1. Introduction

General information

The information contained in this document is for Ping An OneConnect Bank (Hong Kong) Limited (“the Bank”), and prepared in accordance with the Banking (Disclosure) Rules (“BDR”) and disclosure templates issued by the Hong Kong Monetary Authority (“HKMA”).

Basis of preparation

The capital adequacy ratios of the Bank were calculated in accordance with Banking (Capital) Rules (“BCR”) of the Banking Ordinance. The Bank adopted the following approach to calculate its capital charge for:

Credit risk: Standardised (Credit Risk) Approach;

Market risk: Standardised (Market Risk) Approach;

Operational Risk: Transitional arrangements HKMA pursuant to section 341 of the BCR.

PING AN ONECONNECT BANK (HONG KONG) LIMITED
(平安壹賬通銀行(香港)有限公司)

2. Key prudential ratios

2.1 KM1: Key prudential ratios

The table below provides an overview of the Bank's key prudential ratios.

		(a)	(b)	(c)	(d)	(e)
HK\$'000		At 31 Dec 2022	At 30 Sep 2022	At 30 Jun 2022	At 31 Mar 2022	At 31 Dec 2021
	Regulatory capital (amount)					
1	Common Equity Tier 1 (CET1)	707,422	737,185	474,940	508,161	555,904
2	Tier 1	707,422	737,185	474,940	508,161	555,904
3	Total capital	715,373	744,551	482,037	514,197	559,002
	RWA (amount)					
4	Total RWA	728,011	692,380	650,576	552,938	307,467
	Risk-based regulatory capital ratios (as a percentage of RWA)					
5	CET1 ratio (%)	97.2%	106.5%	73.0%	91.9%	180.8%
6	Tier 1 ratio (%)	97.2%	106.5%	73.0%	91.9%	180.8%
7	Total capital ratio (%)	98.3%	107.5%	74.1%	93.0%	181.8%
	Additional CET1 buffer requirements (as a percentage of RWA)					
8	Capital conservation buffer requirement (%)	2.500%	2.500%	2.500%	2.500%	2.500%
9	Countercyclical capital buffer requirement (%)	0.998%	0.996%	0.996%	1.000%	1.000%
10	Higher loss absorbency requirements (%) (applicable only to G-SIBs or D-SIBs)	NA	NA	NA	NA	NA
11	Total AI-specific CET1 buffer requirements (%)	3.498%	3.496%	3.496%	3.500%	3.500%
12	CET1 available after meeting the AI's minimum capital requirements (%)	90.3%	99.5%	66.1%	85.0%	173.8%
	Basel III leverage ratio					
13	Total leverage ratio (LR) exposure measure	3,052,557	2,728,791	2,661,359	2,395,557	2,342,434
14	LR (%)	23.2%	27.0%	17.8%	21.2%	23.7%
	Liquidity Coverage Ratio (LCR) / Liquidity Maintenance Ratio (LMR)					
	Applicable to category 1 institution only:					
15	Total high quality liquid assets (HQLA)	NA	NA	NA	NA	NA
16	Total net cash outflows	NA	NA	NA	NA	NA
17	LCR (%)	NA	NA	NA	NA	NA
	Applicable to category 2 institution only:					
17a	LMR (%) ¹	124.8%	84.2%	95.1%	75.0%	66.0%
	Net Stable Funding Ratio (NSFR) / Core Funding Ratio (CFR)					
	Applicable to category 1 institution only:					
18	Total available stable funding	NA	NA	NA	NA	NA
19	Total required stable funding	NA	NA	NA	NA	NA
20	NSFR (%)	NA	NA	NA	NA	NA
	Applicable to category 2A institution only:					
20a	CFR (%)	NA	NA	NA	NA	NA

The capital ratio and LMR remained well above the minimum regulatory requirements. Decrease in capital ratios was mainly driven by the increase in credit risk RWA partly offset by the decrease in operational risk RWA in December 2022.

¹ The LMR disclosed above represent the arithmetic mean of the average value of its LMR for each calendar month within the quarter.

