have access to credit through traditional financial channels, such as, university students, working mothers, families affected by natural disasters, individuals or small businesses in difficulty and exposed to the risk of usury. To these categories, the Group offered a wide range of financial products and services that are constantly evolving, also thanks to market research

[60] ISPIC is the Intesa Sanpaolo Group company dedicated to frontier innovation. For additional information about ISPIC's operations, reference should be made to the ESRS E4 – Biodiversity and ecosystems and the ESRS E5 – Resource use and circular economy chapters.

and feedback received from customers, adapting the offering to their needs and preferences. The non-profit sector was a particular class of customers which was the target of specific offers, including, inter alia, a programme based on a crowdfunding platform. Services targeting the more disadvantaged customers were also provided by the Group's international subsidiary banks (part of the "International Banks Division" or "IBD"), via specific local initiatives.

With respect to the 2022-2025 Plan, the following standards highlight the important results achieved in the various areas.

Intesa Sanpaolo has defined the strategic priorities of the new 2026-2029 Business Plan based on the results fully achieved under the 2022-2025 Business Plan. It confirmed its leadership in social impact, supporting customers in the sustainable transition and renewing its commitments to decarbonisation. In particular, the Group is committed to:
- maintaining its position among the world's leaders in social impact, with the aim of fighting poverty and reducing inequalities;
- supporting customers on their sustainable transition journey by disbursing sustainable lending equal to 30% of total medium/long-term new lending between 2026 and 2029;
- confirming, in relation to 2050 net-zero, the 2030 targets for financed and own emissions, asset management and insurance business.

In addition, the Group plans to continue investing significantly in its people, its most important asset. This will involve, in particular:
- scaling up capability building, specifically through the new Group Corporate Academy (around 20,000 people involved in transformative training programmes each year);
- reskilling and upskilling towards strategic activities (around 10,000 people reskilled/upskilled);
- engaging around 8,000 young people in dedicated development programmes;
- involving all people in initiatives that communicate the Group's culture;
- further enhancing the Group welfare, with a focus on work-life balance.

The Group is also committed to continuing to promote culture and innovation.

For additional information on the 2022-2025 Business Plan and the new 2026-2029 Business Plan, reference should be made to the Report on operations[61].

Finally, the goals of the Business Plan related to ESG topics and sustainability matters are closely related to some UN Agenda 2030 Sustainable Development Goals (SDGs). Reference should be made to the relevant report for additional information on the ISP Group's contribution to the SDGs.

Business model[62]

The Group's activities contribute to the creation of value for its customers and include the main processes underlying the provision of banking and financial services:
- management of financial resources: this includes managing the financial resources from external sources, such as customer deposits, funds raised on the financial markets and capital management. As a banking group, the Group manages these resources with the aim of maintaining adequate levels of liquidity and capital;
- provision of financial services: this includes all banking transactions such as, for example, opening and managing current accounts, disbursing loans and mortgages, providing financial advisory activities, private banking services, managing the portfolios of retail and institutional customers and business services;
- manage the distribution of services: this includes managing the distribution channels of financial services which include physical branches, online banking and mobile banking services and automated services, such as ATM branches. The Group is strongly committed to promoting digitalisation in order to increase the efficiency of customer services;
- sales and marketing: these include all promotional, advertising and branding activities that attract new customers and maintain existing relationships. The Group heavily invests in the development of customised offering for several customer categories, promoting products which include, inter alia, credit cards, insurance policies, investment funds and financial advisory services;
- after-sale services: these include management of customer relations and continuous support via several channels, such as call centres, online chat and customised support. The Intesa Sanpaolo Group focuses, in particular, on customer care services and on monitoring customer satisfaction.

The Group operates via six business Divisions:
- Banca dei Territori Division is the lynchpin of Italy's commercial operations targeting individuals, small and medium enterprises and non-profit organisations. Furthermore, it offers products such as industrial loans, leases and factoring arrangements, and includes the Group's digital bank (Isybank);
- IMI Corporate & Investment Banking Division is the global partner for enterprises, financial institutions and the public administration in a medium/long-term perspective, at domestic and international level in 23 countries. It offers commercial banking, transaction banking, investment banking, structured finance and capital markets services. Abroad, it offers corporate banking services via a specialised global network;
- the International Banks Division ensures a strategic international presence by offering commercial banking services in several countries in Central/Eastern Europe and North Africa. This Division operates with the South-Eastern Europe HUB comprising Privredna Banka Zagreb in Croatia, Intesa Sanpaolo Banka Bosna i Hercegovina in Bosnia-Herzegovina and Intesa Sanpaolo Bank in Slovenia with the Danube HUB, made up of Všeobecná úverová banka in Slovakia and the Czech

[61] For additional information, reference should be made to the "The 2022-2025 Business Plan and the new 2026-2029 Business Plan" section in the chapter "2025 at a glance".

[62] The disclosure about the business model set out in this section is reflected in the "Breakdown of consolidated results by business area and geographical area" section of the Report on operations which accompanies the consolidated financial statements.

Republic, Intesa Sanpaolo Bank Romania, and with other banks: Intesa Sanpaolo Bank Albania, CIB Bank in Hungary, Banca Intesa Beograd in Serbia, Bank of Alexandria in Egypt, Pravex Bank in Ukraine and Eximbank in Moldova;
- the Divisions of the Wealth Management Divisions:
  - the Private Banking Division offers specific products and services for customers in the Private and High Net Worth Individuals segments; it includes Fideuram - Intesa Sanpaolo Private Banking, which is supported by 7,000 private bankers;
  - the Asset Management division operates through Eurizon, offering asset management solutions to Group customers, non-Group distribution networks and institutional customers;
  - the Insurance Division, headed by Intesa Sanpaolo Assicurazioni (and its subsidiaries) and Fideuram Vita, offers insurance and pension products.

The governance areas contribute to the efficiency and quality of business activities, ensuring that the Group has the resources necessary to operate successfully:
- company management: this includes all policy, management and control, strategic planning, risk management and compliance activities. The Group invests in a sound risk control and management structure in accordance with current regulations and to minimise operational risks;
- human resource management: this includes recruiting, training and developing personnel, focusing on digital skills and the ability to handle an increasingly demanding customer base. For the Group, company welfare, continuing education and initiatives dedicated to the well-being of the Group's people play a particularly important role;
- technological development: this includes innovation and the implementation of new technologies, by investing in digital platforms, artificial intelligence, blockchain and sophisticated data analytics tools. The Group is speeding up its digitalisation process in order to improve operating efficiency and customer experience;
- purchases: this covers purchases of goods and services necessary for the operations of the Group, including technologies, software, third-party consultancy and real estate management. Thanks to this support, the Group has the tools and the resources necessary to operate efficiently.

The Group raises the financial resources necessary to provide its products and services via a mix of internal and external sources. Specifically, the methods used by Intesa Sanpaolo to raise financial resources include:
- customer deposits: these are the main source of liquidity and comprise current accounts and term deposits from Retail and Corporate customers;
- short-term funding: it is mainly comprised of repurchase agreements and CD (certificates of deposit)/CP (commercial paper) funding on wholesale markets;
- medium/long-term funding: it is mainly comprised of own emissions on wholesale markets;
- inter-bank loans: these include loans from other banks in the interbank market;
- European Central Bank (ECB) loans: these are refinancing operations carried out by the ECB which Intesa Sanpaolo can use under certain circumstances. These loans are granted at relatively low interest rates, especially during periods of economic downturn or to boost the economy;
- own equity instruments: these are different from the other forms of funding and are critical to Intesa Sanpaolo's financial strength and financing capacity. Indeed, they protect against any losses and support creditors' and investors' trust in its solvency.

The relationship between sources (financial resources raised) and lending (utilisation of those resources, such as loans and investments) is critical to ensuring the Bank's financial soundness and sustainability and that it can provide services to customers, even in adverse market conditions. Through liquidity management, interest rate risk control, regulatory capital, and the use of risk management tools, Intesa Sanpaolo maintains a sustainable balance between resources raised and lending.

The Group has no subsidiaries that operate directly in the following sectors: fossil fuel, chemicals production, controversial weapons, growing or producing tobacco.

Furthermore, exposures in the Group portfolios are subject to specific internal regulations that implement stringent exclusion criteria for counterparties that operate in ESG-sensitive business sectors, including:
- the coal and Oil&Gas sectors, for which the Intesa Sanpaolo Group formalised its rules for lending operations; for additional information on this topic, reference should be made to the chapter ESRS E1 – Climate change;
- with reference to the arms production and trading sector, the Group adopted "Rules governing transactions with subjects active in the armaments sector" which expressly prohibit to undertake any kind of banking or lending activity related to the production of and/or trade in controversial weapons and/or those banned by international treaties and in particular: nuclear, biological and chemical weapons; cluster and fragmentation bombs; weapons containing depleted uranium; and anti-personnel landmines.

Aware of the need to support national and European defence together with the allied countries in NATO, the Intesa Sanpaolo Group limits its banking and/or lending activity solely to operations that relate to the production and/or trade of military goods in countries belonging to the European Union and/or NATO. Furthermore, financing in countries that do not belong to the European Union or NATO is permitted, but is submitted to a more rigorous assessment process, subject to the existence of intergovernmental programmes with the Italian Republic or other European Union countries or within the framework of the "ReArm Europe Plan/Readiness 2030" programme, based on pre-established thresholds. A more rigorous assessment process is always envisaged, irrespective of the amount, where the recipients of the loans of the Parent Company or the international banks are the armed forces or related defence bodies of a country where an "interstate war" is underway, even if the recipient is a country belonging to the European Union and/or NATO where a "territorial dispute" is underway, or a country bordering another in which an "interstate war" is underway. The minimum threshold is set at 25 million euro and 50 million euro, respectively.

The other Group banks and companies are not authorised to provide financing in connection with the production and/or commercialisation of military goods. Except for transactions involving controversial and/or banned weapons, the Parent Company, the Group banks and companies may process payments involving military goods as underlying assets, also based on the aforementioned obligations imposed on payment service providers by the PSD2[63], obviously in the absence of prohibitions arising from competing external regulations, particularly those relating to anti-money laundering and international financial penalties.

Value chain

The Group's value chain consists of a set of activities carried out as part of interconnected processes, as detailed below.

With respect to the upstream value chain, for additional information about the main expense categories subject to centralised sourcing[64], reference should be made to the note to "Other administrative expenses" of the consolidated financial statements.

With respect to the downstream value chain, Intesa Sanpaolo Group's distribution model relies on a multi-channel approach which combines the physical network of branches with sophisticated digital tools, offering a wide range of banking and financial services and providing customers with a seamless experience. Specifically, the distribution model is structured as follows:

- Italy branch network: Intesa Sanpaolo has an extensive branch network which enables it to reach a wide range of customers. Thanks to its physical presence, the Bank can offer customised services and expert advice on site. Branches can meet the needs of several types of customers, including Retail (private and small undertakings), Businesses, Corporate (large undertakings) and Private (high net worth customers) customers;
- digital branches: these are real branches without a physical location, which are available only by phone and computer;
- internet and Mobile Banking: these tools enable customers to carry out banking transactions, such as transfers, payments, and to monitor current accounts and investments, directly from their phone or PC. These services were designed for customers who want to manage their finances independently. The Bank also offers specific remote services for Corporate and Business customers via an IT infrastructure which enables them to receive and send flows and documents with Group banks or other banks with which the Company has a banking relationship, both in Italy and abroad;
- Isybank: this is Intesa Sanpaolo's digital complementary bank which was set up to meet the needs of young, digital customers. At Isybank, the entire banking process takes place exclusively online, without the need to go to a branch or access traditional physical services. It offers a more streamlined and rapid banking experience, focusing on clarity, immediacy and reduced costs compared to traditional banking services;
- the Group's international network: this is a strategic distribution channel as it offers widespread coverage in several international markets. Through these entities, the Group provides a wide range of services, including traditional and sophisticated banking solutions that meet local needs. This channel assists corporate and retail customers abroad, facilitating international operations and consolidating its leading position in Europe and in other strategic areas around the world;
- product factories: the Group's product factories are entities specialised in the development of specific financial products, such as investment funds, insurance and pension solutions. In certain cases, these entities distribute their products directly to customers outside Intesa Sanpaolo's network, using third-party channels;
- partnerships and service integration: the distribution model includes a series of strategic partnerships that expand Intesa Sanpaolo's offerings. Thanks to these collaborations, the Bank can offer a full range of financial solutions, from the easiest to more complex products for sophisticated customers.

The Group uses these channels to serve several types of customers, including retail customers and households, SMEs, large companies and institutions. The Group offers a wide range of products and services to retail customers and households, which include current accounts and loans, mortgage loans and savings and investment solutions. SMEs can receive specific financial services, such as loans, consultancy and payment instruments. Large companies and institutions can benefit from a comprehensive range of corporate banking, investment and treasury management services as well as international trade solutions, consolidating Intesa Sanpaolo's role as the reference partner in all economic sectors.

The Group's main customer categories are listed below:

- retail customers: individuals and companies with less complex financial requirements which are the main element of the activities of the Banca dei Territori Division (approximately 13.8 million customers) and the International Banks Division (about 7.4 million customers);
- corporate customers: companies, financial institutions and public administration, domestic and international, included in IMI Corporate & Investment Banking Division (19 thousand customers);
- private customers: high net worth individuals with more complex requirements which are offered customised services. Specifically, the Private Banking Division has approximately 129 thousand private and high net worth individuals;

With respect to the main markets, the Parent Company has a strong presence in Italy with a network made up of more than 2,600 branches. Furthermore, the Group has a strategic international presence, with over 900 branches and 7.4 million customers, including subsidiary banks operating in commercial banking in 12 countries in Central/Eastern Europe and North

[63] Payment Services Directive 2 which updates and improves the EU rules introduced by the original PSD adopted in 2007. The PSD2 came into force on 12 January 2016. Its main objectives are to: (i) contribute to a more integrated and efficient European payments market; (ii) improve the level playing field for payment service providers (including new players); (iii) make payments safer and more secure; (iv) improve the protection of European consumers and undertakings.

[64] The main expense categories subject to centralised sourcing are included in Table 12.5, "Other administrative expenses: breakdown" of the notes to the consolidated financial statements, Part C – Information on the consolidated income statement. This excludes the administrative expenses of the insurance sector, which are included under item '160. Insurance service result".

Africa. It also has an international network specialising in providing support to corporate customers in 24 countries, particularly the Middle East and North Africa, and in countries where Italian businesses are especially active.

Performance[65]

Thanks to its strong performance, the Intesa Sanpaolo Group can generate increasing and sustainable value for all its stakeholders. The Group's net income for 2025 amounts to 9.3 billion euro, thanks to which cash dividends[66] of 6.5 billion euro will be proposed to the Shareholders' Metting of Intesa Sanpaolo. Of these, approximately 35% will go directly to Italian households and foundations, and a 2.3 billion euro share buyback, authorised by the ECB, to be launched in June 2026[67], in addition to the 2 billion euro share buyback which was completed in October 2025. Personnel expenses amount to 7 billion euro. Households and businesses received medium/long-term loans worth 86.1 billion euro (of which 56.3 in Italy).

With respect to the main results in the ESG area, also considering the goals set out in the 2022-2025 Business Plan, the "Cibo e riparo per i bisognosi" (Food and shelter for the needy) programme continued, confirming Intesa Sanpaolo Group's strong focus on combating poverty. As part of this programme, 68.2 million euro's worth of initiatives have been carried out in the 2022-2025 period, exceeding the Plan's goals. Also this year, the Group confirmed its strong commitment to the green transition by disbursing new green mortgages to individuals for the purchase, construction and energy efficiency improvement of buildings, totalling approximately 15 billion euro over the 2022-2025 period, including more than 6 billion euro[68] in 2025; furthermore, the improvement of ESG asset management and insurance product offerings continued, with a penetration of about 76% of total AuM[69]. With respect to the commitment to Net-Zero, in January 2025, Intesa Sanpaolo received validation from the SBTi for its own emissions targets (which the SBTi declared to be aligned with the 1.5°C trajectory) and for the Group's financed emissions targets[70]. Finally, the Group has been confirmed as Top Employer 2026 in Europe[71] and Italy[72] for the second and fifth consecutive year, respectively. The Banks in Albania, Croatia, Serbia, Slovakia and Romania were also recognised as Top Employer 2026. Finally, it was ranked the top company in the Banking & Finance sector in the LinkedIn Top Companies 2025 ranking, which recognises companies that offer great career development and professional growth opportunities.

Materiality assessment

Methodology and rationales

For the purposes of this Consolidated Sustainability Statement, the Group has preliminarily conducted an assessment of the main material sustainability matters (the "double materiality assessment").

In line with 2024, the double materiality assessment carried out in 2025 is based on the regulatory requirements of the ESRS, the guidelines on materiality[73] and the technical details provided by the regulator (e.g. those provided in the Frequently Asked Questions (FAQs) on double materiality assessment).

In line with the provisions of the ESRS, the Group's double materiality assessment considers both the impact of the Group's operations on external and internal stakeholders (impact materiality) and the risks and opportunities that have or may have material financial implications on the Group (financial materiality). Specifically:

- impact materiality (inside-out perspective) considers impacts on the economy, the environment and people connected with the undertaking's own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts. The impact assessment also includes the assessment of the materiality of the effects on matters related to human rights and, more in general, areas where, when material, the disclosure could be functional to stakeholders and their assessments of the Group operations.
- financial materiality, which considers, from an outside-in perspective, sustainability matters that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impact materiality and financial materiality are interconnected and interrelated as the effects on the Group arising from the external context and related to sustainability topics can give rise to risks and opportunities. Therefore, risks and opportunities are identified based on the impacts, dependencies and sustainability issues that have or could have financial effects on the Group.

The Group assessed both dimensions (impact materiality and financial materiality) in order to identify and assess material impacts, risks and opportunities (IROs) and reported on the material aspects according to these perspectives. Compared to the double materiality assessment carried out in 2024, the methodological approaches adopted to assess the materiality of IROs

[65] The disclosure about performance set out in this paragraph is reflected in the "Consolidated results of Intesa Sanpaolo" section of the Report on operations which accompanies the consolidated financial statements.

[66] Of these, 3,234 million euro paid as interim dividend on 26 November 2025 (18.6 cents per share) and 3,309 million euro to be paid in May 2026 (19.0 cents per share), equal to 37.6 cents per share in 2025.

[67] Subject to shareholder approval.

[68] As of 30 June 2024, green mortgages disbursed by the International Banks Division are also recognised.

[69] Eurizon boundary - funds and asset management products under Article 8 and Article 9 SFDR 2019/2088, including, portfolio management schemes.

[70] For more details, see the ESRS E1 – Climate Change chapter.

[71] From Top Employers Institute.

[72] From Top Employers Institute.

[73] Reference should be made to the guidelines "IG 1: Materiality Assessment Implementation Guidance" issued by EFRAG in May 2024. The reference methodological document for conducting double materiality assessments, which provides operational guidelines on how to identify and assess impacts, risks and opportunities for ESRS purposes.

involved developments in assessment methodologies, resulting in changes to the materiality results. These developments are described in detail in the relevant sections (see “Materiality assessment of risks”).
The Group conducted the double materiality assessment in accordance with the Group’s business context and via an active dialogue with stakeholders. In particular, the Group considered and emphasised the specific characteristics of the business lines and the geographical areas in which it operates and in which its counterparties, customers, and suppliers operate.

The results of the double materiality assessment provide the basis for sustainability reporting and are crucial in shaping the business strategy on material topics for the business and stakeholders. This is in line with the EFRAG (European Financial Reporting Advisory Group) guidelines, which provide for the engagement of stakeholders in the double materiality assessment process. Stakeholders are engaged through various listening and dialogue methods. These methods are employed both with the relevant internal structures that are in direct contact with the stakeholders concerned, and with the stakeholders themselves (see “Mapping and engagement of the Group’s stakeholders”). The perspectives emerging from this dialogue are integrated into the process for identifying and assessing the materiality of IROs on a qualitative basis. The results make it possible to identify the material topics in relation to which the disclosure describes the controls for managing and monitoring them through specific policies, actions and targets.

The double materiality assessment was carried out in accordance with the following macro-stages:
- Group’s stakeholder mapping to identify and monitor their needs and perspectives in relation to the impacts, risks and opportunities they consider a priority;
- business context analysis to identify positive and negative, actual and potential impacts on the economy, the environment and people, including human rights, arising from Group operations, and the risks and opportunities generated by the external environment, based on an analysis of different sources, such as national/international documentation in the ESG regulatory context and the documentation relevant to the sector in which the Group operates at national and international level. this analysis is also aimed at identifying any developments compared to the previous double materiality assessment;
- identification of the IROs to be assessed and which are potentially relevant to the Group with respect to the topics (sustainability topics) identified by legislation;
- assessment of the IROs which are potentially relevant to the Group by:
  - conducting an internal analysis based on metrics aligned with the requirements of the ESRS reporting standards (as described below). With respect to these metrics, the thresholds identified exclude materiality for IROs for which the likelihood on the one hand or the significance / magnitude[74] on the other are to be considered not material. Therefore, in order to determine materiality, both likelihood and significance / magnitude must be non-residual. The IROs were also assessed to ensure overall consistency with the current Group risk management process, in order to comply with regulatory requirements;
  - engaging the Group’s internal operating structures that are competent for the specific relevant topics;
  - engaging its stakeholders via the engagement and management activities listed below;
  - identifying the sustainability matters relevant to the Group based on the aggregation of the materiality results of the IROs arising from internal analysis and stakeholder engagement activities;
- consolidating and sharing the list of sustainability matters material for the Group.

The process is updated on an annual basis and revised based on any regulatory changes, any refinements to the methodological approach for the double materiality assessment and changes relevant to the internal and external context.

The above macro-stages, which identify and assess IROs, are set out in more detail in the following operating process.

[74] Metrics consistent with the ESRS reporting standards and described in more detail in the “Assessment of the materiality of IROs” section. In particular, significance refers to the materiality assessment of impacts and magnitude to the financial one.

Mapping and engagement of the Group's stakeholders

Stakeholder engagement is the process through which the Group engages with its stakeholders so that their views and requests are also taken into account in the double materiality assessment.

In this respect, the stakeholder map represents the Group's network of relations, with which Intesa Sanpaolo exchanges views on a regular basis in order to identify and monitor their needs and prospects in relation to priority impact, risk and opportunities areas.
When performing the double materiality assessment, in line with the applicable EFRAG Guidelines, the Group applied the following stakeholder engagement approach:

- engage the Group's competent internal structures which maintain constant and ongoing dialogue with the stakeholders concerned, in mapping and assessing the materiality of impacts, risks and opportunities (stakeholder management);
- directly engage specific stakeholders via dedicated workshops, interviews and questionnaires (stakeholder engagement).

Group stakeholders categories are shown in the above map. Some of these stakeholders were engaged in the identification and assessment of the materiality of the IROs linked to the sustainability topics which are closer to their experience, knowledge and sensitivity. This enhanced stakeholders' knowledge of the Group's processes and strategies related to the sustainability matters closest to them.

The listening methods applied to each category of stakeholders and a summary of the sustainability matters explored with each category are shown below:

CATEGORY OF STAKEHOLDER	STAKEHOLDER	LISTENING AND DIALOGUE METHOD	SUMMARY OF THE ISSUES COVERED
CUSTOMERS	Retail customers	Integration of dedicated questions in the retail customer questionnaire and interview with BdT structures	▪ Initiatives for environmental protection and reduction of the environmental footprint of the Group's offices and branches ▪ Responsible, solid and sustainable governance, value creation and distribution for all the Group's stakeholders ▪ Commitment to promoting sustainable economic development, also in light of the international and EU objectives in the Climate Change and sustainability area. More specifically, promotion of an economic model with low carbon emissions based on the circular economy, through the development of a dedicated, customer-centric offering ▪ Pursuit of the banking business in full compliance with the rules and principles of fairness in business ▪ Disbursement of loans to sections of society that would find it difficult to access credit, and provision of products with a high social impact ▪ Attention to service quality, customer care, relationship and satisfaction ▪ Promotion of a growth strategy geared towards digital innovation to anticipate new trends and be competitive on the market ▪ Commitment to asserting its role as a digital company through an advanced multichannel platform aimed at ensuring an innovative, safe and effective offer ▪ Commitment to guaranteeing IT security to its customers ▪ Sustainable investments and integration of sustainability issues in the conduct of the insurance business ▪ Talent development, development of internal skills, evaluation and incentive systems, regular training plans, diversity management ▪ Support to the community and commitment to culture through solidarity initiatives with projects carried out in partnerships, donations and sponsorships, promotion of art and culture in Italy and abroad
	Corporate customers	Integration of dedicated questions in the corporate customer questionnaire and interview with BdT structures.	
ENVIRONMENT/ COMMUNITY	Internal representative figures and reference experts	Virtual one-to-one interviews with representative figures of the Community and the territory and interviews with the internal structures	▪ Environmental aspects, in particular in relation to climate change and biodiversity ▪ Evolution of the regulatory environment (e.g. CSDR, ESRS) and the potential impacts on organisations ▪ Ability to promote a systemic approach towards the achievement of the Sustainable Development Goals (SDGs) defined in the context of the United Nations ▪ Leading role of the Intesa Sanpaolo Group on ESG issues ▪ Importance in communicating the results achieved and the objectives set in the sustainability and ESG area ▪ Main challenges and strengths of the Intesa Sanpaolo Group for the implementation of the Business Plan with a focus on the ESG area ▪ Importance of diversity and inclusion within the workplace ▪ Relevance of the concept of Innovation and related satisfaction of customer needs ▪ Customer loyalty ▪ Customer protection through transparency in product offerings ▪ Support for SMEs in the sustainability area
	Opinion leaders	Integration of dedicated questions in the survey carried out on opinion leaders belonging to the financial area and to trade associations, ESG experts, top managers	▪ Environmental aspects, in particular relating to climate change and circular economy ▪ Employee well-being ▪ Community support, social commitment and inclusiveness ▪ Workers' rights and corporate governance

CATEGORY OF STAKEHOLDER	STAKEHOLDER	LISTENING AND DIALOGUE METHOD	SUMMARY OF THE ISSUES COVERED
SHAREHOLDERS/ INVESTORS	SRI investors	Analysis of the main questions asked by the ESG Investors of the Intesa Sanpaolo Group and discussion with the competent internal structure	▪ Environmental aspects, in particular relating to climate change adaptation, biodiversity, natural resources and decarbonisation ▪ Aspects relating to finance and sustainable investments ▪ Sustainability policies developed by the Bank ▪ Inclusion and diversity ▪ Employee well-being ▪ Development and digitalisation ▪ ESG sustainability and integration in business strategies ▪ Gender pay gap ▪ Impacts of Artificial Intelligence on the Group's workforce ▪ Workers' rights ▪ Corporate governance
PEOPLE	Group's people, in Italy and abroad	• Interviews with HR internal structures • Survey aimed at listening to the opinions and needs of the Group's people by providing a questionnaire to over 89,000 Group's people as part of an internal climate survey which included questions relating to sustainability topics	▪ Assessment of the perception of the Group's image from the customers' point of view, based on individual professional experiences ▪ Attention and care of employment levels in restructuring processes ▪ Recruitment of young people ▪ Assessment of the variables related to personnel enhancement (e.g. sense of pride and belonging, merit recognition, autonomy and financial recognition) ▪ Talent development and retention ▪ Assessment of the training and professional growth opportunities provided by the Intesa Sanpaolo Group ▪ Employee well-being (flexibility and work-life balance, relationship with colleagues and managers) ▪ Job satisfaction of Intesa Sanpaolo Group people ▪ Evaluation of the transparency and objectivity of the performance assessment systems ▪ Assessment and knowledge of the Policies applied by the Group (e.g. Diversity and Inclusion) ▪ Assessment of customer satisfaction on aspects such as the reliability, transparency and clarity of the Intesa Sanpaolo Group's procedures ▪ Intesa Sanpaolo Group ESG initiatives and products
	Trade unions	Virtual focus group with trade union representatives	▪ Employment protection and future, including in consideration of the service digitalisation trend ▪ Community support ▪ Financial inclusion ▪ Disclose sustainability information ▪ Environmental issues and biodiversity ▪ Ecological transition, importance of the use of renewable energies and promotion of sustainable mobility for employees ▪ Gender pay gap / equality
SUPPLIERS	Dedicated internal structure	One-to-one interviews	▪ Environmental topics, biodiversity and circular economy ▪ Job protection, health and safety, diversity & inclusion and well-being of people along the supply chain ▪ Management of relationships with suppliers

Employee representatives pursuant to Legislative Decree no. 125/2024 were engaged in compliance with the relevant regulations and agreements, in particular:

– in discussions with all the trade unions signatory to the sector national collective bargaining agreement, through a focus group dedicated to the 2025 double materiality assessment;
– in a meeting between the company and the Group Trade Union Delegation, following approval of the Consolidated Sustainability Statement 2024 by the Board of Directors, focused on the presentation of its content.

Analysis of the relevant business context

In order to map and preset IROs, the Group analysed the context in which it defines and implements its business activities and relationships. Specifically, the following elements were considered:

– external documentary sources, updated to the most recent versions, to analyse reference standards and frameworks, including international indices (Dow Jones Best-in-Class Indices, Morningstar ESG Indexes, Euronext ESG Indices CDP 2024), reference standards and reports for the reporting of sustainability performance (WEF's Global Risks Report, The OECD Guidelines for Multinational Enterprises, BSR – Business for Social Responsibility, World Business Council for Sustainable Development – WBCSD), documents and reference frameworks in the field of Human Rights (UN Guiding Principles on Business and Human Rights), the Proposal for a Directive of the European Parliament and of the Council on corporate sustainability due diligence which amends EU Directive 2019/1937 (CSDDD, EU Directive 2024/1760 of the European Parliament and of the Council of 13 June 2024 on corporate sustainability due diligence) and further reference regulations referred to by the ESRS (EU Regulation 2019/2088 – SFDR, EU Regulation 575/2013 – "Pillar 3", EU Regulation 2016/1011 – "Benchmark Regulation", EU Regulation 2021/1119 – "EU Climate Law");

- external documentary sources, updated to the most recent versions, for the analysis of current trends in the banking and insurance sector, including the SASB Materiality Map, S&P Global Ratings, Fitch Ratings, The OECD Guidelines in the context of Institutional Investment, Financial Sector - Responsible business conduct for institutional investors - Key considerations for due diligence under the OECD Guidelines for Multinational Enterprises, MSCI - ESG Industry Materiality Map, GRI – Sector Standards, the Supervisory Expectations of the Bank of Italy and the ECB, the Recommendations of the Task Force on Climate-related Financial Disclosures (in particular, the "Climate-Related Risks, Opportunities, and Financial Impacts" section), Principles for Responsible Banking, accounting standards (IFRS) for Sustainability Reporting;
- internal document sources, updated to the most recent version, including the Business Plan, the Code of Ethics, the Consolidated Non-financial Statement prepared in accordance with the CSRD, the Financial Statements, communications of the top management, the minutes of the Shareholders' Meetings and company policies, also in order to identify how the impacts are linked to the strategy and business model;
- benchmark conducted on the main other players of the banking sector in relation to material aspects, relevant stakeholders and the methods used to report materiality results (Sustainability statements for CSRD purposes and other public documentation from other national and international financial groups), in order to ensure that the Group is fully aware of the market context in which it operates;
- feedback/input arising from the engagement of the Group's stakeholders.

Identification of impacts, risks and opportunities

The analyses conducted identified, for each ESRS, the Group's possible IROs, applied to own operations and the value chain. Impact materiality and financial materiality are interrelated and, from a methodological point of view, they were assessed at the same time to identify any elements of interaction and connection.

The Group's impacts on people or the environment are identified based on the specific features of the Group's operating and business model, changes in strategy and management decisions made to address those impacts, and based on internal analysis and due diligence processes, in addition to the reference context.

In particular, mapping of climate and environmental impacts, risks and opportunities (ESRS E1, E2, E3, E4 and E5) was carried out on the basis of the following aspects:

- the context in which the Group defines and implements its business activities and relationships (for example, "Rules for the environmental and energy policy", "Group Guidelines for the Governance of Environmental, Social and Governance (ESG) risks", objectives of the 2022-2025 Business Plan, internal documents such as the "Business Environment Scan" and Climate/ESG Materiality Assessment);
- controls put in place by the Group in order to counter climate change, minimise the negative impacts connected to pollution, promote and protect biodiversity and ecosystems and contribute to the implementation of recycling systems and the use of recycled/recyclable materials;
- signing/renewing agreements/partnerships with associations (for example, One Ocean Foundation, mainly engaged in research and development projects in this area, or the Ellen MacArthur Foundation, with Cariplo Factory for the Circular Economy Lab), collaborations with universities in order to develop initiatives on the relevant issues (for example, the development of a study centre on blue economy topics) and dedicated initiatives and projects;
- assessment of transition and physical risks, as well as risks linked to pollution, water management and use, biodiversity and circular economy to which the Group may be exposed;
- consultations with experts in environmental matters.

Similarly, social and governance impacts, risks and opportunities (ESRS S1, S2, S3, S4 and G1) are identified based on the following aspects:

- the context in which the Group defines and implements its business activities and relationships (for example, Principles on Human Rights, Group Guidelines for the Governance of Environmental, Social and Governance (ESG) risks, 2022-2025 Business Plan, policies governing the various areas. etc.);
- internal controls put in place in order to minimise the negative impacts connected to the relevant matters in relation to own operations and the upstream and downstream value chain (for example, protection policies and measures that contribute to safeguarding the rights of workers in the value chain and aimed at protecting/ensuring the confidentiality of customer data, such as the code of ethics, Guidelines and Rules on the protection of individuals' personal data etc.);
- process to analyse the initiatives implemented by the Group to support, safeguard and enhance the community of the area in which it is based;
- assessment of the risks to which the Group may be exposed, with respect to aspects related to own workforce, workers in the value chain, consumers and end-users, local communities and Group's business conduct.

For the purposes of identifying IROs and conducting the double materiality assessment with respect to own operations, the Group considered all its own workers (employees and non-employee workers) for whom it generates or could generate material impacts or who could generate risks and/or opportunities. Workers making up the Group's own workforce include employees engaged on permanent, temporary or apprenticeship contracts and contractors engaged on temping or project-based contracts.

With respect to the value chain, the types of workers considered in the double materiality assessment, include the employees of the company being financed or in which the Group invests, workers employed in the supply chain, temporary or flexible staff and outsourced resources.

The Group has also taken into consideration all categories of customers and end consumers that are or could be impacted in a material way by the Group and its products or who could generate risks and opportunities.

Finally, the communities analysed mainly include companies in the social fabric in which the Group conducts its business activities, as well as the communities of people affected by the Group's main activities.

Assessment of the materiality of IROs

Materiality assessment of impacts

In order to assess impacts on people and the environment, an internal analysis was conducted using the following metrics, in accordance with reference legislation:

- scale, i.e. how grave the impact is, based on a scale that ranges from "very low" to "very high";
- scope, i.e. how widespread the impact is, based on a scale that ranges from "highly localised" to "global";
- irremediable character, i.e. the extent to which the impact can be remediated and, for negative impacts, based on a scale that ranges from "very low" to "very high";
- likelihood, which measures the likelihood of occurrence of the impact and, for potential impacts, is based on a scale that ranges from "very unlikely" to "extremely likely", considering different time horizons.

For each metric described above, a score is assigned (based on an internal qualitative-quantitative approach) in relation to each individual impact identified by the Group.

Impact materiality is represented by exceeding a pre-established materiality threshold, calculated as the arithmetic average of the score assigned to the scale, scope and irremediable character metrics. Specifically, the materiality:

- of a positive actual impact is the average of the score assigned to the scale and scope metrics;
- of a negative actual impact is the average of the score assigned to the scale, scope and irremediable character metrics;
- of potential impacts is also determined by likelihood. Specifically, the materiality:
  - of a potential positive impact is obtained by multiplying likelihood by the average of the score assigned to scale and scope.
  - of a potential negative impact is obtained by multiplying likelihood by the average of the score assigned to the scale, scope and irremediable character metrics.

For potential negative impacts on human rights, the materiality of the impact (scale, scope and irremediable character) is more important than the likelihood[75], in line with the requirements of the ESRS; this guideline has been incorporated into the assessment methodology adopted.

Time horizons considered when assessing scale, irretrievable character and likelihood in accordance with the ESRS' definition of short, medium and long term[76] are defined as follows:

- short term: the time horizon is 1 year (for items whose expected effect covers short timeframes);
- medium term: the time horizon is up to 5 years (for aspects linked to controls for which a lasting benefit is expected);
- long term: the time horizon is more than 5 years (for elements linked to policies in place in the medium to long term, multi-year action lines).

Impact materiality was assessed taking into account the Group's specific features and was conducted through interviews with internal units affected and external stakeholders (e.g. interviews and discussions with sector experts, experts on communities and the environment or trade union representatives), and a qualitative and quantitative analysis based on the criteria and metrics envisaged by international frameworks and standards[77]. This led to the identification of material impacts generated both through direct activities (own operations boundary) and through business relationships (upstream and downstream value chain boundary).

The assessment was carried out in accordance with an approach which, in general, does not consider any benefits arising from remedial actions and mitigation factors. However, sector legislation (structural controls pursuant to the law) that regulates the Bank's activities on an ongoing basis (for example, anti-money laundering or the GDPR Regulation) was considered.

With reference to climate and environmental standards (ESRS E1, E2, E3, E4 and E5), the impact assessment is carried out, for each identified boundary, as described below:

- own operations: impacts were assessed on the basis of qualitative drivers connected with, among other things, the adoption of internal policies and the promotion of initiatives able to guarantee the achievement of the objectives of pollution reduction targets, climate neutrality and energy efficiency as well as initiatives aimed at responsible water use and the use of recyclable/biodegradable materials;
- upstream value chain: the assessment involved the analysis of ESG questionnaires administered to suppliers and of their feedback;
- downstream value chain: analysis of indirect impacts conveyed through quantitative analyses related to exposures in the Group's portfolios. Indeed, loans/investments in sectors/countries that perform poorly in ESG terms, could generate an indirect negative impact of the Group externally, in addition to entailing a possible risk. For this reason, the analyses carried out for risk assessment purposes are used to assess indirect negative impacts, in order to consider exposure to counterparties belonging to sectors considered to be high-impact from a climate and environmental perspective (for

[75] In line with the ESRS, the likelihood metric is still weighted in calculating materiality. However, it is given a lower weight compared to the materiality component. As stated in IG 1 EFRAG: "*[…] in the case of human rights impacts, […], severity takes precedence over likelihood when identifying material matters*".

[76] As already described in the "Time horizon" section of the above paragraph "Basis for preparation and methodology".

[77] The analysis was carried out in accordance with the methodologies developed by the UNEP FI (United Nations Environment Programme Finance Initiative) and the PSI (Principles for Sustainable Insurance) initiatives, which were also integrated with risk metrics developed internally by the Group.

example, sectors that generate high greenhouse gas emissions and are considered to be highly exposed to physical and transition risks related to climate change or sectors considered to be high-impact in terms of specific environmental matters).
- Furthermore, in order to assess the impacts associated with the downstream value chain, the targets of the dedicated initiatives that the Group has signed on or refers to (e.g. UN Global Compact, Net Zero Banking Alliance - NZBA[78]) were analysed, as well as the investment/loan strategies and criteria defined to assess the counterparties (e.g. internal financing and investment policies that provide for the selection of undertakings that have defined and implemented climate change actions).

With respect to social standards (ESRS S1, S2, S3 and S4), impacts are assessed based on the three reference boundaries, as described below:
- own operations: the assessment was performed on the basis of drivers such as the identification and implementation by the Group of controls and policies on working conditions, equal treatment and opportunities for all and the privacy of workers (such as recruitment plans, talent development programmes, occupational health and safety measures, controls to promote diversity and inclusion), and aimed at safeguarding/protecting the confidentiality of customer data and their health and physical safety. Furthermore, in order to assess the impacts associated with own operations, initiatives to support communities through the protection/enhancement of the area in which they live were analysed;
- upstream value chain: analysis of ESG questionnaires administered to Group suppliers and of their feedback. Furthermore, an analysis of the Group's business context and the categories of suppliers used by the Group was carried out;
- downstream value chain: analysis of the indirect impacts conveyed through the exposures on the Group's portfolios, in order to take into consideration exposures to counterparties belonging to sectors/countries with a high impact from the point of view of the recognition/protection of workers' rights or sectors with a high impact on local communities. In addition, the definition of investment/loan policies/strategies was taken into account to assess impacts on counterparties. With respect to ESRS S4, the assessment was conducted also taking into consideration the protection and safeguarding of consumers and customers in the context of the Group's offering of products and services (e.g. promotion of ethical and transparent business practices, fair treatment of customers, accessibility of the Group's official website).

Finally, with respect to ESRS G1, the impact assessment was conducted across the following boundaries:
- own operations: use of qualitative drivers relating to the Intesa Sanpaolo Group's establishment of internal controls such as the dissemination of a conscious and adequate corporate culture (e.g. promotion of ethical and responsible practices);
- upstream value chain: analysis of the ESG questionnaire prepared by the Group and administered to suppliers, along with an analysis of their feedback;
- downstream value chain: analysis of the indirect impacts arising through exposures in the Group's portfolios, in order to take into consideration the Group's exposure to counterparties/undertakings belonging to high-impact industries in terms of business ethics (e.g. respect for human rights and compliance with external and internal regulations, fight against tax evasion, money laundering and anti-competitive behaviour). In addition, relevant investment/lending criteria and strategies were taken into account in assessing the counterparties.

Materiality assessment of risks[79]

For risk assessment purposes, the analysis was carried out based on the metrics set out in the ESRS and listed below:
- magnitude: this is the potential magnitude of the financial effects arising from risks and is defined using a scale which ranges from "negligible" to "significant", respectively;
- likelihood of occurrence: this indicates how likely a risk is to occur. It was defined using a scale which ranges from "very low" to "very high";

The level of materiality is subsequently calculated as the result of the scores assigned to the above two metrics.
The materiality of a risk is eventually determined by the product value exceeding a specific materiality threshold.

The analysis is based on a cautious approach and was conducted over multiple reference time horizons, in line with the forward-looking estimates and developments already produced within the Group (e.g., Climate/ESG Materiality Assessment, ICAAP, Business Environment Scan) and with scenarios arising from external sources. In particular, the following time horizons were considered[80]:
- short-term: the reference time horizon is 1 year (RAF reference);
- medium-term: the reference time horizon is up to 5 years (reference linked to simulation/stress scenarios);
- long-term: the reference time horizon is more than 5 years (reference linked to medium to long-term planning, multi-year action lines).

The materiality assessment considered the actual financial impact of the Group's material risks. In line with reference legislation, this assessment was conducted using approaches that reflect the highest level of granularity available and the estimates and assessments made by the Group as part of ordinary risk analysis activities.

In line with the Guidelines[81], the financial effects are assessed based on two drivers:

[78] In October 2025 the Net Zero Banking Alliance changed its structure, transforming from a voluntary membership-based alliance to a new framework initiative, with the goal of continuing to provide guidelines to promote the transition in compliance with the Paris Agreement.

[79] The main information on climate risks provided in this paragraph is also included in the "ESG (Environmental, Social and Governance) and climate change risk" section of the notes to the consolidated financial statements, Part E – Information on risks and relative hedging policies and in the section "Climate-related matters" of the notes to the consolidated financial statements, Part A – Accounting policies.

[80] As already outlined in chapter "ESRS 2 - General disclosures, Drafting criteria and methodology, Time horizons".

[81] "EFRAG IG 1: Materiality Assessment Implementation Guidance".

- the Group's exposure to the counterparties in the portfolio and financial institutions that issue debt securities that belong to sectors or countries potentially exposed to ESG risk factors;
- the effects arising from the Group's inadequate operating processes, including assets, resources and relationships (internal and external) that form part of its own operations, or by the threat of penalties or penalties applied in respect of sustainability issues.

Magnitude and likelihood of occurrence and the consequent assessment of the financial effects of risks were determined considering also the following additional elements:
- qualitative elements, by involving the different Group structures, aimed at collecting additional feedback to complement quantitative analyses;
- quantitative elements, using, where possible, methodologies, controls and metrics already in place within the Group (e.g. materiality assessment of environmental, social and governance risks compared to traditional risks (prudential from a financial perspective) as well as data from structured internal processes (accounting data and data used to produce internal or external reporting such as, for example, risk data and projections).

Each sustainability issue was allocated to the traditional risks to which financial intermediaries are exposed (e.g. credit risk, market risk, liquidity risk, operational risk) and was examined at the most granular level possible, linking it to cases that were examined in detail.

The assessments were carried out in line with the current risk management process and the Group's regulatory framework, introducing, compared to the previous double materiality assessment, some developments in the methodological approaches that led to a more extensive consideration of elements that reflect the specific features of the counterparties in the portfolio.

With respect to climate change (ESRS E1), the analyses were conducted by assessing the materiality of the risks identified in relation to matters which included "Climate change mitigation", "Climate change adaptation" and "Energy".
The analyses considered the time horizons previously defined, referring, depending on the period, to internal documentation as well as simulations and projections used for the purpose of analysing the risks to which the Group is exposed.

In order to identify and assess climate change-related risks (physical and transition), the Group has adopted a structured process, which is based on the following operational steps:
- identification of material climate hazards by analysing potential climate-related physical risks, distinguishing between acute physical risks (e.g. heat waves, storms, floods, forest fires) and chronic risks (e.g. sea level rise, changes in mean temperatures, changes in precipitation patterns), and using high-emission climate scenarios[82] and regional projections to identify and predict material climate events;
- identification of transition risks using climate projections based on the Network for Greening the Financial System (NGFS) scenarios, in line with the Paris Agreement, in order to capture the impacts arising from climate change and the decarbonisation process of economies;
- identification of supporting tools and climate data, which consists of the application of geospatial analysis tools and climate models to ensure that risk identification is based on reliable data and recognised methods;
- integration of climate and environmental risk assessments into risk management systems to enable the identification of priorities and the development of mitigation and adaptation strategies to reduce overall vulnerability.

The assessments covered the three identified boundaries and examined the following aspects:
- own operations: analysis of assets and operating activities in order to assess the degree of exposure and sensitivity to the climate hazards identified, considering the risks arising from the potential disruption to the Group's operations. This analysis takes into account the likelihood, potential magnitude and duration of risk events, as well as the specific geographical coordinates of the Group's operating sites as well as efficiency processes and developments in climate-related legislation, technology and markets;
- upstream value chain: assessment of the existence of suppliers which adopt less structured controls with respect to the relevant climate issues (e.g. policies to protect company assets, updating of Business Continuity and Disaster Recovery plans, and energy efficiency measures for premises);
- downstream value chain: analysis of the Group's portfolio in order to assess exposure to counterparties potentially exposed to physical and transition risk factors, in particular by:
  - assessing, with reference to the loan portfolio, exposure to transition risks by considering climate projections based on climate scenarios[83] or the effects of climate events on the value of counterparties' production activities;
  - assessing, with reference to sovereign bond exposures, the impacts of transition risks on bond yields by projecting interest rates under different climate scenarios from which potential shocks to the underlying yield curves are derived.

With respect to environmental standards (ESRS E2, E3, E4 and E5), the following analyses were carried out across the three reference boundaries:
- own operations: assessment of risks linked to environmental matters, based on the Group's core business;
- upstream value chain: assessment of the existence of suppliers that adopt less structured controls with regard to the environmental matters considered;
- downstream value chain: analysis of the Group's portfolio in order to assess exposure to counterparties characterised by poor practices in relation to the environmental matters considered (for example, potentially arising from events related to pollution, the use of polluting substances and the use of marine water resources as well as from threats to biodiversity, the balance of the relevant ecosystems and the circular economy).

[82] For example, the IPCC SSP5-8.5 scenario.

[83] Network for Greening the Financial System (NGFS).

Finally, with respect to social and governance standards (ESRS S1, S2, S3, S4 and G1), the analyses across the different boundaries were as follows:
- own operations: assessment of potential penalties arising from the Group's operations as well as the risks connected to inadequate drafting or implementation of policies aimed at protecting the rights of workers in its own workforce, workers in the Group's value chain and consumers and end users (including aspects related to cybersecurity issues);
- upstream value chain: assessment of the existence of suppliers that adopt less structured controls over issues related to the rights of workers in the Group's value chain (e.g. limitations to the renewal of employees' fixed-term contracts, inadequate preparation of company welfare/benefit systems) as well as over business conduct issues (e.g. publication of a "code of ethics" by suppliers, definition of an anti-corruption policy, etc.);
- downstream value chain: analysis of the Group's portfolio in order to assess exposure to counterparties characterised by poor practices in relation to issues related to the rights of workers in the value chain (for example, adequate salary, collective bargaining), the rights of affected communities and business conduct.

The process of mapping and assessing risks linked to social issues and business conduct that have or could have financial effects entailed the use of specific criteria; in particular:
- with respect to social issues, the Group also considered all the dependencies of risks on the identified impacts. For example, a negative impact related to lending/investment in sectors/countries that are potentially more exposed to risks related to the protection of their employees' rights could lead to a reputational and/or credit risk arising from the portfolios to which the Group is exposed given the high concentration in these sectors/countries;
- with respect to issues related to business conduct, the Group takes an integrated approach, assessing location, type of activity, sector and operating structure. This approach considers the countries and sectors in which the Group operates, as well as the suppliers and counterparties it finances or in which it invests.

In particular, in relation to own operations, potential penalties arising from violations of regulations and procedures are monitored; in relation to the upstream value chain, suppliers are monitored and selected according to criteria that promote corporate soundness and compliance with ethical standards; and in relation to the downstream value chain, counterparties' legal compliance is checked before providing them with products and services.

Materiality assessment of opportunities

Opportunities were assessed using a methodology consistent with that of risks. Therefore, for opportunity assessment purposes, the analysis was carried out based on the metrics set out in the ESRS, as described below:
- magnitude: this is the potential magnitude of the financial effects arising from opportunities and is defined using a scale which ranges from "negligible" to "significant";
- likelihood of occurrence: this indicates how likely a financial opportunity is to occur. It was defined using a scale which ranges from "very low" to "very high".

The level of materiality is subsequently calculated as the result of the scores assigned to the above two metrics.
The materiality of an opportunity is eventually determined by the product value exceeding a specific materiality threshold.

The analysis is based on a cautious approach and was conducted over multiple reference time horizons, in line with the forward-looking estimates and developments already produced within the Group (for example budget planning) and with scenarios arising from external sources. In particular, the following time horizons were considered[84]:
- short-term: the reference time horizon is 1 year (reference linked to the budget);
- medium-term: the reference time horizon is up to 5 years (reference linked to simulation scenarios);
- long-term: the reference time horizon is more than 5 years (reference linked to medium to long-term planning, multi-year action lines).

The materiality assessment considered the actual financial impact of the Group's material opportunities. In line with reference legislation, this assessment was conducted using approaches that reflect the highest level of granularity available and the estimates and assessments made by the Group as part of ordinary planning activities.

The process begins with the identification phase, which considers the Group's external impacts and the potential opportunities that may arise therefrom. For example, the positive impacts arising from the adoption of policies to guarantee adequate working conditions, such as secure employment and adequate wages, and equal treatment, such as gender equality and inclusion, flexible working arrangements and work-life balance, can contribute to the creation of opportunities to improve brand reputation, enhance stakeholder trust and attract new talent.
As a result of the above stage, the Group has identified the following macro-categories of opportunities: (i) expand the product range and the customer portfolio; (ii) improve brand reputation and increase stakeholder trust; (iii) attract talent.

With respect to the allocation of magnitude and likelihood of occurrence to the identified opportunities, in line with the Guidelines[85], the following additional elements were also considered:
- qualitative elements, through assessments that highlight the initiatives, controls, policies and internal strategies prepared by the Group. Where necessary, the assessments were integrated with additional ones to accurately meet the requirements applicable to the relevant sustainability matter;

[84] As already outlined in chapter "ESRS 2 - General disclosures, Drafting criteria and methodology, Time horizons".

[85] "EFRAG IG 1: Materiality Assessment Implementation Guidance".

- quantitative elements, by identifying and using quantitative targets defined in the budget document and the Business Plan as well as assessments of the possibility of expanding target customers by developing products aligned with sustainability goals. The above assessments were based on data and information already used in the Bank's internal processes.

With respect to climate change (ESRS E1), the assessments conducted across the identified boundaries covered the following aspects:
- own operations: analysis of the current and/or planned initiatives implemented by the Group to support climate change mitigation and energy efficiency goals that could contribute to improving the Group's brand reputation;
- downstream value chain: assessment of the opportunity to expand the product range aligned with environmental sustainability objectives. This analysis was also carried out taking into account the possible presence of indicators related to disbursed (or planned) funding aimed at climate change mitigation and adaptation.

With respect to environmental standards (ESRS E2, E3, E4 and E5), the following analyses were carried out across the reference boundaries:
- own operations: analysis of the Group's current and/or planned initiatives to reduce pollution and support biodiversity, ecosystems and the circular economy, which could contribute to improving the Group's reputation;
- downstream value chain: assessment of the possibility of expanding the product range by developing products aligned with environmental sustainability goals (for example aligned with goals related to reducing pollution and issues related to water management, biodiversity and the circular economy). The analysis considered any budget performance targets and indicators linked to the environmental matters examined and those indicators related to disbursed or planned funding in line with environmental matters (for example aimed at improving impacts on and preserving biodiversity and ecosystems as well as improving circular economy profiles and the efficiency of production processes).

Lastly, with reference to social standards (ESRS S1, S3 and S4), the analyses across the different reference boundaries were as follows:
- own operations: analysis of the initiatives, controls, policies and processes in place and/or planned by the Group to protect the rights of its own workforce and with regard to customers, which could give rise to opportunities to attract external talent and strengthen the Group's reputation as well as stakeholder trust.
- In-depth analyses were also carried out with the dedicated structures, also checking the existence of initiatives relating to activities that support the community and the local area, which could strengthen the Group's reputation and stakeholder trust;
- downstream value chain: assessment of the possibility of expanding the product range by guaranteeing access for all social categories of consumers and end users, including the most vulnerable ones.

With respect to matters related to workers in the value chain (ESRS S2) and business conduct (ESRS G1), given the specific features of the Group's core business and following in-depth discussions with the dedicated structures, no potentially significant opportunities were identified from a financial materiality perspective.

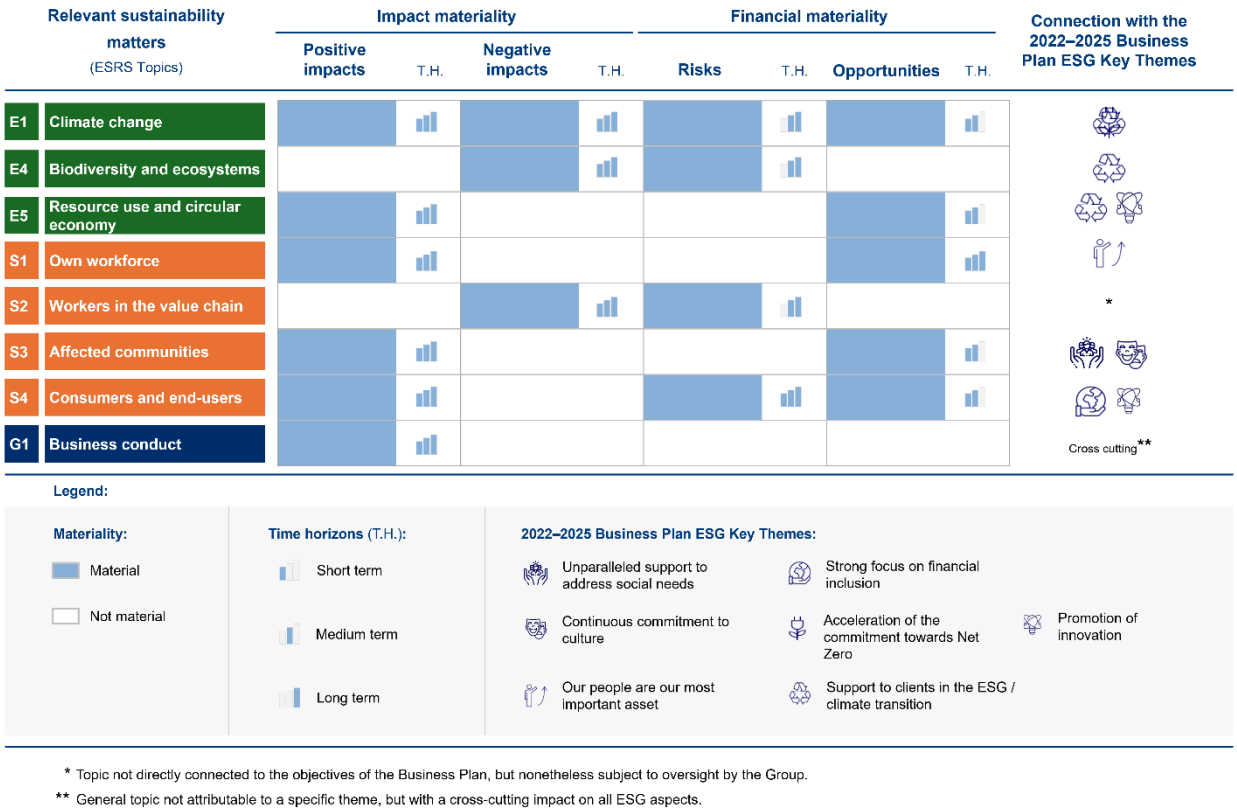
Consolidating and sharing the list of sustainability matters material for the Group.

The Group has a structured decision-making process designed to consolidate and verify material impacts, risks and opportunities for each ESRS issue. A summary of the mapping of the identified IROs and the main evidence and outcomes obtained was prepared after performing the double materiality assessment.

The Group's internal operating structures examined, discussed and consolidated the above mapping of IROs. Each structure examined the mapping to the extent of its remit, using the aforementioned stakeholder management process.

After completing the impact and financial materiality assessment, the identified material sustainability matters were discussed with the Steering Committee and the Risks and Sustainability Committee which supports the Board of Directors in its subsequent approval.

The results of the 2025 double materiality assessment are summarised below, broken down by each relevant ESRS macro-issues and the related time horizons of materiality.
Reference is also made to the key ESG topics set out in the 2022-2025 Business Plan, associated with each of the material ESRS.



* Topic not directly connected to the objectives of the Business Plan, but nonetheless subject to oversight by the Group.

** General topic not attributable to a specific theme, but with a cross-cutting impact on all ESG aspects.

Based on the above assessments, all macro-issues ("topics") proposed by the ESRS were identified as material, except for topics "E2 - Pollution" and "E3 - Water and Marine Resources" (the latter did not show any material impact or financial elements) in line with the results of the 2024 double materiality assessment.

Compared with the previous reporting year, Topic E2 – Pollution, which was material in 2024 for risk aspects and negative impacts on portfolios (related to the risks), was considered not material in 2025 in light of the developments in risk models. The methodological updates led to results that better reflect the actual composition of the Group's portfolio, further enhancing its quality.
Indeed, the assessments took into consideration elements related to the specific features of individual counterparties more extensively than in the previous year (see "Materiality assessment of risks").
In addition to the above, these developments also led to a result of immateriality for risk aspects and negative impact (related to portfolio-linked risks) also for topics "E5 – Circular economy", "S3 – Affected communities" and "G1 – Business conduct". However, in line with 2024, these topics are still material for other aspects (as detailed in the table in the next paragraph).

In addition, as shown in the detail table in the next paragraph, the upstream value chain (suppliers), which was material in 2024 for some limited risk areas (topics "E1 –– Climate change", "S2 – Workers in the value chain" and "G1 – Business conduct") and in terms of impact (topic "G1 – Business conduct"), was immaterial this year. Once again, this was due to methodological developments which enabled a more extensive consideration of the specific features of individual suppliers working with the Group, highlighting their distinctive characteristics more clearly.

Breakdown of the Group's material IROs

The impacts, risks and opportunities deemed material following the 2025 double materiality assessment are shown below for each relevant ESRS issue, indicating the related link to the value chain.

Topic	Sub-Topic	IRO Type	Value chain	IRO Description
E1 Climate change	Climate change adaptation	I+	Own operations	Contribution to climate change adaptation through the definition and adoption of policies and strategies aimed at reducing the impact of climate change on the Group's premises.
		I+	Downstream value chain	Contribution to climate change adaptation through the integration of dedicated investment/financing criteria and strategies.
		R	Downstream value chain	Exposure to counterparties that, following extreme weather events, may face difficulties in meeting their financial obligations.
	Climate change mitigation	I+	Downstream value chain	Support to companies in their transition for climate change mitigation through the adoption of investment/financing criteria and strategies and participation in dedicated initiatives.
		I-	Downstream value chain	Impact on climate change resulting from financing and/or investments in companies operating in sectors and/or countries with high levels of greenhouse gas emissions.
		R	Downstream value chain	Exposure to counterparties subject to high transition risk, which may face difficulties in meeting their financial obligations.
		O	Downstream value chain	Expansion of the Group's commercial offering through the development of new products/financing solutions aimed at supporting counterparties' transition with climate change mitigation policies.
		O	Own operations	Enhancement of the Group's brand reputation through the achievement of targets and the definition of initiatives supporting climate change mitigation.
	Energy	I+	Downstream value chain	Contribution to the reduction of energy consumption through the integration of dedicated investment/financing criteria and strategies.
		I-	Downstream value chain	Contribution to non-renewable energy consumption through lending/investment in companies operating in sectors and/or countries with high energy demand.
		R	Downstream value chain	Exposure to counterparties with a high energy cost incidence, which may face difficulties in meeting their financial obligations.
E4 Biodiversity and ecosystems	Impacts and dependencies on ecosystem services	I-	Downstream value chain	Impact on ecosystems through lending/investment to counterparties operating in sectors and/or countries with potential negative environmental impacts.
		R	Downstream value chain	Exposure to counterparties operating in sectors highly dependent on ecosystem services or potentially impacting ecosystems, which may face difficulties in meeting their financial obligations.
E5 Resource use and circular economy	- Resource inflows, including resource use - Resource outflows - Waste	I+	Downstream value chain	Support for the implementation of policies aimed at improving the circular economy profile through the integration of dedicated investment/financing criteria and strategies.
		O	Downstream value chain	Expansion of the Group's commercial offering through the development of new products/financing solutions aimed at improving resource efficiency and promoting the circular economy.

I+ Positive impact; I- Negative impact; R Risk; O Opportunity

In the subsequent chapters, the impacts, risks and opportunities that were identified and analysed and that led to the materiality assessment of the above topics and sub-topics are described for each topic. In brief, the analyses conducted confirmed the resilience of the Group's strategy and business model, also considering that the potential expected negative impacts associated with ESG risk factors are managed through appropriate actions (developed and/or planned) which are aimed at mitigating risks, capitalising on opportunities and supporting the Group's sustainability with a long-term perspective.

Governance structure

Role and composition of the administration, management and control bodies and of sustainability governance[86]

The Parent Company Intesa Sanpaolo has adopted the “one-tier” management and control model, whereby management and control duties are performed, respectively, by the Board of Directors and the Management Control Committee set up within it, both appointed by the Shareholders’ Meeting.

Detailed information on the corporate governance system and remuneration – including references to diversity in the Board of Directors – is provided in the "Report on Corporate Governance and Ownership Structures" and in the "Report on remuneration policy and compensation paid" available on the Bank’s website.

Board of Directors: role and main characteristics

The Board of Directors is responsible for exercising the Company’s guidance and strategic supervision duties and for resolving on all the most important corporate actions, with the power to undertake all transactions considered necessary, useful or appropriate in achieving the corporate purpose, of both an ordinary and extraordinary nature, and to adopt all decisions reserved to it by law, by the Articles of Association and by the regulations. In specific cases and in the manner provided for by law and the Articles of Association, the most significant management decisions are submitted to the Shareholders’ Meeting for approval.

The Chair of the Board of Directors oversees the work of the Board, organises and directs the activity and performs all the tasks envisaged by the supervisory legislation and the Articles of Association. He/She has a non-executive role and does not carry out, not even de facto, management functions.

The Managing Director and CEO is also the General Manager and supervises the company’s management to the extent of his/her assigned powers, in compliance with the general planning and strategic guidelines set forth by the Board.

The Management Control Committee, appointed by the Shareholders' Meeting, is part of the Board of Directors and is made up of five independent Directors pursuant to applicable regulations and the Articles of Association and exercises the control functions also as an internal control and audit committee (pursuant to Legislative Decree no. 39/2010).

The Board of Directors has established five internal committees, whose members are appointed by the Board itself from among its members, with assessment, advisory and propositional tasks:
- Nomination Committee;
- Remuneration Committee;
- Risk and Sustainability Committee;
- Committee for Transactions with Related Parties;
- Governance Committee[87].

[86] The information on the governance structure set out in this paragraph is reflected in the “Corporate Governance and remuneration policies” section of the Report on operations which accompanies the consolidated financial statements.
[87] The Governance Committee was established by the Board of Directors at the meeting of 6 May 2025, pursuant to Article 28 of the articles of association.

Composition of the Board of Directors
The Ordinary Shareholders' Meeting of 29 April 2025 set the number of members of the Board of Directors at 19, appointing directors for the three-year term of office on the basis of the lists submitted by shareholders, in line with the national legislation for listed companies.

All directors are non-executive, with the exception of the Managing Director and CEO (18 non-executive members and 1 executive member).

The Directors meet the suitability requirements required by the applicable legislation and the provisions of the Articles of Association. Specifically, all Directors meet the independence of mind requirement, as defined by banking legislation, and at least two thirds of the directors meet the qualified independence requirement defined by the special legislation for banks and listed companies and Intesa Sanpaolo's Articles of Association (in this term of office, there are 14 independent directors, i.e. 74% of all members of the Board).
All Board Committees are composed of five non-executive Directors, the majority of whom are independent, with the exception of the Committee for Transactions with Related Parties, which is entirely composed of independent Directors. All the committees required by supervisory regulations (Nomination Committee, Remuneration Committee, Risks and Sustainability Committee and Committee for Transactions with Related Parties) are chaired by independent Directors.

Minority shareholders are adequately represented in the Board of Directors (5 members, representing 26% of the total, were appointed from the slate submitted by minority shareholders) and, in the current Board structure, they are present in all Board Committees required by supervisory regulations. In addition, the Directors representing the slate submitted by minority shareholders chair the Management Control Committee, the Remuneration Committee and the Committee for Transactions with Related Parties. No employees' representatives were appointed in the Board as permitted by the law and the Articles of Association.

Without prejudice to the legislation on public incompatibilities, it is noted that one Director has held a position in the public administration similar to that held in administrative, management and control bodies in the two years prior to taking on the current mandate.

Competences and diversity
According to Intesa Sanpaolo's Articles of Association, the Board shall adopt the necessary measures to ensure that each Director, and the Board as a whole, have a continually adequate level of diversification, including in terms of experience, age, gender and international orientation, in addition to competence, reputation and fairness, independence of mind, and time commitment.

In the document on the qualitative and quantitative composition of the Board of Directors published on the Bank's website in February 2025, in view of the renewal of the Corporate Bodies which took place with the ordinary Shareholders' Meeting of 29 April 2025, the shareholders were asked to ensure that the Board of Directors had the broadest gender diversity with adequate professional skills, as well as a diversity of age brackets and term of office amongst directors, in addition to a comprehensive level of knowledge and experience.

The less-represented gender in the Board of Directors must be reserved a share of at least two fifths of the total members, as established by currently applicable laws on the matter of equal access to the management and control bodies of listed companies. In the current structure, there are 8 women, accounting for 42% of Directors, i.e. the female ratio is 0.73[88]. In the current Board structure, the female gender is represented within all the Board Committees, making up 60% of the members of the Nomination Committee, the Remuneration Committee and the Committee for Transactions with Related Parties and has the chairmanship of 3 committees (Risks and Sustainability Committee, Remuneration Committee and Nomination Committee).

With reference to age, 21% (4) of the Directors are aged 55 or under, 37% (7) of Directors are aged between 56 and 65, 42% (8) are over 65.
With respect to length of service, two Directors are in their fifth term of office, one Director in their fourth, five Directors in their third, three Directors in their second and eight Directors in their first.

The Board of Directors assessed its composition as adequate, including in terms of diversity, and suitable for a properly balanced composition of the Board Committees.

Senior officers of the subsidiaries are nominated by the Board of Directors, which operates according to uniform policies and principles at Group level and in compliance with the regulations and best practices applicable to each subsidiary, with specific importance given to the level of diversity, including in terms of age, gender, seniority of service, geographical origin and international orientation. In establishing the composition of the Bodies, the most adequate and effective mix of personal and professional profiles is sought for each subsidiary in terms of its nature, the structure of its activities and the risks taken. To this end, any indications made by the Management Body of each subsidiary during the annual self-assessment process are taken into account.

With reference to the appropriateness and diversity of the professional profiles required, in accordance with the Articles of Association, at least four members shall be enrolled with the Register of Statutory Auditors and shall have practised as auditors or acted as members of a limited company control body for at least three years. In the current composition of the Board of Directors, 7 Directors (or 37%), including all members of the Management Control Committee, meet this requirement. In

[88] Number of women sitting on the BoD compared to the number of men.

accordance with the Articles of Association, they shall also meet a professional qualification requirement which reflects the special relevance of the experience gained.

Furthermore, in the document on the quali/quantitative composition, the Board of Directors outlined the set of very good or distinctive expertise, knowledge and skills – with a very wide[89], medium-wide[90] or limited[91] distribution – considered appropriate to achieve the optimal overall qualitative composition of Intesa Sanpaolo's Board of Directors, in a "Skills Directory" for the 2025-2027 term of office.

In general, the Directors possess the expertise required for all areas covered by applicable legislation. Furthermore, the surveys carried out when the Corporate Bodies were renewed show that expectations regarding a medium level of distribution of distinctive or very good expertise were widely met in all areas considered most material by legislation, as well as in the other key area indicated by the Board.
In particular, in line with the guidelines for shareholders, in April 2025, the Directors declared that they possessed expertise and skills at a very good/distinctive level in the areas listed below.

Required distribution	Areas of expertise
very wide (>50%)	• knowledge of sustainability issues (84%) • interpretation of a credit institution's financial data, identification of the main issues based on that information as well as appropriate controls and measures (89%) • strategic planning, awareness of a credit institution's corporate strategic guidelines or business plan and related implementation (89%) • knowledge of banking and financial products (89%) • banking and financial markets (89%) • organisational and corporate governance structures and assessment of the effectiveness of the credit institution's governance mechanisms, aimed at ensuring an effective system of supervision, management and control (79%) • regulatory framework of the banking and financial sector (95%) • internal control systems and other operating mechanisms (84%) • risk management (identification, assessment, monitoring, control and mitigation methods of the main types of risk of a credit institution, including the representative's responsibilities in those processes) (84%) • knowledge of global dynamics of the economic and financial system (95%)
medium wide (50%-25%)	• climate-related and environmental risks (58%) • information & digital technology (47%) • wealth management (63%) • prevention of money laundering and terrorist financing (89%) • international experience (84%)
limited distribution (<25%)	• insurance markets and products (37%)

Several Directors also hold positions on the Boards of Directors of leading Italian universities as well as on the Boards of foundations and non-profit sector bodies active in the fields of art and culture, health, research, environment, support for poverty and professional training. Furthermore, a Director, as well as Chair of the Risk and Sustainability Committee, holds the same position in another listed company.

Following the renewal of the Bodies in 2025, the characteristics declared by the Directors were assessed by the new Board as appropriately diversified and suitable to ensure adequate Board composition and a well-balanced composition of the Board Committees.

Board induction
The skills and expertise were subsequently strengthened and supplemented on the basis of training programmes as well as of intensive induction activities for both the new directors (onboarding) and the entire Board.

With the support of the Nomination Committee, the Board of Directors shall ensure the implementation of induction and training programmes for its members. In this context, following the Chair's indications, Board Members' participation in initiatives is promoted to enhance the degree of knowledge of the operating sectors of the Bank and of the Group companies, company dynamics and their development, the principles of sound risk management and the regulatory and self-regulatory environment of reference, and in formal and informal meetings, aimed at further review of strategic matters.

The induction plans are drawn up periodically following (i) the first assessment carried out after appointment and (ii) the self-assessment carried out annually by the Board of Directors. In any event, Directors are given the opportunity to make individual requests for training in a specific area, whenever they consider it necessary.

[89] Expertise required for more than 50% of Directors.
[90] Expertise required for between 25% and 50% of Directors.
[91] Expertise required for less than 25% of Directors.

During the annual self-assessment, the Board, with the support of the Nomination Committee, expresses its opinion on the implementation and quality of the induction plan implemented, also to help refine the process and strengthen the quality of training.

In 2025, 9 induction sessions were held for Directors (of these, 5 during the term of office of the previous Board of Directors), in addition to 11 onboarding sessions intended, in particular, for newly appointed Directors. With respect to specific ESG issues, in particular, there were some sessions on the evolution of the ESG framework and 4 brainstorming meetings on the new Business Plan.

As a result of the self-assessment process carried out in 2025, the Board of Directors expressed extremely positive evaluations of the induction activities carried out during the year in terms of the size, level of detail and relevance of the topics covered.

To promote better understanding of the applicable corporate and regulatory framework and its development, a collection of governance documents, regulatory references, key correspondence with the Supervisory Authorities, accounting positions and any additional documentation conducive to the performance of their duties is also available to Board Members – and regularly updated – through a dedicated electronic platform.

The Board of Directors receives periodic reports from the corporate control functions on their activities, which illustrate the checks carried out, the results achieved, the weaknesses found and the proposals for action to be taken to eliminate them within the various company areas. These reports shall also cover anti-corruption and AML issues.

Sustainability governance

The main ESG responsibilities of Intesa Sanpaolo Bodies and Structures are specified below in line with the Articles of Association, the Bodies' regulations and the Group's internal regulations.

For information on the role of the administrative, management and supervisory bodies in relation to business conduct, reference should be made to the information provided in the various paragraphs of chapter G1 "Business conduct", which covers the individual topics described.

Board of Directors	The Board of Directors, with the support of the Risk and Sustainability Committee: • defines and approves sustainability (ESG) strategies and policies, including the social and cultural responsibility model and combating climate change - taking into account the objectives of sound and sustainable value creation and distribution for all stakeholders; • defines and approves the risk objectives, incorporating sustainability-related risks (ESG) – in particular climate and environmental risks – in its risk appetite framework; • examines and approves the results of the impact and financial materiality assessment that identifies those environmental sustainability, social and governance aspects that are material with regard to the impacts, risks and opportunities considered, consistent with applicable regulations; • examines and approves the Consolidated Sustainability Statement, ensuring that it is prepared and published in accordance with the applicable regulations, after review by the Management Control Committee as well as any other significant report in this area; • examines the annual report submitted by the Manager responsible for preparing the company's financial reports on sustainability risk monitoring and the periodic reports submitted by the corporate control functions; • examines and approves the updates to the Code of Ethics, the Code of Conduct and the policy setting out Diversity, Equity & Inclusion principles. The Board of Directors' Regulations state that Directors have a duty to contribute to creating value for shareholders with the aim of delivering medium- and long-term sustainability, also taking into account the interests of other stakeholders relevant for the Company, in accordance with the principles of sound and prudent management and with the reference principles and values adopted by the Bank. In 2025, the Board of Directors met 23 times. Of these, 15 meetings also covered ESG matters.
Risk and Sustainability Committee	It supports the Board of Directors in the performance of all the above tasks, focusing, in particular, on: • the assessment and investigation of sustainability (ESG) matters related to the Bank's business operations; • the approval of the list of ESG-sensitive sectors relevant to the Group's financing activities; • the assessments and resolutions to be made in respect of the sustainability impact and financial materiality assessment, including for the purposes of approving the Consolidated Sustainability Statement. This analysis identifies the environmental sustainability, social and governance aspects that could be potentially relevant given the impacts, risks and opportunities considered, consistently with applicable regulations, as well as the related methodology. • checking the Group's positioning with respect to national and international sustainability best practices, specifically with respect to Intesa Sanpaolo's participation in the main sustainability indices. Furthermore, the Committee is informed by the Manager responsible for preparing the Company's financial reports on an annual basis about the controls over the risk of sustainability reporting. In 2025, the Risk and Sustainability Committee met 44 times. Of these, 15 meetings also covered ESG matters. The support that the Committee provided to the Board in exercising its strategic supervision functions on sustainability, as well as in setting and monitoring climate and environmental risk objectives, is cross-sectoral and was also ensured when examining the areas of governance and risk management, business model and strategic guidelines and the most significant transactions for risk management procedures. The members of the Risk and Sustainability Committee must have the knowledge, skills and experience necessary to be able to fully understand and monitor the Bank's risk strategies and guidelines, including with respect to sustainability.

Management Control Committee	The Management Control Committee, • in liaison with the corporate functions responsible for the sustainability issues (ESG) and the Internal Auditing function, supervises the compliance with the principles and values contained in the Code of Ethics; • with respect to the Consolidated Sustainability Statement, supervises compliance with the provisions of Legislative Decree no. 125/2024 and reports on this in its annual report to the Shareholders' Meeting, and examines the Consolidated Sustainability Statement in exercising its supervisory functions, in advance of the Board of Directors' meeting; • examines the annual report submitted by the Manager responsible for preparing the company's financial reports on sustainability risk monitoring and the periodic reports submitted by the corporate control functions. Furthermore, the Committee carries out the duties covered by Legislative Decree no. 39/2010, acting as the Control and Audit Committee.
Managing Director and CEO	The Managing Director and CEO • governs sustainability performance; • exercises the power to submit proposals to the Board of Directors for the adoption of resolutions within its remit; • ensures the consistency of the risk management process with the risk appetite and the relevant risk governance policies; • is informed by the Manager responsible for preparing the Company's financial reports on an annual basis about the controls over the risk of Sustainability Reporting; • provides, jointly with the Manager responsible for preparing the Company's financial reports, the legally-required certifications about financial and sustainability information required by law.

The Internal governance structures involved in the management and control of ESG risks are shown below. They ensure the application of controls in compliance with regulatory requirements and in line with the Group's business operations and the context in which it operates.

Steering Committee	The Steering Committee, which plays a central role, assists the Managing Director and CEO and is a Group management body with a decision-making, reporting and consulting role, composed of the Managing Director and CEO, who chairs the committee, and the top management, including the heads of Governance Areas and Divisions. In the context of the Business Plan and Sustainability (ESG) Session, the Committee: • collaborates, taking into account the objectives of solid and sustainable creation and distribution of value for all stakeholders, in the definition of strategic guidelines and sustainability policies (ESG), including the model of social and cultural responsibility and the fight against climate change, which the Managing Director and CEO submits to the relevant Board Committees and the Board of Directors; • collaborates in identifying and updating potentially relevant environmental sustainability, social and governance matters in relation to the impacts, risks and opportunities considered, consistent with applicable regulations, as part of the impact and financial materiality assessment; • examines the Consolidated Sustainability Statement and any other significant report on sustainability matters, prior to its submission to the Board of Directors; • guides the consistency of technological development with the Group's ethical principles, particularly with specific reference to artificial intelligence/machine learning. The Committee meets at least on a quarterly basis in the context of the Business Plan and Sustainability (ESG) Session. In 2025, the Steering Committee met 17 times (of which 6 were circular resolutions[92]) during the "Business Plan and Sustainability (ESG)" session, covering issues with ESG impacts. Specifically, these sessions provide quarterly monitoring of strategic initiatives related to the 2022-2025 Business Plan.
Group Control Coordination and Non-Financial Risks Committee	In the Operational Risk session, the Group Control Coordination and Non-Financial Risks Committee examines the main ESG risk profiles, which are or could be reflected in the operational and reputational risk exposure. This session, chaired by the Chief Risk Officer, is attended by the heads of the Group's corporate control functions, the relevant Governance Areas and the Manager responsible for preparing the Company's financial reports.

Every quarter, the Steering Committee and the Group Control Coordination and Non-Financial Risks Committee report to the Board of Directors on their activities, enabling the Board to play an oversight role on the main issues covered.

The Governance Area of the Chief Financial Officer includes the responsibility for preparing the Consolidated Sustainability Statement, as well as monitoring and interpreting the development of relevant European and national legislation, as well as defining and subsequently updating the resulting methodological rules.

Set up in 2024, the Governance Area of the Chief Sustainability Officer (the "CSO") reports to the Managing Director and CEO and its mission is to drive the development strategies on sustainability. It has the following main functions:
- ensure the development and implementation of the Group's ESG strategy, also helping to identify specific actions and initiatives, and new business opportunities; collaborating on ESG reporting and promoting the dissemination of social, sustainability and innovation culture;
- play an active role in the development and promotion of the local areas and communities in which the Group operates, supporting non-profit organisations and promoting social inclusion initiatives and educational interventions;

[92] Pursuant to the CoDi Regulations, "Circular Resolutions" mean: decisions adopted solely on the basis of the determinations expressed by participants in writing by email and recorded in the minutes of the first subsequent meeting of the relevant session, together with the supporting documentation. The ordinary procedures for holding the meeting remain in place, at the request of even just one of the participants with voting rights in the session.

- promote the innovation of businesses and territories as a key factor for sustainable development through applied research and support for start-ups, open innovation, the transition to the circular economy and the development of innovation ecosystems;
- promote the Group's historical, artistic, architectural, and archive assets to contribute to the civil and cultural growth of the local areas and communities it serves, ensuring their protection and appreciation.

The CSO Governance Area also includes that of the Chief Social Impact Officer (CSIO) Governance Area, which directs, governs and implements social impact initiatives and projects, promotes the well-being and inclusion of people and the community, and directs, coordinates and oversees initiatives to mitigate the direct environmental impacts generated by the Group.

The CSO Governance Area oversees the ESG Control Room (the "Control Room"), a collegiate managerial body established in October 2020 to support the Steering Committee in carrying out its ESG-related activities and renewed in 2024 with the aim of strengthening its role, particularly in terms of the tasks and responsibilities related to strategic proposals in the ESG area. The Control Room is chaired by the Chief Sustainability Officer and its members are the heads of the Governance Areas and Divisions (some permanently, the Chief Financial Officer and the Chief Risk Officer, others on request). The ESG Control Room meets whenever necessary, in any case at least every six months. The Chair of the Control Room reports whenever necessary, directly or through their delegates, to the Steering Committee on the assessments and activities carried out by the Control Room.
Its role is to promote ESG business policies and strategies, monitor the achievement of objectives and examine any necessary actions to achieve results.

The main functions of the ESG Control Room are listed below:
- support the Steering Committee in the Business Plan and Budget processes, in reviewing and assessing proposals about relevant ESG directions and initiatives at Group level, while assessing priorities, metrics and targets (KPIs);
- analyse policies, including the Group's social and cultural responsibility model to combat climate change;
- make assessments on proposals for the Group's ESG commitments and key business implications;
- make assessments and provide indications about proposals to join the main voluntary initiatives and the related plan of activities necessary to achieve the resulting objectives, monitoring the progress of activities and results. Furthermore, assess the main social initiatives at Group level;
- analyse the main ESG reports, including monitoring of initiatives, key ESG targets/goals (Plan and Budget KPIs), and identification of key elements prior to the preparation of ESG disclosure;
- analyse and comment, where necessary, on the integration of ESG criteria into equity investments and credit strategies;
- analyse the external context, sharing the results of ESG regulation monitoring activities and the analyses on the potential impacts of ESG trends, also with reference to other players;
- receive information on relevant requests received from Regulators or Authorities in the ESG area reported by the reference functions (Divisions and Governance Areas) and the related feedback if these involve the submission to the Bank's Bodies.

The ESG Control Room operates and discusses initiatives and relevant topics with the assistance of the following Panels:
- ESG Coordination Panel, launched in 2020 and formerly known as the ESG Control Room. Its main purpose is to share, update and monitor ESG activities and goals, with the collective participation of all Governance Areas and Business Divisions through Sustainability Managers;
- Sustainable Investment and Insurance Panel, active since 2022 and previously named Sustainable Investment ESG Control Room. It ensures comprehensive oversight of the ESG initiatives of the Wealth Management Divisions;
- Social Impact Panel, set up in June 2025. It is focused on the coordination and strategic direction of social initiatives, as well as the review, monitoring and sharing with internal stakeholders of relevant projects and specifically related topics, in order to optimise and promote interrelations between the various functions concerned.

The Panels support the ESG Control Room in defining strategies and formalising priority Business Plan targets in the ESG area. They also contribute to controlling the Group's ESG performance by sharing responsibility for monitoring the main sustainability KPIs and levels of achievement of the ESG targets set out in the Business Plan.

The ESG Panels meet whenever necessary, with a minimum frequency ranging from every quarter to every six months.

The Control Room and the Panels operate with the assistance of the Sustainability Managers. They are appointed by the head of each Governance Area/Division usually from among their first reporting line, and, to the extent of their remit, monitor ESG matters with respect to the relevant Governance Area/Division, including any Group company that belongs to it.

The head of the CSO Governance Area chairs the ESG Control Room and the related Panels, except for the Social Impact Panel which is chaired by the head of the Chief Social Impact Officer Governance Area. The delegates of the CSO Governance Area coordinate the related activities with the ESG Control Room and the Panels.

The Chief Risk Officer (CRO) Governance Area defines, develops and updates the ESG risk management and assessment system. As part of the Risk Appetite Framework, and in view of the subsequent submission to the Corporate Bodies, a level of ESG (including climate change) and reputational risk tolerance is proposed, defining specific exposure limits, risk indicators, and actions to be monitored and updated. The Board of Directors approves the updates to the Risk Appetite Framework.
The CRO Governance Area also heads climate risk identification, assessment and management processes.
Finally, the CRO Governance Area includes a specific function which periodically reports on the overall status of the ISP Group's risks via a "Tableau de Bord of Risks". The latter document includes a section about reputational and ESG risks in order to

monitor compliance with the risk appetite limits and informs top management and the competent department structures about its performance.
As required by internal ESG legislation defining the responsibilities of the Board of Directors, the Board Committees, the Managing Director and CEO and the managerial committees, sustainability IROs are taken into account both when defining and monitoring the corporate strategy and in the context of risk management processes. In 2025, the Board of Directors confirmed the Group's commitment to climate transition and promoted the definition of new operational tools to support communities in order to strengthen the Intesa Sanpaolo Group's positioning in terms of social responsibility. With respect to compliance and risk management, the Board of Directors examined and approved the Risk Appetite Framework and the most relevant internal legislation.

Material sustainability IROs are regularly discussed by the Board of Directors, the Risks and Sustainability Committee and the Steering Committee during the year and are brought to their attention by various reporting structures (and any assisting structures, where necessary) according to the relevant topic. In particular, in 2025, the following structures reported on sustainability issues:
- the Chief Sustainability Officer (CSO) Governance Area;
- the Chief Financial Officer (CFO) Governance Area;
- the Manager responsible for preparing the Company's financial reports;
- the Chief Risk Officer (CRO) Governance Area;
- the Chief Institutional Affairs and External Communication Officer (CIAECO) Governance Area;
- the Chief People & Culture Officer (CPCO) Governance Area.

The main sustainability IROs discussed in 2025 by the Board of Directors and the board and management Committees in charge of ESG issues are as follows:
- governance of reputational risks;
- governance of climate-related and environmental risks;
- promotion of an appropriate corporate culture and of the principles of social and environmental responsibility;
- diversity, equity and inclusion;
- health and safety of workers;
- support to communities and enhancement of local areas.

Incentive systems linked to sustainability factors[93]

The Managing Director and CEO is the only executive member of the Board of Directors and, therefore, is the only beneficiary of an annual Incentive System and a long-term Incentive Plan for the role of General Manager. These systems also include sustainability-related metrics.

Structure of the annual incentive system

The annual Incentive System[94] is formalised through a Performance Scorecard with both financial and non-financial KPIs. Specifically, quantitative KPIs (financial and non-financial) are clustered within 4 drivers (Growth, Profitability, Productivity and Cost of Risk/Sustainability), while the (non-financial) qualitative KPIs are divided into strategic actions or projects that represent the enabling factors for the achievement of the financial KPIs or contribute to the achievement of the Plan objectives. The latter objectives are usually reported by identifying ex-ante drivers that guide the subsequent assessment. With respect to non-financial quantitative KPIs, similarly to the previous years, the Group's Environmental, Social and Governance transversal KPI was assigned in 2025.
Each KPI is assigned a weight equal to at least 10% to ensure the significance of the objective, and no more than 30% to guarantee appropriate weighting of the numerous objectives. The accrual period is annual.
The total bonus due to the Managing Director and CEO is allocated based on the assessment of the results of the individual performance scorecard, according to a deterministic calculation.
In any case, it is subject to verification of the gateway conditions required by the Regulator – aimed at verifying capital strength and liquidity against the limits set out under the RAF as well as the financial sustainability of the variable component with respect to the available economic and financial resources – and to verification that there are no so-called individual compliance breaches – i.e. individual access conditions that control conduct risk. The bonus is also subject to corrective mechanisms.
The premium is paid partly in cash and partly in Intesa Sanpaolo shares and is disbursed over a five-year deferral horizon.
Each deferred portion is subject to an ex-post adjustment mechanism – the so-called malus conditions – according to which the relative amount recognised and the number of financial instruments assigned, if any, may be reduced, even to zero, in the year in which the deferred portion is paid, in relation to the level of achievement of the gateway conditions set by the Regulator.
Furthermore, in the five years following the payment of the individual instalment (up-front or deferred) of variable remuneration, the company reserves the right to activate claw-back mechanisms.

Structure of the Long-Term Incentive Plan

The CEO is also a beneficiary of the Long-Term Incentive Plan (PSP), which is also awarded to the remaining Management (around 3,100 beneficiaries). The Plan is based on shares awarded upon the achievement of specific performance targets that

[93] The information on the governance structure set out in this paragraph is reflected in the "Corporate Governance and remuneration policies" section of the Report on operations which accompanies the consolidated financial statements.
[94] For additional information about incentive systems, reference should be made to the Report on remuneration policy and compensation paid, available on the Group's website.

are consistent with the Business Plan (i.e. PON/RWA, Cost/Income, NPL ratio and relative TSR) and whose levels correspond to those set in the Plan itself.
There are also two bonus de-multipliers:

- Composite ESG KPI, consisting of a sub-KPI for each of the three ESG factors (Environmental, Social and Governance) whose target level is defined in the 2022-2025 Business Plan. This acts as a de-multiplier by reducing the number of possible shares accrued by 10%-20% depending on the degree of any failure to achieve the 2022-2025 Business Plan targets;
- Capital target: measures the maintenance of CET 1 levels above the target defined in the Group's RAF over the Plan's time horizon. It acts as a de-multiplier by reducing the number of shares vesting at the end of the Plan by 10% for each year of breach (up to a maximum reduction of 40% over the entire Accrual Period).

The Plan is subject to verification of the gateway conditions and the absence of individual compliance breaches. 60% of any bonus earned is deferred over a five-year horizon and, depending on the impact on fixed remuneration, 60%-55% is allocated in shares subject to a retention period (the remainder is allocated in shares not subject to a retention period). Malus and clawback conditions also apply.

The ESG Component in CEO Incentive Plans (Annual and Long-Term)
With regard to the variable remuneration of the Managing Director and CEO, the ESG component is of central importance and, as mentioned earlier, is included both in the annual incentive system through the provision of a specific KPI, and in the long-term Performance Share Plan in which an ESG composite KPI is envisaged that acts as a de-multiplier of any bonus earned.
Within the annual Incentive System, the ESG KPI – present since 2021 and representing an evolution from the previous cross-cutting "Diversity & Inclusion" KPI – has been assigned to the CEO's Performance Scorecard, consistent with the Bank's growing commitment to social, cultural and environmental sustainability and the goal of creating long-term value for its people, customers, community and environment as well as in line with the increasing focus on these issues by Regulators, Proxy Advisors, Shareholders and Group Stakeholders. Moreover, a cross-Group ESG KPI is also assigned to about 3,000 Group managers in Italy abroad with a weight of 10% or 15%.

The ESG KPI of the CEO (with weight of 15%) is assessed on the basis of specific drivers:

- presence of Intesa Sanpaolo in the sustainability indices of specialist companies (no. of presences);
- promotion of an inclusive work environment through the identification and implementation of targeted management actions, with a particular focus on meeting the commitments in terms of gender equity assigned to each Division/Governance Area: i) in annual hires; and ii) in the pool of candidates for first appointment to managerial roles;
- group ESG initiatives:
    - support for the green economy and circular economy: i) development of ESG related-commitments for the Corporate boundary (€); and ii) support for Green Mortgages and Social Lending by Banca dei Territori (€);
    - growth in Sustainable Investments through the impact of ESG investments on total AuM (%);
    - youth orientation and employability initiatives.

In the PSP long-term incentive plan there is a composite KPI that, in an effort to promote the pursuit of sustainability, acts as a de-multiplier as mentioned in the previous section. The KPI consists of a sub-KPI identified in the Business Plan for each of the 3 factors comprising ESG, namely:

- Environmental: new loans for the green/circular economy and the ecological transition with a special focus on supporting the Corporate/SME transition (weight 40%);
- Social: number of people who successfully completed the re-skilling and up-skilling programmes with reallocation in new job roles in the case of the former95 (weight 40%);
- Governance: percentage of women in new appointments to senior positions, i.e. -1 and -2 organisational levels below the CEO (weight 20%).

Moreover, note that the same ESG composite KPI is included in the LECOIP 3.0 Plan, the long-term incentive plan dedicated to Professionals in Italy, which 45,629 people have signed on to (about 63% of those entitled) and which is based on Certificates having Intesa Sanpaolo shares as the underlying asset. Specifically, in this case, the KPI recognises a minimum return (of 4%) on the capital initially allocated upon the Group's achievement of that KPI. If the indicator is not achieved, the amount that would have been paid to employees will be invested by the Bank in ESG projects that contribute to the achievement of the ESG objectives concerned.

The annual Incentive System and the long-term Performance Share Plan are approved by the Shareholders' Meeting, upon proposal of the Board of Directors supported by the Remuneration Committee. Moreover, the Risk and Sustainability Committee, without prejudice to the prerogatives of the Remuneration Committee, supports the Board of Directors and examines them in order to check their connection with current and prospective risks.

Risk management and internal controls over Sustainability Reporting

The Intesa Sanpaolo Group adopts an internal control system based on three levels, in line with the legal and regulatory provisions in force. The model has the following types of control:

- Level I: line controls which are aimed at ensuring proper performance of operations (for example, hierarchical, systematic and sample-based controls) and which, to the extent possible, are incorporated in the IT procedures. They are carried out by the same operating and business structures, including through units dedicated exclusively to control duties reporting to the heads of the same structures or performed as part of the back office.

[95] That is, on the positions held consistently with the new expertise acquired.

- Level II: consists of risk and compliance controls to ensure, inter alia: (i) the correct implementation of the risk management process, (ii) observance of the operating limits assigned to the various functions and (iii) compliance of company operations with the rules, including self-governance rules. The functions assigned to such controls are separate from the ones in charge of production and contribute to the definition of the risk governance policies and the risk management process. In the Intesa Sanpaolo Group, Level II includes the following Parent Company structures and the equivalent local units of the Group companies, where established:
  - Chief Compliance Officer Governance Area, which is assigned the tasks and responsibilities of the "regulatory compliance function (compliance)";
  - Chief Risk Officer Governance Area, which is assigned the tasks and responsibilities of the "risk control function (risk management)".
- Level III: internal audit controls to identify breaches of procedures and regulations, as well as to periodically assess the completeness, adequacy, functionality (in terms of efficiency and effectiveness) and reliability of the internal control system and the IT system at Group level, at scheduled deadlines in relation to the nature and intensity of the risks.

The Group has therefore put in place a structured system of controls and responsibilities to ensure the compliance of Consolidated Sustainability Reporting with the applicable legislation from a risk-based perspective, aimed at managing the risks associated with reporting sustainability information to third parties.
The structures involved in the control system perform specific activities, which are detailed in internal Group documents and aimed at ensuring the quality and compliance of Consolidated Sustainability Reporting throughout all stages of the process. These control activities are directly related to the main types of risks identified and represent forms of risk mitigation. Specifically:

- when defining the work plan and the structure of the Report, the controls focus on the analysis and interpretation of the relevant legislation, the correct definition of the scope of consolidation and the verification that the double materiality assessment is complete and accurate, with a clear identification of its results;
- during the collection of information and the preparation of contributions, control activities include the verification of data sources and the loading of information through formal systems and procedures aimed at verifying the completeness, accuracy, consistency and comprehensiveness of such information by the respective contributors and validators;
- finally, in the aggregation and finalisation phase of the Consolidated Sustainability Statement, the outcomes of the contribution and validation process are verified, the correctness of the metrics is checked and the information on policies, actions and targets is harmonised, ensuring that the final document meets regulatory and quality requirements.

The controls over compliance of the Consolidated Sustainability Statement with the reporting standards established by the CSRD, are carried out by the Manager responsible for preparing the Company's financial reports, in compliance with the provisions of Article 154-bis of the Consolidated Law on Finance and the related implementing provisions. In order to comply with the aforesaid provisions, the Manager responsible for preparing the Company's financial reports:

- performs a steering and coordination role over the Group as a whole with respect to sustainability as well as controls over the internal control system functional to the preparation of the Consolidated Sustainability Statement;
- issues the instructions for the preparation of the Consolidated Sustainability Statement;
- verifies the appropriateness of the procedures functional to the preparation of the Consolidated Sustainability Statement, as well as the effectiveness of the control system necessary to ensure legally-required certifications;
- maintains a system of contact and information flows with the function of the Parent Company and of the Group companies, in order to ensure the information necessary to draw up the Consolidated Sustainability Statement is prepared in compliance with the reporting standards adopted in accordance with the CSRD.
- oversees the internal control system on the sustainability reporting process:
  - expressing a preliminary opinion on the appropriateness of the changes to the existing organisational structure (internal regulations) that have an impact on the appropriateness of the design of relevant procedures;
  - preparing audit plans aimed at ensuring the appropriateness and effective application of the relevant procedures of the Parent Company over the period, by significant investees and subsidiaries subject to the laws of non-European Union countries in accordance with Art. 15 of the Consob Market Regulation;
  - monitoring the projects whose implementation impacts the production and control procedures for disclosure purposes;
- periodically reports on the scope and results of the assurance activities performed, to the Risks and Sustainability Committee, the Management Control Committee and the Board of Directors.

Moreover, the Manager responsible for preparing the Company's financial reports performs the verification and monitoring, through the structures reporting to him/her, designed to ensure that the Consolidated Sustainability Reporting included in the report on operations has been prepared in compliance with the reporting standards adopted in accordance with the CSRD.

This integrated system ensures an effective, transparent management of Consolidated Sustainability Reporting that is aligned with regulatory requirements and quality standards defined by the Group.

Risk assessment and internal controls relating to Sustainability Reporting have therefore been integrated within the functions identified by the new internal regulatory framework defined by the ISP Group.

The results of the control and risk assessment activities will subsequently be communicated to the administrative, management and control bodies, as envisaged in the aforementioned framework.

Indeed, the Manager responsible for preparing the Company's financial reports brings to the Board of Directors' attention an annual report on the controls over the sustainability statement risk, which is included in the "Report on the internal control system for the financial reporting process", while the corporate control functions submit their own periodic reports.

Environmental disclosures

ESRS E1 – Climate change

Resilience Assessment[96]

Using an in-depth analysis of external factors such as global sustainability trends, changes in public policy and evolving stakeholder expectations and the European regulatory framework (including EBA's new guidelines for 2025), banks can accurately identify risks and opportunities that influence their operations and long-term strategy. In this context, the Group used the "Business Environment Scan" (BES), an essential tool to strengthen the capacity of financial institutions to adapt to a changing scenario characterised by regulatory, economic and environmental and social changes.

This approach allows economic, social, environmental and governance considerations to be integrated into strategic planning, ensuring a greater ability to adapt to unforeseen events such as market downturns or regulatory pressures. In the banking context, the BES is particularly important when assessing interactions with the credit market, climate, environmental and nature-related risks and the transparency requirements of the Group's stakeholders. The BES also supports the definition of climate change adaptation and mitigation strategies, contributing to the new 2026-2029 Business Plan and the evolution of the Group's ESG risk management processes.

The Intesa Sanpaolo Group has identified a number of variables within the "Business Environment Scan" to analyse ESG risk issues:

- macroeconomic variables: identification of the most material variables impacting each business area, description of the reasons for their materiality and qualitative assessment of the impacts arising from the four Network for Greening the Financial System (NFGS) climate scenarios considered, namely: i) Hot House World; ii) Orderly Transition; iii) Disorderly Transition; iv) Baseline[97];
- competitive landscape: description of the commercial offers and initiatives related to climate and environment announced by the Intesa Sanpaolo Group's Italian and international peers, and assessment of the expected impacts based on peer positioning;
- regulatory, political and geopolitical trends: presentation of the main regulatory, political and geopolitical trends from a climate and environmental perspective affecting each business area, both in terms of existing regulations and future legislation currently under discussion, and assessment of the expected impact of regulation also with respect to the implications for both banks and bank customers;
- technology trends: identification of key climate and environmental technology trends affecting each business area and assessment of their expected impact based on the potential to revolutionise business area operations to support customers' green transition;
- social/demographic trends: presentation of the main social and demographic trends influencing each business area and assessment of the expected impact based on an understanding of the changing needs, preferences and behaviour of the population;
- transition risk: assessment of the quantitative impact of the process of upgrading to a low-carbon and more environmentally sustainable economy on the Intesa Sanpaolo Group's exposures;
- physical risk: assessment of the quantitative impact of climate change on the Group's exposures, including more frequent extreme weather events and gradual changes in climate;
- natural capital risk: assessment of the quantitative impact on the Group's exposures arising from biodiversity loss and ecosystem degradation, which may affect resource availability, supply chains and the financial resilience of customers. For further information, reference should be made to the paragraph "Resilience analysis" in the ESRS E4 – Biodiversity and ecosystems chapter.

For each variable analysed, the potential impact was assessed and the time horizon in which these effects could materialise is noted. The combined impacts of all dimensions provide an explicit judgement of how climate and environment-related risks and opportunities might affect the Intesa Sanpaolo Group's business model in the short, medium and long term.

The analysis covered 14 company areas:

1. Banca dei Territori (BdT) – Italy – Residential Real Estate (RRE);
2. Banca dei Territori (BdT) – Italy – SMEs (Small and medium-sized enterprises);
3. IMI Corporate & Investment Banking (IMI CIB) – Large corporate – Manufacturing;
4. IMI Corporate & Investment Banking (IMI CIB) – Large corporate – Wholesale & Retail Trade;
5. IMI Corporate & Investment Banking (IMI CIB) – Large corporate – Construction;
6. IMI Corporate & Investment Banking (IMI CIB) – Large corporate – Real Estate Activities;
7. IMI Corporate & Investment Banking (IMI CIB) – Large corporate – Oil & Gas;
8. IMI Corporate & Investment Banking (IMI CIB) – Large corporate – Power Generation;
9. IMI Corporate & Investment Banking (IMI CIB) – Large corporate – Automotive & Transportation Services;

[96] The main information on climate risks provided in this paragraph is also included in the "ESG (Environmental, Social and Governance) and climate change risk" section of the notes to the consolidated financial statements, Part E – Information on risks and relative hedging policies and in the section "Climate-related matters" of the notes to the consolidated financial statements, Part A – Accounting policies.

[97] Hot House World: assumes that only the climate policies currently implemented will be maintained, resulting in high physical risks due to significant global warming; Orderly Transition: envisages the early and gradual adoption of stringent climate policies to limit warming to 1.5°C and achieve zero net CO_2 by 2050; Disorderly Transition: characterised by delayed or divergent policies across sectors and countries, with emissions peaking in 2030 and more drastic measures to limit warming below 2°C; Baseline: a conservative scenario characterised by weak climate policies and investment insufficient to achieve net-zero emissions targets.

10. International Banks Division (IBD)[98];
11. Private Banking;
12. Asset Management;
13. Insurance;
14. Corporate Centre[99].

The analysis carried out in 2025 is based on the resilience analysis performed in 2024. This analysis led to the definition of a reference framework that was maintained and updated for 2025. The framework considers short-, medium- and long-term time horizons, and outlines the business context in which the Group operates from climate and environmental perspectives.

In this context, time horizons of a managerial and strategic nature were used for the "Business Environment Scan"[100]. In particular:

- short term (ends in 2028): a time interval that includes the three years following the date of the BES analysis and aligns with the Group's internal adequacy processes, such as the Internal Capital Adequacy Assessment Process (ICAAP) and the Internal Liquidity Adequacy Assessment Process (ILAAP);
- medium term (ends in 2031): time interval extending from year 4 to year 6 from the time of the BES analysis. It considers evolving factors that complement the Business Plan and establishes guidelines for the development of the next plan. By analysing the medium term, the Group can adapt its strategies and initiatives to address emerging trends, market dynamics and stakeholder expectations;
- long term: time interval extending until 2050. This interval is particularly important considering the Group's commitment to achieving Net Zero emissions targets by 2050. Considering the long term, the Group can develop sustainable strategies and initiatives that contribute to a low-carbon future and align with global sustainability goals.

The results of the analysis are shown in terms of expected qualitative impacts (classified as "low", "medium", "high") for each variable, within each business area and over the three time horizons defined.

Overall, out of the 14 company areas indicated above, all have at least one variable rated as "medium" or "high" impact. In addition, 8 areas have at least one variable rated as "high" impact:

- BdT – Italy – Residential Real Estate;
- BdT – Italy – SMEs;
- IMI CIB – Large corporate – Oil & Gas;
- IMI CIB – Large corporate – Power Generation;
- IMI CIB – Large corporate – Automotive & Transportation Services;
- International Banks Division;
- Private Banking;
- Asset Management.

According to the outcome of the impact analysis carried out on the variables identified, 30% of the "medium" or "high" impacts are expected to occur in the short term, 60% in the medium term and 10% in the long term.

More details are given below for each of the variables analysed:

- macroeconomic variables: impacts are expected in the medium term (with the exception of energy prices, which affect the Oil & Gas and Power Generation sectors also in the short term);
- competitive landscape: impacts are expected in the short to medium term, also driven by the development of the market with respect to climate-related products and services;
- regulatory, political and geopolitical trends: significant impacts were identified for almost all the company areas under analysis (for 13 of the 14 areas analysed and mentioned above, this trend was assessed as having a "high" impact in the short to medium term). These present both opportunities and potential risks;
- technology trends: impacts are expected mainly in the short and medium term, highlighting opportunities to support the green transition of bank customers;
- social/demographic trends: in general, more limited impacts are expected in the short term, which will increase in the medium term, e.g. increasing customer demand for sustainable products and investments and greater awareness of the consequences of climate risks.

[98] The analysis covers: VUB Bank, PBZ Bank and CIB Bank.

[99] In addition to credit risk, the Corporate Centre, with functions of direction, coordination and oversight of the entire Group, as well as Treasury management, Asset Liabilities Management (ALM) and property, is attributed with the risks typical of Corporate Center (namely those arising from equity investments), the risks pertaining to the exposures in default, the Banking Book interest rate and exchange rate risk, as well as the risks arising from the management of the Parent Company's FVOCI (Fair Value through Other Comprehensive Income) portfolio.

[100] The time horizons adopted in the BES were defined in order to ensure consistency with the Group's ICAAP framework. In particular, the same time horizons are used in the ICAAP climate scenario analysis.

In addition to the analysis focusing on qualitative assessment, an analysis of transition, physical and natural capital risks drivers was performed. The analysis quantifies the impact of these drivers on Intesa Sanpaolo's portfolios, considering their composition and specific characteristics. The analysis was updated using NGFS Phase V[101] scenarios, with a focus on the Disorderly Transition scenario. In addition, it was conducted only on ten of the fourteen company areas listed, namely BdT, IMI CIB, IBD[102] and the related sector-specific focus areas. This analysis shows that:

- in terms of transition risk, the above company areas' portfolios, although not significantly exposed in the short term, have an increasing exposure over longer time horizons. In particular, residential real estate is exposed to medium- and long-term impacts due to emission reduction regulations. Small or medium-sized enterprises (SMEs) and large companies are increasingly exposed to transition risk in the medium to long term, with an upward trend over time, particularly in the Power Generation, Oil & Gas, Automotive & Transportation Services and Manufacturing sectors;
- in terms of physical risk, flood events are expected to have a significant impact on residential properties, especially in the long term. For SMEs and large companies, exposure to physical risk is moderate in the short and medium term, increasing in the long term;
- in terms of natural capital risk (for further information, reference should be made to the "Resilience Analysis" section in the ESRS E4 – Biodiversity and ecosystems chapter), both SMEs and large companies are moderately exposed in the medium to long term, while exposure is not significant in the short term.

In addition to assessing risks on Intesa Sanpaolo's portfolios, a separate analysis was carried out to assess transition and physical risks for the following areas: Private Banking, Asset Management, Insurance and Corporate Center. To this end, specific methodologies were applied, aimed at presenting the impacts of transition and physical risks over a long-term time horizon. This analysis shows that:

- Private Banking: the analysis of exposures to SMEs highlights a low impact from physical and transition risks;
- Asset Management: the analysis covers both corporate and sovereign issuers and, overall, the expected reduction in portfolio value is modest for both transition and physical risks;
- Insurance: the Group's life insurance companies show greater exposure to transition risk, while non-life companies are more exposed to physical risks. However, the analysis shows that both the Intesa Sanpaolo Assicurazioni Group and its subsidiaries are resilient in terms of transition and physical risks;
- Corporate Center: the analysis of the ESG risk profile of the Bank's portfolio consisting of debt securities, equity instruments and derivatives shows that, overall and in the long term, Intesa Sanpaolo's portfolio is more exposed to transition risks than to physical risks.

Overall, risks and opportunities related to climate and environmental topics can be considered as one of the inputs to be assessed as part of the broader strategic planning process. Furthermore, they are linked to the most significant risk management processes (including ICAAP, RAF, etc.).

The identification and assessment of impacts and the constant monitoring of the business context strengthen Intesa Sanpaolo Group's ability to adapt its strategy and business model to climate change and to manage climate and environmental risks effectively, while seizing opportunities for sustainable growth.

Integration of sustainability performance into incentive systems

Climate aspects contribute to the determination of the variable remuneration of the Managing Director and CEO and the rest of the company workforce in the framework of both the Annual Incentive System and the Long-Term Incentive Plans.

With regard to the Managing Director and CEO, the 2025 Performance Scorecard of the Annual Incentive System includes a specific, detailed ESG KPI with a weight of 15%, while the "Performance Share Plan" (PSP) long-term incentive, based on shares awarded in the future against the achievement of specific performance targets, includes a composite KPI that, in an effort to promote the pursuit of sustainability, acts as a de-multiplier, reducing the number of shares that may be vested by 10%/20%. The composite KPI consists of a sub-KPI identified in the Business Plan for each of the three environmental, social and governance factors.

For the Managing Director and CEO, the ESG KPI resulted in the vesting of 16.8% of the total bonus for the 2025 annual Incentive System.

With regard to the Annual Incentive System, the driver of the ESG KPI assigned to the CEO and connected to climate is the support for the green economy and circular economy assessed in terms of: i) development of ESG related-commitments for the Corporate boundary; ii) support for Green Mortgages and Social Lending by Banca dei Territori division. The development of sustainable investments in terms of ESG investments as a percentage of total AuM (%) is also assessed.

With regard to the PSP, the environmental component of the ESG composite KPI relates to the new credit for the green/circular economy and ecological transition with a particular focus on supporting the transition of corporate undertakings/SMEs (the latter having a weight of 40%).

For more details on the ESG KPI of the Annual Incentive System, the PSP and the scope of application, reference should be made to the section "Integration of sustainability-related performance into incentive systems" in chapter ESRS 2.

[102] The quantitative analysis is based on the most material IBD segment at the reporting date of the analysis (VUB Bank). In addition, it considered transition and physical risks for IBD.

Strategy to counter climate change in own operations

Policies to mitigate and adapt to climate change

The Intesa Sanpaolo Group has developed and adopted a series of policies to address and control issues related to climate change and energy efficiency.

First, a Code of Ethics[103] was adopted that promotes an efficient and conscious use of all resources, avoiding waste and always prioritising sustainable choices over time. Moreover, the document contains guidelines aimed at combating climate change, protecting nature and biodiversity and supporting the transition to a sustainable, green and circular economy.
The adoption of the principles of the Code of Ethics has enabled the development of several policies aimed at mitigating climate change impacts within the Group's own operations.

In this context, the "Environmental and Energy Policy" (the "Policy") aims to minimise environmental impacts and ensure legislation compliance, in line with the Environmental Code (Legislative Decree 152/06) and in accordance with the Organisational, management and control model pursuant to Legislative Decree 231/01. The main objectives include combating climate change, managing ESG risks, preventing environmental impacts, efficient and responsible use of resources, and careful selection of suppliers with ethical, social and environmental requirements.
In this context, the commitments set out in the Policy translate into actions that promote principles of sustainability and social responsibility.

The Policy was defined taking into account stakeholders' interests, including through explicit reference to their needs and expectations with respect to the adoption of the Environmental Management System (ISO 14001 Certification) and the Energy Management System (ISO 50001 Certification).
This system is certified[104] by a third party and subject to periodic audits, ensuring a systematic approach to sustainability in line with international best practices.

The most senior level accountable for the implementation of the Policy is the Environmental Manager, heading the Intesa Sanpaolo Environment and Energy structure, whose mission is to direct, coordinate and oversee initiatives aimed at mitigating the direct environmental impacts generated by the Group's own operations, ensuring control over regulatory compliance for environmental protection and energy efficiency. The Environmental Manager delegates the specialised operational structures to monitor compliance risks, such as Real Estate Management and Group Technology.

In performing their functions, the Environmental Manager is also assisted by relevant structures (internal and external) for environment and energy matters that carry out careful monitoring and legislation compliance checks. These checks are carried out through periodic controls, inspections and audits at the Group's sites, focusing, in particular, on waste management and energy consumption measured compared with expected consumption, also taking into account the characteristics of the building (climate zone, size, facilities, number of employees).

For information on the criteria governing resource procurement, reference should be made to the "Green Banking Procurement Rules", which provide procurement guidelines in areas such as energy, office materials, sustainable renovations and event organisation. Key objectives include optimising resources, promoting sustainable practices in the procurement of goods and services, reducing CO2 emissions, promoting efficiency and the circular economy. The most senior level responsible for the "Green Banking Procurement Rules" document is the head of the Intesa Sanpaolo Environment and Energy structure.

The above policies apply to all Group companies (including subsidiaries) and are available to all stakeholders, including those that are potentially involved and those who contribute to their implementation through internal (Intranet for employees) and external channels (using the official website).

For further information about the impacts, risks, and opportunities (IROs) covered by climate change mitigation and adaptation policies in own operations, reference should be made to the IRO table included in the "Materiality assessment" section of the ESRS 2 – General Information chapter.

Own Emissions Plan

In accordance with the "2022-2025 Business Plan", in 2022, the Intesa Sanpaolo Group designed a plan to reduce its Scope 1 and 2 emissions (the "Own Emissions Plan"). The plan is based on the Science Based Target Initiative (SBTi) protocol which calls for keeping the global temperature increase below 1.5°C compared to pre-industrial levels, as envisaged by the Paris Agreement. For additional information on the 2022-2025 Business Plan, reference should be made to the "Strategy, business model and value chain" section in chapter ESRS 2 – General disclosures.

The plan envisaged a 53% reduction in absolute Scope 1 and Scope 2[105] emissions by 2030 (-51,427 tonnes of CO_2eq) compared to the 2019 baseline (96,192 tonnes of CO_2eq), and also set the goal of becoming carbon neutral at the same time, mitigating residual emissions through the purchase of carbon credits[106]. In this context, the Group has set itself the target, where

[103] For further information on the Code of Ethics, reference should be made the section on "Policies, targets and actions related to corporate culture" in chapter ESRS G1 – Business Conduct.

[104] The ISO 14001 Certification applies only to the Italian boundary, while the ISO 50001 Certification applies to the Italian and CIB Bank (Hungary) boundary.

[105] See the section "Gross Greenhouse Gas Emissions – Scope 1, 2, 3 and Total" of this standard for a description of Scope 1, 2 and 3 emissions.

[106] At 31 December 2025, the Group did not use carbon credits to offset emissions, nor did it directly invest in GHG capture and storage. In fact, it holds CO_2 emission rights (related to the European Union Emissions Trading System - EU ETS) deriving from proprietary trading operations carried out by the IMI Corporate & Investment Banking Division.

possible, of 100% electricity from renewable sources purchased directly for its operations. The definition of the target is based on 2019 data and the assessment of the market for green certificates to 2030, as well as other contractual options such as Power Purchase Agreements (PPAs).

The Intesa Sanpaolo Group's commitment to decarbonisation is renewed in the new 2026-2029 Business Plan, confirming the 2030 target for its own emissions.

It is confirmed that the calculation of emissions for the activities covered by the plan considers the entire scope of the Group, and this has remained unchanged since its definition. Furthermore, the 2019 baseline, which indicates the Group's consumption and is not affected by the exceptional events that marked the subsequent years, such as 2020 and 2021, has never been changed, despite the increase in the number of Group companies included in the reporting boundary. This increase had a residual impact on CO_2eq emissions, accounting for less than 1% of the Group's total emissions.

To define the pathway for reducing its own emissions, the Group adopted an integrated approach, combining two methods:
- "bottom-up", involving various internal stakeholders including the Chief Cost Management Officer (CCMO), the Chief People & Culture Officer (CPCO), banks, branches and foreign companies to identify the main decarbonisation levers;
- "top-down", selecting the projects with the greatest potential for emission reductions relative to implementation costs, and defining the investments required to enact them.

With regard to the achievement of the declared decarbonisation targets in relation to Scope 1 and 2 emissions, three levers have been adopted for both the Italian and foreign boundaries (branches, banks and companies) identified for 2025 and beyond:
- repositioning of the electricity supply towards renewable sources;
- implementation of measures aimed at reducing both energy consumption and dependence on fossil fuels for the Group's buildings through, for example, the gradual elimination of heating/air conditioning systems powered by gas and diesel oil and the renovation of inefficient systems with the use of heat pumps, the installation of photovoltaic panels, the activation of energy management/monitoring systems and the use of low-GWP refrigerants;
- electrification of the company car fleet, both through hybrid and electric vehicles, and the installation of charging stations.

