Key prudential ratios and overview of risk management and RWA (Continued)

OVA: Overview of risk management

Overview

Throughout 2020, the Bank has maintained “stable, balanced, compliant and innovative” as the core concept behind its risk appetite. Through excellent risk management, the Bank is guided onto a sustainable growth path and strengthened its market leading position.

During this reporting period, the Bank thoroughly implements a sound strategy and establishes a mature management structure. Under the guidance of the Board of Directors, the Bank pursues balance between returns and risks, thereby achieving a balanced development in scale, quality and efficiency. We adhere to the principle of compliance management, comply with all regulatory requirements, strengthen the maintenance of risk data, increase the technical level of risk measurements, and enhance the overall risk management capabilities. Through the spirit of risk management, we inherited innovative thinking, grasped development opportunities, achieved strategic goals and created greater value.

As the Bank’s main business is still dominated by credit business such as lending, billing and stock financing, credit risk is one of key risks encountered by the Bank. The Bank also attaches great importance to the development of treasury business, but market risks such as exchange rate risk, interest rate risk and option risk arise from such market price fluctuations. Beyond credit and market risks, key risks encountered by the Bank also include operational, strategy, liquidity, legal and compliance risk.

Risk Governance

The Bank’s risk management governance structure is designed to cover all business processes. It ensures various risks are properly managed and controlled throughout the course of conducting business. The Bank has a robust organisational structure for risk management and a comprehensive set of policies and procedures to identify, measure, monitor and control various risks that may arise. These risk management policies and procedures are regularly reviewed and updated to reflect changes in markets and business strategies. Various groups of risk takers assume their respective responsibilities for risk management.

The Board of Directors, with the assistance of its committees, has the primary responsibility for the formulation of risk management strategies and ensuring that the Bank has an effective risk management system to implement these strategies. The Risk Management Committee, a standing committee established by the Board of Directors, is responsible for overseeing the Bank’s various types of risks, approving high level risk management policies and monitoring their implementation, reviewing significant or high risk exposures or transactions and exercising its power of veto if it considers that any transaction should not proceed.

The Chief Executive is responsible for managing the Bank’s various types of risks, and material risk exposures or transactions within his authority delegated by the Board of Directors. The Chief Risk Officer assists the Chief Executive in fulfilling his responsibilities for the day-to-day management of risks. The Chief Risk Officer is responsible for initiating new risk management strategies, projects and measures in response to regulatory changes that will enable the Bank to better monitor and manage new risk issues or areas that may arise from time to time from new businesses, products and changes in the operating environment. The Chief Risk Officer is also responsible for reviewing material risk exposures or transactions within his delegated authority. In accordance with the principle of setting the hierarchy of risk management policies approved by the Board of Directors, Senior Management are also responsible for approving the detailed risk management policies of their responsible areas.

Various units of the Bank have their respective risk management responsibilities. Business units act as the first line of defence while risk management units, which are independent from the business units, are responsible for the day-to-day management of different kinds of risks. Risk management units have the primary responsibilities for drafting, reviewing and updating various risk management policies and procedures.

Key prudential ratios and overview of risk management and RWA (Continued)

OVA: Overview of risk management (Continued)

Risk Governance (Continued)

As the main operational function in risk management, the Risk Management Department is tasked with identifying, understanding, controlling and reporting of all risks. The Risk Management Department should also provide reliable and comprehensive risk information (such as risk heat map). Other than that, the Risk Management Department is tasked with performing stress tests and reporting the Bank's risk situation under stressed scenarios. Finally, when any event that causes major changes to the Bank's financial and risk situation arises, the Risk Management Department should draw the Board of Director's, Risk Management Committee's and Chief Executive's attention to said event.

Risk information is taken from different risk measurement systems of the Risk Management Department. The information is analysed and presented in management committees. The information is visualized using different business intelligence tools, targeting to provide management with some easy-to-understand risk analytics accompanied with suitable narratives. The committees then report to the Board of Directors with a summary of discussions and recommendations supported by analyses and figures.

Risk Culture

A prudent risk management culture is maintained through making clear risk governance, providing staff trainings, creating proper incentives and setting up various communication channels. The management believes that a strong risk culture would be one of the key attributes stakeholders are looking forward, which will in turn help the Bank sustains in a long run. The promotion of risk culture is aligned with the management incentives through proper performance evaluations. This ensures both the financial and non-financial targets would be achieved simultaneously.

Stress Testing

Stress testing is an important risk management tool for estimating risk exposures under stressed conditions arising from extreme but plausible external factors. The Bank uses a comprehensive bank-wide stress testing program to support risk management and capital planning. The Bank's stress testing policy is approved by Risk Management Committee. The stress test results are presented in the same committee. The stress testing program aims to provide management with the performance and capital strength of the Bank under some stress scenarios. It enables them to better understand and mitigate risks. The Bank's resilience to market shocks is thus enhanced. Stress testing tools include sensitivity analysis, hypothetical and historical stress scenarios as well as reverse stress test. Under stress tests, the incremental expected and the unexpected loss would be reflected in a decrease in capital level and an increase in risk weighted assets respectively.

In sensitivity analysis, it is assumed that extreme changes occur to a single risk factor (such as USD exchange rate decreasing by 10% or yield curve shifting up by 200 bps). These stress test scenarios are used to test the sensitivity of the Bank's business to a single factor, thereby evaluating if the Bank's risk is overly concentrated.

Scenario analysis assumes extreme changes to multiple risk factors at the same time. There are two types of scenario analysis, namely historical scenario analysis and hypothetical scenario analysis. Historical scenario analysis assumes historical extreme fluctuations periods (such as the 1997 Asian Financial Crisis) reoccur. Hypothetical situation analysis uses the discretion and professional judgment of test conductors to design potential movement in future extreme fluctuation periods.

Reverse stress testing assumes that stress test results are above the threshold, such as low capital adequacy ratio, low liquidity or losses beyond profit level, identifying risk drivers that can cause such situations and their respective scenario changes. After that, the probability of such events are identified through quantitative analysis and then classified as very low, low, medium or high.