PING AN ONECONNECT BANK (HONG KONG) LIMITED
(平安壹賬通銀行(香港)有限公司)

3. Overview of risk management and risk-weighted amount (“RWA”)

3.1 OVA: Overview of risk management

The Bank’s Risk Management Framework (“Framework”) is an over-arching framework for the various risk management processes to effect an enterprise risk management. The key risks related to the Bank’s business include credit risk, liquidity risk, market risk, interest rate risk, operational risk and technology risk.

Risk governance

The Board of Directors (“the Board”) has ultimate responsibility for the implementation of this Framework, promoting a sound risk culture for the Bank and ensuring that the governance and other key components of the risk management framework are properly established and effectively implemented. The Board is also responsible for approving the risk appetite statement, the core policies and thresholds that support its operationalisation, and maintaining consistency among business strategy, risk appetite and the long term goals of the Bank. The Board delegates its power to the Board Risk Management Committee (“BRMC”) to supervise the Bank’s major risk areas.

The Board has authorized the Chief Executive to establish Management Committee (“ManCo”) to (i) deal with day-to-day activities of the Bank’s business, (ii) develop and implement business plans, policies and procedures, and budgets that have been approved by the Board, (iii) monitor the Bank’s operating and financial performance, prioritize and allocate investment and resources, (iv) manage and develop talent and (v) manage the risk profile. Under the umbrella of ManCo which is chaired by the Chief Executive, there are six management level sub-committees:

Risk Management Committee (“RMC”)	Supervises the management of the key risks of the Bank at the senior management level and oversees the development and implementation of this Risk Management Framework.
Asset and Liability Committee (“ALCO”)	Responsible for providing risk oversight on capital and liquidity risk by determining the Bank’s approach to balance sheet management.
Compliance Committee	Oversees the legal, regulatory and compliance matters of the Bank. This includes but not limited to treating customer fairly, anti-money laundering, counter terrorist financing and sanctions.
Technology Committee	Oversees the effective implementation of information technology strategies and data protection framework.
Disciplinary Action Committee	Responsible for dealing with formal complaints concerning allegations of misconduct by employees and making decisions on the type of disciplinary action that it considers appropriate in the circumstances.
Customer Selection Committee	Responsible for ensuring a consistent approach in customer selection, reviewing customer relationships with the Bank and management of changes to such relationships.

The Chief Executive, Chief Risk Officer and the senior management have the responsibility to ensure various risk limits are appropriately established according to the risk management strategies set by the Board, and to oversee the effectiveness of managing and controlling risk in the day-to-day management of the Bank.

Various business and functional units act as the first line of defence, held accountable for implementing and adhering to policy requirements in their respective functions, ensuring end-to-end preventative and detective controls are designed and operating effectively, escalating material issues and matters of regulatory importance and remediating any control deficiencies. The second line of defence is provided by the Risk Management Department and the Legal & Compliance Department, which are independent from the business units, both are responsible for overseeing the first-line activities, setting policies and procedures, undertaking risk assessments and internal monitoring. Internal Audit Department as the third line of defence is responsible for providing assurance on the effectiveness of the Bank’s risk management framework, including the risk governance arrangements and practices of the first and second lines of defence units.

3. Overview of risk management and risk-weighted amount (“RWA”) (Continued)

3.1 OVA: Overview of risk management (Continued)

The Bank recognises the importance of risk culture being one of the key pillars of the risk management framework. The risk culture of the Bank is created through setting the “Tone from the top”, as the statement is clearly articulated by the Board through the established Risk Appetite stating the boundaries which the Bank should operate within, effective communication and challenge through formal governance forums, established whistleblowing channel to encourage ‘Speak up’ culture, appropriate accountability and incentivisation through the three lines of defence model and appropriate remuneration system to ensure that incentives would not create excessive or undue risk exposure and unethical behaviour which could threaten the financial soundness and reputation of the Bank. Risk awareness is promoted to all staff to enhance the Bank’s overall risk management through appropriate training.

Risk measurement systems

Risk profile is an overview of the major business activities, the key issues and common themes identified across the Bank. A concise depiction of the risk profile enables the Board and the management to more effectively evaluate whether the risk taking is healthy, in line with expectation and acceptable from a forward-looking perspective. Risk profiling requires identifications of key business activities, key risk dimensions, representative metrics and their thresholds relevant for health-checking purpose. The risk profile should be regularly monitored, measured against the Bank’s risk appetite, and reported to the Board, the BRMC and the relevant management level committee(s) for their review. The Bank shall maintain a management information system (“MIS”) with adequate technological support and processing capacity to effectively capture, aggregate and report the risks of major business activities, as well as to address information needs arising from regulatory changes and information requests from the Board (or its sub-committees). The risk data aggregation and risk reporting framework and any substantial change to them should be reviewed and approved by the Board and RMC.