In particular:
- the first lever is applied to the Italian boundary and foreign geographical areas, where it can be applied;
- the second and third levers impact the Italy boundary and the foreign subsidiary banks located in Albania, Bosnia-Herzegovina, Croatia, Ukraine, Serbia, Slovenia, Moldova, Slovakia and the Czech Republic, Egypt, Romania, Hungary.

During 2025, the main initiatives implemented across the three levers were as follows:
- with regard to the first lever, constant monitoring of the supply of energy from renewable sources to verify alignment with the expected target. Furthermore, some international banks committed to increasing their green energy volumes: in addition to Bank of Alexandria (Egypt), a subsidiary which has progressively achieved 100% green energy purchases through the purchase of i-RECs certificates, CIB Bank in Hungary and Banca Intesa Beograd in Serbia have also achieved 100% green energy in their procurement, excluding energy for fleet charging.
- with regard to the second lever, the following initiatives continued:
  in Italy:
  - replacement of existing boilers with heat pump systems in some branches and buildings;
  - extension of the smart building platform to monitor consumption;

  abroad:
  - replacement of existing boilers with heat pump systems at some sites of the Group subsidiaries - CIB Bank (Hungary) and PBZ Group (Croatia);
  - installation of photovoltaic systems at the subsidiary VUB Group (Slovakia), PBZ Group (Croatia) and Banca Intesa A.D. Beograd (Serbia);
  - replacement of obsolete air conditioning systems at some sites of the subsidiary Bank of Alexandria (Egypt) and VUB Group (Slovakia);
  - replacement of window and door frames at some sites of the subsidiary Intesa Sanpaolo Bank (Slovenia) and CIB Bank Group (Hungary).
- with regard to the third lever:
  - increase in the number of electrified cars (full electric, plug-in hybrid and full hybrid) and simultaneous decrease in cars with internal combustion engines.
  - In order to facilitate the adoption of plug-in rechargeable vehicles, a project was launched to install recharging stations at parking spaces in the Group's main buildings both in Italy and at the foreign subsidiaries VUB Group (Slovakia), Banca Intesa A.D. Beograd (Serbia), CIB Bank (Hungary), PBZ Group (Croatia) and Intesa Sanpaolo Bank (Slovenia).

The implementation of the identified actions takes place in cooperation with the relevant corporate functions, ensuring an effective sharing of the necessary costs and resources. The availability of human and financial resources (the latter made available through the annual capital budget cycle), employed through an integrated, systemic approach that combines strategic allocation with the presence of specific skills, access to appropriate technologies and the support of an adequate regulatory framework, contributes to the implementation of the actions envisaged in the "Own Emissions Plan".

With reference to OpEx (administrative expenses) and CapEx (property and equipment), we note their limited significance given the Group's sector of operations.

With regard to indirect emissions (Scope 3, excluding category 15), while there are no specific targets set out in the Own Emissions Plan, policies aimed at reducing the environmental impact of certain goods have been in place for some time. Indeed, as part of the Green Banking Procurement Rules, actions are envisaged that aim to optimise resources and promote sustainable practices in the procurement of goods and services that impact CO_2 emissions.
In particular:

- Paper: the Group is taking action and promoting initiatives aimed at reducing its use of paper through dematerialisation and digitalisation processes. In addition, to reduce emissions linked to paper usage, Intesa Sanpaolo is primarily committed to maximising the use of paper containing recycled fibres, by choosing products with a high proportion of post-consumer recycled fibres. When these are unavailable, eco-sustainable certified paper is used.
- Water: although water within the Group is mainly used for hygiene purposes, the Group is actively committed to taking action and promoting initiatives that encourage the responsible use of this essential resource (for example, dual-flush cisterns have been installed);
- Office machines: the Group is committed to purchasing office machines that are highly energy-efficient and free from hazardous substances, with limited environmental impact. In line with this commitment, priority is given to equipment that optimises the use of consumables. The Group carefully assesses the life cycle of each piece of equipment, favouring those that ensure a lower environmental impact throughout their entire life cycle and allow for reuse or recycling.

Greenhouse gas emission reduction targets

Climate change mitigation and adaptation objectives in own operations

Target: Scope 1 and 2 - % of actual reduction in own emissions from implemented measures		
	Date	**Value**
Baseline	31.12.2019	96.192 tCO_2eq
Final number	31.12.2024	-35%
Final number	31.12.2025	-39%
Target	2030	-53%

Target: % Purchase of electricity from renewable resources[107]		
	Date	**Value**
Baseline	31.12.2019	87,7%
Final number	31.12.2024	92,8%
Final number	31.12.2025	95,3%
Target	2030	100%

As part of the Own Emissions Plan, at 31 December 2025, the Group had already achieved a 39% reduction in emissions compared to the 2019 baseline (96,192 tonnes of CO_2eq). This reduction corresponds to 37,709 tonnes of CO_2eq, confirming a trend in line with the target envisaged for 2030. Specifically, as set out in the "Own Emissions Plan" section, the key initiatives driving the actual reduction in emissions involve an increase in green energy purchased by certain international Group companies (leading to a reduction in market-based emissions) and energy efficiency measures implemented in buildings in the Italian and foreign boundaries. At the end of 2024, the Group had reduced its Scope 1 and 2 emissions by 35%.

In addition, the Group has set a target to increase the proportion of electricity purchased directly from renewable sources in total procurement, with the ultimate goal of achieving 100% by the end of 2030 where possible. At 31 December 2025, the proportion of electricity purchased from renewable sources had increased, rising from 92.8% in 2024 to 95.3%. The increase is mainly due to greater use of renewable energy sources in the foreign boundary, particularly by the Bank of Alexandria in Egypt, Banca Intesa Beograd in Serbia and CIB Bank in Hungary. This is discussed in the previous section "Own Emissions Plan".

Finally, similarly to the 2024 Statement and like all financial institutions, the Intesa Sanpaolo Group does not currently fall into any of the categories listed in the European legislation on exclusion from the EU-Paris aligned Benchmark (EU PAB).

Strategy to combat climate change at portfolio level

Policies to mitigate and adapt to climate change

The Group adopts a series of policies to control decarbonisation objectives at the portfolio level and to monitor climate adaptation issues, starting with the Code of Ethics, which, among its principles, envisages responsible management of indirect environmental impacts, for example committing to promoting services and products to foster the development of a low-emission economy.

For information about the impacts, risks, and opportunities (IROs) covered by climate change mitigation and adaptation policies at portfolio level, reference should be made to the IRO table included in the "Materiality assessment" section of the ESRS 2 - General disclosures chapter.

In line with the regulatory evolution on sustainability, the Group has adopted a cross-cutting and holistic approach to ESG issues, which is based on:

- the definition of a Group ESG strategy;
- the integration of ESG factors into the general risk management framework, and in particular into the Risk Appetite Framework (RAF) which includes a specific section on ESG and climate change risks;
- the integration of ESG factors in lending processes and in the definition of lending strategies;

[107] Entity-specific metric.

- careful consideration of ESG factors in the development of policies, products and services;
- the dissemination of an ESG risk culture throughout the company.

As part of its ESG strategy, Intesa Sanpaolo recognises the scale of the climate challenge and is committed to achieving Net-Zero by 2050. As part of the 2022–2025 business plan, it has set decarbonisation targets for the sectors with the highest emissions intensity and materiality for the Group by 2030. For further information, reference should be made to the "Sectoral Transition Plan" and "Greenhouse gas emission reduction targets" sections. The Group's commitment to decarbonisation is renewed in the new 2026-2029 Business Plan, confirming the 2030 target for financed emissions.

In order to ensure an effective and efficient management and control system, strategic decisions on risk management at the Group level are referred to the Board of Directors of Intesa Sanpaolo, in its capacity as Parent Company. Thus, the Board plays this role not only with reference to the Parent Company, but also assessing the Group's overall operations and the risks to which it is exposed. In fact, Intesa Sanpaolo's Board of Directors, with the support of the Risk and Sustainability Committee, approves policies on climate change, including the "Group Guidelines for the Governance of Environmental, Social and Governance (ESG) risks" (hereinafter "Guidelines for the Governance of ESG Risks") in line with the Group's strategic and sustainability objectives. In conjunction with other relevant structures, the Chief Risk Officer Governance Area (CRO Area) is responsible for, develops and maintains these guidelines and the related implementing rules. Furthermore, they are responsible for designing, developing and maintaining the internal system for managing and assessing the Group's reputational and ESG risks.

In addition, the Chief Risk Officer, Chief Financial Officer and Chief Sustainability Officer Governance Areas, with the support of the remaining Governance Areas and Divisions, work together to identify and analyse ESG risks and opportunities with particular reference to climate change. The same areas are responsible for defining objectives and guidelines to implement processes for assessing, controlling and mitigating risks and for defining lending strategies.

With regard to climate change mitigation, the integration of ESG risks into the risk management framework takes place through several mechanisms. In particular, the RAF integrates and translates what has been defined in terms of strategic guidelines into specific controls, and the ESG/Climate Materiality Assessment and the ESG Sectoral Color Coding are used to identify, on an annual basis, limits, key risk indicators and specific actions aimed at containing the ESG risks, specifically with regard to the sectors with the highest exposure to those risks. The ESG Climate Change and Reputational Risk section of the Group RAF includes:

- specific limits in relation to the exposure to the Coal Mining and Oil & Gas sectors;
- a synthetic risk metric based on financed emissions on the corporate portfolio in order to improve management of the transition risk for the Power Generation, Oil & Gas, Automotive, Iron&Steel, Commercial Real Estate, Aluminium, Cement and Agriculture – Primary Farming sectors;
- specific warning thresholds for new disbursements in the Residential Real Estate (RRE) portfolio, in particular on the lower energy performance classes (EPC certifications108) and in areas with very high physical risk; to improve the quality of the residential properties taken as collateral, and consequently reduce the transition and physical risk associated with mortgage loans;
- a warning threshold in relation to the exposure to debt securities of government issuers in the Group's banking book that, based on internal ESG-related criteria, are defined as "high risk".

The RAF is updated annually, through a review of current limits and an expansion of monitored areas, to ensure adequate coverage of risk areas. The greenwashing risk was introduced in 2025 as an emerging risk, recognising that sustainability-related statements and actions that do not clearly and fairly reflect the underlying sustainability profile of the entity, financial products or services may represent a reputational risk factor for the Group. The lack of transparency may expose the Group to penalties and legal action, as well as loss of trust among stakeholders.

With regard to the credit framework, the Group has currently developed a holistic approach for the integration of ESG/Climate factors within it. The ESG/Climate Credit Framework, which includes ESG/Climate criteria to guide the strategic management of the loan portfolio and define the pricing of transactions among others, operates on three levels:

- by sector, with the definition of the "ESG Sector Strategy - Color Coding", which considers risks and opportunities and contributes to the definition of the attractiveness of sectors in credit strategies; as an integral part of the ESG sector strategy, a heatmap assigns specific ESG strategies to each business sector;
- by counterparty, with the introduction of an ESG score defined at the counterparty level and integrated, inter alia, into credit strategies and the Credit Risk Appetite (CRA);
- by transaction, with the definition of the internal framework of sustainable lending products and transactions.

Specifically, the ESG counterparty score, developed by Intesa Sanpaolo in 2021, provides a summary assessment of the ESG profile of corporate customers belonging to the portfolio of the Banca dei Territori Division, the IMI Corporate & Investment Banking Division and banks operating in the European Union belonging to the International Banks Division. The aim is to use the same method to assess the ESG profile of corporate customers across the entire portfolio, ranging from large listed customers to small and medium-sized enterprises. In addition to the above corporate customers, the ESG Score is also calculated for the IMI Corporate & Investment Banking Division's Project Finance transactions and for the Sovereign & Other Government entities, which include states and sub-national authorities (Italian regions and provinces and US states). The ESG score is fed by a wide range of data from internal and external sources within the Bank. This data is used to collect material

[108] Energy Performance Certificate.

indicators of impact, risk and opportunities across the three ESG dimensions which include certain indicators relating to climate risk (particularly with regard to corporate customers' preparedness to manage transition and physical risk)[109].

Finally, with respect to the overall ESG risk management framework, the "Guidelines for the Governance of ESG Risks" apply to Group banks and companies, which adapt them to their own context, and, in the case of the International Banks Division, to the specific features of local regulations. A summary of the "Guidelines for the Governance of ESG Risks" is available to all stakeholders on Intesa Sanpaolo's website.

In formulating the "Guidelines for the Governance of ESG Risks", the Group referred to the principles defined by international best practices and to developments promoted and expressed by the regulator and supervisor at the European and international levels. Specifically, at the EU level, reference was made to the legislation that followed the Action Plan for Sustainable Finance and Growth published in 2018 by the European Commission, while at the international level inspiration was drawn from the initiatives aimed at promoting best sustainability practices in the banking sector that the Group has adopted, including the UN Global Compact, UN Environment Programme Finance Initiative (UNEP FI), Principles for Responsible Banking, Principles for Responsible Investment, Principles for Sustainable Insurance, Equator Principles and Net-Zero Banking Alliance (NZBA[110]).

These guidelines play an essential role in applying the principles of reference and the definition of the roles and responsibilities of corporate bodies, internal governance structures and the main corporate functions involved in monitoring these risks.

ESG risk governance process

The "Guidelines for the Governance of ESG Risks" outline the Group's ESG risk governance process (including on climate change adaptation issues), which consists of five steps and applies to all Group companies, considering the individual reference context:

- identification: identification and description of ESG risk factors, including in terms of transmission channels, with particular reference to climate and environmental risks (e.g. through ESG risk scenarios in stress testing processes);
- assessment and measurement: determination of exposure to ESG risks (e.g. through the ESG & Reputational Risk Clearing process);
- monitoring and control: continuous monitoring of the evolution of ESG risk exposure (e.g. monitoring of ESG KPIs established in the Risk Appetite Framework - RAF);
- mitigation: the containment of ESG risks through appropriate actions and strategies, including preventive initiatives, aimed at reducing the severity of the impact of such risks (e.g. the definition of remedial actions in the event of breaches of ESG limits in the RAF);
- communication: provision of appropriate information flows to allow adequate transparency and knowledge of ESG risk exposure (e.g. ESG risk reporting and ESG risk disclosures, including indicators factoring in physical climate risks).

Specifically, with reference to the aforementioned assessment and measurement phase, consistent with the strategic guidelines on the subject, ESG risk management is also implemented through the ESG & Reputational Risk Clearing process, which has the objective of identifying and assessing beforehand potential ESG and reputational risks (including climate and environmental risks) connected to credit proposals, the selection of suppliers/third parties connected to commercial agreements, equity investments and extraordinary transactions.

The ESG & Reputational Risk Clearing process thus seeks to represent the potential ESG and reputational risk profiles associated with a specific transaction/counterparty or initiative, enabling informed assumption of risk in the related decision-making processes. A first level of clearing, performed by the line functions, is aimed at an analysis of the main ESG and reputational risk factors and performed by the structure that manages the relationship with the counterparty. In this context, credit proposals are subject to first-level clearing in a manner differentiated according to sector-specific assessments and the characteristics of the individual counterparty and transaction. A second level of clearing, under the responsibility of the Chief Risk Office Governance Area and activated based on the outcome of the first level, is aimed at examining and assessing any critical concerns that may have emerged from the first level, and also involving an expert analysis of these risk profiles. Generally, the outcome of the assessment is an advisory opinion that includes an assessment of the main critical concerns identified, the related mitigators and the level of risk assigned based on proprietary metrics. Escalation mechanisms are triggered when there are risk classes that are not consistent with the Group's risk appetite.

The broader framework of ESG risk assessment and management also includes the implementation activities of the Equator Principles (EPs), which define a framework for environmental and social risk management in the financing of large projects, thus reinforcing the commitment to managing the impacts associated with the activities of corporate customers. EPs are international guidelines that the Intesa Sanpaolo Group has adopted on a voluntary basis since 2007, implementing their latest updated version (EP IV) applicable to the financing of infrastructure and industrial projects that may have adverse effects on people and the environment (e.g. energy plants, petrochemicals, mining, transport and telecommunications infrastructure). These principles are based on the criteria of the World Bank's International Finance Corporation (IFC) and, with respect to environmental issues, they promote the prevention of pollution, energy efficiency, the preservation of biodiversity and the sustainable management of natural resources.

[109] For more information about the ESG score, see the "Climate Report".

[110] In October 2025 the Net Zero Banking Alliance changed its structure, transforming from a voluntary membership-based alliance to a new framework initiative, with the goal of continuing to provide guidelines to promote the transition in compliance with the Paris Agreement.

The internal regulations on Equator Principles are applied by the Parent Company and by the subsidiaries that offer financing falling within the scope of application of the EPs, and are valid in all countries where the Group operates and for all countries where the Group offers financing. Regardless of the customer's industry, the EPs apply to the financial products listed below when they are used to support the development of new projects and meet specific criteria:
- project finance advisory services;
- project finance;
- project-related corporate loans;
- bridge loans;
- project-related refinancing and acquisition operations.

The project assessment process starts with the assignment of a three-level risk category by the Group, which involves the integrated consideration of several factors[111]. Depending on the assigned risk level, customers must provide the required documentation and actively engage with affected communities, ensuring structured, culturally appropriate consultation processes in compliance with the UN Guiding Principles. When the financed project is exposed to potentially irreversible environmental and social risks, an independent consultant is also engaged to support the ongoing monitoring of impacts and the mitigation measures adopted. Over time, the Bank checks that customers are fulfilling their commitments properly and assesses any reports received from organisations or parties representing the affected communities. This ensures ongoing control of the environmental and social conditions of the financed projects. In this context, the Group incorporates specific provisions into loan documentation and ensures they are properly implemented.

With respect to the objectives of decarbonisation, the "Guidelines for the Governance of ESG Risks" also outline an ESG risk governance model based on materiality assessments of ESG risk factors in relation to the various risk categories (credit risk, market risk, operational risk, liquidity risk and reputational risk) and their incorporation into the various risk management areas. The Group carries out an annual Climate/ESG materiality assessment to evaluate the potential impact of ESG and climate risks on its operations. This analysis enables the level of climate/ESG risk to be assigned to each economic sector and loan portfolio, identifying the most exposed ones.. The process is based on an organic and structured approach to risk assessment which involves a granular definition of the risk drivers and the integration of forward-looking elements (Climate Scenario Analysis). The aggregate analysis of the materiality of ESG risk factors at the sector level leads to the definition of an enhanced risk control for the sectors most exposed to ESG risks, the definition of sector-specific strategies in this regard, and the implementation of specific safeguards within the Risk Appetite Framework.

The Climate Scenario Analysis is used to explore potential portfolio vulnerabilities, particularly in the credit portfolio, as part of the regulatory stress testing exercises or the Internal Capital Assessment Adequacy Process (ICAAP) and the Internal Liquidity Assessment Adequacy Process (ILAAP). In conducting this activity, the Intesa Sanpaolo Group adopts an approach that incorporates different solutions dedicated to the verification of the impacts of transition and physical risk on the Non-Financial Corporate (NFC) portfolio and on the real estate collateral portfolio. With regard to transition risk, the impact is assessed by means of shocks applied to the balance sheets of the individual counterparties and to the energy efficiency level of the residential and commercial immovable property provided as collateral. The estimate of the impact of physical risk, on the other hand, is determined based on the geolocation of the immovable property provided as collateral or NFC customer production sites, according to the different types of weather events.

The Climate/ESG materiality assessment described above contributes to determining the financial materiality for the Environmental component, which, together with the impact materiality, forms the basis for the double materiality assessment described in the "Materiality assessment" section of the ESRS 2 – General disclosures chapter.

Management of sustainability issues in sensitive sectors

The "Guidelines for the Governance of ESG Risks" also define: i) a list of "sensitive sectors" with regard to ESG and/or reputational risks; ii) general criteria to limit and exclude lending; iii) detailed criteria applicable to individual sensitive sectors through the application of sector-specific rules.

With reference to the general exclusion criteria, the Group undertakes not to finance companies and projects that are characterised by their negative impact on:
- UNESCO World Heritage Sites;
- wetlands according to the Ramsar Convention;
- International Union for Conservation of Nature (IUCN) protected areas I to VI.

As far as sector-specific rules are concerned, the Group has defined specific "Rules for Oil & Gas Operations" to regulate its operations in the sector and support the energy transition. A summary of these rules is available to all stakeholders on Intesa Sanpaolo's website.

The "Rules for Oil & Gas Operations" apply to the entire Intesa Sanpaolo Group with reference to the financing and investment activities described within the document, covering the whole sector across its main operating segments:
- upstream (oil and gas exploration and production);
- midstream (transport, storage and wholesale distribution);
- downstream (oil refining and distribution of finished products);
- trading (buying and selling oil, gas and refined products).

[111] For more information about this topic, reference should be made to the "Climate Report".

In this context, the Group is committed to not financing projects involving new oil extraction sites or with negative environmental impacts in “critical areas” of the planet, such as the Arctic region and the Amazon Sacred Headwaters[112]. In addition, it has identified specific exclusion policies for the extraction of unconventional resources, providing for the phase-out of exposures related to such unconventional resources[113] by 2025.

As part of the credit process relating to operations in the Oil & Gas sector, the following controls apply to operations not subject to exclusions and limitations for assessing ESG risks and, in particular, climate risk:
- the ESG & Reputational Risk Clearing process described earlier;
- the analysis of transition plans to assess the counterparty's progress in achieving its climate targets;
- the periodic measurement of the emission intensity of the financed counterparties in the Oil & Gas sector to ensure the progressive alignment of the portfolio to climate neutrality targets.

Furthermore, with the aim of targeting exposures in line with the commitments made for this sector, the Group directs its operations towards the most virtuous counterparties committed to a transition towards more sustainable businesses (with a focus on the level of CO_2 emissions).

With regard to the coal sector, as indicated in the "Rules for lending operations in the coal sector", a summary of which is available to all stakeholders on the Group's institutional website, Intesa Sanpaolo is committed to supporting customers in the sector in the gradual reduction of the use of coal for power generation and in projects adopting energy-efficient and low greenhouse gas emission technologies, through targeted financing, a rigorous assessment of ESG risks in the Risk Clearing process and a limit on overall exposure to this area.

Moreover, the Group has undertaken not to increase its exposure in respect of non-financial products and services to companies with at least one of the following characteristics:
- operating in the production of electricity from coal and which do not have a documented plan/strategy for the progressive reduction of greenhouse gas emissions;
- failure to document a planned limit of no more than 35% of installed capacity from coal by 2030;
- having plans to expand installed coal-fired capacity or engaged in the construction of new coal-fired thermal power plants.

The Group manages its outstanding exposures to the above companies with a view to phasing them out. In addition, the Group confirms that, in line with its exclusion policy, it achieved its objective of phasing out its exposure to counterparties active in coal mining in 2025, although a marginal amount remains, mainly attributable to a non-performing exposure.

The “Rules for lending operations in the coal sector” apply to the entire Intesa Sanpaolo Group, and specifically to the following sectors:
- coal mining;
- coal-fired power generation (coal-fired power plants - CFPPs).

Internal classification of sustainable lending products and transactions

The Intesa Sanpaolo Group also has internal regulations for the classification of sustainable lending products and transactions, under the responsibility of the Chief Risk Officer Governance Area. This legislation applies to Group companies that provide loans to customers and defines, among the various categories, environmentally sustainable activities. Environmental sustainability products and transactions refer to specific economic activities, including renewable energy production, pollution prevention and control, sustainable management of natural resources, conservation of biodiversity and climate change adaptation, aimed at reducing or eliminating physical risk, for example by reducing or avoiding damage/disruption from risks linked to adverse phenomena of temperature, wind, water and land.

The classification categories of sustainable lending products and transactions were defined in line with the internationally recognised guidelines of the Loan Market Association (LMA) on Green Loan and Sustainability-linked Loan Principles. These provide a globally shared framework and promote standard and transparent practices in the sustainable finance sector. In addition, at the end of 2025, the internal regulations for the classification of sustainable lending products and transactions were updated and the related responsibility was assigned to the CSO Governance Area.

The classification processes for sustainable products and sustainable lending products and transactions differ for each business division and require validation of the sustainability classification assigned. The sustainability classification is made during the loan application phase. Following the disbursement of the loan, if relevant, the stability of the sustainability classification will be verified and monitored by the operational and business functions for the entire duration of the loan.

Sectoral Transition Plan

The Intesa Sanpaolo Group has chosen to pursue the Net-Zero target by 2050, also setting intermediate targets to 2030 for its own direct emissions as well as the indirect emissions associated with the main business lines, in line with the objectives of the Paris Agreement to limit global warming to 1.5°C. The first four targets for the Oil & Gas, Power Generation, Automotive and Coal Mining sectors were also published in the 2022-2025 Business Plan. The business plan also formalised the commitment to defining and publishing interim targets for high-emitting sectors that are consistent with the “Guidelines for Climate Target Setting for Banks” issued by UNEP FI, and to requesting validation from the Science Based Targets Initiative (SBTi).

[112] Area understood as the drainage basin of the Amazon River, and of the Napo, Pastaza and Marañon rivers.

[113] Shale/tight oil, shale/tight gas, tar sands/oil sands, coal bed methane/coal seam gas.

In 2023, emission reduction targets were also set for the Iron & Steel and Commercial Real Estate sectors, and in 2024 targets were introduced for the Cement, Aluminium, Residential Real Estate and Agriculture - Primary Farming [114]sectors. This completed the definition of the 2030 decarbonisation targets for high-emitting sectors relevant to the Group. With the exception of the Commercial Real Estate and Residential Real Estate sectors[115], these targets were defined with a level of ambition consistent with the objective of limiting global warming to 1.5°C.

In January 2025, Intesa Sanpaolo obtained validation from the Science Based Targets Initiative (SBTi) for its decarbonisation targets, which were submitted[116] in March 2024.

The Intesa Sanpaolo companies belonging to the Wealth Management Divisions - Eurizon Capital SGR, Fideuram Asset Management SGR[117], Fideuram Asset Management Ireland and the Intesa Sanpaolo Assicurazioni Group - set their respective financed emissions reduction targets.

The Intesa Sanpaolo Group's commitment to decarbonisation is renewed in the new 2026-2029 Business Plan, confirming the 2030 target for financed emissions, asset management and insurance.

Since 2021, the Group has been a member of the Net-Zero Banking Alliance (NZBA)[118], Net-Zero Asset Managers Initiative (NZAMI)[119] through Eurizon Capital SGR, Fideuram Asset Management SGR and Fideuram Asset Management Ireland, and through Intesa Sanpaolo Assicurazioni of the Net-Zero Asset Owner Alliance (NZAOA). In 2024 Intesa Sanpaolo Assicurazioni also joined the Forum for Insurance Transition to Net-Zero (FIT[120]). For further details, reference should be made to the "Climate Report"[121] of the Intesa Sanpaolo Group. This annual document covers climate-related topics and the transition to a low-emission economy, in line with the climate commitments that have been made. The targets of Eurizon Capital SGR and the Intesa Sanpaolo Assicurazioni Group are also described in Eurizon Capital SGR's Sustainability Report and in the consolidated financial statements of the Intesa Sanpaolo Assicurazioni Group, respectively.

In 2022, Intesa Sanpaolo drew up its first High-Level Transition Plan for lending and investment activities, outlining the overall architecture of its transition journey. This approach was progressively refined, culminating in the definition of the "Sectoral Transition Plan" in 2023. This plan outlines the strategic actions to be implemented to achieve the objectives set for each sector.

In terms of the target setting process, the CSO Governance Area, in consultation with the CRO and CFO Governance Areas and the Bank's Business Divisions, as part of a dedicated project, formulated baselines and projections of the emissions generated by each sector, identify a possible target and designed the relevant transition strategy. These targets were reviewed by the ESG Control Room and the Steering Committee and then approved by the Board of Directors with the support of the Risk and Sustainability Committee.

The targets and related transition plan, which are included in this Consolidated Sustainability Statement, are described in more detail in the "Climate Report".

In order to achieve sector-specific emission reduction targets and accompany customers on their path towards decarbonisation, the Intesa Sanpaolo Group has identified several levers that enable and support the sustainable transition:

- Dedicated products and incentives, including:
  - a credit facility dedicated to the circular economy, designed for customers adopting an innovative circular business model, offering them favourable credit access conditions[122];
  - green financing aimed at financing / refinancing projects with a significant and measurable environmental impact, in line with the Green Loan Principles of the LMA (Loan Market Association);
  - sustainability-linked financing, structured in accordance with the LMA Sustainability-linked Loan Principles, with a symmetrical reward / penalty mechanism as an incentive for customers who meet predefined ESG KPIs;
  - Green, Social and Sustainability Bonds whose proceeds are used to finance/refinance green and/or social projects, in line with the ICMA (International Capital Market Association) Guidelines.
- Strategic partnerships and collaborations with public actors, such as multilateral development banks and government and private bodies, aimed at promoting joint transition initiatives, supporting green investments and facilitating access to innovative solutions for customers;

[114] In the same year, the Commercial Real Estate target was also revised to a level consistent with the trajectory to keep the temperature increase well below 2 degrees.

[115] Achieving the targets set for the Commercial Real Estate and Residential Real Estate sectors depends heavily on government policies to decarbonise the energy grid.

[116] Including the sector-specific targets defined for the Automotive, Commercial Real Estate, Iron & Steel and Power Generation sectors.

[117] The full demerger of Fideuram Asset Management SGR in favour of Fideuram - Intesa Sanpaolo Private Banking and Eurizon Capital SGR took effect from 1 July 2025.

[118] In October 2025 the Net Zero Banking Alliance changed its structure, transforming from a voluntary membership-based alliance to a new framework initiative, with the goal of continuing to provide guidelines to promote the transition in compliance with the Paris Agreement.

[119] On 13 January 2025, NZAMI launched a review of the initiative to ensure its appropriateness for the new global context, temporarily suspending the monitoring and reporting of the signatories. On 29 October 2025, the review was concluded with the relaunch of the initiative and the adoption of an updated framework introducing greater flexibility in setting targets, while maintaining the commitment to transparency and annual reporting. The Group renewed its commitments following the relaunch of the NZAMI.

[120] The Forum was announced by the United Nations Environment Programme (UNEP FI) following the notification of the termination of the Net-Zero Insurance Alliance on 25 April 2024.

[121] This document is reviewed by the Steering Committee and approved by the Board of Directors, with the support of the Risk and Sustainability Committee.

[122] The facility does not follow the technical screening criteria of the European Union Taxonomy, having been developed in close partnership with the Ellen MacArthur Foundation before the Taxonomy's entry into force.

- Support for customers in the decarbonisation process and in defining tailored ESG tools in line with their strategies and transition plans. Furthermore, consistent with the ESG commitments and objectives of the Business Plan and in line with the requirements of the European Union Taxonomy, several strategic initiatives were developed in 2024. Specifically, with regard to the IMI Corporate & Investment Banking Division, the initiatives included the development of green products and types of financing consistent with the criteria of the European Union Taxonomy, which were also extended to the Banca dei Territori Division during 2025;
- Development of initiatives aimed at facilitating loans for selected technologies, starting with the Iron & Steel sector. The goal is to pursue emissions reduction targets by enabling customer decarbonisation and cutting the emissions intensities of sector-specific portfolios. The Group intends to consider applying this approach to other high-emission sectors, thereby helping to achieve the 2030 emissions reduction targets;
- Finalisation of a programme designed to support the energy transition of buildings and encourage the adoption of the most energy-efficiency classes;
- Assist companies with transition plans that are aligned with Net Zero targets, including through financial products that are based on climate performance.

In order to ensure constant, comprehensive monitoring of the achievement of the targets defined, a structured process for monitoring results was implemented in four periodic iterations during the year. The purpose of these reviews is to monitor the progress of performance against the target set, while at the same time making it possible to prepare year-end reporting and final accounting.
During monitoring, a comparison is made between the performance reported and the baseline, target and benchmark curve in relation to each sector with the aim of quantifying any deviations. Where necessary, meetings are convened to share any proposals for actions and initiatives to be addressed by the business divisions to ensure the achievement of the targets set. For further information on the progress achieved against the targets set, reference should be made to the "Greenhouse gas emission reduction targets" section.

With reference to OpEx (administrative expenses) and CapEx (property and equipment) necessary to implement the transition plan, we note their limited significance given the Group's sector of operations.

Overview of sector-specific transition plans[123]
This section provides an overview of the sectors for which emission reduction targets have been set, providing, for each of them, the market context and the enabling factors, in addition to the Intesa Sanpaolo Group's decarbonisation strategy and levers for financed emissions (Scope 3).
For additional information about the targets relating to Sector-Specific Transition Plans, reference should be made to the "Climate change mitigation and adaptation objectives at the portfolio level" section.

1. Agriculture – Primary farming
Market context[124]
- In the context of climate change, agriculture plays a dual role. On the one hand, it contributes positively to combating climate change by helping to remove CO_2 through natural photosynthesis and the ability of soils to absorb carbon dioxide, supporting the balance of ecosystems and the reduction of global emissions. On the other hand, the agricultural sector is also a significant source of greenhouse gases. Practices such as the use of fertilisers and enteric fermentation processes in livestock farming account for a large proportion of the sector's overall emissions. In 2022, the agricultural sector accounted for around 14% of global emissions. In 2024, agriculture accounted for over 10% of the European Union's total emissions.
- According to the EU Effort Sharing Regulation, the agricultural sector in Italy, along with the civil sector, transport, waste management and industrial plants, must reduce emissions by 44% by 2030 compared to 2005 levels. The country's agricultural landscape is well-placed to support this transition: approximately 20% of Italian agricultural land is certified organic, which is double the EU average. Furthermore, a significant proportion of this land is dedicated to permanent crops, such as vineyards and olive groves, which reduce the need for fertilisers and machinery, while promoting carbon sequestration. These elements strengthen the sector's sustainability and its contribution to European decarbonisation objectives.

Enabling factors[125]
- The most widespread solutions for reducing the environmental impact of the sector include sustainable crop practices, such as using low-emission fertilisers, cover crops and bioenergy crops, as well as conservation agriculture to preserve soil carbon, including no-till farming, which does not involve ploughing the land. These are complemented by precision farming techniques that use data and sensors to optimise fertiliser and water usage. Other measures include efficient livestock management and the promotion of sustainable food systems (plant proteins, waste reduction and responsible sourcing), in addition to a focus on virtuous forest management to increase carbon removal.

[123] For more details on sector-specific transition plans, see the "Climate Report".

[124] Source: European Commission, "Study on options for mitigating climate change in agriculture by putting a price on emissions and rewarding carbon farming", https://climate.ec.europa.eu/news-your-voice/news/looking-how-mitigate-emissions-agriculture-2023-11-13_en; ISPRA, "Greenhouse gas emissions from agriculture", https://indicatoriambientali.isprambiente.it/it/agricoltura/emissioni-di-gas-serra-dallagricoltura; EEA, "Area under organic farming", https://www.eea.europa.eu/en/europe-environment-2025/countries/italy/area-under-organic-farming?activeTab=658e2886-cfbf-4c2f-a603-061e1627a515; Eurostat, "Agricultural production",https://ec.europa.eu/eurostat/statistics-explained/index.php?title=Agricultural_production_-_crops#Grapes_for_wine; Joint Research Centre – European Commission, "GHG emissions of all world countries", https://edgar.jrc.ec.europa.eu/report_2025#data_download.

[125] Source: European Commission, "The common agricultural policy at a glance", https://agriculture.ec.europa.eu/common-agricultural-policy/cap-overview/cap-glance_en; European Commission, "An environmentally sustainable CAP", https://agriculture.ec.europa.eu/cap-my-country/sustainability/environmental-sustainability/cap-and-environment_en; European Commission, "Italy's CAP strategic plan",https://agriculture.ec.europa.eu/document/download/34058aa4-eee5-4579-99af-0e7c100d40ba_en?filename=csp-at-a-glance-italy_en.pdf.

- From a regulatory perspective, measures are being adopted at the European level to strengthen support for decarbonisation objectives. Of these, the Common Agricultural Policy (CAP) allocates around 387 billion euro for the period 2023–2027, 40% of which is earmarked for climate and environmental initiatives. In Italy, the CAP plan allocates over 10 billion euro to measures such as supporting organic farming, reducing the use of fertilisers and pesticides, and conserving soil.

Intesa Sanpaolo Group decarbonisation strategy and levers

- The Group has identified various strategies to accelerate the decarbonisation of the sector. These include providing financial support to customers with low emissions and promoting solutions that reduce the carbon footprint of counterparties. The offerings for companies in the agri-food sector include the following:
  - Crescita Agri for financial support to farms through the provision of funding for investment programmes;
  - S-Loan Green projects for investments in sustainable agriculture and livestock, forestry and environmental restoration.

  Furthermore, the Group supports the sector through a series of initiatives aimed at accelerating its transformation through the energy transition, internationalisation and supporting supply chains in terms of sustainability, innovation and competitive growth. This support is also part of the measures set out in the National Recovery and Resilience Plan (NRRP). In 2025, the Group announced the allocation of 10 billion euro of new credit for agri-food supply chains, in response to new scenarios driven by climate change.

2. Aluminium

Market context[126]

- In 2024, global aluminium production increased by around 2.5% compared to 2023. This was slightly lower than the 3% rise recorded in 2023 compared to the previous year. The increase was driven by growing demand and the essential role of aluminium in technologies for the transition, as well as in higher-value segments such as vehicles and digital devices. At the same time, emissions remained broadly stable in relation to 2023 production, standing at around 1.12 billion tonnes of CO_2 equivalent. This was thanks to improvements in energy efficiency, greater use of recycled aluminium (which accounts for more than a third of total production) and an increased contribution from renewables in smelting processes. However, in order to align with Net Zero targets, the sector's emissions intensity is expected to decrease by around 30% by 2030 and by 95% by 2050, compared with the current average.

Enabling factors[127]

- In order to accelerate the decarbonisation of the sector, it is crucial to prioritise proven technologies, such as the production of secondary aluminium, which uses recycled material and requires around 95% less energy than primary production. Italy is a global leader in this area, with production based exclusively on recycled aluminium, demonstrating the feasibility of a circular approach. These solutions are complemented by the use of inert anodes in production and alternative energy sources with low emissions (such as hydrogen and renewables).
- EU policies include initiatives such as the Carbon Border Adjustment Mechanism (CBAM) which, from 2026, will impose a carbon tax on imports. The aim is to avoid competitive distortions, align the cost of emissions generated by the production of imported goods with that incurred by European producers, and provide incentives to accelerate the transition towards a low-emission industry.

Intesa Sanpaolo Group decarbonisation strategy and levers

- Intesa Sanpaolo is committed to promoting the sector's transition by reducing industrial emissions and increasing the resilience of its portfolio. To this end, the Group has identified several strategic initiatives to support sector customers on their decarbonisation journey. These include supporting the transition towards sustainable solutions, financing companies that produce low-emission aluminium and encouraging projects that integrate renewable energy, process electrification, carbon capture utilisation and storage (CCUS) systems and other emission reduction solutions. In addition to these initiatives, support is provided for business models linked to the circular economy, particularly secondary production activities. This includes advanced systems for collecting, sorting and remelting scrap to improve the quality of recycled aluminium, in addition to investments in next-generation infrastructure and plants to support the transition and ensure a supply chain in line with emerging standards.

3. Automotive

Market context[128]

- Although the automotive sector is undergoing a profound transformation, progress towards climate objectives remains limited. The rising registration of electric vehicles and the gradual improvement in fuel efficiency are positive signs.

[126] Source: IEA, "Tracking aluminium", https://www.iea.org/energy-system/industry/aluminium; European Aluminium, "EPR 2024", https://european-aluminium.eu/wp-content/uploads/2024/11/2024-11-07-European-Aluminium-EPR-2024-Executive-Summary.pdf; International Aluminium, "Global aluminium industry greenhouse gas emissions intensity reduction continues", https://international-aluminium.org/global-aluminium-industry-greenhouse-gas-emissions-intensity-reduction-continues-with-total-emissions-below-2020-peak/; IEA, "World Energy Outlook 2025", https://www.iea.org/reports/world-energy-outlook-2025; International Aluminium, "Primary Aluminium Production", https://international-aluminium.org/statistics/primary-aluminium-production.

[127] Source: International Aluminium, "Aluminium recycling saves 95% of the energy needed for primary aluminium production", https://international-aluminium.org/landing/aluminium-recycling-saves-95-of-the-energy-needed-for-primary-aluminium-production/; Consorzio Nazionale Alluminio, "Precious aluminium and Italian leadership", https://www.cial.it/en/precious-aluminium-and-italian-leadership/.

[128] Source: IEA, "World Energy Outlook 2025", https://www.iea.org/reports/world-energy-outlook-2025; European Commission, "CO_2 emission performance standards for cars and vans", https://climate.ec.europa.eu/eu-action/transport/road-transport-reducing-co2-emissions-vehicles/co2-emission-performance-standards-cars-and-vans_en; European Parliament, "The crisis facing the EU's automotive industry", https://www.europarl.europa.eu/RegData/etudes/ATAG/2024/762419/EPRS_ATA(2024)762419_EN.pdf; European Commission, "CO_2 emissions from new cars and vans continued to decrease in 2023 as zero-emission vehicles registrations continued to grow", https://climate.ec.europa.eu/news-your-voice/news/co2-emissions-new-cars-and-vans-continued-decrease-2023-zero-emission-vehicles-registrations-2024-06-10_en; EEA, "New registrations of electric cars in Europe", https://www.eea.europa.eu/en/analysis/indicators/new-registrations-of-electric-vehicles; EEA, "Greenhouse gas emissions from transport in Europe", https://www.eea.europa.eu/en/analysis/indicators/greenhouse-gas-emissions-from-transport.

However, heavier, less efficient models are becoming increasingly common. In Europe, electric cars (including plug-in hybrids) accounted for 21% of new registrations in 2024, up from 3% in 2019. This helped reduce the average emissions of new cars to 107 g CO_2/km, which is 13% lower than in 2019. However, road transport emissions in the EU fell by just 6% compared to 2019, meaning the sector is still far from achieving its climate neutrality goals.

- In December 2025, the European Commission presented the "Automotive Package", which proposed revising certain key elements of the "Fit for 55" package for the automotive sector. This included converting the previous ban on registering new vehicles with internal combustion engines from 2035 into a target for manufacturers to reduce tailpipe emissions by 90%, as well as supporting European battery cell manufacturers with subsidised loans.
- An unstable regulatory framework, the lack of a widespread charging network and limited electric vehicle range have caused significant uncertainty in consumers' purchasing decisions, slowing the replacement rate of an ageing, inefficient vehicle fleet.

Enabling factors[129]

- To realign with Net-Zero objectives, it will be necessary to rapidly scale up electric vehicle sales (to around two thirds of new vehicle sales by 2030), invest in charging infrastructure and further strengthen support policies. These measures are complemented by additional solutions, such as hybrid systems, which have already been widely adopted and marketed. In contrast, hydrogen-powered vehicles are still in the early stages of development. Additionally, improvements in design and the use of lightweight materials help reduce emissions by boosting overall efficiency.
- To this end, the EU adopted the Alternative Fuels Infrastructure regulation in 2024, setting out binding targets for the development of charging stations at 60-kilometre intervals along main road networks. In 2025, the EU introduced the Automotive Action Plan, a strategic roadmap designed to boost demand through incentives and support innovation in clean mobility.

Intesa Sanpaolo Group decarbonisation strategy and levers

- The Bank supports the financing of low-emission mobility solutions and promotes initiatives related to electric vehicles, the latest hybrid systems and energy storage systems. In particular:
  - it supports customers throughout the entire value chain, including manufacturers and suppliers. In addition to its range of financial solutions, it offers advisory services and strategic partnerships that promote innovation, process optimisation and reduced environmental impact;
  - it supports customers with the investments needed for the transition to electric mobility, working with them to define and implement the most suitable financial strategy.

4. Cement

Market context[130]

- The cement sector is one of those posing the most ambitious decarbonisation challenge, as emissions are closely linked to the current production process, which involves intrinsic chemical reactions and the combustion required to reach high temperatures. In 2024, the sector accounted for around 8% of global CO_2 emissions, down by approximately 3.5% compared to the previous year and around 5% since 2019, mainly as a result of lower demand. According to the Net-Zero Emissions Scenario, the sector would need to reduce its carbon emissions intensity by 3% annually until 2035, compared to 2024 levels.

Enabling factors[131]

- The main levers to accelerate decarbonisation in the sector include reducing the use of materials with a high emission intensity through the use of lower-emission alternatives, improving the energy efficiency of kilns and production lines, electrifying certain processes and using alternative fuels. In addition, although carbon capture, utilisation and storage technologies currently face cost and infrastructure challenges, they may represent a complementary long-term solution for reducing residual emissions.
- Institutionally, the EU Innovation Fund is one of the world's leading programmes for low-carbon technologies. From 2021 to 2024, it awarded average grants of around 150 million euro to 16 projects in the cement sector, which are expected to reduce CO_2 emissions by 138 million tonnes. In addition, the EU's Horizon programme has funded 71 projects dedicated to cement decarbonisation, totalling 416 million euro. These projects have a strong focus on carbon capture, utilisation and storage technologies.

Intesa Sanpaolo Group decarbonisation strategy and levers

- The Group has outlined a strategy that is consistent with the sector's emission-reduction objectives, based on:
  - lending to customers engaged in the transition, assessing counterparties based on their published decarbonisation commitments and supporting investments and the implementation of innovative technologies that are instrumental in achieving Net-Zero targets;

[129] Source: IEA, "Outlook for electric mobility", https://www.iea.org/reports/global-ev-outlook-2024/outlook-for-electric-mobility; European Commission, "Action Plan for the European automotive sector", https://transport.ec.europa.eu/document/download/89b3143e-09b6-4ae6-a826-932b90ed0816_en.

[131] Source: European Commission, "EU Innovation Fund - Dashboard", https://dashboard.tech.ec.europa.eu/qs_digit_dashboard_mt/public/sense/app/6e4815c8-1f4c-4664-b9ca-8454f77d758d/sheet/bac47ac8-b5c7-4cd1-87ad-9f8d6d238eae/state/analysis; European Commission, "Learning from publicly funded research on cement decarbonisation options", https://publications.jrc.ec.europa.eu/repository/handle/JRC137848.

- supporting the development of targeted transition solutions through innovative technologies, such as lower-emission cementitious materials, the integration of renewable energy into production processes and investments in carbon capture, utilisation and storage systems;
- promoting the aggregation of operators to increase synergies and implement new investments aimed at the progressive decarbonisation of the sector.

5. Coal mining

The Intesa Sanpaolo Group's "Rules for lending operations in the coal sector"[132]define the limits and exclusion criteria for the lending operations in the segments of coal extraction and coal-fired power plants, supporting customers in their efforts to reduce their use of coal for the production of energy and encouraging the transition towards low carbon-intensity alternatives. The Group confirms that, in line with its exclusion policy, it achieved its objective of phasing out its exposure to counterparties active in coal mining in 2025, although a marginal amount remains, mainly attributable to a non-performing exposure.

6. Iron & Steel

Market context[133]

- Steel production is one of the industrial activities with the greatest impact on carbon emissions, accounting for around 7% of global CO_2 emissions. At the same time, it is a vital foundation for economic development and the green transition, as it provides the materials needed for infrastructure, transport, energy systems and advanced manufacturing. Since 2015, the sector's emissions have grown steadily, driven by rising global demand, with a significant concentration in China and India, where production processes with the greatest environmental impact prevail. Despite a decline in production (-1%), they remained broadly unchanged between 2023 and 2024, highlighting the sector's strong structural dependence on high-emission-intensity technologies. In order to align with the IEA's Net Zero Emissions Scenario, which requires a 3% annual reduction in total emissions and direct emission intensity until 2035, significant progress is needed.

Enabling factors[134]

- Technological innovations to support the sector's transition mainly concern the following: the use of green hydrogen as a replacement for coal; the use of recycled materials to eliminate the iron processing phase, which is the stage in production processes that generates the most emissions; expanding the energy supply from renewable sources, as well as carbon capture and storage.
- Targeted policies and public-private partnerships will be crucial in supporting the transition. For example, the EU Clean Steel Partnership is mobilising over 1.7 billion euro to support innovative technologies, from the research phase through to industrial-scale demonstration.

Intesa Sanpaolo Group decarbonisation strategy and levers

- The Group's aim is to facilitate the sector's transformation by focusing its actions on priority initiatives:
  - engage with customers to define and implement Net-Zero strategies, offering customised loan solutions to facilitate the adoption of technologies and tools that enable a sustainable transition. This includes advanced energy efficiency measures, the structural integration of renewable energy, the digitalisation of processes to optimise emissions, the electrification of processes and green innovation across the entire value chain;
  - finance decarbonisation projects through specific financial instruments. For example, support investments in innovative technologies for steel production via hydrogen, as well as additional solutions such as CCUS, low-emission materials and "near-zero" technologies for hard-to-abate sectors;
  - support counterparties that have defined, or are in the process of defining, clear and measurable climate targets, ensuring transparency in emissions-reduction pathways, including the decarbonisation of supply chains.
- In 2025, the Group launched a number of initiatives to facilitate loans for selected technologies, such as electric furnaces and hydrogen-ready plants. These initiatives aimed to support customers' decarbonisation efforts and reduce the emissions intensity of the sector.

7. Oil & Gas

Market context[135]

- Although new technologies are scaling up rapidly, and renewables recorded a record level of installations for the twenty-third consecutive year in 2024, the Oil & Gas sector continues to play an important role in global energy systems. Demand continues to grow in this sector, contributing to new highs in fossil fuel consumption. In 2024, emissions related to fuel extraction and processing accounted for approximately 11% of total global emissions and around 6% in relation to total European Union emissions.
- In 2024, oil demand remained stable at 100 million barrels per day (mb/d), with 45% due to road vehicle usage. In the IEA's "Current Policies Scenario" (CPS), which is based exclusively on measures already set out in existing laws and regulations and does not take into account any further policy changes, global oil demand is expected to increase to 105 mb/d by 2035 and 113 mb/d by 2050, with an average annual increase of around 0.5 mb/d. As transport and power generation become

[132] For additional information, reference should be made to the "Policies to mitigate and adapt to climate change" section.

increasingly diversified towards other fuels, the CPS predicts that petrochemicals will be the main driver of this growth in demand, alongside other industrial activities and the aviation sector.

Enabling factors

- A rapid expansion of renewable energy is considered the main driver of decarbonisation in order to achieve Net-Zero targets. In parallel, oil and gas companies are adopting advanced technologies to reduce emissions from their operations. These include electrifying upstream facilities with low-emission energy, reducing methane emissions from leaks and venting using technologies such as leak detection and repair (LDAR), stopping non-emergency flaring (i.e. the routine burning of natural gas released during oil production), using low-emission hydrogen and related derived fuels, using heat pumps and other electrification technologies to reduce demand for thermal energy and using carbon capture, utilisation and storage systems as a complementary solution to reduce residual emissions.
- Policymakers have confirmed their commitment to supporting the sector's transition. For example, the Italian regulator has confirmed that it will stop issuing new concessions for the exploration and production of liquid hydrocarbons in Italy from October 2024. At the same time, the initiatives under the REPowerEU programme aim to boost renewable energy and hydrogen production at the European level, reducing dependence on fossil fuels and accelerating the transition of the energy sector.

Intesa Sanpaolo Group decarbonisation strategy and levers

- The Intesa Sanpaolo Group promotes financial solutions (e.g. sustainability-linked, green and transition loans, green bonds and transition project financing) and advisory services related to sustainable activities to support customers' transition through investments in low-carbon technologies and solutions to improve the energy efficiency of operations.
- Furthermore, the Group has defined policies and rules introducing specific limits and exclusions for financing activities, reducing the services provided to companies operating in the sector. Indeed, with respect to unconventional oil and gas resources136, the Group confirms that it achieved its objective of phasing out operations by 2025, as set out in the updated "Rules for Oil & Gas Operations"[137], published in June 2024.

8. Power Generation

Market context[138]

- Power Generation, which is supported by the steady growth of renewable sources, is a key sector in achieving climate-neutrality objectives. According to IEA forecasts, global electricity generation from renewable sources is expected to increase by 60% between 2024 and 2030, rising from 9,900 to 16,200 TWh. Photovoltaics will account for over half of this growth, followed by wind power at 32%. It is estimated that the proportion of electricity generated from renewable sources will increase from 32% in 2024 to 43% in 2030. These global dynamics are also reflected at the European level. The changing composition of generation mix is driving emissions reductions in this sector which, in 2024, accounted for approximately 20% of total emissions. In the same year, the percentage of electricity generated from fossil fuels fell from 32% to 28% and that of energy generated from renewable sources grew from 44% to around 48%, while the percentage generated from nuclear sources remained stable at around 24%.
- Global electricity demand grew by around 4% in 2024, reflecting structural trends such as the electrification of transport, increasingly extreme weather conditions and the expansion of data centres and artificial intelligence applications. Most of this growth was covered by renewables, with solar accounting for the largest increase in generation capacity (+30% year on year in 2024). Consequently, the sector's emissions intensity decreased by 3% compared to 2023.

Enabling factors[139]

- In order to achieve decarbonisation objectives, the sector will be able to benefit from the rapid expansion of renewable energy, improved energy efficiency and increased electrification, leveraging technologies that are already available. The most significant contribution to reducing the sector's environmental impact is expected from the growth in global renewable energy generation capacity, which is being driven by Net-Zero targets and energy security policies.
- In this context, the institutions are promoting a regulatory and tax framework that favours the development of renewable energy sources. In Europe, the Renewable Energy Directive aims to raise the target for the share of renewable energy to at least 42.5% of the Union's total energy consumption by 2030, supporting growth in demand from the private sector and households. According to Italy's National Integrated Energy and Climate Plan (NECP), around 40% of gross final energy consumption in Italy is expected to come from renewable sources by 2030. The plan sets out a target to double the installed capacity of solar photovoltaics and wind by 2030, up from 50 GW to 107 GW. National targets are supported by legislative measures such as the "Decreto FER X" and "MACSE", which encourage the development of renewable energy sources and electricity storage capacity by offering competitive incentives and long-term contracts in order to facilitate the energy transition and ensure system flexibility.

Intesa Sanpaolo Group decarbonisation strategy and levers

- The Group defined its approach through the following strategic elements:

136 Unconventional resources defined as shale/tight oil, shale/tight gas, tar sands/oil sands, coal bed methane/coal seam gas.

137 For additional information, reference should be made to the "Policies to mitigate and adapt to climate change" section.

- active financial support, making available financial solutions designed to promote renewable energy, such as solar photovoltaics, onshore and offshore wind energy and battery energy storage systems, as well as innovative solutions such as green hydrogen and, additionally, carbon capture, utilisation and storage systems;
- multistakeholder engagement and partnerships, facilitating the creation of collaborations, e.g. through advisory services for mergers and acquisitions (M&A), partnerships with Multilateral Development Banks (MDBs) and support for public-private partnerships;
- as part of the European Commission's "Adaptation and Resilience to Climate Change" initiative, support customers in assessing physical risks related to climate change and implementing specific adaptation measures;
- financial solutions and strategic advisory services to foster sustainable investments and strengthen industrial value chains. The aim is to support the exploration of advanced technologies, such as next-generation nuclear power, green hydrogen production and renewable energy storage systems (co-location).

As a strategic advisor, the Bank also supports Italian and international customers with operations related to the energy transition and the decarbonisation of the energy mix.

9. Real Estate (Commercial and Residential)

Market context[140]

- Globally, the buildings sector accounts for over a quarter of final energy consumption, with around 70% of its CO_2 emissions originating from the residential sector. In 2024, electricity remained the main energy source, accounting for approximately 39% of the total, while the use of natural gas remained stable at 23%. In Europe, buildings account for 40% of the EU's annual energy consumption and generate 36% of its energy-related greenhouse gas emissions. Although the EU has made significant progress in reducing emissions from commercial buildings - achieving a 23% decrease in direct emissions between 2015 and 2023 - the overall pace of decarbonisation is still insufficient to meet climate targets. The sector's energy efficiency remains low, with an annual renovation rate of around 0.6%. Major renovation measures, which could reduce consumption by at least 60%, stand at just 0.3%. This progress is insufficient to meet the European Commission's target of reducing emissions by 55% by 2030, as outlined in the Renovation Wave.
- Similarly, energy efficiency in the residential sector remains limited. More than 80% of buildings were constructed prior to the introduction of EU Directive 2002/91/EC, and approximately 75% are considered inefficient under the European Energy Performance of Buildings Directive. Renovation rates remain low at around 1% per year, which is well below the level required to meet climate targets.

Enabling factors[141]

- To achieve a gradual reduction of emissions in this sector, targeted measures are required, such as the electrification of heating systems and the integration of renewable energy. Other solutions aimed at promoting energy efficiency include the thermal insulation of buildings, the reuse and recycling of construction materials and architectural innovations. In order to support this process, a strong acceleration in investment in major renovations is necessary.
- The European regulatory framework is evolving to support the transition. As part of the Green Deal finalised by the Commission, the Renovation Wave aims to renovate 35 million buildings by 2030. The support for less efficient buildings will come in the form of targeted funding and incentives. In addition, the Energy Performance of Buildings Directive requires Member States to establish national objectives for reducing the average energy consumption of residential buildings by 16% by 2030. At least 55% of this reduction must be achieved by renovating the least energy-efficient buildings.

Intesa Sanpaolo Group's decarbonisation strategy and levers for the Residential Real Estate sector

- The 2022-2025 Business Plan provided for the allocation of green lending worth 12 billion euro to individuals (for further information reference should be made to the section "Targets and metrics related to Green Mortgages"). In particular, with respect to the residential sector, the Group is supporting families' green transition by offering credit lines and specific products such as Green Mutuo Domus which is intended for the purchase or construction of properties with a high energy efficiency rating, as well as for renovation work. The offer includes favourable terms and, in the event of renovation, energy certification at the Bank's expense.
- The Bank has developed advisory services to help its customers analyse the risks and opportunities relating to the efficiency of their assets.

Intesa Sanpaolo Group's decarbonisation strategy and levers for the Commercial Real Estate sector

- The Bank supports the sector's transition by offering financial instruments and dedicated services:
  - strategic advisory services to support customers in identifying sustainability solutions and leveraging available government grants;
  - support with renovations, energy efficiency upgrades or the earthquake-proofing of buildings, providing for the possibility of assigning a tax deduction to the Bank[142];

[142] With regard to the works set out in Articles 119-121 of Decree-Law no. 34/2020, converted into Law no. 77/2020 ("Rilancio Decree"), as amended.

- loans with favourable conditions linked to increased energy efficiency standards and the implementation of sustainable building solutions. For example, the Group offers financial products such as S-Loan Green Projects related to buildings certified with the highest level of environmental standards and through Intesa Sanpaolo Rent ForYou. The latter scheme provides medium and long-term rental solutions to optimise and manage consumption (such as IoT sensors, software and artificial intelligence to control electrical systems) and to support the transition to sustainable energy (such as solar panels);
- a programme dedicated to the Commercial Real Estate sector, with the aim of providing tools for active portfolio steering towards high-performance energy classes (Class A). In order to enrich the information assets relating to the CRE portfolio and drive active steering strategies, the operating models of the Divisions were updated to include the requirement to collect Energy Performance Certificates (APEs) as part of the loan disbursement process. The main goal is to help the Bank achieve its emissions intensity target, while also aligning with European regulations that require an increase in the coverage of actual energy classes in the portfolio, as well as improving the quality of the Bank's collateral, thereby contributing to the mitigation of credit risk.

For the Real Estate sector, the achievement of this target is highly dependent on the implementation of government policies to decarbonise the energy grid.
For more details, see the section "Climate Change Actions and Resources at the Portfolio Level".

Greenhouse gas emission reduction targets

Description of the objective
The aforementioned sectors for which 2030 emission reduction targets have been set, approved by the Bank's Board of Directors, were identified based on their materiality for the Group and their higher emissions intensity in line with the "Guidelines for Climate Target Setting for Banks" issued by UNEP FI.

The period of application of the targets set by Intesa Sanpaolo runs from 2021 for the Oil & Gas and Coal mining sectors and from 2022 for the other sectors.

The methodological choices adopted by the Intesa Sanpaolo Group relating to baselines, metrics and target setting were defined taking into consideration i) "Guidelines for Climate Target Setting for Banks", issued by UNEP-FI (April 2021) and ii) Financial Sector Science-Based Targets Guidance - version 1.2, issued by SBTi. Therefore, the climate targets set by the Group pursue the temperature targets of the Paris Agreement[143] and support the transition to a net-zero economy by 2050. Furthermore, the choices regarding the selection of the value chain segment, the emissions considered and the proxies used are in line with PCAF (Partnership for Carbon Accounting Financials) methodologies. The Group applies science-based scenarios, such as the IEA Net-Zero 2050, whose curves are aligned with the temperature targets of the Paris Agreement.

The Bank's lending and investment activities considered in the perimeter are as follows:
- Medium- to long-term financing (with the exception of the Oil & Gas and Coal Mining sectors, for which short-term financing is also considered);
- Hold-To-Collect (HTC) bonds for the Oil & Gas sector;
- Banking book equity, if material.

Small or medium-sized enterprises (SMEs), defined as specified in Article 501, paragraph 2, letter b), of the CRR, which refers to Commission Recommendation 2003/361/EC, are excluded only if they are unaffiliated sole proprietorships. The reason for the exclusion of SMEs lies in the limited availability of data for smaller, unlisted companies, which would imply extensive use of sector-specific proxies for estimating emissions and production data and could lead to a strong convergence of the portfolio figure towards the sectoral average.

For the Agriculture – Primary Farming sector, SME Corporate counterparties with a turnover of more than 10 million euro are included in order to define a boundary that is representative of the typical size of counterparties financed in this sector.

SMEs[144] (but not retail SME customers) are included in the Commercial Real Estate segment in accordance with SBTi Guidance, while the Residential Real Estate segment only includes exposures to Private Retail counterparties.

In order to avoid double counting of emission data, only certain segments of the value chain are considered for each sector. The sectors and related segments considered are defined according to the internal classification based on NACE codes at the Group level.

Below are the segments of the value chain considered for each sector:
- Agriculture – Primary Farming: focus on counterparties active in the primary farming sub-sector;
- Aluminium: focus on aluminium producers;
- Automotive: focus on light vehicle production (passenger cars and light trucks). Component manufacturers are excluded;
- Cement: focus on cement and clinker producers;
- Iron & Steel: focus on companies producing crude steel and using iron (or scrap) as input. Mining, steel finishing and downstream activities are excluded;

[143] Except for the target set for the Residential Real Estate sector.

[144] The Commercial Real Estate boundary includes corporate SME but not retail SME customers. Corporate SMEs are defined as undertakings with an individual/group size indicator between 2.5 and 50 million or with an individual/group size indicator below 2.5 million if the individual/group exposure is greater than or equal to 1 million.

- Oil & Gas: focus on upstream operators and those operating along the entire value chain. Refineries, pipelines and downstream activities are excluded;
- Power Generation: focus on power generation and integrated operators. Electricity transport and distribution are excluded;
- Commercial Real Estate and Residential Real Estate: focus on emissions related to the use of buildings in Italy.

For each sector, the emission categories considered are:
- Agriculture – Primary Farming: Scope 1 and 2;
- Aluminium: Scope 1 and 2;
- Automotive: Scope 3 WTW (Well-to-Wheel);
- Cement: Scope 1 and 2;
- Iron & Steel: Scope 1 and 2;
- Oil & Gas: Scope 1, 2 and 3;
- Power Generation: Scope 1 and 2;
- Commercial and Residential Real Estate: Scope 1, 2 and 3.

For all sectors, the Bank uses the Sectoral Decarbonisation Approach (SDA) methodology to measure and reduce an emission intensity metric for each sector defined as the ratio of financed emissions to financed output (financed surface area for Commercial and Residential Real Estate). For Agriculture – Primary Farming, the Bank adopted a "'revenue intensity" metric that measures emissions relative to total counterpart revenue.

Specifically, the emission intensity metrics for the different sectors are as follows:
- Agriculture – Primary Farming: tCO_2eq/€M in revenue;
- Aluminium: tCO_2eq/t aluminium;
- Automotive: gCO_2eq/vkm;
- Cement: tCO_2eq/t cement;
- Iron & Steel: tCO_2/t steel;
- Oil & Gas: gCO_2eq/MJ;
- Power Generation: $kgCO_2eq$/MWh;
- Commercial Real Estate and Residential Real Estate: $kgCO_2eq/m^2$.

With respect to the Coal Mining sector, Intesa Sanpaolo has not set a target based on emission intensity; instead, it has adopted a phase-out policy. The Group confirms that, in line with its exclusion policy[145], it achieved its objective of phasing out its exposure to counterparties active in coal mining in 2025, although a marginal amount remains, mainly attributable to a non-performing exposure. For the Oil & Gas sector, the progressive alignment of the portfolio with climate neutrality objectives is also governed by the "Rules for Operations in the Oil & Gas Sector". In 2025, the Group finished phasing out its exposure to counterparties associated with unconventional Oil & Gas resources.

The method described here made it possible for each target defined and reported to identify a number of levers conducive to achieving the decarbonisation objectives. The main levers were made explicit and emphasised in the "Sectoral Transition Plan" section.

In this context, the Group monitors progress towards the achievement of its targets, reporting annually on the level of progress. To this end, physical intensity and absolute emissions[146] are published. The Group has not defined any GHG emissions target in absolute terms.

Metrics and data may be updated over time based on developments in emission calculation methods, updates to the UNEP FI and SBTi Guidelines, as well as updated data sources and established market practices. Moreover, metrics and data are based on projections and estimates that rely on sector-specific assumptions and strategic plans of the underlying entities, some of which may depend heavily on external factors, such as but not limited to technological improvements and/or implementation of government policies. Metrics are calculated using data whose quality and availability is subject to change over time.

[145] Rules for lending operations in the coal sector.

[146] Disclosure about the absolute emissions associated with the targets set is available in the Intesa Sanpaolo Group "Climate Report".

Climate change mitigation and adaptation objectives at the portfolio level[147]

Target: Agriculture – Primary farming - financed emissions in terms of tCO2eq/€MM		
	Date	**Value**
Baseline	31.12.2022	721
Final number	31.12.2024	675
Final number	31.12.2025	671
Target	2030	641

Target: Aluminium - financed emissions in terms of tCO2eq/t Aluminium		
	Date	**Value**
Baseline	31.12.2022	4.79
Final number	31.12.2024	4.38
Final number	31.12.2025	3.03
Target	2030	4.31

Target: Automotive - financed emissions in terms of gCO2eq/vkm		
	Date	**Value**
Baseline	31.12.2022	192
Final number	31.12.2024	192
Final number	31.12.2025	175
Target	2030	100

Target: Cement - financed emissions in terms of tCO2eq/t		
	Date	**Value**
Baseline	31.12.2022	0.65
Final number	31.12.2024	0.64
Final number	31.12.2025	0.63
Target	2030	0.50

Target: Coal Mining - exposure in €/billion		
	Date	**Value**
Baseline	30.06.2021	0.20
Final number	31.12.2024	0.01
Final number[148]	31.12.2025	0.01
Target	2025	0

Target: Iron & Steel - financed emissions in terms of tCO2/t steel		
	Date	**Value**
Baseline	31.12.2022	1.05
Final number	31.12.2024	0.82
Final number	31.12.2025	0.90
Target	2030	0.81

Target: Oil & Gas - financed emissions in terms of gCO2eq/MJ		
	Date	**Value**
Baseline	30.06.2021	64
Final number	31.12.2024	64
Final number	31.12.2025	63
Target	2030	55[149] (52-58)

Target: Power Generation - financed emissions in terms of kgCO2eq/MWh		
	Date	**Value**
Baseline	31.12.2022	202
Final number	31.12.2024	123
Final number	31.12.2025	108
Target	2030	110

Target: Commercial Real Estate - financed emissions in terms of kgCO2eq/m²		
	Date	**Value**
Baseline	31.12.2022	43.16
Final number	31.12.2024	38.94
Final number	31.12.2025	36.14
Target[150]	2030	22.11

Target: Residential Real Estate - financed emissions in terms of kgCO2eq/m²		
	Date	**Value**
Baseline	31.12.2022	30.13
Final number	31.12.2024	28.77
Final number	31.12.2025	26.88
Target[151]	2030	19.26

In 2025, relative emissions (i.e. physical intensity) continued to improve thanks to a portfolio composition strategy that considers customers' decarbonisation commitments and includes financing innovative technologies and renewable energy.

147 The targets may vary depending on changes in the reference scenarios.

148 The Group confirms that, in line with its exclusion policy, it achieved its objective of phasing out its exposure to counterparties active in coal mining in 2025, although a marginal amount remains, mainly attributable to a non-performing exposure.

149 Central value of the target range identified.

150 The achievement of the target is highly dependent on the implementation of government policies to decarbonise the energy grid.

151 The achievement of the target is highly dependent on the implementation of government policies to decarbonise the energy grid.

Objectives and metrics relative to Green Mortgages

The Group's objective relating to the disbursement of Green Mortgages included in the 2022-2025 Business Plan was largely exceeded, disbursing up to approximately 15 billion euro in 2025 during the term of the Plan. This objective was achieved mainly through the involvement of the business divisions that, starting from the analysis of the economic and commercial reference context and through the definition of specific actions and initiatives to support customers, proposed and coordinated the offer of dedicated product solutions and services in order to promote evolution in the realm of environmental sustainability.

The Intesa Sanpaolo Group contributed to the reduction of carbon emissions and promoted access to sustainable housing solutions through the provision of loans for energy-efficient real estate projects and the improvement of existing energy performance.

The scope of the target includes loans to private individuals disbursed throughout Italy and in the countries where the banks of the International Banks Division (IBD) have branches. Originally focused on the Italian market, it was possible to extend the Group's internal classification rules for products and sustainable lending transactions to the foreign boundary as well.

As reported in the "Climate Change Actions and Resources at the Portfolio Level" section below, the Group supports the green projects of retail customers, including the Green Mortgage, a mortgage loan with favourable terms to finance the purchase/construction of energy-efficient buildings or the upgrading of existing buildings, improving their performance. In accordance with the objective set out in the 2022-2025 Business Plan, the Group contributed to facilitating the renovation of Italy's real estate assets and the diffusion of energy-efficient homes in synergy with the EeMAP criteria (a European initiative – that the Group has signed on to – that aims to create a standardised energy efficiency mortgage loan at the European level).

Target: Green Mortgages Disbursed – cumulative disbursement in €/billion[152]		
	Date	**Value**
Baseline[153]	31.12.2021	-
Final number	31.12.2024	9
Final number	31.12.2025	15
Target	31.12.2025	12

Specifically, in 2025, the total amount disbursed in connection with Green Mortgages, shown in the "Actual" field of the table above, amounts to around 15 billion euro, of which more than 6 billion euro was disbursed in 2025.

Furthermore, a regulatory source was used in order to calculate the disbursed amount for 2025 and 2024. In previous years, the amount disbursed was derived entirely from management sources.

Climate change actions and resources at the portfolio level

With respect to the goal of supporting the ecological transition, the 2022-2025 Business Plan included the following actions: (i) sustainable lending initiatives for retail customers, (ii) support to SMEs/Corporates in their journey towards sustainability, including by strengthening sustainable lending and holding ESG Workshops, in collaboration with specialised partners (for more detail, see the "Metrics and targets" section of ESRS S4). The actions relating to the Banca dei Territori, International Banks Division (IBD), IMI Corporate & Investment Bankingand Wealth Management Divisions are set out below. For additional information on the processes implemented in the management of ESG risks, reference should be made to the "Policies to mitigate and adapt to climate change" section at portfolio level.

With respect to the Banca dei Territori Division, the Group continued to provide loans and mortgages for environmental purposes to retail customers in 2025. The provisions of the European Energy Performance of Buildings Directive (EPBD) provide for the gradual upgrading of the building stock in EU countries. With this in mind, the banking system is urged to play a transformative role in directing financial investments towards activities that can help reduce the EU's dependence on fossil fuels, thereby supporting the achievement of the EU's climate targets for net-zero emissions by 2050. The financing solutions proposed by the Intesa Sanpaolo Group are not only available to support the purchase or construction of an energy-efficient property, but also to those who want to improve energy efficiency through, for example, the replacement of windows and doors and high-performance boilers, the purchase of environmentally-friendly vehicles and installation of solar and photovoltaic panels.

In this context, the Group proposes "Green - Mutuo Domus": a subsidised mortgage (reduction of the Annual Percentage Rate (APR) and free energy certification for renovation purposes) which makes it possible to purchase and build an energy efficiency property or to renovate a residential property in Italy improving its energy performance. For more information on Green Mortgages, see the section "Targets and metrics related to Green Mortgages".

The range of green solutions has been enriched with a series of dedicated services, some of which are provided by partner companies. These additional and optional services help to assess the possible savings that can be made through energy redevelopment measures, for example. Consistent with the regulatory framework defined by Regulation EU 2020/852 on the European Taxonomy, the Intesa Sanpaolo Group has implemented a series of activities aimed at providing information on the energy performance of buildings as collateral for loan applications.

The Intesa Sanpaolo Group participates in the European Energy Efficiency Financing Coalition and the "Energy efficient Mortgages Action Plan" (EeMAP) project. As part of "EeMAP", Intesa Sanpaolo has also joined the "Energy Efficient Mortgage Label" (EEML), a project that aims to maximise the regulatory alignment of the portfolio with key legal developments such as the European Union Taxonomy, the Mortgage Credit Directive (MCD), the Capital Requirements Regulation (CRR), or

[152] Entity-specific metric.

[153] Plan target that represents the planning of a new activity that does not have a base Value.

international equivalents. As part of the EEML project, starting in 2021, each quarter the Intesa Sanpaolo Group reports aggregate figures on the green portfolio and the standard portfolio.

The main products proposed to SME customers include the sustainability-linked "S-Loan" to support small- and medium-sized enterprises that aim to improve their sustainability profile to assist them on a path of structural change, associating their economic and financial decisions also with their environmental impacts, through precise commitments undertaken with the Group using specific ESG indicators (KPIs) subject to annual monitoring.

The "S-Loan Green projects" supports all types of business investments capable of generating a positive environmental impact on processes, infrastructure, technologies, services, and products. Specifically, with regard to climate change mitigation and adaptation, eligible investments concern:
- renewable energies;
- energy efficiency;
- sustainable transport;
- climate change adaptation;
- green buildings.

In addition, Intesa Sanpaolo provides "S-Loan CER" financing for companies that decide to invest in renewable energy and which benefit from an incentive in terms of an interest rate subsidy, with an additional bonus if the undertaking allocates part of the energy produced and not self-consumed to the Renewable Energy Community[154] (CER).

Among the products that support professionals and undertakings in the realisation of investment programmes in the energy sector is the "Energia Impresa" loan, which has several lines of action:
- plants for generating electricity from renewable sources (RES projects);
  - photovoltaics, electricity generation from photovoltaic solar energy;
  - wind power, electricity production from wind power only onshore;
  - hydroelectricity, production of electricity from hydraulic sources classified as "small derivation";
  - residual gases from purification processes;
- small-scale biogas plants for the production of electricity from biogas;
- biomethane plants, for the production of biomethane for transport or other uses;
- energy efficiency measures, for investments in the energy efficiency of buildings, thermal and electrical consumption, and energy production plants.

"NOVA+" is the specific medium- to long-term financing line designed to support undertakings for research, development and innovation projects. The Nova+ Research line includes specific products:
- "Nova+ Green": intended to support product or process innovation projects aimed at achieving climate neutrality or the integration of circular economy processes;
- "Nova+ Mobility": intended to support innovative projects of undertakings aimed at the transition of mobility towards a new paradigm of sustainability, digitisation and connectivity;
- "Nova+ Agritech": intended to support innovative projects of undertakings aimed at the transition of agriculture towards a new paradigm based on principles of sustainability, resilience and productivity.

S-Loan Green projects, Energia Impresa and NOVA+ are addressed to all undertakings/groups of any sector and size in Italy.

The medium- to long-term loan with a SACE Growth Guarantee was introduced on 1 April 2025. This includes support for general and environmental sustainability investments (Green Module), replacing the medium- to long-term loan products with SACE Green and SACE Futuro guarantees. The Green Module supports the needs of undertakings by facilitating the implementation of projects in Italy that aim to make the transition to a lower-impact economy easier. These projects integrate production cycles with low-emission technologies to produce sustainable goods and services, and promote new, lower-emission mobility solutions. This initiative is aimed at corporations, including cooperative companies, that have a registered (or secondary) office in Italy.
Accordingly, the InvestEU – Sustainability Guarantee can be granted on financing operations designed to support the achievement of climate change mitigation and adaptation objectives, and is targeted at customers falling within the SME and Small Mid Cap company size for operations that meet certain eligibility criteria set by the European Investment Fund.

Furthermore, the Think Forestry programme was launched in November 2023 to provides access to a network of leading national forestry initiatives through an agreement with the Climate Network non-profit organisation. In this context, an extensive planting programme was launched with the aim of contributing to the "reforestation" of the Italian territory. The Bank actively participates in the programme by carrying out tree planting in several Italian cities and encouraging the participation of its corporate customers.
In 2025, Intesa Sanpaolo launched CO_2 mitigation solutions, a product designed for businesses willing to commit to reducing their emissions through actions within their value chain. This product supports businesses in measuring their carbon footprint and in purchasing carbon credit certificates. This product supplements the tools that the Bank has already developed to raise awareness of these issues among undertakings, including the ESG platform, which supports the collection of information on companies' ESG performance and enables their profile and positioning to be analysed against relevant benchmarks.

[154] An Energy Community is an association that produces and shares renewable energy, in order to generate and manage cost-effective green energy on its own, while significantly reducing CO_2 emissions and energy waste. Participants can include citizens, businesses, public authorities, small and medium-sized enterprises.

With particular regard to the topic of adapting to climate change, the Intesa Sanpaolo Group confirmed its concrete commitment to support the populations affected by natural disasters in Italy by activating dedicated credit lines, providing new subsidised loans intended for the restoration of damaged properties (houses, shops, offices, artisan workshops, companies), suspensions on existing loans, actions in the area of protection and preferential, simplified and expedited procedures.

For more details on Sustainable Finance, with reference to climate/environmental topics, see the "Sustainable finance metrics" section of ESRS S4.

With respect to the International Banks Division (IBD), a strong commitment to the green transition of its customers is emphasised both through a commercial offer dedicated to the financing of projects aimed at increased energy efficiency, support of the circular economy and the containment of climate impact, and through awareness initiatives for the dissemination of knowledge and understanding of ESG issues.
In the retail and micro-business sector, dedicated solutions such as loans and Green Mortgages for the purchase, construction and increased energy efficiency of real estate are available in the catalogue.
In 2025, the “Green dedicated S-loan” product was also marketed in Privredna Banka Zagreb, in addition to the other banks of the Division – Všeobecná úverová banka (VUB), CIB Bank and Banca Intesa Beograd.

The financial products of the IMI Corporate & Investment Banking Division focuses on ESG solutions with special attention to environmental aspects. It includes sustainability-linked instruments that encourage customers to improve their sustainability performance, and loans with proceeds earmarked for environmental and circular economy projects, promoting decarbonisation and reuse of resources. In particular, in terms of sustainability-linked solutions, in 2025, the Group supported its customers with loans, bonds, guarantees, securitisations and hedging activities, while the transactions with earmarked income include green loans, green, social and sustainable bonds, green convertible bonds, as well as project finance dedicated to the world of renewable energy (wind, photovoltaic, biomass, hydroelectric).

The Division also offers a wide range of advisory services focused on the sustainable transition. Specifically, an ESG Advisory Team was established in 2023 to assist customers served by IMI Corporate & Investment Banking in the development of customised ESG tools linked to their strategies and transition plans.

Through its IMI Corporate & Investment Banking Division, in 2025, Intesa Sanpaolo took part in numerous bond issues with ESG features promoted by Italian and foreign corporate issuers and leading financial institutions.

In this context, Intesa Sanpaolo played a significant role in the green bond market, participating as global coordinator and joint bookrunner in A2A’s first ten-year European Green Bond issue and contributing to other major European Green Bond issues such as those of Snam and Terna[155]. These activities help to strengthen the Intesa Sanpaolo Group’s positioning in international markets and confirm its commitment to supporting companies and financial institutions in creating sustainable value.

To encourage investments in electricity generation projects from renewable sources, particularly photovoltaics and wind power, Intesa Sanpaolo has launched a new initiative in collaboration with SACE. Thanks to this opportunity, undertakings will be able to obtain financing of up to 50 million euro for project-based initiatives, with SACE covering up to 50% of the financed amount. The IMI Corporate & Investment Banking Division prioritises facilitating this kind of investments and contributing to the energy autonomy of companies and the country. To this end, it makes the expertise of its specialist project finance desks available to support more complex, large-scale projects. The IMI Corporate & Investment Banking Division of Intesa Sanpaolo and the European Investment Bank (EIB) signed two financial transactions totalling 750 million euro, aimed at supporting the construction of 2 GW of renewable energy generation plants and mobilising investments in the real economy totalling more than 4.5 billion euro. The first transaction refers to a 500 million euro funding framework to support photovoltaic, wind and bioenergy projects. The second transaction provides for a 250 million euro counter-guarantee, under the EIB’s “Wind Package”, to encourage new investments in the European wind supply chain.

Lastly, with regard to asset management, in 2024, Fideuram Asset Management SGR[156], Fideuram Asset Management (Ireland) and Eurizon Capital SGR signed the Global Investor Statement to Governments on the Climate Crisis, an initiative urging governments to strengthen their climate policies in order to contain the rise in temperatures within 1.5 degrees Celsius[157].

A precise quantification of the emission reduction with respect to each action at the portfolio level is not possible due to the complex connection between actions taken and emission trends in the counterparties' sectors

Energy consumption metrics

The Group measures and reports its annual energy performance through the following tables: “Energy consumption and mix” and “Energy intensity based on net revenue in high climate impact sectors”.

Energy consumption and mix

This section covers the energy consumption metrics applicable to the Group’s own operations.

[155] European green bonds are based on the voluntary European standard known as the “European Green Bond Standard” which, in turn, is based on the European Union Taxonomy criteria for defining sustainable economic activities. The new regulation aims to ensure standardisation and transparency in line with market best practices, and to establish a European supervisory system for companies responsible for reviewing bond pre- and post-issuance documentation.
[156] The full demerger of Fideuram Asset Management SGR in favour of Fideuram - Intesa Sanpaolo Private Banking and Eurizon Capital SGR took effect from 1 July 2025.
[157] For more details on sustainability issues (with specific reference to environmental matters) for the Wealth Management divisions, see the Climate Report.

In particular, the table below shows the Group's energy consumption in 2025 with the aim of providing a detailed and exhaustive picture of the energy consumed by the processes owned or controlled by the Group. Specifically, total energy consumption is broken down by fossil, nuclear and renewable energy sources. Furthermore, self-production of renewable and non-renewable energy is also shown. For information on the reference boundary at 31 December 2025, reference should be made to the "Basis for preparation and methodology" section of the ESRS 2 – General disclosures chapter.

The figures shown below are in megawatt-hours (MWh).

Table 5[158] – Energy consumption and mix (in MWh)

	2025	2024
Total energy consumption	**550,853**	**565,284**
Total fossil energy consumption	*229,189*	*233,889*
Fuel consumption from coal and coal products	-	-
Fuel consumption from crude oil and petroleum products	35,091	36,475
Fuel consumption from natural gas	136,550	136,694
Fuel consumption from other fossil sources	-	-
Consumption of purchased or acquired electricity, heat, steam, and cooling from fossil sources	57,548	60,719
Share of fossil sources in total energy consumption	41.6%	41.4%
Consumption from nuclear sources	*108*	*4,661*
Share of consumption from nuclear sources in total energy consumption	0.0%	0.8%
Total renewable energy consumption	*321,556*	*326,735*
Fuel consumption from renewable sources	-	-
Consumption of purchased or acquired electricity, heat, steam, and cooling from renewable sources	320,130	325,382
Consumption of self-generated non-fuel renewable energy	1,427	1,353
Share of renewable sources in total energy consumption	58.4%	57.8%
Non-renewable energy production	23,817	23,539
Renewable energy production	1,516	1,353
Total energy consumption from activities in high climate impact sectors	445	1,081
Total energy consumption from activities in high climate impact sectors per net revenue from activities in high climate impact sectors	0.000004	0.00002

In 2025, the reduction in energy consumption continued (down 2.5% compared to 2024). In particular, there were decreases in electricity from fossil sources (-2%) and in natural gas consumption for independent and building heating systems. With respect to district heating, the mix shows a reduction in the renewable component in favour of the fossil component due to a more prudent approach to reporting the figure. The significant reduction in energy consumption from nuclear sources is due to the purchase of more energy from renewable sources and the reclassification of a share of purchased energy without origin certifications as energy from fossil sources.
With respect to energy associated with the company fleet, there was a reduction in the use of fossil fuel, in addition to an increase in the use of electricity for vehicle charging. This development reflects the increasing electrification of the car fleet, which contributes to changes in the overall energy mix.

The Group also operates in high climate impact sectors. Consequently, it reports its energy consumption from fossil fuels disaggregated by sources. Furthermore, only to the extent of high climate impact sectors, it provides information on energy consumption and energy intensity (total energy consumption per net revenue) associated with activities in these sectors.

In this respect, it is noted that high climate impact sectors are those listed in sections from A to H and in section L of the Statistical classification of economic activities (NACE), as per Commission Delegated Regulation (EU) 2022/1288: a small number of Group companies operate in sectors covered by sections F-Construction, G-Wholesale and Retail Trade and L-Real Estate Activities. Consequently, "total energy consumption from activities in high climate impact sectors" shows total energy consumption gross of energy from fossil fuel, nuclear sources and renewable sources related to own operations in these sectors. At the end of 2025, energy consumption related to activities in high climate impact sectors had fallen by 58.8%, from 1,081 MWh in 2024 to 444.56 MWh, mainly as a result of the disposal of certain Group properties.

"Total energy consumption from activities in high climate impact sectors per net revenue from activities in high climate impact sectors" is calculated as follows: "total energy consumption from activities in high climate impact sectors (MWh)/net revenue from activities in high climate impact sectors (euro), with the above figure as the numerator and the net revenue attributable to the above activities (high climate impact) as the denominator. As shown in the table, this figure is negligible.

[158] Numbering refers to the XBRL tables published by EFRAG.

Energy intensity based on net revenue in high climate impact sectors[159]

The table below provides useful information for understanding the denominator of the energy intensity ratio. Specifically, it shows the net revenue from activities in high climate impact sectors (as defined earlier) in which the Group operates, which is used to calculate the above energy intensity, in addition to the net revenue[160] broken down by the component not attributable to activities in high climate impact sectors. Specifically, in order to determine energy intensity, the Intesa Sanpaolo Group identified the following high climate impact sectors as material for its scope of operations: the Construction sector, the Wholesale and Retail Trade sector and the Real Estate Activities sector.
Figures are shown in million euro and refer to the Group as a whole.

Table – Connectivity of revenue-based energy intensity with financial reporting information

(millions of euro)

	2025	2024
Net revenue from activities in high climate impact sectors	106	65
Net revenue from activities other than in high climate impact sectors	45,670	51,893
Net revenue	45,776	51,958

In 2025, net revenue arising from activities in high climate impact sectors increased by 63%, from 65 million euro in 2024 to 106 million euro in 2025. This increase is mainly due to a Group company which recognised higher operating income as a result of the rise in the consideration received from customers for the sale of goods.
At the same date, net revenue arising from activities in sectors other than high climate impact sectors amounted to 45,670 million euro, down compared to the previous year due to interest rate trends. Overall, total net revenue recognised in the consolidated financial statements amounted to 45,776 million euro.

Greenhouse gas emissions metrics

As part of its strategy to combat climate change in its own operations and at portfolio level, the Group measures and reports the effectiveness of its climate change mitigation and adaptation policies using the metrics below, which contribute to the achievement of its greenhouse gas emission reduction targets.

The Intesa Sanpaolo Group's greenhouse gas emissions are reported in accordance with the GHG Protocol Corporate Standard (Greenhouse Gas Protocol) and relate to:

- Scope 1 emissions, which include direct emissions from sources owned or controlled by the undertaking including, inter alia, the emissions generated by heating buildings and the fuel used for its car fleet;
- Scope 2 emissions, which include indirect greenhouse gas emissions from purchased or acquired energy, such as electricity, steam, heat or cooling, consumed by the undertaking but generated by third parties;
- Scope 3 indirect emissions (classified in the categories from 1 to 15 which are deemed significant; for additional information on these categories, reference should be made to the next paragraph on "Gross GHG emissions – Scope 1, 2, 3 and total"), which include all the other indirect emissions in the value chain that are a consequence of the activities of the undertaking, but which do not fall under Scope 1 and Scope 2 emissions, such as, for example, those generated by investments ("financed emissions"), employee commuting, transport of valuables and management of waste generated.

Gross GHG emissions – Scope 1, 2, 3 and total

This section covers, in particular, the metrics applicable to greenhouse gas (GHG) emissions which apply to both own operations and the upstream and downstream value chain.

To this end, the table below shows GHG emissions in tonnes of CO_2 equivalent (tCO_{2eq}) as a total and by scope, i.e., Scope 1, Scope 2 (location-based[161] and market-based[162]) and Scope 3. Specifically, for Scope 3, it shows the significant categories for the Group with respect to the 15 categories envisaged by the GHG Protocol Corporate Standard. For information on the reference boundary at 31 December 2025, reference should be made to the "Basis for preparation and methodology" section of the ESRS 2 – General disclosures chapter.

[159] The information relating to net revenue provided in this paragraph is reflected in the notes to the consolidated financial statements, Part C – Information on the income statement.
[160] The Group has adopted the definition of "net revenue" as set out in the Directive on the annual accounts and consolidated accounts of banks and other financial institutions. Specifically, it considered the following income statement items: 262:10,40,70,80,90,100,110, 230 (positive components only), 250 (positive components only), 280 (positive components only).
[161] The location-based method quantifies GHG emissions associated based on the average emission factors of electricity generation for locations defined within local, subnational or national boundaries ("national mix" factors).
[162] The market-based method considers the contribution of specific emission factors linked to the contractual electricity purchasing arrangements adopted by the organisation for its electricity consumption ("residual mix" factors). When electricity is sourced from certified renewable sources, a zero emission factor is assigned for Scope 2, as these sources do not generate direct emissions.

Table – GHG emissions (in tCO2eq)[163]

	2025	2024
Scope 1 GHG emissions		
Gross Scope 1 greenhouse gas emissions	43,592	45,280
Percentage of Scope 1 GHG emissions from regulated emission trading schemes	-	-
Scope 2 GHG emissions		
Gross location-based Scope 2 greenhouse gas emissions	97,049	115,789
Gross market-based Scope 2 greenhouse gas emissions	14,891	16,656
Scope 3 GHG emissions		
Gross Scope 3 greenhouse gas emissions	40.343.179	59,892,681
Percentage of GHG Scope 3 calculated using primary data	28%	26.4%
1. Purchased goods and services	9,868	7,179
2. Capital goods	7,257	6,432
3. Fuel and energy-related Activities	23,615	25,645
4. Upstream transportation and distribution	16,726	13,161
5. Waste generated in operations	602	254
6. Business traveling	6,330	5,959
7. Employee commuting	35,396	33,441
8. Upstream leased assets	1,022	2,419
9. Downstream transportation	-	-
10. Processing of sold products	-	-
11. Use of sold products	256	239
12. End-of-life treatment of sold products	-	-
13. Downstream leased assets	2,708	3,489
14. Franchises	-	-
15. Investments	40.239.399	59,794,462
Total GHG emissions		
Total GHG emissions (location- based)	40.483.820	60,053,750
Total GHG emissions (market- based)	40.401.662	59,954,617

(metric ton of CO2 eq (t CO_2eq))

	2025	2024
Gross Scope 1 greenhouse gas emission	43,592	45,280
Gross location-based Scope 2 greenhouse gas emission	97,049	115,789
Gross market-based Scope 2 greenhouse gas emission	14,891	16,656
Gross Scope 3 greenhouse gas emissions	40.343.179	59,892,681

(metric ton of CO2 eq (tCO_2eq))

	Italy		Foreign	
	2025	2024	2025	2024
Total GHG Emission (location-based)	24,190,434	35,128,121	16.293.386	24,925,629

In 2025, the Group's commitment to decarbonisation continued in line with the reduction target set for 2030. In line with the targets of the Own Emissions Plan, Scope 1 and 2 market-based greenhouse gas emissions decreased by 5.6%, thanks to a reduction in electricity and thermal energy consumption. This was mainly due to energy efficiency measures implemented in the Group's buildings, as well as an increase in the procurement of electricity from renewable sources and the electrification of the company car fleet. This is particularly evident from the reduction in Scope 2 location-based emissions, which have fallen by 12.7%.

[163] This table does not include the columns pertaining to the reference targets. In this respect, reference should be made to the "Greenhouse gas emission reduction targets" and the "Climate change mitigation and adaptation targets in own operations" sections.

Overall, the reduction in Scope 1 and 2 emissions is consistent with the SBTi-validated target of a 53% reduction by 2030 compared to the 2019 baseline. This confirms the effectiveness of the Group's initiatives, including increasing the proportion of renewable electricity purchased. With regard to Scope 3 emissions, several categories show a different trend in 2025 compared to the previous year. In particular, categories 1 (purchased goods and services) and 4 (upstream transportation and distribution) increased by 37.5% and 27.1%, respectively, mainly as a result of changes in the reporting boundary and/or the methodologies applied, as described in detail in the methodological section.
Conversely, categories 8 (upstream leased assets) and 13 (downstream leased assets) decreased considerably, down by 57.8% and 22.4%, respectively. This reduction is mainly attributable to the decrease in leased assets and the change in the adopted emissions calculation methodology, as described in detail in the methodological section.
In addition, the increase in category 5 (waste generated in operations), which was up by 137%, is mainly due to the update of the emission factors, against broadly constant input data.
Finally, there was a decrease in financed emissions compared to December 2024, due to several factors, including a substantial improvement in the estimation data available and the update of the reference year of the metric.

With respect to financed emissions, it is noted that exposures under Scope 3 category 15 (investments) include exposures to Non-Financial Corporations (NFC), exposures to Residential Real Estate (RRE) within the Italian boundary – for which the Group has set an emissions reduction target to 2030 described in the "Greenhouse gas emission reduction targets" section – and those of Všeobecná Ùverová Banka (VUB) in the same segment.
Exposures to NFC counterparties are estimated using both counterparty information and data on average emissions intensity by sector, consistently with the Pillar 3 disclosure.
With respect to the Residential Real Estate (RRE) sector, estimated emissions total approximately 2 million tCO_2, in line with the balance at 31 December 2024, including the share of VUB's RRE exposures[164].
Emissions relating to exposures to the real estate sector, in particular the Commercial Real Estate (CRE) segment, are not significant in amount and are largely included in the category of exposures to NFC.
In addition to the above, it is noted that category 15 - Scope 3 emissions refer to the Group's scope of prudential consolidation and includes financial assets in associates, subsidiaries and joint ventures which are not consolidated.

In preparing the disclosure for Scope 1, 2 and 3 (excluding category 15), the Intesa Sanpaolo Group calculated the emission factors on a country-by-country basis in order to obtain a picture as realistic as possible with respect to the actual emissions generated directly by the Group, in particular for Scope 1 and 2. Each emission factor, multiplied by the respective consumption, generates CO_2eq emissions.
Furthermore, the Group decided to disaggregate and report GHG emissions by country/geographical location (Italy/abroad), disaggregating total emissions and considering Scope 2 emissions calculated in accordance with the location-based method.

The reporting methodologies envisaged by the Italian Banking Association (ABI) Guidelines are usually applied[165].

With respect to electricity:
- in terms of "residual mix" (to be used when calculating market-based emissions), the Association of Issuing Bodies (AIB) is the source of emission factors. Where this is not available, the "national mix" is considered;
- in terms of "national mix" (to be used when calculating location based emissions):
  - for Italy, the Italian Institute for Environmental Protection and Research (ISPRA, Istituto Superiore per la Protezione e la Ricerca Ambientale) is the source of emission factors;
  - for the rest of the countries, excluding the US, the International Energy Agency (IEA) is the source of emission factors;
  - for the US, the Environmental Protection Agency (EPA) is the source of emission factors.

With respect to fossil fuel (in particular, natural gas, gas oil and LPG):
- for Italy, ISPRA is the source of emission factors;
- for the rest of the countries, excluding the US, the emission factors are calculated using the data collected by the UNFCCC – United Nations Framework Convention on Climate Change. Where these are not available, the average value of the countries considered is assigned;
- for the US, the EPA is the source of emission factors.

With respect to district heating:
- for Italy, where available, the emission factors reported by the various suppliers were considered, collecting the necessary evidence;
- for the US, the EPA is the source of emission factors;
- for the UK, the Government's Department for Energy Security and Net Zero (DESNZ) is the source of emission factors;
- for the rest of the countries, an average value between that of ISPRA, EPA and DESNZ was considered.

With respect to the car fleet, reference was made to ISPRA.

Finally, with respect to the Global Warning Potential (GWP) values, the Intergovernmental Panel on Climate Change (IPCC) (Assessment Report) was the reference source.

Scope 3 data collection and calculation methodologies for the significant categories from 1 to 14 included in Table 6 – GHG emissions (in tCO_2eq) are described below. Specifically, with respect to the Group's "Consolidated Sustainability Statement

[164] The emissions linked to the Parent Company's RRE exposures are derived from management accounts, while those of VUB are based on regulatory data.
[165] Reference should be made to the "Support document for sustainability reporting under the European Sustainability Reporting Standard (ESRS) in the environmental area - Focus on disclosure requirements E1-5, E1-6" ABI Lab, 2025.

2024", Scope 3 also includes the emissions arising from the use of toner and water, allocated to category 1 (purchased goods and services).

- Scope 3 - category 1 Purchases of goods and services include:
  - the paper used in office activities. The processes considered are those from production to delivery to the Group. Emissions from production are an average sector scenario, derived from the UK government's greenhouse gas reporting conversion factors. For all residual processes included in the system boundaries, GHG emission factors have been sourced from Ecoinvent 3.11, compared to Ecoinvent 3.5 used in 2024;
  - the use of cloud-based data centre services. Scope 1, 2, 3 annual emissions reported by suppliers, in relation to the services offered to the Group, are considered;
  - toner used in the Group's printing operations. Processes from production to delivery to the Bank are considered. Greenhouse gas emission factors were sourced from Ecoinvent 3.11;
  - water consumption in the Group's operations. The final treatment and purification stages are not considered in the emissions calculation, which is carried out by applying an emission factor derived from the UK Government's Department for Energy Security and Net Zero (DESNZ) dataset.
- Scope 3 – category 2. Capital goods include the most significant IT and electronic equipment purchased by the Group during the reporting year: PCs and laptops, monitors, printers, smartphones, tablets, ATMs, etc.. The system boundaries include cradle-to-gate operations, i.e. the entire product supply chain. In accordance with the GHG Scope 3 Emission Standard (WBCSD/WRI) protocol, emissions generated by the production of capital goods are entirely recognised when purchased, regardless of the lifetime of the product. Emission factors were sourced, where possible, from publicly available primary data, such as Life Cycle Assessment (LCA) reports, Environmental Product Declarations (EPDs), manufacturers' sustainability reports or, alternatively, for the remaining products, emission factors from the Ecoinvent 3.11 datasets (compared to Ecoinvent 3.5 used in 2024) with satisfactory representativeness were applied. Transport distances from production countries, mainly China and other East Asian countries, were considered. ATM machines were modelled based on the percentages of the materials they are composed of and the use of the corresponding Ecoinvent datasets. The IPCC 2021 equivalence factors have been applied, compared to the IPCC 2013 factors used in 2024.
- Scope 3 – category 3. The energy vector indicator of the Group's energy consumption includes emissions related to the fuel supply chain, construction and operation of infrastructure, distribution and transmission losses.
- In order to characterise impacts, where possible, regional data were used or average European/world-wide scenarios. With respect to electricity consumption, country-specific "residual mixes" were used, where available, or "national mixes". Accordingly, in 2025, emission factors provided by various sources were used, namely the International Energy Agency (IEA) for average mixes, the Association of Issuing Bodies (AIB) for residual mixes and the Ecoinvent 3.11 dataset, except for the national energy mix sourced from Ecoinvent 3.12 (Ecoinvent 3.5 was used in 2024). The IPCC 2021 equivalence factors have been applied, compared to the IPCC 2013 factors used in 2024.
- Scope 3 – category 4. With respect to upstream transport and distribution, the emissions generated by the transport of money to replenish ATMs by third-party companies on behalf of the Group were considered.
- Unlike in 2024, when van mileage had been statistically estimated, a representative sample of refuelling events involving different types of vehicles and related distances travelled was used in 2025 to better model the system. Emissions cover all stages of the life cycle: fuel supply chain, combustion emissions and vehicle manufacture. Ecoinvent 3.11 emission factors were used, compared to the Ecoinvent 3.5 version used in 2024.
- Scope 3 – category 5. Waste-related emissions include the end-of-life treatment of special waste generated for the Group's operations. The stages considered include the transport of waste to treatment facilities and the end-of-life treatment. Information on the effective end-of-life was sourced from the Waste Identification Forms completed in accordance with the applicable Italian legislation and from specific questionnaires provided for foreign companies. With respect to the remaining waste streams sent to landfill, incineration or other treatment processes, Ecoinvent 3.11 emission factors were used, compared to Ecoinvent 3.5 used in 2024. The IPCC 2021 equivalence factors have been applied, compared to the IPCC 2013 factors used in 2024.
- Scope 3 – category 6. Emissions related to business travel include journeys made by aircraft, trains and personal cars by employees. The methodology used to calculate emissions, in accordance with the ABI Guidelines, is based on data obtained by applying appropriate ratios derived from the ICAO's Carbon Emission Calculator, the EcoPassenger application and ISPRA's National Information System.
- Scope 3 – category 7. Emissions due to employees' commuting are calculated, for Italy, using the data obtained from specific questionnaires sent to employees that operate in cities covered by Commuting Plans and subsequently remeasured against the total number of Group employees in Italy. Using the primary data, specific emission factors are applied, as extracted from the DESNZ database. Public transport and shuttles, motorbikes, private cars and trains were considered.
- Scope 3 – category 8. The Intesa Sanpaolo Group has buildings leased by third parties which are used as guest houses. For this type of buildings, the Group adopted a more specific methodology during 2025, in line with the actual intended use of the property and using specific factors correlated to the residential sector. In particular, the methodology applied to calculate emissions in 2025 uses CO2eq/m2 emissions intensity factors specific to properties intended for residential use, sourced from the Pathway of the Carbon Risk Real Estate Monitor (CRREM[166], with reference to multi-family residential buildings. Unlike the methodology applied in 2025, in 2024 the Group used an approximation of unit emissions for these types of asset, aligning them with those of assets under operational control.
- Scope 3 – category 11. With respect to the banking/financial services/products used by customers, the main transactions were considered, broken down by channel used (internet banking/mobile banking), type (payment/transfer) for Group banks. The following information was considered for assessment purposes: average time and average electricity consumption for each operation broken down by type of device used. The operating time was estimated, while the average electricity consumption for mobile devices and PCs was based on sector studies. The emission factors for electricity consumption are those used for Scope 2 calculation purposes.

[166] The Carbon Risk Real Estate Monitor (CRREM) is a European research initiative (Horizon 2020) which acts as a global standard for assessing climate risk in real estate.

- Scope 3 – category 13. The Intesa Sanpaolo Group owns buildings that do not fall within the Group's core business (properties classified under IAS 40) over which it does not have operational control, as adequately reported. The methodology applied to category 8 has changed compared to 2024. Further details can be found in category 8. In 2025, emissions intensity factors are sourced from the Pathway of the Carbon Risk Real Estate Monitor (CRREM) foundation, with reference, in this case, to "office" buildings.

Prudently, all properties that in 2025 were not classified under IFRS 5, IAS 2 or IAS 40 and were not leased without consumption have been considered when reporting the related GHG emissions.

Overall, the percentage of GHG Scope 3 emissions calculated using primary data, sourced from suppliers or other partners along the value chain, was 28% for all significant categories reported.

Based also on "Table 6 – GHG emissions (in t CO_2eq)", it is noted that Scope 3 emissions related to the following categories were excluded:

- Scope 3 – category 9 "Downstream transportation", as the Intesa Sanpaolo Group does not produce goods that require transport and distribution;
- Scope 3 – category 10 "Processing of sold products", as there are no intermediate products that require further processing, transformation or inclusion in another product before use;
- Scope 3 – category 12 "End-of-life treatment of sold products", as the Intesa Sanpaolo Group does not produce goods that require end-of-life treatment;
- Scope 3 – category 14 "Franchises", as the Group does not grant third party companies licences to sell or distribute its services.

Furthermore, in line with the previous year, at 31 December 2025, the Group has biogenic emissions of CO_2 from the combustion or bio-degradation of biomass equal to 0 for Scope 1 areas. With respect to Scope 2 and 3, no national methodologies are in place for the timely identification of such indirect emissions.

In 2025, the percentage of contractual instruments used by the Group to purchase and sell energy with respect to GHG Scope 2 emissions is 83.3% (81.3% in 2024); that of bundled contractual instruments is 79.7% (76.5% in 2024), while the percentage of unbundled instruments is 3.6% (4.8% in 2024).

The Intesa Sanpaolo Group focuses, in particular, on reporting the electricity purchased from renewable sources. At present, the contractual instruments used to certify the use of this type of energy are as follows:

- Guarantee of Origin (GO) certificates;
- specific "green" supplies identified in supply contracts;
- Power Purchase Agreements (PPA);
- International Renewable Energy Certificates (i-REC).

At present, the bundled contractual instruments that certify the use of electricity from renewable sources are GO (Guarantee of Origin) certificates, specific "green" supplies identified within supply contracts and PPA, while the unbundled contractual instruments are only GO (Guarantee of Origin) certificates and i-REC.

Finally, there are no changes to report about the effects of any significant events and changes in the circumstances (affecting GHG emissions) that occurred between the reporting date of this document and the reporting dates of the entities included in the Group's value chain.

Financed emissions

As part of Scope 3 - category 15, in line with the methodology developed by the Partnership for Carbon Accounting Financials (PCAF), the following priority of emission data sources has been established:

- reported emissions: collected directly by the counterparty or by infoproviders (they account for approximately 29% of the financed emissions reported at 31 December 2025);
- physical activity-based emissions: estimation based on the production data of the counterparty multiplied by specific emission factors;
- economic activity-based emissions: sectoral proxy calculated based on sectoral emission intensity, and country/geographical area and counterparty size if the estimation sample is numerically sufficient.

With respect to emissions based on approximations referred to in the last point, at counterparty level, the emission figure is obtained by multiplying the counterparty's revenue by specific emission factors derived from a clustering model. Financed emissions are calculated by considering the exposure (loans and advances, debt securities, and equity investments) to the counterparties in relation to the total liabilities (financial liabilities and equity) of the counterparties. Specifically, the reference period for emissions figures is updated to 2023. Consequently, the delay between the Group's exposure data and emissions data is two years.

Finally, there are no significant changes to report about the effects of any significant events and changes in the circumstances (affecting GHG emissions) that occurred between the reporting date of this document and the reporting dates of the entities included in the Group's value chain.

GHG emission intensity[167]

This section covers the intensity of GHG emissions, i.e. total GHG emissions in metric tonnes of CO_2eq compared to net revenue.

The Group calculates this intensity using the following formula: total GHG tCO_2eq emissions/net revenue (euro).

In particular, the net revenue used for calculation purposes amounts to 39,067 million (44,798 million in 2024) in relation to total revenue as per the financial statements which, in 2025, amounts to 45,776 million (51,958 million in 2024), down mainly due to the fall in interest rates which affected overall revenue trends.

The table below provides useful information for understanding the above denominator and, in particular, the reconciliation of the net revenue used to calculate GHG emission intensity with net revenue as per the financial statements. Figures are expressed in million euro.

(millions of euro)

	2025	2024
Net revenue used to calculate GHG intensity	39,067	44,798
Net revenue other than used to calculate GHG intensity	6,709	7,160
Net revenue	45,776	51,958

On the other hand, the numerator of GHG emission intensity is equal to the total emissions, indicated above.
Based on the above, the intensity of GHG emissions is as follows:

- 0.001034 tCO_2eq/euro under the market–based method (0.001338 tCO_2eq/euro in 2024);
- 0.001036 tCO_2eq/euro under the location–based method (0.001341 tCO_2eq/euro in 2024);

The Group has adopted the definition of “net revenue” as set out in the Directive on the annual accounts and consolidated accounts of banks and other financial institutions. Specifically, it considered the following income statement items: 262: 10, 40, 70, 80, 90, 100, 110, 230 (positive components only), 250 (positive components only), 280 (positive components only). In line with the prudential scope, to which the Scope 3 - category 15 emissions represented by the numerator refer, it is noted that the denominator does not include items 160 and 170 which pertain to the “revenue” of the insurance segment. Furthermore, even considering only the revenue items consistent with category 15, which is the most significant addend in the numerator of GHG emission intensity, the emissions intensity value would not be material.

Internal carbon pricing

Internal Carbon Pricing (ICP) is a scheme through which undertakings assign a monetary value to GHG emissions and integrate it (the “price”) into investment decisions and business operations. Specifically, an Internal Carbon Pricing scheme uses market mechanisms and transfers the cost of GHG emissions to the issuer by assigning a price on carbon dioxide emissions.
The adoption of an internal carbon pricing scheme by the Group is a strategic decision aimed at managing climate-related business risks and promoting a transition to a zero-emission business model.
The scheme used by the Group to set its internal carbon price (the “ICP scheme”), is the shadow price and refers to Green Banking Procurement, in particular purchases of IT equipment. Indeed, the ICP is applied to all procurement activities that go through information and communication technologies (ICT) purchases, which are carried out centrally, in line with the Group's procurement policy. In residual cases (e.g. specific geographical areas) for specific purchases that do not go through centralised procurement, the ICP does not apply.
In this respect, the GHG emissions generated by the electricity consumed through IT equipment are subject to internal carbon pricing, based on product certifications (e.g. Energy Star) and/or supplier declarations. The resulting cost is added to the purchase and usage cost (energy), contributing to the lifecycle cost of the machines. This assessment supports Intesa Sanpaolo Group in selecting the most convenient supply from a lifecycle perspective. The main categories of tools subject to ICP with respect to the Group-wide scope, include laptops 78%, mini-desktops 15%, cash in-cash out 99%, ATMs/MTAs 41%, monitors 86%, printers 15% and scanners 89%[168].

Pricing is applicable for the environmental impact analysis via a technical assessment of the equipment and an assessment phase of energy consumption and environmental characteristics. In 2019, the internal carbon price was set at €57/tCO_2eq, as indicated by the Life Cycle Impact Assessment Environmental Prices method (LCIA Environmental Prices) in its 2018 EU28 version, which calculates the carbon footprint over the entire life cycle of the product in line with market practice. In 2023, the Group ICP was set at €100/tCO_2eq, up considerably on the €62/tonCO_2eq indicated by the NGFS, in line with the call to increase domestic prices in view of the 1.5°C target and within the range of €50-160/tonCO_2eq as proposed by the LCIA Environmental Prices. Pricing is applicable for the environmental impact analysis via a technical assessment of the equipment and an assessment phase of energy consumption and environmental characteristics.
Furthermore, the ICP is calculated based on a third-party study.
ICP emissions include Scope 2 location-based emissions related to electricity consumption (emissions linked to the use of IT devices in scope), equal to 3,000 tCO2eq in 2025 (3,487 tCO_2eq in 2024), while the share percentage of GHG Scope 2 emissions covered by the ICP scheme in relation to total GHG Scope 2 location-based emissions is equal to 3.09% (3.02% in 2024).

[167] The information relating to net revenue reported in this paragraph is reflected in the notes to the consolidated financial statements, Part C – Information on the Consolidated income statement.
[168] These percentages within the Italian boundary alone are as follows: laptops 87%, mini-desktops 100%, cash in-cash out 100%, ATMs/MTAs 100%, monitors 100%, printers 17% and scanners 100%.

Table – Application of shadow price

	Volume at stake (tCO_2eq)	Prices applied (€/tCO_2eq)	GHG Scope 1 [%]	GHG Scope 2 [%]	GHG Scope 3 [%]	Perimeter description
CapEx shadow price	3,000	100		3.09%		
Research and Development (R&D) investment shadow price						
Internal carbon fee or fund						
Carbon prices for impairment testing						

Anticipated financial effects from material physical and transition risks and potential climate-related opportunities

This section covers the anticipated financial effects from material physical risks. Specifically, the Group decided to disclose only the information already available as part of Pillar 3 reporting.

The following table, which complies with Pillar 3 disclosure, provides information on exposures in the banking book, including loans and advances, debt securities and equity instruments not held for trading and not held for sale, towards non-financial companies, on loans collateralised by immovable property and on repossessed real estate collateral, exposed to chronic and acute climate-related risks, with a breakdown by sector of economic activity (NACE classification) and by geography of location of the activity of the counterparty or of the collateral, for those sectors and geographical areas subject to climate change acute and chronic events.

Sensitive exposures are shown separately:

- for the impact from chronic events only, including risks relating to gradual changes in weather and climate and having a possible impact on economic output and productivity;
- for the impact from acute events only, including risks that may cause sudden damage to properties, disruption of supply chains, and depreciation of assets;
- for both the impacts described above.

The assets exposed to significant physical risk are located in Italy and in the areas where the Group's main European investees operate (i.e. Croatia, Romania, Slovakia, Slovenia, Serbia, Hungary, Bosnia and Albania).
For the identification of exposures subject to climate change physical risk, the Intesa Sanpaolo Group has used an external provider that has provided mapping and measurement of the risks at individual property level (understood as a collateral asset or registered office/production site where available, for exposures to Non Financial Corporations).
The Group has prudently chosen to use the "Current Policies" scenario provided by the NGFS (equivalent to a Representative Concentration Pathways (RCP) 6.0 scenario[169]) as the baseline scenario, as it assumes that current policies are not subject to any changes by regulators, resulting in very high physical risks.

The physical risk events considered differ according to the business sectors of the companies and the loans collateralised by immovable property based on the specific characteristics of each type of exposure.

The following table shows the exposures collateralised by commercial and residential immovable property and repossessed real estate collateral, including information on the energy efficiency level of the collateral measured in terms of kWh/m^2 energy consumption and label of the energy performance certificate (EPC).

The presentation is broken down according to the geographical area in which the collateralised property is located (EU and non-EU area). Where the energy efficiency level in terms of kWh/m² is an estimated figure, this is stated in the row concerned. The estimation is only calculated for the types of immovable property provided as collateral subject to mandatory energy performance certificate (e.g. residential properties, buildings used for production).

[169] Climate change pathways based on different concentrations of greenhouse gases. The RCP 6.0 scenario is the pathway leading to global temperatures of around +3°C by 2080.

ESRS E4 – Biodiversity and ecosystems

Resilience Analysis

In 2025, the governance area of the Chief Risk Officer (CRO) carried out a risk assessment of the natural capital. The "resilience analysis" was used to assess the impacts on biodiversity and the dependencies on ecosystem services of the Group's corporate customer portfolio.

These analyses were carried out considering exposures within each sector in the loan portfolios of the IMI Corporate & Investment Banking (IMI CIB) and Banca dei Territori divisions.

In this area, characterized by the absence of a specific standard for climate macro-scenarios, which is currently being developed by the Network for Greening the Financial System (NGFS), the analysis focused on actual impacts and dependencies, drawing from updated sector-specific estimates and maps on the state of ecosystems available at the end of 2024.

Expanding its sights, the 2025 materiality assessment relating to the resilience analysis introduced medium-to-long-term considerations (up to 2050), using scenario-based maps based on the Mean Species Abundance (MSA) and forward-looking Water Stress metrics. This enabled forward-looking assessments to be incorporated into the analysis, enriching the understanding of local area risks for corporate customers.

Finally, the analysis was based exclusively on information in the public domain, such as sector-specific estimates and area maps, without the direct engagement of the counterparties or local experts.

For each dimension considered, various risk levels were set and the Group's exposure measured at each level, in terms of gross carrying value. The resilience assessment looked at (i) the single dimension (impact and dependency) of risk (both transaction and physical risk) and (ii) the aggregate level.

In particular, the analysis covered impact indicators (which can be categorised as "pressure" factors on biodiversity) affecting the transaction risk of corporate customers, and indicators of natural capital dependency (which can be categorised as risk factors tied to the degradation of ecosystem services) affecting the physical risk of corporate customers.

The Group adopted an approach based on best practices and in line with the guidelines provided by the Taskforce on Nature-related Financial Disclosures (TNFD), as well as the "Locate, Evaluate, Assess and Prepare" (LEAP) process recommended by the TNFD. In particular, the loan portfolio's exposure to vulnerability in relation to environmental risks was assessed. The different phases of the LEAP process are described below:

- The "Locate" step involved locating head offices and local production facilities to lay the groundwork for analysing interactions between industries and surrounding nature (direct operations). Access to external information sources for mapping ecosystems was instead the starting point for identifying ecosystem services and biodiversity pressures.
- The "Evaluate" step involved the specific impact/dependency scoring of each sector using sector-level materiality (top-down approach). Impacts and dependencies (for direct operations) were assessed using a bottom-up approach, taking into account the relevance of the state of specific natural resources for the assessment area and the materiality of the sector-specific dependency or impact. The relevance and materiality of the direct operations of counterparties were then adjusted using input-output matrices for the analysis of risk in the upstream value chain. For each company (at the local unit level), the different sector-specific and local area scores were estimated and normalised, so as to enable comparison between sectors and geographical areas.
- In the "Assess" step, the environmental risk exposure of the loan portfolio was quantified by combining the sector-specific and local area vulnerability scores and taking into account the associated exposure of each counterparty.
- In the "Prepare" step, the outcome of the analyses were used as part of internal reporting to monitor "at-risk" exposures.

This process enabled a top-down, sector-based view of materiality and a bottom-up view of local area materiality to be integrated into the exercise. The resulting assessment outcomes are shown in terms of expected qualitative impacts at aggregate level, considering the median of the single impact and dependency indicators in the perimeter, classified as: very low, low, medium, high and very high.