Key prudential ratios and overview of risk management and RWA (Continued)

OV1: Overview of RWA (Continued)

During the last quarter in 2020, the total RWA increased by HK\$20,646 million. The key contributor was the credit risk RWA for non-securitization exposures, which was mainly driven by the growth in loans and advances.

L12: Main sources of differences between regulatory exposure amounts and carrying values in financial statements

	Total HK\$'000	Items subject to:			market risk framework HK\$'000
		credit risk framework HK\$'000	securitization framework HK\$'000	counterparty credit risk framework HK\$'000	
1. Asset carrying value amount under scope of regulatory consolidation (as per template LI1)	370,540,416	369,634,983	–	30,061,973	717,583
2. Liabilities carrying value amount under regulatory scope of consolidation (as per template LI1)	27,923,203	–	–	26,938,554	984,649
3. Total net amount under regulatory scope of consolidation	342,617,213	369,634,983	–	3,123,419	(267,066)
4. Off-balance sheet amounts	15,476,090	2,776,260	–	–	–
5. Differences due to consideration of provisions	543,175	543,175	–	–	–
6. Differences due to potential exposures for counterparty credit risk	3,328,947	–	–	3,328,947	–
7. Differences due to credit risk mitigation	467	–	–	467	–
8. Exposure amounts considered for regulatory purposes	361,965,892	372,954,418	–	6,452,833	(267,066)

L1A: Explanations of differences between accounting and regulatory exposure amounts

The main differences between accounting values and amounts considered for regulatory purpose are as follow:

- (i) Off-balance sheet items under regulatory purpose are converted into credit equivalent amount through the use of credit conversion factors (CCFs);
- (ii) Carrying amounts reported in financial statements are net of Stage 1, 2 and 3 provisions, whereas exposure amount under regulatory purpose are net of Stage 3 provision only;
- (iii) Counterparty credit risk exposures under regulatory purpose not only include the current exposures but also the potential exposures;
- (iv) Regulatory exposure amounts take into account the recognized collateral received under SFTs.

Disclosure for valuation methodologies and independent price verification, please refer to note 3.4 of Fair value of financial assets and liabilities under Financial Risk Management Section of the 2020 Annual Report.

Notes to the Template

	Description	Hong Kong basis	Basel III basis
		HK\$'000	HK\$'000
9.	Other intangible assets (net of associated deferred tax liabilities)	16,132	–
	<p><u>Explanation</u> As set out in paragraph 87 of the Basel III text issued by the Basel Committee (December 2010), mortgage servicing rights (“MSRs”) may be given limited recognition in CET1 capital (and hence be excluded from deduction from CET1 capital up to the specified threshold). In Hong Kong, an AI is required to follow the accounting treatment of including MSRs as part of intangible assets reported in the AI’s financial statements and to deduct MSRs in full from CET1 capital. Therefore, the amount to be deducted as reported in row 9 may be greater than that required under Basel III. The amount reported under the column “Basel III basis” in this box represents the amount reported in row 9 (i.e. the amount reported under the “Hong Kong basis”) adjusted by reducing the amount of MSRs to be deducted to the extent not in excess of the 10% threshold set for MSRs and the aggregate 15% threshold set for MSRs, DTAs arising from temporary differences and significant investments in CET1 capital instruments issued by financial sector entities (excluding those that are loans, facilities or other credit exposures to connected companies) under Basel III.</p>		
10.	Deferred tax assets (net of associated deferred tax liabilities)	–	–
	<p><u>Explanation</u> As set out in paragraphs 69 and 87 of the Basel III text issued by the Basel Committee (December 2010), DTAs of the bank to be realized are to be deducted, whereas DTAs which relate to temporary differences may be given limited recognition in CET1 capital (and hence be excluded from deduction from CET1 capital up to the specified threshold). In Hong Kong, an AI is required to deduct all DTAs in full, irrespective of their origin, from CET1 capital. Therefore, the amount to be deducted as reported in row 10 may be greater than that required under Basel III. The amount reported under the column “Basel III basis” in this box represents the amount reported in row 10 (i.e. the amount reported under the “Hong Kong basis”) adjusted by reducing the amount of DTAs to be deducted which relate to temporary differences to the extent not in excess of the 10% threshold set for DTAs arising from temporary differences and the aggregate 15% threshold set for MSRs, DTAs arising from temporary differences and significant investments in CET1 capital instruments issued by financial sector entities (excluding those that are loans, facilities or other credit exposures to connected companies) under Basel III.</p>		
18.	Insignificant LAC investments in CET1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	–	–
	<p><u>Explanation</u> For the purpose of determining the total amount of insignificant LAC investments in CET1 capital instruments issued by financial sector entities, an AI is required to aggregate any amount of loans, facilities or other credit exposures provided by it to any of its connected companies, where the connected company is a financial sector entity, as if such loans, facilities or other credit exposures were direct holdings, indirect holdings or synthetic holdings of the AI in the capital instruments of the financial sector entity, except where the AI demonstrates to the satisfaction of the MA that any such loan was made, any such facility was granted, or any such other credit exposure was incurred, in the ordinary course of the AI’s business. Therefore, the amount to be deducted as reported in row 18 may be greater than that required under Basel III. The amount reported under the column “Basel III basis” in this box represents the amount reported in row 18 (i.e. the amount reported under the “Hong Kong basis”) adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI’s connected companies which were subject to deduction under the Hong Kong approach.</p>		

Composition of regulatory capital (Continued)

CC1: Composition of regulatory capital (Continued)

Notes to the Template (Continued)