Risk management reports including exposure and position information for all significant risk areas are provided to the Board and management on a regular basis, as deemed appropriate. The Board, through various committees, determines the risk reporting requirements that best suit the business. This includes the following:

- Risk exposures and profile against risk limits and risk strategy
- Operational risk trends along with changes in external environment
- New risk models evaluating the readiness for implementation
- Large risk events and subsequent remedial action plans.

A quarterly report on risk exposures and risk management activities of the Bank is presented to the Board, which covers the assessment on major risk exposures including credit risk, market risk, interest rate risk in the banking book, liquidity risk, operational risk, fraud risk and technology risk.

The Bank continues to invest significant resources in IT systems and processes in order to maintain and improve the risk management capabilities. A number of key initiatives and projects to enhance consistent data aggregation, reporting and management, and work towards meeting new regulatory standards are in progress.

PING AN ONECONNECT BANK (HONG KONG) LIMITED
(平安壹賬通銀行(香港)有限公司)

3. Overview of risk management and risk-weighted amount (“RWA”) (Continued)

3.1 OVA: Overview of risk management (Continued)

Risk mitigation

The Bank applies different strategies and processes to hedge and mitigate different risks. Exposure to credit risk is mitigated by guarantees. Personal guarantee, government guarantee and guarantees given by public sector entities, are potentially relevant forms of credit risk mitigations adopted by the Bank to manage, hedge and mitigate risks that arise from the Bank’s business model. The Bank ensures that guarantees accepted should be unconditional and irrevocable, represent a direct claim on the guarantor, and remain continuously effective until the facility covered by the guarantee is fully repaid or settled. For liquidity risk management, the Bank uses results of stress-testing to strengthen resilience to liquidity stress and early-warning triggers for the formulation of management actions and contingency funding plan to mitigate potential stress and vulnerability which the Bank might face. As part of the risk management process, the Bank also takes into consideration of emerging risk types (e.g. Climate Risk) which may have implication for existing risk exposure. The bank would assess and utilize various risk management techniques such as stress testing and imposing exposure limits to manage relevant risks.

3.2 OV1: Overview of risk-weighted amount (“RWA”)

The following table provides an overview of capital requirements in terms of a detailed breakdowns of RWAs for various risks.

		(a)	(b)	(c)
		RWA		Minimum capital requirements
HK\$’000		31 Dec 2022	30 Sep 2022	31 Dec 2022
1	Credit risk for non-securitization exposures	636,042	589,281	50,883

27	Total	728,011	692,380	58,240

¹ Increase in market risk RWA as of 31 December 2022 was related to the increase of the Bank’s net position in foreign currency exposure. Please refer to note 20 for details.

² Decrease in operational risk RWA as of 31 December 2022 was mainly due to a change in calculation logic of operational risk RWA under the transitional arrangement as set out in S341 of BCR.

(平安壹賬通銀行(香港)有限公司)

4. Linkage between financial statement and regulatory exposure (Continued)

4.3 Table LIA: Explanations of differences between accounting and regulatory exposure amounts

Basis of consolidation

The basis of consolidation for regulatory purposes is the same for accounting purposes for the Bank.

Exposure amounts considered for regulatory purposes require adjustments to be made to the carrying value of assets as reported in published financial statements. The only adjustment taken by the Bank is the consideration of provisions.

During the reporting period, the Bank did not have any securitisation exposure. Stage 1, Stage 2 and Stage 3 impairment allowances that are deducted from the carrying amount of exposures in the financial statements need to be reintegrated in the regulatory exposure value under the standardised approach.

4.4 PV1: Prudent valuation adjustments

There was no prudent valuation adjustment as at 31 December 2022.

5. Composition of regulatory capital

5.1 CC1: Composition of regulatory capital

The following table below provides a breakdown of regulatory capital according to the scope of regulatory consolidation.

