The decrease in the total capital ratio was mainly due to the increase in the total RWA, which was in turn attributed by the increase in the core business of loans and advances to customer and investment in debt securities and the new business of investment in private equity fund. While the increase in the investment in debt securities attributes to the increase in the liquefiable assets, it is offset by the increase in the qualifying liabilities arising from the increment in the commitment of loans and advances to customers and investment in private equity fund. Thus, the LMR has a decreasing trend over the reporting periods.