	Description	Hong Kong basis	Basel III basis
		HK\$'000	HK\$'000
19.	Significant LAC investments in CET1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	–	–
	<p><u>Explanation</u> For the purpose of determining the total amount of significant LAC investments in CET1 capital instruments issued by financial sector entities, an AI is required to aggregate any amount of loans, facilities or other credit exposures provided by it to any of its connected companies, where the connected company is a financial sector entity, as if such loans, facilities or other credit exposures were direct holdings, indirect holdings or synthetic holdings of the AI in the capital instruments of the financial sector entity, except where the AI demonstrates to the satisfaction of the MA that any such loan was made, any such facility was granted, or any such other credit exposure was incurred, in the ordinary course of the AI's business. Therefore, the amount to be deducted as reported in row 19 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 19 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.</p>		
39.	Insignificant LAC investments in AT1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	–	–
	<p><u>Explanation</u> The effect of treating loans, facilities or other credit exposures to connected companies which are financial sector entities as CET1 capital instruments for the purpose of considering deductions to be made in calculating the capital base (see note re row 18 to the template above) will mean the headroom within the threshold available for the exemption from capital deduction of other insignificant LAC investments in AT1 capital instruments may be smaller. Therefore, the amount to be deducted as reported in row 39 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 39 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.</p>		
54.	Insignificant LAC investments in Tier 2 capital instruments issued by, and non-capital LAC liabilities of, financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold and, where applicable, 5% threshold)	–	–
	<p><u>Explanation</u> The effect of treating loans, facilities or other credit exposures to connected companies which are financial sector entities as CET1 capital instruments for the purpose of considering deductions to be made in calculating the capital base (see note re row 18 to the template above) will mean the headroom within the threshold available for the exemption from capital deduction of other insignificant LAC investments in Tier 2 capital instruments and non-capital LAC liabilities may be smaller. Therefore, the amount to be deducted as reported in row 54 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 54 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.</p>		
<p>Remarks: The amount of the 10% threshold and 5% threshold mentioned above is calculated based on the amount of CET1 capital determined in accordance with the deduction methods set out in BCR Schedule 4F. The 15% threshold is referring to paragraph 88 of the Basel III text issued by the Basel Committee (December 2010) and has no effect to the Hong Kong regime.</p>

Macroprudential supervisory measures

CCyB1: Geographical distribution of credit exposures used in countercyclical capital buffer (“CCyB”)

	Geographical breakdown by Jurisdiction (J)	Applicable JCCyB ratio in effect (%)	RWA used in computation of CCyB ratio (HK\$'000)	AI-specific CCyB ratio (%)	CCyB amount (HK\$'000)
1.	Hong Kong SAR	1%	119,156,258		
2.	Sum		119,156,258		
3.	Total		161,156,697	0.739%	1,682,918

CCyB ratio is calculated as the weighted average of the applicable jurisdictional CCyB ratio, effective at the date for which the determination is made, in respect of the jurisdictions (including Hong Kong) where the Bank has private sector credit exposures. The weight to be attributed to a given jurisdiction’s applicable CCyB ratio is the ratio of the Bank’s aggregate risk-weighted amount for its private sector credit exposures (in both the banking book and the trading book) in that jurisdiction (RWA_j) to the sum of the Bank’s aggregate RWA_j across all jurisdictions in which the AI has private sector credit exposure.

Leverage ratio

LR1: Summary comparison of accounting assets against leverage ratio exposure measure

	Item	Value under the LR framework (HK\$'000)
1.	Total consolidated assets as per published financial statements	372,963,842
2.	Adjustment for investments in banking, financial, insurance or commercial entities that are consolidated for accounting purposes but outside the scope of regulatory consolidation	–
3.	Adjustment for fiduciary assets recognised on the balance sheet pursuant to the applicable accounting standard but excluded from the LR exposure measure	–
4.	Adjustments for derivative contracts	2,942,255
5.	Adjustment for SFTs (i.e. repos and similar secured lending)	2,218,453
6.	Adjustment for off-balance sheet (“OBS”) items (i.e. conversion to credit equivalent amounts of OBS exposures)	3,680,481
6a.	Adjustment for specific and collective provisions that are allowed to be excluded from exposure measure	(463,644)
7.	Other adjustments	(173,197)
8.	Leverage ratio exposure measure	381,168,190

Liquidity

31 Dec 2020

Average liquidity coverage ratio ("LCR")	
– Fourth quarter	163.10%
Average LCR for the period	173.10%
Net stable funding ratio ("NSFR")	
– Third quarter end	120.76%
– Fourth quarter end	113.11%

The Bank's LCR and HKD Level 1 HQLA LCR were above the regulatory requirement for the period.

The Bank's average LCR in year 2020 was 173.10%. The Bank's NSFR for the quarter ends of year 2020 were 115.62%, 117.33%, 120.76% and 113.11% respectively.

In the fourth quarter of year 2020, the Bank's LCR decreased as a result of increase in the unsecured wholesale funding matured within 30 days, thus an increase in cash outflow.

In the fourth quarter end of year 2020, the Bank's NSFR decreased due to increase in customer loan.

Level 1 HQLA is the major component of the Bank's HQLA portfolio, which consists of balance with the HKMA, Exchange Fund Bills / Notes and unencumbered sovereign bonds. The Bank also holds a portion of Level 2 HQLA, which include corporate bonds with high credit rating. The main drivers of net cash outflows were retail deposits and small business funding, wholesale funding and loans during the quarter. Deposit is the major funding source of the Bank.

LCR net cash outflow arising from off-balance-sheet derivatives and additional collateral provision are not material. The Bank's major liquidity profile is captured in the LCR calculation.

The Bank's HKD LCR was above the regulatory requirement for the period. The Bank holds Level 1 HQLA denominated in foreign currencies (mainly CNY and USD) to cover respective LCR net cash outflow in foreign currency. The foreign currency LCR mismatch is bolstered mainly by our HKD-denominated HQLA through FX contracts. The Bank has established internal monitoring limit on LCR for foreign major currencies according to Supervisory Policy Manual LM-1 issued by the HKMA.

The Bank has established internal limit and management action trigger level on LCR and NSFR to ensure our liquidity risk is controlled at the level commensurate with our risk appetite. The Bank's daily liquidity management is governed by the liquidity management requirement of parent bank and there is considerable level of interaction between members of the parent group. The Bank submits liquidity management reports to parent bank regularly and participates in the group liquidity stress test.