		(a)	(b)
		Amount	Source based on reference numbers of the balance sheet under the regulatory scope of consolidation
As at 31 Dec 2022 HK\$'000			
CET1 capital: instruments and reserves			
1	Directly issued qualifying CET1 capital instruments plus any related share premium	1,500,000	(3)
2	Retained earnings	(666,605)	(4)
3	Disclosed reserves	14,504	(5)
4	<i>Directly issued capital subject to phase-out arrangements from CET1 (only applicable to non-joint stock companies)</i>	NA	NA
5	Minority interests arising from CET1 capital instruments issued by consolidated bank subsidiaries and held by third parties (amount allowed in CET1 capital of the consolidation group)	–	
6	CET1 capital before regulatory deductions	847,899

Notes to the Template

Description	Hong Kong basis	Basel III basis
9 Other intangible assets (net of associated deferred tax liabilities)	140,477	140,477
<p><u>Explanation</u> As set out in paragraph 87 of the Basel III text issued by the Basel Committee (December 2010), mortgage servicing rights (“MSRs”) may be given limited recognition in CET1 capital (and hence be excluded from deduction from CET1 capital up to the specified threshold). In Hong Kong, an AI is required to follow the accounting treatment of including MSRs as part of intangible assets reported in the AI’s financial statements and to deduct MSRs in full from CET1 capital. Therefore, the amount to be deducted as reported in row 9 may be greater than that required under Basel III. The amount reported under the column “Basel III basis” in this box represents the amount reported in row 9 (i.e. the amount reported under the “Hong Kong basis”) adjusted by reducing the amount of MSRs to be deducted to the extent not in excess of the 10% threshold set for MSRs and the aggregate 15% threshold set for MSRs, DTAs arising from temporary differences and significant investments in CET1 capital instruments issued by financial sector entities (excluding those that are loans, facilities or other credit exposures to connected companies) under Basel III.</p>

8. LIQA: Liquidity risk management

Governance of liquidity risk management

The Bank's risk appetite statement describes the level of risk the Bank is prepared to accept and achieve its strategic and business objective. The risk appetite thresholds are established according to the business nature, risk tolerance and the commercial environment in the period, it shall be reviewed by ALCO and RMC and approved by the Board on annual basis. In addition to risk appetite limits, operational level controls are also implemented with reference to the regulatory requirements, industry practices, and the prudent liquidity management manners.

The Board is ultimately responsible for approving the Bank's Liquidity risk management policy and ensuring that these are appropriate to the business and observed within the organisation and delegates its power to RMC and ALCO to manage the Bank liquidity risk strategy, policies and practices, oversee the liquidity risk framework to ensure proper internal control are in place and in compliance with the regulatory requirements. The ALCO members and attendees consist of the Chief Executive, Chief Risk Officer, Chief Financial Officer and various business lines. The Bank's liquidity is managed by the Treasury Division (the first line of defence) and monitored by Market and Liquidity Risk Division (second line of defence), the independent party to monitor the liquidity regularly. ALCO and RMC are performing high level management in accordance with the guidelines and procedures laid down in the liquidity risk management policy that has been approved by the Board. Internal reports and any excess cases will be submitted to senior management, ALCO and Board for their review and approval, whilst seeking their advices or instruction on mitigating the liquidity risk. Market and Liquidity Risk Division is also responsible to conduct stress tests, develop relevant policies and procedures, and review the assumptions which is related with the risk measures.

Liquidity risk management

The Bank's operation is mainly funded by customer deposits and shareholders' funds. Adequate liquidity with high quality liquid assets will be maintained at all times to meet obligations when they fall due in normal circumstances and provide contingent liquidity in the event of a funding crisis. Monitoring and reporting take the form of cash flow measurement and projections for the next day, week and month respectively, as these are key periods for liquidity management. The starting point for those projections is an analysis of the contractual maturity of the financial liabilities and the expected collection date of the financial assets. In addition, the Bank is also closely monitoring the concentration risk of the liquid assets portfolio.

Stress testing

Stress testing is one of the important tool in the liquidity risk management process. It is to evaluate the Bank's ability to meet its payment obligations under different severe but plausible scenarios. The Bank has set up bank specific, market wide, and combined scenarios to evaluate liquidity healthiness of the Bank in the times of different stress situations. The Board, ALCO, and RMC are the committees to oversee the stress testing results and the implications for balance sheet management, growth plan and, in the extreme, triggering contingency funding plan.