Overall, the analysis found that a limited portion of the loan portfolio was exposed to medium-to-high sector-specific and local area risks, by quantifying the environmental risk exposure of the portfolio and combining the sector-specific and local area vulnerability scores.

Finally, a series of follow-up actions were identified to adapt the strategy to the outcomes of the resilience analysis in relation to changes in biodiversity.

These actions aim to mitigate risks, capitalize on opportunities and pave the way for the long-term sustainability of the Group in the face of environmental challenges. The actions include, for example, the development of the risk assessment framework to incorporate forward-looking metrics; the definition of rules on biodiversity (for further information on this topic, reference should be made to the paragraph "Policies related to biodiversity and ecosystems"); the constant, pro-active monitoring of the relevant statutory framework; participation in climate change working groups and initiatives; and risk assessments linked to ESG matters in the lending process (including creditworthiness assessments and ESG sector mapping).

Policies, targets and actions at portfolio level

Policies related to biodiversity and ecosystems

Intesa Sanpaolo Group acknowledges the risks arising from biodiversity loss and pollution, the benefits that can come from preserving and restoring nature, and the key role that financial institutions can play in this regard. Accordingly, the "Group Code of Ethics"[170] takes biodiversity and nature conservation into consideration in terms of the direct and indirect environmental impacts that Group operations can generate.

Within this framework, in 2024, the Group prepared new "Rules on Biodiversity and Nature" (the "Rules"), which were adopted in January 2025. The Rules outline the approach adopted by the Intesa Sanpaolo Group to biodiversity and nature-related issues with respect to the portfolio in relation to loans and wealth management & protection as well as direct impacts.

Through these Rules the Group governs its own operations in relation to risks affecting biodiversity and ecosystems by setting out specific limitation and exclusion criteria, fine-tuning risk assessment procedures and encouraging sustainable loans aimed at promoting the conservation or improvement of biodiversity or ecosystem services, also with the welfare of local communities in mind.

Applicable to all the Group, the Rules set out exclusion, heightened assessment and risk monitoring criteria for lending to new projects and counterparties. The exclusion criteria identify the new projects and counterparties that the Group declines to finance, based on their location, their economic sector (including intensive farming and sectors that have an impact in terms of deforestation and the indiscriminate use of marine resources), and the classification of certain types of projects as "controversial" due to their impacts or dependencies on aspects of biodiversity and nature. In particular, lending to new projects and counterparties is considered at risk where they are located in countries that have not ratified the main conventions on biodiversity and nature or in protected geographical areas under the main international conventions.

The Rules are part of the general framework of Group ESG risk management, risk appetite and relevant strategic guidelines. An overview of the Rules is available to the public for all stakeholders on the Group's website. Responsibility for the updating of the rules is tasked to the governance areas of the CSO and CRO to ensure their alignment with changing regulations, standards and national and international best practices on the matter.

In line with the Group's strategic guidelines and ESG risk governance framework, the Group focuses on its own operations, in particular, on new projects in sectors and/or geographical areas of high exposure to ESG risks, especially in terms of biodiversity and nature. These are subject to specific controls for risk assessment purposes through an "ESG & Reputational Risk Clearing" process. Accordingly, the "Rules on Biodiversity and Nature" refer to a series of international biodiversity conservation and environmental protection conventions, including the Convention on Biological Diversity (CBD), the Cartagena Protocol and the Rotterdam Convention, which together provide a regulatory framework for promoting sustainable practices, guaranteeing biosafety and restricting the use of hazardous chemicals. The conventions additionally support the traceability of products, components and raw materials throughout the value chain, improving the sustainability of production chains in the countries that have implemented the conventions.
The implementation of the Equator Principles is also relevant here, providing a framework that contemplates the protection of biodiversity and the sustainable management of natural resources. For more details, reference should be made to the section "ESG Risk Governance Process" in chapter ESRS E1 – Climate change.

For further details on the impacts, risks and opportunities (IROs) covered by the policies relating to biodiversity and ecosystems, reference should be made to the IRO table set out in the paragraph "Materiality assessment" in chapter ESRS 2 – General disclosures.

In addition, the Group sets criteria to support undertakings working in practice towards, or wishing to pursue, ecological transition, also as regards biodiversity topics. In this regard, the Group promotes and always permits loans that are European Union Taxonomy-aligned and/or sustainable from an "environmental" point of view, in accordance with internal products classification rules and sustainable lending transactions, in particular those relating to biodiversity and ecosystem conservation and restoration objectives.

With specific reference to asset management, Fideuram Intesa Sanpaolo Private Banking, Fideuram Asset Management (Ireland) and Eurizon Capital SGR all take into consideration the principal adverse impacts (PAI) of their investment decisions on sustainability factors and regularly disclose the outcomes in the relative reports.

Eurizon had adopted its own "Commitment Policy" in which the company has outlined an internal screening framework based on the principles set out in the Kunming-Montreal "Global Biodiversity Framework" (GBF). Named Eurizon NatureWatch, it is designed to identify issuers that can give rise to negative impacts on biodiversity.

Fideuram Intesa Sanpaolo Private Banking and Fideuram Asset Management (Ireland) have similarly published commitment and sustainability policies. Specifically, the commitment policies identify the mitigation of biodiversity loss as one of the four "macro-themes" cutting across all industry sectors, namely: i) reduction of GHG emissions; ii) mitigation of biodiversity loss; iii) respect for human rights and combating the manufacture of non-conventional weapons; and iv) good corporate governance practices.
For further information on the above-mentioned commitment policies, reference should made to the section "Sustainability-conscious investment products" in the ESRS S4 – Consumers and end-users chapter.

[170] For further information on the Code of Ethics, reference should be made the section on "Policies, targets and actions related to business conduct" in chapter ESRS G1 – Business Conduct.

Targets related to biodiversity and ecosystems

In relation to environmental risks, including biodiversity loss and ecosystem degradation, the aim of the Group is to incorporate controls into the risk management framework and related decision-making processes. Nevertheless, it should be stressed that the materiality assessment performed, for the standard in question, on the loan portfolio is based on current models and metrics that are still under development, in terms of their methods and standardisation, and factored in a medium/long-term time horizon. The development of international methodological reference standards and the availability of more detailed, reliable data will enable materiality assessments to be refined and specific additional controls to be introduced. As mentioned in the section "Policies related to biodiversity and ecosystems", the Group has adopted Rules on Biodiversity and Nature to govern these matters. Finally, as reported below, the Group has initiatives and actions in place in support of biodiversity and the protection of ecosystems, although no specific quantitative targets have been set.

Actions related to biodiversity and ecosystems

In a context where public, verifiable quantitative data for measuring environmental risk is still under development, the Group has nevertheless launched various initiatives to support businesses in their transition to a green economy, in line with the commitments set out in the Rules. These initiatives include the granting of medium-to-long-term financing, such as the "S-Loan Green Projects" loan, and loans backed by specific guarantees, such as the "SACE Growth" guarantee, which can be used to finance projects and initiatives concerning biodiversity and ecosystems.

Furthermore, as part of bond issues, Intesa Sanpaolo has developed a "Green, Social and Sustainability Bond Framework" which governs bond issuance to finance eligible loans under the environmental categories of the framework, including projects for the management of living natural resources, land and biodiversity.

The ESG score used by Intesa Sanpaolo Group to assess the ESG profiles of corporate customers also considers components concerning biodiversity and natural resources. The scoring model takes into account information sourced from external providers on environmental certifications (for example, ISO 14001, EMAS, FSC-Forest Stewardship Council) and, for counterparties assessed by the main international info-providers, information on initiatives pursued for the restoration, rehabilitation and clean-up of local areas, and an assessment of the impacts of the undertaking's own operations on biodiversity and water resources. The resulting ESG score is incorporated into group processes to give an ESG perspective in the application of the credit framework and credit strategies, showing how the biodiversity considerations making up the score are included in frameworks and strategies relevant to the Group.

Following its participation in the Nature Action 100 initiative in 2023, which is aimed at tackling biodiversity loss and deforestation, Eurizon Capital SGR strengthened its stewardship activities by defining the proprietary Eurizon NatureWatch methodology in 2024. This methodology aims to identify issuers that could have a negative impact on biodiversity by assessing their exposure to issues connected with the exploitation of ecosystems and the potential loss of related value, in order to prioritise engagement actions towards those with the greatest exposure to biodiversity loss. The Eurizon NatureWatch framework is inspired by the Taskforce on Nature-related Financial Disclosures (TNFD) guidelines and the Kunming-Montreal Global Biodiversity Framework (GBF) principles. It uses data from MSCI ESG Research, the Carbon Disclosure Project (CDP) and public platforms that specialise in screening undertakings on the topic of deforestation. The phases of the analysis include: (i) identifying companies that have a potential negative impact on biodiversity based on the sectors/local areas in which they operate; (ii) measuring their dependencies and impacts on biodiversity; (iii) engaging with these companies to encourage them to adopt corrective measures and implement initiatives to mitigate their impact. In particular, Eurizon continued its commitment to engagement in 2025, focusing on assessing the risks and impacts of the business activities of the identified companies (including their supply chains) on biodiversity. This included the responsible management of water resources, waste and circular economy practices.
In addition, Eurizon participated in collective engagement activities under the Nature Action 100 initiative, exploring, inter alia, the commodity sector in Latin America, focusing, in particular, on objectives and strategies for mitigating deforestation and biodiversity loss. As part of this engagement activity, the identified undertakings were encouraged to align with the TNFD recommendations and adopt the Species Threat Abatement and Restoration (STAR) methodology of the International Union for the Conservation of Nature (IUCN). This methodology enables the identification of areas in which species threatened by biodiversity loss are present, allowing targeted mitigation strategies to be developed with the engagement of local communities and public authorities.
Finally, Eurizon exercised its voting rights at shareholder meetings of the companies in which it invests, supporting proposals aimed at promoting greater transparency on biodiversity conservation and the circular economy.

The Intesa Sanpaolo Assicurazioni Group is committed to progressively and systematically integrating nature and biodiversity issues into its business model. As a responsible investor, it monitors specific biodiversity-related indicators, adopting negative screening approaches for issuers most exposed to these risks and disputes.

The Intesa Sanpaolo Group also promotes sustainable development by fostering partnerships, launching training initiatives and conducting applied research projects in areas such as artificial intelligence, robotics, neurosciences, climate change and biodiversity. This includes, for example, the continuation in 2025 of an applied research project carried out through the Intesa Sanpaolo Innovation Center. This project aims to study environmental attitudes and related behaviour using a neuroscientific approach. A statistically significant sample of individuals was analysed to assess the impact of environmental attitudes (e.g. in the areas of transport and food choices) and related behaviour, and to identify the most suitable methods for encouraging greater attention to climate change and biodiversity. The results of the first survey mean that we can now move on to the experimental phase of the research. The aim of this phase is to identify effective ways to raise awareness and generate a positive behavioural change in relation to these issues. The Urban Regeneration, Nature-Based Solutions for Climate and Social Resilience report was produced as part of our numerous activities in partnership with universities, in particular the collaboration between Intesa Sanpaolo Innovation Center and Politecnico di Torino on the Master's programme in Climate Change – Mitigation and Adaptation. This report demonstrates how nature and innovation are the key drivers for cities in the future.

ESRS E5 – Resource use and circular economy

Policies, targets and actions at portfolio level

Policies on resource use and circular economy

In line with the Intesa Sanpaolo Group's strategic approach, the circular economy policies adopted set out the principles, rules and processes for pursuing the Group's objectives in the transition towards a circular economy model, focused on resource efficiency, waste reduction and especially the creation of value throughout the entire product life cycle. The primary objective is to guide the transition of undertakings and communities towards an inclusive circular economy and an economic approach capable of accelerating climate change mitigation policies, protecting and restoring biodiversity and reducing pollution. This can be achieved not only by reducing greenhouse gas emissions, but also by optimising the availability and use of commodities, the regeneration of natural resources and technological innovation, contributing to the creation of a more sustainable, equitable and resilient economic system. This commitment is consistent with global trends towards sustainability and environmental regulations and helps reduce the risks associated with volatile resource prices. For further details on the impacts, risks and opportunities covered by the policies on resource use and the circular economy, reference should be made to the IRO table set out in the paragraph “Materiality assessment” in the ESRS 2 – General disclosures chapter.

The Intesa Sanpaolo Group's "Code of Ethics” promotes, inter alia, the adoption of circular economy models aimed at environmental protection, support for the country's development through green transition and the responsible management of indirect environmental impacts.

Moreover, the Group ensures transparency with respect to stakeholders by making available the main circular economy policies through the company's communication channels:

- the internal classification of sustainable lending products and transactions, which identifies a specific category in the area of environmental sustainability called “Ecological efficiency and circular economy”. This category is assigned based on how closely the lending transaction aligns with the five Circular Economy criteria, which are described later on and were defined in collaboration with the Ellen MacArthur Foundation (EMF), a non-profit organisation and the world's leading think tank on the circular economy. In 2025, a review of the framework criteria was launched in collaboration with EMF to align them with the Harmonised Circular Economy Finance Guidelines developed by the International Finance Corporation (IFC, World Bank Group). This framework is currently not fully aligned with the criteria of the European Taxonomy relating to the Transition to a Circular Economy environmental objective;
- the “Green, Social and Sustainability Bond Framework”[171], published on the Group’s institutional website, which defines the rules and criteria adopted for the issuance of bonds intended to finance activities with environmental and social benefits, including initiatives supporting the circular economy. The proceeds of bonds issued as part of this framework are allocated exclusively to loans falling under a limited set of green categories, including the macro-category dedicated to the circular economy, in which five sub-categories (corresponding to the five circular criteria described later on) are defined. The framework is aligned with the “Green Bond Principles 2021”, the “Social Bond Principles 2021” and the “Sustainability Bond Guidelines 2021” of the International Capital Market Association (ICMA), as well as with the European Taxonomy, where possible and where deemed necessary and in line with the current regulatory provisions[172];
- internal rules, with respect to the European Taxonomy, and the macro-process adopted by the Group for the identification and reporting of exposures aligned with these rules, including those related to the fourth of the six environmental objectives, i.e. “Transition to a Circular Economy”;
- the Intesa Sanpaolo Group's internal ESG Scoring rules, which represent a company-wide assessment of the ESG profile of corporate customers, which include certain aspects related to the circular economy;
- the “Green Procurement Rules”, available on the Group’s website, which, inter alia, set out the Group’s approach aimed at promoting circular procurement models for stationery, toner, gadgets and free gifts, in line with the Group’s overall focus on adopting sustainable practices.

The scope of circular economy policies encompasses all Group activities, with a focus on the financial support for projects and undertakings that promote circular business models and on internal resource management (e.g. procurement practices). As part of the Governance Area of the Chief Sustainability Officer, who is responsible for controlling and implementing sustainability policies[173], a specific competence centre was identified to control circular economy policies, namely Intesa Sanpaolo Innovation Center (ISPIC[174]). In this context, the Intesa Sanpaolo Innovation Center is responsible for making a technical assessment of the level of circularity and eligibility for funding of initiatives proposed by corporate customers.

As part of the lending process, the Group incorporates circular economy principles into its policies, referring both to specific green economy criteria defined in the “Green, Social and Sustainability Bond Framework”, and to the criteria of the circular framework developed together with the Ellen MacArthur Foundation.

[171] The framework comprises a set of internal rules through which the Group issues various types of debt securities (green, social and sustainability bonds) in different currencies and formats – secured, unsecured or subordinated – to finance new or existing loans and activities that have a positive environmental and/or social impact.

[172] Alignment with the Taxonomy takes place on a best effort basis.

[173] For further details on the role of the CSO, reference should be made to the paragraph “Role and composition of the administration, management and control bodies and of sustainability governance” in the ESRS 2 – General disclosures chapter.

[174] ISPIC is the Group company that explores future scenarios and trends, develops multidisciplinary applied research projects, supports start-ups, accelerates the business transformation of undertakings according to the criteria of open innovation and the circular economy, promotes the development of innovative ecosystems and spreads the culture of innovation, to make the Intesa Sanpaolo Group the driving force of a more aware, inclusive and sustainable economy.

Specifically, the eligibility criteria for the internal circular framework cover:
- solutions that extend the product life or cycles of use of goods and materials (circular design; application of modular design; implementation of reverse logistics programmes; repair and regeneration or reconditioning of products; use of product-as-service models, pay-per-use and/or sharing economy);
- procurement of secondary or sustainably sourced renewable resources and/or recycled material (including the use of renewable energy for self-consumption);
- solutions that significantly increase the efficiency of resource consumption, either within the company or along its value chain (application of industrial symbiosis principles and implementation of an integrated value chain that transforms waste into production inputs; implementation of cycle closure models and/or application of eco-design and systemic design principles; implementation of processes based on natural principles for CO_2 capture and storage and/or CO_2 capture and utilisation, to support the achievement of decarbonisation and net-zero impact targets);
- fully reusable, recyclable or compostable products, placed in an efficient context of collection, separation and reuse after use;
- innovative technologies and activities that enable circular economy models (e.g. Internet of Things solutions for implementing tracking systems, reverse logistics and/or predictive maintenance; Big Data, Artificial Intelligence and Cloud Computing in order to dematerialise services and develop markets for commodities and/or secondary materials; regenerative agriculture practices and/or hydroponic/aeroponic/precision farming technologies to improve soil health, increase biodiversity, produce food close to the place of consumption and cultivate in unfavourable areas).

As previously mentioned, a review of the circular framework criteria was launched in 2025 to align them with the 'Harmonised Circular Economy Finance Guidelines'.

For the “Green, Social and Sustainability Bond Framework”, the eligibility criteria covered:
- renewable energies not for self-consumption and in particular investments in production, transmission, infrastructure and associated assets, such as solar, wind, bioenergy/biomass and hydroelectric energy;
- energy efficiency (storage of energy from renewable energy; smart grid technology and/or infrastructure; energy-efficient equipment for buildings);
- sustainable mobility (financing of low-carbon passenger cars and light commercial vehicles and urban and suburban road/rail passenger transport with zero specific CO_2 exhaust emissions; infrastructure enabling low-carbon road and public transport);
- green buildings (new, existing and renovated buildings that meet certain criteria, e.g. Class A Energy Performance Certificate (EPC), LEED/BREEAM high-level certification);
- environmentally sustainable management of living natural resources, land use and biodiversity (projects and activities aimed at the development and use of sustainable agricultural practices, conservation, preservation and/or restoration of nature and biodiversity and of natural habitats and ecosystems).

At present, the internal framework does not completely overlap with the criteria of the European Taxonomy on the circular economy. Therefore, the loans granted under this framework are not considered "aligned" with the criteria of the Taxonomy for the purpose of calculating the Green Asset Ratio.

Finally, in 2025, the Group prepared the document “Rules on Circular Economy” which came into effect in January 2026 to support its operations in the field of the circular economy. These are currently being finalised and are in line with the Group's "Guidelines for Governing Environmental, Social and Governance (ESG) Risks" and the "Rules for Classifying Sustainable Lending Products and Transactions”, contributing to sustainable finance products within a broader framework.

Objectives for resource use and circular economy

The Intesa Sanpaolo Group has confirmed its commitment to the circular economy by promoting the dissemination of this model, also drawing on the support of the Ellen MacArthur Foundation, a Strategic Partner of the Group since 2015 as part of a multi-year collaboration. The transition to a circular economy is also pursued thanks to the contribution of the Intesa Sanpaolo Innovation Center, although no quantitative targets have been defined.
As described in the next section, the Group has shown a strong commitment to promoting circular economy practices, which are considered an integral part of its sustainability strategy and a strategic opportunity to expand its commercial offering.

Actions related to resource use and the circular economy

In 2025, the Group reinforced its commitment to supporting the transition to a circular economy model by continuing and expanding on the initiatives launched in previous years.
The implemented actions covered several strategic areas, reflecting the Group’s integrated approach, and can be grouped into four macro-areas: finance, including tools and products dedicated to facilitating the transition of undertakings; innovation, including technical support and activities of the Circular Economy Lab; Corporate Centre, including the participation in institutional working groups, national and international collaborations and the development of projects linked to corporate operations, such as circular procurement; research and training, spreading a culture of circularity and developing new application models.

Finance

The Group earmarked 8 billion euro for undertakings to support initiatives that align with the green and circular criteria set out in the adopted internal framework. At the reporting date, the amount disbursed exceeded the earmarked amount. For further details, reference should be made to the “2022–2025 Business Plan”, available on the Group’s website.
With a view to concretely supporting undertakings in the circular economy transition process, the Group offers customers of the Banca dei Territori, IMI Corporate & Investment Banking and International Banks Divisions (IBD) the opportunity to access financing dedicated to the circular economy and which may include specific incentives. This opportunity is aimed at both Italian and foreign undertakings that adopt circular solutions in innovative ways, granting them the best conditions for access to credit.

In general, support has been provided for numerous company projects for activities such as the replacement of critical raw materials[175] and fossil fuel materials with recycled or organic materials, the reuse of urban organic waste for the production of biomethane and compost and the recovery of CO_2, the revamping of renewable energy plants with the extension of their lifetimes and the increase in their production capacity, and the recovery of industrial waste for its reuse in new product lines.

Furthermore, in 2025, the Group carried out its third synthetic securitisation[176] transaction in the area of ESG and circular economy with the aim of optimising the capital allocated to a portfolio of loans to undertakings with a high ESG Score and/or engaged in the circular economy. With a portfolio of around 1.5 billion euro, the transaction freed up additional resources to support a circular and sustainable economy, also thanks to the possibility of including new loans.

In the area of sustainable bonds, in 2019 Intesa Sanpaolo was the first Italian bank to issue a Green Bond worth 750 million euro focused on the circular economy and intended to support the loans granted by the Bank as part of dedicated credit supply. In this respect, financing attributable to the circular economy[177] that falls within the Group's "Green, Social and Sustainability Bond Framework" is a material component of the overall portfolio and has contributed significantly to reducing financed emissions. This result is similar to those generated by financing attributable to renewable energy, confirming the strategic role of circularity in reducing financed emissions.

Finally, the Group's commitment to support the circular economy also continued within the Wealth Management Division. Eurizon Capital SGR has established itself as a leader in the circular transition and is continuing to implement its strategy in Italy in collaboration with the Group's Private Banking division, as well as abroad. Eurizon promotes awareness of the circular economy in the investment world, also via the creation and dissemination of digital training materials.

Innovation

In addition to finance, the Group implements its circular economy strategy through specialised support for initiatives and innovation projects that foster the transition of undertakings. A central role in this area is played by the Circular Economy Lab, a multi-stakeholder innovation initiative set up in 2018 in Milan thanks to the collaboration between Intesa Sanpaolo, ISPIC, Fondazione Cariplo and Cariplo Factory. The Circular Economy Lab offers non-financial services to foster innovation, with the aim of supporting and accompanying the transformation of the Italian economic system and disseminating new models of value creation in the collective interest, accelerating the transition to the circular economy. The activities of the Circular Economy Lab fall into three lines:

- training, employing methods of disseminating the circular economy culture aimed at companies and the academic world, through dedicated workshops and lectures. In 2025, 14 lectures were delivered to both national and international universities or specialised courses.
- connection activities, through initiatives geared towards creating an open dialogue on the topic, engaging an extensive national and international network of companies, institutions, universities, research centres and other partners. During 2025, the following took place:
  - 9 Circular Economy dissemination events on specific sectors, 4 of them within the "ESG Workshops" of the Group's BdT Division.
  - the "Circular Economy: a future-proof economic paradigm" conference, organised in June 2025, as part of the renewal of the partnership with Cariplo Factory. The event brought together institutions, undertakings and academia with the aim of fostering the dissemination of circular economy practices and innovative and sustainable solutions, encouraging the adoption of circular models. During the event, the "Report on Circular Innovation in Italian Startups" was unveiled. This report is the result of a systematic analysis by the Circular Economy Lab of the Italian circular economy ecosystem through start-ups and innovative SMEs, based on the Open Innovation activities launched in the area since 2018. The study mapped more than 820 business entities from a proprietary repository of circular innovation solutions to identify where and how the capacity to innovate through circular-by-design models is concentrated.
- innovation activities, through innovative consulting services aimed at accelerating the transformation of SMEs and corporate entities towards circular business models. Specifically, six projects were carried out in 2025 with Intesa Sanpaolo corporate customers.

Corporate Center

With the goal of contributing to the dissemination and consolidation of the circular economy[178], the Group continued its international and national collaborations in 2025.

International initiatives

The main international initiatives included a collaboration with the financial initiative of the United Nations Environment and Finance Programme (UNEP FI) to promote circular economy best practices in the global banking sector.
In 2025, the Group's confirmed its participation in the task force coordinated by UNEP FI, "Circular Economy as an enabler to operationalise the nexus between climate, nature, pollution and healthy & inclusive economies". The initiative aims to align the Principles for Responsible Banking (PRB) with the circular economy. This recognises that the circular economy can be a strategic lever for the financial sector to achieve the objectives related to decarbonisation, biodiversity restoration, pollution reduction and support for local economies.

[175] Critical raw materials are strategic resources for an area and are at high risk of supply disruption because they are concentrated in a few countries or are difficult to replace. Examples include lithium, cobalt, nickel, rare earths and graphite.

[176] Value per transaction: 2.0 billion euro (2023), 2.5 billion euro (2024), 1.5 billion euro (2025).

[177] "Financing attributable to the circular economy" means loans earmarked to finance various technologies, solutions, products and services aimed at increasing efficiency in resource use and enabling circular economy business models. For further details, reference should be made to the "Green and Social Bond Report 2024" available on the Group's website.

[178] That is, activities to promote and disseminate the culture of the circular economy and the development of projects linked to business operations, such as circular procurement.

During the year, the Group took part in the "Policy Imperative and Financial Pathways to Scale Circular Economy Finance" working group through UNEP FI's Circular Economy Community of Practice. The aim of this group was to strengthen the role of financial institutions in financing the circular economy. The initiative encouraged peer-to-peer interaction and the exchange of best practices, with the aim of expanding financial support for circular models through collaboration.
Collaboration continued with UNEP FI and the Global Alliance on Circular Economy and Resource Efficiency (GACERE) on drafting the document Unlocking Circular Economy Financing: From Vision to Action. This document aims to identify shared solutions to capital shortfalls and promote a more effective and inclusive financial ecosystem to support the transition towards a circular economy.

In parallel, the Chief Institutional Affairs and External Communication Officer Governance Area coordinated collaboration between Intesa Sanpaolo, ISPIC and the International Finance Corporation (IFC, World Bank Group), which led to the publication of the Harmonised Circular Economy Finance Guidelines in May. These guidelines are intended to help investors, financial institutions and undertakings recognise and evaluate investment opportunities that promote the transition to circular economy models. They also provide criteria and operational guidance to direct capital flows and identify activities that are eligible for financing within the scope of the circular economy.
Drawing inspiration from the success of other sustainable finance frameworks dedicated to biodiversity, the blue economy and green bonds, the document aims to define categories of economic activities and financial instruments capable of mobilising private capital to support sustainable development and the transition towards circular economy models, encouraging the convergence of market practices and ensuring their applicability globally. The published guidelines are sector-agnostic and are based on existing guidance on financing the circular economy. In particular, they align closely with the European Union's categorisation system and the International Capital Market Association's Green Bond Principles, as well as the ISP Group's experience of what has been implemented and developed over the years.

In May 2025, during the 58th Annual Meeting of the Asian Development Bank[179], the Group – through ISPIC and the Chief Institutional Affairs and External Communication Office Area – promoted an event dedicated to the circular economy, highlighting the public and private crucial role of financial institutions in the transition towards sustainable economic models and in strengthening cooperation between Italy, Europe and the Asia-Pacific region.
In 2025, the Group reaffirmed its commitment to European and international institutional dialogue on circular finance. This was achieved by participating in the public consultation promoted by the European Banking Federation (EBF) regarding the European Commission's anticipated Circular Economy Act in 2026. The Group also organised a meeting at the European Commission in Brussels in collaboration with the Ellen MacArthur Foundation to reinforce the message of the central role of the circular economy in the Union's strategy.

National initiatives
The main national initiatives included those carried out by the Circular Economy Lab, in its new role as coordinator of the Italian Circular Economy Alliance, to strengthen the Alliance's role and positioning. These activities included the development of topic-based webinars and interactive workshops, as well as the launch of a Call4Solutions to identify and support circular innovation projects.
In collaboration with the Alliance, ISPIC helped to develop operational proposals based on the needs expressed by member undertakings, with the aim of launching new projects in 2026. Collaboration with the Freight Leaders Council continued through networking and co-design activities at specific events. Finally, with respect to the Water Value Community, which was promoted by The European House Ambrosetti, the 2024/2025 edition explored in detail the contribution of various segments of the extended water supply chain to the transition from linear to circular development models.
In 2025, the Group continued to experiment with innovative and circular ICT asset management models in order to promote the responsible reuse of resources and improve the efficiency of internal processes. During the year, the fifth, sixth and seventh pilot projects dedicated to enhancing decommissioned IT assets were completed. These projects involved reconditioning, reusing and selling equipment that was no longer in use. These activities reduced storage costs and contained CO_2 emissions during the decommissioning and disposal stages. In total, more than 6,500 IT assets were sold, including desktops and laptops, tablets and monitors, generating proceeds of around 120,000 euro.

Research and training
With respect to research, the Group's collaboration with Bocconi University in the Circular Economy & Finance area continued in 2025 through ISPIC, involving the university's independent research centre (GREEN)[180] in order to further expand the relationship between circular economy and sustainability, improve the metric for measuring the degree of circularity of undertakings (Circularity Score - CS) and assess the opportunities offered to the financial sector by the circular transformation of economic sectors, starting for example from the theory of de-risking financial portfolios. In 2025, the results of the research confirmed the impact of financial de-risking on the degree of circularity of undertakings.
A study of the theoretical model of Circular Shared Value (CSV)[181] in the banking sector was also launched. This approach is derived from the Shared Value model and integrates circular economy principles into the creation of shared value between banks, their customers and the local area. It promotes financial solutions that generate economic, environmental and social benefits throughout the entire value chain.
Another activity in the research area was ISPIC's collaboration through the Circular Economy Lab with the Energy & Strategy Observatory of Politecnico di Milano for the development of the "Annual Report on the State of the Circular Economy in Italy", which was published in November 2025.

[179] This is a global event that brings together finance ministers, central bank governors, representatives of international organisations, leaders of the private sector, representatives of civil society organisations and members of the media from countries in the Asia-Pacific region.
[180] Centre for Research on Geography, Resources, Environment, Energy & Networks.
[181] Developed by Porter and Kramer.

In the same area of research and dissemination, the collaboration with the Italian Circular Economy Stakeholder Platform (ICESP) continued in 2025 with the aim of promoting and disseminating circular economy best practices, as well as contributing to the national debate on transition policies. In this context, the Lab contributed to the publication of the "The Relationship Between the Circular Economy and Climate Change: Overview of Existing Legislation and Proposals for the Future" report.
At ICESP's invitation, the Group also took part in the UNI/PdR[182] working group, which was promoted by ENEA-SSPT[183] and CNR-STIIMA[184], as part of the public consultation aimed at defining the knowledge, skills, autonomy and responsibilities required for new professional profiles linked to the circular economy, including the role of Circular Economy Manager (CEM). The Group contributed by sharing its experience in the field of finance for the circular economy, and by making its banking expertise and the best practices it has developed in this sector available.
In 2025, the Circular Economy Lab contributed to the production of the "Towards the Circular Blue Economy" report, which was published by Centro Studi per il Mezzogiorno (SRM). SRM is affiliated with Intesa Sanpaolo and specialises in analysing the dynamics of the maritime transport, logistics and energy sectors in the Mediterranean basin.

Lastly, the Circular Economy Lab is a technical partner of Tech4Planet, the National Technology Transfer Centre for Environmental Sustainability, an initiative promoted by Cassa Depositi e Prestiti and co-invested, inter alia, by Neva SGR, Intesa Sanpaolo's venture capital company, with the aim of identifying and accelerating research projects by facilitating the path to business initiatives.

Activities aimed at the International Banks Division continued during the year in order to promote and disseminate the circular economy paradigm within the Group. In 2025, six online sessions were organised for the relationship managers of the Group's international subsidiary banks, with the aim of supporting the Group's people in their relationships with customers transitioning towards a sustainable and circular economy, also by sharing best practices at the Group level.

[182] The UNI/PdR (UNI Reference Practice) is a technical document drawn up under the coordination of the Italian Standards Body (UNI).

[183] ENEA-SSPT conducts research and technology transfer, as well as coordinating national initiatives, on behalf of the Italian National Agency for New Technologies, Energy and Sustainable Economic Development.

[184] CNR-STIIMA is the National Research Council's (CNR) Institute of Intelligent Industrial Technologies and Systems for Advanced Manufacturing.

Reporting pursuant to the EU Taxonomy (Regulation (EU) 2020/852)

Introduced within the framework of the EU Action Plan on Financing Sustainable Growth, Regulation (EU) 2020/852 (the "Taxonomy Regulation") establishes that activities can be defined as "environmentally sustainable" if they contribute to at least one of the following environmental objectives, without significantly harming the other objectives, and are carried out in compliance with minimum safeguards[185]:

- climate change mitigation;
- climate change adaptation;
- sustainable use and protection of water and marine resources;
- transition to a circular economy;
- pollution prevention and control;
- protection and restoration of biodiversity and ecosystems.

Various delegated acts have been adopted under the regulation over the years. For each of the six environmental objectives, the acts identify the "Taxonomy eligible" economic activities that can potentially contribute to the objectives and set out the screening criteria to assess whether they are "Taxonomy-aligned" by making a substantial contribution to at least one of the objectives. With respect to the content, methodology and presentation of information on environmentally sustainable economic activities, Delegated Regulation (EU) 2021/2178 was amended by the European Commission in July 2025 and published in the Official Journal of the European Union on 8 January 2026 with Delegated Regulation (EU) 2026/73 (the "Omnibus delegated act"). The latter is part of the European Commission's "Omnibus I" package, which aims to simplify sustainability legislation in key areas. These include the EU Taxonomy and reducing reporting burdens for undertakings and financial intermediaries, while ensuring the transparency and reliability of the environmental information provided to the market. The new regulation applies from 1 January 2026, with respect to 2025. Companies subject to Taxonomy reporting may apply for a one-year deferral if deemed appropriate. The Intesa Sanpaolo Group decided to report in accordance with the provisions set out in Delegated Regulation (EU) 2026/73, applying it in full. The main changes introduced include revising the GAR calculation methodology and eliminating the templates relating to the disclosure of nuclear energy and fossil gas activities, which are now reported in aggregate form in a single template.

In accordance with the regulatory framework in force and in light of the guidance provided by the European Commission,[186] for the year ended 31 December 2025, Intesa Sanpaolo Group measured the following KPIs, presented in tabular form where required:

- Green Asset Ratio (GAR);
- key performance indicator for financial guarantees (FinGuar KPI);
- key performance indicator for assets under management (AuM KPI);
- Green Asset Ratio – Sector-specific information including banking book exposures to the ten main sectors covered by the Taxonomy using the counterparty's NACE codes and aggregate disclosure on activities in the nuclear and in the fossil gas sectors;
- proportion of exposures to Taxonomy-aligned economic activities with reference to the further four environmental objectives and the new economic activities introduced for the first two environmental objectives.

For more information on the presentation of the KPIs in tabular form, see Annex I – Taxonomy Template of this Consolidated Sustainability Statement.

[185] The minimum safeguards are procedures implemented by an undertaking that is carrying out an economic activity to ensure alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the International Labour Organisation's Declaration on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

[186] In 2025, on the basis of the guidance set out in the Commission Notice of 8 November 2024 published in the OJEU and the additional set of guidance provided in the draft notice of 17 December 2025, the Group identified the best efforts needed to comply with the guidance, considering the time-frame and data available. It should be noted that the clarifications responding to FAQs contained in the draft notice are not binding.

Template 0: Summary of KPIs to be disclosed by credit institutions under Article 8 Taxonomy Regulation

		2025						
		Total exposure to Taxonomy-aligned activities (currency)		KPI[187] (%)	KPI[188] (%)	% coverage (over total assets)[189] (%)	non assessed exposures (% of covered assets)[190] (%)	non assessed exposures (% of covered assets)[190] (%)
		Turnover-based	CapEx-based	Turnover-based	CapEx-based		Turnover-based	CapEx-based
Main KPI	**Green asset ratio (GAR) stock**	**26,315**	**30,805**	**9.19%**	**10.75%**	**36.45%**	**0.19%**	**0.19%**

		Total exposure to Taxonomy-aligned activities (currency)		KPI[187] (%)	KPI[188] (%)	% coverage (over total assets) (%)[189]	non assessed exposures (% of covered assets)[190] (%)	non assessed exposures (% of covered assets)[190] (%)
		Turnover-based	CapEx-based	Turnover-based	CapEx-based		Turnover-based	CapEx-based
Additional KPIs	GAR (flow)	9,961	12,692	10.61%	13.51%	11.95%	1.29%	1.29%
	Trading book[191]	-	-	-	-	-	-	-
	Financial guarantees	165	222	5.76%	7.73%	-	-	-

	Fees and commission income[192]	-	-	-	-	-	-	-

		2024					
		Total environmentally sustainable assets[193]	KPI (Turnover based)	KPI (CapEx based)	% coverage (over total assets)[194]	% of assets excluded from the numerator of the GAR (Article 7(2) and (3) and Section 1.1.2. of Annex V)[195]	% of assets excluded from the denominator of the GAR (Article 7(1) and Section 1.2.4 of Annex V)[196]
Main KPI	**Green asset ratio (GAR) stock**	**20,516**	**3.63%**	**4.36%**	**73.80%**	**44.02%**	**26.20%**

		Total environmentally sustainable assets[193]	KPI (Turnover based)	KPI (CapEx based)	% coverage (over total assets)[194]	% of assets excluded from the numerator of the GAR (Article 7(2) and (3) and Section 1.1.2. of Annex V)[195]	% of assets excluded from the denominator of the GAR (Article 7(1) and Section 1.2.4 of Annex V)[196]
Additional KPIs	GAR (flow)	5,859	8.11%	11.32%	9.43%	44.02%	26.20%
	Trading book[197]	-	-	-			
	Financial guarantees	161	2.72%	4.65%			
	Assets under management	4,417	1.97%	3.20%			
	Fees and commission income[198]	-	-	-			

As described in the introduction, in 2025, the Intesa Sanpaolo Group chose to report Taxonomy KPIs by applying Delegated Regulation (EU) 2026/73, which introduces significant methodological changes. In particular, the main changes involve revising the GAR calculation methodologies to ensure greater consistency between the numerator and denominator. The new methodology provides for the exclusion of certain items[199] from the denominator, including exposures to counterparties not subject to the CSRD, thereby improving the value of the indicator.
Intesa Sanpaolo Group's Turnover-based GAR stock of 9.19% consists of the following exposures:

- loans to households collateralised by residential immovable property that have been assessed as being Taxonomy-aligned for the environmental objective of climate change mitigation on the basis of compliance with the relevant technical

187 Based on the KPI relating to the counterparty's turnover.
188 Based on the KPI relating to the counterparty's capital expenditure.
189 % calculated as the ratio of KPI-covered assets to the Bank's total assets.
190 In accordance with Article 7(8) of this regulation.
191 The Trading Book KPI applies commencing as of 2027 (publication in 2028).
192 Revenue from fees and commissions from services other than lending and asset management. The Fee & Commission KPI applies commencing as of 2027 (publication in 2028).
193 Amounts are stated in millions of euro.
194 Percentage calculated as the ratio of KPI-covered assets to the Bank's total assets.
195 Percentage calculated as the ratio of assets excluded from the numerator of the KPI (in particular: derivatives, exposures to undertakings that are not obliged to publish non-financial information pursuant to Article 19a or 29a of Directive 2013/34/EU, on-demand inter-bank loans, cash assets and equivalents, other asset classes and the trading book) to total covered assets. The percentage was found to be the same at flow level.
196 Percentage calculated as the ratio of assets excluded from the denominator of the KPI (specifically: exposures to central governments and supranational issuers, exposures to central banks and the trading book) to the Bank's total assets. The % was found to be the same at flow level.
197 The Trading Book KPI applies commencing as of 2027 (publication in 2028).
198 The Fee & Commission KPI applies commencing as of 2027 (publication in 2028).
199 In addition to exposures to counterparties that are not subject to the CSRD, the following assets are excluded from the GAR calculation: central governments and supranational issuers; exposures to central banks, trading book, derivatives, on-demand inter-bank loans, liquid funds and cash assets, other categories of assets (e.g. goodwill, commodities, etc.).

screening requirements for economic activities relating to the construction and real estate activities set out in Delegated Regulation (EU) 2021/2139 (6.06%)[200];
- Taxonomy-aligned exposures to financial and non-financial counterparties subject to CSRD requirements (3.13%).

With respect to the comparative information[201] for the previous year, the Intesa Sanpaolo Group discloses "Template 0 – Summary of KPIs to be disclosed by credit institutions under Article 8 Taxonomy Regulation", which is considered a material KPI. The change in the GAR compared to the previous year is due to the introduction of the new calculation methodology. Applying this methodology to the GAR published in the previous reporting period (equivalent to 3.63%) would produce a restated value of 7.60%, which is comparable to the 9.19% recorded in 2025. Using the same methodology, the increase of approximately 20.92% is mainly attributable to loans to households secured by residential property.

The KPI for financial guarantees considers financial guarantees securing loans, advances and debt securities financing economic activities pursued by financial and non-financial undertakings and local authorities, net of exposures to counterparties not subject to the CSRD[202]. The differences seen in the indicator compared with the year ended on 31 December 2024 are primarily attributable to methodological changes that have affected the calculation of the exposure values included in the denominator.

The KPI for assets under management considered investments at the consolidated level held by Eurizon Capital SGR[203], Fideuram Intesa Sanpaolo Private Banking S.p.A.[204] and VUB[205], including any assets delegated to third parties for management and excluding assets managed under delegation on behalf of third-party financial undertakings[206], net of exposures to counterparties not subject to the CSRD.

In general, with reference to the calculation of the key performance indicators reported:
- exposures to non-financial counterparties where "use of proceeds is not known" have been weighted according to Turnover and Capital Expenditure (CapEx) that is Taxonomy-eligible and Taxonomy-aligned for all the environmental objectives published by those counterparties in their sustainability statements (actual data)207 and obtained by the Bank through a specialist infoprovider;
- exposures to financial counterparties where "use of proceeds is not known" have been weighted according to Turnover and Capital Expenditure (CapEx) that is Taxonomy-eligible and Taxonomy-aligned for all the environmental objectives published by those counterparties in their sustainability statements (actual data)208 and obtained by the Bank through a specialist infoprovider;
- exposures to financial and non-financial counterparties where "use of proceeds is known" have been considered to the extent that the assets financed are economic activities which are taxonomy-aligned with respect to all environmental objectives. In particular, the exposures relating to debt securities have been weighted according to the eligibility and alignment percentages relating to individual ISINs and obtained by the Bank through a specialist infoprovider.

Taxonomy in the business and financial strategy and in product design

Through the 2022-2025 Business Plan, the Intesa Sanpaolo Group has continued to generate increasing and sustainable value, further strengthening its leading position in ESG issues with a world-class position in terms of social impact and a strong focus on climate. The Group is specifically playing its part in fast-tracking the transition to a sustainable economy through its target of net-zero emissions by 2050 for the loan and investment portfolios, asset management and insurance business.

Intesa Sanpaolo Group appreciates that the Taxonomy was designed with a view to assigning the European banking system a crucial role in boosting the real economy to pursue the European Union's ambitious strategy for sustainable development and the transition towards a low-carbon economy, increasing the level of transparency and comparability of markets. In this context, the Group has implemented its "EU Taxonomy Green Enhancement" project as part of the Business Plan to respond to the regulatory requirements of the EU Taxonomy, assess the level of regulatory alignment of its loans, and actively steer the loan portfolio, in particular for new disbursements, by identifying new business opportunities, also through new products, and reviewing the pricing incentive system.

[200] The alignment checks also covered compliance with the DNSH criterion for the environmental objective of climate change adaptation (i.e. assessment of physical risk).
[201] In addition to the requirements set out in Article 8(3) of Delegated Regulation (EU) 2021/2178, FAQ No. 4 of the Draft Commission Notice, published on 17 December 2025, addressed the disclosure of EU Taxonomy KPIs in comparative form between years "T" and "T-1".
[202] For the 2025 financial year, financial guarantees attributable to local authorities are included in the calculation of the FinGuar KPI, excluding all exposures to counterparties not required to prepare the CSRD, in line with the provisions of the revised version of Template 1 in Annex VI to Delegated Regulation (EU) 2026/73
[203] Eurizon Capital Real Asset SGR SPA, Eurizon Capital SGR SPA, Eurizon Asset Management Croatia DOO, Eurizon Asset Management Hungary LTD, Eurizon Asset Management Slovakia Sprav. Spol. AS, Eurizon SLJ Capital Limited.

Social information

ESRS S1 – Own Workforce

Characteristics of Group employees and breakdown[209]

Below we report key information on the breakdown of the Group's own workforce. For information on the reference boundary at 31 December 2025, reference should be made to the "Basis for preparation and methodology" section of the ESRS 2 – General disclosures chapter.
The workforce shown below refers to the total number of employees in service at the reporting date and does not include contractors engaged on project-based and temping contracts (and not on employment contracts).[210]

At 31 December 2025, the Group workforce amounted to 90,789 employees. The following table shows the breakdown of the total number of employees by gender for 2025 and 2024.

Table – Number of employees by gender

	2025	2024
Women	49,618	50,725
Men	41,171	42,814
Other	-	-
Not disclosed	-	-
TOTAL	**90,789**	**93,539**

Compared with 31 December 2024, the number of employees in the Group decreased mainly as a result of voluntary exits arising from agreements signed with the trade unions, as well as the management of natural turnover.

The following table shows the breakdown of the total number of Intesa Sanpaolo Group employees for the past two years by gender and contract type. As shown in the table, almost all Group employees are employed on a permanent basis.

Table – Employees by type of contract, broken down by gender

	2025					2024				
	Women	Men	Other	Not disclosed	TOTAL	Women	Men	Other	Not disclosed	TOTAL
Permanent employees	48,131	39,941	-	-	88,072	49,225	41,692	-	-	90,917
Temporary employees	1,487	1,230	-	-	2,717	1,500	1,122	-	-	2,622
Employees with variable working hours	-	-	-	-	-	-	-	-	-	-

In 2025, the total number of employees that left the Group amounted to 7,477 (5,511 in 2024), with a turnover rate for the period of 8.24% (5.89% in 2024). The turnover rate was measured as the ratio of total employee terminations to total headcount at year end, where terminations included all employment contracts terminated during the year (voluntary resignations, dismissals, retirement, exit incentives, death, etc.). As shown above, this rate increased compared to the previous year, primarily due to the implementation of agreements with the trade unions. This resulted in a higher number of exits and voluntary departures in 2025.

Finally, it is noted that, similarly to 2024, Italy is the only country where the Group's workforce is significant (meaning 50 or more employees making up at least 10% of the total), with a total of 68,894 employees (71,174 at 31 December 2024), accounting for 76% of total headcount, in line with the previous year.

As already outlined in chapter ESRS 2 - General disclosures, section "Basis for preparation and methodology", the Group introduced new metrics (entity-specific metrics) in the 2025 Report, for which comparative data are not presented.
The following tables show the headcount of employees in service at the end of the reporting period (31 December 2025).

[209] The key information relating to employees set out in this section is reflected in the "Alternative performance measures and other indicators" section of the Report on operations which accompanies the consolidated financial statements.
[210] The total headcount of employees stated in the "Alternative performance measures and other indicators" section in the Report on operations is equal to 90,831. This figure refers to the number of employees, including contractors not on employment contracts, at the end of the reporting period included in the consolidated financial statements.

Table – Full-time and part-time employees by gender[211]

	2025
Breakdown of full-time employees by gender [no.]	79,407
Men	39,439

The Group's commitment to human rights

The Group strives to promote respect for human rights and foster a corporate culture based on respect for the person and individual dignity by protecting the physical and moral integrity of its people, through management based on respect for the personality and professionalism of each individual, within a framework of loyalty and mutual trust. The protection of workers' rights and human rights is focused on compliance with the general principles set out in the Code of Ethics and with the Principles on Human Rights. In addition, the Group is a signatory to the UN Global Compact. This is a voluntary initiative promoted by the United Nations which encourages companies worldwide to adopt sustainable and socially responsible practices. The initiative covers various thematic areas, including human rights. The Code of Ethics draws on leading national and international initiatives for the protection of human rights (such as the Universal Declaration of Human Rights proclaimed by the United Nations, the UN Covenant on Civil and Political Rights, the ILO Declaration on Fundamental Principles and Rights at Work and the OECD Guidelines for Multinational Enterprises), setting out the values of the Group in an effort to steer individual conduct towards them. All Group companies have adopted the Code of Ethics in their governance systems to incorporate social and environmental considerations into processes, practices and decision-making, alongside the obligations of Legislative Decree 231/2001. The Code of Ethics is updated regularly to reflect changes in the Bank's operational framework, ensuring the full transparency and consistency in order to strengthen the ongoing relationship of trust with stakeholders.

[211] Entity-specific metric.
[212] Entity-specific metric.
[213] Entity-specific metric.
[214] Entity-specific metric.

The cardinal principles in relations with the Group's people, as set out in the Code of Ethics and with which all Group policies are aligned, are:

- listening and dialogue: the Group leverages listening and dialogue with its people to promote the strategic role of internal communication, disseminate tools for sharing information and identify the needs of its people;
- transparency: the Group aims to continuously further a culture of transparency on which to build relationships between people. Transparency underpins all its actions, allowing people to make informed, aware and independent decisions;
- equity, diversity and inclusion: for the Group, respect for individuality and the dignity of people is fundamental for creating an inclusive workplace committed to preventing all forms of discrimination and to respecting difference (in terms of gender, gender identity and/or expression, emotional and sexual orientation, marital and family status, age, ethnic origin, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental conditions or any other individual traits of a person, also in relation to the expression of opinion);
- respect for people: the Group strives to prevent any conduct that is harmful to human dignity, guaranteeing assistance and confidentiality, and to promote a workplace that is respectful of privacy, sustainable and conducive to achieving a work-life balance;
- protection of health and safety: the Group works to ensure the health and safety of its people and promote an experience of work that is respectful of their physical and mental health, by identifying and governing occupational health and safety risks and adopting preventive and protective measures, with residual risks managed through emergency and intervention plans for improving the well-being of people;
- appreciation and motivation: the Group recognises the strategic importance of the relational, intellectual, organisational and technical skills of every individual, and considers them fundamental in valuing and motivating people in relations;
- cohesion: the Group works to strengthen the spirit of belonging in people by spreading its values, sharing strategies and objectives, supporting leaders, creating ways of participating in success and promoting solidarity initiatives;
- management and staff remuneration policies: the Group's remuneration policies are based on the principles of equity, merit and the sustainability of outcomes.

To promote its maximum reach, the Code of Ethics is published on both the institutional website of the Group and on the company intranet. It has been produced to be used also for the blind and visually impaired, following the accessibility rules certified by the LIA Foundation (for accessible Italian books). In addition, a copy of the Code of Ethics is given to every director, employee and contractor upon their appointment, employment or engagement.

To give concrete expression to the commitments and values set out in the Code of Ethics and to ensure the rights of every person are respected, the Group applies the Principles on Human Rights, as approved by the Board of Directors, which take up and develop the values set out in the Code of Ethics. The Principles on Human Rights define the Group's commitment vis-à-vis all stakeholders, including people, customers, suppliers and communities. Alongside the commitment to complying with relevant legislation in all the countries where it operates, the Principles on Human Rights are the Group's pledge to identifying, mitigating and, where possible, preventing potential adverse human rights impacts connected with its operations, in line with the Declaration of Human Rights proclaimed by the United Nations and the UN Guiding Principles on Business and Human Rights. These commitments are also consistent with the ten principles of the UN Global Compact on human rights, labour, environment and anti-corruption. Specifically, the Principles on Human Rights protect freedom of association and the right to join trade unions and councils representing the Group's people and combat any form of child labour and forced labour. They also promote: equal opportunities and non-discrimination, health and safety in the workplace, the right to privacy and personal dignity, fair and respectful working conditions. The document is provided to all the Group's people and is published on the institutional website of the Group

The Group has additionally adopted Diversity, Equity & Inclusion Principles to give concrete expression to its commitment to implementing policies promoting the inclusion of all forms of diversity both inside and outside the Group.
Finally, in keeping with its firm commitment to the respect for human rights and in line with the requirements of the legislation in force in some of the countries in which it operates, the ISP Group issues an annual Modern Slavery Statement, disclosing the actions taken to combat any risk of modern slavery in its own operations and in the value chain. For more information, see the Intesa Sanpaolo Modern Slavery Statement on the institutional website of the Group.

Metrics on human rights in the own workforce

The following table presents a series of metrics for monitoring incidents and complaints concerning social matters and human rights in relation to Group employees. Specifically:

- "Total number of incidents of discrimination" shows the number of criminal litigations or labour law suits brought by employees against the group and internally-verified cases of non-compliance, all in relation, on a primary or secondary basis, to discrimination, including harassment;
- "Number of complaints filed through channels for employees" measures the number of reports filed by Group people through the relevant channels provided (such as the Code of Ethics inbox, the whistleblowing system and the channel for reporting sexual harassment) raising concerns on various issues connected with social matters, such as working conditions, equal treatment and the fundamental rights of workers;
- "Number of complaints filed with National Contact Points for OECD Multinational Enterprises" shows complaints sent to National Contact Points for OECD multinational enterprises related to the same matters addressed by the previous metric;
- "Total amount of fines, penalties and compensation for damages as a result of incidents and complaints" discloses the overall amount of fines, penalties and compensation imposed on the Group as a result of the incidents or complaints reported above;
- "Number of severe human rights incidents" shows the number of severe human rights incidents connected to the Group's workforce. The severity of the incidents is assessed on the basis of the scope, scale and irremediable character of the incident;
- "Number of severe human rights incidents constituting non-respect of the UN Guiding Principles on Business and Human Rights, ILO Declaration on Fundamental Principles and Rights at Work or OECD Guidelines for Multinational Enterprises"

discloses how many of the severe human rights incidents reported breached the UN Guiding Principles on Business and Human Rights, ILO Declaration on Fundamental Principles and Rights at Work or OECD Guidelines for Multinational Enterprises;
- "Total amount of fines, penalties and compensation for damages as a result of human rights incidents" reports the overall amount of fines, penalties and compensation imposed on the Group for serious human rights incidents reported.

Table – Human rights incidents and violations

	2025	2024
Number of incidents of discrimination	12	9
Number of complaints filed through channels for own workers to raise concerns	53	39
Number of complaints filed to National Contact Points for OECD Multinational Enterprises	-	-
Amount of material fines, penalties, and compensation for damages as result of violations regarding social and human rights factors (€)	-	43,742
Number of severe human rights issues and incidents connected to own workforce	-	-
Number of severe human rights issues and incidents connected to own workforce that are violations of UN Global Compact Principles and OECD Guidelines for Multinational Enterprises	-	-
Amount of material fines, penalties, and compensation for severe human rights issues and incidents connected to own workforce (€)	-	-

Below we provide contextual information on the data presented in the foregoing table:
- 12 incidents of discrimination reported in 2025, specifically relating to:
  - 6 verified cases of sexual harassment, reported through the channels provided, for which the Group consequently activated disciplinary measures;
  - 4 litigation cases over alleged discriminatory conduct on health grounds and alleged inappropriate conduct, deemed unfounded by the Group;
  - 2 pre-litigation cases relating to alleged discrimination on gender and disability grounds. Both cased were settled amicably during the year following dialogues with the affected parties.
- 53 reports received from Group people in Italy and abroad through the Code of Ethics, whistleblowing and sexual harassment reporting channels. The reports mainly concerned issues relating to work-life balance, people's confidentiality and collective bargaining, as well as alleged sexual harassment;
- In 2025, there were no fines, penalties or compensation resulting from the incidents and reports disclosed.

Job protection and labour relations

Job protection and labour relations policies

Workers' rights in the Group are protected by the general principles of the Code of Ethics, the Principles on Human Rights, the Principles on Diversity, Equity and Inclusion and by the collective bargaining system, which operates fully on two distinct and complementary levels, the national level and the Group level.

The Group makes every effort to guarantee freedom of association in trade unions and workers' councils, adopt complementary protection measures and give all its people the chance to express their individuality and creativity in their jobs, bringing out the best in each of them, as a driving force for innovation and an essential contribution to the Group's growth.

In keeping with the commitments enshrined in the Code of Ethics, the labour relations management model is based on collective bargaining agreements made at both the national level and enterprise level. Compliance with these rules and the regulatory framework in force is instrumental to improving the working environment, with a view to continued growth in the quality of relations between the Group and its people.

On 24 December 2025, Intesa Sanpaolo and the Group Trade Union Delegations ("OO.SS.") reached an agreement on certain aspects of the Group Second-Level Collective Agreement, identifying the regulatory framework that will apply to the Group's employees from 1 January 2026 to 31 December 2029.
While maintaining the structured system of measures already implemented over time for the Group's employees and their families, significant new initiatives have been introduced, such as supplementary pension schemes, the increase in the value of meal vouchers and work-life balance, with particular attention to the needs of parents and caregivers, and with the goal of fostering cohesion and solidarity among generations within the company.

For further details on the impacts, risks and opportunities (IROs) covered by the policies relating to job protection and labour relations policies, reference should be made to the IRO table set out in the paragraph "Materiality assessment" in the ESRS 2 – General disclosures chapter.

The tasks and powers delegated by law and industry regulations for enterprise-level bargaining are exercised by the Group Trade Union Delegation, in relation to: performance bonuses or the broad-based short-term plan, supplementary pension schemes, healthcare, guarantees relating to safety at work, protection of health and hygiene conditions at work, job positions and career development plans.

Engagement with trade unions is also pursued through a number of bilateral bodies made up of company representatives and the trade unions, supplemented from time to time by technical experts that provide specific expertise on the topic covered.

These include the Welfare, Safety and Sustainable Development Committee which is tasked with finding solutions to improve the well-being of the Group's people and make a positive contribution to productivity with advanced and innovative responses in the area of pensions, welfare and services for families, education and an improved work-life balance. Following the renewal of the Labour Relations Protocol in July 2025, the Committee was assigned additional responsibilities, including the promotion of initiatives aimed at improving and raising awareness of corporate social responsibility.. Finally, the Committee receives specific disclosure when the Group's Consolidated Sustainability Statement is submitted.
Furthermore, the bilateral Consultation Committee is called to address work initiatives of general interest to the Group, in particular as concerns the application methods and interpretation of agreements in place, and, where necessary, receives reports on progress made on the Business Plan.
The Labour Relations Protocol confirmed the role of the Digital Transformation, AI and Privacy Committee, a bilateral body tasked with monitoring the impacts arising from technological innovation and the new digitalisation measures introduced by the Group, specifically as regards impacts on bank branches, with findings presented at the negotiating table with the Group. The Protocol also provides for local level meetings on a more or less quarterly basis, providing additional opportunities for engagement with trade unions.

Finally, the Joint business policy and corporate climate committee adopts uniform criteria for assessing reports of business conduct in breach of the Group's values and the provisions of collective bargaining agreements concerning business policy.

The development of labour policies is managed by a specific unit in the Governance Area of the Chief People & Culture Officer, which is tasked with drawing up trade union agreements and monitoring their implementation. The Head of Relations with Workers' Representatives and Welfare is responsible at the operational level.

Remuneration policies
At the national level, Intesa Sanpaolo is a member of the Italian Banking Association and applies the National Collective Bargaining Agreement for the credit sector. The bank actively participated in the last renegotiation of the agreement, signed on 23 November 2023. For relevant delegated matters, direct employment relationships are also governed by enterprise-level collective bargaining.

The enterprise-level agreement addresses remuneration matters in relation to pay structure and pay levels for the employment grades envisaged under the national collective bargaining agreement. Enterprise-level bargaining also sets out specific provisions for career development paths and additional employee benefits, such as meal vouchers. The development of remuneration policies is tasked to the Governance Area of the Chief People & Culture Officer.

In relation to employees outside of Italy, the Group complies with collective bargaining agreements where they exist, or the provisions of local labour law. The Group undertakes to apply standard conditions across the countries where it operates.

The application of collective bargaining agreements to Group employees ensures an adequate salary at national level, in line with the requirements of legislation. The 23 November 2023 agreement signed jointly by Intesa Sanpaolo, the Italian Banking Association and national trade union representatives provided for an average pay rise of 435 euro per month, applicable in tranches: 250 euro as from 1 July 2023, 100 euro as from 1 September 2024, 50 euro payable as from 1 June 2025, and 35 euro as from 1 March 2026.

In addition, in line with the Remuneration and Incentive Policies of the Group, where a revision process is activated for the pay levels of personnel in positions covered by enterprise-level agreements, the guidelines applicable were set out. The guidelines highlight the need for comprehensive consistency in pay initiatives and for special focus to be placed on gender equality, outlining a priority scale that takes into consideration market benchmarks for the remuneration of positions covered and the performance of people. The approach respects the principle of "equal pay for equal work" and seeks to help make the Group an "employer of choice" able to attract, motivate and retain the best talent.

In particular, the Group ensures that its remuneration and incentive systems and all decisions concerning pay are based on merit and professional skills, regardless of the gender or other diversity of the person, and that they uphold the principles of equity. For more information on this topic, reference should be made to the paragraph "Equal pay policies" in the "Diversity, Equity and Inclusion" section. See also the Report on Remuneration Policy and Compensation Paid, published on the institutional website of the Group.

In 2015, under collective bargaining provisions and specific trade union agreements, the Group and trade unions agreed to the introduction of a broad-based short-term plan (PVR), which incorporates a productivity bonus for the workforce as a whole into the incentive system designed to reward outstanding performance by awarding a growing bonus for the delivery of set objectives.

For all Group company people of the Italian boundary under the National Collective Bargaining Agreement, with the exception of Risk Takers and Middle Management, for whom specific incentive systems are envisaged, a trade union agreement was signed on 15 April 2025 for the payment of the 2025 PVR, both on a distributive-participative basis, to reward the collective contribution made toward year-end earnings and delivery of the targets set by the 2022–2025 Business Plan, and on an incentive basis, to reward team effort and performance.

The 2025 PVR is made up of two components:
- Base Bonus, awarded on the basis of the professional profile, consisting of a fixed amount for all employees and an additional quota for incomes up to 40 euro.

- Excellence Bonus, awarded on the basis of outstanding individual performance and team objectives, consisting of specific components reserved to network personnel in the Banca dei Territori Division.

The amount of the Base Bonus awarded ranged from a minimum of 1,275 euro to a maximum of 3,140 euro, on top of which the Excellence Bonus will be paid.

As in other years, in 2025 employees absent for long periods of time were still able to participate in the PVR, with special attention paid to protecting employees away on parental leave.
In addition, confirming the importance that the issues of assistance and services for families and work-life balance have in the Group's policies, employees had the option of requesting that all or part of their PVR bonus be paid in the form of welfare services, taking advantage of the opportunities that the tax regulations in the area of workplace productivity remuneration offer employees year by year. Finally, for personnel with an insurance contract within the Italian boundary, the agreement of 30 April 2025 provided for the awarding of the Additional Variable Bonus (AVB) and the Social Bonus.

Metrics on collective bargaining coverage and social dialogue

As at 31 December 2025, a total 89% of Group employees were covered by applicable national collective bargaining agreements, with 100% of Italian employees covered. These values are in line with those disclosed in 2024. In countries where coverage by collective agreements is not envisaged, the Group handles labour relations with employees in compliance with the provisions of local labour law.

For the Italian boundary only, the proportion of employees who are union members is 74.6%, which is in line with the 76% recorded in 2024[215].

The following tables shows the coverage rate of employees covered by collective bargaining agreements and workers' representatives for countries where the Group's workforce is significant. As specified in the section "Characteristics of Group Employees and Breakdown", Italy is the only country where the Group's workforce is significant.

Table - Collective bargaining coverage and social dialogue

Coverage rate	Collective Bargaining Coverage		Social Dialogue
	Employees – EEA[216]	Employees – non EEA	Workplace representation (EEA only)
0-19%			
20-39%			
40-59%			
60-79%			Italy (74.6%)
80-100%	Italy (100%)		

Finally, we report that no agreements exist for the representation of employees by a European Works Council (EWC), a Societas Europaea (SE) Works Council or a Societas Cooperativa Europaea (SCE) Works Council.

Metrics on adequate wages

The Group is committed to guaranteeing an adequate wage for all its employees. In this regard, similarly to 2024, in each of the countries where the Group operates, all employees are paid an adequate minimum wage.
Here, "adequate minimum wage" means the minimum set by law at the national level or determined on the basis of collective bargaining agreements[217].

Processes for engaging with own workers and their representatives

The labour relations model, adopted and developed by the Group together with trade unions, promotes dialogue between the parties on a continuous basis. The model is a way of identifying the most suitable solutions and tools for addressing and managing the various growth and reorganisation phases. As mentioned, trade union relations are organised and developed also through the work of bilateral company/trade union bodies, formed with the aim of analysing, identifying and proposing positive actions, solutions and tools in the areas of equal opportunities, welfare, safety and sustainable development. Operational responsibility for ensuring dialogue with workers' representatives is tasked to the Relations with Workers' Representative and Welfare unit in the Governance Area of the Chief People & Culture Officer.

Relations with trade unions are regulated within an industry framework and by the "Labour Relations Protocol", which was recently renewed with the agreement dated 18 July 2025, which has made it possible to implement a specific trade union relations model within the Group. Accordingly, meetings with trade union representatives are held at the Group Delegation level and/or through the Welfare, Safety and Sustainable Development Committee, generally on a weekly basis. The Consultation Committee is convened whenever the need arises for joint efforts to identify possible solutions to disputes and for meetings to

[215] The data refer to workers within the Italian boundary who have a labour contract of the credit or insurance sector and who were union members at 31 December 2025.
[216] European Economic Area.
[217] For countries in the European Economic Area, reference is made to Directive (EU) 2022/2041 on adequate minimum wages; whereas for countries outside the European Economic Area, wage levels are set in accordance with international, national or subnational standards or with collective bargaining agreements, providing they guarantee dignified living standards.

discuss labour matters of general interest to the Group. The Joint Business Policy and Corporate Climate Committee generally meets on a quarterly basis. Meetings are also held on the local level, generally on a quarterly basis, as an additional opportunity to engage with trade unions.

Dialogue with trade unions regarding company projects is ongoing, prompt and aimed at identifying shared solutions to the various requirements that come to the attention of the parties. This also takes place in accordance with trade union coverage in Italy[218] and in line with national coverage in the sector. More than 30 agreements were made in 2025.

Remediation processes for employees and their representatives and reporting channels

The Group provides various company channels for reporting grievances, needs and concerns, such as the Code of Ethics inbox and the whistleblowing channel. The Code of Ethics inbox allows any breaches to be reported via e-mail, guaranteeing maximum confidentiality and protection from any form of retaliation, discrimination or penalisation. The whistleblowing channel allows any user covered by the process (employees, contractors, suppliers, consultants, etc.) to report suspected infringements, both actual or potential, via the specific mechanisms activated 24/7. For further information on the Code of Ethics reporting channel and the whistleblowing procedure, see, respectively, the sections "Policies, targets and actions related to business conduct" and "Whistleblowing policies, targets and actions" in the ESRS G1 – Business Conduct chapter.
In this respect, collective bargaining processes additionally envisage occasions for assessing any infringements and specific mechanisms that are activated in the event of a dispute. Where a breach is found to infringe the law, the process is no longer handled at the company level, but through national/international legal process. The "Labour Relations Protocol" similarly envisages bodies and processes to check application methods and the interpretation of agreements in place. One such body is the Consultation Committee, in which the Group and trade union representatives, inter alia, work together to identify possible solutions for disputes arising at the local level.

The Joint Business Policy and Corporate Climate Committee adopts uniform criteria for assessing reports of business conduct in breach of the Group's values and the provisions of collective bargaining agreements concerning business policy. The objective is to guarantee constant monitoring and the formalisation of action proposals for preventing critical situations. Such reports can be made directly by Group people and/or trade unions to the dedicated inbox, which guarantees the protection of personal data and the constant monitoring of reports.

Where necessary, agreements contemplate occasions for discussion and checks on their implementation in cases such as changes in company organisation, with specific and timely meetings held with the Group Delegation, Welfare, Safety and Sustainable Development Committee and/or the Consultation Committee.

Job protection targets and metrics[219]

Over the 2022-2025 Business Plan, which ended on 31 December, Intesa Sanpaolo reallocated and reskilled 9,327 Group people, exceeding the Plan target of 8,000, on priority initiatives, enhancing the most strategic roles and skills for the Group through upskilling and reskilling programmes. In 2025 alone, 2,425 employees were involved, in addition to the 6,902 people who had been reskilled at 31 December 2024. Overall, these programmes aimed to improve the skills of the Group's employees and help them to develop professionally, enhancing their contribution to high-value activities.

Target: Reskilled/upskilled people (2022–2025) – Number of people acquiring new skills and reskilled for new profiles[220]

	Date	Value
Baseline[221]	31.12.2021	-
Final number	31.12.2024	6,902
Final number	31.12.2025	9,327
Target	2025	8,000

Actions related to job protection and labour relations

For Intesa Sanpaolo Group, job protection is also a key element of the 2022–2025 Business Plan. Accordingly, with a view to fast-tracking generational changeover within the framework of technological transformation, with a resilient and sustainable business model for a scenario of digitalisation and artificial intelligence, on 23 October 2024 Intesa Sanpaolo sealed an agreement enabling the roll-out of service and business models designed to be simpler and more effective for customers, but also to give time for professional development activities, involving a major upskilling/reskilling plan to tackle the need to spread new digital skills and cover new job roles.
The agreement envisages the cutback of the workforce by 4,000 employees by the end of 2027, exclusively on a voluntary basis for retirement or access to the industry solidarity fund. Concurrently, again under the trade union agreements in place, including the 23 October 2024 agreement, 4,600 new permanent hires were planned by 31 December 2025, plus another 3,500 permanent new hires by 30 June 2028, for the balanced management of the effects arising from the cutback and in order to support the Bank's growth.
In addition, an agreement was signed in December 2025 that provides for further voluntary exits for employees who have acquired, or will have acquired by 31 December 2026, the right to a pension. Consequently, new hires will be made with the same care and in the same proportions established by the Agreement of 23 October 2024, with particular attention to women victims of violence included in the "protection programmes" under Article 1 of the National Protocol for the Banking Industry of 24 November 2025.

---

[218] For more details, reference should be made to the "Metrics on collective bargaining coverage and social dialogue" section.

[219] The information relating to the "Reskilled/upskilled people" indicator set out in this section is reflected in the section "2025 in brief" – paragraph "The 2022-2025 Business Plan and the new 2026-2029 Plan" of the Report on operations which accompanies the consolidated financial statements.

[220] Entity-specific metric.

[221] Plan target that represents the planning of a new activity that does not have a base Value.

In this framework, in 2025, approximately 2,500 employees left and roughly 1,300 new hires joined the Bank, completing the plan for the 4,600 hires envisaged. The Bank's employment policies also envisage mixed contracts for new hires, involving a working method whereby individuals are engaged on two contracts, one on a permanent part-time employment basis and one as a self-employed financial advisor for off-site offering. At the end of 2025, 2,000 people were in service on such a contract.

The Group continues to pursue its commitment to taking action to foster growth opportunities and enhance human capital. This contributes to a stronger brand reputation and the development of a culture of responsible innovation.

In keeping with the strategy adopted and in view of the Business Plan target to reallocate and reskill/upskill 8,000 people by 2025 for new priority initiatives, in 2025 more than 2,400 people (9,327 at the end of the Plan) were involved in reskilling and upskilling plans primarily targeted at business development (such as Digital Branch), controlling functions (Enabling Integrated anti Financial Crime – ENIF/Know your customer – KYC), technological projects (Application Digitalisation, Data & Analytics) and training on data, AI and technology (MATRIX project) [222].

From a geographical point of view, the people involved in the various programmes were located throughout the entire country, leveraging a "delocalisation" concept (i.e. the transfer, where possible, of certain activities to decentralised locations away from the main offices) implemented on an increasingly wider basis, also thanks to the growing reach of new working methods as part of the "Next Way of Working" project[223].

In the Governance Area of the Chief People & Culture Officer, the Group Internal Mobility & Reskilling Center oversaw mobility tools and processes in 2025, assessing the availability of internal people and their relative skill sets, on the basis of needs identified and facilitating the adequate staffing of new areas.

Since the start of the Business Plan in 2022, activities have been monitored and reported on a quarterly basis, with a view to delivering all the Plan's targets by its conclusion at the end of 2025. People involved in change programmes were sent regular anonymous surveys to check their level of satisfaction, motivation and engagement in the activities of their new jobs. To date, the feedback have shown high levels in all the areas.

Social protection instruments[224]

The Group introduced new metrics (so-called entity-specific metrics) in the 2025 Report, for which comparative data are not presented. The Group places particular importance on social protection for its employees. In this context, all Group employees are covered by social protection measures, i.e. the set of measures aimed at reducing and preventing poverty and vulnerability throughout the life cycle, whether through public systems or company benefits. The coverage includes loss of income due to illness, unemployment, employment injury or acquired disability, taking parental leave and retirement.

In full compliance with the legislation in force in the countries in which the Group operates, social protection mechanisms relating to unemployment coverage and pension contributions are guaranteed for all categories of workers, in accordance with the methods and timelines set out in the relevant local legislation. It is noted that for a Group company based in the United Arab Emirates, the jurisdiction of the Dubai International Financial Centre (DIFC) and local legislation (DIFC Employment Law) do not provide for a public pension scheme nor a public unemployment benefit scheme equivalent to those in force in the European Union for fixed-term employment relationships. In any case, the Company ensures full compliance with the applicable regulatory framework in the DIFC, guaranteeing the adoption of all safeguards provided for by local legislation, as well as adherence to mandatory protection mechanisms. These include the post-employment benefits provided for by legislation, in line with applicable contractual and regulatory provisions.

Diversity, equity and inclusion

Diversity, equity and inclusion policies

The Group has adopted Principles on Diversity, Equity & Inclusion ("DE&I Principles") to give concrete force to its commitment to promoting and spreading, both internally and externally, an inclusive policy that values all forms of diversity. Intesa Sanpaolo Group's DE&I Principles lay out the framework of its inclusive approach to all forms of diversity, based on respect for all individuals, the enhancement of talent, meritocracy and equal opportunity. It also sets out concrete commitments for the promotion of an inclusive environment and identifies the conduct expected of all Group people. A specific section is dedicated to commitments on gender equity, with a focus on hiring processes, pool of candidates for the promotion to senior roles, appointments to management positions and in the succession plan for top management roles. The DE&I Principles stress the principle of zero tolerance of any form of discrimination and envisages a specific channel for reporting breaches. The regular monitoring of the Group's commitments is entrusted to the Diversity, Equity & Inclusion Table (the "DE&I Table")[225].

The DE&I Principles aim to build a pluralistic and respectful workplace where all forms of diversity are protected, be it in terms of gender, gender identity and/or expression, emotional and sexual orientation, marital and family status, age, ethnic origin, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental conditions or any other individual traits of a person, also in relation to the expression of opinion. This objective is pursued as an ethical duty towards all Group people and towards all stakeholders. At the same time, it is a priority for business and sustainability, as diverse ideas and skills promote innovative solutions and more effective decision-making. It also enhances

[222] For more information on the project, see the section "Actions Related to Training and Employee Development".

[223] This refers to the process adopted for the flexible planning of work activities, with the aim of using company spaces more efficiently and in a way that is consistent with the next way of working.

[224] Entity-specific metric.

[225] The Table is made up of: Chief People & Culture Officer; Chief Sustainability Officer; Head of Diversity, Equity & Inclusion; Head of People Management & Development; Human Resources Heads of the Divisions; Head of Group Reward & Performance.

the reputation of the corporate brand, improving the ability to retain, motivate and attract the best talent. Finally, it also considers the improvement suggestions from certifying bodies, international benchmarks and stakeholders in general, contributing to the identification of best practices for inclusion.

With respect to the commitment to gender equity, the DE&I Table considers and monitors compliance with the following principles, using a dedicated methodology:
- gender balance in annual hires;
- gender balance, on an annual basis, in the pool of candidates for first appointment to managerial positions;
- gender balance in the pool of candidates for senior management positions in the annual total;
- at least one candidate of the less-represented gender for each position in the pool of candidates for top management positions (chief and executive directors).

Specific commitments and affirmative actions are also envisaged to promote inclusion, such as:
- promoting the accessibility of premises, communication, information and training, including the availability of equipment/applications and considering any conditions of disability;
- guarantees in company regulations affording the same benefits for people in same-sex relationships and in mixed-sex relationships;
- fostering the value of inclusion through training, awareness-raising and the use of inclusive language;
- creating of an inclusive workplace based on trust, respect and the valuing of personal diversity;
- combating any form of discrimination or harassment;
- promoting inclusion in the local areas and socioeconomic contexts in which the company operates.

The DE&I Principles apply to all Group people in their dealings with internal and external stakeholders and to the members of the management and control corporate bodies. In relation to people working with the Group as contractors and not as employees (such as agents/freelance financial advisors, suppliers and subcontractors), they are required to respect the values and principles set out herein by acknowledging a specific policy statement addressed to them. The Group also strives to support and promote the adoption of the values and principles of diversity, equity and inclusion by customers – in particular Business & Corporate customers – within the framework of their ESG policies. To promote dissemination, the DE&I Principles have been published on the company intranet and the Group's official website, making them available to all stakeholders.

The DE&I Principles were updated ad approved by the Board of Directors in December 2024. The new version was published in early 2025 The amendments concerned the inclusion of reporting on pay gap matters to the Board of Directors and the analysis of the gender coverage of merit-based initiatives.
The Chief People & Culture Officer is tasked with identifying objectives and the strategy for achieving them and with ensuring that the effort of all Group units is adequate and consistent with the terms of the DE&I Principles. The officer also reports annually to the Board of Directors of the Parent Company and to the Risk and Sustainability Committee on outcomes delivered.

Finally, in line with the DE&I Principles, the Group is committed to stepping up engagement with stakeholders representing specific interests (such as employee resource groups – ERGs) and that present improvement proposals, with a view to openness and constructive dialogue, including the planning and roll-out of joint actions. The activities and interaction methods with the Communities, as well as a specific definition of them, are discussed in detail in the subsequent section on engagement processes.

The "Rules for Combating Sexual Harassment" outline the Group's firm commitment to preventing and combating any form of sexual harassment and ensuring full respect and maximum protection for the dignity of the individual. Under the rules, zero tolerance is shown of harassment of any kind. The objective is to create the conditions for episodes of sexual harassment to be reported, ensuring an effective and strict process for managing reports that guarantees maximum rigour and protection of confidentiality for the people involved.
The rules apply to: all employees of Intesa Sanpaolo Group in carrying on their duties both inside and outside the group; agents and freelance financial advisors/contractors in carrying out their duties with internal and external people; temping staff; people on internship/work experience programmes; and business partners of the Group in their contact with the Group for any reason. The same rules similarly apply during social events, business travel, training and occasions outside normal working hours but connected with work activities, as well as outside the workplace in cases where the sexual harassment offender and the victim both belong to the categories covered by the rules. The process for managing reports is guaranteed by the head of the Diversity, Equity & Inclusion unit.

All Group banks and companies are required to adopt the rules, adapting them as necessary to their own regulatory framework with the approval of the Parent Company's Diversity, Equity & Inclusion unit. Where the rules are more restrictive than local law, Intesa Sanpaolo nevertheless requires their application, regardless of whether conduct is prohibited or not by local law. For more information, see the DE&I Principles and the Rules for Combating Sexual Harassment, published on the institutional website of the Group.

Finally, with respect to the Italian boundary and in relation to matters concerning disability and chronic disease, an inter-functional Disability Management working group is in place, set up under the inclusion agreement signed in 2018 and in line with the Principles on Diversity, Equity and Inclusion subsequently published in 2020.
Working in synergy with the Diversity, Equity and Inclusion unit, the inter-functional Disability Management working group meets on a regular basis with the trade unions through the Welfare, Safety and Sustainable Development Committee to identify the initiatives to be undertaken.

The Workers' Benefits units is responsible for the coordination of the inter-functional Disability Management working group, which involves the active participation of around 80 people representing multiple organisational units. The objective is to unite

different professionals in supporting and promoting the contribution of all Group people and foster a climate conducive to well-being and support in company life, while expanding the welfare options available. On the one hand, individual reports are handled by identifying the reasonable adjustments set out in the UN Convention on the Rights of Persons with Disabilities. This entails making changes and adjustments to ensure that people can perform to the best of their professional ability, regardless of their health, while meeting business needs. On the other hand, work is carried out on dedicated project streams. For example, these streams focus on spreading culture, training and accessibility topics.

For further details on the impacts, risks and opportunities (IROs) covered by the policies relating to diversity, equity and inclusion, reference should be made to the IRO table set out in the paragraph "Materiality assessment" in chapter ESRS 2 – General disclosures.

Metrics on diversity by gender and age

The table below shows the age distribution of employees by number and percentage for the past two years. The figure shows the headcount of all employees in service at the end of the reporting period. The 2025 figures show percentage values in line with those of the previous year for all age groups.

Table - Number and percentage of employees by age group

Number and percentage of employees	2025	2024
Under 30 years old	6,213	6,339
Between 30 and 50 years old	43,173	45,024
Over 50 years old	41,403	42,176
% under 30 years old	6.8%	6.8%
% between 30 and 50 years old	47.6%	48.1%
% overo 50 years old	45.6%	45.1%

The Group introduced new metrics (so-called entity-specific metrics) in the 2025 Report, for which comparative data are not presented. In particular, the following tables provide a breakdown of employees by age group and gender, expressed as both the number of employees and a percentage.

Table – Distribution of employees by age group and gender (number of employees and percentage)[226]

Number and percentage of employees	2025	
	Number	%
Under 30 years old	6,213	6.8%
Men	2,675	2.9%
Women	3,538	3.9%
Between 30 and 50 years old	43,173	47.6%
Men	17,808	19.6%
Women	25,365	28.0%
Over 50 years old	41,403	45.6%
Men	20,688	22.8%
Women	20,715	22.8%

In terms of the gender distribution of employees at top management (top management) level at 31 December 2025, of the total number of 26 employees, 76.9% were male and 23.1% were female. The following table specifically shows the gender distribution of employees in top management positions, by number and percentage of total employees for the past two years. There are no differences compared to 2024.

For this purpose, top management includes the Managing Director and CEO of Intesa Sanpaolo and direct reports, the Chief Audit Officer, the Deputy Heads of the Divisions and Governance Areas (at the reporting date, the Deputy Head of the IMI Corporate & Investment Banking Division and the Deputy Chief Financial Officer), and the manager responsible for preparing the company's financial reports.

[226] Entity-specific metric.

Table - Number and percentage of employees by gender at top management level

Number and percentage of employees top management level	2025	2024
Female	6	6
% of total at top management level	23.1%	23.1%
Male	20	20
% of total at top management level	76.9%	76.9%
Other	-	-
% of total at top management level	-	-
Not disclosed	-	-
% of total at top management level	-	-
Total	26	26

Equal pay policies

Intesa Sanpaolo Group adopts gender-neutral remuneration and incentive policies, which contribute in the pursuit of equality for all employees. The policies ensure that Group people are paid equal remuneration for work of equal value, also in terms of the conditions for its awarding and payment.
In particular, the Group ensures that its remuneration and incentive systems and all decisions concerning pay are based on merit and professional skills, regardless of the gender or other form of diversity as discussed earlier, and that they uphold the principles of equity.
To enable the application of gender-neutral policies and assess their effectiveness, the Group adopts:

- systems for measuring organisational positions, taking into account the responsibilities and complexity handled by the different roles. Specifically for the management cluster, the Group has adopted a Global Banding system based on the uniform grouping of managerial positions that are similar by levels of complexity/responsibility managed, measured using the International Position Evaluation (IPE) methodology. The professional cluster is instead segmented by career title attributed on the basis of specific criteria (seniority, autonomy and complexity, as well as skills), so as to give a granular reflection of the level of professional contribution provided in one's work and the progressive specialisation of skills, or by professional group, also considering the system of roles set out in enterprise-level collective bargaining agreements;
- for the management cluster, market benchmarks are associated to each Global Band and differentiated by professional category and geographical area. For professional positions, career titles are associated to market trends differentiated by professional category and geographical area;
- incentive systems tied to objective parameters that allow merit and performance to be rewarded.

The Board of Directors of Intesa Sanpaolo, with the support of the Remuneration Committee, assesses the gender-neutrality of policies on an annual basis and measures the gender pay gap, and its change over time, using an internal methodology set in accordance with industry regulations. For the purpose, the gender pay gap has so far been measured for positions of equal value and on a country by country basis distinctly for: (i) Risk Takers, excluding members of the Board of Directors; (ii) members of the Board of Directors considering its management function; (iii) members of the Board of Directors considering its supervisory function; and (iv) all remaining personnel. The reasons for any pay gaps found are duly documented and, where necessary, corrective action is taken.

The Group's Remuneration and Incentive Policies and the related procedures for their adoption and implementation are submitted annually to the shareholders' meeting which approves them by a binding vote, upon proposal of the Board of Directors. The Board of Directors is responsible for the proper implementation of these Policies. For additional information on this topic, see the Report on Remuneration Policy and Compensation Paid, available on the institutional website of the Group.

Metrics on equal pay

The value stated below shows the gender pay gap between male and female employees, expressed as the percentage gap in average pay levels between female and male employees, as required by the ESRS standards applied for the purposes of this report.

In 2025, the pay gap amounted to 26.8% (25.8% in 2024).
The pay gap was measured on the basis of the average gross hourly pay level of Group employees, calculated considering all supplementary and variable components of the salary package, including wages and other compensation paid in cash or as benefits to employees for their work on an annualised basis, without considering their different countries, duties, organisational role or seniority level.
Variable components tied to long-term incentive systems were recognised on an accrual basis.
The measure covers all employees in service at the companies scoped into the Consolidated Sustainability Statement at 31 December 2025, with the exception of Risanamento S.p.A..
Any balances expressed in a currency other than the euro were translated into euro applying the exchange rate used by the Commission for Financial Planning and Budgeting in December 2025[227].

[227] For this metric no corrective factors were applied to remuneration paid to take into account the cost of living in the country of reference.

With respect to the gender pay gap, starting this year, the adjusted gender pay gap[228] has been measured using the same database and company scope as that used to calculate the gender pay gap under the ESRS. This calculation takes into account the pay gap between women and men, net of objective professional and organisational factors that are gender neutral. For 2025, the figure was 1.6%, estimated using a statistical regression model. This model takes into account the following factors: country of employment, job classification, seniority, and individual performance. The aim is to distinguish and neutralise the component of the pay gap that can be explained by objective, gender-neutral criteria.

The total remuneration rate of the Group for 2025 was 157.2 (135.2 in 2024). The rate is measured as the ratio of total annual remuneration of the highest-paid individual to the median annual total remuneration for all employees, excluding the highest-paid individual[229]. The highest-paid individual was the CEO of Intesa Sanpaolo Group, whose remuneration includes both a fixed component and variable components. The median was calculated using the same criteria and covering the same scope described for the gender pay gap metric. The increase in the remuneration rate is due to a set of factors linked to the rise in the CEO's fixed remuneration, which was approved by the Board of Directors in relation to the role of General Manager in 2024, and effective from 1 December 2024. Indeed, this increase led, on the one hand, to a rise in the maximum annual bonus that can be accrued and, on the other, to an increase in the value of benefits that are calculated on the basis of gross annual remuneration. To ensure consistency with the database used for the other indicators, the methodology for calculating the annual incentive system changed between 2024 and 2025. In particular, the presentation changed from a cash basis to considering the bonus accrued in the year.

Processes for engaging with own workers and their representatives

The engagement process with the own workforce is carried out under the responsibility of the head of the Diversity, Equity & Inclusion unit, through: (i) trade union representatives; (ii) constant dialogue with communities (employee resource groups or affinity groups); and (iii) surveys and listening initiatives, also at the individual level.

Inclusion is a material topic for the Group in the framework of trade union negotiations, with an Inclusion & Equal Opportunity Framework Protocol made in 2014 that was the basis for a specific agreement and which is an integral part of the Group's Second-Level Collective Agreement. As regards sexual orientation and gender identity, specific company policies were introduced back in 2014 to define the framework for the extension of company benefits to same-sex unions. Alongside the promotion of the specific inter-functional working group for the needs connected to disability and disease, the Inclusion Agreement envisages the roll-out of experimental projects, with the support of the Welfare, Safety and Sustainable Development Committee, aimed, inter alia, at promoting the employability of people with autistic spectrum disorders. These projects are partly funded by the Arrotonda Solidale ("Round-down Solidarity") initiative, which involves the contribution, on a voluntary basis among all the Group's people, of the residual amount collected from rounding down net monthly salaries to the nearest euro. In turn, the Company contributes the remaining cents to make a total of one euro for each Group person taking part in the initiative. In addition, as set out in the section "Job protection and labour relations", within the Italian scope, the Group continuously promotes dialogue with the trade unions and discussion on the Group's initiatives aimed at identifying shared solutions to address the different needs brought to their attention.

ERG communities are bodies that by their nature represent the interests and perspectives of affinity groups. Examples include ISPROUD, the Intesa Sanpaolo LGBTQ+ and Allies community, and "ARTICOLO19 – Disability & Citizenship", which aims to support people with disabilities and their families. "ARTICOLO19 – Disability & Citizenship" aims to accompany and guide people through the content of the disability reform (Law no. 227/2021) for the full implementation in Italy of the Principles of the UN Convention on the Rights of Persons with Disabilities. In addition, it organises meetings and personal and group exchanges on crucial topics such as, for example, combating ableism, preventing institutionalisation, autism and neurodivergences and job placements, engaging from time to time also with the relevant departments and Governance Areas, in agreement and in close synergy with the reference DE&I and Workers' Benefit - Disability Management units. Diversity and inclusion are promoted through internal and external communication channels, with information provided on the company Intranet for accessing available services and opportunities. The DE&I and Workers' Benefit units are at the disposal of ERG communities to listen to their concerns and, when matters of specific interest to a community are addressed, engagement is arranged before any initiative is pursued.

Finally, surveys are conducted every two years through questions added to the Climate Analysis and other surveys, with no set frequency, on topics specifically linked to DE&I issues. In 2024, a questionnaire was administered to survey "Stereotypes, harassment and gender violence – What do you think?" and, in 2025, the results were analysed to assess any actions and initiatives to be implemented. Additional specific listening initiatives are promoted with the company population, such as specific post-event surveys. Other questionnaires instead survey people belonging to a specific area or division on relevant topics or areas of action, and to steer targeted projects. Group people can instead request contact or send in suggestions by e-mail to the DE&I unit.
The various engagement initiatives provide the input for reports on the response and appreciation rates of specific initiatives, projects or events. The overall results are anonymous and help to inform future initiatives, in which trade union representatives or community members may be involved.

Remediation processes for employees and their representatives and reporting channels

Two types of channels (the Code of Ethics inbox and the whistleblowing system) are available to Group people to report needs/concerns/alleged breaches of their rights, facilitating the Group in remedying the negative impacts they may suffer. For further information on the Code of Ethics reporting channel and the whistleblowing procedure, see, respectively, the sections "Policies, targets and actions related to business conduct" and "Whistleblowing policies, targets and actions" in the ESRS G1 – Business Conduct chapter.

[228] Entity-specific metric.

[229] For this metric no corrective factors were applied to remuneration paid to take into account the cost of living in the country of reference.

In addition, the DE&I unit provides an inbox to which people can write to express their needs or concerns on matters of competence. The inbox is monitored by a member of the unit and replies are given to all requests or messages received, also with the involvement of any other competent functions in relation to the matter raised.

In addition, the "Rules for Combating Sexual Harassment" provide for a specific reporting channel for the matter, setting out the roles of all the organisational units involved. Working tables to address reports of sexual harassment are activated by the DE&I unit, in its capacity as guarantor of the process. Working tables bring together various functions, which work together to guarantee that reports of sexual harassment are handled appropriately, confidentially and in accordance with company policies, ensuring victims receive all the support they need and that corrective measures are adopted. The areas and professional roles involved are: Diversity, Equity & Inclusion; Human Resources Management; Audit; Legal Affairs – Group General Counsel; Health & Safety.
Reports are duly investigated and, where sexual harassment or any breach of other Bank regulations is found, the resulting disciplinary action is decided by the competent Labour Proceedings function. Depending on the specific situation, additional remedial measures may be defined to protect those involved in an incident of sexual harassment. A psychological counselling and legal advisory service is always available to people involved in a sexual harassment case, even where the harassment took place outside the workplace (in the private sphere, for instance). For further information of a quantitative nature on such cases, see the section "Metrics on human rights in the workforce".
Specific reporting channels are envisaged in the DE&I policies and in the Rules for combating sexual harassment (for example, the "segnalazioni_molestie@intesasanpaolo.com" email inbox is active for sexual harassment). Group people are also made aware of the reporting channel for sexual harassment through an annual mandatory training course on the topic. The aim of this course is to raise awareness among all participants of what constitutes harassment and its consequences. In 2025, around 66 thousand people participated in this training.

Information on the number of times a working table is activated during the year for the management of sexual harassment reports and on the outcomes of the relative investigations are recorded in a special register. Under the Rules for Combating Sexual Harassment, the effectiveness of the reporting channel is ensured via the constant monitoring of the e-mail inbox and by confirmation of receipt of reports, which is communicated to the person making the report within one working day from receipt.

The rules are published on the company Intranet and all Group people, in accordance with the Group's Internal Code of Conduct, are required to acknowledge them, contacting the competent units if they have any doubts as to their interpretation. Furthermore, reporting sexual harassment is the topic of a specific survey which looks at various aspects, including trust in the channel used. The questionnaires reiterated the commitment to respecting and protecting the victim and/or person making the report; in fact, both for reports concerning breaches of the Principles on Diversity, Equity and Inclusion and reports of sexual harassment, measures are in place to protect people from any retaliatory action.

In relation to disability-related matters, Group people can turn for help to their Human Resources Management office, as their first contact for this matter. A dedicated inbox is provided for the purpose (disability.management@intesasanpaolo.com), with a specific section on the Intranet. Disability issues are regularly discussed with trade unions within the framework of the Welfare, Safety and Sustainable Development Committee.

The work of the inter-functional Disability Management working group in practice involves the management of individual reports, as well as a range of other activities, such as the governance of IT accessibility matters, the delivery of dedicated training to all Human Resources Management offices, managers in charge of people with sensory disabilities and top management, and awareness-raising cultural initiatives engaging all Group people.

Diversity, equity and inclusion targets

The 2022–2025 Business Plan, which ended on 31 December, required a gender balance (approx. 50% male and 50% female) in new appointments to senior management positions (first and second-level reports to the CEO). The progress towards achieving this target was monitored by the Diversity, Equity & Inclusion Table on a quarterly basis. The setting and monitoring of the target and measurement of progress did not involve engagement with the workforce or trade union representatives.

Appointments are considered "to senior positions" when they:
- open "access" to first or second-level reporting positions to people in lower levels of the organisational ladder or who are external to the Group;
- promote people from second-level to first-level positions reporting to the Managing Director and CEO.

Where a person is appointed to more than one senior position, each appointment is considered separately. For the purposes of the target set, "horizontal appointments", which do not involve a step up in the organisational ladder, are not considered, both where a person changes role and where a person is assigned a new role in addition to their existing area of responsibility. In the case of transition periods, where a person temporarily steps down from a senior position (first or second-level report) but will later return to their level (for example, pending the creation of new positions that have been planned), such appointments are not considered if the person "steps back up" the same level previously held. Such appointments are treated as being equivalent to "horizontal appointments" and the step down/step up of the person to a senior position is considered purely a temporary measure for the creation or preparation of the new organisational role. Appointments that instead lead a person to step up the organisational ladder to a higher position than the previously held are considered. Only the organisational levels effectively included in the organisational chart are considered.

On the basis of the organisational structure in place at 31 December 2025, over the Plan period, 26 appointments were male (49%) and 27 appointments were female (51%)[230]. This contributed to achieving a 29.4%[231] female presence in senior leadership (organisational levels -1 and -2 below the CEO).

Diversity, equity and inclusion actions

The Group implements the DE&I Principles by promoting equal opportunities and enhancing diversity as a strategic lever for growth and innovation through initiatives and actions. Through dedicated programmes and concrete actions, it is committed to supporting the attraction and development of talent, fostering a sense of trust and belonging and ensuring an inclusive work environment that prioritises people's well-being.

DE&I actions and initiatives cover all Group people, with each initiative targeted at specific clusters. Some initiatives are also run outside the Group, reaching out to groups such high school pupils and university students. While some actions are stand-alone events (such as awareness-raising or training sessions), others are organised on a repeat basis to cover the entire cluster targeted, lasting several months or more than one year.

During 2025, the DE&I unit continued its work promoting an inclusive work environment, capable of welcoming and giving value to all forms of diversity. The Group's inclusion strategy forms the groundwork for effectively governing the coordination of initiatives and is backed by the ongoing measurement and assessment of outcomes delivered. The DE&I Working Group, made up of representatives from each division, governance area and other key units involved in the planning and roll-out of initiatives, continued its alignment, coordination and discussion work, enabling continuous exchange between the DE&I unit and all Group entities.

With the ongoing support of the International Banks Division (IBD), discussions about DE&I topics with the division's banks, which were launched in 2024, continued in 2025. In 2025, the DE&I Working Group was opened up to include IBD banks, with the aim of fostering a more participatory and shared dialogue on topics related to inclusion. In particular, discussions on disability-related topics continued, with the aim of establishing a shared approach to initiatives. Following the extension of inclusive leadership training to all managers across the Group, the second training module on inclusive leadership, focusing on disability and mental health, was rolled out to the IBD banks. This module has already been completed by the managerial population in the Italian boundary (approximately 6,500 managers). To this end, a pilot project involving representatives from the banks' Human Resources, CSR and Training functions was launched in 2025, with the aim of extending it to all people in management roles by 2026. Another shared initiative focuses on inclusive communication. To this end, an inter-functional working group, which represented the entire Group, was set up to develop a manifesto of shared principles regarding language and behaviour that respect diversity.

Throughout the year, the DE&I Table continued its work, focusing on monitoring compliance with the commitments set out in the DE&I Principles, particularly with respect to gender equality, and promoting the value of the inclusion-related initiatives and projects implemented within the various units.

The "Parole di tutto rispetto" project, dedicated to inclusive and accessible communication, continued throughout the year and resulted in the production of an internal document to support Group employees in using inclusive language that respects all dimensions of diversity, by suggesting good practices to adopt. The project also includes initiatives to raise awareness and provide Group employees with training, with the aim of emphasising the importance of choice of words. Some of these initiatives involved the Executive Director of the CDAITO Governance Area[232], people in the IMI CIB Division acting as lecturers outside the Group and the Chief Compliance, Audit and Financial Officer Governance Areas.

To enrich the cultural offering on topics such as inclusion, discrimination and gender-based violence, and to stimulate reflection on the construction of equitable scenarios, numerous awareness-raising initiatives were implemented, leveraging the language of art, such as photography, and offering experiences at the Gallerie d'Italia museum venues. In addition, the Group joined PARI, an association of companies that are united in their commitment to fighting gender-based violence. Participation in PARI gives the entire company population or specific target groups access to a wide range of in-depth topic content.

Intesa Sanpaolo's second "Inclusion Week" was held in September to promote thinking and raise awareness of the value of diversity. The five days of the initiative each covered a different macro-theme, with five on-line events featuring Group people and guests from the world of culture as speakers.

To promote female talent and encourage the creation of fair and inclusive working environments, initiatives for the development of female professionals and managers continued, including initiatives which involve job rotation, shadowing, training and empowerment programmes.
The group coaching programme continued for women taking up a role of responsibility for the first time, with a view to improving inclusive leadership skills.

The programme for the Group's long-term absentees also continued, involving more than 500 long-term absentees in a voluntary orientation programme, with the aim of establishing a close relationship with the employees during their absence and promoting their successful return to work. The programme was digitalised in the first quarter of 2025 to facilitate the various phases of the process and increase its effectiveness.

[230] Entity-specific metric.
[231] Entity-specific metric.
[232] Chief Data, A.I., Innovation and Technology Officer Governance Area.

Parenting support initiatives in place targeted both mums and dads. Training to promote awareness of the parenting and professional roles continued alongside the delivery of the "Padri non mammi" programme, which involved dads from certain Governance Areas[233] and the IMI CIB Division in reflecting on gender stereotypes linked to parenting.

On the topic of sexual orientation and gender identity, Intesa Sanpaolo continued its partnership with Parks – Liberi e Uguali, running joint communication and awareness-raising campaigns to encourage the full inclusion of LGBTQ+ people. In 2025, these events were primarily aimed at individuals in the role of director or coordinator of the Banca dei Territori (BdT) Division. To date, approximately 20,000 people from the Governance Areas have participated. Business divisions and Human Resources population. Furthermore, efforts continued to ensure support, within the Group, to people desiring assistance in the workplace during their gender affirmation process.

The year witnessed the continuing growth of ISPROUD, the LGBTQ+ people and allies community, established spontaneously in 2021. In 2025, the community grew to more than 1,900 members in Italy and abroad, who meet periodically to discuss and share ideas and experiences to be translated into tangible project ideas to propose to the company. ISPROUD worked with the DE&I unit and with the rest of the Group on a number of initiatives, providing its contribution for the planning of internal and external content, the organisation of events and the launch of new projects.

The value of inclusion was the subject of various training contents designed and proposed during the year, which were customised and aimed at different Group populations. Since 2024, inter-cultural training initiatives have been launched, focused specifically on the effectiveness and importance of inclusive and respectful communication between cultures. An informational webinar on disability and mental health was held, which was open to all Group employees in Italy. Accessibility and innovation initiatives were also launched for people in leadership roles, with the aim of sharing useful information and skills for expressing a leadership style that values accessibility. In addition, training initiatives dedicated to cognitive bias were launched for people with coordination roles. These initiatives, which were delivered to 350 participants in 2025, aimed to raise awareness of personal beliefs and internal narratives that can generate micro-exclusions, which are often invisible and affect the full development of individual and collective potential.

Finally, in 2025, the Group confirmed a series of training initiatives to foster inter-generational dialogue and promote constructive cooperation between people of different ages in work teams. In particular, BdT implemented an initiative dedicated to inter-generational dialogue. This initiative engaged 643 people (347 over 60 and 296 under 30) from all the Regional Governance Centres. The key aim was to foster a culture of open, collaborative discussion between generations, enhance understanding of differences and stimulate mutual understanding of contemporary challenges. The initiative offers tools and space for reflecting on the relationship between people and work, with particular attention to role stability, the relationship with technology, socialisation models, judgement heuristics and the main cognitive biases that influence the perception of others. It is structured around the topics of digital transformation, artificial intelligence and one health. The initiative offered a tangible opportunity to foster inter-generational dialogue, encouraging trust, active listening and reciprocity. It enabled the gathering of experiences and points of view that are useful for building more aware and inclusive relationships, capable of addressing today's transformations with collective intelligence.

In addition to the mandatory annual training course on the application of the relevant rules, a course on understanding, recognising and preventing gender-based violence and sexual harassment was delivered in 2025. This course explored sexual harassment within the broader framework of gender-based violence.

The UNI PDR 125:2022 Gender Equality Certification, introduced by the National Recovery and Resilience Plan (NRRP)[234], was renewed in 2025. Specifically, the audit verifies compliance with 31 qualitative and quantitative KPIs, as well as the implementation of a gender equality management system in Italy.

Intesa Sanpaolo is among the 100 most inclusive and diversity-conscious workplaces according to the 2025 FTSE Diversity & Inclusion Index. The index analyses over 16,500 publicly traded companies worldwide, assessing them based on 24 metrics across four pillars: gender diversity, inclusion, people development and disputes.
Intesa Sanpaolo is included in the Equileap Top Ranking 2025 among the top 100 companies in the world for gender equality. Equileap is an organisation specialising in the assessment and ranking of 6,000 companies worldwide on the topics of equality and diversity and is now recognised as a leading company in the provision of data and information on social equity.

Actions for the inclusion of people with disabilities
Thanks also to a productive dialogue with the trade unions and other units of the Bank, the Group is implementing a series of initiatives aimed at facilitating the recruitment of disabled people and those who are neurodivergent.
In particular, recruitment of people on the autism spectrum was carried out through a process involving all affected stakeholders and work teams. Before people joined the team, an activity was set up to raise awareness and develop specific skills relating to autism. The experience gained has encouraged the adoption of more open and diverse approaches in both work groups and management, promoting a professional environment that is open to listening, valuing differences and fostering collective growth.

Specifically, the inter-functional Disability Management working group handles and assesses individual requests for arrangement measures with the utmost care. The process includes the adjustments and arrangements, when necessary, to guarantee that people with disabilities enjoy and exercise all their human rights and fundamental freedoms on par with others.

[233] Chief Cost Management Officer, Chief Financial Officer, Chief Risk Officer, Chief Sustainability Officer.

[234] The certification was renewed for 9 companies (Intesa Sanpaolo S.p.A., Fideuram - Intesa Sanpaolo Private Banking SpA, Intesa Sanpaolo Private Banking SpA, Società Italiana di Revisione e Fiduciaria S.p.A., Eurizon Capital SGR SpA, Intesa Sanpaolo Assicurazioni SpA, Intesa Sanpaolo Protezione S.p.A, Fideuram Vita SpA and Prestitalia S.p.A.).

The inter-functional working group works on projects in a number of areas, including accessibility, communication, development of an inclusive culture, training and joint projects directly involving Intesa Sanpaolo people.

Together with trade union representatives, the inter-functional working group took part in the advanced training course "Disability Managers and the Working World", organised by the Università Cattolica del Sacro Cuore in Milan to lay the groundwork for adopting a common language, an important work tool.

As part of the general initiatives dedicated to people with disabilities, the project to place people with Down's syndrome in branches across Italy, in cooperation with the Banca dei Territori Division, is ongoing.
Similarly to autism, the aim of this inclusion path is to enhance the uniqueness of the individual and increase awareness across the entire team they joined. Cross-cutting investments were made in developing an inclusive organisational culture.

In 2025, "ARTICOLO 19 – Disability & Citizenship" affirmed its identity as an affinity group championing disability issues. What started out as a small group of people has progressively grown (to date, there are approximately 900 members), with the objective of developing ideas and content to improve the lives of people with disabilities and their families, and the prospect of providing an additional contribution to disability and inclusion issues.

Among the many initiatives, 2025 saw the implementation of the winning project from the internal "#RealizzAbile" competition. This competition was created to collect ideas from Group employees for improving the work environment for people with disabilities within the Group. The projects were assessed based on three criteria: the ability to respond to an unmet or partially met need regarding disability, creativity, and innovation. The winning project, #QuasiRoberto, involved several actions. Following the training for Facility Management and Human Resources managers delivered last year, experiential events have been rolled out in branches since 2025, with the aim of reaching all Group departments over time. Around 500 people have experienced moving around in a wheelchair either first-hand or by observation.
Aware that projects showing how putting yourself in someone else's shoes facilitates understanding and inclusion are valuable, the "Visite d'altri sensi" project continued throughout the year. In this project, people with visual impairments acted as sensory museum guides, and around 150 people from the Group took part in the visits. The aim is to unlock an appreciation of art from a different perspective and, above all, foster empathy by putting oneself in another person's shoes. "Invisible Illnesses" is another important initiative which includes a series of webinars open to all Group employees that address different conditions, also with significant contributions from internal testimonials. Reference materials and dedicated services are available on the company intranet.

In addition, since 2018, Intesa Sanpaolo has been a certified Dyslexia-friendly company, confirming its commitment to raising awareness of specific learning disorders (SLDs). This commitment is given practical expression through the delivery of specific webinars targeted at all Group people and the availability on the Intranet of guides, video clips, infographics and a self-assessment questionnaire for parents and families, all exploring the many different aspects of dyslexia and helpful for living with the disorder, making a positive impact on well-being and quality of life in all contexts.

Metrics relating to the inclusion of people with disabilities[235]

The Group introduced new metrics (so-called entity-specific metrics) in the 2025 Report, for which comparative data are not presented. The indicator shown below refers to the percentage of Group people with disabilities.

For the purposes of calculating the indicator, with reference to the Italian boundary, only people with disabilities included in the annual report of persons with disabilities at 31 December 2025, drawn up pursuant to Law No. 68/99[236], are considered. The overall group figure, shown in the following table, is determined by including employees of foreign companies within the reporting boundary. This is based on information already collected in accordance with the applicable national legislation and definitions in the respective countries.

Table – Employees with disabilities

	2025
Percentage of employees with disabilities	4.7%

[235] Entity-specific metric.

[236] "Regulations for the Right to Work of People with Disabilities," which promote the employment inclusion of people with disabilities.

Training and development

Policies relating to the training and development of Group people

Training and communication are two fundamental levers for the involvement of all the Group's people in a process of continuous growth and enhancement with the aim of guaranteeing the best professional experience. In line with the 2022-2025 Business Plan, the Intesa Sanpaolo Group continues to invest in its people, creating a unique ecosystem of skills that is suited to both the current context and its future evolution.
During 2025, a new Group training strategy has been defined which, inspired by the principles established in the trade union agreement of 4 December 2024, has led to the creation of the Corporate Academy with a primary focus on transformative learning. The aforesaid agreement, which Intesa Sanpaolo entered into with all the trade unions, was aimed at strengthening the role of training as a pillar of the bank of the future and a priority tool to ensure engagement and the responsibility pact with the Group's people in order to increase their satisfaction, promoting the development of skills, employability and professional growth.

Building on these premises as well, the Group Academy has been structured and is governed by three Committees involving all Divisions and the Group's Governance Areas. Specifically:
- Academy Committee: oversees the design of the top-down training strategy in line with the Group's priorities;
- Scientific Committee (one for each Faculty): defines and updates the core training content and monitors the success of the initiatives;
- Technical Committee (one for each training programme): contributes by identifying potential experts/trainers to support the delivery of the training.

The Academy, which focuses on topics that are relevant, strategic, and cross-functional for the Group, has been structured for 2025 into eight Faculties, within which training programmes are developed in alignment with the evolving roles and skills:
- Managerial Culture: aimed at developing Group-wide training on leadership topics;
- AI and Data: aimed at developing strategic and technical skills in AI and data management in order to accelerate digital transformation;
- Network Development: aimed at accelerating the evolution of the banking network through relevant and specialised business skills;
- Wealth: aimed at developing skills in wealth management, with a focus on personalised advisory services and digital tools;
- Risk Culture: dedicated to strengthening risk culture and promoting greater individual awareness, fostering compliance with internal and external regulations in order to increase customer trust and contain corporate risks;
- Trainers' Development Path: aimed at developing the Group's internal trainers by enhancing both their transversal and specialised skills in the design and delivery of training programmes;
- ESG: aimed at developing cross-functional and specialised content in the field of sustainability, focusing on the three pillars (Environmental, Social, and Governance) from the perspective of the financial sector;
- Internationalisation: aimed at supporting the acceleration of the internationalisation process undertaken by the Group.

With reference to the Faculties launched during 2025, the number of participants enrolled is as follows: Managerial Culture (1,755 participants), AI and Data (42,905 participants), Network Development (7,790 participants), Wealth (190 participants), Risk Culture (2,373 participants), and Trainers' Development Path (28 participants); for a total of 55,041 participants.

For details regarding any impacts, risks, and opportunities (IROs) covered by the policies related to the Group's training and people development, please refer to the IRO table included in the "Materiality Analysis" section of the ESRS 2 – General disclosures chapter. Specifically, the management of relevant impacts and opportunities is ensured through the preparation of the Parent Company's training plan, which provides for differentiated training initiatives based on role, areas of responsibility, and associated accountabilities. The plan is implemented in a way that supports diversity and inclusion and prevents any form of discrimination against specific categories of employees. In this regard, it is noted that employees who do not meet the technical conditions for participation in the courses according to the methods defined above (for example, visually impaired persons) are subject to specific provisions which determine the methods and timeframes for the completion of the mandatory courses intended for them.

The training plan is defined annually, implemented and monitored through the involvement of the competent corporate structures. It illustrates the training provisions planned for the Parent Company and specifies which ones will also be extended to the Subsidiaries.

The training plan is broken down into three types:
- transformative learning: focuses on strategic, high-priority, and innovative topics for the Group. The transformative training plan, aligned with the need to renew professional skills, focuses on reskilling and upskilling employees toward the roles and skills of the future.
- The target audience for transformative training is jointly identified by the Chief People & Culture Officer Governance Area and the relevant Group structures involved from time to time, together with the respective Human Resources functions;
- mandatory training: in the belief that the constant updating and training of its people represent an important distinctive factor and increase its overall added value, the Group is committed to further strengthening its control over mandatory training, thus also responding to the requests of the Supervisory Authorities. Mandatory training is enabling, as it ensures adequate knowledge of the applicable regulations, related obligations and responsibilities, as well as the consequences arising from failure to comply with such obligations;
- job-specific training: focuses on the specific training needs of each professional role, based on the requirements identified internally by the business structures and not covered by transformative training initiatives.

Within the Group's guidelines, the People Attraction, Skills & Learning Strategy structure, through the oversight of training activities, contributes to compliance with all regulations regarding anti-money laundering, counter-terrorist financing, embargoes, antitrust, fairness in customer relations, and integrity in the management of tax issues. Training also contributes to combating corruption, applying the “zero tolerance” principle and promoting corporate behaviour based on the utmost consistency and transparency, and preventing, where possible, potential situations of conflict of interest.
With reference to mandatory training, knowledge of the published training obligations which the employee has signed up to is acquired through periodic access to the company's training platforms. Each employee is required to access the corporate platforms to review their assigned training obligations and, in support, receives periodic summary communications regarding any courses still to be completed and their respective deadlines.
The criteria for the participation in mandatory training are detailed in the Group's specific internal regulations according to which all Group employees with subordinate employment contracts are required to attend such training sessions in order to guarantee the correct performance of the tasks and duties of the recipients, ensuring knowledge of the regulations and company processes. Furthermore, training is also under the scrutiny of the Supervisory Authorities, which, in certain circumstances, can adopt disciplinary measures. The internal regulations are applied at Group level; to this end, all the Governance functions involved work, each within their respective areas of competence, to ensure a standardised application of the methodology at Group level.

The initiatives included in the mandatory training plan may arise from:
- external or internal regulatory requirements;
- specific requests from the Supervisory Authorities;
- topics recognised as being of particular relevance to the Group (for example, business impact).

The initiatives take into account the employee’s duties, role, or specific assignments and are subject to approval by the Training Coordination Committee. The training plan, in its mandatory component, promotes the dissemination of a shared foundation of knowledge related to Risk Culture, ensuring alignment between the strategic vision and its practical application, in line with the Group’s needs.

The Coordination Committee is a collegiate body established at the Parent Company that reviews the overall training plan, approving its mandatory training component. The composition, responsibilities, and operating rules of the Committee are governed by a specific internal Group regulation. Its permanent members include the Chief People & Culture Officer Governance Area, the Chief Compliance Officer Governance Area, and the Chief Risk Officer Governance Area.

Mandatory training for Chiefs, Heads of Division, and Executive Directors is delivered through “compliance talks,” programmes designed to provide in-depth insight into strategic and innovative topics, with content aligned to the responsibilities and areas of action of these roles.

With reference to job-specific training, the identification of training needs is carried out in coordination with the Human Resources functions in order to analyse all the elements necessary for a thorough assessment of the collected training requirements, define the feasibility of the training initiative, and identify potential cross-functional groupings based on the following elements:
- priority (relevance/urgency of the need), critical mass (number of participants), scalability (cross-functional nature of the need with opportunities for synergy with other structures), and frequency (recurrence of the need over time);
- the content and learning objectives of the initiatives.

Mandatory and job-specific training needs are identified annually by the business structures. Specifically, the Chief People & Culture Officer Governance Area, with the support of the competent human resources functions, starts collecting training requirements from the corporate structures, which identify them based on:
- specific job requirements;
- legal provisions relating to issues that require mandatory training initiatives and/or those enabling the provision of services and the marketing of products;
- topics of particular relevance to the Group, including changes in business models and operating processes;
- findings and/or reports from the Supervisory Authorities, which require dedicated training provisions.

During the year, a periodic review of the training needs identified by the business structures is carried out in order to incorporate any changes and additions. The “Transformative Training Plan,” on the other hand, is defined and periodically updated by the Chief People & Culture Officer, who, from time to time, draws on the contribution of the relevant business structures.

Moreover, the training plan places significant emphasis on topics that cut across all three ESG dimensions. In line with its commitments to the ecological transition, the fight against climate change and the protection of nature and biodiversity, the Group is committed to spreading ESG values, promoting the involvement of all its people in the implementation of responsible environmental practices. Specific courses are mandatory for personnel directly involved in the implementation of the environmental and energy management system, but are also available to all employees. Great attention is also paid to social issues, with particular reference to diversity, equity and inclusion, the fight against sexual harassment, and human rights.

Processes for engaging with own workers and their representatives

All activities related to needs analysis, training design, and the identification of the delivery model for training initiatives are overseen by the People Attraction, Skills & Learning Strategy structure, which reports to the Chief People & Culture Officer Governance Area. In the phases that require it, support from a dedicated outsourcer is provided, along with the involvement of the relevant Group structures.
The process develops through the following phases:

- collection of training requirements;
- analysis and development of training requirements;
- coordination of the implementation of training initiatives;
- monitoring activities.

Collection of training needs is carried out in conjunction with the human resources functions to identify the professional, mandatory and managerial training needs identified by the Governance Areas/Divisions, within the scope of annual and periodic planning activities and in compliance with sustainability criteria (both economic and organisational). The collected needs are then evaluated by the Learning Business Partner function, in conjunction with the human resources structures, to define the feasibility of the training initiative and the possible cross-cutting aggregations, giving special priority to the implementation of mandatory initiatives.

Once the training needs have been collected from each structure contact, the Chief People & Culture Officer Governance Area defines, with the support of the dedicated supplier, the method of delivery of the training provisions, distinguishing between in-person or remote initiatives based on the chosen channel.