Liquidity (Continued)

LIQA: Liquidity risk management

Funding liquidity risk relates to the Bank's ability to fulfill its obligations arising from financial liabilities as they fall due, or its ability to fulfill maturing funding needs, which subsequently affects the Bank's capacity to support deposit withdrawal or drawdown on loan commitments. Effective liquidity risk management helps to sustain the expansion of the Bank's business with liquidity cost and risk under control. The Bank has established and implemented its own liquidity risk management policy per local regulatory requirements in order to fulfill its liquidity risk management. The Asset and Liability Management Committee ("ALCO") of the Bank is the decision-making body in balance sheet management and is responsible for coordinating and overseeing all related strategies, including risk management framework and risk appetite. Asset and Liability Management Department ("ALMD") is responsible for analyzing and monitoring activities related to liquidity risk. Global Markets Department is responsible for managing daily liquidity position and related executions. Internal Audit Department is responsible for conducting periodic review to ensure liquidity risk management framework is effectively implemented.

The cornerstone of the Bank's funding sources is customer deposit. The Bank strives to build up core deposits while diversifying funding sources via various funding channels to enhance financing capacity. Regarding liquidity arrangement with parent bank, the Bank performs regular funding transfer with parent bank to preserve prompt intragroup backup funding supply if necessary. Monitoring and control on intragroup funding transactions are in line with those of third parties. Moreover, parent bank has set up groupwide internal limits to control the Bank's reliance on parent bank's funding.

The majority of the liquidity risk of the Bank arises from maturity mismatch of assets and liabilities. Therefore, regular cash flow analysis and projections on both on- and off-balance sheet items falling within different maturity buckets is performed to ensure funding need. Moreover, the Bank closely monitors off-balance sheet funding obligations (such as commitments or letters of guarantee) and assesses their impact to our liquidity capacity. Furthermore, the Bank strives to maintain high marketability of the asset portfolio to allow prompt monetization in case of unforeseeable liquidity crunch in the market.

The Bank has in place various limits and indicators for liquidity risk, including liquidity coverage ratio, loan-to-deposit ratio, concentration limits on customer deposits, interbank borrowing utilization ratio, etc. for effective identification and control of liquidity risk. The Bank utilizes relevant management information systems to perform daily liquidity risk management functions. Moreover, the Bank performs daily cash flow analysis to assess liquidity in normal circumstances, and performs regular stress test (at least monthly) to evaluate the Bank's resilience under significant stress conditions. The stress test scenarios are designed with reference to the HKMA's Supervisory Policy Manuals, and also historical liquidity stress scenarios. The Bank's stress test takes into account the impact of all assets, liabilities and off-balance sheet positions and estimates possible funding short-fall with historical data and plausible stress conditions. The results will be scrutinized and appropriate measures will be taken if necessary.

The Bank has set up early warning indicator system, and movement of relevant indicators is closely monitored on a regular basis. In case of liquidity crisis emerges, the Bank's Crisis Management Committee will be formed to formulate appropriate contingency funding plan to resolve the crisis. The Bank also performs regular drill in order to ensure prompt actions and feasibility of contingency funding plan under crisis.

To cope with unpredictable liquidity needs, the Bank has set up liquidity buffer to maintain sufficient highly liquid assets. The buffer portfolio contains cash, Exchange Fund Bills / Notes, unencumbered sovereign bonds and other high quality bonds, which is managed by ALMD and operated by Global Markets Department on a daily basis.

Quantitative Information relating to the Bank's liquidity risk management, please refer to note 3.3 of Liquidity Risk under Financial Risk Management Section of the 2020 Annual Report.

Credit risk for non-securitization exposures

CRA: General information about credit risk

Credit Risk

Credit risk is the risk of loss that a customer or counterparty is unable to or unwilling to meet its contractual obligations. It arises principally from lending, trade finance and treasury businesses. As a local retail bank, according to business model, customer base and market environment derived from the operation risks, has formulated a comprehensive set of credit risk management policies and procedures, and appropriate credit risk limits to manage and control credit risk that may arise. These policies, procedures and credit risk limits are regularly reviewed and updated to cope with changes in market conditions and business strategies.

Credit Risk Governance

The Bank's organization structure establishes a clear set of authority and responsibility for monitoring compliance with policies, procedures and limits. The Chief Credit Officer, who reports directly to the Risk Committee, takes charge of credit risk management and is also responsible for the control of credit risk exposures in line with the credit risk management principles and requirements set by the Bank. Various units of the Bank have their respective credit risk management responsibilities. Business units act as the first line of defense. The Risk Management Department, which is independent from the business units, is responsible for the day-to-day management of credit risks and has the primary responsibility for providing an independent due diligence through identifying, measuring, monitoring and controlling credit risk to ensure an effective checks and balances, as well as drafting, reviewing and updating credit risk management policies and procedures.

The Board of Directors delegates credit approval authority to the Chief Executive. The Chief Executive can further delegate to the subordinates within his limit authorized by the Board of Directors. The Bank sets the limits of credit approval authority according to the credit business nature, rating, the level of transaction risk, and the extent of the credit exposure. In view of the rapidly changing market conditions, the Bank has been continuously revisiting its credit strategies and conducting rigorous reviews on the concerned portfolios. Different credit approval and control procedures are adopted according to the level of risk associated with the customer, counterparty or transaction. The Credit Committee, comprising experts from credit and other functions, is responsible for making an independent assessment of material credit applications which require the approval of Chief Executives or above. For retail exposures, more comprehensive review is required and monitored regularly on a portfolio basis.

Risk Management Department provides regular credit management information reports and ad hoc reports to the Management, Risk Committee and Board of Directors to facilitate their continuous monitoring of credit risk. In addition, the Bank identifies credit concentration risk by industry, geography, customer and counterparty. The Bank monitors changes to counterparty credit risk, quality of the credit portfolio and credit risk concentrations, and reports regularly to the Bank's Management.