Contingency funding plan

The Contingency Funding Plan is implemented and approved by the Board. It describes the Bank's strategy for dealing with any liquidity problems, and the procedures for making up cash flow deficits in emergency situations. The Bank has designed early warning indicators to alert if there is any potential liquidity crisis situation. If there is any sign of liquidity crisis, ad-hoc ALCO meeting will be called to discuss the situation. If it is defined as a liquidity crisis situation, Crisis Management Team which consist of senior management of the Bank will be formed as instructed by ALCO to tackle the situation until the crisis is over.

9. Credit risk for non-securitization exposures

9.1 CRA: General information about credit risk

Credit risk is the risk that a borrower or counterparty fails to meet its obligations. It could exist in both banking and trading books, and both on and off balance sheet of a bank. For the Bank, the types of credit risk exposures are relatively confined. The product suite currently does not include complex products such as collateralised lending, cross border financing, private banking, traded products, bank guarantee/letter of credit, etc. A Credit Programme will be established for the purpose of credit extension to a group of customers with similar characteristics, risk profiles and financial needs. It is prescribed by a set of risk parameters which define the conditions under which credit lines may be approved by designated credit authorities. In all Credit Programmes, the credit approving authority required and the credit approval criteria for individual transactions or credit lines are clearly defined. The sponsoring Business Unit ensures that appropriate and adequate control measures are in place to support on-going risk monitoring and programme compliance. All Credit Programmes shall be reviewed, with re-approval by RMC on annual basis from last approval date.

Credit risk management

The key credit strategy adopted to manage down earning volatility is to focus the lending businesses on the more granular types of credits where the exposure sizes are individually small against the portfolio size and the portfolios are reasonably diversified, acknowledging the limitation of the current size of the capital base of the Bank. The target customers are therefore small-and-medium enterprises (“SMEs”). The risk appetite limits for credit loss rates are with respect to the break-even point, with a buffer, under moderate degree of stresses, given our expected pricing and cost of fund. An exception is interbank exposure. This type of exposures arises because of liquidity management needs, as the other core lending businesses may not always use up the available capital and deposits. Its size, therefore, is to some extent passively determined by the sizes of the other lending relative to capital and deposits. In view of this and the very low degree of bank credit risk, we do not set a portfolio risk appetite limit to interbank lending. Instead, obligor concentration limits are set to avoid over concentration in individual name(s).

The Board is ultimately responsible for approving the Bank’s key credit risk policies and strategies and ensuring that these are appropriate to the business and observed within the organisation. BRMC would periodically review the credit risk profile against the agreed risk thresholds, paying attention to large or connected exposures, and determine whether the credit strategy should be re-appraised or adjusted to adapt to external changes and internal risk appetite.

BRMC delegates its credit approving authority to the RMC within the Bank for overseeing different aspects of credit risk management. Actions and changes to the risk thresholds, where appropriate, are directed by RMC. In instances of breaches, the RMC will review the nature of the breaches, changes in the external environment and the associated risks to determine what remedial actions may be needed.

The risk management function, which is directly accountable to the Chief Risk Officer and RMC, is responsible for formulating credit risk management methodologies, strategies and policies and the day-to-day measurement, monitoring and evaluation of credit risk within the Bank. Business units should solicit credit business within laid-down policies and manage the relationship with customers.

The risk management function undertakes the overall administration, credit approval, and review of the credit portfolio, including implementation of relevant risk thresholds with respect to the risk appetite, sector trend analyses and compilation of management information reports.

PING AN ONECONNECT BANK (HONG KONG) LIMITED
(平安壹賬通銀行(香港)有限公司)

9. Credit risk for non-securitization exposures (Continued)

9.1 CRA: General information about credit risk (Continued)

The Legal and Compliance Department advises on and monitors compliance with applicable banking and corporate laws, codes of conduct and other regulatory expectations. All business units shall have a comprehensive knowledge and understanding of the Bank's risks and the legal, regulatory and compliance obligations associated with their businesses. Each business unit shall take all necessary steps to comply with the various rules and regulations under which the Bank operates.