The activities described are also included among the funding opportunities planned for the development of continuous professional training and for upskilling and reskilling activities for professional profiles of specific interest.
In this context, the training plan is shared with the Welfare, Safety and Sustainable Development Committee/Joint Training Body (COWESS), a bilateral body composed of company and union representatives, provided for by the current Group Labour Relations Protocol and in line with the provisions laid down by the National Collective Bargaining Agreement. COWESS is tasked with studying, analysing and researching training matters, including the examination of material relating to financing projects promoted by entities operating in the vocational training sector.

Moreover, as described in the previous section, in 2024 Intesa Sanpaolo signed an agreement with all Trade Union Organisations aimed at strengthening the role of training as a pillar of the bank of the future.

Group employees can use various channels to raise any concerns, needs, or reports related to "Training & Skill Development". In particular, in addition to regular discussions with their Manager or the relevant Human Resources function, employees may, in the event of violations of the Code of Ethics, submit reports to a dedicated e-mail address. Lastly, with regard to the effectiveness of training paths in terms of the relevance of content to professional needs and the applicability of what has been learned in daily operations, a pilot has been launched within the new Corporate Academy on the Lead4ward programme. The initiative is aimed at measuring satisfaction through an anonymous questionnaire addressed to the managers of the Professionals attending the course. Activated starting from April 2025, the pilot is designed to gather insights that will also be useful for other training programmes. The results show that colleagues are overall satisfied with the service received.

Targets and metrics relating to the development of the Group's people and talent management[237]

The Intesa Sanpaolo Group pursues the objective of providing its employees with growth paths based on training intended as a driver for the development of the talents present within the Group, as well as the ability to attract people from the outside. Consequently, it has set itself qualitative and quantitative objectives linked both to the provision of hours of cross-disciplinary training to all its people and to specific learning and collaboration methods.

In order to adopt a consistent model for the development and enhancement of the Group's professional contribution, groups of people with homogeneous skills, learning paths and qualifications have been identified. These groups, referred to as job communities, are formed according to two different approaches:

- by profession, "natural communities," which include professional profiles with a homogeneous title and role (for example, HR, Global Advisor, Digital Business Partner, etc.);
- by interest, which include those who, regardless of skills and titles, are driven by a specific or project-related interest in strategic themes for the Group (for example, AI, Data, Art and Culture, etc.).

The communities bring together people from the Group's Italian perimeter and, in 2025, International Branches were involved as the first phase of international expansion.
Under the 2022–2025 Business Plan, a target was set for job communities to reach a total of 20,000 users involved by December 2025 — a goal that has been widely achieved.

Target: Number of people in "job communities"[238]

	Date	Value
Baseline[239]	31.12.2021	-
Final number	31.12.2024	36,775
Final number	31.12.2025	43,126
Target	2025	20,000

[237] The information relating to the "Leader of the Future" Programme indicator provided in this paragraph is also reported in the section "2025 in brief" – paragraph "The 2022–2025 Business Plan and the new 2026–2029 Plan" of the Report on Operations of the Consolidated Financial Statements.
[238] Entity-specific metric.
[239] Plan target that represents the planning of a new activity that does not have a base Value.

Intermediate annual milestones were also set along the same time horizon, and were always achieved and exceeded. The target was monitored on a quarterly basis through an indicator defined by the following components:
- number of people with homogeneous titles and Professions;
- number of people in Profession job communities without titles and therefore gathered with respect to the same professional profile;
- number of people in interest job communities.

The target was defined by the competent functions within the Chief People & Culture Officer Governance Area.

Against the target of involving 20,000 people in job communities over the 2022–2025 Plan period — already exceeded as at 31 December 2024 with 36,775 users involved — the number of participants further increased as at 31 December 2025, reaching 43,126 users, of whom 22,263 have homogeneous titles and Professions.

The Talent Management strategy also includes the "Leader of the Future" programme, aimed at all Intesa Sanpaolo Group people, both in Italy and abroad, and which is also one of the objectives set out in the 2022-2025 Business Plan.

The programme consists of two project initiatives:
- International Talent Programme: it is one of the most important initiatives for the enhancement of talents at Group level, which aims to develop a new generation of managers and professional roles with a cross-cutting and international culture through personalised paths with an indicative duration of three years. A mentorship and tutorship programme is dedicated to the talents, which involves the Senior Managers and the Heads of the structures to which those same talents belong;
- Key People: it is the second pillar of the Group's innovative talent strategy, which aims to identify and develop the Leaders of the Future. It represents a path of excellence mainly dedicated to members of the Group's middle management, with the aim of enhancing professional and managerial growth, as well as guiding them towards future leadership roles in more complex managerial contexts.

The key objectives of the "Leaders of the Future" programme are:
- human capital enhancement: recognising and promoting existing talents within the organisation, encouraging their professional growth and development;
- strategic management of internal professional growth: ensuring that the Group has constant access to the best resources, thus reducing the need for external recruiting to fill critical roles;
- generational renewal: ensuring the constant rejuvenation of the talent pool, enabling the Group to maintain a balance between experience and new perspectives.

The expected results of the "Leaders of the Future" programme are:
- continuity and stability: establishing a talent pipeline ready to transition into key roles, ensuring business continuity and organisational stability;
- competitiveness: increasing the Group's competitiveness through the acquisition and retention of high-level skills;
- organisational culture: strengthening a corporate culture focused on excellence, innovation, and continuous growth.

Over the course of the 2022–2025 Business Plan, a target of approximately 1,000 talents involved in the "Leader of the Future" programme was set, selected both in Italy and abroad.
The indicator includes the people involved in the two programmes: "International Talent Program" and "Key People". The former considers the people belonging to the talent community at the reporting date, and includes both talents who are undergoing the development path and those who have completed it. As regards the "Key People" programme, the population was defined ex ante for the entire 2022–2025 Business Plan and is therefore stable.

As already indicated, the 2022–2025 Business Plan, with specific reference to the "Leader of the Future" Programme, envisaged the involvement of approximately 1,000 people in talent management and development activities. This milestone was achieved as at 31 December 2025, with the involvement of 1,054 people who took part in the "Talent Program" and "Key People" programmes; of these, 986[240] have completed or are still continuing their development path within the Group[241].

Actions relating to the training and development of Group people

Training activities at Group level and across departments
Training activities are delivered on an ongoing basis to all Group employees (including part-time staff), through the intervention of the Chief People & Culture Officer Governance Area, which, among its responsibilities, also has the task of:
- promoting the dissemination of a Group culture that supports change and contributes to creating an inclusive and high-quality working environment for all people;
- defining training proposals and implementing the relevant training programmes to enable the continuous updating of skills, fulfilment of regulatory obligations and professional retraining, in line with the company's needs and strategies, individual motivation and enhancement of all Group people;
- overseeing the Group Corporate Academy, dedicated to the design and delivery of high-quality training content, giving priority to strategic and innovative topics for the Group (transformative training) and steering its implementation;
- preparing the training plan by coordinating the collection of training needs, supporting the Training Coordination Committee in the analysis and approval of the mandatory component, and ensuring its monitoring.

[240] Entity-specific metric.

[241] It should be noted that the difference between the two figures is attributable to natural employee turnover.

All training, including mandatory training, is carried out on an ongoing basis with the support of a dedicated supplier in order to guarantee high quality standards and constantly updated content based on the Group's specific needs. The collaboration between Intesa Sanpaolo and Digit'Ed S.p.A. (Intesa Sanpaolo's partner in the implementation of training initiatives), a company established in 2022 following the transfer of the training business line, continued throughout 2025. Digit'Ed, leveraging Intesa Sanpaolo's innovative learning infrastructures, was able to position itself on the market as an aggregator of the best Italian operators in the sector.

The main channel for the provision of training, especially mandatory training, is the digital one which enables:
- to quickly make training content and any subsequent updates available to very large audiences;
- to access training content at any time from the company's corporate platforms and Apps;
- to independently manage learning times.

Alternatively, if required by specific regulatory provisions or for other organisational reasons, training can be provided through Live classrooms (physical or remote).

During 2025, the People Attraction, Skills & Learning Strategy structure continued developing innovative training models and methodologies aimed at promoting a multichannel learning approach that maximises simplicity and flexibility. In addition to Academy4Future, a new training "ecosystem" is currently being implemented, which includes the adoption of a new learning platform designed to simplify and enhance the experience of Group employees.

In 2025, in continuity with what was done the year before, corrective mechanisms concerning non-completion of mandatory training within the required timescales were provided in the incentive system in order to further strengthen its monitoring. Furthermore, the training provision has been expanded and updated with the publication of new digital content to incorporate regulatory updates regarding Legislative Decree 231, Anti-Money Laundering and Anti-Corruption.

With reference to the AI area and thanks to the dedicated Faculty described above, in 2025 the gradual rollout of the AI Fundamentals training programme to employees was launched. The programme is designed to develop key competencies in artificial intelligence by introducing the basic concepts of AI. The content, focusing on areas such as machine learning, generative AI, ethics and privacy, and people skills, provides an initial guide to understanding and making the most of new digital technologies, helping to prepare people to address future changes. Moreover, related training activities also continued in 2025 through the publication, in October, of the selection titled "Regulations in the field of artificial intelligence." This selection, which represents an update of the one published in 2024 (under the same title), addresses, among others, the following topics:
- the AI Act, which regulates Artificial Intelligence;
- prohibited AI practices;
- the Guidelines for the Use of AI, which define roles, responsibilities, and macro-processes and provide direction for the use of Artificial Intelligence;
- the AI Compliance Framework, which consists of internal regulations, processes, tools, controls, and training aimed at managing Artificial Intelligence in the most effective way possible.
- how the Group mitigates risks related to Generative AI by requiring the adoption of specific safeguards, additional checks, and dedicated tools known as "Guardrails."

During 2025, for the second consecutive year and in compliance with the provisions set out in the 40th update of the "Supervisory regulations for banks" issued by the Bank of Italy, a specific Training Plan on "ICT and Security Risks" was prepared. In the current context, characterised by a strong push toward process and tool digitalisation, technological development, and a complex international political landscape, the plan included training and awareness initiatives aimed at increasing employees' awareness and know-how regarding the main ICT-related risks.

The training initiatives, depending on the content covered, are delivered on an ongoing basis both to all Group employees (for example, with regard to online fraud, critical events and how to manage them, and information security management systems and Business Continuity) and to specific population clusters responsible for overseeing particular business risks. This scope also includes the "MATRIX Project," which was completed in the first six months of 2025 (involving 4,581 people during the year). The project, designed with the aim of creating an ecosystem of models and tools for human resources, aimed at supporting the technological development of the Group with adequate resources, planned a significant investment in training in order to respond to the needs arising from the evolution of the Group's people and promote the acquisition and enhancement of key knowledge in the IT sector. The training programme is aimed at both newly hired collaborators, with a specific onboarding process including digital and live content designed ad hoc, and at professionals already included in the role with specific technical/specialist initiatives and certification paths.
During 2025, in order to comply with the European Union regulation on the Digital Operational Resilience Act (DORA Project), which aims to strengthen the cyber resilience of the financial sector and make it better prepared to deal with cyber incidents, specific training initiatives were delivered across both the Italian and international perimeter of the Group (involving 65,950 people during the year).

In order to promote prudent risk-taking when it comes to current and prospective risks across all levels of the organisation, with particular focus on those connected to climate change and technological innovation, information, awareness and training initiatives were provided on an ongoing basis in the context of risk culture and management.

In 2025, as in previous years, the Intesa Sanpaolo Group continued delivering training in the ESG field, addressing topics in a cross-functional manner, with reference to social, environmental, and governance issues. The training proposal is structured on two levels:
- a basic level, cutting across the various topics and provided to all employees, above all through online remote training modules;

- an in-depth specialist level, on individual topics, managed by the Divisions and Governance Areas concerned, including in-person training.

In particular, in 2025 a new collection of mandatory training modules on the Corporate Sustainability Reporting Directive (CSRD) was published, with the aim of providing in-depth insight into the CSRD Directive, the reporting standards (ESRS), and the Group's main social, governance, and environmental policies — starting from the concept of double materiality through to the Group's internal control system.

New modules were also published to supplement and update the training programme on the Code of Ethics, with the aim of presenting the Code as a strategic tool to guide behaviours and decisions in line with corporate values. Particular attention was given to the stages of the document's development — from its approval through to its dissemination — and to the risks associated with its violation, with specific reference to the active role that each employee is expected to play in applying appropriate behaviours in daily decisions, both within and outside the Intesa Sanpaolo Group (in 2025, these training modules were completed by more than 67,000 Group employees).

With a view to raising awareness on environmental issues, an update to the mandatory training programme on environmental protection was published, with the aim of illustrating the appropriate technical tools and providing the necessary information for the correct completion of the identification and management form for special waste. In addition, training modules on the Voluntary Carbon Market were published, with the aim of providing the relevant regulatory context (the United Nations Framework Convention on Climate Change, the 2005 Kyoto Protocol, and the 2015 Paris Agreement) and offering useful information on how the Group intends to support its customers in their decarbonisation journey, guiding them to make responsible and informed choices.

In 2025, a Compliance Talk entitled "The Evolution of the ESG Framework" was delivered, addressing ongoing changes in the broader context, the positioning of Intesa Sanpaolo, and sustainability as a driver of competitiveness and business development in alignment with ESG principles.

Specific initiatives on Diversity, Equity & Inclusion topics — including sexual harassment — continued in line with what had been implemented in previous years, with the aim of broadening and strengthening the culture of inclusion. For a detailed overview of these initiatives, please refer to the paragraph "Actions on Diversity, Equity and Inclusion."

During 2025, 44 Digital Talks were delivered, 8 of which in the ESG area, with testimonials from subject matter experts on various topics, including climate change and inclusive leadership. In particular, topics addressed included the energy transition, the technologies that can support it, and the key factors to consider when investing in sustainability. In addition, the topic of organisational wellbeing was explored in greater depth, focusing on how it can be supported through the development of relational skills that enable self-care and care for others, as well as the ability to "rediscover what truly matters" in a context characterised by intense stimuli, demands and expectations. Some of these Digital Talks were delivered in English in order to also reach Managers of the International Banks.

Lastly, since archives are fundamental elements in reconstructing a company's history and the Historical Archive of Intesa Sanpaolo has been declared of significant historical interest by the State — and, as such, constitutes cultural heritage of the community — in 2025 a mandatory digital training programme was published. Its objective is to provide information and practical tools to promote proper awareness in identifying documents of historical value that contribute to shaping the Group's history, roots, and identity.

With reference to the actions taken in order to support people in job communities, the following initiatives were carried out in 2025:

- launch of a new community dedicated to Community Ambassadors — individuals who support the definition of the communication strategy, the creation of content, and the development of the network;
- activation of the platform in bilingual mode in order to extend the communities to employees operating across the international perimeter. In particular, in 2025, two of the communities of interest were also launched in English and extended to the International Branches of Intesa Sanpaolo.

With these actions, as at 31 December 2025, 12 communities were active (7 professional and 5 interest-based) dedicated to people within the Group's Italian perimeter, of which 2 were also extended to international branches and their respective representative offices.

As regards the "Leaders of the Future" programme, for the entire duration of the 2022-2025 Business Plan, participants followed a personalised development path, financed through an ad hoc budget: specialist and managerial training in English in collaboration with the best Business Schools, premium coaching and individual empowerment initiatives, international workshops focused on innovation, project work initiatives strongly connected to the Group's businesses.

Training activities at Division level

During 2025, the IMI Corporate & Investment Banking Division stepped up its commitment to promoting initiatives aimed at strengthening specialist skills, both domestically and internationally. This choice responds to the increasing complexity and dynamism of global financial markets, which require the continuous evolution of technical and managerial skills in order to maintain a competitive advantage and ensure a high level of advisory service. Initiatives were developed with a focus on emerging topics in response to transformations in the sector. Targeted training programmes aimed at strengthening written and verbal communication skills were also launched.

The set of initiatives developed during 2025 involved 923 people. This choice stems from the awareness that, in an increasingly international and multicultural environment, mastery of communication is a critical success factor, as it enables the overcoming

of linguistic and cultural barriers, the management of complex negotiations, and the strengthening of leadership and influence in interactions with internal and external stakeholders.
These initiatives are part of an integrated vision of professional development, aimed not only at technical upskilling but also at fostering the growth of soft skills and managerial competencies. The objective is to develop well-rounded professionals capable of successfully addressing the challenges of a constantly evolving sector.
The IMI Corporate & Investment Banking (CIB) Division of Intesa Sanpaolo also renewed its ESG commitment for 2025, promoting update and awareness initiatives aimed at its international community of young professionals under the age of 36. ESG topics play a central role in the new "IMI CIB Next Generation Education Program", developed in collaboration with Digit'Ed and SDA Bocconi School of Management, with the aim of preparing the next generation of professionals in the sector. The programme aims to build an ecosystem of knowledge and methodologies capable of equipping participants with the core values and skills needed to interpret and guide the needs and solutions that drive the industrial processes of Corporate & Investment Banking at Intesa Sanpaolo. The training programme, designed in alignment with the functions and services offered by the IMI CIB Division, is based on synchronous learning formats, both in person and remotely, leveraging both internal expertise within the ISP Group and the academic capabilities of SDA Bocconi School of Management.

In continuity with previous years, the Asset Management Division also launched the "Eurizon Advanced Training" course in 2025. The idea is to provide an annual programme aimed at a selected group of young professionals under 35 from the Division's Italian companies, combining internal and external know-how. The objective is to share knowledge and experience in order to integrate theory and practice, confirming, among others, training modules relating to the ESG impact in the fields of finance, economics and society, as well as the Division's sustainability policy. The programme ran throughout 2025, alternating in-person sessions with remote interventions, and included project work activities as well as meetings with industry experts.

The Private Banking Division, in light of the growing importance of sustainability topics within financial services and with the aim of continuously enhancing the professional profile of its staff — as well as fostering an adequate level of awareness and culture — delivered, in continuity with previous years, a preparatory programme for ESG investment certification. The "ESG Advisor" programme is delivered during the last quarter of the year through remote sessions scheduled at intervals to allow participants to further explore the topics covered. In addition, during the first half of the year a programme on behavioural finance was also delivered, aimed at professionals within the commercial network of Intesa Sanpaolo Private Banking (ISPB). The objective of the programme is to provide these professionals with the tools needed to understand the emotional and cognitive dynamics that influence and shape customers' economic decisions, so that the advisory approach can become the most effective variable in the customer relationship.

Lastly, during 2025, the Insurance Division also took part in the ESG training initiatives developed and promoted at Group level, with the aim of strengthening internal competencies and ensuring consistent alignment on sustainability topics.

The above-mentioned training initiatives recorded the participation of 157 people from the Wealth Management Division during 2025[242].

The Chief Audit Officer, in coordination with the Group's Learning Strategy function and Digit'Ed, developed a training initiative on Ethics — addressed from legal, accountability and AI implementation perspectives — aimed at a selected group of employees.

The International Banks Division (IBD), in continuity with previous years, ensured ESG training across all banks within its perimeter, both through high-level online initiatives addressed to all Division employees and through more targeted, specialist live sessions dedicated to specific professional roles (the latter involved 41 people during the year). In particular, the online delivery of the mandatory course on the Code of Ethics continued. Other mandatory initiatives addressed to the Legal Entities population were carried out with reference to regulations on Modern Slavery, the Corporate Sustainability Reporting Directive (CSRD), the internal Code of Conduct, and Whistleblowing.
A non-mandatory digital course on ESG Investments was also published, and the dissemination of "ISP4ESG, Our Contribution To The Future" continued.
For subject-matter specialists across all the banks and the Division, two live courses were delivered: "ESG and Social Lending Credit Product: Criteria and Practical Approach" and "ESG & Credit Risk."

Digital Talks delivered in English for Managers of the international banks within the International Banks Division (IBD) also continued, with three editions focusing on sustainability and innovation topics.

During the second half of 2025, additional live training initiatives were delivered under the following titles:
- Updates on ECA tool (credit platform), ESG & Reputational Risk Clearing process;
- Biodiversity Indicators in banking business;
- Climate Transition Plans.

[242] Wealth Management refers to the combined scope of the Asset Management Division, the Private Banking Division, and the Insurance Division.

Metrics relating to performance assessment

The Group introduced new metrics (so-called entity-specific metrics) in the 2025 Report, for which comparative data are not presented.
With reference to performance assessment systems, the Group recognises these processes as essential elements for professional development and career growth. To this end, during 2025, approximately 96.9% of employees included within the evaluation scope were subject to periodic reviews of performance and career development.

Table – Percentage of employees who participated in annual performance reviews[243]

	2025
Women	95,8%
Men	98,2%
Total	96,9%

The following are excluded from the evaluation mentioned above:
- employees hired on permanent contracts after 30 June of the reporting year, including those whose permanent contract results from a contractual conversion (for example, staff whose apprenticeship contract has been converted into a permanent contract);
- employees hired during the same period on fixed-term contracts or under professional apprenticeship schemes, for whom a different assessment methodology is applied.

Health and safety

Health and safety policies

The Health & Safety structure ensures the monitoring of compliance risk with reference to the areas of occupational health and safety protection, pursuant to Legislative Decree 81/08, fulfilling the role of specialist function provided for by the Group Compliance Guidelines.

The principles and procedures to be adhered to and implemented to ensure a safe working environment are governed within Intesa Sanpaolo by four documents:
- the Occupational Health, Safety and Welfare Policy, which aims to formalise, implement and promote the strong and shared values of Integrity, Excellence, Transparency, Respect for Individual Differences, Fairness, the Value of the Individual, and Responsibility in the Use of Resources, as well as the principles of conduct governing relationships with stakeholders as outlined in the Code of Ethics and the Internal Code of Conduct.
- the corporate rules on occupational health and safety, applicable to the Italy perimeter, a document that — in addition to defining guiding principles and operational provisions aimed at ensuring an effective occupational health and safety management system in the workplace — assigns specific supervisory duties to Company Supervisors with respect to their employees;
- the Health and Safety Rules for employees based in Italy during assignments or secondments abroad, which derive from the progressive extension of the obligation to assess both “internal” risks — generated by the company’s own activities — and “external” risks, provided they are related to the work context. Moreover, the duty of safety extends to all locations where the employee performs their work activities. Oversight of health and safety protection therefore extends, through a broad-spectrum approach, also to employees working in foreign countries;
- the Rules for Occupational Health & Safety Management Systems in the International Subsidiary Banks, introduced to implement the principles set out in the Occupational Health, Safety and Welfare Policy at an international level and to promote harmonisation and consistency of the practices adopted, while ensuring compliance with the regulations in force at national level.

These documents complement the declarations set out in the Group's Code of Ethics, which places its employees' health and safety among its fundamental principles and to which reference is made for the discussion of the commitments regarding human rights.

In light of the specific complexity that characterises Intesa Sanpaolo, the delegation model provides for the appointment of a single Employer’s Delegate acting as the central “focal point” for defining the guidelines, coordination and oversight relating to occupational health and safety. All responsibilities relating to occupational health and safety have been assigned to this role — with the sole exception of those that cannot be delegated by law (approval of the Risk Assessment Document and appointment of the technical role of the Head of the Prevention and Protection Service) — including the authority to identify other company roles to which tasks and responsibilities may be assigned in line with the positions held.
Accordingly, several company roles have been identified as sub-delegated parties, possessing appropriate expertise as well as managerial and financial autonomy. Regardless of their organisational position, these roles are closer to the sources of risk and are therefore better able to assess their impacts and implement the most appropriate protective measures to prevent them. At a second level (the only one permitted by law) are the structures receiving Sub-Delegation, identified within the corporate functions.
The above policies comply with national and international standards for respecting human rights in the occupational health and safety sector. In confirmation of this, the organisation has adopted — currently limited to Intesa Sanpaolo and three companies of the Insurance Division (Intesa Sanpaolo Assicurazioni, Intesa Sanpaolo Protezione and Fideuram Vita) — ISO 9001 certification for the *“design and delivery of prevention and protection services relating to workers’ health and safety, and the*

[243] Entity-specific metric.

planning and organisation of occupational health services", as well as ISO 45001 and ISO 45003 certifications. The documents are made available both through the intranet portal for Group people and through the institutional website for external customers or stakeholders.

For details regarding any impacts, risks and opportunities (IROs) covered by the policies relating to health and safety, please refer to the IRO table presented in the "Materiality Analysis" section of the ESRS 2 – General Information chapter.

Processes for engaging with own workers and their representatives

The Group's commitment to involving people is expressed in the Code of Ethics, promoting listening and dialogue at all levels. Employee hiring is also ensured through trade union representatives. As well as by the industry outlook, relations with the Trade Unions are also regulated by the Labour/Management Relations Protocol, which has made it possible to implement a specific union relations model within the Group.

With reference to the involvement of employees in health and safety matters and in line with the reference regulations (Legislative Decree 81/08), the role of Worker Safety Representatives (WSRs) comes into play. These are generally assigned the task of communicating and engaging with employees in order to take their perspectives into consideration. These representatives number 96 and cover 100% of the workforce in Italy. Of these, 40 are part of the delegation that meets periodically with the Health and Safety structure, the Employer's Delegate, and RLS Support — a recently established structure — with the aim of collecting and representing the needs arising from the local areas that must be brought to the attention of the employer. On that occasion, all the activities carried out by Health and Safety are summarised using a reporting system set forth by the legislation which includes activities carried out and programmes for the following years. Information on these topics is made available through the intranet portal and mandatory training (Apprendo platform), subject to assessment and monitoring.

The Process Guides define the role and responsibility of the Safety Officer, which also includes hiring of and communicating with employees.

Remediation processes for employees and their representatives and reporting channels

The management of material impacts on the Group's people in the health and safety area is governed by a specific Process Guide (Compliance Management Process Guide - Management of Occupational Safety Regulations) which sets out the approach to managing the anomalies identified through control activities and any corrective actions to be implemented.

Specifically, the Process Guide defines the risk monitoring and assessment activities for workers in the health and safety sector and also identifies the various structures in charge of these processes (the employer is responsible for risk assessment, Health and safety must plan and carry out inspections and audits for the integrated risk assessment and record the results). In addition, in the event of risk factors being opened, these are recorded in the systems and a tracking process verifies their acceptance and the subsequent completion of the intervention.

This Guide also defines the communication channels made available to employees to receive information and communicate with the reference functions in health and safety matters. This process is managed by the Safety Officer, who undertakes responsibility for it. In addition to Code of Ethics and whistleblowing reports, the channel for reporting risks and incidents on the company HSE portal is available to some company roles, such as branch managers and WSRs, who have the right to access all workplaces and submit reports that are subject to checks by the head office structure in order to determine whether or not to open the risk factors.

Furthermore, it is worth highlighting the presence of direct channels dedicated to branch managers to report risks and incidents. This option is also available for the Occupational Medicine department, which has a direct channel available to request additional medical examinations. In addition, the Group employees can benefit from psychological support following a traumatic event.

Corporate roles specifically identified for this purpose (for example, supervisors) are provided with dedicated training on the correct use of reporting channels, available on the company intranet with the related access instructions, thus guaranteeing the privacy of the person who makes the report.

Health and safety objectives

The Group put in place a series of policies and actions to protect its employees on health and safety matters that enable it to monitor and address these issues on an ongoing basis, allowing the achievement of the standards set to protect the Group's people, even without a precise definition of quantitative and measurable targets.

Actions related to health and safety issues

With regard to health and safety topics, the Intesa Sanpaolo Group promotes several initiatives addressed to its people that go beyond regulatory requirements, adopting a holistic and integrated approach. For example, during medical examinations, the Occupational Health Doctor administers targeted tools designed to investigate emerging risks such as new forms of stress and to conduct a more in-depth assessment of individual vulnerabilities arising from specific personal conditions, with the aim of identifying the most appropriate reasonable accommodation. Moreover, the activation of neuroscientific research projects aimed at identifying intervention strategies related to cognitive load, technostress, and ageing effects is also encouraged. For these areas, the industrialisation of the related training programmes was completed during 2023 and 2024, while a similar process is currently underway in the field of Human–Computer Interaction. The neuroscientific research project "Acoustic Wellbeing" is currently nearing completion. These initiatives complement traditional prevention activities and the ongoing training on new and relevant topics.
The Process Guides detail the activities aimed at identifying risks and the operational controls carried out, as well as any corrective actions to be implemented (for example, prevention and protection measures implemented and personal protective equipment).

In particular, the method used to assess workplaces and the related Risk Contexts involves conducting a technical analysis and a field analysis, through inspections of all workplaces. Where deemed necessary, checks and measurements are also carried out on site using specific equipment by qualified and specially trained technical personnel. All the measures implemented, along with the assessment of their effectiveness, are reported in the Risk Assessment Document (DVR). With regard to mitigation measures, it should also be noted that in the area of psychosocial risks, for the third consecutive year Intesa Sanpaolo and three companies of the Insurance Division — Intesa Sanpaolo Assicurazioni, Intesa Sanpaolo Protezione and Fideuram Vita — have obtained ISO 45003 certification for "Occupational health and safety management — Psychological health and safety at work — Guidelines for the management of psychosocial risks."
For each of the identified mitigation measures, the areas and significance of the risk to which they refer are also identified, in addition to the level of intervention in terms of primary, secondary and/or tertiary prevention.

Mandatory health surveillance required by law currently applies, within the Italy perimeter, to more than 56,000 people in the Intesa Sanpaolo Group who, based on the analyses completed so far, are found to use video display terminals for at least 20 hours per week. Measurements are also currently being finalised for staff working in Intesa Sanpaolo branches with fewer than five employees. The results of these examinations, in anonymous and aggregate form, are the basis of the epidemiological survey that provides a general picture of the Group's people's health and wellbeing.
The "Subjective Vulnerabilities Process," launched in 2024, is intended for employees with disabilities and, through the Occupational Health Doctor, aims to:

- support employees with "subjective vulnerabilities" at every stage of their working life, monitoring the effectiveness of the measures over time, including in relation to changes in job role;
- provide a data matrix for epidemiological analysis purposes and develop a reliable and scientifically robust method for assessing the functioning construct;
- promote an integrated management strategy among the different Corporate Functions, tailored to the individual employee, aimed at:
  - identifying the need in relation to one's limitations and functionality;
  - providing specific training to the employee and the work team;
  - detecting any need for further assistance in an emergency;
  - identifying reasonable mitigation/arrangement measures.

The International Banks Division (IBD) also renewed the "Healthcare Programme" for 2025 — the international healthcare assistance programme — continuing to support Group employees abroad with permanent contracts, totalling more than 18,000 people. The programme offers consultations for second medical opinions (also extended to spouses and school-age children) and/or medical treatment at centres of excellence (for Group employees) located in countries other than the place of residence and/or work. Designed to provide support in cases of serious illness, the programme covers the costs of treatment and complementary services, including visa assistance, hospitalisation, accommodation for an accompanying person, and travel expenses. It also provides full coverage of transport and accommodation expenses abroad, in addition to reimbursing medical expenses incurred upon returning home.
Starting from the second quarter of 2025, CIB Bank joined other banks within the perimeter[244] in implementing a medical coverage policy, aligned with local standards, for all active employees in service once they have completed their probation period. The policy provides a wide range of services that can be accessed through a call centre booking system, including comprehensive outpatient care, laboratory tests and diagnostics, and outpatient surgical procedures.

Health and safety metrics

As of 31 December 2025, 100% of employees are covered by an Occupational Health and Safety Management System. In particular, as regards the Parent Company and the insurance companies of the Insurance Division (Italian boundary), this Management System is certified according to the ISO 45001 standard. For all other Companies/secondary branches, however, there is an Occupational Health and Safety Management System that is defined either internally by the Group or by the applicable foreign regulations.

The following table shows the main indicators regarding work-related injuries and deaths that occurred in the Group during the year.

Table – Performance of health and safety indicators for the Group's collaborators

	2025	2024
Percentage of people in its own workforce who are covered by health and safety management system based on legal requirements and (or) recognised standards or guidelines	100%	100%
Number of fatalities in own workforce as result of work-related injuries and work-related ill health	-	-
Number of fatalities as result of work-related injuries and work-related ill health of other workers working on undertaking's sites	-	-
Number of recordable work-related accidents for own workforce	527	537
Rate of recordable work-related accidents for own workforce	3.47	3.39
Number of recordable occupational diseases among Group employees[245]	6	n.d.
Number of days lost due to occupational injuries, occupational diseases and fatalities among Group employees[246]	16,316	n.d.

[244] Banca Intesa Beograd, Alexbank, ISP Albania, ISP Romania and Pravex for Managers only.
[245] Entity-specific metric. New indicator introduced in the 2025 Consolidated Sustainability Statement, for which comparative data are not presented.
[246] Entity-specific metric. New indicator introduced in the 2025 Consolidated Sustainability Statement, for which comparative data are not presented.

The number of recordable injuries is indicated by taking into account both injuries that occurred to employees at work and those that occurred while commuting, based on the accident reports submitted.
The relative injury rate is calculated as the number of injuries in the year out of the total hours worked, multiplied by a coefficient equal to 1,000,000. The estimate of hours worked is based on normal or standard working hours, taking into account the right to periods of paid leave. As regards the Italian scope, this estimate follows the calculation criteria defined by INAIL methodologies.
In 2025, both indicators remain in line with the levels recorded in 2024. In particular, the total number of recordable injuries shows a decrease compared with the previous year, consistent with the reduction in headcount, while the injury rate remains substantially stable.

With reference to the number of occupational diseases, the figure shown in the table refers to cases that are recordable on the basis of claims notified by employees during the reporting period.
Finally, the number of lost days takes into account days of absence due to workplace accidents and includes the first and last full day of absence, calculated on a calendar-day basis. It should be noted that, for confidentiality reasons, the figure does not include any days of absence due to occupational illness.

Well-being of the Group's people

Work-life balance policies

To ensure a good balance between employees' private and professional lives, the Group has established rules and policies to manage the related impacts and opportunities. These are also inspired by the Code of Ethics and are set out in the document Rules on Flexible Working; both documents are aligned with national and international standards for the protection of human rights related to work–life balance (for example, the ILO Declaration on Fundamental Principles and Rights at Work).

For further details on the impacts, risks and opportunities (IROs) covered by the policies relating to work-life balance please refer to the IRO table set out in the paragraph "Materiality analysis" in the ESRS 2 – General disclosures chapter.

Within the Intesa Sanpaolo Group, the National Collective Bargaining Agreement, the Code of Ethics and the second-level bargaining agreement identify solutions aimed at ensuring a good work-life balance. All the relevant regulations are aligned with national and international standards for the protection of human rights (for example, the ILO Declaration on Fundamental Principles and Rights at Work). The National Collective Labour Agreement, which represents the regulatory source through which the workers' trade unions and the employers' Associations define, in agreement, the rules governing employment contracts, provides highly innovative and dynamic tools, capable of balancing people's personal and professional lives, in a context of profound and continuous transformation. Furthermore, as part of the renewal of the Group's second-level collective bargaining agreement, most recently concluded in December 2025, the Group's commitment to the full enhancement and well-being of the Group's people was confirmed through initiatives and tools targeted at them and their families. In an integrated Welfare context, the second level collective bargaining agreement contains agreements on "work-life balance - inclusion" and work organisation (flexible work and training, 4-day working week and flexible hours), as well as a new agreement on the protection of parenthood.

With reference to Intesa Sanpaolo Assicurazioni, the solutions aimed at ensuring a good balance between personal and professional life are identified within a collective bargaining system operating on two distinct and complementary levels: the first at national level (CCNL ANIA) and the second — supplementary to the first and at second level — for the companies of the Insurance Group (Insurance Protocol).

The IBD Division also supports Group policies and actions aimed at safeguarding the wellbeing of its employees, in relation to work-life balance issues in order to support them in pursuing their psychological and physical well-being and in fulfilling their needs. In addition, particular attention is given to insights emerging from periodic surveys, in order to support improvement actions or define new initiatives.
As previously described, in the paragraph "The Group's commitment to human rights", among the various principles set forth by the Code of Ethics, "respect for people" is emphasised with the aim of promoting policies that facilitate work-life balance, encouraging forms of flexibility and implementing initiatives to reconcile work and private commitments, in the awareness that such balance is fundamental in the pursuit of people's well-being. The Flexible Working Rules, which fall under the responsibility of the Relations With Workers' Representatives And Welfare and Labour Affairs & Policies structures, are available on the company's intranet, within the HR regulatory section of the internal company platform (#People) and apply to all Group employees in the Italian scope. The Rules, in line with the principles set out in the Code of Ethics, summarise all the provisions currently in force regarding flexible working, with the aim of facilitating a better balance between employees' private and professional lives.

Policies relating to working hours

The Group places its people at the centre of the policies implemented, within which the protection of the rights of each individual takes on a predominant role. This person-centred approach is reflected in all the company's regulations issued from time to time, in which working hours are of particular importance, promoting their professional development and growth and at the same time guaranteeing a healthy work-life balance.

The Bank operates within the regulatory and contractual framework defined by the relevant laws and by first-level national collective bargaining: the main reference legislation is represented by Legislative Decree No. 66 of 8 April 2003, as amended, as well as by Legislative Decree No. 81 of 15 June 2015, as amended.

The legal provisions are incorporated by the National Collective Bargaining Agreement (CCNL) for Executives and for the Professional Areas reporting to Credit, Financial and Instrumental companies, which governs issues such as working hours,

intervening for example in the following areas: part-time working hours, disconnection, weekly rest, holidays and leave, time bank, student workers, methods of implementing extra-standard working hours in cases of social hardship, weekly hours, daily hours, shifts. The topic is also subject to further agreements at national level which constitute appendices to the afore-mentioned CCNL, including the Agreement Minutes on the subject of work-life balance, equal opportunities and corporate social responsibility.

Finally, it should be noted that the current National Collective Bargaining Agreement (CCNL) introduced a 37-hour working week, effective from 1 July 2024.

In addition to making reference to the National Bargaining Agreement, the Group, for the Companies within the Italy perimeter, has also adopted its own second-level collective bargaining agreement which governs, among other things, the legislation on the provision of professional services and working hours, including the regulation of part-time employment, flexible work and other work-life balance tools.

At an operational level, for the Group Companies belonging to the Italian scope with employment contracts in the Credit sector, the matter relating to working hours is governed by three separate Policies: the “Rules on working hours, holidays and leave”, the “Rules on Flexible Work” and the “Rules on Part-time Work”, which are based on the provisions of the law, first and second level bargaining contracts and on the consequent company resolutions. The three Policies, like the entire regulatory framework of the Intesa Sanpaolo Group, are inspired by the principles set out in the fundamental documents that guide the Group's action, namely the afore-mentioned Code of Ethics, the Principles on Human Rights and the Principles on Diversity, Equity and Inclusion.
The three Policies represent a single set of regulations and govern the aspects of the employment contract relating to working hours as a whole and are constantly monitored and updated with the aim of ensuring timely alignment with national and supranational legislation, as well as with sector and company collective bargaining agreements.
All internal regulations are monitored within the scope of the Compliance processes in order to ensure their conformity also from the point of view of their application.

The “Rules on working hours, holidays and leave” apply to Group personnel with employment contracts in the credit sector (Italy) and cover general provisions concerning personnel classified in the categories of middle managers and professional areas such as:

- working hours (including weekly and daily working hours, service provision hours, including work activity divided into 4 days per week, and rest periods);
- holidays and former public holidays[247];
- paid and unpaid leave for family and personal reasons, or for studies;
- leave of absence due to studies, family and personal reasons or illness;
- parental protection;
- Time Bank;
- the voluntary suspension of the work activity;
- the right to disconnect (which means that outside of working hours and in cases of legitimate reasons for absence, personnel are not required to access and/or connect to the company's IT systems or activate the company's communication devices).

All these measures, in compliance with the law, are always inspired by the aim of avoiding any active or passive discrimination towards the Group's people.

Similarly, the "Rules on Part-Time Work" and the "Rules on Flexible Work" cover two particular work-life balance tools, respectively defining part-time work and the so-called agile working (i.e. the provision of the service for certain days a year at locations other than the assignment location, such as: home, “company hub”[248] or “customer”).

The “Rules on working hours”, as well as all those concerning the regulation of the contracts with the Group's people, fall under the responsibility of the Chief People & Culture Officer - Labour Law.
The “Rules on working hours” are made available to all Group personnel via the company intranet portal and in particular on the internal company platform (in the #Regulations section), in order to allow everyone to constantly align with the evolution of the company regulatory framework. In the event of significant amendments, for example as a result of their adaptation to relevant regulatory or contractual changes, the publication of the updated versions of the Rules is announced through specific news on the company portal. Furthermore, once again for information purposes, the internal company platform (#People) contains explanatory regulatory information sheets of the main employment law provisions, including those relating to working hours. These information sheets also contain the information required to activate the request process for the regulated measures (for example, time off or a leave of absence) by explaining the role of the various players involved (for example, the applicant, hierarchical manager and Human Resources structure). The application of the provisions contained in the policies regarding working hours, as well as other policies regarding the management of the Group's Human Resources, is also facilitated by the presence of a dedicated section in the internal company platform (#People), as well as by an additional section of the company portal (#HR Support) through which it is possible to submit questions relating to Human Resources Services.

[247] As established by the National Collective Bargaining Agreement (CCNL) for the Credit sector, employees within the Italy perimeter are entitled each year to a period of paid leave of 20 days, to be proportionally adjusted according to the months worked in the year of hiring and subsequently increasing up to a maximum of 25 days for professional areas and 26 days for middle managers. In addition, paid leave is granted for working days that coincide with former public holidays, up to a maximum of five days.

[248] A corporate hub refers to workstations located in offices or premises of Intesa Sanpaolo or another Group company that have been specifically designated and can be used by employees upon reservation, regardless of their organisational unit.

For further details on the impacts, risks and opportunities (IROs) covered by the policies relating to working hours please refer to the IRO table set out in the paragraph “Materiality analysis” in the ESRS 2 – General disclosures chapter.

Processes for engaging with own workers and their representatives

As set out in the section “Employment Protection and Industrial Relations”, within the Italy perimeter the Group, in coordination with the Trade Union Organisations, continuously promotes dialogue between the parties, as well as discussion on the Group’s initiatives aimed at identifying shared solutions to address the different needs brought to their attention.

At the level of the International Branches of Intesa Sanpaolo, the implementation of employee participation arrangements is carried out in accordance with the locally applicable national legislation and contractual regulations. Consequently, workers’ information and consultation obligations are applied in compliance with the specific legal framework of the relevant country, while always taking into account the principles guiding the Group’s actions on human rights, namely the Code of Ethics, the Principles on Human Rights, and the Principles on Diversity, Equity and Inclusion.

Remediation processes for employees and their representatives and reporting channels

Even with regard to aspects relating to working hours, the Group's people can first contact their reference human resources manager and make use of a specific support section within the intranet portal to receive technical support regarding the application of the relevant regulations. This is in addition to the option to make independent use of the various reporting channels made available to employees, i.e. the so-called active listening systems, which include:

- formal reporting to one's manager, to the Human Resources Department or to the reference company contact responsible for personal matters;
- the so-called "Whistleblowing"[249], governed by the Group rules on the internal reporting system of alleged violations;
- other procedures (including IT ones) dedicated to reporting to the relevant structures, including specialist ones, any non-application or incorrect or discriminatory application of the legislation relating to employment contracts (including in relation to working hours) with reference to particular thematic areas such as: the Code of Ethics, DE&I, sexual harassment, business policies, violations of the 231 Organisational Model.

Each Group Company protects whistleblowers from any form of retaliation, discrimination or penalisation and ensures the utmost confidentiality, without prejudice to legal obligations.

The handling of complaints/reports by Group personnel is set out in the relevant company regulations, including those dedicated to specific channels (see for example the Rules on Whistleblowing) as well as in the Group's Internal Code of Conduct, which specifies the various ways in which it is possible to report even alleged violations, non-applications or discriminatory applications of the regulations concerning employment contracts, including working hours. Periodically, both voluntary and anonymous climate analyses are introduced to collect and analyse any impacts, also in order to implement the consequent improvement actions. For further details regarding the climate analysis, please refer to the ESRS G1 – Business Conduct chapter, “Actions related to corporate culture.”

Targets relating to work-life balance and working hours

The Group has defined a series of policies and actions to protect its employees in relation to work-life balance issues in order to support them in pursuing their psychological and physical well-being and in fulfilling their needs. To this end, specific initiatives are conducted and monitored, which make it possible to assess the effectiveness of the welfare solutions intended for the Group's people, even in the absence of a precise definition of quantitative and measurable targets in a limited time horizon.

Work-life balance actions

Since 2015, flexible working has been the remote working model of the Intesa Sanpaolo Group. From the experimental phase to date, an ever-increasing number of people have been gradually involved, until it was decided to establish the availability of an annual ceiling of 120 days of flexible working from home, which can be increased to 140 in specific cases. Starting in 2023, thanks to an agreement signed with the trade unions, the option to use the so-called short working week (4x9) was introduced in Intesa Sanpaolo, which allows its employees to work between Monday and Friday over 4 9-hour days with equal pay, and on a voluntary basis, in line with the company's organisation and technical and production requirements.

The Credit National Collective Bargaining Agreement provides for various forms of part-time work, with different ways of distributing working hours: vertical, horizontal, mixed, cyclical, both for fixed-term and permanent contracts, with weekly hours ranging from a minimum of 15 hours to a maximum of 32 and a half hours.
In addition to the provisions laid down by law and the collective bargaining agreement for the sector, the Group's second-level bargaining agreement has over time defined priority criteria for the acceptance of requests related to personal and/or family needs with a view to sustainability. The 2021 Group second-level collective bargaining agreement provides additional tools to support parenting that complement the provisions already set forth at a regulatory level. For example, the following measures are worthy of note: paid leave for participation in childbirth preparation courses, for the settling of children in nursery schools or kindergartens, for attending the Emergency Room and additional unpaid days aimed at assisting minor children, additional leave/welfare initiatives to support parenting and caregiving. For fathers, specific additional paid leave is available following the birth of their children, as well as the entitlement to an allowance of 10% of the sum granted by law for parental leave, and the possibility of taking 10 additional days of parental leave.
The second-level collective bargaining agreement has strengthened inclusion and equal opportunities, extending parenting protection provisions to same-sex civil unions, de facto relationships and in favour of the spouse’s children. In this context, a specific extraordinary paid leave was introduced on the occasion of birth or arrival into the family and an optional extraordinary leave for the care needs of the children of the spouse, civil partner or cohabitant, which can be taken up to the age of twelve

[249] For further information, reference is made to the paragraph “Whistleblowing policies, objectives and actions” in the ESRS G1 – Business Conduct chapter.

with an economic treatment equal to that provided for parental leave for fathers and entirely paid by the Group (40% or 90% of the salary).

One of the work-life balance tools is the so-called “voluntary suspension”, which allows to use up to 20 days a year of suspension of the work activity, which can be taken advantage of without having to justify its use, guaranteeing a salary equal to 35%, with payment of the corresponding social security contributions. It is also permitted to exceed the limit of 20 days per year for caregiving needs.
In addition, particular importance is attached to the measures relating to parenthood provided for in the Second-Level Collective Bargaining Agreement, signed in December 2025 and effective from 2026, aimed at supporting and assisting young families. In particular, the agreement provides for:

- a 1,200 euro birth bonus for every newborn child;
- the experimental introduction of the possibility for a parent to use, after the period of “breastfeeding” leave and until the child reaches three years of age, additional paid leave of up to 12 hours per week or, alternatively, a very short working week (4 days × 7.5 hours) with no change in salary.

Another innovative tool provided by national and second-level collective bargaining agreements is the Time Bank, a reserve of time made available by the company and Group's people so they can provide greater support for employees in difficulty, even for brief periods, and give them more time. The Time Bank is set up annually with an initial ceiling of 65,000 hours and each person has the opportunity to donate some of their own paid leave or holidays, which the company implements with an equal amount of time, up to a maximum of 100,000 hours in total. As part of the Time Bank initiative, multiple corporate volunteering activities were launched in 2025, which led over 400 people to carry out volunteer work, on working days for external associations and bodies chosen by the Group across the national territory.
The hours of leave granted through the Time Bank amounted to approximately 160,000 hours in total.
In 2025, over 35,000 hours were donated by the Group's people, in addition to the hours made available by the company, for a total of approximately 160,000 hours, also taking into account the hours made available for unused holidays by personnel who left the company pursuant to voluntary redundancy company agreements.

In 2025, the “People Care” initiatives were strengthened to promote and spread awareness of the importance of well-being in line with the 2022-2025 Business Plan and the Group's human resources strategy, with an increasingly broader vision, according to which not only personal but also organisational well-being is an integral part of the corporate culture, which is therefore "shaped" by it, and can significantly impact the Group's ability to attract new talent and consolidate stakeholder trust. By listening to people's needs, identified at multiple levels within the organisation and in different contexts and contact methods, diversified initiatives were therefore developed to promote people's well-being and improve their work-life balance, in synergy with support for diversity and inclusion, with corporate welfare and with new ways of working (Next Way of Working).

The Group continues to revisit office spaces in Italy, in synergy with the Next Way of Working project, as well as the food offering available in the company to promote habits geared towards individual well-being and to foster relationships. New “Energy Corners” — shared areas including leisure spaces and a food & beverage zone — have been set up, now totalling 99 across 39 locations. Corporate food outlets — restaurants, cafes and quick-service dining — have also been upgraded, and innovative and sustainable services have been introduced, such as smart fridges and delivery of healthy meals made with high-quality ingredients. To promote psycho-physical wellbeing, the development of corporate gyms has continued: in addition to the sites in Brescia, Milan (via Gioia 22) and Turin (NCD), three further gyms have been added — two in Milan (via Bisceglie and Milan Centre) and one in Moncalieri (Turin) — contributing to an overall increase of more than 60% in registered users. Intesa Sanpaolo has received recognition, for its offices in Milan (via Gioia 22 and Piazza Ferrari), among the “Workplaces that promote health” as part of the WHP – Workplace Health Promotion Lombardia programme, promoted by the Health Protection Agencies (ATS) of the Lombardy Region. In addition, the branch in Torre del Greco (Naples), in via Cesare Battisti, was awarded a similar recognition by ASL Napoli 3 Sud for successfully participating in a project sponsored by the Campania Region under the Regional Prevention Plan 2020–2025.

The modular use of the new spaces described above made it possible to hold in-person wellness activities across various company locations: morning yoga sessions, meetings with wellbeing experts, as well as cultural and social initiatives. In continuity with previous years, days dedicated to employees’ family members and friends were organised, featuring wellbeing, cultural, social and relational events, with the participation of prominent personalities. In 2025, the most significant initiatives took place as part of the celebrations for the tenth anniversary of the Turin NCD headquarters.

Significant measures to support and protect maternity and paternity also continue through the strengthening of the network of corporate and affiliated nurseries in Bergamo, Brescia, Florence, Milan, Moncalieri, Naples, Rome and Turin. These centres of excellence provide a safe, inclusive and stimulating environment for more than 300 children, demonstrating the bank’s strong commitment to supporting work–life balance and the wellbeing of employees’ families across the Group.

In addition, Intesa Sanpaolo is among the nine leading Italian companies that have established the "Fondazione Cresciamo il Futuro" to promote and develop, on a national scale, the innovative model of a distributed network of corporate nurseries, with the aim of expanding access to childcare services for employees’ families by enhancing existing facilities and creating new ones. The initiative, supported by the Ministry of Labour and Social Policies and by the Department for Family Policies of the Presidency of the Council of Ministers through the signing of two memoranda of understanding, supports employees and local communities, promotes parenthood and work–life balance, and contributes to addressing declining birth rates. The pilot phase began in spring 2025 with the sharing of available places in each company’s nurseries for the 2025–26 educational year. Through these initiatives, Intesa Sanpaolo further strengthens its commitment to its people and the wider community.

The Group continued to engage in the organisation of in-person and streaming initiatives across the Italian territory, to be even closer to its people and spread awareness on well-being:

- "Ricomincio da me (Starting Again from Me)", a new series of gym sessions dedicated to physical and mental wellbeing, designed to support the return to physical activity after the summer break and offering an opportunity to become more familiar with the corporate gyms and expert trainers;
- "Wellbeing Stories", a series of meetings launched in 2024 with special guests to encourage reflection on balance, building, courage, kindness and respect, aimed at organisational wellbeing;
- "Respira. Coltiva il tuo equilibrio (Breathe. Cultivate your balance)", a programme launched in 2024 featuring sessions to practise mindfulness and promote wellbeing and balance during periods of personal and work-related stress;
- "Adolescenza in dialogo, per una genitorialità consapevole (Adolescence in Dialogue, for Conscious Parenting)", a series of meetings aimed at exploring a stage of life characterised by significant physical, emotional and psychological changes;
- Initiatives aimed at raising awareness and promoting openness on issues such as disability and inclusion, health and psychological wellbeing — for example those linked to World Mental Health Day and the International Day of Persons with Disabilities, as well as the series dedicated to so-called "Invisible Illnesses";
- In-person "relational experiences" dedicated to individual structures or homogeneous clusters, to promote engagement through relational well-being, with dynamic formats and in locations that are disruptive to the work context.

Overall, over the course of the year, with reference to the above, over 75 initiatives were organised in 21 locations across the country, involving a catchment area of approximately 23 thousand people. Many of these initiatives were also made available in streaming.

Another important aspect is the Group's attention to people's health and mental well-being. In this context, the Group continued to provide its "Ascolto e Supporto" activity, the psychological support service, available 24/7, 365 days a year, for the entire Group in Italy and abroad. In 2024, the service was enriched in Italy with the Social Care tool: in the psychological counselling area, a Social Care Manager can intervene to provide practical help to the Group's people in the search for local services in the caregiving sector (for example, child care, care for the elderly and/or people with disabilities). In 2025, the "Ascolto e Supporto" service marked five years since its introduction and continued to provide assistance to all people across the Group, recording more than 3,000 total accesses (in Italy and abroad) during the year.

As regards CareLab, a workshop for the promotion of well-being that is divided into a structured offer of contents, tools and initiatives, both in digital form and in person, new services and opportunities were implemented: ÷

- "CareLab Pathways", developed in the wake of the "Wellbeing Stories" and the topics addressed during that series, with regular sessions held every two months inviting participants to explore a curated selection of insights, ideas and tools aimed at improving everyday life;
- "Petit BamBou", an app that supports people in practising mindfulness, offering programmes and tools designed to reduce stress and anxiety and help them fully enjoy life;
- "Futurely", a service specialising in educational guidance, aimed at families with children who need to choose their course of study after lower secondary school or after completing their high school diploma. It helps young people discover their passions, aptitudes and potential through an innovative digital platform offering personalised and flexible pathways, structured around guided activities, exercises and practical content.

In continuity with previous years, the following initiatives remain available and have been further expanded:

- "Tecnogym app", a tool with innovative services to encourage a healthier lifestyle, through training in all disciplines and personalised paths;
- "LianeCare", a platform to source caring specialists - babysitters, carers, housekeepers and pet sitters - with the aim of supporting people in their search for qualified personnel;
- "Acadèmia.tv", the online platform featuring cooking courses created with renowned Italian and international chefs, but also nutritionists, biologists and dieticians;
- "4Fooding", a web app for healthy eating, with daily and weekly menus, recipes and a team of nutritionists available for questions or personalised consultations;
- "21days", a web app that encourages the adoption of positive habits for emotional wellbeing, offering ten training paths to help manage technostress and ageing, reduce cognitive load, increase energy, foster positivity, improve concentration, manage time, strengthen emotional intelligence and self-esteem, and cultivate quality relationships.
- "#Stepbystep", an app that rewards an active lifestyle through steps, sports and challenges between employees, continues to host "special initiatives in steps" that involve groups of people in achieving ESG goals: by transforming the steps taken into tangible actions, everyone was able to combine attention to well-being with support for environmentally-friendly initiatives or support for the most vulnerable people. Among the initiatives, particular mention should be made of the one culminating in Olympic Day, an event organised by Fondazione Milano Cortina 2026 as part of the "Let's Move" campaign to promote the 2026 Winter Olympics.

As at 31 December 2025, CareLab recorded more than 760,000 views in Italy and abroad (+41% compared with the previous year), and 54,000 people were using CareLab services across platforms, apps and web apps.

The internationalisation process of the People Caring strategy continues, extending initiatives with impact and relevance to all people across the Group at a global level. Indeed, many of the tools mentioned above are also available to the Group's people abroad — for example CareLab, "Ascolto e Supporto", 4Fooding, Petit BamBou and #Stepbystep — and, with regard to meetings and initiatives, dedicated sessions have been organised exclusively for this perimeter.

Specifically, within the International Banks Division (IBD), in addition to consolidating the extension of the CareLab platform through a monthly plan for publishing wellbeing-related content — in collaboration with the Group's People Care structure — parallel sessions were held at several banks on the occasion of International Yoga Day. Further webinars dedicated to mental

health were also organised, partly thanks to the "Care Connect" service, which is similar to the "Ascolto e Supporto" Service for the Group's international entities.

Wellbeing topics within the IBD were further expanded in the annual programme of the Be Well initiative, which included:
- the third edition of the IBD Cooking Challenge, bringing together finalists from local cooking competitions held within the banks and the IBD Head Office in a multicultural exchange;
- the mental wellbeing programme, which in 2025 focused on kindness ("Be Kind"), developed through monthly meetings and testimonials from international banks, culminating in a webinar held on the occasion of World Kindness Day;
- a self-defence session for women at the IBD Head Office, aimed at strengthening confidence, awareness and risk-management skills;
- the continuation of the Head Office Book Club, a bimonthly meeting dedicated to sharing reflections and common readings.

Based on the experience gained during the pandemic and the results of internal surveys, the banks within the IBD perimeter have developed new flexible working models, in line with local laws. These models include a defined number of flexible working days, the redesign of corporate spaces, and the expansion of the group of employees involved. Also in 2025, the flexible working model remained in place at the head offices of all banks within the perimeter, with some of them extending it to their branch networks as well. In particular, VUB extended the initiative to all branches after the 2024 pilot phase.

Metrics relating to work–life balance[250]

The Group introduced new metrics (so-called entity-specific metrics) in the 2025 Report, for which comparative data are not presented. As at 31 December 2025, 97.9% of the Group's employees were entitled to family leave; within the Italy perimeter, this entitlement is granted to all employees. In 2025, 7.1% of those entitled actually made use of family leave, with 5.3% among women and 1.8% among men.

Table – Percentage of employees entitled to family leave

	2025
Total	97.9%

Table – Percentage of eligible employees who used family leave

	2025
Women	5.3%
Men	1.8%
Total	7.1%

The reported figure includes the following types of family-related leave:
- maternity leave (a period of absence before and after childbirth; in some countries also in the case of adoption), with job protection;
- paternity leave (for the father or, where provided for by national legislation, for an equivalent second parent) on the occasion of the birth of a child, for caregiving purposes;
- parental leave (for parents, following the birth or adoption of a child, for the purpose of childcare), as defined by the relevant Member State;
- carers' leave, to provide personal care or support to a family member or a cohabiting person with a serious medical condition, in accordance with national legislation.

Privacy of the Group's people

Policies relating to the privacy of the Group's people

The Intesa Sanpaolo Group has always maintained a high and constant commitment to protecting its employees' personal data, ensuring that such data is collected and processed in compliance with current legislative provisions.

The Group has drawn up specific governance documents which provide clear instructions on the conduct that employees and collaborators must maintain to ensure the correct collection, use and protection of personal data in compliance with current national and international legislation and the principles that guide the Group, formalised in the Code of Ethics and the Internal Code of Conduct. These instructions are set out in the Guidelines on the protection of personal data of natural persons and in the Corporate Rules for the processing and protection of personal data of natural persons. The internal regulatory documents, including Guidelines and Rules, are published on a dedicated internal portal to which all employees and collaborators have access.
Moreover, compliance with policies, regulations and standards relating to the protection of personal data is also required of suppliers. This is ensured through the assessment of their compliance and adequacy, the formalisation of contractual conditions, the definition of their privacy role, the provision of instructions on how to process data owned by the Group's companies, and the verification of the necessary safeguards in the case of suppliers operating outside the EU.

Upon the establishment of the employment relationship, employees and collaborators are provided with a privacy notice that transparently and clearly details the data processed, the methods of collection, the legal bases and purposes of processing, the data retention periods, the rights granted under the General Data Protection Regulation (GDPR), the ways in which those rights can be exercised, and the contact details of the Data Protection Officer (DPO), in order to make all necessary information

[250] Entity-specific metric.

transparent to the data subjects. The privacy notice was revised in June 2025. The updates concern the introduction of artificial intelligence systems in the data processing methods and the purposes related to the legal basis of legitimate interest.

For further details on the impacts, risks and opportunities (IROs) covered by the policies relating to the privacy of the Group's people please refer to the IRO table set out in the paragraph "Materiality analysis" in the ESRS 2 – General disclosures chapter.

The Group, having companies located in various EU and non-EU countries, complies with the express personal data protection provisions of their domestic legislation. Within the EU, activities relating to personal data protection are carried out by local Data Protection Officers, appointed by the Boards of Directors of the individual companies and functionally reporting to the Parent Company's Data Protection Officer. Companies for which a Data Protection Officer is not appointed identify, in line with the principle of proportionality, a role tasked with supporting local structures in carrying out activities to oversee the risks of non-compliance in the area of data protection. Outside the EU, the local Compliance Officer (or the specific role required by local regulation, where applicable) must verify that the Company's internal regulations comply with the principles set out in the Guidelines on the protection of personal data of natural persons. The results of this assessment are then submitted to the Parent Company's Data Protection Officer, while also ensuring full compliance with the legislation of the country in which the company operates. All companies are required to provide the Parent Company's structures with the information requested regarding personal data protection and to promptly notify them in the event of any significant related incidents.

The relevant regulatory framework, the principles that inspire the Group, the governance documents adopted by the Bank, and the responsibilities assigned to the various corporate structures and to the Data Protection Officer are described in the section "Service Quality – Customer Data Protection", paragraph "Policies relating to customer privacy", in the ESRS S4 chapter, and refer to the processing of personal data of all natural persons.

Processes for engaging with own workers and their representatives

In line with the principle of listening and dialogue in relations with the Group's people, as set out in the Code of Ethics, employee engagement takes place indirectly and is ensured through trade union representations, in accordance with sector regulations and the industrial relations protocol.
In the area of privacy, employees are directly involved at the time the employment relationship is established, through the provision of a privacy notice by the Human Resources function, which is also made available on the internal HR portal. As required by the legislation and the Guidelines, the policy is drafted in a concise, transparent, intelligible, easily accessible form and with simple and clear language to communicate the necessary information in a transparent manner. When the privacy notice is updated, the document is sent to all employees and collaborators for their acknowledgement and is also made available on the internal HR portal. For the new elements introduced with the latest update, please refer to what has already been described in the paragraph "Policies relating to the privacy of the Group's people."

Remediation processes for employees and their representatives and reporting channels

All employees and collaborators who are designated as Data Processors are required to act in accordance with the instructions provided to them, the applicable legal provisions, and the company's principles.

Failure by a Data Processor to comply with external or internal data protection regulations triggers a procedure to verify the actual non-compliant conduct. In the case of ascertained breaches, the relevant Departments are always informed in order to start disciplinary proceedings, which normally result in one of the measures under the reference regulations being applied against the employee.

In case of reports concerning privacy issues or requests to exercise rights, employees can contact the DPO, whose contact details are included both in the policy provided to them, and on the Group's institutional website, Privacy section, and in the specific process guides published on the internal portal.

Requests can be sent electronically (e-mail, certified e-mail) or in hard copy, and are treated with an adequate level of confidentiality and protection of the data of the data subjects. The monitoring of the receipt of requests falls under the responsibility of the Privacy function, which manages the requests received and guarantees their timely processing according to the terms laid down by the legislation.
As part of the integrated internal control system, the control Functions carry out checks, of different depth and frequency, on the compliance of activities with personal data protection regulatory requirements and on the correct implementation of the measures issued by the Data Protection Authority on these matters. The outcomes are reported to the Board of Directors.
In this context, the Chief Audit Officer carries out periodic control activities defined not only on the basis of specific regulatory obligations in the matter (audits conducted annually), but also from a risk-based perspective, also taking into account the findings reported by other corporate control functions.
Generally speaking, the independent checks of the Internal Audit are aimed at ascertaining the completeness, adequacy and functionality of the management model for the compliance risk in terms of data protection, reporting any irregularities relating to personal data processing to the competent corporate structures, to the DPO and reporting to the Board of Directors. The DPO, in compliance with the GDPR and the Guidelines, is tasked with preparing a report, at least annually, to report to the Board of Directors any data protection issues of particular importance. This commitment allows, through the adoption of appropriate measures, for the mitigation of reputational and non-compliance risks in the processing of personal data, also with respect to the lawfulness and fairness of the processing, the purpose of the processing and its relevance, and the completeness and non-excessive nature of the data collected.

Targets relating to the privacy of the Group's people

Intesa Sanpaolo is constantly committed to ensuring the highest level of confidentiality and security of its employees' data, guaranteeing — as detailed in the "Actions" section — the application of the principles of the General Data Protection Regulation (GDPR) and implementing awareness-raising initiatives. In this context, the safeguards put in place allow for the continuous

monitoring and oversight of these matters, ensuring the protection of employees' and collaborators' data even in the absence of specifically defined measurable quantitative targets.

Actions relating to the privacy of the Group's people

The Data Protection Officer monitors the compliance risk according to a risk-based approach by ensuring the application of the principle of Privacy by Design aimed at implementing from the outset the personal data protection rationale through the identification of potential risks for the rights and freedoms of the data subjects and the technical and suitable organisational measures for mitigating such risks, and the performance of privacy impact assessments for the evaluation of the impact on data protection before proceeding with one or more processing activities that may present a high risk for the rights and freedoms of natural persons.

In 2025, awareness-raising activities for the Group's employees continued, aimed at promoting a risk culture in the field of data protection and increasing awareness of a risk-based approach. This awareness is promoted through the delivery of mandatory e-learning training courses. The courses include a final test and enable staff to gain a practical understanding of the regulations, while ensuring continuous updating. The Group monitors, through dedicated tools, the completion rate of the courses and the pass rates of the related tests. In addition to the training content already prepared prior to 2024 and still available, a training event — the Compliance Talk Privacy — was organised in March for the Bank's top management, followed by its delivery in video format to all Group employees. A Board Induction session on the same data protection topics was also organised in March. Finally, two new digital courses were made available: the first, aimed at staff of the central functions, to increase awareness of data breaches by describing specific cases and, more broadly, what their management entails; the second, dedicated to staff of the Parent Company's Banca dei Territori division, outlining potential errors that may occur in branch operations, with a focus on the correct and compliant handling of data and the related sanction risks. For further information on mandatory training, see the "Training and Development" section.

ESRS S2 – Workers in the value chain

Management of sustainability matters related to workers of portfolio companies

Policies and processes related to workers of portfolio companies

The Group takes into account the ESG risks associated with the activities of corporate customers and pays particular attention to the in-depth analysis of sustainability matters connected to the credit granting process. To this end, general exclusion criteria have been established in order to prevent the financing of activities and/or projects with particularly significant social impacts. Specifically, the Group undertakes not to finance companies and projects if evidence emerges, such as penalties, legal proceedings and judgements, relating to human rights violations and forced or child labour practices. In formulating the internal guidelines on ESG risks, reference is made to the principles defined by international best practices and to the developments promoted and expressed by regulators and supervisory authorities at European and international level. In particular, inspiration is drawn from initiatives aimed at promoting the best sustainability practices in the banking sector which the Group has adhered to, including UN Global Compact, UN Environment Programme Finance Initiative (UNEP FI), UN Principles for Responsible Banking, UN Principles for Responsible Investment, UNEP FI Principles for Sustainable Insurance, and Equator Principles (EPs).

The Chief Risk Officer (CRO) Governance Area develops and maintains, in conjunction with other relevant structures, the Guidelines for the Governance of Environmental, Social and Governance (ESG) Risks and the related implementing rules and is responsible for the design, development and maintenance of the internal system for the management and assessment of the Group's reputational and ESG risks. For further information on these Guidelines, reference is made to the section "Strategy to combat climate change at portfolio level" in the ESRS E1 – Climate Change chapter.

The Group recognises the risk associated with investment, financing and lending services to customers in sectors that present higher social risks in their operations and/or supply chains and accordingly promotes ESG investments through which it can also play an active role in helping to mitigate social issues such as economic and social inequalities. Therefore, as emerged from the double materiality assessment, a negative impact linked to financing/investment in potentially less virtuous sectors/countries with regard to the protection of their employees' rights could entail a credit/market risk given the high concentration towards such sectors/countries. For further details on the impacts, risks and opportunities (IROs) covered by the policies relating to employees of portfolio companies, please refer to the IRO table set out in the paragraph “Materiality analysis” in the ESRS 2 – General disclosures chapter.

An ESG score was also introduced which also aims to evaluate the social profile of corporate customers[251] (including labour management and standards, health and safety at work, policies for the inclusion and enhancement of diversity and human capital development) and a dedicated ESG & Reputational Risk Clearing process was set up to assess these risks. For further information on the Risk Clearing process, reference is made to the section "Strategy to combat climate change at portfolio level" in the ESRS E1 – Climate Change chapter.

Given the context, positioning and operations of the Intesa Sanpaolo Group as one of the leading Italian and European financial institutions, it is currently complex to structure and apply a dedicated process for the direct involvement of workers employed at the companies in the Group's portfolios, or to provide them with specific reporting channels through which they can communicate to the Intesa Sanpaolo Group their concerns and any negative impacts suffered, as required by ESRS standards.

Currently, the engagement and any listening methods on sustainability matters related to the workers of such companies can be conducted by the Group through dialogue with the counterparty included in the portfolio.

Objectives and actions related to the workers of portfolio companies

The Group conducts activities and initiatives to support and monitor ESG issues, particularly with reference to social ones, which may include (with direct or indirect impacts) also the employees of its portfolio companies, paying particular attention to sustainability matters related to sectors that are sensitive to ESG and/or reputational risks. These projects are also conducted without the definition of quantitative objectives relating to the management of impacts and risks inherent to the workers of the portfolio companies, mainly due to the limited availability of quantitative information that allows to measure the effectiveness of one's actions. Similarly, with regard to (i) the qualitative and quantitative monitoring of the effectiveness of these actions and (ii) the allocation of specific resources dedicated to these issues, it is currently difficult to define targeted measures to support workers in the companies within the portfolio. However, potential forms of engagement and listening are envisaged through dialogue with the counterparties present in the portfolio.

[251] At the end of December 2025, the ESG score covers over 240 thousand Intesa Sanpaolo corporate customers.

ESRS S3 – Affected communities

Policies relating to the communities affected by own operations

The Group's commitment to community rights

The Group places great importance on projects that promote growth and social, educational, cultural and civic inclusion in the communities where it operates, thereby contributing to the development of more innovative and inclusive societies. Support for groups of disadvantaged people, young people, the community and the territory, together with the promotion of Italy's artistic, cultural and natural heritage, are fundamental elements deeply rooted in the Group's history and operating practices. The latter extends its commitment to human rights also within the communities, in particular with respect to the selection of beneficiary entities and the contributions that it intends to disburse and by promoting listening and dialogue with civil society. As noted in the paragraph "The Group's commitment to human rights" in the ESRS S1 – Own Workforce chapter, the formalisation of this commitment is set out in the Code of Ethics, in line with the Principles on Human Rights.

The Code of Ethics is the reference regulatory instrument with reference to relations with the local communities. In particular, the Code of Ethics and its principles are connected to the impacts and opportunities considered material for the Group. The principles recalled therein refer to the fulfilment of the material and cultural needs of the community and guide the Group's relations with local communities with respect to the following macro-areas:

- support for the non-profit sector to promote fair and cohesive social development, through a commitment to support social enterprises and non-profit organisations via partnerships aimed at delivering initiatives and intervention models across local communities in favour of disadvantaged groups;
- support to communities and their material and cultural needs through donations, sponsorships and partnerships, ensuring consistency with the reference values and corporate strategies, and enhancing the historical, artistic, cultural and natural heritage;
- promotion of local economies and strong roots in Italy and abroad, effectively supporting the territory, combining economic results and respect for local values, supporting small and medium-sized enterprises and promoting initiatives with high social and environmental value.

The principles of the Code of Ethics apply to the activities of the Group and concern interventions dedicated to local communities, disadvantaged people, young people, the community and the territory as well as relations with social enterprises and non-profit organisations (NPOs) - such as Volunteer Associations, Social Promotion Associations (APS), Foundations and Consortia - through co-planning and partnership activities aimed at activating projects and initiatives.

The Group promotes ongoing dialogue with organisations representing local communities, recognising their strategic importance for developing its activities in a sustainable manner. For this reason, it provides stakeholders with various channels and internal procedures to collect, analyse and address reports of alleged non-compliance relating to community rights, including those enshrined in the Human Rights Principles adopted by the Group.

Among these channels, the Code of Ethics inbox is available for reporting cases of possible non-compliance. For further information on the application of the Code of Ethics and the corresponding reporting channel, please refer to the section on "Policies, objectives and actions related to corporate culture" in chapter ESRS G1 – Business Conduct.

Social impact on the community

In implementing the general principles and values described above, the Intesa Sanpaolo Group plays an active role in supporting the local territories and communities in which it operates, through multiple tools, initiatives and programmes.

The Articles of Association of the Parent Company Intesa Sanpaolo provide for the option to allocate a portion of distributable profits to charity, through the establishment of a special fund, called the "Allowance for charitable, social and cultural contributions" (hereinafter, "Charity Allowance"), which is headed by the Bank's Presidency.

Furthermore, the Articles of Association grant to the Board of Directors of Intesa Sanpaolo, among other things, the power to intervene with donations within the framework of an annual plan of interventions to support worthy initiatives, in the event of emergency events or to support specific situations in the local territory. In accordance with the relevant clauses of the Articles of Association, the Board of Directors ensures the coordination of such disbursements, approving the general regulation thereof, also in accordance with the Group's attention and responsibility towards environmental, social and governance issues. The Board of Directors, with the support of the Risk and Sustainability Committee, also defines the general criteria and lines of intervention for charitable donations and performs all strategic supervision duties.

The disbursements in support of these initiatives extend both to the Italian territory and to the foreign countries in which the Group operates. Donations are intended for non-profit organisations, including religious and non-commercial public entities.

Intesa Sanpaolo, with the aim of positioning itself among the world leaders in terms of social impact, implemented its organisational structure to strengthen its intervention strategy in favour of the country, local territories and communities and set up Governance Areas to consolidate ESG activities and strengthen the ESG strategic direction. Within the Chief Sustainability Officer Area, the Chief Social Impact Officer Governance Area has been operating since 2024, overseeing, through Intesa Sanpaolo for Social Impact, the direction, governance and implementation of the Social Impact initiatives and projects carried out by the Group, ensuring the relationship with the main stakeholders and social players in coordination with the competent Group functions.

During 2025, the Board of Directors approved specific Group guidelines for the governance of social activities, a new governance document aimed at defining and formalising the management dynamics of social initiatives, in line with the Group's regulatory framework and guiding principles. These guidelines represent a tool to enable a consistent approach and unified, optimised management of social investments, while also fostering synergies within the Group. They identify Intesa Sanpaolo for Social Impact as the unit responsible for the strategic direction, coordination, monitoring and reporting of social activities at

Group level, alongside the units of the Governance Areas/Business Divisions and the Group Companies that promote social initiatives and oversee their implementation (so-called “Social Owners”).

In 2025, the Bank’s social initiatives followed the lines of intervention developed in 2024 within the Social Action Plan, which—starting from the Group’s social ambition—identified the courses of action aimed at achieving the defined objectives. The Plan's definition is based on the analysis and monitoring of the social context, current and latent needs, risks and emerging trends, and a set of social challenges identified also through ongoing dialogue and mutual exchange with the relevant stakeholders. Intesa Sanpaolo for Social Impact, in line with the Group's objectives, continued to develop its initiatives along the following 4 lines of action, called "Social Routes":

- combating material, financial and educational poverty and promoting access to employment;
- supporting access to health, care and treatment;
- promoting social integration, local development, the enhancement of unused assets and spaces and social housing;
- developing new social projects with public institutions and social players, transferring replicable and scalable skills.

The Social Action Plan, thanks to the 4 lines of action mentioned above, represents a plan of interventions in response to the impacts and opportunities considered material for the Group, with particular reference to the issues of "Adequate housing", "Adequate food" and "Impacts on the territory". The Plan's action areas concern multiple stakeholders and beneficiaries, including young people and minors, women, people in poverty, seniors, vulnerable people, communities, immigrants and refugees, and involve public institutions and various social players, including non-profit organisations. For further details on the impacts, risks and opportunities (IROs) covered by the policies relating to the communities affected by own operations, please refer to the IRO table set out in the paragraph “Materiality analysis” in the ESRS 2 – General disclosures chapter.

The responsibility for defining the Social Action Plan is entrusted to Intesa Sanpaolo for Social Impact, the structure responsible for the strategic supervision of the Group's social activities, which promotes initiatives in favour of the territories and local communities with particular attention to combating poverty and inequalities and defining strategies to support inclusive education and the employability of vulnerable young people and individuals. Intesa Sanpaolo for Social Impact also pursues the aim of spreading the social culture, ensuring the supervision and general direction of the impact finance governance process, coordinating the Group's commitment in the area of social housing, managing institutional relations with the players involved and implementing specific projects aimed at strengthening the Group's leadership position in terms of social responsibility. Supporting the implementation of the Social Action Plan is the Intesa Sanpaolo for Social Impact Observatory, whose role is to analyse and monitor the main current and emerging social scenarios, trends and needs, also with the aim of guiding the Bank’s social initiatives. The Social Action Plan and the resulting initiatives are subject to a dedicated enhancement and communication strategy through a multi-channel dissemination of the social culture inside and outside the Group, through a dedicated section of the website, social media, events and communication platforms of the partner network.

Charity Allowance

The Charity Allowance aims to provide support to the most vulnerable people and contribute to the achievement of the social objectives of the Intesa Sanpaolo Business Plan, also with a view to contributing to the achievement of the UN Sustainable Development Goals (SDGs) set by the UN 2030 Agenda for Sustainable Development.

The Charity Allowance operates on the basis of a Regulation and Guidelines. The Regulation, approved and issued in 2016 by the Board of Directors of Intesa Sanpaolo, governs the management of the Charity Allowance and defines the mechanisms for the selection of entities and projects, according to the principle of separating charitable initiatives from the pursuit of business interests. Only non-profit organisations, not involved in known legal disputes, in matters concerning organised crime and the failure to respect human rights, peaceful coexistence and environmental protection and whose reference values are consistent with those set forth in the Group's Code of Ethics, may access the resources of the Charity Allowance. The Regulation also excludes the following from the category of beneficiaries: private citizens; political parties, political movements and their organisational branches; trade unions and employers' organisations; regions, provinces and municipalities, except for specific initiatives of particular social, cultural or scientific significance.

With regard to the requests, only projects with a clear social impact are evaluated and the ability to achieve the declared objectives is reviewed through the analysis of the proposing entity's track record. Priority is given to requests with the best project structure, with the most significant results and social impact and with a more careful and effective use of resources.
Donations can be of different amounts and, depending on their purpose, are divided into two types:

- local donations, up to a maximum of 5 thousand euro, managed in a decentralised manner by the Banca dei Territori Division and provided to support small projects with a direct local impact, expressions of the community to which they belong;
- central donations, of an amount greater than 5 thousand euro, managed centrally by the Chair's Technical Secretariat and granted to medium-large projects, with a significant social impact.

The Guidelines identify the high-level strategic objectives and priorities that are intended to be pursued and define the thematic directions. They also identify some issues considered to be of particular importance and urgency with respect to current socio-economic problems, which are allocated a significant share (equal to at least 25%) of the resources that can be disbursed annually. The Guidelines are renewed every two years and are submitted to the Board of Directors for approval.
For the two-year period 2025–2026, the analysis was developed on the basis of authoritative sources, including studies and reports from Censis, Eurostat, ISTAT, and the Ministries of Labour, Social Policies and Health. To complement these analyses, six experts with recognised experience in supporting the most vulnerable groups in society were also involved. Their contribution made it possible to outline a clear and shared view of the country’s main socio-economic challenges and to define the priorities for intervention with greater precision.

In addition to the main areas of intervention—namely community-based healthcare welfare, the enhancement of the potential of Southern and Island Italy, and the social inclusion of migrants and refugees—the most significant developments compared with the previous two-year period also concern the following aspects:

- greater importance attributed to networking, namely the ability of applicant organisations to expand synergies and networks among different stakeholders from the public, private and third sectors;
- support provided to projects promoting inclusive amateur sport, including through central donations, provided that the initiatives are embedded within structured programmes that also include other actions aimed at addressing broader social challenges;
- the expansion of support for awareness-raising initiatives on issues such as gender-based violence, education on emotional relationships, and civic education, including environmental education;
- the possibility of supporting cooperatives and social enterprises from the moment of their establishment, provided there is strong co-financing from other donor or funding entities;
- the extension of financial support to costs related to capacity-building activities, namely actions aimed at improving the organisation's effectiveness, sustainability and long-term impact at all levels (including financial and human resources management, communication and advocacy);
- the introduction of new thresholds for impact assessment and the updating of the related cost-coverage arrangements, with the requirement to activate third-party verification starting from the first renewal (the second year of the project).

The Board of Directors periodically checks the use of the allocated resources and the convergence of the planned initiatives with the objectives undertaken. The selection of projects falls under the responsibility of the Chair of the Board of Directors (upon the proposal of the Chair's Technical Secretariat), following consultation with the Managing Director, for all initiatives exceeding 5 thousand euro and up to 300 thousand euro, while the Board of Directors approves initiatives exceeding 300 thousand euro. Finally, the Chair of the Board of Directors is responsible for monitoring all supported initiatives. Each year, the Annual Plan of usable resources is also submitted to the Board of Directors, which is subsequently approved by the Shareholders' Meeting. Part of the Plan's resources is allocated to the Banca dei Territori to support initiatives that are the expression of local communities and for an amount not exceeding 5 thousand euro each.
The share of resources allocated to the Banca dei Territori, following the approval of the Plan by the Board of Directors and ratification by the Shareholders' Meeting, is assigned for direct management to the Head of the Banca dei Territori who subsequently delegates the Regional Governance Centres concerned. The extract of the Regulations and the Guidelines of the Charity Allowance can be consulted on the Group's institutional website. On the same pages it is possible to find comprehensive information on the use of the Charity Allowance broken down by name and amount disbursed, with reference to the previous year.

Traditionally, the Charity Allowance concentrates most of its resources in Italy, supporting the communities where Intesa Sanpaolo operates through its branch network. The resources are distributed across all regions and, in particular, in the areas of greatest need: suburbs, internal areas and contexts characterised by degradation and marginalisation. The Charity Allowance also intervenes at an international level, supporting medium-large projects and giving priority to interventions aimed at the development of the communities and territories in which the Intesa Sanpaolo Group operates with its companies, including through collaborations activated by the International Banks Division (IBD). The Chair's Technical Secretariat also carries out coordination activities with the competent charity Functions and the autonomous Foundations of the IBD division to ensure the standardisation of principles, rules and reporting methods.

Commitment to culture

In order to regulate the protection, conservation and enhancement of the historical-artistic assets and archival assets owned by the Group, as well as those belonging to third parties, to ensure their public use and sharing with the communities of reference with the ultimate goal of enhancing the cultural heritage of the country and its territories, the Intesa Sanpaolo Group has adopted internal regulatory tools. In particular, the following were defined:

- internal rules to be adopted for the management of both movable and immovable artistic assets (for example, archaeological finds, paintings, sculptures, drawings, ancient books, frescoes, artistic stained glass windows, etc.), as well as for the management of assets of the same nature belonging to third parties in the event of loans and loans for use;
- internal rules for the definition of principles and directives to be adopted for the management of the company's archive assets (paper or digital documentation, photographic collections, etc.);
- internal rules for the management of events and sponsorships;
- internal rules for the management of cultural patronage.

The documents are drawn up in accordance with the current Italian legislation relating to Cultural Heritage and in particular with Legislative Decree 22 January 2004, no. 42 (Code of Cultural Heritage and Landscape); for companies within the scope of the international subsidiary banks division, reference is made to the specific national legislation. The principles and guidelines set out in the documents apply to historical-artistic and archival assets owned by the Group as well as to assets of the same nature owned by third parties in the event of loans, loans for use and restoration, while their implementation falls under the responsibility of the Art, Culture and Heritage structure within the Chief Sustainability Officer Governance Area.

Processes for engaging with the communities affected by own operations

The Group pays particular attention to the perspective of the communities concerned, promoting structured and ongoing dialogue and engagement with stakeholders and community representatives, including actors from the civil economy active in the relevant territories. All this in order to identify areas of intervention and initiatives with a high social, cultural and civil impact, with which to act in order to combat inequalities, to support young people and employability and, in general, to promote inclusive and sustainable development.

The Intesa Sanpaolo Group shapes its relationship with the community through opportunities for listening and dialogue with the various spheres of civil society. To this end, it is committed to:

- maintaining a constant channel of communication with organisations representing the interests of stakeholders and promoting structured dialogue with the aim of cooperating in relation to mutual interests;
- listening to and taking account of the expectations and proposals made by the various components of civil society;
- analysing needs and identifying areas of action with high social, cultural and civic impact for communities;
- developing actions consistent with the listening and dialogue activities carried out.

The Group's involvement of the communities is achieved directly through meetings, organisation of events and through the activation of collaborations, partnerships, listening campaigns and exchange of information with the main local stakeholders. The implementation of the initiatives takes place in co-planning with non-profit organisations, thanks also to their ability to intercept the current and latent needs of the local communities involved, to structure inclusive and sustainable solutions and intervention models. The Group supports these organisations by making available resources, skills and its network of relationships which give rise to collaborations and real solidarity ecosystems.

To this end, Intesa Sanpaolo for Social Impact relies on a dedicated "Observatory" tasked with identifying the main social trends, leveraging the contributions of key stakeholders (in particular academic and scientific partners and foundations), and accordingly guiding the Group's social actions. The effectiveness of the Observatory is further strengthened by the activities of the Advisory Committee, composed of senior figures from the Bank and external members of recognised authority and significant experience in the social sector. Responsibility for the process of engaging the communities concerned, including stakeholders from the public sector, the private sector and the third sector, is entrusted to the individual Group structures that promote and implement the initiatives.

Among the Observatory's initiatives, in October 2025 the "Youth Forum for the Social Sector of Intesa Sanpaolo" was officially presented, with operations set to begin in 2026. It is a body with both consultative and advisory functions, composed of 12 young people aged between 18 and 25 who have a strong interest in social issues, innovation and youth engagement. The Youth Forum was established with the aim of listening to, valuing and integrating young people's perspectives into the social impact strategies promoted by the Bank, through intergenerational dialogue with the Group's structures on issues such as social innovation, sustainability and inclusion, in line with Intesa Sanpaolo's social priorities.

Objectives and metrics related to the communities affected by own operations[252]

The Group's support to local territories and communities occurs through multiple methods, in terms of tools and initiatives. One initiative of particular importance is the "Cibo e Riparo per le persone in difficoltà" (Food and Shelter for disadvantaged people) programme. As the biggest plan ever to be activated by a private entity in Italy, it involves the widespread distribution of food, beds, medicines and clothing to people in need throughout national territory. In the four-year period of the 2022-2025 Business Plan, the programme consolidated its support action for the most vulnerable people, defining a new dimension of social intervention with multi-project and multi-stakeholder characteristics, and setting the target of implementing 50 million initiatives. To this end, a variety of profit and non-profit partners were engaged to reach as many beneficiaries as possible.

Target: Food and shelter for disadvantaged people programme – Meals, Beds, Medicines, Clothing (number of initiatives in millions)[253]		
	Date	**Value**
Baseline[254]	31.12.2021	-
Final number	31.12.2024	54.1
Final number	31.12.2025	68.2
Target	2025	50

The target of implementing 50 million initiatives was set by the Board of Directors of Intesa Sanpaolo in the preparation of the 2022-2025 Business Plan, and represented an evolution compared to the social intervention targets already set in the previous 2018-2021 Business Plan. The implementation of the Programme takes place through partnerships with non-profit sector entities of national standing and capable of reaching every area of the country. These entities are selected from time to time on the basis of the social needs identified by the Intesa Sanpaolo for Social Impact structures through scenario studies; a joint project aimed at developing targeted actions is subsequently defined with them. Generally speaking, the Group defines specific objectives in advance together with the entities involved at the level of each individual initiative and monitors their progress through periodic reporting formats agreed with each partner. During the target monitoring phase, non-profit sector entities are involved in the implementation of the initiatives and in reporting the impacts generated. Over 14 million initiatives were carried out in 2025. Overall, since the start of the Plan, the Group has completed a total of more than 68.2 million interventions, compared with 54.1 million recorded as at 31 December 2024, including 56.5 million food interventions, 4.6 million dormitory beds, 6.4 million medical prescriptions and 730,000 items of clothing. The initiatives conducted also involved activities in support of the humanitarian emergency in Ukraine resulting from the ongoing conflict.

The final figures highlight the full achievement of the target set for 2025—already reached in 2024—and its significant overperformance, with 18.2 million additional interventions compared with the initial objective. This result demonstrates the effectiveness of the initiatives implemented by the Group to support people in difficulty.

[252] The information relating to the "Food and shelter programme for people in difficulty" Programme indicator provided in this paragraph is also reported in the section "2025 in brief" – paragraph "The 2022–2025 Business Plan and the new 2026–2029 Plan" of the Report on Operations of the Consolidated Financial Statements.

[253] Entity-specific metric.

[254] Plan target that represents the planning of a new activity that does not have a base Value.

Actions relating to the communities affected by own operations[255]

The collaboration between Intesa Sanpaolo for Social Impact and non-profit organisations and non-profit sector entities arises with the aim of fostering community well-being, promoting inclusion and social cohesion through initiatives aimed at generating a positive impact. The Group thus demonstrates its commitment to inclusion by supporting projects that aim to combat poverty in its various dimensions, reduce inequalities and encourage youth employability, contributing – in general – to promoting sustainable and inclusive development, also through institutional initiatives. Through these actions, tangible support is provided to the communities involved, while contributing to strengthening the Group's reputation. The actions undertaken by the Group, described in the following sections, are divided into the following main areas:

- combating poverty;
- social cohesion and inclusion;
- youth education and employability;
- corporate volunteering;
- crowdfunding platforms;
- Charity Allowance;
- education and spread of financial culture;
- commitment to culture;
- institutional initiatives in support of the community.

Combating poverty

As part of the actions to combat poverty, the “Food and Shelter Programme for People in Need” promotes initiatives across the entire national territory through targeted actions aimed at supporting the most vulnerable communities. In particular, the programme targets children, the elderly, people in rehabilitation communities, individuals linked to the prison system, and people living in poverty, providing concrete support through the distribution of essential goods and the provision of basic services.

Meals

Food poverty is one of the most dramatic aspects for people in fragile and destitute conditions. Intesa Sanpaolo has taken action to combat it with a widespread network of initiatives aimed at helping communities with socio-economic difficulties, supporting the distribution of food and basic necessities to combat food poverty. To this end, Intesa Sanpaolo has entered into a partnership with Fondazione Banco Alimentare with the aim of strengthening and enhancing local networks in their ability to retrieve and distribute food products for local charities. The collaboration includes the “Ri-pescato” initiative, which involves the recovery and processing of illegal fish seized in Sicily by the Coast Guard, allocating it for distribution to charitable organisations. Furthermore, in support of the Business Plan objectives for the Programme, Intesa Sanpaolo collaborates with Fondazione San Patrignano by implementing the "Support and Prevent" project, which aims to guarantee the distribution of meals to people hosted in the community. In addition, to offer support to children with disabilities and serious illnesses, an active collaboration is in place between the Bank and Fondazione Dynamo Camp**,** aimed at ensuring free meals and beds for the children hosted at the Camp in the Tuscan territory who are offered recreational therapy courses, as well as a collaboration with Vidas ODV, aimed at offering free daily meals to the young patients and their families hosted at the Casa Sollievo Bimbi hospice in Milan. Finally, the Bank supports the project “Accogliere Insieme”, carried out in collaboration with City Angels, aimed at helping people in difficulty by providing beds, meals and support services for the homeless. Thanks to the implementation of the initiatives supported by Intesa Sanpaolo's collaborations for line of action dedicated to food security, in the 2022-2025 period these agreements enabled the distribution of 56.5 million meals. The Charity Allowance also contributes to the implementation of the Programme through its own resources, made available by the Intesa Sanpaolo Chairmanship; overall, 2.4 million euro was disbursed for the distribution of approximately 1.4 million meals in a year, equivalent to approximately 3,800 meals per day. The Charity Allowance activities in this area are not limited to the distribution of meals, but also include the implementation of a series of additional activities aimed at helping the beneficiaries achieve their final goal of lifting them out of poverty.

Beds

The initiatives aimed at providing beds developed and implemented by Intesa Sanpaolo aim to enable a structured intervention that provides dignified shelter, but is also able to guarantee better access to healthcare and support for caregivers. This area includes the afore-mentioned collaborations with Fondazione San Patrignano, for which Intesa Sanpaolo supports the provision of beds to people hosted by the community, as well as with the collaborations with Fondazione Dynamo Camp, Vidas ODV and City Angels, aimed at further supporting the facilities thanks to initiatives intended to increase the reception capacity for children and young people hosted there and for their families. Furthermore, in order to contribute to the development of support structures for people in difficulty, an active collaboration is in place with the association Di.Re – Donne in Rete contro la violenza (Women in Network against Violence), which supports women through their journey out of violence and promotes coordinated prevention and awareness-raising actions. For this initiative, the Group contributes to the reception and hospitality of women in the “Shelter Homes” of the Di.Re network by supporting the initial expenses for utilities and rent, as well as babysitting services during the search for a job or for the purchase of goods that can be used to start up work activities. These agreements ensured that 4.6 million dormitories/beds were made available in 2022-2025.

Medicines

Access to healthcare is a right to which every citizen is entitled, and this also forms the basis for Intesa Sanpaolo's coordination action with Banco Farmaceutico for the extension of a national network for the collection and distribution of medicines. To this end, the “Pharma Links” project, born from the collaboration between Intesa Sanpaolo and Fondazione Banco Farmaceutico, aims to create and strengthen drug collection and distribution networks throughout Italy by strengthening the “Recupero Farmaci Validi” (Recovery of Valid Medicines) intervention model, aimed at collecting unused drugs and medicines to donate them to local charities. Another objective achieved through the collaboration with Banco Farmaceutico was the strengthening of the

[255] The key information relating to initiatives for communities set out in this section is reflected in the section “2025 in brief” – paragraph “The 2022-2025 Business Plan and the new 2026-2029 Plan” of the Report on Operations of the Consolidated Financial Statements.

BFOnline platform, the foundation's management tool that underpins the drug collection and distribution process. These collaborations enabled the prescription of 6.4 million drugs in the 2022-2025 period.

Clothing

The distribution of items of clothing has become an opportunity to design a complex circular redistribution initiative to confirm the combination of sustainability and social issues. In this sense, Intesa Sanpaolo collaborates with Caritas Italiana and some of the Bank's corporate customers for the "Golden Links" project, an initiative aimed at the recovery and distribution of items of clothing, consisting of unsold items, returns, second choices, defective but usable products, to families suffering from financial hardship. A total of 730,000 items of clothing and other goods were distributed over the three-year period 2022–2025.

The effectiveness of the initiatives that make up the Programme is monitored on a quarterly basis through the reports received from the entities with which the partnerships are set up.

Social cohesion and inclusion

The Group values its support to the communities, including through initiatives aimed at developing local territories in favour of people in conditions of socio-economic fragility, with the aim of ensuring social cohesion and inclusion. The initiatives are concretely supported by Intesa Sanpaolo thanks to the financial support to non-profit sector entities and thanks to the co-planning and dissemination of know-how, in favour of needy people who are struggling to reach that minimum threshold of well-being and dignity that constitutes a right of all people. The effectiveness of the initiatives is periodically monitored by the Bank in synergy with the entities involved in the projects.

Numerous social cohesion and inclusion projects are being developed throughout the Italian territory, following the guidelines of the 2022-2025 Business Plan. In particular, several initiatives were implemented to combat the socio-economic poverty of the most vulnerable subjects. In this sense Intesa Sanpaolo, in collaboration with Caritas Italiana, supports the "Aiutare chi Aiuta (Helping the helpers)" programme aimed at supporting dioceses in promoting the social inclusion of the elderly and combating youth poverty by distributing meals, health kits and clothing. In 2025, Intesa Sanpaolo and Caritas Italiana strengthened their commitment to supporting young people and adults in the prison system, focusing this year on Italy's Juvenile Detention Centres and on young people subject to other measures of a criminal nature. The initiative includes the distribution of essential goods, the provision of vocational training to develop skills relevant to the labour market, and support for job placement programmes aimed at improving employability.

Still in the area of social inclusion, Intesa Sanpaolo is strongly committed to supporting children aged 0 to 36 months hospitalised in the oncohematology departments of the main hospital centres in Italy. In this context, in collaboration with the Social Cooperatives partnering with Consorzio PAN , the Bank developed and continues to support the "Intesa Sanpaolo educational programme for children who are long-term patients" by providing young patients with a nursery service, the first of its kind, aimed at helping children overcome the social and psychological isolation resulting from illness, heavy treatments and long-term hospitalisation, promoting their cognitive and emotional development through appropriate programmes followed by qualified educators, providing educational materials and initiatives to furnish the spaces. Overall, from the start of the programme to 2025, 936 children attended the nursery in the hospital facilities involved.

The Bank promotes the growth of inclusive communities by supporting the Comunità Amiche della Disabilità (Disability-Friendly Communities) project with the aim of defining the characteristics that make a territory inclusive for people with disabilities. The partnership includes support for the local extension of the project and support for the co-programming and strategic planning processes regarding the disability issue.
Concurrently, Intesa Sanpaolo is also committed on the national territory to combating energy poverty, that is, the situation in which a family unit is unable to pay for their primary energy services required to guarantee a dignified standard of living. In this context, in the Rione Sanità and in peripheral neighbourhoods of the city of Naples, the project "Sharing Energy - Rinnoviamo l'energia: produzione e distribuzione di Comunità" (Sharing Energy - Let's renew energy: production and distribution of communities) is active, which promotes the growth of a new model of energy sustenance, from renewable sources, with zero impact and low costs. The project also involves the creation of Solidarity Renewable Energy Communities (CERS) and the distribution of energy produced for free or at a highly regulated price to vulnerable people. In terms of urban redevelopment, the Bank developed the initiative "La Bella Piazza", aimed at combating social and urban abandonment and degradation through the activation of a process of regeneration, enhancement and care of public spaces in Piazza Garibaldi in Naples.

In response to the emerging critical issues regarding juvenile hardship and to promote the inclusion and development of positive behaviours in the area of civic education, the Group has activated "WeBecome". It is an educational programme aimed at primary school children that develops learning pathways on various topics designed to promote educational inclusion, through training modules for parents, teachers and school leaders intended to prevent the onset of childhood difficulties by strengthening the transversal skills needed to live in a constantly changing context.

In light of the persistence of a macroeconomic scenario of strong uncertainty and instability that further aggravated the fragile condition of a significant portion of Italian households, and the housing emergency for students living away from home, Intesa Sanpaolo implemented an action plan to strengthen social housing that entails, over the 2022-2025 Business Plan, the promotion of new homes and beds in student halls of residence. The initiative undertaken by the Bank is one of the most extensive social housing programmes in Italy and is one of the tangible initiatives for inclusion and the reduction of inequalities. Its effectiveness has been monitored throughout the implementation phase through an assessment of the underlying economic commitment and managerial effort in terms of attracting investors and project development. For this purpose, new partnerships were launched with leading operators in the sector, which gave new impetus to the "MilanoSesto" project, the largest infrastructure development initiative for quality of life in Italy, which involves the implementation of programmes for subsidised, unrestricted social construction work (for approximately 27,000 sqm), in synergy with the creation of the "Città della Salute e della Ricerca" (City of Health and Research) under the leadership of the Lombardy Region, as well as commercial businesses,

offices and an urban park. Intesa Sanpaolo also provided significant financial and advisory support for the project of the former Porta Romana railway station in Milan where the Olympic Village was built, which will later become one of the largest social housing projects in Europe, with 1,700 subsidised beds.
Furthermore, in the 2024–2025 period Intesa Sanpaolo further strengthened its support for the development of student housing through investments in the iGeneration and Pitagora funds, managed respectively by InvestiRe SGR and Finint Investimenti SGR, as well as in the infrastructure development initiative for quality of life managed by Redo SGR at the Montelungo–Colleoni Barracks in Bergamo, which will enable the creation of more than 4,800 student beds.

Youth education and employability

Intesa Sanpaolo is committed to supporting the community through initiatives dedicated to the training and job placement of people in situations of social or economic vulnerability. These initiatives are aimed in particular at young people from low-income families who have difficulties accessing quality education and employment, and who are therefore more exposed to the risk of social exclusion and poverty.
The aim is to support and relaunch the school system, promoting inclusive education, guidance for school-age children and the prevention of school dropouts. This approach intends to ensure equal learning and job placement opportunities for all new generations, regardless of their socioeconomic background, gender and abilities, and to promote a culture of respect and enhancement of diversity.

During the year, the Bank developed several initiatives and projects in this direction throughout Italy, in accordance with the objectives and principles of the 2022-2025 Business Plan. Intesa Sanpaolo directly supports these initiatives by providing both resources and its own know-how and expertise. In particular, such support is ensured by promoting collaboration between the profit and non-profit sectors, as well as by making available educational materials, skills, contents and tools to implement new educational and training approaches, aimed at the social and professional integration of young people and vulnerable people.

In this context, to combat the youth unemployment phenomenon and train the profiles that are most sought after by the job market, the “Giovani e Lavoro” initiative continues. The programme was born from the partnership between Intesa Sanpaolo and Fondazione Generation Italy ETS, a McKinsey & Company non-profit foundation, and is aimed at matching job supply and demand in the most sought-after sectors (Hi-Tech, Precision Mechanical Industry, Sales, Hotel and Catering and Renewable Energies) and providing training courses nationwide, entirely supported by Intesa Sanpaolo, to young people aged between 18 and 29 who are neither studying nor working to develop their technical, attitudinal and behavioural skills, guaranteeing companies, including corporate customers, a pool of trained people to fill the positions that are most needed. Since 2019, the year the programme began, the following results have been achieved (data as at the end of 2025): around 5,600 students trained or currently in training (more than 700 of whom during 2025), around 2,500 companies involved, and a youth placement rate of over 80% after completing the programme.

To address situations of social, economic and family hardship affecting young NEETs (Not in Education, Employment or Training)—that is, those who are not studying, working or participating in training programmes—and to promote their inclusion in the labour market, the Group is active with “In Action ESG NEET”, an initiative launched in 2022. Through dedicated training pathways, the programme aims to respond to the growing demand for professionals working in the fields of care, social assistance and high-quality educational services. So far, the initiative has involved 295 people across the regions of Tuscany, Campania, Lazio, Puglia, Molise and Sicily, for a total of 6,914 hours of classroom and on-the-job training. Each participant also completed a curricular internship at social, healthcare or educational facilities. According to the available data, 47% of participants found employment and/or resumed an educational pathway within 12 months of completing the programme.
To further strengthen its commitment to tackling youth unemployment, Intesa Sanpaolo has joined the ZeroNeet challenge promoted by Fondazione Cariplo, in collaboration with the Lombardy Region, with the ambitious goal of supporting 20,000 young NEETs over the next four years in Lombardy and in the provinces of Novara and Verbano-Cusio-Ossola (areas in which the Foundation operates), helping them to build a pathway towards employment activation. Within the framework of this collaboration, Intesa Sanpaolo’s “Giovani e Lavoro” programme has been fully integrated into the ZeroNeet initiative and its areas of operation, in order to make available the skills, methodologies and experience developed over the years.

Similarly, since 2024 Intesa Sanpaolo has been working with key social-sector organisations to promote labour inclusion and the social integration of the most vulnerable people. To this end, the Bank has offered and supported programmes aimed at people with physical and cognitive disabilities, as well as migrants and refugees, with the goal of strengthening their skills and fostering their integration through training and employment.

To further support talented young university students whose career potential is limited by external factors other than their own abilities, the “Generation4Universities” project, developed by Fondazione Generation Italy and McKinsey & Company with the support of Intesa Sanpaolo, offers talented university students a training programme focused on cross-cutting, behavioural, attitudinal skills and individual mentorship, as well as a two-week bootcamp with targeted sessions on employability and professional vocation seminars held by Managers and Executives of leading companies. Now in its fifth edition, the initiative involved 90 students, 69 universities and 18 partner companies in 2025. The Bank works to combat early school leaving and supports young people in making choices about their future, including through its own training initiatives and in collaboration with local entities such as Music Innovation Hub and Manager4Education.

Intesa Sanpaolo’s commitment to helping reduce reoffending among former prisoners is implemented through vocational training programmes, also delivered with the involvement of people from within the Group. At the same time, the Group promotes a culture of legality in schools through a project developed in collaboration with the associations Quarto Savona 15 and Vento e Vertigine.

The pilot phase of the “FUTURA” Programme—an initiative by Save the Children, the Forum Disuguaglianze e Diversità and Yolk, in collaboration with Intesa Sanpaolo—aimed at tackling girls’ educational poverty and school dropout, has been

completed. The project operated in socially and economically disadvantaged areas, offering personalised training pathways to young women—including young mothers—aged between 13 and 24, aimed at obtaining an educational qualification and/or supporting their re-entry into the labour market. To this end, 350 educational plans were activated, of which 50 were dedicated to young mothers. The evaluation plan assessing the impact on the participants' educational pathways and empowerment is currently being finalised, developed with the contribution of a Scientific Committee. The tool is designed to measure the skills acquired and aims to make the methodology tested during the first two years reproducible and scalable at a national level.

In 2025, the Group also continued its support for the Istituto Mater Dei dell'Ordine delle Figlie della Carità di San Vincenzo de' Paoli for the project "Ecosistema Educativo per i giovani e le famiglie di Napoli Nord (Educational Ecosystem for Youth and Families of Northern Naples)", aimed at tackling educational poverty in the outskirts of Naples and in neighbouring municipalities (Caivano, Casoria and Salicelle). The objective is to promote the recovery and social inclusion of young people aged between 13 and 25 through the creation of educational hubs and vocational schools that support the labour market integration of young people (NEETs) who have left education prematurely, in an area characterised by high school dropout rates, limited employment opportunities, and situations of economic poverty and crime. In particular, in 2025 the Group contributed to supporting the completion of the renovation works at the educational hub in Casoria, the set-up of classrooms and laboratories, and the purchase of several minibuses for student transport. The Group also contributed to the refurbishment and expansion (including the creation of four new modern and functional classrooms, laboratories and shared facilities) of the Mater Dei Vocational Training Institute building in Naples – Chiaia, which has been operational since October 2020. This latest intervention will enable the launch of a new vocational course that will allow a further 100 students to enrol, bringing the total number of enrolments across the two educational hubs to 500, as confirmed by monitoring carried out by the Mater Dei Institute.

In 2025, the project "Orizzonti in Azione – Doti educative per apprendere, sperimentare e coltivare passioni (Educational Endowments to Learn, Experiment and Cultivate Passions)" was launched, an initiative promoted and implemented by Save the Children in co-planning with Intesa Sanpaolo. The programme was created with the aim of tackling child poverty, both material and educational, through the provision of "educational grants", namely goods and services intended for children and young people living in conditions of socio-economic vulnerability and/or social exclusion. Activated in 16 "Punti Luce"—Save the Children's socio-educational spaces located in disadvantaged neighbourhoods across 13 cities in 12 different regions—the project promotes the right to education and supports the development of transversal skills, enhancing individual aspirations through personalised pathways (e.g. sports, arts, language, IT or music courses). Educational grants also enable beneficiaries to access new opportunities for personal growth and socialisation, such as study trips, school outings or summer camps. The initiative includes an impact evaluation process conducted ex ante, in itinere and ex post by a specialised organisation, in order to rigorously measure the results generated in the local areas and among the beneficiaries.
Thanks to the support of Intesa Sanpaolo, the project plans to provide around 2,700 educational grants to the same number of minors over the three-year period 2025–2027, of which 755 were awarded in 2025, offering concrete support for their educational and personal development.

At the same time, Intesa Sanpaolo renewed its commitment to tackling educational and child poverty in the outskirts of Milan by supporting, in collaboration with Save the Children Italia, the new Punto Luce Gallaratese. The project includes co-design activities and financial education initiatives aimed at mothers and families in vulnerable conditions and/or at risk of social exclusion, as well as programmes dedicated to children and young people to promote the responsible use of digital tools. In this context, through "Donare per non sprecare", the initiative through which the Bank makes available furniture and hardware that are being decommissioned but are still functional, the Group donated five laptop computers to support the centre's educational and training activities.

Intesa Sanpaolo also supports the growth of the Third Sector through capacity-building initiatives, providing tools and skills to strengthen its operational effectiveness and long-term sustainability. In this context, in 2025 the commitment continued with the second edition of the Executive Master for Third Sector operators, delivered in collaboration with 24ORE Business School. The programme provides 30 scholarships each year and addresses key topics such as digitalisation and technological innovation.

Corporate volunteering

As part of its commitment to supporting communities, the Group promotes volunteering activities aimed at strengthening corporate solidarity and generating tangible impact in the territories in which it operates. Within this framework, the fourth edition of the Volunteering Week took place in November, organised in collaboration with non-profit organisations. The initiative included four themed days made up of multiple activities, including support for the elderly, assistance in a day centre for former drug addicts, preparation of food parcels, management of a food rescue market, and moments of dialogue with adolescents. In particular, employees at the Head Office of the International Banks Division (IBD) were able to freely choose the activities they wished to take part in, contributing in a tangible way to the wellbeing of the community and strengthening the value of corporate solidarity.

In addition to these community-based volunteering experiences, the Group has launched its first Skills-Based Volunteering programme, a specific form of corporate volunteering that leverages and makes available—during working hours—the professional skills of the Group's people for the benefit of projects and initiatives run by Third Sector organisations or their beneficiaries. This programme, which complements other traditional volunteering activities, aims to further amplify the positive social impact of the Group's actions and also represents an opportunity for personal and professional enrichment for the people involved. In 2025, the first pilot project was launched in collaboration with the Fondazione AIRC for Cancer Research. In this context, five people from the Group involved in development programmes made their skills in Project Management, Recruiting and Training available, working alongside the Foundation's staff to review and structure certain processes in these areas. Looking ahead to the next steps, the Skills-Based Volunteering programme will be further developed through additional collaborations with other organisations and through the creation of a digital platform designed to promote the programme and facilitate the collection of applications.

Crowdfunding platforms

To offer a direct contribution to the implementation of social initiatives proposed by non-profit sector local entities, the Group promotes various fundraising tools.
In this sense, Intesa Sanpaolo's For Funding platform confirms, also in 2025, its leading role in Italy's crowdfunding sector, promoting the collection of donations for non-profit organisations across the country. The projects supported on For Funding cover various areas of intervention, including environment and ecology, culture and sport, diversity and inclusion, health and research, and social support. The use of the platform takes place upon request from non-profit organisations. Applicant NPOs follow a well-defined and structured selection process, which involves the relevant local branch and the Impact Credit and Risk Management structures, both of which carry out thorough due diligence before the initiatives are published on the platform. Customers and donors can contribute through the Crowdfunding platform's website and the Intesa Sanpaolo app. Customers are informed about the fundraising campaign through the Bank's various channels (for example, direct email marketing, push notifications, in-app messages, ATMs, etc.). Intesa Sanpaolo covers 100% of the operational costs of the fundraising campaign, ensuring that donations are free of charge. The duration of the fundraising initiatives on For Funding can be customised, based on the specific needs of each supported project. The For Funding activity is supported by the Formula programme, also accessible via the platform, which offers direct support for specific needs in favour of local Italian communities and stand-out projects at a national level. Every four months, with the involvement of Intesa Sanpaolo Regional Governance Centres and with the technical support of Fondazione CESVI, a minimum of 13 non-profit organisations that carry out significant initiatives in their territory are selected. These organisations, together with CESVI, develop a targeted project and, thanks to fundraising on the For Funding platform receive the necessary support to achieve tangible objectives at a local level. Participation in the Formula programme is also an opportunity for participating NPOs to increase their capacity for planning and reporting initiatives, also thanks to the technical support provided by CESVI. In 2025, For Funding raised a total of approximately 8.6 million euro in donations. Approximately 6 million euro of these funds was allocated to the Formula programme. To ensure the success of the campaigns, non-profit organisations are required to provide detailed reporting on the progress of their initiatives, while an impact tracking process is in place to evaluate the results achieved. The initiatives contribute directly to the needs of the communities, increasing the Group's support in the local territories where it operates.

Charity Allowance

The Chair's Technical Secretariat assists the Chair in the planning, implementation and monitoring of the Charity Allowance's initiatives through a dedicated office (Charity Allowance Office) made up of 8 resources. Furthermore, within the Banca dei Territori Division, Charity Representatives (23 people) have been identified who assist the Heads of the Regional Governance Centres in the evaluation and selection of initiatives up to 5 thousand euro. In terms of time commitment, the donations provide support for a period of one year and can be renewed – even non-consecutively – for a maximum of three years. Save for exceptional circumstances (e.g. pandemic), the duration of the project cannot exceed 18 months from the start date communicated to the Charity Allowance, which can be extended to 24 months for medical research projects.
In 2025, Intesa Sanpaolo's Charity Allowance disbursed approximately 24.3 million euro to support 872 projects carried out by non-profit organisations. Overall, about 1.6 million direct beneficiaries were reached (net of medical research projects).
There are three main lines of action for 2025, closely linked to issues aggravated by the health, economic and social crisis of recent years, to which approximately 34% of the total disbursements have been allocated:

- community-based healthcare welfare;
- enhancing the potential of Southern and Island Italy;
- social inclusion of migrants and refugees.

Community-based healthcare welfare projects were aimed at providing equitable and inclusive healthcare assistance, leveraging both traditional and innovative resources to reach those most in need. These initiatives benefited people without a health card, young people and the elderly in vulnerable conditions, patients with neuromotor, sensory or cognitive disorders, and individuals facing socio-economic hardship. Support was provided to community-based centres offering free and easily accessible healthcare services, initial psychological support points, and mobile units delivering check-ups and medical visits in areas far from hospital facilities. Alongside these services, innovative cognitive stimulation programmes and non-pharmacological therapies were also introduced, together with rehabilitation activities and home care assistance programmes. Territorial proximity played a central role in these initiatives, ensured by specialist figures such as the community nurse, engaged in active prevention, monitoring and patient support. From a technological perspective, particular attention was given to the use of virtual reality and the strengthening of telemedicine—tools that make it possible to provide remote consultations and specialist visits, facilitate access to diagnostic tests, and monitor clinical progress even outside hospital facilities. An equally important aspect concerned support for caregivers, enabling them to acquire the skills needed to carry out their caregiving role and to maintain a balance between caring for themselves and for their family member. Overall, the most effective interventions proved to be those adopting a holistic approach, aimed not only at treating the symptoms of illness but also at addressing the practical, social and psychological needs of the entire family involved in the care pathway.

At the same time, the initiatives aimed at enhancing the potential of Southern and Island Italy developed along several directions, all sharing the objective of combining social inclusion, territorial growth and sustainable development. The initiatives aimed to create employment opportunities for young people, particularly those living in vulnerable conditions, through training pathways and placement in productive activities linked to local traditions and innovation. Culture was also promoted as a tool for social regeneration, through projects that transformed spaces and shared assets - including those confiscated from organised crime - into places of creativity, participation and legality. Great attention was also devoted to the education and training of younger generations, through programmes aimed at tackling school dropout and educational poverty, strengthening transversal skills, and fostering growth in strategic fields such as environmental sustainability, digital technologies and scientific disciplines. This approach made it possible to enhance local resources while at the same time fostering the development of communities that are more inclusive, dynamic and future-oriented.

Initiatives aimed at the social inclusion of migrants and refugees seek to strengthen opportunities for integration and to counter conditions of marginalisation. The initiatives addressed the employment dimension through training pathways and placements

in strategic sectors; internships, career guidance activities and workshops on labour rights helped facilitate more informed and lasting integration. To enable migrant women to participate in training and employment pathways, childcare support measures were also provided. At the same time, interventions aimed at identifying and protecting victims of labour exploitation and illegal gangmastering were strengthened, including temporary housing solutions and income support measures. Language training and intercultural mediation also proved essential—key tools for facilitating access to services, education and the labour market. Particular attention was given to people in situations of greater vulnerability. In this area, refugee women who have survived gender-based violence or have been victims of trafficking have been able to benefit from protection pathways, legal support, and psychosocial and healthcare assistance. At the same time, women in situations of severe marginalisation, including transgender people, have benefited from semi-independent accommodation services. Finally, from an educational perspective, the projects supported migrant students and families through initiatives aimed at strengthening relational and technical skills, fostering self-determination and psychological wellbeing, as well as encouraging participation in school and community life.

The Charity Allowance also supported projects related to other social issues, such as the prevention of and fight against gender-based violence, support for young NEETs (Not in Education, Employment or Training), disability, inclusive amateur sport, and cultural initiatives characterised by their social impact.
As regards medical research, 9 projects were supported (total donations of 1.3 million euro) by leading national institutions. The initiatives in this area were selected with the help of external experts who draw up detailed assessment sheets on qualitative and quantitative elements such as objectives and methodology, impact, research team and budget. With regard to social research, total donations of 424,000 euro were allocated to support five studies on: extortion and usury in several major Italian cities; labour exploitation in agri-food supply chains; methods to combat sexual abuse of minors; the management of vulnerabilities among asylum seekers and beneficiaries of international protection within the Italian reception system; and the use of psychoactive drugs among young people outside a medical prescription.

Collaboration with the International Banks Division continued with approximately 1.6 million euro disbursed (approximately 57% of the international donations) in the countries included in the Division's scope.

The resources allocated to the initiatives planned during 2026 will be submitted to the Board of Directors with the 2025 Consolidated Financial Statements and subsequently approved by the Shareholders' Meeting.