4.	Total	100,085	373,078,248	600,687	44,233	556,454	–	372,577,646

CR2: Changes in defaulted loans and debt securities

		Amount HK\$'000
1.	Defaulted loans and debt securities at 30 Jun 2020	83,959
2.	Loans and debt securities that have defaulted since the last reporting period	32,369
3.	Returned to non-defaulted status	(16,648)
4.	Amounts written off	(2,754)
5.	Other changes	3,159
6.	Defaulted loans and debt securities at 31 Dec 2020	100,085

Between Jun 2020 and Dec 2020, the Bank's defaulted loans and debt securities increased from HK\$84 million by 19% to HK\$100 million. The main contributor was the loans and debt securities of HK\$32 million defaulted during the reporting period.

Credit risk for non-securitization exposures (Continued)

CRB: Additional disclosure related to credit quality of exposures

Definition of Overdue

Advances with a specific repayment date are classified as overdue when the principal or interest is past due and remains unpaid. Advances repayable by regular instalments are classified as overdue when an instalment payment is past due and remains unpaid. Advances repayable on demand are classified as overdue either when a demand for repayment has been served on the borrower but repayment has not been made in accordance with the instruction or when the advances have remained continuously exceeded the approved limit that was advised to the borrower.

Definition Impairment Loss on Advances and Calculations

Advances are impaired and impairment losses are incurred if, and only if, there is objective evidence of impairment as a result of one or more events that occurred and that loss event(s) has an impact on the estimated future cash flows of the advances that can be reliably estimated. If there is objective evidence that an impairment loss on advances has been incurred, the amount of loss is measured as the difference between the carrying amount and the present value of estimated future cash flows generated by the advances. Objective evidence that advances are impaired includes observable information that comes to the attention of the Bank about the loss events.

The criteria that the Bank uses to determine that there is objective evidence of an impairment loss include:

- Significant financial difficulty incurred by the borrower;
- A breach of contract, such as a default or delinquency in principal or interest payment;
- For economic or legal reasons related to the borrower's financial difficulty, the Bank has granted to the borrower a concession that it would not otherwise consider;
- Probable that the borrower will become bankrupt or undergo other financial reorganization; or
- Other observable data indicating that there is a measurable decrease in the estimated future cash flows from such advances.

Definition of Rescheduled Advances

Rescheduled advances are those advances that have been restructured or renegotiated because of deterioration in the financial position of the borrower or of the inability of the borrower to meet the original repayment schedule. Rescheduled advances, which have been overdue for more than three months under the revised repayment terms, are included in "Advances overdue for more than three months".

Credit risk for non-securitization exposures (Continued)

CRC: Qualitative disclosures related to credit risk mitigation

Collateral and Other Enhancements

The valuation and management of collateral have been documented in the credit risk management policies and procedures which cover acceptance criteria, validity of collateral, loan-to-value ratio, haircut ratio, valuation and insurance, etc. The collateral is revalued on a regular basis, though the frequency and the method used varies with the type of collateral involved and the nature and the risk of the underlying credit. In the personal sector, the main types of collateral are real estate properties, cash deposits and securities. In the commercial and industrial sector, the main types of collateral are real estate properties, securities, receivables, cash deposits and machinery. For loans guaranteed by a third party, the Bank will assess the guarantor's financial condition, credit history and ability to meet obligations. Balances and placements with banks and other financial institutions, these exposures are generally considered to be low risk due to the nature of the counterparties. Collateral is generally not sought on these assets.

Credit Exposures

The maximum credit exposure is the worst case scenario of exposure to the Bank without taking into account any collateral held or other credit enhancements. For on-balance sheet assets, the maximum exposure to credit risk equals their carrying amount. For letters of guarantee issued, the maximum exposure to credit risk is the maximum amount that the Bank could be required to pay if the guarantees are called upon. For loan commitment and other credit related liabilities, the maximum exposure to credit risk is the full amount of the committed facilities.

CR3: Overview of recognized credit risk mitigation

		Exposures unsecured: carrying amount	Exposures to be secured	Exposures secured by recognized collateral	Exposures secured by recognized guarantees	Exposures secured by recognized credit derivative contracts
		HK\$'000	HK\$'000	HK\$'000	HK\$'000	HK\$'000
1.	Loans	160,970,007	3,253,389	1,231,274	2,022,115	–
2.	Debt securities	200,084,996	1,853,130	–	1,853,130	–
3.	Total	361,055,003	5,106,519	1,231,274	3,875,245	–
4.	Of which defaulted	38,304	18,470	18,470	–	–

As of Dec 2020, the Bank's carrying amount for unsecured exposures was HK\$362,908 million, an increase of HK\$85,770 million compared with Jun 2020. This was mainly due to the growth of unsecured loans of HK\$51,027 million. Meanwhile, unsecured debt securities increased by HK\$32,890 million to HK\$200,085 million in the same period.

Credit risk for non-securitization exposures (Continued)

CRD: Qualitative disclosures on use of ECAI ratings under STC approach

The Bank uses the following external credit assessment institutions (“ECAIs”) to calculate its capital adequacy requirements under the standardized (credit risk) approach prescribed in the Capital Rules:

- Moody’s Investors Service
- S&P’s Ratings Services
- Fitch Ratings

Where exposures have been rated by the above-mentioned ECAIs, they are categorized under the following class of exposures:

- Sovereign exposures
- Public sector entity exposures
- Bank exposures
- Corporate exposures

The process used to map ECAIs issuer ratings or ECAIs issue specific ratings in the Bank’s banking book is consistent with those prescribed in the Capital Rules.

Credit risk for non-securitization exposures (Continued)

CR4: Credit risk exposures and effects of recognized credit risk mitigation – for STC approach

Exposure classes	Exposures pre-CCF and pre-CRM		Exposures post-CCF and post-CRM		RWA and RWA density

11. Residential mortgage loans	-	-	192,322	25,336,078	-	-	-	-	-	-	-	25,528,400
12. Other exposures which are not past due exposures	76,788	-	17,429	-	-	-	12,436,036	-	-	-	-	12,530,253
13. Past due exposures	-	-	-	-	-	-	18,791	39,392	-	-	-	58,183
14. Significant exposures to commercial entities	-	-	-	-	-	-	-	-	-	-	-	-
15. Total	21,849,191	-	63,332,220	25,336,078	128,695,778	12,858,922	120,842,837	39,392	-	-	-	372,954,418

Compared with Jun 2020, the Bank's post-CCF and post-CRM on balance exposure increased by 31% to HK\$372,954 million in Dec 2020. This was mainly attributed to the sharp increase in loans and advances, as well as in the holding of debt securities, resulting in an increase of HK\$27,573 million and HK\$61,287 million in bank and corporate credit risk exposures correspondingly.