Independent credit reviews and compliance audits are performed by Internal Audit, external auditors and regulator. These audits could involve on-site review of credit and portfolio management functions, credit policies and procedures, MIS reports, account administration practices, as well as the Bank's compliance with applicable laws and regulations.

Content of the reporting on credit risk exposure

The risk management function regularly reports to the BRMC and RMC on the credit risk profile, risk concentrations, and stress testing results:

- Management Information ("MI"). It is an essential tool in portfolio management to effect, through periodic quantification and presentation of the credit risks of the portfolios, a feedback mechanism where effects of decisions previously made and impacts of economic cycles can be systemically tracked and visualised. For this, risk management function would regularly provide MI reports on the up-to-date credit risk profile and performance of the portfolios to RMC.
- Concentration Risk Management. It manages against name concentration and segment portfolio concentration, risk appetite thresholds are established. Sub-portfolio limits may be set to maintain a healthy composition for a particular portfolio/credit programme when deemed appropriate.
- Stress Testing. It is an integral part of the Bank's risk management process. It alerts senior management to exceptional but plausible adverse events, assesses their impacts on overall capital adequacy and individual portfolio performances, evaluates our overall resilience to systemic risks and vulnerabilities of certain portfolios, and provides lead time for mitigating actions before the onset of an adverse event. Credit stress testing is conducted once or more every year. Additional stress tests may be requested by RMC as a result of changes in external conditions or internal developments.

9.4 CRB: Additional disclosure related to credit quality of exposures

The Bank adopts the following loan classifications following the Supervisory Policy Manual (“SPM”) of HKMA:

Category	Definition
Pass	Loans where borrowers are current in meeting commitments and full repayment of interest and principal is not in doubt
Special Mention	Loans where borrowers are experiencing difficulties which may threaten the institution’s position. Ultimate loss is not expected at this stage but could occur if adverse conditions persist.
Substandard	Loans where borrowers are displaying a definable weakness that is likely to jeopardise repayment. Includes loans where some loss of principal or interest is possible after taking account of the “net realisable value” of security, and rescheduled loans where concessions have been made, on non-commercial terms, to the customer on interest or principal. [Note: Such loans may be upgraded to pass once they have been serviced according to the revised terms for 6 months in the case of monthly repayments or 12 months other than monthly repayments.]
Doubtful	Loans where collection in full is improbable and the institution expects to sustain a loss of principal and/or interest after taking account of the net realisable value of security.
Loss	Loans which are considered uncollectible after exhausting all collection efforts such as realisation of collateral, institution of legal proceedings, etc.

9. Credit risk for non-securitization exposures (Continued)

9.4 CRB: Additional disclosure related to credit quality of exposures (Continued)

The accounting definition of impaired exposures and the regulatory definition of defaulted exposures are generally aligned. In general, loans and advances overdue for more than 90 days are considered impaired unless the Bank has objective evidence showing that facility is credit-impaired significantly impacting the expected future cash flows. Loans and advances repayable by regular instalments are classified as overdue when an instalment payment is past due and remains unpaid. Should there be deviations from the below staging criteria for certain individual cases, approval from the Chief Risk Officer shall be obtained.

Under HKFRS 9, each credit exposure shall be classified into one of the three stages. Below states the requirements and our ways of identifications:

	Requirement	Our Identification
Stage 1	A loss allowance for a financial instrument should be measured at an amount equal to 12-month ECL if the credit risk on that financial instrument has not increased significantly since initial recognition	The contractual cash flow obligations of the facility is fulfilled and there is no objective evidence showing a significant increase in credit risk since initial recognition; or its contractual cash flow obligations is not fulfilled, but the facility is less than 30 days past due
Stage 2	A loss allowance for a financial instrument should be measured at an amount equaling to the lifetime ECL if the credit risk on that financial instrument has increased significantly since initial recognition	The facility is 30 days past due; or its loan classification grade is “Special Mention”; or the Bank has any objective evidence showing a significant increase in credit risk since initial recognition
Stage 3	Lifetime ECL are recognised on the financial instrument if the credit risk of a financial instrument increases to the point that it is considered credit-impaired	The facility is 90 days past due; or the Bank has objective evidence showing that facility is credit-impaired significantly impacting the expected future cash flows. The loan classification grades of Stage 3 facilities are either “Substandard”, “Doubtful” or “Loss”

Initial recognition refers to the time of credit origination for retail and regulatory retail portfolios where exposures are not managed individually but on a portfolio basis. Whereas it refers to the time of the last credit review for non-retail portfolios.