The checks carried out on the completed projects returned an overall positive picture: most of the entities achieved and, in some cases, exceeded the objectives set, actively involving the reference communities in the development of the initiatives and expanding the local networks. The beneficiaries of the initiatives are in line with those expected at the project submission stage. Numerous collaboration networks between private social, institutions and other key players (schools, social services, etc.) were started or consolidated, evidence of the acquisition by the local territory of the experiences activated and guarantee of the sustainability of the initiatives over time.

The impact of the supported projects is significant, in terms of employment generated, social inclusion, influence on public policies and regeneration of the territories in which they are located. Below are some examples:

- The volunteer organisation IOM Jesi e Vallesina provided integrated support to 91 women with oncological conditions in Jesi, in the province of Ancona, through the opening of a multifunctional centre dedicated to addressing the different needs that may arise during the course of treatment. All participants reported an improvement in psychological wellbeing, with reduced anxiety and feelings of loneliness, as well as strengthened self-esteem. The relational and communication impact was also positive, thanks to the creation of meaningful connections among the participants and the active involvement of their families. The project came to an end in March 2025; it was then renewed for a second year;
- The Aliseo Association of Turin worked to address problematic alcohol use among young people, with the aim of increasing awareness of the risks associated with abuse, facilitating access to treatment pathways, and supporting and guiding families. In the second year of the project, the organisation reached more than 3,500 young people and over 2,000 key adult figures. In addition to the partnerships already established in the first year with the Addiction Services of the Local Health Authorities (ASL) in Turin and in several other cities in Piedmont, further collaborations were activated with other public bodies and Third Sector organisations managing primary and secondary prevention projects. The social impact evaluation found that 80% of participants experienced an increase of over 50% in psycho-physical wellbeing, greater awareness of consumption behaviours, improved relational and decision-making skills, and a gradual reconnection with family and friends, along with greater participation in social life. The project, in its second year, came to an end in May 2025; it was then renewed for the third and final year;
- The Conchiglia Association launched a project in Mesagne, in the province of Brindisi, to support the social and labour inclusion of NEET mothers, involving 150 women. Career guidance services, skills assessment and individual counselling were provided, along with training workshops on work–life balance and economic independence, as well as a work–life reconciliation service from which 200 children benefited. 90% of the participants reported increased awareness of their own situation, and 56% reactivated their job search. The project generated a significant impact on the municipal library, transforming it into a social hub for families, and received prestigious recognition by winning the regional “No Gender Gap 2025” award as a best practice in the Third Sector category. The project came to an end in June 2025; it was then renewed for a second year;
- the Mosaico Association organised a theatre workshop for 25 young women detained at the “Capanne” prison in Perugia, with the aim of initiating a pathway of empowerment and psycho-physical wellbeing capable of reducing the distance between prison and the wider community. The final performance held within the correctional facility was attended by 124 members of the public. The initiative received full appreciation from the Director of the correctional facility and was granted the patronage of the Umbria Region. The project came to an end in June 2025; it was then renewed for a second year.

The project deadlines were mostly met, with the exception of physiological delays in the launch of the initiatives in the first year of operation and in the case of medical research, for which extensions are often requested to allow the publication of the results achieved.

Some additional difficulties were encountered in the implementation of international cooperation interventions in difficult socio-political contexts, which were overcome thanks to the ability of the institutions to reorganise themselves by leveraging a long-standing presence on site and a solid network of relationships woven in the reference territories. The monitoring and reporting activities confirmed the proper use of the donation by the beneficiary.(Minor) budget adjustments during the implementation of the activities have always been agreed with the Charity Allowance.

Education and spread of financial culture

Museo del Risparmio (Savings Museum) is an innovative space where it is possible to become familiar with the concepts of saving and investing with a clear and simple language, in order to improve the level of financial literacy of the people to whom it is addressed. This is not a traditional museum, but rather an edutainment project that facilitates learning through play. Founded in 2012 in Turin, thanks to the financial support of the Intesa Sanpaolo Group, of which it is part, it was a pioneer in the spread of financial education in Italy, so much so that it was the first museum in the world dedicated to this topic. Its mission is to help people consciously manage their personal finances and consequently improve their overall well-being level, counteracting situations of poor financial literacy that often contribute to a much wider phenomenon of social exclusion. During 2025, the Museum's educational initiatives reached over 154,000 users.

The Savings Museum promotes social and educational inclusion through the dissemination of financial literacy, delivered through a wide programme of educational initiatives designed for both children and young people as well as adults, who can participate individually or in groups through schools or third sector organisations.
The main actions put in place consist of the preparation of financial education contents and initiatives, implemented through thematic guided tours, educational workshops, modular and structured training courses, and dissemination events held at the physical headquarters of the Savings Museum in Turin and online.

Following the introduction of mandatory financial education in school curricula, a catalogue of basic financial education programmes has been developed for primary and secondary schools:

- "EduFin&Fun" for primary and secondary schools, consisting of three meetings during which to explore the history and functions of money, elements of personal budget management and safe use of the Internet and the first online purchases;
- "School and Work Training Pathways" (formerly PCTO): a range of basic financial education modules designed for upper secondary schools, which classes can select and combine according to their specific needs;
- "A Window on the World" pathway: a cycle of six monthly introductory webinars designed to provide young people with the basic knowledge needed to approach the economic world in an informed way.

Overall, in 2025 a total of 416 classes—equivalent to more than 8,000 students—took part in the "School and Work Training Pathways" (formerly PCTO) programmes.

In addition to guided tours and structured learning pathways, the Savings Museum offered classes from primary and lower and upper secondary schools a programme of 27 educational events, organised on a monthly basis and designed to promote basic financial literacy in a playful yet rigorous way. Using formats inspired by edutainment and cross-disciplinary approaches, the events also addressed topics such as cybersecurity and digital safety, artificial intelligence and cryptocurrencies, human capital and the circular economy.
Among the most significant events were the meeting with physicist and science communicator Vincenzo Schettini ("L'economia che ci piace" (The Economy We Like)), attended by over 10,300 students from upper secondary schools; the new four-part series "Edufin and Literature", designed to analyse the economic issues underlying some literary masterpieces of the past; and the series of online webinars for primary schools led by For and Mica, the mascots of the Savings Museum, which attracted more than 30,200 participants.
A total of approximately 8,400 children and young people participated in in-person activities and over 124,000 were involved in remote learning activities, always accompanied by a tutor, for a total of 2,266 hours of training provided.

Support activities for teachers also continued, through webinars dedicated to providing tools and methodologies for delivering financial education in the classroom in an innovative and engaging way, such as "Economia. Una chiave per il futuro (Economics. A Key to the Future)", which seeks to transform the teaching of economics into a tool for the personal and professional growth of young people, and "AI a scuola: uno strumento per crescere e orientarsi (AI at School: a tool for growth and orientation)", focused on the potential of artificial intelligence to support learning and foster young people's entrepreneurial mindset. Particular attention was also given to interdisciplinary connections, with webinars dedicated to links with neuroscience and to financial education from a sociological perspective.

Outreach activities were also offered to an adult audience, with a programme of 65 digital and blended events that reached more than 11,200 people and generated over 448,000 on-demand views during the period considered.
Among the new initiatives, the following are worth mentioning:

- "Da regina della casa a Money Queen (From Queen of the Home to Money Queen)": a three-part programme designed to provide tools to help women manage the choices that affect their financial wellbeing at different stages of their lives;
- "Risparmia per un sogno (Save for a Dream)": a cycle of four live events designed to demonstrate how conscious money management can transform from a simple sacrifice into an extraordinary opportunity, through the stories of four figures from the worlds of entertainment, music, lifestyle and sport;
- "Debito facile, vita difficile (Easy Debt, Hard Life)": a training module aimed at preventing over-indebtedness.

Meetings to support parents also continued through the "Giovani al centro (Young People at the Centre)" series, promoted together with MOIGE (Movimento Italiano Genitori), as well as training programmes for adults, including "Score Your Goal (Fai Meta)", open to anyone wishing to acquire the basic skills needed to make informed economic decisions, and "Warm Up Your Muscles (Riscalda i Muscoli)", aimed at young people aged between 18 and 35 who hold the National Youth Card.

Since 2017, the Museum has set itself the goal of designing pilot initiatives specifically aimed at segments of the population which, for various reasons, can be considered socially vulnerable, such as women, migrants, prisoners, students from disadvantaged backgrounds, and people with mild cognitive disabilities. The main activities to support the development of financial education among the most socially vulnerable categories included:

- "Welcom-ed": dedicated to migrants and foreign students from the Provincial Centres for Adult Education (CPIA) and to the youngest people of the Communities to raise their awareness of basic financial terminology, simple budgeting and planning techniques and the operation of the most widespread financial instruments;
- "Prometti di prenderti cura di te (Promise to take care of yourself)": designed to provide women victims of violence with the basic economic knowledge and skills needed to achieve economic independence. In particular, in 2025 a collaboration agreement was signed with the Puglia Region, under which the Savings Museum trained 60 staff members from anti-violence centres operating across the region, enabling them to provide basic financial education to the women they support.
- "LEI" and "Logos": a programme for female inmates at the end of their sentence and ex-inmates designed to enhance their opportunities in the job market in the perspective of leaving prison and to prevent the phenomenon of recidivism.

In 2025, the Savings Museum contributed to the asset-building programmes WILL and PERCORSI, promoted by the Ufficio Pio of the Compagnia di Sanpaolo to support low-income families and students residing in Turin and the Metropolitan City, with the aim of encouraging investment in educational and academic pathways. Within these programmes, around 650 parents and 500 students took part in a series of basic financial education sessions.
Overall, in 2025, the training activities of the Savings Museum aimed at vulnerable people reached approximately 2,030 individuals.

In addition to training and information initiatives, the Museum regularly prepares new content and formats hosted at its physical location, or transmitted via its website and social networks. The aim is to reach all segments of the public in the most widespread way possible, conveying financial education concepts with a simple and engaging language.
In 2025, in particular, the following initiatives were developed:

- "Money money: un toc di economia (Money Money: A Touch of Economics)": an eight-episode video series recorded in reel format and shared on the main social media platforms, in which the Director of the Museum explores economic and financial topics of potential interest to users;
- "Non solo parole: educare al denaro con l'esempio e il dialogo (Not Just Words: Educating About Money Through Example and Dialogue)": a format developed with the support of a psychologist, aimed at promoting an educational approach capable of fostering awareness and responsibility in financial management;
- "Arco e Iris in Estremo Oriente (Arco and Iris in the Far East)": a new tale from the "Le favole di Arco e Iris (Arco and Iris Fables)" series, designed to introduce the features of the most common payment instruments and the purpose of a current account;
- "Al Museo con For e Mica (At the Museum with For and Mica)": a format designed to engage children and families at the Savings Museum through activities led by the mascots For and Mica.

The digital publications are also made available in printed format on the occasion of specific events or project initiatives organised by the Museum.

The Museum's initiatives and educational formats have a predominantly national geographic reach. However, some specific educational initiatives ("Money Master Challenge", "SAVE Ambassador", "Cybersecurity Labs") are also offered in other European and non-European countries through the Financial Literacy International Network (FLITIN), the network of Financial Education ambassadors belonging to the 11 international banks of the Intesa Sanpaolo Group. The initiatives are aimed at the entire community, but modulated according to the specific needs of the different groups of beneficiaries: children, young people, adults, schools, families, socially vulnerable groups (for example, migrants, women victims of violence, prisoners and ex-prisoners, young people at risk of dropping out of school, people with cognitive disabilities, etc.). The actions are planned on an annual basis and following the calendar of the reference school year. Overall, FLITIN activities reached more than 12,400 students, representing an increase of 98% compared with the previous year.

The actions developed by the Savings Museum are based on scientific surveys aimed at exploring the needs in terms of financial literacy of the different population targets. Every year the Savings Museum develops surveys in collaboration with public and private research centres, the results of which guide the design and provision methods of the training activities and lead to scientific publications in international journals. The latest survey, which was released in November 2024, explores how optimism (or hope), happiness, and planning skills influence peace of mind when dealing with personal money issues.
Lastly, the Museum is active in the exchange of good practices and in discussions in specialised national and international fora such as the "National Committee for Financial Education" and the "International Federation of Finance Museums" (IFFM).

Commitment to culture

Intesa Sanpaolo supports the communities and territories in which it operates through a series of initiatives aimed at protecting and enhancing the historical, artistic and cultural heritage of both the country and the Group, primarily for the purpose of its public enjoyment for the benefit of the communities. In this perspective, the Bank has created the "Progetto Cultura (Culture Project)", a programme of activities conceived and implemented in dialogue with public and private, national and international entities and institutions, with which Intesa Sanpaolo expresses its direct and tangible commitment to promoting art and culture in the territories in which it operates, in the awareness of the strategic role of culture in promoting more innovative, sustainable and inclusive societies. The Project is made up of different initiatives, starting from "Gallerie d'Italia", considered one of the most important private museums in Europe. Through the Culture Project, the Group devotes significant effort to the management of its art collections and the materials held in the Bank's Historical Archive, with the aim of making them accessible to the public. The "Restituzioni" programme is also active, contributing to the protection and enhancement of the country's artistic and architectural heritage in collaboration with the local entities of the Ministry of Culture responsible for its safeguarding. Finally,

through the Progetto Cultura, the Bank supports partnerships, sponsorships and grants with the aim of creating a network of collaboration with public and private players, both national and international, that promote the country's cultural heritage. Progetto Cultura, in addition to bringing positive effects to the local communities in which Intesa Sanpaolo is present in terms of enhancing the history, traditions and cultural identity, also represents a tangible opportunity for the Bank by increasing the trust of its stakeholders in the Group and contributing to the achievement of the objectives of the 2022-2025 Business Plan. Indeed, the initiatives of "Progetto Cultura" are developed according to a multi-year programme in accordance with the 2022-2025 Business Plan.

Gallerie d'Italia

One of the main components of "Progetto Cultura" is "Gallerie d'Italia", the Intesa Sanpaolo museum hub resulting from the transformation of historic buildings owned by the Bank into museums open to the public to share the corporate collection, exhibitions and initiatives of cultural and social value, linked to the territory and communities. The project involves 4 locations: Milan, Naples, Turin and Vicenza. Overall, in 2025 Gallerie d'Italia welcomed around 750,000 visitors and hosted 18 major exhibitions in partnership with national and international institutions, ranging from the Vatican Museums to the Bibliothèque Nationale de France and National Geographic Society. The exhibitions are aimed in particular at showcasing artistic movements and authors from the regions where Gallerie d'Italia are located, while the photography exhibitions in Turin—created on commission—explore topics related to ESG themes. Among these were: the major exhibition on Neoclassicism in Milan; an in-depth exhibition on seventeenth-century women artists in Naples; in Turin, the exhibition by photographer Carrie Mae Weems, focused on the fight against racial and gender injustice; and finally in Vicenza, the project by Cristina Mittermeier on the relationship between humans and nature and the protection of the planet. Around 5 thousand free educational visits and workshops were organised, with 109 thousand children and young people participating from local schools of all levels and age groups: the broad and structured educational proposal offers interactive and engaging experiences, with the aim of bringing the youngest audiences closer to art, making them acquire greater awareness of the artistic and cultural heritage value and of belonging to a common history. The Gallerie also play an active role in the inclusion and attention to people exposed to situations of vulnerability, from the promotion of the rights of people with disabilities (physical, mental, cognitive and linguistic), to the inclusion of refugees and citizens from other countries and cultures, to attention to the issues of mental health and diseases with a strong personal and social impact such as Alzheimer's and Parkinson's: in the year, around 750 courses were designed for people with disabilities or exposed to situations of vulnerability, with around 9,700 participants. Among the numerous cultural initiatives, 60 free meetings were held as part of the public programme #Inside, to delve deeper into the themes of the hosted exhibitions. Furthermore, the Gallerie d'Italia App is active in the four locations, an innovative digital guide thanks to which users are able to access an "advanced" visit experience, with free audio and video content.

Art assets

Intesa Sanpaolo demonstrates a strong commitment to the care and enhancement of the Group's art collections, made up of 40 thousand works, which represent one of the most important corporate collections in Europe in terms of size and quality. The works are subject to constant protection, conservation, research and enhancement activities. In 2025, the sharing of the collection took place not only at Gallerie d'Italia, but also through the loan of 336 works to 65 exhibitions in Italian and international museums (ranging from the Vatican Apostolic Library to the Manly Art Gallery & Museum in Sydney). In particular, mention should be made of the loan of the corporate collection masterpiece The *Martirio di sant'Orsola* by Caravaggio, for the major exhibition Caravaggio 2025 at the Palazzo Barberini, part of the National Galleries of Ancient Art, organised in Rome during the Jubilee year. Among the international loans (specifically in countries where the Group's international banks operate), two exhibitions are worth mentioning that featured exclusively works from Intesa Sanpaolo in the cities of Luxembourg and Bucharest. 4 loans were signed for a total of 88 works entrusted to local entities (such as museums and foundations) and 257 maintenance and restoration interventions were carried out. Finally, dialogue continued on enhancing—particularly in Italian territories of strategic importance for the Group—collection holdings with strong identity value for local communities, in collaboration with local institutions, primarily banking foundations (such as in Pistoia with Fondazione Caript, in Arezzo with Fondazione Ivan Bruschi, in Mirandola with Fondazione Cassa di Risparmio di Mirandola, and in Jesi with Fondazione CR Jesi).

Restituzioni

Within the framework of Progetto Cultura and in collaboration with the bodies of the Italian Ministry of Culture responsible for the protection of cultural heritage, Intesa Sanpaolo has supported and managed the Restituzioni programme since 1989, dedicated to the restoration and enhancement of the national heritage. In 2025, the closing exhibition of the 20th edition of the programme was held at Palazzo delle Esposizioni in Rome. The edition involved the restoration of 128 artworks from all 20 Italian regions (including one case of international collaboration between Italy and Belgium), belonging to 67 institutions such as museums, churches, places of worship and archaeological sites. The restorations were carried out in collaboration with 51 heritage protection bodies of the Italian Ministry of Culture, involving more than 60 restoration laboratories and hundreds of art historians. For 36 years, the Restituzioni project has promoted an Italian excellence—the restoration of works of art—with the aim of "returning" to communities historical and artistic assets—now more than 2,200—that belong to the country's history and collective identity.

Historical archive

"Progetto Cultura" also manages the Group's Historical Archive, one of the first and most important bank archives in Europe, a valuable heritage for reconstructing not only the history of the Bank, but also the history of the entire country. The archival activity involves over 20 linear kms of historical documentation and includes, among the photographic funds, the Publifoto Archive, which is subject to extensive activities for its protection, conservation, digitalisation, inventory, cataloguing and promotion, with the main objective of improving public access to the sources, also through the most advanced digital technologies (such as the innovative open format LinkedOpenData). The Archive also offers a portal dedicated to the consultation of digitalised documents. Among the results achieved in 2025 were the digitisation of around 80,000 pages of paper documentation (bringing the total number of digitised pages to over one million, some of which are available online) and the creation of more than 20,000 new catalogue records as part of inventorying projects (to date, tens of thousands of records have been compiled and made available online). Research and enhancement projects also continued, including collaborations

with other archives and institutions (such as the Progetto Egeli, carried out with Fondazione 1563, dedicated to documents relating to the confiscation of Jewish assets in 1939–1945). Educational activities also played an important role, aimed at bringing university students and students from other levels of education closer to the Archive and its documents. With regard to the Publifoto Archive, 6,288 additional photographs were digitised (bringing the total number of digitised images to around 65,000, of which approximately 35,000 are available online). In terms of cataloguing, 6,200 new records were created. It should also be noted that, in collaboration with the Istituto Centrale per il Catalogo e la Documentazione, an initial set of 35,000 photographs from the Publifoto Archive has been integrated into the government portal of the photographic collections of the Italian Ministry of Culture (the Bank is the first private partner on the Ministry's photography portal).

In addition, initiatives are carried out around the art collections and archival assets owned by the Bank in collaboration with other Bank structures that directly involve the Group's people, with particular reference to the issues of accessibility, inclusion, diversity enhancement, multiculturalism and multidisciplinarity (Art & People project).
The production of original content on the websites and social media of Gallerie d'Italia and the Group also continued to enhance access, promotion and sharing of the assets owned, exhibitions and initiatives of Progetto Cultura.

Partnerships, sponsorships, donations
The Bank supports artistic, cultural, social and educational initiatives through collaborations alongside public and private organisations, in which its contribution often also takes the form of sharing and co-designing content, spaces and relationships, within a network-based approach aimed at strengthening the shared objective of promoting the country's cultural heritage. In 2025, these synergies included projects developed together with various banking Foundations, including Compagnia di San Paolo, Cariplo, Cariparo, CR Firenze, CR Forlì, CR Cuneo and Caript. The Bank also participated as a main partner in national and international fairs and exhibitions, such as Miart in Milan, Artissima and the Salone Internazionale del Libro di Torino in Turin, the Holy See Pavilion at the Venice Biennale of Architecture, and Rome Art Quadriennale. Festivals promoting art, archival heritage, photography and music were also supported, such as Archivissima in Turin and the International Festival of Photography in Cortona. The Bank also played a significant role in the co-production of exhibitions, such as the Christmas exhibitions organised by the Cities of Milan and Vicenza, as well as in joint projects with Fondazione CR Cuneo, Fondazione CR Firenze, and Fondazione Costruiamo il Futuro. In terms of safeguarding public cultural heritage, the Bank supported several initiatives through the Art Bonus mechanism, including the development of the new premises of the GAMec museum in Bergamo, the reconstruction of the church in Amatrice damaged by the earthquake, the renovation of the inner courtyard of the Museo Egizio, the creation of a Cittadella della Formazione for the IATH Academy in Cernobbio, and the restoration and architectural redevelopment of major complexes such as the Teatro Alessandro Manzoni in Pistoia and the spaces of the Biblioteca Palatina in the Complesso Monumentale della Pilotta in Parma.
An active and ongoing dialogue is maintained with numerous prestigious museums across the country, a relationship that translates into joint initiatives, loans of artworks, and support for activities and projects, including through forms of cultural patronage. Among these collaborations are those with La Grande Brera, the Museo Poldi Pezzoli and the Veneranda Biblioteca Ambrosiana in Milan, as well as with Palazzo Strozzi in Florence, the Galleria Borghese, the Gallerie Nazionali di Arte Antica, and the Galleria Nazionale d'Arte Moderna e Contemporanea in Rome.
At the international level, Intesa Sanpaolo enhanced its partnership activities by supporting major projects, such as the exhibition dedicated to Sienese art at the National Gallery in London.

During 2025, the Bank also promoted numerous institutional initiatives in collaboration with leading cultural organisations and institutions, with the aim of bringing younger generations closer to music, reading, art and culture. Among these are the "Un libro tante Scuole" project of the Salone Internazionale del Libro di Torino, dedicated to promoting reading in Italian schools, and a research and training project aimed at photography students of the Istituto Europeo di Design. In the field of music, several initiatives were promoted, including the MusiCasanova training project for students of the Istituto Comprensivo Casanova-Costantinopoli in Naples, and the advanced training programme Esperienza Orchestra, developed in collaboration with the Orchestra Filarmonica del Teatro Regio di Torino and aimed at young musicians.

Higher education and enhancement of cultural professions
Intesa Sanpaolo promotes training and skill development projects in the arts and culture, with a particular focus on young people, in recognition of the potential of cultural heritage, also as a driver of economic and employment growth. In 2025, the fifth edition of the executive course of Gallerie d'Italia Academy, "Management of Artistic and Cultural Heritage and Corporate Collections", was held. The programme—developed in collaboration with Fondazione Compagnia di San Paolo, Fondazione Cariplo, the Fondazione Nazionale Scuola dei beni e delle attività culturali (established by the Italian Ministry of Culture) and Fondazione 1563 per l'Arte e la Cultura—involved 30 students and around 50 lecturers, including academics from Italian universities, professionals, cultural and corporate managers, and museum directors and officials. The course was delivered through 162 hours of in-person and webinar-based teaching and included the provision of 14 scholarships for participants under the age of 35. The Bank makes its museum venues (Milan and Turin) available to host students for in-person lessons, while also providing the expertise and know-how of its professionals and of the museum institutions with which it collaborates. The Bank also provides continuous training opportunities and networking events for cultural professionals through the "Alumni di Gallerie d'Italia Academy" community. In this context, a Masterclass on the theme of Artificial Intelligence in the cultural sector was held, attended by 30 students.

Research and innovation projects
During 2025, research and innovation projects continued in collaboration with internal and external stakeholders of the Group, particularly focusing on the measurement of the impact of the Progetto Cultura, the Gallerie d'Italia, and, more broadly, museums and cultural institutions within their cultural, social and economic contexts. For example, it is worth mentioning the project on the social impact of four museum institutions—Fondazione Brescia Musei, Castello di Rivoli Museo d'Arte Contemporanea, Museo e Real Bosco di Capodimonte, and Gallerie d'Italia—promoted by Intesa Sanpaolo for Social Impact, in collaboration with ALTIS Advisory – Università Cattolica del Sacro Cuore and LAMA Società Cooperativa.

A further collaboration to highlight is that with Società Editrice Allemandi (acquired at the end of 2024 by Intesa Sanpaolo together with Fondazione 1563 per l'Arte e la Cultura of the Fondazione Compagnia di San Paolo and Fondazione CR Cuneo), which manages the publications of Gallerie d'Italia.

Institutional initiatives in support of the community

Intesa Sanpaolo also strives to respect its own ethical, cultural and social values in its partnership and sponsorship initiatives, by selecting projects capable of conveying messages in line with the image and reputation of the Bank and the entire Group, not only in economic terms but also in civil, cultural and social terms.
The main areas of intervention in 2025 concerned culture, environment and sustainability, dialogue with the production fabric, social inclusion, sport and health promotion.

Social solidarity

Intesa Sanpaolo, in addition to being the driver of the country's economy, is an institution that sets out to make a real social contribution to the community in terms of inclusion. Some of the main initiatives include the Group's support to the Costruiamo il Futuro (Let's Build the Future) Award, which supports small non-profit sector organisations in Lombardy, engaged on a daily basis in the inclusion and training of young people through sports and social life. In its over 20 years of activity, the award has supported more than 1,000 non-profit sector associations and entities. The Bank is a member of Fondazione Severino and Fondazione Tender To Nave, both active in combating inequalities and prejudice. The "META INSIEME" project offers opportunities for redemption to juvenile detainees through sport. In parallel, Intesa Sanpaolo promotes "About Women", a cycle of discussions on the role of women in society and in the workplace, held within the framework of the Venice International Film Festival, with a focus on issues such as the gender pay gap and gender discrimination in professional contexts.
Finally, Intesa Sanpaolo supports the travelling exhibition of the art collection of Progetto Genesi, committed to defending human rights through the promotion of cultural diversity and environmental protection, and which has chosen contemporary art as the main field and instrument of its social and cultural engagement.

Environment

Intesa Sanpaolo is committed to building a sustainable future for the environment, young generations and an inclusive society, promoting initiatives such as: the collaboration with Fondo per l'Ambiente Italiano (Italian Environment Fund (FAI)) for the "I Luoghi del Cuore" project and the support to the Sustainable Economy Forum promoted by Fondazione San Patrignano. Furthermore, it supports the One Ocean Foundation for the protection of the oceans and the Daje de Alberi Association for the reforestation and urban regeneration of the city of Rome.

Health

Intesa Sanpaolo collaborates with organisations, foundations and healthcare institutions to promote healthy lifestyles and provide free medical prevention services to the community. Among the main initiatives, the Bank supports Friends for Health Onlus and other Italian healthcare excellences involved in the implementation of Tennis & Friends, an event that combines health, sport and solidarity, offering free health check-ups. Intesa Sanpaolo also supports Fondazione Rava N.P.H. Italia Onlus to raise funds for the NPH Saint Damien paediatric hospital in Haiti. Among other initiatives, sport is taking on an increasingly important role as a common good and collective heritage to be protected and shared. Among the most significant examples are the collaboration with CORRI LA VITA, a sporting event created to help women affected by breast cancer and to fund projects for prevention, early diagnosis and treatment, and the Wembrace Project, conceived by the Art4sport Onlus for children and young people with limb prostheses, promoting the practice of Paralympic sport. The Bank also supports the activities of Special Olympics Italia and those of Insuperabili Onlus, an organisation present across the country with 17 football schools dedicated to people with disabilities.

Education and research

Intesa Sanpaolo places great attention on young people and their right to education, training and access to the job market, investing in the right to education and research. Among the main initiatives, it is worth mentioning the support for 42Firenze, an innovative, inclusive and free programming school designed to develop technical and relational skills that respond concretely to the expectations of the job market, and the Young Factor project, promoted by the Osservatorio Permanente Giovani-Editori to promote financial education in schools and introduce young people to current economic issues. These projects aim to develop talent, combat school dropout rates and expand employment opportunities for young people.
Intesa Sanpaolo also supports the HOP Project, aimed at lower secondary school teachers of mathematics, science and technology. The programme is promoted by Fondazione Agnelli together with CERN and the Istituto Nazionale di Fisica Nucleare, and seeks to improve Italian students' learning of physics through an experimental approach.

Finally, the Intesa Sanpaolo Group supports, as a Premium Partner, the 2026 Winter Olympics and the 2026 Winter Paralympics. This initiative reflects the Intesa Sanpaolo Group's commitment to supporting the country and its economic, social and cultural dimensions, as well as the Bank's alignment with the values that characterise the 2026 Winter Olympics and the 2026 Winter Paralympics—fair play, respect for the rules, discipline and merit—which are fully consistent with its corporate culture.

IBD Division initiatives

In order to respond to the growing needs expressed by the territories in which the Group operates, the International Banks Division (IBD) actively supports local communities, with particular attention to the most vulnerable segments of the population. The commitment undertaken is consistently expressed through the promotion of social inclusion, the fight against youth educational poverty, support for the healthcare sector, and the protection of artistic and environmental heritage, primarily through the important initiatives carried out by Nadacia VUB, the Vseobecna Uverova Banka Foundation in Slovakia, and by Intesa Foundation, Banca Intesa Beograd Foundation in Serbia.

In 2025, through Nadacia VUB, projects in Slovakia were supported with a total of 325,000 euro. The Foundation directed its support towards the protection of artistic and cultural heritage, environmental protection, and social solidarity activities.
Among the various social impact initiatives, the programme “Every Child Has a Chance” is also noteworthy in 2025, supporting organisations that work with disadvantaged children and families. In the field of initiatives aimed at protecting artistic heritage, the “Rescue of the Gothic Route” programme continues, a five-year project dedicated to the restoration of five Gothic churches. Nadacia VUB also awarded the annual "Atlas" Award, aimed at recognising and highlighting the distinctive contribution of six non-profit organisations working in support of the environment.

In Serbia, Intesa Foundation provided more than 1.1 million euro in support of initiatives in the fields of education, healthcare, social welfare, environmental protection and women’s empowerment. Of this amount, 240,000 euro was invested in projects aimed at promoting financial education for the elderly and the school inclusion of vulnerable children and young people, including children with disabilities and those from marginalised communities. A further 324,000 euro supported the strengthening of hospital services and assistance provided to minors and women undergoing treatment, as well as to their families. In addition, 240,000 euro was allocated to projects supporting people with disabilities or in situations of severe vulnerability, with a particular focus on developing skills useful for entering the labour market. Finally, 223,000 euro contributed to initiatives promoting the wellbeing and autonomy of women victims of violence through psychological counselling, vocational training and financial literacy programmes. In addition, 2025 marked the launch of the first environmental initiatives, with 116,000 euro allocated to projects carried out by organisations such as WWF and Food Bank Vojvodina, focused on restoring biodiversity and reducing food waste.
Project monitoring, aimed at verifying their effective implementation and the achievement of the predefined impact objectives, is carried out through ongoing dialogue with the organisations and local structures involved. The initiatives implemented provide targeted responses to the social needs of communities in the areas of healthcare, education, social inclusion and environmental protection, while also representing an opportunity to enhance the Group’s reputation in the territories where it operates.

ESRS S4 – Consumers and end-users

The Group's commitment to human rights

The Group believes that a proper relationship with customers is grounded in the sharing of corporate values and in respect for human rights, across all types of products and services provided to customers.
By virtue of the provisions set out in the Code of Ethics, the Group places great importance on the continuous development of dialogue with customers, in order to better understand their expectations while safeguarding their security, as well as the protection of their assets and information. The Group bases its relationship with customers on the principles of fairness and transparency, with particular attention to the financial inclusion of the most vulnerable social groups.
To this end, the Group undertakes to:

- systematically develop dialogue tools, to gather suggestions from customers, consumer associations and associations representing specific categories of customers;
- ensure timely feedback on queries and complaints;
- protect people, valuables and assets, and information resources, including their digital identity, and adopt internal measures designed to ensure the provision of a service meeting the highest standards of reliability, continuity and confidentiality;
- consistently observe transparency criteria in informing customers about their privacy rights and how their personal information is processed;
- not discriminate against customers on the basis of gender, gender identity and/or expression, emotional-sexual orientation, marital status and family situation, age, ethnicity, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental condition or any other characteristic of a person, including those related to the expression of their thoughts;
- identify customer needs and risk profiles also for the purposes of offering advice, services and products, in the knowledge that they play a key role in investment assistance, prudent management of savings, and responsible lending, in addition to offering insurance protection.

As outlined in the paragraph "The Group's commitment to community rights" in the ESRS S3 – Affected communities chapter, the Group provides stakeholders with various channels and internal procedures for collecting, analysing and addressing reports on cases of possible non-compliance in relation to consumer and end-user rights, including those enshrined in the Human Rights Principles adopted by the Group. Among the above-mentioned channels, the Code of Ethics mailbox is available for reporting alleged breaches, in addition to the possibility for customers to submit a complaint through various methods and communication channels. For further information on the Code of Ethics reporting channel, please refer to the section on "Policies, objectives and actions related to corporate culture" in chapter ESRS G1 – Business Conduct.

Service Quality - Customer satisfaction and responsible sales

Policies on customer satisfaction and responsible sales

In line with the above-mentioned principles set out in the Group's Code of Ethics, the systematic listening to customers' needs and perceptions represents a fundamental value for the Group. Furthermore, to foster a holistic approach to listening, customer feedback is integrated and enriched with feedback from employees.
Accordingly, Group methodological standards have been defined and formalised in a regulatory document outlining the activities for measuring customer satisfaction, the propensity to recommend the Bank, and the perceived quality of services. Among the key principles guiding this document are methodological consistency at Group level, continuous improvement, and the adoption of best practices. The formalisation of shared and cross-cutting standards ensures consistency, comparability and methodological robustness in the listening process. The above-mentioned document applies to all business contexts in which a customer satisfaction measurement system is in place, or where one is intended to be activated and structured. Each organisational unit retains responsibility for defining the operational methods and details according to its specific business and organisational characteristics, thereby combining methodological consistency with alignment to the particularities of different contexts.

In a context of correct and transparent relationships between intermediaries and customers, the Intesa Sanpaolo Group makes the information it provides to its customers clear and comprehensible in all stages of their relationship through the simplicity of its language, transparent policy statements, and consistent terms and conditions among the various documents relating to the same products/services.
The main offer documents, drawn up in line with the clarity and intelligibility requirements, can be found in branches and also on the Group's official website, under the "Banking Transparency" section. These include product and service information sheets, specific guides and information documents on the conditions offered to all type of customers. Respect for customers' rights at all stages of the contractual relationship is also ensured through organisational measures and checks on compliance with customer protection regulations and through behaviours based on transparency and fairness both in the placement phase and during the performance of the relationship.

In the area of investments, the Group has chosen to adopt a service model based on advisory services. As regards transactions relating to financial products or investment services, personalised recommendations are made in line with the customer's financial profile. In this sense, Group personnel are bound by a specific set of rules relating, in particular, to the provision of the advisory service and other investment services, which identify the conduct to be maintained and the safeguards applied in the provision of the advisory service to customers and other investment services. These rules are applied by Intesa Sanpaolo and, where relevant, are adopted by the other companies within the Group's national perimeter. They are issued by the Board of Directors upon proposal of the Chief Compliance Officer Governance Area through a process of alignment with all the Group's main organisational structures.
Furthermore, these rules were drafted to be consistent and in line with the European Directives and the Italian laws transposing them. Lastly, these rules are available for consultation by employees and key stakeholders on the "Legislation" portal, which can be accessed via the Group's intranet.

After the entry into force of the MiFID II Directive and European regulations in the area of investor protection, the regulatory infrastructure was strengthened in order to provide investors with higher levels of protection and increased transparency in negotiations on the financial instruments markets. On the basis of the provisions of the main Italian and European regulations on this topic, the Intesa Sanpaolo Group provides for obligations in terms of the governance of financial instruments, knowledge and expertise requirements for the Group's personnel responsible for providing investment services and ex ante and ex post information on the costs, charges and incentives of the products and services available. The model was further refined to introduce a new survey profile on sustainability preferences aimed at verifying the consistency of the percentage of ESG financial products/investment services with respect to the sustainability preferences expressed by customers during the profiling phase, which include, in addition to the minimum percentage of the portfolio to be allocated to investments aimed at meeting these preferences, the possibility of further implementing them in compliance with the provisions of ESMA[256] 's "Guidelines on certain aspects of the MiFID suitability requirements". In addition, the Group's processes have been supplemented in order to make available to staff and customers specific information relating to the sustainability of the investment instruments and, consequently, the reports periodically sent to customers have been supplemented with information regarding the preferences expressed and regarding the composition of the portfolio in terms of sustainable products.

Within the Group, new products and services and any subsequent changes to them, as well as their distribution models, are subject to the Product Governance process, in order to assess their characteristics, risk aspects, clarity of presentation and the value conveyed, with a view to ensuring the highest level of protection for the end customer. To this end, the Board of Directors—upon proposal of the Chief Compliance Officer Governance Area—has issued specific guidelines for the approval of new products, services and activities aimed at a defined customer target, applicable across the entire Group. Through a structured framework of regulations and process guidelines—adapted to the individual entities—these guidelines identify the key principles and define responsibilities, roles and the main processes adopted in the ex-ante assessment of risks, safeguards and controls. Within this framework, the Product Governance Committees ensure that products and services intended for a specific customer target—whether developed by the Group or by third-party providers—are assessed and approved in line with the needs of customers and local economic realities, with particular attention to vulnerable individuals. The involvement of the relevant functions—including Compliance, Risk Management and the Data Protection Officer—ensures that the solutions are fair, responsible, sustainable and monitored over time, including from an ESG perspective.
The Product Governance process is subject to ongoing review by the Compliance function, which assesses both the substantive and formal compliance with internal and external regulations, as well as the underlying evaluations expressed by the relevant organisational units. This process makes it possible to accurately manage and oversee the individual stages in the life cycle of products or services subject to validation—namely concept, feasibility analysis, clearing, approval and post-sale monitoring—which allows verification over time of their consistency with the parameters of the relevant market and the predefined characteristics.

The regulations issued by the Bank of Italy, Consob and IVASS govern the management of customer requests and provide for specific reporting obligations on the part of the responsible function within the Group, with the aim of reporting to the corporate bodies and the authorities themselves - at least once a year - on the overall situation of complaints and other requests received, as well as on the adequacy of the procedures and organisational solutions adopted.
In addition to the requirements set out in the above-mentioned regulations, the Group has adopted specific guidelines on the management of complaints, reports to supervisory authorities and appeals to Alternative Dispute Resolution bodies, which apply across the entire Group.
The management of customers' requests is inspired by principles of transparency and fairness and is based on the verification of the circumstances reported by the customer and of the conduct of the personnel involved, aiming for the effective resolution of disputes, within the time limits prescribed by law. The guidelines, which are available in the "#Legislation" section of the corporate intranet, are issued by the Parent Company's Board of Directors and then implemented by the Group Banks and Companies, which adopt the necessary regulations to implement them, taking into account applicable local and sector-specific regulations. The Group's official website provides information on how a customer can lodge a complaint and the maximum timeframe in which the Group undertakes to provide feedback to the customer. The resulting assessments and determinations are based on the applicable external and internal rules and regulations and on the principles expressed in the Group's Code of Ethics.

For further details on the impacts, risks and opportunities (IROs) covered by the policies relating to customer satisfaction and responsible selling, please refer to the IRO table set out in the paragraph "Materiality analysis" in the ESRS 2 – General disclosures chapter.

Customer engagement processes

The Group has adopted a service model focused on specific business areas, supported by an organisational structure that ensures oversight both in Italy and in the foreign countries where it operates. The objective is to ensure the highest quality of service through the use of multiple channels, making the commercial offering increasingly effective and aligned with the needs of different customer segments. Customer satisfaction and the quality of the service provided are constantly monitored and overseen by the Customer Satisfaction and Customer Experience structures operating within the various business divisions, supported by a central function dedicated to fostering cross-functional synergies and ensuring methodological and process consistency.
Specifically, to ensure a high level of customer satisfaction, the Banca dei Territori Division has developed a comprehensive feedback collection system, able to identify areas of improvement at an early stage and take concrete action aimed at the continuous optimisation of the customer experience. This system is based on key tools such as:

[256] European Securities and Markets Authority.

- NPS (Net Promoter Score[257]): measures the customer's willingness to recommend the Bank to others, thus providing a concise indication of the level of customer loyalty towards the company.
- INS (Net Satisfaction Index): an indicator designed to measure the level of customer satisfaction both at key moments of the customer experience and in relation to the use of products and services held.
- SEIok Programme: provides concrete support for the continuous improvement of the level of service offered to customers and contributes to the determination of the Variable Performance Bonus for the Network.

In line with these listening processes, initiatives are promoted with the aim of supporting customers in the use of digital channels and services and of offering dedicated assistance also in the event of service disruptions. Intesa Sanpaolo also promotes digital education and awareness initiatives through webinars and information sessions aimed at exploring topics related to banking services, payments and online security.
In addition, customers can also contact the Group through the complaint channels provided in the specific "Complaints and Dispute Resolution" sections of the Group's app and official website, as well as in the information sheets provided to customers and in the written agreements (e-mail address, certified e-mail, ordinary mail, fax). The handling of complaints, the drafting and updating of these documents and the website contents are governed by specific internal regulations.

Within the framework of relations with consumer representatives, the Consumer Association Relations structure manages institutional relations at both national and regional level with the 20 consumer associations recognised in Italy through a Framework Agreement, which provides for periodic meetings with the Group's top management on topics of shared interest, such as products and services, transparency, conciliation – Alternative Dispute Resolution (ADR) – and financial education. During 2025, five plenary meetings were held focusing on the Bank's technological innovation in its relationship with customers and on financial education. In addition, the Framework Agreement also provides for the implementation of specific projects:
- Mettere in Comune Competenze programme, which in 2025 included three meetings aimed at training the national and regional representatives of the associations;
- Quick Start programme, focused on transparency in communication with customers;
- Quick Training programme, focused on customers' digital education and training, which included three events held across local areas with a total of 120 participants;

Dialogue with consumer associations also takes place through the receipt and resolution of reports concerning critical issues that may give rise to legal and reputational risks for the Bank. Finally, an agreement is in place with these associations for the resolution of the main disputes between the Bank and its customers through the Alternative Dispute Resolution (ADR) mechanism of joint conciliation.

Remediation processes and channels to submit complaints

Complaints are handled by means of a dedicated IT procedure, which records the complaints and generates a "Complaint Register". This procedure tracks all the steps in the complaint handling process and monitors compliance with the applicable legislation on response times.

The procedures and solutions deployed to handle customer complaints are structured and governed by specific internal regulations, also in line with the guidance issued by the Bank of Italy, in particular in its communication of 18 March 2016 "Organisation and functioning of complaints offices: good practices and issues found through control activity".
When the complaint is received, the customer is notified that the matter is under examination. Each complaint is duly examined, considering the various grounds for the customer's dissatisfaction. Where in-depth examination of complaint makes it impossible to issue a reply by the statutory time limit, the customer must be promptly informed by means of an ad hoc communication. The answer must be drafted in simple, clear and comprehensible language and sent in a timely manner, and in any case by the time limits laid down in the legislation in force.
Once the case has been examined, the function responsible shall send the complainant a written response, drafted in accordance with the principles set out in internal Group guidelines on the handling of complaints, protests to supervisory authorities and appeals submitted to alternative dispute resolution bodies. The response must include:
- if the complaint is considered unfounded: a clear and comprehensive explanation of the reasons for rejecting it;
- if the complaint is considered to be wholly or partly well-founded: a description of the measures taken in the customer's favour, with details of the manner and timeframe for granting any reimbursement or compensation.

Targets related to customer satisfaction and responsible sales

One of the fundamental drivers of a service quality culture is the continuous process of improving the customer experience. The Intesa Sanpaolo Group has therefore designed a series of actions, in addition to its policies, to monitor the quality of the services provided. Thus, service quality is subject to constant monitoring and guidance. This makes it possible to achieve high standards of service quality, even without precisely defining measurable quantitative targets. Furthermore, the Group uses key tools such as the NPS in its customer engagement processes, as depicted in the "Customer Engagement Processes" and "Metrics – Net Promoter Score" sections, to monitor the effectiveness of its actions.

Actions on customer satisfaction and responsible sales

The Group has long launched a broad programme aimed at excelling in customer listening processes and in the systematic use of the feedback collected, transforming it into tangible actions capable of generating value for customers.
In particular, during 2025 the Banca dei Territori Division further strengthened its commitment to continuously ensuring service excellence through a coordinated set of initiatives aimed at consolidating the quality of the customer experience.
In particular, the technological evolution undertaken by the Bank has represented an important opportunity to further strengthen the quality monitoring system. The adoption of omnichannel processes—a cornerstone of this transformation—has made it

[257] Net Promoter®, NPS®, NPS Prism® and the emoticons associated with NPS are registered trademarks of Bain & Company, Inc., NICE Systems, Inc. and Fred Reichheld. Net Promoter ScoreSM and Net Promoter SystemSM are service marks of Bain & Company, Inc., NICE Systems, Inc. and Fred Reichheld.

possible to develop a more comprehensive and timely listening infrastructure, capable of synergistically integrating feedback from multiple contact channels, both physical and digital. This approach will enhance the understanding of the customer's voice by enabling cross-channel analysis of interactions and feedback received, resulting in greater effectiveness and speed in actions aimed at improving the quality of service delivered.

Initiatives aimed at raising awareness and promoting a culture of quality as a core value in the service provided to customers also continued. The "Customer Experience in Filiale (Customer Experience in Branch)" portal, already available for physical branches, is now also accessible to digital branches to support the continuous improvement of service.
It is a tool that provides a concise overview of the quality perceived by customers across all key moments of their experience. It integrates two key indicators: NPS (Net Promoter Score), which measures the relational component, and INS (Net Satisfaction Index), which evaluates the customer's experience with the branch across the different moments of interaction.
The portal, which allows data to be consulted at different levels of detail (from the Division level down to the branch level), collects and organises the main satisfaction indicators together with the feedback and comments provided by customers in surveys. Thanks to a concise and comprehensive view, updated monthly, Customer Experience in Filiale enables a rapid understanding of the customer perspective, the identification of areas for improvement, the definition of targeted action plans and the monitoring of their progress over time.

The Group monitors customer complaints and reiterations. In this regard, in order to promptly identify any emerging issues, the relevant business structures periodically receive the reports within their remit, ensuring the monitoring of actions undertaken or to be initiated and facilitating the timely implementation of improvement measures and mitigation of any critical issues identified. Regular alignment and training activities are carried out for the staff at the structure responsible for handling complaints; the applicable regulations are also available to staff on the company intranet.
The Group's annual report on the overall situation of complaints, disclaimers, protests to the Supervisory Authorities and appeals to Alternative Dispute Resolution Bodies describes the organisational set-up and examines its adequacy. In addition, the trend of customer complaints at Group level during the year is reported, including complaints and their possible reiteration ("customer appeals"), appeals to out-of-court dispute resolution bodies ("ADR appeals") and requests for clarifications made by Supervisory Authorities in response to customer reports ("reports"). The Group's Complaints Report is sent to the Supervisory Authorities and an extract entitled "Complaints Management Report" is published on the Group's official website, as required by the relevant regulations.
The trends in complaints are also monitored on a quarterly basis, to verify compliance with the early warning thresholds, defined each year at Group level.
Complaint handling times are constantly monitored by the function responsible for overseeing compliance with the relevant regulations and are reported in the above-mentioned report, as well as in the subsequent section "Metrics - Response to customer complaints".

Finally, with regard to customer advisory services, the solution "Valore Insieme" continues to be a global consultancy solution provided by branch managers thanks to an innovative relations platform that provides an advanced and personalised advisory service in all phases of the construction, protection and transfer of investment portfolios, also through dedicated investment products. It is a service aimed at those looking for an exclusive relationship that combines an innovative platform and ongoing professional support from a dedicated manager.

Metrics on customer satisfaction and responsible sales[258]

Number of branches[259]

The number of branches in the Group decreased in line with the objectives of the 2022–2025 Business Plan, which envisaged an evolution of the distribution model towards increasing digitalisation of services. This transformation, while involving the rationalisation of the physical network, did not negatively affect the quality of the service provided or the Bank's proximity to its customers. In particular, at the end of 2025 the Intesa Sanpaolo Group has more than 2,600 branches in Italy and a strategic international presence with over 900 branches, including subsidiary banks operating in commercial banking and an international network specialised in supporting corporate customers.
Despite the overall closure of 1,502 Retail branches since the fourth quarter of 2021 (around 300 of which in 2025), the Intesa Sanpaolo Group has continued to ensure high standards of customer service quality thanks to the progressive digitalisation of services, implemented to guarantee operational continuity and full accessibility. Advanced digital solutions have enabled the Intesa Sanpaolo Group to maintain a constant relationship with its customers, ensuring timely and effective support in line with a service model focused on listening. This has also been supported by the role of Global Advisors, who provide a distinctive experience through the use of innovative tools, flexibility in organising their time, synergies with branch teams and the opportunity to build strong and lasting relationships with their customers.
The following table shows the number of branches broken down by geographical area covered by the Group, as well as the related Representative Offices.

[258] The information relating to the "Number of branches" indicator set out in this section is reflected in the section "2025 in brief" – paragraph "The 2022-2025 Business Plan and the new 2026-2029 Plan" of the Report on Operations of the Consolidated Financial Statements.
[259] Entity-specific metric.

	Number of Branches 2025	Number of Branches 2024
Italy	2,646 Branches	2,971 Branches
Other european countries	738 Branches + 1 Representative Office	770 Branches + 1 Representative Office
America	2 Branches + 1 Representative Office	2 Branches + 1 Representative Office
Asia	7 Branches + 6 Representative Offices	7 Branches + 6 Representative Offices
Africa	175 Branches + 1 Representative Office	174 Branches + 1 Representative Office
Australia/Oceania	1 Branch	1 Branch

Net Promoter Score[260]

The Net Promoter Score (NPS) is an indicator that expresses the likelihood of customers to recommend a product, service or company, and is calculated in index points (between -100 and +100) subtracting the percentage of detractors (dissatisfied customers) from the percentage of promoters (loyal customers) obtained. Overall, in 2025, at the level of the Banca dei Territori Division (BdT), the survey results shown in the following table are based on approximately 802,000 total responses, an increase compared with 657,000 in 2024. These responses were collected via telephone, email, app or Internet Banking from Retail, Exclusive, Enterprise, Non-Profit Sector and Agribusiness customers. As illustrated in the table, a significant improving trend emerges for the Retail, Exclusive and Enterprise segments, while results remain substantially stable for the remaining categories. Overall, the scores achieved indicate a positive and consistent improvement in the quality perceived by customers.

Categories	Customer satisfaction index 2025	Customer satisfaction index 2024
NPS Retail	48	38
NPS Exclusive	47	34
NPS Enterprises	30	24
NPS Non-Profit Sector	34	33
NPS Agribusiness	24	24

In 2025, the NPS increased thanks to a progressively stronger culture of quality, which enhanced the focus on customer relationships and strengthened collaboration with the central structures supporting the network. This was further supported by the strengthening of digital channels, which made services simpler, faster and smoother, significantly improving the overall customer experience. In addition, more efficient survey processes have made it possible to collect timely and representative feedback, while greater internal awareness of the value of surveys has increased participation.
The result has been a consolidation of service quality across all touchpoints, providing customers with a clearer and more reliable experience.

Responding to customer complaints[261]

With reference to the average processing and response times for complaints within the Banca dei Territori Division, four types of complaints are presented below:

- Banking Services (ORD);
- Investment Services (SIM);
- Insurance Services and Products (ASS);
- Payment services (PAG).

The average response time, in line with the applicable regulations, is calculated as the average number of days between the date the complaint is received and the date it is closed.
The calculation is carried out in terms of calendar days. In this regard, it should be noted that the maximum timeframe provided for by the applicable regulations is expressed in calendar days, except for complaints relating to Payment Services (PAG), for which the timeframe is indicated in working days.

As in the 2024 financial year, the average complaint processing times indicated in the table for 2025 also fall within the limits established by the regulations applicable to the management of the different types of complaints.

Type of complaint	Average processing times 2025 (calendar days)	Average processing times 2024 (calendar days)	Regulatory time limit (calendar days, business days for PAG)
Banking Services (ORD)	16	16	60
Investment Services (SIM)	31	35	60
Insurance Services and Products (ASS)	22	18	45
Payment Systems (PAG)	11	14	15

Service quality - Customer data protection

Policies relating to customer privacy

The Intesa Sanpaolo Group has always maintained a high and constant commitment to protecting its customers' personal data, ensuring that such data is collected and processed in compliance with current legislative provisions. The regulatory framework for personal data protection is represented by Regulation (EU) 2016/679 (General Data Protection Regulation (GDPR) which came into force on 25 May 2018, whose rules have been implemented by the Group and formalised in the main internal governance documents consisting of the Group's Code of Ethics, which outlines the principles and values on which the Group bases its choices and activities, and the Internal Code of Conduct, which defines the conduct that the Group's employees and collaborators must adhered to in order to ensure the correct processing of data.

[260] Entity-specific metric.

[261] Entity-specific metric.

For further details on the impacts, risks and opportunities (IROs) covered by the policies relating to customer privacy please refer to the IRO table set out in the paragraph “Materiality analysis” in the ESRS 2 – General disclosures chapter.

More specifically, the GDPR applies the so-called the accountability principle, which requires the data controller to implement regulatory, organisational and technological measures aimed at ensuring that the processing of personal data takes place in compliance with and on the basis of the criteria laid down in the Regulation, such as privacy by design, privacy by default, the appointment of the Data Protection Officer, privacy impact assessment, the record of processing activities, the subjective role of Third Parties and data breach management[262]. The Group protects the personal data of the individuals with whom it interacts by implementing the “privacy by design” principle, whereby the personal data protection logic is established from the outset by identifying the potential risks for the rights and freedoms of data subjects and the technical and organisational measures suitable for mitigating such risks. A further safeguard is the privacy impact assessment conducted before carrying out one or more data processing activities that may involve a high risk for the rights and freedoms of individuals.

The privacy notice was updated in March 2025 with several new elements concerning: the processing of data carried out by the Bank through the use of artificial intelligence systems; the automated assessment of the financial sustainability of transactions (so-called Affordability); the legal basis of legitimate interest in the management of corporate and strategic transactions; the exchange of information between Group companies regarding the reporting of suspicious transactions; profiling for anti-fraud purposes and IT security monitoring; and joint controllership between the Bank and SWIFT[263] in relation to international payment transactions. The privacy policy, published on the official website, specifies that the Intesa Sanpaolo Group processes personal data only for the purposes described and expressly indicated therein, which is made available to data subjects. No processing is carried out for any secondary purposes not expressly stated. With regard to the processing of personal data for marketing purposes, the provision of a free, explicit and unambiguous consent of the data subject is required. If the data subject denies consent or does not make any choice, the data collected will not be processed and used for marketing purposes.

Failure by a data processor to comply with external or internal data protection regulations triggers a procedure to verify the actual non-compliant conduct. In the case of ascertained and unjustified breaches, the relevant departments are always informed in order to start disciplinary proceedings, which normally result in one of the measures under the reference regulations being applied.

The Group, having companies located in various EU and non-EU countries, complies with the express personal data protection provisions of their domestic legislation. Specific governance documents were drawn up, which provide clear instructions on the conduct that employees and collaborators must maintain to ensure the correct collection, use and protection of personal data in compliance with current national and international legislation and the principles that guide the Group, formalised in the Code of Ethics and the Internal Code of Conduct (for further details, please refer to the corporate website, where both documents are available for consultation.) These instructions are also set out in the Guidelines on the protection of personal data of natural persons and in the Corporate Rules for the processing and protection of personal data of natural persons.

In June 2025, the Board of Directors of Intesa Sanpaolo approved an update to the Guidelines on the Protection of Personal Data of Natural Persons, which incorporates the articulation of the principle—already present in the previous version and further strengthened in the updated one—that the processing of personal data by authorised personnel must be relevant and/or connected to the duties assigned to them, as well as the principles governing processing carried out through artificial intelligence systems. The Guidelines establish the model for managing compliance risk with the data protection rules for all the individuals with whom the Group interacts, including employees and collaborators. They lay down the general principles and set out the roles and responsibilities of the corporate bodies and structures involved, the macro-processes for monitoring and controlling risk, and the Group’s guidance, coordination and control model. Furthermore, the Guidelines lay down the obligations required for the purposes of personal data processing and protection and establish the application of sanctions in the event of non-compliance with the provisions. Moreover, they are drawn up in compliance with external regulations, internal governance documents the provisions of the European Data Protection Board (EDPB), which is composed of representatives of the national data protection authorities of the EU Member States. The Guidelines apply to the Parent Company, its international branches and companies established in the European Union. The principles set out in the Guidelines therein serve as a reference for the Group companies located outside the European Union. They are generally reviewed once a year. Before being approved by the Board of Directors, they undergo a concordance process with the relevant corporate functions.

In line with the principles set forth by the Guidelines, the Corporate Rules for the processing and protection of personal data of natural persons detail the topics and provisions relating to the activities carried out by all authorised data processors, providing precise operating instructions in order to comply with regulatory provisions. The Rules were updated in December 2025, introducing strengthened behavioural recommendations for data processors and the inclusion of specific principles governing data processing through artificial intelligence systems. These Rules apply to the Parent Company, its international branches and the Group companies operating in Italy, in accordance with the governance model for regulatory oversight of privacy protection (centralised at the Parent Company).

Pursuant to Article 37 GDPR, the Board of Directors also appoints the Data Protection Officer who, in performing his/her activities, is supported by the Privacy function, which is located in the Chief Compliance Officer’s Governance Area and comprises three offices, dealing respectively with Privacy Advisory, Relations with the Data Protection Authority and Data Subjects, and Privacy Governance.

[262] Data breach refers to a 'breach of security leading to the accidental or unlawful destruction, loss, alteration, unauthorised disclosure of, or access to, personal data transmitted, stored or otherwise processed' (Art. 4, paragraph 12 GDPR)
[263] Society for Worldwide Interbank Financial Telecommunication.

The following tasks are entrusted to the Data Protection Officer and the privacy function:
- monitoring and overseeing compliance with the GDPR;
- preliminary compliance check on new products, initiatives and services involving the processing of personal data;
- assessment of risks to the rights and freedoms of individuals when starting or changing any personal data processing activities (privacy impact assessment) in accordance with Article 35 of the GDPR;
- assessment of the privacy role held by Suppliers and drafting of the appointment document;
- management of customer requests regarding the exercise of the rights of the data subjects;
- management of replies to the Data Protection Authority and data subjects following reports or complaints lodged with the same Authority;
- guidance, coordination and control of the Group companies located in Italy and abroad (EU and non-EU);
- keeping and updating the Record of Processing Activities, as required by Article 30 of the GDPR, wherein all the personal data processing activities carried out are recorded. The Register shows the purposes of each processing, the data storage methods, the security measures applied and other information on the processing activities carried out;
- assessment of non-compliance events and personal data breaches;
- updating the list of third parties that process customers' personal data;
- monitoring training courses on privacy.

Cybersecurity policies[264]

Intesa Sanpaolo places particular attention on information protection and cybersecurity: this commitment strengthens the digital resilience of the entire national system, fostering trust among stakeholders and contributing to economic and social stability.

For further details on the impacts, risks and opportunities (IROs) covered by the policies on cybersecurity please refer to the IRO table set out in the paragraph "Materiality analysis" in the ESRS 2 – General disclosures chapter.

The Chief Security Officer Governance Area oversees, in an integrated manner, cybersecurity and anti-fraud activities, business continuity and the integrity of the information system, ensuring a sustainable approach focused on safeguarding customers. The Area adopts a management model structured into three macro-areas—Department, Control and Active Oversight—which ensure alignment between strategy, monitoring and operations. The reference framework is defined by the Group Policy "Information Security Principles", published on the corporate website, which outlines the guiding principles and defines roles and responsibilities within the model, as well as the policies and operational procedures in force across the various areas of information security.
Within the model, the roles described in the Policy represent the key organisational components operating in alignment with the three macro-areas mentioned above:
- Corporate Bodies and Committees, responsible for strategic direction and overall oversight, supported by the Governance Functions to ensure effective and transparent management of cybersecurity;
- Group Information Security Officer, whose objective is to protect information and infrastructures and to promote cyber culture initiatives aimed at customers and employees, fostering awareness and collective resilience;
- Relevant technical functions, which develop cybersecurity solutions and services in compliance with applicable regulations and international best standards.

This systemic approach ensures: (i) a single point of reference for security models and solutions, in line with the principles of transparency, inclusiveness and sustainability; (ii) responsible and efficient governance of resources, optimising the budget and reducing environmental impacts; (iii) the identification of strategic priorities that balance security and sustainability, promoting innovative solutions; (iv) alignment with the best international standards, strengthening resilience and stakeholder trust.
The model, following the principle of continuous improvement, is subject to periodic review and is updated in line with regulatory and technological developments or following significant events that require the strengthening or adjustment of safeguards. The outcomes of the update process are incorporated into policies and operational procedures and are accompanied by training and communication initiatives aimed at employees. To complement the model, the cybersecurity and anti-fraud structure carries out strategic intelligence activities aimed at identifying and proactively managing risk scenarios.

The Board of Directors annually approves the IT Security Plan, which addresses the challenges of cyberspace through targeted initiatives carried out by the Group's functions. This plan is based on a strategy that takes into account the evolving risk landscape and the human factor, structured around four pillars:
- protect customers: counter fraud and attacks while strengthening digital trust;
- protect the Bank: enhance the ability to safeguard and recover digital infrastructures;
- ensure regulatory compliance: comply with laws and regulations;
- enable digital trust: provide secure access to online services and strengthen the entire value chain.

The strategy guides projects and investments aimed at improving the following areas:
- cyber hygiene: promoting best practices and appropriate behaviours among employees and collaborators;
- resilience and operational recovery: the ability to ensure service continuity despite attacks;
- third-party protection: safeguarding data and services, including through collaboration with external suppliers;
- anti-fraud: direct protection of customers from attacks;
- governance and leadership: consistency and effectiveness of cyber strategies, supported by external certifications and full involvement of management.

With this holistic approach, the Group is committed to promoting a safer, more sustainable and responsible environment.
The integrated oversight of cybersecurity, anti-fraud and Business Continuity—central elements of the Group's Crisis Management mechanisms—has demonstrated its effectiveness in addressing complex events such as natural disasters, pandemic emergencies and geopolitical tensions.

[264] The disclosure about cybersecurity set out in this section is reflected in the "Breakdown of consolidated results by business area and geographical area" section of the Report on operations which accompanies the consolidated financial statements.

As part of its governance model, Intesa Sanpaolo systematically maintains certifications issued by qualified third parties for its cybersecurity and Business Continuity activities. These certifications represent a guarantee of quality and attest to the robustness of the safeguards adopted to ensure the reliability and sustainability of the services provided, in line with the Group's ESG vision, which focuses on promoting digital security and operational resilience to protect customers, employees and stakeholders. In particular, the certifications relating to Information Security (ISO/IEC 27001:2022) and Business Continuity (ISO/IEC 22301:2019) were renewed. The certifications are available on the Group's official website.

Customer engagement, remediation processes and channels to submit complaints

The Group makes the privacy notice available to all individuals with whom it interacts, in compliance with Article 13 of the General Data Protection Regulation, which sets out the information to be provided to the data subject at the time personal data are collected. In particular, the Group publishes the customer data protection policy on its official website, providing all the necessary information on how it ensures correct data processing. The information provided includes the type of data processed, the purposes and legal basis of the processing, retention periods, the recipients of the data, the rights of the data subjects and how to exercise them, as well as the contact details of the DPO.
For the new elements introduced in the privacy notice updated in March 2025, and for further details regarding the purposes indicated in the notice itself and the free consent required for marketing activities, please refer to the paragraph "Policies relating to customer privacy."

The Intesa Sanpaolo Group has adopted a critical event management model that sets out the steps for the efficient management of incidents. The model specifies the functions involved according to the type of event. It contributes to mitigating the reputational risks associated with personal data processing, also with respect to the lawfulness, fairness and purpose of the processing, as well as the relevance, completeness and non-excessive nature of the data collected. In this scenario, the Data Protection Officer cooperates with the management of non-compliance events by providing assistance to ensure the identification and implementation of actions to eliminate or mitigate the effects of the event. If the event constitutes a personal data breach, the Data Protection Officer is required to assess its impacts in terms of tangible risk for the rights and freedoms of the data subjects impacted; if the risk is high, the DPO notifies the Authority and, in case of particularly high risk, he/she also notifies the data subjects. For more details on this topic, please see the section "Customer privacy metrics".

To submit complaints on personal data protection issues or requests to exercise their rights, data subjects can contact the Data Protection Officer, using the contact details contained in the privacy policy provided to the data subjects and on the Group's official website. Requests can be sent electronically (e-mail, certified e-mail) or in hard copy; in both cases, they are treated with an appropriate level of confidentiality and protection of the personal data. The monitoring of incoming requests is the responsibility of the Privacy function, which manages the requests received and defines processes aimed at ensuring their timely handling. The careful handling of requests to exercise the data subjects' rights is of crucial importance in consolidating the trust relationship and addressing critical situations.
The Group has equipped itself to respond promptly to customers' requests as required by Article 12 GDPR, under which the data controller must take appropriate measures to provide the data subject with all information concerning the processing, without undue delay and, in any case, within one month of receiving the request, or within a further two months in the cases provided for, informing the data subject.

As part of the Integrated Internal Control System, the Control Functions carry out checks, of different depth and frequency, on the compliance of activities carried out with personal data protection regulatory requirements and on the correct implementation of the measures issued by the Data Protection Authority. The results of the checks are reported to the Board of Directors in the manner defined by the control system.

In this context, the Chief Audit Officer carries out periodic control activities defined not only on the basis of the specific regulatory obligations on the subject (audits carried out annually), but also from a risk-based perspective, taking into account the evidence reported by the other corporate control functions. Generally speaking, the independent checks by the Internal Audit function are aimed at ascertaining the completeness, adequacy and effectiveness of the data protection compliance risk management model, reporting any irregularities in personal data processing to the competent corporate structures and the Data Protection Officer, reporting on the matter to the Board of Directors.
In compliance with the GDPR and the Guidelines, the Data Protection Officer must at least annually submit a report to the Board of Directors on the most significant data protection issues. This commitment enables, through the adoption of appropriate measures, the mitigation of reputational and non-compliance risks in the processing of personal data, including with regard to: the lawfulness and fairness of processing, the purposes for which the data are processed, and compliance with the principles of relevance, completeness and data minimisation in the collection of personal data.

Objectives relating to customer privacy and cybersecurity

The Intesa Sanpaolo Group has adopted a comprehensive framework of policies, procedures and actions to safeguard the protection of customer data and its information systems. This approach enables continuous monitoring and proactive management of the matter, ensuring high standards of regulatory compliance and safeguarding customers, even without the definition of quantitative and measurable targets.
In the area of business continuity, the Group has for several years adopted a proprietary model for managing critical events. This model provides for continuous analysis of events and threats, supported by the use of metrics to assess the performance and effectiveness of the actions undertaken (as presented in the sections "Customer privacy metrics" and "Metrics on the protection of customers against fraudulent transactions").

Customer privacy actions

The Data Protection Officer (DPO) oversees, through a risk-based approach, the risk of non-compliance with privacy protection requirements, ensuring the application of the principles of privacy by design—data protection from the design stage—and privacy by default—data protection by default settings. This approach ensures that the risk of non-compliance is effectively

managed both during the design or substantial modification of personal data processing activities and throughout the processing itself, through the adoption, by default, of appropriate technical and organisational measures aimed at guaranteeing an adequate level of security.

Intesa Sanpaolo has refined the process of continuous improvement of safeguards aimed at protecting personal data. In particular, at the end of 2024 a project was launched involving the control functions and business units within the Italy perimeter, aimed at:

- strengthening ex-ante and ex-post controls, including through the introduction of automated tools and enhanced protection systems dedicated to customers relevant to national security;
- strengthening the risk appetite framework and the internal rules on data protection;
- carrying out a comprehensive review, at Group level, of the visibility of customers' personal data, defined according to the corporate role and the relevant customer segment, starting from business logics and the analysis of service models.

In relation to suppliers appointed as data processors pursuant to Article 28 of the General Data Protection Regulation, Intesa Sanpaolo carries out annual verification activities aimed at assessing their compliance with personal data protection regulations. In 2025, privacy monitoring of suppliers continued both through the administration of privacy self-assessment questionnaires to 100 suppliers and through on-site visits to 11 suppliers. Overall, both activities were successful, with most suppliers achieving a medium/high level of data protection controls. In 2025, greater priority and attention were given both to those suppliers who had not responded to the request to complete the privacy questionnaire in 2024 and to those who, in the context of the self-assessment and on-site visits, had obtained a low level of safeguards.

The adoption of an internal management platform has also been completed, which will facilitate the integrated management of the main privacy-related processes.

In relation to the foreign companies within the EU perimeter, guidance, coordination and oversight activities continued through dedicated meetings aimed at presenting the privacy processes adopted by the Parent Company, discussing relevant topics and receiving periodic information flows. For the non-EU perimeter, the strengthening of oversight over international branches characterised by a higher volume of personal data processing continued, with the aim of reducing the risks of non-compliance and enhancing governance.

Cybersecurity actions[265]

In a context of rapid technological evolution and increasing digitalisation, the Bank has implemented initiatives aimed at protecting customer data, ensuring service continuity and strengthening stakeholder trust, thereby contributing to the Group's long-term resilience.

In the field of cybersecurity, structured measures are adopted to strengthen the systems and applications supporting services, including strong authentication[266] for critical access, platforms for monitoring and correlating events, and solutions for managing the attack surface on the internet, supported by the systematic use of threat intelligence solutions to prevent threats. Suppliers are classified through specific methodologies, with in-depth assessments carried out for the most critical ones, and preventive measures together with sustainability and security criteria introduced to reduce risks related to the supply chain, including by evaluating alternative solutions for essential services.

For Business Continuity, internal processes have been strengthened to ensure the controlled recovery of operations and clear, effective external communication in the event of critical incidents, supported by plans and redundant solutions to maintain service availability. These actions, integrated and oriented towards operational sustainability, aim to ensure security, transparency and accountability in the management of technological risks.

In relation to digital fraud, 2025 saw the adoption of increasingly sophisticated techniques, including scams based on psychological manipulation, Money Muling[267], phishing campaigns and social engineering aimed at stealing credentials, as well as the use of malware, with differentiated impacts on retail and corporate customers.

To counter these threats, Intesa Sanpaolo has strengthened its detection and prevention capabilities through:

- the enhancement of the real-time transaction analysis platform, based on artificial intelligence and machine learning algorithms;
- the introduction of the anti-fraud questionnaire, aimed at raising customer awareness and documenting their choices;
- the strengthening of European interbank cooperation to identify anomalies in payment transactions;
- the development of data analytics capabilities, behavioural monitoring (Behavioural Customer Monitoring) and the optimisation of anti-fraud rules.

A new anti-fraud prevention platform was also introduced, integrated with the most advanced market solutions, representing a further step in Intesa Sanpaolo's digital resilience strategy, aimed at safeguarding transaction security and strengthening stakeholder trust.

Intesa Sanpaolo places great importance on the development of skills and professional growth in the field of digital security. This commitment translates into established partnerships with leading academic institutions, including Bocconi University, Università Cattolica del Sacro Cuore, Milan Polytechnic, Turin Polytechnic, Il Sole 24ORE Business School, University of Padua, University of Bologna, University of Parma and University of Cagliari. Through these collaborations, the Bank contributes to the development of a pool of highly qualified talent capable of addressing the constantly evolving challenges of cybersecurity. Agreements with universities are periodically renewed to ensure continuity and alignment with emerging needs.

---

[265] The disclosure about cybersecurity set out in this section is reflected in the "Breakdown of consolidated results by business area and geographical area" section of the Report on operations which accompanies the consolidated financial statements.

[266] Strong authentication (or strong customer authentication) is a security method that requires at least two independent authentication factors to verify a user's identity.

[267] Money Muling is a form of financial fraud in which a person is recruited—often unknowingly—to transfer money originating from illicit activities.

The Bank also plays an active role in promoting a culture of cybersecurity within the financial system. Participation in national and international working groups—including Europol, European Cyber Security Organisation (ECSO), the National Cybersecurity Agency, the Polizia di Stato and other Italian law enforcement bodies, the CERTFin, and the European Banking Federation (EBF)—enables Intesa Sanpaolo to contribute to the definition of sector standards, foster knowledge sharing with public and private stakeholders and strengthen collective resilience. In this context, Intesa Sanpaolo for Social Impact has promoted digital security training programmes in collaboration with international humanitarian organisations, including Save the Children, confirming the Group's social commitment to protecting people and communities.
Each year, Intesa Sanpaolo renews or establishes partnerships with lower and upper secondary schools and, in collaboration with the Savings Museum, promotes initiatives such as "Drizza le antenne – A prova di hacker! (Stay Alert – Hacker-Proof!)" and "Metti in campo i tuoi talenti (Put Your Talents into Action)", aimed at raising digital awareness among students and teachers. Projects such as "Sky is No Limit" and "Let's Go Digital" support both digital innovation and talent development, through mentoring programmes designed to guide educational and professional growth. In addition, the "Cryptocurrencies and Artificial Intelligence" initiative explores innovative topics related to the digital world, offering young people valuable insights into the opportunities and risks of technological evolution.
Cybersecurity education is also extended to adults and the wider community. For example, Intesa Sanpaolo has collaborated with the Polizia Municipale di Firenze on initiatives to combat fraud and scams, strengthening its role in civic education and consumer protection. Complementing these activities, Intesa Sanpaolo launched the second season of the podcast "L'arte della difesa digitale (The Art of Digital Defence)", distributed through Intesa Sanpaolo On Air, making cybersecurity knowledge more accessible to a broad audience.
Finally, awareness initiatives were undertaken to raise awareness among customers and the Group's employees about the main fraud and scam scenarios and the actions to take to avoid becoming victims of fraudulent events.

Customer privacy metrics[268]

In 2025, 153 cases (75 of which related to Intesa Sanpaolo) of loss or theft of Group customers' data (Data Breaches) were assessed in Italy, 124 of which (53 related to Intesa Sanpaolo) were not found to pose a risk to the rights and freedoms of the data subjects and therefore did not need to be notified to the Italian Data Protection Authority. For the remaining 29 cases (22 of which related to Intesa Sanpaolo), it was instead considered necessary or prudential to notify the Data Protection Authority; of these, 19 cases (18 related to Intesa Sanpaolo, and 6 of which also related to Group employees) were also communicated to the data subjects. Foreign companies based in the European Union reported a total of 131 incidents/events of alleged personal data breaches, 5 of which were reported to the local authorities; of these, 4 were also communicated to the data subjects. For the remaining 126 cases, the local Data Protection Officers did not detect a risk to the rights and freedoms of the data subjects. Consequently, no notification to the respective Data Protection Authority was necessary. Outside the European Union perimeter, one data breach was reported that required notification to the local Authority.

	2025	2024
Number of cases of loss or theft of customer Date (Italy)[269]	**153**	**186**
Number of cases notified to the Date Protection Authority[270]	29	15
- of which: communicated to the Date subjects[271]	19	4
Number of cases of loss or theft of customer Date (Abroad)	**132**	**85**
Number of cases notified to the Date Protection Authority	6	4
- of which: communicated to the Date subjects	4	2

During 2025, the Group managed events attributable to various types of potential personal data breaches, including, for example, cybersecurity incidents (such as phishing or malware), IT incidents (e.g. software release errors) and operational incidents (e.g. incorrect sending of documentation or incorrect assignment of authorisations). Further reports of potential privacy breaches were received through internal alert channels and through notifications from data subjects, including those received via complaint channels, the DPO channel and the whistleblowing system.

All events were analysed in accordance with the critical event management process defined at corporate level. Incidents relating to ordinary management were handled by the Privacy function, while those classified as "complex" were managed with the involvement of the Cybersecurity function. At the end of the analysis and information-gathering activities, the Privacy function carried out an assessment of the risks to the rights and freedoms of data subjects, applying the rules set out in the specific internal regulation, largely inspired by the "Recommendations for a methodology of the assessment of severity of personal data breaches" issued by ENISA (European Union Agency for Cybersecurity).

Based on the results of the two analysis steps described above, in cases where the assessment identified a risk to the rights and freedoms of data subjects, a notification was made to the Italian Personal Data Protection Authority. Where such risks were classified as high, the affected data subjects were also informed accordingly. As a result of the above-mentioned detection and analysis process, it should be noted that within the Italy perimeter, the total number of data breaches in 2025 showed a slight decrease compared with 2024. The differing number of data breaches handled in the reference periods is attributable to the number of reports received by the companies concerned. The increase in the number of cases notified to the Authorities and communicated to the data subjects is attributable to the risk assessment carried out on individual events, which identified, in a greater number of cases, the conditions requiring notification and/or communication. In the international perimeter, the increase in cases is attributable to the higher number of events reported to the structures responsible for managing data breaches.

[268] Entity-specific metric.
[269] In 2025, 75 cases related to Intesa Sanpaolo, compared to 78 in 2024.
[270] In 2025, 22 cases related to Intesa Sanpaolo, compared to 13 in 2024.
[271] In 2025, 18 cases related to Intesa Sanpaolo, compared to 4 in 2024.

Despite the increase in cases, the number of data breaches notified to the Authorities and to the data subjects remains overall limited.

As at 31 December 2025, the Data Protection Authority had not requested any further investigation into the cases reported to it.

Metrics on the protection of customers against fraudulent transactions[272]

Overall, Intesa Sanpaolo blocked fraudulent transactions worth over 131 million euro involving retail customers and approximately 60 million euro involving corporate customers, for a total value exceeding 191 million euro. The value of these transactions is calculated on the basis of a monitoring system that makes it possible to distinguish cases of fraud from those of scams.
In particular, there was a significant increase in the value of blocked scams, rising from 84 million euro as at 31 December 2024 to 175.7 million euro at the end of 2025. This amount was distributed between retail customers and businesses, with percentage shares of 71% and 29% respectively, and with values tripling compared with the same period of the previous year in the case of business customers (16 million euro as at 31 December 2024 – 50.7 million euro as at 31 December 2025).
With regard to fraud, there was an increase in attempts compared with the previous year (+27.8%), mainly attributable to a sharp intensification of malware attacks, which were six times higher than in 2024. Moreover, the average fraud amount attributable to malware increased fourfold. Specifically, the frauds blocked in 2025 were attributable 42% to retail customers and 58% to corporate customers.

Despite this unfavourable scenario, blocking[273] effectiveness increased by 2 percentage points compared with the previous year, rising from 96% in 2024 to 98% at the end of 2025, maintaining a very high level when compared with the UK benchmark (65%[274] in 2025) used as a reference point for the analysis.

Blocked fraudulent transactions (€/mln)	2025	2024
Blocked frauds	**16.1**	**12.6**
Retail customers	6.7	8.4
Corporate customers	9.4	4.2
Blocked swindles	**175.7**	**84**
Retail customers	125	68
Corporate customers	50.7	16
Total blocked fraudulent transactions	**191.8**	**96.6**
Retail customers	131.7	76.4
Corporate customers	60.1	20.2

Customer health and safety

Policies on customer health and safety

Safeguarding the safety of customers and the security of their assets and information is not only a primary duty of the Group, but is also the foundation of developing a long-term trust-based relationship.
In particular, the Intesa Sanpaolo Group protects the health and safety of people, including customers and suppliers, by acting on two distinct but complementary levels, at institutional and Group governance level.
In this context, the Group, at institutional level, has joined the Memorandum of Understanding for the Prevention of Crime against Banks and Customers, promoted by OSSIF (Italian Banking Association's Anti-Crime Research Centre), endorsed by the Ministry of the Interior and signed in the Prefectures of the main Italian provinces.
The MoU defines the best practices for the prevention of both major threats against staff and assets held by banks, and fraud against customers, with a focus on senior citizens and less financially literate customers. The MoU, which is continuously updated and adapted to changes in the broader reference context by the Italian Banking Association and its members, identifies the levels of protection considered appropriate for the prevention of such threats, based on the best practices in the field. The Group operates above the minimum adequacy thresholds, representing a benchmark in both the national and international landscape. Also in 2025, Intesa Sanpaolo continued the training and information campaign for the prevention of scams targeting the most vulnerable customer groups, launched in 2024 through the use of various communication channels.

At the Group governance level, within the oversight of the Chief Security Officer Governance Area, the Corporate and Physical Security structure carried out further updates and implementations of the reference guidelines, which represent the main document of principles and guidance in this area. The current version has been in force since January 2025, following approval by the Board of Directors.
The guidelines set out clear principles, processes and responsibilities, to ensure the protection of personnel and assets, both at home and abroad. This generates significant positive externalities, inter alia, by helping to create a comfortable and safe place for customers. The guidelines complement the operational rules and the advanced technological measures to strengthen existing controls and measures that contribute to the physical integrity and safety of people. This framework is supported by Group initiatives and information tools for the dissemination of a safety culture.
The above-mentioned internal regulations are inspired by constitutional and legal principles that emphasise the value and dignity of work and the individual.

[272] Entity-specific metric.
[273] The indicator is calculated as the ratio between the value of blocked fraud and the total value of attempted fraud.
[274] Source: "UK Finance Limited", Half Year Fraud Report 2025.

With reference to the areas of health and safety in the workplace, pursuant to Legislative Decree No. 81/2008, the Health & Safety structure ensures oversight of the risk of non-compliance by performing the role of a specialist function as provided for by specific Group compliance guidelines. The principles and procedures to be followed and implemented to ensure a safe working environment are governed within Intesa Sanpaolo by specific documents referenced in Chapter S1 – Health and Safety.

For further details on the impacts, risks and opportunities (IROs) covered by the policies relating to customer health and safety please refer to the IRO table set out in the paragraph "Materiality analysis" in the ESRS 2 – General disclosures chapter.

Customer engagement and remediation and channels to submit complaints

One the key principles of the Code of Ethics is the value of the person: the Group takes care of people's health and safety to ensure their professional experience respects their physical and mental well-being.
In particular, the Intesa Sanpaolo Group protects the health and safety of all the people who work there and visit its premises by implementing operational rules and technological safety measures, supported by information materials promoting a health and safety culture. The protection of people is essential; therefore, corporate and physical security play a crucial role and are governed by specific guidelines and internal rules that also safeguard customers, enabling everyone to operate with full effectiveness, efficiency and safety.

The Code of Ethics allows customers to file reports of possible non-compliance with its provisions through a dedicated e-mail inbox, guaranteeing a timely response to queries and complaints and aiming for an effective and not merely formal resolution of disputes.
For details of the actions involving the Group's customers, please refer to the paragraph "Actions relating to customer health and safety".

Targets related to customer health and safety

The Intesa Sanpaolo Group has put in place a series of policies and actions to safeguard customer health and safety, which ensure the continuous monitoring and guidance of this issue, even without a precise definition of quantitative and measurable targets.

Actions relating to customer health and safety

With reference to the actions aimed at promoting customer safety, over the years the Intesa Sanpaolo Group has launched widespread information activity to prevent fraud against weaker customers, such as seniors and those with limited financial education. In particular, the Bank has continued its participation in the national campaign promoted by the Italian Banking Association (ABI) together with the Carabinieri Corps, which is one of many initiatives deployed by the Authorities to prevent fraud against vulnerable groups, which affects significant numbers and has devastating impacts on customers, often worsening their existing vulnerabilities, at times with irreversible outcomes.
In this context, informational materials produced by the Carabinieri Corps were distributed through all channels used to reach retail customers: printed materials (for customers who still prefer this form of communication), as well as the Group's app and institutional website.
The campaign also aims to highlight the Group's social commitment and to contribute to eradicating the phenomenon through the active involvement of key stakeholders, including customers and employees.
Consistent with the above, the action of Intesa Sanpaolo also continued during 2025 through a training project for branch staff aimed at identifying and preventing scams in general, and in particular those targeting vulnerable customers.

As to actions to strengthen the security of personnel and assets, but which also have a potential indirect effect on customer protection, the Group designs its actions on the basis of risk analysis conducted by the corporate and physical security function, based on the ISO 31000 Guidelines.
These analyses provide input for designing appropriate prevention strategies and measures, ranging from training and organisational actions to the use of advanced technological solutions.

The remit of the corporate and physical security function covers the entire perimeter of the Group, partly under a centralised model and partly via decentralised support.
In particular, in 2025 the emergency plans were updated, with implications for the safety and health of staff abroad, in collaboration with the relevant functions and in line with the Corporate and Physical Security rules for managing risks related to international travel. The primary objective is to mitigate travel security risks to which personnel may be exposed during business trips outside Italian territory. In addition, during 2025 the Corporate and Physical Security Rules were issued for Intesa Sanpaolo's international branches and representative offices, with the aim of strengthening the health and safety framework for people working in branches and representative offices outside the national territory.

Assessing the effectiveness of actions is an integral part of the process. The Group tracks data relating to all criminal events, both completed and attempted, across the Italian territory. The figures for 2025 show substantial stability compared with previous years, demonstrating the positive impact of the measures adopted.
Another key area for physical security is aggressions other than robberies, typically against Group staff. In this area, detection, analysis and containment actions have been in place for quite some time, also with a view to reducing the level of possible jeopardising of customers in financial activities involving contact with them.

Thanks to the contribution of the Corporate and Physical Security and Health and Safety functions, the training course "De-escalation Management to Reduce the Risk of Aggression Against Staff" was developed for the managers of an initial group of branches. The course, delivered by both internal instructors (Corporate and Physical Security and Health Surveillance and Psycho-Social Risks) and an external instructor (a psychologist), provides a more practical and concrete exploration—alongside the training already available and attended by staff—of aspects related to identifying weak or early warning signs of potential aggression and managing all de-escalation mechanisms, whether verbal, behavioural or relational.

Social inclusion and supporting production

Policies on social inclusion and supporting production

In line with ESG principles and the international commitments undertaken by the Group, Intesa Sanpaolo promotes social inclusion and the strengthening of the productive fabric through an integrated set of policies and guidelines that place equity, equal opportunities and social cohesion at their core. These include the Code of Ethics, the Internal Code of Conduct, the Principles on Diversity, Equity & Inclusion and the Principles on Human Rights, which are primarily addressed to the Group's people but also ensure the integration of social and environmental factors into credit and investment processes.
The 2022-2025 Business Plan translates these principles into concrete inclusion and cohesion objectives through credit lines dedicated to SMEs and micro-enterprises, measures in support of the Non-profit Sector and initiatives to support production chains. The Group also offers financial education and inclusion programmes for families and young people, as well as partnerships with local authorities and foundations to support the sustainable and digital transition of local economies.
The extensive territorial reach and proximity of the sales networks make it possible to systematically identify emerging socio-economic needs, turning them into concrete solutions. This approach is based on ongoing dialogue with families, undertakings, trade associations, Non-profit Sector entities and institutions in order to identify emerging needs and turn them into concrete actions.

The objective is twofold: on the one hand, to ensure transparent, safe and inclusive access conditions to banking products and services; on the other, to support the competitiveness of Italy's productive system, with particular attention to SMEs, micro-enterprises and local supply chains as well as the most vulnerable segments of the population, namely young people, families and individuals in conditions of economic and social hardship.

As illustrated in the section "Policies to mitigate and adapt to climate change" in the ESRS E1 – Climate Change chapter, the Intesa Sanpaolo Group has adopted internal regulations for the classification of sustainable lending products and transactions. These regulations apply to Group companies that provide finance to customers and, among the various categories, define lending transactions aimed at supporting socially sustainable economic activities, including, for example, activities supporting the creation and preservation of employment levels, socio-economic advancement and empowerment. This category also includes lending transactions to non-profit and Third Sector organisations where they are not already classified in one of the other sustainability categories.
The classification categories of sustainable lending products and transactions were defined in line with the internationally recognised guidelines of the Loan Market Association (LMA) on Social Loan and Sustainability-linked Loan Principles. These provide a globally shared framework and promote standard and transparent practices in the sustainable finance sector.
In addition, the internal regulations for the classification of sustainable lending products and transactions define the other sustainability category, which includes transactions that are not purpose-specific compared to the other sustainability categories but are associated with sustainable covenants/KPIs and identified with reference to one or more environmental/social sustainability activities. The identified KPIs must be significant and consistent with the related purpose and with the achievement of the company's sustainability strategies and their achievement must be documentable over the term of the transaction.
At the end of 2025 the internal regulations for the classification of sustainable lending products and transactions were updated and the related responsibility was assigned to the CSO Governance Area.

For further details on the impacts, risks and opportunities (IROs) covered by the policies relating to social inclusion and support for the productive fabric, please refer to the IRO table set out in the paragraph "Materiality analysis" in the ESRS 2 – General disclosures chapter.

Customer engagement processes

The Group is committed to ensuring clear and transparent access to its channels, encouraging customer awareness in economic and financial management. Through organisational structures and in collaboration with industry associations, it develops products and services in response to evolving customer needs, while adhering to sector initiatives. For example, in the area of certificates, it participates in the annual surveys organised by ACEPI (Italian Association of Certificates and Investment Products), to ensure that the complexity of instruments is clearly classified and improve its advisory services.

In order to best respond to customers' needs, advanced listening tools have been adopted to better understand emerging needs and assess the level of satisfaction with existing products and services. In this way, the Group can continue to offer products in line with both companies' and individuals' expectations. When designing agreements, loans and other customer initiatives, direct discussions are organised with the beneficiaries, incorporating feedback and suggestions for continuous improvement, including through focus groups and co-design sessions in the most significant projects.
The Bank interacts with customers who contact it spontaneously through the digital channels available to them (toll-free number and chat) and also initiates its own contact initiatives, designed in coordination with the relevant functions. In addition, the Bank informs customers—within the scope of its usual relationship management—about products offered by the Bank that promote social inclusion, such as the Basic Account, and maintains active relationships with the customers it interacts with, especially in cases where, following the contact, it becomes necessary to open a second-level report, providing feedback on the status of the request processing. Customers are also involved through periodic satisfaction surveys on the services offered, some of which were promoted through a web series available on YouTube, with the aim of helping customers use the digital services offered.
The Bank adopts a participatory approach aimed at ensuring that inclusion and accessibility initiatives respond to the real needs of customers with disabilities or in vulnerable conditions. In material projects, customers and employees with disabilities actively participate in designing and testing the functionalities, including through focus group and co-design sessions.
The effectiveness of the actions is monitored through qualitative and quantitative indicators, such as periodic feedback collected by industry associations during the planned discussions; the results are shared in internal governance committees to steer corrective actions and ensure continuous improvement of inclusion processes.

In the Banca dei Territori Division, right from the product design phase, customer behaviour and market benchmarks are analysed to identify latent needs. Annual customer satisfaction surveys and continuous customer experience surveys following interactions on physical and digital channels highlight areas of satisfaction and dissatisfaction, allowing prompt action to be taken to optimise the Group's products and services.
As well as listening to customers, the staff in the BdT Division also contribute by providing feedback on processes and services, suggesting improvements for more immediate usability and a more transparent relationship.

In particular, the Banca dei Territori Division's commitment to creating socially oriented credit solutions is manifested through an inclusive approach, aimed at bridging some of the country's social gaps, such as the limited number of young people with university degrees. End customers' needs are analysed based on market surveys (e.g. Istat, Eurostat) and the support of research institutes, with specific focus groups. Gamma Impact products, such as those aimed at students or the unemployed, are designed with favourable terms and extended repayment periods to facilitate access to credit even for those who do not meet the traditional requirements.

Remediation processes and channels to submit complaints

The Intesa Sanpaolo Group maintains a constant dialogue with its customers to ensure top-tier service. Each customer has the opportunity to submit a complaint through various methods and communication channels, in order to also accommodate customers with more limited access to digital channels or those belonging to vulnerable groups. Complaints can in fact be submitted through online forms on the Group's institutional website, via the app and email, or through traditional methods such as by mail or hand delivery at operational branches. Timely and careful handling of complaints is crucial to consolidate trust and resolve any critical issues. Current regulations require the responsible compliance function to provide regular disclosures, at least annually, on the overall handling of complaints and the effectiveness of the procedures adopted.
In addition, the Code of Ethics allows customers to file reports of possible non-compliance with its provisions through a dedicated e-mail inbox, guaranteeing a timely response to queries and complaints and aiming for an effective and not merely formal resolution of disputes.

Targets and metrics related to social inclusion and supporting production[275]

The Group has set itself the objective of promoting ESG practices, included as a priority in the 2022-2025 Business Plan, by raising awareness among companies and their supply chains and helping them to understand their own level of sustainability, as well as in establishing a transition plan geared towards more responsible and innovative models, in line with the ecological transition of the NRRP. To this end, the ESG Workshop initiative continued in 2025. These are physical and virtual meeting spaces that offer workshops and advice from qualified partners on ESG issues.

The target of creating at least one workshop per Regional Governance Centre has been far exceeded, with multiple workshops in some areas. Each workshop establishes common objectives and operating methods in order to propose a path designed to help companies identify their strengths and areas for improvement, stimulating change that generates value not only for the company, but also for the community and the environment.

The activities of the workshops are constantly promoted through the Group's traditional channels, such as press releases, the official website and social media channels, but also through the communication initiatives of the founding partners (e.g. chambers of commerce, local authorities, institutions, universities, etc.). During the 2022-2025 Business Plan, the initiative continued to expand, supported by institutions and technical partners, with the aim of making ESG practices a priority in business decisions and development strategies, making the ecological transition not only a necessity, but also an opportunity for innovation and growth.

Since 2021, when the first workshop was launched in Brescia, several workshops have been set up throughout Italy, from Padua to Genoa, including cities such as Milan, Turin, Bari and Palermo. As of 31 December 2025, there were 16 ESG workshops, in line with the 2024 figure, as shown in the table below.

Target: Number of ESG Workshops[276]

	Date	Value
Baseline[277]	31.12.2021	-
Final number	31.12.2024	16
Final number	31.12.2025	16
Target	2025	12

Actions related to social inclusion and supporting production

The Intesa Sanpaolo Group provides its customers with a wide range of medium- to long-term products with the aim of helping to find ESG solutions and supports the most vulnerable groups by promoting access to credit through specific projects and local partnerships.

[275] The information relating to the "Number of ESG Workshops" indicator set out in this section is reflected in the section "2025 in brief" – paragraph "The 2022-2025 Business Plan and the new 2026-2029 Plan" of the Report on Operations of the Consolidated Financial Statements.
[276] Entity-specific metric.
[277] Plan target that represents the planning of a new activity that does not have a base Value.

In relation to social inclusion issues, the BdT Division has developed dedicated credit lines:

- S-Loan, to support small and medium-sized enterprises aiming to improve their sustainability profile. In particular, the S-Loan Diversity line, to support SMEs' investments and reward their efforts towards empowering women, such as promoting female participation in their company, recruiting new female staff, gender equality policies and welfare for female employees, in line with European gender equality goals. The S-Loan line, aimed specifically at corporations, including non-profit social enterprises and cooperatives, also includes the S-Loan ESG line, for companies that want to improve their all-round sustainable performance;
- gamma Impact, through the Fund for Impact, a credit line dedicated to social impact activities set up in 2019 and confirmed in the 2022-2025 Business Plan, enables the development of credit initiatives aimed at categories of people who have difficulty accessing traditional credit, despite having high potential. The Fund for Impact credit products provide subsidised rates and extended repayment periods of up to 30 years; around 127 million euro was made available in 2025. The main programmes include:
  - "per Merito", an unsecured loan designed for university students, with approximately 125 million euro granted in 2025;
  - "mamma@work", a loan that promotes work-life balance for working new mothers, with approximately 1.5 million euro granted.
- Other products in the Impact range include "Obiettivo Pensione", which supports unemployed individuals in paying voluntary pension contributions in order to meet pension eligibility requirements; "per Crescere", a loan for low-income families aimed at making children's education and training expenses more sustainable; "per avere Cura", designed to support people with disabilities and/or their caregivers; and the "per Esempio" loan, intended for young people who have participated in the Universal Civil Service and are entering their first work experience.
- These products, developed under the Gamma Impact range, are primarily characterised by social and inclusive features, allowing people to access credit who would normally struggle to obtain it, such as students and the unemployed. The aim is to generate a positive social impact, helping these groups of people to succeed through financial support. Access to all credit products in this range by users (customers and prospects) is granted subject to verification of the eligibility requirements for the specific product. This verification is carried out by the interested user through two dedicated web platforms, accessible from the Bank's commercial website (the per Merito Platform and, starting from 2025, the Piado Documentary Platform). In addition, the Division has introduced a system for measuring social impact through the Impact Measurement (RIM) process, as illustrated in the paragraph below.
- "Finanziamento Microcredito Imprenditoriale" (Business Microcredit Financing), to support start-up and development projects by undertakings, freelancers and unrecognised associations struggling to access credit, using the special microcredit section of the SME Guarantee Fund;
- the Business Gemma loan, aimed at supporting any type of investment or liquidity need related to the professional economic activity of female-led businesses and self-employed women;
- anti-usury loans, disbursed in accordance with the terms established by agreements with Foundations and Associations registered in a special list of the Italian Ministry for the Treasury. These institutions, responsible for managing the resources provided for by Law 108/96 on behalf of the State, offer guarantees to banks to facilitate access to credit for individuals who are considered worthy of financial support but who, however, would not be able to access finance according to the traditional criteria for assessing creditworthiness. The guarantees financed by the Fund for the Prevention of Usury, established by the above-mentioned law, facilitate the disbursement of loans to combat the financial exclusion of vulnerable individuals, reducing the risk of them turning to illegal credit channels. Since this funding is intended for people in serious economic hardship, the impact on the lives of the beneficiaries and their families is considerable. The number of anti-usury loans granted during the year is monitored by a dedicated structure, which each month reports on the number of exposures covered by guarantees. From these data it is possible to obtain an estimate of the benefits generated in the various territories where the entities partnered with the Group operate. Personal loans and anti-usury mortgage loans are intended for consumers, professionals and sole proprietors operating for personal or family purposes, outside their business or professional activities, and residing in the areas covered by the foundations and associations affiliated with the Intesa Sanpaolo Group;
- Credit for Community Development (Cre.S.Co.), an initiative developed through individual calls for proposals or other forms of collaboration with specific partners, which establish a guarantee fund to facilitate access to credit for Non-Profit Organisations (NPOs). This instrument aims to support the development of socially beneficial projects in the areas in which the partners pursue their statutory objectives. The mechanism allows the partners, such as foundations, to enter into an agreement with the ISP Group and issue a call to select the projects to be funded. In this context, the partners provide a guarantee fund and/or a fund to cover all or part of the borrowing costs associated with the selected projects. Both secular and religious NPOs, including those set up in aggregative forms such as Temporary Special-Purpose Associations (*Associazioni Temporanee di Scopo* - ATS), which have their legal and operational headquarters in Italy, may participate in the calls for proposals. Both organisations already active at the time of the call and NPOs newly established as a result of mergers or integrations between pre-existing bodies are eligible, provided that they fall within the sectors, types of intervention or areas defined by the partner. Cre.S.Co. is an instrument offering subsidised loans for new investments or liquidity needs, aimed in particular at non-profit organisations with the objective of supporting the growth of small organisations, which often lack their own equity.

The BdT Division pays special attention to retail customers and their needs, offering dedicated mortgage lines for specific requirements, including:

- "Mutuo Giovani": an offer that facilitates young people (under 36) with a house purchase by accepting requests of up to 100% of the property value, providing for subsidised rates and application fees, elimination of instalment collection costs and elimination of expenses for flexibility and suspension options that can be used to handle contingent hardship situations. Workers with non-standard and increasing protection employment contracts can also apply for it. The "Mutuo Giovani" has thus gained a positioning on the market which sees the Group as the main lender of this target customer group.
- Guarantee Fund for Main Home Purchases: the Intesa Sanpaolo Group participates in the Guarantee Fund for Main Home Purchases, established by the 2014 Italian Stability Law. The "Sostegni-bis" Decree published in May 2021 refinanced the Fund in subsequent years, extending the benefits until the end of 2027 with Decree Law 207/2024. Also in 2025, the Bank

offered eligible individuals—such as young people under the age of 36 or single-parent families with minor children—mortgages on favourable terms, including the waiver of application and instalment collection fees, the possibility of accessing high Loan To Value (LTV) ratios, also supported by State guarantees, and the benefit of highly competitive interest rates.

To respond to the needs of customers in particularly vulnerable situations, dedicated insurance cover has been introduced for Seniors (over 65) and family caregivers within the XME Protezione product (Support and Assistance and Caregiver coverages). In addition, the Bank offers the following Intesa Sanpaolo Vita Class I life insurance investment products within its product range:

- "ISV Tu dopo di noi", a product designed to protect the future of a person with disabilities;
- "Base Sicura Tutelati", a product designed for minors or individuals under legal guardianship, for whom a Legal Representative acts.

The Bank's initiatives focusing on the topic of financial inclusion include Finanza Insieme, an online platform launched in September 2023, which is free and open to everyone, customers and non-customers alike. The platform is based on the premise that acquiring skills and making informed financial decisions is not only a driver of individual progress, but also of collective progress.
With this initiative, Intesa Sanpaolo aims to support people in improving their level of financial awareness, their relationship with money and, more broadly, to help reduce inequalities in economic and financial literacy.
Hence the reason for its name: "Finanza (Finance)" because it addresses the fundamental and essential topics of finance, and "Insieme (Together)" because its aim is to guide people on a journey of growth and enrichment, without any reference to the Bank's commercial offering and without any promotional or sales-driven intent.
During 2025, the platform recorded around 6,400 registrations and 700,000 visits. Overall, from the launch of the project in 2023 to the end of 2025, Finanza Insieme reached approximately 22,600 registrations and 1.4 million visits.
Through simple language and an interactive/edutainment approach, Finanza Insieme offers a customised learning and training path with more than 350 topics and exercises.
The thematic pathways (so-called Topics) cover seven main areas of bancassurance, such as Savings, Investment and Risk. The seven thematic pathways are also organised into different sections that enable users to understand the main socio-demographic trends, analyse the key strategies across the various areas in order to recognise and prevent the main biases, train the development of more careful and informed decision-making, and explore current economic and financial topics in greater depth.

Alongside the commercial offering of products and services, outlined above, the BdT Division promotes a number of initiatives aimed at fostering economic development and the dissemination of a culture of sustainability and social rights:

- the Women Value Company programme, implemented in collaboration with the Marisa Bellisario Foundation, dedicated to SMEs that implement concrete and innovative policies and strategies to guarantee men and women equal opportunities and equal recognition in their careers;
- the Resto al Sud initiative, to support the establishment and development of new entrepreneurial and freelance activities in southern Italy;
- Crescibusiness, a programme aimed at micro, small enterprises and freelancers, which provides a pathway to ESG growth;
- Imprese Vincenti, the initiative that highlights the paths of growth, digital transformation and business models developed by companies also with regard to ESG;
- Programma Sviluppo Filiere (Supply Chain Development Programme), to facilitate access to credit and a better understanding of companies' needs as part of a supply chain. It supports not only the individual, but the entire team with a unified vision of all supply chain players, and since 2024 it has been supplemented with the introduction of the Programma Sviluppo Filiere – Filiere sostenibili (Supply Chain Development Programme – Sustainable supply chains) with the specific objective of promoting virtuous approaches to ESG for supply chain companies.

In addition, the following initiatives are made available to corporate customers to raise awareness of ESG topics:

- Group training programmes with a focus on ESG topics;
- ESG workshops, in-person and remote venues offering workshops and consultancy on environmental, social and governance issues.

Initiatives to support individuals, non-profit and third sector organisations, with a focus on positive social impacts, include:

- Negative EVA impact ceiling: introduced in 2023, this is an innovative governance tool designed to support lending transactions having significant social impact, even in the absence of an immediate economic return for the Group. This tool, which is reviewed each year by the Steering Committee, makes it possible to offer short-, medium- and long-term loans on favourable terms to vulnerable individuals and third sector organisations, often having no access to traditional lending channels;
- Impact Assessment (RIM): the results of loans granted are assessed by means of an impact measurement process, covering:
  - impact products, i.e. loans granted to disadvantaged individuals;
  - loans to the non-profit sector, where the Group's impact is indirect, and is applied to new loans of no less than EUR 50,000 with maturities of no less than six months.

  This process involves the completion of a questionnaire with branch managers and customers in order to collect information relevant to measuring the benefits. The data thus collected are then analysed to calculate the benefits on people (outcome) as well as the effects of the initiatives on the lives of individuals and their communities (social impact). Finally, an SROI - Social Return On Investment - is calculated, i.e. a measure of the change effected in ways relevant to the people and organisations experiencing or contributing to it. Concretely, appropriate monetary values are applied to the measured social, environmental and economic outcomes. This makes it possible to calculate a benefit-cost ratio.

For Impact products, the questionnaires are currently administered to customers before the credit is granted and assess the expected improvement compared with possible alternatives, where these exist. In the future, questionnaires to be administered ex-post will also be introduced, to measure actual results against expected results.
For loans to the non-profit sector, the assessment is conducted at the time of the loan application. Ex-ante questionnaires are currently being used to collect customers' expectations about the social impacts of the financed initiatives. In this case, an ex-post assessment is already planned to measure concrete results against initial expectations.
As regards lending to the Non-profit Sector, during 2025 the usual "Impact Day" was organised—an event aimed at presenting to the public and the market the results of the ex-ante social impact assessment of projects by Non-profit Sector organisations financed by the Intesa Sanpaolo Group.

The ISP Group participates in the Agreement for Women Victims of Violence, which the Italian Banking Association (ABI) and the main trade unions have signed in favour of women included in certified protection schemes for victims of abuse, so that they can request the suspension of mortgage and personal loan instalment payments for 18 months. To provide even more support, the Group also grants suspension of the entire instalment in addition to the principal amount covered by the agreement. The Agreement has already been extended and is valid until 25 November 2025.

In the area of accessibility, the Banca dei Territori Division ensures that its digital and physical channels are fully usable also by customers with disabilities. These activities are carried out within the framework of the Bank's broader Accessibility project, in line with the Stanca Law (2022) and with the European Accessibility Act, which has been in force since 28 June 2025.
In this context, compliance assessments are regularly carried out on digital touchpoints (for example, the app and website used to access internet banking), in accordance with the methods and timelines set out by the regulations, in order to ensure compliance with accessibility, usability and inclusion requirements. Touchpoints developed or updated in line with these standards are then made available to all the Bank's customers through the usual distribution channels, including the release of applications on the Android and iOS app stores.
In addition, the Group's ATMs also provide accessibility features, such as the audio narration of certain functions, the option to connect headphones, and high-contrast displays for people with visual impairments.

The Banca dei Territori Division pays special attention to young people and their needs, offering them a wide range of dedicated solutions. Below are the main initiatives and solutions offered to them:
- XME Conto UP! (reserved for minors) offers a zero-fee current account, plus free debit card, bank transfers and ATM withdrawals, and with stamp duty paid by the Group.
- The new range of "Isytech" transactional products for retail customers, offered through an omnichannel approach to align with customers' needs, starting from the age of 18. This is a dynamic offering that can be subscribed to in a simple, convenient and intuitive way by making use of all the Bank's open points. For example, a customer can start purchasing a product or service online, then complement the process through a physical branch and finally complete it with the support of the digital branch. This approach gives customers full flexibility and freedom to interact with the Bank through all available channels during the different stages of purchasing a product and/or service, providing a smoother and simpler experience.
- The pre-paid "Flash Up Studio" card for students attending the partner universities. It can be requested free of charge directly via the app: it can be used to make payments, receive scholarships and any remuneration. Where applicable, it also allows the holder to use university services and access university premises.

In addition, the BdT Division is planning other ad hoc initiatives to respond to specific social needs, such as the management of remittances. In continuity with the past, the Group continues to provide the option to send money abroad to meet the specific needs of the ISP Group's migrant customers, through the Money Transfer service, in partnership with Western Union.

As regards the ESG financial offering available to customers of the IMI Corporate & Investment Banking Division, please refer to Standard E1 – Climate Change.

The International Banks Division (IBD) supports individuals in vulnerable conditions through a dedicated offer. In particular, Bank of Alexandria (Egypt) places microfinance at the centre of its strategy as a driver for poverty reduction and the country's social and economic development. Bank of Alexandria positions itself as a reference for financial inclusion in Egypt, economic empowerment and income support for small businesses and customers with no access to banking, with a greater focus on small farmers, livestock farmers and craft workers. In 2025 the Bank, which offers a diversified catalogue of products (in particular in the field of Agribusiness), also developed in line with the guidelines of the Central Bank of Egypt, granted loans for an overall amount of approximately 55 million euro, also providing customers with training services, in collaboration with the World Food Programme (WFP) and entering into partnerships and collaborations with NGOs, Ministries and private entities.
Within the Division, there is also an offering dedicated to young people for the purchase of their first home, which also makes use of government programmes supporting younger generations. This offering is active in seven entities: Banca Intesa Beograd, CIB Bank, Banca Comercială EximBank, Banca Intesa Sanpaolo (Slovenia), Intesa Sanpaolo Bank Albania, Intesa Sanpaolo Banka Bosna i Hercegovina, and Vseobecna Uverova Banka; in 2025, a total of approximately 434 million euro was disbursed.
In addition, there are products to support women and young people in business, also developed in cooperation with multinational banks, such as the Women in Business programme of the European Bank for Reconstruction and Development (EBRD), active in 2025 in Serbia. The aim is to support micro, small and medium-sized enterprises run by women or young people in the Western Balkans by providing favourable financial terms, technical advice and know-how. In 2025, around 13 million euro were disbursed.
In five geographic areas of the Division (Serbia, Bosnia, Moldova, Croatia and Egypt), products dedicated to pensioners are distributed; the amount disbursed during 2025 was approximately 197 million euro.

Moreover, as explained above, in the current context it is essential to support the production sector as well as the economic and social growth of the communities in which the Group operates, by offering products and services in the field of environmental, social and other sustainability (see the section "Sustainable finance metrics" for details). For a comprehensive

description of the products and services offered for this purpose, with particular reference to climate/environmental topics, see also the section on "Climate Change Actions and Resources at the Portfolio Level" of ESRS E1.

Sustainable finance metrics[278]

For the purpose of greater internal and external transparency with respect to products and transactions deemed sustainable, the Group has decided to draw up specific rules for the classification of sustainable credit products and lending transactions. From 2023, reporting complies with these rules, including loans in the categories of environmental sustainability, social sustainability, and other sustainability[279].

In particular:

- environmental sustainability: this category includes products and credit transactions considered sustainable according to the "environmental" classification, covering financing to Retail, SME and Corporate & Project Finance customers. For further details, please refer to the paragraph "Strategy to address climate change at portfolio level" in the chapter ESRS E1 – Climate Change.
- social sustainability: this category includes targeted lending products and transactions considered sustainable according to the "social" category, and includes anti-usury loans, products for vulnerable social groups, loans to the Non-Profit Sector and other social loans;
- other forms of sustainability: this category includes non-targeted transactions associated with sustainable covenants/KPIs towards undertakings."

The total amount disbursed during the financial year 2025 is summarised below, broken down by type of loan.

Table – Sustainable financing (amount disbursed during the year)

Type of loan	Loans disbursed in 2025 €/bln	Loans disbursed in 2024 €/bln
Loans in the environmental sustainability field	13.6	7.6
Loans in the social sustainability field[280]	5.2	4.5
Loans falling under "other sustainability"	6.0	7.0

In 2025, a total of approximately 24.8 billion euro in sustainable lending was disbursed (+5.7 billion euro compared with 2024). The increase in financing related to environmental sustainability is mainly linked to the expansion of the range of green products (+6 billion euro compared with 2024), to which Green Mortgages and S-Loan Green products have made the most significant contribution.

With reference to financing related to social sustainability, the four relevant sub-categories that make up the aggregated figure are presented in the table below. As this is the first reporting year, no comparative data are presented.

Table – Social sustainability financing by type

Social sustainability loans disbursed in 2025	€/mln
Anti-usury loans	4.3
Loans to the Third Sector	344.7
Products for vulnerable social groups	4,763.0
Other social loans	77.7
Total – Social sustainability financing	**5,189.7**

A breakdown at stock level as at 31 December 2025 is given below.

Table – Sustainable financing (outstanding balance)

Type of loan	Stock 2025 €/bln	Stock 2024 €/bln
Loans in the environmental sustainability field	30.3	20.3
Loans in the social sustainability field	23.6	20.1
Loans falling under "other sustainability"	15.6	15.8

Please note that the source of the data for environmental sustainability financing is regulatory, whereas the source for social sustainability and other sustainability financing is managerial in nature.

With reference to the stock values of sustainable financing, in 2025 these amount to approximately 69.5 billion euro (+13.3 billion euro compared with 2024), reflecting the strong momentum in disbursements. In particular, the environmental sustainability segment records an increase of 10 billion euro compared with 2024, mainly driven by the offering of Green Mortgages (in line with the objectives of the 2022–2025 Business Plan) and S-Loan Green products. Meanwhile, the social sustainability segment shows growth of 3.5 billion euro compared with 2024, supported by financing dedicated to more

[278] Entity-specific metric.

[279] At the end of 2025 the internal regulations for the classification of sustainable lending products and transactions were updated and the related responsibility was assigned to the CSO Governance Area.

[280] Please note that this figure does not include loans disbursed to support natural disasters and for urban regeneration purposes.

vulnerable groups, such as Youth Mortgages and Consap mortgages (Concessionaria Servizi Assicurativi Pubblici)[281]. Finally, loans in the "other sustainability" category remained in line with 2024 levels.

Sustainability-conscious investment products and sustainable insurance

The Group considers it essential to establish trust-based relationships with its customers and, in this regard, is committed to maintaining an ongoing dialogue with them, analysing their needs and expectations as a fundamental starting point for offering advice, services and products. The Group is aware of the key role it plays in supporting customers in their investment decisions, in the prudent management of savings, and in the responsible provision of credit, as well as in offering insurance solutions suited to their needs. To this end, the following paragraphs outline policies, objectives, actions and metrics in asset management, private banking and insurance.

Sustainability-conscious investment products

Policies on sustainability-conscious investment products - Asset Management

The Asset Management Division (hereinafter, also "AM Division"), being a financial market participant, also has a fiduciary commitment to its customers and investors and, more generally, to stakeholders. This requires the AM Division to effectively address sustainability issues, with particular reference to the performance of its financial products and to the issuers in which it invests on behalf of its managed assets, based on the assumption that issuers that implement high environmental, social and corporate governance standards can generate sustainable performance in the long term.

In this regard, in line with the requirements of the EU laws on sustainability-related disclosures in the financial services sector, in particular Regulation (EU) 2019/2088 (hereinafter also referred to as the "SFDR Regulation"), the AM Division has defined within its Sustainability Policy specific methodologies for selecting and monitoring financial instruments, aimed at integrating sustainability risk analysis and management within the investment process, in addition to the recommendations made as part of the investment advice service. The AM Division also takes into account the main negative effects of investment decisions on sustainability factors, pursuant to Articles 4 and 7 of the SFDR Regulation, and integrates sustainability risks into its remuneration policies pursuant to Article 5 of the SFDR Regulation.

The Sustainability Policy addresses all types of assets ("asset classes") held by the products managed - mutual funds and portfolio management - that in the respective pre-contractual disclosure:

- integrate sustainability risks into investment decisions, in accordance with the transparency requirements of Article 6 of the SFDR Regulation; or
- promote, inter alia, environmental and/or social characteristics, provided that the investee companies comply with good governance practices, in accordance with Article 8 of the SFDR Regulation; or
- have sustainable investment objectives, in accordance with Article 9 of the SFDR Regulation.

Portfolio management mandates characterised by the presence of specific indications within the respective investment policies do not fall within the scope of application, in light of the lower degree of discretion in the selection of financial instruments.

With regard to shareholder engagement, the reference documents are the following:

- the "Commitment Policy", which describes the conduct adopted to foster dialogue with the issuers in which Eurizon Capital SGR S.p.A. invests, the methods and topics of discussion; and
- the "Strategy for the exercise of intervention and voting rights regarding the financial instruments pertaining to assets under management", which governs participation in the investee issuers' shareholders' meetings.

In order to promote the proper implementation of its sustainability policies, Eurizon Capital SGR S.p.A. has defined and adopted a specific internal governance model that envisages the involvement of the corporate bodies and structures having specific roles and responsibilities in the monitoring and management of sustainability risks. Specifically:

- the Board of Directors (BoD): among other tasks, acting on proposals from the CEO and General Manager, it defines the Sustainability Policy and regularly checks its correct implementation;
- the CEO and the General Manager: with the support of the ESG Committee, they make proposals to the Board of Directors on (i) how to integrate sustainability risks into the investment process of Eurizon Capital SGR S.p.A. and into the remuneration and incentive policies, and (ii) identifying the main negative effects of investment decisions on sustainability factors. In addition, the ESG Committee regularly monitors the implementation of the Sustainability Policy;
- the ESG Committee supports the CEO in (i) defining proposals to be submitted to the Board of Directors on sustainability policies, (ii) monitoring the implementation of strategies involving the negative screening of issuers, the positive screening of ESG factors, the analysis, selection and composition of the managed portfolios, and monitoring external corporate governance activities.
- the Sustainability Committee's main task is to ensure that management decisions comply with the ethical principles set out in the regulations of the funds.

In addition, the Company has entrusted the Responsible Investments & Stewardship structure, within the Investment Department, with overseeing active ownership activities and promoting the integration of environmental, social and governance factors into the investment process. In this regard, portfolio managers within the Investment Area are involved in the selection and monitoring of financial instruments, aimed at integrating sustainability risks within the investment process of managed products. The Compliance & AML Function monitors compliance with the Sustainability Policy, overseeing the correct application of the controls governed by external and internal regulations.

