Increase in CET1 ratio, Tier 1 ratio, Total capital ratio and LR was mainly due to capital injection during the quarter.

b. Template OV1: Overview of Risk-Weighted Assets

The capital adequacy ratios of the Bank were calculated in accordance with the BCR. The Bank uses the following approaches to calculate its capital charge for:

- (a) credit risk: STC approach;
- (b) market risk: STM approach; and
- (c) operational risk: BI approach pursuant to Division 2 of Part 9 of the BCR.

The disclosure on minimum capital requirement is made by multiplying the Bank's RWA derived from the relevant calculation approach by 8%, not the Bank's actual "regulatory capital".
