The risk involved in these credit-related instruments is essentially the same as the credit risk involved in extending loan facilities to customers. The contract amounts represent the amounts at risk should the contract be fully drawn upon and the customers default. As the facilities may expire without being drawn upon, the contracts amounts do not represent expected future cash flows.

The above derivative contracts amounts are the notional amount of the contract, they do not represent amounts at risk. All the derivative contracts held by the Branch are to offset gains/losses on fixed rate bonds and loans.

(b) The total fair value of the above derivative transactions	<u>At 31 Dec 2021</u>	<u>At 30 Jun 2021</u>
- Exchange rate-related derivative contracts	82,761	80,464

V Liquidity

	<u>Year ended 31 Dec 2021</u>	<u>Year ended 31 Dec 2020</u>
The average liquidity maintenance ratio for the period	118.86%	150.08%
The average liquidity maintenance ratio for 4th quarter	94.23%	129.91%

The liquidity maintenance ratio (LMR) is calculated in accordance with the Banking (Liquidity) Rules effective from 01 January 2015.

The average liquidity maintenance ratio is the arithmetic mean of each calendar month's average LMR as reported in the "Return of Liquidity Position of an Authorized Institution".

Liquidity Risk Management

The Branch has established a Liquidity Risk Management Policy which is reviewed and approved by the senior management. This policy requires the Branch to maintain a conservative level of liquid funds on a daily basis to meet all financial obligations, and setup the action plan on liquidity contingency.

The liquidity position is monitored through statutory liquidity ratios, cash flow analysis, and inter-bank transactions undertaken by our Branch. The Branch also perform the testing on various type of stress scenarios on monthly basis according to our Liquidity Stress Testing Policy.

Shinhan Bank, Hong Kong Branch
Financial Disclosure as of 31 December 2021

The key elements of the liquidity risk framework are:

Liquidity Stress Testing

The Branch performs liquidity stress testing on a regular basis, to evaluate the effect of both general market wide and institutional specific disruptions on the Branch's liquidity position. The internal stress testing is to ensure sufficient liquidity for the Branch under different adverse scenarios. The Branch's liquidity stress tests consider the effect of changes in funding assumptions, and the market value of liquidity assets, the results of which are reviewed by senior management and are considered in making liquidity management decisions. Based on the result of the liquidity stress test, the Branch takes necessary (if needed) rebalancing, restructuring actions by risk mitigation or contingency plans.

Contingency Planning

The Branch maintains the liquidity contingency funding plan in case it faces liquidity problem as part of liquidity risk management. The liquidity contingency plan specifies an approach for monitoring and evaluation of actual and potential liquidity events. The plan outlines liquidity identification, monitoring, and measurement of liquidity events. The plan also specifies possible measures, internal and external communication and action to be taken at various stages of crisis.

Funding Diversification

Apart from taking customer deposits as major sources of funding, the Branch boardens its funding source in retail market, money market and capital market by different terms. The Branch also holds a pool of highly liquid, unencumbered assets that can be readily sold or pledged to secure borrowings under stressed conditions.

Oversight and Reporting

The results of stress testing, Liquidity Maintenance Ratio(LMR) and liquidity gap are reported to the management and head office on a regular basis.

The details of maturity profile refer to Appendix I