[281] These are subsidised mortgages for the purchase of a first home, made possible through the Primary Residence Guarantee Fund, established by the Ministry of the Economy and Finance and managed by Consap, described in more detail in the previous paragraph "Actions related to social inclusion and support for the productive fabric."

Moreover, in order to pursue its customers and investors' best interests and to support the implementation of its Sustainability Policy, the Asset Management Division, also through its parent company Eurizon Capital SGR S.p.A., actively participates in:
- national and international initiatives that promote the development of best practices in the ESG area, the integration of sustainability principles in the financial sector and the adoption of responsible investment principles;
- training events and conferences, aimed at sharing experiences and spreading the culture of sustainability.

Through Eurizon Capital SGR S.p.a, the Asset Management Division participates in numerous international initiatives and working groups: for example, it is a signatory of Carbon Disclosure Project (CDP) since 2004, of the Italian Stewardship Principles promoted by Assogestioni since 2014 and of the UN Principles for Responsible Investment (UN PRI) since 2015. In addition, it has been a member of the International Corporate Governance Network (ICGN) since 2016, the Institutional Investors Group on Climate Change (IIGCC) since 2021, the Net Zero Asset Managers Initiative (NZAMI) [282]since 2021, and the Forum for Sustainable Finance since 2021. In addition, since 2023 it has participated in the Net Zero Engagement Initiative (NZEI) promoted by IIGCC, in Climate Action 100+, in Nature Action and in PRI Advance.
For further information on the initiatives joined, see the "Sustainability" section of Eurizon Capital SGR S.p.A.'s official website, where you can also access the Sustainability Policy Summary document.

The sustainability policies are reviewed each year by the Responsible Investments & Stewardship structure of Eurizon Capital SGR S.p.A., in coordination with the Compliance & AML function, to assess the consistency of the methodologies adopted by Eurizon Capital SGR S.p.A. with the evolution of best practices at national and international level.

Policies on sustainability-conscious investment products - Private Banking

Fideuram Intesa Sanpaolo Private Banking, in line with the Intesa Sanpaolo Group's commitment to sustainable economic development, in accordance with the principles outlined in the Group's Code of Ethics and aware of the importance of allocating resources according to social and environmental sustainability criteria for long-term value creation, has adopted policies on the integration of sustainability risks and information on the main adverse impacts on sustainability factors when selecting issuers, creating the financial product catalogue and providing investment advice and insurance distribution services (hereafter, these services are jointly referred to as "Advice").
These policies are made available to all Private Banking Division (hereinafter also "PB Division") employees via the company intranet in the internal regulations section; they are also published on the Division's website and can be viewed by customers. The contents of the policies are described below.
With regard to the decision-making process for selecting product companies, Fideuram Intesa Sanpaolo Private Banking analyses counterparties with respect to sustainability risk, consideration of PAIs (Principal Adverse Impacts)[283] and compliance with the applicable legislation. Accordingly, it analyses the degree of compliance and implementation of sustainability issues by the companies whose products may be included in its product catalogue, investigating the controls adopted by Asset Managers and Insurance undertakings in relation to the following topics:
- ESG principles/codes: adherence to ESG principles and/or codes at national and global level (such as, for example, the Net Zero initiative, the adoption of SRI criteria, Stewardship Principles, Climate Action 100+ and Nature Action 100, which Fideuram Intesa Sanpaolo Private Banking has joined);
- corporate governance and organisation: implementation of an ad hoc internal regulatory framework and definition of internal bodies or structures focused on sustainability;
- adoption of policies to integrate sustainability risks into investment and remuneration processes;
- range of sustainable products pursuant to the SFDR Regulation (as amended by Regulation (EU) 2020/852, the "Taxonomy Regulation"): complete product documentation complying with the reference legislation, description of any processes for updating and adapting products with respect to sustainability, how information on the products' sustainability characteristics is made available (e.g. by compiling the European ESG Template - EET file);
- use of environmental, social and governance or sustainability-related terms: adoption of an internal regulatory framework to ensure that fund documentation and marketing communications comply with the "Guidelines on funds' names using ESG or sustainability-related terms" issued by ESMA on 14 May 2024;
- consideration of PAIs, as defined in the regulatory technical standards for the SFDR Regulation.

The analysis, carried out on all existing counterparties is performed during the onboarding of the product company with which a distribution or brokerage agreement is to be signed, and is formalised within the Product Governance processes; this analysis is also subject to periodic updates.

In connection with the above, as part of the procedures adopted to provide the Advisory service, Fideuram Intesa Sanpaolo Private Banking handles the following:
- collecting information from customers during profiling about any interest they might have in investment solutions that value environmental, social and good governance factors;
- defining internal rules for the selection of products that can be considered consistent with the sustainability preferences expressed by customers.

Starting from December 2024, during the profiling phase, Fideuram asks whether the customer is interested in including financial products that take ESG factors into account in their portfolio and, if the answer is positive, proceeds to collect the following information:
- the sustainability (ESG) factors that the investment product must pursue;

[282] On 13 January 2025, NZAMI launched a review of the initiative to ensure its appropriateness for the new global context. As the initiative undergoes the review, activities to track signatory implementation and reporting have been suspended.
[283] The adverse impact indicators, also known as "Principal Adverse Impact indicators" (PAI), defined by Delegated Regulation (EU) 2022/1288, measure the effects of investment decisions and investment advice on sustainability factors, with the aim of monitoring the impacts of investment decisions across different dimensions such as the environment, society and the economy.

- the minimum percentage of the portfolio that the customer intends to allocate to such investments (25%, 50%, 75%);
- the customer's possible willingness to further specify, in line with the selected sustainability factors, their interest in products of this type.

Fideuram Intesa Sanpaolo Private Banking has adopted a classification model for the financial products included in its range of offers, applied across primary and secondary market operations differentiated according to the type of financial instrument.
The service model provides for a check to verify the consistency between the preferences indicated by customers during profiling and the financial products included in its range of offers or traded on the secondary market. If the transaction is not consistent, the reasons for the inconsistency are explained to the customers so that they can assess whether to adjust their sustainability preferences in relation to the specific transaction and conclude it.

Fideuram - Intesa Sanpaolo Private Banking, through a sustainability governance system based on important organisational controls, builds and pursues an integrated corporate strategy that focuses on business results but also on human, social, relational and environmental capital. In particular:

- the Sustainability Manager has a role of integrated and comprehensive oversight of the ESG initiatives, also in liaison with the Intesa Sanpaolo Group initiatives;
- the "Sustainability (ESG)" session, within the Fideuram's Steering Committee, identifies sustainability issues at least once a quarter and defines strategic initiatives, assessing their financial feasibility and impact;
- The ESG & Strategic Activism team, which reports to the Head of the Investment Center, performs several tasks, including: integrating ESG metrics into the financial analysis of products managed by the product factories; assessing the sustainability profiles of products distributed and managed by third parties; managing sustainability-focused products; and overseeing corporate governance and engagement activities with issuers.

The Chief Compliance Officer of Intesa Sanpaolo is ultimately responsible for implementing policies on the integration of sustainability risks and information on the main adverse impacts on sustainability factors in the provision of investment advice services and insurance distribution. Fideuram adopts the centralised model as set out in the Integrated Internal Control System Regulation.
Policy monitoring is embedded within Product Oversight Governance processes with specific metrics related to both product scope and consistency of investment proposals with sustainability preferences.

Targets and metrics on sustainability-conscious investment products - Asset Management

As part of the definition of the Intesa Sanpaolo Group's 2022-2025 Business Plan, Eurizon contributed to the Group's expressed commitment to achieving global climate objectives, by committing to foster the transition to a low-carbon economy. To this end, Eurizon has strengthened and expanded its product range with a particular focus on sustainability, through an increase in financial instruments classified under Articles 8 and 9 of the SFDR Regulation. Specifically, the Plan defined two targets: on the one hand, an absolute value of 156 billion euro in assets under management classified under Articles 8 and 9, which was already reached and exceeded in 2024, amounting to 156.6 billion euro; on the other hand, a relative target of 60% of total assets under management, which was also widely achieved and surpassed in 2024..

With reference to 2025, the positive trend compared with the previous year is confirmed in absolute terms, with an increase in assets under management under Articles 8 and 9 of 12.6 billion euro (+8%), rising from 156.6 billion euro in 2024 to 169.2 billion euro at the end of 2025.
With regard to the percentage target, the ratio between the assets of UCIs under Articles 8 and 9 and the total UCIs (75.4% as at 31 December 2025), while still well above the predefined target of 60%, shows a slight decrease compared with the 2024 figure (75.6%). This change is due to the total demerger of Fideuram Asset Management SGR, effective 1 July 2025, which resulted in the transfer of the Italian funds business to Eurizon Capital SGR for a total value of approximately 5.4 billion euro. The share of Article 8 and 9 funds in total inflows was lower than the composition of the assets already under management, contributing to the reduction in their overall share compared with 2024. Excluding this extraordinary transaction, the 2025 figure would be higher than in 2024, reaching 75.9%.

Target: AuM UCIs pursuant to Article 8 and 9 SFDR out of total AuM UCIs (Eurizon) - absolute[284]		
	Date	**Value**
Baseline	31.12.2021	110 EUR billion
Final number	31.12.2024	156.6 EUR billion
Final number	31.12.2025	169.2 EUR billion
Target	2025	156 EUR billion

Target: % AuM UCIs pursuant to Article 8 and 9 SFDR out of total AuM UCIs (Eurizon)[285]		
	Date	**Value**
Baseline	31.12.2021	46%
Final number	31.12.2024	76%
Final number	31.12.2025	75.4%
Target	2025	60%

[284] Entity-specific metric.
[285] Entity-specific metric.

Targets and metrics on sustainability-conscious investment products - Private Banking

In order to measure the percentage penetration of sustainability-focused assets under management, the Intesa Sanpaolo Group decided to monitor the percentage incidence of (AUM) products classified as Article 8 and 9 SFDR in the total AUM held by customers.

Target: % incidence of products classified under Articles 8 and 9 on total assets under management[286]		
	Date	**Value**
Baseline	31.12.2021	19%
Final number	31.12.2024	78%
Final number	31.12.2025	79.4%
Target	2025	70%

The programme launched in 2021 set increasingly challenging objectives over the Plan period, up to 70% in 2025. Thanks to the significant work carried out in product selection and the integration of sustainability criteria into the Group's investment processes, the target was already reached and exceeded in 2024 (78%), with the share of total assets under management rising to 79.4% by the end of 2025.

Actions on sustainability-conscious investment products - Asset Management

As part of its Sustainability Policy, the Asset Management Division has defined special methodologies for selecting and monitoring financial instruments aimed at integrating sustainability risks into the AUM investment process. These methodologies provide for the adoption of specific financial instrument selection processes, duly calibrated according to the characteristics of the individual products managed, briefly summarised below:

- Negative screening - it involves the application of restrictions on issuers most exposed to sustainability risks, with the aim of avoiding investment in financial instruments most exposed to the risk of loss of value due to the occurrence of an environmental, social or corporate governance event or condition. For corporate issuers, these restrictions are defined based on the issuer's sector of activity and/or the company's conduct in terms of negative impacts on the environment and society (so-called "PAI Binding screening"), as well as the presence of any additional environmental, social and/or governance issues, identified on the basis of specific risk indicators (so-called "ESG Binding screening"). For sovereign issuers, these restrictions are determined according to the country's carbon emissions intensity relative to GDP and the inclusion of the country on the black list of the Financial Action Task Force (FATF, also known as GAFI – Groupe d'action financière);
- The integration of the main Principal Adverse Impact (PAI) indicators into the negative screening methodology, introduced in October 2024 and progressively adopted by products in 2025, led to the introduction of new thresholds and exclusion criteria for products managed under Articles 6, 8 and 9 of the SFDR. These include, for example, limits on exposure to fossil fuels and exclusions relating to breaches of major international standards (such as the principles of the UN Global Compact or the OECD Guidelines);
- Positive screening - it involves, subject to compliance with good governance practices: (i) the integration of ESG factors into the analysis, selection and composition of the assets under management ("ESG Integration") or (ii) the pursuit of sustainable investment objectives;
- Stewardship or Active Ownership - Engagement - proactive interaction with issuing companies through the exercise of participation and voting rights and discussion, fostering effective communication with the relevant corporate bodies and/or senior management and their representatives;
- Through its stewardship activities, Eurizon Capital SGR contributes to climate change mitigation, in line with its Engagement Policy and the Net Zero ambition defined in 2022. Eurizon Capital SGR prioritises engagement activities with companies considered to be lagging behind in the decarbonisation process, also making use of publicly available information on the strategies of investee companies and their research and development initiatives, as well as studies and assessments carried out by third parties, such as the Transition Pathway Initiative, Climate Action 100+, Science Based Targets initiative and Net Zero Tracker.

Compliance with these macro strategies is monitored by the Risk Management function with the support of the Compliance & AML function.

At the end of 2025, the Asset Management Division has a broad and diversified range of sustainability-conscious funds with assets of approximately 169 billion euro in products that, in accordance with good governance practices, promote environmental and/or social characteristics in accordance with Article 8, or have sustainable investment objectives in accordance with Article 9 of the SFDR Regulation.

In particular, in 2025, most of the UCIs launched by Eurizon Capital SGR S.p.A. and Eurizon Capital SA integrated ESG factors into the investment analysis, selection and monitoring process; the main strategies adopted concerned (i) products with different time horizons that provide for the protection of invested capital, (ii) flexible "step-in" strategies, with different levels of target equity exposure, to gradually invest in equity markets, and (iii) "buy&watch" funds to manage bond portfolios with decreasing duration. Within the Luxembourg-domiciled funds promoted by Eurizon Capital SA, the offering has been enhanced with the launch of a new range of passive funds (Your Index SICAV), which also feature an ETF share class. Almost all equity funds and corporate bond funds are classified under Article 8 of the Sustainable Finance Disclosure Regulation (SFDR), as are government bond funds, with the exception of single-country funds. It should be noted that the subsidiaries Epsilon SGR S.p.A. and Eurizon Capital S.A. were merged by incorporation into Eurizon Capital SGR S.p.A., which now operates in Luxembourg through the new branch Eurizon Capital SGR S.p.A. – Luxembourg Branch, with effect from 1 March 2025 and 1 December 2025, respectively.

In line with its Net Zero ambition, from 2022 to 2025 Eurizon progressively increased investments in climate solutions, particularly in green and sustainability bonds, reaching the target of 4% of total assets under management (AuM). Eurizon Capital SGR complements its product range with three funds specialised in investing in green bonds. In particular, Eurizon Fund

[286] Entity-specific metric.

- Absolute Green Bonds, established in 2018, Eurizon Fund - Green Euro Credit, established in February 2021 and Eurizon Fund – Aggregate Green Bonds Short Term, established in November 2025.
These funds qualify under Article 9 of the Regulation (EU) 2019/2088 and are considered impact investments, as they use investment selection methodologies aimed at generating measurable environmental impact alongside a financial return.

Also with reference to institutional mandates, the investment process takes into account the integration of ESG criteria in its investment choices in accordance with the provisions of the SFDR Regulation and in line with the requirements set by each individual customer. In particular, all mandates comply with the negative screening criteria. A specific ESG report is regularly produced on a large number of mandates (61 mandates with a value of 16.5 billion euro managed), indicating the positioning of the portfolio with respect to the reference benchmark. Upon request, a report detailing the engagement activities carried out by the SGR with issuers included in the managed portfolios is also shared on a periodic basis. The AM Division manages a total of 39 mandates relating to 23 non-captive customers, corresponding to approximately 11.7 billion euro, for which specific investment restrictions are implemented and/or support is provided to customers in engagement and corporate governance activities. At the level of insurance mandates and captive open pension funds, the AM Division manages a total of 84 mandates for approximately 49.9 billion euro in assets under management, on which specific ESG integrations under Article 8 SFDR are implemented.

For further information on the aforesaid Eurizon Capital SGR products, see the “Sustainability” section of Eurizon Capital SGR S.p.A.’s official website, where you can also access the Green Bonds Impact Report document.

Actions on sustainability-conscious investment products - Private Banking

Regulatory developments envisaged by regulators and the civil society’s continued attention to the transition to a more sustainable economy have led the Group to further intensify its commitment, initiatives and improved approach to sustainability, confirming the focus and strategic importance of the ESG Programme launched in June 2021. The project is ambitious and transversally involves all company functions, aiming to integrate sustainability into all aspects of business management and operations.
In line with the objective stated in the 2022-2025 Business Plan relating to the development of ESG advisory services, in 2023 Fideuram supplemented its service model based on customised advice to manage the sustainability preferences of its customers, which since2021 have been collected by using the MiFID profiling questionnaire. Since the end of 2024, a new questionnaire has been adopted where sustainability preferences are further detailed, as required by the policies.

In order to ensure the dissemination of ESG products among customers, the Private Banking Division has set progressively more challenging goals for the period 2022-2025, both with respect to the number of asset management products on the market classified as Articles 8 and 9 SFDR in relation to the total number of products being placed, and with respect to the number of new asset management products classified as Articles 8 and 9 on the total number of new products being placed. Also in 2025, the new offer was strongly directed to solutions that reflected the criteria adopted by the Division in terms of ESG with an incidence of over 87% of the products pursuant to Articles 8 and 9 on the total number of new products.

Within the scope of the firm’s products and services, during the year the Step-In programme continued for various Article 8 global equity product lines included in the FOGLI and OMNIA portfolio management scheme ranges.
As part of the reorganisation of the Group’s Wealth Management Division, 14 Article 8 portfolio management schemes of Eurizon Capital SGR were transferred to the Investment Center of the PB Division.
With regard to the Fideuram Vita Futura insurance wrapper, with a view to expanding the range of Article 8 products, a new internal insurance fund – FV Equity World Step-In Smart Dynamic 7 – was launched.
Finally, Fideuram Asset Management Ireland dac expanded its range of Art. 8-classified funds with the launch of two new Willerfunds – Private Suite sub-funds: JPM Global Aggregate Bond and PIMCO European Income Bond; in addition, a new ETF under Art. 8 SFDR, tracking the MSCI EMU equity index, was added to the D-X ETF platform.
The numerous mergers between sub-funds carried out during the year, together with the review of certain strategies, led to an increase in assets allocated to funds, mainly those in the Ailis series, classified under Articles 8 and 9 of the SFDR.
As an addition to the Group’s product offering according to the Guided Open Architecture approach to meet even the most sophisticated needs, customers can also find third-party ESG products on offer in the catalogue in collaboration with leading international investment houses.
The ESG investment approach is a distinctive and quality factor in the asset management industry. Similarly, an understanding of the ESG investment logic is crucial in financial advisory service provision so that its value points can be shared with customers. During the year, the Group, also with a view to supporting the expansion of the ESG product offering, launched a number of educational and training activities.

In the area of training/information, the role of “ESG Ambassador” was created: consultants called upon to promote, in their respective territories, the culture of sustainability with a twofold purpose: disseminate ESG matters and sustainable behaviour, and listening to the needs of customers and other private bankers.
Following the conclusion of the pilot phase in 2024, the following activities were identified in 2025 to manage the initiative on a steady-state basis: formal recognition of the role by the network structure and the development of an editorial plan of informational and educational content to be presented to the ambassadors.

Sustainable insurance

Policies on sustainability-conscious insurance products

In line with the strategic objectives of the Intesa Sanpaolo Group and the increasing importance of integrating ESG factors within the financial and insurance sectors, the Intesa Sanpaolo Assicurazioni Group (hereinafter also the “Insurance Group”) has continued over the years its path of developing environmental and social issues. In this context, the Group has defined tools to oversee governance and manage ESG-related risks through the assignment of roles and responsibilities, the adoption

of policies, and the implementation of concrete actions and initiatives aimed at further strengthening internal governance while at the same time generating a tangible and meaningful impact for its customers.
The Insurance Group has long adopted a "Sustainability Policy", which sets out the principles and standards used to ensure the responsible management of its business. The Policy aims to support the Group's strategic decisions by integrating ESG principles within the organisation, to promote the implementation of concrete actions that create sustainable value over time, to communicate its sustainability vision to all stakeholders, and to identify, manage, monitor and report the risks arising from exposure to relevant ESG factors, while also promoting a culture of sustainability.

In addition, the Sustainability Policy is submitted to the Intesa Sanpaolo Assicurazioni Board of Directors for approval and is adopted by the Boards of Directors of all the Insurance Group Companies. For more details, please refer to the document "Sustainability Policy of the Intesa Sanpaolo Assicurazioni Group", which can be viewed on the Insurance Group's official website.
With specific reference to consumers, the Policy sets out a number of commitments, including expanding the range of products with ESG characteristics, investment options and services across all business lines, both in the Life and Non-Life segments, in order to meet customers' needs, which are increasingly oriented towards sustainability issues. It also includes a commitment to fair claims settlement for customers, in line with high standards of management and timeliness, as well as the promotion of insurance culture and raising awareness among both customers and non-customers about the value of insurance protection.
These commitments form part of the broader sustainability journey of the Intesa Sanpaolo Assicurazioni Group, which is also shared with its stakeholders through institutional channels, taking into account the United Nations Sustainable Development Goals (SDGs) and the Principles for Sustainable Insurance (PSI), signed in 2019, as well as initiatives such as the United Nations Global Compact, UNEP Finance Initiative and the Equator Principles. Again as evidence of this commitment, at the end of 2021 the Intesa Sanpaolo Assicurazioni Group joined the Net Zero Asset Owner Alliance (NZAOA) through the Last Italian Parent Company (USCI) Intesa Sanpaolo Assicurazioni, and in April 2024 joined the Forum for Insurance Transition to Net Zero (FIT).

In the area of investments, the Insurance Group has adopted a "Policy for the integration of ESG sustainability factors in the investment process", which defines the principles and sustainability standards guiding the responsible management of investments. This Policy includes both engagement activities with issuing companies, aimed at verifying the adoption of environmental objectives and policies, with a focus on long-term transition plans for emissions reduction, and exclusion strategies for issuers based on Principal Adverse Impact (PAI) indicators, applied to those issuers considered "critical" and to those that do not comply with good governance practices (the latter applies exclusively to products under Articles 8 and 9 of the SFDR).
Exclusions are also applied to sovereign issuers that are more exposed to sustainability risks, identified through the analysis of specific environmental and reputational indicators. In addition, the Policy is subject to continuous monitoring in order to integrate any new initiatives that allow for an ever greater integration of sustainability standards into the investment process; the principles contained therein are defined by the Insurance Group and more specifically by the Board of Directors and apply to all Intesa Sanpaolo Assicurazioni Group companies.

In the non-life sector, the Insurance Group has adopted an Underwriting Policy that applies to the Intesa Sanpaolo Protezione company with the aim of establishing the principles and macro-processes that guide the identification, assessment, management, monitoring and reporting activities related to underwriting risks. The goal of the policy is to set out the criteria for guiding underwriting activity having regard to technical ESG risks.
The Board of Directors is responsible for the overall implementation, maintenance and monitoring of the corporate governance system, in accordance with its directives and in compliance with the roles and tasks assigned to it.

Actions on sustainability-conscious insurance products

The Intesa Sanpaolo Assicurazioni Group is committed to supporting the transition to a net-zero-emission future, strictly complying with the Intergovernmental Panel on Climate Change (IPCC)'s scientific indications and the objectives of the Paris Agreement and the NZAOA Protocol. In this context, a target was set for a 50% reduction in EVIC (Enterprise Value Including Cash)-weighted carbon intensity by 2030 (compared to 2021[287] levels) with the aim of achieving climate neutrality by 2050 and limiting the global temperature increase to 1.5°C.

Within the Policy for the integration of ESG sustainability factors in the investment process, the Group has formalised its emissions reduction strategies through the following decarbonisation levers and initiatives, applied on a continuous basis:
- exclusion of issuers operating in sectors or activities with significant environmental or social impacts, identified through Principal Adverse Impact (PAI) indicators;
- exclusion of critical issuers, namely companies with high exposure to environmental, social and governance risks and with ESG sustainability ratings among the lowest within the corporate investment universe;
- exclusion of sovereign issuers most exposed to sustainability risks, identified through specific environmental and reputational indicators;
- for products classified under Articles 8 and 9 of the SFDR, exclusion of issuers that do not comply with good governance practices, assessed in terms of corporate management, employee relations, remuneration policies and tax compliance;
- active engagement strategies aimed at analysing companies operating in sectors with a high environmental impact. The Insurance Group promotes proactive engagement with issuers by exercising participatory and voting rights, including through delegated managers and by engaging with investees, encouraging effective communication with the Management of the companies (i.e. "active ownership – engagement"). At the same time, the Insurance Group is committed to engaging in dialogue with oil & gas companies and third-party operators to promote a sustainable transition, encouraging companies to set emissions reduction targets based on scientific research, publish detailed transition plans, align corporate strategy

[287] The baseline used to define the target was calculated on the scope of direct investments in listed equities or corporate bonds, relating to Class I separate management portfolios and proprietary assets, for a total of approximately 22 billion euro.

and investments with decarbonisation goals, combat fugitive methane emissions, avoid dependence on unconventional, carbon-intensive oil and gas, and forego new investments in drilling in sensitive areas such as the Arctic;

The Insurance Group's offering includes insurance policies covering both the Life and Non-Life segments and provides insurance, pension and financial products, primarily aimed at customers of the Intesa Sanpaolo Group.

In the Life segment, the Insurance Group operates through Intesa Sanpaolo Assicurazioni and Fideuram Vita. The products offered can be subscribed to mainly by individual customers and, for certain products, also by legal entities. Among the products offered are savings and investment solutions (multi-line products, unit-linked policies and Class I policies), supplementary pension products, and pure protection solutions (term life insurance).
The Insurance Group aims to offer products that promote environmental or social characteristics within the meaning of the SFDR Regulation (classified under Article 8), by integrating ESG criteria and targeted savings and investment solutions for specific customer segments, such as family members of people with disabilities, minors and legally incapacitated individuals requiring a legal guardian, and Non-profit Sector organisations.

Within the Non-Life segment, the Insurance Group operates through Intesa Sanpaolo Protezione, offering a wide range of products dedicated to the protection of individuals—including health and accident coverage, also benefiting more vulnerable groups—vehicles and homes, as well as products specifically designed to meet the needs of SMEs and the Corporate segment. Within this framework, the Group promotes healthcare solutions aimed at ensuring fair and timely access to medical care and preventive services, with particular attention to older people and caregivers, by integrating innovative care models and safeguarding the financial stability of families. This is achieved by offering products that cover medical expenses, specialist visits and preventive services, as well as group policies for health-related events and accidents.

The Group's offering also includes solutions proposed to promote sustainable and environmentally friendly mobility, such as specific breakdown services for electric vehicles or policies that reward reduced vehicle use, based on distance driven. The Non-Life offering also includes coverage against catastrophic risks and natural events, aimed at both Retail customers and businesses, with particular attention to climate-related damage. It also includes solutions dedicated to protecting renewable energy generation systems, designed mainly for the Retail segment.
These covers not only provide adequate protection but also help raise customer awareness, encouraging them to adopt behaviours that help mitigate the consequences of natural events through measures aimed at reducing risk and the related damage caused by extreme weather events. In particular, for customers who adopt these preventive measures (for example, the installation of protective devices or the adoption of structural solutions), the Company has introduced specific incentives, such as the elimination of the deductible or excess.

For further details regarding the commitments and performance of the Insurance Group, please refer to the Consolidated Sustainability Statement of the Intesa Sanpaolo Assicurazioni Group.

Governance information

ESRS G1 – Business Conduct

Policies, targets and actions related to corporate culture

Policies related to corporate culture

Corporate culture is the foundation of the Intesa Sanpaolo Group's identity and strategies. Guided by the principles of integrity, sustainability, inclusion and social responsibility, it represents a key element in the implementation of the Group's strategy and guides corporate decisions and everyday behaviours, creating value for customers, employees, shareholders and communities.

To strengthen the sense of belonging and promote a shared corporate culture, through the "Culture, Inclusion and Corporate Governance Internal Communication" structure—dedicated to the development of corporate values and culture—the Group aims to further enhance its identity heritage, encouraging the active participation of all its people and ensuring consistency across different geographical and generational contexts. Through the coordination and enhancement of the many cultural initiatives already in place, the Culture, Inclusion and Corporate Governance Internal Communication function helps to strengthen a cohesive, inspiring and future-oriented working environment, in line with the principles of responsibility and sustainable development that guide the Group.
Tools such as the Code of Ethics, the Principles on Diversity, Equity and Inclusion, and the Internal Code of Conduct ensure alignment with international standards and promote an ethical and inclusive environment. Investing in corporate culture enables the Group to meet global challenges, strengthening its leadership role in the banking sector also on sustainability topics. For further details on the impacts, risks and opportunities covered by the policies relating to corporate culture, please refer to the IRO table set out in the paragraph "Materiality analysis" in the ESRS 2 – General disclosures chapter.

The Code of Ethics (hereinafter also referred to as the Code) is a voluntary self-regulatory instrument adopted by all the companies of the Group and forms an integral part of the sustainability management model. The Code sets out the Group's mission, corporate values and principles governing relations with stakeholders. For some particularly important areas (e.g. human rights, employment protection, environmental protection and fight against corruption) it lays down rules and principles in line with the main international standards.

The Code and any updates thereto are approved, with the support of the Risk and Sustainability Committee (SRC), by the Board of Directors (BoD) of Intesa Sanpaolo S.p.A., in its capacity as Parent Company, and brought to the attention of the competent bodies of the subsidiaries for their implementation. Compliance with the principles and values of the Code of Ethics is monitored by the Chief Sustainability Officer Area and the Chief Audit Officer's structures, the latter on the basis of the annual risk-based audit programme. Finally, an independent third party may be tasked with analysing implementation of the principles of the "Code of Ethics", in line with the international ISO 26000 Guidelines. In this context, it is noted that the Chief Sustainability Officer area presents a report on the Code of Ethics and on the principles of social and environmental responsibility to the Management Control Committee (CCG) and the Supervisory Body pursuant to Legislative Decree 231, to the Risks and Sustainability Committee, and to the Board of Directors, with the contribution of the Chief Audit Officer area in monitoring compliance with the principles and values set out in the Code of Ethics. For further details, please refer to the paragraph "Sustainability governance" in the ESRS 2 – General disclosures chapter.

The "Code of Ethics" is also inspired by the main national and international guidelines on corporate social responsibility (in addition to those mentioned in the paragraph "The Group's commitment to human rights" in the ESRS S1 - Own workforce chapter) including:

- OECD Due Diligence Guidance for Responsible Business Conduct;
- OECD Guidelines for Multinational Enterprises on Responsible Business Conduct and the Ten Principles of the UN Global Compact (ten fundamental principles relating to human rights, labour standards, environmental protection and anti-corruption).
- Council of Europe Convention on Preventing and Combating Violence Against Women and Domestic Violence (also known as the Istanbul Convention);
- Charter of Fundamental Rights of the European Union.

In cases of alleged non-compliance with this Code, reported by any stakeholder, the Group reserves the right to take the appropriate measures, based (in cases other than fraudulent conduct or acts infringing specific laws, contracts or regulations) on a constructive approach, including via training programmes, to reinforce the Group people's awareness of and compliance with the values and principles laid down in this Code.

To promote the dissemination of its principles, the Code of Ethics is published on the Group's intranet and official website so as to be accessible to all stakeholders. In addition, the Code is provided to each Director, employee or external collaborator upon appointment, hiring or start of the collaboration. On receiving the Code, the persons concerned sign a document declaring that they have received and read it, and pledge to comply with its principles. In this regard, as an additional guarantee for all stakeholders, a Code of Ethics email address (codice.etico@intesasanpaolo.com) is available to anyone wishing to report any alleged non-compliance, with an obligation of confidentiality and non-retaliation.

The Chief Sustainability Officer area actively contributes to awareness-raising initiatives aimed at disseminating the culture and values of the Code of Ethics and more in general of the sustainability culture, both within the Group and to the various stakeholders. These values, principles and commitments are disseminated within the Group through training and communication activities aimed at translating ethical principles into consistent strategic choices and into concrete behaviours

in day-to-day operations. In particular, training courses are created with content suitable to the role of each person and developed according to a process that will complete their professional training and foster personal growth. In addition, training contents were revised during 2025, maintaining a general part and three levels of in-depth analysis of the requirements for compliance with all corporate rules. For more details, see the document Code of Ethics available on the Group's official website.

The Group has adopted Principles on Diversity, Equity & Inclusion ("DE&I Principles") to give concrete force to its commitment to promoting and spreading, both internally and externally, an inclusive policy that values all forms of diversity. Intesa Sanpaolo Group's DE&I Principles lay out the framework of its inclusive approach to all forms of diversity, based on respect for all individuals, the enhancement of talent, meritocracy and equal opportunity. It also sets out concrete commitments for the promotion of an inclusive environment and identifies the conduct expected of all Group people. For further details, please refer to the paragraph "Diversity, equity and inclusion policies" in the ESRS S1 – Own workforce chapter.

The Group has also adopted an Internal Code of Conduct (hereinafter also referred to as the "Internal Code"), which is supervised and monitored by the competent governance and control functions. The Internal Code is the document that, drawing inspiration from the values expressed in the Code of Ethics, indicates the conduct to be maintained or avoided in order to pursue with professionalism, diligence, honesty and fairness the interests of the company, customers, shareholders and society as a whole, as it defines the essential rules of conduct to be followed by all Group personnel. The Internal Code is also addressed to management and supervisory bodies, non-employee financial advisors, agents, external collaborators and interns. In this context, the Chief People & Culture Officer Area is responsible for updating the Internal Code of Conduct and obtaining its approval by the Risk and Sustainability Committee (SRC) and the Board of Directors (for further details, see the paragraph ESRS 2, "Sustainability governance" in the ESRS 2 General disclosures chapter).

In light of the above, the subsidiaries must adopt the Internal Code by resolution of their competent Corporate Bodies. At that time, they may make additions and amendments, to add stricter solutions or take into account the specific features of the subsidiaries. Any such changes must be submitted to the Parent Company for prior approval. As regards branches and offices of the Intesa Sanpaolo Group located in foreign countries, the Internal Code, without prejudice to its principles, may undergo adaptations to align it with local regulatory requirements. For more details, see the document "Group Internal Code of Conduct", available on the Group's official website.

Targets related to corporate culture

As illustrated in the section "Policies related to corporate culture", the controls implemented by the Group enable continuous monitoring and targeted oversight of this area. In particular, in order to ensure the effective implementation of the provisions set out in the Code of Ethics, the Principles on Diversity, Equity & Inclusion and the Internal Code of Conduct, specific and detailed training activities are provided for Group employees aimed at promoting the values recognised in the aforementioned documents, in addition to controls designed to address any breaches thereof.

Actions related to corporate culture

During the year, the Group continued a broad listening and analysis process aimed at gaining an in-depth understanding of awareness and perception of its organisational culture, as well as the values and behaviours that guide people's day-to-day actions, with the aim of promoting a coherent evolution of internal communication in line with the company's strategy and mission. The initiative involved the Leadership and the entire company population, in Italy and abroad, through an integrated approach combining qualitative and quantitative analysis structured across several complementary phases.

In the first quarter, a documentary analysis was conducted on more than two thousand institutional sources and news items published on the Group's intranet – including institutional documents, Business Plans, previous surveys and official communications – using a combined approach based on manual analysis methodologies and generative artificial intelligence tools. The activity provided a systemic view of the main value dimensions expressed and of their consistency across internal and external communication.
In the second quarter, the periodic Climate Survey – conducted every two years and addressed to all Group employees – was carried out. It enabled a deeper understanding of perceptions regarding the organisational context and the reference values, highlighting a high level of participation (the questionnaire, available in several languages, recorded an overall participation rate of 65.6%). The results were presented to the Board of Directors in September and subsequently shared with all Group employees through the company intranet. The job satisfaction level of the Group's employees stood at 82%.
In addition, focus groups were launched within the International Banks, moderated by experts in the local language, with the aim of exploring in greater depth the perception of the guiding values and the distinctive cultural elements of the Group's International Banks.
At the same time, a Cultural Survey was carried out, a quantitative and qualitative in-depth analysis of the perception of the Group's cultural status, aimed at identifying strengths and development opportunities in line with the planning and the strategic objectives defined. The survey involved the entire corporate population.
The set of initiatives dedicated to listening forms part of a medium- to long-term evolutionary path aimed at consolidating, disseminating and passing on the Group's culture.
In this context, the Code of Ethics also plays a role. Its drafting starts from a context analysis and external benchmarking and involves the Sustainability Managers, as well as the Governance and Business functions.

To ensure compliance with the values and principles set out in the Code of Ethics, the Group delivers compulsory training courses to its people on an ongoing basis. Courses are permanently available on the company's internal platforms (in Italian, English and the local languages of the foreign entities).
Similarly, with regard to the Group Internal Code of Conduct, the Group provides mandatory training courses on a continuous basis in digital format. These courses are always available on the corporate platforms dedicated to Group employees (in both Italian and English). Specific training courses have also been provided for employees of the banks within the International Bank Division (IBD).

In 2025, new modules were published that supplemented and updated the training programme on the Code of Ethics, with the aim of presenting the Code as a strategic tool to guide behaviour and decision-making in line with the company's values. Particular focus was placed on the stages in the development of the document – from its approval through to its dissemination – and on the risks associated with its violation, with specific reference to the active role that each employee must play in applying it in their day-to-day choices and behaviours, both within and outside the Intesa Sanpaolo Group.
A new collection of mandatory training modules on the Corporate Sustainability Reporting Directive (CSRD) has also been published, including an in-depth overview of the Group's main social, governance and environmental policies, starting from the concept of double materiality through to the Group's internal control system.

Training courses on the Code of Ethics, the Internal Code of Conduct, Corruption Risk, and Whistleblowing are systematically updated, reinforcing the message around the values that distinguish the Group and that inspire all processes, as well as initiatives relating to corporate culture. In addition, with the aim of further strengthening oversight of training, mechanisms are in place within the Group's incentive system that provide for an impact on the variable performance bonus (PVR) in the event that mandatory training is not completed, in accordance with the Group rules governing the completion of mandatory training. For further details, please refer to the paragraph "Training and skills development" in the ESRS S1 – Own workforce chapter.

Policies and actions relating to compliance with tax legislation

Policies relating to compliance with tax legislation

In compliance with the Code of Ethics, the Intesa Sanpaolo Group – as a whole – is committed to observing principles based on the values of honesty and integrity in the management of tax matters, to complying with the tax regulations applicable in the countries in which it operates, and to maintaining a cooperative and transparent relationship with the tax authorities, including through participation in cooperative compliance regimes (hereinafter also referred to as cooperative compliance).
The Group recognises the importance of contributing to the communities in the jurisdictions in which it operates by paying the appropriate amount of taxes. For this reason, particular attention is paid to developments in tax legislation, both domestic and international, with an ongoing commitment to complying with the principles aimed at combating tax base erosion and profit shifting.
From this perspective, the Group has adopted principles of conduct intended to guide the management of tax matters across the Group's companies.

Moreover, the adoption of the Principles of Conduct in Tax Matters ("Principles") constitutes one of the requirements for access to the cooperative compliance regime with the Italian Revenue Agency, introduced in Italy pursuant to Legislative Decree No. 128/2015, as subsequently amended. It also attests to the Group's explicit commitment to comply with the obligations set out in the Code of Conduct for taxpayers participating in the cooperative compliance regime, as provided for by the same Decree[288].
The Principles of Conduct in Fiscal Matters, updated during 2025, form an integral part of the internal control system adopted by the Group for the management and mitigation of tax risk (hereinafter also referred to as the Tax Control Framework or TCF, according to international terminology), designed and implemented in line with OECD standards.
The Principles are set out below:

- Corporate Responsibility: in accordance with the principle of Corporate Responsibility, the Group acts in line with the values of honesty and integrity in the management of tax matters, recognising that tax revenues represent one of the main sources contributing to the economic and social development of the countries in which it operates;
- Legality: the Group pursues conduct aimed at complying with the tax regulations applicable in the countries in which it operates and adopting interpretations that enable responsible management of tax risk, so as to be able to meet the interests of all stakeholders and safeguard its reputation;
- Tone at the top: the Board of Directors defines the Group's principles of conduct in fiscal matters and ensures their application, thereby assuming responsibility for shaping and disseminating a corporate culture marked by the values of honesty and integrity and the principle of legality;
- Relationship: in light of its role both as a taxpayer for its own taxes and as a withholding agent for customers' taxation, the Group considers it strategic to maintain an advanced, cooperative, constructive and transparent relationship with the tax authorities. In this context, the Group ensures, among other things, that the authorities have a full understanding of the facts underlying the application of tax rules, also complying, where required, with additional documentation obligations (for example, for transfer pricing purposes). From this perspective, the Group promotes the participation of companies that meet the requirements set out in national regulations in cooperative compliance regimes, with the aim of establishing enhanced forms of relationship with the tax authorities;
- Soft Controls: Intesa Sanpaolo promotes a culture and values of tax compliance, also by disseminating behavioural standards, organising training courses and, more generally, initiatives open to all employees, with the aim of raising awareness and providing training on the topic across the entire organisation.

These Principles are also adopted by Intesa Sanpaolo in its capacity as Parent Company and are approved by the Board of Directors. The interpretation of the provisions contained in the Principles is entrusted to the Parent Company which, through the tax function located, from an organisational standpoint, within the Chief Financial Officer area, is also responsible for updating them. Where necessary, and at least once a year, the document is reviewed, also in order to take into account any significant changes in the external and/or internal context. Similarly, the tax function regularly prepares a periodic report on an annual basis, which is submitted to the Board of Directors of Intesa Sanpaolo. The report outlines the results of the monitoring of the Tax Control Framework (TCF) and the assessment and management of any tax risks identified in relation to the relevant tax period.
The Principles of Conduct in Fiscal Matters are published on Intesa Sanpaolo's institutional website and must be adopted by all Group companies, subject to approval by their respective bodies responsible for strategic supervision. For further details on

[288] Article 5, paragraph 2-bis.

the impacts, risks and opportunities covered by the policies relating to compliance with tax legislation, please refer to the IRO table set out in the paragraph "Materiality analysis" in the ESRS 2 – General disclosures chapter.

The adoption of the Principles means that each Group company must:
- comply with and apply all tax regulations of the countries in which it operates, and cooperate transparently with the tax authorities;
- fulfil tax obligations within the time and in the manner defined by law or by the tax authority, also using technological solutions to control the data underlying the calculation of taxes due by law;
- avoid forms of tax planning that may be deemed aggressive by tax authorities. In particular, each Company must not locate assets, artificially and for the sole purpose of reducing the Group's tax burden, in countries included in the European Union's list of non-cooperative jurisdictions for tax purposes or in the OECD's lis[t289]. Any presence of Group entities in such countries must be justified exclusively by business reasons;
- interpret the rules in a manner consistent with their spirit and purpose, without exploiting their literal wording;
- report the acts, facts and transactions undertaken so as to enable taxation consistent with the real economic substance of the transactions;
- enjoy the tax benefits and incentives provided by law only if they are in line with the business objectives and economic substance of the underlying business transactions;
- ensure transparency in its operations and in the determination of its income and assets by avoiding the use of structures, including corporate structures, that may conceal the actual beneficiary of the income flows or the ultimate holder of the assets;
- comply with the provisions on the appropriate transfer pricing of intragroup transactions, in line with the arm's length principle, matching as correctly as possible the income generated with the location of value creation, and avoiding allocating revenues or costs in ways that may generate tax evasion/avoidance;
- avoid using artificial structures or entities that are not related to its business activities for the sole purpose of circumventing tax regulations, generating situations of double deduction, deduction without inclusion or double non-taxation, or of disguising the economic and commercial reality through artifices or deceptive practices with the aim of obtaining an undue profit and/or an unfair competitive advantage;
- cooperate with the competent authorities to provide truthful and comprehensive information necessary for tax compliance and control;
- not offer customers products and services that allow them to obtain undue tax advantages not otherwise obtainable, and put in place appropriate safeguards to avoid involvement in non-tax-compliant transactions carried out by customers;
- establish cooperative relationships with the tax authorities, inspired by transparency and mutual trust and aimed at preventing conflicts, thus reducing the possibility of disputes. To mitigate tax risk and obtain prior clarification on interpretative doubts, the Group promotes agreements with local tax authorities. On the other hand, the Group does not enter into tax rulings[290] that grant preferential tax regimes or undue tax benefits;

Intesa Sanpaolo and the Group Companies also actively participate in industry associations that monitor and promote tax system developments. Directly or through these associations, they take part in public consultations and regulator support activities, to ensure a rational and fair development of the tax system.

Business functions and Head Office Departments that carry out transactions with potential tax impacts must comply with the Principles of conduct in fiscal matters and the Guidelines in the performance of their activities. Where the clearing processes adopted by the Bank do not already provide for the involvement of the Tax function, it is the responsibility of the business function (Division or Head Office Department) proposing/structuring the transactions to involve the Head of the Tax Function in advance to allow for an appropriate assessment of the tax effects and risks arising from their implementation.

Actions relating to compliance with tax legislation

The Group is committed to ensuring substantive, and not merely formal, compliance with the applicable legislation. To this end, it adopts preventive and control measures (so-called safeguards) and implements a structured system to prevent its involvement in violations, ensuring full cooperation with the Supervisory Authorities, as well as compliance with the relevant internal and external regulations.
The adequacy of the controls is assessed through checks on the effective implementation of the macro-processes relating to tax compliance. The main macro-processes include: conducting an annual risk assessment, regulatory alignment, advisory and clearing activities, first- and second-level assurance, the promotion of a compliance culture, interaction with the Authorities, the management of non-compliance events, and information flows to the Corporate Bodies.

Corporate regulations play a central role, defining the model for managing tax non-compliance risks based on general principles, the roles and responsibilities of the Bodies and structures involved, as well as the compliance macro-processes applicable also to the Group's Banks/Companies and to its international branches.

First- and second-level controls are generally formalised and include the identification of the responsible structure, the scope and methods of carrying out the control, the frequency, the criteria for assigning the outcome, the reporting methods, and evidence of any mitigation actions.

The Group has strengthened the internal control system for tax risk, referred to as the Tax Control Framework ("TCF"), making it ideal for managing the strategic nature of tax risk and to meet the requirements for access to the cooperative compliance scheme introduced in Italy pursuant to Legislative Decree 128/2015. In this regard, Intesa Sanpaolo has participated in the

[289] In this regard, reference is made to the updates on the work of the Forum on Harmful Tax Practices (Action 5 of the BEPS Project) within the Inclusive Framework, and to the list of work of the OECD Global Forum on Tax Transparency.
[290] Tax rulings are understood as advance tax agreements concluded between the taxpayer and the tax authorities.

Cooperative Compliance regime since 2017, the year in which the application was submitted. Under this scheme, Intesa Sanpaolo and the Italian Revenue Agency can carry out joint assessments of situations likely to generate tax risks through constant preventive contacts aimed at resolving potential disputes in advance.
The Group controls tax risks through the adoption of the Tax Control Framework, which includes processes, procedures, governance rules, ongoing maintenance activities and testing, as well as the use of technology to support the consistency of the data used in the calculation of taxes due by law.

The TCF makes it possible to monitor and measure tax risk, taking into account both tax compliance (compliance risk, managed in the risk maps where residual risk is highlighted) and the uncertainty arising from its application (interpretation risk, managed through the specific procedure leading to the measurement of the impact and materiality of tax uncertainty).

Tax risks impacting the Group are monitored and managed locally, but under the guidance and control of the Parent Company.

For the main entities of the Group, which participate in the collaborative compliance scheme, a closing note for the compliance year is prepared annually and signed by the Italian Revenue Agency and the individual Group company, which contains the results of the controls on the Tax Control Framework and the discussions carried out on significant tax risks (this closing note is also disclosed to the Board of Directors in the periodic report on the TCF).
During 2025, the Tax Control Framework (TCF) was subject to a review aimed at strengthening its effectiveness and its alignment with the bank's ethical and behavioural principles. This review enabled the Tax Control Framework (TCF) to be fully aligned with the Ministerial Decree of 29 April 2024 (as subsequently amended on 3 October 2024), concerning adherence to the code of conduct between the Revenue Agency and taxpayers, thereby strengthening the management of tax risk in line with the values of integrity, transparency and responsibility.
The strengthening of the TCF and the presence of second-level controls represent key elements of the organisation's approach, as they contribute to the sustainability of the business model, the protection of the company's reputation and the creation of long-term value.
In order to ensure that the Principles are implemented, the Group supports significant investments in technology aimed at adopting advanced digital solutions to control and streamline the management of direct and indirect taxation.
The Group pursues the prevention of disputes and the reduction of tax risk, also ensuring that the tax functions involved have the organisational significance, material resources and human resources needed to achieve the objectives, and that the relevant personnel are constantly updated, through the use of up-to-date databases and specialised information sources as well as regular training initiatives. Furthermore, the Group provides for regular training activities on topics of particular importance and topicality for functions other than the tax functions (both business and operational).

Intesa Sanpaolo, in adopting processes and procedures for the management of tax risk, in compliance with the above-mentioned Principles, ensures that the processes for the management of tax risk provide appropriate protection to internal and external stakeholders, in terms of risk mitigation (also in view of possible reputational impacts) and in the more general terms of safeguarding stakeholder value, understood as the stakeholders' interest in maintaining the company's value.
Therefore, Intesa Sanpaolo ensures that shareholders are given the opportunity to submit questions and queries prior to the shareholders' meeting for the approval of the financial statements, including with regard to tax-related matters. The questions asked and the answers given are published on Intesa Sanpaolo's website. Furthermore, the Group's whistleblowing system also applies to conduct that may involve infringements of the Principles and tax legislation.

Policies, targets and actions related to the prevention of corruption

Policies related to the prevention of corruption

The Group carries out its activities with the aim of providing banking and financial services to its customers in compliance with the value of integrity, which in turn is embodied in the principles of professionalism, diligence, honesty, fairness and responsibility, and in accordance with the values and restrictions contained in the Code of Ethics, the Group Internal Code of Conduct and the Organisational, Management and Control Model adopted pursuant to Legislative Decree 231/2001.
In this context, the "Group Anti-Corruption Guidelines" (hereinafter referred to as the "Anti-Corruption Guidelines") identify principles and sensitive areas, establish the roles, responsibilities and macro-processes for managing the risk of corruption, and define the commitment to comply with regulatory provisions aimed at combating corruption in all its forms (the "zero tolerance" principle). In this sense, the policy impacts on active cooperation in the fight against corruption and the mitigation of its risks. In particular, these activities concern the areas at highest risk identified by the "Anti-Corruption Guidelines" and establish management and organisational safeguards in the respective areas of activity. With reference to international standards, the Group has identified the following areas exposed to the highest risk of corruption, or which may be exploited to engage in corruption

- gifts and entertainment expenses;
- charitable donations and sponsorships;
- relations with third parties (suppliers and other parties that provide their services to the Group);
- purchase, management and disposal of equity investments and other assets;
- staff hiring;
- purchase, management and disposal of real estate.

In addition, the Guidelines enable the Group to know better the parties with which it deals in the performance of its activities and to maintain its credibility and trust with all stakeholders.

The process of monitoring the principles of the "Anticorruption Guidelines" comprises the following activities:
- analysis of the evolution of the legal framework;
- risk assessment;
- definition of first- and second-level controls;
- verification of implementation of the Guidelines;
- quality assurance.

The Group monitors the transactions in which it acts as a mere executor of customer instructions, using the money laundering risk and terrorist financing risk control system, set up to comply with the requirements of Legislative Decree 231/2007.

The "Anti-Corruption Guidelines" must be complied with by corporate officers and all Group personnel, and apply to all Group companies and all the countries in which the Group operates, with the exception of entities that perform only ancillary services and research activities. The "Anti-Corruption Guidelines" are also addressed to external parties (suppliers, agents, consultants, professionals, business partners, self-employed or para-subordinate workers, etc.) who cooperate with the Group in the performance of its activities (i.e. "third parties"). For this reason, the above-mentioned Guidelines are made available to all stakeholders through the Group's official website and to counterparties who are beneficiaries of charitable or sponsorship initiatives, as well as to third parties that collaborate with the Group, when formalising the relevant relationships. For further details on the impacts, risks and opportunities covered by the policies relating to the prevention of corruption, please refer to the IRO table set out in the paragraph "Materiality analysis" in the ESRS 2 – General disclosures chapter.

With respect to the functions involved, the "Anti-Corruption Guidelines" are approved by the Corporate Bodies. The topic falls under the supervision of the Chief Compliance Officer Governance Area.

At the operational level, Group personnel must immediately report any violations of the provisions of the "Anti-Corruption Guidelines" to their supervisor, who in turn must forward the report received to the Company's Anti-Corruption Officer and to the Internal Audit function for assessment. This is without prejudice to the possibility of using the reporting systems established under the rules on internal whistleblowing. For more information, see the following section "Whistleblowing Policies".

In this context, it should be noted that the Group's approach to fighting corruption is inspired by the fundamental principles contained in the relevant conventions by international best practices (OECD, Convention on Combating Bribery of Foreign Public Officials in International Business Transactions; UN, Convention Against Corruption, Global Compact; Council of Europe, Criminal Law Convention on Corruption and Civil Law Convention on Corruption). In addition, the Group is subject to the three-year UNI ISO 37001:2016 certification procedure for Anti-Bribery Management Systems, which represents the relevant international standard, carried out by an external company; the current certification is valid until 2028.

Targets related to the prevention of corruption

As reported in the paragraphs in this section, the Intesa Sanpaolo Group has implemented a number of policies and actions to monitor corruption topics, including an anti-corruption policy and dedicated assessments in the ESG & Reputational Risk Clearing processes, carried out on the portfolio, for social and governance topics, although it has not yet established specific quantitative targets in this governance area.

In this context, the Group has put in place effective controls to continuously monitor and govern these topics, thereby pursuing the goal of preventing corruption and achieving the Group's objectives with honesty, fairness and responsibility, in full and effective compliance with the rules, professional ethics and the spirit of the agreements signed, even without a precise definition of quantitative and measurable targets within a limited time horizon.

Actions related to the prevention of corruption

The main actions implemented in the area of corruption prevention consist of the constant revision of the "Group Anti-Corruption Guidelines" (last update approved by the Board of Directors in 2025), the updating of the rules on the management of gifts and entertainment expenses, and the planning of compliance with the recommendations of the certification body for ISO 37001:2016. It should be noted that the Group obtained the renewal of the afore-mentioned certification during 2025.

The "Anti-Corruption Guidelines" are reviewed annually, usually by December of each year.
To prevent any instance of corruption, the Group adopts a risk assessment model that takes into account the operational and business features of each company, based on a qualitative-quantitative methodology derived from an assessment of the residual risk in relation to the risk inherent in the vulnerability of the organisational and control system:
- the assessment of inherent risk is based on seven risk factors consistent with the areas identified by the Guidelines, and on the geographic factor, assessed on the basis of a set of quantitative indicators (e.g. value of orders to third parties);
- the assessment of the vulnerability of the organisational and control systems is based on thirteen vulnerability categories developed on the basis of a qualitative questionnaire that refers to the macro-processes defined in the "Anticorruption Guidelines" and a set of quantitative indicators developed by correlating the risk mitigation elements (e.g. number of employees who completed training courses).

For the purposes of obtaining the ISO 37001:2016 certification, six-monthly audits on the areas of greatest risk of corruption are conducted by the Chief Compliance Officer Area. These audits include both level one checks (including enhanced due diligence) and level two checks.

The Group monitors the transactions in which it acts as an executor of customer instructions, using the money laundering risk and terrorist financing risk control system.

At the same time, the internal reporting systems, the person responsible for them, the processes for analysing the reports, the structures involved and the methods for reporting to the corporate bodies are governed by specific Group company rules on internal systems for reporting violations, as well as by the "Organisational, Management and Control Model" adopted by each Group company pursuant to Legislative Decree No. 231/2001, which ensure the confidentiality of the reporter, excluding the risk of retaliatory, unfair or discriminatory behaviour.

The reporting methods require the competent function to submit a quarterly report on its activities to the Management Control Committee, and an annual report to the Board of Directors. In the event of significant occurrences, information is also provided to the Managing Director and CEO, the Board of Directors, the Management Control Committee, and the Supervisory Body (OdV). In addition, within the framework of the periodic reporting to the Supervisory Body (OdV) of the Parent Company and of the relevant companies, evidence is provided of reports concerning matters considered sensitive for the purposes of Legislative Decree No. 231/01.

If the Chief Audit Officer, who is separate and autonomous from the audited structures, receives reports of any unlawful conduct or indicating a strong suspicion of a breach of anti-corruption principles or legislation, he/she shall promptly inform the Corporate Anti-Corruption Officer and take the action deemed most appropriate.

In this context, reporting to corporate bodies on anti-corruption matters is an integral part of the reports prepared by the Chief Compliance Officer Area on the basis of the information flows established under the "Regulation on Integrated Internal Control Systems and other communications". These include, on an annual basis, the identification, risk assessment and planning of management actions, as well as, on a six-monthly basis, the description of the activities carried out, the issues detected and the remedies identified.

Finally, the Group arranges for specific training initiatives on the subject, for the benefit of corporate officers and staff. The planned training initiatives are compulsory and traceable; specifically, they aim to strengthen understanding of the key concepts of the anti-corruption legal framework and application of the Guidelines in order to promote conduct consistent with the provisions they contain.

In support of this theme, training is also provided whenever the "Anti-Corruption Guidelines" undergo a significant revision. This is done by providing specific updating training, which is preferably delivered in digital mode, to ensure that the perimeters and functions/resources of the entire Group are reached, in the form of compulsory training and with an impact on the Broad-based Short-Term Plan (PVR) in the event of failure to attend the training.

The content of the training incorporates the rules in force at a general level ("Anticorruption Guidelines") and in response to the operations of the Business Units (rules and processes); in the event of updates during the year, the necessary additions are made available. In this context, the Group provides training to 100% of the structures involved in the sensitive areas identified as having a higher risk of corruption (identified above).

In addition, specific training to top management, called "Tone from the Top" is delivered annually. The objectives are similar to those defined for all anti-corruption training: in particular, the aim is to disseminate a corporate culture based on the values of honesty and integrity and the principle of lawfulness. The training is delivered via online sessions (virtual classroom with remote connection). This training consists of:

- induction for members of the parent company's Board of Directors;
- "board members programme", for members of the corporate bodies and top management of the Italian and international subsidiaries as well as top management of the foreign perimeter.

Metrics related to the prevention of corruption

As in the 2024 financial year, it is confirmed that the Intesa Sanpaolo Group has not been subject to convictions and/or sanctions for violations of anti-corruption and anti-bribery laws; consequently, no fines or penalties have been imposed on the Group.

Policies and actions relating to combating money laundering

Policies relating to combating money laundering[291]

Intesa Sanpaolo pays the utmost attention to compliance with national and international legislation aimed at preventing money laundering and combating terrorist financing. Financial crimes represent a serious threat to the lawful economy, with destabilising effects on the financial sector. Similarly, compliance with international financial sanctions and embargoes is extremely important for the Group and requires increasing efforts in light of the geopolitical landscape.

The Intesa Sanpaolo Group has adopted policies ("Guidelines") and regulations, as well as processes, tools and controls, aimed at mitigating the risk of being involved, even unknowingly, in money laundering activities, terrorist financing, and violations of sanctions and embargoes. This control model, which forms an integral part of the Integrated Internal Control System, is defined and implemented in compliance with legal and regulatory requirements and with the expectations of the Supervisory Authorities in the jurisdictions in which the Group operates, as well as with international standards such as the Recommendations of the Financial Action Task Force (FATF) and the Principles issued by the Wolfsberg Group. For further details on the impacts, risks and opportunities covered by the policies relating to combating money laundering, please refer to the IRO table set out in the paragraph "Materiality analysis" in the ESRS 2 – General disclosures chapter.

[291] The main information relating to anti-money laundering presented in this paragraph is also reflected in the section "Anti-Money Laundering Function" of the Notes to the Consolidated Financial Statements, Part E – Information on risks and relative hedging policies.

In particular, the Group Guidelines identify the applicable standards and define the risk management model in relation to money laundering, terrorist financing, and violations of sanctions and embargoes, including: (i) the general principles of the governance model; (ii) the roles and responsibilities of the corporate bodies and organisational structures involved; (iii) the macro-processes for combating money laundering and terrorist financing, and for managing sanctions and embargoes; and (iv) the model for the direction and coordination of the Group's Banks/Companies and International Branches. The Guidelines are reviewed annually. The various Group entities are required to adopt the Guidelines, adapting them to their respective corporate contexts and, in the case of foreign entities, to the specific requirements of local regulations. For further information, the document is made available to all internal stakeholders through the Group employees' intranet.

The principles set out in the Guidelines are translated into operational terms in the Rules for the Management of Compliance Macro-Processes and in the corporate rules relating to anti-money laundering, counter-terrorist financing, and the management of sanctions and embargoes. Specific processes and procedures have been defined in relation to customer due diligence, the reporting of potentially suspicious transactions, risk assessment and management, internal controls, the retention and archiving of data, information and documents, the adoption of automated systems for transaction monitoring, customer screening, and transaction filtering.

The role of Head of Anti-Money Laundering is assigned to the Head of the Anti-Financial Crime Department, who: (i) performs a supervisory role regarding the adequacy of the organisation of activities and the effective implementation of internal processes and procedures; (ii) through the Anti-Money Laundering Function, continuously verifies the effectiveness of corporate processes and procedures and proposes, in collaboration with the relevant corporate functions, the organisational and procedural changes necessary and/or appropriate to ensure adequate management of risk; (iii) also performs the role of Group Head of Anti-Money Laundering, responsible for the overall management of money laundering risk at Group level. The Head of Anti-Money Laundering also serves as Senior Staff Member responsible for the development, implementation and updating of policies, procedures and internal controls designed to ensure compliance with the applicable regulations on sanctions and embargoes, and acts as Group Senior Staff Member.

In addition, in line with the requirements set out in the Bank of Italy Measure of 1 August 2023 on organisation, procedures and internal controls, the Managing Director and CEO of Intesa Sanpaolo, in his capacity as the body responsible for management functions, has been designated as the Executive responsible for anti-money laundering. In this role, he ensures the implementation of strategic guidelines and governance policies relating to anti-money laundering and counter-terrorist financing, as well as sanctions and embargoes, ensuring that the Corporate Bodies have the information necessary to fully understand the significance of the risks to which the Bank is exposed. The Managing Director and CEO also acts as the Executive responsible for anti-money laundering at Group level. Within the Group banks and companies, the role of Executive responsible for anti-money laundering is generally assigned to the Chief Executive Officer (CEO), Deputy CEO, or equivalent, in line with the relevant corporate governance model and unless otherwise required by local regulations.

Actions relating to combating money laundering[292]

To manage the risks of money laundering, terrorist financing, and violations of sanctions and embargoes, the Intesa Sanpaolo Group has defined a structured and integrated approach. In particular, the Group has adopted a Risk Appetite Framework within which the Head of the Anti-Financial Crime Department, in agreement with the Chief Compliance Officer: (i) proposes the qualitative statements relating to the risks of money laundering, terrorist financing and violations of sanctions and embargoes; (ii) defines the limits relating to the quantitative Key Risk Indicators relevant for monitoring the risks within its remit; (iii) presents the risk profiles resulting from the AFC Risk Assessment and proposes any mitigation actions.

In monitoring the risks of money laundering, terrorist financing, and violations of sanctions and embargoes, the Intesa Sanpaolo Group has adopted the following guiding principles and reference values:

- inspiration from the values of honesty, fairness and responsibility, in substantive compliance with the Intesa Sanpaolo Group's Code of Ethics;
- active cooperation with Supervisory Authorities;
- adoption of control standards aligned with international standards and reasonably consistent across the Group, in compliance with the regulations applicable at local level;
- adoption of risk-based control measures proportionate to the characteristics and complexity of the activity performed and to the legal form, size and organisational structure of the various Group entities.

In addition, within the Group Risk Appetite Framework, the Group undertakes to:

- combat money laundering and terrorist financing by (i) carrying out customer due diligence and enhanced due diligence commensurate with the customer's risk profile, (ii) monitoring transactions to identify suspicious cases of money laundering or terrorist financing, (iii) fulfilling the obligations to report potentially suspicious transactions;
- safeguard the integrity of the financial and economic system, cooperate with the competent authorities in the application of sanctioning laws and regulations in the jurisdictions in which the Group operates. The ISP Group adopts a "zero tolerance" approach in relations with individuals or entities included in financial sanctions lists or with business activities involving – directly or indirectly – countries or territories subject to sanctions listed in the Group embargo management rules.

The dissemination, at all corporate levels, of a culture based on the principles of honesty, fairness and compliance with the spirit and letter of the rules is a fundamental prerequisite for risk control. The Anti-Financial Crime Department works with the Bank's other structures to establish effective communication channels and training tools, identifying training needs and preparing the content of training initiatives for all the Bank's employees, with a view to ensuring that staff, with particular attention to those involved in selling products and the heads of business units, have adequate knowledge of the relevant legislation, the

[292] The main information relating to anti-money laundering presented in this paragraph is also reflected in the section "Anti-Money Laundering Function" of the Notes to the Consolidated Financial Statements, Part E – Information on risks and related hedging policies.

obligations and related responsibilities, the consequences arising from failure to comply with these obligations and are able to use support tools and procedures with full awareness in carrying out the requirements laid down by legislation. On an annual basis, the training plan is approved by the Board of Directors and its implementation is monitored and reported on by the AML Function. In addition, specific initiatives aimed at disseminating a risk culture and raising the level of awareness of the risk approach include: (i) induction sessions for corporate bodies and workshops for top management on particularly sensitive or current topics (ii) specific training programmes for staff of the Anti-Financial Crime Department and operational and business units so that they are constantly updated on developments in the related risks, (iii) as well as specific induction sessions for the Anti-Money Laundering Officers of the Group Companies and International Branches.

During 2025, the Group, through the Anti-Financial Crime structure, focused its activities on a wide range of strategic priorities. Among these, the completion of the activities of the multi-year ENIF (Enabling Integrated Anti-Financial Crime) programme, aimed at reviewing and strengthening the Group's anti-money laundering, embargo and counter-terrorism controls, was of particular importance.

In parallel, progress continued on the Compliance Next Digital Transformation Programme, launched to implement initiatives based on innovative technologies to increase the effectiveness of the controls and the efficiency of the main compliance processes. In this context, initiatives aimed at strengthening the skills of Compliance resources continued, in order to support the Group's internationalisation process.

A further area of action concerned the mitigation of emerging risks associated with the development initiatives proposed by the Divisions, assessed jointly with the other corporate Control Functions as potentially high or medium-high in terms of compliance risk. These include the extension of the new Isytech technological system to the Group's various Divisions, the expansion of the offering of the digital bank Isybank, the strengthening of the international development of the Private Banking Division and the integration of the Romanian bank First Bank following its acquisition in May 2024.

The structure also carried out initiatives aimed at addressing the issues highlighted by the Group Risk Assessment, ensuring the alignment of internal legislation with the requirements arising from developments in external legislation and managing any new evidence arising from requests from the Supervisory Authorities or from assurance activities performed by the internal control functions.

Finally, constant support to the Divisions was ensured through advisory and clearing processes conducive to the development of new products, services and markets, as well as the most material transactions. To complete the controls,
guidance, coordination and control activities for the Group's entities, as well as assurance and training activities, were carried out.

Finally, in the context of international Private Banking, it should be noted that an action plan aimed at strengthening the framework of local controls in place to manage money laundering, terrorist financing and breaches of international financial sanctions and embargoes has been completed.

Metrics related to the prevention of corruption and combating money laundering[293]

The Group introduced new metrics (so-called entity-specific metrics) in the 2025 Report, for which comparative data are not presented. Specifically, the indicators presented below refer to training on the prevention of corruption and money laundering.

As detailed in the sections "Actions related to the prevention of corruption" and "Actions relating to combating money laundering", these metrics form part of the training initiatives aimed at all the Bank's people. In particular, the training pathways are aimed at developing technical, regulatory and operational skills to identify, prevent and manage risks linked to corruption and money laundering.

As at 31 December 2025, with reference to the Group's reporting boundary, 425,194 hours of specific training on the prevention of corruption and money laundering were delivered. The number of hours of specific training is defined as the sum of the duration of the teaching units delivered.
The programme involved 87.113 participants, counting only once those who attended both anti-corruption and anti-money laundering courses.
In particular, in 2025, the percentage of the Group's people who received specific training on the prevention of corruption and money laundering amounted to 96% of the corporate population. Mandatory training is planned on a cyclical basis and not necessarily annually; consequently, the coverage percentage reflects the status of the courses in the reporting period.

Table - Training on the Prevention of Corruption and Money Laundering

	2025
Hours of specific training [no.]	425.194
Participants [no.]	87.113
% of employees who received specific training on the prevention of corruption and money laundering	96%

[293] Entity-specific metric.

Whistleblowing policies, targets and actions

Whistleblowing policies

The Group has an internal whistleblowing system relating to both national and European regulations which harm the public interest or the integrity of Intesa Sanpaolo and the Group Companies (for example: administrative, accounting, civil or criminal offences; unlawful conduct pursuant to Legislative Decree no. 231/01; rules governing banking activities; conduct giving rise to conflicts of interest) or relating to internal company policies and/or procedures, which the whistleblower has discovered in the work context.

The reference internal rules on the matter, which are the responsibility of the Chief Audit Officer Area, are set out in a specific Group rules document on internal whistleblowing systems and are available for consultation by all persons working for the Intesa Sanpaolo Group on the company intranet. In addition, a summary description is also available on the Group's official website. For further details on the impacts, risks and opportunities covered by the policies relating to whistleblowing, please refer to the IRO table set out in the paragraph "Materiality analysis" in the ESRS 2 – General disclosures chapter.

In this context, the system is reserved for: employees and self-employed workers who work or have worked for the Group; persons who have a professional collaboration relationship with the Group; workers or collaborators who provide goods or services or perform work for third parties and work or have worked for the Group; freelancers and consultants who work or have worked for the Group; volunteers and trainees; shareholders (natural persons); and persons with administrative, control, supervisory or representative functions.

These individuals may report a violation via channels available 24 hours a day (e-mail or voice messaging) available on the Group's official website and on the Group's intranet portal, in Italian or English (international language of reference), or in the language of their country. Dedicated whistleblowing channels are active at the Group's foreign companies, to which reports can be submitted in the local language.

In addition, the Group puts in place appropriate controls to protect all those involved. In particular, it protects the confidentiality of the information received and the identity of the whistleblower, which is known only to those authorised to access the dedicated channels and can be disclosed only with the whistleblower's consent, and protects the whistleblower from retaliatory or discriminatory conduct, including attempts or threats of such conduct, as a result of the whistleblower's report.

With respect to the perimeter and the main figures involved, the head of the whistleblowing systems for the Parent Company and the Service Companies is the Chief Audit Officer. Said Officer is appointed by the Board of Directors of Intesa Sanpaolo S.p.A. and is assisted by a Delegated Manager who supports him/her in process supervision and reporting and by a specific team. The corporate bodies are provided with specific periodic reporting.

Targets related to whistleblowing

The Group has adopted rules, procedures and conduct regarding internal whistleblowing systems and provides mandatory training on whistleblowing. Reports are managed by involving the competent functions for the necessary checks and assessments, as well as for any risk mitigation actions or disciplinary measures, providing feedback to whistleblowers within the time limits set out by legislation. The entire process is carried out in accordance with confidentiality principles to protect whistleblowers, safeguarding them against potential retaliatory actions. Despite the lack of a precise definition of quantitative targets within a specific time horizon, the set of policies and actions adopted by the Group is effective and appropriate to protect whistleblowers and manage their reports efficiently.

Actions related to whistleblowing

In 2025, the activities to prepare and deliver mandatory training courses (already completed in 2024 for the Italy perimeter) were completed, involving the remaining companies in the foreign perimeter. The course syllabi covered the characteristics of the whistleblowing report, channels and safeguards of the individuals concerned, as well as the steps to manage the whistleblowing process.
The mandatory whistleblowing training courses already published in 2024 remain available for employees to consult.

In the fourth quarter of 2025, an information campaign on the issue was also launched, delivered through the company intranet, with the aim of maintaining an adequate level of attention among all staff on the whistleblowing process.

Ongoing updates also continued for the people managing the reports, in line with the provisions of Legislative Decree 24/2023 and for the structures most involved in the process.

Mandatory whistleblowing training courses are cyclical and not necessarily annual; therefore, the data on participation should be read in continuity with the entire time horizon presented. Overall, in addition to the employees who had used the training initiatives in 2024 (around 73 thousand), in 2025 the mandatory training courses launched during the year were completed by around a further 18 thousand employees of the foreign entities.

Metrics related to Whistleblowing reports[294]

The Group introduced new metrics (so-called entity-specific metrics) in the 2025 Report, for which comparative data are not presented. The indicators set out below refer to the number of reports received through the internal whistleblowing channels made available by the Group, their relevance and the initiation of specific checks.

[294] Entity-specific metric.

As at 31 December 2025, with reference to the Group's reporting boundary, a total of 65 reports were received through the internal reporting systems. Of these, 10 (15.4%) were found to be not relevant, while 55 (84.6%) led to the initiation of specific checks, already completed for 38 cases. In the first half of 2025, checks were also completed relating to 12 reports that were still ongoing in the previous year.

Table - Whistleblowing [no.]

	2025
Reports received	65
Reports deemed not relevant	10
Reports resulting in the initiation of specific investigations	55

Policies, targets and actions related to political engagement and lobbying activities

Policies on political engagement and lobbying activities

The Intesa Sanpaolo Group's internal policies provide that political parties and movements may not be recipients of donations and sponsorships, as set out in the Group's "Anticorruption Guidelines" in the section "Policies related to the prevention of corruption". Specific Group rules, in compliance with the Anti-Corruption Guidelines, clarify that the only form of credit facility in favour of political parties, affiliated associations and individual candidates — reserved to the competence of the Board of Directors — consists of the annual advance of the "2x1000 contribution"[295], against the assignment, to be notified in accordance with the law, of the amounts due to the parties under this form of contribution. In this regard, it should be noted that in 2025 no cases of this kind were submitted to the Board of Directors of the Intesa Sanpaolo Group, therefore the Group did not grant any credit facilities in this area.

In addition, the Intesa Sanpaolo Group adopts a structured system of internal regulations to govern the management of relations with institutions in the legislative, regulatory and operational fields. These rules support the coordination and consistency of the Group's activities, ensuring compliance with legal provisions, the protection of corporate interests and the promotion of transparent and effective practices in relations with institutions, regulatory authorities, market partners and relevant stakeholders. This approach helps to strengthen the Group's strategic positioning in a constantly evolving regulatory environment.

Specifically, the Group has put in place rules governing its interactions with the Supervisory, Resolution and Regulatory Authorities, to ensure regulatory compliance and protect the Group's strategic positioning. These rules cover the entire scope of the Group's activities, with a small number of exceptions relating to specific operational interactions, the criteria for which are detailed in specific internal Group regulations. For further details on the impacts, risks and opportunities covered by the policies relating to political engagement and lobbying activities, please refer to the IRO table set out in the paragraph "Materiality analysis" in the ESRS 2 – General disclosures chapter.

There are two main actors that are competent and responsible for interactions with the regulatory and supervisory authorities:

- firstly, the internal regulations identify "pivot structures", i.e. structures belonging to the Parent Company that are tasked with coordinating communications with each supervisory and regulatory authority and the consistency of such communications across the Group. A single structure is identified to avoid risks of inconsistency in communications with the authority and is optimal for effectively managing communications, ensuring a single point of contact and a comprehensive response. By way of example, the Institutional Affairs Head Office Department is responsible for managing official correspondence with Italian and international antitrust authorities, for all matters concerning competition and market protection legislation;
- the second actors are the "functional owners", i.e. Group structures engaged and identified by the pivot structure on the basis of the subject or scope of the individual contact or topic addressed, according to the competence identified from time to time. The functional owners, among other things, identify potential initiatives to mitigate negative impacts or to seize opportunities.

The regulatory framework adopted by the Group adheres to the standards and initiatives of the European Central Bank (ECB), the European Commission and the Financial Stability Board.

The needs of key stakeholders, including consumers, regulatory authorities and market partners, are all taken into consideration when establishing internal regulations.

Targets related to political engagement and lobbying activities

As explained in this section, the Intesa Sanpaolo Group has implemented a number of policies and actions to monitor lobbying issues (e.g. policies on relations with political parties, advocacy activities). However, the Group has not yet established specific quantitative targets in this governance area.

[295] Italian law (Decree Law no. 149/2013, converted with amendments into Law no. 13/2014) allows the taxpayer to allocate 2x1000 of IRPEF (personal income tax) in favour of a political party. The bank may therefore advance this amount, discounting the credit claimed against the State. This transaction does not constitute a direct loan from the bank to the political party.

Actions related to political engagement and lobbying activities

The Group plays a proactive role in regulatory processes, monitoring regulatory proposals (and, where appropriate, actively participating in related discussions through advocacy) for topics that may have a direct and indirect impact on the Group, particularly with regard to banking, financial and insurance legislation and the European ESG regulatory framework. In particular, advocacy work was carried out with regard to the initiatives reported in the metrics section on ESG issues (e.g., at the European level, some legislative initiatives related to the EU Green Deal strategy) and financial issues.

For all issues, including sustainable finance and direct environmental impacts, Intesa Sanpaolo cooperates with the relevant trade associations at all levels (national, European or international). For example, for sustainability aspects, there is ongoing collaboration with the Italian Banking Association (ABI) within specific working groups, to raise awareness in the financial and non-financial sectors on environmental sustainability topics and the forthcoming impact of regulatory developments, especially those on ESG disclosures.

At the European level, the Intesa Sanpaolo Group has interacted with lawmakers, the main trade associations and other stakeholders to promote and represent the various environmental sustainability initiatives of the Group. The Group, through its European Regulatory and Public Affairs structure, which is part of the Institutional Affairs Head Office Department, brings its best practices to the attention of policymakers, informs European officials about any technical aspects of the financial topics supporting sustainability, and describes the specific features of its context so that they can be taken into account during the legislative process.

Metrics related to political engagement and lobbying activities

Without prejudice to the legislation on public incompatibilities, it is noted that one Director has held a position in the public administration similar to that held in administrative, management and control bodies in the two years prior to taking on the current mandate.

As at 31 December 2025, Intesa Sanpaolo is registered in the European Union Transparency Register under the identification number 24037141789-48.

Below is a non-exhaustive list of some of the Group's main lobbying activities during 2025, divided into ESG legislation and legislation not strictly related to ESG issues.

ESG legislation

Directive (EU) 2025/794 of the European Parliament and of the Council of 14 April 2025, amending Directives (EU) 2022/2464 and (EU) 2024/1760 as regards the dates from which Member States are to apply certain obligations relating to corporate sustainability reporting and corporate sustainability due diligence; Proposal for a Directive of the European Parliament and of the Council amending Directives 2006/43/EC, 2013/34/EU, (EU) 2022/2464 and (EU) 2024/1760 as regards certain obligations relating to corporate sustainability reporting and corporate sustainability due diligence (the so-called Omnibus I Package)

The legislative proposal in question provides, on the one hand, for the postponement of certain application dates of the directives on sustainability reporting (Corporate Sustainability Reporting Directive – CSRD) and on corporate sustainability due diligence (Corporate Sustainability Due Diligence Directive – CSDDD), and, on the other hand, introduces substantive amendments to both regulatory frameworks. With reference to the Corporate Sustainability Reporting Directive (CSRD), Intesa Sanpaolo has worked together with industry associations to develop a sector position, highlighting the critical issues that have emerged and proposing possible operational solutions for a balanced and effective application of the regulation. Among the main critical issues raised is the absence of an exemption from the obligation for companies within the group listed on regulated markets to prepare individual sustainability reports, even where the parent company provides consolidated disclosure.

Revision of Commission Delegated Regulation (EU) 2023/2772 of 31 July 2023, supplementing Directive 2013/34/EU of the European Parliament and of the Council as regards sustainability reporting standards, pursuant to Directive (EU) 2022/2464 of the European Parliament and of the Council of 14 December 2022, which amends Regulation (EU) No 537/2014, Directive 2004/109/EC, Directive 2006/43/EC and Directive 2013/34/EU as regards corporate sustainability reporting.

The revision of Delegated Regulation (EU) 2023/2772 forms part of the so-called Omnibus I Package and follows the mandate given by the European Commission to the European Financial Reporting Advisory Group (EFRAG) to review the sustainability reporting standards, with the aim of reducing administrative burdens while ensuring an adequate quality of sustainability disclosure. To this end, EFRAG has presented a proposed revision introducing substantial changes to the structure of the sustainability reporting standards, reflecting the need for simplification and greater efficiency of the regulatory framework. Intesa Sanpaolo supports the new architecture of the standards and has actively contributed to the public consultations, presenting its position both individually and in collaboration with industry associations, also highlighting certain critical issues. These include the introduction of the "fair presentation" principle and the absence of the possibility for financial institutions to report targets on financed emissions in terms of intensity values where absolute values are not available.

Commission Delegated Regulation (EU) 2026/73 of 4 July 2025, amending Delegated Regulation (EU) 2021/2178 as regards the simplification of the content and presentation of the information to be disclosed concerning environmentally sustainable activities, and Delegated Regulations (EU) 2021/2139 and (EU) 2023/2486 as regards the simplification of certain technical screening criteria for determining whether economic activities do not significantly harm environmental objectives

This revision follows the so-called Omnibus I Package and represents an intervention through which the European Commission proposes amendments to the delegated acts relating to the reporting of Taxonomy alignment, as well as to the climate and environmental delegated acts. Intesa Sanpaolo welcomes this proposed revision, which aims to simplify and make more effective and useful the reporting relating to the EU Taxonomy, considering it essential to further strengthen the usefulness of

the Green Asset Ratio (GAR) as a KPI for sustainable finance. In this context, Intesa Sanpaolo has actively contributed to the consultation process launched by the European Commission, both independently and in coordination with the financial sector and industry associations, highlighting several critical aspects, including: (i) the structural asymmetry between the numerator and the denominator of the Green Asset Ratio (GAR); (ii) operational inefficiencies arising from inconsistencies between the EU Taxonomy GAR and the Pillar 3 GAR; (iii) the complexities involved in applying the "do no significant harm" (DNSH) principle; and (iv) the opportunity to eliminate the templates currently required for disclosures relating to the trading portfolio and fees and commissions.

Delegated Act establishing a general portfolio framework aimed at incentivising financial institutions to increase the expected volumes of energy performance–focused renovation, pursuant to Directive (EU) 2024/1275 of the European Parliament and of the Council of 24 April 2024 on the energy performance of buildings
Directive (EU) 2024/1275 grants the European Commission the mandate to establish, through a delegated act, a general portfolio framework for voluntary use by financial institutions, with the aim of supporting lenders in identifying and increasing lending volumes in line with the EU's decarbonisation ambition and energy objectives. Specifically, this initiative aims to effectively encourage banks to increase the volume of lending dedicated to renovations focused on improving the energy performance of buildings. Intesa Sanpaolo, in coordination with the financial sector and industry associations, actively participated in the consultation process launched by the European Commission in 2025, highlighting the importance of this initiative, inter alia, to strengthen public guarantee schemes in order to reduce credit risk and ensure financial institutions' access to Energy Performance Certificate (EPC) data, thereby enabling the enhancement of mortgage portfolios with classifications consistent with the EU Taxonomy. On this topic, Intesa Sanpaolo is also actively engaged within the European Coalition for Energy Efficiency Financing, as a member, contributing to the creation of a favourable market environment for investments in energy efficiency.

Proposal for the revision of Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector
Regulation (EU) 2019/2088 establishes sustainability-related disclosure obligations for financial market participants. The proposal for the revision of the Regulation, presented by the European Commission on 20 November 2025, introduces significant amendments. Intesa Sanpaolo had already confirmed the importance of revising the Regulation in order to effectively simplify the current disclosure obligations and address the numerous issues related to the interpretation and implementation of the existing requirements. Intesa Sanpaolo has therefore welcomed this revision initiative. In coordination with the financial sector and industry associations, Intesa Sanpaolo contributed to the drafting of the sector position and actively participated in the consultation process launched by the European Commission, highlighting, inter alia, the need to simplify the current disclosures at both product and entity level and to develop a product categorisation framework consistent with the existing Regulation and the related financial legislation, capable of safeguarding the investments already made by financial market participants and ensuring objective criteria and regulatory consistency.

Regulations not strictly related to ESG issues
Regulation (EU) 2024/1623 of the European Parliament and of the Council of 31 May 2024 amending Regulation (EU) No 575/2013 as regards requirements for credit risk, credit valuation adjustment risk, operational risk, market risk and the output floor (CRR III)
CRR III introduced changes regarding requirements for credit risk, credit valuation adjustment risk, operational risk, market risk and the output floor. Together with the banking sector and trade associations, Intesa Sanpaolo has, inter alia:
- encouraged the further one-year postponement of the application of the Fundamental Review of Trading Book (FRTB) rules, now scheduled in January 2027, in order to ensure a level playing field with banks operating in non-EU jurisdictions;
- actively supported the CRR amendment relating to the application of the Net Stable Funding Ratio (NSFR), with the aim of ensuring treatment consistent with that adopted in other jurisdictions and avoiding disincentive effects for banks in sovereign debt intermediation activities, which could have resulted in a reduction in market liquidity;
- conducted, through trade associations, the consultations on the European Banking Authority (EBA) guidelines on ESG risk management and on scenario analysis;
- taken part in association activities in drafting the response to the EBA consultation on the implementing technical standards for Pillar 3 for the ESG section, supporting, consistently with the legislative simplification proposal currently under way – the so-called Omnibus I Package – the suspension of templates 6 to 10 on the topic of the Green Asset Ratio (GAR), an initiative supported by the EBA through the publication of a no action letter and by the European Central Bank.

In addition, Intesa Sanpaolo closely monitors the publication of the implementing technical standards and regulatory technical standards by the EBA, with particular attention to the topics of prudent valuation, the credit conversion factor and crypto-assets.

Proposal for a Directive of the European Parliament and of the Council amending Directives (EU) 2009/65/EC, 2009/138/EC, 2011/61/EU, 2014/65/EU and (EU) 2016/97 as regards the Union retail investor protection rules, COM/2023/279 final; Proposal for a Regulation of the European Parliament and of the Council amending Regulation (EU) No 1286/2014 as regards the modernisation of the key information document, COM/2023/278 final (Retail Investment Strategy)
The "Retail Investment Strategy" (RIS) regulatory package includes i) a proposal for an omnibus Directive amending the Markets in Financial Instruments Directive (MiFID), the Insurance Distribution Directive (IDD), the Solvency II Directive, the Directive on undertakings for collective investment in transferable securities (UCITS) and the Alternative Investment Fund Managers Directive (AIFMD), and (ii) a proposal for a regulation amending the PRIIPs (packaged retail and insurance-based investment products) regulation. Intesa Sanpaolo considers the absence of a total ban on inducements to be positive. Intesa Sanpaolo has carried out advocacy activities, engaging in talks, where deemed necessary and/or appropriate, with relevant stakeholders.

Proposal for a Regulation of the European Parliament and of the Council amending Regulation (EU) No 806/2014 as regards early intervention measures, conditions for resolution and funding of resolution action, COM/2023/226 final; Proposal for a Directive of the European Parliament and of the Council amending Directive 2014/59/EU as regards early

intervention measures, conditions for resolution and financing of resolution action, COM/2023/227 final; Proposal for a Directive of the European Parliament and of the Council amending Directive 2014/49/EU as regards the scope of deposit protection, use of deposit guarantee schemes funds, cross-border cooperation, and transparency, COM/2023/228 final (Crisis management and deposit insurance framework - CMDI)
The proposed reform of the current regulatory framework for bank crisis management and deposit guarantee schemes consists of three texts: i) the Single Resolution Mechanism Regulation (SRMR) (Regulation (EU) No 806/2014), ii) the Bank Recovery and Resolution Directive (BRRD) (Directive 2014/59/EU), and iii) the Deposit Guarantee Schemes Directive (DGSD) (Directive 2014/49/EU). Intesa Sanpaolo welcomed the objectives of the reform to preserve financial stability and protect taxpayers' money, protect the real economy from the impact of bank failures, and improve protection for depositors. Advocacy work by Intesa Sanpaolo was carried out both with trade associations and through direct dialogue with representatives of institutions, focusing on the provisions of the legislation concerning the instrument of irrevocable payment commitments (so-called IPC).

Proposal for a Regulation of the European Parliament and of the Council amending Regulation (EU) No 575/2013 on prudential requirements for credit institutions as regards requirements for exposures to securitisation and Regulation (EU) No 2017/2402 establishing a general framework for securitisation
On 17 June 2025, the European Commission published a legislative proposal to relaunch the European securitisation market, focusing in particular on reducing undue operating costs for issuers and investors and adjusting the prudential framework for banks and insurers. Intesa Sanpaolo shares the European Commission's intent and monitors the ongoing legislative process by participating in the legislative debate, both directly and through trade associations.

Proposal for a Regulation of the European Parliament and of the Council on the establishment of the digital euro, COM/2023/369 final
On 28 June 2023, the European Commission published a regulatory proposal establishing the legal framework for a possible digital euro to supplement euro banknotes and coins. However, it will be up to the European central bank (ECB) to decide whether and when to issue it. The objective of this proposal, according to the European Commission, is to ensure that central bank money with the status of legal tender remains available to the general public, while at the same time offering a state-of-the-art and cost-efficient means of payment, ensuring a high level of privacy in digital payments, maintaining financial stability and promoting accessibility and financial inclusion. The proposal is currently being examined by the European Parliament and the EU Council. Intesa Sanpaolo is following the proposed regulation, which, if adopted, will have significant impacts on the payments world, and taking part in the legislative debate, both directly and through trade associations.

Regulation (EU) 2024/1689 of the European Parliament and of the Council of 13 June 2024 laying down harmonised rules on artificial intelligence and amending Regulations (EC) No 300/2008, (EU) No 167/2013, (EU) No 168/2013, (EU) 2018/858, (EU) 2018/1139 and (EU) 2019/2144 and Directives 2014/90/EU, (EU) 2016/797 and (EU) 2020/1828 (Artificial Intelligence Act)
Intesa Sanpaolo participated not only in the debate on implementing legislation for the Artificial Intelligence Act, responding to some public consultations, but also in consultation exercises on future strategic and legislative initiatives of the Commission, also focusing on the topic of Artificial Intelligence.

Regulation (EU) 2025/2075 of the European Parliament and of the Council of 8 October 2025, amending Regulation (EU) No 909/2014 as regards the introduction of a shorter settlement cycle in the Union
Regulation (EU) 2025/2075 amends Regulation (EU) 909/2014 (CSDR) by shortening the securities settlement cycle to one day ("T+1" rule) and sets 11 October 2027 as the date from which that rule will apply. Intesa Sanpaolo considers the provision of an exemption from the "T+1" rule for certain categories of securities financing transactions such as securities lending or borrowing, buy-sell back and sell-buy back transactions and sale and repurchase agreements (repos) to be positive, provided they are documented as single transactions consisting of two associated transactions. Intesa Sanpaolo has carried out advocacy activities, engaging in talks, where deemed necessary and/or appropriate, with relevant stakeholders.

During the 2025 financial year, the International Relations Function carried out advocacy activities in relation to a request concerning the Group's operations in Ghana, activating the diplomatic channel and involving in particular the relevant Italian institutions (Embassy of Italy in Ghana) in order to facilitate dialogue with the Ghanaian Ministry of Finance. The objective of these discussions was to identify restructuring solutions for the credit claim held by Intesa Sanpaolo that are acceptable to the Bank, while ensuring that the Ghanaian state complied with the debt sustainability parameters set out in the IMF programme and maintained comparability of treatment with other creditors.

Responsible supply chain management

Following the double materiality assessment conducted in 2025, Intesa Sanpaolo did not identify material impacts, risks or opportunities (IROs) relating to suppliers and procurement processes. For further information on the outcomes of the materiality assessment for the upstream value chain, please refer to the paragraph "Consolidating and sharing the list of sustainability matters material for the Group" in the ESRS 2 – General disclosures chapter.
However, in continuity with the disclosure provided in the 2024 Consolidated Sustainability Statement, the Group's purchasing practices and the supervision and monitoring systems that serve as controls for the Group's procurement processes are set out below.

In line with its corporate strategies and objectives, the Bank establishes relations with suppliers aimed at safeguarding the principles of ethical, social and environmental responsibility and favours business relationships based on trust and transparency.

The Group defined internal procurement guidelines, with the aim of defining the roles and responsibilities of the Corporate Bodies, the structures of the Bank and the Group companies in the procurement management process, as well as the principles and macro-processes to be observed during all management phases for the purchases of goods and services, in compliance with:

- the principles of the Code of Ethics, for which reference is made to the section "Policies related to corporate culture" in the ESRS G1 – Business Conduct chapter, and the provisions of the Group Internal Code of Conduct, which set out the rules of conduct to be observed both in the workplace and externally, i.e. pursuing the Group's interests with professionalism, diligence, honesty and fairness, and acting in any case with transparency and full respect for people's dignity and integrity;
- compliance with current guidelines on environmental, social and governance sustainability to ensure respect for the environment, human rights, working conditions and business ethics throughout the supply chain, also by evaluating specific local features;
- compliance with the regulations on health and safety in the workplace, including in relation to the risks to which service providers and suppliers in general who operate in premises used by a Group company are exposed.

These guidelines apply to all Group companies. Responsibility for their approval lies with the Board of Directors of Intesa Sanpaolo in its capacity as Parent Company, while the structure responsible for their implementation is the Chief Cost Management Officer Governance Area.

In addition, as a complement to what is set out in the paragraph "The Group's commitment to human rights" in the ESRS S1 – Own workforce chapter, the Group also extends the protection of human rights to its procurement processes. These processes are based on criteria of transparency and fairness in supplier selection and the sourcing process, with particular attention to preventing any form of discrimination, ensuring respect for health and safety at work and combating child and forced labour along the supply chain, in particular:

- non-discrimination on the basis of gender, gender identity and/or expression, emotional-sexual orientation, marital status and family situation, age, ethnicity, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental condition or any other characteristic of a person, including those related to the expression of their thoughts;
- right to health and safety, by avoiding entering into business relationships with suppliers for which there is verified information of serious breaches of the relevant legislation;
- combating forms of child and forced labour, by avoiding entering into business relationships with suppliers for which there is verified information of convictions and/or involvement in serious breaches of this principle.

Finally, the Group's Human Rights Principles recognise the Group's responsibility towards society and the environment and therefore guide the selection of suppliers and sub-suppliers towards counterparties that:

- base their activities and their policies on social and environmental sustainability and, in particular, on respect for human rights and workers' rights;
- adopt the necessary measures and tools to minimise the possible negative impacts caused by their activity.

The Bank provides its suppliers, including their workers, with various channels and internal procedures that can be used to collect, analyse and address reports of alleged incidents of non-compliance in relation to workers' rights, including those laid down by the Human Rights Principles adopted by the Group, as described in the above paragraphs.

The Group has also adopted internal procurement regulations, which define the operating rules to be applied to the procurement process, distinguishing between:

- centralised procurement model, which provides for management by the Parent Company's Group Procurement structure;
- autonomous procurement model, which provides for the independent performance of purchasing activities, for certain product categories, by the structures of the Parent Company or the Group companies.

Both models are based on the following general principles:

- transparency and tracking of the entire procurement process;
- formalisation of the agreement in compliance with the Group's standard regulatory conditions;
- attention in relations with third parties to the monitoring of operational risks, compliance with the Group's general guidelines on reputation and governance of environmental and social risks, as well as the overall sustainability of the choices adopted. From this perspective, the selection of the supplier must consider not only specialisation in the required product area and financial soundness, but also the reputational profile and sustainability performance.

To complement this regulatory framework, the Group has defined additional policies aimed at strengthening the Group's commitment along the supply chain. In 2025, a Supplier Code of Conduct was also drafted and submitted for formal approval by the Parent Company structures, aimed at promoting and sharing sustainable and responsible practices throughout the entire supply chain, ensuring consistency and commitment to the Group's ethical, environmental and social values and fostering

relationships with suppliers based on trust and transparency. Following approval of the Code by the Board of Directors of Intesa Sanpaolo, it will also be adopted by the other Group companies.

With reference to supplier payment practices, confirming the robustness and reliability of the supply chain, the Group has prepared a guidelines document for the purchasing cycle. These guidelines, in addition to formalising the expense governance model:

- define the roles and responsibilities of the structures involved in the purchasing cycle process;
- describe the macro-processes also with regard to payment activities towards suppliers without distinguishing between large undertakings and SMEs, with the aim of ensuring compliance with deadlines and preventing delays in payments;
- refer to the role of the Responsibility Centres which, among other activities, approve the payment of invoices within the contractually agreed timeframes, contributing to the management of any impacts arising from delays;
- highlight the presence of procedures and processes dedicated to payables payments.

Finally, with regard to the management of environmental aspects, the Group has also adopted the "Green Banking Procurement Rules", which form part of the initiatives dedicated to environmental protection. This policy promotes a responsible approach to the sourcing and use of goods and services, prioritising those that meet specific environmental criteria at all stages of the procurement process. The aim is to identify the best solutions in term of design, products or services with the lowest possible environmental impact throughout their life cycle, taking into account market availability. As of 2025, for competitive negotiations concerning the so-called "green" product categories – defined by the Rules and including, for example, paper, stationery products and toner – a pilot phase was launched with some of the Bank's Real Estate management structures. The pilot provides for the sharing with the delegates of these structures of some significant supplier responses to the ESG questionnaire, assigning them a percentage weight. This result represents a preferential criterion in the final technical assessment. Starting from 2026, the intention is to extend this approach also to the internal delegates of other areas.

Since 2023, the Qualification Portal 2.0 has been active, the application platform used by the Group Procurement structure that interfaces with the Supplier Gate Portal[296] for the management of the qualification process and for the monitoring of the counterparties of interest, with the aim of automating the collection of all the information required for their assessment, determining a qualification score (global score) and focusing the control activities on the most critical aspects. The assessment of suppliers registered on the Supplier Gate Portal allows to automate the collection of all the necessary information for the initial due diligence and subsequent monitoring of the counterparty, focusing the control activities on the most critical aspects. The assessment takes into account not only the economic-financial and technical-organisational characteristics of each of them, but also the aspects pertaining to business ethics, respect for human rights, workers' rights, and the environment, based on the statements made through the compilation of specific questionnaires and/or the possession of certain certifications (including ISO 50001 and 14001 and the adoption of an ISO 50001-compliant energy management system).
Since the end of 2024, for suppliers that are also customers of Intesa Sanpaolo S.p.A., the ESG score calculated by the Bank is also recorded in the qualification processes. The ESG assessment obtained (regardless of whether it arises from the ESG questionnaire or the Bank's ESG score[297]) contributes to determining the Global Score and is made available to relevant users through the Qualification Portal 2.0 and specific Group Procurement management dashboards which make it possible to obtain aggregated information, by number of suppliers and by spend value, among those that have obtained a high, medium or low assessment.
Suppliers with a medium or high ESG assessment benefit from a percentage increase in the Global Score which increases their likelihood of selection by the Group. In this way, the best ESG-performing suppliers are rewarded, ensuring them a better ranking than competitors with similar performance in other areas.

As of 2024, completion of the ESG questionnaire became mandatory and is now a prerequisite for participation in tenders issued by the Group via the Group Supplier Gate Portal. The initiative enabled to map the ESG profile of the suppliers used, in order to, particularly with respect to green and social categories, determine the average positioning, assess any critical issues and define an improvement plan to bring all the most strategic partners to a medium/high level of maturity. In line with what was planned, by the end of 2025 100% of the suppliers qualified in the register and engaged had an ESG assessment.

The main Group policies in force from time to time are communicated to suppliers when they request registration on the Portal and whenever they are updated. In order to be registered and operate with the Intesa Sanpaolo Group, suppliers must declare that they have read the following documents: Code of Ethics, Group Internal Code of Conduct, Anti-Corruption Guidelines, the Disclosure on the Diversity, Equity and Inclusion Principles, the Organisational, Management and Control Model, the General Supply Terms and Conditions, from 2026 also the new Supplier Code of Conduct. Specifically, within the General Supply Terms and Conditions, particular attention is paid to compliance with labour law, immigration laws, adequate economic, salary, regulatory, social security and insurance treatment and workplace safety regulations, both with respect to its own workers and the personnel of any subcontractors. At the start of the relationship and upon each subsequent appointment, the General Supply Terms and Conditions are resubmitted for signature purposes. Violation of the above principles may constitute grounds for termination of the contract. The disclosure of these principles to the entire supply chain falls under the responsibility of the suppliers in charge of the contract who, by signing the General Supply Terms and Conditions, take responsibility for ensuring that their employees and any subcontractors comply with the regulations and any reference principles.

Once the supplier qualification process has been completed, the monitoring phase begins which, via the Qualification Portal 2.0, uses a daily interface to analyse internal and external sources available to Intesa Sanpaolo to detect any changes in the qualification indicators and update the Global Score and the suppliers' qualification status. As a result of monitoring activities, negative events may be identified, as well as environmental and/or social issues, which may entail a risk and influence the supplier's final score, potentially making the supplier no longer eligible for engagement. Based on the severity of the cases, the

[296] Application used to interact with suppliers, hence registration processes, updating documents and tender management.

[297] Where both are present, the Bank's ESG score prevails over the ESG questionnaire assessment.

remedial actions to be adopted are defined, which may lead to the termination of the contract. Where the information collected is assessed as preventing the initiation or continuation of the collaboration, the supplier is assigned an invitation status with a high risk of exclusion.

In 2025, a total of 1,703 criticality reports were analysed (attributable to approximately 9.9% of the suppliers qualified in the Register), in order to prevent the selection of suppliers not in line with the company's principles. Of these, 321 were assessed as high risk and 81 as medium risk, resulting in a reduction in the overall score. Following the critical issues identified, 13 suppliers were blacklisted; this also includes counterparties who failed to provide the requested documents and/or who did not fill out the requested questionnaires. At the same time, 26,905 compliance checks were conducted on documents uploaded to the Supplier Gate Portal.

With regard to the services purchased by the Bank, the general supply conditions include specific contractual clauses requiring respect for workers' rights and provide for the possibility of carrying out on-request checks on salary, social security and tax compliance, including, for example, verification of the payment of wages and mandatory contributions by the supplier. For suppliers with registered offices in Italy and qualified in the Group Supplier Portal, the document certifying the regular payment of workers' social security and welfare contributions is constantly monitored.
The contractual clauses also provide, for the performance of contractual services that fall within the scope of application of Article 26 of Legislative Decree No. 81/2008, for the appointment of a supplier health and safety representative who ensures compliance with health and safety regulations and coordination with the Group, the obligation to inform the personnel involved of any risks existing in the environment in which they will operate and of the procedures and regulations in force therein.

Suppliers showing irregular documentary profiles are subject to a 30% reduction in their overall score for the entire duration of this condition and may consequently suffer limitations in the assignment of new contracts. The Group also launched a specific check on the regularity and correct updating of the ESG certifications uploaded to the Supplier Portal.
With the aim of mitigating the risk of such events occurring, in the second half of 2025 the first supplier engagement initiatives were launched, which increase suppliers' awareness of ESG issues. In this context, in order to raise awareness of the importance of these aspects, suppliers that had obtained a low ESG assessment were invited to take part in a dedicated online course which was attended by a total of 27 supplier staff. A webinar on social sustainability was also organised, aimed at 40 suppliers selected from those operating in categories considered at higher risk in terms of the protection of human rights, which was attended by a total of 57 supplier staff. From 2026, specific programmes are planned to strengthen suppliers' awareness of ESG topics.

Corporate governance and remuneration policies

Corporate Governance and remuneration policies

Corporate Governance

Intesa Sanpaolo has adopted the "one-tier" governance system, in line with regulatory provisions, including supervisory provisions, with the principles laid down in the Corporate Governance Code and, in general, with national and international best practices, ensuring the effective and transparent allocation of roles and responsibilities to its Corporate Bodies and the correct balance between the strategic supervision, management and control functions.
For a more detailed description of the corporate governance system, reference should be made to the "Report on Corporate Governance and Ownership Structures" – available in the "Governance" section of the Company's website – prepared in accordance with Article 123-bis of the Consolidated Law on Finance, which requires issuers to provide the market yearly with detailed information on their ownership structures, their compliance with a corporate governance code, their corporate bodies structure and operation as well as their corporate governance practices.

Shareholder base

According to the entries in the Shareholders' Register and the available information, shareholders with stakes represented by shares with voting rights exceeding 3% of capital as at 31 December 2025 – a threshold that, if exceeded, requires disclosure to both the company and Consob[316], pursuant to current Italian legislation (Article 120 of the Consolidated Law on Finance) – are shown in the table below[317].

Shareholder	Ordinary shares	% held
Fondazione Compagnia di San Paolo	1,153,947,304	6.627%
Fondazione Cariplo	961,333,900	5.521%

One-tier governance system

Intesa Sanpaolo adopts the one-tier governance system and therefore operates through a Board of Directors, within which guidance and strategic supervision powers converge; the control functions are carried out by the Management Control Committee, established within the Board of Directors, made up entirely of Independent Directors appointed by the Shareholders' Meeting; the Managing Director and CEO supervises the company's management to the extent of his assigned powers, in compliance with the general planning and strategic guidelines set forth by the Board.
The governance model adopted by the Bank is characterised by a clear allocation of roles and responsibilities among the Bodies:

– the Board of the Company is assigned the guidance and strategic supervision duties and the duty to resolve on all the relevant corporate deeds;
– the Committees appointed by the Board support it in carrying out its own functions in order to facilitate the taking of fully informed decisions;
– the Management Control Committee exercises the powers and functions conferred by the current regulations upon the body with the control function and upon the internal control and audit committee, pursuant to Legislative Decree 39/2010;
– the Managing Director and CEO performs the day-to-day management function, within the scope of the powers delegated by the Board;
– the Managers support the Managing Director and CEO in day-to-day management within Managerial Committees, performing the tasks and powers assigned to them by the Board and detailed in specific Regulations which govern the functioning thereof.

[316] Pursuant to Article 119-bis, paragraph 7 of the Issuers' Regulation, companies and licensed parties holding shares as assets under management may use the exemption from the disclosure obligations if the managed shares are more than 3% and less than 5%.
[317] Reference is also made to the information already provided in the 2024 Annual Report regarding BlackRock Inc., which in December 2020 had disclosed a 5.005% holding in the share capital of Intesa Sanpaolo (notified in Form 120 A dated 9 December 2020) as well as a 5.066% aggregate holding (notified in Form 120 B dated 4 December 2020) and has not provided any update of these holdings following the changes made subsequently in the number of shares into which the share capital of Intesa Sanpaolo is divided.

The Shareholders' Meeting

In the one-tier system adopted by the Bank, the ordinary Shareholders' Meeting resolves, amongst other things, on:
- the approval of the financial statements and distribution of net income;
- the appointment, removal and determination of remuneration with respect to the positions of Board Member, Chair and Deputy Chair of the Board of Directors and Chair and members of the Management Control Committee;
- the approval of the Board Members' and personnel's remuneration policies, as well as the plans based on financial instruments;
- the appointment of the independent auditors and the determination of the relative fees, upon the reasoned proposal of the Management Control Committee and, where the conditions are met, the revocation or amendment of said engagement, in consultation with the same Committee;
- the other matters assigned to it by the applicable regulations and the Articles of Association.

The Board of Directors, the Managing Director and the Board Committees

The Board of Directors is composed of a minimum of 15 up to a maximum of 19 members, including non-shareholders, appointed by the Shareholders' Meeting on the basis of slates of candidates submitted by shareholders in line with the legislation for listed companies. Board Members remain in office for three financial years until the date of the next Shareholders' Meeting called to approve the financial statements and the proposal for allocation of net income in accordance with Article 2364 of the Italian Civil Code and may be re-elected.
The Shareholders' Meeting, held on 29 April 2025, determined the number of members of the Board as 19 and appointed the Board of Directors for the 2025/2026/2027 financial years, electing as its Chair Gian Maria Gros-Pietro and as Deputy Chair Paola Tagliavini. The election took place on the basis of slates of candidates who meet the requirements envisaged by law and by the Articles of Association.

The Board of Directors is responsible for exercising the Company's guidance and strategic supervision duties and for resolving on all the most important corporate actions, with the power to undertake all transactions considered necessary, useful or appropriate in achieving the corporate purpose, of both an ordinary and extraordinary nature, and to adopt all decisions reserved to it by law, by the Articles of Association and by the regulations. In specific cases and in the manner provided for by law and the Articles of Association, the most significant management decisions are submitted to the Shareholders' Meeting for approval.
With regard to its corporate management duties, the Board, without prejudice to the powers reserved for it, delegates to the Managing Director the necessary and appropriate powers to ensure consistency in day-to-day management, in implementation of the guidelines decided by the same Board. The Board determines the content, limits and methods of exercise of the powers granted to the Managing Director and establishes how he must report back to the Board on the delegated activities, on a quarterly basis.
At the meeting held on 29 April 2025, the Board of Directors, in continuity with the previous mandate, unanimously confirmed the appointment of Carlo Messina as Managing Director and CEO, who was granted the necessary and appropriate powers to ensure consistency in day-to-day management, in implementation of the guidelines issued by the Board.
The Managing Director is the Chief Executive Officer and General Manager and supervises the company's management to the extent of his assigned powers, in compliance with the general planning and strategic guidelines set forth by the Board. He determines and issues operational directives and is responsible for personnel management.
The Board of Directors has established five internal Committees, the prerogatives and duties of which comply with the provisions of the Articles of Association and the Supervisory regulations in force:
- Nomination Committee: it performs inquiry and advisory duties to support the Board in the process of appointment or co-optation of the Board Members to ensure that the composition of the Body, in terms of size and professionalism, makes it possible to fulfil its duties efficiently, as part of the process for the appointment of members of the Bodies of the main subsidiaries; the Committee also performs the other duties assigned to it pursuant to the law or by the Board of Directors;
- Remuneration Committee: it inquires, proposes and advises on remuneration and incentive matters, thereby supporting the Board, and performs the other duties assigned to it pursuant to the law or by the Board of Directors;
- Risks and Sustainability Committee: it supports the Board in the performance of strategic supervision functions regarding risks, the internal control system and sustainability, and performs the other duties assigned to it pursuant to the law or by the Board of Directors.
- Committee for Transactions with Related Parties: it carries out the tasks assigned to it by the rules on transactions with related parties and associated entities; in particular, it issues its opinion on the transactions that fall within the scope of application of the rules and of the internal regulations;
- Governance Committee: it supports the Board of Directors with inquiry and advisory roles in examining specific issues related to the Bank's governance.

The Management Control Committee

The Management Control Committee, appointed by the Shareholders' Meeting as part of the Board of Directors, consists of 5 members of the Board of Directors elected by the Shareholders' Meeting of 29 April 2025, who appointed as its Chair Roberto Franchini. All Committee members meet the independence requirements laid down in the Articles of Association.
The Management Control Committee performs the duties assigned by current legislation to the control body of a parent company of a banking group heading a financial conglomerate and issuing listed shares and also operates as the Internal Control and Audit Committee pursuant to Article 19, paragraph 2, letter c) of Legislative Decree no. 39/2010.

Among other activities, the Committee supervises:
– compliance with the regulations, the principles of correct management and the actual implementation of the corporate governance rules set forth in the Corporate Governance Code,
– the adequacy of the Company's organisational, administrative and accounting structure,
– the statutory audit process and accounting and financial disclosures,
– the adequacy, efficiency and functionality of the internal control system,
– the adequacy, efficiency and functionality of the risk governance and management process and the business continuity plan.

The Committee is also exclusively entrusted with the task of examining and conducting a prior assessment of the accounting/financial documentation to the Board of Directors' resolutions.

The Committee may, after notifying the Chair of the Board of Directors, convene the Shareholders' Meeting whenever it deems it necessary for the performance of its duties or if, during its activities, it detects objectionable facts of significant severity and requiring urgent measures.

The operating structure

Divisions, Governance Areas and Head Office Departments reporting directly to the Managing Director and CEO

The Parent Company is divided into Divisions – comprising business line aggregations with similar characteristics in terms of products and services provided and in terms of regulatory framework – and into Head Office Structures grouped into Governance Areas in a direct reporting line to the Managing Director and CEO, which exercise guidance, coordination, control, support and service functions at Group level, as detailed below.
– Divisions
  - Banca dei Territori Division;
  - IMI Corporate & Investment Banking Division;
  - International Banks Division;
  - Wealth Management Divisions, which consists of the following Divisions: Private Banking Division, Asset Management Division and Insurance Division;
– Governance Areas
  - Chief Governance, Operating & Transformation Officer Governance Area, which includes the Chief Equity, Legal & M&A Officer Governance Area, the Chief Transformation & Organisation Officer Governance Area and the Chief People & Culture Officer Governance Area;
  - Chief Sustainability Officer Governance Area, which includes the Chief Social Impact Officer Governance Area;
  - Chief Security Officer Governance Area;
  - Chief Data, A.I. and Technology Officer Governance Area;
  - Chief Cost Management Officer Governance Area;
  - Chief Lending Officer Governance Area;
  - Chief Financial Officer Governance Area;
  - Chief Risk Officer Governance Area;
  - Chief Compliance Officer Governance Area;
  - Chief Institutional Affairs and External Communication Officer Governance Area.

In addition to the aforesaid structures, the Chief Audit Officer reports directly to the Board of Directors to ensure his/her necessary autonomy and independence.

The functions assigned to the Governance Areas are as follows:

Chief Governance, Operating & Transformation Officer (C-GOTO) Governance Area

The Chief Governance, Operating & Transformation Officer (C-GOTO) Governance Area is responsible for:
– overseeing the definition of transformation, innovation and organisational evolution strategies for the Group, to support the development of business and governance structures, in line with corporate objectives, promoting and accelerating the implementation of transformation initiatives;
– overseeing the definition of the Group's human resources and industrial relations policies, also promoting the development of the Group's values and culture, in compliance with the applicable regulations and in line with corporate strategies and objectives, to be proposed to the Managing Director and CEO and to the Corporate Bodies for matters within their competence;
– overseeing the definition of the evolutionary strategy for the Group's organisational model, in line with the corporate strategies and objectives, to be proposed to the Managing Director and CEO and to the Corporate Bodies for matters within their competence;
– supporting the Corporate Bodies in defining strategies on extraordinary finance transactions and governance of the investment portfolio for the Group, in line with corporate objectives;
– overseeing the definition of proposals for extraordinary finance transactions, to be submitted to the competent decision-making Bodies for assessment and approval as to matters within their competence;
– ensuring the monitoring of legal risk at Group level and providing legal advice by defining the relevant guidelines;
– ensuring, for the Group, the monitoring of compliance risk with reference to the areas of Protection of Health and Safety in the workplace, pursuant to Italian Legislative Decree No. 81/2008;
– assisting the Managing Director and CEO in his internal and external activities, supporting the examination of major strategic issues and the monitoring of relevant initiatives;
– assisting and advising the Parent Company's Corporate Bodies in the performance of their functions.

The Chief Governance, Operating & Transformation Officer Governance Area is reported to by Corporate Bodies and Corporate Affairs, in addition to the three Governance Areas whose functions are described below:

– ***Chief Equity, Legal & M&A Officer Governance Area***
  - ensuring the analysis of the evolutionary trends of the domestic and international markets of relevance to the Group, in close cooperation with the Business Divisions, to identify potential targets and/or partnerships and/or extraordinary corporate transactions in line with the Group's growth and/or rationalisation strategies as defined in the Business Plan;
  - defining proposals for extraordinary finance transactions for the Group, in line with corporate strategies and objectives, to be submitted to the competent decision-making Bodies for assessment and approval, by the Head of the Chief Governance, Operating & Transformation Officer Governance Area;
  - ensuring compliance with the guidelines and policies regarding the governance of the investment portfolio and the achievement of results in line with the Business Plan;
  - overseeing legal risk at Group level, managing litigation and the related operational risk and defining, in these areas, the guidelines through directives and instructions;
  - providing legal advice and assistance to the Group's structures, following regulatory and case law literature, including at European and international level, ensuring the correct regulatory framework of all new initiatives and supporting the compliance function in the identification and interpretation for the purposes of managing the non-compliance risk.

– ***Chief Transformation & Organisation Officer Governance Area***
  - defining, for the Group, the guidelines on transformation, innovation and organisational evolution (Transformation Plan), based on market trends and international best practices, as well as on an integrated and cross-cutting vision of customer satisfaction and the Group's reputation, in coordination with the Head of the Chief Governance, Operating & Transformation Officer Governance Area;
  - driving the Group's transformation and innovation process, in line with the above-mentioned guidelines, supporting the evolution of the business and governance structures, promoting and accelerating the implementation of the transformation initiatives and projects envisaged in the Business Plan;
  - managing the dissemination of innovation within the Group in a synergistic and structural manner, with a user-centred and sustainable approach, in line with business needs;
  - ensuring the definition and evolution of the Group's organisational model in line with corporate strategies and objectives, developing, in coordination with the Head of the Chief Governance, Operating & Transformation Officer Governance Area, the proposals to be submitted to the Managing Director and CEO and to the Corporate Bodies, for matters within their competence;
  - driving the implementation and transformation of the Group's organisational model with a view to effectiveness and efficiency, defining solutions consistent with regulatory and business requirements and pursuing the digital transformation of processes.

– ***Chief People & Culture Officer Governance Area***
  - defining people management and development policies for the Group, in compliance with the applicable regulations and in line with corporate strategies and objectives, in coordination with the Head of the Chief Governance, Operating & Transformation Officer Governance Area, to be proposed to the Managing Director and CEO and to the Corporate Bodies, for matters within their competence;
  - ensuring the implementation of the above policies through the promotion of innovative programmes and initiatives aimed at the growth and enhancement of human resources;
  - defining the employee remuneration and incentive policies, as provided for in the Guidelines on Remuneration, Incentives and Identification of Risk Takers, in coordination with the Head of the Chief Governance, Operating & Transformation Officer Governance Area, to be proposed to the Managing Director and CEO and to the Corporate Bodies, for matters within their competence;
  - ensuring the governance of labour costs, in line with corporate strategies and objectives;
  - defining training proposals and implements the relevant training programmes to enable the continuous updating of skills, fulfilment of regulatory obligations and professional retraining, in line with the company's needs and strategies, individual motivation and enhancement of all Group people;
  - promoting the dissemination of a Group culture that supports change and contributes to creating an inclusive and high-quality working environment for all people;
  - ensuring, for the Group, the definition of guidelines and policies on the Protection of Health and Safety in the workplace, as well as their implementation.