9. Credit risk for non-securitization exposures (Continued)

9.4 CRB: Additional disclosure related to credit quality of exposures (Continued)

It is possible for a customer who faces difficulty in repayment to look for an alternative arrangement from the Bank. In this instance, the Bank may consider restructuring the loan for the customer, provided that there are sufficient evidences showing that the original repayment arrangement is unsustainable under the borrower's worsened financial conditions, whereas these conditions are reasonably compatible with the repayment requirements under a re-arrangement, following the principles given in "Hong Kong Approach to Corporate Difficulties" stated in SPM IC-7. Therefore, before offering a restructured loan to a customer, there has to be an adequate assessment on the customer's long-term repayment ability and the feasibility of a reasonable restructuring arrangement. Restructured exposure will normally require an adverse classification under the loan classification system (i.e. substandard or doubtful).

There was no restructured exposure as at 31 December 2022.

9.5 CRC: Qualitative disclosures related to credit risk mitigation

Recognition of risk mitigation under the standardised approach

The main types of recognised credit risk mitigant used by the Bank include government guarantee, personal guarantee and guarantees given by public sector entities. The Bank applies the simple approach for credit risk mitigation to all its on-balance sheet banking book exposures that are subject to risk mitigation, where a claim on a counterparty is secured by a guarantee from an eligible guarantor, the portion of the claim that is supported by the guarantee is to be weighted according to the risk-weight applicable to the guarantor (unless the risk-weight applicable to the original counterparty is lower). The unsecured portion of the claim must be weighted according to the risk-weight applicable to the original counterparty.

For capital calculation, the Bank has not used any on-balance sheet or off-balance sheet recognised netting for credit risk mitigation.

9. Credit risk for non-securitization exposures (Continued)

9.5 CRC: Qualitative disclosures related to credit risk mitigation (Continued)

Concentrations within credit risk mitigations

According to Banking (Exposure Limits) Rules, the aggregate post-CRM exposure to a single counterparty or a group of linked counterparties – by control or by economic dependence – is subject to a statutory limit of 25% of the Bank’s Tier 1 capital, excluding exempted sovereign entities and exposures exempted/disregarded. Unless the aggregate exposure of the linked counterparties is less than 5% of the Tier 1 capital, exposures to linked counterparties are expected to be aggregated and be subject to large exposure limit. Grouping has to be based on the control structure and economic dependence. If the exposures to a set of unrelated counterparties are protected by the same credit protection provider under a credit risk transfer arrangement, then the aggregate exposure to this credit protection provider is also subject to the 25% statutory limit, unless the provider is being exempted (e.g. Hong Kong Mortgage Corporation).

9.6 CR3: Overview of recognised credit risk mitigation

		(a)	(b1)	(b)	(d)	(f)

4	Of which defaulted	353	13,521	–	13,521	–

9.7 CRD: Qualitative disclosures on use of ECAI ratings under STC approach Qualitative disclosures on use of ECAI ratings under STC approach

Under the standardised approach for the calculation of credit risk within the Basel capital framework, banks are required to use credit assessments provided by external credit assessment institutions (“ECAIs”), recognised by the HKMA for the purposes of regulatory capital calculation, to determine the risk-weights of the banks’ credit exposures.

Standard & Poor’s Ratings Services, Moody’s Investors Service, Fitch Ratings and Rating and Investment Information, Inc. are the ECAIs that the Bank has used for the determination of risk weightings for the following classes of exposure:

- Sovereign exposures;
- Public sector entity exposures; and
- Bank exposures

The mapping of ECAI ratings of the above three classes of exposure to the risk weights under standardised approach follows the process as prescribed in Part 4 of the BCR. Where an exposure of debt securities has an issue-specific external credit assessment, such assessment will be used. In case there is no specific issue rating published by the ECAI, the issuer rating is applied to the senior unsecured claims of that issuer subject to the conditions prescribed by the BCR.

10. Counterparty credit risk

There was no counterparty credit risk exposures as at 31 December 2022.

11. Securitization exposures

There was no securitization exposures as at 31 December 2022.