Counterparty credit risk

CCRA: Qualitative disclosures related to counterparty credit risk (including those arising from clearing through CCPs)

The Bank's organisation structure establishes a clear set of counterparty risk management framework, authority and responsibility for monitoring compliance with policies, procedures and limits that are in line with the credit risk management principles and requirements set by the Bank. Various units of the Bank have their respective credit risk management responsibilities. Business units act as the first line of defence. The Risk Management Department, which is independent from the business units, is responsible for the day-to-day management of credit risks and has the primary responsibility for providing an independent due diligence through identifying, measuring, monitoring and controlling credit risk to ensure an effective checks and balances, as well as drafting, reviewing and updating credit risk management policies and procedures. For investments in debt securities, assessment of the underlying assets and credit limits setting on customer / security issuer basis are used for managing credit risk associated with the investment. For derivatives, the Bank sets customer limits to manage the credit risk involved and follows the same approval. For financial assets at fair value through profit or loss and investment in securities collateral is generally not sought on debt securities. For derivative financial instruments, the Master Agreement published by the International Swaps and Derivatives Association, Inc. ("ISDA Master Agreement") is the preferred agreement for documenting derivatives activities of the Bank. It provides the contractual framework under which dealing activities of over-the-counter ("OTC") transactions are conducted, and sets out close-out netting provisions upon termination following the occurrence of an event of default or a termination event. In addition, if deemed necessary, Credit Support Annex ("CSA") will be included to form part of the Schedule to the ISDA Master Agreement. Under a CSA, collateral is passed from one counterparty to another, as appropriate, to mitigate the exposures.

Counterparty credit risk (Continued)

CCR1: Analysis of counterparty default risk exposures (other than those to CCPs) by approaches

		Replacement cost (RC)	PFE	Effective EPE	Alpha (α) used for computing default risk exposure	Default risk exposure after CRM	RWA
		HK\$'000	HK\$'000	HK\$'000		HK\$'000	HK\$'000
1.	SA-CCR (for derivative contracts)	–	–		1.4	–	–
1a.	CEM	905,433	3,328,947		–	4,234,380	1,748,166
2.	IMM(CCR) approach			–	–	–	–
3.	Simple Approach (for SFTs)					2,218,453	716,755
4.	Comprehensive Approach (for SFTs)					–	–
5.	VaR (for SFTs)					–	–
6.	Total						2,464,921

The counterparty default risk RWA's increment of 22% came from the 32% OTC derivatives principal expansion and the longer remaining tenor of the interest rate exposure.

CCR2: CVA capital charge

		EAD post CRM	RWA
		HK\$'000	HK\$'000
	Netting sets for which CVA capital charge is calculated by the advanced CVA method	–	–
1.	(i) VaR (after application of multiplication factor if applicable)		–
2.	(ii) Stressed VaR (after application of multiplication factor if applicable)		–
3.	Netting sets for which CVA capital charge is calculated by the standardized CVA method	4,234,380	1,481,400
4.	Total	4,234,380	1,481,400

The 32% of OTC derivatives principal expansion, together with the increasing concentration level of the exposure, drove the significant increase of CVA RWA in Dec 2020.

Counterparty credit risk (Continued)

CCR3: Counterparty default risk exposures (other than those to CCPs) by asset classes and by risk weights – for STC approach

Risk Weight	0%	10%	20%	35%	50%	75%	100%	150%	250%	Others	Total default risk exposure after CRM
	HK\$'000	HK\$'000	HK\$'000	HK\$'000	HK\$'000	HK\$'000	HK\$'000	HK\$'000	HK\$'000	HK\$'000	HK\$'000
1. Sovereign exposures	3,947	-	-	-	-	-	-	-	-	-	3,947

Market risk

MRA: Qualitative disclosures related to market risk

Market Risk

The Bank sets indicators and limits to identify, measure, monitor and control market risks. To hold market risk positions, any department must obtain market risk limits approval in advance.

Under guidance from the Board of Directors, the Bank has established and authorized the Risk Management Committee to manage market risks. The Risk Management Committee is responsible for approving market risk management regulations, and, in accordance with market risk management regulations, reviewing the Bank's market risk tolerance levels and limits, and monitoring management of market risks. The Risk Management Committee promptly reports to the Board of Directors about the current or potential major changes in any market risk affecting the Bank's financial position.

Market Risk Governance

Market risk management of the Bank is led by the Board of Directors and the Risk Management Committee. Their main task is to set a high level market risk limit, including value at risk (VaR), net open position, basis point value and the market risk management policy. They are also tasked with assigning the Comprehensive Risk Management Committee and the Risk Management Department to determine the suitability of market risk exposure and to further breakdown the risk limit for market risk bearing departments respectively.

Other than determining the suitability of market risk exposure, the Comprehensive Risk Management Committee is also in charge of checking the market risk regulations and regularly overseeing both the day to day and long term market risk management of the Bank.

As a function independent of business and operational areas, the Risk Management Department is in charge of breaking down the risk limit for market risk bearing departments, overseeing market risk management regularly, and responding and reporting to related business units, Chief Executive and the Board of Directors, when either market risk indicators are breached or market risk events occurred. Finally, Risk Management Department also needs to review and draft changes to the market risk management policy annually for the Comprehensive Risk Management Committee, Risk Management Committee and Board of Directors to approve.

Global Markets Department is currently the only department authorized with market risk limit, they should control market risk to be within a suitable range. Each financial trade should also be clearly classified into the trading book, investment book or banking book. Any reclassification of financial instruments would require the permission from Risk Management Department and Finance Department.

Internal Audit Department is in charge of regularly reviewing the Bank's market risk management procedures and policies to ensure the Bank's procedures and policies are reasonable, accurate and remain stable.