Chief Sustainability Officer (CSO) Governance Area

The Chief Sustainability Officer (CSO) Governance Area is responsible for:

– ensuring the definition and implementation of the Group's ESG strategy in line with the Group's leadership position in the market and taking into consideration the relationship with stakeholders (customers, shareholders, Group people and all those who work with it, suppliers, the community and the environment – the latter also with regard to responsibility towards present and future generations);
– overseeing the setting and monitoring of qualitative-quantitative ESG targets and the identification of specific actions and initiatives in line with the Group's strategic objectives, with the support of the Group's competent structures, and contributing to the Consolidated Sustainability Statement;
– supporting the business units in the transition of the customer segments towards a sustainable economy, helping them to keep up with the new ESG regulations and to identify new business opportunities, in line with the Group's sustainability objectives;
– playing an active role in the development and promotion of the local areas and communities where the Group operates, supporting non-profit organisations, promoting social inclusion initiatives, and educational activities;

- promoting the Group's historical, artistic, architectural, and archival assets to contribute to the civil and cultural growth of the local areas and communities it serves, ensuring their protection and appreciation;
- promoting innovation in businesses and local areas as a key factor for sustainable development and competitive advantage, through applied research and support for startups, open innovation, the transition to a circular economy, and the development of innovation ecosystems;
- promoting the dissemination of a social, sustainability and innovation culture, also engaging in dialogue with external public and private institutions in collaboration with the Group's competent structures.

The Chief Sustainability Officer Governance Area is reported to by the Chief Social Impact Officer Governance Area, which is responsible for:

- ***Chief Social Impact Officer Governance Area***
  - contributing to the definition of strategic guidelines, overseeing the direction, governance and implementation of initiatives and projects in the Social Impact field carried out by the Group, ensuring relations with the main stakeholders and social parties in coordination with the competent Group functions;
  - identifying intervention models that facilitate the scalability of social initiatives and the activation of system-wide actions potentially generating potential multiplier effects and structural change;
  - promoting the well-being and inclusion of people and their communities through the enhancement of both external and internal best practices, in collaboration with the relevant Group structures;
  - ensuring the direction, coordination and monitoring of initiatives aimed at mitigating the direct environmental impacts generated by the Group's activities;
  - ensuring, for the Group, the monitoring of compliance risk with reference to Environmental Protection, pursuant to Italian Legislative Decree No. 152/2006, performing in this regard the role of Specialist Function envisaged by the Group Compliance Guidelines.

Chief Security Officer (CSeO) Governance Area

The Chief Security Officer (CSeO) Governance Area is responsible for:

- ensuring, for the Group, the definition and implementation of the cybersecurity, business continuity and corporate and physical security strategy, policies and models, in line with corporate objectives and in compliance with the applicable regulations;
- ensuring cybersecurity, corporate and physical security and anti-fraud monitoring, analysing the related risks, defining strategies and mitigating measures;
- coordinating the development and implementation of the guidelines and policies defined within its area of responsibility, promoting their correct application by the Group companies;
- overseeing the development, updating and monitoring of the Group Business Continuity Plan;
- ensuring the information flows to the Corporate Bodies provided for by the Internal Control System and the governance documents within the respective areas of responsibility.

Chief Data, A.I. and Technology Officer (C-DAITO) Governance Area

The Chief Data, A.I. and Technology Officer (C-DAITO) Governance Area is responsible for:

- ensuring, for the Group, the definition and implementation of the strategy, policies and models regarding ICT architectural, methodological and technological standards, data management and data use, and the development and implementation of Artificial Intelligence solutions, in line with corporate objectives and the needs of the Business Owners and in compliance with applicable regulations;
- ensuring, in line with the corporate objectives and the priorities of the Business Owners, the definition and development of innovative IT initiatives, technologies and solutions, implementing the interventions in line with the transformation and innovation guidelines defined by the Chief Governance, Operating & Transformation Officer Governance Area;
- overseeing the evolution of the IT systems, data governance system and operations with a view to the continuous innovation of technological solutions, the operating model and controls, in order to guarantee the Group's constant projection towards a dimension that is evolved and consistent with digitalisation advances, in compliance with the expenditure and investment levels assigned;
- driving the implementation of digital strategies, in line with the above-mentioned guidelines on transformation and innovation, in order to become a data-driven company;
- ensuring the information flows to the Corporate Bodies provided for by the Internal Control System and the governance documents within the respective areas of responsibility;
- ensuring, in agreement and in cooperation with the other competent Governance Areas, the analysis of the impacts of applicable regulations on digitisation, digital innovation and operational resilience relevant to the Area, and defining the related actions.

Chief Cost Management Officer (CCMO) Governance Area

The Chief Cost Management Officer (CCMO) Governance Area is responsible for:

- consistently with corporate strategies and objectives, assisting the Corporate Bodies in defining guidelines and policies on cost management, property, logistics and procurement of the Group;
- coordinating the implementation of guidelines and policies on cost management, property, logistics and procurement by the relevant Group business units, also in the various corporate contexts;
- collaborating with the Chief Financial Officer Governance Area and the Chief Data, A.I. and Technology Officer Governance Area contributing to the definition of the investment initiatives promoted by the same C-DAITO Area, by the Divisions/Business Units and by the other Governance Areas, in line with the objectives of the Business Plan;
- ensuring, through the appropriate control methods, compliance with the guidelines and policies in the aforementioned areas, ensuring, in accordance with the Business Plan, cost management results as well as the service levels offered within the property, logistics and procurement scope.

Chief Lending Officer (CLO) Governance Area

The Chief Lending Officer (CLO) Governance Area is responsible for:

– taking lending decisions, directly or submitting them to responsible corporate Bodies, the relevant lending decisions regarding the assumption and management of the Group's credit risks, directly authorising them as far as it is concerned, including through compliance opinions;
– ensuring the proactive management of credit and guaranteeing the management and the monitoring of the Group's non-performing loans, within the respective area of responsibility;
– ensuring the correct classification and valuation for financial reporting purposes of positions under its responsibility that are classified as non-performing loans;
– managing the stocks and flows of bad loans managed within the Group;
– defining and managing disposals of NPE individual exposures or portfolios and other assets within scope, with the collaboration of other competent functions;
– performing monitoring and control on outsourced activities, including monitoring the performance KPIs of Outsourcers, directly making decisions, or submitting them to the competent Bodies, regarding proposals exceeding the powers delegated to the Outsourcers;
– contributing, within its area of responsibility, to the process of formulating Credit Strategy proposals for the Divisions, with the aim of incentivising new lending, through pricing adjustments, to the economic sectors and customer clusters with the greatest attractiveness in terms of risk-return profile, also taking into account the Group's ESG policies;
– contributing to establishing and evaluating the Group's Sector Framework, coordinating and supporting the Sector Working Group in defining sector performance indicators;
– analysing the evolution of the cost of credit within the Group, also taking into account the application of the aforesaid Credit Strategies;
– assigning and validating the ratings to the positions in scope, also providing support in defining rating allocation processes and tools;
– defining lending relevant regulations and requirements for credit tools development and contribute to the formulation of proposals for the assignment of credit granting and NPL management powers, notwithstanding the responsibility for the final decision belonging to the Chief Risk Officer Governance Area;
– promoting initiatives aimed at disseminating and developing a credit culture;
– ensuring, consistently with the guidelines of the Chief Risk Officer Governance Area, the first level systematic supervision of the relevant credit portfolio, identifying phenomena referring to specific credit aggregates characterised by high levels of anomalies for which to activate the appropriate risk mitigation measures.

Chief Financial Officer (CFO) Governance Area

The Chief Financial Officer (CFO) Governance Area is responsible for:

– assisting the Corporate Bodies in defining, in accordance with the Group corporate strategies and objectives, the guidelines on: administration and tax, planning and management control, treasury and finance, studies and research, balance sheet optimisation from a risk-return perspective, relations with investors and rating agencies;
– coordinating the implementation of said guidelines by the relevant Group business units, and in other corporate areas as appropriate;
– overseeing Asset and Liability Management (ALM) activities, the management of the Treasury securities portfolio, the Funding Plan, the integrated management of liquidity risks as well as financial and regulatory risks, ensuring the satisfaction of funding requirements at Group level;
– defining the Group's future qualitative and quantitative objectives through strategic planning, budgeting, capital management, internal assessment of capital adequacy and liquidity position (ICAAP/ILAAP), monitoring of the Recovery and Resolution Plan and carrying out the continuous analysis of the economic and financial results;
– fulfilling the Parent Company's and the Group's tax obligations and providing assistance and advice on tax matters by strengthening uniformity of conduct at Group level;
– overseeing studies and research on investments, economy and markets;
– overseeing the balance sheet optimisation activities at Group level, supporting the Divisions in the active management of credit risk, with the aim of improving the risk-return profile of balance sheet items in order to create value for shareholders, also through market transactions on performing loan portfolios, together with the other competent corporate functions;
– managing communication and relations with investors, financial analysts, rating agencies and SRI Investors.

The Chief Financial Officer Governance Area also includes the Manager responsible for preparing the Company's financial reports, who ensures the accurate and timely financial reporting of the Bank and of the entire Group, as well as compliance with the relative accounting and supervisory obligations, performing quality control of the processes governing administrative and financial reporting disclosures to the market, pursuant to the appropriate regulations.
The same activity and monitoring are ensured with regard to Consolidated Sustainability Statement.

Chief Risk Officer (CRO) Governance Area

The Chief Risk Officer (CRO) Governance Area is responsible for:

– governing the macro-process of definition, approval, control and implementation of the Group's Risk Appetite Framework (RAF) with the support of the other corporate functions involved;
– consistent with corporate strategies and objectives, assisting the Bodies in defining and implementing guidelines and policies on risk management;
– coordinating the implementation of guidelines and policies on risk management by the relevant Group business units, also in the various corporate contexts;
– designing, developing and maintaining internal risk measurement, management and assessment systems, both for regulatory and – to the extent applicable – management purposes, ensuring they are incorporated into the relevant business processes;
– measuring and controlling the Group's exposure to the various types of risk, also verifying the implementation of the risk management guidelines and policies;
– formulating a prior opinion on the consistency of the Most Significant Transactions with the RAF, ensuring the assessment of all the risk profiles connected with them;
– performing II level monitoring and controls for monitoring ICT and security risk, as well as risks other than credit risk;
– continuously and iteratively validating risk measurement and management systems – used both for the determination of capital requirements and for non-regulatory purposes – in order to assess their compliance with regulatory provisions, operational company and reference market demands and to manage the internal validation process at Group level; in this context, also guaranteeing the monitoring and validation of the Group Data Governance framework and ensuring the definition and oversight of a framework for model risk governance;
– performing II level monitoring and controls on credit quality, the composition and evolution of the various loan portfolios and the proper classification and measurement of single positions ("single name" controls).

Chief Compliance Officer (CCO) Governance Area

The Chief Compliance Officer (CCO) Governance Area is responsible for:

– ensuring at Group level governance of compliance risk, including conduct risk, both in its operational component and in its reputational component, also through the adoption of a graded compliance model for regulations that require specific forms of specialized governance;
– defining, in line with Company strategies and objectives, the guidelines and policies to be adopted to ensure compliance with the Group's regulations, integrating the model of the assessment and management of compliance risk in the Risk Appetite Framework;
– coordinating the implementation of compliance guidelines and policies by the Group's designated units, including companies inside the Group;
– cooperating with the other Corporate Control Functions in order to achieve an efficient integration of the risk management process;
– managing the interactions with Corporate Bodies and Supervisory Authorities as regards compliance issues.

Chief Institutional Affairs and External Communication Officer (CIAECO) Governance Area

The Chief Institutional Affairs and External Communication Officer (CIAECO) Governance Area is responsible for:

– promoting a coordinated, dynamic and result-oriented approach in the management of the Group's institutional relations and external communication in order to support its growth, development and reputation;
– overseeing the Group's institutional relations, promoting and managing relations with institutions, regulators and supervisors – including, by way of example, relations with the European Central Bank and antitrust authorities – schools, universities, think tanks, trade and interest associations at national, European and international level;
– supporting and disseminating knowledge of the Group and Top Management through the management of media relations, in line with the objectives set by the Business Plan;
– promoting and protecting the Group's image and identity – also by means of support initiatives and relations with Stakeholders and reference targets – by disseminating its ethical, social, cultural and educational values, in line with corporate strategies;
– overseeing and developing all the Group's institutional and product advertising and promotional activities, including continuous monitoring and listening and market research;
– overseeing High Impact Value Programmes for the Group and the community on key global transformation trends at national, European and international level;
– overseeing the identification and updating of geopolitical reference scenarios for the contexts in which the Group operates.

Chief Audit Officer (CAO)

The Chief Audit Officer (CAO), who reports directly to the Board of Directors (and therefore it reports to the Chairman), functionally reporting to the Management Control Committee, without prejudice to the appropriate links with the Managing Director and CEO, is responsible for:

– ensuring constant and independent monitoring action on the Bank's and the Group operations and processes to prevent/detect the occurrence of anomalous and risky behaviours or circumstances, by assessing the functionality of the Internal Control System and its suitability as to ensure the effectiveness and efficiency of business processes, the safeguarding of the value of assets and the protection against losses, the reliability and integrity of accounting and management data, the compliance of operations with the policies established by the Corporate Governance Bodies and with internal and external Regulations;
– providing advice to the Group's Corporate Functions, also through participating in projects, in order to create added value and improving the effectiveness of control, risk management, compliance and governance processes;
– ensuring supervision of the Internal Control Systems of the Group's Subsidiaries, also by performing governance and steering activities of the Local Internal Audit Functions;
– supporting corporate governance and ensuring to the Executives, Corporate Bodies and competent Authorities (e.g.

European Central Bank, Bank of Italy, Consob, etc.) a prompt and systematic reporting on the effectiveness of the Internal Control System, on the results of the activities carried out and on the progress of related remedial actions;
– supporting the Surveillance Body pursuant to the Legislative Decree 231/2001 in ensuring constant and independent surveillance of the regular performance of operations and processes, in order to prevent or detect occurrence of anomalous and risky actions or situations, and to monitor compliance with - and the adequacy of - the rules set out in the Model 231;
– ensuring the correct execution of the Internal management process for reporting violations (so called “Whistleblowing”).

Remuneration and incentive policies

Over the last few years, international bodies and regulators have paid increasing attention to the issue of remuneration across different sectors, including, in particular, that of listed companies, banks and banking groups, as well as insurance, assets under management and investment firms, with the aim of guiding operators towards the adoption of remuneration policies and remuneration systems that are consistent with the principles – intensified following the economic and financial crisis – governing the process for drawing up and approving the remuneration and incentive policies, the compensation structure and their transparency.

The regulatory framework has undergone a significant evolution - which is still ongoing - both at the European level and at the national level, in each of the above-mentioned sectors[318].

With reference to listed companies, Art. 123-ter of the Consolidated Law on Finance (Italian Legislative Decree No. 58 of 24 February 1998, “CLF”) provides for the obligation to prepare and make available to the public a report on remuneration policy and compensation paid, divided into two sections (the first illustrating the company’s policy in relation to remuneration and the procedures used for the adoption and implementation of this policy, the second providing information on the remuneration paid), to be drawn up including the information set out in the Issuers’ Regulation, and to be submitted to the Shareholders’ Meeting resolution. The Shareholders’ Meeting is called to cast a binding vote on the first section of the report and to resolve in favour or against the second section. The latter resolution is not binding. In the banking sector, remuneration and incentive policies and practices are the subject of specific regulations at European and national level. These regulations have changed significantly over time. More specifically, and among other things, in implementation of the so-called CRD III (Directive 2010/76/EU) and taking into account the guidelines and criteria defined internationally (including the principles and standards of the Financial Stability Board, the methodologies of the Basel Committee on Banking Supervision, and the Guidelines issued at the time by CEBS), the Bank of Italy, with a measure dated 30 March 2011, issued Supervisory Provisions containing a harmonised set of regulations of remuneration policies, systems and practices in banks and banking groups, relating to the processing and control process, the remuneration structure and the disclosure obligations to the public, thereby requiring, among other things, the approval of the remuneration and incentive policies by the Shareholders’ Meeting, in order to achieve remuneration systems in line with the long-term corporate strategies and objectives connected with company results, appropriately adjusted to take into account all risks, consistently with the capital and liquidity levels required to fulfil the activities undertaken and, in any case, such as to avoid distorted incentives that could lead to regulatory violations or excessive risk-taking for the bank and the system as a whole.
The Bank of Italy intervened once again in the matter with the two recommendations contained in the communications dated 2 March 2012 and 13 March 2013, highlighting in general the need for banks to establish a strategy that is aligned to the objective of preserving the stability of the business, also from a forward-looking perspective, as well as maintaining the conditions of capital adequacy and prudent management of liquidity risk. Subsequently, in 2014, the Supervisory Provisions on remuneration policies and practices - contained in Bank of Italy Circular no. 285/2013 - were revised to implement the regulations contained in the so-called CRD IV (Directive 2013/36/EU). In implementation of CRD IV, in 2014, the European Commission issued the Regulatory Technical Standards (RTS) relating to qualitative and quantitative criteria for the identification of categories of personnel whose professional activities have a material impact on the institution’s risk profile (so-called "Risk Takers"). In December 2015, the EBA, based on the provisions contained in CRD IV, published the update of the “Guidelines on sound remuneration policies”, drawn up by its predecessor CEBS, defining in detail the rules relating to the remuneration structure, remuneration policies and the related governance and implementation processes. The indications of these Guidelines were implemented by the Bank of Italy which, in 2018, updated the regulations on remuneration policies and practices referred to in Circular 285/2013. In 2019 CRD V (Directive 2019/878/EU)[319] and Regulation (EU) 2019/876 (CRR II)[320] were issued. Following the adoption of CRD V, the EBA revised (i) the regulatory technical standards that specify the criteria for identifying Risk Takers (RTS), merged into the Delegated Regulation (EU) 2021/923 published on 9 June 2021 and (ii) the Guidelines on Sound Remuneration Policies, publishing a new version in July 2021 and providing for its application starting from 31 December 2021; as a result, on the other hand, of the issuance of CRR II and subsequently of CRR III, the European Commission published Regulation (EU) 2024/3172 – Implementing Technical Standards – which regulates, among other things, the way in which remuneration disclosures are made. The Bank of Italy implemented CRD V and the essential contents of the new EBA Guidelines as well as the Implementing Technical Standards with the 37th update of Circular 285/2013, published on 24 November 2021.

[318] Please note that the regulatory framework described in this paragraph is up to date as at the date of approval of this document while the following paragraphs refer to the provisions of the 2025 Group Remuneration and Incentive Policies approved by the Intesa Sanpaolo Shareholders’ Meeting held on 29 April 2025.
[319] Amended by Directive 2024/1619/EU (CRD VI), the deadline for transposition of which is 10 January 2026.
[320] Amended by Regulation (EU) 2024/1623 (CRR III).

With regard to the insurance sector, ISVAP (now IVASS), with Regulation No. 39 of 9 June 2011, laid down the principles regarding the decision-making processes, structure and disclosure obligations for the remuneration policies of insurance companies. Regulation No. 39/2011 was subsequently replaced by IVASS Regulation No. 38 of 3 July 2018 on the corporate governance of insurance companies and groups, which implements the Solvency II Directive (Directive 2009/138/EC) and the Guidelines issued by the European Insurance and Occupational Pensions Authority (EIOPA) on the corporate governance system, and incorporates the provisions of ISVAP Regulation No. 39/2011 concerning remuneration policies. Furthermore, on 5 July 2018 IVASS sent a Letter to the market regarding the guidelines on the application of the principle of proportionality in the corporate governance system.
With regard to the asset management sector, the provisions on remuneration, initially contained in the Joint Bank of Italy – Consob Regulation (issued pursuant to Article 6, paragraph 2-bis, of the Consolidated Law on Finance) updated on 27 April 2017 to transpose Directive 2014/91/EU (UCITS V Directive) into Italian law and included, from December 2019, in the Bank of Italy Regulation implementing Articles 4-undecies and 6, paragraph 1, sub-paragraphs b) and c-bis) of the Consolidated Law on Finance, also apply to asset management companies belonging to banking groups, differently according to whether or not the asset management company is classed as significant.
The above Regulation was updated on 23 December 2022 in order, primarily and to the extent relevant here, to implement the new rules on remuneration applicable to investment companies introduced by Directive (EU) 2019/2034 and the Remuneration Policy Guidelines (EBA/GL/2021/13) adopted by the EBA in consultation with ESMA. The framework on remuneration applicable to investment companies is accompanied by, among others, Commission Delegated Regulation (EU) 2021/2154, which sets out regulatory technical standards specifying the criteria to identify categories of staff whose professional activities have a material impact on the risk profile of the investment firm ("Risk Takers"), effective as of 12 December 2021.
Lastly, with reference, inter alia, to the provision of investment services and activities by banks, investment companies and asset management companies, the provisions on remuneration set out in Directive 2014/65/EU (MiFID II) and Delegated Regulation (EU) 2017/565 (MiFID II Delegated Regulation) are also relevant, as well as the "Guidelines on certain aspects of the MiFID II remuneration requirements" issued by ESMA and last updated in April 2023. These provisions aim to strengthen client protection by, among other things, preventing conflicts of interest that may arise in remuneration and incentive matters.
That being said, Intesa Sanpaolo has always extensively focused its attention on remuneration matters, on relative regulation compliance and on maximum transparency to the market.

Procedures for adoption and implementation of the remuneration policies

The role of Corporate Bodies

The Shareholders' Meeting

The Articles of Association require the Shareholders' Meeting to approve the Board Members' and personnel's remuneration policies, as well as the plans based on financial instruments.
The Shareholders' Meeting shall approve the criteria for determining the severance payments to be granted in the event of early termination of the employment agreement or early termination of office, including the limits set for such payments as provided by the regulations currently in force and shall also determine, with the qualified majority threshold defined by the supervisory regulations in force, a ratio between the variable and fixed individual remuneration of the personnel above the ratio of 1:1, but in any case not exceeding the maximum established by the same regulations.
The Shareholders' Meeting determines the remuneration for the members of the Board of Directors and the Management Control Committee and the remuneration for the offices of Chair and Deputy Chair of the Board of Directors and Chair of the Management Control Committee.
In addition, the Shareholders' Meeting resolves with a non-binding vote on the annual disclosure of the remuneration paid pursuant to Article 123-ter of the Consolidated Law on Finance.

The Board of Directors

The Board of Directors may determine, in addition to the fixed remuneration determined by the Shareholders' Meeting and in compliance with the remuneration policies approved by the Shareholders' Meeting, the remuneration of the Board Members to whom the Board itself assigns further special duties in compliance with the Articles of Association, including the office of Managing Director and General Manager.
The Board of Directors is responsible for the drafting of the Group remuneration and incentive policy to be submitted to the Shareholders' Meeting and the definition of the remuneration and incentive systems for persons for whom the supervisory regulations require that this task be performed by the body with strategic supervision function, including the identification of parameters used to evaluate performance objectives and the definition of the variable remuneration deriving from the application of said systems.
The Board of Directors is tasked with determining the remuneration due to the Manager responsible for preparing the Company's financial reports pursuant to Article 154-bis of Legislative Decree 58 of 24 February 1998, as well as to all other Top Risk Takers of the Group and the higher-level Executives of the Corporate Control Functions, in accordance with the provisions of the current legislation.

The Remuneration Committee

The Remuneration Committee was set up by the Board of Directors in order to support with all activities concerning remuneration.
The Committee supports the Board of Directors in preparing proposals to submit to the Shareholders' Meeting.
The Committee is responsible for formulating remuneration proposals for the Managing Director and CEO and for the members of the Board of Directors to whom additional special offices are assigned pursuant to the Articles of Association, as well as with regard to the remuneration systems for the Group Top Risk Takers and the higher-level executives of the Corporate Control Functions, also taking into account the opinion of the Risks and Sustainability Committee and the Management Control Committee insofar as within its competence.
Lastly, the Committee formulates opinions on the achievement of the performance objectives linked to the incentive plans and on the verification of the other requirements laid down for payment of the remuneration.

The Risks and Sustainability Committee

Without prejudice to the responsibilities of the Remuneration Committee, the Risks and Sustainability Committee supports the Board of Directors by analysing the Group's Remuneration and Incentive Policies to verify their link with the Group's current and prospective risks, capital strength and liquidity levels, with specific regard to the performance targets (KPIs) assigned to the Group Top Risk Takers belonging to the Business and Governance functions.
In order to strengthen the independence of the Corporate Control Functions, the Risks and Sustainability Committee (also following consideration in joint session with the Management Control Committee) expresses its opinion on the Incentive Systems for the Chief Risk Officer and the Head of the Internal Validation & Controls structure.

The Management Control Committee

In order to strengthen the independence of the Corporate Control Functions, the Management Control Committee expresses its opinion on the Incentive System for the Top Risk Takers belonging to the Corporate Control Functions, the higher-level personnel of those Functions and the Manager responsible for preparing the Company's financial reports. This opinion is expressed in a joint session with the Risks and Sustainability Committee with regard to the Incentive Systems for the Chief Risk Officer and the Head of the Internal Validation & Controls Structure.

The Chief People & Culture Officer and the Corporate Control Functions

As mentioned above, the Shareholders' Meeting is responsible for approving remuneration policies for employees upon proposal of the Board of Directors and with the involvement of the Remuneration Committee.
The Chief People & Culture Officer is responsible for drawing up the aforementioned remuneration policies, that undergo the relative approval procedure, involving the following, to the extent of their responsibilities, as envisaged by the regulations:

- the Chief Risk Officer Governance Area, in order to ensure consistency of the remuneration policies and resulting incentive systems with the Group's Risk Appetite Framework (RAF);
- the Planning and Control Function, in order to ensure consistency of the remuneration policies and resultant incentive systems with:
  - the strategic short-and medium-long term objectives of the Companies and of the Group;
  - the level of capitalisation and liquidity of the Companies and of the Group;
- the Chief Compliance Officer Governance Area, in order to verify compliance of the remuneration policies and resulting incentive systems with rules, regulations, codes of ethics and standards of conduct applicable to the Group.

The Chief Audit Officer, in accordance with the guidelines of the Supervisory Authority, verifies compliance of the remuneration implementation procedures with the relevant policies, informing the Board of Directors and the Shareholders' Meeting on the results of the verifications conducted.

Remuneration of the members of the Board of Directors

Remuneration of Board Members

The Bank's Articles of Association envisage that the members of the Board of Directors be entitled, in addition to the reimbursement of expenses incurred due to their office, to a fixed remuneration for the services rendered, which is determined for the entire period of their office by the Shareholders' Meeting at the time of their appointment. At the same time, the Shareholders' Meeting also determines the supplementary remuneration of the offices of Chair and Deputy Chair of the Board of Directors.
An insurance policy for administrative liability is signed in favour of the members of the Board of Directors according to the terms resolved on by the Shareholders' Meeting.

Remuneration of the Managing Director and CEO

Pursuant to the Articles of Association, the Managing Director also acts as the General Manager of Intesa Sanpaolo.
The Managing Director and General Manager is entitled to receive a fixed and variable remuneration determined by the Board of Directors in line with the Group remuneration and incentive policies approved by the Shareholders' Meeting.
The Board of Directors, upon the proposal of the Remuneration Committee, determined the remuneration of the Managing Director. This amount is in addition to the amount due as a Board Member. The Managing Director, in his capacity as General Manager, is entitled to receive the gross annual remuneration, the short and long-term incentive system and the supplementary pension scheme, and to receive the additional fringe benefits envisaged for the position determined by the Board of Directors in accordance with the Remuneration and Incentive Policies for employees.

Remuneration of the members of the Management Control Committee

Under the Articles of Association, the Shareholders' Meeting is required, at the time of the appointment of the Management Control Committee and for the entire term of office thereof, to set a specific remuneration for the Board Members of that Committee, consisting exclusively of a fixed amount, which is equal for each Member and higher for the Chair.

Remuneration for participation in the other Board Committees

With regard to the work carried out by Board Members as members of the additional Board Committees, the Board of Directors, pursuant to the Articles of Association and upon proposal by the Remuneration Committee, establishes an additional fixed remuneration for said Board Members, in line with the Remuneration and Incentive Policies approved by the Shareholders' Meeting. In particular, the Board of Directors established, in addition to the remuneration envisaged for the position of Board Member, an attendance fee in relation to the actual participation of the members in the work of the Committees, and a further annual gross fixed remuneration for the Chairs of such Committees.

Remuneration policy for employees and staff not bound by an employment agreement

The remuneration policies of the Intesa Sanpaolo Group are based on the following principles:

- alignment of the conduct held by management and personnel to the interests of all Stakeholders, with a focus on creating value for Shareholders, as well as on the social impact generated on the Communities;
- correlation between remuneration and risks undertaken, through:
  - direction of management and personnel conduct towards the achievement of objectives within a framework of rules aimed at controlling corporate risks;
  - remuneration systems aligned with prudent financial and non-financial risk management policies (including legal and reputational risks), in line with what is defined in the Group's Risk Appetite Framework;
  - the definition of a sufficiently high fixed component to allow the variable portion to decline significantly, even down to zero, upon occurrence of pre-defined conditions;
- orientation towards medium-long term objectives, taking into account the Group Risk Tolerance through the definition of a set of Incentive Systems that allow performance to be oriented over a period of accrual longer than one year and to share the medium-long term results consequent to the implementation of the Business Plan;
- merit, to guarantee better matching with actual performance and the managerial quality identified, through:
  - remuneration flexibility linking the variable component to the results achieved and risks assumed;
  - focus on key staff members with high managerial skills, to whom competitive salary brackets compared with the reference market are reserved;
  - differentiation of the best performances to which variable bonus levels significantly in excess of the average are to be assigned;
- equity, in order to promote proper conduct and standardise treatment in terms of remuneration, through:
  - the correlation between the person's fixed remuneration and the level of responsibility managed, measured through the adoption of a Global Banding system[321], certified by a leading consultancy firm or the career title/professional figure;
  - differentiation of target salaries and the ratio of the variable component to the total remuneration according to the relevant professional category and/or geographical market, with Banding bracket or career title/professional figure being equal;
- gender neutrality, through:
  - ensuring equal pay for equal work, regardless of gender;
  - focus on the gender pay gap and its evolution over time;
- sustainability, to limit expense deriving from application of the policy to values compatible with the available economic and financial means, through:
  - mechanisms to adjust allocations to the overall incentive provisions according to corporate profitability and the Group's results;
  - selective reviews of fixed remuneration based on strict market benchmarks;
  - the determination of appropriate caps on both total incentives and the amount of individual bonuses;
- compliance with legislative and regulatory provisions, with the codes of conduct and other self-regulatory instruments with a focus on the Risk Takers (and, among these, on the so-called Top Risk Takers, including the Key Managers) and on the Corporate Control Functions;
- fairness in customer relations.

Remuneration of Group employees is broken down into the following:

- fixed and/or recurring component;
- variable and/or non-recurring component.

a.1 Fixed remuneration

The fixed component of remuneration for employees is determined on the basis of pre-established non-discretionary criteria such as contract conditions, role held, responsibilities assigned and the employee's specific experience and skills.
In full compliance with the provisions of law, the fixed component includes:

- the gross annual remuneration reflecting the staff member's professional experience and seniority of service;
- allowances tied to the role held, not connected to any type of performance indicator and assigned in a non-discretionary manner to:

[321] The Global Banding System adopted by the Intesa Sanpaolo Group is based on the grouping in homogeneous categories of managerial positions that are similar by levels of complexity/responsibility managed, measured using the international IPE (International Position Evaluation) methodology.

  - the Risk Takers[322] and Middle Management[323] belonging to the Corporate Control Functions and similar roles as well as the Risk Takers of the Group's Human Resources Function[324];
  - the heads of commercial roles within the scope of the physical and digital distribution network of the Banca dei Territori Division;
  - specific categories of staff having a commercial role in the Reyl Group, which operates mainly in the Private Banking segment;
  - expatriate personnel, in order to cover for any differences in cost, quality of life and/or remuneration levels of their destination market;
- allowances and/or fees deriving from offices held in corporate bodies, provided that these are not reversed to the companies to which they belong;
- any benefits designed to increase employee motivation and loyalty of the resources and assigned on a non-discretionary basis. The benefits paid to Group employees may be of a contractual nature (e.g., supplementary pension, health benefits, etc.) or the result of remuneration policy decisions (e.g., company car) and, therefore, have different treatment with respect to different categories of personnel.

a.2 Recurring remuneration

For Non-employee Financial Advisors (hereinafter also "Financial Advisors") and Financial Agents, the "recurring" component consists of commissions, which make up the stable and ordinary portion of remuneration.

In particular, for Financial Advisors, commissions remunerate their activity of placement, management and assistance to customers, and cover the costs they incur in carrying out their activities. For Financial Advisors given additional responsibilities of commercial coordination and supervision of specific activities and/or teams of Financial Advisors, the "recurring" remuneration consists of supervision commissions, for coordinating and supervising a team of Financial Advisors operating within their area of expertise, and of development commissions, for the development and growth in size of the team of Financial Advisors they supervise.

As for the Financial Agents of Prestitalia, recurring remuneration is differentiated according to product macro-categories, as detailed in the Report on remuneration policy and compensation paid. Specifically, with reference to the products provided by Prestitalia (e.g., salary-backed loans), recurring remuneration is divided into 3 components: ordinary, recurring, and additional commissions, which are constant by production segments. On the other hand, with regard to products offered under the distribution agreement with Intesa Sanpaolo (e.g., banking products and services), recurring remuneration is determined by product type as a share of the consideration paid by Intesa Sanpaolo to Prestitalia for the promotion and placement activities governed by the agreement.

In addition, with reference to Financial Agents with accessory contract (Team Leaders), recurring remuneration is also composed of a fixed monthly coordination fee for carrying out the assignment of supervising the commercial activity as well as the supervision commissions calculated on the basis of the commissions generated by the coordinated agents.

b.1 Variable remuneration

The variable component is linked to employee's performance and aligned to the results actually achieved and the risks prudentially assumed, and consists of:

- short-term variable component, paid through the annual Incentive Systems and the Broad-based Short-Term Plan (PVR);
- long-term variable component, paid through the PSP (Performance Share Plan), targeted at the Intesa Sanpaolo Group Management, including the Top Risk Takers and the remaining Group Risk Takers (in Italy and abroad), the LECOIP 3.0 Plan, targeted at the Intesa Sanpaolo Group Professionals (in Italy) and any other long-term incentive plans (e.g. Long-term incentive plans for "Investment" staff operating in AMCs managing AIFs, Loyalty Plan for the employees of the Private Banking Network););
- the carried interest, i.e. the share in the profits of the UCITS or AIF received by personnel as compensation for the management of the UCITS or AIF[325];
- any variable short- and long-term components, tied to the duration of employment in the company (stability or non-competition agreements, one-off retention bonus, project bonus) or extraordinary agreements (entry bonus, buy-out);
- any discretionary benefits.

The assignment of guaranteed bonuses is not envisaged.

The distinction of the variable remuneration in a short-term and a long-term component promotes both attraction and retention of resources, allows performance to be oriented over a period of accrual longer than one year and to share the medium-long term results consequent to the implementation of the Business Plan.

b.2 Non-recurring remuneration

For Financial Advisors, the "non-recurring" component is represented by the commissions paid as annual incentives, with the aim of driving the sales activity to reach specific targets, taking into account both the long-term business strategies and objectives of the Networks they belong to and integrity in customer relations.

---

[322] Italy, Slovakia and Croatia, Hungary and Luxembourg perimeter.

[323] Italy, Switzerland, Serbia, New York, Egypt and China perimeter.

[324] Italy perimeter.

[325] Not including the portion of pro rata profit assigned to personnel by virtue of any investments made by them in the UCITS or AIF, provided that they are proportional to the actual percentage of participation in the UCITS or AIF and not exceeding the return recognised to the other investors. For a proper implementation of the regulation, managers must therefore be able to clearly identify the portions of profit which exceed the pro rata profit of the investments and that qualify as carried interest.

Moreover:
– for around 5,000 Financial Advisors of the Fideuram, Sanpaolo Invest and IW Private Investments Networks, a 2022-2025 Long-Term Incentive Plan has been designed;
– for new Financial Advisors of the Fideuram, Sanpaolo Invest, IW Private Investments and Intesa Sanpaolo Private Banking networks, a specific non-recurring component is envisaged as part of the recruitment offer;
– for Financial Advisors of the Fideuram, Sanpaolo Invest and IW Private Investments networks, the Fidelity Plan and the Loyalty Bonus are envisaged, respectively to Financial Advisors with an accessory contract and to those without an accessory contract.

Lastly, non-recurring remuneration also includes any short- and long-term components, tied to the duration of employment in the company (stability or non-competition agreements, one-off retention bonus) or extraordinary components (entry bonus, buy-out);

The remuneration pay mix

In accordance with the regulatory guidelines, the Intesa Sanpaolo Group traditionally adopts a pay mix that is appropriately "balanced" between the fixed (or recurring) component and the variable (or non-recurring) component, in order to:
– allow flexible management of labour costs, as the variable portion may significantly decline, even down to zero, depending on the performance actually achieved during the year in question or in the event that the Group is unable to maintain or restore a solid capital base;
– discourage behaviour focused on the achievement of short-term results, particularly if these involve taking on greater risk.

In order to achieve the above objectives, it is standard Group practice to establish ex ante limitations in terms of balanced ceilings for variable remuneration, through the definition of specific caps applied to bonuses in relation to any over-performance.

As a general rule of thumb, the aforesaid cap to the variable remuneration was determined:
– at 100% of fixed remuneration for roles not belonging to the Corporate Control Functions;
– at 33% of fixed remuneration for roles belonging to the Corporate Control Functions;
– at 60% of fixed remuneration for roles similar to the Corporate Control Functions[326] and the roles belonging to the Group Human Resources Function.

The calculation of the variable remuneration takes into account both the short-term component relating to the Incentive System or PVR and the long-term component assigned through the long-term Incentive Plans (PSP Plan and LECOIP 3.0 Plan), any other long-term incentive plans, any variable components linked to seniority or exceptional components, and compensation in the event of termination of employment agreement or early termination of office (severance pay)[327]. In particular, the PSP and LECOIP 3.0 Plans have an impact on the pro-rata variable remuneration for the entire accrual period.

The maximum limit established by the general criteria (1:1) has been raised to 2:1, as provided for by CRD IV, permitted by the Bank of Italy's Supervisory Provisions and approved by the Shareholders' Meeting, for Group Risk Takers[328] not belonging to the Corporate Control Functions and similar roles, for staff operating in specific and limited professional sectors and highly profitable business segments[329], as well as non-employee Financial Advisors who are recipients of the recruitment offer in order to attract new key resources from the market for the growth and development of the Networks, as they have a significant effect on the Group's average annual total net funding.
Furthermore, starting from 2019, using the option granted by the Supervisory Provisions, the maximum limit on the variable remuneration has been raised above 2:1 up to a maximum of 4:1 for personnel in the "Investments" category of the Group's asset management companies, who work exclusively for the same Asset Management Company.
However, in terms of cap compliance between fixed and variable remuneration (1:1), appropriate pay mix differentiations were identified with reference to the various professional or business segments, in line with the results obtained by means of specific benchmark analyses related to the leading European global banks that also ensure compliance with the internal equity principle, given the use of common benchmarks for each cluster.
The adequacy of the amounts is further verified in comparison to market practices, with ongoing participation in national and international remuneration surveys; for management roles and other particular business positions, the comparison is based on specific Peer Groups, in order to evaluate the competitive alignment with the most appropriate reference market.
In relation to market data, the Intesa Sanpaolo Group aims to align the overall remuneration with median values, notwithstanding the possibility to make the appropriate differentiations for particularly critical positions and/or resources with high management skills.

[326] Roles similar to the Corporate Control Functions include the Manager responsible for preparing the Company's financial reports and the Head of the Group Administrative Governance and Control Structure.
[327] With the exclusion of amounts agreed and recognised: (i) under a non-competition agreement, for the portion that, for each year of the plan's duration, does not exceed the last year of fixed remuneration; (ii) as part of an agreement between the Bank and the staff, wherever reached, for the settlement of an actual or potential dispute, if calculated on the basis of a predefined formula.
[328] Excluding the non-executive members of the Board of Directors of Intesa Sanpaolo and the Group Risk Takers operating in Slovakia, Slovenia, Bosnia and Herzegovina, Moldova and Romania.
[329] The Private Banking branches of Investment Banking, Insurance and Private Banking investment managers, Treasury and Finance, the commercial branch of the Asset Management Division dedicated to the non-captive market, the Heads of Product Management and Development of the Insurance Division, the Heads of the Institutional Clients structures, the Corporate Finance & Advisory structure, the Syndication & Risk Sharing structure, the Global Relationship Managers of the Global Corporate and Institutional Client structures, the Managers of the Corporate and Financial Institutions Desks of certain former Hub branches present in the IMI CIB International Network as well as, within the scope of the Všeobecná Úverová Banka (VUB) Network, the Mortgage Specialists, the Magnifica Relationship Bankers and the Premium Relationship Managers.

The correlation between remuneration, risk and performance is ensured for all employees through:

- the use of a balanced pay mix, as the fixed component is sufficiently high to allow the variable portion, which is never guaranteed, to decline significantly, even down to zero, upon occurrence of the conditions specified below;
- the application of the principle of merit, under which significantly higher-than-average bonuses are awarded for the best performances;
- the adoption, based on the financial sustainability principle, of a structured funding mechanism for the variable component (bonus pool) that:
  - on the one hand, correlates top-down the resources allocated to the majority share of the bonus pool ("Gross Income-based bonus pool") to a specific Group indicator, currently identified in Gross Income; and
  - on the other, provides for the self-funding of a (minority) share of the bonus pool through a percentage from the fee and commission income generated by network employees within the scope of Wealth Management & Protection activities ("commission-based bonus pool")[330];
- within the scope of the Gross income-based bonus pool, the use of a solidarity mechanism between Group and Division results, according to which the amount of total bonuses paid to the employees of each Division depends in part on the Group's overall performance (reflected in the size of the bonus pool) and in part on the performance of the specific Division, measured in terms of the degree of expected contribution to the Group's Gross Income;
- the observance of the access conditions provided for in international and national regulations, namely:
  - at Group level, the achievement of adequate levels of capital strength and liquidity and, in any event, compliance with the limits envisaged in the RAF;
  - at individual level, the propriety of conduct (e.g. absence of disciplinary measures resulting in one or more days of suspension);
- the measurement of performance across multiple dimensions, both quantitative (profitability, growth, productivity, cost of risk/sustainability) and qualitative (strategic actions or projects – including, also for 2025, the transversal Group KPI "Environmental, Social and Governance (ESG)" – and managerial qualities), and covering different scopes (Group/Department/Individual). The following are some examples of indicators for performance drivers:
  - Profitability: average Operating Income/Risk Weighted Assets, Revenues/Assets, Total Income from Insurance Business/Mathematical Reserves;
  - Growth: Net Funding, Medium/long-term Disbursements, New purchases of tax assets, Income from the Non-Life Insurance Business;
  - Productivity: Cost/Income, Administrative Expense Reduction, Full Combined Ratio;
  - Cost of risk/sustainability: Gross NPL Ratio, Gross flows from performing loans to NPE, Operating Losses/Operating Income, Concentration Risk, Maximisation of LCR target levels, Reduction in workplace health and safety risk, Operating losses due to ICT and Cyber Risks;
- the use of corrective mechanisms that act as de-multipliers of the bonus accrued according to the risks taken and the relevant cluster.

It is expressly prohibited for individual employees to undertake personal hedging or insurance strategies on the remuneration or other aspects that may alter or undermine the effects of the alignment with company risk inherent in the remuneration mechanisms described.

Remuneration may not be paid in forms, instruments or methods aimed at avoiding provisions of law.

The termination of the employment agreement involving personnel with state pension or seniority pension rights and/or "Assicurazione generale obbligatoria" (AGO) pension treatment does not result in loss of the right to payment of the entitled amounts, even deferred. In all other cases, the Bank has the right to award any amounts, depending on the specific situations, upon termination of the employment agreement, also through consensual retrenchment agreements providing termination payments. Furthermore, individual prior agreements may be entered into for the determination of the remuneration to be granted in the event of early termination of the relationship, provided that these agreements must comply with all the conditions set out in the Remuneration Policies and in the Supervisory Provisions[331]. In recent years, the Bank has signed specific agreements with the trade unions with regard to the "solidarity fund", applied to employees of all levels, including executives, which also govern the treatment of sums payable to personnel upon termination of the employment agreement in the event of extraordinary transactions and/or company reorganisations[332].

In accordance with the Supervisory Provisions on remuneration, any type and/or form of severance payment agreed in view of or upon early termination of the employment agreement or early termination of office for the amount exceeding the provisions of the law and of the National Collective Bargaining Agreement concerning payments related to the indemnity for failed notice, constitutes severance, including any compensation paid under the non-competition agreement, limited to the portion exceeding the last year of fixed remuneration.

[330] It should be noted that this principle also applies to Financial Advisors who are not employees since, similar to the methods defined for the commission-based bonus pool at the Group level, the Financial Advisor Incentive Systems are self-funding through a percentage of the gross revenues earned by the Company to which they belong.

[331] In line with the practices commonly used among competitors and the leading Italian listed companies, an agreement containing specific contractual provisions on severance was entered into with the Managing Director and CEO. Specifically, in line with the provisions of the Remuneration Policies, this agreement provides, for Good Leavers, for the disbursement, in addition to the indemnity in lieu of the notice period required by law and the collective bargaining agreement, of an amount by way of severance of between 12 and 24 months of fixed remuneration depending on the average of the overall Performance Scorecard score relating to the Group's annual Incentive System for the three years preceding the date of termination of the employment agreement. If this average is less than 80%, no severance payment will be due to the Managing Director and CEO.

[332] In this regard, it should be noted that Section III, paragraph 2.2.3 of the Supervisory Provisions on Remuneration and Incentive Policies and Practices provides for specific exceptions to the applicable rules with reference to amounts agreed upon with a view to or on the occasion of the early termination of employment agreement or termination of office or to exit incentives, as part of extraordinary transactions or corporate restructuring processes, provided that the conditions described therein are met.

In the Intesa Sanpaolo Group, the principles for the definition of these payments - inspired to both the correlation between severance pay and ongoing performance criteria and the control of potential litigations – are:

– ensuring compliance with regulatory capital adequacy requirements;
– no reward for failure;
– unobjectability of individual behaviour (consistency with compliance breaches' criteria).

Pursuant to these criteria and the Supervisory Provisions on remuneration, when negotiating this kind of remunerations, the Group defined that those payments:

– are equal, as a maximum amount, to 24 months of fixed remuneration, and are determined in a different manner for each cluster, in order to take into due consideration the overall evaluation of the work of the person and having particular regard to the Group's capitalisation, liquidity and profitability levels and to the presence or absence of individual sanctions imposed by the Supervisory Authority;
– are paid according to the methods set for short-term variable remuneration, for each cluster;
– are included in the calculation of the ratio between the respective variable remuneration and the fixed remuneration of the last year of employment in the company, not including the sums agreed upon and paid:
    - based on a non-competition agreement, for the portion which, for each year of duration of the agreement, does not exceed the last year of fixed remuneration;
    - within an agreement reached in order to settle a current or potential dispute (wherever reached), if calculated according to a predefined calculation formula approved by the Shareholders' Meeting in advance.

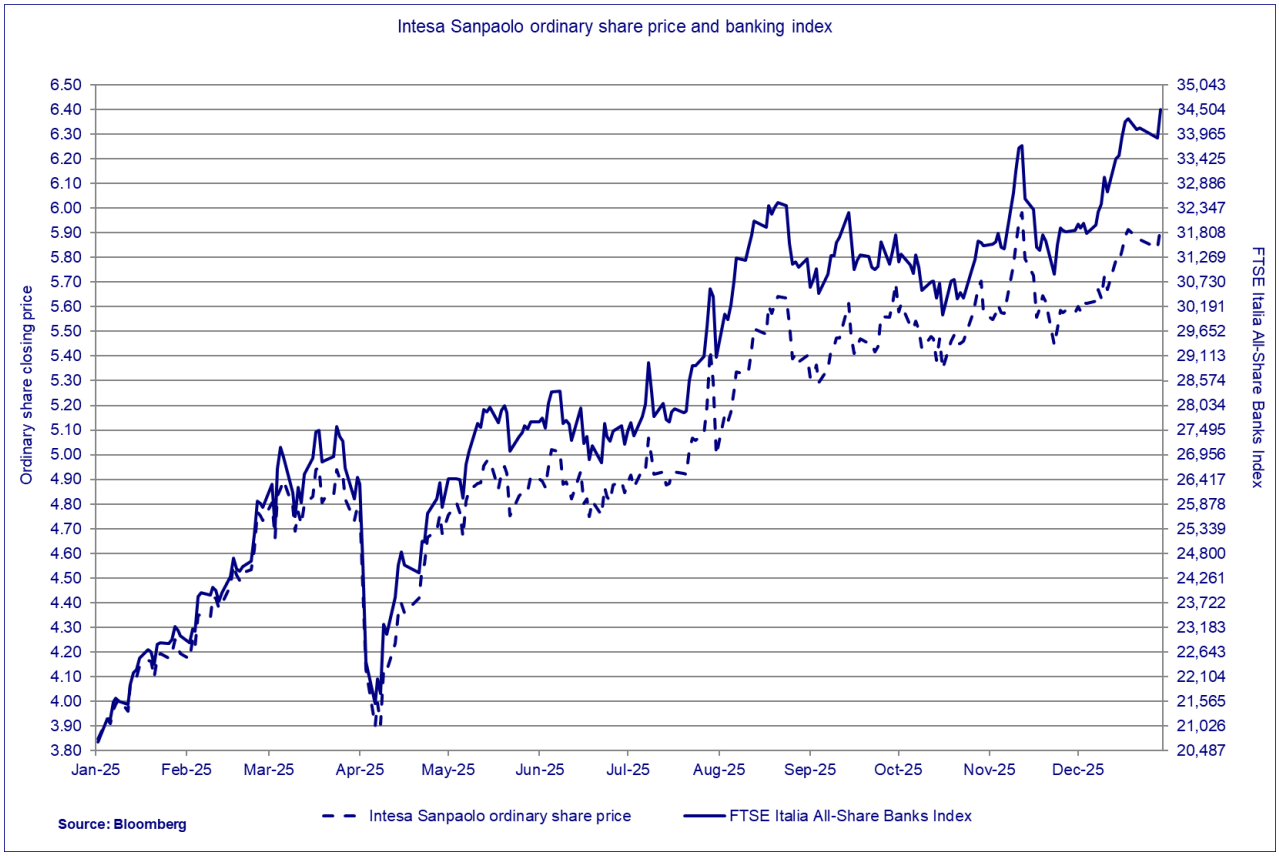
Intesa Sanpaolo shares

Intesa Sanpaolo shares

Share performance

In 2025, the banking sector benefited from a strong first quarter, supported by solid results and capital distribution policies, which led the euro area banking index to close the first three months of 2025 with a performance of +27.5%. At the beginning of April, the introduction of the reciprocal US tariffs caused a sharp correction that almost nullified the sector's year-to-date performance. Subsequently, with the softening of US positions and the positive results reported by the sector, the euro area banking index more than recovered the lost ground, closing the year up by 80.3%, a trend significantly higher than the Euro Stoxx (+21.2%).
In 2025, the Italian banking index recorded an increase of 65.7%, driven by resilient results in a scenario of declining rates, generous shareholder remuneration policies and the ongoing consolidation process in the sector that began at the end of 2024. The Italian banking index recorded a lower performance than that of the European sector, but was significantly higher than the FTSE MIB index (+31.5%).

The price of Intesa Sanpaolo ordinary shares in 2025 mirrored the trend of banking sector indices, with a marked upward trend in the first two months, fluctuation in March, a sharp decline in the first ten days of April, a sustained recovery until mid-May, fluctuation until mid-July and finally an upward trend, closing the year up 53.3% compared to the end of 2024.
Intesa Sanpaolo's capitalisation rose to 103.1 billion euro at the end of 2025, from 68.8 billion euro at the end of 2024.



Earnings per share

Intesa Sanpaolo's share capital consists solely of ordinary shares.
Net income attributable to ordinary shares is determined considering the dividends proposed and then allocating the residual portion of net income, in the hypothetical assumption of its total distribution, in equal weight to all outstanding shares.
The Earnings Per Share (EPS) indicator is presented both in the "basic" and in the "diluted" formula: basic EPS is calculated by dividing income theoretically attributable to holders of shares by the weighted average number of outstanding shares (excluding own shares repurchased); diluted EPS also takes into account the effect of any future issues.

	Ordinary shares				
	31.12.2025	**31.12.2024**	**31.12.2023**	**31.12.2022**	**31.12.2021**
Weighted average number of outstanding shares (*)	17,583,596,365	18,017,340,115	18,370,426,095	19,315,541,610	19,377,549,407
Income attributable (millions of euro) (**)	9,321	8,666	7,724	4,379	4,185
Basic EPS (euro)	0.53	0.48	0.42	0.23	0.22
Diluted EPS (euro)	0.53	0.48	0.42	0.23	0.22

(*) The weighted average number of outstanding shares is calculated excluding repurchased treasury shares.

(**) The attributable income for 2022 differs from that published in the 2022 Annual Report due to the adjustments made to the 2022 comparative information following the retrospective application of the new IFRS 17 Insurance Contracts and the IFRS 9 Financial Instruments by the Group's insurance companies, starting from 1 January 2022.

Price/book value

The indicator reflects the value attributed by the market to the share capital of a listed company, and hence indirectly to the company's overall assets. Although it measures the confidence which financial analysts and the financial community have in the company's income prospects and capital strength, the indicator is significantly affected by the external factors that influence share prices.
Also for the Intesa Sanpaolo Group, the level and performance of the indicator – as at 31 December 2025 calculated on both average figures and year-end figures – were influenced by the dynamics of the market and its industry sector. The comparative figures for the years 2021 to 2024 shown in the table are annual averages.

(millions of euro)

	31.12.2025	**2025**	**2024**	**2023**	**2022**	**2021**
Market capitalisation	103,105	88,923	63,323	45,144	38,433	44,535

Payout ratio	**70%**	**70%**	**70%**	**70%**	**70%**

(*) For the years 2025, 2024, 2023 and 2021, the amounts proposed/distributed are partly charged to reserves.
Starting from 2021, the amounts were partly distributed as interim dividends, following specific resolutions of the Board of Directors upon the approval of the results as at 30 September of each year.
The data relating to previous years are shown net of portion not distributed to own shares held at the record date. For 2022, the amount reflects the rounding differences identified when determining the final dividend amount (following the annulment of own shares acquired through the buyback programme).

In compliance with Supervisory Authority instructions and in line with the provisions of the 2022–2025 Business Plan – which envisages a payout of 70% of consolidated net income in each year of the Plan – the following is noted for the year 2025:

– on 26 November 2025 (with coupon presentation on 24 November and record date on 25 November), interim dividends were paid out from 2025 results, as resolved by the Intesa Sanpaolo Board of Directors on 31 October 2025, in compliance with the provisions set out in Article 2433-bis, paragraph 4 of the Italian Civil Code. The interim dividend of 18.60 euro cents per share was paid on the 17,386,262,670 ordinary shares outstanding on the record date for a total of 3,233,844,856.62 euro (net of an undistributed amount of 5,045,611.40 euro relating to 27,126,943 own shares held at the record date);
– on 2 February 2026 the Board of Intesa Sanpaolo resolved to submit to the Ordinary Shareholders' Meeting of 30 April 2026 a proposal for the distribution of a remaining dividend for 2025 of 19 euro cents for each of the 17,413,389,613 ordinary shares constituting the share capital, for a total payout of 3,308,544,026.47 euro. Of that total: (i) 3,012,516,403.05 euro, equal to 17.3 euro cents per share, from the net income for the year, while the remaining (ii) 296,027,623.42 euro, equal to 1.7 euro cents per share, as assignment of reserves drawn on the Share premium reserve. If approved by the Shareholders' Meeting, the dividend distribution will take place from 20 May 2026 (with coupon presentation on 18 May and record date on 19 May).

The total dividend proposed for 2025 is therefore equal to 37.60 euro cents per share, for a total payout of 6,542,388,883.09 euro, equal to 70% of the consolidated net income.

With regard to 2024, it is worth recalling that:

– on 20 November 2024 (with coupon presentation on 18 November and record date on 19 November), interim dividends were paid out from the 2024 results, as resolved by the Intesa Sanpaolo Board of Directors on 31 October 2024. The interim dividend of 17 euro cents per share was paid on the 17,778,801,839 shares outstanding on the record date for a total of 3,022,396,312.63 euro (net of an undistributed amount of 4,227,672.54 euro relating to 24,868,662 own shares held at the record date);
– at the Shareholders' Meeting of 29 April 2025, Intesa Sanpaolo shareholders approved the distribution of a remaining dividend for 2024 of 17.10 euro cents per share on the 17,803,670,501 ordinary shares constituting the share capital, for a total payout of 3,044,427,655.67 euro, of which: (i) 2,252,164,318.38 euro, equal to 12.65 euro cents per share, from the net income for the year, and the remaining (ii) 792,263,337.29 euro, equal to 4.45 euro cents, from the Share premium reserve. The dividend was paid on 21 May 2025 (with coupon presentation on 19 May and record date on 20 May) for a total of 3,042,652,586.92 euro, net of an undistributed amount of 1,775,068.75 euro relating to 10,380,519 own shares held at the record date, which was allocated to the Extraordinary reserve.

The total dividend paid out for 2024 therefore amounted to 34.10 euro cents per share, for a total payout of 6,065 million euro, equal to a ratio of 70% of consolidated net income.

With regard to 2023:

– on 22 November 2023 (with coupon presentation on 20 November and record date on 21 November) interim dividends were paid out from 2023 results, as resolved by the Intesa Sanpaolo Board of Directors on 3 November 2023. The interim dividend of 14.40 euro cents per share was paid on the 18,256,842,646 ordinary shares outstanding on the record date for a total of 2,628,985,341.02 euro (net of an undistributed amount of 3,737,713.40 euro relating to 25,956,343 own shares held at the record date);
– at the Shareholders' Meeting of 24 April 2024, Intesa Sanpaolo shareholders approved the distribution of a remaining dividend for 2023 of 15.20 euro cents per share on the 18,282,798,989 ordinary shares constituting the share capital, for a total payout of 2,778,985,446.33 euro, of which: (i) 2,373,107,308.77 euro, equal to 12.98 euro cents per share, from net income for the year, and the remaining (ii) 405,878,137.56 euro, equal to 2.22 euro cents per share, from the Share premium reserve. The dividend was paid on 22 May 2024 (with coupon presentation on 20 May and record date on 21 May) for a total of 2,776,310,634.08 euro (net of an undistributed amount of 2,674,812.25 euro relating to 17,597,449 own shares held at the record date).

The total dividend paid out for 2023 therefore amounted to 29.60 euro cents per share, for a total payout of 5,405 million euro, equal to 70% of consolidated net income.

With regard to 2022:

– on 23 November 2022 (with coupon presentation on 21 November and record date on 22 November) interim dividends were paid out from 2022 results, as resolved by the Intesa Sanpaolo Board of Directors on 4 November 2022. The interim dividend of 7.38 euro cents per share was paid on the 18,964,880,325 ordinary shares outstanding on the record date for a total of 1,399,608,167.99 euro (net of an undistributed amount of 1,765,505.22 euro relating to 23,922,835 own shares held at the record date);
– at the Shareholders' Meeting of 28 April 2023, Intesa Sanpaolo shareholders approved the distribution of a remaining dividend for 2022 of 8.68 euro cents per share (for a total amount of 1,648,228,114.29 euro), subject to increase due to the annulment of the own shares purchased in execution of the buyback programme. Following the annulment of the shares at the start of May, on 24 May 2023 with coupon presentation on 22 May and record date on 23 May), a remaining dividend of 9.01 euro cents was paid on the 18,282,798,989 ordinary shares constituting the share capital.[333]

[333] The total amount of the dividend paid was 1,646,462,490.59 euro against 1,765,623.70 euro allocated to the Extraordinary reserve in relation to the portion not distributed to the 9,075,453 own shares held at the record date (817,698.32 euro) and the rounding differences arisen during the calculation of the final amount of the dividend (947,925.38 euro).

The total dividend paid out for 2022 therefore amounted to 16.39 euro cents per share, for a total payout of 3,046 million euro, equal to 70% of consolidated net income.

Finally, with regard to 2021:
– on 24 November 2021 (with coupon presentation on 22 November and record date on 23 November) interim dividends were paid out from 2021 results, as resolved by the Intesa Sanpaolo Board of Directors on 3 November 2021. The interim dividend of 7.21 euro cents per share was paid on the 19,399,837,165 ordinary shares outstanding on the record date for a total of 1,398,728,259.60 euro (net of an undistributed amount of 2,208,144.69 euro relating to 30,626,140 own shares held);
– at the Shareholders' Meeting of 29 April 2022, Intesa Sanpaolo shareholders approved the distribution of a remaining dividend of 1,533,063,554.76 euro (7.89 euro cents per share) on the 19,430,463,305 ordinary shares constituting the share capital, of which 1,299,897,995.10 euro as dividends from net income for 2021 (equal to 6.69 euro cents per share) and 233,165,559.66 euro from the Share premium reserve (equal to 1.20 euro cents per share). The dividend was paid on 25 May 2022 (with coupon presentation on 23 May and record date on 24 May) for a total of 1,531,897,089.90 euro (net of an undistributed amount of 1,166,464.86 euro relating to 14,784,092 own shares held at the record date).

Based on the above, the dividend for the year 2021 was set at a total of 15.10 euro cents per share, for a total dividend distribution of 2,931 million euro and a payout ratio of 70% of consolidated net income.

Note that the Shareholder return should also be assessed in the light of the buyback operations executed by Intesa Sanpaolo, by virtue of which Shareholders, without having to further invest, see growth in their share of participation in the Bank's total dividends. Over the time horizon of the 2022-2025 Business Plan, the following transactions were executed: in the second half of 2022 and the first half of 2023, buybacks for a total of 3.4 billion euro (an amount equivalent to the suspended 2019 dividend); in 2024, a buyback of 1.7 billion euro, launched in June and concluded in October; and in 2025, a buyback of 2 billion euro, launched in June and concluded in October.

Over the time horizon of the 2026-2029 Business Plan, approved by the Intesa Sanpaolo Board of Directors on 2 February 2026, a distribution was envisaged corresponding to a payout ratio, based on consolidated net income, of 95% in each year of the Plan, of which 75% through cash dividends and 20% through buybacks.

Dividend yield

This indicator measures percentage return on the shares, calculated as the ratio between the dividend allocated for the year and the market price in the reference year. This return, determined on the basis of average annual share prices, maintained sustainable levels over time, also in view of financial market trends, and, as reiterated above, should be assessed in the light of buyback operations executed since 2022.

	2025	2024	2023	2022	2021
Dividend per share (euro cents) (*)	37.60	34.10	29.60	16.39	15.10
Average stock price (euro)	5.016	3.481	2.438	2.024	2.292
Dividend yield	7.5%	9.8%	12.1%	8.1%	6.6%

(*) The 2022 remaining dividend per share has undergone an increase compared to the resolution of the Intesa Sanpaolo Shareholders' meeting of 28 April 2023 (from 8.68 euro cents to 9.01 euro cents) following the annulment, on 2 May 2023, of all treasury shares purchased in execution of the buyback programme which was launched on 13 February 2023 and concluded on 4 April 2023.

Rating

Summarised below are actions on Intesa Sanpaolo's main ratings taken by the international Agencies in 2025:

– on 18 April, S&P Global Ratings upgraded Intesa Sanpaolo's long-term senior preferred (unsecured) debt rating to "BBB+" from "BBB", with "Stable" outlook. This action followed a similar upgrade of Italy's sovereign debt rating on 11 April, and the improved systemic risk assessment for the Italian banking sector. On 2 February 2026, the agency revised the outlook from "Stable" to "Positive", reflecting the action on the sovereign rating outlook on 30 January 2026;

– on 25 September, Fitch Ratings upgraded Intesa Sanpaolo's long-term senior preferred (unsecured) debt rating to "A-" from "BBB", its short-term deposits rating to "F1" from "F2" and its viability rating to "a-" from "bbb". The outlook is "Stable". The agency reported that the two-notch upgrade reflects the combination of the upgrade in the long-term sovereign rating to BBB+ from BBB, dated 19 September, and the Group's exceptional strength relative to its domestic peers, supported by well diversified products and revenues, and flight-to-quality status;

– on 23 October, Morningstar DBRS upgraded Intesa Sanpaolo's long-term senior preferred (unsecured) debt rating to "A (low)" from "BBB (high)", with "Stable" trend. This action followed a similar upgrade concerning Italy announced by Morningstar DBRS on 17 October and reflects the Group's diversified business model and its solid profile in terms of profitability, asset quality and capital strength;

– on 25 November, Moody's upgraded Intesa Sanpaolo's long-term senior preferred (unsecured) debt rating to "A3" from "Baa1", with "Stable" outlook. This improvement followed a similar action on sovereign rating announced by Moody's on 21 November.

The ratings assigned to Intesa Sanpaolo by the main international agencies, which were unchanged as at the data of approval of these financial statements, are shown below.

	RATING AGENCIES			
	Morningstar DBRS	**Fitch Ratings**	**Moody's**	**S&P Global Ratings**
Short-term debt	R-1 (low)[1]	F1	P-2	A-2
Long-term debt (senior preferred unsecured)	A (low)	A-	A3	BBB+
Outlook / Trend Long-term debt	Stable	Stable	Stable	Positive
Viability	-	a-	-	-

(1) Stable Trend

An always updated information about Intesa Sanpaolo's ratings can be found in the Investor Relations/Rating section of the Group website.

Alternative Performance Measures and Other information

Alternative Performance Measures

Introduction

Pursuant to Article 16 of Regulation 1095/2010/EU, the European Securities and Markets Authority (ESMA) has issued specific Guidelines[334] on the presentation criteria for Alternative Performance Measures (APMs) included by European issuers in regulated information (including the Report on operations in the Annual Report, the Half-yearly report on operations in the Half-yearly report, and the Reports on operations in the Interim Statements), where such measures are not defined or provided for in the rules on financial reporting. These guidelines, in force since 3 July 2016, are designed to promote the utility and transparency of APMs included in the regulated information, by confirming a shared approach to the use of such measures, in order to improve their comparability, reliability, comprehensibility and consistency over time, with resulting benefits for end users. Consob[335] has transposed the Guidelines in Italy and incorporated them into its supervisory practices.
According to the definition provided in the ESMA Guidelines, an Alternative Performance Measure is a financial measure of historical or future financial performance, financial position, or cash flows, other than a financial measure defined or specified in the applicable financial reporting framework. APMs are typically based on financial statement line captions prepared in accordance with applicable financial reporting rules. What sets them apart is that APMs are not defined in the financial reporting framework, yet their use is still widespread, with the role of conveying a view of the entity's performance that is closer to the management's perspective than would be possible using only the defined measures.
Measures published in application of prudential rules, including those laid down in the Regulation and Directive on capital requirements (CRR/CRD), physical or non-financial measures and social and environmental measures do not strictly fall within the definition of APMs.

Intesa Sanpaolo's Alternative Performance Measures

In accordance with Legislative Decree 38 of 28 February 2005, Intesa Sanpaolo prepares its financial statements in compliance with the IAS/IFRS issued by the International Accounting Standards Board (IASB) and the related interpretations of the International Financial Reporting Standards – Interpretations Committee (IFRS-IC), endorsed by the European Commission as provided for by EC Regulation 1606 of 19 July 2002, based on the "Instructions for the preparation of the separate and consolidated financial statements of banks and financial companies, which are parent companies of banking groups" issued by the Bank of Italy (Circular 262/2005 as amended), and disclosed in Part A of the Notes to the financial statements.
To facilitate the understanding of trends in income statement and balance sheet figures, Intesa Sanpaolo also uses various Alternative Performance Measures (APMs) to provide a clear, concise and immediate account of the operating results, the financial position and the performance achieved. Intesa Sanpaolo's APMs – commonly used in banking and finance – are also used by the management in decision-making processes of both an operational and strategic nature.
The Alternative Performance Measures used are supplementary to the measures defined within the IFRS framework. These measures – described below in accordance with the above-mentioned ESMA Guidelines – include the margins of the reclassified income statement and the aggregates of the reclassified balance sheet, in addition to other measures calculated on the basis of the figures presented in the financial statements. The figures used are thoroughly reconciled with the related figures defined in the IFRS framework through the disclosures provided in the Report on operations and reconciliation statements included in the Attachments to the Financial Statements. The figures used are normally restated to enable like-for-like comparison when this restatement is necessary and material (mainly as a result of changes in the scope of consolidation).

In accordance with the ESMA Guidelines, no new measures have been added, nor have any changes been made to the measures used with regard to both the military conflict between Russia and Ukraine and any potential geopolitical impacts.

[334] ESMA Guidelines on Alternative Performance Measures of 5 October 2015 (ESMA/2015/1415en).
[335] Consob Communication No. 0092543 of 3 December 2015

Margins of the reclassified income statement

With regard to the reclassified income statement, the following aggregates and margins have been identified as Alternative Performance Measures.

Operating income: this aggregate includes core income and other income/expenses strictly correlated with operating activity. It is calculated as the sum of the following captions of the reclassified income statement:
– Net interest income;
– Net fee and commission income;
– Income from insurance business;
– Profits (losses) on financial assets and liabilities at fair value;
– Other operating income (expenses).

Operating costs: this aggregate includes costs and expenses relating to the operating activity presented in the following captions of the reclassified income statement:
– Personnel expenses;
– Administrative expenses;
– Adjustments to property, equipment and intangible assets.

Operating margin: margin measured as the difference between Operating income and Operating costs, as described above, representing the result of operations.

Gross income: operating margin that takes into account the effects of adjustments, provisions and impairment losses and realised gains/losses on loans and other assets. It is obtained by subtracting/adding the following captions of the reclassified income statement to the operating margin:
– Net adjustments to loans;
– Other net provisions and net impairment losses on other assets;
– Other income (expenses);
– Income (Loss) from discontinued operations.

Lastly, Net income (loss) includes income components beyond the company's control (taxes, levies and charges aimed at maintaining the stability of the banking industry), items of an "accounting" nature (effects of purchase price allocations and the impairment (net of tax) of goodwill and other intangible assets), as well as expenses related to restructuring/reorganisation processes. The following captions of the reclassified income statement are considered:
– Taxes on income;
– Charges (net of tax) for integration and exit incentives;
– Effect of purchase price allocation (net of tax);
– Levies and other charges concerning the banking and insurance industry (net of tax);
– Impairment (net of tax) of goodwill and other intangible assets;
– Minority interests.

For detailed information on the breakdown of the individual captions of the reclassified income statement cited above, see the chapter "Economic results and balance sheet aggregates" of this Report on operations. Reconciliations of the individual captions of the reclassified income statement with the captions of the financial statements are presented in an attachment to the financial statements, as also required by Consob in its Communication 6064293 of 28 July 2006. Where comparative figures and/or figures for the reporting period have been restated, a thorough reconciliation is provided in the attachments to the financial statements.

Aggregates of the reclassified balance sheet

With regard to the reclassified balance sheet, which is primarily intended to provide a summary with respect to the financial statements, the following have been identified as Alternative Performance Measures, while the chapter "Economic results and balance sheet aggregates" of this Report provides details of the remaining captions of the reclassified balance sheet derived directly from the financial statements. Reconciliations of the individual captions of the reclassified balance sheet with the captions of the financial statements are presented in an attachment to the financial statements, as also required by Consob in its Communication 6064293 of 28 July 2006. Where the comparative figures have been restated, a thorough reconciliation is provided in the attachments to the financial statements.

Loans to customers
This aggregate includes the captions typical of the lending business with customers relating to the banking segment.
It mainly consists of loans to customers classified as Financial assets measured at amortised cost and, to a lesser extent, exposures in securities (issued by non-financial companies, public entities and others) representing loans to customers. It also includes any portions of loans to customers classified under Financial assets held for trading, Financial assets designated at fair value, Other financial assets mandatorily measured at fair value and Financial assets measured at fair value through other comprehensive income.

Other banking business financial assets and liabilities
This aggregate comprises financial assets and liabilities of the banking business (thereby excluding financial assets and liabilities pertaining to insurance companies) other than loans. In detail, the following captions of the reclassified balance sheet assets are included, as defined below: Financial assets measured at amortised cost which do not constitute loans; Financial assets measured at fair value through profit or loss and Financial assets measured at fair value through other comprehensive income. This aggregate also includes Financial liabilities held for trading in the reclassified balance sheet liabilities, pertaining to the banking segment, considered net of investment certificates, as they are included in direct deposits from banking business.

Financial assets measured at amortised cost which do not constitute loans
This aggregate includes portions of Financial assets measured at amortised cost (both amounts due from banks and loans to customers) of the banking segment not held for financing purposes. These are essentially debt securities of banks, governments, financial institutions and insurance companies. The breakdown of this caption is provided in the detail table included in the chapter "Economic results and balance sheet aggregates".

Financial assets measured at fair value through profit or loss
These include Financial assets held for trading, designated at fair value and mandatorily measured at fair value pertaining to the banking segment, other than those representing loans to customers and due from banks, which are classified to the specific aggregates. The breakdown of this caption is provided in the detail table included in the chapter "Economic results and balance sheet aggregates".

Financial assets measured at fair value through other comprehensive income
These include Financial assets measured at fair value through other comprehensive income of the banking segment, except for portions that represent loans to customers and due from banks, which are classified to the specific aggregates. The breakdown of this caption is provided in the detail table included in the chapter "Economic results and balance sheet aggregates".

Customer financial assets
This aggregate represents total financial assets deposited by customers of the Group, in the various types of direct deposits from banking and insurance business and indirect deposits, as defined further below. In order to avoid duplications, the aggregate is constructed by netting those components of indirect customer deposits that also constitute types of direct deposits.

Direct deposits from banking business
This aggregate includes captions relating to funding from customers. In addition to the financial liabilities measured at amortised cost represented by amounts Due to customers (net of lease payables reclassified to Other liabilities) and Securities issued, it also includes funding – in the form of investment certificates and, to a marginal extent, other instruments – classified under the captions Financial liabilities held for trading and Financial liabilities designated at fair value.

Direct deposits from insurance business
This aggregate groups together funding items from the insurance segment and includes Insurance liabilities recognised on the balance sheet, Financial liabilities designated at fair value pertaining to insurance companies recognised on the reclassified balance sheet, and Other insurance deposits. This last item consists of securities issued and amounts due to customers recognised under Financial liabilities at amortised cost pertaining to insurance companies on the reclassified balance sheet, and includes subordinated liabilities.

Indirect customer deposits
This aggregate refers to investment and distribution activity – for securities, mutual funds, portfolio management schemes and insurance – carried out on behalf of third parties or in connection with the management of securities portfolios. The assets are measured at market prices. Indirect customer deposits are broken down into Assets under management (mutual funds, portfolio management schemes, insurance policies – both proprietary and from third-party asset managers/insurance companies[336] – pension funds and individual pension policies) and Assets under administration (all securities under administration and custody not attributable to assets under management: government bonds, Equities, Third-party bonds, etc.).

Amounts due from and to banks - net interbank position
Amounts due from and to banks include typical asset and liability items relating to interbank dealings in the banking segment.
The aggregate *due from banks* consists primarily of Amounts due from banks recognised as Financial assets measured at amortised cost and, to a lesser extent, any financing to banks classified as Financial assets held for trading, Financial assets designated at fair value, Other financial assets mandatorily measured at fair value, or Financial assets measured at fair value through other comprehensive income.
Amounts *due to banks* include the corresponding caption under Financial liabilities measured at amortised cost, net of lease payables, which are reclassified to Other liabilities.
The *net interbank position* shows the net balance of amounts due from and to banks. It is calculated also including, on the asset side, on-demand deposits held with Central Banks and other banks, which starting from September 2022 are recognised under Cash and cash equivalents, in accordance with the instructions of Bank of Italy Circular 262.

[336] Starting from December 2025, the presentation of assets under management was partially revised, with the aggregate now also including funds established by third parties, portfolio management of third-party companies and insurance policies issued by companies not belonging to the Group, which were previously classified as assets under administration and in custody as not attributable to the Group's product factories.

Other Alternative Performance Measures

In addition to the Alternative Performance Measures represented by the margins of the Reclassified income statement and the aggregates of the Reclassified balance sheet described above, Intesa Sanpaolo also publishes the following APMs.

Profitability ratios

Cost/income ratio
The measure is calculated as the ratio of operating costs (personnel expenses, administrative expenses and adjustments to property, equipment and intangible assets) to the operating income presented in the Reclassified income statement for the year/period and provides a synthetic overview of operating efficiency. For information regarding the breakdown of the captions included in the numerator and denominator of this ratio, see the above and the reconciliation statements attached to the financial statements for a detailed reconciliation.

ROE – Return On Equity
This measure is calculated as the ratio of net income or loss to shareholders' equity and represents the profitability generated by available shareholders' equity. In particular:
– the net income or loss presented in the Income statement for the year/period is used in the numerator; in exceptional cases only, net income or loss may be adjusted to account for any non-recurring components, which are precisely identified. In interim reporting, net income or loss is annualised (except for any non-recurring components, not annualised);
– in the denominator, the shareholders' equity considered is the amount pertaining to the Group at the end of the year/period and does not take into account the AT1 capital instruments and the net income or loss for the year/period.

ROA – Return On Assets
The measure is calculated by comparing the net income or loss to total assets and provides an overview of the profitability of company assets. In particular:
– the net income or loss presented in the Income statement for the year/period is used in the numerator; in exceptional cases only, net income or loss may be adjusted to account for any non-recurring components, which are precisely identified. In interim reporting, net income or loss is annualised (except for any non-recurring components, not annualised);
– in the denominator, period/year-end total assets are used.

Indicators relating to the Intesa Sanpaolo shares

Price/Book value
This measure, which reflects the value attributed by the market to Intesa Sanpaolo, and thus indirectly to its overall assets, is calculated by comparing the market capitalisation to shareholders' equity. It is published on the basis of a time series consisting of average data from the last 5 years/periods, in addition to the calculation on the basis of period-end values at the reporting date. Specifically:
– the average capitalisation for the reporting year/period is used in the numerator. The average capitalisation is calculated on the basis of the average price of shares (arithmetic average of the daily closing prices of trading on Borsa Italiana), multiplied by the weighted average number of shares making up the share capital during the reporting year/period.
In addition to average capitalisation, the year/period-end capitalisation is also published, which is used to calculate the price/book value on the basis of year/period-end figures. Year/period-end capitalisation is calculated by multiplying the closing price on the last trading day on Borsa Italiana by the number of shares at the end of the year/period;
– the average Group shareholders' equity, calculated as the semi-sum of Group shareholders' equity at the beginning and end of the year/period, is used in the denominator. In addition to average shareholders' equity, the value of shareholders' equity at the end of the year/period is published in order to calculate the price/book value on the basis of year/period-end figures.

Payout ratio
This measure, published in table form in the Annual Report based on a time series consisting of data from the last 5 financial years, is the ratio between the amount assigned for the remuneration of shareholders and the total amount of the net income produced. In particular:
– the amount of cash dividends that have been proposed or approved for distribution to the shareholders, inclusive of any amounts arising from the distribution of available reserves, is used in the numerator;
– the net income or loss presented in the Consolidated income statement is used in the denominator, only exceptionally adjusted to account for any non-recurring items, which are duly identified.

Dividend Yield
This measure, published in table form in the Annual Report based on a time series consisting of data from the last 5 financial years, refers to the percentage return on the shares, calculated as the ratio between the dividend and the market price. Specifically:
– the total amount of the dividend per share proposed/approved is used in the numerator;
– the average price of the share, calculated as the annual arithmetic average of the daily closing prices of trading on Borsa Italiana, is used in the denominator.

Risk ratios

Net bad loans/Net loans to customers
The measure is calculated as the ratio of Bad loans to total Loans to customers outstanding at the year/period end, thus providing synthetic indications of the loan portfolio quality. The figures are taken from the financial statements, i.e. net of the related adjustments, and do not include loans to be disposed of that are recognised as assets held for sale. For the definition of the aggregate Loans to customers, see the above. The measure is also calculated with reference to gross values, i.e. before adjustments.

Net non-performing loans/Net loans to customers
This measure is calculated as the ratio of the amount of Non-performing loans (bad loans, unlikely-to-pay loans and past due loans) to total Loans to customers outstanding at the year/period end, thus providing synthetic indications of the loan portfolio quality. The figures are taken from the financial statements, i.e. net of the related adjustments, and do not include loans to be disposed of that are recognised as assets held for sale. For the definition of the aggregate Loans to customers, see the above. The measure is also calculated with reference to gross values, i.e. before adjustments.

Cumulated adjustments on bad loans/Gross bad loans to customers
This measure states the total amount of cumulated adjustments on Bad loans to customers as a ratio of total Bad loans to customers gross of adjustments outstanding at the end of the year/period, thus providing an indicator of the coverage ratio for bad loans. The figures do not include loans to be disposed of that are recognised as assets held for sale. For the definition of the aggregate Loans to customers, see the above.

Cumulated adjustments on non-performing loans/Gross non-performing loans
This measure states total cumulated adjustments on Non-performing loans (bad loans, unlikely-to-pay loans and past due loans) as a ratio of total Non-performing loans gross of the related adjustments outstanding at the end of year/period, thus providing an indicator of the coverage ratio for Non-performing loans. The figures do not include loans to be disposed of that are recognised as assets held for sale. For the definition of the aggregate Loans to customers, see the above.

Cost of credit/Cost of risk
This measure is calculated as the ratio of the amount of net adjustments to loans for the year/period in the Reclassified income statement to the amount of Loans to customers at year/period-end, thus providing synthetic indications of the level of adjustments on the portfolio during the year/period. To enable a valuation more closely linked to ordinary operations, this measure may be accompanied by a version of the same measure calculated with the isolation of particularly significant non-recurring elements, which are precisely identified.
For the definition of the aggregate Loans to customers, see the above. In interim reporting, the numerator is annualised (except for any non-recurring components, not annualised).

Other measures

Loan-to-deposit ratio
This measure is calculated as the ratio of Loans to customers to the amount of Direct deposits from banking business, thus providing synthetic indications of the structure of the customer lending and deposit activity. For the definitions of the aggregates Loans to customers and Direct deposits from banking business, see the above.

Absorbed capital
Absorbed capital is a measure of the risk capital associated with each Group Division in relation to its specific operations. For each Division, the absorbed capital is calculated on the basis of the Risk Weighted Assets (RWAs) measured in accordance with the applicable regulations and supplemented, where necessary, with management data on “economic” capital[337] to take into account the risks not covered by the regulatory metric.

[337] Economic capital consists of an internal estimate of the maximum “unexpected” loss the Group may incur in a given time horizon and considering the desired level of confidence. It aims to quantify the potential economic losses related to the individual risks to which the Group is exposed.

Other information

With regard to information to be included in the Consolidated financial statements as required by specific provisions please note the following:

- the list of Group companies and subsidiaries is provided in the Notes to the consolidated financial statements (Part A, Section 3 – Scope of consolidation and consolidation methods and Part B, Assets – Section 7), in accordance with Bank of Italy instructions;
- Part E - Information on risks and relative hedging policies of the Notes to the consolidated financial statements, in the introductory section on the Manager responsible for preparing the Company's financial reports, also provides information on the certification of compliance, during the year 2025, with the conditions required by Article 15 of Consob Market Regulation 20249/2017 (as amended) for the listing of shares of companies controlling companies established and regulated under the laws of non-EU countries;
- to enable a comprehensive understanding, all the information relating to the Bank's and the Group's connections and transactions with related parties, not only that required by IAS 24 but also that required by Article 5, paragraph 8, of Consob Regulation 17221 of 12 March 2010 (adopted pursuant to Article 2391-bis of the Italian Civil Code), is provided in Part H of the Notes to the consolidated financial statements;
- the information on the own shares of the Parent Company Intesa Sanpaolo held and traded at consolidated level is provided in Part F of the Notes to the consolidated financial statements;
- with regard to the information on corporate governance and ownership structure required by Article 123-bis of the Consolidated Law on Finance, Intesa Sanpaolo has opted to present such information in a separate document from the Report on operations, approved by the Board of Directors and published together with it. Accordingly, in addition to the summary provided in the chapter "Corporate Governance and remuneration policies" of this Report, see the "Report on Corporate Governance and Ownership Structures" available in the Governance section of the Group's website, at www.group.intesasanpaolo.com;
- with regard to the information on the remuneration paid to members of the Management and control bodies, General Managers and Key Managers and on the Parent Company shares held by them, as well as the assignment of financial instruments to board members and general managers or employees pursuant to Article 123-ter of the Consolidated Law on Finance, in addition to the summary provided in the already mentioned chapter "Corporate Governance and remuneration policies" of this Report, see the specific "Report on remuneration policy and compensation paid" published in the Governance section of the Group's website;
- the public disclosure concerning Basel 3 Pillar 3, contained in a specific separate file, is published on the Group's website in the Governance, Risk Management section;
- finally, the country-by-country reporting required by Article 89 of Directive 2013/36/EU of the European Parliament and of the Council (CRD) is also published on the Group's website in the Governance, Risk Management section.

Forecast for 2026

Visibility regarding market prospects remains clouded by a high concentration of uncertainties, linked both to economic policies and to international crisis hotspots. In this respect, there are concerns about the risk of an escalation in Chinese pressure on Taiwan, developments in the Russia-Ukraine conflict, the deterioration in relations between the United States and Europe linked to US ambitions to control Greenland, and the risk of new conflicts in the Middle East. Furthermore, the outlook for US trade policy remains in flux and the emergence of new tensions, including with the European Union, cannot be ruled out. The macroeconomic outlook could also be adversely affected in the event of a sharp correction in equity prices in the technology sector. Conversely, the electoral cycle could provide upward pressure on domestic demand in the United States, while also making it more difficult to interpret interest rate prospects for the dollar.

In Italy, economic activity is expected to remain moderate in 2026. The improvement in household purchasing power, the easing of financial conditions, and the impact of the NRRP are expected to support domestic demand, slightly more than offsetting the negative effect of US protectionist measures on exports. The average annual GDP growth is forecast at above half a percentage point. The public deficit is expected to decline further, although without yet resulting in a reduction in the debt-to-GDP ratio, while allowing risk premiums to remain low.

Inflation is expected to stabilise at levels close to 2%. Markets expect the ECB to leave monetary policy unchanged, with forward rates not factoring in further official rate cuts or increases before the year-end.

The economic outlook for the countries where Intesa Sanpaolo has subsidiaries reflects a mixed picture. In Central and Southeastern Europe (CEE and SEE), growth is expected to be driven by consumption and infrastructure investments financed by EU funds, although this growth may be constrained by weak foreign demand and stagnation in Germany. In Eastern Europe (EE), GDP is expected to be affected by the uncertain geopolitical outlook regarding prospects for a peace agreement between Russia and Ukraine and by weak investor confidence, while in Egypt lower prices should further support the already strong GDP growth observed in the first three quarters of 2025. On the inflation front, the latest data confirm a temporary stabilisation within a broader downward trend that supports expectations of a moderate monetary easing. Specifically, in the CEE/SEE countries where Intesa Sanpaolo operates, inflation fell to 4.5% in 2025 and is expected to decline to around 3.2% by the end of 2026. In the EE countries, it is forecast to average 4.4% in 2026, and in Egypt to reach 12.3%. Overall, 2026 is set to be a year focused on finding a balance between supporting growth and maintaining macroeconomic stability within a challenging international environment.

In the Italian banking system, for 2026 loans to businesses are expected to continue to grow, as a result of more favourable lending conditions. Credit demand is expected to reflect positive investment trends, supported by the approaching conclusion of the National Recovery and Resilience Plan and by tax incentives. The attitude towards credit provision should remain prudent yet accommodative, in light of the controlled state of credit quality. However, lending to businesses will continue to be influenced by the high level of self-financing and the globally uncertain environment. The positive trend in household lending is expected to continue, helped by favourable lending conditions supporting house purchases financed by mortgages, against a backdrop of house prices that are still on the rise. As regards funding from customers, lower interest rates – alongside precautionary motives owing to continued uncertainty – are expected to sustain moderate growth in on-demand deposits. In particular, household deposits will remain supported by a savings rate that, while projected to decline slightly compared with 2025, will remain relatively high and above pre-pandemic levels. In the asset management segment, mutual fund subscriptions are likely to continue, with overall net flows remaining positive, albeit with possible discontinuities related to market volatility. Life insurance is expected to maintain a good growth rate.

For the Intesa Sanpaolo Group, net income of around 10 billion euro is envisaged for 2026, deriving from:
- growth in revenues, mainly driven by commissions and insurance income, with increasing net interest income also thanks to core deposit hedging and volume growth;
- stable costs;
- significant reduction in provisions;
- increase in tax rate (due to the Italian Budget Law) and in levies and other charges concerning the banking and insurance industry.

A strong value distribution is envisaged, with a payout ratio of 95%[338] for 2026, of which 75% through cash dividends[339] and 20% through buyback[340].

The Board of Directors

Turin, 26 February 2026

[338] Calculated on the stated net income.

[339] Subject to the approval from the Shareholders' Meeting.

[340] If the Common Equity Tier 1 ratio exceeds 12.5% and no options for higher-ROI (Return On Investment) capital allocation to external growth are available (focusing on Wealth Management). Subject to approvals from the Shareholders' Meeting and the ECB.

Cash and cash equivalents: foreign exchange effect	114	-115
CASH AND CASH EQUIVALENTS AT END OF PERIOD	**37,868**	**40,533**

LEGEND: (+) from (–) used in

(*) With regard to the disclosure required by par. 44 B of IAS 7, it is noted that the changes in liabilities deriving from financing activities amount to 14,763 million euro (cash flow used) and comprise +23,318 million euro in cash flows, -8,587 million euro in fair value changes and +32 million euro in other changes.

Notes to the consolidated financial statements

Part A – Accounting policies

A.1 – GENERAL CRITERIA

SECTION 1 – DECLARATION OF COMPLIANCE WITH IAS/IFRS

As set forth by Legislative Decree 38 of 28 February 2005, the Intesa Sanpaolo Group's Consolidated financial statements have been prepared in compliance with the accounting principles IAS/IFRS issued by the International Accounting Standards Board (IASB) and the related interpretations of the International Financial Reporting Standards - Interpretations Committee (IFRS-IC) and endorsed by the European Commission as provided for by EC Regulation 1606 of 19 July 2002.
The Consolidated financial statements as at 31 December 2025 have been prepared based on the "Instructions for the preparation of the separate and consolidated financial statements of banks and financial companies, which are parent companies of banking groups" issued by the Bank of Italy, in the exercise of powers set forth by Art. 43 of Legislative Decree 136/2015[341], with Regulation of 22 December 2005, which issued Circular 262/2005, and subsequent updates. Specifically, these consolidated financial statements have been prepared in accordance with the format and preparation rules of the 8th update of 17 November 2022.
These Instructions set out compulsory financial statement formats and the related methods of compilation, as well as the content of the Notes to the consolidated financial statements.
The financial statements have been prepared using the IAS/IFRS endorsed and in force as at 31 December 2025 (including the SIC and IFRIC interpretation documents) as listed in the attachments to these financial statements.

The table below shows the new standards or amendments to existing ones, together with the related European Commission endorsement regulations, which came into force in 2025.

IFRS endorsed as at 31.12.2025 in force since 2025

Endorsement regulation	Amendments to standards/interpretations	Effective date
2862/2024	Amendments to IAS 21 The Effects of Changes in Foreign Exchange Rates – Lack of Exchangeability	01/01/2025 First financial year starting on or after 01/01/2025

As shown in the above table, the financial statements at 31 December 2025 reflect the provisions of Regulation no. 2862/2024 Amendments to IAS 21 The Effects of Changes in Foreign Exchange Rates – Lack of Exchangeability. No aspects of particular significance for the Group have been identified in this respect. Below is a brief summary of their main content.

Regulation no. 2862/2024 of 12 November 2024: Amendments to IAS 21 The Effects of Changes in Foreign Exchange Rates - Lack of Exchangeability
Regulation no. 2862/2024 contains small amendments to IAS 21 specifying when a currency is exchangeable into another currency and how to determine the exchange rate when it is not and the disclosure required. The amendments mainly include the introduction of the definition of "exchangeability"[342] and an application guidance to assist entities in determining when a currency is exchangeable (for example, by clarifying how to assess the time frame to obtain the currency).
The amendments do not provide guidance on how to estimate exchange rates when the currency is not exchangeable; instead, detailed disclosure is required to enable readers to understand the methodologies adopted and the impacts on the financial statements.
As also noted by the IASB, the cases subject to regulatory intervention are not frequent. Therefore, given the current context, these amendments are not expected to be relevant to the Intesa Sanpaolo Group.

The table below shows the new standards and amendments to existing ones, together with the related European Commission endorsement regulations, which will become mandatory after 2025, and for which the Intesa Sanpaolo Group has not exercised the option of early adoption.

[341] Art. 43 of Legislative Decree 136/2015 confirmed to the Bank of Italy the powers concerning the layouts of financial statements already previously attributed to the same Authority by Legislative Decree 38/2005.
[342] IAS 21.8: "A currency is exchangeable into another currency when an entity is able to obtain the other currency within a time frame that allows for a normal administrative delay and through a market or exchange mechanism in which an exchange transaction would create enforceable rights and obligations."

IFRS endorsed as at 31.12.2025 applicable subsequent to 31.12.2025

Endorsement regulation	Amendments to standards/interpretations	Effective date
1047/2025	Amendments to the Classification and Measurement of Financial Instruments - Amendments to IFRS 9 and IFRS 7	01/01/2026 First financial year starting on or after 01/01/2026
1266/2025	Contracts Referencing Nature-dependent Electricity – Amendments to IFRS 9 and IFRS 7	01/01/2026 First financial year starting on or after 01/01/2026
1331/2025	Annual Improvements to IFRS Accounting Standards - Volume 11 (*)	01/01/2026 First financial year starting on or after 01/01/2026

(*) Regulation no. 1331/2025 introduced the following annual improvements: Cost Method (Amendments to IAS 7), Determination of a "de facto Agent'" (Amendments to IFRS 10), Gain or Loss on Derecognition (Amendments to IFRS 7), Hedge Accounting by a First-time Adopter (Amendments to IFRS 1), Derecognition of Lease Liabilities (Amendments to IFRS 9), Transaction Price (Amendments to IFRS 9).

With reference to endorsement regulations that implement changes to existing accounting standards, Regulations no. 1047/2025, 1266/2025 and 1331/2025, described below, will become applicable as from 1 January 2026.

Regulation no. 1047/2025 of 27 May 2025 – Amendments to the Classification and Measurement of Financial Instruments which amended IFRS 9 and IFRS 7

With respect to the aspects of greatest interest to the Intesa Sanpaolo Group, the amendments clarify the classification of financial assets with environmental, social and governance ("ESG") and similar features. These amendments also impose disclosure requirements to increase transparency in relation to financial instruments with contingent feature. As set out in the recitals of the Regulation, these amendments should promote loans with ESG-linked features as they should be able to apply either amortised costs or FVOCI, on the basis they meet the Solely Payments of Principal and Interest ("SPPI") test. In this way, financial reporting should support economic transition measures that advance the European Green Deal.

The amendments cover the following aspects:

1. *Classification of financial assets*

   The application guidance provides clarification for assessing the characteristics of contractual cash flows, i.e., the so-called SPPI criterion which, if met, leads to the classification of assets at amortised cost or at FVOCI.

   This includes the amendments that clarify the treatment for the SPPI test of financial assets with features linked to Environmental, Social and Governance (ESG) factors which, upon achieving (or failing to achieve) specific ESG KPIs, provide for a variability of the interest rate which is contractually defined (usually the increase and/or decrease of a specific number of basis points).

   In this respect, for contracts where the nature of the contingent event does not relate directly to changes in basic lending risks and costs, for example if the debtor achieves a contractually specified reduction in carbon emissions, the entity shall establish an internal policy in order to assess that the contractual cash flows are not significantly different from those of a financial instrument with identical contractual terms, but without such a contingent feature. In some circumstances, the entity may be able to make that determination by performing a qualitative assessment; but, in other circumstances, it may be necessary to perform a quantitative assessment and, consequently establish the related calculation methodology and thresholds (not covered by the standard).

   This approach also applies to all contracts in force on the date of the initial application, as well as to those issued subsequently, since the amendments are to be applied retrospectively.

   Based on the above, Intesa Sanpaolo has established its own group policy. This policy is not expected to impact recognised financial instruments. Furthermore, as part of a dedicated Group-wide project, Intesa Sanpaolo is already implementing the necessary IT solutions.

   Furthermore, the standard also clarifies the definition of contractually linked instruments ("CLI")[343] and the difference with respect to instruments with non-recourse features[344]. This second aspect – CLI/non-recourse – is not particularly relevant to the Intesa Sanpaolo Group. Based on the analyses carried out, the Group's accounting policy developed when adopting IFRS 9 is already in line with the clarifications introduced by the relevant amendments with respect to conducting the SPPI test.

2. *Derecognition of financial liabilities settled through an electronic cash transfer system*

   Under the amendments, a financial liability is derecognised at the settlement date, unless the entity opts for the application of the new provisions whereby a financial liability can be derecognised at an earlier date if the cash transfer takes place through an electronic payment system and specific conditions are met[345]. The amendment provides for the possibility (and not the obligation) to adopt an accounting policy to be applied consistently to all settlements made through a specific electronic payment system.

[343] Reference is made to instruments in tranches which create concentrations of credit risk to settle liabilities and whose payments are contractually linked to those received from a pool of other financial instruments.

[344] A financial asset has non-recourse features if an entity's ultimate right to receive cash flows is contractually limited to the cash flows generated by specified assets.

[345] Specifically, derecognition of a financial liability when using an electronic payment system is permitted if all the following criteria are met:

- the entity has no practical ability to withdraw, stop or cancel the payment instruction or access the cash to be used for settlement as a result of the payment instruction;
- the settlement risk associated with the electronic payment system is insignificant.

The Intesa Sanpaolo Group conducted an in-depth analysis of these regulatory updates to determine their relevance to the Group. According to the analyses, the Group derecognises liabilities at the settlement date (in line with the relevant standard). Furthermore, the application of the above policy on electronic payment systems is not relevant.

3. *New disclosure requirements*

IFRS 7 has been amended to introduce additional disclosure requirements relating to:

– financial instruments with contractual terms that could change the amount of contractual cash flows based on the occurrence (or non-occurrence) of a contingent event that does not relate directly to changes in basic lending risks and costs (such as the time value of money or credit risk), for example, ESG financial instruments.
  Specifically, based on the appropriate level of aggregation or disaggregation, an entity shall disclose:
  - a qualitative description of the nature of the contingent event;
  - quantitative information about the possible changes to contractual cash flows that could result from those contractual terms (for example, the range of possible changes);
  - the gross carrying amount of financial assets and the amortised cost of financial liabilities subject to those contractual terms.
– equity instruments designated at fair value through other comprehensive income.
  For these instruments, an entity shall disclose the fair value at the end of the reporting period and the fair value gain or loss presented in other comprehensive income during the period, showing separately the fair value gain or loss related to investments derecognised during the reporting period and the fair value gain or loss related to investments held at the end of the reporting period. Furthermore, it shall disclose any transfers of the cumulative gain or loss within equity during the reporting period related to the investments derecognised during that reporting period.

With respect to disclosure requirements, the first case is relevant to the Group, specifically ESG financial instruments. In this respect, the related quantitative information will be provided in accordance with the Bank of Italy's indications included in Circular no. 262/05, which is currently being updated.

In accordance with IAS 8, an entity shall apply these amendments retrospectively as of 1 January 2026. However, there is no requirement to restate the comparative period (similarly to the first-time application of IFRS 9).

With respect to the aspects of greatest interest to the Group, namely the SPPI test for products with ESG-linked features and related disclosure, application methods have been defined as part of a specific project involving the relevant departments. Furthermore, measures are currently being implemented in information systems and business processes. As already mentioned, no impacts are expected upon initial application.

Regulation no. 1266/2025 of 30 June 2025 – Contracts Referencing Nature-dependent Electricity – Amendments to IFRS 9 and IFRS 7

These amendments help companies better report the financial effects of nature-dependent electricity contracts, which are often structured as power purchase agreements (PPAs).

Specifically, PPAs may refer to:

– the signing of a renewable power purchase agreement (physical PPA) whereby an entity undertakes to purchase a certain amount of electricity produced from renewable sources (e.g. all energy produced by a wind turbine) at a predetermined fixed price for a certain number of years (even a very long time, e.g. 20 years);
– virtual agreements (or virtual PPAs) whereby there is no physical delivery of energy; in these agreements, the difference between the fixed price determined in the PPA and the spot price at which energy can be purchased/sold in the market is settled.

The IASB acted in the light of the increased use of these contracts[346] which help companies to secure their electricity supply from renewable sources such as wind and solar power, at a fixed price per unit of energy purchased or sold. The amount of electricity generated under these contracts can vary based on uncontrollable factors such as weather conditions and, at certain times (e.g. weekends or during the night), the entity may not consume all of the purchased energy, resulting in the need to resell it on the market, given the limits to the storage of unused energy.

In order to better reflect in the financial statements how these contracts affect the financial performance of a company, the IASB issued amendments to IFRS 9 Financial Instruments and IFRS 7 Financial Instruments: Disclosures.

The amendments include:

– clarifying the application of the own-use exception[347].
  The aim of the amendments is to enable application of the exception envisaged by IFRS 9 for entities that enter into these contracts for the purpose of the receipt of energy in accordance with the entity's expected usage. In this case the contract is outside the scope of IFRS 9 and, consequently, is not classified as a financial instrument to be measured at fair value, but is recognised as a standard energy supply agreement. In practice, the aim is to extend the application of the exception to entities entering into these contracts to receive electricity generated by alternative sources, in accordance with their expected usage, instead of generating short-term profits from price fluctuations, for which fair value presentation is more appropriate;
– allow hedge accounting requirements when these contracts are used as hedging instruments (via a virtual PPA).
  Under the amendments, an entity is permitted to designate as the hedged item a variable nominal amount of forecast electricity transactions, thereby facilitating the effectiveness of the hedging relationship;
– new disclosure requirements which enable investors to understand the effect of these contracts on the performance and cash flows of an entity.
  Specifically, entities are required to provide information about the terms and conditions of these agreements and quantitative and qualitative information about the agreements and their financial effect.

[346] These contracts are becoming increasingly widespread, as they are usually linked to the issuance of renewable energy certificates (RECs).

[347] The own-use exception is defined in paragraph 2.4 of IFRS 9 which governs the contracts to buy or sell a non-financial item in accordance with the entity's expected purchase, sale or usage requirements.

At present, the Intesa Sanpaolo Group has entered into a very small number of PPAs that are already classified as "own use" under current legislation and are therefore recognised as energy supply agreements.

Regulation no. 1331/2025 of 9 July 2025 – Annual Improvements to IFRS Accounting Standards – Volume 11
This Regulation implements the amendments issued by the IASB on 18 July 2024 in Annual Improvements to IFRS Accounting Standards – Volume 11 in the framework of its regular improvement process. The annual improvements contain narrow scope amendments; for example, they remove areas of inconsistency in IFRS Accounting Standards or clarify wording where required. Given the limited nature of the amendments, these are not particularly relevant to the Intesa Sanpaolo Group.

The table below shows the new international financial reporting standards or amendments to existing standards that have not yet been endorsed by the European Commission.

IFRS not endorsed as at 31.12.2025

New standards/interpretations		Date of issue
IFRS 18	Presentation and Disclosure in Financial Statements	09/04/2024
IFRS 19	Subsidiaries without Public Accountability: Disclosures	09/05/2024
Amendments to standards/interpretations		
IFRS 19	Amendments to IFRS 19 Subsidiaries without Public Accountability: Disclosures	21/08/2025
IAS 21	Amendments to IAS 21 The Effects of Changes in Foreign Exchange Rates: Translation to a Hyperinflationary Presentation Currency	13/11/2025

As regards the IASB documents introducing new standards or amending existing accounting standards pending endorsement, the following is noted:

IFRS 18 Presentation and Disclosure in Financial Statements
IFRS 18 Presentation and Disclosure in Financial Statements was issued by the IASB on 9 April 2024. Its application is mandatory for annual reporting periods starting from 1 January 2027 onwards but earlier application is permitted, subject to the completion of the endorsement process. Comparative information needs to be disclosed in respect of the previous period.
The standard will not affect how companies measure their financial performance, but only the presentation. Indeed, the following will be required:

1. *Introduce defined subtotals in the statement of profit or loss*
   Under IFRS 18, entities need to classify items of income and expense in 5 categories: operating, investing and financing - covered by the new definition introduced by IFRS 18 - in addition to income taxes and discontinued operations, which are unchanged.
   With respect to specific operating segments, such as banking, insurance and financial conglomerates, items of income and expense that would normally be classified in the investing or financing categories contribute to the operating performance since for these entities, investing or financing to customers are the main business activity.
2. *Management-defined performance measures (MPMs)*
   Management-defined performance measures (MPMs) are the subtotals of income and expenses, other than those covered by IFRS 18 or specifically required by other IFRS, that an entity uses in public communications outside financial statements (including, for example, the report on operations and the press releases) to communicate to investors management's view of an aspect of the financial performance of the entity. Under IFRS 18, an entity shall disclose information about its MPMs in a single note to the financial statements, including information that enables users of financial statements to understand them.
3. *Grouping (aggregation and disaggregation) of information*
   IFRS 18 provides application guidance on aggregating information in the primary financial statements and accompanying notes, which have complementary roles. With respect to the expense items to be included in the operating category, under IFRS 18, entities must present these items in a way that provides the most useful structured summary of them, by either the "nature" or "function" of the expense. However, a "mixed" (by both nature and function) presentation is also allowed by disclosing the specific expenses by nature in the notes to the financial statements.
   The Intesa Sanpaolo Group has launched a project to analyse the new regulatory provisions and the operational effects of the new standard, also with the aim of gradually adapting its internal procedures and processes. The preliminary stage of these activities, which involved analysing the provisions of the standard and identifying the aspects relevant to the Group, was launched in 2025. In any case, Italian banks will have to wait for the Bank of Italy's initiatives to adapt to the new standard, in particular, with reference to Circular 262/2005, also in order to assess the consequences on application systems.

IFRS 19 Subsidiaries without Public Accountability: Disclosures

IFRS 19 Subsidiaries without Public Accountability: Disclosures was issued by the IASB in May 2024 and permits subsidiaries that are eligible[348] to provide reduced disclosures instead of the disclosure requirements of other IAS/IFRS.

IFRS 19 does not apply to the preparation of the Intesa Sanpaolo Group's consolidated financial statements, nor of Intesa Sanpaolo's separate financial statements. Overall, the scope of the standard is narrowed for banks, financial intermediaries and insurance companies (which often meet the public accountability criterion).

Amendments to IFRS 19 – Subsidiaries without Public Accountability: Disclosures

On 21 August 2025, the IASB issued amendments to IFRS 19 Subsidiaries without Public Accountability: Disclosures. These amendments complement the standard and update it with the reduced disclosure requirements as per the IASB publications issued between February 2021 and May 2024.

Similarly to IFRS 19, these amendments are not relevant to Intesa Sanpaolo.

Translation to a Hyperinflationary Presentation Currency – Amendments to IAS 21

On 13 November 2025, the IASB issued some limited amendments to IAS 21 on the translation of the results and the financial position in a hyperinflationary presentation currency[349].

Under the amendments, when an entity's functional currency is the currency of a non-hyperinflationary economy but its presentation currency is the currency of a hyperinflationary economy, the entity shall translate all amounts using the closing rate at the date of the most recent financial statement, balance sheet items and income and expenses, including comparative amounts.

Furthermore, an entity is required to provide specific disclosure to explain the facts and specific circumstances.

These amendments are irrelevant for the preparation of Intesa Sanpaolo's financial statements since the Group's presentation currency, the euro, is not a hyperinflationary presentation currency.

***

Accounting treatment of the "one-off levy" under Law no. 199 of 30 December 2025 (the "2026 Budget Act")

It's considered appropriate to provide some clarifications regarding the accounting impacts of the 2026 Budget Act which has introduced – among other changes – important changes to the rules governing the "one-off tax calculated on the increase in banks' net interest income", which was imposed on banks by Article 26 of Decree Law no. 104 of 10 August 2023 (converted with amendments by Law no. 136 of 9 October 2023).

Nevertheless, this rule, which provided for a tax of 40% capped at 0.26% of RWA on the increase in banks' net interest income in 2023 compared to 2021, had provided banks with the possibility of allocating an amount equal to at least two and a half times the tax due to a special non-distributable reserve, instead of paying the tax. Intesa Sanpaolo Group banks subject to this rule availed of this option when approving the 2023 financial statements and allocating the profit for the same year. Consequently, they resolved to allocate a total of approximately 2,069 million euro, equal to two and a half times the tax due equals to approximately 828 million euro to the non-distributable reserve[350]. Furthermore, Law no. 136/2023 stipulated that, had the 2023 reserve been used for profit distribution purposes, the 40% tax would have been due, in addition to interest calculated at the ECB's deposit facility rate, starting from 30 June 2024.

Under the 2026 Budget Act:

– irrespective of the resolution of the shareholders' meeting, the distribution of dividends or reserves by Italian banks starting from the financial year beginning after 1 January 2028 (therefore from 1 January 2029) shall be deemed to be made prioritising the use of the above reserve, resulting in the obligation to pay the Tax at a rate of 40%, plus interest calculated from 30 June 2024;
– the option, until 31 December 2028, to make the reserve subject to a one-off levy at the following rates:
  - 27.5% for the existing reserve in the financial statements as at 31 December 2025;
  - 33% for the existing reserve in the financial statements as at 31 December 2026.

According to express provision of the Law, the one-off levy applies to the reserve regardless of the nature of the items that contributed to its formation and the manner of its establishment. Furthermore, payment of the one-off levy within the above terms, including time limits, entails the non-application of the 40% tax, plus interest.

From an accounting point of view, it is believed, first and foremost, that the provisions of the 2026 Budget Act represent a new obligation, separate from the previous one, which was settled at the time by setting up the reserve. In other words, by establishing the reserve, the Bank has fulfilled the obligation imposed by Decree no. 104/2023. This identifies a new obligation in the provisions of the 2026 Budget Act, separate from the previous one. The purpose of this obligation is ultimately deemed to be the payment of a capital contribution following future distributions of dividends or reserves, starting from 2029.

[348] This standard applies to investees without public accountability, whose parent company prepares its consolidated financial statements in accordance with IFRS Accounting Standards. An entity has public accountability if:
a. its debt or equity instruments are traded in a public market; or
b. it holds assets in a fiduciary capacity for a broad group of outsiders as one of its primary businesses.

[349] Under IAS 21, the presentation currency is the currency in which the financial statements are presented, while the functional currency is the currency of the primary economic environment in which the entity operates.

[350]

	Tax	Reserve
Intesa Sanpaolo	796.6 million	1,991.4 million
Fideuram Intesa Sanpaolo Private Banking	23.7 million	59.3 million
Intesa Sanpaolo Private Banking	6.6 million	16.6 million
Isybank	0.6 million	1.5 million
Total	827.5 million	2,068.8 million

As the IFRS Accounting Standards are silent in this respect[351], for accounting purposes, in accordance with IAS 8, which, here, requires the preparers of the financial statements to refer to provisions covering similar circumstances, the Group has decided to make reference to the provisions of IAS 12, which, in paragraph 61A, provides for the recognition of taxes in line with the item on which the tax is calculated.
Specifically, since the obligation stems from the Group's decision to set up an equity reserve instead of paying the tax referred to in Decree Law no. 104/2023 and that this obligation, as mentioned earlier, is separate from the previous one, while referring also to the provisions of the 2026 Budget Act, whereby "*The one-off levy applies to the 2023 Reserve regardless of the nature of the items that contributed to its formation and the manner of its establishment*," this tax, amounting to approximately 570 million euro[352] for the Intesa Sanpaolo Group, should be recognised as a reduction in an available equity reserve with a balancing entry under "Current tax liabilities".

This impact has been recognised in the consolidated financial statements at 31 December 2025 as a result of:
– the definitive approval of the 2026 Budget Act on 30 December 2025;
– the formalisation, by the Boards of Directors of the banks of the Group subject to the rule, of the decision to opt for the one-off levy prior to the approval of the 2025 "draft financial statements".

The Shareholders of Intesa Sanpaolo called in a meeting to approve the 2025 Financial statements are invited to approve the allocation of the levy to the Share premium reserve and the allocation, with effect from the payment of the levy in the income tax return for the tax period in which it is applied, of the entire amount recognised in the Net income reserve pursuant to Law 136 of 9/10/2023 ("2023 Reserve") to the Extraordinary reserve, thereby eliminating the Net income reserve pursuant to Law 136 of 9/10/2023 ("2023 Reserve") that will become freely available, without further charges for Intesa Sanpaolo after fulfilling the obligation to apply the aforementioned tax.

At the direction of the Parent Company, similar resolutions regarding the exercise of the option to pay the one-off levy were also adopted by the Boards of Directors of the subsidiary banks affected by the measure: Fideuram – Intesa Sanpaolo Private Banking, Intesa Sanpaolo Private Banking, and Isybank.

***

Accounting treatment of the stamp duty paid on insurance contracts
Law No. 207 of 30 December 2024 (the "2025 Budget Act") introduced amendments to the stamp duty on periodic communications, applicable to life insurance contracts with financial content under Classes III and V of the Private Insurance Code (Legislative Decree 209/2005), referred to in Article 13, paragraph 2-ter, of the Tariff attached to Presidential Decree 642/1972.
In particular, Article 1, paragraph 87, establishes that, starting from 2025, for the periodic communications relating to life insurance contracts under Classes III and V, the stamp duty must be paid by the insurance companies on an annual basis rather than, as previously, cumulatively upon redemption or upon the expiry of the policy.
With regard to life insurance contracts in force as at 1 January 2025, Article 1, paragraph 88, establishes that the amount corresponding to the total stamp duty, calculated for each year up to 2024, must be paid in four instalments, to be paid annually by 30 June in the period 2025-2028, respectively equal to 50%, 20%, 20% and 10% of the total amount.
The accounting treatment of the receivable from customers arising from the advance payment of the stamp duty differs depending on whether it concerns IFRS 17 insurance contracts or IFRS 9 financial contracts:
– for insurance contracts, the receivable from customers as at 31 December 2025 was recognised at the nominal value of 79.2 million euro under Other assets, and the difference between the nominal value and the present value was recognised as a decrease in the Contractual Service Margin (CSM) amounting to 11.6 million euro;
– for financial contracts, the receivable from customers as at 31 December 2025 had a nominal value of 292 million euro and the Intesa Sanpaolo Group used the risk-free market rate of comparable financial instruments in terms of expected maturities to determine the present value of this receivable, amounting to 255.9 million euro, and recognised the difference between the nominal value and the present value as an expense in the income statement amounting to 36.1 million euro. This accounting approach is consistent with Document No. 10 of the Joint Coordination Committee of the Bank of Italy, Consob and IVASS issued on 30 January 2026.

[351] This case is not considered to fall within:
- the scope of IFRIC 21 "Levies" as the payment of the charge by 2028 would reflect an independent decision by the bank, taken within the scope of its powers, and would therefore not constitute a tax imposed by the public administration; nor
- under the scope of IAS 12 "Income Taxes", as it does not qualify as income tax.

[352] Based on the 27.5% rate on the "2023 Reserve" equal to approximately 2,069 million.

SECTION 2 – GENERAL PREPARATION PRINCIPLES

The Consolidated financial statements are made up of the Balance sheet, the Income statement, the Statement of comprehensive income, the Changes in shareholders' equity, the Statement of cash flows, the Notes to the consolidated financial statements and the related comparative information; the Report on operations prepared by the Directors, on the economic results achieved and on the Intesa Sanpaolo Group's balance sheet and financial position has also been included.
In compliance with the provisions of Article 5 of Legislative Decree 38/2005, the financial statements have been drawn up in euro as functional currency.
The amounts indicated in the financial statements and in the Notes to the consolidated financial statements as well as those in the Report on operations are expressed in millions of euro, unless otherwise specified.
The financial statements are prepared with the application of the general principles set out by IAS 1 and the specific financial reporting standards endorsed by the European Commission and illustrated in Part A.2 of these Notes to the financial statements, as well as in compliance with the general assumptions set forth by the Conceptual Framework for the preparation and presentation of Financial Statements issued by IASB.
No exceptions to the application of accounting standards IAS/IFRS have been made.
The Report on operations and the Notes to the consolidated financial statements contain all information required by the IAS/IFRS, by current regulations, by the Bank of Italy, by Consob (Italian Securities and Exchange Commission) and by the European Securities and Markets Authority - ESMA, in addition to other information which is not compulsory but is nonetheless deemed to be necessary in order to give a true and fair presentation of the Group's situation.

Where the conditions pursuant to IFRS 5 had been met, the reclassified components held for sale, resulting from the balance sheet as at 31 December 2025 and the related details in the Notes to the financial statements, mainly include: (i) properties, including those subject to transfer under the agreement between Intesa Sanpaolo and COIMA, with a total value of around 0.5 billion euro, due to be completed in 2026; and (ii) non-performing loans for 1.9 billion euro gross, due to be disposed under de-risking transactions.

The financial statements forms and the notes thereto show, in addition to the figures for the reference period, the corresponding comparative figures for 2024.
The Attachments include the reconciliation statements to the balance sheet and income statement originally published in the 2024 financial statements, together with specific reconciliations between the latter financial statements and the reclassified statements included in the Report on operations accompanying these financial statements.

