I. LIQUIDITY INFORMATION

	For the quarter ended	
	31-Dec-2025	30-Jun-2025
Average liquidity maintenance ratio for the period	73.35%	64.69%

The average liquidity maintenance ratio ("LMR") is the arithmetic mean of each calendar month's average liquidity maintenance ratio for the relevant period as calculated in accordance with Section 103B of Banking (Disclosure) Rules.

a. Governance of liquidity risk management

The Branch manages our liquidity risk in accordance with the Liquidity Risk Management Policy, which is set by Assets and Liabilities Committee of the Branch ("ALCO") and approved by the Head Office. The Policy provides a set of principles for the prudent management of liquidity in the normal course of business. The primary measures used to manage liquidity within the tolerance are the stress-testing and scenario analysis, liquidity maintenance ratio, loan-to-deposit, and cash flow maturity mismatch analysis.

ALCO is responsible for the liquidity risk management in the Branch. Chief Executive is the chairman of the Committee. The members include Alternate Chief Executive and the head of all department. Chief Executive could also invite other staffs to attend the Committee meeting in need. The regular Committee meeting will be convened monthly or on a need basis. The Branch regularly prepares various liquidity risk measurement indicators and limits, and reports to ALCO. Then, the Committee will report to the senior management of the Head Office to let the high-level management under stands the Branch's funding liquidity.

b. Funding strategy

The liquidity risk management of the Branch adopts the principle of conservative and stable, forecasts the cash flow at different time points to diversify the source and duration of funds, and adjusts the liquidity gap for daily cash flow and market changes.

- Source of funds: Based on the principle of diversification, stability, and reliability.
- Use of funds: The principle of decentralization and avoiding excessive concentration.
- Management strategy: Based on the principle of conservative estimation, and strengthen the interactive management of foreign currency funds.

c. Liquidity risk mitigation techniques

In order to maintain a stable liquidity ratio, the Branch establishes several measures to reduce the liquidity risk when Branch's capital is needed in emergency.

The measures are included by following:

- Sale of debt securities
- Funding from Head Office
- Funding from other banks
- Reduction of inter-bank lending activities

d. Liquidity stress test

Stress tests should be performed quarterly for all currencies in aggregate that we have significant

positions in order to maintain appropriate individual currency funding in needs. There are 3 scenarios for stress testing. They are institution-specific stress scenario, general market stress scenario, and combination of both situations. Each scenario would perform cash-flow analysis for within 7 days or within 30 days. The test result is used to analyzing exposure level and risk tolerance in such scenarios. The Risk Management Department also should review the assumptions and results of the stress testing periodically, as well as to adjust the different assumptions to ensure those assumptions for stress testing which are the most suitable for the Branch.

e. Liquidity buffers and contingency funding plan

The Branch sets a higher internal limit of liquidity maintenance ratio than the statutory minimum to maintain adequate liquidity in response possible situation. In addition, the Branch establishes a contingency funding plan that details the emergency measures which should be taken actions while a liquidity crisis occurs. The ALCO shall formulate measures to address the emergency situation and report to the Head Office regarding the follow-up actions and results.

f. Measure indicators of liquidity risk

The Branch sets up a series of limits indicators, including liquidity maintenance ratio and maturity mismatch limits, in order to monitoring impact on liquidity risk.

Limits indicators		Limit
Liquidity maintenance ratio (LMR)		≥ 40%
Maturity mismatch Ratio (MMR)	Within 7 days	-20%
	Within 1 month	-30%

g. Concentration limits on collateral pools and sources of funding

The major sources of funding for the Branch are the funding raised from Head Office and inter-banks. The Branch has established concentration limit of funding sources taking into account the respective risk profiles of banks. Funding from each counterparty is restricted to be not more than 10% of the total assets to reduce reliance on a single source of funding.