Value at Risk

Value at risk (VaR) refers to the maximum loss that an investment portfolio may incur at a given confidence level and holding period caused by the changes in market price factors such as interest rates and exchange rates etc. The Bank adopted the historical simulation method to calculate daily VaR (250 days historical market data, 99% confidence interval, the holding period of 1 day).

Market risk (Continued)

MR1: Market risk under STM approach

		RWA
		HK\$'000
	Outright product exposures	
1.	Interest rate exposures (general and specific risk)	571,700
2.	Equity exposures (general and specific risk)	–
3.	Foreign exchange (including gold) exposures	296,175
4.	Commodity exposures	–
	Option exposures	
5.	Simplified approach	–
6.	Delta-plus approach	988
7.	Other approach	–
8.	Securitization exposures	–
9.	Total	868,863

Compared with Jun 2020, the market risk RWA rose by 17%. Part of the change was due to the 13% growth in general interest rate risk, originating from larger HKD interest rate derivative positions. The other contributor was the 29% larger foreign exchange exposures, resulting from the increasing Chinese Renminbi positions.

Operational risk

Basic Indicator Approach

The Bank has adopted the basic indicator (operational risk) (“BIA”) approach to calculate the operational risk capital charge, the formula for operational risk capital charge is shown below:

$$K_{BIA} = \sum(GI_{1...n} \times \alpha) / n$$

Where:

K_{BIA} = capital charge for operational risk calculated under the BIA approach;

GI = gross income, where positive, of the last 3 years;

α = 15%; and

n = number of the last 3 years for which gross income is positive.

As the Bank is not in operation for 3 years, the Bank adopts the transitional agreements as stipulated in Section 341 of Banking (Capital) Rules.

Interest rate risk in banking book

IRRBB: Interest rate risk in banking book – risk management objectives and policies

Banking Book Interest Rate Risk Management

Interest rate risk in the banking book (“IRRBB”) means the risk to the Bank’s financial condition resulting from adverse movements in interest rates that affect the Bank’s banking book positions. The interest rate risk exposure in the banking book arises from its normal course of banking activities, such as lending, deposit taking, securities investment and debt issuance. The governing objective in interest rate risk management is to control potential significant loss as a result of interest rate changes within risk appetite.

The Bank is exposed to two major sources of IRRBB, namely, gap risk and basis risk.

Gap risk arises from the changes in interest rates on assets, liabilities or off-balance sheet items of different maturities. The extent of gap risk depends on whether changes to the term structure of interest rates occur consistently across the yield curve (parallel risk) or differentially by period (non-parallel risk).

Basis risk arises from imperfect correlation between changes in the rates earned and paid on different instruments with otherwise similar repricing characteristics. For example, loan assets are being tied to the prime rate, and deposit liabilities tied to the HIBOR. Basis risk primarily occurs in the Bank’s Hong Kong dollar books.

The Bank has a robust banking book interest rate risk management framework in accordance with the “The Policy of Interest Rate Risk Management in Banking Book”, which is approved by the Board. Risk Management Committee is responsible for overseeing and reviewing the Bank’s risk management strategies including IRRBB. ALCO exercises its oversight of IRRBB. ALMD assists ALCO to perform day-to-day monitoring on IRRBB. Global Markets Department is responsible for managing and hedging the IRRBB within the limits approved by the Board and related Committees. The Bank hedges the IRRBB, mainly, through interest rate swap and cross currency swap.

The Bank sets out interest rate risk limits, which are approved by the Board for implementation. The limits include, but not limited to, net interest income (“NII”) in earnings perspective and economic value of equity (“EVE”) in economic value perspective.

Sensitivity analysis in relation to the impact of changes in interest rate on earnings and economic value is assessed through a prescribed interest rate shock scenarios by the HKMA’s Supervisory Policy Manual IR-1 on the Bank’s actual repricing profile on assets, liabilities and off-balance sheet items on a routine basis. Apart from daily risk monitoring, the Bank has established a monthly stress testing to assess potential erosion of earnings and economic value that the Bank may incur from gap risk, basis risk and option risk. The outcome analyses are reported to Senior Management and related Committees on a regular basis.

Sensitivity Analysis on IRRBB

The Bank adopts sensitivity analysis to measure the impact of interest rate changes on earnings and economic value.

Sensitivity analysis, which is based on a static interest rate risk profile of assets and liabilities, is used for risk management purposes only. They are based on several assumptions, including but not limited to, run to maturity positions, etc.

The Bank adopts excluding spread components approach in calculating the coupon cash flow for IRRBB monitoring. For products with optionality, including retail fixed rate loans with early prepayment risk and retail term deposits with early redemption risk, the Bank developed customer behavioral models based on historical statistics. Besides, the Bank slots the non-maturity deposits into the appropriate time bands according to the earliest date on which their interest rates can be adjusted, i.e. next day. The Bank regularly reviews and updates the assumptions and parameters setting, and conducts independent model validation regularly.

Remuneration

REMA: Remuneration policy

In accordance with the disclosure requirement of Banking (Disclosure) Rules and the Supervisory Policy Manual “CG-5 Guideline on a Sound Remuneration System” issued by the HKMA, the following disclosures are made:

Governance Structure of the Remuneration System

The Bank has established the Remuneration Committee. It is mainly responsible for making recommendations to the Board on the remuneration packages for the Directors, Chief Executive, Senior Management and Key Personnel; making recommendations to the Board on the remuneration policies and the implementation of such policies; and reviewing the policies regularly. The Remuneration Committee has held meetings during the year, discussed and formulated remuneration policies of the Bank.

“Senior Management” refers to the executives who are responsible for oversight of the Bank’s firm-wide strategy or activities or those of the Bank’s material business lines. “Key Personnel” refers to the individual staff whose duties or activities in the course of their employment involve the assumption of material risk which may have significant impact on risk exposure, or whose individual responsibilities are directly and materially linked to the risk management, or those who have direct influence to the profit. In 2020, the Bank has engaged an external consultant to undertake an independent review and sought advice of the Bank’s remuneration policy and its implementation.