Contents of financial statement forms

Balance sheet and income statement

The compulsory forms of the balance sheet and income statement are made up of captions, subcaptions and further detailed information (specified as the "of which" items in the captions and subcaptions).
In the interests of completeness, it should be noted that with regard to the compulsory forms defined by the Bank of Italy, captions which do not have amounts for the reporting year and the previous year have also been shown. In the income statement revenues are indicated without sign, whereas costs are preceded by the minus sign.

Statement of comprehensive income

The statement of comprehensive income shows, starting from the net income/(loss) for the year, the income components recognised as a balancing entry in valuation reserves, net of the tax effect, in compliance with the IAS/IFRS.
Consolidated comprehensive income is represented by providing separate recognition of the income components that will not be reversed to the income statement in the future and those which, conversely, could later be reclassified to income/(loss) for the year under specific conditions. The statement also distinguishes between the portion of income pertaining to the Parent Company and that pertaining to minority interests. Similarly to the balance sheet and the income statement, with respect to the compulsory forms defined by the Bank of Italy, captions which do not present amounts for the reporting year and the previous year are in any case included. Negative amounts are preceded by the minus sign.

Changes in shareholders' equity

The statement of changes in shareholders' equity presents shareholders' equity accounts and changes which occurred in the reference year and in the previous year, broken down in share capital, reserves, reserves from retained earnings, valuation reserves and net income. Treasury shares are deducted from shareholders' equity. The table is presented by inverting the rows and the columns with respect to the same form provided for by the updating of Bank of Italy Circular 262/2005.

Statement of cash flows

The statement of cash flows registered in the reference year and in the previous year is prepared using the indirect method, on the basis of which cash flows from operating activities are represented by net income adjusted for the effects of non-cash transactions.
Cash flows are broken down into flows from operating activities, from investing activities and from financing activities.
In the form, cash flows generated in the year are indicated without sign, whereas cash flows absorbed are preceded by the minus sign.

Contents of the Notes to the consolidated financial statements

The Notes to the financial statements include the information provided for by international accounting standards and Circular 262 issued by the Bank of Italy on 22 December 2005 and subsequently amended, applicable for the preparation of these financial statements. They have been supplemented in accordance with IVASS guidance based on the updates to Regulation 7 of 13 July 2007, directly applicable also pursuant to Circular 262/2005, for the disclosure required by IFRS 17 for insurance contracts pertaining to consolidated insurance companies.

SECTION 3 – SCOPE OF CONSOLIDATION AND CONSOLIDATION METHODS

Scope of consolidation

The Consolidated financial statements include Intesa Sanpaolo and the companies that it directly and indirectly controls and consider in the scope of consolidation – as specifically set out by IAS/IFRS – also the companies operating in dissimilar sectors from the Parent Company as well as private equity investments. Similarly, structured entities are included when the requisite of effective control recurs, even if there is no stake in the company.

Companies are considered subsidiaries where Intesa Sanpaolo is exposed to, or has rights to, variable returns from its involvement with them, and has the ability to affect those returns by exercising its own power over the entity in question.

Control only exists if all of the following conditions are met:

– the power to direct the relevant activities of the subsidiary;
– the exposure, or rights, to variable returns from the involvement with the investee;
– the ability to use the power over the investee to affect the amount of the investor's returns.

Companies are considered as subject to joint control if control is directly or indirectly contractually shared by the Parent Company with one or more other parties external to the Group, or where the decisions about the relevant activities require the unanimous consent of all the parties sharing control.

Companies are considered associates, that is subject to significant influence, when Intesa Sanpaolo, directly or indirectly, holds 20% or more of the voting rights (including "potential" voting rights) or when the Parent Company – despite a lower percentage of voting rights due to specific legal agreements such as the participation of voting syndicates – has the power of participating in the determination of the financial and operating policies of the company.

Certain companies in which the Parent Company holds an equity stake exceeding 20% of voting share capital are excluded from the scope of consolidation and are classified based on the provisions of IFRS 9, since they are of limited absolute amount, or since Intesa Sanpaolo, directly or indirectly, exclusively holds rights on a portion of the rewards of the investment, and does not have access to management policies and may exercise limited governance rights to safeguard its economic interest.

Equity investments held, directly or through funds, in companies involved in the venture capital business are also excluded from the line-by-line scope of consolidation. These equity investments are included in the category of Financial assets measured at fair value through profit or loss.

Companies for which the shares have been received as pledges with voting rights exceeding 20% are not consolidated, in consideration of the substance underlying the pledge, which has the purpose of guaranteeing loans and not of exercising control and direction over financial and economic policies in order to benefit from the economic return on the shares.

Intesa Sanpaolo does not perform management and coordination activity over Risanamento S.p.A. and its subsidiaries pursuant to Article 2497 et seq. of the Italian Civil Code.

Compared to 31 December 2024, there were no new additions to the line-by-line accounting scope of consolidation, while exits concerned:

– the merger by incorporation of Epsilon SGR S.p.A. into Eurizon Capital SGR S.p.A., with legal effect from 1 March 2025 and accounting and tax effects from 1 January 2025 (being a transaction under common control, there is no impact at consolidated level);
– the removal of CIB Insurance Broker Ltd in Liquidation from the Hungarian Commercial Register from 8 April 2025;
– the sale of Intesa Sanpaolo Rent Foryou S.p.A. with legal and accounting effect from 1 June 2025;
– the full demerger of Fideuram Asset Management SGR S.p.A. in favour of Fideuram – Intesa Sanpaolo Private Banking S.p.A. and Eurizon Capital SGR S.p.A., with statutory, accounting and tax effects from 1 July 2025. The full demerger resulted in the dissolution of Fideuram Asset Management SGR S.p.A. (as this was a transaction under common control there was no impact at consolidated level);
– The merger by incorporation of First Bank S.A. into Banca Comerciala Intesa Sanpaolo Romania S.A. The transaction took legal, accounting and tax effect on 31 October 2025;
– the merger by incorporation of Intesa Sanpaolo Ireland Plc into Intesa Sanpaolo Bank Luxembourg S.A. The transaction took legal and tax effect on 17 November 2025, with accounting effect on 1 January 2025;
– the merger by incorporation of Eurizon Capital S.A. into Eurizon Capital SGR S.p.A. The transaction took legal, accounting and tax effect on 31 December 2025;
– the change of the consolidation method of Qingdao Yicai Fund Distribution CO. LTD. from Line-by-Line to Equity, as it fell below the materiality threshold, effective on 1 October 2025.

Finally, for the sake of completeness, it should be noted that Private Equity International S.A. – previously a direct subsidiary of Intesa Sanpaolo S.p.A. – is now held through Intesa Sanpaolo Holding International S.A.

The following table lists the investments in exclusively controlled companies at 31 December 2025.

(a) Type of relationship:
1 - majority of voting rights in the shareholders' meeting;
2 - other forms of control.

(b) Where different from the % portion, the availability of the votes in the Ordinary Shareholders' Meeting is indicated, distinguishing between the effective (*) and potential (**) voting rights, where applicable.

(c) Company consolidated using the equity method given its limited materiality.

(d) Minority shareholders are subject to a legal commitment to purchase 0.7% of share capital.

(e) Company controlled pursuant to IFRS 10, although the Group does not hold any equity stake in the company capital.

(f) In the event of liquidation of the equity investment, the minority shareholder has the right to sell, and Intesa Sanpaolo is required to purchase, the entire minority investment.

(g) Company not subject to the management and coordination activities pursuant to Article 2497 and following of the Italian Civil Code.

(h) Please note that there are put and call option agreements on 35.00% of share capital held by minority shareholders.

(i) A closed-end alternative real estate investment fund managed by COIMA SGR S.p.A.

(j) Please note that there are put and call option agreements on 24% of share capital held by minority shareholders.

(k) Please note that there are put and call option agreements on 44.74% of share capital held by minority shareholders.

2. Significant evaluations and assumptions in determining the scope of consolidation

As stated above, companies are considered subsidiaries where Intesa Sanpaolo is exposed to, or has rights to, variable returns from its involvement with them, and has the ability to affect those returns by exercising its own power over the entity in question.
Control only exists if all of the following conditions are met:
– the power to direct the relevant activities of the subsidiary;
– the exposure, or rights, to variable returns from the involvement with the investee;
– the ability to use the power over the investee to affect the amount of the investor's returns.

In particular, the Group considers the following factors in evaluating the existence of control:
– the purpose and the structure of the investee in order to identify its aims and relevant activities, or the activities that significantly affect the investee's returns, and how those activities are governed;
– power, in order to understand whether the Group has the contractual right to manage the relevant activities;
– the exposure to variable returns from the investee in order to evaluate whether the return recognised by the Group is subject to variations depending on the investee's returns.

Furthermore, in order to evaluate the existence of control, potential principal-agent relationships are taken into consideration.
In order to evaluate whether the investee is acting as a principal or an agent, the Group takes account of the following factors:
– the decision-making power on the relevant activities of the subsidiary;
– the rights of other parties;
– the payments to which the Group is entitled;
– the Group's exposure to variable returns resulting from any investment in the investee.

IFRS 10 identifies relevant activities as activities of the investee that significantly affect the investee's returns.
In general terms, when the relevant activities are managed through voting rights, the following factors determine evidence of control:
– direct ownership, or indirect ownership through its subsidiaries, of more than half the voting rights of an entity, unless in exceptional circumstances it can be clearly demonstrated that such ownership does not constitute control;
– ownership of half, or less, of the votes which can be cast at the shareholders' meeting, and the practical ability unilaterally to govern the relevant activities through:
  - the control of more than half the voting rights as enshrined in an agreement with other investors;
  - the power to determine the financial and operational policies of the entity, as conferred by the Articles of Association or by contract;
  - the power to nominate or remove the majority of the members of the Board of Directors or of the equivalent corporate governance body;
  - the power to cast the majority of the votes at meetings of the Board of Directors or of the equivalent corporate governance body.

In order to exercise power, it is necessary for the rights that the Group has over the investee to be material; to be material, the Group must have the ability to use its rights when decisions relating to relevant activities are taken.
The existence and the effect of potential voting rights, where material, are taken into consideration in evaluating whether power exists to shape the managerial and financial policies of another entity.
Sometimes the Group has "de facto" control over certain entities when it possesses rights to determine unilaterally the relevant activities of the investee, even though it does not have the majority of the voting rights.
On the contrary, cases may emerge where the Group, though holding more than half of the voting rights, does not control the investee since, consequently to agreements with other investors, the exposure to variable returns from the involvement with the investees is not considered significant.
Subsidiaries can also include "structured entities" in which the voting rights are not the dominant factor in deciding who controls the entity; this includes special purpose vehicles (SPEs/SPVs) and investment funds. Structured entities are considered to be controlled where:
– the Group has powers enshrined in contractual rights allowing it to govern the relevant activities; and
– the Group is exposed to the variable returns deriving from such activities.

3. Investments in subsidiaries with significant minority interests

3.1 Minority interests, minority voting rights and dividends distributed to minorities

1	Bank of Alexandria	4,389	59	4,132	116	3,363	634	399	455	-140	297	188	-	188	5	193

4. Significant restrictions

In terms of significant restrictions, it is noted that the Intesa Sanpaolo Group is subject to the supervisory rules provided for by Directive 2013/36/EU (CRD) and Regulation (EU) 575/2013 (CRR), as subsequently amended, and controls financial institutions subject to the same or similar regulations aimed at maintaining an adequate level of regulatory capital in relation to risks taken; therefore, the ability of subsidiary banks or financial institutions to distribute capital or dividends is dependent on the fulfilment of the regulatory thresholds set in those regulations.

In view of the above, with regard to the disclosures to be made in accordance with IFRS 12, the limitations currently set by the Russian regulations essentially impose restrictions on repayments and payments to parties resident in unfriendly countries, which also affect the subsidiary Banca Intesa Russia. In this regard, it should also be noted that the current legal restrictions on transferring monetary resources beyond the country's borders do not prejudice in any way the ownership of the amounts (due to the creditor banks), nor do they constitute an obstacle to maintaining control over the Russian subsidiary. For more information, see the "Section 5 – Other aspects – Risks, uncertainties and impacts of the Russian/Ukrainian crisis" below.

Lastly, within the Group, there are insurance companies subject to the Solvency Capital Requirements of insurance companies established by the Solvency II legislation.

5. Other information

In preparing the Intesa Sanpaolo consolidated financial statements, the financial statements of all subsidiaries have the same financial year-end, except for that reported below for the Ukrainian subsidiary Pravex Bank and Risanamento in the following paragraph on Consolidation methods.

Consolidation methods

Full consolidation

This method involves the “line by line” aggregation of the individual amounts reported in the balance sheets and income statements of the subsidiary companies concerned. Following the allocation to minority shareholders of their interests, in a specific caption, in equity and in the result for the period, the residual value is eliminated against the book value of the subsidiaries concerned.
Any positive differences arising on consolidation, after the allocation to the assets and liabilities of the consolidated subsidiary, are recorded under Intangible assets as goodwill or other intangible assets. Negative differences are recognised in the income statement.
Assets, liabilities, income and expenses between consolidated companies are totally eliminated.
Business combinations must be accounted for using the "acquisition method" in accordance with IFRS 3, whereby identifiable assets acquired or liabilities assumed (including contingent liabilities) are recognised at their fair value at the acquisition date. Moreover, for each business combination, any minority interest in the acquired company can be recognised at fair value or in proportion to the minority investment in the net identifiable assets of the acquired company. Any excess of the consideration transferred (being the fair value of the assets sold, the liabilities incurred and the equity instruments issued) over the fair value recognition of minority interests with respect to the fair value of the assets acquired and the liabilities assumed is recognised as goodwill. If the consideration is lower, the difference is taken to the income statement.
The "acquisition method" is applied starting from the acquisition date, that is from the moment in which control of the acquired company is obtained. Therefore, the economic results of a subsidiary acquired in the reference period are included in the Consolidated financial statements starting from the acquisition date. Likewise, economic results of a subsidiary sold are included in the Consolidated financial statements until the date in which control ceased. The difference between sale price and book value at the date of disposal (including foreign exchange differences recorded in shareholders’ equity on consolidation, over time) is accounted for in the income statement.
Where necessary – and apart from entirely marginal cases – the financial statements of consolidated companies which are drawn up using different accounting criteria are restated to be compliant with the standards used by the Group.

With regard to the Ukrainian subsidiary Pravex Bank, given the continuing critical situation in the city of Kyiv (where the subsidiary is headquartered) it was decided – with a view to containing “operational” risk – that it was best to consolidate the Ukrainian bank’s figures by means of the accounting values as at 30 September 2025. Specifically, for the financial statements as at 31 December 2025, the balance sheet and income statement results of Pravex were included based on a consolidation package, drawn up in compliance with the IAS/IFRSs, as set out in the Group Accounting Policies, related to 30 September 2025, using the exchange rate as at 31 December 2025 for conversion into Euro.
The decision to use the data as at 30 September 2025 for the line-by-line consolidation of Pravex, also taken in light of the slight materiality of the subsidiary, and motivated by objective operational restrictions, is also based on the indications in IFRS 10, though for specific cases[353].

With regard to the subsidiary Risanamento, over which Intesa Sanpaolo does not exercise the management and coordination envisaged in Article 2497 and following of the Italian Civil Code, by the date of approval of Intesa Sanpaolo’s financial statements there had been no board meetings of the company approving the related accounts as at 31 December 2025, and it was therefore not possible to include them in Intesa Sanpaolo’s consolidated financial statements, in accordance with the Group’s policy which stipulates that the income statements and balance sheet data of the subsidiaries must have been approved beforehand by their respective Boards of Directors in order to be included in the Group’s consolidated financial statements. As a result the data of the Risanamento Group as at 30 September 2025 were used as the contribution to the consolidated financial statements of Intesa Sanpaolo as at 31 December 2025.

Measurement using the equity method

Associates and companies subject to joint control are consolidated with the equity method. The equity method requires the initial recognition of the equity investment at cost and its subsequent value adjustment based on the stake in the shareholders’ equity of the company.
Any difference between the value of the equity investment and the shareholders’ equity of the company involved is recorded in the book value of the company.
The valuation of the portion of shareholders’ equity does not consider any potential voting rights.
The portion of the company’s results for the period pertaining to the Group is recorded in a specific caption of the consolidated income statement.
If there is evidence of impairment, the recoverable amount of the investment is estimated, considering the present value of the future cash flows which may be generated by the investment, including the final disposal value. If the recoverable amount is lower than the carrying value, the difference is recorded in the income statement.
For the consolidation of the companies subject to joint control and investments in associates, the most recent approved (annual or interim) figures have been used. In certain marginal cases, the companies do not apply IAS/IFRS and, therefore, for such

[353] IFRS 10 states that, where it is not possible to use the subsidiary’s data updated to the same reporting date as the consolidated financial statements, it is permitted to use the previous accounting data, provided that previous date is no more than 3 months prior. For more details, see the following paragraphs of IFRS 10: IFRS 10.B92 “The financial statements of the parent and its subsidiaries used in the preparation of the consolidated financial statements shall have the same reporting date. When the end of the reporting period of the parent is different from that of a subsidiary, the subsidiary prepares, for consolidation purposes, additional financial information as of the same date as the financial statements of the parent to enable the parent to consolidate the financial information of the subsidiary, unless it is impracticable to do so”; IFRS 10.B93 “If it is impracticable to do so, the parent shall consolidate the financial information of the subsidiary using the most recent financial statements of the subsidiary adjusted for the effects of significant transactions or events that occur between the date of those financial statements and the date of the consolidated financial statements. In any case, the difference between the date of the subsidiary’s financial statements and that of the consolidated financial statements shall be no more than three months, and the length of the reporting periods and any difference between the dates of the financial statements shall be the same from period to period.”

companies it was verified that the adoption of IAS/IFRS would not have produced significant effects on the Intesa Sanpaolo Group's Consolidated financial statements.

Conversion of financial statements in currencies other than the euro

The financial statements of non-Eurozone companies are translated into euro by applying the spot exchange rate at the year end to assets and liabilities in the Balance sheet, and the average exchange rate for the year to Income statement captions. Foreign exchange differences from the conversion of the financial statements of such companies, deriving from the application of different foreign exchange rates to assets and liabilities and the income statement, are recorded in Valuation reserves under shareholders' equity. Foreign exchange differences on the shareholders' equity of the subsidiaries are also recorded in Valuation reserves.

All foreign exchange differences are reversed to the income statement of the year in which the foreign operation is sold.

SECTION 4 – SIGNIFICANT EVENTS AFTER THE REPORTING DATE

Below we refer to the main events occurring after the reporting date. For the related details, please refer to that set out in the Report on operations to these Consolidated Financial Statements, in the section "2025 in brief".

On 16 January 2026 Fideuram - Intesa Sanpaolo Private Banking took over 21% of the shares of Reyl & Cie S.A. held by the minority shareholder Reyl Holding S.A., while on 30 January. it purchased the remaining 3% held by three natural person shareholders. As a result, the direct percentage stake of Fideuram - Intesa Sanpaolo Private Banking increased from 46% to 70%, in addition to the 30% indirect holding through the wholly-owned subsidiary RB Participations S.A. Having obtained full control over the Swiss bank, the Intesa Sanpaolo Group intends to further strengthen and accelerate the development of its operations in Switzerland.

On 28 January 2026, Intesa Sanpaolo, together with the National Interbank Deposit Guarantee Fund, Banca Monte dei Paschi di Siena, Banco BPM, BPER Banca, UniCredit and Banca Progetto under extraordinary administration, executed a new binding term sheet for the completion of the restructuring transaction of Banca Progetto, which is classified as preventive in nature pursuant to Article 35 of the Articles of Association of the National Interbank Deposit Guarantee Fund.

With regard to the changes introduced by Law No. 199 of 30 December 2025 (2026 Budget Act) to the rules governing the "One-off tax calculated on the increase in net interest income" established by Article 26 of Decree Law No. 104 of 10 August 2023, converted, with amendments, by Law No. 136 of 9 October 2023, on 2 February 2026, the Board of Directors of Intesa Sanpaolo resolved (i) to exercise the option to pay the one-off levy at a rate of 27.5% of the "Net income reserve pursuant to Law 136 of 9/10/2023", by allocating the corresponding amount to the Share premium reserve, with an offsetting entry in "Current tax liabilities" in the Financial Statements as at 31 December 2025, and (ii) to propose to the Shareholders' Meeting approving the 2025 Financial Statements the approval of that allocation to the Share premium reserve, together with the allocation – effective from the payment of the aforementioned levy in the income tax return for the period in relation to which it is applied – of the entire amount recorded in the "Net income reserve pursuant to Law 136 of 9/10/2023" to the Extraordinary Reserve, with consequent elimination of the "Net income reserve pursuant to Law 136 of 9/10/2023", because it is freed from any obligations. Under instruction from the Parent Company, similar resolutions regarding the exercise of the option to pay the one-off levy were also adopted by the Boards of Directors of the subsidiary banks concerned by the measure: Fideuram - Intesa Sanpaolo Private Banking, Intesa Sanpaolo Private Banking and Isybank.

On 2 February 2026, on approval of the separate and consolidated results as at 31 December 2025, the Board of Directors of Intesa Sanpaolo:

- resolved to submit a proposal to the Ordinary Shareholders' Meeting of 30 April 2026 for (i) total dividends of 6.5 billion euro, of which 3.2 billion euro in interim dividends paid in November 2025 and 3.3 billion euro as proposed remaining dividends for 2025 to be paid in May 2026, and (ii) a purchase of own shares for annulment (buyback) for 2.3 billion euro, already authorised by the ECB, to be launched in July 2026, subject to approval of the Shareholders' Meeting;
- approved the 2026-2029 Business Plan, which was presented to the financial community on the same day;
- in order to enhance the Group employees' role as key enablers in the achievement of the Plan's objectives, also resolved to propose at the Shareholders' Meeting of 30 April 2026 (i) capital increases to serve two 2026-2029 long-term incentive plans, based on financial instruments of Intesa Sanpaolo S.p.A. and reserved for all Group employees, as well as (ii) an update of the maximum number of shares as provided in the delegation of powers granted to the Board of Directors on 29 April 2022 by the Extraordinary Shareholders' Meeting to carry out a share capital increase without payment to serve the 2022-2025 Performance Share Plan long-term incentive plan based on financial instruments.

SECTION 5 - OTHER ASPECTS

RISKS, UNCERTAINTIES AND IMPACTS OF THE RUSSIAN/UKRAINIAN CRISIS

The extremely serious situation arising following the outbreak of the conflict between Russia and Ukraine on 24 February 2022 was immediately closely monitored and assessed by Intesa Sanpaolo, also in light of the related guidance provided by the regulators, given that the Group has:

– a direct presence with two subsidiaries in the warring countries, Pravex Bank Joint-Stock Company (Pravex) and Joint-Stock Company Banca Intesa (Banca Intesa Russia), and is therefore particularly exposed to the consequences of the conflict;
– cross-border exposures stemming from its corporate and investment banking activities.

In its lending activities, the IMI CIB Division had over time financed counterparties resident in the Russian Federation. More than two-thirds of the loans to Russian customers disbursed before the conflict involved leading industrial groups, which have established commercial relationships with customers belonging to the main international supply chains, a significant amount of which derives from commodity exports. At the outbreak of hostilities, loans to Russian customers represented around 1% of the Intesa Sanpaolo Group's total loans to customers, net of Export Credit Agency - ECA guarantees. Due to the existence of those guarantees, the credit risk on those exposures can be considered as not referring to either Russia or Ukraine.

That being said, in this section we note some information relating to the subsidiary banks:

– Banca Intesa Russia: this is a Moscow-based bank, 47%-owned by Intesa Sanpaolo and 53% by Intesa Sanpaolo Holding International. It operates with 16 branches and 672 staff;
– Pravex is a small commercial bank, wholly-owned by Intesa Sanpaolo and based in Kyiv. It operates with 39 branches (mainly in the Kyiv region) and 530 staff.

Albeit within the objective limits dictated by the contingent scenario, particularly for Pravex, the two subsidiaries are continuing to operate with the support of the Parent Company structures.

Also for the purposes of the 2025 Financial Statements, Intesa Sanpaolo's continuing control over the two entities has been confirmed, which can be evidenced from various points of view:

– in accounting/administrative terms, by acquiring the accounts for consolidation purposes. Specifically, as explained in greater detail in Part A: Section 3 - Scope of consolidation and consolidation methods, and also in line with the methodological choices made for the 2024 Annual Report, for the Russian subsidiary, the accounts as at 31 December 2025 were acquired accurately and in a timely manner, while for Pravex, it was decided to maintain the accounts produced for consolidation as at 30 September 2025, valued at the exchange rate as at 31 December 2025, considering the specific operating difficulties of the subsidiary, as well as in light of the substantial immateriality of its balance sheet figures at Group level;
– in terms of statutory regulations, with specific regard to the Russian subsidiary, the Parent Company was able to exercise its power to determine, in compliance with Russian regulations, the composition of the management body of Banca Intesa Russia at the Shareholders' Meeting of 5 June 2025. The turnover of officers was the result of appointments proposed by the Parent Company that passed the approval process of the Russian Central Bank. Also for the Ukraine subsidiary, there was routine turnover in the governance bodies in 2025, based on the nominations expressed by the Parent Company;
– in terms of steering the business, the two entities continue to move ahead with their business following the instructions of the Parent Company;
– in terms of coordination and control, as the Parent Company's control functions (including the support function of the Manager responsible for preparing the Company's financial reports, namely Administrative and Financial Governance) continue to carry out their roles through the regular receipt and analysis of the planned information flows, interacting with the structures of the subsidiaries through the communication channels available, in line with any limitations that may arise over time, also handled using contingency solutions.

Moreover, the conclusions regarding the maintenance of control over Banca Intesa Russia are not invalidated by the limitations currently set by Russian regulations which, substantially, impose restrictions to repayments and payments to parties resident in "unfriendly" countries. Aware of the restrictions imposed by the specific regulatory framework, Banca Intesa Russia credited to specific Russian accounts, as provided by law, the monetary resources for the repayment of intragroup exposures that matured in the meantime. The potential use of the resources credited on these accounts – equal to a value of around 30 million euro at the end of December 2025 – is limited to several specific purposes, internal to Russia. In this context, it must be considered that the current limitations do not constitute the "expropriation" of the amounts in any way (nor are they even indicators of a loss of control over the subsidiary's assets). Rather, they derive from the temporary legal "freezing" of the free availability of amounts which, based on economic rights, would otherwise be available for their owner.

Since the hostilities broke out, the total exposure to the Russian Federation has constantly been decreasing sharply, as indicated by the ECB recommendations, the last of which was issued in December 2024 ("Decision establishing prudential requirements relating to further reduction of the risks connected with the Supervised Entity's business in Russia"). The Decision Letter imposes restrictions on Intesa Sanpaolo directly aimed at the operations of Banca Intesa Russia, along with a recommendation regarding the reduction of the Group's cross-border operations in Russia. The measures set out for Banca Intesa Russia consist of reducing i) the loan portfolio; ii) the volume of customer deposits; iii) the placement of deposits with financial institutions domiciled in Russia; and iv) payment activities originating from Russia, in currencies other than the rouble.

In terms of the valuation of exposures to Russia and Ukraine, it must be noted that the valuation approaches for the credit exposures to Russian and Ukrainian counterparties adopted for the 2025 Annual Report are substantially consistent with those adopted for the 2024 Annual Report. For a more complete discussion of the quantitative and valuation aspects of the Group's exposures to Russian and Ukrainian counterparties, for which – as stated – the de-risking already started in the three-year period 2022-2024 continued further in 2025, refer to Part E (Section 2 "Risks of the prudential consolidation") of these

Consolidated Financial Statements. In this section, we note that the elements mentioned above currently confirm the outlook of maintaining the subsidiary Banca Intesa Russia, whose assets (and related risks), albeit significantly decreased by the wind-down plan, show positive income for 2025 (139 million euro). Therefore, that result is calculated for the purposes of the 2025 consolidated income, considering that the forecast income of the bank, though gradually decreasing given the wind-down scenario, also confirms positive values for the future. Allowances for Risks and Charges allocated up to 31 December 2024 and aimed at eliminating the value of the shareholders' equity of BIR at that date remained substantially unchanged, pending the forward-looking monitoring of the geopolitical context, as a result of which we will decide whether to take additional decisions. Those allowances amount to 438 million euro (382 million euro as at 31 December 2024. an increase substantially caused by the revaluation of the rouble on the euro). Considering the assumption as at 31 December 2025 of a positive consolidated carrying amount of BIR, substantially equal to the 2025 income of the subsidiary reflected in the consolidated income statement (139 million euro), it was necessary to submit that value to impairment testing, which was conducted based on a specific valuation commissioned from a third party advisor. The results of the valuation support the consolidated carrying amount of Banca Intesa Russia as at 31 December 2025.

Lastly, it is also noted that, given the material nature of the issues in question, in the Report on operations of the Consolidated Financial Statements, a specific section was dedicated to "The military conflict between Russia and Ukraine". This section summarises the exposures of the Group due from entities resident in the two countries and the main related accounting issues, including those of measurement, in addition to the initiatives of the Intesa Sanpaolo Group in favour of Ukraine, as well as the aspects regarding the framework of sanctions against the Russian Federation and cybersecurity.

SIGNIFICANT JUDGEMENTS IN APPLYING IFRS 17

With regard to the insurance companies included in the consolidation, the disclosure required by IFRS 17 Insurance Contracts, paragraphs 117 to 120, on significant judgments made in applying the standard, to ensure consistency of treatment, is provided in the Accounting Policies, Section A.2 Main financial statement captions in relation to the insurance assets and liabilities, which describes, among others, the methods used to determine the discount rates and the risk adjustment for non-financial risk, and to estimate the future fulfilment cash flows for the insurance contracts. The quantitative details of the yield curve used to discount cash flows, required by paragraph 120 of IFRS 17, are provided in Part E in relation to the Insurance Risks.

CLIMATE-RELATED MATTERS

In the last few years, monitoring of ESG risks, specifically climate-related risks, and the impact that these may generate on the valuation of assets recorded in the financial statements have become issues of increasing interests, which required the intervention of the Supervisory Authorities (specifically ESMA and Consob) and the IASB with the two-fold objective of:

– supplementing ESG issues and, specifically, climate-related issues in financial reporting;
– pursuing greater connection between financial reporting and sustainability reporting.

As usual, in preparing the 2025 Annual Report, the Intesa Sanpaolo Group considered the recommendations set out in the "European Common Enforcement Priorities for 2025 Annual Financial Reports", published by ESMA in October 2025, also referenced by Consob. In line with the guidelines defined starting in 2021, issuers are required to assess the potential impacts of climate-related risks on financial statement captions and provide adequate disclosure, where those impacts are material. Specifically, again this year, ESMA is highlighting the importance of guaranteeing the consistency of and connection between the information on climate-related impacts provided in financial reporting and that included in the sustainability report.
ESMA has also called attention to the IASB document "Disclosure about Uncertainties in Financial Statement – Climate Related Examples", the final version of which was published in November 2025. The IASB has developed these examples to assist entities in improving reporting on uncertainties, specifically climate-related uncertainties. The examples do not change the requirements of the accounting standards in force, but provided several useful ideas for formulating materiality judgments, aspects to consider to assess the material assumptions and uncertainties in estimates and regarding the disaggregation of information. Despite the fact that a no date is provided for the entry into force of their application, the Regulator expects that those indications will be considered already in preparing the 2025 Annual Report, an expectation with which the Intesa Sanpaolo Group has complied.

As stated in previous reports, in light of their growing importance, ESG risks, and in particular climate risk, are subject to constant attention by the Intesa Sanpaolo Group, within the overall Risk Management framework, which, as described in more detail in Part E, involves a materiality analysis, the establishment of specific controls within the RAF, the performance of scenario analyses, and the monitoring of ESG risks divided across the different risk categories (e.g. credit, market, liquidity). The materiality analysis contributed to determining the financial materiality envisaged in the Consolidated Sustainability Statement, included in the Report on operations, which should be referred to for more details, in order to identify the material risks the Group is exposed to, which may also influence the measurement of the various financial statement items potentially impacted by climate risks and the related disclosures. Indeed, the Intesa Sanpaolo Group recognises the importance of developing techniques that can more accurately identify how and to what extent environmental risks, and in particular climate-related risks, may translate into financial risks, by incorporating environmental forward-looking information into its valuation models.
When identifying the time horizon over which environmental risks may generate an impact, it is necessary to consider the difficulty in determining the timing of the related effects with reasonable certainty. In this regard, the EBA in its "Report on the role of environmental and social risks in the prudential framework" of October 2023 notes that chronic physical risks may reasonably have an impact over a relatively long-term time horizon and only some acute physical risks, as well as transitional risks, may materialise over a short to medium term time horizon. The results of the impact assessments conducted so far by the Intesa Sanpaolo Group (materiality assessment and climate scenario analysis) have shown that the Group is not exposed to a material extent to climate risks in the short term. Over the medium- to long-term horizon, exposure to these risks could intensify in a limited and concentrated manner in areas already subject to control and monitoring. In particular, with regard to the transition risk on the most emission-intensive sectors of the banking book (Oil & Gas, Power Generation and Automotive), intermediate sector targets to 2030 have been set in the Business Plan – aligned to the Net-Zero target by 2050 – subject to a

transition plan in accordance with the NZBA guidance[354], to mitigate the potential future risk. The monitoring has been progressively extended to other sectors, in line with the commitments made upon joining the NZBA and with the request for validation by the SBTi.
With regard to the recording and valuation of financial statement captions pursuant to the IFRSs, given the nature of the items recognised in the financial statements, credit is the category for which climate risk is potentially most significant, in relation to which, as set out in Part E, the Group is continually developing its internal valuation models to include ESG and climate-related factors, within its credit risk, which currently do not appear to have a material effect on the valuations produced by the models. In particular, for the measurement of the ECL (Expected Credit Loss) of loans, the Intesa Sanpaolo Group has taken steps to also include climate risk among emerging risks. Since 2025, the ECL measure has contained an in-model adjustment that aims to incorporate the effect of climate-related risk in the credit risk parameters, focusing on performing loans to businesses and mortgage loans to individuals, as set out in Part A - Accounting policies, Section A.2 - Main financial statement captions and Impairment of financial assets, and in Part E, Section 2 Credit risk management policies, 2.3 Methods for measuring expected losses.
With regard to connecting information, we are continuing in the commitment to strengthen the integration and consistency of the data among the various sections of the Annual Report. Even though the concept is continuously evolving, the objective remains the full integration between financial reporting and sustainability reporting, a milestone which future activities are aiming for.

ESG FINANCIAL INSTRUMENTS FEATURING A SUBSEQUENT CHANGE IN INTEREST RATES NOT LINKED TO CREDIT RISK

The Intesa Sanpaolo Group supports customers in the ESG transition by granting new loans and opening credit lines for projects related to the green economy, circular economy and climate transition, as well as through the S-Loan offering, as described in more detail in the Consolidated Sustainability Statement, included from this year in the Report on operations.
In view of the above, a specific framework of incentives/benefits in terms of the rate applied has been developed for loans aimed at supporting the ESG transition, based on the purposes of the initiative and the alignment with the European Taxonomy. These may entail a subsequent variation of the rate depending on whether or not the borrower achieves specific ESG KPIs.
In that regard, the Group's offering is made up of highly standardised products, mainly offered by the Banca dei Territori Division (as at 31 December the related remaining exposure amounted to around 7.3 billion euro) or more customised products, mainly offered by the IMI Corporate & Investment Banking Division (as at 31 December the related remaining exposure amounted to around 9.8 billion euro).
The support provided by Intesa Sanpaolo Group to its customers during the transition phase is further reflected in the investments in sustainable securities classified under the Hold to Collect and Hold to Collect and Sell business models. The exposure in securities included sustainable-linked bonds, which are subject to possible (upward) variability of the interest rate, of around 0.5 billion euro. The expected impacts on net interest income in subsequent years, resulting from the failure of issuers to achieve the KPIs, are considered minimal.
With regard to the SPPI tests on financial instruments subject to possible subsequent variability of the interest rate depending on whether or not the borrower or the issuer achieves specific ESG KPIs, these clauses are not considered critical following qualitative-quantitative analyses in place aimed at verifying the nature and absolute and relative impacts of those clauses on the overall contractual cash flows of the instrument. Those results were confirmed by the application of the internal policy defined by the Group in light of the clarifications set out in the Amendment to IFRS 9, whose first-time adoption did not give rise to impacts on equity or reclassifications of balance sheet assets.

[354] In October 2025 the Net Zero Banking Alliance changed its structure, transforming from a voluntary membership-based alliance to a new framework initiative, with the goal of continuing to provide guidelines to promote the transition in compliance with the Paris Accord.

OTHER ASPECTS

Option for the national fiscal consolidation provisions

Intesa Sanpaolo and the Group's Italian companies have adopted the "national fiscal consolidation", set forth by Articles 117-129 of the Combined Tax Regulations, introduced by Legislative Decree 344/2003. It provides an option, based on which the total net income or fiscal loss of every subsidiary taking part in the fiscal consolidation procedure – together with withholding tax, tax deductions and tax credits – is transferred to the parent company, which determines a single taxable income or loss carried forward (that is the result of the sum of its own income/loss and of the income/loss of the participating subsidiaries) and, consequently, a sole tax debit/credit. Based on this option, Group companies that opted for the "national fiscal consolidation" determine the tax charge pertaining to them and the corresponding taxable income is transferred to the Parent Company.

Set up of a VAT Group

Intesa Sanpaolo and all of the Group companies that meet the requirements for participation opted to set up the VAT Group, governed by Articles from 70-bis to 70-duodecies of Presidential Decree 633/1972.
This option takes effect from 1 January 2019 and has a duration of three years, automatically renewed each year, unless revoked.
As a result of this option, the tax will not apply to either the provision of services and sales of goods between participating parties, with a few exceptions. Sales of goods and provision of services by a participating party to an external party shall be considered made out by the VAT Group. Sales of goods and provision of services by an external party to a participating party shall be considered made to the VAT Group.

"Cooperative compliance" regime

Intesa Sanpaolo applied for and obtained from the Italian Revenue Agency admission to the "cooperative compliance" regime set out in Legislative Decree 128/2015. The admission is effective from the tax period 2017.
The purpose of this regime is to promote the use of enhanced forms of communication and cooperation based on the reciprocal trust between the tax authorities and the taxpayer, as well as favouring the prevention and resolution of tax disputes, in the common interest of the parties.
Under the regime, Intesa Sanpaolo is required to maintain an appropriate system of recognition, measurement and management of tax risk as well as act in a cooperative and transparent manner, and the Italian Revenue Agency is required to promote a relationship based on the principles of transparency, cooperation and fairness.
In addition to Intesa Sanpaolo, the following companies applied for admission and were admitted to the regime: Fideuram - Intesa Sanpaolo Private Banking (with effect from 2018), as well as Intesa Sanpaolo Assicurazioni, Intesa Sanpaolo Protezione, Fideuram Vita and Eurizon SGR (with effect from 2019). Intesa Sanpaolo Private Banking and SIREF were admitted in 2021 with effect from 2020.

Auditing

EY S.p.A. audited the Consolidated financial statements, in execution of the Shareholders' Meeting resolution of 30 April 2019, which appointed the company as independent auditor for the years from 2021 to 2029, included.

Other aspects

A reformulation of the rules on the transparency of government grants laid down in Article 1, paragraphs 125-129 of Law No. 124/2017 has been introduced in Article 35 of Decree Law 34/2019 (the "Growth" Decree), converted by Law 58/2019. This reformulation indicates that the scope of transparency obligations applies to information regarding grants, subsidies, advantages, contributions or aid, in cash or in kind, "not of a general character and which do not represent consideration, remuneration or compensation" effectively disbursed by public authorities and the entities indicated in Article 2-bis of Legislative Decree 33/2013.
In the light of this reformulation, additional interpretative clarification provided in Assonime Circular No. 32 of 23 December 2019 has confirmed that the transparency obligation applies to awards of economic benefits arising from a bilateral relationship between a public entity and a specific beneficiary. Sums received by a company as consideration for a service rendered, as remuneration for an assignment received or as compensation for damages are expressly excluded. Economic advantages received in application of a general regime, such as tax or contribution relief accessible to all parties who meet certain conditions, are also excluded.
In consideration of the above, there were no cases to report in 2025 for the Group's Italian companies.
In the interest of completeness, reference should also be made to the National State Aid Registry, available for public consultation on the relevant website, in which aid measures and the related individual aid packages granted and recorded in the system by the managing entities are published, although, given the foregoing, for the Group's Italian companies the circumstances indicated therein for the year 2025 are not subject to financial statement transparency obligations pursuant to paragraphs 125 and 125-*bis*.

A.2 – MAIN FINANCIAL STATEMENT CAPTIONS

To ensure uniformity in the accounting policies used for the financial statements, the Intesa Sanpaolo Group has adopted an internal set of rules and policies for the various operational and organisational areas.

The methodological document used for the application of the accounting standards is the "Group Accounting Policies", which describes the application models adopted by the Group, within the framework of the standards and the legislation applicable to the various companies/subsidiaries, and sets out the choices made when the regulations envisage alternative or optional accounting treatments.

With regard to the valuation processes, the Group, in the document “Guidelines for the valuation of Balance Sheet Items”, has drawn up the principles and regulatory framework for the valuation of the balance sheet items and the roles and responsibilities of the Corporate Bodies, the Manager responsible for preparing the Company’s financial reports and the Parent Company’s corporate functions involved in the valuation process; the prerequisites for the existing valuation processes and the control system necessary to ensure proper valuation; the general valuation processes based on accounting standards specific to the various categories of balance sheet items being measured (assets and liabilities); and the rules for guidance and coordination of Group Companies on the valuation of balance sheet items.

The guidelines and policies also include the Business Model Rules, the Rules on the measurement of Expected Credit Loss in accordance with IFRS 9 (Impairment Policy), and the Rules for Valuation of Financial Instruments at Fair Value (former Fair Value Policy), in addition to more specific documents relating to non-performing loans, equity investments, and the management of hedging financial instruments.

Finally, with regard to prudential supervision, the Group has drawn up a specific document called "Harmonised Prudential Supervision Rules".

In general, these documents are approved by the competent Corporate Bodies. They are updated by the management structures in response to needs arising both from external factors (e.g. changes in regulations) and from internal factors within the Group (e.g. new operations and products). Those documents are subject to a specific approval process, based on the significance and scope of the changes made.

1. Financial assets measured at fair value through profit or loss (FVTPL)

Classification criteria

This category contains the financial assets not classified as Financial assets measured at fair value through other comprehensive income or as Financial assets measured at amortised cost. This caption includes in particular:

– financial assets held for trading, essentially consisting of debt securities and equity instruments and the positive value of derivative contracts held for trading;
– financial assets mandatorily measured at fair value through profit or loss, consisting of financial assets that do not meet the requirements for measurement at amortised cost or at fair value through other comprehensive income. These are financial assets whose contractual terms do not solely envisage payments of principal and interest on the principal amount outstanding (SPPI Test not passed) or that are not held under a Hold to Collect business model or a Hold to Collect and Sell business model;
– financial assets designated at fair value, i.e. financial assets that are defined as such upon initial recognition and when the conditions apply. In relation to this case, an entity may irrevocably designate a financial asset as measured at fair value through profit or loss only if it eliminates or significantly reduces a measurement inconsistency.

This caption therefore includes:

– debt securities and loans that are included in an Other/Trading business model (i.e., that do not come under the Hold to Collect or Hold to Collect and Sell business models) or that do not pass the SPPI Test, including the portions of syndicated loans subscribed or other types of loans that are originally intended to be sold and are not part of a Hold to Collect and Sell business model. It also includes the debt securities of the Insurance Division covering the liabilities to insured parties represented by unit-linked products, multi-line products and pension funds;
– equity instruments – that do not qualify as investments in subsidiaries, associates or joint ventures – held for trading purposes or for which the option was not exercised, upon initial recognition, to designate them at fair value through other comprehensive income;
– quotas of UCI (Undertakings for Collective Investment).

This caption also includes the derivatives, recognised under financial assets held for trading, which are presented as assets if the fair value is positive and as liabilities if the fair value is negative. The positive and negative current values arising from transactions with the same counterparty – also between derivatives allocated to the trading book and hedging derivatives, as envisaged by the Bank of Italy Circular 262 – may be offset only when the legal right to offset amounts recognised for accounting purposes currently exists and the net settlement of positions subject to offsetting is carried out.
Derivatives also include those embedded in combined financial contracts – where the host contract is a financial liability – which are subject to separate accounting when:
– their economic characteristics and risks are not closely related to the characteristics of the host contract;
– the embedded instruments, even though separate, fully meet the definition of derivative;
– the combined instruments are not measured at fair value with changes in fair value recognised through profit or loss.
According to the general rules established by IFRS 9 on the reclassification of financial assets (except for equity instruments, for which no reclassification is permitted), reclassifications to other categories of financial assets are not permitted unless the entity changes its business model for those financial assets. In such cases, which are expected to be highly infrequent, the financial assets may be reclassified from those measured at fair value through profit or loss to one of the other two categories established by IFRS 9 (Financial assets measured at amortised cost or Financial assets measured at fair value through other comprehensive income). The transfer value is the fair value at the time of the reclassification and the effects of the reclassification apply prospectively from the reclassification date. In this case, the effective interest rate of the reclassified financial asset is determined based on its fair value at the reclassification date and that date is considered as the initial recognition date for the credit risk stage assignment for impairment purposes.
For more information regarding the classification criteria for the financial instruments see the paragraph below "Classification drivers for the financial assets".

Recognition criteria
Initial recognition of financial assets occurs at settlement date for debt securities and equity instruments, at disbursement date for loans and at trade date for derivative contracts.
On initial recognition, financial assets measured at fair value through profit or loss are recognised at fair value, without considering transaction costs or revenues directly attributable to the instrument.

Measurement criteria
After initial recognition, the financial assets measured at fair value through profit or loss are recorded at fair value. The effects of the application of this measurement criterion are recorded in the income statement.
For the determination of the fair value of financial instruments quoted on active markets, market quotations are used. If the market for a financial instrument is not active, standard practice estimation methods and valuation techniques are used which consider all the risk factors correlated to the instruments and that are based on market elements such as: valuation of quoted instruments with the same characteristics, calculation of discounted cash flows, option pricing models, recent comparable transactions, etc.. For equities and derivative instruments that have equities as underlying assets, which are not quoted on an active market, the cost approach is used as the estimate of fair value only on a residual basis and in a small number of circumstances, i.e., when all the measurement methods referred to above cannot be applied, or when there are a wide range of possible measurements of fair value, in which cost represents the most significant estimate.
For more information regarding the criteria for the determination of fair value, see the Section "A.4 – Information on Fair Value".

Derecognition criteria
Financial assets are derecognised solely if the sale leads to the substantial transfer of all the risks and rewards connected to the assets. Conversely, if a significant part of the risks and rewards relative to the disposed financial assets is maintained, they continue to be recorded in the financial statements, even though their title has been transferred.
When it is not possible to ascertain the substantial transfer of risks and rewards, the financial assets are derecognised where no control over the assets has been maintained. If this is not the case, when control, even partial, is maintained, the assets continue to be recognised for the entity's continuing involvement, measured by the exposure to changes in value of assets sold and to variations in the relevant cash flows.
Lastly, disposed financial assets are derecognised if the entity retains the contractual rights to receive the cash flows of the asset, but signs a simultaneous obligation to pay such cash flows, and only such cash flows, without significant delay to third parties.

2. Financial assets measured at fair value through other comprehensive income (FVOCI)

Classification criteria

This category includes the financial assets that meet both the following conditions:

– the financial asset is held under a business model whose objective is achieved both through the collection of expected contractual cash flows and through sale (Hold to Collect and Sell business model), and
– the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding ("SPPI Test" passed).

This caption also includes equity instruments, not held for trading, for which the option was exercised upon initial recognition of their designation at fair value through other comprehensive income.

In particular, this caption includes:

– debt securities that can be attributed to a Hold to Collect and Sell business model and that have passed the SPPI test;
– equity interests, that do not qualify as investments in subsidiaries, associates or joint ventures and are not held for trading, for which the option has been exercised of their designation at fair value through other comprehensive income;
– loans that are attributable to a Hold to Collect and Sell business model and have passed the SPPI Test, including the portions of syndicated loans subscribed or other types of loans that are originally intended to be sold and are part of a Hold to Collect and Sell business model.

According to the general rules established by IFRS 9 on the reclassification of financial assets (except for equity instruments, for which no reclassification is permitted), reclassifications to other categories of financial assets are not permitted unless the entity changes its business model for those financial assets.
In such cases, which are expected to be highly infrequent, the financial assets may be reclassified from those measured at fair value through other comprehensive income to one of the other two categories established by IFRS 9 (Financial assets measured at amortised cost or Financial assets measured at fair value through profit or loss). The transfer value is the fair value at the time of the reclassification and the effects of the reclassification apply prospectively from the reclassification date. In the event of reclassification from this category to the amortised cost category, the cumulative gain (loss) recognised in the valuation reserve is allocated as an adjustment to the fair value of the financial asset at the reclassification date. In the event of reclassification to the fair value through profit or loss category, the cumulative gain (loss) previously recognised in the valuation reserve is reclassified from shareholders' equity to net income (loss).
For more information regarding the classification criteria for the financial instruments see the paragraph below "Classification drivers for the financial assets".

Recognition criteria

Initial recognition of financial assets occurs at settlement date for debt securities and equity instruments and at disbursement date for loans. On initial recognition, assets are recorded at fair value, including transaction costs and revenues directly attributable to the instrument.

Measurement criteria

After initial recognition, the Assets classified at fair value through other comprehensive income, other than equity instruments, are measured at fair value, with the recognition in profit or loss of the impact resulting from the application of the amortised cost, the impairment effects and any exchange rate effect, whereas the other gains and losses resulting from a change in fair value are recognised in a specific shareholders' equity reserve until the financial asset is derecognised. Upon the total or partial sale, the cumulative gain or loss in the valuation reserve is transferred, in whole or in part, to the income statement.
Equity instruments, for which the choice has been made to classify them in this category, are measured at fair value and the amounts recognised in other comprehensive income cannot be subsequently transferred to profit or loss, not even if they are sold. The only component related to these equities that is recognised through profit or loss is their dividends.
Fair value is determined on the basis of the criteria already described for Financial assets measured at fair value through profit or loss.
For the equity instruments included in this category, which are not quoted on an active market, the cost approach is used as the estimate of fair value only on a residual basis and in a small number of circumstances, i.e., when all the measurement methods referred to above cannot be applied, or when there are a wide range of possible measurements of fair value, in which cost represents the most significant estimate.
For more information regarding the criteria for the determination of fair value, see the Section "A.4 – Information on Fair Value".

Financial assets measured at fair value through other comprehensive income – both in the form of debt securities and loans – are subject to the verification of the significant increase in credit risk (impairment) required by IFRS 9, in the same way as Assets measured at amortised cost, with the consequent recognition through profit or loss of a value adjustment to cover the expected losses. More specifically, for instruments classified as stage 1 (i.e., financial assets at origination, when not impaired, and instruments for which there has not been a significant increase in credit risk since the initial recognition date), a 12-month expected loss is recognised on the initial recognition date and at each subsequent reporting date. For instruments classified as stage 2 (performing for which there has been a significant increase in credit risk since the initial recognition date) and as stage 3 (credit-impaired exposures), a lifetime expected loss for the financial instrument is recognised.
Equity instruments are not subject to the impairment process.
See the paragraph below "Impairment of financial assets" for more details.

Derecognition criteria

Financial assets are derecognised solely if the sale leads to the substantial transfer of all the risks and rewards connected to the assets. Conversely, if a significant part of the risks and rewards relative to the disposed financial assets is maintained, they continue to be recorded in the financial statements, even though their title has been transferred.

When it is not possible to ascertain the substantial transfer of risks and rewards, the financial assets are derecognised where no control over the assets has been maintained. If this is not the case, when control, even partial, is maintained, the assets continue to be recognised for the entity's continuing involvement, measured by the exposure to changes in value of assets sold and to variations in the relevant cash flows.

Lastly, disposed financial assets are derecognised if the entity retains the contractual rights to receive the cash flows of the asset, but signs a simultaneous obligation to pay such cash flows, and only such cash flows, without significant delay to third parties.

3. Financial assets measured at amortised cost

Classification criteria

This category includes the financial assets (in particular loans and debt securities) that meet both the following conditions:

– the financial asset is held under a business model whose objective is achieved through the collection of expected contractual cash flows (Hold to Collect business model), and
– the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding ("SPPI Test" passed).

More specifically, the following are recognised in this caption:

– loans to banks in their various forms that meet the requirements referred to above;
– loans to customers in their various forms that meet the requirements referred to above;
– debt securities that meet the requirements referred to above.

This category also includes the operating loans and receivables connected to the provision of financial activities and services as defined by the Consolidated Law on Banking and the Consolidated Law on Finance (e.g. for the distribution of financial products and servicing activities).

According to the general rules established by IFRS 9 on the reclassification of financial assets, reclassifications to other categories of financial assets are not permitted unless the entity changes its business model for those financial assets. In such cases, which are expected to be highly infrequent, the financial assets may be reclassified from the amortised cost category to one of the other two categories established by IFRS 9 (Financial assets measured at fair value through other comprehensive income or Financial assets measured at fair value through profit or loss). The transfer value is the fair value at the time of the reclassification and the effects of the reclassification apply prospectively from the reclassification date. Gains and losses resulting from the difference between the amortised cost of a financial asset and its fair value are recognised through profit or loss in the event of reclassification to Financial assets measured at fair value through profit or loss and under Shareholders' equity, in the specific valuation reserve, in the event of reclassification to Financial assets measured at fair value through other comprehensive income.

For more information regarding the classification criteria for the financial instruments see the paragraph below "Classification drivers for the financial assets".

Recognition criteria

Initial recognition of the financial asset occurs at settlement date for debt securities and at disbursement date for loans. On initial recognition, assets are recorded at fair value, including transaction costs and revenues directly attributable to the instrument.

In particular, for loans, the disbursement date is usually the same as the date of signing of the contract. Should this not be the case, a commitment to disburse funds is made along with the subscription of the contract, which will cease to exist upon disbursement of the loan. The loan is recognised based on its fair value, equal to the amount disbursed or subscription price, inclusive of the costs/revenues directly attributable to the single loan and determinable from inception, even when settled at a later date. Costs that, even with the aforementioned characteristics, are reimbursed by the borrower or are classifiable as normal internal administrative costs are excluded.

Repurchase agreements are recognised as funding or lending transactions. Specifically, they are recognised as payables for the spot amount received or as receivables for the spot amount paid.

Measurement criteria

After the initial recognition, these financial assets are measured at amortised cost, using the effective interest method. The assets are recognised in the balance sheet at an amount equal to their initial carrying amount less principal repayments, plus or minus the cumulative amortisation (calculated using the effective interest method) of the difference between this initial amount and the amount at maturity (typically attributable to costs/income directly attributable to the individual asset) and adjusted by any provision for losses. The effective interest rate is the rate that exactly discounts estimated future cash payments of the asset, as principal and interest, to the amount disbursed inclusive of the costs/revenues attributable to that financial asset. This measurement method uses a financial approach and allows distribution of the economic effect of the costs/income directly attributable to a financial asset over its expected lifetime.

The amortised cost method is not used for assets, measured at historical cost, whose short duration makes the effect of discounting negligible, or for assets without a definite maturity or revocable loans.

The measurement criteria, as described in more detail in the paragraph "Impairment of financial assets", are closely linked to the inclusion of these instruments in one of the three stages of credit risk established by IFRS 9, the last of which (stage 3) consists of non-performing financial assets and the remaining (stages 1 and 2) of performing financial assets.

With regard to the accounting representation of the above measurement effects, the adjustments for this type of asset are recognised in profit or loss:

– on initial recognition, for an amount equal to the 12-month expected credit loss;
– on subsequent measurement of the asset, when the credit risk has not increased significantly since initial recognition, in relation to changes in the amount of adjustments for the 12-month expected credit losses;
– on subsequent measurement of the asset, when the credit risk has increased significantly since initial recognition, in relation to the recognition of adjustments for expected credit losses over the contractually agreed remaining lifetime of the asset;
– on subsequent measurement of the asset, where – after a significant increase in credit risk has occurred since initial recognition – the increase is no longer "significant" due to the alignment of the cumulative value adjustments to take account of the change from a lifetime expected credit loss to a 12-month expected credit loss for the instrument.

These financial assets, when they are performing, are subject to an assessment, aimed at establishing the value adjustments to be recognised in the financial statements, at the level of individual loan (or "tranches" of securities), according to the risk parameters consisting of Probability of Default (PD), Loss Given Default (LGD) and Exposure at Default (EAD), derived from the AIRB models, and duly adjusted to take account of the provisions of IFRS 9.

If, in addition to a significant increase in credit risk, there is also objective evidence of impairment, the amount of the loss is measured as the difference between the carrying amount of the asset – classified as "non-performing", like all the other relationships with the same counterparty – and the present value of the estimated future cash flows, discounted using the original effective interest rate. The amount of the loss, to be recognised through profit or loss, is established based on individual measurement or determined according to uniform categories and, then, individually allocated to each position, and, as detailed in the paragraph "Impairment of financial assets", takes account of forward-looking information and possible alternative recovery scenarios.

Non-performing assets include financial assets classified as bad, unlikely-to-pay or past due by over ninety days according to the rules issued by the Bank of Italy, in line with the IAS/IFRS and EU Supervisory Regulations.

The expected cash flows take into account the expected recovery times and the estimated realisable value of any guarantees.

The original effective rate of each asset remains unchanged over time even if the relationship has been restructured with a variation of the contractual interest rate and even if the relationship, in practice, no longer bears contractual interest.

If the reasons for impairment are no longer applicable following an event subsequent to the registration of impairment, recoveries are recorded in the income statement. The size of the recovery must not lead the carrying value of the financial asset to exceed the amortised cost had no impairment losses been recognised in previous periods.

Recoveries on impairment with time value effects are recognised in net interest income.

In some cases, during the lifetime of these financial assets, and of loans in particular, the original contractual conditions may be subsequently modified by the parties to the contract. When the contractual clauses are subject to change during the lifetime of an instrument, it is necessary to verify whether the original asset should continue to be recognised in the balance sheet or whether, instead, the original instrument needs to be derecognised and a new financial instrument needs to be recognised.

In general, changes to a financial asset lead to its derecognition and the recognition of a new asset when they are "substantial". The assessment of the "substantial nature" of the change must be made using both qualitative and quantitative information. In some cases, in fact, it may be clear, without resorting to complex analysis, that the changes introduced substantially modify the characteristics and/or contractual flows of a particular asset while, in other cases, further analysis (including quantitative analysis) will need to be carried out to assess the effects of the changes and verify whether or not to derecognise the asset and recognise a new financial instrument.

The qualitative and quantitative analyses aimed at defining the "substantial nature" of contractual changes made to a financial asset must therefore consider:

– the purposes for which the changes were made: e.g. renegotiations for commercial reasons and forbearance measures due to financial difficulties of the counterparty:
  - the former, aimed at "retaining" the customer, involve a borrower that is not in financial difficulty. This category includes all renegotiations aimed at aligning the cost of the debt to market conditions. These operations involve a change in the original conditions of the contract, usually requested by the borrower and relating to aspects concerning the cost of the debt, with a consequent economic benefit for the borrower. In general, whenever the bank carries out a renegotiation to avoid losing its customer, that renegotiation should be considered as substantial because, if it were not carried out, the customer could borrow from another intermediary and the bank would incur a decrease in expected future revenues;
  - the latter, carried out for "reasons of credit risk" (forbearance measures), relate to the bank's attempt to maximise the recovery of the cash flows of the original loan. The underlying risks and rewards, following the changes, are not normally substantially transferred and, consequently, the accounting representation that provides the most relevant information for the readers of the financial statements (apart from the triggers discussed below) is "modification

accounting" – which involves the recognition through profit or loss of the difference between the carrying value and the present value of the modified cash flows discounted at the original interest rate – rather than derecognition;
– the presence of specific triggers that affect the contractual characteristics and/or cash flows of the financial instrument (such as, for example, a change in currency or a modification of the type of risk the financial instrument is exposed to, when correlated to equity and commodity parameters), which are considered to result in derecognition due to their impact (expected to be significant) on the original contractual cash flows.

Derecognition criteria

Financial assets are derecognised solely if the sale leads to the substantial transfer of all the risks and rewards connected to the assets. Conversely, if a significant part of the risks and rewards relative to the disposed financial assets is maintained, they continue to be recorded in the financial statements, even though their title has been transferred.
When it is not possible to ascertain the substantial transfer of risks and rewards, the financial assets are derecognised where no control over the assets has been maintained. If this is not the case, when control, even partial, is maintained, the assets continue to be recognised for the entity's continuing involvement, measured by the exposure to changes in value of assets sold and to variations in the relevant cash flows.
Lastly, disposed financial assets are derecognised if the entity retains the contractual rights to receive the cash flows of the asset, but signs a simultaneous obligation to pay such cash flows, and only such cash flows, without significant delay to third parties.

4. Hedging transactions

The Intesa Sanpaolo Group has exercised the option, provided for on the introduction of IFRS 9, of continuing to fully apply the provisions of IAS 39 on hedge accounting (in the carved-out version endorsed by the European Commission) for each type of hedge (both for micro hedges and macro hedges).

Classification criteria: type of hedge

Hedging transactions are aimed at neutralising potential losses on a specific item or group of items, attributable to a certain risk, if such a risk should actually occur.
The following types of hedging transactions are used:
– fair value hedge, which has the objective of covering exposure to changes in the fair value (attributable to the different risk categories) of assets and liabilities in the balance sheet, or on a portion of these, of groups of assets/liabilities, of binding commitments and portfolios of financial assets and liabilities, including core deposits, as permitted by IAS 39 endorsed by the European Commission. Fair value macro hedges are aimed at reducing fluctuations in the fair value, as a result of interest rate risk, of a sum of money flowing from a portfolio of financial assets or liabilities. Net amounts resulting from mismatches between assets and liabilities cannot be subject to macro hedges;
– cash flow hedge, which has the objective of covering exposure to variability in future cash flows attributable to particular risks associated with balance sheet captions. This type of hedge is essentially used to stabilise the interest flow on floating rate funding to the extent that the latter finances fixed rate investments. In certain circumstances, similar transactions are carried out with respect to some types of floating rate investments;
– hedges of net investments in foreign currency, which refer to the coverage of the risks of net investments in foreign operations expressed in their original currency.

Only hedging transactions which involve counterparties outside the Group may qualify for hedge accounting.
The choice made by the Group to take advantage of the possibility of continuing to fully apply the IAS 39 rules for hedging relationships means that the equity instruments classified as Financial assets measured at fair value through other comprehensive income (FVOCI) cannot be measured as hedged items for price or exchange rate risk, since these instruments are not recognised through profit or loss, not even if they are sold (except for dividends that are recognised through profit or loss).

Recognition criteria

Hedging derivatives, like all derivatives, are initially recognised and subsequently measured at fair value.
A relationship qualifies as a hedging relationship, and is appropriately reported in the financial statements only if, all of the following conditions are met:
– at the inception of the hedge, the hedging relationship is formally designated and documented, including the company's risk management objectives and strategy in undertaking the hedge. This documentation includes the identification of the hedging instrument, the item or transaction hedged, the nature of the risk being hedged, and how the entity will assess the hedging instrument's effectiveness in offsetting the exposures to changes in the fair value of the item hedged or in the cash flows attributable to the risk hedged;
– the hedge is expected to be highly effective;
– the planned transaction hedged, to hedge the cash flows, is highly probable and has an exposure to changes in cash flows that could have effects on the income statement;
– the effectiveness of the hedge can be reliably measured;
– the hedge is measured on an ongoing basis and is considered highly effective for all the financial years in which it is designated.

Measurement criteria

Hedging derivatives are measured at fair value. In particular:
– in the case of fair value hedges, the change in the fair value of the hedged item is offset by the change in fair value of the hedging instrument. Offsetting is recognised via the registration in the income statement of the gains and losses referred to both the hedged item (with regard to the variations produced by the underlying risk factor), and the hedging instrument. Any difference, which represents the partial ineffectiveness of the hedge, is therefore the net economic effect. In case of

fair value macro hedges, fair value changes related to the hedged risk of assets and liabilities in hedged portfolios are allocated to the balance sheet under caption 60. “Fair value change of financial assets in hedged portfolios” or under caption 50. “Fair value change of financial liabilities in hedged portfolios”;
– in the case of cash flow hedges, changes in fair value of the derivative are recorded in equity, for the effective portion of the hedge, and these are registered in the income statement only when, with reference to the hedged item, there is a variation in the flows to be offset or if the hedge is ineffective;
– hedges of net investments in foreign currency are treated in the same way as cash flow hedges.

The effectiveness of the hedge depends on the extent to which changes in the fair value of the hedged item or the relating expected cash flows are offset by those of the hedging instrument. Therefore, effectiveness is appraised by comparing the aforementioned changes, considering the intent pursued by the entity at the time in which it entered the hedging transaction. A hedge is effective when the variations in fair value (or cash flows) of the hedging financial instrument almost completely neutralise, that is within the 80-125% range, the changes in the fair value of the hedged item, for the type of risk being hedged.

Effectiveness is assessed at every close of annual or interim financial statements using:
– prospective tests, which justify the application of hedge accounting, since these prove the expected effectiveness of the hedge;
– retrospective tests, which demonstrate the effectiveness of the hedge for the reference period, or measure how much the effective results diverge from perfect coverage.

Fair value hedge accounting is discontinued prospectively in the following cases:
– the hedging instrument expires or is sold, terminated, or exercised;
– the hedge no longer meets the hedge accounting criteria described above;
– the entity revokes the designation.

If such assessments do not confirm hedge effectiveness, from that moment hedge accounting is discontinued, the derivative is reclassified in instruments held for trading and the hedged item is measured on the basis of its classification in the balance sheet. If the assets or liabilities hedged are measured at amortised cost, the higher or lower value resulting from the fair value measurement due to the hedge becoming ineffective is recognised through profit or loss, using the effective interest rate method. When a fair value macrohedging relationship is discontinued, the cumulative change in fair value losses carried under caption 60 "Fair value change of financial assets in hedged portfolios" or caption 50. “Fair value change of financial liabilities in hedged portfolios” are transferred to the income statement among interest income or expense over the residual life of the original hedging relationships, without prejudice to verification that the requirements have been met.

An entity must discontinue cash flow hedge accounting prospectively in each of the following circumstances:
– the hedging instrument expires or is sold, terminated, or exercised (for this purpose the replacement or exchange of one hedging instrument with another hedging instrument is not a conclusion or termination if that replacement or exchange forms part of an entity’s documented hedging strategy). In this case the total profit (or loss) on the hedging instrument continues to be recognised directly in shareholders’ equity until the end of the reporting period in which the hedge became effective and it continues to be recognised separately until the programmed transaction, being hedged, occurs;
– the hedge no longer meets the criteria for hedge accounting. In this case the total profit or loss on the hedging instrument is recognised directly in shareholders’ equity starting from the reporting period in which the hedge became effective and continues to be recognised separately in shareholders’ equity until the programmed transaction occurs;
– it is no longer considered that the future transaction will occur, in which case any related total profit or loss on the hedging instrument recognised directly in equity starting from the reporting period in which the hedge became effective must be recognised through profit or loss;
– the entity revokes the designation. For hedges of a programmed transaction, total profits or losses on the hedging instrument recognised directly in shareholders’ equity starting from the reporting period in which the hedge became effective continue to be recognised separately in shareholders’ equity until the programmed transaction occurs or it is expected that it will no longer occur.

5. Investments in associates and companies subject to joint control

Classification, recognition and measurement criteria

The caption includes investments in companies subject to joint control and associates.
Entities are considered to be companies subject to joint control if control is contractually shared between the Group and one or more other parties, or where the decisions about the relevant activities require the unanimous consent from all parties sharing control.
Companies are considered subject to significant influence (associates) when the Group holds 20% or more of the voting rights (including “potential” voting rights) or if it – with a lower equity stake – has the power of participating in the determination of financial and management policies of the company based on specific juridical relations, such as the participation in voting syndicates.
Certain companies in which the Group holds a stake exceeding 20% are not considered subject to significant influence since it solely has economic rights on a portion of the returns generated by the investment, but does not have access to management policies and may exercise governance rights limited to the safeguarding of its economic interests.

The investments in associates and companies subject to joint control are measured at cost and accounted for according to the equity method. If there is evidence of impairment, the recoverable amount of the investment is estimated, considering the present value of the future cash flows which may be generated by the investment, including the final disposal value.
If the recoverable amount is lower than the carrying value, the difference is recorded in the income statement.

If the reasons for impairment are no longer applicable following an event subsequent to the registration of impairment, recoveries are recorded in the income statement.

Derecognition criteria
The investments in associates and companies subject to joint control are derecognised when the contractual rights to the cash flows from the assets expire or when the investment is sold, substantially transferring all the risks and rewards connected to the assets.

6. Property and equipment

Classification criteria
Property and equipment include land, owner-occupied property, investment property, valuable art assets, technical plants, furniture and fittings and any type of equipment that are expected to be used during more than one period.
Property and equipment held for use in the production or supply of goods and services are classified as "Property and equipment used in operations", in accordance with IAS 16. Real estate owned for investment purposes (to obtain rental income or gains on the capital invested) is classified as "Investment property" based on IAS 40.
This caption also includes property and equipment classified in accordance with IAS 2 - Inventories, which refer both to assets resulting from the enforcement of guarantees or from purchase at auction that the company intends to sell in the near future, without carrying out major renovation work, and which do not meet the requirements for classification in the previous categories, and to the real estate portfolio of the Group's real estate companies, including building sites, properties under construction, properties completed for sale and real estate development initiatives, held for sale.
Finally, this caption also includes the rights of use acquired through leases and relating to the use of an item of property and equipment (for the lessee companies) and the assets leased under operating leases (for the lessor companies).

Recognition criteria
Property and equipment are initially measured at cost which comprises in addition to their purchase price any costs directly attributable to the purchase and required for them to be operational.
Extraordinary maintenance expenses which lead to a rise in future economic benefits are attributed to increase the value of assets, while other ordinary maintenance costs are recorded in the income statement.

Measurement criteria
Property and equipment are measured at cost, net of depreciation and impairment losses, except for owner-occupied properties and valuable art assets, which are measured according to the revaluation model.
The investment properties are measured with the fair value method.

For the property and equipment subject to assessment according to the revaluation model:
– if the carrying value of an asset is increased following a revaluation, the increase must be recognised in the Statement of comprehensive income and accumulated in the shareholders' equity under the caption revaluation reserve; conversely, in the case where an impairment loss on the same asset recognised previously in the income statement is recovered, it must be recognised as income;
– if the carrying value of an asset is decreased following the revaluation, the decrease must be recognised in the Statement of comprehensive income to the extent in which there are possible credit balances in the revaluation reserve referring to this asset; otherwise, this reduction is recorded in the Income statement.

Property and equipment are systematically depreciated, adopting the straight-line method over their useful life. The depreciable amount is the cost of the goods (or the net value recalculated if the method adopted for the valuation is the revaluation model) net of the residual value at the end of the depreciation period, if significant. Buildings are depreciated for a portion deemed to be suitable to represent their deterioration over time following their use, considering extraordinary maintenance expenses, which are recognised in the carrying value of the assets. In order to determine the useful life of the various types of assets and the corresponding depreciation rates, the Group's real estate assets have been divided into four clusters: (i) Historical and particularly prestigious properties (useful life of 65 years), (ii) Entire buildings (useful life of 33 years), (iii) Banking branches (useful life of 20 years) and (iv) Other properties (useful life of 20 years). These clusters do not include the New Intesa Sanpaolo Headquarters in Turin, for which the useful life was estimated through a specific analysis which considered the peculiar architectural features of the building. Other property and equipment is depreciated based on the following useful lives: furniture from 5 to 10 years, plants from 4 to 10 years, hardware and IT equipment for a period from 4 to 8 years and, lastly, other assets from 3 to 13 years.

The following are not depreciated:
– land, irrespective of whether acquired individually or embedded in the value of buildings, since it has an indefinite useful life;
– the valuable art assets, the other historical, artistic and decorative assets, since their useful life cannot be estimated and their value is normally destined to increase over time;
– the investment properties, as required by IAS 40, are measured at fair value through profit or loss and therefore they must not be depreciated.

If there is some evidence that property and equipment measured at cost may have been impaired, the carrying amount of the asset and its recoverable amount are compared. Any impairment losses are recorded in the income statement.
If the reasons for impairment cease to exist, a value recovery is recorded and may not exceed the value that the asset would have had, net of depreciation, determined in the absence of previous impairment losses.

With regard to the property and equipment recognised in accordance with IAS 2, these are measured at the lesser of cost and net realisable value, without prejudice to the comparison between the asset's carrying amount and its recoverable amount where there is an indication that the asset may have been impaired. Any impairment losses are recorded in the income statement.

Property and equipment consisting of the right-of-use of assets subject to leases

According to IFRS 16, a lease is a contract or part of a contract that conveys the right to use an asset (the underlying asset) for a period of time in exchange for consideration.

According to IFRS 16, leases are accounted for on the basis of the right of use model, where, at the initial date, the lessee has a financial obligation to make payments due to the lessor to compensate for its right of use of the underlying asset during the lease term.
When the asset is made available to the lessee for use (initial date), the lessee recognises both the liability and the asset consisting of the right of use.
In particular, the right of use acquired with a lease is measured as the sum of the present value of the future payments over the term of the contract, the lease payments made at or before the commencement date, the lease incentives received, if any, the initial direct costs and any estimated costs of dismantling or restoring the underlying asset.
The financial liability recognised corresponds to the present value of the payments to be made for the lease.

With regard to the discount rate, based on the requirements of IFRS 16, the Group uses the implicit interest rate for each lease contract, when it is available. For leases from the lessee's point of view, in some cases, for example for rental agreements, the implicit interest rate cannot always be readily determined without using estimates and assumptions (the lessee does not have enough information about the unguaranteed residual value of the leased asset). In these cases, the Group has developed a methodology for setting the incremental interest rate as an alternative to the implicit interest rate and has decided to adopt the Funds Transfer Pricing (FTP) method. This is based on an unsecured and amortising rate curve, which envisages lease payments for the lease contract that are typically constant over the lease term, rather than a single payment upon maturity. The FTP method takes into account the creditworthiness of the lessee, the term of the lease, as well as the economic environment in which the transaction takes place and is therefore in line with the requirements of the standard.

The lease term is determined taking into account:
– periods covered by an option to extend the lease if the lessee is reasonably certain to exercise that option;
– periods covered by an option to terminate the lease if the lessee is reasonably certain to exercise that option.

During the course of the lease term a lessee shall:
– measure the right-of-use at cost less accumulated depreciation and accumulated impairment losses determined and recognised based on the provisions of IAS 36 "Impairment of assets", adjusted to take account of any remeasurement of the lease liability;
– increase the liability arising from the lease following the accrual of interest expense calculated at the interest rate implicit in the lease or alternatively at the incremental borrowing rate, and decrease it for payments of principal and interest made.

If changes are made to the lease payments, then the lease liability must be remeasured and the impact of the remeasurement of the liability is recognised against the right-of-use asset.

Derecognition criteria
Property and equipment are derecognised from the balance sheet on disposal or when the asset is permanently withdrawn from use and no future economic benefits are expected from its disposal.

7. Intangible assets

Classification criteria
Intangible assets consist of goodwill and other intangible assets governed by IAS 38. They may include the rights of use acquired under a lease and relating to the use of an intangible asset (for lessees) and assets leased under an operating lease (for lessors).
Intangible assets are recognised as such if they may be identified and stem from legal or contractual rights. Intangible assets include goodwill, which represents the positive difference between purchase price and fair value of assets and liabilities pertaining to the acquired company.

Recognition and measurement criteria
Intangible assets are recognised at cost, adjusted for any accessory charges only if it is probable that the future economic benefits attributable to the assets will be realised and if the cost of the asset may be reliably determined. If this is not the case, the cost of the intangible asset is recorded in the income statement in the year in which it was incurred.
For assets with finite useful life, the cost is amortised on a straight-line basis or in decreasing portions determined on the basis of the economic benefits expected from the asset. Assets with indefinite useful life are not subject to systematic amortisation, but are periodically subjected to impairment testing.
If there is any indication that an asset may have suffered impairment losses, the asset's recoverable amount is estimated. The impairment loss, which is recorded in the income statement, is equal to the difference between the carrying value of the assets and the recoverable amount.

In particular, intangible assets include:
– technology-related intangible assets, such as software applications, which are amortised mainly on the basis of their expected technological obsolescence or, if lower, their expected use, and in any case generally no longer than a period of seven years. An exception are the core banking system platforms, whose useful life is estimated on a case-by-case basis, and, as a result, amortised over longer periods (from 10 to 15 years). Moreover, the costs incurred for the development of software are considered as intangible assets and are recognised under assets only when all the following conditions are met: i) the cost attributable to the intangible asset during its development can be measured reliably, ii) there is the intention, the availability of financial resources and the technical ability of making the intangible asset available for use or sale, iii) the future economic benefits to be generated by the asset can be demonstrated. Software development capitalised costs only comprise the costs directly attributable to the development process. Capitalised software development costs are amortised systematically over the estimated useful life of the relevant product/service so as to reflect the pattern in which the asset's future economic benefits are expected to be consumed by the entity from the beginning of production over the product's estimated life;
– customer-related intangibles mainly represented, in business combinations, by asset management relations, non-financial activities related to provision of services and insurance portfolios classified as investments. Such assets, with a finite life, are originally measured by the discounting, using a rate representing the time value of money and the asset's specific risks, of the income margins on the ongoing relations at the time of the business combination over a period which expresses their residual, contractual or estimated life. For asset management relations and non-financial activities related to provision of services, they are amortised on a straight-line basis over the period of greater significance of the expected economic benefits in case of relations which do not have a predetermined duration and, for relations from insurance products classified as investments, generally in decreasing portions corresponding to the duration of the contract in case of relations with predetermined expiry (residual lives of the policies);
– marketing-related intangibles represented by the measurement of the brand name which is also recorded at the time of business combinations. This asset is considered as having indefinite life since it is deemed to contribute for an indefinite period of time to the formation of income flows.

Lastly, intangible assets include goodwill.
With respect to business combinations, goodwill may be recorded when the positive difference between the consideration transferred and the fair value recognition, if any, of minority interests, and the fair value of shareholders' equity acquired is representative of the future income-generation potential of the equity investment.
If this difference is negative (negative goodwill) or if goodwill may not be attributed considering future income-generation potential of the equity investments, the same difference is directly recorded in the income statement.
Once a year (or every time that there is evidence of impairment losses), an impairment test is carried out for goodwill. This requires the identification of the Cash Generating Unit (or CGU) to which goodwill is allocated. The cash-generating units of the Intesa Sanpaolo Group correspond to the operating divisions presented in segment reporting. Any impairment losses are determined on the basis of the difference between the recognition value of goodwill and its recoverable amount, if lower. The recoverable amount is equal to the higher between the fair value of the cash-generating unit, less any cost to sell, and the relative value in use. The consequent adjustments are posted in the income statement.
With regard to the intangible asset represented by the brand name, if the reference CGU does not have any goodwill allocated, then an independent and specific valuation is made of the intangible on the basis of the fair value certified by the appraisal of an independent expert. If the fair value of the brand name is not higher than its carrying amount, the recoverable amount of the CGU is estimated, calculated based on future cash flows.

It is also noted that, where a CGU which is allocated both goodwill and a brand name has a value in use lower than the carrying amount, by an amount that exceeds the total value of the intangibles with indefinite life allocated, without prejudice to the full write-down of goodwill, an autonomous valuation of the brand name is carried out based on the fair value stated in the specific appraisal.

Derecognition criteria
Intangible assets are derecognised from the balance sheet on disposal and if no future economic benefits are expected.

8. Other assets
Other assets essentially consist of items awaiting classification and items not attributable to the other balance-sheet captions, including receivables arising from the supply of goods and non-financial services, sundry tax items other than those recognised in their own caption (e.g., connected to withholding agent activities), gold, silver and precious metal, the tax credits connected with the "Cura Italia" and "Rilancio" Decree Laws and accrued income other than that capitalised on the related financial assets, including the income resulting from contracts with customers in accordance with IFRS 15, paragraphs 116 and following. As required by paragraphs 91 and following of IFRS 15, the costs incurred for the acquisition and fulfilment of long-term contracts with customers are capitalised and amortised when they are incremental and are expected to be recovered.

9. Non-current assets held for sale and discontinued operations and Liabilities associated with non-current assets held for sale and discontinued operations

Non-current assets/liabilities for which a disposal process has commenced and for which disposal is deemed to be extremely probable are recorded in assets under Non-current assets held for sale and discontinued operations and in liabilities under Liabilities associated with non-current assets held for sale and discontinued operations. These assets/liabilities are measured at the lower of the carrying amount and fair value less cost to sell, except for some type of assets (e.g., financial assets within the scope of IFRS 9) for which IFRS 5 specifically establishes that the measurement principles of the applicable accounting standard must be used. The assets that are subject to amortisation/depreciation under the IAS/IFRS are no longer amortised/depreciated when they are classified under non-current assets held for sale and discontinued operations.
Non-current assets held for sale and discontinued operations may include portfolios of assets for which there are no prices in an active market. In such case, where an agreement has been reached with the purchaser, they are measured at fair value by referring to the sale prices resulting from that agreement. Where there is no agreement, they are measured using specific valuation techniques based on the asset and, where necessary, by employing external fairness opinions.
The income and charges (net of tax effect) attributable to non-current assets held for sale and discontinued operations or recorded as such in the year are recognised in the income statement in a separate caption.

10. Current and deferred tax

Taxes on income[355], calculated according to domestic tax regulations, are accounted for as a cost on an accruals basis, in line with the method followed to include, in the financial statements, the costs and income that generated them. Therefore, they represent the balance of current and deferred income taxes[356] for the year. Current tax assets and liabilities include the balances of the Group companies due to the relevant Italian and foreign tax authorities relating to direct taxation. More specifically, these captions include the net balance of tax liabilities from previous years and the current year, calculated on the basis of a prudent estimate of the tax charges due for the year, assessed according to the tax regulations currently in force, and the current tax assets represented by advances, by withholding taxes borne or other tax credits. The risk inherent in such proceedings and the risks inherent in proceedings where preliminary disbursements have not been requested are evaluated in applying the principles contained in IAS 37 regarding the best estimate of the economic resources required.
Considering the Group's adoption of the national fiscal consolidation provisions, tax positions which may be referred to the Italian Group companies are managed separately from an administrative standpoint.
Deferred taxation is calculated according to the balance sheet liability method, taking into account the tax effect of the temporary differences between the book value of the assets and liabilities and their value for taxation purposes, which will determine taxable income or deductible amounts in the future. To this end, "taxable temporary differences" are differences which will give rise to taxable income in future years while "deductible temporary differences" are those which will give rise to deductible amounts in future years.
Deferred tax liabilities are calculated by applying the tax rates currently in force to taxable temporary differences that are likely to generate a tax burden, and to the deductible temporary differences for which it is likely that there will be future taxable amounts at the time when the related tax deductibility occurs (so-called probability test). Deferred tax assets and liabilities related to the same tax and due in the same period are offset.
If deferred tax assets and liabilities refer to items affecting the Income statement, the balancing entry is represented by taxes on income.
Where deferred tax assets and liabilities relate to transactions that have been recorded in shareholders' equity without affecting earnings (such as adjustments on IAS/IFRS first-time adoption, measurements of financial assets recognised at fair value through other comprehensive income or of cash flow hedge derivative contracts), the balancing entry is made in shareholders' equity, under specific reserves where so provided (e.g. valuation reserves).
No provision is made for reserves subject to latent taxation only in the event of distribution, since the size of the available reserves which have already been taxed leads to the belief that no transactions will be undertaken which may cause taxation of the untaxed reserves.
Deferred tax liabilities referred to Italian companies included in the fiscal consolidation are reported in their financial statements, in application of the accrual basis principle and in consideration of the fact that the effects of fiscal consolidation are limited to the settlement of current tax positions.
Latent taxation on shareholders' equity items of consolidated companies is not recorded in the financial statements if it is unlikely that any tax liability will actually arise, also bearing in mind the permanent nature of the investment.

[355] Pursuant to IAS 12, taxes on income also include those relating to the tax laws that implement the Global Minimum Tax.

[356] With respect to deferred taxation, it is noted that, under IAS 12, deferred tax assets and liabilities relating to taxes on income under the so-called Global Minimum Tax are not to be recognised or disclosed.

11. Allowances for risks and charges

Allowances for risks and charges for commitments and guarantees given
This sub-caption of the allowances for risks and charges contains the allowances for credit risk recognised for loan commitments and guarantees given that come under the scope of the IFRS 9 impairment rules. For these cases, in general, the methods described for financial assets measured at amortised cost or at fair value through other comprehensive income are adopted for the assignment to the three credit risk stages and the calculation of the expected credit loss.
This aggregate also includes allowances for risks and charges made to cover other types of commitments and guarantees given that, due to their specific characteristics, do not fall under the scope of impairment pursuant to IFRS 9.

Post-employment benefits
Company post-employment benefits are based on agreements and qualify as defined benefit plans. Liabilities related to such plans and the relative cost of current service are determined on the basis of actuarial assumptions based on the Projected Unit Credit Method. This method sets out that future obligations are forecast using past time-series analyses and the demographic curve and that such future cash flows are discounted based on a market interest rate. The provisions made in each year of service are considered separately and give rise to an additional unit of benefit entitlement for the purposes of the final obligation. The discounting rate is determined on the basis of market returns, surveyed as at the date of measurement, on high-quality corporate bonds, taking account of the residual average life of the liability. The present value of the liability at the reporting date is also adjusted by the fair value of any plan assets.

Actuarial profits and losses (namely the changes in the current value of the obligation resulting from changes in the actuarial assumptions and adjustments based on past experience) are recognised in the statement of comprehensive income.

Other allowances
Other allowances for risks and charges record provisions related to legal obligations or connected to labour relationships or to litigations, also of a fiscal nature, originating from a past event for which a disbursement will probably arise to settle the obligations, provided that the amount of the disbursement may be estimated reliably.
Consequently, a provision is recognised when, and only when:
– there is a present obligation (legal or constructive) as a result of a past event;
– it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation;
– a reliable estimate can be made of the amount of the obligation.

The amount recognised as a provision is the best estimate of the expenditure required to settle the present obligation at the reporting date and takes into account the risks and uncertainties that inevitably surround many events and circumstances. Where time value is significant, provisions are discounted using current market rates. Provisions and increases due to time value are recorded in the income statement.
If it is no longer probable that an outflow of resources embodying economic benefits will be required to settle the obligation or when the obligation is settled, the provision should be reversed.
The caption also includes long-term benefits to employees, whose charges are determined with the same actuarial criteria described for post-employment benefits. Actuarial profits and losses are all immediately recognised in the income statement.

12. Financial liabilities measured at amortised cost

Classification criteria
Amounts Due to banks, Due to customers and Securities issued include various forms of funding on the interbank market and with customers, repurchase agreements with commitment to repurchase and funding via certificates of deposit, bonds issued and other funding instruments in circulation, net of any amounts repurchased.
It also includes the payables recorded by the entity in the capacity of lessee in lease transactions.

Recognition criteria
Initial recognition of these financial liabilities occurs at the date of subscription of the contract, which usually coincides with the time of collection of the sums deposited or the issue of debt securities.
Initial recognition is based on the fair value of the liabilities, normally equal to the amount collected or the issue price, increased by any additional charges/revenues directly attributable to the single funding or issuing transaction. Internal administrative costs are excluded.
Lease payables are recognised at the present value of the future lease payments, discounted using the implicit interest rate of the transaction or, where it cannot be determined, the marginal financing rate.

Measurement criteria
After initial recognition, financial liabilities are measured at amortised cost with the effective interest method.
An exception is made for short-term liabilities, where time value is immaterial, which are stated at collected amount.
Lease payables are remeasured when there is a lease modification (e.g. a change in the contract which is not accounted for/considered as a separate contract); the effect of the remeasurement will be a corresponding adjustment to the right-of-use asset.

Derecognition criteria
Financial liabilities are derecognised from the balance sheet when they have expired or extinguished. Derecognition also occurs for repurchase of previously-issued bonds. The difference between book value of the liability and amount paid for repurchase is recorded in the income statement.
Placement of own securities, after their repurchase, is considered a new issue with recognition at the new placement price.

13. Financial liabilities held for trading

Recognition criteria
These financial instruments are recognised at the subscription or issue date at the fair value of the instrument, without taking into account directly attributable transaction costs or revenues.
This liability category includes, in particular, the negative fair value of trading derivatives, as well as embedded derivatives with a negative fair value separated from liabilities measured at amortised cost.
It also includes liabilities determined by short selling generated by trading of securities and certificates forming part of the trading business model.

Measurement criteria
All financial liabilities held for trading are measured at fair value through profit or loss.

Derecognition criteria
Financial liabilities held for trading are derecognised when the contractual rights to the related cash flows expire or when the financial liability is disposed of with the substantial transfer of all the risks and rewards connected to it.

14. Financial liabilities designated at fair value

Classification criteria
Financial liabilities designated at fair value are recorded under this caption, on the basis of the fair value option given to companies by IFRS 9 and in compliance with the cases contemplated in the reference regulations.
With reference to the financial liabilities of the subsidiary insurance companies, which do not fall within the scope of application of IFRS 17, the Group has availed itself of the possibility of designating as fair value liabilities products of a financial nature without a significant insurance risk and which are not included in separate management and therefore do not provide elements of discretionary participation features. Investments relating to these forms of funding, as already set out above, are also measured at fair value through profit or loss as they are managed according to an "Other" Business Model.

This category of liabilities also includes certificates included in the banking book business model.

Recognition criteria
These liabilities are recorded at fair value as at the date of issue, including the value of any embedded derivatives, net of placement fees paid.

Measurement criteria
These liabilities are measured at fair value according to the following rules established by IFRS 9:
– changes in fair value attributable to changes in own credit risk must be recognised in the statement of comprehensive income (shareholders' equity);
– the remaining changes in fair value must be recognised in the income statement.

The amounts recognised in the statement of comprehensive income are not subsequently recycled to the income statement. This method of accounting must not be applied when recognition of the effects of own credit risk on shareholders' equity results in or accentuates an accounting mismatch in the income statement. In this case, gains and losses associated with the liability, including those resulting from changes in own credit risk, must be recognised in the income statement.

Derecognition criteria
The financial liabilities designated at fair value are derecognised when the contractual rights to the related cash flows expire or when the financial liability is disposed with the substantial transfer of all the risks and rewards connected to it.

15. Foreign currency transactions

Definition
The foreign currency is a currency that is not the functional currency of the entity, which is in turn the currency of the primary economic environment in which the entity operates.

Initial recognition
Foreign currency transactions are recorded, on initial recognition, in the functional currency, by applying to the foreign currency amount the spot exchange rate at the date of the transaction.

Subsequent measurement
At every close of annual or interim financial statements, captions in foreign currency are measured as follows:
– foreign currency monetary items are translated using the closing rate;
– non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rate at the date of the transaction;
– non-monetary items that are measured at fair value in a foreign currency are translated using the closing rates.

Exchange differences arising on the settlement of monetary items or on translating monetary items at rates different from those at which they were translated on initial recognition during the period or in previous financial statements are recognised through profit or loss in the period in which they arise.
When a gain or loss on a non-monetary item is recognised directly in equity, any exchange component of that gain or loss is recognised directly in equity. Conversely, when a gain or loss on a non-monetary item is recognised through profit or loss, any exchange component of that gain or loss is recognised through profit or loss.

With regard to the "Conversion of financial statements in currencies other than the euro" for the purposes of consolidation and accounting for the related foreign exchange differences, reference is made to the specific paragraph of Part A: Section 3 - Scope of consolidation and consolidation methods of these Notes to the consolidated financial statements.

16. Insurance assets and liabilities

Classification criteria

This category contains the insurance assets and liabilities within the scope of application of IFRS 17 Insurance Contracts.
Specifically, the caption insurance liabilities presents the liabilities recognised by the Group for contracts for which insurance risk is deemed significant and which include: temporary class I life policies and income and mixed policies with guaranteed fixed conversion rates at the time of issue, and certain types of unit-linked policies, insurance pension funds and damage cover, as well as reinsurance components.
This caption also includes liabilities recognised for investment products that entail discretionary participation features (separate management schemes) as well as mixed class I products and class V capitalisation policies.
Note that the financial products issued by insurance companies that do not have significant insurance risk and no not provide for discretionary participation features are recognised in the financial statements as financial liabilities and accounted for pursuant to IFRS 9. Specifically, the Group measures those products at fair value, exercising the option provided by the standards (Fair Value Option) to avoid accounting mismatches with the correlated investments measured at fair value. These financial products substantially include unit-linked policies without extra return clauses.
Their classification as assets or liabilities is based on the net balance of the portfolio the contracts belong to. Generically, the insurance contracts present a balance payable (insurance liabilities) while reinsurance contracts present a balance receivable (insurance assets).

Recognition criteria

When the contract is signed with the policyholder, a liability is recognised whose amount represents the sum of the present value of all of the expected contractual cash flows (Present value of future cash flows), discounted and also including an appropriate Risk Adjustment (for non-financial risks) and the Contractual Service Margin which represents the present value of the future profits.
Contracts are recognised by groups (units of account), not contract by contract. In order to identify the units of account, the contracts issued are firstly divided into “portfolios”, or groups of contracts with similar risks, which are managed as a unit. Each portfolio is then divided into profitability buckets, distinguishing between onerous contracts at the time of initial recognition, contracts which have no significant possibility of becoming onerous at the time of initial recognition and groups composed of other contracts in the portfolio. A specific test is conducted to define the profitability classes (onerousness test).
Lastly, groups of contracts shall not contain contracts issued more than 12 months previously (grouping by “cohorts”), with the exception of contracts linked to separate management schemes, for which the European Commission’s endorsement of IFRS 17 provided the option to depart from that requirement (carve-out).
The Intesa Sanpaolo Group aggregates the contracts belonging to the Non-Life Business based on the Solvency II Line of Business (“LoB”) they belong to. For the Life Business, groups of contracts are aggregated for products included in the same Separate Management, for Multi-management products in the same combination of Separate Management, Multi-Line products linked to the same Separate Management, Unit-Linked products, products linked to Pension Funds and pure risk products (e.g. temporary life policies).
With regard to contracts relating to Multi-Line products or linked to one or more Separate Management schemes, the Group exercises the option not to apply the Annual Cohort requirement (so-called “carve-out”), as allowed in the IFRS 17 Endorsement Regulation at European level, and therefore aggregates these types of contracts only based on the concept of sharing similar risks and uniform management as well as belonging to the same profitability bucket.
Contract boundaries are the expected cash flows to be considered when projecting the cash flows of an insurance contract. The determination of the contract boundaries is used to establish whether a particular contractual option is to be included in the cash-flow projection as soon as the contract is issued or whether the exercise of that option will result in the generation of a new group of contracts. The IFRS 17 contract boundaries include all the contractual options that establish the predetermined exercise conditions in terms of pricing, already at the time when the contracts are issued. If the exercise of the option does not have conditions predetermined upon issue and the conditions are only defined at a later date or at the time of exercise by the policyholder, they are not included in the IFRS 17 contract boundaries and are not projected in the cash flows of the host contract; the exercise of the option generates a group of contracts different from that of the host contract.

Measurement criteria

IFRS 17 requires the measurement of insurance liabilities (or assets if of opposite sign) based on up-to-date information that reflects the conditions existing at the measurement date.
Specifically, the standard sets out:

– a reference accounting model (General Model) used for life insurance contracts without contractual links to other assets and liabilities (life policy products and credit protection insurance) and for long-term non-life contracts ineligible for the simplified model;
– a model that modifies the General Model called the Variable Fee Approach, which is mandatory for measuring certain specific types of liabilities (for example, contracts linked to separate management schemes or Unit-Linked products);
– an optional simplified approach called the Premium Allocation Approach.

For the General Model and the Variable Fee Approach, the standard requires, at the initial measurement date, the measurement of a group of contracts as the sum of the expected contractual cash flows (Present value future cash flow), a risk adjustment – a liability that reflects the uncertainty of cash flows due to non-financial risks – and the Contractual Service Margin, which represents the unaccrued profits that the entity will recognise gradually as it provides the service provided for by the group of insurance contracts.

Insurance liabilities comprise:
– the liability for remaining coverage (LRC): this is the liability related to the hedged event and consists of the sum of the expected contractual cash flows (Present value future cash flows), the Risk Adjustment and the Contractual Service Margin;
– the liability for incurred claims (LIC): this is the liability representing events that have already occurred and is composed of the sum of the related expected contractual cash flows (Present value future cash flows) and Risk Adjustment.

To determine the expected cash flows, all flows directly linked to the performance of the insurance contracts are considered. Because the insurance products in the Intesa Sanpaolo Group are mainly distributed by Group companies other than those in the Insurance Division, to quantify the cash flows and thus, the Contractual Service Margin at consolidated level, only the real costs incurred by the Group due to third parties are considered.

Following initial recognition, the carrying amount of a group of insurance contracts at each reporting date must be revised based on the most up-to-date assumptions, both operational (i.e. costs of claims, expenses) and financial (i.e. interest rate).
At each accounting closing it is thus necessary to update the balances of the present value of future cash flows and the risk adjustment. In this context, the General Model of measurement envisages the following:
– the update of the present value of future cash flows or the risk adjustment attributable to operational assumptions (i.e. the update to the estimated future claims) is recorded as an offsetting entry to the contractual service margin (i.e. a reduction in the present value of future cash flows due to a decrease in expected claims is recorded as an increase in the contractual service margin);
– the update of the present value of future cash flows or the risk adjustment attributable to financial changes (i.e. the update to the interest rate) is recognised, instead, in the income statement (i.e. as a reduction in the present value of future cash flows due to an increase in the discount rate is recognised in the income statement).

Once the changes attributable to operational assumptions of the expected contractual cash flows and the risk adjustments have been applied, the Contractual Service Margin for the insurance service provided during the period is released to the income statement. The release method follows the service provided over the term of the contract (coverage unit), which the Group calculates using the projected and discounted insured amounts for the life business and the earned premiums for the non-life business.
With respect to the Life business products measured under the Variable Fee Approach, in addition to the release of the Contractual Service Margin calculated using the Coverage Units, there is the release of the Systematic Economic Variance (ESR) which is equal to the difference between the prospective period-end Contractual Service Margin before the release under the Real World assumption and the prospective period-end Contractual Service Margin before the release under the Risk Neutral assumption.
For groups of onerous contracts, the standard requires that the overall estimated loss over the entire life of the policies be immediately recognised in the income statement.
The differences between the expected cash flows for the period and the corresponding actual figure also contribute to the adjustment of the Contractual Service Margin. In particular, with respect to the benefits provided by the contracts, the following must be calculated:
– the actual/expected difference relating to the non-distinct investment component (amounts that are paid to the holder of the contract in all circumstances, net of any components relating to insurance risks), which was identified for all products in portfolio with reference to the surrender value payable by the Company at the request of the holder of the contract, net of any penalties;
– the actual / expected difference relating to the premiums paid by the holder of the contract and related commissions, with reference only to the component relating to future services.

For insurance contracts with direct participation features (life products whose value is influenced by the underlying assets), the standard requires the mandatory application of a modified version of the General Model called the Variable Fee Approach. A contract has direct participating features if its terms and conditions envisage that:
– the policyholder obtains returns linked to a clearly identified group of underlying items;
– the entity expects to pay out a substantial share of the fair value returns on the underlying assets;
– a substantial proportion of the cash flows that the issuer expects to pay the policyholder will vary with the change in the fair value of the underlying assets.

The Variable Fee Approach has the same rules of initial recognition as the General Model, but provides several variants on the changes in subsequent measurements.
Under the Variable Fee Approach, the contractual service margin includes, in addition to that set out in the General Model, the financial profits pertaining to the Group deriving from the management of the assets underlying contracts measured using the Variable Fee Approach.
To determine whether discretionary participation features are significant, the Group performs both a qualitative and quantitative test to verify the requirements. Within the Insurance Division's products, all the linked insurance contracts and pension funds and all the contracts linked to a separate management, both individual and Multi-Line, are measured using the Variable Fee Approach.

Lastly, IFRS 17 requires the application of the Premium Allocation Approach to simplify the measurement of a group of insurance contracts if the coverage period of each contract in the group (including the insurance services deriving from all premiums included within the contractual limit) does not exceed 12 months or if the application of that approach does not provide results that deviate significantly from the application of the General Model.
That approach does not require the identification of the single components of liabilities for future coverage (present value of future cash flows, risk adjustment and contractual service margin) but the identification of an "overall" insurance liability. The Intesa Sanpaolo Group applies this approach solely to the Non-Life Business, with the general rule being to use the Premium Allocation Approach for insurance policies with a duration of one year or less.

In some cases, the interaction between IFRS 17 and IFRS 9 may generate mismatches between the way insurance contracts and related financial assets are accounted for. In order to reduce these mismatches, IFRS 17 allows for a disaggregation of financial income and expenses from insurance contracts between the profit or loss (financial result) and the statement of comprehensive income.
The decision to carry out disaggregation is made for groups of contracts in applying IFRS 17 with the following methods:
– with regard to contracts valued using the General Model and the Premium Allocation Approach, the financial revaluation of future cash flows and risk adjustment at historical rates is recognised through profit or loss, while the difference between the revaluation at historical and current rates is recognised through other comprehensive income;
– for contracts valued under the Variable Fee Approach, IFRS 17 requires the financial result of insurance contracts to be disaggregated between profit or loss and other comprehensive income. In essence, the difference between the financial result of insurance contracts and the financial result through profit or loss arising from the underlying financial instruments is reclassified to other comprehensive income (mirroring).

In line with the decisions to classify the securities under assets to cover the insurance products, and to reduce potential accounting mismatches, the Intesa Sanpaolo Group adopts the disaggregation illustrated above (also known as the "OCI option") on all portfolios of insurance contracts, except those relating to unit-linked policies not linked to multi-line products or open pension funds.

Modification and derecognition criteria

Under IFRS 17, an insurance contract is derecognised when, and only when, the contract is extinguished, i.e., when the specific obligation in the insurance contract has expired or has been fulfilled or eliminated.

Moreover, following contractual modifications (agreed between the parties or due to changes in regulations) that reflect at least one of the following conditions:
– the modified contract would have been excluded from the scope of application of IFRS 17 if the modified terms had been included in the contract on initial recognition; the separation of the different components, bringing a different contract to be measured under IFRS 17; or a substantially different "contract boundary" or the assignment of a different group of contracts;
– the original contract meets the definition of insurance contract with direct participation features, but the modified contract no longer does, and vice versa;
– the original contract is measured using the simplified approach or the premium allocation approach, but the modified contract no longer meets the eligibility criteria to be measured using this approach.

IFRS 17 requires that the original contract be derecognised and the new contract be recognised. Conversely, if the contractual modifications meet none of the conditions listed above, they shall be treated as changes in the measurement assumptions of the present value of future cash flows and, as a result, shall modify the previously calculated risk adjustment and contractual service margin.

Use of estimates to determine the insurance liabilities pursuant to IFRS 17

Discount rate

In accordance with IFRS 17, the Intesa Sanpaolo Group defined a methodology for calculating discount rates for the measurement of insurance contracts.
Specifically, the Intesa Sanpaolo Group follows a bottom-up approach, defining a discount rate structure that includes both risk-free interest rates and an adjustment to reflect the illiquid nature of insurance products.
In order to determine the risk-free interest rate structure, the Group first observes the market data on interest rates that are deemed sufficiently liquid. At present, the Intesa Sanpaolo Group considers sufficiently liquid the swap rate observations up to the 20-year maturity (LLP or Last Liquid Point). In order to ensure the use of a risk-free structure, the Group subsequently excludes the credit risk component from the valuation of swap rates, which is quantified (similarly to EIOPA) through the calculation of credit risk adjustment (CRA).
The risk-free rates calculated accordingly as swaps less CRA are extrapolated beyond the LLP, using specific market methodologies, also defining a risk-free interest rate on long maturities of the curve (60y), assessed by also considering inflation expectations[357].
On the other hand, with respect to the liquidity premium to be added to the risk-free rates calculated accordingly, the Intesa Sanpaolo Group first defines, for each insurance contract to be valued, the appropriate reference asset portfolio to calculate this premium. The Group elected to use the following reference portfolios for the different types of insurance contracts:
– for contracts relating to the non-life business, the asset portfolio of the company is used;
– for contracts relating to the life unit-linked business and pension funds, the company's total portfolio of assets relating to the unit-linked business and pension funds is used;
– for contracts relating to the traditional life business (separate management) or multi-line business, the investment portfolio of separate management to which the product is linked is used.

After identifying the reference asset portfolio, the Group calculates the average liquidity premium of the assets in the portfolio, equal to the difference between the spread observable at the measurement date for each asset and its probability of default. The default component is deducted in line with the provisions of IFRS 17 on credit risk correction.

[357] The Group's elections, both for the interest rate liquidity analysis component, the CRA adjustment and the extrapolation of long-term rates, are in line with the provisions of IFRS 17 on the definition of the risk free rate structure and the insurance practice.

Estimates of future cash flows for the performance of insurance contracts

Future cash flows represent future liabilities that the insurance company posts to cover its commitments regarding insurance business. These include cash flows to insured parties weighted by their probability of occurrence, including forward-looking returns on insurance products and expenses to be incurred to support the business in force.

Life business cash flows are calculated using the actuarial engine, based on future cash flow projection methods similar to those defined under Solvency II, with a higher level of granularity compared to the Unit of Account, in order to achieve an estimation level as close to reality as possible. 200 scenarios were used for stochastic processing.
Management of the assets belonging to separate management schemes, used for projection purposes and implemented in the actuarial engine, is defined as Future Management Measures (FMG). These include, inter alia: the target return of the separate management scheme, strategic asset allocation, reinvestment/disposal policies, risk mitigation strategies and commercial actions.

With respect to the Non-Life business, the future cash flows relating to the liability for incurred claims (LIC) are calculated without distinguishing between the different components included in the calculation (i.e., there is no need for a break down into the different components relating to claims, incurred but not reported, external settlement costs, etc.).
With respect to the future cash flows relating to the liability for remaining coverage (LRC) measured using the General Model, the calculation is based on the definition of future cash flows under Solvency II, duly adjusted to reflect any differences with respect to the scope of the future cash flows to be considered (i.e., contract boundary) and the granularity required by IFRS 17.
The calculation of the liability for remaining coverage measured using the Premium Allocation Approach does not require future projections and is based on the simplified method envisaged by the standard.

To estimate the expected future cash flows within the scope of each group of contracts, the Group applies the following criteria:
– incorporating all available information obtained in a reasonable and justifiable manner, without superfluous costs or efforts, with regard to the amount, timing and uncertainty of the cash flows;
– maintaining consistency of the estimate of any market variables with the corresponding values observable on the market for those variables;
– reflecting the conditions existing at each measurement date, i.e. the estimate is based on current information, updated for each reporting period.

Specifically, the accounting standard defines non-financial variables (so-called operational assumptions) as all variables that cannot be observed or derived directly from markets.
The operational assumptions mainly affect:
– the exercise by the insured parties of contractual options that modify the nature of the terms of the contract and the resulting cash flows (such as the conversion option);
– the frequency and amount of insured events (such as the operational mortality factor);
– the technical assumptions relating to non-life business (such as the definition of the loss ratio, the expense ratio, early termination rates with and without premium reimbursement, claim run-off rates).

Where cash flows contain financial guarantees and contractual options (which do not change symmetrically with market charges), the methodology adopted by the Intesa Sanpaolo Group provides for appropriate modelling of the impact of financial guarantees and contractual options, using stochastic financial scenarios within the actuarial platform.
The companies belonging to the Insurance Division maintain and regularly update a list of all operational factors that may affect future liabilities.
For each operational factor selected and deemed material, the most appropriate, comprehensive and accurate data set (internal or external, or a combination of the two) is identified and will be used as an objective, stable and robust basis to define Best Estimate assumptions. For each of the selected operational factors, the most reliable, objective, appropriate and stable method is identified to derive Best Estimate assumptions, appropriately using the available information and possibly considering the impact of outliers and potential future trends. Finally, the validity is checked and the adequacy of the methods used to derive the Best Estimate assumptions is actively and regularly monitored.
With respect to the most significant operating assumptions, the companies belonging to the Insurance Division perform appropriate sensitivity analyses.

To identify the amount of expenses included in the scope of IFRS 17, reference is made to the expense captions, net of several expenses (e.g. training expenses, donations and fines etc…), in line with the provisions of the standard. Specifically, the expenses include those directly attributable to groups of contracts, including the allocation of fixed and variable general overhead costs. Moreover, under several methods used to measure claims incurred for Non-Life/Accident contracts, the estimate of future payments of claims are adjusted to take account of inflation. The Insurance Acquisition Cash Flows incurred in a lump-sum on issuing new contracts are not part of future cash flows, but are included in the measurement of the Contractual Service Margin of New Business, as a decrease thereto, by virtue of the fact that those costs were paid against the payment of the premium.
In defining projected cash flows, the Intesa Sanpaolo Group projects the real costs incurred to third parties, eliminating the intragroup costs incurred by the insurance companies.

With regard to the assumptions on mortality rates, the Italian national mortality tables published by ISTAT are considered. A survey on the Group's experience in the last ten years is conducted, and statistical methods are used to adjust the mortality tables in order to generate the expected mortality rates differentiated by macro-type of product (credit protection insurance, temporary life policies, savings/investment/pension) and by age and gender classes.

The other technical assumptions are also obtained starting with the historical data taken from ERP/management applications. Specifically, for redemption rates, a statistical analysis is conducted by claim duration of the historical frequencies recorded by the single insurance companies, suitably adjusted based on expert judgement, specifically regarding the claim durations not yet subject to observation.

To measure the future cash flows relating to the liability for incurred claims, the Group uses the most commonly used methods in the sector, also based on the availability of data and time series on claims. The estimate of liabilities for claims occurred includes the estimate of reimbursements and direct costs for claims occurred and reported, occurred but not yet reported, direct liquidation fees and management and liquidation fees allocated.

Methods used to measure the adjustment for non-financial risk

The non-financial risk adjustment is the compensation required to support the uncertainty on the amount and timing of cash flows deriving from non-financial risk at the time of performance of the insurance contract. As the risk adjustment compensates for uncertainty, estimates are made both on a proportionate approach to calculating the risk adjustment as the product of an average percentage applied to the expected contractual cash flows, where the percentage is obtained by leveraging an ex-ante VaR approach on a quarterly basis, based on the 75th percentile of the specific distribution of each risk considered. The analysis of the requirements of the standard entailed the selection, for the purposes of calculating the risk adjustment for the Life Business and the Non-Life Business, of the following underwriting risks:

– for the Life business, reference is made to the following risks: Mortality, Longevity, Expenses and the higher of the Lapse Up risk and Lapse Down risk;
– for the Non-Life business, reference is made to the following risks: Premium and Reserve and Lapse.

Both for the Life business and the Non-Life business, Catastrophic risk is excluded.
The *ex-ante* VaR is calculated at the overall company level, benefiting from diversification effects between risks and portfolios. This measure is subsequently "re-allocated" to each Macro-Portfolio (for the Life business: Separate Management, Multi-line, Unit Linked, Pension Funds and pure risk products; for the Non-life business, the Macro-Portfolios correspond to the Solvency 2 Business Lines) on a pro rata basis according to each Macro-Portfolio's individual contribution to the *ex-ante* Var.

17. Other information

Own shares

Any own shares held are directly deducted from equity. Similarly, their original cost and the profits or losses deriving from their subsequent sale are recorded in equity.

Accruals, prepayments and deferrals

Accruals, prepayments and deferrals for the year that include income and charges for the year, accrued on assets and liabilities, are shown in the financial statements as an increase or decrease of the assets and liabilities to which they are related.

Leasehold improvements

The costs sustained for restructuring property belonging to third parties are capitalised in consideration of the fact that for the duration of the rental contract the using company has control of the assets and may receive their future economic benefits. These costs, recorded in Other assets as provided for by the instructions of the Bank of Italy, are amortised over a period which must not exceed the duration of the rental contract.

Employee termination indemnities

Employee termination indemnities qualify as a "post-employment benefit" classified as:

– a "defined contribution plan" to the extent of the portions accruing from 1 January 2007 (the date the reform of the supplementary pension schemes came into force pursuant to Legislative Decree 252 of 5 December 2005) when the employee opted for the complementary pension scheme or decided to allocate such portions to the INPS (the Italian Social Security Institute) Treasury fund. Therefore, the amounts, recorded under personnel expenses, are determined on the basis of amounts due without the application of actuarial calculation;
– a "defined benefit plan" to the extent of the portions of employee termination indemnities accrued until 31 December 2006. These amounts are recognised at their actuarial value determined using the "Projected Unit Credit Method", without applying the pro-rata of the service rendered. Indeed, the current service cost of employee termination indemnities is almost entirely accrued and its revaluation in the years to come is not expected to generate significant benefits for employees.

For the purposes of discounting, the rate used is the market yield of high-quality corporate bonds taking into account the average remaining life of the liability, weighted based on the percentage amount paid and advanced, for each maturity, with respect to the total to be paid and advanced until the expiry of the entire obligation.
The plan's costs are recorded under personnel expenses, while actuarial profits and losses are recognised in the statement of comprehensive income.

Share-based payments

Share-based payments are recorded in the income statement, with a corresponding increase in shareholders' equity, on the basis of the fair value of financial instruments attributed at assignment date, dividing the charge over the period set forth by the plan.

In the case of options, the fair value is calculated using a model which considers, in addition to information such as strike price and expiry date of the option, spot price of the shares and their expected volatility, expected dividends and the risk-free interest rate, as well as the specific characteristics of the plan. The pricing model values the option and the probability of realisation of the condition on the basis of which the options have been assigned.

The combination of the two values supplies the fair value of the assigned instrument.

Any decrease in the number of financial instruments granted is accounted for as a cancellation of such instruments.

Employee benefits

Employee benefits are defined as all forms of consideration given by an entity in exchange for service rendered by employees.

Employee benefits are divided into:

– short-term benefits (other than termination benefits or equity compensation benefits) that are expected to be paid in full within twelve months after the end of the period in which the employees render the related service and recognised in full through profit or loss when they become due (this category includes, for example, wages, salaries and "extraordinary" benefits);
– post-employment benefits payable after the conclusion of employment that require the entity to provide future benefits to employees. These include employee termination indemnities and pension funds, which are in turn divided into defined contribution plans and defined benefit plans or company pension funds;
– termination benefits, i.e. compensation that the company recognises to the staff members upon termination of the employment agreement, following the company's decision to terminate the employment relationship prior to the normal retirement date;
– long-term benefits, other than those above, that are not expected to be paid in full within twelve months after the end of the period in which the employee rendered their service.

Offsetting of financial instruments

According to IAS 32, paragraph 42, financial assets and financial liabilities are offset and the net amount presented in the financial statements when an entity:

– has a legal enforceable right of set off which is currently exercisable in all circumstances, both in the ordinary course of business or in the event of default, insolvency or bankruptcy of the parties;
– intends to settle the transactions on a net basis or on a gross settlement basis whose substantive effects are equivalent to a net settlement.

For derivative instruments covered by netting agreements that meet the above requirements, Bank of Italy Circular 262 also requires the offsetting to be performed between trading and hedging derivatives, with the mismatches to be presented on a net basis. The net balance is usually allocated to the trading book rather than to the hedging derivatives, based on the actual amount of the mismatch between trading and hedging derivatives.

In compliance with the requirements of IFRS 7, more detailed information is provided in the tables contained in Part B – Other information of these Notes to the financial statements, which present the following:

– the carrying amounts of assets and liabilities that meet the requirements of IAS 32, paragraph 42, before and after offsetting;
– the exposures subject to master netting agreements that have not been offset but have the potential to be offset following specific circumstances;
– the collateral associated with them.

Tax credits related to the "Cura Italia" and "Rilancio" Decree Laws acquired as a result of transfer by direct beneficiaries or previous purchasers (e.g. ecobonus)

Decree Laws no. 18/2020 ("Cura Italia" Decree) and no. 34/2020 ("Rilancio" Decree) introduced tax incentives related to both investment expenditure (e.g. ecobonus and seismicbonus) and current expenditure (e.g. rents for non-residential premises). The government once again intervened on the issue through Decree Law no. 50/2022 ("Decreto Aiuti"), mainly by remodulating the base of potential re-assignees through Decree Law no. 11/2023 which prohibits, although with certain exceptions, the possibility of opting, instead of directly using the deduction, for the discount on invoices or transfer of credit and, finally, through Decree Law no. 39/2024 which mainly refers to qualified parties (financial intermediaries and insurance companies) and limits the possibility of netting social security against contribution liabilities.

These tax incentives apply to households or businesses, are linked to a percentage of the expenditure incurred (in some cases up to 110%) and are granted in the form of tax credits or tax deductions (with option for conversion into tax credits). The main features of these tax credits are: i) the possibility of using them for offsetting; ii) their transferability to third-party purchasers; and iii) their non-refundability by the Treasury.

The accounting for tax credits acquired from a third party (transferee of the tax credit) is not covered by a specific international accounting standard. IAS 8 requires, in cases where there is a circumstance not explicitly addressed by an IAS/IFRS accounting standard, that management develop an accounting policy to ensure relevant and reliable disclosure of such transactions.

To this end, the Intesa Sanpaolo Group, in view of the guidance provided by the Authorities, in the document "Accounting treatment of tax credits connected with the 'Cura Italia' and 'Rilancio' Decree Laws acquired following the assignment by the direct beneficiaries or previous purchasers" published on 5 January 2021 by the Coordination Committee between the Bank of Italy, Consob and IVASS concerning the application of IAS/IFRS has adopted an accounting policy that refers to the accounting rules established by IFRS 9, applying the provisions that are consistent with the characteristics of the transaction.
The Group attributes:

– to a Hold to Collect business model the loans that are acquired within the limits of its tax capacity, with the objective of holding and using them for future offsetting. Those loans are recognised at amortised cost, representing the remuneration of net interest income over the time frame of recovery;
