Point to note:

Explanation of signficant drivers behind differences in reporting periods T and T-1. No signficant differences.

When minimum capital requirements in column (c) do not correspond to 8% of RWA in column (a), the AI must explain the adjustment made.

Not applicable.

If the AI uses the internal models method under the market-based approach to calculate its equity exposures in the banking book pursuant to the BCR, it should provide a description of its internal models used in an accompanying narrative.

KEXIM Asia Limited uses Basic approach to measure equity exposures in the banking book. The internal models method under the market-based approach does not apply.

<sup>1.</sup> Items marked with an asterisk (\*) will be applicable only after their respective policy frameworks take effect. Until then, "Not applicable" should be reported in the rows.

Notes\_:
Elements where a more conservative definition has been applied in the BCR relative to that set out in Basel III capital standards:

#### Template CC1: Composition of regulatory capital (continued)

	Hong Kong basis	Basel III basis
10 Deferred tax assets (net of associated deferred tax liabilities)	227,071	227,071

#### Explanation

As set out in paragraphs 69 and 87 of the Basel III text issued by the Basel Committee (December 2010), DTAs of the bank to be realized are to be deducted, whereas DTAs which relate to temporary differences may be given limited recognition in CET1 capital (and hence be excluded from deduction from CET1 capital up to the specified threshold). In Hong Kong, an AI is required to deduct all DTAs in full, irrespective of their origin, from CET1 capital. Therefore, the approach to hadducted as according to the specified threshold. deduction from CETT capital up to the specified threshold). In Hong Kong, an Al is required to deduct all DTAs in full, irrespective of their origin, from CETT capital. Therefore, the amount to be deducted as reported in row 10 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 10 (i.e. the amount reported under the "Hong Kong basis") adjusted by reducing the amount of DTAs to be deducted which relate to temporary differences to the extent not in excess of the 10% threshold set for DTAs arising from temporary differences and the aggregate 15% threshold set for MSRs, DTAs arising from temporary differences and significant investments in CET1 capital instruments issued by financial sector entities (excluding those that are loans, facilities or other credit exposures to connected companies) under Basel III.

#### Remarks:

The amount of the 10% threshold and 5% threshold mentioned above is calculated based on the amount of CET1 capital determined in accordance with the deduction methods set out in BCR Schedule 4F. The 15% threshold is referring to paragraph 88 of the Basel III text issued by the Basel Committee (December 2010) and has no effect to the Hong Kong regime.

Total	-	-	-	-	-	-

<sup>[3]</sup> For "SFTs" reported in columns (e) and (f), the collateral used is defined as referring to both legs of the transaction. For example, an Al transfers securities to a third party, which in turn posts collateral to the Al. The Al should report both legs of the transaction in the template; on one hand the collateral received is reported in column (e), on the other hand the collateral posted by the Al is reported in column (f).

<sup>[4] &</sup>quot;Domestic currency" refers to the Al's reporting currency (not the currency / currencies in which the derivative contract or SFT is denominated).

#### Liquidity information

#### Liquidity maintenance ratio ("LMR")

At as 30/06/2024 As at 31/12/2023

Average LMR for the period

345.15% 420.51%

The average LMR is computed as the arithmetic mean of the average value of the LMR for each calendar month as reported in the liquidity position submitted for the year.

#### Approach to liquidity risk management

The Company's approach to liquidity risk management is based on the building blocks of governance by framework, oversight by risk management committees, and internal control policies that define specific risk methodologies. Processes and systems are in place to measure, limit and control exposures based on the risk methodologies defined. Risk Management Committee is responsible for overseeing overall liquidity position and ensuring that there is sufficient liquidity available to meet the obligations. The Committee members meet at least on a monthly basis to review several limits set internal or statutory. Internal target liquidity ratio is established which provide early-warning signal in relation to liquidity position.

The purpose of liquidity management is to ensure sufficient cash flows to meet all financial commitments and to capitalize on opportunities for business expansion. This included the Company's ability to meet any deposit withdrawals either on demand or at contractual maturity, to repay borrowings as they mature, to company with statutory liquidity ratio, and to make new loans and investments as opportunities arise.

Liquidity is managed on a daily basis by a senior manager under the direction of the management and liquidity maintenance ratio. The senior manager is responsible for ensuring that the Company has adequate liquidity for all operations, ensuring that the funding mix is appropriate so as to avoid maturity mismatches and to prevent price and reinvestment rate risk in case of a maturity gap, and monitoring local and international markets for the adequacy of funding and liquidity. Risk Management Committee will be promptly informed if the ratio calculated below internal target and determine appropriate course of action to restore the ratio back to or above internal target ratio.

The Company manages liquidity risk by holding sufficient liquid assets (e.g. cash and bank balances and securities) of appropriate quality to ensure that short-term funding requirements are covered within prudent limits. The Company regularly stress tests its liquidity position.

## KEXIM ASIA LIMITED Regulatory Disclosures

#### **International Claims**

International claims are on-balance sheet exposures of counterparties based on the location of the counterparties after taking into account any transfer of risk. For a claim guaranteed by a party situated in a country different from the counterparty, risk will be transferred to the country of the guarantor. For a claim on the branch of a bank or other financial institution, the risk will be transferred to the country where its head office is situated. Claims on individual countries or areas, after risk transfer, amounting to 10% or more of the aggregate international claims are shown as follows:

As at 30/06/2024	Banks	Offical sector	Non-bank financial institutions	Non-financial private sector	Others	Total