Remuneration Policy

The remuneration policy supports the Bank’s overall approach to risk management so as to ensure it is not undermined and to encourage staff to support the Bank’s overall risk management, including but not limited to credit risk, market risk, interest rate risk, liquidity risk, operational risk, reputation risk, legal and compliance risk and strategic risk.

Staff remuneration is composed of “fixed remuneration” and “variable remuneration”. Both are paid by cash. The proportion of fixed and variable remuneration is determined by the factors such as staff seniority, job responsibilities and the need to encourage staff to support the Bank’s overall risk management and long-term financial soundness. For risk control personnel, their remuneration is determined independent of the performance of the business units they oversee.

The award of variable remuneration to the staff is determined by individual fulfilment of both financial and non-financial factors (including but not limited to the adherence to the risk management policies, compliance with legal, regulatory and ethical standards, bank culture etc.). Under such arrangement, staff performance shall be assessed comprehensively and appropriately reflected in their variable remuneration after taken into account of other factors such as the Bank’s financial performance and future development. To improve and enhance the remuneration system and to strike a balance between staff current earnings and the delayed risk that might bring to the Bank as well as to support the Bank’s stability and sustainable development, the Bank has implemented a deferral mechanism on performance bonus with a vesting period of three years. Apart from considering the Bank’s business performance, if a staff is found to have committed significant operational incidents, non-compliance or other serious incidents, the Bank may recalculate the variable remuneration and / or adjust the deferred variable remuneration of the staff.

The Bank conducts regular internal monitoring to ensure compliance in the implementation of its remuneration policy. Such monitoring is conducted by relevant independent departments responsible for compliance monitoring in accordance with the Bank’s organization structure. The remuneration policy is subject to review periodically and when necessary.

Remuneration (Continued)

Additional balance sheet information

1. International claims

The information on international claims are prepared in according to the location and types of the counterparties as defined by the HKMA under the Banking (Disclosure) Rules with reference to the HKMA's Return of International Banking Statistics. International claims are on-balance sheet exposures to counterparties based on the location of the counterparties after taking into account the transfer of risk, and represent the sum of cross-border claims in all currencies and local claims in foreign currencies. Geographical segments, constituting 10% or more of the Bank's total international claims after taking into account any recognized risk transfer, are disclosed below.

	Bank	Official Sector	Non-bank financial institutions	Non-financial private sector	Total
Equivalent in millions of HK\$					
<u>As at 31 Dec 2020</u>					
Developing Asia-Pacific	81,104	12,872	4,219	40,477	138,672
of which attributed to People's Republic of China	67,219	12,778	4,219	38,858	123,074
Developed countries	33,919	5,437	2,635	2,071	44,062
Offshore centres	5,038	1,105	5,686	40,958	52,787
of which attributed to Hong Kong	4,674	1,105	4,280	40,295	50,354

2. Impaired loans and advances to customers by geographical areas

	Gross amount of loans to customers HK\$'000	Gross amount of trade bills HK\$'000	Total amount of loans and advances HK\$'000	Identified Impaired loans and advances HK\$'000	% of total loans and advances	Stage 1 & 2 provision for ECL HK\$'000	Stage 3 provision for ECL HK\$'000

Additional balance sheet information (Continued)

9. Non-bank Mainland exposures

The analysis of non-bank Mainland exposures is based on the categories of non-bank counterparties and the type of direct exposures defined by the HKMA under the Banking (Disclosure) Rules with reference to the HKMA's Return of Mainland Activities.

	On-balance sheet exposures HK\$'000	Off-balance sheet exposures HK\$'000	Total exposures HK\$'000
<u>As at 31 Dec 2020</u>			
1. Central government, central government-owned entities and their subsidiaries and joint ventures ("JVs")	61,762,779	–	61,762,779
2. Local governments, local government-owned entities and their subsidiaries and JVs	6,560,359	13,211	6,573,570
3. PRC nationals residing in Mainland China or other entities incorporated in Mainland China and their subsidiaries and JVs	23,739,023	37,208	23,776,231
4. Other entities of central government not reported in item 1 above	–	–	–
5. Other entities of local governments not reported in item 2 above	500,071	–	500,071
6. PRC nationals residing outside Mainland China or entities incorporated outside Mainland China where the credit is granted for use in Mainland China	4,546,425	–	4,546,425
7. Other counterparties where the exposures are considered by the reporting institution to be non-bank Mainland China exposures	–	–	–
Total	<u>97,108,657</u>	<u>50,419</u>	<u>97,159,076</u>
Total assets after provisions	372,980,025		
On-balance sheet exposures as percentage of total assets	26.04%		

Additional balance sheet information (Continued)

10. Currency concentration

The information concerning the foreign currency exposures of the Bank arising from trading and non-trading positions are disclosed below:

	USD	Total
Equivalent in millions of HK\$		
<u>As at 31 Dec 2020</u>		
Spot assets	179,931	179,931
Spot liabilities	(111,913)	(111,913)
Forward purchases	87,497	87,497
Forward sales	(159,647)	(159,647)
Net options position*	–	–
Net long (short) position	<u>(4,132)</u>	<u>(4,132)</u>
Net structural position	<u>–</u>	<u>–</u>

* Delta equivalent approach is adopted.

Except for the above foreign currencies, we do not disclose other foreign currency exposures arising from trading and non-trading positions, which constitutes less than 10% of the total net position in all foreign currencies as above. There is no net structural position in any foreign currencies.

11. Off-balance sheet exposures (other than derivative transactions)

The off-balance sheet exposures are based on nominal contract amounts and risk-weighted amounts of contingent liabilities and commitments defined by the HKMA under the Banking (Disclosure) Rules with reference to the HKMA's Return of Capital Adequacy Ratio.

	31 Dec 2020
	HK\$'000
Contract amounts	
Direct credit substitutes	39,106
Trade-related contingencies	288,919
Commitments that are unconditionally cancellable without prior notice	9,042,222
Commitments which have an original maturity of not more than 1 year	1,245,173
Commitments which have an original maturity of more than 1 year	4,860,670
Total	<u>15,476,090</u>
Risk-weighted amount	<u>2,242,183</u>