12. Market risk

12.1 MRA: Qualitative disclosures related to market risk

Market risk is the risk of losses in assets, liabilities and off-balance sheet positions arising from movements in market rates and prices, including foreign exchange rates and interest rates, etc.

The Bank does not have any trading portfolio. The market risk exposures mainly arise from the foreign exchange risk and interest rate risk of non-trading portfolios, which is not considered material.

Market risk measurement

RMC and ALCO have been delegated by the Board to manage the Bank's market risk strategy, policies and practices. The Committee membership and attendees consist of the Chief Executive, Chief Risk Officer, Chief Financial Officer and various business lines. The Bank's market risk is managed by the Treasury Division (the first line of defence) and monitored by Market and Liquidity Risk Division (second line of defence). ALCO and RMC are performing the high level management in accordance with the guidelines and procedures laid down in the Market and Interest Rate Risk Management Policy that has been approved by the Board. Market and Liquidity Risk Division is the independent party to monitor the exposure. Market and Liquidity Risk Division is also responsible to conduct stress tests, develop relevant policies and procedures, and review the assumptions which is related with the risk measures.

The Bank is mainly exposed to the foreign exchange risk arising from Renminbi and US dollar payables. Market and Liquidity Risk Division monitors the FX positions on daily basis. The FX position limit is set and approved in RMC and ALCO, and the FX exposure is reported to the committees on monthly basis to ensure the activities are within the risk limits.

13. IRRBB: Interest Rate Risk in banking book

Qualitative and quantitative disclosures are described in Note 23(c) of Notes to the Financial Statements for the year ended 31 December 2022.

14. Remuneration

14.1 REMA: Remuneration policy

The Nomination and Remuneration Committee (the “NRC”) is designated by the Board to oversee the design and practice of the Bank’s remuneration system. NRC is composed by 2 independent non-executive directors and 1 non-executive director.

NRC takes into account of the Bank’s risk tolerance, risk management, business strategy and long term financial soundness in determining the Bank’s remuneration policy. The policy advocates pay-for-performance philosophy to ensure desirable behavior and work ethic that align with the Bank’s risk management framework, long term goals and strategies, with an aim to prevent misconduct behavior.

14. Remuneration (Continued)

14.1 REMA: Remuneration policy (Continued)

Remuneration Structure

The remuneration packages of employees comprise of fixed salary and variable remuneration. Following the total reward principle and prevailing market practices, payments of remuneration are required to follow the policy to maintain an appropriate balance that the fixed portion is sufficient to attract and retain competent employees and the variable portion should not induce excessive risk taking. The proportion of variable remuneration is expected to increase in line with the seniority and responsibilities of employees.

Fixed remuneration mainly refers to base salary, pension rights, and benefits-in-kind (if any). Variable remuneration, comprising mainly cash bonus payments, sales incentives and share-based incentives. Variable remuneration is discretionary and awarded based on overall performance of the Bank, the relevant business units and the selective employee.

Performance management and determination of variable remuneration

Performance of the Bank will be evaluated against pre-defined and assessable financial and non-financial targets, including but not limited to the Bank's performance on risk management perspectives. Based on the Bank level targets, performance of individual employees will be determined according to the job responsibilities, contributions covering both financial and non-financial factors, and the full adherence to the code of conduct, compliance standard, risk management requirements and other internal control policies. The overall performance of an employee is therefore measured and determined by not only financial achievement, but also non-financial indicators. For employees with risk control functions, they should be compensated in a manner that is independent of the performance of the business area which they oversee.

Payout and deferral of variable remuneration

The award of variable remuneration is subject to deferment in accordance with the remuneration policy. In general, the proportion of variable remuneration with respect to the share-based incentive, sales incentive, and senior management's and some key personnel's annual bonus are subject to deferment. The share-based incentive is granted for a vesting period with pre-determined vesting condition.

Ongoing monitoring of the remuneration system

The NRC shall oversee the overall remuneration matters of the Bank including the regular review on the adequacy and effectiveness of the remuneration policy. Any material weakness identified shall be reported to the Board. Involvement and inputs from risk management, finance, internal audit and compliance shall be solicited as appropriate in the design and implementation of the remuneration systems, with specific regard to risk considerations at various levels of the Bank.
